RABBI, RABBONI. Heb. *rab* meant 'great', and came to be used for a person in a respected position; *rabbi*, 'my great one', was used as a reverential form of address. By the end of the 2nd century BC the word *rab* was used for a teacher, and *rabbi* as the respectful address, 'my teacher'. Later the suffix lost its possessive significance, and the word 'rabbi' came to be used as the title of the authorized teachers of the Law; in modern Judaism it is used for those who are ordained to this work. By NT times the word had not come to be restricted to the official usage. It was certainly a title of honour, applied once to John the Baptist and twelve times to our Lord. In Mt. 23:7f., in contrast to the scribes' delight in being called 'rabbi', the disciples are told not to be so called—'for you have one teacher', Jesus said to them, 'and you are all brethren'. The Heb. word is transliterated into Gk. as *rhabbi* or *rhabbei* and in this passage quoted, and also in Jn. 1:38 and 20:16, it is made clear that the Heb. word was equivalent in meaning to the Gk. *didaskalos*.

'Rabboni' (*rhabbouni*) is a heightened form of 'rabbi' used to address our Lord in Mk. 10:51 and Jn. 20:16.

RABMAG. The official position of the Bab. *Nergal-sharezar at the sack of Jerusalem in 587 BC (Je. 39:3, 13). It is the heb. form of *rabuemga*, 'noble

Ra'amses (Qantir) in Goshen.

and wise', a royal title claimed by Neriglissar, and of *rab mahhu*, 'chief of the *mahhu* (administrative, not religious) officials'. It is probably, however, the Heb. form of *rab mu(n)gi*, the title of an Assy. and Bab. military official, sometimes sent as envoy to foreign kings. The precise meaning is unknown.

D.J.W.

RABSARIS. The title, 'chief official', of the following: 1. One of the three Assyrians sent by Sennacherib to parley with Hezekiah at Jerusalem (2 Ki. 18:17; cf. Is. 36:3, where it is omitted). 2. The Bab. Nabushazban who removed Jeremiah from prison and handed him over to Gedaliah (Je. 39:13). 3. *Sarsechim, one of three Babylonians who sat as judges in the gate of Jerusalem after its capture in 587 BC (Je. 39:3).

The office of 'chief of the court eunuchs' (Bab. *rab ša rēši*) was held by a high-ranking palace dignitary (cf. Dn. 1:7). It is common in Assy. texts and is attested in an Aram. docket from Nineveh (*rbsrs*, B.M. 81-2-4, 147). On this official see J. V. Kinnier Wilson, *The Nimrud Wine Lists*, 1972, pp. 47f. An Assy. eponym, whose usual title of *šaknu* of the land of Marqasu, is glossed in an Aram. contract as *rbsrs*, i.e. *rab ša rēši* (JAOS 87, 1967, p. 523).

D.J.W.

RABSHAKEH. The title of the Assy. official who, with the *Tartan and *Rabsaris, was sent by Sennacherib, king of Assyria, from Lachish to demand the surrender of Jerusalem by Hezekiah (2 Ki. 18:17, 19, 26-28, 37; 19:4-8; Is. 36:2, 4, 11-13, 22; 37:4, 8). He acted as spokesman for the delegation, addressing the citizens in the Judaeian dialect. Hezekiah's representatives asked him to speak in

RABSHAKEH

Aram. to avoid disclosing his mission. He refused and, at the failure of his task, returned to Lachish.

The office (*rabšāqē*) ranked below that of the army commander (*TARTAN), after whom it is listed. The Assy. *rab* ('chief') *šāqē* was once thought to be 'chief cupbearer' (Heb. *mašqeh*), but is now known to be connected with *šāqū*, 'to be high'. The Assy. *rab šāqē* is listed among the senior officials who governed provinces (cf. *RABSARIS).
D.J.W.

RACA. This is probably an Aram. word *rēqā* or *rēqā*, which means 'scoundrel' or 'fool'. Since the discovery in a papyrus of Gk. *rhachas* (of which *rhacha* may be a vocative) used in a bad sense (*Antiochon ton rhachan*), some scholars have suggested that the word is Gk. *Raca* is, however, to be derived from Aram. and Heb. Heb. *rēqim* is used in the OT for good-for-nothings. In Jdg. 11:3 the 'worthless fellows' who associated themselves with Jephthah are called *rēqim*; in 2 Sa. 6:20 Michal despised David because he uncovered himself as one of the *rēqim* (rsv 'vulgar fellows'). The word is also used in Zadokite Documents (10:18), where it is combined with *nābāl* (cf. Mt. 5:22, Gk. *mōre* for Heb. *nābāl*) as an adjective to 'word'. *Raca* is abundantly used in rabbinical literature (cf. *SB*, 1, pp. 278–279) in the sense of 'fool'.

The word *raca* is present in Mt. 5:22 in the Sermon on the Mount. Jesus gave a new spirit to the well-known law of homicide. It is not actually a question of killing, but also of disposition. People are not allowed to call their brother names in their resentment. In spirit this is as great a transgression as real murder.
F.C.F.

RACHEL (Heb. *rāḥēl*, 'ewe'; LXX *Rachēl*). An Aramaean woman, known primarily as the second and favourite wife of Jacob, her first cousin. The daughter of Laban, and mother of Jacob's two youngest sons, Joseph and Benjamin, Rachel was endowed with great beauty (Gn. 29:17). Jacob apparently fell in love with her at first sight, and his affection remained undiminished until the day of her death. She was also capable of devious behaviour, however (Gn. 31:19, 34–35), and lacked the single-minded devotion to God which Jacob had learnt through his experiences at Bethel and Peniel. She probably did not put away her pagan gods until shortly before she died. Rachel was the ancestress of three tribes, Benjamin, Ephraim and Manasseh, and she and her sister Leah were honoured by later generations as those 'who together built up the house of Israel' (Ru. 4:11).

(a) *Marriage* (Gn. 29:6–30). Jacob had been sent by Isaac and Rebekah to find a wife among his mother's relatives in Paddan-aram (28:1–2; *FAM-ILY). He met Rachel in the region of Harran as she was shepherding her father's flocks, and he at once helped her to water the animals by rolling the stone from the well's mouth. Laban welcomed him into his household where he lived for 20 years. Jacob's love for Rachel is one of the Bible's outstanding examples of human love—7 years 'seemed to him but a few days because of the love he had for her' (29:20). As a result of Laban's trickery in making Leah Jacob's first wife, presumably accomplished by the veiling of the bride, Jacob served another 7 years for Rachel, but his love did not waver.

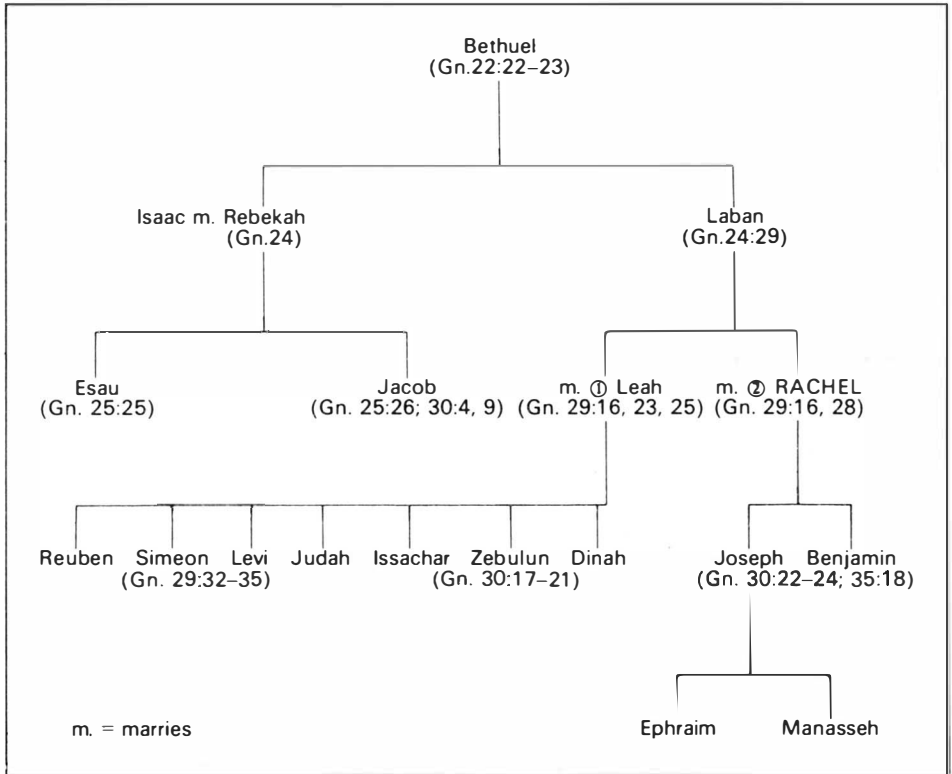

Some details of Rachel's marriage can be paralleled outside the OT. Serving for a wife in lieu of

payment is known from a 15th century BC document from *Nuzi (JEN 661), though the circumstances were very different. Laban's gift of the slave-girl Bilhah as part of Rachel's dowry was practice also known at Nuzi, though more examples are known in earlier Old Babylonian texts. By contrast, the custom to which Laban appealed of marrying the elder daughter before the younger is so far unique — it was either a local Aramaean practice, or perhaps invented by Laban, though one cannot be certain. The suggestion that Jacob's marriages to Leah and Rachel involved his adoption by Laban on the basis of Nuzi custom, is better explained in other ways (*ADOPTION, *NUZI).

(b) *Children* (29:31; 30:1–8, 14–15, 22–24). Rachel's early years of marriage were barren, and, inspired by envy of Leah's fertility, she gave her slave-girl Bilhah to Jacob to bear children for her. Infertility was a well-known problem in the ancient Near East, and the husband would of ten take a second wife or a concubine because of it. Sometimes, however, the wife provided her husband with her own slave-girl to protect her own position, as with Rachel, Leah, Sarah, and extrabiblical examples from *Alalah, *Nuzi, *Babylon (Laws of Hammurapi) and elsewhere. The slave-girl gained in status as a secondary wife (Bilhah is designated 'īšā, 'wife', 30:4; cf. Nuzi *ana aššūti*, 'as a wife', HSS 5. 67), and the resultant offspring could become heirs if adopted or legitimated by the husband and wife. The Nuzi text just mentioned also indicates that the chief wife could exercise authority over such children. Thus Bilhah's two boys Dan and Naphtali were reckoned to Rachel (lit. 'I may be built up through her'—30:3), and by naming them Rachel signified her authority over them. Subsequently Rachel bore Joseph, Jacob's favourite son, though whether Reuben's mandrakes, plants with supposed aphrodisiac qualities, had any effect is not clear (30:14–15). The birth of Rachel's second son Benjamin brought about her death (35:18–19).

(c) *Return to Palestine* (30:25–26; 31:4–55). Influenced by the hostility of Rachel's brothers, and a revelation from God, Jacob decided to return home after Joseph was born. Rachel and Leah readily concurred, since Laban had used up the money set aside for their dowry (31:15—an identical phrase, *kaspa akālu* 'to consume the money', was used several times at Nuzi in very similar circumstances). Without any inheritance from their father, the girls were regarded by him as 'foreigners'. It is frequently suggested that Rachel's theft of her father's household gods or *teraphim (*t'rāpim*) was an attempt to regain an inheritance for herself and Jacob, but the fact that they were stolen rules out this interpretation. Perhaps Rachel sought for protection on the long journey, or simply wanted to deprive her father of his valued possessions. Jacob, however, who was unaware of his wife's action, regarded the offence as worthy of death, though the threat was never carried out. Rachel continued as Jacob's favourite wife after the incident (33:2, 7), and the *t'rāpim* were probably among the images later disposed of because their existence was a hindrance to the worship of God (35:2–4). On the same journey, Laban and Jacob agreed a covenant by which Jacob undertook not to maltreat his wives nor to marry any other. Both these conditions are found in marriage contracts from various periods in the ancient Near East.

(d) *Death* (35:16–20). Rachel died between

Rachel's lineage.

Bethel and Bethlehem when her second son Benjamin was born. Jacob's continuing love for her is evidenced by the memorial pillar (*maššēbā*) he set up over her grave, and its location was still known in Saul's day, when it was described as being on the border of Benjamin at Selsah (*ZELZAH, 1 Sa. 10:2). The site is unknown today, though Je. 31:15 (cf. Mt. 2:18) suggests it may have been near Ramah, c. 8 km N of Jerusalem. However, Rachel's memory was also preserved at Bethlehem in the time of Ruth (Ru. 4:11), probably because it was near her burial-place.

BIBLIOGRAPHY. M. J. Selman, *TynB* 27, 1976, pp. 114-136; J. Z. Abrams, *JBQ* 18, 1989-90, pp. 213-221. M.J.S.

RAHAB (Heb. *rāhāb*, possibly connected with root *rhb*, 'broad'). A harlot who lived in a house which formed part of the town wall of Late Bronze Age Jericho. Joshua's two spies lodged with her. When they were pursued she hid them under drying stalks of flax on the roof. The pursuers were sent off on a false trail and then Rahab made terms with her lodgers. She knew that Jericho must fall to the servants of Yahweh and so she asked for protection for herself and her family. The spies escaped from a window, with her help. When Jericho was destroyed the family was saved and Rahab joined up with the Israelites (Jos. 2:6-17, 22-25).

In the NT the writer to the Hebrews includes her among ancient examples of faith in God (Heb.

11:31), and she is quoted as one who was justified by her works in Jas. 2:25. She is almost certainly to be identified with Rahab (אֲרָחָב 'Rachab'), the wife of Salmon and mother of Boaz, ancestor of David, who is included in our Lord's genealogy in Mt. 1:5.

BIBLIOGRAPHY. M. Newman in J. T. Butler (ed.), *Understanding the Word*, 1985, pp. 167-181.

M.B.

RAHAB (Heb. *rahāb*, lit. 'pride', 'arrogance'), the female monster of chaos (cf. Bab. Tiamat), closely associated with *Leviathan. The curbing of the forces of chaos (pre-eminently the unruly sea) at the creation is poetically described in terms of God's smiting Rahab (cf. Jb. 26:12, and more generally Jb. 9:13; 38:8-11). But this imagery in the OT is usually transferred from the creation story to the narrative of the redemption of Israel from Egypt, when God again showed his mastery over the sea and other forces opposed to his will; it is the Exodus that is indicated by references to the smiting of Rahab in Ps. 89:10; Is. 51:9 (cf. Ps. 74:12ff., where the sense is the same, although Rahab is not expressly mentioned). From this usage Rahab comes to be employed quite generally as a poetic synonym for Egypt, as in Ps. 87:4 ('Among those who know me I mention Rahab and Babylon') and Is. 30:7 ('Rahab who sits still'); and her dragon-associate becomes a figure of Pharaoh (cf. Ezk. 29:3).

F.F.B.

RAIN. The importance and character of rain all is emphasized in the OT by the use of several words.

RAIN

The general term is *mātār*, combined sometimes with *gešem*, a violent downpour (1 Ki. 18:41; Ezr. 10:9, 13), to suggest torrential rains (Zc. 10:1; Jb. 37:6); *zereṃ*, a rainstorm (Is. 25:4; 28:2; 32:2; Hab. 3:10; Jb. 24:8), is sometimes accompanied by hail (Is. 28:2; 30:30). In contrast are the *r'bibīm*, 'showers' (Dt. 32:2; Ps. 65:10; Je. 3:3; 14:22; Mi. 5:7), and *r'sisim*, a 'rain-mist' (Ct. 5:2). Seasonal rainfall, *yōreh* and *mōreh*, 'former rains', and *malqōš*, 'the latter rains', are a reference to the onset and termination of the rainy season (Dt. 11:14; Jb. 29:23; Ho. 6:3; Joel 2:23; Zc. 10:1f.; Jas. 5:7).

Frequently the term *mātār* indicates that this source of blessing to man comes from God himself, from the heavens. The Baalim were early associated with the springs, wells and streams, but Yahweh was the rain-giver (Je. 14:22), for can 'any among the false gods of the nations . . . bring rain?' This challenge was vindicated by Elijah before the priests of Baal (1 Ki. 18:17-40). Heaven is thus invoked for rainfall (Ps. 72:6), and its blessings are compared with the mechanical devices of the Egypt. *shaduf* for lifting river water from the Nile (Dt. 11:11). Heb. *šetep̄*, 'torrential rain', 'flood-water' (Ps. 32:6; Pr. 27:4; Dn. 9:26; 11:22; Na. 1:3), is used in the plural in Jb. 38:25 to denote irrigation channels (normally *peleḡ*, as in Pss. 1:3; 119:136; Pr. 5:16; 21:1; Is. 30:25; 32:2; La. 3:48), as though a heavy downpour were likened to a channel of water poured from the reservoir of heaven (cf. 'the *peleḡ* of God', Ps. 65:9; also Gn. 7:11, where the '*rubbōt* or 'sluices' of the sky are opened). Gentle rain or rain-mist (*tal*) is associated with beneficent gifts (Dt. 33:13). It is the first of blessings promised to Jacob's land (Gn. 27:28) and to Israel (Dt. 28:12). The descent of rain is likened to the blessings of the kingdom (Ps. 72:6-7). In contrast, the presence of clouds and wind without rain is likened to a man who 'boasts of a gift he does not give' (Pr. 25:14). (*DEW.)

The rainfall of Palestine is so closely identified with the cool season that the Arab. *šitā* refers to both winter and rain. There is the same significance in Ct. 2:11, 'For, lo, the winter is past, the rain is over and gone.' Equally the summer season is suggestive of the hot, dry period, e.g. 'My strength was dried up as by the heat of summer' (Ps. 32:4). During the preliminary period of mid-Sept to mid-Oct. the moist sea air encountering the very hot dry air from the land surface causes thunderstorms and the irregular distribution of rainfall. This is vividly described in Am. 4:7, 'I would send rain upon one city, and send no rain upon another city: one field would be rained upon, and the field on which it did not rain withered.' The onset of the effective rains usually begins in mid- or late Oct., but may be delayed until even Jan. These 'former rains', so earnestly longed for, cause a fall in temperature so that convectional currents are eliminated and the damp atmosphere produces a brilliance in the sky, described by Elihu: 'And now men cannot look on the light when it is bright in the skies, when the wind has passed and cleared them' (Jb. 37:21). The cool, rainy season is the pastoral setting to the joys described by the psalmist (Ps. 65:12-13). Between April and early May, the 'latter rains' describe the last showers at the close of the rainy season (Am. 4:7).

Modern scholars agree that no climatic change has occurred within historic times. See J. W. Gregory, 'The Habitable Globe: Palestine and the Stability of Climate in Modern Times', *Geog. Journ.*

76, 1947, pp. 487ff.; W. C. Lowdermilk, *Palestine, Land of Promise*, 1944, pp. 82ff.; A. Reifenberg, *The Struggle between the Desert and the Sown*, 1956, pp. 20-24; N. Shalem, 'La Stabilité du Climat en Palestine', *Proc. Desert Research*, UNESCO, 1953, pp. 153-175. This does not mean that there have not been minor fluctuations in climate, but they have not been great enough to influence civilizations materially. Prolonged droughts such as those recorded in 1 Ki. 17:7; Je. 17:8; Joel 1:10-12, 17-20, indicate their disastrous effects, especially when there is no dew to compensate the lack of rainfall (2 Sa. 1:21; 1 Ki. 17:1; Hag. 1:10). (*CLOUD; *DEW; *PALESTINE.) J.M.H.

RAINBOW. There is no special word for rainbow in Heb. The ordinary word for war-bow (Heb. *qešet*) is used. The NT word is *iris*. In Gn. 9:13, 15, God's war-bow, *qešet*, is said to be put in the clouds as the sign of his covenant with Noah, and was his pledge that never again would he destroy all flesh by a flood.

The meaning seems to be that what was ordinarily an instrument of war, and a symbol of vengeance, became a symbol of peace and mercy by virtue of its now being set in the clouds. Against the black storm clouds God's war-bow is transformed into a rainbow by the sunlight of his mercy and grace. God is at peace with his covenant people.

So also in Ezk. 1:28 the rainbow of mercy appears around the throne of divine glory and judgment. In Rev. 4:3; 10:1, John has a vision similar to Ezekiel's. J.G.S.S.T.

RAMAH. The Heb. name *rāmā*, from the root *rīm*, 'to be high', was used of several places, all of them on elevated sites.

1. Ramah of Benjamin, near Bethel, in the area of Gibeon and Beeroth (Jos. 18:25), was a resting-place on the road N. Here the Levite and his concubine planned to stay (Jdg. 19:13). Deborah the prophetess lived close by (Jdg. 4:5). When Asa of Judah and Baasha of Israel were at war, Baasha built a fort here, but when the Syrians attacked Israel Asa destroyed it and built Geba and Mizpah with the materials (1 Ki. 15:17, 21-22; 2 Ch. 16:1, 5-6).

Here Nebuzaradan gathered the exiles after the fall of Jerusalem and released Jeremiah (Je. 40:1). The town was reoccupied after the return from Babylon (Ezr. 2:26; Ne. 11:33).

Ramah features in the messages of some of the prophets (Ho. 5:8; Is. 10:29; Je. 31:15). It is probably to be identified with Er-Ram 8 km N of Jerusalem, or Ramat Rahel (Beth Haccherem), near the traditional tomb of Rachel (Je. 31:15; 1 Sa. Mt. 2:18; Jos., *Ant.* 8. 303).

2. The birthplace and subsequent home of Samuel, also called Ramathaim-zophim (1 Sa. 1:19; 2:11), from which he went on circuit annually (1 Sa. 7:17). Here Saul first met him (1 Sa. 9:6, 10), and here the elders of Israel came to demand a king (1 Sa. 8:4ff.). After his dispute with Saul Samuel came here (1 Sa. 15:34ff.). David found refuge in Ramah and later fled to Nob (1 Sa. 19:18; 20:1).

There are four sites proposed for Ramah today: Ramallah, 13 km N of Jerusalem; Beit Rama, 19 km NW of Bethel; Er-Ram, the Ramah of Benjamin; and Nebi Samwil. There still remains some uncertainty.

The word is also used as the name for 3. a town on

the boundary of Asher (Jos. 19:29); 4, a walled town of Naphtali (Jos. 19:36); 5, a town of Simeon (Jos. 19:8; 1 Sa. 30:27); and 6, an abbreviation for Ramoth-gilead (cf. 2 Ki. 8:28–29 and 2 Ch. 22:5–6).

See F. M. Abel, *Géographie de la Palestine*, 2, 1933, p. 427; D. Baly, *Geography of the Bible*², 1974. J.A.T.

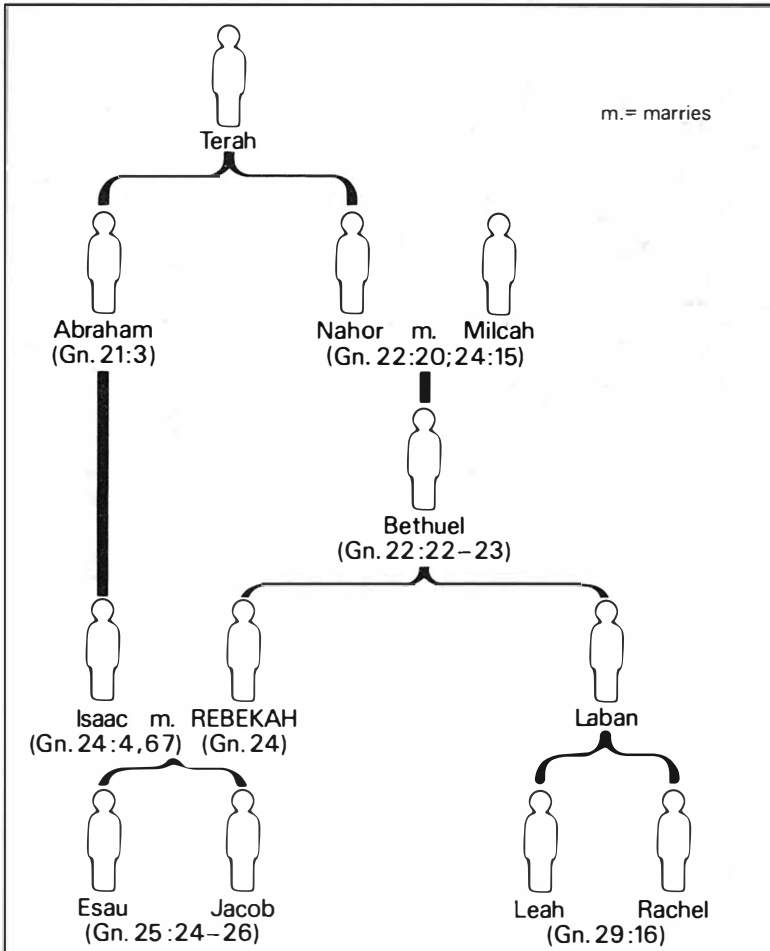

RAMOTH-GILEAD. A walled city in the territory of Gad, E of the Jordan, which featured frequently in Israel's wars with Syria. It was one of the *cities of refuge (Dt. 4:43; Jos. 20:8) and was assigned to the Merarite Levites (Jos. 21:38; 1 Ch. 6:80). It has been identified with Mizpeh, Mizpeh of Gilead (Jdg. 11:29) and Ramath-mizpeh ('height of Mizpeh', Jos. 13:26). Modern equivalents suggested are Huṣn-'Ajlūn and Remtheh, but the suggestion of Nelson Glueck (*BASOR* 92, 1943) that it is Tell-Rāmīth has strong claims.

It was probably the home of Jephthah (Jdg. 11:34). Ben-geber, one of Solomon's twelve administrators, lived here (1 Ki. 4:13). According to Josephus (*Ant.* 8. 399), the city was taken by Omri

from Ben-hadad I. The town changed hands between Israel and the Syrians several times. Even after Ahab had defeated the Syrians (1 Ki. 20), it remained in their hands and Ahab enlisted the help of Jehoshaphat of Judah to retake it (1 Ki. 22:3–4). He was wounded and died (1 Ki. 22:1–40; 2 Ch. 18). His son Joram took up the attack but was likewise wounded (2 Ki. 8:28ff.). During his absence from the camp at Ramoth-gilead, Jehu the army captain was anointed at Elisha's instigation (2 Ki. 9:1f.; 2 Ch. 22:7). Jehu later murdered all the seed royal, but Josephus says that the city was taken before Jehu departed (*Ant.* 9. 105).

REBEKAH, REBECCA (Heb. *ribqā*, cf. Arab. 'a looped cord for tying young animals' from *rabaqa*, 'to tie fast'; Gk. *rhebekka*). The wife of Isaac, daughter of Bethuel, Abraham's nephew (Gn.

The family of Rebekah.

REBEKAH, REBECCA

22:23). The account of the choice of Rebekah as Isaac's wife (Gn. 24) strongly emphasizes the guidance and overruling providence of God. Abraham sent his chief steward, not named but probably Eliezer, to his home-country to seek a wife for his son. After prayer, the steward was led directly to Rebekah. Bethuel and her brother, Laban, having heard all the circumstances, agreed to the marriage.

She was barren for the first 20 years of her marriage. Isaac entreated God, and she bore twin sons, Esau and Jacob, receiving from Yahweh before the birth an oracle in which their divergent destinies were foretold (Gn. 25:20-26). The beginning of tragedy is foreshadowed in Gn. 25:28, where we read of the favoritism of Isaac and Rebekah for different sons, which made inevitable the destruction of family unity.

Reminiscent of Abraham and Sarah was the incident during Isaac's sojourn in Gerar, when he deceived Abimelech and the Philistines by pretending that Rebekah was his sister (Gn. 26:1-11; cf. Gn. 20). Both Isaac and Rebekah were grieved at Esau's marriages to women of an alien race, the Hittites (Gn. 26:34f.).

In the deed of treachery whereby Jacob supplanted Esau in obtaining the blessing from his aged father, Rebekah took the initiative and planned the deception (Gn. 27:5-17). When this was successful, fearing that Esau would kill Jacob, she sent him away to his uncle Laban in Paddanaram, justifying the action to Isaac by suggesting that Jacob ought to seek a wife of their own people (Gn. 27:42-28:5).

The only remaining episodes recorded concerning Rebekah are the death of her nurse, Deborah (Gn. 35:8), and her burial with Isaac in the family grave in the cave at Machpelah (Gn. 49:31).

In the NT, the sole reference to Rebekah is in Rom. 9:10, where *rsv* follows the *Vulg.* spelling 'Rebecca' (ΝΕΒ 'Rebekah'). Paul refers to the oracle she received before the birth of Esau and Jacob as illustrating God's election of grace.

Rebekah was a woman of strong will and ambition, devoted at first to her husband, but later transferring some at least of that devotion to her younger son, with disastrous results for the family unity, though the sequel shows that in the overruling of God even this was enlisted to the furtherance of the divine purpose. (See the family tree on p. 1001.)

RECHABITES. With their 500-year-old Kenite ancestry (1 Ch. 2:55; Jdg. 4:17-22) and their forefather Jonadab (2 Ki. 10:15-27) who, 200 years earlier, had commanded their distinctive lifestyle, the Rechabites continued to stand for the 'old ways': a nomadic, 'desert' society which they doubtless saw as original, uncorrupted Yahwism. Jeremiah, in 608 BC, did not, however, endorse the way they applied their theology but their fidelity in maintaining it (Je. 35). In the passage two ideas are pre-eminent: 'command', ten times (six as verb, four as noun); 'hearing/obeying' (NIV 'obey', lit., 'to hear') ten times (nine times, 'to hear', once, in v. 15, 'to incline the ear'). This is the heart of the matter: the Rechabites obeyed the human word of their forefather. Why do the people of God disobey

the divine word of their God? Jeremiah placed the incident between the promise-breakers of 34:18 and the imperishable divine word of ch. 36 to enforce the message. The distinctive reality of the people of God is to obey the Word of God. The Rechabites wanted to change society by a separatist stance; Jeremiah called for change in society by a return to obedience.

RECONCILIATION. There are four important NT passages which treat of the work of Christ under the figure of reconciliation, namely, Rom. 5:10f.; 2 Cor. 5:18ff.; Eph. 2:11ff.; Col. 1:19ff. The important Gk. words are the noun *katallagē* and the verbs *katallassō* and *apokatallassō*. Reconciliation properly applies not to good relations in general but to the doing away of an enmity, the bridging over of a quarrel. It implies that the parties being reconciled were formerly hostile to one another. The Bible tells us bluntly that sinners are 'enemies' of God (Rom. 5:10; Col. 1:21; Jas. 4:4). We should not minimize the seriousness of these and similar passages. An enemy is not someone who comes a little short of being a friend. He is in the other camp. He is altogether opposed. The NT pictures God in vigorous opposition to everything that is evil.

Now the way to overcome enmity is to take away the cause of the quarrel. We may apologize for the hasty word, we may pay the money that is due, we may make what reparation or restitution is appropriate. But in every case the way to reconciliation lies through an effective grappling with the root cause of the enmity. Christ died to put away our sin. In this way he dealt with the enmity between man and God. He put it out of the way. He made the way wide open for men to come back to God. It is this which is described by the term 'reconciliation'.

It is interesting to notice that no NT passage speaks of Christ as reconciling God to man. Always the stress is on man's being reconciled. This in the nature of the case is very important. It is man's sin which has caused the enmity. It is man's sin that has had to be dealt with. Man may very well be called on in the words of 2 Cor. 5:20 to be 'reconciled to God'. Some students go on from this to suggest that Christ's reconciling activities are concerned only with man. But it is difficult to harmonize this with the general NT position. That which set up the barrier was the demand of God's holiness for uprightness in man. Man, left to himself, is content to let bygones be bygones. He is not particularly worried by his sin. Certainly he feels no hostility to God on account of his sin. The barrier arises because God demands holiness in man. Therefore when the process of reconciliation has been effected it is impossible to say it is completely man-ward, and not God-ward in any sense. There must be a change from God's side if all that is involved in such expressions as 'the wrath of God' is no longer exercised towards man.

This does not mean a change in God's love. The Bible is very clear that God's love to man never varies no matter what man may do. Indeed, the whole atoning work of Christ stems from God's great love. It was 'while we were yet sinners' that

'Christ died for us' (Rom. 5:8). This truth must be zealously guarded. But at the same time we must not allow ourselves to slip into the position of maintaining that reconciliation is a purely subjective process. Reconciliation in some sense was effected outside man before anything happened within man. Paul can speak of Christ 'through whom we have now received our reconciliation' (Rom. 5:11). A reconciliation that can be 'received' must be proffered (and thus in some sense accomplished) before men received it. In other words, we must think of reconciliation as having effects both God-ward and man-ward.

L. M.

REDEEMER, REDEMPTION. Redemption means deliverance from some evil by payment of a price. It is more than simple deliverance. Thus prisoners of war might be released on payment of a price which was called a 'ransom' (Gk. *lytron*). The word-group based on *lytron* was formed specifically to convey this idea of release on payment of ransom. In this circle of ideas Christ's death may be regarded as 'a ransom for many' (Mk. 10:45).

Again, slaves might be released by a process of ransom. In the fictitious purchase by a god the slave would pay the price of his freedom into the temple treasury. Then he would go through the solemn formality of being sold to the god 'for freedom'. Technically he was still the slave of the god, and some pious obligations might accordingly be laid upon him. But as far as men were concerned he was thenceforth free. Alternatively, the slave might simply pay his master the price. The characteristic thing about either form of release is the payment of the ransom price (*lytron*). 'Redemption' is the name given to the process.

Among the Hebrews we may discern a different situation, well illustrated in Ex. 21:28-30. If a man had a dangerous ox he must keep it under restraint. If it got out and gored someone so that he died the law was plain, 'the ox shall be stoned, and its owner also shall be put to death'. But this is not a case of wilful murder. There is no malice aforethought. Thus, it is provided that a ransom (Heb. *kōḥper*) might be 'laid on him'. He could pay a sum of money and thus redeem his forfeited life.

Other usages of redemption in antiquity provide for the redemption of property, *etc.*, but the three we have noticed are the most important. Common to them all is the idea of freedom secured by payment of a price. Outside the Bible the usage is practically unvarying. A few metaphorical passages occur, but these serve only to make clear the basic meaning of the word. The payment of a price for deliverance is the basic and characteristic thing.

It is this which makes the concept so useful for the early Christians. Jesus had taught them that 'everyone who commits sin is a slave to sin' (Jn. 8:34). In line with this, Paul can think of himself as 'carnal, sold under sin' (Rom. 7:14), sold as under a cruel slave-master. He reminds the Romans that in earlier days they had been 'slaves of sin' (Rom.

6:17). From another point of view men were under sentence of death on account of their sin. 'For the wages of sin is death' (Rom. 6:23). Sinners are slaves. Sinners are doomed to death. Either way the ancient world would have regarded the situation as crying out for redemption. Failing redemption, the slavery would continue, the sentence of death be carried out. The cross of Christ is seen against this background. It is the price paid to release the slaves, to let the condemned go free.

What gives the metaphor force is the constant presence of the price-paying idea. But it is precisely this that is disputed by some who think that redemption is no more than another way of saying 'deliverance'. The big reason for thinking this is that there are some OT passages where Yahweh is said to have redeemed his people (Ex. 6:6; Ps. 77:14f., *etc.*), and it is unthinkable that he should pay a price to anyone. But too much is being deduced. The metaphor has not been robbed of its point (*cf.* the saying 'he sold his life dearly'). Sometimes in the OT Yahweh is thought of as being so powerful that all the might of the nations is but a puny thing before him. But redemption is not used in such passages. Where redemption occurs there is the thought of effort. Yahweh redeems 'with a stretched out arm'. He makes known his strength. Because he loves his people he redeems them at cost to himself. His effort is regarded as the 'price'. This is the whole point of using the redemption terminology.

The characteristic NT word for redemption is *apolytrōsis*, a comparatively rare word elsewhere. It is found ten times in the NT but apparently there are only eight occurrences in all the rest of Gk. literature. This may express the conviction of the early Christians that the redemption wrought in Christ was unique. It does not mean, as some have thought, that they understand redemption simply as 'deliverance'. For that they use such a word as *rhyomai*, 'rescue'. *apolytrōsis* means deliverance on payment of a price, and that price is the atoning death of the Saviour. When we read of 'redemption through his blood' (Eph. 1:7), the blood of Christ is clearly being regarded as the price of redemption. It is not otherwise with Rom. 3:24f., 'Being justified freely by his grace through the redemption that is in Christ Jesus: whom God hath set forth to be a propitiation through faith in his blood' (AV). Here Paul is using three metaphors, those of the law court, and of the sacrifices, and of manumission. Our concern is with the last. Paul envisages a process of freeing, but by the payment of a price, the blood of Christ. Redemption is linked with Christ's death also in Heb. 9:15. Sometimes, again, we have the mention of price, but not redemption, as in references to being 'bought with a price' (1 Cor. 6:19f.; 7:22f.). The basic idea is the same. Christ bought men at the price of his blood. In Gal. 3:13 the price of redemption is given thus: 'having become a curse for us'. Christ redeemed us by taking our place, by bearing our curse. This points us to the definitely substitutionary idea in redemption, an idea which sometimes receives stress, as in Mk. 10:45 ('a ransom for many').

Redemption not only looks back to Calvary, but forward to the freedom in which the redeemed stand. 'You were bought with a price,' Paul can say, 'so glorify God in your body' (1 Cor. 6:20). Precisely because they have been redeemed at such a cost believers must be God's men. They must show

REDEEMER, REDEMPTION

in their lives that they are no longer caught up in the bondage from which they have been released and are exhorted to 'stand fast therefore in the liberty wherewith Christ hath made us free' (Gal. 5:1, AV).

RED SEA. In modern geography, the sea that divides NE Africa from Arabia and extends some 1,900 km from the straits of Bab el-Mandeb near Aden N to the S tip of the Sinai peninsula. For nearly another 300 km, the Gulfs of Suez and Aqabah continue the sea N on the W and E sides of the Sinai peninsula respectively. In classical antiquity the name Red Sea (*erythra thalassa*) included also the Arabian and Indian Seas to the NW coast of India. In the OT the term *yam sūp*, 'sea of reeds' (and/or 'weed'), is used to cover: (a) the Bitter Lakes region in the Egyptian Delta N of Suez along the line of the present Suez Canal; and (b) the Gulfs of Suez and Aqabah and possibly the Red Sea proper beyond these.

I. The Bitter Lakes region

In general terms, the Israelites were led from Egypt on the way of the wilderness and the *yam sūp* (Ex. 13:18). Ex. 14 and 15 are more specific: on leaving Succoth (Tell el-Maskhuta) and Etham, Israel were to turn back and camp before Pihahiroth, between Migdol and the 'sea', before Baal-zephon (Ex. 14:1–2, 9; cf. *ENCAMPMENT BY THE SEA). It was this 'sea', near all these places, that God drove back and divided by a 'strong east wind' for Israel to cross dryshod, and then brought back upon the pursuing Egyptians (Ex. 14:16, 21–31; 15:1, 4, 19, 21). From the 'sea of reeds', *yam sūp*, Israel went into the wilderness of Shur (Ex. 15:22; Nu. 33:8) and then on towards Sinai. Various points suggest that this famous crossing, the Exodus in the narrow sense, took place in the Bitter Lakes region, roughly between Qantara (48 km S of Port Saïd) and just N of Suez. First, geographically, the wilderness of Shur, which Israel entered directly from crossing the *yam sūp* (Ex. 15:22), is opposite this very area (*SHUR). Secondly, geophysically, the reedy waters of the Bitter Lakes and Lake Menzaleh can be affected by strong E winds precisely in the way described in Ex. 14:21 and experienced on a small scale by Aly Shafei Bey in 1945–6 (*Bulletin de la Société Royale de Géographie d'Égypte* 21, August 1946, pp. 231ff.; cf. also *JTVI* 28, 1894–5, pp. 267–280). Thirdly, philologically, the Heb. word *sūp* is generally admitted to be a loanword from Egyp. *twf(y)*, 'papyrus', and *p-twf*, a location, 'the papyrus-marshes' *par excellence* in the NE part of the Delta between Tanis (Zoan), Qantir and the present line of the Suez Canal N of Ismailia, on the former Pelusiac arm of the Nile. For details and references, see A. H. Gardiner, *Ancient Egyptian Onomastica*, 2, 1947, pp. 201*–202*; R. A. Caminos, *Late-Egyptian Miscellanies*, 1954, p. 79; Erman and Grapow, *Wörterbuch d. Aegypt. Sprache*, 5, 1931, p. 359: 6–10. Ps. 78:12, 43, puts the great events preceding the Exodus in the 'field of Zoan', *i.e.* in the NE Delta. There is no sufficient factual basis for taking *sūp* to mean 'end'; more likely it is derived

from the Egyptian *twf*, despite F. Batto, *JBL* 102, 1983, pp. 27–35, and *BAR* 10/4, 1984, pp. 57–62; cf. survey, J. R. Huddleston, *ABD* 5, 1992, pp. 633–642.

II. The Gulfs of Suez and Aqabah

Turning S from Shur *via* Etham, Marah and Elim, the Israelites pitched by the *yam sūp* and then went on to Sin and Dophkah (Nu. 33:10–11). This would appear to refer to the Gulf of Suez. Whether Ex. 10:19 during the plagues refers to the Lakes region, the Gulf of Suez or the Red Sea proper is not certain; see *Plagues of Egypt (eighth plague) and G. Hort, *ZAW* 70, 1958, pp. 51–52. The *yam sūp* of Ex. 23:31 is ambiguous, but perhaps it is the Gulf of Aqabah.

Various references clearly show that the term *yam sūp* applied to the Gulf of Aqabah. After their first halt at Kadesh-barnea (*KADESH), the Israelites were ordered into the wilderness by the way to the *yam sūp* (Nu. 14:25; Dt. 1:40; 2:1), *i.e.* by the Arabah towards the Gulf of Aqabah as suggested by the physical circumstances in which the earth swallowed Korah and his company (*WILDERNESS OF WANDERING; G. Hort, *Australian Biblical Review* 7, 1959, pp. 19–26). After a second sojourn at Kadesh, Israel went by the way of the *yam sūp* to go round Edom (Nu. 21:4; Jdg. 11:16), again with reference to the Gulf of Aqabah. Solomon's seaport of Ezion-geber or *Elath on this gulf is placed on the *yam sūp* by 1 Ki. 9:26; Teman in Edom is associated with it (Je. 49:21).

The use of the term *yam sūp* to refer to a wider area than the reedy lakes or the N arms of the Red Sea is not unparalleled. About 1470 BC, for example, Egyp. texts of a single epoch can use the name *Wadj-wer*, 'Great Green (Sea)', of both the Mediterranean and Red Seas (Erman-Grapow, *op. cit.*, 1, p. 269: 13–14, references), and *Ta-neter*, 'God's Land', of both Punt (E Sudan?) in particular and E lands generally (*ibid.*, 5, p. 225: 1–4, references). K.A.K.

REFINER, REFINING. The Heb. root *srp* expresses the melting, testing, and refining of metals, especially precious metals such as gold and silver. This same terminology was also used of God testing men and of God's tried and tested word. A less-common term for refining or purifying was *zqq*. In the ancient world crude metal was customarily remelted to remove impurities and to make metal castings (tools, weapons, images, *etc.*). The metal was heated in pottery crucibles (Pr. 17:3; 27:21) in ovens or hearths, bellows often being used to provide a draught to create greater heat.

The Heb. term *sōrēp* for refiner, metal-worker, is often rendered as goldsmith in evv. In the days of the Judges Micah's mother had a silver image cast (Jdg. 17:4), while much later Isaiah (40:19; 41:7; 46:6) and Jeremiah (10:8–9; 51:17) graphically describe the futile manufacture of metal and metal-plated idols. David provided refined gold and silver for the future Temple at Jerusalem (1 Ch. 28:18; 29:4); various metal-smiths shared in the repair of Jerusalem's walls under Nehemiah (Ne. 3:8, 31–32).

God, like a master-refiner seeking the pure metal, is often said to try or test (*srp*) men's hearts. Cf. Jdg. 7:4 (Gideon's men); Pss. 17:3b; 26:2b; 66:10; 105:19; Is. 48:10; Je. 9:7; Zc. 13:9; Mal. 3:2–3. See also the graphic pictures in Ps. 12:6 and Pr.

30:5 of God's Word. For the latter concept, cf. also 2 Sa. 22:31 (= Ps. 18:30); Ps. 119:140. Pure metal was used for casting (cf. Pr. 25:4). God sought to purify his people from sin as the removal of dross and alloy (Is. 1:25), but in simile even a fire heated with the bellows was sometimes not enough to do this (Je. 6:29-30). Trials are sometimes used to refine men, and the wise refine (purify) themselves (Dn. 11:35; 12:10). Wine is once so referred to (Is. 25:6). (*ARTS AND CRAFTS.)

REGENERATION. The Gk. noun *palingenesia* occurs only twice in the NT (Mt. 19:28, rsv 'new world', av 'regeneration'; Tit. 3:5, 'regeneration'). In the Mt. passage it is used eschatologically to refer to the restoration of all things, reminding us that the renewal of the individual is part of a wider and cosmic renewal. In Tit. the word is used with an individual reference.

Elsewhere various words are used to express the change which the Holy Spirit effects. *gennaō* (with *anōthen*, Jn. 3:3, 7), meaning 'to beget' or 'give birth to', is used in Jn. 1:13; 3:3-8; 1 Jn. 2:29; 3:9; 4:7; 5:1, 4, 18. In 1 Pet. 1:3, 23 the word *anagennaō*—'to beget again' or 'to bring again to birth'—is found. These words are used to describe the initial act of renewal. The words *anakainōsis* (Rom. 12:2; Tit. 3:5) with the verb *anakainōō* (2 Cor. 4:16; Col. 3:10) denote a making anew or renewing. The references will indicate that the use of these two words is not limited to the initial renewal but extends to the resultant process. We may note with reference to the result of the new birth such terms as *kainē ktisis*, 'a new creation' (2 Cor. 5:17; Gal. 6:15), and *kainos anthrōpos*, 'a new man' (Eph. 2:15; 4:24). Twice we have the term *synzōopoieō*, 'to make alive with' (Eph. 2:5; Col. 2:13), which hints at a change, not only as dramatic as birth, but as dramatic as resurrection. *apokyeō* (Jas. 1:18) denotes to bear or bring forth.

Surveying these terms, we notice that they all indicate a drastic and dramatic change which may be likened to birth, rebirth, re-creation or even resurrection. Several of the terms in their context indicate that this change has permanent and far-reaching effects in its subject.

I. Old Testament presentation

The idea of regeneration is more prominent in the NT than in the OT. Many OT passages have the concept of national renewal. This thought is present in the statements concerning the new covenant and the law being written in the heart or the giving of a new heart (Je. 24:7; 31:31f.; 32:38f.; Ezk. 11:19; 36:25-27, and the 'valley of dry bones' passage, 37:1-14).

Although it is the nation that is in view in these scriptures, a nation can be renewed only when the individuals within it are changed. Thus, in the very idea of national renewal we find the concept of 'new hearts' being given to individuals. Other pas-

sages deal more directly with the individual (cf. Is. 57:15). We notice especially Ps. 51, where David's prayer is expressed in v. 10. Considering the serious view of sin and its effects expressed in this Psalm, it is hardly surprising to find more than a hint of the need for individual renewal.

II. New Testament presentation

This doctrine must be considered in the context of man in sin (Jn. 3:6; Eph. 2:1-3, 5). The effects of sin on human nature are considered to be so serious that, without the new birth, the sinner cannot see, let alone enter into, the kingdom of God (Jn. 3:3, 5; cf. 1 Cor. 2:6-16).

The initiative in regeneration is ascribed to God (Jn. 1:13); it is from above (Jn. 3:3, 7) and of the Spirit (Jn. 3:5, 8). The same idea occurs in Eph. 2:4-5; 1 Jn. 2:29; 4:7; etc. This divine act is decisive and once for all. Aorists are used in Jn. 1:13; 3:3, 5, 7. The use of perfects indicates that this single, initial act carries with it far-reaching effects, as in 1 Jn. 2:29; 3:9; 4:7; 5:1, 4, 18. The abiding results given in these passages are doing righteousness, not committing sin, loving one another, believing that Jesus is the Christ, and overcoming the world. These results indicate that in spiritual matters man is not altogether passive. He is passive in the new birth; God acts on him. But the result of such an act is far-reaching activity; he actively repents, believes in Christ, and henceforth walks in newness of life.

Jn. 3:8 serves to warn us that there is much in this subject that is inscrutable. Yet we must inquire what actually happens to the individual in the new birth. It would be safe to say that there is no change in the personality itself; the person is the same. But now he is differently controlled. Before the new birth sin controlled the man and made him a rebel against God; now the Spirit controls him and directs him towards God. The regenerate man walks after the Spirit, lives in the Spirit, is led by the Spirit, and is commanded to be filled with the Spirit (Rom. 8:4, 9, 14; Eph. 5:18). He is not perfect; he has to grow and progress (1 Pet. 2:2), but in every department of his personality he is directed towards God.

We may define regeneration as a drastic act on fallen human nature by the Holy Spirit, leading to a change in the person's whole outlook. He can now be described as a new man who seeks, finds and follows God in Christ.

III. The means of regeneration

In 1 Pet. 3:21 baptism is closely connected with entry into a state of salvation, and in Tit. 3:5 we have the reference to the washing of regeneration. 1 Pet. 1:23 and Jas. 1:18 mention the Word of God as a means of new birth. Many, from such scriptures, contend that these are the necessary channels by which regeneration comes to us. With 1 Cor. 2:7-16 in mind, we must question whether the Word of God is a means of regeneration in this way. Here we are clearly taught that the natural man is in such a state that he cannot receive the things of the Spirit of God. A divine intervention which makes the natural man receptive to God's Word must be antecedent to hearing the Word in a saving manner. When this has occurred the Word of God brings the new life into expression. It is clear that the new birth of 1 Pet. 1:23; Jas. 1:18 is conceived more comprehensively than in John. John distinguishes between regeneration and the

REGENERATION

faith which results from it (e.g. Jn. 1:12-13; 1 Jn. 5:1); Peter and James, by including the reference to the Word as the means, show that they have in mind the whole process whereby God brings men to conscious faith in Christ.

We can also think of the issue in terms of conception and birth. The Holy Spirit plants or begets new life by a direct action on the soul. It is subsequently brought to the birth (*apokryeō*, Jas. 1:18) by the word. *gennaō* (1 Pet. 1:23) can have the meaning of birth as well as begetting.

There are further biblical objections to the idea that baptism itself conveys regenerating grace. To look at baptism in this *ex opere operato* manner is contrary to other scriptures, especially the prophetic protest against the abuse of priestly rites, and Paul's strictures on Jewish views concerning circumcision (cf. Rom. 2:28f.; 4:9-12). We actually have incidents of conversion without baptism (Acts 10:44-48; 16:14-15). The latter case is especially interesting, for the opening of Lydia's heart is specifically mentioned before baptism. If it be argued that things are different concerning Christians of subsequent generations, Paul's attitude to similar views with regard to circumcision ought to settle the issue. Regenerating grace comes direct by the Spirit to lost sinners. The Word of God brings it into expression in faith and repentance. *Baptism bears witness to the spiritual union with Christ in death and resurrection through which new *life is conveyed, but does not convey it automatically where *faith is not present.

REHOB (Heb. *r'ḥōb*, 'open place, market-place [of town or village]', a name occurring in the Bible as a personal and as a place-name).

1. The most N city observed by Joshua's spies in Canaan (Nu. 13:21). It was an Aramaean centre which supplied the Ammonites with troops in the time of David (2 Sa. 10:6-8). The name is written 'Beth-rehob' in 2 Sa. 10:6 and in Jdg. 18:28, which latter passage suggests that it was situated near the source of the Jordan, though the precise location is unknown.

2. A city in Canaan which fell to the lot of Asher (Jos. 19:28, 30) and was declared a levitical city (Jos. 21:31; 1 Ch. 6:75), though it was among the cities not taken at the time of the Conquest (Jdg. 1:31). Identification with Tell Bir el-Gharbi (Tel Bira), SE of Acco, is proposed; see *NEAEHL*, pp. 262-263.

3. The father of Hadadzezer, the king of Zobah in the time of David (2 Sa. 8:3, 12). Compare Ruḥubi, the name of the father of Ba'sa, the Ammonite ally of Ahab at the battle of Qarqar in 854 BC (Shalmaneser III, Kurḥ Stele 2. 95).

4. One of the Levites who sealed the covenant in the time of Nehemiah (Ne. 10:11).

(*REHOBOTH; *REHOBOTH-IR.)

BIBLIOGRAPHY. W. F. Albright, *BASOR* 83, 1941, p. 33; H. Tadmor, *Scripta Hierosolymitana* 8, 1961, p. 245. T.C.M.

REHOBOAM (Heb. *r'ḥab'ām*, 'expansion of the people'). The son of *Solomon and Naamah who, upon his father's death, became the last king of a united Israel and the first of the S kingdom of Judah.

The chronology of Rehoboam's reign is disputed. Assuming a 17-year reign (1 Ki. 14:21; 2 Ch. 12:13) the dating would be c. 931-913 BC (*CHRONOLOGY OF THE OT), but some have truncated the reign to c. 922-915 BC (W. F. Albright, *BASOR* 100, 1945, pp. 16-22).

The oppressive measures needed by Solomon to ensure the funds for his public and royal expenditures led to a confrontation between Rehoboam and the N kingdom. His arrogance led him to accept ill-considered advice to increase this burden, which Israel would not accept. When Rehoboam sent his *corvée*-officer to the N, he was stoned, and *Jeroboam was made king over the ten tribes of Israel (1 Ki. 12:1-20; 2 Ch. 10). When Rehoboam mustered troops to quell the revolt, Shemaiah, a prophet, forestalled him (1 Ki. 12:21-24).

Judah built fortified towns (2 Ch. 11:5-12), probably against incursions by the Philistines (cf. 1 Ki. 15:27; 16:15) and Egypt. Rehoboam was also in conflict with Israel (14:30), from which the priests and Levites had fled, in reaction to the pagan practices there (2 Ch. 11:13-17). The Egypt. king, *Shishak (Shosheng), came against Palestine c. 926 BC and plundered it from end to end (*LOB*, pp. 283-290; fully studied by K. A. Kitchen, *The Third Intermediate Period in Egypt*, 1972, pp. 432-447), pillaging Jerusalem (1 Ki. 14:25-27).

Pagan cultic practices appeared in Judah (1 Ki. 14:22-24), possibly influenced by the presence of foreign women in important positions, such as the king's mother, Naamah (1 Ki. 14:21, 31), and his favourite wife, Maacah (15:13; cf. W. F. Albright, *Archaeology and the Religion of Israel*, 1968, pp. 152f.). When Shemaiah the prophet pointed out that the invasion by Egypt was divine punishment for this apostasy, Rehoboam repented (2 Ch. 12:5-8, 12).

When he died, Rehoboam was buried in Jerusalem, 'with his fathers' (1 Ki. 14:31; 2 Ch. 12:16). His name is mentioned in the genealogy of Jesus (Mt. 1:7). D.W.B.

REHOBOTH (Heb. *r'ḥōbōt*, 'broad places, room'; LXX *eurychōria*). 1. A well dug by Isaac near Gerar (Gn. 26:22), so named because no quarrel ensued with the herdsmen of Gerar. 2. A city 'by the river' (Gn. 36:37), probably beside the Wadi el-Hesā, which divides Moab from Edom. 'The River' is normally the Euphrates (see RSV), but the context here forbids it. J.W.C.

REHOBOTH-IR (Heb. *r'ḥōbōt 'ir*). One of four cities built by As(s)hur (RSV *NIMROD) in Assyria (Gn. 10:11-12). Of these Nineveh and Calah are well known, but no Assyrian equivalent is known for this place. Since the large and ancient city of Aššur (80 km S of Nineveh) would be expected in the context, some consider this name an interpretation from the Sum. *AŠ.UR* (*AŠ* = Assyrian *rebātu*; *UR* = Assyrian *ālu*; Heb. *'ir*). A suburb of Nineveh (*rebit Ninua*) is mentioned in Assyrian.

texts (Esarhaddon), and this may have been founded at the same time. The phrase 'open-places of the city' may here be a description of Nineveh itself. The LXX read as a proper name (*Rhoöbôth*).

BIBLIOGRAPHY. G. Dossin, *Le Muséon* 47, 1934, pp. 108ff.; J. M. Sasson, *RB* 90, 1983, pp. 94-96.
D.J.W.

REHUM. A name borne by several men in post-exilic times, including Rehum the 'commander' (RSV), or 'high commissioner' (NEB), who joined in writing the letter of complaint in Ezr. 4:8. His title *b'el t'ēm* means 'lord of judgment' (or 'report'), and may refer either to administration or to communication (A. H. Sayce suggested 'postmaster').
J.S.W.

REI. Occurs in 1 Ki. 1:8 only. EVV render it as a personal name, thus linking Rei with the group of Solomon's supporters. J. Taylor (*HDB*, *ad loc.*) suggests that he was an officer of the royal guard. Josephus (*Ant.* 7. 346) translates 'the friend of David' instead of 'and Rei, and the mighty men which belonged to David', but this indicates that he was probably following a shorter Heb. text, and the longer form is difficult to account for if it is not original. Suggested conjectural emendations and identification with other persons of the Davidic period are unconvincing.
G.W.G.

RELIGION. The word 'religion' came into Eng. from the Vulg., where *religio* is in a 13th-century paraphrase of Jas. 1:26f. In Acts 26:5 it denotes Judaism (*cf.* Gal. 1:13f.). Here and in the Apocrypha, *thrēskeia* refers to the outward expression of belief, not the content, as when we contrast the Christian religion with Buddhism. RSV uses the word, however, in something approaching this sense in 1 Tim. 3:16, to translate Gk. *eusebeia* (AV 'godliness'), and in 2 Tim. 3:5, where again our instinct would be to use the word 'Christianity'. Because of the association of *thrēskeia* with Judaism, James's use is probably ironical. The things which he calls the elements of 'thrēskeia' that is pure and undefiled' would not in the view of his opponents, who restricted it to ritual, have counted as *thrēskeia* at all.

Hesitance today in using the word 'religion' either of the content of the Christian faith or of its expression in worship and service, is due to the conviction that Christianity is not simply one among many religions, but differs from all others in that its content is divinely revealed and its outward expression by believers is not an attempt to secure salvation but a thank-offering for it.

J.B.J.

REPENTANCE. In the OT two words are regularly translated 'repent' or some near equivalent—*nāham* ('be sorry, change one's mind') and *šūb* (in the sense, 'turn back, return').

nāham is used infrequently of man (Ex. 13:17; Jb. 42:6; Je. 8:6; 31:19), but regularly of God, where it is often said that God 'repents of evil' proposed or initiated. This vigorous speech arises out of Israel's understanding of God's attitude to men in terms of personal relationship. The lan-

guage of course did not imply anything fickle or arbitrary on God's side, but simply that the *relation* was a changing one. In particular, when man removes himself by his self-will from God's direction and care he finds that the God-willed consequence of his evil is more evil (Gn. 6:6f.; 1 Sa. 15:11, 35; 2 Sa. 24:16; Je. 18:10). But whoever repents, even at the eleventh hour, whoever turns (again) to God, finds a God of mercy and love, not of judgment (Je. 18:8; 26:3, 13, 19; Jon. 3:9f.; the importance of the intercessor who is willing to stand before God on behalf of his people is emphasized in Ex. 32:12-14 and Am. 7:3, 6). So even though God's firmness of judgment against *sin is in no doubt (Nu. 23:19; 1 Sa. 15:29; Ps. 110:4; Je. 4:28; Ezk. 24:14; Zc. 8:14), he has shown himself more often as a gracious God, faithful to his people even when they are faithless—a God, in other words, 'who repents of evil' (Ex. 32:14; Dt. 32:36; Jdg. 2:18; 1 Ch. 21:15; Pss. 106:45; 135:14; Je. 42:10; Joel 2:13f.; Jon. 4:2).

The call for repentance on the part of man is a call for him to return (*šūb*) to his creaturely (and covenant) dependence on God. Such calls are particularly frequent in the pre-exilic prophets. Am. 4:6-11 makes it clear that the evil that God intends as a consequence of Israel's sin is not malicious or vindictive, but rather is intended to bring Israel to repentance. He who commits evil finds further evil willed by God. But he who repents of his evil finds a God who repents of *his* evil. One of the most eloquent pleas for repentance comes in Ho. 6:1-3 and 14:1-2—a plea alternating with hope and despair (3:5; 5:4; 7:10), with 11:1-11 particularly poignant. Equally moving are the hopes of Isaiah expressed in the name of his son, Shearjashub ('a remnant shall return', 7:3; see also 10:21f.; 30:15; *cf.* 19:22) and the pleadings of Jeremiah (3:1-4:4; 8:4-7; 14:1-22; 15:15-21), both mingled with foreboding and despair (Is. 6:10; 9:13; Je. 13:23).

Other powerful expressions are Dt. 30:1-10; 1 Ki. 8:33-40, 46-53; 2 Ch. 7:14; Is. 55:6-7; Ezk. 18:21-24, 30-32; 33:11-16; Joel 2:12-14. See also particularly 1 Sa. 7:3; 2 Ki. 17:13; 2 Ch. 15:4; 30:6-9; Ne. 1:9; Ps. 78:34; Ezk. 14:6; Dn. 9:3; Zc. 1:3f.; Mal. 3:7. The classic example of national repentance was that led by Josiah (2 Ki. 22-23; 2 Ch. 34-35).

In the NT the words translated 'repent' are *metanoō* and *metamelomai*. In Gk. they usually mean 'to change one's mind', and so also 'to regret, feel remorse' (*i.e.* over the view previously held). This note of remorse is present in the parable of the tax collector (Lk. 18:13), probably in Mt. 21:29, 32; 27:3 and Lk. 17:4 ('I am sorry'), and most explicitly in 2 Cor. 7:8-10. But the NT usage is much more influenced by the OT *šūb*; that is, repentance not just as a feeling sorry, or changing one's mind, but as a turning round, a complete alteration of the basic motivation and direction of one's life. This is why the best translation for *metanoō* is often 'to convert', that is, 'to turn round' (*CONVERSION). It also helps to explain why John the Baptist demanded *baptism as an expression of this repentance, not just for obvious 'sinners', but for 'righteous' Jews as well—baptism as a decisive act of turning from the old way of life and a throwing oneself on the mercy of the Coming One (Mt. 3:2, 11; Mk. 1:4; Lk. 3:3, 8; Acts 13:24; 19:4).

Jesus' call for repentance receives little explicit

REPENTANCE

mention in Mk. (1:15; cf. 6:12) and Mt. (4:17; 11:20f.; 12:41), but is emphasized by Lk. (5:32; 10:13; 11:32; 13:3, 5; 15:7, 10; 16:30; 17:3f.; cf. 24:47). Other sayings and incidents in all three Gospels, however, express very clearly the character of the repentance which Jesus' whole ministry demanded. Its radical nature, as a complete turning round and return, is emphasized by the parable of the Prodigal Son (Lk. 15:11-24). Its unconditional character appears from the parable of the Pharisee and tax collector—repentance means acknowledging that one has no possible claim upon God, and submitting oneself without excuse or attempted justification to God's mercy (Lk. 18:13). The 'turn round' in previous values and life-style is highlighted by the encounter with the rich young man (Mk. 10:17-22) and Zacchaeus (Lk. 19:8). Above all, Mt. 18:3 makes it clear that to convert is to become like a child, that is, to acknowledge one's immaturity before God, one's inability to live life apart from God, to accept one's total dependence on God.

The call for repentance (and promise of forgiveness) features regularly in Luke's record of the preaching of the first Christians (Acts 2:38; 3:19; 8:22; 17:30; 20:21; 26:20). Here *metanoō* is complemented by *epistrephō* ('to turn round, return'—Acts 3:19; 9:35; 11:21; 14:15; 15:19; 26:18, 20; 28:27), where *metanoō* means more a turning away (from sin) and *epistrephō* a turning to (God) (see particularly Acts 3:19; 26:20), though each by itself can embrace both senses (as in Acts 11:18; 1 Thes. 1:9).

It is clear from Acts 5:31 and 11:18 that no difficulty was felt in describing repentance both as God's gift and as man's responsibility. At the same time Is. 6:9-10 is cited several times as an explanation of men's failure to convert (Mt. 13:14f.; Mk. 4:12; Jn. 12:40; Acts 28:26f.).

The writer to the Hebrews also indicates the importance of initial repentance (6:1), but whereas he questions the possibility of a second repentance (6:4-6; 12:17), others are even more emphatic in their belief that *Christians* can and need to repent (2 Cor. 7:9f.; 12:21; Jas. 5:19f.; 1 Jn. 1:5-2:2; Rev. 2:5, 16, 21f.; 3:3, 19).

There are only a few other references to repentance in the NT (Rom. 2:4; 2 Tim. 2:25; 2 Pet. 3:9; Rev. 9:20f.; 16:9, 11). We should not assume that talk of repentance and *forgiveness invariably featured in the earliest preaching. In particular Paul rarely uses either concept, and they do not occur at all in the Gospel and Epistles of John, whereas both strongly emphasize that the Christian life starts from the positive commitment of *faith.

J.D.G.D.

REPHAIM (Heb. *r'pā'im*). One of the pre-Israelite peoples of Palestine mentioned, together with the *Zuzim* and *Emim*, in the time of Abraham

as having been defeated by Chedorlaomer (Gn. 14:5). They are also listed among the inhabitants of the land God promised to Abraham's seed (Gn. 15:20). At the time of the conquest the Rephaim seem to have inhabited a wide area, but were known by different local names. In Moab the Moabites, who succeeded them there, called them **Emim* (Dt. 2:11), and likewise in Ammon, where they preceded the Ammonites, they were known as **Zamzumim* (Dt. 2:20-21).

They were a formidable people, being compared in stature with the *Anakim* (**ANAK*) (Dt. 2:21), and LXX renders the name by *gigas*, 'giant' in Gn. 14:5; Jos. 12:4; 13:12, and 1 Ch. 11:15; 14:9; 20:4, a rendering adopted by AV in Dt. 2:11, 20; 3:11, 13; Jos. 12:4; 13:12; 15:8; 17:15; 18:16; 1 Ch. 20:4. (LXX translates it *Titanes* in 2 Sa. 5:18, 22.)

It may be that the forms *rāpā'* and *rāpā* (2 Sa. 21:16, 18, 20, 22; 1 Ch. 20:6, 8), which are rendered 'giant' in EVV (LXX *gigas* in 2 Sa. 21:22; 1 Ch. 20:6), are variant forms of the name *r'pā'im*, but the context of these occurrences, in connection with a Philistine, is perhaps better suited by the meaning *'giant'. The name is unknown in an ethnic sense outside the Bible.

In Ps. 88:11 (v. 10, rsv); Pr. 2:18; 9:18; 21:16; Jb. 26:5; Is. 14:9; 26:14, 19, the word *r'pā'im* occurs in the sense of 'ghosts of the dead', and it is suggested by some that the name Rephaim was applied by the Israelites to the early inhabitants of the land as persons long since dead. The word occurs in Ugaritic (*rp'im*), perhaps referring to a class of minor gods or a sacred guild, though the meaning is uncertain, and in Phoenician tomb inscriptions (*rp'm*) in the sense of 'ghost'.

T.C.M.

REPHAN (AV **REMPHAN**). The name of a god identified or connected with the planet Saturn, quoted in Acts 7:43 from the LXX of Am. 5:26. The LXX reading, *Rhaiphān* (cod. B, A; *Rhemphan* 239), is thought by some to be a mistaken transliteration of the MT reading, *kiyyūn* (RSV **KAIWAN*, AV *Chiun*), by others to be a deliberate substitution of *Repa*, a name of Seb, the Egypt. god of the planet Saturn.

D.W.G.

REPHIDIM. The last stopping-place of the Israelites on the Exodus from Egypt, before they reached Mt Sinai (Ex. 17:1; 19:2; Nu. 33:14-15). Here the Israelites under Joshua fought against Amalek, and the successful outcome of the battle depended on Moses' holding up his hands, which he did with the support of Aaron and Hur (Ex. 17:8-16). After the battle, Jethro, Moses' father-in-law, persuaded Moses to give up judging the people entirely by himself, and to appoint deputies for this purpose (Ex. 18). The site of Rephidim is uncertain, the usual suggestion being the Wadi Refayid in SW Sinai.

BIBLIOGRAPHY. B. Rothenberg, *God's Wilderness*, 1961, pp. 143, 168.

T.C.M.

REPROBATE. It is convenient to retain the AV term as a heading under which to include words used in rsv (unfit, refuse, dross, disqualified) to

translate Heb. and Gk. equivalents which present the idea of divine investigation leading to rejection because of an ineradicable sin. OT prophets compare the sin of Israel to impurity in metal (Is. 1:22; Je. 6:30; Ezk. 22:19–20). In Je. 6:30, 'Refuse silver they are called, for the Lord has rejected them', the Heb. verb *mā'as* is rendered 'reprobate' in AV (AVMG., RSV, RV 'refuse'), i.e. 'tested and rejected by Yahweh because of ineradicable sin'. In Is. 1:22 LXX renders Heb. *siḡim* by the adjective *adokimos*, which occurs eight times in the NT with the meaning 'rejected after a searching test'.

In Rom. 1:28, the Gk. puns *dokimazein* with *adokimos*. and may be rendered 'since they did not see fit to retain God in their mind he handed them over to an unfit mind', where 'unfit' (AV 'reprobate', AVMG. 'a mind void of judgment') means 'unfit to pass judgment', in the active or passive sense, because of wickedness, etc. (vv. 29–30).

In 1 Cor. 9:27 Paul concludes 'an exhortation to self-denial and exertion' (Hodge), given in athletic metaphors, by attributing his personal bodily discipline to fear of disqualification, 'lest I . . . be disqualified (*adokimos*)'. But from what? Salvation or ministerial reward? The context favours reward (cf. 3:10–15) and stresses the need of ceaseless vigilance against sin (cf. 10:12). The remaining occurrences of *adokimos* are in 2 Cor. 13:5–7, where the test proposed is 'whether you are holding to your faith', and the context implies that faith has empirical proofs, lacking which the Corinthians are failures, and even Paul himself would be a failure, since he would be unable to demonstrate his apostolic authority; in 2 Tim. 3:8 and in Tit. 1:16, where *adokimos* means 'proved to be morally worthless'; and in Heb. 6:8, where 'barren' (*adokimos*) soil illustrates the situation of hardened backsliders. None of these occurrences necessarily implies judicial abandonment to *perdition, yet all are consonant with such a doctrine: in each case the rejection follows demonstrable faults; in some God, in others man, makes the test. The human verdict anticipates the divine.

RESEN (Gk. *Dasen*). The city located between Nineveh and Calah founded by *Nimrod or Ashur (so AV) and with them part of a great populated area (Gn. 10:12). *rēs-ēni* ('fountain-head') designated a number of places in Assyria. The sites of this name on the Iḡabur and Khosr Rivers (NE of Nineveh) do not, however, easily fit the geographical situation given in Gn. 10. The proposed equation with Selamiyeh (3 km N of Calah) is based on the false identification of this place with Larissa (Xenophon, *Anabasis* 3. 4), now known to be the Gk. name for Calah itself. A possible site for Resen is the early ruins of Hamam Ali with its adjacent sulphur springs on the right bank of the river Tigris about 13 km S of Nineveh.

D.J.W.

REST. The non-theological sense of 'rest' is prominent in the Bible. *E.g.* the Lord rests from activity (Gn. 2:2f.); the sabbath is to be a day of rest (Ex. 31:15); the land of promise was to have rest every 7th year (Lv. 25:4f.); and the Temple was the

Lord's resting-place among his people (Ps. 132:8, 14).

In its theological sense 'rest' is even more prominent in the Bible. Israel was promised rest by the Lord in the land of Canaan (Dt. 3:20), and to this rest the exiles would return from Babylon (Je. 46:27). Rest and felicity were to be David's great gifts to Israel (1 Ch. 22:7–10). Alas, this great ideal of rest remained unfulfilled in Israel's experience (Heb. 3:7–4:10) because of unbelief and disobedience (Ps. 95:8–11).

However, although rest in the OT remains in the sphere of promise, in the NT there is fulfilment. Christians, by faith in Christ, have entered into rest (Heb. 12:22–24). He is their peace. To all who come to him he gives rest, rest that is relief, release and satisfaction to the soul (Mt. 11:28–30).

But 'rest' in Scripture has also an eschatological content. 'There remains a sabbath rest' for the Christian as for Israel (Heb. 4:9). The celestial city and the heavenly country (Heb. 11:10, 16) are still in the future. Today there is the task (1 Cor. 3:9), the good fight of faith (Eph. 6:10–20), the pilgrimage (Heb. 11:13–16). And even the rest to which death is the prelude (Rev. 14:13) is not fullness of rest (Rev. 6:9–11). But those who have entered into the rest of faith, by casting anchor within the veil where Christ has gone, know that the final state of rest is secure. J.G.S.S.T.

RESTORATION. The Gk. noun *apokatastasis* is found only in Acts 3:21, while the corresponding verb is used three times in the sense of a final restoration.

The idea goes back to the great prophets of the OT. They foresaw the Exile, but they also prophesied that God would restore his people to their own land (Je. 27:22; Dn. 9:25, etc.). When this took place conditions in Judah were far from ideal, and thus men looked and longed for a further restoration, a restoration of prosperity and bliss.

In time this came to be associated with the Messiah. The Jews as a whole understood this restoration in terms of material prosperity, but Jesus saw it in the work of John the Baptist, who fulfilled the prophecy of Mal. 4:5 (Mt. 17:11; Mk. 9:12). Here, as elsewhere, he reinterpreted the Messianic category which had become distorted among the Jews.

In the full sense the restoration is yet future. Though they had Jesus' interpretation of the prophecy of Malachi, the disciples could ask on the eve of the ascension, 'Lord, will you at this time restore the kingdom to Israel?' (Acts 1:6). Jesus' answer discourages them from speculation about matters which do not concern them, but it does not deny that there will be a restoration. The fullest reference comes in Acts 3:19ff. Here Peter looks for 'times of refreshing' which he associates with the return of the Lord Jesus Christ (v. 20), who is in heaven 'until the time for establishing (i.e. restoration) all that God spoke . . .'. From one point of view the restoration awaits the return of the Lord, and Peter sees this as a subject of prophecy from the very first. It is legitimate to infer that the restoration points to some such state as that of pre-fallen man, though there is no biblical passage which says this in so many words. Some have reasoned from the expression 'time for establishing all that God spoke' to the thought of universal salvation. This is more than the expression will

RESTORATION

bear. That question must be determined by the teaching of Scripture as a whole.

BIBLIOGRAPHY. H.-G. Link, *NIDNTT* 3, pp. 146-148. L.M.

RESURRECTION. The most startling characteristic of the first Christian preaching is its emphasis on the resurrection. The first preachers were sure that Christ had risen, and sure, in consequence, that believers would in due course rise also. This set them off from all the other teachers of the ancient world. There are resurrections elsewhere, but none of them is like that of Christ. They are mostly mythological tales connected with the change of the season and the annual miracle of spring. The Gospels tell of an individual who truly died but overcame death by rising again. And if it is true that Christ's resurrection bears no resemblance to anything in paganism it is also true that the attitude of believers to their own resurrection, the corollary of their Lord's, is radically different from anything in the heathen world. Nothing is more characteristic of even the best thought of the day than its hopelessness in the face of death. Clearly the resurrection is of the very first importance for the Christian faith.

The Christian idea of resurrection is to be distinguished from both Greek and Jewish ideas. The Greeks thought of the body as a hindrance to true life and they looked for the time when the soul would be free from its shackles. They conceived of life after death in terms of the immortality of the soul, but they firmly rejected all ideas of resurrection (*cf.* the mockery of Paul's preaching in Acts 17:32). The Jews were firmly persuaded of the values of the body, and thought these would not be lost. They thus looked for the body to be raised. But they thought it would be exactly the same body (*Apocalypse of Baruch* 1:2). The Christians thought of the body as being raised, but also transformed so as to be a suitable vehicle for the very different life of the age to come (1 Cor. 15:42ff.). The Christian idea is thus distinctive.

I. Resurrection in the Old Testament

There is little about resurrection in the OT. That is not to say that it is not there. It is. But it is not prominent. The men of the OT were very practical men, concentrating on the task of living out the present life in the service of God, and they had little time to spare for speculation about the next. Moreover, it must not be forgotten that they lived on the other side of Christ's resurrection, and it is this which gives the doctrine its basis. Sometimes they used the idea of resurrection to express the national hope of the re-birth of the nation (*e.g.* Ezk. 37). The plainest statement on the resurrection of the individual is undoubtedly that in Dn. 12:2, 'many of those who sleep in the dust of the earth shall awake, some to everlasting life, and some to shame and everlasting contempt'. This clearly envisages a resurrection both of the righteous and of the wicked, and it sees also eternal consequences of men's actions. There are other passages which look for resurrection, chiefly some in the Psalms (*e.g.* Pss. 16:10f.; 49:14f.). The precise meaning of Job's great affirmation (Jb. 19:25-27) is disputed, but it is difficult to think that there is no thought of resurrection here. Sometimes the prophets also give utterance to this thought (*e.g.* Is. 26:19). But on the whole the OT says little about it.

This may, perhaps, be due to the fact that some doctrine of resurrection was found among such peoples as the Egyptians and Babylonians. At a time when syncretism was a grave danger this would have discouraged the Hebrews from taking too great an interest in it.

During the period between the two Testaments, when that danger was not so pressing, the idea is more prominent. No uniformity was reached, and even in NT times the Sadducees still denied that there was a resurrection. But by then most Jews accepted some idea of resurrection. Usually they thought that these same bodies would be brought back to life just as they were.

II. The resurrection of Christ

On three occasions Christ brought back people from the dead (the daughter of Jairus, the son of the widow of Nain, and Lazarus). These, however, are not to be thought of as resurrection so much as resuscitation. There is no indication that any of these people did other than come back to the life that they had left. And Paul tells us explicitly that Christ is 'the first fruits of those who have fallen asleep' (1 Cor. 15:20). But these miracles show us Christ as the master of death. This comes out again in the fact that he prophesied that he would rise 3 days after he was crucified (Mk. 8:31; 9:31; 10:34, *etc.*). This point is important. It shows Christ as supremely the master of the situation. And it also means that the resurrection is of the very first importance, for the veracity of our Lord is involved.

The Gospels tell us that Jesus was crucified, that he died and that on the third day the tomb in which he had been placed was found to be empty. Angels told certain women that he had risen from the dead. Over a period of some weeks Jesus appeared to his followers from time to time. Paul lists some of these appearances but he does not explicitly mention the empty tomb and some scholars accordingly suggest that it was absent from the earliest tradition. But it may be fairly countered that Paul implies that the tomb was empty. What else does he mean by saying that Jesus 'was buried, that he was raised on the third day . . . ' (1 Cor. 15:4)? The express mention of burial is pointless if he does not have the empty tomb in mind. And it is referred to in all four Gospels. It must be accepted as part of the authentic Christian tradition. Some have suggested that the disciples went to the wrong tomb, where a young man in white said, 'He is not here', meaning 'He is in another tomb'. But in the first place this is pure speculation, and in the second it raises all sorts of questions. It is impossible to hold that the right tomb was completely forgotten by all, friend and foe alike. When the first preaching laid such stress on the resurrection we can be sure that the authorities would have spared no effort in the attempt to find the body.

But if the tomb was empty it would seem that there are only three possibilities: that friends took the body away, that foes took the body away, or that Jesus rose. The first hypothesis is more than difficult to maintain. All our evidence goes to show that there was no thought of resurrection in the minds of the disciples, and that they were men without hope on the evening of the first Good Friday. They were despirited, beaten men, hiding away for fear of the Jews. Moreover, Matthew tells us that a guard was set over the tomb, so that they could not have stolen the body even had they

wanted to do so. But the crowning improbability is that they would have suffered for preaching the resurrection as Acts tells us they did. Some were imprisoned, and James was executed. Men do not suffer such penalties for upholding what they know to be a lie. It must also be borne in mind that when the Christian sect was troublesome enough for the authorities to persecute it, the chief priests would have been very ready to have paid for information as to the stealing of the body, and the case of Judas is sufficient to show that a traitor could be found in the ranks. All in all, it is impossible to hold that Christians stole away the body of Christ.

It is just as difficult to maintain that his foes removed the body. Why should they? There seems no conceivable motive. To have done so would have been to start the very rumours of a resurrection that the evidence shows they were so anxious to prevent. Moreover, the guard over the tomb would have been just as big an obstacle to them as to the friends of the Lord. But the absolutely decisive objection is their failure to produce the body when the first preaching began. Peter and his allies put great emphasis on the resurrection of their Lord. Clearly it had gripped their imagination. In this situation, had their enemies produced the body of Jesus, the Christian church must have dissolved in a gale of laughter. The silence of the Jews is just as significant as the speech of the Christians. The failure of the enemies of Jesus to produce the body is conclusive evidence that they could not do so.

Since it seems impossible to hold either that friends or foes removed the body, and since the tomb was empty, it seems that we are shut up to the hypothesis of the resurrection. This is confirmed also by the resurrection appearances. Altogether there are ten different appearances recorded in our five accounts (the four Gospels and 1 Cor. 15). These accounts are not easy to harmonize (though this is not impossible, as is often asserted; the attempt made in the *Scofield Reference Bible*, for example, may or may not be the right one, but it certainly shows that harmonization is possible). The difficulties show only that the accounts are independent. There is no stereotyped repetition of an official story. And there is impressive agreement on the main facts. There is great variety in the witnesses. Sometimes one or two saw the Lord, sometimes a larger number, as the eleven apostles, once as many as 500 disciples. Men as well as women are included in the number. Mostly the appearances were to believers, but possibly that to James was to one who had not believed up till that point. Specially important is Paul. He was not credulous, but an educated man who was bitterly hostile to the Christians. And he is emphatic that he saw Jesus after he had risen from the dead. Indeed, so sure was he of this that he based the whole of the rest of his life on the certainty. Canon Kennett puts this point trenchantly. He speaks of Paul as having been converted within 5 years of the crucifixion and says, 'within a very few years of the time of the crucifixion of Jesus, the evidence for the resurrection of Jesus was in the mind of at least one man of education absolutely irrefutable' (*Interpreter* 5, 1908-9, p. 267).

We should not overlook the transformation of the disciples in all this. As noted before, they were beaten and dispirited men at the crucifixion, but they were ready to go to prison and even to die for the sake of Jesus shortly afterwards. Why the change? Men do not run such risks unless they are

very sure of themselves. The disciples were completely convinced. We should perhaps add that their certainty is reflected in their worship. They were Jews, and Jews have a tenacity in clinging to their religious customs. Yet these men observed the Lord's day, a weekly memorial of the resurrection, instead of the sabbath. On that Lord's day they celebrated the holy communion, which was not a commemoration of a dead Christ, but a thankful remembrance of the blessings conveyed by a living and triumphant Lord. Their other sacrament, baptism, was a reminder that believers were buried with Christ and raised with him (Col. 2:12). The resurrection gave significance to all that they did.

Sometimes it is said that Christ did not really die, but swooned. Then in the coolness of the tomb he revived. This raises all sorts of questions. How did he get out of the tomb? What happened to him? Why do we hear no more? When did he die? Questions multiply and the answers do not appear. Some have thought the disciples to have been the victims of hallucination. But the resurrection appearances cannot be so explained. Hallucinations come to those who are in some sense looking for them, and there is no evidence of this among the disciples. Once started they tend to continue, whereas these stop abruptly. Hallucinations are individual affairs, whereas in this case we have as many as 500 people at once seeing the Lord. There seems no point in exchanging a miracle on the physical level for one on the psychological level, which is what this view demands.

But many scholars today deny outright the possibility of a physical resurrection. They may lay it down that 'the bones of Jesus rest in the soil of Palestine'. They may say that Jesus rose into the *kerygma*; the disciples came to see that he had survived through death and that they could thus preach that he was alive. Or they may locate the change in the disciples. These men had known Jesus to live in true freedom and now they entered that experience for themselves. This meant that they came to see that Jesus was not dead but a living influence. There are two big difficulties in the way of all such views. The first is that this is not what the sources say. As plain as words can do it they say that Jesus died, was buried, and rose to life again. The second is the moral difficulty. There is no question but that the disciples believed that Jesus had risen. It was this that gave them their drive and it was this that formed the theme of their preaching. If Jesus was in fact dead then God has built the church on a delusion, an unthinkable conclusion. Moreover, such views ignore the empty tomb. This is a stubborn fact. Perhaps it is worth adding that these views are quite modern (though occasionally there have been forerunners, cf. 2 Tim. 2:17f.). They form no part of historic Christianity, and if they are correct nearly all Christians have at all times been in serious error concerning a cardinal doctrine of the faith.

III. The resurrection of believers

Not only did Jesus rise, but one day all men too will rise. Jesus refuted the scepticism of the Sadducees on this point with an interesting argument from Scripture (Mt. 22:31-32). The general NT position is that the resurrection of Christ carries with it the resurrection of believers. Jesus said, 'I am the resurrection and the life; he who believes in me, though he die, yet shall he live' (Jn. 11:25). Several times he spoke of raising believers up at the

RESURRECTION

last day (Jn. 6:39–40, 44, 54). The Sadducees were grieved because the apostles were ‘proclaiming in Jesus the resurrection from the dead’ (Acts 4:2). Paul tells us that ‘as by a man came death, by a man came also the resurrection of the dead. For as in Adam all die, so also in Christ shall all be made alive’ (1 Cor. 15:21f.; cf. 1 Thes. 4:14). Likewise Peter says, ‘we have been born anew to a living hope through the resurrection of Jesus Christ from the dead’ (1 Pet. 1:3). It is plain enough that the NT writers did not think of Christ’s resurrection as an isolated phenomenon. It was a great divine act, and one fraught with consequences for men. Because God raised Christ he set his seal on the atoning work wrought out on the cross. He demonstrated his divine power in the face of sin and death, and at the same time his will to save men. Thus, the resurrection of believers follows immediately from that of their Saviour. So characteristic of them is resurrection that Jesus could speak of them as ‘sons of God, being sons of the resurrection’ (Lk. 20:36).

This does not mean that all who rise rise to blessing. Jesus speaks of ‘the resurrection of life’ but also of ‘the resurrection of judgment’ (Jn. 5:29). The plain NT teaching is that *all* will rise, but that those who have rejected Christ will find the resurrection a serious matter indeed. For believers the fact that their resurrection is connected with that of the Lord transforms the situation. In the light of his atoning work for them they face resurrection with calmness and joy.

Of the nature of the resurrection body Scripture says little. Paul can speak of it as ‘a spiritual body’ (1 Cor. 15:44), which appears to mean a body which meets the needs of the spirit. He expressly differentiates it from the ‘physical body’ which we now have, and we infer that a ‘body’ answering to the needs of the spirit is in some respect different from that which we now know. The spiritual body has the qualities of incorruptibility, glory, and power (1 Cor. 15:42f.). Our Lord has taught us that there will be no marriage after the resurrection, and thus no sexual function (Mk. 12:25).

Perhaps we can gain some help by thinking of the resurrection body of Christ, for John tells us that ‘we shall be like him’ (1 Jn. 3:2), and Paul that ‘our lowly body’ is to be ‘like his glorious body’ (Phil. 3:21). Our Lord’s risen body appears to have been in some sense like the natural body and in some sense different. Thus on some occasions he was recognized immediately (Mt. 28:9; Jn. 20:19f.), but on others he was not (notably the walk to Emmaus, Lk. 24:16; cf. Jn. 21). He appeared suddenly in the midst of the disciples, who were gathered with the doors shut (Jn. 20:19), while contrariwise he disappeared from the sight of the two at Emmaus (Lk. 24:31). He spoke of having ‘flesh and bones’ (Lk. 24:39). On occasion he ate food (Lk. 24:41–43), though we cannot hold that physical food is a necessity for life beyond death (cf. 1 Cor. 6:13). It would seem that the risen Lord could conform to the limitations of this physical life or not as he chose, and this may indicate that when we rise we shall have a similar power.

IV. Doctrinal implications of the resurrection

The Christological significance of the resurrection is considerable. The fact that Jesus prophesied that he would rise from the dead on the third day has important implications for his Person. One who could do this is greater than the sons of men. Paul

clearly regards the resurrection of Christ as of cardinal importance. ‘If Christ has not been raised,’ he says, ‘then our preaching is in vain, and your faith is in vain. . . . If Christ has not been raised, your faith is futile and you are still in your sins’ (1 Cor. 15:14, 17). The point is that Christianity is a gospel, it is good news about how God sent his Son to be our Saviour. But if Christ did not really rise, then we have no assurance that our salvation has been accomplished. The reality of the resurrection of Christ is thus of deep significance. The resurrection of believers is also important. Paul’s view is that if the dead do not rise we may as well adopt the motto ‘Let us eat and drink, for tomorrow we die’ (1 Cor. 15:32). Believers are not men for whom this life is all. Their hope lies elsewhere (1 Cor. 15:19). This gives them perspective and makes for depth in living.

The resurrection of Christ is connected with our salvation, as when Paul says that ‘Jesus our Lord was put to death for our trespasses and raised for our justification’ (Rom. 4:25; cf. 8:33f.). There is no need here to go into the precise significance of the two uses of ‘for’. That is a task for the commentaries. We content ourselves with noting that the resurrection of Christ is connected with the central act whereby we are saved. Salvation is not something that takes place apart from the resurrection.

Nor does it stop there. Paul speaks of his desire to know Christ ‘and the power of his resurrection’ (Phil. 3:10), and he exhorts the Colossians, ‘If then you have been raised with Christ, seek the things that are above . . .’ (Col. 3:1). He has already reminded them that they were buried with Christ in baptism, and in the same sacrament were raised with him (Col. 2:12). In other words, the apostle sees the same power that brought Christ back from the dead as operative within those who are Christ’s. The resurrection is ongoing.

REUBEN (*MT* רֵׁוּבֵן; *LXX* *Roubēn*; Pesh. *Roubil*; Jos. *Roubēlos*; Arab. *Ra’ūbin*; Lat. *Rubin*). I. The first-born of Jacob by Leah (Gn. 29:32), whose choice of name is connected with the phrase, ‘the Lord has looked upon my affliction’ (Heb. *rā’ā . . . b’onyi*). That this meaning was attached to the name is clear from the other names in this section: ‘Simeon (Heard) . . . the Lord has heard’, ‘Levi (Attached) . . . my husband . . . will be attached’, ‘Judah (Praise) . . . I will praise the Lord’, ‘Dan (Judge) . . . God has judged me’, etc. Attempts have been made to give the desired meaning, ‘He has looked upon my affliction’, to the Heb. consonants for ‘Reuben’, which in our present text appears to mean, ‘Behold a son’. Possibly the vocalization of the name is at fault.

Reuben had some admirable qualities in his character; unfortunately, they were offset by his incestuous act with Bilhah, his father’s concubine

REUEL

A Midianite priest, also called *Jethro, who received Moses when he fled from Egypt, and gave him his daughter Zipporah (Ex. 2:18; Nu. 10:29). 3. Father of Eliasaph of Gad, a commander under Moses (Nu. 1:14; 2:14; 7:42, 47; 10:20). 4. A Benjaminitic chief living at Jerusalem under Solomon (1 Ch. 9:8).

REVELATION.

I. The idea of revelation

The Eng. word 'reveal', from Lat. *revelo*, is the regular rendering of the Heb. *gālā* and the Gk. *apokalypō* (noun, *apokalypsis*), which corresponds to *gālā* in the LXX and NT. *gālā*, *apokalypō* and *revelo* all express the same idea—that of unveiling something hidden, so that it may be seen and known for what it is. Accordingly, when the Bible speaks of revelation, the thought intended is of God the Creator actively disclosing to men his power and glory, his nature and character, his will, ways and plans—in short, himself—in order that men may know him. The revelation vocabulary in both Testaments is a wide one, covering the ideas of making obscure things clear, bringing hidden things to light, showing signs, speaking words and causing the persons addressed to see, hear, perceive, understand and know. None of the OT words is a specifically theological term—each one has its profane usage—but in the NT *apokalypō* and *apokalypsis* are used only in theological contexts, and the ordinary profane use of them does not appear, even where one might have expected it (cf. 2 Cor. 3:13ff.); which suggests that for the NT writers both terms possessed quasi-technical status.

Other NT words expressing the idea of revelation are *phaneroō*, 'manifest, make clear'; *epiphainō*, 'show forth' (noun, *epiphaneia*, 'manifestation'); *deiknuō*, 'show'; *exēgeomai*, 'unfold, explain, by narration', cf. Jn. 1:18; *chrēmatizō*, 'instruct, admonish, warn' (used in secular Gk. of divine oracles, cf. Arndt, *MM*, s.v.; noun, *chrēmatismos*, 'answer of God', Rom. 11:4).

From the standpoint of its contents, divine revelation is both indicative and imperative, and in each respect normative. God's disclosures are always made in the context of a demand for trust in, and obedience to, what is revealed—a response, that is, which is wholly determined and controlled by the contents of the revelation itself. In other words, God's revelation comes to man, not as information without obligation, but as a mandatory rule of faith and conduct. Man's life must be governed, not by private whims and fancies, nor by guesses as to divine things unrevealed, but by reverent belief of as much as God has told him, leading to conscientious compliance with as many imperatives as the revelation proves to contain (Dt. 29:29).

Revelation has two focal points: (1) God's purposes; (2) God's person.

1. On the one hand, God tells men about himself—who he is, what he has done, is doing and will do, and what he requires them to do. Thus he took Noah, Abraham and Moses into his confidence, telling them what he had planned and what their part in his plan was to be (Gn. 6:13–21; 12:1ff.; 15:13–21; 17:15–21; 18:17ff.; Ex. 3:7–22). Again, he declared to Israel the laws and promises of his covenant (Ex. 20–23, etc.; Dt. 4:13f.; 28, etc.; Pss. 78:5ff.; 147:19). He disclosed his purposes to

the prophets (Am. 3:7). Christ told his disciples 'all that I have heard from my Father' (Jn. 15:15), and promised them the Holy Spirit to complete his work of instructing them (Jn. 16:12ff.). God revealed to Paul the 'mystery' of his eternal purpose in Christ (Eph. 1:9ff.; 3:3–11). Christ revealed to John 'what must soon take place' (Rev. 1:1). From this standpoint, as God's own precise disclosure of his saving purpose and work, Paul calls the gospel 'the truth', in contrast with error and falsehood (2 Thes. 2:11–13; 2 Tim. 2:18; etc.). Hence the use of the phrase 'revealed truth' in Christian theology to denote what God has told men about himself.

2. On the other hand, when God sends men his word, he also confronts them with himself. The Bible does not think of revelation as a mere broadcasting of information, divinely guaranteed, but as God's personal coming to individuals to make himself known to them (cf. Gn. 35:7; Ex. 6:3; Nu. 12:6–8; Gal. 1:15f.). This is the lesson to be learnt from the theophanies of the OT (cf. Ex. 3:2ff.; 19:11–20; Ezk. 1; etc.), and from the part played by the enigmatic 'angel (messenger) of Yahweh', who is so evidently a manifestation of Yahweh himself (cf. Gn. 16:10; Ex. 3:2ff.; Jdg. 13:9–23); the lesson, namely, that God is not only the author and subject of his messages to men but he is also his own messenger. When a man meets God's word, however casual and accidental the meeting may seem to be, God meets that man, addressing the word to him personally and calling for a personal response to himself as its Author.

Speaking generally, the older Protestant theologians analysed revelation in terms entirely of God's communicating truths about himself. They knew, of course, that God ordered biblical history and that he now enlightens men to accept the biblical message, but they dealt with the former under the heading of providence and the latter under the heading of illumination, and did not formally relate their concept of revelation to either. The focal centre of their doctrine of revelation was the Bible; they viewed Holy Scripture as revealed truth in writing, and revelation as the divine activity that led to its production. They correlated revelation with inspiration, defining the former as God's communication to the biblical writers of otherwise inaccessible truth about himself, and the latter as his enabling them to write it all down truly, according to his will. (This formulation evidently has its roots in the book of Daniel: cf. Dn. 2:19, 22, 28ff., 47; 7:1; 10:1; 12:4.)

Many modern theologians, reacting against this view under pressure of a supposed need to abandon the notion of Scripture as revealed truth, speak of revelation wholly in terms of God's directing biblical history and making individuals aware of his presence, activity and claims. The focal centre of the doctrine of revelation is thus shifted to the redemptive history which the Bible records. With this commonly goes the assertion that there is, properly speaking, no such thing as communicated truth ('propositional revelation') from God; revelation is essentially non-verbal in character. But this is to say in effect that the biblical idea of God *speaking* (the commonest and most fundamental revelatory act which Scripture ascribes to him) is only a misleading metaphor; which seems implausible. On these grounds, it is further held that the Bible is not, properly speaking, revelation, but a human response to revelation. This, however, seems unbiblical, since the NT

uniformly quotes OT statements—prophetic, poetic, legal, historical, factual and admonitory—as authoritative utterances of God (cf. Mt. 19:4f.; Acts 4:25f.; Heb. 1:5ff.; 3:7ff.; etc.). The biblical view is that God reveals himself by both deeds and words: first by ordering redemptive history, then by inspiring a written explanatory record of that history to make later generations 'wise unto salvation' (cf. 2 Tim. 3:15ff.; 1 Cor. 10:11; Rom. 15:4), and finally by enlightening men in every age to discern the significance and acknowledge the authority of the revelation thus given and recorded (cf. Mt. 16:17; 2 Cor. 4:6). Thus, the positive emphases in the two sets of ideas contrasted above are complementary rather than contradictory; both must be combined in order to cover the full range of the biblical concept of revelation.

II. The necessity of revelation

The Bible assumes throughout that God must first disclose himself before men can know him. The Aristotelian idea of an inactive God whom man can discover by following out an argument is quite unbiblical. A revelatory initiative is needed, first, because *God is transcendent*. He is so far from man in his mode of being that man cannot see him (Jn. 1:18; 1 Tim. 6:16; cf. Ex. 33:20), nor find him out by searching (cf. Jb. 11:7; 23:3–9), nor read his thoughts by shrewd guesswork (Is. 55:8f.). Even if man had not sinned, therefore, he could not have known God without revelation. In fact, we read of God speaking to unfallen Adam in Eden (Gn. 2:16). Now, however, there is a second reason why man's knowledge of God must depend on God's revelatory initiative. *Man is sinful*. His powers of perception in the realm of divine things have been so dulled by Satan (2 Cor. 4:4) and sin (cf. 1 Cor. 2:14), and his mind is so prepossessed by his own fancied 'wisdom', which runs contrary to the true knowledge of God (Rom. 1:21ff.; 1 Cor. 1:21), that it is beyond his natural powers to apprehend God, however presented to him. In fact, according to Paul, God presents himself constantly to every man through his works of creation and providence (Rom. 1:19ff.; Acts 14:17; cf. Ps. 19:1ff.), and the spontaneous operations of natural conscience (Rom. 2:12–15; cf. 1:32); yet he is not recognized or known. The pressure of this continual self-disclosure on God's part produces idolatry, as the fallen mind in its perversity seeks to quench the light by turning it into darkness (Rom. 1:23ff.; cf. Jn. 1:5), but it does not lead to knowledge of God, or to godliness of life. God's 'general revelation' (as it is usually called) of his eternity, power and glory (Rom. 1:20; cf. Ps. 19:1), his kindness to men (Acts 14:17), his moral law (Rom. 2:12ff.), his demand for worship and obedience (Rom. 1:21) and his wrath against sin (Rom. 1:18, 32), thus serve only to render men 'without excuse' for their 'ungodliness and wickedness' (Rom. 1:18–20).

This shows that fallen man's need of revelation goes beyond Adam's in two respects. First, he needs a revelation of God as a redeemer and restorer, one who shows mercy to sinners. God's revelation through creation and conscience speaks of law and judgment (Rom. 2:14f.; 1:32), but not of forgiveness. Second, supposing that God grants such a revelation (the Bible is one long proclamation that he does), fallen man still needs spiritual enlightenment before he can grasp it; otherwise he will pervert it, as he has perverted natural revelation. The Jews had a revelation of mercy in the OT,

which pointed them to Christ, but on most of their hearts there was a veil which kept them from understanding it (2 Cor. 3:14ff.), and so they fell victim to a legalistic misconception of it (Rom. 9:31–10:4). Even Paul, who calls attention to these facts, had himself known the Christian gospel before his conversion—and tried to stamp it out; not till 'it pleased God . . . to reveal his Son in me'—in, by inward enlightenment—did Paul recognize it as the word of God. The need of divine enlightening to reveal to individuals the reality, authority and meaning of revelation objectively given, and to conform their lives to it, is occasionally indicated in the OT (Ps. 119:12, 27, etc.; Je. 31:33f.); in the NT it is stressed most by Paul and in the recorded teaching of Christ (Mt. 11:25; 13:11–17; Jn. 3:3ff.; 6:44f., 63ff.; 8:43–47; 10:26ff.; cf. 12:37ff.).

III. The content of revelation

a. Old Testament

The foundation and framework of Israel's religious outlook was the covenant which God announced between himself and Abraham's seed (Gn. 17:1ff.). A *covenant is a defined relationship of promise and obligation binding two parties together. This covenant was a royal imposition whereby God pledged himself to Abraham's clan as *their God*, thus authorizing them to invoke him as *our God and my God*.

The fact that God made known his name (Yahweh) to Israel (Ex. 3:11–15; 6:2ff.; on the exegesis, cf. J. A. Motyer, *The Revelation of the Divine Name*, 1960) was a witness to this relationship. The 'name' stands for all that a person is, and for God to tell the Israelites his name was a sign that, such as he was, in all his power and glory, he was pledging himself to them for their welfare. The goal of his relationship with Israel was the perfecting of the relationship itself: that is, that God should bless Abraham's seed with the fullness of his gifts, and that Abraham's seed should perfectly bless God by a perfect worship and obedience. Hence God continued to reveal himself to the covenant community by his words of law and promise, and by his redemptive deeds as Lord of history for the realizing of this covenant eschatology.

God made the royal character of his covenant more explicit at Sinai, where, having dramatically shown his saving power in the Exodus from Egypt, he was formally acknowledged as Israel's Sovereign (Ex. 19:3–8; Dt. 33:4f.), and through the mouth of Moses, the archetypal prophet (cf. Dt. 18:15), promulgated the laws of the covenant, making it clear that enjoyment of covenant blessing was conditional upon obedience to them (Ex. 19:5; cf. Lv. 26:3ff.; Dt. 28). These laws were committed to writing, the Decalogue in the first instance by God himself (Ex. 24:12; 31:18; 32:15f.), the whole code eventually by Moses, as, in effect, God's amanuensis (Ex. 34:27f.; Dt. 31:9ff., 24ff.; cf. Ex. 24:7). It is noteworthy that God through Hosea later spoke of the entire work of writing the law as his own work, though tradition was unanimous that Moses did it (Ho. 8:12); here are some of the roots of the idea of biblical *inspiration. The law, once written, was regarded as a definitive and permanently valid disclosure of God's will for his people's life, and the priests were made permanently responsible for teaching it (Dt. 31:9ff.; cf. Ne. 8:1ff.; Hg. 2:11f.; Mal. 2:7f.).

REVELATION

God forbade Israelites to practise sorcery and divination for day-to-day guidance, as the Canaanites did (Dt. 18:9ff.); they were to seek guidance from him only (Is. 8:19). He promised them a succession of prophets, men in whose mouths he would put his own words (Dt. 18:18; cf. Je. 1:9; 5:14; Ezk. 2:7-3:11; Nu. 22:35, 38; 23:5), to give his people such periodic direction as they needed (Dt. 18:15ff.). Prophets in Israel fulfilled a vital ministry. The great prophets, at Yahweh's bidding, spoke God's words and interpreted his mind to kings and to the nation; they expounded and applied his law, pleading for repentance and threatening judgment in his name, and they declared what he would do, both in judgment and also in fulfilling the covenant eschatology by bringing in his kingdom after the judgment was over. And prophets may also have had a place in the cult as seers, men who could give answers from God to individuals who asked particular questions about guidance and the future (cf. 1 Sa. 9:6ff.; 28:6-20; 1 Ki. 22:5ff.; see A. R. Johnson, *The Cultic Prophet in Ancient Israel*, 1944). A further means of guidance in pre-exilic Israel was the sacred lot, *Urim and Thummim, manipulated by the priests (Dt. 33:8ff.; cf. 1 Sa. 14:36-42; 28:6). Divine guidance for life of a more general sort was supplied also by the maxims of the 'wise men', whose wisdom was held to be from God (cf. Pr. 1:20; 8).

In addition to these arrangements for verbal or quasi-verbal communication from God, Israel knew certain theophanic and experimental manifestations which betokened the nearness of God: the *'glory' (cf. Ex. 16:10; 40:34; Nu. 16:19; 1 Ki. 8:10f.; Ezk. 1, etc.); the thunderstorm (Pss. 18:6-15; 29); the sight of his 'face' and the joyful awareness of his 'presence' to which faithful worshippers aspired (Pss. 11:7; 16:11; 17:15; 51:11f.).

The chief emphases in the OT revelation of God are upon: (a) God's uniqueness, as the Maker and Ruler of all things; (b) his *holiness, i.e. the conjunction of awesome characteristics which set him apart from men—majesty and greatness and strength, on the one hand, and purity and love of righteousness and hatred of wrongdoing, on the other; (c) his covenant faithfulness and patience and mercy, and his loyalty to his own gracious purposes towards the covenant people.

b. New Testament

In the NT Christ and the apostles are organs of new revelation, corresponding to Moses and the prophets in the OT. The fulfilment of OT covenant eschatology is found in the kingdom of Christ and the Christian hope of glory. The one God of the OT is revealed as Triune, by the coming first of Christ and then of the Spirit, and the disclosing of the divine redemptive purpose as one in which all three Persons of the Godhead work together (cf. Eph. 1:3-14; Rom. 8). Two events which will bring God's plan of human history to its climax are spoken of as acts of revelation still to come (the appearing of antichrist, 2 Thes. 2:3, 6, 8, and of Christ, 1 Cor. 1:7; 2 Thes. 1:7-10; 1 Pet. 1:7, 13). The NT claims that the revelation of the OT has been augmented along two chief lines.

(i) *The revelation of God in Christ.* The NT proclaims that 'God . . . in these last days . . . has spoken to us by a Son' (Heb. 1:1f.). This is God's crowning and final revelation, his last word to man. By his words and works, and by the over-all character of his life and ministry, Jesus Christ per-

fectly revealed God (Jn. 1:18; 14:7-11). His personal life was a perfect revelation of the character of God; for the Son is the image of God (2 Cor. 4:4; Col. 1:15; Heb. 1:3), his *logos* ('word', regarded as expressing his mind, Jn. 1:1f.), in whom, as incarnate, all the divine fullness dwelt (Col. 1:19; 2:9). Equally, his Messianic work revealed perfectly the saving purposes of God; for Christ is the wisdom of God (1 Cor. 1:24), through whom, as Mediator (1 Tim. 2:5), all God's saving purposes are worked out and all the wisdom that man needs for his salvation may be found (Col. 2:3; 1 Cor. 1:30; 2:6f.). The revelation of the Father by the Son, whom the Jews condemned as an impostor and blasphemer for declaring his Sonship, is a major theme of John's Gospel.

(ii) *The revelation of God's plan through Christ.* Paul declares that the 'mystery' (secret) of God's 'good pleasure' for the saving of the church and the restoring of the cosmos through Christ is now revealed, after having been kept hidden up to the time of the incarnation (Rom. 16:25f.; 1 Cor. 2:7-10; Eph. 1:9ff.; 3:3-11; Col. 1:19ff.). He shows how this revelation abolishes the old wall of partition between Jew and Gentile (Rom. 3:29ff.; 9-11; Gal. 2:15-3:29; Eph. 2:11-3:6); similarly, the writer to the Hebrews shows how it abolishes the old priestly and sacrificial Jewish cultus (Heb. 7-10).

IV. The nature of revelation

It is clear from the foregoing that the Bible conceives of revelation as primarily and fundamentally verbal communication—God's *tôrâ* ('teaching, instruction, law'), or *d'bārîm* ('words'), in the OT, and his *logos* or *rhēma*, 'word, utterance', in the NT. The thought of God as revealed in his actions is secondary, and depends for its validity on the presupposition of verbal revelation. For men can 'know that he is Yahweh' from seeing his works in history only if he speaks to make it clear that they are his works, and to explain what they mean. Equally, men could never have guessed or deduced who and what Jesus of Nazareth was, apart from God's statements about him in the OT, and Jesus' own self-testimony (cf. Jn. 5:37-39; 8:13-18). (*INSPIRATION, *PROPHECY.)

REVELATION, BOOK OF. The last book of the Bible is, for most Christians, one of the least read and most difficult. A few passages from it are well known and well loved (e.g. 7:9-17); but for the most part modern readers find the book unintelligible. This is largely because it abounds in symbolism of a type that we do not use and to which we no longer possess the key. Yet this kind of imagery was readily comprehensible to the men of the day. Indeed, this partly accounts for our difficulties. The author could assume that his readers would detect his allusions, and therefore he felt no need to make explanations.

The 'seven churches of Asia' of Rev. 1-3 and the island of Patmos where John received the revelation.

Revelation is classed with the literature known as *apocalyptic. It is the only book of this type in the NT, though there are apocalyptic passages in other books (e.g. Mt. 24), and the OT visions of Daniel belong to the same class. Characteristic of apocalyptic is the thought that God is sovereign, and that ultimately he will intervene in catastrophic fashion to bring to pass his good and perfect will. He is opposed by powerful and varied forces of evil, and these are usually referred to symbolically as beasts, horns, etc. There are visions; angels speak; there is the clash of mighty forces; and ultimately the persecuted saints are vindicated. Much of this is conventional (which is why the first readers of Revelation would have understood it quite easily), but in the hands of many enthusiasts it led to turgid and grotesque phantasies. Biblical apocalyptic is much more restrained.

Another difference between Revelation and the usual run of apocalyptic is that the author's name is given, whereas apocalypses were usually pseudonymous. The writers took names from the great ones of the past and ascribed their works to them. For our present purpose it is important to notice that in this book the Holy Spirit has made use of a recognized literary form, but that the book is not simply a conventional apocalypse. It has features of its own, and is a genuine prophecy, as the first three verses indicate.

I. Outline of contents

The book begins with a vision of the risen Lord, who gives messages to seven churches, those in Ephesus, Smyrna, Pergamum, Thyatira, Sardis, Philadelphia and Laodicea, a group of cities in the Roman province of Asia (1:1-3:22). The messages rebuke these churches where they have failed and

encourage them on the path of Christian service. Then come visions of God and of the Lamb (4:1-5:14), after which we read of the 7 seals. As each seal is opened there is a vision recorded (6:1-17; 8:1). This leads on to the 7 trumpets, with a vision recorded after each trumpet is sounded (8:2-9:21; 11:15-19). Between the 6th and 7th seals there is an interlude (7:1-17), and another between the 6th and 7th trumpets (10:1-11:14). John then records various wonders in heaven, a woman bringing forth a man child, and opposed by Satan (12:1-17), beasts opposing themselves to God (13:1-18), the Lamb on Mount Zion and his followers (14:1-20). Next the 7 last plagues are recounted. John sees 7 angels with bowls, and as each pours out his bowl upon the earth one of the plagues follows (15:1-16:21). Further judgments are then denounced on the scarlet woman and on Babylon (17:1-19:21), and the book concludes with visions of the millennium, of the new heavens and the new earth (20:1-22:21).

It is uncertain how much of the book duplicates other sections. The recurrence of the number 7 makes it fairly clear that some, at least, of the series are described in more than one way. What is certain is that the book envisages terrific opposition to God and the people of God, but that in the end God will triumph over every evil thing.

II. Authorship and date

The author tells us that his name was John, and he describes himself as God's 'servant' (Rev. 1:1), as one of the 'prophets' (Rev. 22:9) and as 'your brother' (Rev. 1:9). Tradition has affirmed this John to be identical with John the apostle, and further, that he was the author of the Fourth Gospel and of the three Johannine Epistles. The view that the author was John the apostle goes back to Justin

REVELATION, BOOK OF

Martyr (c. AD 140), and is supported by Irenaeus and many others. The principal objection is the style of Revelation. The Greek is in many respects unlike that of the other Johannine writings. It is so unusual and sometimes shows such scant respect for the rules of Gk. grammar that it is felt that it cannot come from the same pen as do the Gospel and the Epistles. (Charles speaks of it as 'unlike any Greek that was ever penned by mortal man'.) The question is too intricate to be discussed fully here. Suffice to say that, whereas most scholars today deny the apostolic authorship, there are some who find it best to think of all five Johannine writings as from one author, and that author the apostle John (e.g. E. Stauffer).

The book was obviously written at a time when the church was undergoing persecution and difficulty. During the possible time for the composition of the book the two most important periods when this was so were during the reigns of Nero and of Domitian. The principal argument for the former date is Rev. 17:9f., 'This calls for a mind with wisdom: the seven heads are seven mountains on which the woman is seated; they are also seven kings, five of whom have fallen, one is, the other has not yet come.' If this refers to the emperors of Rome, then Nero was the fifth, and the writing would date from shortly after his reign. This is strengthened by the prophecy that 'the beast that was and is not, it is an eighth but it belongs to the seven' (Rev. 17:11). This appears to refer to the 'Nero *redivivus*' myth, the idea that Nero, though dead, would appear once more on this earth. Support is adduced from Rev. 13:18, which gives 'the number of the beast' as 666. Numbers were written in the 1st century, not with our convenient notation, but with letters of the alphabet. Each letter had a numerical value. By taking the numerical values of the letters making up 'Nero Caesar' in Hebrew we get 666. But it is difficult to see why it should be in Hebrew (when the book is in Greek), and anyway to get the desired result a variant spelling has to be adopted.

The later date is attested by a number of ancient authors, such as Irenaeus and Eusebius, who state categorically that the book was written in the time of Domitian. This is supported by certain indications of a general type within the book, though not by specific allusions to identifiable events. Thus the book speaks of certain groups of Christians as complacent and declining in spirituality. In Nero's reign the church was still very young and vigorous. By the time of Domitian there is much more possibility of development and of degeneration. Most scholars today are agreed that the later date is to be preferred.

III. Interpretation

How are we to understand all this? Four chief ways of looking at the book have emerged in the Christian church.

a. *The preterist view*

This takes the book to describe past events. It sees all the visions as arising out of conditions in the Roman empire of the 1st century AD. The seer was appalled at the possibilities for evil inherent in the Roman empire and he used symbolic imagery to protest against it, and to record his conviction that God would intervene to bring about what pleased him. In general, liberal scholars endorse this point of view. It enables them to understand the book

without finding much place for predictive prophecy, and at the same time to see in Revelation a much-needed assertion of the truth of God's moral government of the world. Such a view roots the book in the circumstances of the writer's own day, which is surely right. But it overlooks the fact that the book calls itself a 'prophecy' (Rev. 1:3), and that some at any rate of its predictions refer to what is still future (e.g. chs. 21–22).

b. *The historicist view*

This regards the book as setting forth in one grand sweep a panoramic view of history from the 1st century to the second coming of Christ. The writer's own day is mentioned, and so is the final time, but there is no indication of a break anywhere. Therefore, upholders of such views reason, the book must be held to give a continuous story of the whole period. Such views were held by most of the Reformers, who identified papal Rome with the beast. But the difficulties seem insuperable, and it is significant that, while stoutly maintaining that all history is here set forth, historicists have not been able to agree among themselves as to the precise episodes in history which the various visions symbolize. In 1,900 years at least the main outlines should have emerged with clarity. It is also difficult to see why the outline of history should confine itself to W Europe, especially since in earlier days at least much of the expansion of Christianity was in E lands.

c. *The futurist view*

This maintains that from ch. 4 onwards Revelation deals with events at the end-time. The book is not concerned with the prophet's own day, nor with later historical events, but with those happenings that will take place in connection with the second coming of the Lord. This view takes seriously the predictive element in the book (Rev. 1:19; 4:1). And it has in its favour the fact that Revelation undeniably leads up to the final establishment of the rule of God, so that some of the book must refer to the last days. The principal objection is that this view tends to remove the book entirely from its historical setting. It is not easy to see what meaning it would have had for its first readers if this is the way it is to be understood.

d. *The idealist or the poetic view*

This insists that the main thrust of the book is concerned with inspiring persecuted and suffering Christians to endure to the end. To bring about this aim the writer has employed symbolic language, not meaning it to be taken for anything other than a series of imaginative descriptions of the triumph of God. Such views can be linked with other views, and are often found, for example, in combination with preterist ideas. The difficulty is that the seer does claim to be prophesying of later days.

None of the views has proved completely satisfying, and it is probable that a true view would combine elements from more than one of them. The outstanding merit of preterist views is that they give the book meaning for the men of the day in which it was written, and, whatever else we may say of the book, this insight must be retained. Historicist views similarly see the book as giving light on the church throughout its history, and this cannot be surrendered. Futurist views take with the greatest seriousness the language of the book about the

end-time. The book does emphasize the ultimate triumph of God and the events associated with it. Nor can the idealist view be abandoned, for the book does bring before us a stirring challenge to live for God in days when the opposition is fierce. Moreover, the Christian must always welcome the assurance that God's triumph is sure.

L.M.

REWARD. Thirteen Heb. roots, of which *sākār* and *sōhad* are the chief, lie behind OT expressions of 'reward'. In Gk. the verb *apodidōmi* and noun *mīsthos* are used. All convey the meaning of payment, hire or wages, and there are instances of 'reward' as pay for honest work done (1 Tim. 5:18) and dishonest gain, i.e. bribe (Mi. 3:11).

1. Any reward depends for its significance upon the character of its bestower, and God's rewards, with which the biblical writers are chiefly concerned, both as blessings and as punishments, are manifestations of his justice, i.e. of himself (e.g. Ps. 58:11) and inseparable from the covenant (Dt. 7:10) to which his commands are annexed. Thus the second commandment relates the penalty of disobedience to the jealousy of God, and the reward of obedience to his mercy (Ex. 20:5). Dt. 28 explains Israel's well-being in terms of submission to the covenant, a theme developed by the later prophets (e.g. Is. 65:6-7; 66:6). That obedience to God will bring visible temporal rewards is rightly expected throughout the Bible, but two false conclusions were also drawn from such teaching as Dt. 28, namely (i) that righteousness is automatically rewarded materially, and (ii) that suffering is a certain sign of sin (Job; Pss. 37; 73, all reflect the tension created by these false deductions, and Ec. 8:14 marks an extreme cynicism). Yet it must be noted that in the OT God himself and his salvation are already known to be the supreme reward (Is. 62:10-12; Ps. 63:3), rather than his gifts.

2. Jesus promised rewards to his disciples (Mk. 9:41; 10:29; Mt. 5:3-12), so coupled with self-denial and suffering for the gospel's sake as to prevent a mercenary attitude. He slew the Pharisaic notion of meritorious service (Lk. 17:10) and discouraged desire for human reward (Mt. 6:1), since the Father is the disciple's best reward. Jesus shows that reward is inseparable from himself and from God, and the apostles laboured to establish the complete dependence of man's obedience and faith upon mercy and grace (Rom. 4:4; 6:23). Work, and therefore reward, is certainly looked for, but simply as an index of living faith (Jas. 2:14-16; Jn. 6:28), not as a basis of claim upon God. The reward of salvation in Christ begins in time (2 Cor. 5:5) and its fulfilment is looked for after *judgment (final rewards and punishments) when the covenant people enter into full enjoyment of the vision of God which is their enduring reward (Rev. 21:3).

M.R.W.F.

REZEPH. A town destroyed by the Assyrians and named in a letter to Hezekiah sent by Sennacherib as a warning to Jerusalem of the fate of those cities who resisted their demands for surrender (2 Ki. 19:12 = Is. 37:12). The details of any revolt or sack of Assyria. Rašappa are not known, though Assyrian texts mention the town and name several governors in the years 839-673 BC. This important caravan-centre on the route from the Euphrates to Hamath was identified by Ptolemy (5. 16; Gk. *Rhēsapha*) and is the modern *Resāfa*, about 200 km ENE of Hama, Syria. D.J.W.

REZIN. The king of *Damascus who, in alliance with *Pekah of Samaria, threatened *Ahaz of Judah (2 Ki. 15:37; 16:5). Their aim was probably to form an anti-Assyrian front, but in fact they drove Ahaz into alliance with Assyria, despite Isaiah's advice that Rezin was not to be feared (Is. 7:1, 8; 8:6). *Tiglath-pileser III listed Rezin as tributary about 738 BC, but captured Damascus and killed him in 732 BC (2 Ki. 16:9). See W. Pitard, *Ancient Damascus*, 1987, pp. 179-187. A.R.M.

REZON. The son of Eliadah, who fled with a band of followers when David attacked Hadadezer of Zobah (1 Ki. 11:23-24). He occupied Damascus and became its ruler, opposing Israel during the reign of Solomon in alliance with Hadad of Edom (v. 25). He later 'reigned over Syria', and is thus thought to have outlived the united Hebrew monarchy and to be identified with Hezion, father of Tab-Rimmon and grandfather of *Benhadad I, the king of *Damascus, with whom Asa of Judah made an alliance (1 Ki. 15:18). If this is correct, Rezon was the founder of the dynasty of *Aram who opposed Israel. Rezon (and Rezin) may be a title meaning 'prince' (cf. Pr. 14:28). Cf. M. F. Unger, *Israel and the Aramaeans of Damascus*, 1980; W. T. Pitard, *Ancient Damascus*, 1987. D.J.W.

RHEGIUM. The modern Reggio di Calabria, a port-city on the Italian shore of the Strait of Messina, in S Italy. An old Gk. colony, Rhegium owed its importance under the Roman empire to its position in relation to the navigation of the Strait and the Italian W coast. With the whirlpool of Charybdis and the rock of Scylla endangering navigation through the Strait, it was important to attempt the passage only with the most favourable sailing wind, and shipping moving N would wait at Rhegium for a S wind. This was done by the master of the ship which was taking Paul to Rome (Acts 28:13). J.H.P.

RHODA (Gk. *rhodē*, 'rose'). A slave-girl in the house of John Mark's mother who announced Peter's arrival (Acts 12:13ff.) after the angel had released him from prison. See *BRD*, pp. 209ff.

J.D.D.

RHODES. The large island extending towards Crete from the SW extremity of Asia Minor, and thus lying across the main sea route between the Aegean and the Phoenician ports. It was partitioned among three Gk. states, of Dorian stock, early federated and sharing a common capital at the NE point of the island. It was this city, also called Rhodes, that Paul touched at on his last journey to Palestine (Acts 21:1). After Alexander's conquests, and the establishment of the Macedonian kingdoms and many Hellenized states throughout the E periphery of the Mediterranean, Rhodes grew to be the leading Gk. republic, outstripping those of the old homeland. This was not only because she was now the natural clearing-house for the greatly increased E-W traffic, but because her position gave her an effective diplomatic leverage against the pressures of the rival kingdoms who disputed the hegemony of the strategic Aegean islands. As the champion of the old autonomy principle, she took the lead in calling for Roman intervention to protect it. Rhodes fell from favour with the Romans, however, who deliberately advanced Delos to destroy her ascendancy. By Paul's time her importance was gone, except as a resort of mellow distinction in learning and leisure.

BIBLIOGRAPHY. M. Rostovtzeff, *CAH*, 8, pp. 619-642. E.A.J.

RIBLAH, RIBLATH. I. A place in the district of Hamath, on the river Orontes in Syria, on the right bank of which are ruins near a modern village, Riblah, 56 km NE of Baalbek and S of Hama. The site is easily defended and commands the main route from Egypt to the Euphrates as well as the neighbouring forests and valleys, from which ample supplies of food or fuel are obtained. For such reasons Riblah was chosen by Neco II as the Eyp. headquarters, following his defeat of Josiah at Megiddo and the sack of Qadesh in 609 bc. Here he deposed Jehoahaz, imposed tribute on Judah and appointed Jehoiakim its king (2 Ki. 23:31-35). When Nebuchadrezzar II defeated the Egyptians at Carchemish and Hamath in 605 bc he likewise chose Riblah as his military base for the subjugation of Palestine. From it he directed operations against Jerusalem in 589-587 bc, and here was brought the rebel Zedekiah to be blinded after watching the death of his sons (2 Ki. 25:6, 20-21; Je. 39:5-7; 52:9-27). The AV Diblath (RV 'Diblah') of Ezk. 6:14 may be the same place (see RSV), since an otherwise unknown situation is unlikely in the context.

2. Riblath at the NE corner of the ideal boundary of Israel (Nu. 34:11) might be the same place as I, though the border is generally considered to lie farther S (cf. Ezk. 47:15-18). The suggestion commonly adopted, that this is to be read 'to Harbel' (LXX), modern Harmel in the Beqa', helps little in evaluating the border, since this place lies only 13 km SW of Riblah I itself. D.J.W.

RIGHTEOUSNESS (Heb. *šedeq*, *s'ḏāqā*; Gk. LXX and NT, *dikaioσynē*). The Heb. *šedeq* probably derives from an Arab. root meaning 'straightness', leading to the notion of an action which conforms to a norm. There is, however, a considerable richness in the biblical understanding of this term and

it is difficult to render either the Heb. or Gk. words concerned by a simple Eng. equivalent. One basic ingredient in the OT idea of righteousness is relationship, both between God and man (Ps. 50:6; Je. 9:24) and between man and man (Dt. 24:13; Je. 22:3).

Referred to relations between men, righteous action is action which conforms to the requirements of the relationship and in a more general sense promotes the well-being and peace of the community (1 Sa. 24:17; Pr. 14:34). It is therefore linked in a forensic sense with *justice though even then the idea is less that of conformity to some formal legal norm as the strongly ethical notion of action which is to be legally upheld because it is productive of communal well-being (Dt. 1:16; Am. 5:7). In the prophetic period righteousness comes to include the idea of helping the poor and needy (Dn. 4:27; Am. 5:12, 24), and hence almsgiving (Mt. 6:1f.).

When we move from relations between men to those between God and men (though this distinction is arguably somewhat formal since the thought of God was probably never completely absent whenever the Hebrew used the word *šedeq*) righteousness implies a correct relationship to the will of God which was particularly expressed and interpreted by Israel's covenant with God. Righteous action is hence action which flows out of God's gracious election of Israel and accords with the law of the covenant (Dt. 6:25; Ezk. 18:5-9). God himself is righteous (2 Ch. 12:6; Ps. 7:9), and hence may be relied upon to act in accordance with the terms of his relationship with Israel. God is therefore a righteous judge who acts for his people (Ps. 9:4; Je. 11:20), and upon whose righteousness his people depend for deliverance and vindication (Ps. 31:1; Je. 11:20).

Thus emerges the conflation of the notions of righteousness and salvation. God is 'a righteous God and (therefore) a Saviour' (Is. 45:21; cf. Ps. 36:6; Is. 61:10). For the OT God is Creator and therefore he is the ground and guarantor of the moral order. His righteousness is hence intimately related to other more general moral attributes such as his holiness. The Creator, however, is also the Redeemer, and his righteousness is interpreted by his redemptive activity. Further, Israel's experience of God's righteous deliverance in the past led her to an expectation of a future act of salvation. The coming Messianic ruler is seen as the special recipient and instrument of the divine righteousness (Ps. 72:1f.; Is. 11:3-5; 32:1-20; Je. 23:5). The 'Righteous One' was a Messianic title (Is. 53:11; cf. Acts 3:14; 7:52; 22:14).

The NT uses righteousness in the sense of conformity to the demands and obligations of the will of God, the so-called 'righteousness of the law' (Gal. 3:21; Phil. 3:6, 9; cf. Tit. 3:5). Human attainment of righteousness is at points relatively positively viewed (Lk. 1:6; 2:25; Mt. 5:20), but in the end this attainment in all men falls far short of a true conformity to the divine will (Rom. 3:9-20; Lk. 18:9-14; Jn. 8:7). In contrast to this human unrighteousness stands the righteousness of God (Rom. 1:17) which in consistency with OT understanding conveys the thought of God's active succour of man in the miracle of his grace.

This righteousness is proclaimed by Jesus as a gift to those who are granted the kingdom of God (Mt. 5:6). By faith in Jesus Christ and his work of atonement man, unrighteous sinner though he is,

receives God's righteousness, *i.e.* he is given a true relationship with God which involves the forgiveness of all sin and a new moral standing with God in union with Christ 'the Righteous One' (Rom. 3:21-31; 4:1-25; 10:3; 1 Cor. 1:30; 2 Cor. 5:21; Phil. 3:9). By dealing with all the consequences of man's sin and unrighteousness (both Godward and manward) in the cross, God at once maintains the moral order in which alone he can have fellowship with man and in grace delivers the needy (Rom. 3:26).

The gift of God's righteousness involves entry into the new realm of divine salvation, the gift of eternal life under the reign of God (Rom. 6:12-23; 2 Cor. 6:7, 14; Phil. 1:11; Eph. 4:24). Hence the extrinsic righteousness imputed through the cross finds inevitable expression in the intrinsic righteousness of a life which in a new way conforms to the will of God, even though the ultimate realization of this conformity must await the consummation of the kingdom (1 Jn. 3:2; Phil. 3:12-14; 1 Cor. 13:12f.; 2 Pet. 3:11-13). (*JUSTIFICATION.)*

B. A. M.

RIMMON. I. 'Thunderer', a title of the storm-god Hadad (*cf.* *HADAD-RIMMON) worshipped in Damascus. Grateful for his cure from leprosy by Elisha, the Syrian army commander Naaman requested two mule-loads of earth from Israel. He proposed to erect an altar on this soil in Rimmon's temple so that he might worship Israel's God on his own ground (2 Ki. 5:17-18). The temple was probably on the site in Damascus occupied by the Roman temple of Zeus, whose emblem, like Rimmon's, was a thunderbolt. The famous Umayyad mosque now stands there. See J. C. Greenfield, *IEJ* 26, 1976, pp. 195-198.

2. A Benjamite from Beeroth, father of Baanah and Rechab, who assassinated Ishbosheth (2 Sa. 4:2, 9). This personal name, like the similar place-names, if not an abbreviation of a form including the divine element Rimmon, is probably to be derived from the Heb. *rimmôn*, 'pomegranate'. See following article.

D. J. W.

RIMMON (Heb. *rimmôn*, 'pomegranate'). I. En (Ain)-Rimmon was a place in the Negeb near Edom assigned to Simeon (Jos. 19:7; 1 Ch. 4:32) but incorporated into the Beersheba district (Jos. 15:32). Zechariah envisaged it as the S part of the high plateau seen from Jerusalem (14:10). It was settled by returning exiles (Ne. 11:29), and usually identified with Khirbet er-Ramamim c. 16 km NNE of Beersheba. Some identify this with the Rimmon-perez between Hazeroth and Moseroth where the Israelites encamped (Nu. 33:19-20).

2. A village in Zebulun (Jos. 19:13), possibly mod. Rummaneh 10 km NNE of Nazareth (the Crusader Romaneh). AV 'Remmon-methoah' is to be translated 'Rimmon as it bends towards . . .', as in RSV. A Levitical city (1 Ch. 6:77), Dimnah (Jos. 21:35), read by some vss as Remmon, may be the site; it was captured by the Assyrians *en route* to Jerusalem (so Is. 10:27, RSV).

3. A rocky cliff with caves near Gibeah, to which the Benjaminites escaped (Jdg. 20:45-47); perhaps modern Rammon, 8 km E of Bethel.

D. J. W.

RIVER. Hebrew has a good many different words often rendered 'river', although this is not always an accurate translation of the original term.

The Heb. word *nahal* is common, meaning a wadi or torrent-valley; in summer a dry river-bed or ravine, but a raging torrent in the rainy season. The Jabbok was such a wadi (Dt. 2:37), as were all the streams mentioned in the Elijah stories. Because these river-beds could suddenly become raging torrents, they often symbolize the pride of nations (Is. 66:12), the strength of the invader (Je. 47:2), and the power of the foe (Ps. 124:4). In his vision it was a *nahal* that Ezekiel saw issuing from the Temple (47:5-12).

The second term, *nāhār*, is the regular word for 'river' in Heb. It is used of particular rivers: *e.g.* the rivers of Eden (Gn. 2:10, 13-14), the Euphrates (Dt. 1:7), and the rivers of Ethiopia (Is. 18:1), Damascus (2 Ki. 5:12), *etc.* In Ex. 7:19; Ps. 137:1, the word should almost certainly be rendered 'canals'. The waters from the rock struck by Moses formed a *nāhār* (Ps. 105:41).

The word used most frequently of the Nile is *y'ôr*. The term is also found in Coptic, and was probably an Egypt. loan-word (*BDB*); see, *e.g.*, Gn. 41:1; Ex. 1:22. It is used by Jeremiah (46:7f.) as a similitude of Egypt. invasion.

Other Heb. terms for 'river' are *peleḡ*, irrigating canals (Pss. 1:3; 65:9); *āpīq*, channel or river-bed (Ps. 42:1; Is. 8:7; and *yūbāl* or *ūbāl*, a stream or watercourse (Is. 30:25; Dn. 8:2-3, 6). In the NT the word for 'river' is *potamos*. It is used of the Euphrates (Rev. 16:12) and the Jordan (Mk. 1:5); of the river issuing from God's throne (Rev. 22:1f.); and of the Holy Spirit under the figure of living water (Jn. 7:38f.).

J. G. S. S. T.

RIZPAH (Heb. *rispā*, 'a hot stone', 'a live coal'). I. Feminine form of *resep*, 'a live coal (from the altar)' (Is. 6:6); 'a cake baked on heated stones' (1 Ki. 19:6).

2. A town in N Mesopotamia (2 Ki. 19:12). Sennacherib, king of Assyria, spoke of its gods, as well as the gods of other nations, as being powerless to resist him (2 Ki. 19:12; Is. 37:12). Israel too was unable to resist the Assyrians.

3. A daughter of a certain Aiah, a concubine (*pileges*) of Saul (2 Sa. 3:7; 21:8, 10, 11). On Saul's death, Abner took Rizpah himself (2 Sa. 3:7-11).

Rizpah gave two sons to Saul, Mephibosheth and Armoni (2 Sa. 21:8). When, in later years, King David learnt that the Gibeonites required the death of seven of Saul's sons as an atonement for the bloody deeds of Saul among them, he surrendered the two sons of Rizpah along with the sons of Michal (2 Sa. 21:1ff.). All were hanged and left unburied, and the grief-stricken Rizpah watched over the bodies for several months. This devotion led David to undertake the proper burial of the bones of Jonathan and Saul along with those of the men who had been hanged. J. A. T.

ROCK. In the OT rock (Heb. *sela'*; *šār*) symbolizes the security and defence of a steep and inaccessible

ROCK

refuge (cf. Is. 32:2; 33:16). Similarly, it is used of an immovable foundation (cf. Ps. 40:2): to remove 'the rock' is equivalent to shaking the world (cf. Jb. 18:4). In an interplay of these symbols it is not surprising to find God spoken of as a rock who gives security and safety to his people (cf. 2 Sa. 22:32). In Is. 8:14 *šûr* is used of the Messianic stone rejected by the Jewish 'temple builders'. Together with Ps. 118:22 and Is. 28:16 it becomes important for NT typology: Jesus Christ, the rejected 'rock of offence', becomes the *cornerstone of God's true Temple, the Christian *ekklesia* (Rom. 9:33; 1 Pet. 2:6ff.; cf. Ellis, *Paul*, pp. 88ff.). In Paul the typology is extended to the identification of Christ with the rock whose nourishing water followed the Israelites in the wilderness (1 Cor. 10:1ff.; cf. Ellis, *Prophecy*, pp. 209–212). The relation (and probable identification) of *Peter with the rock in Mt. 16:18 is the subject of continuing discussion (cf. Cullmann, pp. 155–212).

ROD (STAFF). A word with a variety of meanings. 1. A stem, branch (Gn. 30:37; Je. 1:11). 2. A support carried by travellers (Gn. 32:10; Mk. 6:8), shepherds (Ex. 4:2; Ps. 23:4, 'staff'), old men (Zc. 8:4; Heb. 11:21) and men of rank (Gn. 38:18); figurative in 2 Ki. 18:21; Is. 3:1; Ezk. 29:6. Passing under a rod or staff was a shepherd's way of counting his sheep (Lv. 27:32; cf. Ezk. 20:37). 3. An instrument of punishment (Pr. *passim*; 1 Cor. 4:21). 4. A club carried by soldiers (1 Sa. 14:27; 2 Sa. 23:21) and shepherds (1 Sa. 17:40; cf. Ps. 23:4, where rod and staff respectively are used figuratively of divine protection and guidance; cf. Mi. 7:14). 5. A symbol of authority, both human (Jdg. 5:14), e.g. a sceptre (Gn. 49:10; Je. 48:17), and divine, like Moses' rod (Ex. 4:20) and Aaron's which confirmed the levitical priesthood (Nu. 17; Heb. 9:4). 6. A pole upon which ring-shaped loaves were hung. Breaking it is figurative of famine (Lv. 26:26; Ps. 105:16; Ezk. 4:16; 5:16; 14:13). Alternatively it may be simply a symbol for bread as a staple means of supporting life. 7. A magician's or diviner's wand (Ex. 7:12; Ho. 4:12). 8. A threshing-stick (Is. 28:27). 9. A measuring stick (Rev. 11:1; 21:15f.; cf. Ezk. 40:3).

In Ezk. 7:10 probably *MT hammatteh*, 'rod' (rsvmg.), has been rightly revocalized as *hammatteh*, 'injustice'.

ROMAN EMPIRE. The term in its modern usage is neither biblical nor even classical, and does not do justice to the delicacy and complexity of Roman methods of controlling the peoples of the Mediterranean. The word *imperium* signified primarily the sovereign authority entrusted by the Roman people to its elected magistrates by special act (the *lex curiata*). The *imperium* was always complete, embracing every form of executive power, religious, military, judicial, legislative and electoral. Its exercise was confined by the collegiality of the magistracies, and also by the customary

or legal restriction of its operation to a particular *provincia*, or sphere of duty. With the extension of Rom. interests abroad, the province became more and more often a geographical one, until the systematic use of the magisterial *imperium* for controlling an 'empire' made possible the use of the term to describe a geographical and administrative entity. In NT times, however, the system was still far from being as complete or rigid as this implies.

I. The nature of Roman imperialism

The creation of a Rom. * province, generally speaking, neither suspended existing governments nor added to the Rom. state. The 'governor' (there was no such generic term, the appropriate magisterial title being used) worked in association with friendly powers in the area to preserve Rome's military security, and if there was no actual warfare his work was mainly diplomatic. He was more like the regional commander of one of the modern treaty organizations which serve the interests of a major power than the colonial governor with his monarchical authority. The solidarity of the 'empire' was a product of the sheer preponderance of Roman might rather than of direct centralized administration. It embraced many hundreds of satellite states, each linked bilaterally with Rome, and each enjoying its individually negotiated rights and privileges. While the Romans obviously had it in their power to cut their way clean through the web of pacts and traditions, this suited neither their inclination nor their interest, and we find them even struggling to persuade dispirited allies to enjoy their subordinate liberties. At the same time there was going on a process of piecemeal assimilation through individual and community grants of Rom. citizenship which bought out the loyalty of local notabilities in favour of the patronal power.

II. Growth of the provincial system

The art of diplomatic imperialism as explained above was developed during Rome's early dealings with her neighbours in Italy. Its genius has been variously located in the principles of the fetal priesthood, which enforced a strict respect for boundaries and allowed no other grounds for war, in the generous reciprocity of early Rom. treaties, and in the Rom. ideals of patronage, which required strict loyalty from friends and clients in return for protection. For whatever reason, Rome soon acquired the leadership of the league of Latin cities, and then over several centuries, under the impact of the sporadic Gallic and German invasions, and the struggles with overseas powers such as the Carthaginians and certain of the Hellenistic monarchs, built up treaty relations with all of the Italian states S of the Po valley. Yet it was not until 89 bc that these peoples were offered Rom. citizenship and thus became municipalities of the republic. Meanwhile a similar process was taking place throughout the Mediterranean. At the end of the first Punic War Sicily was made a province (241 bc), and the Carthaginian threat led to further such steps in Sardinia and Corsica (231 bc), Hither and Further Spain (197 bc), and finally to the creation of a province of Africa itself after the destruction of Carthage in 146 bc. By contrast the Romans at first hesitated to impose themselves on the Hellenistic states of the E, until after the repeated failure of free negotiation provinces were created for Macedonia (148 bc) and Achaia (146

bc). In spite of a certain amount of violence, such as the destruction of both Carthage and Corinth in 146 bc, the advantages of the Rom. provincial system soon became recognized abroad, as is made clear by the passing of three states to Rome by their rulers' bequest, leading to the provinces of Asia (133 bc), Bithynia and Cyrene (74 bc). The Romans had been busy tidying up on their own account, and the threat to communications caused by piracy had by this time led to the creation of provinces for Narbonese Gaul, Illyricum and Cilicia.

The careerism of Rom. generals now began to play a prominent part. Pompey added Pontus to Bithynia and created the major new province of Syria as a result of his Mithridatic command of 66 bc, and in the next decade Caesar opened up the whole of Gaul, leaving the Romans established on the Rhine from the Alps to the North Sea. The last of the great Hellenistic states, Egypt, became a province after Augustus' defeat of Antony and Cleopatra in 31 bc. From this time onwards the policy was one of consolidation rather than expansion. Augustus pushed the frontier up to the Danube, creating the provinces of Raetia, Noricum, Pannonia and Moesia. In the next generation local dynasties were succeeded by Rom. governors in a number of areas. Galatia (25 bc) was followed by Cappadocia, Judaea, Britain, Mauretania and Thrace (AD 46).

The NT thus stands at the point where the series of provinces has been completed and the whole Mediterranean has for the first time been provided with a uniform supervisory authority. At the same time the pre-existing governments still flourished in many cases, though with little prospect of future progress. The process of direct incorporation into the Rom. republic went ahead until Caracalla in AD 212 extended citizenship to all free residents of the Mediterranean. From this time onwards the provinces are imperial territories in the modern sense.

III. The administration of the provinces

Until the 1st century bc the provinces had fallen to the Rom. magistrates either for their year of office itself or for the immediately subsequent year, when they continued to exercise the *imperium* as promagistrate. For all the high sense of responsibility of the Rom. aristocrat, and his life-long training in politics and law, it was inevitable that his province was governed with a single eye to his next step in the capital. The first standing court at Rome was established for the trial of provincial governors for extortion. So long as the competition for office remained unrestrained, the creation of 3-, 5- and 10-year commands only worsened the position. They became the basis for outright attempts at military usurpation. The satellite states were left in a hopeless plight. They had been accustomed to protect their interests against capricious governors by seeking the patronage of powerful houses in the senate, and justice was done in the long run. Now during the 20 years of civil war that followed the crossing of the Rubicon (49 bc) they were compelled to take sides and risk their wealth and liberty in an unpredictable conflict. Three times the great resources of the East were mustered for an invasion of Italy itself, but in each case the invasion was abortive. It then fell to the victor, Augustus, during 45 years of unchallenged power to restore the damage. He first accepted a province

for himself embracing most of the regions where a major garrison was still needed, notably Gaul, Spain, Syria and Egypt. This grant was renewed periodically until the end of his life, and the custom was maintained in favour of his successors. Regional commanders were appointed by his delegation, and thus a professional class of administrators was established, and consistent long-term planning was possible for the first time.

The remaining provinces were still allotted to those engaged in the regular magisterial career, but the possibilities of using the position improperly were ruled out by the overwhelming strength of the Caesars, and inexperience tended to defer to them in any case, so that the Caesarian standard of administration was widely maintained.

If it came to the worst a maladministered province could be transferred to the Caesarian allotment, as happened in the case of Bithynia in Pliny's day.

Three of the main responsibilities of the governors are well illustrated in the NT. The first was military security and public order. Fear of Rom. intervention on this ground led to the betrayal of Jesus (Jn. 11:48-50), and Paul was arrested by the Romans on the assumption that he was an agitator (Acts 21:31-38). The governments at Thessalonica (Acts 17:6-9) and at Ephesus (Acts 19:40) demonstrate the paralysis that had crept in through fear of intervention. On the other hand, among the Phoenician states (Acts 12:20) and at Lystra (Acts 14:19) there are violent proceedings with no sign of Rom. control. The second major concern was with the revenues. The Caesars straightened out the taxation system and placed it on an equitable census basis (Lk. 2:1). Jesus (Lk. 20:22-25) and Paul (Rom. 13:6-7) both defended Rom. rights in this matter. The third and most onerous of their duties was jurisdiction. Both by reference from the local authorities (Acts 19:38) and by appeal against them (Acts 25:9-10) litigation was concentrated around the Rom. tribunals. Long delays ensued as the cost and complexity of procedure mounted up. Hard-pressed governors struggled to force the onus back on to local shoulders (Lk. 23:7; Acts 18:15). Christians, however, freely joined in the chorus of praise for Rom. justice (Acts 24:10; Rom. 13:4).

IV. The Roman empire in New Testament thought

While the intricate relations of governors, dynasts and republics are everywhere apparent in the NT and familiar to its writers, the truly imperial atmosphere of the Caesarian ascendancy pervades it all. Caesar's decree summons Joseph to Bethlehem (Lk. 2:4). He is the antithesis of God in Jesus' dictum (Lk. 20:25). His distant envy seals Jesus' death warrant (Jn. 19:12). Caesar commands the perjured loyalty of the Jews (Jn. 19:15), the spurious allegiance of the Greeks (Acts 17:7), the fond confidence of the apostle (Acts 25:11). He is the 'emperor' to whom Christian obedience is due (1 Pet. 2:13). Yet his very exaltation was fatal to Christian loyalty. There was more than a grain of truth in the repeated insinuation (Jn. 19:12; Acts 17:7; 25:8). In the last resort the Christians will defy him. It was the hands of 'lawless' men that crucified Jesus (Acts 2:23). The vaunted justice is to be spurned by the saints (1 Cor. 6:1). When Caesar retaliated (Rev. 17:6) the blasphemy of his claims revealed his doom at the hand of the Lord of lords and King of kings (Rev. 17:14).

ROMAN EMPIRE

Thus, while Rom. imperial peace opened the way for the gospel, Rom. imperial arrogance flung down a mortal challenge.

ROMANS, EPISTLE TO THE.

I. Outline of contents

a. Introduction (1:1-15)

The apostle gives a long greeting followed by his reasons for his desire to visit the Roman church.

b. Doctrinal exposition (1:16-8:39)

The major theme is the righteousness of God.

(i) Both Gentiles and Jews are equally guilty in spite of God's righteousness (1:18-3:20). This is in spite of the many privileges of the Jews.

(ii) God has nevertheless dealt with this situation. He has provided a propitiatory sacrifice in Christ (3:21-26). Since the benefits of this are appropriated by faith, the way is open for both Jews and Gentiles (3:27-31). The example of Abraham shows justification to be by faith and not works (4:1-25). Many blessings attend the believer's justification (5:1-11). As sin is universal through Adam, so life comes through Christ (5:12-21).

(iii) Righteousness must have an application to life. This is achieved through union with Christ, for as the believer has died with him so he now lives in him (6:1-14). This new life involves a new type of service, for the believer, although freed from the law, has become a slave of God (6:15-7:6). Law is no help towards sanctification, since it produces inner conflict (7:7-25). But life in the Spirit brings victory to the believer, for sin is robbed of its power and a new status of sonship replaces the bondage of sin (8:1-17). The believer has great hope for the future, which is shared even by the material creation (8:18-25). The present life is strengthened by the Spirit's intercession and by the security provided by God's love (8:26-39).

c. The problem of Israel (9:1-11:36)

The theme of God's righteousness is now treated historically in answer to its apparent conflict with the rejection of Israel.

(i) God's actions are sovereign and just. No creature has the right to question the Creator's decisions (9:1-29).

(ii) Israel's rejection is not arbitrary but due to their own fault, for they have had ample opportunity to repent (9:30-10:21).

(iii) Nevertheless Israel may hope for restoration. God has always preserved a remnant (11:1-6). Israel's own failing has led to the inclusion of the Gentiles (11:7-12). The Gentiles will be the means of Israel's restoration (the olive-tree analogy) (11:13-24). The final state of Israel is in the hands of God in whom is inscrutable wisdom (11:25-36).

d. Practical exhortations (12:1-15:13)

(i) Duties resulting from dedicated lives of a personal and general character (12:1-21).

(ii) Duties affecting society as a whole, such as the duty of civic obedience, neighbourliness and sober conduct (13:1-14).

(iii) The need for toleration among Christians. This is worked out in relation to the special problem of foods (14:1-15:13).

e. Conclusion (15:14-16:27)

(i) The writer states his motive in writing (15:14-21).

(ii) His future plans are then mentioned (15:22-29).

(iii) He asks for prayer support for his Jerusalem visit (15:30-33).

(iv) Many Christians are greeted by name (16:1-16).

(v) Warnings are given about false teachers (16:17-19).

(vi) Further personal greetings, a benediction and doxology close the Epistle (16:20-27).

II. The Christian church at Rome

In the world of Paul's day the name of Rome meant much and was not without its strong fascination for the apostle himself, since he expresses a strong desire to preach the gospel there. As a missionary strategist he recognized the immense importance of the Christian church at the centre of the empire, and this may well have influenced the form of the Epistle which he addressed to it. Of the origin of this important church we know little, and it is perhaps useless to conjecture. It may have been founded by converts from the day of Pentecost who returned to their Roman homes rejoicing in their new-found faith, but, although some Romans are mentioned in Acts 2, there is no indication whether any of these were converted to Christianity on that day. But travel between Rome and her provinces was relatively easy in those days, and many Christians must have been among the travellers along the imperial highways. All that is certainly known is that by the time Paul writes to them the church was not only established but of considerable proportions. If the expulsion of Jews from Rome under the emperor Claudius had anything to do with the Christian church, as seems most probable from the reference to 'Chrestus' in the report of Suetonius, it is evident that it was of sufficient dimensions for such drastic action to be taken. And certainly under the Neronian persecutions not many years after this Epistle was written the Christians numbered a considerable multitude.

The question of Peter's connection with Rome cannot be answered with any conciseness, although any claims that Peter was founder of the church there may at once be dismissed. The apostle was still in Jerusalem at the time of the edict of Claudius, and the church must have been started many years before this. Moreover, Paul makes no mention of Peter in this Epistle, which would be hard to explain if Peter were in fact the head of the church at Rome at this time, as well as being directly opposed to his statement in 15:20. Nevertheless, tradition strongly supports the view that Peter and Paul both suffered martyrdom in Rome, since so early a witness as Clement of Rome attests to this.

There has been some discussion regarding the composition of the Roman church, but it would

seem most probable that it consisted of both Gentiles and Jews, with the former in the majority. Such a composition is to be expected in a cosmopolitan city with a strong Jewish colony, and is supported by an analysis of the Epistle itself. In some parts of his argument Paul seems to be addressing Jews, as, for instance, when he appeals to Abraham as 'our father' (4:1) and his direct address to a Jewish questioner in ch. 2; in other parts he turns his thought exclusively towards Gentiles (*cf.* 1:5ff.; 11:13, 28–31). It is an interesting question from what source the Christian tradition within this church had been mainly derived, but there is little indication that it had been derived from the narrower Jewish-Christian stream and it is most natural to suppose that these Christians maintained an outlook similar to that of Paul himself. There is no evidence of the tension of the Jewish-Gentile controversy so apparent in the Galatian Epistle.

III. Date and place of writing

Such indications as are given in this Epistle about Paul's present location all point to the period of his stay in Greece at the close of his third missionary journey (Acts 20:2). His face is now definitely turned towards the W, for he plans not only soon to visit Rome but to proceed with further missionary work in Spain (Rom. 15:24, 28). His E travels are therefore at an end, and this would well fit his situation in Acts 20. Moreover, he is there on his way to Jerusalem, and in Rom. 15:25 he says that his present plans are to go to Jerusalem with the contributions which many churches have made for the support of poverty-stricken Christians there. No doubt can exist, therefore, that the apostle writes this letter just before the final part of his third journey.

In confirmation of this conclusion there are certain indications in ch. 16 which point to Corinth as the place of despatch, although not all scholars are prepared to appeal to this chapter in support, since some believe it was sent to Ephesus and not Rome (see below). But leaving this aside, it is significant that *Phoebe is commended, and she was a deaconess of the church at Cencrea, one of the two ports of Corinth. There is also a passing reference to a certain *Gaius who was Paul's host at the time of writing, and it is possible that he is the Christian mentioned in 1 Cor. 1:14. Possibly the *Erastus referred to in Rom. 16:23 is the Erastus mentioned in 2 Tim. 4:20 as being left at Corinth, but this is by no means certain. More significant is the mention of Timothy and Sopater (Sospater) (Rom. 16:21), both of whom accompanied Paul on his visit to Jerusalem (Acts 20:4).

The Epistle may therefore be dated with relative accuracy, although the problems of NT *chronology in general and Pauline chronology in particular forbid any absolute dating. Some time between AD 57 and 59 would fit all the known data.

IV. The purpose of the Epistle

Certain immediate circumstances suggest themselves as the occasion which prompted the production of this Epistle. Paul's intention to do further missionary work in Spain caused him to appeal to the Christians at Rome to support him in this venture (*cf.* Rom. 15:24). As he contemplates his visit to the Roman church he realizes that he may have a spiritual gift to impart to them and that he as well as they may be mutually encouraged (1:11–12).

The apostle may have heard of some practical difficulties which the Christians were experiencing, and he intends to correct in the ethical part of his letter (especially in ch. 14) any wrong emphases. There is an allusion to false teachers in 16:17–19, where the Christians are told to avoid them, but this cannot be considered as part of the primary purpose of the letter, since it is appended almost as an afterthought. Clearly an anti-heretical purpose does not dominate the Epistle.

But the incidental purposes so far considered do not account for the theological form of the main part of the letter. What prompted the apostle to give such a prolonged theological exposition? He scarcely needed to have done this in order (on his approaching visit) to encourage interest in his western missionary plans. He must obviously have had some other dominating purpose. The first eleven chapters after the introductory portion (1:1–15) read more like a treatise than a letter, and it is important to consider the reason for this.

The view that Paul wished to deposit with the Roman church a full statement of his doctrinal position has much to commend it. Here are enshrined for posterity some of the noblest concepts of Christianity which have rightly been accorded an honoured place in Christian theology. But a clear distinction must be made between the basic use that Christians have made of this Epistle and the purpose for which Paul originally intended it. It cannot be maintained that he envisaged laying the foundations of Pauline theology in this way. Moreover, there are some aspects of this theology which find no part in the argument of this Epistle, such as eschatology and the doctrine of the church. It is not possible, therefore, to regard this Epistle as a full statement of Paul's doctrine. Nevertheless, it provides a well-reasoned presentation of some of his most dominant concepts, and it may well be that it was Paul's intention to inform the Roman church of these so that when he visited them the Christians would be intelligently acquainted with his teaching.

It is most probable that the apostle is deeply conscious that he has now reached the turning-point of his missionary career and his mind dwells upon some of the major concepts which have formed part of his continuing teaching work. In this case the inclusion of his matured reflections in a letter addressed to Rome may have been no more than an accident of circumstances in that at the time his face was turned Romeward. But it seems better to attach some importance to Paul's own esteem for the strategic importance of this church and to suppose that consciousness of this played some part in the character of his letter.

A more precise problem relating to the dogmatic purpose of the letter is the relative importance of the section dealing with the Jews' position (chs. 9–11). Some of the earlier critical scholars (*i.e.* of the Tübingen school) regarded this portion as the kernel of the letter, in which case the purpose was supposed to be an endeavour to reconcile opposing Jewish and Gentile elements. But this theory is now wholly discounted. It is more in harmony with the facts to maintain that this section naturally follows on the earlier, more theological, debate. The problem in these chapters is the difficulty of reconciling the righteousness of God, the theme of the earlier chapters, with the apparent non-fulfilment of the ancient promises in the rejection of Israel. This theme must have been a burning one for all Jewish

ROMANS, EPISTLE TO THE

Christians, and would have been relevant in an address to any church with a group of such Christians.

V. The integrity of the Epistle

Few scholars have had the temerity to question the authenticity of this Epistle, and the arguments of those who have done so are now recognized as wholly unfounded and subjective. But there are many scholars who question the concluding chapter, not on grounds disputing Pauline authorship but on the grounds that it does not belong to this Epistle. This opinion is based on several considerations: the large number of personal greetings which are supposed to be improbable to a church which Paul had never visited; the fact that three people, Aquila, Priscilla and Epaenetus, had connections with Asia rather than Rome (although the first two originally came from Rome); the commendation of Phoebe, which is considered less appropriate when addressed to a church where Paul was known; and the unexpectedness of the allusions to the false teachings in vv. 17-19; and the suitability of 15:33 as an ending to the Epistle. But these considerations are not conclusive and can be otherwise explained. It was not Paul's practice to single out individuals in churches where he was known, and in view of travel facilities it is not surprising that he knew many at Rome or that some last heard of in Asia were then at Rome. Since Paul was well enough known at Rome to write them an Epistle, the commendation of Phoebe presents no difficulty, while the warnings regarding false teachers may have been abruptly introduced either because Paul's notice had just been drawn to them or else because he purposely left the matter to the end so as not to emphasize it disproportionately. The ending 15:33 may be possible as an ending, but is unparalleled in Paul's other Epistles. On the internal evidence from the Epistle there would seem to be insufficient grounds for regarding the chapter as originally detached and as sent to a quite different destination, either Ephesus or anywhere else.

Something must be said about the textual evidence for the ending of this Epistle, although this is not the place for a full discussion. It is sufficient to mention that there are different streams of textual evidence for the position of the benediction and the doxology, and some variations in the reference to Rome in 1:7, 15. There are even some indications that in some quarters the Epistle circulated without its two concluding chapters. This seems to have been particularly associated with Marcion. It is by no means easy to find a theory which accounts for all the variations in the textual evidence, and many different hypotheses have been proposed, some regarding chs. 1-14 as original, some 1-15, and others 1-16. It is probable that the Epistle is original as it now stands, but that Marcion shortened it. In that case his text would have been responsible for the various textual traditions.

VI. The leading themes of the Epistle

a. The righteousness of God

At the commencement of the doctrinal part of the Epistle Paul introduces the theme of God's righteousness, which he claims is now revealed to the believer (1:17). To understand the development of Paul's argument as a whole it is necessary to consider in what ways he uses the concept of *righteousness (*dikaïosynē*). Sanday and Headlam, in

their excellent article on the righteousness of God (*A Critical and Exegetical Commentary on the Epistle to the Romans*, 1895, pp. 34-39), point out four different aspects of the manifestation of divine righteousness in this Epistle. The first is fidelity; for the promises of God must be fulfilled to accord with the divine nature (3:3-4). The second is wrath, a particular aspect of righteousness in its abhorrence of all sin, and not as is sometimes supposed a quality opposed to righteousness (*cf.* 1:17f.; 2:5). Righteousness and wrath are, in fact, indivisible, and it is a false exegesis which can treat of God's righteousness without allowing for the operation of God's wrath. The third is the manifestation of righteousness in the death of Christ, of which the classic statement is found in 3:25f. More will be said of this later, but for the present purpose it is necessary to note that in some way God's gift of Christ as a propitiatory sacrifice manifests his righteousness. It is not considered arbitrary or capricious, but is pre-eminently right and just. Only so could it reveal righteousness. The fourth aspect is the linking of righteousness with faith. It may be said to be characteristic of Pauline theology that the righteousness of God which has been manifested can also be appropriated by faith. God's righteousness is therefore considered as being active as well as passive, and in its active role it declares as righteous those who by nature are at enmity with God (see 5:10). This is the meaning of justification; not that men are actually made righteous but that they are accounted as righteous. The whole Epistle is in reality an exposition of this theme, and it has become basic not only to Pauline theology but to the subsequent Reformed theology which draws so much from it.

b. The goodness of God

In case anyone should think that Paul's conception of God was mainly influenced by God's righteousness irrespective of his other attributes, it is well to be reminded that in this Epistle Paul has much to say about the loving character of God. The mere fact that God's righteousness is conceived of as active in man's salvation points to a motive of love linked with holiness. But Paul specifically draws attention to God's kindness and forbearance and patience (2:4). He points out that the supreme manifestation of God's love is in the amazing fact that Christ died for us while we were still sinners (5:8). And the classic statement of the enduring quality of that love is found in 8:35ff., where Paul can think of nothing, either circumstantial or spiritual, which could possibly separate us from God's love.

When dealing with the problem of the rejection of Israel, Paul makes much of God's mercy and flatly refuses to acknowledge the possibility of his injustice (9:15). He quotes approvingly the statement of Isaiah that all day long God had stretched out his hands to the disobedient people of Israel (10:21). Even when the apostle is obliged to speak of the severity of God, he at once reminds his readers of God's kindness to those who continue to abide in him (11:22). It is the great prerogative of God to have mercy (11:32). Even in the practical part of the Epistle, Paul frequently thinks of the gracious character of God. His will is good, acceptable and perfect (12:2). He receives both the weak and the strong, and this is cited as a reason why the one should not judge the other. He is called the God of steadfastness and encouragement (*tēs hypomonēs kai tēs paraklēseōs*, 15:5), and

this forms the basis of an exhortation to develop similar qualities in ourselves. Similarly, because God is a God of hope (15:13), Christians by the power of the Spirit are to abound in hope. Throughout the Epistle, in fact, Paul's thought is dominated by his conception of God. But one other aspect demands a brief comment on its own.

c. The sovereignty of God

It is mainly in chs. 9–11 that God's sovereignty comes into focus. Here Paul is discussing the destiny of Israel and its relationship to the destiny of the Gentiles. The theme at once raises the problem of the justice of God, and Paul sets out his view of God's choice. He illustrates his point by reference to both patriarchal and Mosaic times. To any who still dispute the sovereign choice of God through Israel's past history, he uses the illustration of the potter and the clay (9:19ff.) and shows that the power of God is always mixed with mercy. His sovereign purposes are seen not only in the inclusion of the Gentiles, but also in the promise of Israel's restoration. Throughout this discussion Paul is at pains to affirm the sovereignty of God even if it leads to problems. It is the conviction that God's ways must be right which leads the apostle to the majestic doxology in 11:33–36.

d. The grace of God

No account can be given of God's grace until full appreciation has been made of man's sin, and this is well illustrated in this Epistle. The first three chapters are designed to show man's failure to attain to God's righteousness. Not only does Paul give a startling inventory of Gentile sins (ch. 1) but he points out Israel's culpability in spite of their privileges. As his argument develops, Paul lays stress on the sinful nature of man under the terminology of flesh (*sarx*), by which he means moral rather than physical sinfulness. When speaking of Christ Paul is careful to differentiate his flesh, which was only in the likeness of sinful flesh, and man's flesh. It is clear that Christ had to become man to redeem man, for that is basic to Paul's doctrine of the two *Adams (5:12ff.). In his description of his own struggles with sin (ch. 7) Paul has an acute sense of the power of sin. It is almost a personal enemy which does its utmost to destroy the soul. It takes advantage of the flesh. It brings all the members into bondage to its principles, which Paul calls the law of sin (7:23). It reduces man to the utmost wretchedness, from which only God through Christ can deliver.

This leads to a consideration of the saving activity of God in Christ. There has been much discussion over the significance of the word *hilastērion* (propitiatory) in 3:25, and this is not the place to discuss its meaning. But it is important to remember that the most significant aspect of Paul's statement is that God took the initiative. This is in line with Paul's whole approach to the processes of redemption in this Epistle. The work of Christ on the cross is seen as an objective sacrifice provided by God on the basis of which sins may be remitted.

Paul deals in ch. 6 with the operation of God's grace and shows that the superabundance of that grace must never be regarded as an occasion to commit greater sin. This is impossible because of the believer's close union with Christ, a doctrine which has an important place in Paul's thought. The illustration of baptism is used to show the

character of the transformation which has been effected. Sin no longer has dominion because we are now under grace (6:14). Nevertheless, grace has made us slaves of God, so that a new obligation has replaced the old (6:20f.).

e. The law of God

That the apostle had a high regard for the Jewish law is made clear by his statement that the commandment is holy, just and good (7:12). He also recognizes the useful function of the law in manifesting the character of sin (7:7). Yet he is convinced by bitter experience that the law is completely ineffective as a means of salvation, not because of any inherent deficiencies in the law, for man's better self delights in the law (7:22), but because of man's own deficiencies.

Yet as he considers the law of God, the apostle at once perceives that for the Christian this comprises more than the mere letter of the Mosaic law. It involves what he calls the law of the Spirit (8:2), and his doctrine of the Holy Spirit, especially in his work of sanctification (in ch. 8), ought not to be divorced from its close connection with the law of God. Under the new covenant the commandments were to be written on the heart, and this is effected only through the indwelling Spirit. He introduces a new way of looking at God's requirements, for these become the laws of a Father under an entirely new relationship.

The Spirit of God is set over against the flesh (8:4f.), gives life in place of death (8:11), bears witness to the Christian's sonship (8:14f.), and intercedes for them in accordance with God's will (8:26f.). Christian life is, therefore, not a matter of submission to a legal code, but a life controlled by the Spirit on the basis of a new law which involves such qualities as righteousness, peace, joy, hope and love (cf. 5:3f.; 12:11; 14:17; 15:13, 30).

ROME. Founded traditionally in 753 BC on its seven hills (the bluffs formed where the Latin plain falls away into the Tiber bed at the first easy crossing up from the mouth), Rome, as the excavations have shown, was in origin a meeting-place and a melting-pot, rather than the home of a pre-existing people. The process of accretion, stimulated at an early stage by the strategic requirements of the Etruscan states to the N and S, acquired its own momentum, and by a liberal policy of enfranchisement unique in antiquity Rome attracted to herself men and ideas from all over the Mediterranean, until nearly 1,000 years from her beginning she had incorporated every other civilized community from Britain to Arabia. Rome was cosmopolitan and all the world was Roman. Yet this very comprehensiveness destroyed the uniqueness of the city, and the strategic centrality that had dictated her growth was lost with the opening up of the Danube

ROME

and the Rhine, leaving Rome in the Middle Ages little more than a provincial city of Italy.

In NT times Rome was in the full flush of her growth. Multi-storey tenement blocks housed a proletariat of over a million, drawn from every quarter. The aristocracy, becoming just as international through the domestic favours of the Caesars, lavished the profits of three continents on suburban villas and country estates. The Caesars themselves had furnished the heart of the city with an array of public buildings perhaps never equalled in any capital. The same concentration of wealth provided the overcrowded masses with generous economic subsidies and entertainment. It also attracted literary and artistic talent from foreign parts. As the seat of the senate and of the Caesarian administration Rome maintained diplomatic contact with every other state in the Mediterranean, and the traffic in foodstuffs and luxury goods fortified the links.

I. Rome in New Testament thought

The Acts of the Apostles has often been supposed to be an apostolic odyssey set between Jerusalem and Rome as the symbols of Jew and Gentile. The opposite pole to Jerusalem is, however, given as the 'end of the earth' (Acts 1:8), and, while the narrative certainly concludes at Rome, no great emphasis is laid on that. Attention is concentrated on the legal struggle between Paul and his Jewish opponents, and the journey to Rome serves as the resolution of this, culminating in Paul's denunciation of the Jews there and the unhindered preaching to the Gentiles. The theme of the book seems to be the release of the gospel from its Jewish matrix, and Rome provides a clear-cut terminal point in this process.

In Revelation, however, Rome acquires a positively sinister significance. 'The great city, which has dominion over the kings of the earth' (Rev. 17:18), seated upon seven mountains (v. 9), and upon 'the waters' which are 'peoples and multitudes and nations and tongues' (v. 15), is unmistakably the imperial capital. The seer, writing in Asia Minor, the greatest centre of luxury trade in antiquity, discloses the feelings of those who suffered through the consortium with Rome. He scorns the famous compromise with 'the kings of the earth' who 'were wanton with her' (Rev. 18:9), and catalogues the sumptuous traffic (vv. 12-13) of the 'merchants of the earth' who have 'grown rich with the wealth of her wantonness' (v. 3). He stigmatizes the artistic brilliance of the city (v. 22). How widespread such hatred was we do not know. In this case the reason is plain. Rome has already drunk the 'blood of the martyrs of Jesus' (Rev. 17:6).

II. The origin of Christianity at Rome

So far as the NT goes, it is not clear how the circle of Christians was established in Rome, nor even whether they constituted a church in the regular way. There is no unequivocal reference to any meeting or activity of the church as such, let alone to bishops or sacraments. The church of Rome simply fails to appear in our documents. Let it be said at once that this need not mean that it was not yet formed. It may merely be the case that it was not intimately connected with Paul, with whom most of our information is concerned.

Paul's first known link with Rome was when he met *Aquila and Priscilla at Corinth (Acts 18:2). They had left the city as a result of Claudius' ex-

pulsion of the Jews. Since it is not stated that they were already Christians, the question must be left open. Suetonius says (*Claudius*, 25) that the trouble in Rome was caused by a certain Chrestus. Since this could be a variant of Christus, it has often been argued that Christianity had already reached Rome. Suetonius, however, knew about Christianity, and, even if he did make a mistake, agitation over Christus could be caused by any Jewish Messianic movement, and not necessarily by Christianity alone. There is no hint in the Epistle to the Romans that there had been any conflict between Jews and Christians at Rome, and when Paul himself reached Rome the Jewish leaders professed personal ignorance of the sect (Acts 28:22). This not only makes it unlikely that there had been a clash, but sharpens the question of the nature of the Christian organization at Rome, since we know that by this stage there was a considerable community there.

Some few years after meeting Aquila and Priscilla, Paul decided that he 'must also see Rome' (Acts 19:21). When he wrote the Epistle shortly afterwards his plan was to visit his friends in the city on the way to Spain (Rom. 15:24). A considerable circle of these is named (ch. 16), they had been there 'many years' (Rom. 15:23), and were well known in Christian circles abroad (Rom. 1:8). Paul's reference to his not building 'on another man's foundation' (Rom. 15:20) does not necessarily refer to the situation in Rome; it need only mean that this was the reason why his work abroad had been so lengthy (Rom. 15:22-23); indeed, the authority he assumes in the Epistle leaves little room for an alternative leader. The most natural assumption, on the internal evidence, is that Paul is writing to a group of persons who have collected in Rome over the years after having had some contact with him in the various churches of his foundation. A number of them are described as his 'kinsmen', others have worked with him in the past. He introduces a new arrival to them (Rom. 16:1). Although some bear Roman names, we must assume that they are recently enfranchised foreigners, or at least that the majority of them are not Romans, since Paul's references to the government allude to its capital and taxation powers over non-Romans in particular (Rom. 13:4, 7). Although some are Jews, the group seems to have a life of its own apart from the Jewish community (ch. 12). The reference in at least five cases to household units (Rom. 16:5, 10-11, 14-15) suggests that this may have been the basis of their association.

When Paul finally reached Rome several years later, he had been met on the way by 'the brethren' (Acts 28:15). They do not appear again, however, either in connection with Paul's dealings with the Jewish authorities or, so far as the brief notice goes, during his 2 years' imprisonment. The seven letters that are supposed to belong to this period do sometimes contain greetings from 'the brethren', though they are mainly concerned with personal messages. The reference to rival preachers (Phil. 1:15) is the nearest we come to any positive NT evidence for a non-Pauline contribution to Roman Christianity. On the other hand, the assumption of a church organized independently of Paul might explain the amorphous character of Roman Christianity in his writings.

III. Was Peter ever in Rome?

In the late 2nd century AD the tradition appears

that Peter had worked in Rome and died there as a martyr, and in the 4th century the claim that he was first bishop of the Roman church appears. These traditions were never disputed in antiquity and are not inconsistent with NT evidence. On the other hand, nothing in the NT positively supports them. Most students assume that 'Babylon' (1 Pet. 5:13) is a cryptic designation for Rome, but, although there are parallels for this in apocalyptic literature, it is difficult to see what the need for secrecy was in a letter, nor who was likely to be deceived in this case when the meaning was supposed to be plain to so wide a circle of readers. The so-called *First Epistle of Clement*, written when the memory of the apostles was still preserved by living members of the church at Rome, refers to both Peter and Paul in terms which imply that they both died martyrs' deaths there. The tantalizing fact that this is not positively asserted may, of course, simply mean that it was taken for granted. From about a century later comes the information that there were 'trophies' of Peter on the Vatican hill and of Paul on the road to Ostia. On the assumption that these were tombs, the two churches bearing the apostolic names were erected over them at later times. The Vatican excavations have revealed a monument which could well be the 2nd-century 'trophy' of Peter. It is associated with a burial-ground that was used in the late 1st century.

We still lack any positive trace of Peter in Rome, however. The excavations strengthen the literary tradition, of course, and in default of further evidence we must allow the distinct possibility that Peter died in Rome. That he founded the church there and ruled it for any length of time has much feebler support in tradition, and faces the almost insuperable obstacle of the silence of Paul's Epistles.

The tradition of the martyrdom of the apostles is supplied with a lurid occasion by the massacre of AD 64 (*NERO). The account by Tacitus (*Annals* 15. 44) and the shorter notice by Suetonius (*Nero* 16) supply us with several surprising points about the Christian community at Rome. Its numbers are described as very large. Its connection with Jesus is clearly understood, and yet it is distinguished from Judaism. It is an object of popular fear and disgust for reasons which are not explained, apart from a reference to 'hatred of the human race'. Thus Nero's mad atrocities merely highlight the revulsion with which the Christians were received in the metropolis of the world.

BIBLIOGRAPHY. See under *ROMAN EMPIRE. G. Alföldy, *The Social History of Rome*, 1988; J. P. V. D. Balsdon, *Life and Leisure in Ancient Rome*, 1974. E.A.J.

ROSH. I. In the RV this word occurs in the title of Gog who is described as 'prince of Rosh' (Ezk. 38:2-3; 39:1). AV, RVmg. and RSV interpret as a title itself, 'chief', 'prince'. However, the name of a N people or country such as Meshech and Tubal is more probable. Gesenius suggested Russia, but this name is not attested in the area, and a very distant people named thus early is unlikely in the context. Most follow Delitzsch in identifying Rosh with Assy. *Rašu* on the NW border of Elam (*i.e.* in Media).

2. The name of the seventh son of Benjamin (Gn. 46:21). LXX makes him son of Bela, grand-

son of Benjamin; but *cf.* lists in Nu. 26:38f.; 1 Ch. 8:1-5. D.J.W.

RUFUS ('red'). A name of Italic rather than Latin origin, found twice in the NT (Mk. 15:21; Rom. 16:13), probably referring to the same man. In Mk. 15:21 Simon of Cyrene is identified for the benefit of a later generation as the father of Alexander and Rufus, brothers who were presumably known in Rome when Mark's Gospel was published there. The Roman Rufus who is greeted by Paul (on the assumption that Rom. 16 was sent to Rome) can hardly have been a different man. Paul describes him as a choice Christian. His mother had shown herself a mother to Paul (perhaps in Antioch, if we may further identify Simon of Cyrene with Simeon of Acts 13:1). F.F.B.

RUHAMAH (Heb. *ruhāmā*, 'pitied'). A symbolic name of Israel (Ho. 2:1, AV; *cf.* Rom. 9:25-26; 1 Pet. 2:10) used to indicate the return of God's mercy. A play on words is involved, for the second child of Gomer, wife of *Hosea, was called Lo-ruhamah ('unpitied'), denoting a time when God had turned his back on Israel because of her apostasy. J.D.D.

RUMAH. Mentioned in 2 Ki. 23:36 only. Josephus, in a parallel account, calls it 'Abouma', and probably means 'Arumah', a place mentioned in Jdg. 9:41, in the vicinity of Shechem. But the name Rumah is quite possible; the name and site are probably preserved in Khirbet al-Rumah, some 35 km inland from Mt Carmel. D.F.P.

RUNNER. Urgent messages were sent in antiquity by a swift runner (Heb. *rās*), often a member of the royal bodyguard or 'out-runners' (2 Sa. 15:1). So the late term 'runner' or royal messenger (Je. 51:31) was used for those who carried letters between cities (2 Ch. 30:6, 10), usually on fast horses (Est. 8:10, 14). Thus the term 'post' (AV) was synonymous with speed (Jb. 9:25). Throughout the Persian empire, as in earlier Babylonian times, regular posts were established between provincial capitals (G. R. Driver, *Aramaic Documents of the Fifth Century BC*, 1956, pp. 10-12). D.J.W.

RUTH (Heb. *rūṭ*, perhaps contracted from *r'ūṭ*, 'female companion'). Ruth is the heroine of the book which bears her name (see next article). She was a Moabitess who lived in the time of the Judges.

In her own land Ruth had married Mahlon (Ru. 4:10), the elder son of Elimelech and Naomi, Israelites from Bethlehem-judah who came to Moab during a famine. Naomi was widowed and then her two sons died without heirs. She determined to return to her native country, whereupon Ruth announced that she intended to accompany her, adopting both her nation and her God. Only by death would they be separated (Ru. 1:17).

During the barley harvest in Bethlehem Ruth went to glean in the fields of Boaz, a wealthy relative of Elimelech. Boaz noticed her and gave her his protection in acknowledgment of her loyalty to Naomi. She was invited to eat with the reapers, and

RUTH

was favoured throughout the barley harvest and the wheat harvest.

When all was harvested and the threshing had begun, acting on Naomi's instructions Ruth went to the threshing-floor at night and claimed Boaz's protection by appealing to his chivalry. He sent her back home as soon as it was light, with a present of six measures of barley, and the undertaking that, if her near kinsman was not prepared to marry her under the levirate marriage law, he would act as her kinsman-redeemer (*cf.* Lv. 25:25, 47-49).

With ten elders of the city as witnesses, he appealed to Naomi's kinsman to redeem a plot of land which had belonged to Elimelech, and which was a sacred trust that must not pass out of the family (*cf.* Lv. 25:23). To this he added the obligation of levirate marriage to Ruth (Ru. 4:5). The kinsman could not afford this and renounced his right in favour of Boaz.

Ruth was married to Boaz, and their first child Obed was given to Naomi to continue the names of Elimelech, Mahlon and Chilion. He was the grandfather of David (1 Ch. 2:12; Mt. 1:5).

M.B.

RUTH, BOOK OF. In the Heb. Bible Ruth is one of the five *Megilloth* or 'rolls', included in the 'Writings', the third division of the Canon. It is read annually by the Jews at the Feast of Weeks. In the LXX, Vulg., and most modern versions it comes immediately after Judges; Josephus (*Contra Apionem* l. 8) apparently reckons it to be an appendix to Judges and does not count it separately in enumerating the total number of books in the Canon.

For the plot of the book, see *RUTH.

I. Outline of contents

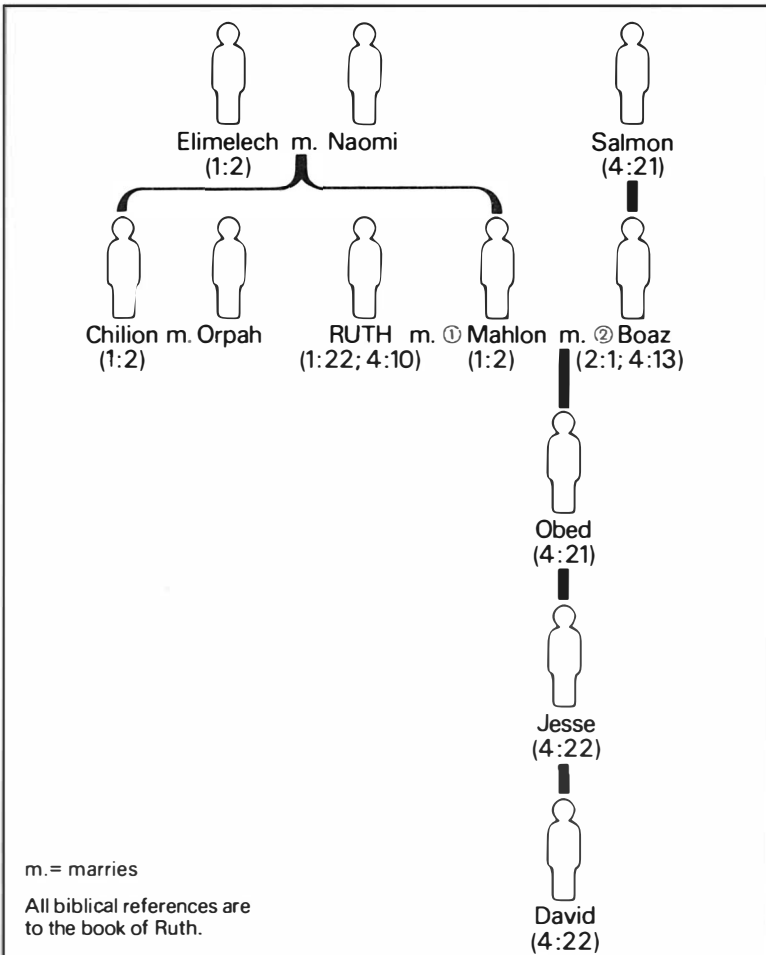

a. Naomi, widowed and bereft of her sons, returns from Moab to her native Bethlehem with her Moabite daughter-in-law Ruth (1:1-22).

b. Ruth gleanes in the field of Naomi's wealthy kinsman Boaz (2:1-23).

c. Ruth appeals to Boaz to perform the part of a kinsman-redeemer (3:1-18).

d. Ruth is married to Boaz and gives birth to Obed (4:1-17).

e. Genealogy from Perez to David (4:18-22).

The family of Ruth.

II. Authorship, date and purpose

The book of Ruth is fraught with difficulties for the critic, because, like Job, it contains no clue to its authorship. Tradition alone ascribes this idyllic pastoral to the last of the Judges, the prophet-priest Samuel.

The setting is that of the period of the Judges (Ru. 1:1), but its writing belongs to a later date. This is indicated when the author explains former customs (Ru. 4:1-12). A very wide range of dating is offered for its actual composition, ranging from early pre-exilic times to a late post-exilic date.

The classical style and language do point to an early date, as does the attitude to foreign marriages, for under the Deuteronomic law a Moabite could not enter the congregation (Dt. 23:3). The late dating is based on the antiquarian interest displayed in the book, and on its supposed connection with the reforms of Ezra and Nehemiah. One school of thought sees evidence of both early and late work in the book, supposing that the genealogy of David (Ru. 4:18-22) and the explanations of early customs belong to a much later date than the book itself.

Many suggestions as to the purpose of the book have been put forward, among them the following. It was intended to supply a family tree for the greatest of the kings of Hebrew history, David, because this was omitted from the books of Samuel. It was a political pamphlet, an anti-separatist tract, written to counteract the stringency of Ezra and Nehemiah on the subject of mixed marriages. It was a humanitarian plea on behalf of the childless widow so that the next of kin would assume responsibility for her. It was designed to depict an overruling providence. It was to present a case for racial tolerance. Perhaps there was no ulterior motive at all, but it was a tale that had to be told. It certainly presents a most pleasing contrast with the narratives at the end of Judges, which belong to the same general period (Jdg. 17-21).

M.B.

S

SABBATH (Heb. *šabbāt*, from the root *šābat*, 'to cease', 'to desist'). In the Bible the principle is laid down that one day in 7 is to be observed as a day holy to God. From the reason given for keeping the sabbath day in the Ten Commandments we learn that the example for the sabbath rest had been set by God himself in the creation. The sabbath therefore is a creation ordinance (Ex. 20:8-11).

In the account of creation the actual word 'sabbath' is not found, but the root from which the word is derived does occur (Gn. 2:2). The work of creation had occupied 6 days; on the 7th God rested (lit. 'ceased') from his labour. Thus there appears the distinction between the 6 days of labour and the one day of rest. This is true, even if the 6 days of labour be construed as periods of time longer than 24 hours. The language is anthropomorphic, for God is not a weary workman in need of rest. Nevertheless, the pattern is here set for man to follow. Ex. 20:11 states that God 'rested' (Heb. *wayyānāh*) on the 7th day, and Ex. 31:17 says that he ceased from his work and 'was refreshed' (*wayyinnāpās*). The language is purposely strong so that man may learn the necessity of regarding the sabbath as a day on which he himself is to rest from his daily labours.

It has been held in contradistinction to what has been stated above that the institution of the sabbath derived from Babylonia. It is true that the Babylonian word *šabbatum* is related to the corresponding Hebrew word, but the force of the words is quite different. For one thing the Babylonians had a 5-day week. Examination of contract tablets reveals that the days designated *šabbatum* were not days of cessation from labour. Contracts from Mari (Tel el-Hariri) show that work was performed, sometimes over a period of several days, without any interruption every 7th day. The Bible clearly attributes the origin of the sabbath to the divine example.

The fourth commandment enjoins observance of the sabbath. In Genesis there is no mention of the sabbath apart from the creation account. There is, however, mention of periods of 7 days (cf. Gn. 7:4, 10; 8:10, 12; 29:27ff.). We may also note in the narrative in Job that the seven sons celebrated a feast each on his day, and this was followed by the prayers and sacrifices of Job for the benefit of his children (Jb. 1:4-5). This was not a single round, but was regularly practised. It may be that here is an intimation of worship on the 1st day of the cycle. At least the principle that one day in 7 is holy to the Lord appears to be recognized here.

In Ex. 16:21-30 explicit mention is made of the sabbath in connection with the giving of manna. The sabbath is here represented as a gift of God (v. 29), to be for the rest and benefit of the people (v. 30). It was not necessary to work on the sabbath (*i.e.* to gather manna), for a double portion had been provided on the 6th day.

The sabbath was therefore known to Israel, and the injunction to remember it was one that would be understood. In the Decalogue it is made clear that the sabbath belongs to the Lord. It is therefore primarily his day, and the basic reason for observing it is that it is a day which belongs to him. It is a day that he has blessed and that he has set apart for observance. This is not contradicted by the Decalogue given in Dt. 5:12ff. In this latter passage the people are commanded to keep the sabbath in the manner in which the Lord has already commanded them (the reference is to Ex. 20:8-11), and the fact that the sabbath belongs to the Lord is again stated (v. 14). An additional reason, however, is given for the observance of the command. This reason is merely additional; it does not conflict with those already given. Israel is commanded to observe the sabbath day, in order 'that your manservant and your maidservant may rest as well as you'. Here is a humanitarian emphasis; but here also is emphasis upon the fact that the sabbath was made for man. Israel had been a slave in Egypt and had been delivered; so Israel must show the mercy of the sabbath towards those in her own midst who were slaves.

Throughout the remainder of the Pentateuch the sabbath legislation is found. It is interesting to note that there is a reference to the sabbath in each of the four last books of the Pentateuch. Genesis presents the divine rest; the remaining books emphasize the sabbatical legislation. This shows the importance of the institution. Sabbath legislation, it may be said, is integral and essential to the basic law of the OT and the Pentateuch (cf. Ex. 31:13-16; 34:21; 35:2ff.; Lv. 19:3, 30; 23:3, 38).

In this connection the significance of the sabbatical legislation appears in the severe punishment that is meted out upon a sabbath-breaker. A man had been gathering sticks upon the sabbath day. For this act a special revelation from God decreed that he should be put to death (cf. *J. Weingreen, From Bible to Mishna*, 1976, pp. 83ff.) This man had denied the basic principle of the sabbath, namely, that the day belonged to the Lord, and therefore was to be observed only as the Lord had commanded (cf. Nu. 15:32-36).

Upon the Pentateuchal legislation the prophets build; their utterances are in accordance with what had been revealed in the Pentateuch. The 'sabbaths' are often linked together with the 'new moons' (2 Ki. 4:23; Am. 8:5; Ho. 2:11; Is. 1:13; Ezk. 46:3). When prophets like Hosea (2:11) pronounced divine judgment on new moons, sabbaths and other appointed feasts, they were not condemning the sabbath as such; they were condemning a misuse of the sabbath and of the other Mosaic institutions.

On the other hand, the prophets do point out the blessings that will follow from a proper observance

of the sabbath. There were those who polluted the sabbath and did evil on that day (Is. 56:2-4), and it was necessary to turn from such things. In a classic passage (Is. 58:13) Isaiah sets forth the blessings that will come from a true observance of the day. It is not a day in which man is to do what pleases him, but rather one on which he is to do the will of God. God, not man, must determine how the sabbath is to be observed. Recognizing that the day is holy to the Lord will bring the true enjoyment of the promises.

During the Persian period emphasis was again laid upon observance of the sabbath day. The pre-exilic ban on engaging in commercial transactions on the sabbath (Am. 8:5) or carrying burdens on that day (Je. 17:21f.) was reinforced by Nehemiah (Ne. 10:31; 13:15-22). During the period between the Testaments, however, a change gradually crept in with respect to the understanding of the purpose of the sabbath. In the synagogues the law was studied on the sabbath. Gradually oral tradition made its growth among the Jews, and attention was paid to the minutiae of observance. Two tractates of the Mishnah, *Shabbath* and *Erubin*, are devoted to a consideration of how the sabbath was to be observed in detail. It was against this burdening of the commands of God with human tradition that our Lord inveighed. His remarks were not directed against the institution of the sabbath as such and not against the OT teaching. But he did oppose the Pharisees who had made the Word of God of none effect with their tradition. Christ identified himself as the Lord of the sabbath (Mk. 2:28). In so speaking, he was not depreciating the importance and significance of the sabbath nor in any way contravening the OT legislation. He was simply pointing out the true significance of the sabbath with respect to man and indicating his right to speak, inasmuch as he himself was the Lord of the sabbath.

As Lord of the sabbath, Jesus went to the synagogue on the sabbath day, as was his custom (Lk. 4:16). His observance of the sabbath was in accord with the OT prescription to regard the day as holy to the Lord.

In his disagreement with the Pharisees (Mt. 12:1-14; Mk. 2:23-28; Lk. 6:1-11) our Lord pointed out to the Jews their complete misunderstanding of the OT commands. They had sought to make the observance of the sabbath more rigorous than God had commanded. It was not wrong to eat on the sabbath, even if the food must be obtained by plucking corn from the ears. Nor was it wrong to do good on the sabbath day. To heal was a work of mercy, and the Lord of the sabbath is merciful (cf. also Jn. 5:1-18; Lk. 13:10-17; 14:1-6).

On the first day of the week the Lord rose from the dead, and therefore it early and increasingly became the day above all others—the 'Lord's day' (Rev. 1:10)—on which Christians met for worship (cf. Acts 20:7; also *Didache* 14. 1; Justin, *First Apology* 67. 3).

F. F. B.

SABBATICAL YEAR. This term refers to the provision made concerning the land. Lv. 25:2 has *w'sāb' t'āh ā'āres šabbāt*, 'the land shall keep a sabbath'. It is also called 'sabbath of solemn rest' and 'year of solemn rest' (Lv. 25:4-5). After 6 years of sowing, pruning and gathering, the land lay fallow for one year. The unattended growth of the field was for the poor to glean and what remained was for the beasts (Ex. 23:11; Dt. 15:2-18). To quiet fears of privation the Israelites were assured by the Lord that the 6th year would provide enough for 3 years (Lv. 25:20f.). From the time of its institution this year of rest was observed in Israel (Ne. 10:31; 1 Macc. 6:49, 53; cf. Jos., *Ant.* 12. 378; 14. 206). Lv. 26:34-43; 2 Ch. 36:21; Je. 34:14-22 refer to God's anger concerning the violation of this ordinance.

The culmination of the sabbatical years was reached each 50th year. This was a jubilee (Heb. *yōbēl*, 'ram', thence 'trumpet' (ram's horn) by which the year was heralded). The sanctions of the sabbatical year were enforced. In addition, property reverted to its original owners, debts were remitted, and Hebrews who had been enslaved for debt were released. It was a time of thanksgiving and an occasion for the exercise of faith that God would provide food (Lv. 25:8, etc.).

The significance of rest for the land every 7th year does not lie merely in principles of soil chemistry. Neither does it follow the Canaanite pattern of a 7-year cycle without a harvest followed by 7 years of plenty. In the text the land lies fallow for one year. (See C. H. Gordon, *Ugaritic Literature*, 1949, pp. 5f.) The underlying reason for this arrangement lies in the disclosure that the 7th year of rest is a sabbath of rest both for the land and for the Lord (Lv. 25:2, 4). There is evident here a relation to the *sabbath institution which is grounded in God's creative activity. In accord with this disclosure other elements may be observed, namely, that man is not the sole owner of the soil and he does not hold property in perpetuity but possesses it in trust under God (Lv. 25:23). The Israelite was also to remember he possessed nothing by inherent right, for he was a slave in Egypt (Dt. 15:15). Generosity is motivated by gratitude. D.F.

SABTA, SABTAH. The third son of Cush (Gn. 10:7, *sabtā*; 1 Ch. 1:9, *sabtā*) whose name also applied to his descendants. From the fact that among the other descendants of *Cush there are names later associated with S Arabia, it is probable that Sabta refers to a tribe in this area.

BIBLIOGRAPHY. J. A. Montgomery, *Arabia and the Bible*, 1934, p. 42. T.C.M.

SABTECA. The fifth son of Cush (Gn. 10:7 = 1 Ch. 1:9) whose name also referred to his descendants. The other descendants of Cush include names later associated with S Arabian tribes, indicating that the descendants of Sabteca probably later lived in this area. The name is otherwise unknown. T.C.M.

SACKCLOTH. A coarse cloth (Heb. *saq*, Gk. *sakkos*, from which the Eng. word is derived), usually made of goats' hair (*Siphra* 53b) and black in colour (Rev. 6:12). The same Heb. word sometimes

SACKCLOTH

means 'sack' (e.g. Gn. 42:27), which was evidently made of this material.

Sackcloth was worn as a sign of mourning for the dead (Gn. 37:34; 2 Sa. 3:31; Joel 1:8; Judith 8:5), or of mourning for personal or national disaster (Jb. 16:15; La. 2:10; Est. 4:1; 1 Macc. 2:14), or of penitence for sins (1 Ki. 21:27; Ne. 9:1; Jon. 3:5; Mt. 11:21), or of special prayer for deliverance (2 Ki. 19:1–2; Dn. 9:3; Judith 4:10; Baruch 4:20; 1 Macc. 3:47).

The form of the symbolic sackcloth was often a band or kilt tied around the waist (1 Ki. 20:31–32; Is. 3:24; 20:2; 2 Macc. 10:25). It was usually worn next to the skin (2 Ki. 6:30; Jb. 16:15; 2 Macc. 3:19), and was sometimes kept on all night (1 Ki. 21:27; Joel 1:13). In one case it replaces a robe, presumably over other clothes (Jon. 3:6). Sometimes the sackcloth was spread out to lie on (2 Sa. 21:10; Is. 58:5), or spread out before the altar or on the altar (Judith 4:11).

Palestinian shepherds wore sackcloth because it was cheap and durable (TB, *Shabbath* 64a). Prophets sometimes wore it as a symbol of the repentance which they preached (Is. 20:2; Rev. 11:3). According to Jon. 3:8 and Judith 4:10 even animals were clothed in sackcloth as a sign of national supplication. Wearing sackcloth for mourning and penitence was practised not only in Israel but also in Damascus (1 Ki. 20:31), Moab (Is. 15:3), Ammon (Je. 49:3), Tyre (Ezk. 27:31) and Nineveh (Jon. 3:5).

Clothing with sackcloth is used figuratively of the darkening of the heavenly bodies in Is. 50:3.

SACRAMENTS. The word 'sacrament' (Lat. *sacramentum*) in its technical theological sense, when used to describe certain rites of the Christian faith, belongs to the period of the elaboration of doctrine much later than the NT. The Vulgate in some places thus renders Gk. *mysterion* (Eph. 5:32; Col. 1:27; 1 Tim. 3:16; Rev. 1:20; 17:7), which was, however, more commonly rendered *mysterium* (*MYSTERY). In early ecclesiastical usage *sacramentum* was used in a wide sense of any ritual observance or sacred thing.

In everyday usage the word had been applied in two ways: (1) as a pledge or security deposited in public keeping by the parties in a lawsuit and forfeited to a sacred purpose; (2) as the oath taken by a Roman soldier to the emperor, and thence to any oath. These ideas later combined to produce the concept of a sacred rite which was a pledge or token, the receipt of which involved an oath of loyalty, and this led in time to the limitation of the word 'sacrament' to the two major rites of divine institution, Baptism and the Lord's Supper. The wider use continued for many centuries. Hugo of St Victor (12th century) can speak of as many as thirty sacraments, but Peter Lombard in the same period estimated seven as the number. The latter estimation is officially accepted by the Roman Church.

The common definition of a sacrament accepted by the Reformed and Roman Churches is that of an outward and visible sign, ordained by Christ,

setting forth and pledging an inward and spiritual blessing. The definition owes much to the teaching and language of Augustine, who wrote of the visible form which bore some likeness to the thing invisible. When to this 'element', or visible form, the word of Christ's institution was added, a sacrament was made, so that the sacrament could be spoken of as 'the visible word' (see Augustine, *Tracts on the Gospel of John* 80; *Epistles* 98; *Contra Faustum* 19. 16; *Sermons* 272).

Does the NT teach the obligation of sacramental rites on all Christians? What spiritual benefit is there in their reception, and how is it conveyed?

The obligation to continue sacramental rites depends on: (1) their institution by Christ; (2) his express command for their continuance; (3) their essential use as symbols of divine acts integral to the gospel revelation. There are only two rites obligatory in these ways on all Christians. There is no scriptural warrant for giving the other so-called sacramental rites (*i.e.* Confirmation, Orders, Matrimony, Penance, Extreme Unction) the same status as *Baptism and the *Lord's Supper, which from the beginning are together associated with the proclamation of the gospel and the life of the church (Acts 2:41–42; cf. 1 Cor. 10:1–4). They are linked with circumcision and the Passover, the obligatory rites of the OT (Col. 2:11; 1 Cor. 5:7; 11:26). The Christian life is associated in its beginning and in its continuance with sacramental observance (Acts 2:38; 1 Cor. 11:26). Some of the deepest lessons of holiness and perfection are implicit in what Scripture says regarding the Christian's sacramental obligations (Rom. 6:1–3; 1 Cor. 12:13; Eph. 4:5). References to the sacraments may underlie many passages where there is no explicit mention of them (e.g. Jn. 3; 6; 19:34; Heb. 10:22). The risen Lord's great commission to the disciples to go to all nations with the gospel specifically commands the administration of Baptism and clearly implies observance of the Lord's Supper (Mt. 28:19–20). Christ promises to be with his servants until the end of time. The work to which he has called them, including the observance of the sacraments, will not be completed before then. Paul also has no doubt that the Lord's Supper is to be continued, as a showing forth of the death of Christ, till he comes again (1 Cor. 11:26). It is true that Matthew and Mark do not record the command 'this do in remembrance of me', but the evidence of the practice of the early church (Acts 2:42; 20:7; 1 Cor. 10:16; 11:26) more than compensates for this.

The efficacy of the sacraments depends on the institution and command of Christ. The elements in themselves have no power; it is their faithful use that matters. For through them men are brought into communion with Christ in his death and resurrection (Rom. 6:3; 1 Cor. 10:16). Forgiveness (Acts 2:38), cleansing (Acts 22:16; cf. Eph. 5:26) and spiritual quickening (Col. 2:12) are associated with baptism. Participation in the body and blood of Christ is realized through Holy Communion (1 Cor. 10:16; 11:27). Baptism and the cup are linked together in the teaching of our Lord when he speaks of his death, and in the mind of the church when it remembers its solemn obligations (Mk. 10:38–39; 1 Cor. 10:1–5).

The sacraments are covenant rites: 'This cup is the new covenant' (Lk. 22:20; 1 Cor. 11:25). We are baptized 'into the name' (Mt. 28:19, rv). The new

covenant was initiated by the sacrifice of the death of Christ (cf. Ex. 24:8; Je. 31:31–32). Its blessings are conveyed by God through his word and promise in the gospel and its sacraments. There is clear evidence that many in apostolic days received blessing through the administration of the sacraments accompanied by the preaching of the word (Acts 2:38ff.). It was the gospel word or promise accompanying administration which gave meaning and efficacy to the rite. Those who had received only John's baptism were baptized again 'in the name of the Lord Jesus' (Acts 19:1–7). It is apparent also that some received the sacraments without spiritual benefit (Acts 8:12, 21; I Cor. 11:27; 10:5–12). In the case of Cornelius and his household (Acts 10:44–48) we have an example of some who received the gifts which baptism seals, before they received the sacrament. Nevertheless, they still received the sacrament as bestowing benefit and as an obligation.

In the NT there is no conflict suggested between the use of sacraments and spirituality. When they are rightly received the sacraments do convey blessings to the believer. But these blessings are not confined to the use of the sacraments, nor when they are conveyed through the sacraments does their bestowal conflict in any way with the strong, scriptural emphasis on faith and godliness. The sacraments, when administered in accordance with the principles laid down in Scripture, recall us continually to the great ground of our salvation, Christ in his death and resurrection, and remind us of the obligations we have to walk worthily of the calling wherewith we are called.

SACRIFICE AND OFFERING.

I. In the Old Testament

a. Terms

The OT has no general word for 'sacrifice', except the rather sparsely used *qorbān*, 'that which is brought near' (*qrb*), which is practically confined to the levitical literature. (AV renders this term 'Corban' in the single NT reference of Mk. 7:11.) *'iṣṣēh* may also serve this purpose in the laws, but it is debated whether it should not be limited to 'fire-offerings' (*'ēš*) (but cf. Lv. 24:9). The other frequently used words describe particular kinds of sacrifice, and are derived either from the mode of sacrifice, as *zebah* (sacrifice), 'that which is slain' (*zābah*), and *'ōlā* (burnt-offering), 'that which goes up', or from its purpose, as *'āšām* (guilt-offering), 'for guilt' (*'āšām*), and *hattā'īl* (sin-offering), 'for sin' (*hattā'īl*). These may be distinguished in part by the disposal of the victim, whether wholly burnt (*'ōlā*, Lv. 1), or eaten by priests and worshippers together (*zebah*, Lv. 3), or eaten by the priests alone (*hattā'īl* and *'āšām*, Lv. 4–5). For the distinction of *'ōlā* and *zebah*, see Dt. 12:27 (cf. Je. 7:21, where the prophet ironically suggests an obliteration of the distinction).

Also included under *qorbān* were the non-blood offerings 'offering, oblation', the cereal-offering (*minhā*, Lv. 2), the firstfruits (*re'šit*, *bikkūrim*), the sheaf of 16 Nisan, the dough of the Feast of Weeks, and the tithes.

b. Theories of the beginnings

Sacrifice was not confined to Israel among the nations of antiquity (cf. Jdg. 16:23; I Sa. 6:4; 2 Ki. 3:27; 5:17), and many parallels from surrounding nations have been adduced in explanation of Israelite sacrifice. W. R. Smith ('Sacrifice', *EBR*⁹, 21, 1886, pp. 132–138; *The Religion of the Semites*, 1889) constructed, from the pre-Islamic nomadic Arabs, a hypothetical 'Semite', to whom the sacrificial meal was the earliest form, and the communion of the worshippers and the deity the controlling idea. The Pan-Babylonian movement (H. Winckler, A. Jeremias, from c. 1900 onwards) looked to the higher civilization of Mesopotamia, and to the developed ritual of propitiatory sacrifice practised there.

R. Dussaud preferred a Canaanite background, and found parallels first in the Carthaginian sacrificial tariffs (*Le sacrifice en Israël et chez les Phéniciens*, 1914; *Les origines cananéennes du sacrifice israélite*, 1921), and later in the Ras Shamra texts (*Les découvertes de Ras Shamra et l'Ancien Testament*, 1937). Here the materials of ancient Ugarit (c. 1400 BC) indicated a developed ritual of sacrifices bearing names similar to those of the OT. The *šrp* was a burnt-offering, the *dbh*, a slain-offering for a meal, the *šlm*, possibly a propitiatory sacrifice, and the *'atm*, the equivalent of the Heb. *'āšām*. (These were not Dussaud's identifications.) The myth and ritual school (S. H. Hooke, *The Origins of Early Semitic Ritual*, 1938; I. Engnell, *Studies in Divine Kingship in the Ancient Near East*, 1943) stressed this sedentary background and laid weight on the substitutionary role of the suffering king in the cult.

This was not convincing to A. Alt, who had earlier claimed (*Der Gott der Väter*, 1929, now in *Essays on OT History and Religion*, 1966, pp. 1–77) that the real antecedents of Israelite faith were to be sought rather among the nomad Patriarchs, who had practised a form of religion centring in the god of the head of the clan (the 'God of Abraham', the 'God of Isaac', the 'God of Jacob'). V. Maag ('Der Hirte Israels', *Schweizerische Theologische Umschau* 28, 1958, pp. 2–28) took this further by noticing the dominance of the shepherd metaphor in the descriptions of this God, and from a background of the migrant shepherd cultures of the Asiatic steppes, suggested that their sacrifice was the fellowship meal in which the god took over the responsibility of the shed blood, which would otherwise have exacted vengeance (cf. A. E. Jensen, 'Über das Töten als kulturgeschichtliche Erscheinung', *Paideuma* 4, 1950, pp. 23–38; H. Baumann, 'Nyama, die Rachemacht', *ibid.*, pp. 191–230). Israelite religion, as it appears in the OT, is a syncretism in which the nomadic *zebah* sacrifice exists alongside of gi't sacrifices of the *'ōlā* type, which come in from the sedentary Canaanite side (V. Maag, *VT* 6, 1956, pp. 10–18).

Such a view finds place for both the sedentary and nomadic aspects, but becomes subjective when applied to particular OT narratives. The OT depicts early Israel less as nomadic than as a people in process of sedentarization. The Patriarchs already have the larger bovines and engage in some

Total for 7 days	14	7	49	7
Weeks (Firstfruits)	2	1	7	1
1st day of 7th month	1	1	7	1
Day of Atonement	1	1	7	1
Tabernacles				
Day 1	13	2	14	1
Day 2	12	2	14	1
Day 3	11	2	14	1
Day 4	10	2	14	1
Day 5	9	2	14	1
Day 6	8	2	14	1
Day 7	7	2	14	1
Day 8	1	1	7	1
Total for 8 days	71	15	105	8
<p>Numbers of animals to be offered at the public sacrifices, daily, weekly and at festivals. The two lambs on the Sabbath are additional to the usual daily 2. The total for seven days refers to the seven days of the Festival of Unleavened Bread (<i>i.e.</i> 2 bullocks per day for 7 days = 14). Similarly, the total for eight days refers to the eight days of the Feast of Tabernacles (<i>i.e.</i> 1 goat per day for 8 days = 8 goats).</p>				

Chart of the occasions laid down for public sacrifice and offerings (Nu. 28–29).

agriculture, and it may well be that a closer parallel to Hebrew sacrifice may be found among a tribe such as the African Nuer, whose sacrifice, as described by E. Evans-Pritchard (*Nuer Religion*, 1956) involved the offering of an ox in substitution for sin. The Wellhausen school, which traced an evolution from a joyous sacrificial meal in the earlier time to sin-offerings and guilt-offerings only in the post-exilic period (J. Wellhausen, *Prolegomena to the History of Israel*, 1885; W. R. Smith, *op. cit.*), regarded the connection of sacrifice with sin as the latest element. But this is no longer probable (*cf.* the writer's *Penitence and Sacrifice in Early Israel*, 1963), as the following historical sketch will show.

c. The development in the history

1. *Patriarchal*. It is significant that the first sacrifices mentioned in Gn. were not *z'bahim* meals, but the gift-offerings of Cain and Abel (*minhâ*, Gn. 4:3–4), and the burnt-offering of Noah (*'ôlâ*, Gn. 8:20; we have here the first reference to an altar). Patriarchal altars are often described (*e.g.* Gn. 12:6–8), but unfortunately details as to the type of sacrifice are lacking. Maag thinks of the *zebâh* communion meal, but T. C. Vriezen (*An Outline of Old Testament Theology*, 1958, p. 26) thinks the *'ôlâ* more typical. Gn. 22 gives some support to the latter position. Isaac knows that Abraham is in the

habit of offering 'ôlâ and that a lamb is the likely victim (v. 7). Sacrificial meals do, however, seal covenants (Gn. 31:54, first use of *zebah*), but not all covenants are of this type. Gn. 15:9-11 is best understood as a purificatory ritual like that of the Hittite text translated by O. Masson (*RHR* 137, 1950, pp. 5-25; cf. O. R. Gurney, *The Hittites*, 1952, p. 151).

As to the motives of sacrifice in this period, honouring of God and thanksgiving for his goodness were prominent, but more solemn thoughts cannot be ruled out. Noah's offering is to be seen, not simply as a thank-offering for deliverance, but as an expiation or atonement. When Jacob goes to Egypt (Gn. 46:1), he pauses to seek God's will, and offers sacrifices (*zebah*), which were possibly expiatory (cf. I. Rost, *VT Supp* 7, 1960, p. 354; *ZDPV* 66, 1943, pp. 205-216). In Egypt Israel is called to a solemn sacrifice in the wilderness (Ex. 5:3, *zebah*), which required animal victims (Ex. 10:25-26) and was distinguished from any offered by the Egyptians (Ex. 8:26).

2. *Tribal*. The establishment of Israel as a tribal organization, which Noth thinks of as coming into being only on the soil of Palestine in the time of the Judges (cf. *The History of Israel*, 1958), is taken back by strong biblical tradition to the time of Moses. Chief among tribal occasions were the three festivals, at which sacrifice was to be offered: 'none shall appear before me empty-handed' (Ex. 23:15). The sacrifices we know best were those of the *Passover and the *covenant. The Passover combined the elements of sacrifice as an apotropaic and sacrifice as a communion meal. Secure in the knowledge that the blood had been shed to ward off evil, the members of each family could sit down to joyful fellowship (Ex. 12; Jos. 5:5-12). Similar elements probably entered into the covenant sacrifice and its renewals (Ex. 24:1-8; Dt. 27:1ff.; Jos. 8:30ff.; 24; cf. Ps. 50:5). The blood-sprinkling purified the covenant and the eating of the meal marked its consummation.

In addition, many other sacrifices both national and local were offered. Typical of national sacrifices were those in times of disaster or war (Jdg. 20:26; 21:4; 1 Sa. 7:9), when penitence seems to have been the main note (cf. Jdg. 2:1-5). Dedications and new beginnings were marked by sacrifice (Jdg. 6:28; Ex. 32:6; 1 Sa. 6:14; 11:15; 2 Sa. 6:17), as were individual occasions of celebration (1 Sa. 1:3), intercession (Nu. 23:1ff.), and perhaps hospitality (Ex. 18:12).

3. *Monarchic*. The building of the Temple by Solomon provided opportunity for initiatory (1 Ki. 8:62ff.) and regular sacrifices (1 Ki. 9:25), but as the sources are books of 'kings' they speak rather of royal participation (cf. 2 Ki. 16:10ff.) than of that of the people. That the everyday cult was in progress, however, is attested by such a verse as 2 Ki. 12:16, and by the frequent mention of sacrifice in the prophets and psalms. The many favourable references in the latter show that the condemnations of the former are not to be taken in an absolute sense, as if prophet and priest were opposed. The prophets object less to the cult itself than to the magic-working ideas borrowed from the fertility cults (Am. 4:4-5; Is. 1:11-16), and to such innovations as idolatry and child sacrifice introduced by apostatizing rulers (Je. 19:4; Ezk. 16:21).

An Isaiah can receive his call in the Temple (Is. 6), and a Jeremiah or an Ezekiel can find a place

for a purified cult in the future (Je. 17:26; Ezk. 40-48). This is also the predominant feeling of the psalmists, who constantly speak of their sacrifices of thanksgiving in payment of their vows (e.g. Ps. 66:13-15). Expressions of penitence and the joy of forgiveness are also present (Pss. 32; 51) and, although sacrifice is not often mentioned in these contexts, it is probably to be assumed from the fact that forgiveness is experienced in the Temple (Ps. 65:1-5). While there is no need to make all such references post-exilic, the prophets' complaint that penitence did not often enough accompany sacrifice in the late kingdom period should also be borne in mind.

4. *Post-exilic*. The disaster of the Exile is usually seen as resulting in a deeper sense of sin, and no doubt this is true (cf. 2 Ki. 17:7ff.; Ne. 9), but not in the sense of Wellhausen that only then could the expiatory note of Lv. 1-7 and Lv. 16 have entered Israelite religion. References to sacrifice in the non-levitical writings before and after the Exile, although usually too fragmentary to decide the issue, give little support to such an evolution. Joy, as well as penitence, continues to characterize sacrifice (Ezr. 6:16-18; Ne. 8:9ff.). Temple and cult are valued (Hg. 1-2; Joel 2:14, and especially Chronicles), but only as they are the vehicles of sincere worship (Mal. 1:6ff.; 3:3ff.). Apocalyptic and Wisdom literature take the cult for granted (Dn. 9:21, 27; Ec. 5:4; 9:2) and also continue the prophetic moral emphasis (Ec. 5:1; Pr. 15:8).

d. *The regulations of the laws*

Laws for sacrifice are scattered through all the codes (Ex. 20:24ff.; 34:25ff.; Lv. 17; 19:5ff.; Nu. 15; Dt. 12, etc.), but the sacrificial 'torah' *par excellence* is Lv. 1-7. Chs. 1-5 deal in turn with the burnt-offering ('ôlâ), cereal-offering (*minhâ*), peace-offering (*zebah*), sin-offering (*hattâ't*) and guilt-offering (*âsâm*), while chs. 6-7 give additional regulations for all five—6:8-13 (burnt); 6:14-18 (cereal); 6:24-30 (sin); 7:1-10 (guilt); 7:11ff. (peace). From these and other references the following synthetic account is compiled.

1. *The materials*. The sacrificial victim had to be taken from the clean animals and birds (Gn. 8:20), and could be bullock, goat, sheep, dove or pigeon (cf. Gn. 15:9), but not camel or ass (Ex. 13:13) (*CLEAN AND UNCLEAN). These provisions are not to be traced to the idea of sacrifice as 'food for the gods' (*viz.* that the gods ate what man ate)—as might be suggested by Lv. 3:11; 21:6; Ezk. 44:7—for fish (Lv. 11:9) and wild animals (Dt. 12:22) could be eaten but not sacrificed. The principle seems rather to have been that of property (cf. 2 Sa. 24:24), the wild animals being regarded as in some sense already God's (Ps. 50:9ff.; cf. Is. 40:16), while the domestic animals had become man's by his labours (Gn. 22:13 is only apparently an exception), and were in a kind of 'biotic rapport' with him. This was even more clearly the case with the non-blood offerings, which had been produced by 'the sweat of his brow' (cereals, flour, oil, wine, etc.), and were also staple articles of the kitchen. Property unlawfully acquired was not acceptable (Dt. 23:18).

The principle of 'the best for God' was observed throughout—as to sex, males being preferred to females (Lv. 1:3; but cf. Lv. 3:1; Gn. 15:9; 1 Sa. 6:14; 16:2); as to age, maturity being especially valuable (1 Sa. 1:24); as to physical perfection, 'without blemish' being constantly emphasized

SACRIFICE AND OFFERING

(Lv. 1:3; 3:1; Dt. 15:21; 17:1; 22:17–25; cf. Mal. 1:6ff., but note the exception for free-will offerings Lv. 22:23); and in some cases as to colour, red being chosen (Nu. 19:2), perhaps as representing blood (cf. prehistoric cave paintings of animals). The difference between Israel and her neighbours is clearly seen in the rejection of the extension of this principle to what might be thought its logical climax in the human first-born. The child sacrifice, which was present in the late kingdom (2 Ki. 21:6), and the human sacrifices occasionally reported of earlier times (Jdg. 11:29ff.), were from outside influences, and were condemned by prophet (Je. 7:31ff.), precept (Lv. 20:4) and example (Gn. 22). Ex. 22:29b is clearly to be interpreted by Ex. 34:19–20 and Ex. 13:12–16. The principle of substitution is present, not only in this replacing of the human first-born by an animal victim but in the provision given to the poor to offer the cheaper doves for a sin-offering (Lv. 5:7) and, if even this was too much, a cereal-offering (Lv. 5:11). The words 'such as he can afford' (Lv. 14:22, etc.) are very significant here.

Libations of oil (Gn. 28:18), wine (Gn. 35:14) and water (? 1 Sa. 7:6) seem to have had a place in the cult, but only the wine-offerings are referred to in the basic laws (Nu. 28:7, etc.). The prohibition of leaven and honey (with some exceptions), and possibly also of milk, is probably to be put down to their liability to putrefaction. For the opposite reason salt was probably added to the sacrifices, because of its well-known preservative qualities (mentioned only in Lv. 2:13 and Ezk. 43:24, but cf. Mk. 9:49). *Incense (*l'ḥōnā, q'ṭōreṭ*) played a considerable role, both as an independent offering (Ex. 30:7, cf. the instructions for its making in vv. 34–38) and as an accompaniment of the cereal-offering (Lv. 2). Many scholars, doubting its early use on the ground that it was neither edible nor home-grown property (Je. 6:20), think *q'ṭōreṭ* in the historical books describes the burning of the fat (*qtr*) rather than incense, but this is not certain. (See N. H. Snaith, *IB*, 3, 1954, p. 40, and J. A. Montgomery, *ICC, Kings*, 1952, p. 104, also *VT* 10, 1960, pp. 113–129.)

2. *The occasions.* The regulations cover both national and individual offerings, and daily and festival occasions. The first public sacrifices with good attestation are the seasonal ones, the Feast of Unleavened Bread, Firstfruits or Weeks and Ingathering or *Tabernacles (Ex. 23:14–17; 34:18–23; Dt. 16). With the first the *Passover was early connected (Jos. 5:10–12), and with the last, in all probability, covenant renewal ceremonies (cf. Ex. 24; Dt. 31:10ff.; Jos. 24) and possibly new year and atoning rites (cf. Lv. 23:27ff.) (*PENTECOST.) A full tariff of sacrifices for these, and for additional observances, monthly (new moon), weekly (sabbath) and daily (morning and evening), is found in Nu. 28–29, and may be set out in tabular form (see the chart on p. 1046).

The date of the beginning of the twice-daily burnt-offering is controverted, and certainty is difficult to arrive at, because of the ambiguous nature of *minḥā* for both cereal- and burnt-offerings. (See the chart on p. 1050.) *ōlā* and *minḥā* are also referred to without time notes in 1 Sa. 3:14; Je. 14:12; and Ps. 20:3, and continual *ōlōt* and *minḥōt* in Ezr. 3:3ff. and Ne. 10:33.

Sacrifices of a more private nature were the Passover, for which the unit was the family (Ex. 12; cf. 1 Sa. 20:6, but this was a new moon, not a full

moon), and individual sacrifices, such as those in fulfilment of a vow (1 Sa. 1:3, cf. v. 21; 2 Sa. 15:7ff.), or in confirmation of a treaty (Gn. 31:54), veneration of God (Jdg. 13:19), personal dedication (1 Ki. 3:4), consecration (1 Sa. 16:3) or expiation (2 Sa. 24:17ff.). Whether the extending of hospitality to a guest was always regarded as a sacrificial occasion is not clear (Gn. 18; Nu. 22:40; 1 Sa. 28:24 may not have involved altar rites, but cf. 1 Sa. 9). Additional occasions mentioned in the laws are the cleansing of the leper (Lv. 14), purification after child-birth (Lv. 12), the consecration of a priest (Lv. 8–9) or a Levite (Nu. 8), and the release of a Nazirite from his vows (Nu. 6). Less frequent sacrifices were those of sanctuary dedication (2 Sa. 6:13; 1 Ki. 8:5ff.; Ezk. 43:18ff.; Ezr. 3:2ff.), royal coronations (1 Sa. 11:15; 1 Ki. 1:9), and days of national penitence (Jdg. 20:26; 1 Sa. 7) or preparation for battle (1 Sa. 13:8ff.; Ps. 20).

Among seasonal offerings brought annually in recognition of God's share in productivity were firstlings and firstfruits (Ex. 13; 23:19; Dt. 15:19ff.; 18:4; 26; Nu. 18; cf. Gn. 4:3–4; 1 Sa. 10:3; 2 Ki. 4:42), *tithes, and the offerings of the first sheaf (Lv. 23:9ff.) and the first dough (Nu. 15:18–21; Ezk. 44:30; cf. Lv. 23:15ff.). Their purpose was probably not to consecrate the rest of the crop, but to deconsecrate it. All was God's until the first portion had been offered and accepted in lieu of the whole. Only then was the restriction on the human use of the remainder removed (Lv. 23:14, cf. 19:23–25). Even the portion brought was usually presented only in token at the altar, and afterwards taken away for the use of the priests or for a sacrificial meal. This was also the final fate of the weekly *showbread.

3. *The ritual.* The major altar sacrifices of Lv. 1–5 are described in a framework of a stereotyped ritual comprising six acts, of which three belong to the worshipper and three to the priest. They may be illustrated from the *ōlā* and the *zebāh* (cf. R. Rendtorff, *Die Gesetze in der Priesterschrift*, 1954). (See the chart on p. 1051.) The provisions for the sin-offering, several times repeated for various classes (Lv. 4:1–12, 13–21, 22–26, 27–31), follow the same scheme, except in minor details. The burnt-offering of a bird (Lv. 1:14–17) and the cereal-offering (Lv. 2) of necessity present greater variations, but are not entirely dissimilar. A similar formula for the guilt-offering is not given (cf., however, 7:1–7), but it may be understood as coming under the law of the sin-offering (Lv. 7:7).

(i) The worshipper brings near (*hiqrīb*) his offering (also *lēḥbi, 'āsāh*). The place of the sacrifice is the tabernacle forecourt on the N side of the altar (for burnt-, sin- and guilt-offerings, but not for the more numerous peace-offerings), although in earlier times it may have been the door of the tabernacle (Lv. 17:4), or local sanctuary (1 Sa. 2:12ff.), or a rough altar of stone or earth (Ex. 20:24ff.) or a rock (1 Sa. 6:14) or pillar (Gn. 28:18). Killing on the altar, although implied by Gn. 22:9 and Ex. 20:24 (Ps. 118:27 is corrupt), is not normal in the cult.

(ii) He lays (*sāmak*) his hands, or in the biblical period more probably one hand (cf. Nu. 27:18), upon the victim, and possibly confesses his sin. This latter is mentioned, however, only in connection with the scapegoat, where the blood was not shed (Lv. 16:21) and with some sin-offerings (Lv. 5:5) and guilt-offerings (Nu. 5:7) (cf., however, Dt. 26:3; Jos. 7:19–20), so that the *s'ḥīkā* cannot cer-

tainly be claimed as a transferring of sin. On the other hand, it seems inadequate to regard it simply as an identification by the owner of his property, for such an identification is not made with the non-blood sacrifices, where it would have been equally appropriate. Representation, if not transference, seems to be clearly involved (*cf.* the use of the same word for the commissioning of Joshua (Nu. 27:18) and the Levites (Nu. 8:10) and the stoning of a blasphemer (Lx.: 24:13f.)). See P. Volz, *ZAW* 21, 1901, pp. 93–100, and for an opposite view J. C. Matthes, *ibid.* 23, 1903, pp. 97–119.

(iii) The slaughtering (*šāḥat*) is performed by the worshipper, except for the national offerings (Lv. 16:11; 2 Ch. 29:24). In the non-levitical literature the verb *zāḥ* is used, but this may have referred to the subsequent cutting up of the sacrifice, and the laying of the parts on the altar (*mizbēah*, not *mishāḥ*) (so K. Galling, *Der Altar*, 1925, pp. 56ff.). For this, however, *nth* is normally used (1 Ki. 18:23; Lv. 1:6), and *zāḥ* describes rather the *z'bahim* sacrifices, except for a few passages (Ex. 20:24; 1 Ki. 3:4; *cf.* 2 Ki. 10:18ff.) where it occurs with *'ōlōt*. These are perhaps to be put down to a loose use of the verb, which in the cognate languages can even be used of vegetable offerings, and in the *Piēl* in Heb. seems to be used quite generally for the whole round of the (usually apostate) cult. It is not certain, then, that every use of *zēbah* was sacrificial, or that meat could be eaten only on occasions of sacrifice, although this was often the case in antiquity (*cf.* the problem of the idol-meat at Corinth) (see N. H. Snaith, *VT* 25, 1975, pp. 242–246).

(iv) The manipulation (*zāraq*) of the blood is in the hands of the priest, who collects it in a basin and dashes it against the NE and SW corners of the altar in such a way that all four sides are spattered. This takes place with the animal burnt-offerings (Lv. 1), peace-offerings (Lv. 3) and guilt-offerings (Lv. 7:2), but not with the burnt-offering of birds (Lv. 1:15), where the quantity of blood was insufficient, and so was drained out on the side of the altar. The sin-offering (Lv. 4) uses a different set of verbs, *hizzā* ('sprinkle') or *nāṭan* ('put') according to whether the offering is of primary or secondary rank (see below). The remainder of the blood is then poured out (*šāpāk*) at the base of the altar. The blood rite is referred to in the historical books only in 2 Ki.: 16:15 (but *cf.* 1 Sa. 14:31–35; Ex. 24:6–8). (See Th. C. Vriezen, *OTS* 7, 1950, pp. 201–235; D. J. McCarthy, *JBL* 88, 1969, pp. 166–176; 92, 1973, pp. 205–210; N. H. Snaith, *ExpT* 82, 1970–71, pp. 23f.)

(v) Some burning (*hiqṭir*) took place with all the sacrifices. Not only the blood but also the fat belonged to God, and this was first burnt (Gn. 4:4; 1 Sa. 2:16). This was not the fat in general, but specifically the fat of the kidneys, liver and intestines. From the peace-, sin- and guilt-offerings only this was burnt, from the cereal-offerings a portion called the *'azkārā* was separated off and burnt, but the burnt-offering was wholly burnt except for the skin, which became the perquisite of the priests (Lv. 7:8). A different kind of burning (*šāraḥ*) away from the altar was the fate of the primary rank sin-offerings. In this burning the skin was also included.

(vi) The remaining portions of the sacrifice were eaten (*'ākal*) in a sacrificial meal, either by the priests and worshippers together (peace-offering), or by the priests and their families, or by the priests alone. Priestly food was classified as either holy or

most holy. The former included the peace-offerings (Lv. 10:14; 22:10ff.) and firstfruits and tithes (Nu. 18:13), and could be eaten by the priest's family in any clean place, but the latter included the sin-offerings (Lv. 6:26), guilt-offerings (Lv. 7:6), cereal-offerings (Lv. 6:16), and showbread (Lv. 24:9), and could be eaten only by the priests themselves, and within the Temple precincts. The people's sacrificial meal from the peace-offering was the popular accompaniment of local worship in early times (1 Sa. 1:9), but with the centralization of the cult in Jerusalem (*cf.* Dt. 12) tended to recede before the formal aspects of worship. As late as Ezk. 46:21–24, however, provision continued to be made for it.

4. *The kinds.* (i) *'ōlā*. The burnt-offering seems to have a better claim to be regarded as the typical Hebrew sacrifice than the *zēbah* favoured by the Wellhausen school. It is present from the beginning (?Gn. 4; 8:20; 22:2; Ex. 10:25; 18:12; Jdg. 6:26; 13:16), early became a regular rite (1 Ki. 9:25; *cf.* 1 Ki. 10:5), was never omitted on great occasions (1 Ki. 3:4; Jos. 8:31), and retained its dominant role to the latest times (Ezk. 43:18; Ezr. 3:2–4) (see R. Rendtorff, *Studien zur Geschichte des Opfers im alten Israel*, 1967). Whatever may be said for Robertson Smith's view of a primary peace-offering, from which the burnt-offering later developed, as far as the OT is concerned it is from the *'ōlā* that the *minhā*, *'āšām*, *hattā't* and even *š'lamim* seem to have arisen. The *kā'ilil* referred to five times (1 Sa. 7:9; Ps. 51:19; Dt. 33:10; *cf.* Dt. 13:16 and Lv. 6:22–23) is also another name for the *'ōlā*, although apparently differing somewhat in the Carthage and Marseilles tariffs.

While there is truth in Rost's view that the incidence of the *'ōlā* is confined to Greece and the region bordered by the Taurus in the N, the Mediterranean in the W and the desert in the E and S' ('Erwägungen zum israelitischen Brandopfer', *Von Ugarit nach Qumran* (Eissfeldt Festschrift), 1958, pp. 177–183), it does not follow that its origins in Israel are in human sacrifice (2 Ki. 3:27) or rites of aversion of the Greek kind. Its undoubted gift character is apparent from the sublimation of the elements into a form in which they can be transported to God (Jdg. 6:21; 13:20; *cf.* Dt. 33:10), but this does not say anything about the purpose of the gift, which may have been of homage and thanksgiving, or to expiate sin. The latter note is present in Jb. 1:5; 42:8 and many early passages, and is given as the reason for the sacrifice in Lv. 1:4 (*cf.* the Ugaritic Text 9:7, where the burnt-offering (*šrp*) is connected to forgiveness of soul (*slḥ nps*)). When the sin-offering came to take precedence as the first of the series of sacrifices (Mishnah, *Zebahim* 10. 2) it tended to take over this function, but this was not originally the case (*cf.* Nu. 28–29, and *cf.* Nu. 6:14 with 6:11).

(ii) *minhā* ('meal-offering', *av* 'meat-offering', *rsv* 'cereal-offering'). It is somewhat confusing that this term is used in three different ways in the OT: 34 times it simply means 'present' or 'tribute' (*cf.* Jdg. 3:15; 1 Ki. 4:21—the root is probably *mānah*, 'to give', *cf.* the peculiar form of the plural in the *MT* of Ps. 20:3), 97 times in the levitical literature it is the cereal-offering (*e.g.* in Lv. 2), and an indeterminate number of the remaining instances also have this meaning (*e.g.* Is. 43:23; 66:20), but in the others it refers to sacrifice generally (1 Sa. 2:29; 26:19, and probably in Malachi), and to animal sacrifice in particular (1 Sa. 2:12–17; Gn. 4:3–4; but see N. H. Snaith, *VT* 7, 1957, pp.

SACRIFICE AND OFFERING

314–316). S. R. Driver rightly defines *minhâ* as not merely expressing the neutral idea of gift, but as denoting 'a present made to secure or retain goodwill' (*HDB*, 3, 1900, p. 587; cf. Gn. 33:10), and this propitiatory sense is to the fore also in such sacrificial references as 1 Sa. 3:10–14; 26:19.

In these references the *minhâ* is an independent sacrifice, whereas in the laws it is the accompaniment of burnt-offerings and peace-offerings (Nu. 15:1–16), except in Nu. 5:15, 25; Lv. 5:11–13; 6:19–23. According to Lv. 2, it is to consist of either flour (2:1–3), baked cakes (2:4–10) or raw grain (2:14–16), together with oil and frankincense (*'bônâ*). With this '*minhâ* of the forecourt' may be compared what J. H. Kurtz called the '*minhâ* of the holy place'—the altar of incense, the showbread on the table and the oil in the lamp (*The Sacrificial Worship of the Old Testament*, 1865). Other ingredients might be salt (Lv. 2:13) and wine (Lv. 23:13). None of these offerings was eaten by the worshippers (but ?Lv. 7:11–18). They went to the priests, but only after a 'memorial portion' (Lv. 2:2) had been burnt on the altar. This RSV translation implies a derivation of '*azkârâ* from *zâkar*, but G. R. Driver has suggested the meaning 'token', a part for the whole (*JSS* 1, 1956, pp. 97–105), and this would be yet another instance of the principle of substitution in the sacrifices.

(iii) *zebah* and *š'lamîm*. Again there is a variety of usage, in which *zebah* and *š'lamîm* are sometimes interchangeable (Lv. 7:11–21; 2 Ki. 16:13, 15), sometimes distinguished (Jos. 22:27; cf. Ex. 24:5; 1 Sa. 11:15), sometimes independent (2 Sa. 6:17–18; Ex. 32:6), and sometimes combined into a compound expression *zebah š'lamîm* or *zib'hê š'lamîm* (so usually in the levitical law). It is doubtful if all these uses are to be understood as referring simply to the *zebah* sacrificial meal. *š'lamîm*, when used alone, was possibly not a meal at all (cf., however, 2 Sa. 6:19), but a solemn expiatory offering akin to the '*ôlâ* (so R. Rendtorff, *Studien zur*

Geschichte des Opfers), and in conjunction with other sacrifices may still have retained this meaning. A *šlm* of a propitiatory kind seems to have been known at Ugarit (D. M. L. Urie, 'Sacrifice among the West Semites', *PEQ* 81, 1949, pp. 75–77) and is reflected in such passages as Jdg. 20:26; 1 Sa. 13:9; 2 Sa. 24:25. It is in no way inconsistent that a joyous meal followed, if the joy was the joy of forgiveness, for the *zebah* covenant meal also usually marked a reconciliation after estrangement (Gn. 31:54; cf. S. I. Curtiss, 'The Semitic Sacrifice of Reconciliation', *The Expositor*, 6th series, 6, 1902, pp. 454–462).

Either of the proposed derivations of *šelem*—from *sâlôm*, 'peace', so 'to make peace' (cf. G. Fohrer, 'to make complete' so 'concluding offering'; *TDNT* 7, pp. 1022–1023) or from *šillêm*, 'compensate', so 'to pay off, expiate' (cf. B. A. Levine, 'a tribute, a present, a gift of greeting', *In the Presence of the Lord*, 1974)—would be in keeping and preferable to the reduction of the peace-offering to what were in fact only segments 'vow-offering' or 'thank-offering'. These two, together with the freewill-offering, made up three classes within the peace-offering proper, and the regulations governing them (Lv. 7:11ff.) are a supplement to those of Lv. 3. All three were thank-offerings, but the vow-offering, which discharged an earlier promise at the time of its accomplishment, was no longer optional, while the others were. Possibly it was for this reason that the vow reverted to the stricter regulation of a victim without blemish (Lv. 22:19; cf. Mal. 1:14, where it is added that it should be a male), while this requirement was relaxed for the freewill-offering (Lv. 22:23). Lv. 7 also adds the rules for the sacrificial meal, which had been missing in Lv. 3—viz. that the thank-offering was to be eaten the same day, and the vow and freewill-offering not later than the next. The priests' portions are defined (Lv. 7:32ff.) as the 'wave' breast and the 'heave' shoulder (thigh). G. R. Driver (*op.*

The ritual procedures laid down for sacrifices or burnt- and peace-offerings (Lv. 1 and 3).

cit.) suggests some such meaning as 'contribution' for the terms 'wave' (*t'nuḇā*) and 'heave' (*t'rūmā*), and this seems better than the older suggestion of horizontal and vertical motions at the altar, which are scarcely appropriate when rams, he-goats and Levites are the objects of the actions (Nu. 8:11). (See W. B. Stevenson, 'Hebrew *'Olah* and *Zebach* Sacrifices', *Festschrift Alfred Bertholet*, 1950, pp. 488-497; cf. J. Milgrom, 'The Alleged Wave-Offering in Israel and in the Ancient Near East', *IEJ* 22, 1972, pp. 33-38.)

(iv) *'āsām* and *ḥattā't*. The names of these offerings, guilt-offering (trespass-offering) and sin-offering, are the names of the offences for which they are to atone, *'āsām* ('guilt') and *ḥattā't* ('sin'). In a cultic context these terms refer, not so much to moral offences, as to those which are ceremonially defiling, although the moral aspect is by no means ruled out. Of the former kind are the sin-offerings of the leper (Lv. 14; cf. Mk. 1:44) and the mother after childbirth (Lv. 12; cf. Lk. 2:24), and of the latter, those of deception and misappropriation in Lv. 6:1-7, and passion in Lv. 19:20-22. These examples can have been but little more than random specimens to illustrate the laws, and should not be regarded as giving a full account of sacrifice for sin in these laws, much less in the cult as a whole. In the history, for example, these sacrifices scarcely figure at all. They are not mentioned in Deuteronomy (cf. Dt. 12), and are probably not to be understood in Ho. 4:8. But this is to be put down less to their post-exilic origin as Wellhausen argued—for they are well known to Ezekiel (cf. 40:39; 42:13) and may be hinted at in Ps. 40:6; 2 Ki. 12:16; 1 Sa. 6:3 (unless these are only monetary)—than to their individual nature (this might explain the silence concerning the *'āsām*, which was not a festival sacrifice), and the fragmentary character of the records. They are equally silent for the post-exilic period (*'āsām* is mentioned, doubtfully, only in Ezr. 10:19 and *ḥattā't* in Ne. 10:33 and what

appears a formula of the Chronicler in Ezr. 6:17; 8:35; 2 Ch. 29:21ff.).

Equally obscure is the relation between the two offerings (e.g. they are used synonymously in Lv. 5:6). All that can certainly be said is that sins against the neighbour are more prominent in the *'āsām* and those against God in the *ḥattā't*. The *'āsām* therefore requires a monetary compensation in addition to the sacrifice. The value of the misappropriation plus a fifth is to be repaid to the wronged neighbour (Lv. 6:5) or, if he or his representative is not available, to the priest (Nu. 5:8). The sacrificial victim in the guilt-offering, usually a ram, also became the priest's, and after the regular blood and fat ritual could be eaten by the priests as 'most holy' (Lv. 7:1-7). The same provision applies (Lv. 6:24-29) to the sin-offerings of the ruler (Lv. 4:22-26) and the common man (Lv. 4:27-31), but in these cases the blood is put on the horns of the altar.

The sin-offerings of the high priest (Lv. 4:1-12) and the whole community (Lv. 4:13-21) follow a still more solemn ritual, in which the blood is sprinkled (*hizzā*, not *zāraq*) before the veil of the sanctuary, and the bodies of the victims are not eaten but burnt (*sārap*, not *hiqtīr*) outside the camp (Lv. 6:30; cf. Heb. 13:11). In addition to these four classes provisions are made for substitute offerings from the poor (Lv. 5:7-13). Chs. 4 and 5 thus contain a graduated scale of victims: bull (high priest and congregation, but cf. Nu. 15:24; Lv. 9:15; 16:5), he-goat (ruler), she-goat or lamb (common man), turtle-doves or pigeons (poor), flour (very poor). The following principles may be remarked: everyone must bring some sin-offering, no-one may eat of his own sin-offering, and the more propitiatory the rite the nearer the blood must come to God. On the Day of Atonement the veil itself was penetrated and the blood sprinkled on the ark. (See D. Schötz, *Schuld- und Sündopfer im Alten Testament*, 1930; L. Morris, 'Asham', *EQ* 30, 1958, pp. 196-210; J. Milgrom, *VT* 21, 1971, pp. 237-239; D. Kellerman, *TDOT* 1, pp. 429-437.)

SACRIFICE AND OFFERING

5. *The meaning.* The oft-stated purpose of the sacrifices in Lv. is 'to atone' (*kipper*, Lv. 1:4, etc.). This verb may be explained in one of three ways: 'to cover', from the Arab. *kafara*; 'to wipe away', from the Akkad. *kuppuru*; 'to ransom by a substitute', from the Heb. noun *kōpēr*. Although the second is favoured by most modern writers, it is the third which seems most in keeping with the theory of sacrifice given in Lv. 17:11, AV, 'the life of the flesh is in the blood . . . it is the blood that maketh an atonement for the soul' (but cf. RSV and J. Milgrom, *JBL* 90, 1971, pp. 149–156), and with the principle at work in many of the practices encountered above: the choice of offering material in 'biotic rapport'; their designation by the laying on of the hand; the burning of a token such as the fat or the 'azkārā; the offering of a first portion and the redemption of the first-born (cf. S. H. Hooke, 'The Theory and Practice of Substitution', *VT* 2, 1952, pp. 1–17, and for an opposite view A. Metzinger's articles, *Bib* 21, 1940). To these might be added the ritual of the heifer in Dt. 21 and the scapegoat in Lv. 16, which, although not blood sacrifices, reflect ideas which *a fortiori* have been true of blood sacrifices. It was in this light that Lv. 16 was understood in the Jewish tradition (e.g. Mishnah, *Yoma* 6. 4, 'bear our sins and be gone').

Such passages are a warning against confining the atonement to a single act, as if it were the death alone, or the presentation of the blood, or the disposal of the victim, which atoned. The death was important—the live goat is only half of the ritual in Lv. 16 (cf. v. 15 with 14:4–7; 5:7–11). The blood manipulation was also important—in 2 Ch. 29:24 it seems to make atonement subsequent to the killing. The final disposal of the victim by fire or eating or to Azazel also had its place—in Lv. 10:16–20 the priestly eating of the sin-offering is more than just declaratory. The view that the death of the victim was only to release the life that was in the blood, and that the atonement consisted only of the latter, is as one-sided as that which sees the death as a quantitative penal satisfaction. To the latter view it has been objected that the sins for which sacrifice was offered were not those meriting death, that sin-offerings did not always require death (cf. Lv. 5:11–13), and that the killing could not have been central or it would have been in the hands of the priest, not the layman. These objections tell only against extreme forms of the substitution theory, not against the principle of substitution itself.

The real advantage of the substitution theory is that it retains the categories of personal relationships, where other views tend to descend to sub-personal dynamic categories, in which the blood itself is thought of as effecting mystic union or revitalizing in a semi-magical way (cf. the theories of H. Hubert and M. Mauss, *Sacrifice: Its Nature and Function*, 1964; A. Loisy, *RHLR* n.s. 1, 1910, pp. 1–30, and *Essai historique sur le sacrifice*, 1920; S. G. Gayford, *Sacrifice and Priesthood*, 1924; A. Bertholet, *JBL* 49, 1930, pp. 218–233, and *Der Sinn des kultischen Opfers*, 1942; E. O. James, *The Origins of Sacrifice*, 1933).

A weightier objection to the substitution theory is that which finds difficulty in the description of the sin-offering after the sacrifice as 'most holy', and as fit for priestly food. If a transfer of sin had taken place, would it not be unclean and fit only for destructive burning (*šārap*)? This was in fact the case with the primary rank sin-offerings. In the other cases the priestly eating is perhaps to be simi-

larly interpreted, as if the power of superior 'holiness' in the priests through their anointing absorbed the uncleanness of the offering (cf. Lv. 10:16–20 and the article 'Sin-Eating', *ERE*, 11, 1920, pp. 572–576 (Hartland)). That we are dealing here with categories of 'holiness', which are not ours, is evident from the instruction to break the earthen vessels in which the sin-offering has been boiled (Lv. 6:28; cf. *CLEAN AND UNCLEAN). Alternatively, the death of the victim could be understood as neutralizing the infection of sin, so that the fat and blood could come unimpeded to the altar as an offering to God.

Whether other views of sacrifice such as 'homage' and 'communion' are possible alongside that outlined here, as favoured by most scholars (A. Wendel, *Das Opfer in der altisraelitischen Religion*, 1927; W. O. E. Oesterley, *Sacrifices in Ancient Israel*, 1937; H. H. Rowley, *The Meaning of Sacrifice*, 1950), or whether certain types of sacrifice express one of these aspects more than another (e.g. burnt-offering, homage, and peace-offering, communion) is best left an open question. But in the laws at least the burnt-offering, the cereal-offering and even the peace-offering (but only rarely; cf. Ex. 29:33; Ezk. 45:15), as well as the sin- and guilt-offerings, are said to atone. And what is true of the laws seems to be true also of the history.

The question as to whether the offering was both an expiation (*i.e.* of sins) and a propitiation (*i.e.* of wrath) or only an expiation is also difficult to answer. *kipper* undoubtedly means propitiation in some instances (Nu. 16:41–50; Ex. 32:30), and this is supported by the use of the expression *rēah nīhōah*, 'sweet-smelling savour', throughout the laws (cf. also Gn. 8:21, and LXX of Dt. 33:10). *rēah nīhōah* may, however, have a weakened sense (G. B. Gray, *Sacrifice in the Old Testament*, 1925, pp. 77–81, points out that it is used where we should hardly expect it, with cereal and *zēbah* offerings, but not where we do expect it with sin- and guilt-offerings), and this is even more evidently the case with *kipper* when it is used in connection with such material things as the tabernacle furniture (Ex. 29:37; Ezk. 43:20; 45:19), and must be rendered simply 'cleansed'.

Of importance to the discussion here is the recognition that God himself gave the ritual to sinful man (Lv. 17:11, 'the blood . . . I have given it for you upon the altar to make atonement for your souls'). The sacrifices are to be seen as operating within the sphere of the covenant and covenanting grace. They were not 'man's expedient for his own redemption' as L. Köhler (*Old Testament Theology*, 1957) suggests, but were 'the fruit of grace, not its root' (A. C. Knudson, *The Religious Teaching of the Old Testament*, 1918, p. 295). The question as to whether within this context propitiation has a place is similar to the NT one, and will depend on the view taken of sin, and law and the nature of God (*ATONEMENT; also L. Morris, *The Apostolic Preaching of the Cross*, 1955).

It remains to be said that within the OT itself there is much to suggest that its system was not a final one. No sacrifices availed, for example, for breach of covenant (cf. Ex. 32:30ff.)—it is in this light that the prophetic rejection of sacrifice is to be understood—or for sins of a 'high hand' that put man outside the covenant (Nu. 15:30), though perhaps idolatry and apostasy would be illustrations here. While not accepting the view, on the one hand, that the efficacy of sacrifice was limited to

inadvertent sins, which were no real sins at all, or, on the other, that prophets and pious psalmists saw no value in sacrifice whatsoever, it remains true that the cult was liable to abuse, when the inward tie between worshipper and means of worship was loosed, and prophetic religion became necessary to emphasize the priority of a personal relation to God. It is no accident, however, that when priestly and prophetic religion meet in the figure of the Servant of the Lord in Is. 53 the highest point of OT religion is reached, as all that is valuable in cult is taken up into a person, who both makes a sacrificial atonement (*hizzā*, 'lamb', 'guilt-offering') and calls for the love and personal allegiance of the human heart.

II. In the New Testament

The Greek words used are *thysia*, *dōron*, *prosphora* and their cognates, and *anapherō*, translated 'sacrifice, gift, offering, offer' (*thysia* in Mk. 12:33 probably means 'meal-offering'); *holokautōma*, 'whole burnt offering'; *thymiama*, 'incense'; *spendō*, 'pour out as a drink-offering'. All were adopted, with the other terms given below, from LXX.

a. Old Testament sacrifices in the New

The OT sacrifices (see I, above) were still being offered during practically the whole period of the composition of the NT, and it is not surprising, therefore, that even their literal significance comes in for some illuminating comment. Important maxims are to be found in Mt. 5:23–24; 12:3–5 and parallels, 17:24–27; 23:16–20; 1 Cor. 9:13–14. It is noteworthy that our Lord has sacrifice offered for him or offers it himself at his presentation in the Temple, at his last Passover, and presumably on those other occasions when he went up to Jerusalem for the feasts. The practice of the apostles in Acts removes all ground from the opinion that after the sacrifice of Christ the worship of the Jewish Temple is to be regarded as an abomination to God. We find them frequenting the Temple, and Paul himself goes up to Jerusalem for Pentecost, and on that occasion offers the sacrifices (which included sin-offerings) for the interruption of vows (Acts 21; cf. Nu. 6:10–12). However, in principle these sacrifices were now unnecessary, for the old covenant was now indeed 'old' and 'ready to vanish away' (Heb. 8:13), so that when the Romans destroyed the Temple even the non-Christian Jews ceased to offer the sacrifices.

The Epistle to the Hebrews contains the fullest treatment of the OT sacrifices. The teaching of this writer has its positive side (11:4), but his great concern is to point out their inadequacy except as types. The fact that they cannot gain for men entrance into the Holy of holies proves that they cannot free the conscience from guilt, but are simply carnal ordinances, imposed until a time of

reformation (9:6–10). Their inadequacy to atone is shown also by the fact that mere animals are offered (10:4), and by the very fact of their repetition (10:1–2). They are not so much remedies for sin as reminders of it (10:3).

b. 'Spiritual sacrifices'

'Spiritual sacrifices' (1 Pet. 2:5; cf. Jn. 4:23–24; Rom. 12:1; Phil. 3:3) are the NT substitute for carnal ordinances, and appear frequently (Rom. 12:1; 15:16–17; Phil. 2:17; 4:18; 2 Tim. 4:6; Heb. 13:15–16; Rev. 5:8; 6:9; 8:3–4). Even in the OT, however, the psalmists and prophets sometimes use the language of sacrifice metaphorically (e.g. Pss. 50:13–14; 51:16–17; Is. 66:20), and the usage is continued in the intertestamental literature (Ecclus. 35:1–3; *Testament of Levi* 3. 6; *Manual of Discipline* 8–9; Philo, *De Somniis* 2. 183). The attempt of F. C. N. Hicks (*The Fulness of Sacrifice*³, 1946) to refer such passages to literal sacrifices must be reckoned on the whole a failure. The sacrifices mentioned in these passages are not always immaterial, and sometimes involve death: the sense in which they are 'spiritual' is that they belong properly to the age of the Holy Spirit (Jn. 4:23–24; Rom. 15:16). But sometimes they are immaterial, and they never have a prescribed ritual. It appears, in fact, that every act of the Spirit-filled man can be reckoned as a spiritual sacrifice, and the sense in which it is a sacrifice is that it is devoted to God and is acceptable to God. It does not, of course, atone. The antitype of atoning sacrifice is to be sought not here but in the sacrifice of Christ, without which spiritual sacrifices would not be acceptable (Heb. 13:15; 1 Pet. 2:5).

c. The sacrifice of Christ

The sacrifice of Christ is one of the chief themes of the NT. His saving work is sometimes spoken of in ethical, sometimes in penal, but often also in sacrificial terms. He is spoken of as the slain lamb of God, whose precious blood takes away the sin of the world (Jn. 1:29, 36; 1 Pet. 1:18–19; Rev. 5:6–10; 13:8)—a lamb being an animal used in various sacrifices. More specifically, he is spoken of as the true Passover lamb (*pascha*, 1 Cor. 5:6–8), as a sin-offering (*peri hamartias*, Rom. 8:3, cf. LXX Lv. 5:6–7, 11; 9:2–3; Ps. 40:6, etc.), and in Heb. 9–10 as the fulfilment of the covenant sacrifices of Ex. 24, the red heifer of Nu. 19, and the Day of Atonement offerings. The NT constantly identifies our Lord with the suffering Servant of Is. 52–53, who is a guilt-offering (Is. 53–10), and with the Messiah (Christ) of Dn. 9, who is to atone for iniquity (v. 24). The NT uses the terms 'propitiate' and 'ransom' (*PROPIITIATION, *REDEEMER) of Christ in a sacrificial sense, and the idea of being cleansed by his blood (1 Jn. 1:7; Heb. *passim*) is sacrificial (*ATONEMENT, III. b; *SANCTIFICATION).

The doctrine is most fully worked out in the Epistle to the Hebrews. The writer stresses the importance, in Christ's sacrifice, of his death (2:9, 14; 9:15–17, 22, 25–28; 13:12, 20), and the fact that his sacrifice is over (1:3; 7:27; 9:12, 25–28; 10:10, 12–14, 18), but his other statements have led some Anglo-Catholics (e.g. S. C. Gayford, *Sacrifice and Priesthood*, 1924) and the Presbyterian W. Milligan (*The Ascension and Heavenly Priesthood of our Lord*, 1892) to suppose, on the contrary, that the death is not the important element in Christ's sacrifice, and that his sacrifice goes on for ever. It is quite true that the Epistle confines Christ's priest-

SACRIFICE AND OFFERING

hood and sanctuary to heaven (8:1–5; 9:11, 24), but it emphatically does not confine his sacrifice there. It states indeed that he offered there (8:3), but 'offer' is a word used equally of the donor who brings and kills a sacrifice outside the sanctuary and of the priest who presents it, either there on the altar or within. The reference here is doubtless to the sprinkling or 'offering' of blood in the Holy of holies on the Day of Atonement by the high priest (9:7, 21–26), a typical action fulfilled by Christ. All that was costly in the sacrifice—the part of the donor and the victim—took place at the cross: there remained only the priestly part—the presentation to God by an acceptable mediator—and this Christ performed by entering into his Father's presence at the ascension, since when his sprinkled blood has remained there (12:24). There is no call to think of any *literal* presentation of himself or of his blood at the ascension: it is enough that he entered as the Priest of the sacrifice slain once for all at the cross, was immediately welcomed, and sat down in glory. His everlasting priestly intercession in heaven (7:24f.; cf. Ps. 99:6; Joel 2:17) is not some further activity, but is all part of his 'now appearing in the presence of God on our behalf' (9:24). On the basis of his finished work on the cross, and with his sufferings now all past, his simple appearance in God's presence on our behalf is both continual intercession for us and continual *'expiation' or *'propitiation' for our sins (2:10, 17f.; note present tense in the Gk.). See also *PRIESTS AND LEVITES.

It is a mistake to view Christ's sacrifice as being any more a literal sacrifice than the spiritual sacrifices are. Both transcend their OT types, and neither is ritual. The contention of Owen and others that Christ's sacrifice was a real sacrifice was directed against the Socinian view that Christ's death does not fulfil what the OT sacrifices set out to do, and failed to do—the view which denied that Christ's death makes propitiation. But apart from the slaying (and this is not performed, as in OT ritual, by the donor), everything in his sacrifice is spiritualized. For the body of an animal we have the body of God's Son (Heb. 10:5, 10). For spotlessness, we have sinlessness (Heb. 9:14; 1 Pet. 1:19). For a sweet smell, we have true acceptableness (Eph. 5:2). For the sprinkling of our bodies with blood, we have forgiveness (Heb. 9:13–14, 19–22). For symbolical atonement, we have real atonement (Heb. 10:1–10).

d. Sacrifice and the Lord's Supper

Sacrifice and the *Lord's Supper are indissolubly connected—not indeed in the way that Romanists, Non-jurors and Tractarians have wished to connect them, by making the eucharist an act of oblation, but as complementary to each other. To give 'do' and 'remembrance' (Lk. 22:19; 1 Cor. 11:24–25) a technical sacrificial sense is merely an afterthought of those who have already accepted the eucharistic sacrifice on non-scriptural grounds. The same is true of the attempt to exclude a future meaning from the participles 'given' and 'shed' (Mt. 26:28; Mk. 14:24; Lk. 22:19–20). And to correlate the eucharist with the eternal sacrifice of Christ in heaven is impossible if the eternal sacrifice is disproved. But to regard the eucharist as a *feast* upon Christ's sacrifice is demanded by the argument of 1 Cor. 10:14–22, in which it is made to correspond with Jewish and Gentile sacrificial meals; by the allusion to Ex. 24:8 in Mt. 26:28 and

Mk. 14:24; and by the traditional interpretation of Heb. 13:10. Since the sacrifice of Christ is in so many points to be spiritualized, the language about the feast on his sacrifice is doubtless to be spiritualized also, but it is not to be bereft of its meaning. The meaning of the sacrificial meal was not so much the appropriation of atonement as the fellowship with God which it effected, and this was betokened by a feast with God upon the victim. Whether in enjoying this fellowship with God we also truly partake of Christ or of his body and blood is the central point of controversy about the sacrament. But since Jn. 6 teaches that those who believe on Christ when they see him or hear his words do feed on him, on his body and blood, through the Spirit, there does not seem to be any reason for doubting that what happens through his words also happens through the tokens of bread and wine which he instituted, though in an equally spiritual manner.

SADDUCEES. On the various problems in reconstructing the nature of Jewish groups in the 1st century see *PHARISEES.

No materials survive from the Sadducees themselves. Our only sources are the NT itself, Josephus (*BJ* 2. 119, 164–166; *Ant.* 13. 171–173, 293–298; 18. 11, 16–17; 20. 199; *Vit.* 10–11) and scattered rabbinic texts of varying value. These are all to a greater or lesser extent hostile. It is therefore impossible to derive a balanced view of this group. Their name has been derived from *šaddiq* ('righteous') and from the name Zadok (either the high priest or another). They have been seen as a primarily religious group (of priestly conservatives); as the Judæan aristocracy (again through a supposed link with the priesthood), and as a political party. They have been identified by some scholars (and by some of the later rabbinic traditions) with the Boethusians, an equally obscure group whose major difference with the Pharisees appears to have been over the *calendar.

None of our sources actually link the Sadducees with the priesthood, stating only that certain priests were also Sadducees. 1 Macc. 2:1 derives the Hasmonean priesthood not from Zadok (as one might expect on the conventional understanding of Sadducee origins) but from one Joarib. When the polemic is stripped from the rabbinic materials, all that remains is that the Pharisees and Sadducees had differing understandings of certain laws, particularly purity laws, and the afterlife. They first appear as an entity in Josephus' narrative of John Hyrcanus (*Ant.* 13. 293–299), as a political group subordinate to the Pharisees, until the Sadducee, Jonathan, persuades the ruler to support their cause – a move which Josephus regards as extremely unpopular. Apart from Ananus the high priest, who is incidentally identified as a Sadducee (*Ant.* 20. 199), they otherwise feature very little in

Josephus' narrative of political events. We are therefore left quite uncertain about their origins, social status and *raison d'être*.

In his descriptions of the three philosophies, Josephus contrasts the Sadducees with the Pharisees and *Essenes as denying divine action in the world, affirming human freedom, and believing that the soul perishes along with the body. He also notes that they have the support of the rich and accept only the written laws in contrast to the Pharisaic traditions.

The only issue on which all our sources agree is that the Sadducees rejected beliefs in the afterlife, resurrection and a post-mortem judgment. However, even here one must be cautious. Josephus sees no incongruity in people switching allegiance between Pharisees and Sadducees (John Hyrcanus, *Ant.* 293–299, and himself, *Vita* 2), which suggests that he did not see such beliefs as central or burning issues.

In the gospels, they appear only once in Mark and Luke (Mk. 12:18; Lk. 20:27; Mt. 22:23), with their question about the resurrection. Matthew, however, adds them to two other narratives (assuming Marcan priority), at 3:7 and 16:1–12, simply as part of the Jewish religious scene.

In Acts their concerns are again primarily over the question of resurrection (4:2; 23:6–8). They are said to be the party of the high priest (5:17), and we are also informed that they were represented in the *Sanhedrin (23:6).

D. R. de L.

SAKKUTH, SIKKUTH, SICCUTH. *MT* *sikkút* is translated 'tabernacle' (as though it were equivalent to *sukka!*) in Am. 5:26, AV—a verse which refers to Israel's adoption of Assyrian gods. In this verse the unvocalized consonants are *skkt mlkkm*, which are better translated, 'Sakkuth your king', than by AV and LXX, 'the tabernacle of your Moloch'. The consonants *skkt* were vocalized to read *sikkút*, 'tabernacle', probably by using the vowels of *šiqqūs*, 'an abominable thing'. However, the verse makes good sense if we read Sakkuth instead of 'tabernacle'. Sakkuth was the name of the god of war, and of sun and light, Adar-malek or Saturn (*cf.* 2 Ki. 17:31, Adrammelech), otherwise known as Ninurta (SAG.KUT). Kaimanu or Kaiwanu are alternative names for the planet. Hence Am. 5:26 should be translated, as in RSV, 'You shall take up Sakkuth your king, and Kaiwan

your star-god, your images, which you made for yourselves . . .' (Others, however, like NEB, regard this astral interpretation as improbable, and follow LXX in seeing in *Sikkuth* a reference to tent-shrines, while translating *Kaiwan* as 'pedestal(s)'—an interpretation attested as early as the *Zadokite Work* of the 1st century BC.) (*REMPHAN.) J. A. T.

SALAMIS. A town on the E coast of the central plain of *Cyprus, not to be confused with the famous island off the coast of Attica. It rivalled in importance Paphos, the Roman capital of the whole island, and eventually superseded it. The harbour which made Salamis a great commercial centre is now completely silted up. In the 1st century AD the Jewish community there was large enough to have more than one synagogue (Acts 13:5). Destroyed by earthquakes, the town was rebuilt in the 4th century AD as Constantia. Its ruins are 5 km from Famagusta. K. L. MCK.

SALECAH, SALCAH. A place in the extreme E of *Bashan (Dt. 3:10; Jos. 12:5; 13:11). Though Bashan fell to the lot of Manasseh, the area occupied by Gad included Salecah (1 Ch. 5:11). It probably was within the area conquered by David, but after Solomon's time it lay outside Israelite territory. The site is possibly the modern Šalḥad (Nabataean *šlhd*) on a S spur of the Hauran, though this identification is not universally accepted. See *LOB*, p. 383. T. C. M.

SALEM. The place where Melchizedek ruled (Gn. 14:18; Heb. 7:1, 8) near the valley of Shaveh (Gn. 14:17; explained as 'the King's Valley'). It is mentioned in parallel with Zion (Ps. 76:2). Following Jos. (*Ant.* 1. 180), it is usually identified with the ancient site of *Jerusalem, the city of Salem, *Urusalem, uru-salimmu* of the cuneiform and Egyptian inscriptions. This would suit the route probably taken by Abraham on his return from Damascus to Hebron when he encountered Melchizedek. Those who assume his return down the Jordan valley look for a more E location such as *Salim. The Samaritans link Salem with *Shalem, a city of Shechem (Gn. 33:18, AV), E of Nablus, but this may be due to their ancient rivalry with Judah, where a 'Valley of Salem' is known as late as Macabean times (Judith 4:4). In Je. 41:5 the LXX (B) reads Salem for Shiloh.

The name *sālēm* (Gk. *Salem*) means 'safe, at peace', though Jerusalem has been interpreted as 'Salem founded' implying a divine name Salem. For the early occurrence of this name form, *cf.* *šillēm* (Gn. 46:24; Nu. 26:49). D. J. W.

SALIM. An apparently well-known place (Gk. *Saleim*) near Aenon on the river Jordan where John baptized (Jn. 3:23). Of the many identifications proposed, the Salim (Salumias) or Tell Abu Sus about 12 km S of Beisan (*Bethshan-Scythopolis) is the most likely. The ruins of Tell Ridgha or Tell Sheikh Selim, as it is also called after the local shrine, lie near several springs which might have been called Aenon (Arab. 'ain, 'spring'). This site would be under the control of Scythopolis. Salim is mentioned by Eusebius, and marked on the 6th century AD Medaba map. The

SALIM

Salim E of Nablus with which the Samaritans identify the *Salem of Gn. 14:18 lies in the heart of Samaria. The land of Salim (rsv 'Shaalim') is a region in hilly Ephraim, possibly between Aijalon and Ramah (1 Sa. 9:4). Cf. W. F. Albright, *The Archaeology of Palestine*, 1960, p. 247; *idem*, in *The Background of the New Testament and its Eschatology* (ed. W. D. Davies and D. Daube), 1956, p. 159. (*SHAALBIM.) D.J.W.

SALMON, SALMA. 1. Of Judah's line (Mt. 1:4-5; Lk. 3:32). The son of Nahshon, and father of Boaz the husband of Ruth and the great-grandfather of David the son of Jesse (Ru. 4:20; 1 Ch. 2:11). According to Mt. 1:5 he married Rahab (of Jericho). 2. Also of Judah's line. A son of Caleb (not to be confused with Caleb, son of Jephunneh), and father of the Bethlehemites, Neophathites and other groups associated with the Kenites (1 Ch. 2:51-54). C.H.D.

SALMONE. A promontory at the extreme E end of Crete, now known as Cape Sidero. On his way to Rome Paul's ship was prevented by a NW wind from proceeding from off Cnidus along the N coast of Crete, and, tacking past Salmone, sheltered in the lee of the island (Acts 27:7). K.L.McK.

SALOME (Heb. *sālôm*, 'peace', with Gk. suffix). 1. According to Mk. 15:40 and 16:1, of three women who saw the crucifixion and went to the tomb on Easter morning two were called Mary and one Salome. Mt. 27:56 names two women called Mary, and the mother of the sons of Zebedee, who is probably to be identified with Salome. Jn. 19:25 refers to two women called Mary, plus the mother of Jesus and his mother's sister, who stood near the cross. If his mother's sister is identified with Salome, then James and John, the sons of Zebedee, would be cousins of Jesus. It is equally possible, however, that John has made a different selection of names out of the 'many other women' who, according to Mk. 15:41, were present at the crucifixion.

2. The daughter of Herodias, by her first husband Herod Philip (Josephus, *Ant.* 18. 136f.). Though not named in the Gospel accounts, she is usually identified with the girl who danced before Herod (Mk. 6:22; Mt. 14:6). She married her father's half-brother Philip the tetrarch. D.R.H.

SALT. Whereas the Phoenicians obtained quantities of salt from the Mediterranean by evaporation in salt-pans, the Hebrews had access to an unlimited supply on the shores of the Dead Sea (Zp. 2:9) and in the hill of Salt (Jebel Usdum), a 15-square-mile (4,000 hectares) elevation at the SW corner of the Dead Sea. This area was traditionally associated with the fate of Lot's wife (Gn. 19:26).

Such salt was of the rock or fossil variety, and, because of impurities and the occurrence of chemical changes, the outer layer was generally lacking in flavour. The reference in Mt. 5:13 is to this latter, much of which was discarded as worthless. Salt was valued as a preservative and for seasoning food (Mt. 5:13; Mk. 9:50; Col. 4:6). It was

often used among Oriental peoples for ratifying agreements, so that salt became the symbol of fidelity and constancy. In the levitical cereal-offerings (Lv. 2:13) salt was used as a preservative to typify the eternal nature of the 'covenant of salt' existing between God and Israel (Nu. 18:19; 2 Ch. 13:5).

The effect of salt on vegetation was to render the land infertile (Dt. 29:23). Thus the 'parched places of the wilderness' (Je. 17:6) were synonymous with a barren salt land (Jb. 39:6). Abimelech followed an ancient custom in sowing ruined Shechem with salt (Jdg. 9:45) as a token of perpetual desolation. Elisha used salt to sweeten the brackish waters of the Jericho spring (2 Ki. 2:19-22). New-born infants were normally rubbed with salt prior to swaddling (Ezk. 16:4). Under Antiochus Epiphanes Syria imposed a tax upon salt, which was paid to Rome.

BIBLIOGRAPHY. E. P. Deatrick and F. C. Fen-sham, *BA* 25, 1962, pp. 41-49; L. G. Hevv, *ISBE* 4, pp. 286-287. R.K.H.

SALT, CITY OF (Heb. *'ir hammelah*). In Jos. 15:62 one of the frontier posts of the tribal territory of Judah 'in the wilderness', S of Middin, Secacah and Nibshan (now identifiable, on the basis of excavations, with the Buqei'a Iron Age II settlements at Khirbet Abū Ṭabaq, Khirbet es-Samrah and Khirbet el-Maqāri), and N of Engedi. Its identification with Khirbet Qumran, first suggested by M. Noth (*Josua*, 1938, p. 72; *ZDPV* 71, 1955, pp. 111ff.), has been confirmed by the discovery of an Iron Age II fortress beneath the *Qumran community settlement (cf. F. M. Cross Jr., J. T. Milik, *BASOR* 142, 1956, pp. 5ff.; R. de Vaux, *Archaeology and the Dead Sea Scrolls*, 1973, pp. 91ff. F.F.B.

SALT, VALLEY OF. Saline encrustations in steppe and desert lands are common. Some are of climatic origin; in other cases the climate has preserved geological salinity in the rocks. It is not possible to identify one topographic location from the biblical references. David and his lieutenant Abishai had memorable victories over the Edomites in the Valley of Salt (2 Sa. 8:13; 1 Ch. 18:12). Later Amaziah had a similar victory (2 Ki. 14:7; 2 Ch. 25:11). Traditionally the site has been accepted as the plain SSW of the Dead Sea, opposite the oasis of the Zered delta, where a plain 10-13 km long is overlooked by the salt range of Jebel Usdum, 8 km long and 200 m high. This plain passes imperceptibly into the glistening lowland of the Sebkhā to the SE, a soft, impassable waste of salt marsh, where an army could well be routed in confusion. But, equally well, the site could be Wadi el-Milh (salt), E of Beersheba, also overlooked by a rocky hill, Tel el-Milh. All that the more precise reference of 2 Ch. 25:11 suggests is that the plain was overlooked by a rocky hill, somewhere between Judah and Edom, presumably in the Arabah. J.M.H.

SALVATION (Heb. *yēša'*; Gk. *sōtēria*).

I. In the Old Testament

The principal Heb. term translated 'salvation' is *yēša'* and its cognates. Its basic meaning is 'bring

into a spacious environment' (cf. Pss. 18:36; 66:12), but it carries from the beginning the metaphorical sense of 'freedom from limitation' and the means to that; *i.e.* deliverance from factors which constrain and confine. It can be referred to deliverance from disease (Is. 38:20; cf. v. 9), from trouble (Je. 30:7) or enemies (2 Sa. 3:18; Ps. 44:7). In the vast majority of references God is the author of salvation. Thus God saves his flock (Ezk. 34:22); he rescues his people (Ho. 1:7) and he alone can save them (Ho. 13:10-14); there is no other saviour besides him (Is. 43:11). He saved the fathers from Egypt (Ps. 106:7-10) and their sons from Babylon (Je. 30:10). He is the refuge and saviour of his people (2 Sa. 22:3). He saves the poor and needy when they have no other helper (Ps. 34:6; Jb. 5:15). The word of Moses, 'stand firm, and see the salvation of the Lord' (Ex. 14:13), is of the essence of the OT idea. Thus to know God at all is to know him as a saving God (Ho. 13:4) so that the words 'God' and 'Saviour' are virtually identical terms in the OT. The great normative instance of God's saving deliverance was the exodus (Ex. 12:40-14:31). The redemption from Egyptian bondage through the intervention of God at the Red Sea was determinative of all Israel's subsequent reflection on God's nature and activity. The exodus was the mould into which all the subsequent interpretation of the drama of Israel's history was poured. It was sung in worship (Ps. 66:1-7), retold in story (Dt. 6:20-24), re-enacted in ritual (Ex. 13:3-16). Thus the notion of salvation emerged from the exodus indelibly stamped with the dimension of God's mighty acts of deliverance in history.

This profoundly significant element laid the basis in turn for a further major OT contribution to the idea of salvation, *viz.* eschatology. Israel's experience of God as saviour in the past projected her faith forward in anticipation of his full and final salvation in the future. Precisely because Yahweh has shown himself to be the Lord of all, creator and ruler of the whole earth, and because he is a righteous and faithful God, he will one day effect his total victory over his foes and save his people from all their ills (Is. 43:11-21; Dt. 9:4-6; Ezk. 36:22-23). In the earlier period this hope of salvation centres more upon immediate historic intervention for the vindication of Israel (cf. Gn. 49; Dt. 33; Nu. 23f.). In the prophetic period it finds expression in terms of a 'Day of Yahweh' in which judgment would combine with deliverance (Is. 24:19f.; 25:6-8; Joel 2:1f., 28-32; Am. 5:18f.; 9:11f.). The experience of the Exile gave concrete imagery and a concrete setting for the expression of this hope as a new exodus (Is. 43:14-16; 48:20f.; 51:9f.; cf. Je. 31:31-34; Ezk. 37:21-28; Zc. 8:7-13); but the disappointing and limited results of the restoration projected the hope forward again and transmuted it into what has been termed the *transcendental-eschatological* (Is. 64:1f.; 65:17f.; 66:22), the hope of the '*olām habba*', the new world at the end of the present age in which God's sovereign rule and righteous character would be manifested among all the nations.

Reference should also be made to other related terms which the LXX renders by *soiēria*; in particular the root *g'l*, 'to redeem', to recover property which had fallen into alien hands, to 'purchase back', often by payment. The person effecting this redemption, or salvation, is the *gō'el*, the

'kinsman-redeemer' (cf. Lv. 25:26, 32; Ru. 4:4, 6). God is the great *gō'el* of Israel (Ex. 6:6; Ps. 77:14f.). This usage is synonymous with *yēša* in the latter part of Isaiah (Is. 41:14; 44:6; 47:4). They appear as parallel terms in Is. 43:1-2; 60:16; 63:9 (cf. TDNT7, pp. 977-978).

Finally we note that the saving activity of God in the OT is expanded and deepened in terms of a particular instrument of this salvation, the Messiah-Servant. Salvation implies an agent, or saviour, though not necessarily one other than Yahweh himself. In general while Yahweh may employ particular human agents, or saviours, at particular historical junctures (Gn. 45:7; Jdg. 3:9,15; 2 Ki. 13:5; Ne. 9:27), he alone is the saviour of his people (Is. 43:11; 45:21; Ho. 13:4). This general assertion however requires qualification in the context of the development of the hope of salvation in the OT where in the Servant Songs we encounter a personal embodiment of Yahweh's moral salvation, even though the Servant is never directly referred to as saviour. Corporate imagery is clearly present here but the personification of the Servant's ministry is clear in the text, and in the light of NT fulfilment needs no further defence. In the song, Is. 49:1-6, he is to be the instrument of God's universal salvation (v. 6; cf. too v. 8). The final song, 52:13-53:12, does not contain the term but the idea of salvation is everywhere present in terms of a deliverance from sin and its consequences. Thus the OT leads us finally to the understanding that God delivers his people through his saviour-Messiah.

II. In the New Testament

In the NT we begin with the general observation that the 'religious' usage of a moral/spiritual deliverance becomes almost wholly dominant as far as the idea of salvation is concerned. Non-religious usage is virtually confined to saving from acute danger to life (Acts 27:20, 31; Mk. 15:30; Heb. 5:7).

a. The Synoptic Gospels

The word salvation is mentioned by Jesus only once (Lk. 19:9), where it may refer either to himself as the embodiment of salvation imparting pardon to Zacchaeus, or to that which is evidenced by the transformed conduct of the publican. Our Lord, however, used 'save' and kindred terms to indicate first what he came to do (by implication, Mk. 3:4; and by direct statement, Lk. 4:18; Mt. 18:11; Lk. 9:56; Mt. 20:28), and secondly, what is demanded of man (Mk. 8:35; Lk. 7:50; 8:12; 13:24; Mt. 10:22). Lk. 18:26, and context, shows that salvation calls for a contrite heart, childlike, receptive helplessness, and the renunciation of all for Christ—conditions it is impossible for man unaided to fulfil.

The testimony of others to our Lord's saving activity is both indirect (Mk. 15:31) and direct (Mt. 8:17). There is also the witness of his own name (Mt. 1:21, 23). All these varied usages suggest that salvation was present in the person and ministry of Christ and especially in his death.

b. The Fourth Gospel

This double truth is underlined in the Fourth Gospel, in which each chapter suggests different aspects of salvation. Thus in 1:12f. men are born as sons of God by trusting in Christ; in 2:5 the situation is remedied by doing 'whatever he tells you'; in 3:5 new birth from the Spirit is essential for

SALVATION

entering the kingdom, but 3:14, 17 make it clear that this new life is not possible apart from trust in the death of Christ, without which men are already under condemnation (3:18); in 4:22 salvation is of the Jews—by revelation historically channelled through God's people—and is a gift inwardly transforming and equipping men for worship.

In 5:14 the one made whole must sin no more lest a worse thing come; in 5:39 the Scriptures testify of life (=salvation) in the Son, to whom life and judgment are committed; in 5:24 believers have already passed from death to life; in 6:35 Jesus declares himself the bread of life, to whom alone men should go (6:68) for the quickening words of eternal life; in 7:39 water is the symbol of the saving life of the Spirit who was to come after Jesus had been glorified.

In 8:12 the Evangelist shows the safety of the guidance of light and in vv. 32, 36 the liberty through truth in the Son; in 9:25, 37, 39 salvation is spiritual sight; in 10:10 entrance into the safety and abundant life of the fold and of the Father is through Christ; in 11:25f. resurrection-life belongs to the believer; in 11:50 (*cf.* 18:14) the saving purpose of his death is unwittingly described; in 12:32 Christ, lifted up in death, draws men to him; in 13:10 his initial washing signifies salvation ('clean all over'); in 14:6 he is the true and living way to the Father's abode; in 15:5 abiding in him, the Vine, is the secret of life's resources; in 16:7-15 for his sake the Spirit will deal with the obstacles to salvation and prepare for its realization; in 17:2-3, 12 he keeps safely those who have knowledge of the true God and of himself; in 19:30 salvation is accomplished; in 20:21-23 the words of peace and pardon accompany his gift of the Spirit; in 21:15-18 his healing love reinstalls love in his follower and reinstates him for service.

c. The Acts

Acts traces the proclamation (*cf.* 16:17) of salvation in its impact first upon the crowds which are exhorted to be saved 'from this crooked generation' (2:40) by repentance (itself a gift and part of salvation, 11:18), remission of sins, and receiving the Holy Spirit; then upon a sick individual, ignorant of his true need, who is healed by the name of Jesus, the only name whereby we must be saved; and thirdly, upon the household of him who asked 'What must I do to be saved?' (16:30ff.).

d. The Pauline Epistles

Paul claims that the Scriptures 'are able to instruct you for salvation through faith in Christ Jesus' (2 Tim. 3:15ff.) and provide the ingredients essential for the enjoyment of a full-orbed salvation. Enlarging and applying the OT concept of the righteousness of God, which itself had adumbrations of the saving righteousness of the NT, Paul shows how there is no salvation by means of the law, since it could only indicate the presence and excite the reactionary activity of sin and stop men's mouths in their guilt before God (Rom. 3:19; Gal. 2:16). Salvation is provided as the free gift of the righteous God acting in grace towards the undeserving sinner who, by the gift of faith, trusts in the righteousness of Christ who has redeemed him by his death and justified him by his resurrection. God, for Christ's sake, justifies the unmeriting sinner (*i.e.* reckons to him the perfect righteousness of Christ

and regards him as if he had not sinned), forgives his sin, reconciles him to himself in and through Christ 'making peace by the blood of his cross' (2 Cor. 5:18; Rom. 5:11; Col. 1:20), adopts him into his family (Gal. 4:5f.; Eph. 1:13; 2 Cor. 1:22), giving him the seal, earnest, and firstfruits of his Spirit in his heart, and so making him a new creation. By the same Spirit the subsequent resources of salvation enable him to walk in newness of life, mortifying the deeds of the body increasingly (Rom. 8:13) until ultimately he is conformed to Christ (Rom. 8:29) and his salvation is consummated in glory (Phil. 3:21).

e. The Epistle to the Hebrews

The 'great' salvation of the Epistle to the Hebrews transcends the OT foreshadowings of salvation. The NT salvation is described in the language of sacrifice; the oft-repeated offerings of the OT ritual that dealt mainly with unwitting sins and provided only a superficial salvation are replaced by the one sacrifice of Christ, himself both saving Priest and Offering (Heb. 9:26; 10:12). The outpouring of his life-blood in death effects atonement, so that henceforth man with a cleansed conscience can enter the presence of God in terms of the new covenant ratified by God through his Mediator (Heb. 9:15; 12:24). Hebrews, which lays such stress on Christ's dealing with sin by his suffering and death to provide eternal salvation, anticipates his second appearing, not then to deal with sin, but to consummate his people's salvation and, presumably, their attendant glory (9:28).

f. The Epistle of James

James teaches that salvation is not by 'faith' only but also by 'works' (2:24). His concern is to disillusion anyone who relies for his salvation on a mere intellectual acknowledgment of the existence of God without a change in heart resulting in works of righteousness. He does not discount true faith, but urges that its presence be shown by a conduct that in turn indicates the saving energies of true religion at work through the ingrafted Word of God. He is as concerned as any to bring back the sinner from the error of his way and save his soul from death (5:20).

g. 1 and 2 Peter

1 Peter strikes a similar note to Hebrews about the costly salvation (1:19) which was searched for and foretold by the prophets but is now a present reality to those who, like straying sheep, have returned to the Shepherd of their souls (2:24f.). Its future aspect is known by those who 'are guarded . . . for a salvation ready to be revealed' (1 Pet. 1:5).

In 2 Peter salvation involves escaping the corruption that is in the world through lust by being partakers of the divine nature (1:4). In the context of sin the believer yearns for the new heavens and the new earth wherein dwells righteousness, but recognizes that the postponement of the parousia is due to the longsuffering of his Lord, which is itself an aspect of salvation (3:13, 15).

h. 1, 2 and 3 John

For 1 John the sacrificial language of Hebrews is congenial. Christ is our salvation by being the propitiation for our sins, as the outcome of God's love. It is God in his love in Christ's outpoured life-blood who covers our sins and cleanses us. As in the Fourth Gospel, salvation is conceived in terms

of being born of God, knowing God, possessing eternal life in Christ, living in the light and truth of God, dwelling in God and knowing his dwelling in us through love by his Spirit (3:9; 4:6, 13; 5:11). 3 John has a significant prayer for general prosperity and bodily health (natural well-being) to accompany prosperity of soul (v. 2).

i. The Epistle of Jude

Jude 3, in referring to the 'common salvation', has in mind something akin to the 'common faith' of Tit. 1:4, and allies it to the 'faith' (cf. Eph. 4:5) for which believers are to contend. This salvation comprises the saving truths, privileges, demands and experiences common to the variety of his readers. In vv. 22f. he would urgently present this salvation to various groups in doubt, danger and degradation.

j. The Revelation

Revelation reiterates the theme (of 1 Jn.) of salvation as liberation or cleansing from sin by virtue of the blood of Christ and its constitution of believers as royal priests (1:5f.). In a manner reminiscent of the psalmist, the seer, in adoration, ascribes salvation in its comprehensiveness to God (7:10). The closing chapters of the book depict salvation in terms of the leaves of the tree of life which are for the healing of the nations, to which tree, as to the city of salvation, admission is given only to those whose names are written in the book of life.

III. Relation to other views of salvation

a. The Essenes

Considerable attention has been given in the years since the discovery of the *Dead Sea Scrolls (1947 onwards) to this monastic movement within Judaism, and various attempts made to evaluate its contribution to NT origins. As far as the doctrine of salvation is concerned the Qumran Essenes shared the biblical sense of man's inherent sinfulness apart from God, and one notable passage (1QS 11. 9f.; cf. also the *Hymn of Thanksgiving*) approaches very near to the NT doctrine of salvation as acquittal by the action of God's righteousness, salvation through utter reliance upon the grace and mercy of God. This however is not altogether surprising bearing in mind the debt of the Qumran covenanters to the psalter and the great OT prophets. It would be wrong to overstress the points of correspondence; at other points the parallel with NT teaching is much more tenuous. The universalism of the Christian gospel is totally lacking; salvation is certainly *not* for the common mass of sinners. The Qumran understanding of the Suffering Servant of Is. 53 is disputed, but the prophecy appears to have been seen as fulfilled in the inner council (*sōd*) of the community. Nor can one entirely evade the simple fact that there is not one unambiguous reference to the Essenes in the entire NT.

b. Gnosticism

The precise dating of gnostic teaching is disputed, and the attempt to demonstrate a Christian dependence upon gnostic ideas is today a distinctly uncertain enterprise. There is however evidence in the NT (cf. 1 and 2 Cor.; Col.; 1 and 2 Tim.; Tit.; 1 Jn.; Rev.) that the early church had to distinguish its salvation teaching from views which were embodied in later gnostic doctrines. In essence the gnostic claimed salvation by an immediate know-

ledge of God. This knowledge was intellectual as against moral, and esoteric in its being confined to the elite circle of 'initiates'. Gnosticism also taught a dualism of soul and body, only the former being significant for salvation; and a hierarchy of spiritual and angelic intermediaries between God and man. Salvation was the escape from the domination of alien astrological forces and human passions by coming to 'know' in response to a 'call' from the divine world expressed in the so-called 'gnostic-redeemer myth', the story of the heavenly man who came down from the world of celestial light to 'save' 'fallen' men by the impartation of this secret knowledge.

As has already been implied, the attempt to locate such a view in the pre-Christian period and hence to see it as lying behind NT notions of salvation falls a long way short of demonstration. The evidence is far more compatible with the view that in the syncretistic religious atmosphere of the time certain latent gnostic tendencies were in the 2nd and 3rd centuries wedded to Christian salvation motifs to produce the doctrines of the gnostic sects which we have outlined above and of which we hear from writers such as Irenaeus in the post NT period. Against incipient forms of such notions of salvation the biblical writers stress the universal scope of God's offer of salvation, its essentially moral nature, the true humanity and the true deity of the mediator, and the focus of salvation in the historic acts of God in the birth, life, death and resurrection of Jesus Christ (cf. NT sections cited above).

c. The mystery religions

Another point at which the NT writers had to distinguish their doctrine of salvation from current ideas was in relation to the mystery cults. This 1st-century phenomenon was a combination of Hellenistic and oriental elements which had their origin in ancient fertility rites. They claimed to offer 'salvation' from fate, and a life beyond the grave free from the unsatisfactory and oppressive conditions of the present. Salvation was attained by the meticulous performance of certain cultic rituals. Language similar to the NT occurs at points. The initiates could be referred to as 'born again to eternal life'. Cult deities such as Dionysius attained the title 'Lord and Saviour'. Links with Christian theology have been alleged, particularly at the sacramental level, since sacred lustrations and the idea of uniting with the gods in a solemn meal were known. At even a cursory examination, however, the differences from the early Christian message and the life of the early Christian communities are stark and obvious. Salvation in the mysteries was essentially non-moral. The 'saved' worshipper was not expected to be a better man than his pagan neighbour, nor in most cases was he. The rational element was minimal; there were no great saving acts, and so no great common theological affirmations.

The alleged parallels to the Christian (Pauline) baptismal and eucharistic teaching have also been shown to be almost certainly without foundation; the evidence rather pointing to the apostle's debt to biblical salvation-history centred in God's mighty deed of redemption in Jesus Christ.

d. The imperial cult

The age-long mirage of salvation through political power and organization was reflected in the 1st

SALVATION

century in the imperial cult. The myth of a God-King who was the saviour and benefactor of his people appears widely in various forms in the ancient world particularly in the orient. In Rome the impetus for the official cult stems from the career of Augustus who after Actium in 31 BC established the *Pax Romana*, the golden age of peace after decades of bloodshed. He was commonly addressed as *sōtēr*, 'Saviour of the world', and through his relationship to Julius Caesar, 'the Son of God'. Even in Augustus' case however some caution needs to be exercised since it has been shown that the title *sōtēr* was certainly not confined to the emperor, nor was the title always invested with the full oriental implications. The successive emperors of the 1st century showed varying degree of enthusiasm for the claims made on their behalf in the official cult. Caligula, Nero and Domitian certainly took their divine status seriously and this may account to some extent for some of the appearances of the title referred to Jesus Christ and the Father in the NT (cf. 1 Tim. 1:1; 4:10; Tit. 1:3; 3:4; 1 Jn. 4:14; Jude 25; Rev. 7:10; 12:10; 19:1).

e. Summary

In general, while there are clear parallels in language, the case for the dependence of Christian salvation teaching upon any or all of these contemporary movements has certainly not been made. In attempting to communicate the gospel to their contemporaries the NT preachers and writers certainly were not unprepared to translate the message, including its salvation language, into 1st-century thought-patterns, but the true origin and justification of their salvation language lies outside that world, in the salvation-history tradition of the OT as focused and fulfilled in the person and mission of Jesus Christ.

IV. Biblical salvation: Summary

1. Salvation is historical. The OT view of salvation as effected through historic, divine intervention is fully honoured in the NT. As against Gnosticism, man is not saved by wisdom; as against Judaism, man is not saved by moral and religious merit; as against the Hellenistic mystery cults, man is not saved by a technique of religious practice; as against Rome, salvation is not to be equated with political order or liberty. Man is saved by God's action in history in the person of Jesus Christ (Rom. 4:25; 5:10; 2 Cor. 4:10f.; Phil. 2:6f.; 1 Tim. 1:15; 1 Jn. 4:9-10, 14). While the birth, life and ministry of Jesus are not unimportant, the stress falls upon his death and resurrection (1 Cor. 15:5f.); we are saved by the blood of his cross (Acts 20:28; Rom. 3:25; 5:9; Eph. 1:7; Col. 1:20; Heb. 9:12; 12:24; 13:12; 1 Jn. 1:7; Rev. 1:5; 5:9). As this message is proclaimed and men hear and come to respond in faith God's salvation is brought to them (Rom. 10:8, 14f.; 1 Cor. 1:18-25; 15:11; 1 Thes. 1:4f.).

2. Salvation is moral and spiritual. Salvation relates to a deliverance from sin and its consequences and hence from guilt (Rom. 5:1; Heb. 10:22), from the law and its curse (Gal. 3:13; Col. 2:14), from death (1 Pet. 1:3-5; 1 Cor. 15:51-56), from judgment (Rom. 5:9; Heb. 9:28), also from fear (Heb. 2:15; 2 Tim. 1:7, 9f.) and bondage (Tit. 2:11-3:6; Gal. 5:1f.). It is important to indicate the negative implications of this, i.e. what Christian salvation does *not* include. Salvation does not imply material

prosperity or worldly success (Acts 3:6; 2 Cor. 6:10), nor does it promise physical health and well-being. One must be careful not to overstate this particular negative, as clearly remarkable healings did and do take place and 'healing' is a gift of the Spirit to the church (Acts 3:9; 9:34; 20:9f.; 1 Cor. 12:28). But healing is not invariable, and hence is in no sense a 'right' of the saved man (1 Tim. 5:23; 2 Tim. 4:20; Phil. 2:25f.; 2 Cor. 12:7-9). Further, salvation does not include deliverance from physical hardship and danger (1 Cor. 4:9-13; 2 Cor. 11:23-28), nor even, perhaps, seemingly tragic events (Mt. 5:45?). It does not mean being absolved from social injustice and ill-treatment (1 Cor. 7:20-24; 1 Pet. 2:18-25).

3. Salvation is eschatological. There is a danger of stating the meaning of salvation too negatively. Here we recall the recognition above of the paucity of references to salvation from the lips of Jesus. His central category was the kingdom of God, the manifestation of God's sovereign rule. In Rev. 12:10 however salvation and the kingdom are virtually equated. For the author of the Apocalypse as for Jesus salvation is equivalent to life under the reign of God, or, as in the witness of the Fourth Gospel, eternal life. Salvation therefore gathers up all the contents of the gospel. It includes deliverance from sin and all its consequences, and positively, the bestowal of all spiritual blessings in Christ (Eph. 1:3), the gift of the Holy Spirit and the life of blessedness in the future age. This future perspective is crucial (Rom. 8:24; 13:11; 1 Cor. 5:5; Phil. 3:20; Heb. 1:14; 9:28; 1 Pet. 1:5, 9). All that is known of salvation now is but a preliminary and foretaste of the fullness of salvation which awaits the fullness of the kingdom at the parousia of the Lord.

SAMARIA. The name of the N Israelite capital and of the territory surrounding it.

I. History

After reigning 6 years at Tirzah, Omri built a new capital for the N kingdom on a hill 11 km NW of Shechem commanding the main trade routes through the Esdraelon plain. He purchased the site for two talents of silver and named it after its owner Shemer (1 Ki. 16:24). The place is otherwise unknown unless it is to be identified with Shamir, the home of Tola (Jdg. 10:1; F. M. Abel, *Géographie de la Palestine*, 2, p. 444). The hill, which is c. 100 m high and commands a view over the plain, was impregnable except by siege (2 Ki. 6:24), and the name (*sōm'rōn*) may be connected with the Heb. 'watch-post'.

Omri allowed the Syrians of Damascus to set up bazaars (AV 'streets') in his new city (1 Ki. 20:34). For 6 years he worked on the construction of Samaria, and this was continued by Ahab, who built a house decorated or panelled with ivory (1 Ki. 22:39). In a temple for Baal of Sidon (Melqart), the deity whose worship Jezebel encouraged (1 Ki. 18:22), Ahab set up a pillar (*āšerā*) near the altar which Jehoram later removed (2 Ki. 3:2). Other shrines and buildings used by the idolatrous priests must have been in use from this time until the reform undertaken by Jehu (2 Ki. 10:19). Samaria itself was long considered by the prophets a centre of idolatry (Is. 8:4; 9:9; Je. 23:13; Ezk. 23:4; Ho. 7:1; Mi. 1:6).

Ben-hadad II of Syria besieged Samaria, at first unsuccessfully (1 Ki. 20:1–21), but later the Syrians reduced it to dire famine (2 Ki. 6:25). It was relieved only by the panic and sudden withdrawal of the besiegers, which was discovered and reported by the lepers (2 Ki. 7). Ahab was buried in the city, as were a number of Israelite kings who made it their residence (1 Ki. 22: 37; 2 Ki. 13:9, 13; 14:16). His descendants were slain there (2 Ki. 10:1), including Ahaziah, who hid in vain in the crowded city (2 Ch. 22:9). Samaria was again besieged in the time of Elisha and miraculously delivered (2 Ki. 6:8ff.).

*Menahem preserved the city from attack by paying tribute to *Tiglath-pileser III (2 Ki. 15:17–20). His son *Pekah, however, drew the Assyrian army back again by his attack on Judah, then a vassal-ally of Assyria. The city, called *Samerina* or *Bit-Īumri* ('House of Omri') in the Assyrian Annals, was besieged by Shalmaneser V of Assyria in 725–722 bc. 2 Ki. records that he captured the city, agreeing with the Babylonian Chronicle, but evidently his death intervened before it was finally secured for Assyria. The citizens, incited by *lau-bi'di* of Hamath, refused to pay the tax imposed on them, and in the following year (721 bc) Sargon II, the new king of Assyria, initiated a scheme of mass deportation for the whole area. According to his annals, Sargon carried off 27,270 or 27,290 captives, and the effect was to terminate the existence of the N kingdom of Israel as a homogeneous and independent state. The exiles were despatched to places in Syria, Assyria and Babylonia and replaced by colonists from other disturbed parts of the Assyrian empire (2 Ki. 17:24). The resultant failure to cultivate the outlying districts led to an increase in the incursions of lions (v. 25). Some Israelites, called *Samaritans (v. 29), still inhabited part of the city and continued to worship at Jerusalem (Je. 41:5). The town, according to a cuneiform inscription (*HES*, 247) and to other records, was under an Assyrian governor and both Esarhaddon (Ezr. 4:2) and Ashurbanipal (Ezr. 4:9–10) brought in additional peoples from Babylonia and Elam. The contention between Samaria and Judah, of earlier origin, gradually increased in intensity, though Samaria itself declined in importance.

The discovery of papyri from Samaria in a cave of the Wadi ed-Dāliyah 14 km N of Jericho seems to confirm the reports of ancient historians that Samaria was initially favourable to Alexander who captured the city in 331 bc. However, while Alexander was in Egypt they murdered his prefect over Syria. On his return, Alexander destroyed Samaria, massacred the city's leaders in the cave to which they had fled and resettled the

area with Macedonians. Information contained in the papyri enables a list of Samaritan governors to be constructed, beginning with Sanballat I c. 445 bc.

Samaria was besieged by John Hyrcanus, and the surrounding countryside was devastated c. 111–107 bc. Pompey and Gabinius began to rebuild (Jos., *Ant.* 14. 75), but it was left to Herod to embellish the city, which he renamed Sebaste (Augusta) in honour of his emperor. In it he housed 6,000 veterans, including Greeks. On his death, Samaria became part of the territory of Archelaus and later a Roman colony under Septimius Severus. Despite the mutual antagonism between Judah and Samaria, Jesus Christ took the shorter route through Samaria to Galilee (Lk. 17:11), resting at Sychar near Shechem, a Samaritan city (Jn. 4:4). Philip preached in Samaria, but perhaps the district rather than the city is intended, since the definite article is absent in Acts 8:5.

II. Archaeology

The site was occupied in the Early Bronze Age, then deserted until the Iron Age. Sixteen levels of occupation were recognized by the Harvard (1908–10) and, later, joint Harvard–Hebrew University–British School of Archaeology in Jerusalem expeditions (1931–5). Further excavations were made by the Department of Antiquities of Jordan in 1965 and the British School of Archaeology in Jerusalem in 1968. The site is difficult to work because of the dense and continuous habitation, with constant rebuilding. Of the periods of occupation unearthed, seven have been assigned to the Israelites: Levels I–II = Omri–Ahab (28 years). The inner (1.5 m thick) and outer (6 m thick) fortification wall, completed by the latter king, enclosed the summit. A main gateway seems to have had a columned entrance court. The palace, which was later adapted by Jeroboam II, had a wide court in which lay a reservoir or pool (10 by 5m), probably the one in which Ahab's bloodstained chariot was washed down (1 Ki. 22:38). In an adjacent storeroom more than 200 plaques or fragments of ivories were discovered. These show Phoenician and pseudo-Egyptian styles and influences and may well have been inlays for furniture in Ahab's ivory house (1 Ki. 22:39) (*IVORY). Sixty-five ostraca, inscribed in Old Hebrew, noted the capacity and original owners of the wine-jars, with the date of their contents (*DOTT*, pp. 204–208; *WRITING). These are probably to be assigned to the reign of Jeroboam II.

Level III marks the period of Jehu with adaptations of earlier buildings. Then, after an interval, come levels IV–VI, the Israelite period covering Jeroboam and the 8th century bc. The city was repaired in the last decades before its fall to the Assyrians in 722 bc, which is marked by the destruction level VII.

The remains of the Hellenistic buildings are well preserved, with a round tower standing nineteen courses of stone high, a fortress, the city wall (near the West Gate), coins, stamped jar-handles and Greek pottery remaining.

The Roman city of Herod is notable for the great temple dedicated to Augustus, built over the Israelite palaces. Other remains include the enclosure wall, and West Gate, with three round towers, a 820-m long colonnaded street bordered by porticos and shops, the temple of Isis rededicated to Kore, a basilica (68 by 32 m), divided into three naves by

SAMARIA

Corinthian columns, a forum, a stadium and an aqueduct. Many of the visible ruins are probably to be dated to later restorers, especially Septimius Severus (AD 193–211).

SAMARITANS. In evv of the OT, Samaritans are mentioned only in 2 Ki. 17:29, a passage which describes the syncretistic religion of those peoples whom the king of Assyria transported to the N kingdom of Israel to replace the exiled native population after the fall of Samaria (722/721 BC).

Several reasons argue strongly against the identification, favoured by Josephus and many others since, of this group with the Samaritans as they are more widely known from the NT (Mt. 10:5; Lk. 9:52; 10:33; 17:16; Jn. 4:9, 39–40; 8:48; Acts 8:25), some of whose descendants survive to the present day in two small communities at Nablus and Holon: (i) the word used (*haššōmrōnim*) seems merely to mean 'inhabitants of (the city or province of) Samaria (*šōmrōn*)', and this fits the context of 2 Ki. 17 best; (ii) there is no evidence that the later Samaritans inhabited Samaria. The earliest certain references to them, by contrast, all point clearly to their residence at Shechem (Ecclus. 50:26; 2 Macc. 5:22f.; 6:2; cf. Jn. 4:5f., 20), whilst one of Josephus' sources refers to them as 'Shechemites' (cf. *Ant.* 11. 340–347; 12. 10); (iii) nothing whatever that is known of later Samaritan religion and practice suggests the pagan influence of 2 Ki. 17 or Ezr. 4.

The origins of the Samaritans of the NT as a distinctive group should probably not be sought before the start of the Hellenistic period (end of the 4th century BC), when Shechem was rebuilt after a long period of desolation. The enemies of the Jewish community in the earlier Persian period mentioned in Ezr. and Ne. would then be some of the inhabitants of the N province whose opposition to the rebuilding of Jerusalem was mainly stirred by political motives. That some adhered to the Israelite faith (Ezr. 4:2) is not surprising, since the OT itself acknowledges that not all the inhabitants of the old N kingdom were exiled in 721 BC (2 Ch. 30) and some of the newcomers could well have assimilated to those who remained.

It is not known precisely what factors led to the resettlement of Shechem and the consequent crystallization of the Samaritan community. An attractive suggestion is that following the complete Hellenization of Samaria after the conquests of Alexander the Great, a group of religious purists (possibly joined by some priests whose marriage to women of the N made their continued residence in Jerusalem impracticable) decided to make a fresh start where they could practise their religion unmolested. The find of over 200 skeletons (together with papyri which originated in Samaria) in a remote cave in Wadi ed-Dāliyah, about 14 km N of Jericho, suggests that other refugees may not have been so fortunate.

Be that as it may, once the community had taken on a distinctive identity, and a temple had been

built on Mt Gerizim (both Josephus, *Ant.* 11. 321f., for all the other difficulties of his narrative at this point, and archaeological remains, if correctly identified, agree on a date in the Hellenistic period), it was inevitable that attitudes between the Jews of Jerusalem and the Samaritans should have begun to harden. Whilst it may be misleading to speak of a particular schism, it is clear that Ben-Sira (c. 180 BC) regarded the Samaritans as a quite separate group (Ecclus. 50:26), and this would have been accentuated by their capitulation in the period of the Maccabean revolt, when their temple was dedicated to Zeus Xenios. Perhaps, however, the breach was made final when, c. 128 BC, John Hyrcanus extended the Hasmonaean dominance of the area by capturing Shechem and destroying the Gerizim temple.

This by no means marked the end of the friction, however. From the scanty sources available, we learn that between AD 6 and 9 some Samaritans scattered bones in the Jerusalem Temple during a certain Passover. In AD 52 Samaritans massacred a group of Galilean pilgrims at En-gannim, though in the consequent dispute before Claudius, which followed a Jewish reprisal raid, the decision was given in favour of the Jews. Furthermore, the Samaritans suffered at the hands of the Roman rulers: in AD 36 a Samaritan fanatic assembled a crowd on Mt Gerizim, promising to reveal the sacred vessels thought to have been hidden there by Moses, and many of them were massacred by Pilate. A year after the start of the Jewish War (AD 66–70), a group of Samaritans switched allegiance to join the revolt, only to be slaughtered on Mt Gerizim by Vettulenus Cerealis.

Since the main theological writings of the Samaritans (e.g. *Memar Marqah*, the Samaritan liturgy known as the *Defter*, and a number of Chronicles) come from only the 4th century AD, and often much later, it is almost impossible to reconstruct in detail their beliefs in the NT period. For this reason, attempts to find a *distinctively* Samaritan background to (e.g.) Jn., Acts 7 or Heb. should be treated with the greatest caution.

Only the five books of the Pentateuch in their Samaritan recension (2nd century BC) were regarded as canonical, and this is reflected in their creed, whose elements must date back to early times: belief in one God, in Moses the prophet, in the law, in Mt Gerizim as the place appointed by God for sacrifice (which is made the tenth commandment in the SP), in the day of judgment and recompense, and in the return of Moses as *Taheb* (the 'restorer' or 'returning one').

The attitude of the Jewish Mishnah and Talmud towards the Samaritans, as of Josephus, is ambiguous. This may reflect a favourable attitude which recognized an essential affinity of both race and religion with the Samaritans, but which was subsequently heavily overlaid with later polemic, encouraged by the developing antagonism and based on 2 Ki. 17 and Ezr. 4.

It is thus noteworthy that the NT is almost consistently favourable towards them (see refs. above), and that the Samaritans are portrayed as responding enthusiastically both to Jesus himself and to the preaching of the early Christian church.

H.G.M.W.

SAMGAR-NEBO (Heb. *samgar-n'bo*; Gk. many variants, e.g. *Samagoth*, *Eissamagath*). Je. 39:3 lists officers of Nebuchadrezzar who sat in the middle gate of Jerusalem after its capture in 587 BC: 'Nergal-sharezer, Samgar-nebo, Sarsechim the Rabсарis, Nergal-sharezer the Rabmag'. Since a list of Nebuchadrezzar's courtiers includes a Nergal-shar-ušur with the title Sinmagir (*ANET*, p. 308), it is thought that the text is confused and should read 'Nergal-sharezer the Sinmagir'. The following Nebo would then belong with *Sarsechim as the name of the *Rabsaris, perhaps corrupted from Nebushazban as in v. 13. All this remains conjecture.

A.R.M.

SAMOS. One of the larger islands in the Aegean Sea, off the coast of Asia Minor SW of Ephesus. An Ionian settlement, it had been an important maritime state. Under the Romans it was part of the province of Asia until Augustus made it a free state in 17 BC. On his way back to Judaea from his third missionary journey Paul sailed between Samos and the mainland (Acts 20:15).

K.L.McK.

SAMOTHRACE (modern Samothraki). A small mountainous island in the N of the Aegean off the coast of Thrace, with a town of the same name on the N side. One of its peaks rises above 1,700 m, forming a conspicuous landmark. Sailing NW from Troas on his way to Neapolis. Paul must have had a favourable wind to reach Samothrace in one day and Neapolis in one more (Acts 16:11; cf. 20:6).

Samothrace was renowned as a centre of the mystery cult of the Kabeiroi, ancient fertility deities who were supposed to protect those in danger, especially at sea.

K.L.McK.

SAMSON. Greater attention is given to Samson than to any other of Israel's judges before Samuel (Jdg. 13-16). His name, *šimšōn* (Jdg. 13:24), derives from Heb. *šemeš*, 'sun', which has led some scholars to suggest a connection with a sun-mythology, Samson's exploits being equated with the 'twelve labours' of Gilgamesh or Hercules. The proximity of Beth-shemesh to Samson's birth-place, Zorah, the fact that one of his feats of strength took place 'at the time of wheat harvest' (Jdg. 15:1), i.e. approaching mid-summer, and his death between the pillars of a Philistine temple, possibly symbolic of sunset, are used in support of this view. But the essential historicity of the biblical record can hardly be doubted. Samson's birth and death are carefully documented and there is a close connection with an actual historical situation. Names like Samson are found in Ugaritic

texts of the 14th and 15th centuries BC and most likely a common Canaanite name like this was widely used by Israel also.

I. Historical background

The Samson narratives provide an invaluable background to the earlier part of the Philistine oppression. The Philistines settled on the coastal plain c. 1200 BC, a generation after the Conquest, and once established they attempted to expand into the Israelite hill-country. Shamgar's exploit probably gave temporary relief (Jdg. 3:31), but a combination of Philistine and Amorite pressure (Jdg. 1:34) forced part of Samson's tribe, the Danites, to migrate N (Jdg. 18). The Danite remnant which remained, with Judah, bore increasingly the brunt of Philistine pressure. At this stage Philistine rule was not onerous, Judah accepting it without demur (Jdg. 15:11). It was established by infiltration rather than by force, and promised obvious economic advantages to the subject peoples. The insidious nature of this domination was a major threat to Israel's continued independence. Samson's activities were significant in this light. Nowhere had he armed support from his compatriots but his one-man campaign highlighted the danger and brought the conflict into the open. Even so, Israel eventually overcame the Philistines only with the greatest difficulty. Samson may be dated in the period of open Philistine aggression, c. 1070 BC, contemporary with Jephthah, who dealt with the Ammonite menace (cf. Jdg. 10:7) and c. 20 years before Israel's double defeat at Aphek (1 Sa. 4:1-11).

II. Personal history

a. Samson was the son of Manoah, whose wife, like Sarah, Hannah and Elizabeth, was barren. His birth, like those of Isaac and John the Baptist, was announced by an angel (Jdg. 13:3). He was to be a *Nazirite (Heb. *nāzīr*, 'separated' or 'consecrated') from birth. Usually the Nazirite vow was voluntarily taken for a limited period (Nu. 6:1-21). Of the stipulations required by the Nazirite vow, Samson took only one seriously, that concerning his hair. He was often in contact with corpses (e.g. 14:8f.) and it is unlikely that he abstained from strong drink.

Samson's parents lived at Zorah, on the border between Dan and Judah, in the Shephelah c. 22 km W of Jerusalem.

b. *Samson's first love* (14:1-15:8). Seeing a Philistine woman in Timnah, 6 km SW of Zorah, he demanded that his unwilling parents arrange a marriage. Understandably they were aggrieved that he should seek a wife outside the covenant-community. At the wedding feast he used a riddle to test the thirty young men, who appear more as protection against Samson than as guests (14:11). They put pressure upon Samson's bride to extract the answer, whereupon an enraged Samson slew thirty Philistines at Ashkelon to pay his debt and then departed (14:13-19). To escape disgrace his bride was given to his 'best man' (14:20). The type of marriage indicated did not involve permanent cohabitation, but when Samson arrived back in the early summer with the present customary in such a relationship (15:1) he was refused entrance. He took his revenge by catching 300 'foxes', probably jackals, which unlike foxes are not solitary and are more easily caught, tying fire-brands to their tails

SAMSON

and releasing them (15:2–5). At harvest-time the loss would be considerable. The Philistines, in their turn, took an equally vicious revenge upon the Timnite and his family (15:6). In a further escalation of violence Samson retaliated by slaughtering the offending Philistines (15:7f.).

c. *The attempt to capture Samson at Lehi* (15:9–20). Seeking refuge at the rock of Etam, Samson was taken into custody by 3,000 men of Judah, resentful that he had disturbed their peaceful situation under the Philistines (15:9–13). His abnormal strength enabled him to break free and attack the surprised Philistines with a jawbone of an ass, a formidable weapon in the hands of a determined man (15:14–17). Samson was weakened with thirst after this spectacular success and God provided miraculously for his need (15:18f.). V. 20, with its formal statement of Samson's judgeship, probably marked the end of one account of his life.

d. *His downfall and death* (16:1–31). Samson's uncontrolled sexual urge, involving foreign prostitutes, eventually proved his undoing. A warning of his vulnerability in such circumstances was given at Gaza, but his unique strength enabled him to escape (16:1–3). Gaza, the southernmost of the five Philistine cities, was 60 km from Hebron, but the narrative may indicate that Samson lifted the city-gates to a hill in the general direction of Hebron.

After this Samson became infatuated with Delilah, whose home in the valley of Sorek lay just below Zorah (16:4). She collaborated with the Philistines and with heartless tenacity extracted from Samson the secret of his strength (16:5–20). Blinded and humiliated, 'eyeless in Gaza', he was paraded as the butt at a festival (16:21–27). For the first time a religious act on Samson's part is noted, and in answer to his prayer, coupled with the fact that the Philistines had carelessly allowed his hair to grow again, Samson was able to demolish a probably over-stressed temple, killing both himself and more Philistines than he had slain during his life (16:28–31). As the Philistines formed a ruling class superimposed upon native population, the effect of this decimation would be considerable.

e. *Moral problems raised by the Samson narratives*. Most of the judges had moral and religious shortcomings, but these are greatly accentuated in the case of Samson, whose sensuality, irresponsibility and lack of true religious concern are apparent. Yet he is included in the catalogue of heroes of faith (Heb. 11:32). Especially perplexing is the relationship of his endowment with the Spirit of God to his character. A clue to the significance of chs. 13–16 is the absence of the religiously motivated comment which abounds elsewhere in the book of Judges, as though the editor deems further comment unnecessary, the narratives themselves testifying openly to the prevailing low standards. We should distinguish between the level of appreciation of the average contemporary Israelite, who would thoroughly approve of the hated Philistines' discomfiture, and that of the godly men who finally collected Israel's traditions; they would be well aware of Samson's blemishes. Nor must we read back the clear NT connection between Spirit-endowment and holiness—a charismatic anointing in the OT period did not necessarily produce purity of life. God could still make use of a person apart from the quality of his life. Amongst his unlikely instruments were Balaam (Nu. 22–24), Nebuchadnezzar (Je. 25:9; 27:6; 43:10) and Cyrus (Is. 44:28;

45:1–4). We may question his use of an agent like Samson, and be embarrassed by the details, but God is sovereign, and he used Samson, in the 'Dark Ages' of the Judges' period, to fulfil a lone but vital role.

A.E.C.

SAMUEL (Heb. *šmū'ēl*, '(?)name of God'). I. A Simeonite leader (Nu. 34:20), in NEB; most EVV have *Shemuel. 2. Grandson of Issachar (1 Ch. 7:2), in NEB; most EVV have *Shemuel. 3. The prophet, contemporary with Saul and David, whose career is related in 1 Sa., and who has given his name to the two books of Samuel. Acts 3:24 views him as the first of the prophets, Acts 13:20 as the last of the judges.

I. Career

Samuel was born into an Ephraimite family of Ramah (though of Levitical stock, according to 1 Ch. 6:33f.). His parents were Elkanah and Hannah; the latter had previously been barren, and she dedicated Samuel before his birth as a *Nazirite. After his weaning, therefore, he was brought up in the Shiloh temple by Eli (1 Sa. 1). While still a boy, he experienced the prophetic call, and in due course 'was established as a prophet of the Lord' (1 Sa. 3).

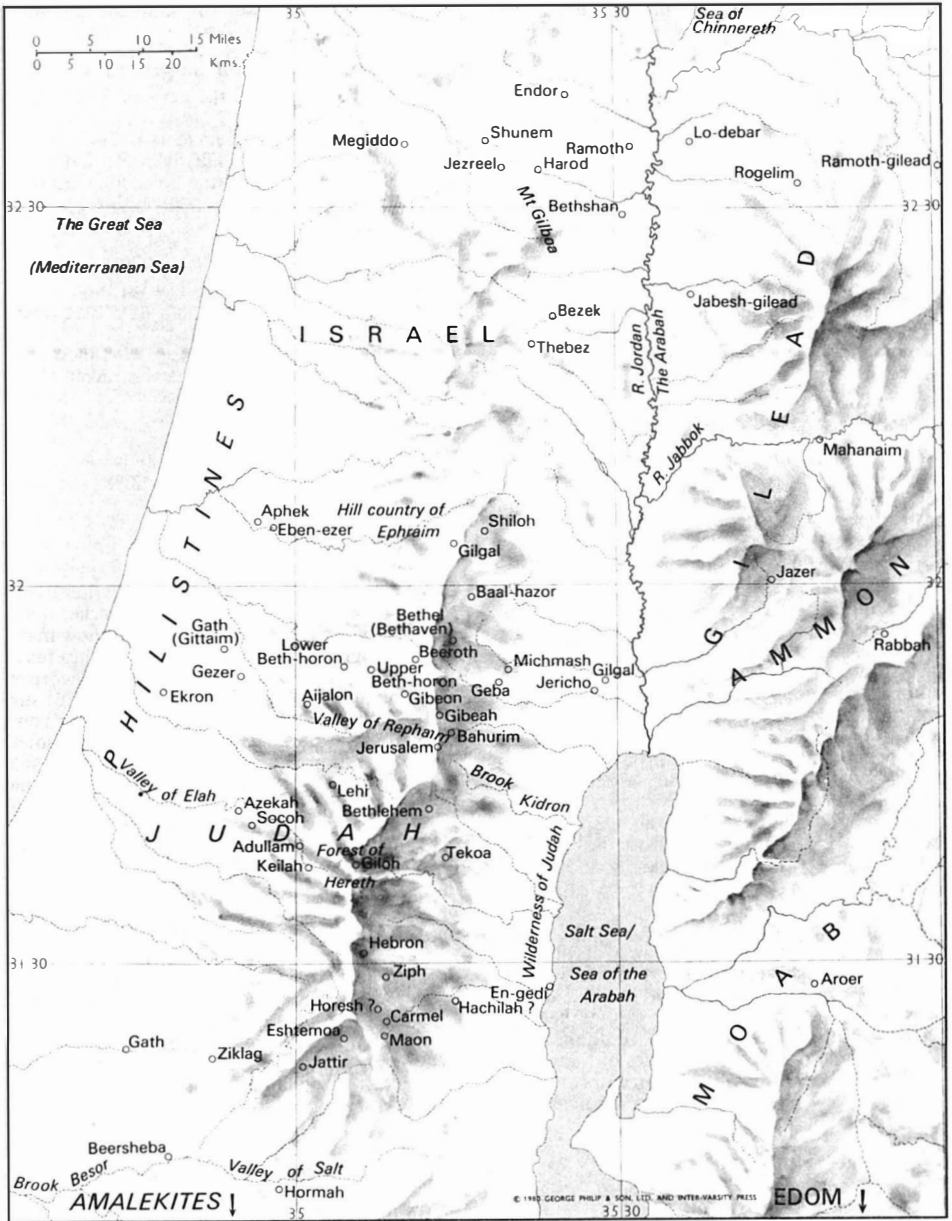

A major Philistine victory was accompanied by the capture of the ark of the covenant, the death of Eli and the transfer of the priesthood from *Shiloh (1 Sa. 4); Samuel's movements are not recorded. He subsequently mustered the Israelite troops at Mizpah and won a victory over the Philistines (*EBENEZER). He now fulfilled the role of judge in Israel, with a circuit in Bethel, Gilgal, Mizpah and Ramah (1 Sa. 7).

In his old age, his leadership was challenged by the tribal elders who clamoured for a king. Samuel at first resisted this pressure but received divine guidance to agree to it (1 Sa. 8). He then met *Saul and was told by God to anoint him; and in a complex of events Samuel presided over the institution of the Israelite monarchy, though not without issuing stern warnings to king and people alike (1 Sa. 9–12).

Before long, a breach occurred between Samuel and Saul, when the latter took it upon himself to offer sacrifice before battle (1 Sa. 13). This breach became absolute when Saul later broke a solemn oath in sparing the life of the Amalekite king Agag. Samuel himself killed Agag, and then retired to Ramah. He explicitly rejected Saul, and never had any further dealings with him (1 Sa. 15). His final act was to anoint David, privately, to be next king of Israel (1 Sa. 16). He died in Ramah and was buried there (1 Sa. 25:1). Even afterwards a desperate Saul tried to ascertain God's will through him (1 Sa. 28).

II. Critical evaluation

Recent critical assessments of Samuel tend to be negative. The minimal view would see him as a mere local seer, quite unknown to Saul, on the

Israel and Judah at the time of Samuel.

basis of I Sa. 9:6, 18. Few scholars, however, would deny that he not only superintended the institution of the Monarchy but also later broke with Saul and repudiated him. Saul's subsequent insecurity strongly supports the biblical picture of Samuel as a man of power and influence.

The chief arguments against historicity are (i) the 'legendary' character of some of the stories (e.g. the infancy narrative), (ii) the fact that Samuel is depicted in such a diversity of roles (prophet,

judge, war-leader, national leader and perhaps priest), and (iii) the problem of aligning these various roles with the supposed literary sources or unwritten traditions underlying I Sa. In the absence of extra-biblical data about Samuel, the first of these arguments admits of no objective criteria. The third problem, moreover, offers no secure basis for judgment in view of the fact that there is so little certainty about the sources utilized in the *books of Samuel. The second problem is

SAMUEL

therefore the main issue. Two points may be made about the roles Samuel is said to have filled. First, while it may be admitted that different literary strata may have emphasized or highlighted different roles, it is nevertheless true that the latter were not so disparate as might appear: the book of Judges shows that the offices of war-leader, national leader and judge (in the judicial sense) could be combined in ancient Israel; and there is evidence from inside and outside Israel that *prophecy at times embraced sacrificial roles, and that prophets at times appointed and repudiated kings. Secondly, Samuel lived in a period of crisis and transition, and in the absence of any other figurehead, the Israelite tribes may well have looked to him to fill an exceptional role. Basically, he combines the offices of judge and prophet; Deborah offers a minor analogy (*cf.* Jdg. 4:4).

D.F.P.

SAMUEL, BOOKS OF. The two books of Samuel were originally one; not until the 15th century were they ever divided in the Heb. Bible. The division into two books goes back to the LXX. The English title 'Samuel' is the same as the Heb.; the LXX linked the four books of Samuel and *Kings together as 1-4 'Reigns' (or 'Kingdoms'), while the Vulg. calls them 1-4 'Kings' (*cf.* the titles of these books in AV). In the Heb. Bible Samuel stands third in the 'Former Prophets', *i.e.* the four-volume history Joshua-Judges-Samuel-Kings. Many modern scholars consider that these four were from the beginning a single, connected history (styled 'the Deuteronomistic History'). It is at least true that Samuel provides the transition from the era of the judges to the period of the Monarchy, and that the divisions between the books seem to be arbitrary at some points.

The title 'Samuel' is not altogether appropriate; the prophet Samuel is only the first of the three major figures whose lives are recorded in these books; the other two are Saul and David. Samuel's death is recorded in 1 Sa. 25:1; he cannot then have been the author, in spite of the tradition in TB (Baba Bathra 14b). 'The Chronicles of Samuel the seer' (1 Ch. 29:29) may be a source document of the books of Samuel; the books of Samuel themselves cannot be meant.

I. Outline of contents

The books of Samuel span a period of roughly a century, c. 1050-950 BC. There are six sections:

- a. *Samuel's early years* (1 Sa. 1:1-7:14)
 - (i) Samuel and Eli (1:1-3:21)
 - (ii) War with the Philistines (4:1-7:14)
- b. *Samuel and Saul* (7:15-15:35)
 - (i) Saul becomes king (7:15-12:25)
 - (ii) War with the Philistines (13:1-14:52)
 - (iii) The defeat of Amalek (15:1-35)
- c. *Saul and David* (16:1-31:13)
 - (i) David reaches the royal court (16:1-17:58)
 - (ii) David and Jonathan (18:1-20:42)
 - (iii) David as a fugitive (21:1-26:25)
 - (iv) David in Philistine territory (27:1-30:31)

(v) Defeat and death of Saul and Jonathan (31:1-13)

d. *The early years of David's reign* (2 Sa. 1:1-8:18)

- (i) David's reaction to the news of Saul's death (1:1-27)
- (ii) David and Ish-bosheth (2:1-4:12)
- (iii) David defeats the Philistines (5:1-25)
- (iv) David, the ark and the house of God (6:1-7:29)
- (v) Further victories (8:1-18)

e. *King David and his court* (9:1-20:26)

- (i) David and Mephibosheth (9:1-13)
- (ii) Warfare with Ammon and its consequences (10:1-12:21)
- (iii) David and his eldest sons (13:1-18:33)
- (iv) David's return and Sheba's revolt (19:1-20:26)

f. *Appendix* (21:1-24:25)

- (i) Famine and warfare (21:1-22)
- (ii) Two psalms of David (22:1-23:7)
- (iii) His mighty men (23:8-39)
- (iv) Census and plague (24:1-25)

II. Sources and composition

There can be no doubt at all that the writer of the books of Samuel made use of some earlier documents, though it is impossible to know how many. No single individual lived right through the eras of Samuel, Saul and David; and statements incorporating the phrase 'to this day' (*e.g.* 1 Sa. 27:6) suggest a further lapse of time before the author's own date. Attempts have therefore been made to isolate the sources from which the author took his material; and a number of quite different schemes have resulted.

Some scholars (notably K. Budde and O. Eissfeldt) have argued that documentary strata underlying the *Pentateuch are also visible in Samuel. Few contemporary scholars would agree. The present trend is to consider Samuel an amalgam of individual narratives, brought together by stages (*see, e.g.* Weiser, Fohrer). The chief interest centres in the attempt to isolate the earlier units or documents. A. R. S. Kennedy long ago proposed (*CB*, 1904) that five basic documents had been utilized by the author of Samuel: a history of Samuel's early years, a history of the ark of the covenant, a history of the Monarchy favourable to it, a history of the Monarchy hostile to it and a court history of David. British scholarship has tended to follow this hypothesis (*e.g.* Anderson, Rowley); the strongest case can be made for the second and fifth of Kennedy's documents. There is wide agreement that a history of the ark underlies 1 Sa. 4:1-7:1, and many scholars have also agreed that 2 Sa. 9-20, with 1 Ki. 1f., constitute a distinct unit (usually known as 'The Succession Narrative'), though some recent studies have challenged this view (Delekat, Würthwein). The Succession Narrative is usually considered to have been composed by, or at least to derive from, an eyewitness. Absent from this section are 'doublets', a feature characteristic of the rest of Samuel; many scholars have stressed the significance of such 'duplicate narratives' in arguing for a variety of (conflicting) sources. This argument has been over-pressed (*see* D. F. Payne, 'Duplicate Accounts', in *NBCR*, pp. 284f.), but on the other hand it may be admitted that such doublets tend to suggest separate sources: historicity is,

or should be, a different issue from source criticism. Thus 1 Sa. 16:14-23 tells how Saul first met David as a musician; 1 Sa. 17:55-58 may well derive from a separate source, in which the challenge from Goliath provided the circumstances for David's first coming to the attention of the king. If so, the compiler of the book has drawn on both earlier sources, and made his own clear decision as to which was the earlier event; the 'duplication' denies the historicity of neither story.

Both the number and the nature of the sources of Samuel remain unclear and disputed, then. The author himself undoubtedly made his own contribution, as references to his own day (1 Sa. 27:6) and explanatory remarks (1 Sa. 9:9) make clear. By general consent, however, his activity was very discreet; apart from such minor touches, it is only in 1 Sa. 7, 12 and 2 Sa. 7 that his hand is generally thought to be clearly visible. It is noteworthy that the clear editorial structures and formulae of *Judges and *Kings are absent from Samuel; this fact, among others, argues for a distinct origin for Samuel and militates against the hypothesis of a unified Deuteronomistic history, Joshua-Kings. It may be, nevertheless, that a final redaction, of limited extent, took place when Samuel and Kings were brought together, in the exilic period or soon afterwards.

III. Purpose

In covering the era of the transition from a loose tribal constitution under the judges to a monarchy, the books of Samuel necessarily offer a view on the value of the monarchy; but different passages give rather differing impressions. 1 Sa. 8 offers a biting critique of kingship, and in 1 Sa. 12:19 the people acknowledge that they had done evil in seeking a king; but in 1 Sa. 10:24-27; 11:14f. a positive view is taken. Recent studies have found a similar tension within the Succession Narrative, some passages being favourable to David and Solomon, while others are distinctly critical of them. These differing viewpoints have often been used as a criterion, as regards sources and historicity; but as Bright and others have argued, the tension is certainly an original one, on any credible historical reconstruction, and the value of the criteria is dubious. In any case, since he incorporated material tending in both directions, it is unlikely that the final author was either pro-monarchic or anti-monarchic. Rather his attitude was typically prophetic, seeing the monarchy as a constitution which had been ordained by God, but taking a detached and objective view of each individual monarch. J. A. Soggin is right to emphasize that the primary interests of the author are election and rejection.

It is important not to overlook the biographical motive. There was a genuine interest in the careers and achievements of leading Israelites. It was the biblical writers' conviction that God had involved himself in history, and that he governed its whole course, which gave the historical books of the OT their theological quality and content. Theologically-coloured history is none the less history.

IV. Text

There are numerous problems in the Heb. text (*MT*) of Samuel, and commentaries and translations often turn to the LXX (especially LXX^b and LXX^c) for help. The LXX MSS not only elucidate many verses where the Heb. is obscure or problem-

atic but also offer variant readings where the Heb. makes good sense. The most notable variation is in 1 Sa. 17f., where LXX^b is much shorter than *MT* (17:12-31 and 17:55-18:5 are entirely absent). (See D. F. Payne, *NBCR*, p. 318.) Two other sources of evidence are parallel passages in Chronicles, and fragmentary copies of Samuel found at Qumran. The Qumranic material tends to support LXX where it differs from *MT*, and recent *EVV*, especially *NEB*, have made considerable use of its evidence. It is widely held that the evidence suggests not so much that the Heb. text of Samuel was poorly preserved as that there existed different recensions of the book.

SANBALLAT. The name is Babylonian, *Simballit*, i.e. 'Sin (the moon-god) has given life'. In Ne. 2:10, 19; 13:28 he is called the Horonite, probably denoting that he came from Beth-horon, about 30 km NW of Jerusalem (cf. Jos. 10:10, etc.). He was one of the chief opponents of Nehemiah. The Elephantine Papyri show that in 407 bc he was governor of Samaria. If when Nehemiah came in 445 bc he was either governor or hoping to be governor, he doubtless wanted to have control of Judaea also. The Elephantine Papyri speak of his two sons, Delaiah and Shelemiah, and these names may show that Sanballat was a worshipper of Yahweh. This means that he was descended either from an Israelite family which had not gone into captivity in 721 bc or from one of the peoples whom the Assyrian kings had imported into Palestine. In either case his religion was probably syncretistic (2 Ki. 17:33), though he put Yahweh first, and so won sympathy even from the high priest's family, into which his daughter married (Ne. 13:28). Josephus (*Ant.* 11. 302) makes Sanballat responsible for the building of the Samaritan temple, which he dates under Darius III (336-331 bc). If the story is true, Josephus has confused the date; unless he is referring to a second governor with the same name. (There was at least one further Sanballat, if not two, among the governors of Samaria under the Persian empire.)

SANCTIFICATION, SANCTIFY

a. Meaning

Sanctification is one of several possible English translations of *qdš*, *hagios* and their cognates. See *HOLINESS for usage. Context alone determines whether the translation should be holy, holiness, holy one, saints, consecrate, consecration, sanctify or sanctification. Even in individual passages translators do not always agree. Its broad meaning

SANCTIFICATION, SANCTIFY

is the process by which an entity is brought into relationship with or attains the likeness of the holy.

b. Old Testament

In the OT, the primary use of the *qđs* word group, in the sense of consecration or sanctification, has to do with the way in which the holiness necessary for earthly people or things to relate to the holy God could be received. The primary means of sanctification in the OT was through the cultic system.

The whole cultic system centred on the way the earthly realm relates to the divine. Crucial to this relationship was the consecration of the pure but profane person or thing to God through the means provided by God. Recent studies have shown that the priestly theology of holiness structured all Israelite society in terms of earthly relations to the divine. This is seen in the holiness word group: holy – profane and clean – unclean (Lv. 10:10). Both pairs have gradations between them, with varying levels of sanctity and cleanness. 'The sense of the distinction, however, is less a gradation of the holiness which derives from God than a gradation of human dealings with the Holy One' (Seebass, 227).

Consecration does not rest upon intrinsic holiness: 'it requires a special act of God to make a thing or person holy' (Jenson, 48). The sacrificial system was God's gracious means to enable his people to move from uncleanness or defilement to cleanness as the basis upon which to approach the holy God. Holiness and purity are not synonymous, however; purity is a presupposition for approaching the holy 'because antipathy between holiness and impurity was absolute' (Jenson, 53). Hence, in the priestly tradition, there is a great deal of emphasis on purity and separation. Sanctification occurs as a consequence of movement towards the Holy One, not as the basis for holiness.

Earlier studies sought to contrast priestly ritualistic notions of holiness and sanctification with the ethical standards of the prophets. But that dichotomy does justice to neither. The highest ethical standards, centred in wholehearted love of God and neighbour (Dt. 6:4; Lv. 19:18b), are embedded in the priestly cultus: 'Consecrate yourselves therefore, and be holy; for I am the Lord your God. Keep my statutes, and do them; I am the Lord who sanctify you' (Lv. 20:7). The prophets demanded worship which issued in concrete expression of covenantal standards in societal and personal ethics. They saw clearly that the experience of God's holiness would necessarily result in the transformation of the person (Is. 6:5–7) and society (Am. 4:4f.; 5:21–24; Mi. 6:6–8). In short, 'for Israel to be and remain the people of God, it must be holy, not merely in the ritual sense but also in the ethical sense' (Muller, 322).

c. New Testament

Fundamental to all NT theology is the shift in eschatological perspective brought about by the coming of Jesus Messiah, and the coming of the Holy Spirit. God has come amongst his people to reconcile them to himself and the *future* has already been set in motion, although the *end* has only just begun. Sanctification cannot be understood outside this framework.

The terminology of sanctification is rare in the gospels. In John, sanctification concerns relation-

ship with the triune God on the one hand and mission on the other. Jesus is the one sanctified by the Father and sent into the world (10:36). If the disciples are to continue that mission, they too must be sanctified, *i.e.* brought into that intimate fellowship enjoyed by Father and Son (20:20–23). Jesus prays that the Father would sanctify the disciples in the truth (17:17). In order that they may be filled with God's being and power, Jesus sanctifies himself (17:19) through his death, then sends the disciples into the world just as the Father had sent him (20:21–22), imparting to them the Holy Spirit.

The presence of the Holy Spirit is the key to Paul's view of sanctification. Paul holds that sanctification is based on the historical reality of the atoning death of Christ which is brought to experiential reality by the Spirit (Gal. 3:2–5; 1 Cor. 6:11; Eph. 1:13–14; Tit. 3:4–7). It partakes fully of the eschatological tension of salvation: 'already'/'not yet'.

Paul's main emphasis is ethical rather than cultic. He echoes Jesus' own summation of God's ethical requirements for the new people as given in the great commandments (Gal. 5:14; Rom. 13:8–10) and models them before his converts (1 Thes. 2:10; 3:12). He urges them to continue to work out these principles of wholehearted devotion to God and love of neighbour in the context of everyday existence (1 Thes. 4:9–10). In 1 Thes. 3:10–13 and 5:23, Paul prays that his readers will be established in holiness and that God will sanctify them wholly. They are ever to be what they are now, *i.e.* a people called to be holy.

But these are also wish-prayers which means that the 'not yet' is equally important here. Paul has the Parousia, which perhaps he expected before his death (1 Thes. 4:17; 5:6), firmly in his view. He prays that these Christians will be found blameless (note, not faultless) in holiness on that soon-to-arrive day, with lives that reflect their anticipation of it.

The ethical thrust of sanctification continues in Rom. 6, where Paul uses the term *hagiasmos* twice. In 6:19, he urges his readers to yield their members to righteousness for sanctification, clearly focusing on the ethical living expected of those who have been freed from the dominion of sin. Since in and with Christ they have died to the lordship of sin (6:6), they are now to live lives which reflect their new relationship to God as sharers in Christ's risen life (6:13–14). In no sense, however, is Paul stating that holiness is achieved by personal striving (see Wynkoop, 326).

Paul uses the terms 'righteousness' and 'sanctification' here in a way which shows their inseparability. Paul could not conceive of a person brought into a right relationship with God whose life would not issue in sanctification (6:22), *i.e.* in a life of holiness. Debate about whether Paul has in mind a state or a process of sanctification is beside the point. Paul intends both.

That Paul can speak of both aspects of sanctification is confirmed in 2 Cor. 7:1. Here, in language reminiscent of the OT cultic context of purity and holiness, he urges his alienated readers to 'cleanse [y]ourselves from every defilement of body and spirit, and make holiness perfect.' His Christian readers are to purge themselves in every part, inwardly and outwardly (see Ps. 24:2–3, 'clean hands and pure heart'), and live out the implications of their grace-given relationship to the holy God.

Were it not for the indwelling presence of the

Spirit, all of this might seem to be mere wishful thinking. But Paul considers the sanctified life to be possible because of the indwelling presence of God's empowering Spirit (2 Thes. 2:13). Indeed, he says, anyone who rejects this way of living, rejects God who gives his Holy Spirit to you (1 Thes. 4:8). It is the presence of the Spirit which enables the believer to live a life which is not *according* to the flesh (Gal. 5:16, 24; Rom. 8:5) although life is still lived *in* the flesh (Gal. 2:20; Rom. 8:11, 23). To be sure, the Spirit has not brought the fulness of the end but only its beginning, so the Spirit's presence does not confer final perfection in the present age but rather leads to growing maturity in Christ, whereby Christians are ripened for their final transformation. 'We are both already and not yet' (Fee, p. 826).

The writer of the Epistle to the Hebrews is in conscious dialogue with Judaism. For this writer, sanctification is the work of Christ, the eternal high priest (5:8-10; 7:23-25) and the sanctifier (2:11; 13:12) who, as the enthroned Lord, now exercises all the prerogatives of God (ch. 1). The means of sanctification is through the death of Christ, who through the shedding of his blood, established the new and better covenant relationship between God and humans (10:10, 14). This new sacrifice is efficacious because, in contrast to sacrifices under the old covenant which could purify the flesh and restore a defiled Israelite to the community (Nu. 19:9), the blood of Christ is able to deal with the inner condition of sinful people (9:13f.; 10:22).

The heart of the matter in Hebrews, therefore, is the new covenant relationship promised in the OT (Je. 31:31-34; Ezk. 36:25-27). The verb *hagiadzein* is used 'with reference to the establishment of New Covenant relations between God and man' (D. F. Peterson, *Hebrews and Perfection*, *SNTSMS* 47, 1982, p. 72). The notion of the perfecting of believers (7:11, 19; 10:14), relates primarily to their covenantal acceptance by God (Peterson, p. 136).

Hebrews is the most explicit of the epistles on the present reality and enjoyment of the sanctified life. A crucial verse in this regard is Heb. 10:14 which emphasizes the single offering for sanctification made by Christ on the one hand and the experiential realization of the new relationship between God and humanity on the other. The new covenant relationship has already been established in Christ's death and exaltation; Christians are consciously to embrace in their ongoing experience what has already been accomplished for them. 'The terminology of perfection is used by our writer here to stress the realized aspect of Christian salvation' (Peterson, p. 153).

But Hebrews also applies the 'already/'not yet' tension to sanctification. For while it is the present experience of believers, it is neither static nor final (12:10, 14, 22-24). This relationship is the earnest of that ultimate goal of sanctification which 'is to share Christ's glory (2:10), to enter God's rest (4:11ff.), to see the Lord (12:14), and to inhabit the heavenly Jerusalem (12:22; 13:14)' (Peterson, p. 129).

In some ways, 1 Pet. provides a summary of the NT view of sanctification: it has to do with God's choice (1:2; 2:9), the work of the Spirit in applying the benefits of Christ's sacrificial death and resurrection (1:2-3), and lives lived in obedience to God's call to holiness (1:14-15; 2:5) and love (1:22; 4:8). Sanctification, in sum, is essentially a re-

lational reality, completed in Christ's death on the cross, experienced through the indwelling Holy Spirit and brought to its final goal when we see God (Heb. 12:14; 1 Jn. 3:2-3).

K.B.

SANCTUARY. The Heb. words *miqdās*, and its correlative *qōdeš*, define a place set apart for the worship of God or gods. Whereas the Bible uses these words almost entirely of the place where Yahweh was worshipped, a study of cognate languages such as Canaanite shows that the same terms were used for the worship of the earlier inhabitants of Palestine. Excavation has revealed a wide variety of sanctuaries extending back to the 4th millennium BC. The most complete range of these at present known was excavated at Megiddo. A considerable variety of cult images and tools is now available for study.

Israel's earliest sanctuary was the movable tent known as the *tabernacle where the ark containing the tables of the covenant was housed (Ex. 25:8, *etc.*). Detailed descriptions of the various parts of this structure occur in Ex. 25-31 and 36-40, and the elaborate ritual associated with it is detailed in Leviticus.

With the settlement of Israel in the land, David planned, and Solomon completed, a permanent place of worship (1 Ch. 22:19; 28:10, *etc.*).

Apostasy during the days of the kings brought foreign cult-practices into the Temple. Ezekiel and Zephaniah reproached God's people for defiling his sanctuary (Ezk. 5:11; 23:39; 28:18, *etc.*; Zp. 3:4).

Israel's early sanctuaries were set up in the places where God appeared to his people or 'caused his name to dwell'. Finally Jerusalem became the official centre of worship. (*HIGH PLACE; *TEMPLE.)

In NT the 'sanctuary' (Gk. *naos*) is the holy house, the dwelling-place of God, whether literal (e.g. Mk. 14:58; 15:38; Jn. 2:19) or figurative (e.g. 1 Cor. 3:16f.; 6:19), as distinct from 'temple' (*hieron*), the whole sacred enclosure (e.g. Mk. 11:11, 15; Lk. 2:27, 46; Jn. 2:14).

J.A.T.

SAND (Heb. *hōl*; Gk. *ammos*). The Heb. word derives from the verb *hūl* ('to whirl, dance'), doubtless a reference to the ease with which the light particles of silex, mica, feldspar, *etc.*, are lifted and whirled by the wind. Sand is found extensively along the Mediterranean shores of S Palestine and Egypt, and in desert regions, thus providing a striking symbol of countless multitude (e.g. Gn. 22:17; Is. 10:22; Rev. 20:8). It is used also to convey an idea of weight (Jb. 6:3), longevity (Jb. 29:18) and instability (Mt. 7:26). A somewhat obscure allusion (Dt. 33:19) speaks of 'the hidden treasures of the sand'; perhaps a source of prosperity would be found in the seas (fishing, maritime commerce) and

on the shores (shellfish; dye, from shellfish; glass, from sand; cf. Jos., *BJ* 2. 190; Pliny, *NH* 5. 17; 36. 65). The promise probably applies only to Zebulun, the tribe associated with the sea in the last words of Jacob (Gn. 49:13–15).

J.D.D.

SANHEDRIN, the transcription used in the Talmud for Gk. *synedrion* (from which Heb. *sanhedrin* is a loan-word). Both before and at the time of Christ, it was the name of the highest tribunal of the Jews which met in Jerusalem and also for various lesser tribunals. In evv the term is of ten translated 'council'. There are parallels in classical writings to similar courts in Greece and Rome. Josephus used the word for the council that governed the five districts into which the Roman Gabinius, proconsul of Syria 57–55 bc, divided Judaea (*Ant.* 14. 90; *BJ* 1.170). Josephus first uses it of the Jews when referring to the summoning of the young Herod before it for alleged misdemeanours (*Ant.* 14. 163–184). In the NT the term refers either to the supreme Jewish court (Mt. 26:59; Mk. 14:55; Lk. 22:66; Jn. 11:47; Acts 4:15; 5:21ff.; 6:12ff.; 22:30; 23:1ff.; 24:20) or simply to any court of justice (Mt.: 5:22). In a few cases other words are substituted for *synedrion*, e.g. *presbyterion*, 'body of elders' (Lk. 22:66; Acts 22:5), and *gerousia*, 'senate' (Acts 5:21).

I. History

The history of the Sanhedrin is not clear at all points. Traditionally it originated with the seventy elders who assisted Moses (Nu. 11:16–24). Ezra is supposed to have reorganized this body after the Exile. The Persians gave authority to the Jews in local affairs (Ezr. 7:25–26; 10:14), and it is possible that the elders of Ezr. 5:5, 9; 6:7, 14; 10:8, and the rulers of Ne. 2:16; 4:14, 19; 5:7; 7:5, made up a body which resembled the later Sanhedrin. Later, the Greeks permitted a body known as the *gerousia* ('senate') which was made up of elders and represented the nation (Jos., *Ant.* 12. 142; 1 Macc. 12:3, 6; 14:20). In the days of the Seleucids this *gerousia* had dealings with such rulers as Antiochus the Great in 208 bc and with Antiochus V (Jos., *Ant.* 12. 128), and was then apparently composed of elders drawn from the aristocracy (1 Macc. 12:6; 2 Macc. 1:10; 4:44; 11:27). In the days of the Maccabean revolt it was this council that united with Jonathan, the high priest and leader of the people, to make an alliance with Sparta (1 Macc. 12:5ff.), and it was they who advised him about building fortresses in Judaea (1 Macc. 12:35; cf. 13:36; 14:20, 28, 47). It would appear that the high priest presided over this body.

Under the Romans, except for a short period under Gabinius, this body had wide powers. The term used for the district councils was subsequently adopted for the more powerful *gerousia* at Jerusalem, and by the close of the 1st century bc this council was known as the *synedrion*, though other terms such as *gerousia* and *boulē* ('council') were also used at times. It was Julius Caesar who reversed the plan of Gabinius and extended the power of the Sanhedrin once again over all Judaea, although during the reign of *Herod (37–4 bc) its powers were severely curtailed. Under the procurators (AD 6–66) the powers of the Sanhedrin were extensive, the internal government of the country being in its hands (Jos., *Ant.* 20. 200), and it was recognized even among the *diaspora* (Acts 9:2;

22:5; 26:12) in some ways. From the days of Archelaus, son of *Herod the Great, its direct powers were, however, limited to Judaea, since it had no power over Jesus while he was in Galilee. In Judaea there were, of course, the local authorities who tried cases locally but reported certain cases to the central authority. The councils (*synedria*) of Mt. 5:22; 10:17; Mk. 13:9, and the *boulai* of Jos., *Ant.* 4. 214, etc. were local courts of at least seven elders, and in large towns up to twenty-three elders.

After AD 70 the Sanhedrin was abolished and replaced by the Beth Din (Court of Judgment) which is said to have met at Jabneh (AD 68–80), Usah (80–116), Shafran (140–163), Sepphoris (163–193) and Tiberias (193–220). Though regarded in the Talmud as continuous with the Sanhedrin, it was essentially different, being composed of scribes whose decisions had only moral and religious authority.

II. Constitution and composition

The constitution of the Sanhedrin was modified during the years. Originally composed basically of the predominantly Sadducean priestly aristocracy, its membership changed from the days of Queen Alexandra (76–67 bc) when *Pharisees were included, as well as *scribes. The method of appointment is not clear, but the aristocratic origin of the body suggests direct appointment of members of ancient families, to which were added secular rulers. Under Herod, who favoured the Pharisees and desired to restrict the *Sadducees and the influence of the old nobility, the Sadducean element became less prominent, and the Pharisaic element, which had been growing in strength since the days of Queen Alexandra, became more influential. In NT times the Great Sanhedrin in Jerusalem comprised the high priests (i.e. the acting high priest and those who had been high priest), members of the privileged families from which the high priests were taken, the elders (tribal and family heads of the people and the priesthood), and the scribes, i.e. the legal experts. The whole comprised both Sadducees and Pharisees (Mt. 26:3, 57, 59; Mk. 14:53; 15:1; Lk. 22:66; Acts 4:1, 5ff.; 5:17, 21, 34; 22:30; 23:6). The members were councillors (*bouleutēs*, Mk. 15:43; Lk. 23:50), as, for example, Joseph of Arimathea.

According to Josephus and the NT, the high priest at the time was president (Jos., *Ant.* 4. 224; 20. 224ff.; Mt. 26:57; Acts 5:17ff.; 7:1; 9:1ff.; 22:5; 24:1). Thus, Caiaphas was president at the trial of Jesus, and Ananias at the trial of Paul (Acts 23:2). It would seem that in earlier times the high priest had supreme authority, but this was curbed somewhat later. The appointment was no longer hereditary, but political, and ex-high priests with their close associates (such as the captain of the Temple) were the 'rulers' (Jn. 7:26; Acts 4:5–8, etc.).

III. Extent of jurisdiction

The jurisdiction was wide at the time of Christ. It exercised not only civil jurisdiction according to Jewish law but also criminal jurisdiction in some degree. It had administrative authority and could order arrests by its own officers of justice (Mt. 26:47; Mk. 14:43; Acts 4:1ff.; 5:17ff.; 9:2). It was empowered to judge cases which did not involve capital punishment (Acts 4–5). Capital cases re-

quired the confirmation of the Roman procurator (Jn. 18:31), though the procurator's judgment was normally in accordance with the demands of the Sanhedrin, which in Jewish law had the power of life and death (Jos., *Ant.* 14. 168; Mt. 26:66). In the special case where a Gentile passed the barrier which divided the inner court of the Temple from that of the Gentiles the Sanhedrin was granted the power of death by Roman administrators (Acts 21:28ff.); and this concession may have extended to other offences against the Temple by deed or, as with Stephen (Acts 6:13f.), by word. The only case of capital sentence in connection with the Sanhedrin in the NT is that of our Lord, but the execution was carried out by the judgment of the Roman governor. The case of Stephen has some features of an illegal mob act.

A study of the NT will give a cross-section of the kinds of matters that came before the Sanhedrin. Thus, Jesus was charged with blasphemy (Mt. 26:57ff.; Jn. 19:7), Peter and John were charged with teaching the people false doctrine (Acts 4), Paul with transgressing the Mosaic law (Acts 22-24). These, of course, were religious matters. But at times the collection of revenue was the responsibility of the Sanhedrin, as in the time of Florus (Jos., *BJ* 2. 406). There was, however, always a theoretical check on the powers of the Sanhedrin, for the Romans reserved the right to interfere in any area whatever, if necessary independently of the Jewish court. Paul's arrest in Acts 23 is a case in point. It is probably best to regard the Sanhedrin as having two main areas of responsibility, political (administrative and judicial) and religious. It is not always clear how these two were carried out, and some writers have even suggested two different bodies, each known as the Sanhedrin. This is probably not necessary, but is suggested because of our lack of clear knowledge of procedures.

IV. Procedure

There were correct times and places for meeting, according to the tradition preserved in the Mishnaic tractate *Sanhedrin*. Local courts met on the 2nd and 5th days of the week, and the Sanhedrin in Jerusalem at definite (though unknown to us) times. They did not meet on festival days and on sabbaths.

There were proper procedures. The Sanhedrin sat in a semicircle and had two clerks of court, one to record votes of acquittal and the other votes of condemnation. Disciples attended the courts and sat in front. Prisoners attended dressed in humble fashion. In capital cases the arguments for acquittal were presented, then those for conviction. If one spoke for acquittal he could not reverse his opinion, but if he spoke for condemnation he could later change his vote. Students could speak in favour of acquittal but not for condemnation. Acquittal might be declared on the day of the trial, but condemnation must wait till the day following. In voting, members stood, beginning with the youngest. For acquittal a simple majority sufficed, for condemnation a two-thirds majority was required. If 12 of the 23 judges necessary for a quorum voted for acquittal, and 11 for conviction, the prisoner was discharged. If 12 voted for conviction, and 11 against, the number of judges had to be increased by 2, and this was repeated up to a total of 71, or until an acquittal was achieved. The benefit of the doubt was allowed to persons where the case was as doubtful as this. Indeed, always, the

benefit lay with the accused (Mishnah, *Sanhedrin* 5. 5).

In this regard, the legality of the trial of Jesus has been discussed by many writers, and it is fairly clear that there are elements about it which point in the direction of a miscarriage of justice.

J.A.T.

SAPPHIRA (Gk. *sappheira*, transliteration of Aram. *šappirā*, fem. sing., 'beautiful'). In Acts 5:1ff. wife of *Ananias, a member of the primitive Jerusalem church. The name, in Greek and Aramaic, was found on an ossuary in Jerusalem in 1923, but J. Klausner's theory (*From Jesus to Paul*, 1944, pp. 289f.) that the Sapphira of Acts is intended requires confirmation. F.F.B.

SARAH, SARAI (Heb. *sārā*, 'princess'). The principal wife of Abram, and also his half-sister on his father Terah's side (Gn. 20:12). She went with him from Ur of the Chaldees, through Harran, to the land of Canaan. Famine caused them to turn aside to Egypt, and, as Abram feared that her outstanding beauty might endanger his life, Sarai posed as his sister. Pharaoh was attracted by her and took her into his harem. Then he suspected the truth, and husband and wife were sent away (Gn. 12).

She posed as Abraham's sister on a second occasion, at the court of Abimelech, king of Gerar, in accordance with her husband's instructions: 'This is the kindness you must do me; at every place to which we come, say of me, He is my brother' (Gn. 20:13)—words which suggest a settled policy. This incident further increased Abraham's wealth, for gifts were given him as compensation to an injured husband (Gn. 20:14).

Her barrenness was a continual reproach to Sarai, and she gave her handmaiden, the Egyptian *Hagar, to her husband as his concubine. Hagar's pregnancy aroused her jealousy, and she ill-treated her to such an extent that Hagar ran away for a time. On her return Ishmael was born (Gn. 16).

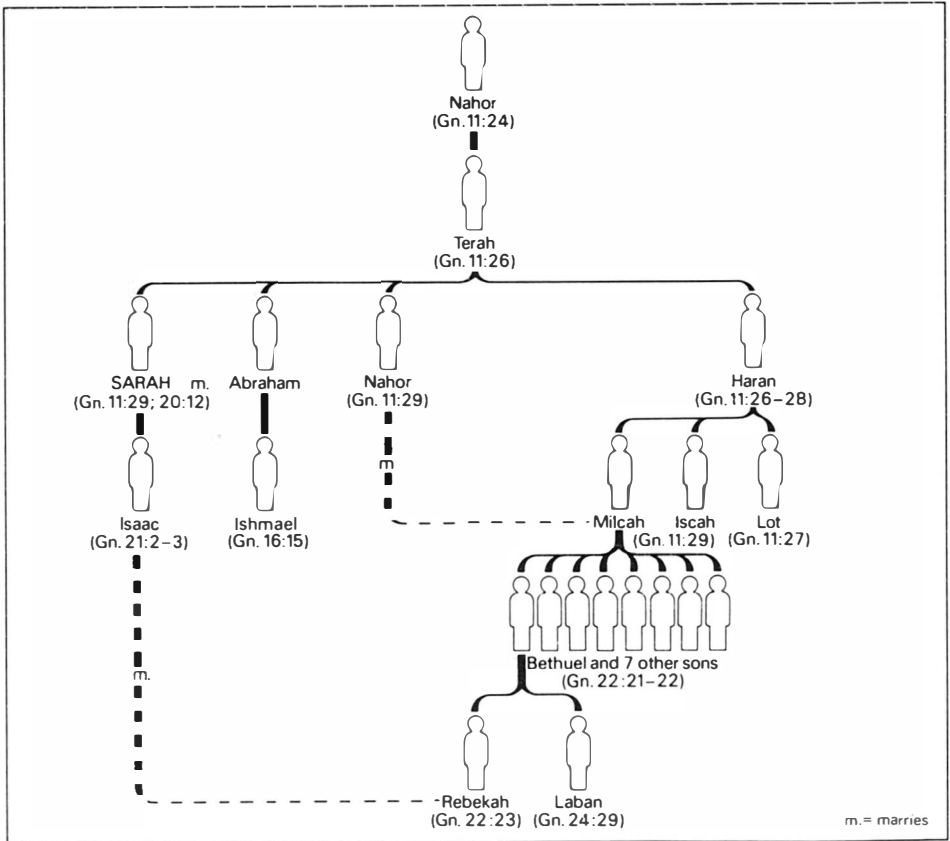

At the age of 90, Sarai's name was changed to Sarah, and her husband's from Abram to Abraham. Yahweh blessed her and said she would bear a son, and become the 'mother of nations' (Gn. 17).

When Abraham was granted a theophany, Sarah was asked to make cakes for the divine visitors. She overheard the prophecy about her son, and laughed; then, afraid, she denied her derision in face of the words, 'Is anything too hard for the Lord?' (Gn. 18:14). On the birth of Isaac, Sarah's reproach was removed. She was so incensed by Ishmael's scorn at the feast to celebrate Isaac's weaning that she asked for Hagar and her son to be cast out (Gn. 21).

Aged 127, she died in *Kiriath-arba and was buried in the cave of the field of Machpelah (Gn. 23:1ff.) (*HEBRON).

Sarah is named in Is. 51:2 as an example of trust in Yahweh. In the NT Paul mentions both Abra-

SARAH, SARAI

The family of Sarah.

ham and Sarah among those whose faith was counted for righteousness (Rom. 4:19), and he writes of Sarah as the mother of the children of promise (Rom. 9:9). The writer of the Epistle to the Hebrews includes Sarah in the list of the faithful (11:11). She is named also as an example of a wife's proper regard for her husband (1 Pet. 3:6).

M. B.

SARDIS. A city in the Roman province of Asia, in the W of what is now Asiatic Turkey. It was the capital of the ancient kingdom of Lydia, the greatest of the foreign powers encountered by the Greeks during their early colonization of Asia Minor. Its early prosperity, especially under Croesus, became a byword for wealth; its riches are said to have derived in part from the gold won from the Pactolus, a stream which flowed through the city. The original city was an almost impregnable fortress-citadel, towering above the broad valley of the Hermus, and nearly surrounded by precipitous cliffs of treacherously loose rock. Its position as the centre of Lydian supremacy under Croesus was ended abruptly when the Persian king Cyrus besieged the city and took the citadel (546 BC), apparently by scaling the cliffs and entering by a weakly defended point under cover of darkness. The same tactics again led to the fall of the city in 214 BC, when it was captured by Antiochus the

Great. Though it lay on an important trade route down the Hermus valley, it never regained under Roman rule the spectacular prominence it had had in earlier centuries. In AD 26 its claim for the honour of building an imperial temple was rejected in favour of its rival Smyrna. There is now only a small village (Sart) near the site of the ancient city.

The letter to 'the angel of the church in Sardis' (Rev. 3:1-6) suggests that the early Christian community there was imbued with the same spirit as the city, resting on its past reputation and without any present achievement, and failing, as the city had twice failed, to learn from its past and be vigilant. The symbol of 'white garments' was rich in meaning in a city noted for its luxury clothing trade: the faithful few who are vigilant shall be arrayed to share in the triumphal coming of their Lord.

Important current excavations have brought much to light, including a superb late synagogue. Sardis had evidently been for centuries a principal centre of the Jewish Diaspora, and was probably the Sepharad of Ob. 20.

Sardis, one of the 'seven churches of Asia' (Rev. 1-3).

SARGON. Sargon (Heb. *sargōn*; LXX *Arna*; Assy. *sargen*, [(the god) has established the king(ship)]) ruled Assyria 722-705 BC. His reign is known in much detail from inscriptions at his palace at Khorsabad built in 717-707 BC, and from historical texts and letters found at Nineveh and Nimrud. Although he is named only once in the OT (Is. 20:1), his campaigns in Syro-Palestine are of importance in understanding the historical background of the prophecies of Isaiah.

Sargon claimed the capture of Samaria, which had been besieged by his predecessor Shalmaneser V for 3 years (2 Ki. 17:5-6) until his death on 20 December 722 BC or 18 January 721 BC. It is probable that Sargon completed this operation and hurried back to Assyria to claim the throne. Although he bore the same royal name as the heroic Sargon I of Agade (c. 2350 BC; *ACCAD; *NIMROD), there is evidence that he was the legal successor to the throne and not a usurper.

During the first months of his reign he faced a major domestic crisis which was settled only by the grant of privileges to the citizens of Assur. In the spring of 720 BC he moved S against the Chaldean Marduk-apla-iddina II (*MERODACH-BALADAN), who had seized the Babylonian throne. An indecisive battle at Der arrested the advance of the supporting Elamites and Arabian tribes, but disturbances in the W rendered it expedient for Sargon to leave Marduk-apla-iddina as king in Babylon (721-710 BC).

In the W, Yaubi'di of Hamath led Damascus, Arpad, Simirra, Samaria, and possibly Hatarikka, in an anti-Assyrian coalition. Late in 720 BC Sargon marched to defeat these allies in a battle near Qarqar, N Syria, and, reducing the participating cities once more to vassalage, he moved to destroy Raphia and thus cut off the rebel Hanun of Gaza from an Egyptian force, under its commander, which was defeated. This interpretation follows the identification of *So or Sib'e (2 Ki. 17:4) as a Hebrew rendering of the term for leader (*re'e*) and not as the proper name of an unidentified Egyptian king (*JNES* 19, 1960, pp. 49-53) or of a

king of Sais (*s'w* = So; *BASOR* 171, 1963, pp. 64-67).

During these operations Isaiah warned Judah of the inadvisability of participating, or of trusting, in Egyptian help, illustrating his message by the fate of Carchemish, Hamath, Arpad, Samaria and Damascus (Is. 10:9). On his return from the Egyptian border Sargon deported a large part of the population of Samaria, which he began to rebuild as the capital of a new Assyrian province of Samaria. The process of repopulating the city with foreigners took several years and appears to have continued in the reign of Esarhaddon (Ezr. 4:2).

In 716 BC Sargon sent his army commander (*turtan*; the *'tartan') to war against the Arabs in Sinai. This led to the reception of tribute from the pharaoh Shilkanni (Osorkon IV) of Egypt and from Samsi, queen of the Arabs. Despite these Assyrian successes, the people of Ashdod displaced their Assyrian-nominated ruler, Ahimetus, by a usurper Iadna (or Iamani) who initiated yet another Syro-Palestinian league against Assyria, doubtless relying on Egyptian help. In 712 BC the same *turtan* was sent to conquer Ashdod (Is. 20:1), which was reduced to the status of an Assyrian province. Since Azaqa ('Azeqah or Tell es-Zakariye) on the Judaean border near Lachish surrendered in this campaign, it will be seen how narrowly independent Judah escaped a further invasion. Iamani fled to Nubia for refuge, only to be extradited to Nineveh by the ruler Shabaka.

On other fronts Sargon fought many battles, defeating the Mannaeans and Rusas of Urartu in 719-714 BC, and incorporating the defeated Carchemish as a provincial centre. In 710 and 707 BC, following raids into Media to neutralize the hill tribes, Sargon once more advanced against Merodach-baladan, who fled to Elam. Sargon's latter years were spent in suppressing rebellions in Kummukh and Tabal (where he was killed in action). He was succeeded by his son Sennacherib on 12 Ab, 705 BC. That he was 'not buried in his house' was later attributed to his sin in adopting a pro-Babylonian policy following his 'taking the hands of the god Bel (Marduk)' as king there in 709 BC.

SARID. A town on the S boundary of Zebulun (Jos. 19:10, 12). Some ancient MSS of LXX read *Sedoud*, and this has given rise to the common identification with Tell Shadud, 8 km SE of Nazareth (*LOB*, p. 106). The weight of textual evidence, however, favours the *MT* Sarid of unknown location. W.O.

SARSECHIM. The name of a Babylonian official present in Jerusalem after the capture of the city in 587 BC (Je. 39:3). The name is as yet unidentified. It has been proposed to identify him with Nebushazban the *Rabsaris (Je. 39:13). This would require taking Nebo from the preceding *Samgar-nebo to read Nebo-sar-sechim as a corruption of Nabū-šezibanni (*n'ḥō-šazibōn'*). Or *sar-s'kim* could be a title, 'chief of the ...' D.J.W.

SATAN. The name of the prince of evil, Heb. *šātān*, Gk. *Satanas*, means basically 'adversary' (the word is so rendered, e.g., in Nu. 22:22). In the first two chapters of Job we read of 'the Satan' as presenting himself before God among 'the sons of God'. It is sometimes said that in such passages Satan is not thought of as especially evil, but as simply one among the heavenly hosts. Admittedly we have not yet the fully developed doctrine, but the activities of 'the Satan' are certainly inimical to Job. The OT references to Satan are few, but he is consistently engaged in activities against the best interests of men. He moves David to number the people (1 Ch. 21:1). He stands at the right hand of Joshua the high priest 'to accuse him', thus drawing down the Lord's rebuke (Zc. 3:1f.). The psalmist thinks it a calamity to have Satan stand at one's right hand (Ps. 109:6, AV, but cf. RV 'an adversary', RSV 'an accuser'). John tells us that 'the devil sinned from the beginning' (1 Jn. 3:8), and the OT references to him bear this out.

Most of our information, however, comes from the NT, where the supremely evil being is referred to as Satan or as 'the devil' (*ho diabolos*) indifferently, with Beelzebub (or Beelzeboul, or Beezeboul) also employed on occasion (Mt. 10:25; 12:24, 27). Other expressions, such as 'the ruler of this world' (Jn. 14:30) or 'the prince of the power of the air' (Eph. 2:2), also occur. He is always depicted as hostile to God, and as working to overthrow the purposes of God. Matthew and Luke tell us that at the beginning of his ministry Jesus had a severe time of testing when Satan tempted him to go about his work in the wrong spirit (Mt. 4; Lk. 4; see also Mk. 1:13). When this period was completed the devil left him 'until an opportune time', which implies that the contest was later resumed. This is clear also from the statement that he 'in every respect has been tempted as we are' (Heb. 4:15). This conflict is not incidental. The express purpose of the coming of Jesus into the world was 'to destroy the works of the devil' (1 Jn. 3:8; cf. Heb. 2:14). Everywhere the NT sees a great conflict between the forces of God and of good, on the one hand, and those of evil led by Satan, on the other. This is not the conception of one writer or another, but is common ground.

There is no doubting the severity of the conflict. Peter stresses the ferocious opposition by saying that the devil 'prowls around like a roaring lion, seeking some one to devour' (1 Pet. 5:8). Paul thinks rather of the cunning employed by the evil one. 'Satan disguises himself as an angel of light' (2 Cor. 11:14), so that it is small wonder if his minions appear in an attractive guise. The Ephesians are exhorted to put on 'the whole armour of God, that you may be able to stand against the wiles of the devil' (Eph. 6:11), and there are references to 'the snare of the devil' (1 Tim. 3:7; 2 Tim. 2:26). The effect of such passages is to emphasize that Christians (and even archangels, Jude 9) are engaged in a conflict that is both relentlessly and cunningly waged. They are not in a position to retire from the conflict. Nor can they simply assume that evil will always be obviously evil. There is need for the exercise of discrimination as well as stout-heartedness. But determined opposition will always succeed. Peter urges his readers to resist the devil 'firm in your faith' (1 Pet. 5:9), and James says, 'Resist the devil and he will flee from you' (Jas. 4:7). Paul exhorts 'give no opportunity to

the devil' (Eph. 4:27), and the implication of putting on the whole armour of God is that thereby the believer will be able to resist anything the evil one does (Eph. 6:11, 13). Paul puts his trust in the faithfulness of God. 'God is faithful, and he will not let you be tempted beyond your strength, but with the temptation will also provide the way of escape' (1 Cor. 10:13). He is well aware of the resourcefulness of Satan, and that he is always seeking to 'gain the advantage over us'. But he can add 'we are not ignorant of his designs' (or, as F. J. Rae translates, 'I am up to his tricks') (2 Cor. 2:11).

Satan is continually opposed to the gospel, as we see throughout the Lord's ministry. He worked through Jesus' followers, as when Peter rejected the thought of the cross and was met with the rebuke 'Get behind me, Satan' (Mt. 16:23). Satan had further designs on Peter, but the Lord prayed for him (Lk. 22:31f.). He worked also in the enemies of Jesus, for Jesus could speak of those who opposed him as being 'of your father the devil' (Jn. 8:44). All this comes to a climax in the passion. The work of Judas is ascribed to the activity of the evil one. Satan 'entered into' Judas (Lk. 22:3; Jn. 13:27). He 'put it into the heart of Judas Iscariot, Simon's son, to betray him' (Jn. 13:2). With the cross in prospect Jesus can say 'the ruler of this world is coming' (Jn. 14:30).

Satan continues to tempt men (1 Cor. 7:5). We read of him at work in a professed believer, Ananias ('why has Satan filled your heart . . .?', Acts 5:3), and in an avowed opponent of the Christian way, Elymas ('You son of the devil', Acts 13:10). The general principle is given in 1 Jn. 3:8, 'He who commits sin is of the devil'. Men may so give themselves over to Satan that they in effect belong to him. They become his 'children' (1 Jn. 3:10). Thus we read of 'a synagogue of Satan' (Rev. 2:9; 3:9), and of men who dwell 'where Satan's throne is' (Rev. 2:13). Satan hinders the work of missionaries (1 Thes. 2:18). He takes away the good seed sown in the hearts of men (Mk. 4:15). He sows 'the sons of the evil one' in the field that is the world (Mt. 13:38f.). His activity may produce physical effects (Lk. 13:16). Always he is pictured as resourceful and active.

But the NT is sure of his limitations and defeat. His power is derivative (Lk. 4:6). He can exercise his activity only within the limits that God lays down (Jb. 1:12; 2:6; 1 Cor. 10:13; Rev. 20:2, 7). He may even be used to set forward the cause of right (1 Cor. 5:5; cf. 2 Cor. 12:7). Jesus saw a preliminary victory in the mission of the Seventy (Lk. 10:18). Our Lord thought of 'eternal fire' as 'prepared for the devil and his angels' (Mt. 25:41), and John sees this come to pass (Rev. 20:10). We have already noticed that the conflict with Satan comes to a head in the passion. There Jesus speaks of him as 'cast out' (Jn. 12:31), and as 'judged' (Jn. 16:11). The victory is explicitly alluded to in Heb. 2:14; 1 Jn. 3:8. The work of preachers is to turn men 'from the power of Satan unto God' (Acts 26:18). Paul can say confidently, 'the God of peace will soon crush Satan under your feet' (Rom. 16:20).

The witness of the NT then is clear. Satan is a malignant reality, always hostile to God and to God's people. But he has already been defeated in Christ's life and death and resurrection, and this defeat will become obvious and complete in the end of the age. (*ANTICHRIST; *EVIL SPIRITS.)

SATRAP (Heb. *ḥāšdarpān*; Aram. *ḥāšadrpān*; Akkad. *ahšad(a)rapannu*; from Old Persian *ḥšatapāvan*, 'protector of the kingdom', originally *Median *khsathrapā*). Provincial governor under the Persians (Ezr. 8:36; Est. 3:12; Dn. 3:2; 6:1, etc.). The provincial system in the ancient Near East had been in use since the 3rd millennium bc (e.g. at *Ur and under *Assyria and *Babylonia). The system was adopted by the Persians. Possibly under *Darius I the empire was divided into twenty satrapies, each comprising smaller units (Herodotus 3. 89–95). Syro-Palestine was part of the satrapy 'Beyond the River' (Ne. 3:7).

BIBLIOGRAPHY. J. M. Cook, *The Persian Empire*, 1983. D.W.B.

SATYR (*šā'ir*, 'hairy one', 'he-goat'). The Heb. plural (*š'irim*) is rendered 'satyrs' in Lv. 17:7 and 2 Ch. 11:15 (AV 'devils', RV 'he-goats'). A similar meaning may be intended in 2 Ki. 23:8 if Heb. *š'ārim* ('gates'), which seems meaningless in the context, be regarded as a slip for *š'irim*. The precise nature of these 'hairy ones' is obscure. They may have been he-goats in the ordinary sense, or gods having the appearance of goats. Sacrifices were made to them in high places, with special priests performing the ritual.

From goat to demon in Semitic belief was an easy transition (cf. *SCAPEGOAT). Satyrs, apparently demonic creatures, danced on the ruins of Babylon (Is. 13:21), and figured also in the picture of the desolation of Edom (Is. 34:14).

J.D.D.

SAUL (Heb. *šā'ul*, 'asked', i.e. of God). I. King of ancient Edom, from Rehoboth (Gn. 36:37). 2. A son of Simeon (Gn. 46:10; Ex. 6:15; Nu. 26:13).

3. First king of Israel, son of Kish, of the tribe of Benjamin. The story of Saul occupies most of I Sa. (chs. 9–31) and depicts one of the most pathetic of all God's chosen servants.

Head and shoulders above his brethren, a man whose personal courage matched his physique, kindly to his friends and generous to his foes, Saul was the man chosen by God to institute the monarchy, to represent within himself the royal rule of Yahweh over his people. Yet three times over he was declared to have disqualified himself from the task to which he had been appointed, and even in that appointment there was a hint of the character of the man whom God, in his sovereignty, chose to be king.

Under the pressure of the Philistine suzerainty, the Israelites came to think that only a visible warrior-leader could bring about their deliverance. Rejecting the spiritual leadership of Yahweh, mediated through the prophetic ministry of Samuel, they demanded a king (I Sa. 8). After warning them of the evils of such government—a warning which they did not heed—Samuel was instructed by God to grant the people's wish, and was guided to choose Saul, whom he anointed secretly in the land of Zuph (I Sa. 10:1), confirming the appointment later by a public ceremony at Mizpeh

(10:17–25). Almost immediately Saul had the opportunity of showing his mettle. Nahash the Ammonite besieged Jabesh-gilead and offered cruel terms of surrender to its inhabitants, who sent for help to Saul, who was on the other side of the Jordan. Saul summoned the people by means of an object-lesson typical of his race and age, and with the army thus raised won a great victory (11:1–11). It is an evidence of his finer instincts that he refused at this time to acquiesce in the desire of his followers to punish those who had been unwilling to pay him homage (10:27; 11:12–13).

Following this, a religious ceremony at Gilgal confirmed the appointment of Saul as king, which had obviously received divine approval in the defeat of the Ammonites. With a parting exhortation to the people to be assiduous in their obedience to God, which was accompanied by a miraculous sign, Samuel left the new king to the government of his nation. On three occasions only, one of them posthumously, was the old prophet to emerge from the background. Each time it was to remonstrate with Saul for disobeying the terms of his appointment, terms involving utter obedience to the slightest command of God. The first occasion was when Saul, through impatience, arrogated to himself the priestly office, offering sacrifice at Gilgal (13:7–10). For this sacrilege his rejection from kingship was prophesied by Samuel, and Saul received the first hint that there was already, in the mind of God, the 'man after his heart' whom the Lord had selected to replace him.

The second occasion was when Saul's disobedience brought forth the prophet's well-known dictum that 'to obey is better than sacrifice, and to hearken than the fat of rams' (15:22). Again Saul's rejection from rule over Israel is declared and symbolically shown, and Samuel severs all contact with the fallen monarch. It is from the grave that Samuel emerges to rebuke Saul for the third and last time, and, whatever problems are raised by the story of the medium of Endor (ch. 28), it is clear that God permitted this supernatural interview with the unhappy king in order to fill Saul's cup of iniquity and to foretell his imminent doom.

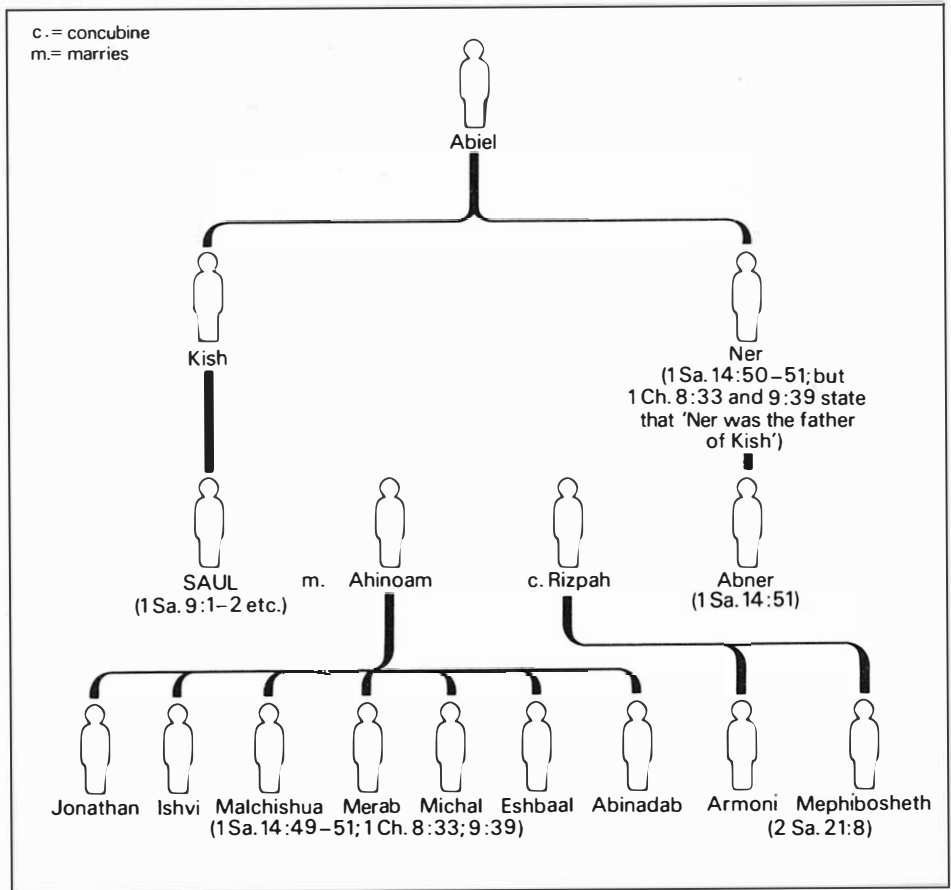

For the long conflict between Saul and David, see *DAVID, which deals with other aspects of Saul's character. It is significant that when the public anointing of David was made in Bethlehem, Samuel rejected Eliab, David's most manly brother, and was warned against assuming that natural and spiritual power necessarily went together (16:7).

Saul is an object-lesson in the essential difference between the carnal and the spiritual man, as his NT namesake was to distinguish the two (I Cor. 3, etc.). Living in a day when the Holy Spirit came upon men for a special time and purpose, rather than indwelling the children of God permanently, Saul was peculiarly susceptible to moodiness and uncertainty within himself (*HEALTH). Yet his disobedience is presented by the authors of I Sa. and I Ch. as inexcusable, for he had access to the Word of God, as it was then ministered to him through Samuel.

His downfall was the more tragic because he was a public and representative figure among the people of God.

4. The Jewish name of the apostle *Paul (Acts 13:9).

SAVOUR. With one exception (Joel 2:20) the word is used in AV of a sweet or acceptable smell. It is characteristic of sacrifice; and in this connection it is used pointedly of the effect of the Christian's life on his fellows (2 Cor. 2:15-16; RSV 'aroma', 'fragrance'). In Eph. 5:2 it is used of the sacrifice of Christ (RSV 'fragrant offering').

Two other references, referring to a loss of savour (Mt. 5:13; Lk. 14:34), connect this with insipidity or foolishness.

Common to all is the implicit association of cost, or distinctiveness, or strength with savour. Something is missing from God's people or the worship of God when there is no 'savour'.

In Mt. 16:23; Mk. 8:33, AV 'savour' renders Gk. *phronein*, 'to set the mind on' (RSV 'be on the side of'). C.H.D.

Atonement (Lv. 16:8, 10 (twice), 26). There are four possible interpretations. 1. The word denotes the 'scapegoat' and is to be explained as 'the goat (*'ēz*) that goes away (from *'āzal*)'. 2. It is used as an infinitive, 'in order to remove'; cf. Arab. *'azala*, 'to remove' 3. It means a desolate region (cf. Lv. 16:22) or 'precipice' (G. R. Driver; cf. NEB). 4. It is the name of a demon haunting that region, derived from *'āzaz* 'to be strong' and *'ēl* 'God'.

Most scholars prefer the last possibility, as in v. 8 the name appears in parallelism to the name of the Lord. As a fallen angel Azazel is often mentioned in *Enoch* (6:6 onwards), but probably the author got his conception from Lv. 16. The meaning of the ritual must be that sin in a symbolical way was removed from human society and brought to the region of death (cf. Mi. 7:19). It is not implied that a sacrifice was presented to the demon (cf. Lv. 17:7).

A. van S.

SCAPEGOAT. The word *Azazel* (Heb. *'azāzēl*) occurs only in the description of the Day of

SCEPTRE. A staff or rod (Heb. *šēbet*) carried by kings and high officials. It was also used as a weapon (Is. 30:31), as a symbol of the exercise of

justice and law (Ps. 45:6) or to indicate political and military oppression (Is. 14:5; Am. 1:5; Zc. 10:11). Judah was God's sceptre (Nu. 24:17; Pss. 60:7; 108:8; Ezk. 21:13). Rulers of Egypt (Zc. 10:11), Syria (Am. 1:5), Ashkelon (Am. 1:8), Babylon (Is. 14:5), Persia (Est. 4:11) and Israel (Ezk. 19:14) held a sceptre. The handle was of wood (Ezk. 19:11-14), metal (Ps. 2:9; Rev. 2:29) or gold (Est. 4:1).

Decorated sceptres are found in excavations (Royal Graves, Ur, Tel Dan) or depicted on palace reliefs and paintings (e.g. Darius I relief from Persepolis; cf. Gn. 49:10). A tiny ivory pomegranate, perhaps found in Jerusalem, seems to have decorated a ceremonial staff. It is inscribed in old Heb. script 'Belonging to the temple of the Lord? holy for the priests' (*lbyft yhw/h qdš lkhnm*) and was made about 700 BC. (A. Lemaire, *RB* 88, 1981, pp. 236-239; *BAR* 10, 1984, pp. 24-29; cf. *BAR* 18, 1992, pp. 42-45). D.J.W.

SCEVA. Actual or putative father of a group of seven magical practitioners who, endeavouring to imitate Paul in Ephesus, used a spell with the name of Jesus for exorcism, were repudiated by the demon and set upon by the demoniac: an incident which deeply impressed Jew and Gentile alike (Acts 19:13ff.). The story was doubtless valued as a demonstration that the 'name' was no magical formula with automatic effect.

Scева is described as a 'Jewish high priest'. Though this could denote a member of the senior priestly families, it is probably here a self-adopted title for advertisement—rather as a modern conjuror styles himself 'Professor'. 'The Sons of the High Priest Scева' may have been the collective designation for this 'firm' of itinerant mountebanks (cf. v. 13); a Jewish high priest would, in the eyes of superstitious pagans, be an impressive source of esoteric knowledge. B. A. Mastin, however, argues that, as befitted priests, they were genuine, if unsuccessful, exorcists.

The MSS show many variants in detail.

SCHOOL.

I. In the Old Testament

From the earliest times in the ancient Near East schools were used for regular instruction in reading and writing. Among the Hebrews Moses, trained in Egypt (Acts 7:22), was commanded to teach the people the law (Dt. 4:10) and statutes (Lv. 10:11). This was done by repetition and example (Dt. 11:19), public reading (Dt. 31:10-13), and the use of specially composed songs (v. 19). Parents were responsible for their children's education (Gn. 18:19; Dt. 6:7).

With the establishment of local sanctuaries and the Temple, young men were doubtless taught by the prophets (1 Sa. 10:11-13; 2 Ki. 4:1), and among other instruction reading and writing was given (Jdg. 8:14; Is. 10:19). The alphabet was learned by repetition (Is. 28:10, 'precept upon precept . . . being literally 'š after š, q after q . . .'), but most subjects were imparted orally by question and answer (Mal. 2:12, אב 'master and scholar', lit.

'he who rouses and he who answers', may, however, refer to watchmen).

The pupils (*limmūdīm*, אב 'disciples') were taught by the prophets (Is. 8:16; 50:4; 54:13), as were kings (e.g. 2 Sa. 12:1-7). There are no direct references in the OT to special school buildings, but the introduction c. 75 BC in Judah by Simon ben-Shetai of compulsory elementary education for boys aged 6-16 indicates the prior existence of such schools from the time of the second Temple. 1 Ch. 25:8 refers to scholars (*talmid*) at the time of the first Temple.

* Education played a significant part in the cultural influence of Mesopotamia from the 3rd millennium, and its school texts and curriculum appear to have been copied in Anatolia, Syria (*UGARIT, *MARI) and Palestine itself (*MEG-IDDU). For Mesopotamian education and the part played by the scribe, see S. N. Kramer, *The Sumerians*, 1963, pp. 229-248; and for the Egyptian, R. J. Williams, *JAOS* 92, 1972, pp. 214-222. D.J.W.

II. In the New Testament

There is no trace in the NT of schools for Hebrew children. It seems that the home was the place of elementary instruction. The synagogue was the centre of religious instruction with teaching in the hands of the scribes (Mt. 7:29; Lk. 4:16-32; Acts 19:9). The word 'school' occurs in only one NT context (Acts 19:9, אב; RSV, 'hall'). There is nothing to indicate whether 'the school of Tyrannus' was devoted to elementary teaching (6-14 years) or to the advanced subjects of the Greek curriculum, philosophy, literature and rhetoric (14-18 years). A 'Western' addition to Acts 19:9 runs: 'from the fifth to the tenth hour'. Tyrannus' accommodation was available for hire from 11 a.m. onwards. Instruction began at dawn simultaneously with the obligations of Paul's own calling (Acts 18:3). He used the afternoon for teaching in the hired school-house. (* EDUCATION.) E.M.B.

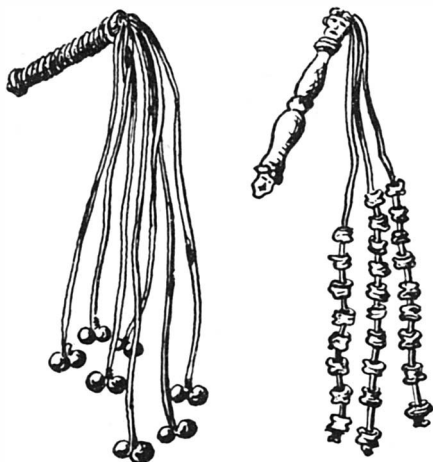

SCHOOLMASTER. אב thus renders the Greek *paidagōgos* in Gal. 3:24-25 (RSV 'custodian'; RV reads 'tutor', as also in 1 Cor. 4:15). There is no satisfactory rendering, for the word has passed into a derivative of quite dissimilar meaning, and the office it signified passed with the social conditions which devised it. The Greek and Roman pedagogue was a trusted male attendant, commonly a slave, who had the general supervision of the boy and saw him safely to and from school. This is the point of Paul's metaphor. E.M.B.

SCOURGING, SCOURGE. The Eng. translation of several Heb. and Gk. words. I. Heb. *biqqōreṯ*, translated in Lv. 19:20, אב as 'she shall be scourged'; or (אבמג.), 'there shall be a scourging'. The Heb. term, however, expresses the idea of investigation, conveyed by RSV, 'an inquiry shall be held'.

2. Heb. *šōṭ* (Jb. 5:21; Is. 10:26, etc.), *šōṭēṯ* (Jos. 23:13), 'a scourge', but generally used in a metaphorical sense.

3. Gk. *mastigōō* (Mt. 10:17; Jn. 19:1, etc.), *mastizōō* (Acts 22:25), 'to whip', 'to scourge'; *phragelloō*, derived from Lat. *flagello* (Mt. 27:26; Mk. 15:15). The scourging in Mt. 27:26; Mk. 15:15, was a preliminary stage in the execution of the sentence

SCOURING, SCOURGE

Roman scourges, barbed with lumps of lead and pieces of bone.

to *crucifixion; that proposed in Lk. 23:16, 22 (*paideuō*) and carried out in Jn. 19:1 preceded the death-sentence and may have been intended as a milder penalty.

J.D.D.
F.F.B.

SCRIBE. In ancient Israel, following the spread of the alphabet, the scribes' monopoly of writing was broken, but theirs remained an important profession. The words for 'scribe' in Heb. (*sōpēr*, from *sāpār*, 'to count, tell'; Pi'el, 'to recount'), Canaanite (*spr*) and Akkad. (*šapāru*, 'to send', 'write') cover the main duties of this highly skilled trade. Many scribes were employed by the public as secretaries to transcribe necessary legal contracts (Je. 32:12), write letters, or keep accounts or records, usually from dictation (Je. 36:26). Others, known as 'the king's scribes' (2 Ch. 24:11), were employed in public administration and were attached to the royal household, where the Chief Scribe acted as 'Secretary of State' and ranked before the Chronicler (*mazkir*), who kept the state records (2 Sa. 8:16; 1 Ki. 4:3). As a high official the Chief Scribe was one of the royal advisers (1 Ch. 27:32). Thus Shebna the scribe, who later rose to be 'over the household' (*i.e.* Prime Minister), was sent by Hezekiah with the Prime Minister and elders to parley with the Assyrians besieging Jerusalem (2 Ki. 18:18; 19:2; Is. 36:3). Some scribes were especially employed for military duties, which included the compilation of a list of those called out for war (Jdg. 5:14) or of the booty won, their senior official being designated 'principal scribe of the host' (2 Ki. 25:19; Je. 52:25). Although other scribes were allotted to tasks in the Temple involving the collection of revenues (2 Ki. 12:10), the scribal profession was, until the Exile, separate from the priesthood, who had their own literate officials. Senior scribes had their own rooms in the palace (Je. 36:12-21) or Temple (Je. 36:10).

Shaphan the scribe was given the newly discovered scroll of the law to read before the king (2 Ki. 22:8), but it was only in the post-exilic period that the scribes assumed the role of copyists, preservers and interpreters of the law (Ezr. 7:6). *EDUCATION; *WRITING.)

was both priest and scribe (7:11) and may well have acted as adviser on Jewish affairs to the Babylonian court, in the same way as did the specialist scribes of Assyria and Babylonia. By the 2nd century BC the majority of scribes were priests (1 Macc. 7:12) and were the prototypes of the religious *scribes of the NT day.

The scribe, as a person of education and means, was able to wear fine garments with a pen-case or 'inkhorn' hanging from his girdle (Ezk. 9:2). His equipment included reed-pens (Je. 8:8); a small knife for erasures and cutting papyrus (Je. 36:23), and, in some cases, styli for *writing in the cuneiform script. The profession was often followed by whole families (1 Ch. 2:55), and several sons are named as following their fathers in office. (*EDUCATION; *WRITING.)

D.J.W.

SCRIBES (Heb. *sōp'rim*; Gk. *grammateis*, *nomikoi* (lawyers) and *nomodidaskaloi* (teachers of the law)). Scribes were experts in the study of the law of Moses (*Torah*). At first this occupation belonged to the priests. Ezra was priest and scribe (Ne. 8:9); the offices were not necessarily separate. The chief activity of the scribe was undistracted study (Ecclus. 38:24). The rise of the scribes may be dated after the Babylonian Exile. 1 Ch. 2:55 would suggest that the scribes were banded together into families and guilds. They were probably not a distinct political party in the time of Ben-Sira (beginning of the 2nd century BC), but became one by the repressive measures of Antiochus Epiphanes. Scribes were found in Rome in the later imperial period, and in Babylonia in the 5th and 6th centuries AD. Not until about AD 70 are there detailed facts concerning individual scribes. They were mainly influential in Judaea up to AD 70, but they were to be found in Galilee (Lk. 5:17) and among the Dispersion.

The scribes were the originators of the synagogue service. Some of them sat as members of the Sanhedrin (Mt. 16:21; 26:3). After AD 70 the importance of the scribes was enhanced. They preserved in written form the oral law and faithfully handed down the Heb. Scriptures. They expected of their pupils a reverence beyond that given to parents (*Aboth* 4. 12).

The function of the scribes was threefold.

1. They preserved the law. They were the professional students of the law and its defenders, especially in the Hellenistic period, when the priesthood had become corrupt. They transmitted unwritten legal decisions which had come into existence in their efforts to apply the Mosaic law to daily life. They claimed this oral law was more important than the written law (Mk. 7:5ff.). By their efforts religion was liable to be reduced to heartless formalism.

2. They gathered around them many pupils to instruct them in the law. The pupils were expected to retain the material taught and to transmit it without variation. They lectured in the Temple (Lk. 2:46; Jn. 18:20). Their teaching was supposed to be free of charge (so Rabbi Zadok, Hillel and others), but they were probably paid (Mt. 10:10; 1 Cor. 9:3-18, for Paul's statement of his right), and even took advantage of their honoured status (Mk. 12:40; Lk. 20:47).

3. They were referred to as 'lawyers' and 'teachers of the law', because they were entrusted

with the administration of the law as judges in the Sanhedrin (cf. Mt. 22:35; Mk. 14:43, 53; Lk. 22:66; Acts 4:5; Jos., *Ant.* 18. 16f.). 'Lawyer' and 'scribe' are synonymous, and thus the two words are never joined in the NT. For their services in the Sanhedrin they were not paid. They were therefore obliged to earn their living by other means if they had no private wealth.

The OT Apocrypha and Pseudepigrapha are sources for the origin of the scribal party. The books of Ezra, Nehemiah, Daniel, Chronicles and Esther also indicate something of the beginnings of the movement, whereas Josephus and the NT speak of this group in a more advanced stage of development. There is no mention of the scribes in the Fourth Gospel. They belonged mainly to the party of the Pharisees, but as a body were distinct from them. On the matter of the resurrection they sided with Paul against the Sadducees (Acts 23:9). They clashed with Christ, for he taught with authority (Mt. 7:28-29), and he condemned external formalism which they fostered. They persecuted Peter and John (Acts 4:5), and had a part in Stephen's martyrdom (Acts 6:12). However, although the majority opposed Christ (Mt. 21:15), some believed (Mt. 8:19).

SCRIPTURE, SCRIPTURES.

I. Vocabulary

Two Gk. words are translated 'Scripture(s)' in *evv. gramma*, originally 'an alphabetical character', is used in NT for 'document' (Lk. 16:6; Acts 28:21), in a special sense by Paul for the law (Rom. 2:27, 29; 7:6; 2 Cor. 3:6) and in the plural for the 'writings' of Moses (Jn. 5:47); for 'learning', sacred or profane (Jn. 7:15; Acts 26:24), and only once in the phrase *ta hiera grammata*, 'the holy scriptures' (2 Tim. 3:15). *graphē*, on the other hand, which in secular Gk. meant simply 'a writing' (though sometimes an authoritative writing in particular), is in the NT appropriated to 'the Scriptures' in a technical sense some 50 times, in most cases unmistakably the OT. Associated with *graphē* is the formula *gegraptai*, 'it is written', occurring some 60 times in the NT, and found in Greek usage for legal pronouncements (cf. A. Deissmann, *Bible Studies*², 1909, pp. 112ff.). Analogous forms occur in the Mishnah, but the rabbis more often used formulae like 'It is said . . .'. The term 'the Scripture' (*hak-kātib*) is also employed. (See B. M. Metzger, *JBL* 70, 1951, pp. 297ff., for quotation formulae in rabbinic and NT documents.)

II. Significance

gegraptai meant 'It stands written in the Scriptures', and all Christians or Hellenistic Jews recognized that these comprised (Lk. 24:44) 'the law, . . . the prophets, and . . . the psalms' (*i.e.* the *K'tubim*, or Writings; *CANON OF THE OLD TESTAMENT).

Though the *av*, *RSV* translation of 2 Tim. 3:16 ('every [all] scripture is inspired . . .') is probably preferable to that of *RV*, *NEB*, no contemporary would doubt the extent of 'every inspired scripture'. It was what Christians called the OT, in which the gospel was rooted, of which Christ was the fulfilment, which was through faith in Christ able to lead a man to salvation, and was used in the primitive church for all the purposes outlined in 2 Tim. 3:15-17.

The question arises, however, at what date and in what sense Christians began to use the term 'Scriptures' for *Christian* writings. It has sometimes been suggested that 'according to the scriptures' in 1 Cor. 15:3f. refers to Christian testimony books or early Gospels, since no OT passage specifies the resurrection on the third day. This is unacceptable: Paul means the OT, as the groundwork of Christian preaching (*GOSPEL), and probably relates simply the fact of resurrection, not its occurrence on the third day, to prophecy (cf. B. M. Metzger, *JTS* n.s. 8, 1957, pp. 118ff.). Still less acceptable is Selwyn's suggestion that the anarthrous *en graphēi* in 1 Pet. 2:6 means 'in writing' (*e.g.* in a hymn), for the passage quoted is from the OT. Nevertheless, there were undoubtedly collections of authoritative sayings of the Lord in the apostolic church (cf. O. Cullmann, *SJT* 3, 1950, pp. 180ff.; *TRADITION), and 1 Tim. 5:18 seems to represent a quotation from such a collection, linked with an OT citation, the two together being described as 'scripture'. Again, Paul in 1 Cor. 2:9 cites by *gegraptai* a passage which, unless it is an extremely free rendering of Is. 64:4; is unidentifiable. It occurs in various forms elsewhere in early literature, however, and now as Logion 17 of the *Gospel of Thomas* (*NEW TESTAMENT APOCRYPHA). It is perhaps worth considering whether Paul is quoting a saying of the Lord not recorded in our Gospels (as in Acts 20:35) and citing it as he would 'scripture'.

If indeed the tradition of the Lord's words was so early called 'Scripture' it would be an easy step so to describe apostolic letters read in church; and, despite many dogmatic statements to the contrary, there would be no reason why this should not have occurred in apostolic times, as 2 Pet. 3:16, as usually translated, represents: though perhaps we should translate 'they wrest the Scriptures as well' (cf. C. Bigg, *St. Peter and St. Jude*², *ICC*, 1901, in *loc.*).

We have, however, reached a dark place in NT history, though one where we may hope for future light. (*BIBLE; *CANON; *INSPIRATION.)

A.F.W.

SCYTHIANS. Though sometimes used of highly skilled semi-nomadic horsemen migrating from the Russian steppes, Scythian denotes a group of tribes who lived N and E of the Black Sea. They had invaded E Anatolia (Urartu) and NW Iran (Media) by the 8th century BC, driving the Cimmerians (*GOMER) before them. Their progress was checked by the Assyrians under Sargon II (722-705 BC) and they were defeated in 676 by Esarhad-don. According to Herodotus (1.116, 4.1) they

SCYTHIANS

dominated the Near East for 28 years (653–625 BC). At one time they were allied with the Assyrians to relieve Nineveh in 630 but later sided with the Babylonians, perhaps as part of the Umman-manda hordes, to conquer that same city in 612 BC. A raid against Egypt was bought off in the reign of Psammetichus I (664–610). Later they were involved with Cyrus in the capture of Babylon. Some descendants or mercenaries settled at Beth Shean, called Scythopolis (Jdg. 1:27, Lxx). By the 1st century BC they still controlled trade N of the Black Sea and were known to the Greeks as ruthless warriors with a reputation for savagery, reflected in 2 Macc. 4:47, 3 Macc. 7:5, 4 Macc. 10:7 and known to Paul in Col. 3:11.

The Scythians, known as Ashkenaz (Gn. 10:2; 1 Ch. 1:6; Je. 51:27) and by the Assyrians as *Ishkuza* have left no writings of their own. However, archaeological finds indicate a highly cultured people (Karmir Blur, the Ziwiye Treasure and widespread distinctive three-bladed barbed arrows).

SEA (Heb. *yām*; Gk. *thalassa* and *pelagos*: this latter term, meaning 'open sea', occurs only once, Acts 27:5).

The predominating sea in the OT is, of course, the Mediterranean. Indeed, the word *yām* also means 'west', 'westward', i.e. 'seaward', from the geographical position of the Mediterranean with reference to Palestine. The Mediterranean is termed 'the Great Sea' (Jos. 1:4), 'the western sea' (Dt. 11:24), and 'the sea of the Philistines' (Ex. 23:31).

Other seas mentioned in the OT are the Red Sea, lit. 'sea of reeds' (Ex. 13:18); the Dead Sea, lit. 'sea of salt' (Gn. 14:3); the Sea of Galilee, lit. 'sea of *kinneret*' (Nu. 34:11). The word *yām* was also used of a particularly broad river, such as the Euphrates (Je. 51:35f.) and the Nile (Na. 3:8). It is used with reference to the great basin in the Temple court (1 Ki. 7:23).

As one would expect, the NT *thalassa* is used with reference to the same seas as are mentioned in the OT.

The Hebrews betrayed little interest in, or enthusiasm for, the sea. Probably their fear of the ocean stemmed from the ancient Semitic belief that the deep personified the power that fought against the deity. But for Israel the Lord was its Creator (Gn. 1:9f.), and therefore its Controller (Ps. 104:7–9; Acts 4:24). He compels it to contribute to man's good (Gn. 49:25; Dt. 33:13) and to utter his praise (Ps. 148:7). In the figurative language of Isaiah (17:12) and Jeremiah (6:23) the sea is completely under God's command. Many of the manifestations of the Lord's miraculous power were against the sea (Ex. 14–15; Ps. 77:16; Jon. 1–2). So also Christ's walking on the sea and stilling the storm (Mt. 14:25–33; cf. G. Bornkamm, 'The Stilling of the Storm in Matthew', in G. Bornkamm, G. Barth and H. J. Held, *Tradition and Interpretation in Matthew*, 1963, pp. 52ff.). God's final triumph will witness the disappearance of the sea in the world to come (Rev. 21:1). J.G.S.S.T.

SEA OF GLASS. Twice John saw in heaven 'as it were a sea of glass' (*hōs thalassa hyalinē*), 'before

the throne' of God 'like crystal' (Rev. 4:6) and later 'mingled with fire' (Rev. 15:2). The picture of a sea in heaven may be traced through the apocalyptic literature (e.g. *Testament of Levi* 2:7; 2 *Enoch* 3:3) back to 'the waters which were above the firmament' of Gn. 1:7; Pss. 104:3; 148:4. The likeness to crystal stands in contrast with the semi-opacity of most ancient *glass and speaks of the holy purity of heaven; the mingling with fire suggests the wrath of God (cf. Gn. 7:11; 1 *Enoch* 54:7–8). Beside or on the sea stand the victors over the beast: their song (Rev. 15:3) recalls that of the Israelites beside the Red Sea (Ex. 15:1ff.). M.H.C.

SEAL, SEALING.

I. In the Old Testament

In the Near East, from which many thousands of individual seals have been recovered, engraved seals were common in ancient times, the Hebrews using a general term which did not specify the form of the seal itself (*hōtām*; Eyp. *htm*). The varied uses of such seals were much the same as in modern times.

a. Uses

(i) As a mark of authenticity and authority. Thus pharaoh handed a seal to Joseph his deputy (Gn. 41:42) and Ahasuerus sealed royal edicts (Est. 3:10; 8:8–10). The action describes the passing of the master's word to his disciples (Is. 8:16) and Yahweh granting authority to Zerubbabel (Hg. 2:23; cf. Je. 22:24). For a non-biblical example of delegated seals on a covenant, see *Iraq* 21, 1958.

(ii) To witness a document. The seal was impressed on the clay or wax (*WRITING). Thus, his friends witnessed Jeremiah's deed of purchase (Je. 32:11–14) and Nehemiah and his contemporaries attested the covenant (Ne. 9:38; 10:1) and Daniel a prophecy (Dn. 9:24).

(iii) To secure by affixing a seal. Thus, a clay document within its envelope or other receptacle, or a scroll tied by a cord to which was attached a lump of clay bearing a seal impression, could be examined and read only when the seal had been broken by an authorized person (cf. Rev. 5:1f.). A sealed prophecy (Dn. 12:9) or book (Is. 29:11) was thus a symbol for something as yet unrevealed.

To prevent unauthorized entry doors would be sealed by a cord or clay, with the sealing stretched across the gap between the door and its lock. This was done to the lions' den at Babylon (Dn. 6:17; Bel and the Dragon 14) and to tombs (Herodotus, 2. 121; cf. Mt. 27:66). A crocodile's close-knit scales were likened to a sealed item (Jb. 41:15).

Metaphorically the seal stood for what is securely held, as are the sins of man before God (Dt. 32:34; Jb. 14:17), who alone has the authority to open and to seal (Jb. 33:16). He sets his seal as a token of completion (Ezk. 28:12). The metaphor in Ct. 4:12 is probably of chastity.

b. Form

With the invention of writing in the 4th millennium BC seals were used in large numbers. The cylinder-seal was the most common and was rolled on clay, though stamp seals are also found in contemporary use. In Palestine, under both Mesopotamian (often through Syrian and Phoenician) and Egyptian influences, cylinder-seals and scarabs

were in use in the Canaanite period. The latter predominated for use on wax or clay lumps appended to papyrus. With the Monarchy, stamp seals, 'button', conoid or scaraboid prevail.

The seal was pierced so that it could be worn on a cord round the neck (Gn. 38:18; Je. 22:24; Ct. 8:6) or on a pin, traces of which sometimes remain, for attachment to the dress. The scaraboid seals or seal stones were set in a ring to be worn on the hand or arm (Est. 3:12).

c. Materials

Poor persons could purchase roughly engraved seals made of local terracotta, bitumen, limestone, frit or wood. The majority of seals, however, were specially engraved by a skilled seal-cutter who used copper gravers, a cutting wheel, and sometimes a small bow-drill, perhaps the 'pen of iron; with a point of diamond' (Je. 17:1; *ARTS AND CRAFTS), to work the hard semi-precious stones (*ART). In Palestine, as elsewhere, carnelian, chalcedony, agate, jasper, rock crystal and haematite were imported and frequently used. Imported Egyptian scarabs were of glazed steatite and, later, glazed composition.

Engraved stones (Ex. 28:11-23; 39:8) were used as insets in the high priest's breast ornament. The fine stones and workmanship led to these seal stones or signet-rings (Heb. *tabba'at*; Akkad. *tīmbu'u*) being used as ornaments (Is. 3:21), votive offerings, or for sacred purposes (Ex. 35:22; Nu. 31:50), like the group of seals in the Canaanite shrine at Hazor, or as *amulets. The Heb. *tabba'at* is used also of rings in general (Ex. 25:12).

d. Designs

Before the Monarchy cylinder-seals followed the Phoenician or Syrian style, showing patterns, well-filled designs, rows of men or designs characteristic of the different fashions prevailing at various periods in Mesopotamia. The later Palestinian seals, usually oval, bear representations of lions (see *IBA*, fig. 52), winged human-headed lions or sphinxes (cherubim), griffins or the winged uraeus-snake. Egyptian motifs, with the lotus flower, the *ankh*-symbol of life or the Horus-child, frequently occur. Scenes of worship, seated deities and animals and birds seem to show that this art did not offend Hebrew religious feeling. After the 7th century BC, however, the majority of seals bear only a two-line inscription.

e. Inscriptions

More than 200 Hebrew seals have been recovered, inscribed with their owners' names. The name may stand alone, or be followed by the father's name or by a title. Several belonged to royal retainers, described as 'servant of the king'. The finest of them is the jasper seal 'Of Shema, servant of Jeroboam' (i.e. Jeroboam II), found in excavations at Megiddo. Another shows a cock, with an inscription reading 'Of Jaazaniah, servant of the king', and may indicate as owner the Jaazaniah of 2 Ki. 25:23, or a contemporary of the same name (Je. 35:3; 40:8; cf. Ezk. 11:1). The seals were impressed into lumps of clay, and some of these have been recovered, carrying on the back the marks of the papyrus documents they once secured. One such sealing, termed *bullā*, had been stamped by the seal 'Of Gedaliah who is over the household'. It was found at Lachish, and may have belonged to the governor of Judah (2 Ki. 25:22-25; for the title cf.

2 Ki. 18:18, and *SHEBNA). One impression is particularly important because its date is certain. The seal was inscribed 'Of Jehozerah, son of Hilkiah, servant of Hezekiah' (*IEJ* 24, 1974, pp. 27-29), Hezekiah being the king of Judah, and Hilkiah his steward's father (2 Ki. 18:18, etc.). Several men are entitled 'son of the king', although it is not clear whether these were members of the royal family or of the larger palace community. Also uncertain is the identity of the master on the seal inscribed 'Of Eliakim, retainer (*na'ar*) of Yawkin'. Yawkin may have been *Jehoiachin, king of Judah, but the masters on other seals so inscribed were not all kings. Some seals certainly belonged to women, e.g. the seal of one Hannah (*hnh*; *PEQ* 108, 1976, pp. 59-61), or 'Of Abigail, wife of Asaiah'.

The value of these seals lies in the range of Hebrew personal names they reveal, not all known from the OT (e.g. Gamariah, Halasiah). The titles they reveal widen our knowledge of the administration. The large number of seals, many bearing no design apart from the names, implies a widespread ability to read in the relatively small state of Judah, whence most of the seals come.

Important historical information is supplied by a collection of clay sealings and some stamps on jar-handles, apparently carrying the names of three post-exilic governors of Judah (El Nathan, Yehoezer, Ahzai) each styled *peha*, to be placed after Zerubbabel, and before Ezra. These names are otherwise unknown. (See N. Avigad, *Bullae and Seals from a Post-Exilic Judaeon Archive*, 1976.)

f. Stamped jar-handles

Excavations in Palestine have produced about 1,000 jar-handles bearing seal impressions. Some appear to be royal pottery marks (cf. 1 Ch. 4:23) giving the place of manufacture. The impressions are usually of four-winged scarabeus or a flying scroll with 'Of the king' (*lammelek*) above, and (below) a place, e.g. Hebron, Ziph, Socoh and *mmst*. Others bear personal names (perhaps of the potter), e.g. Shebnaiah, Azariah, Yopiah. Such stamped jar-handles have been found in quantity at Megiddo, Lachish and Gibeon. A group of fiscal stamp impressions inscribed in Aramaic *yhd* (Judah) dated 400-200 BC are of special interest (*MONEY; *BASOR* 147, Oct. 1957, pp. 37-39; 148, Dec. 1957, pp. 28-30; *IEJ* 7, 1957, pp. 146-153).

II. In the New Testament

a. Literal use

The verb *sphragizō* (noun *sphragis*) is occasionally used in the NT in a literal sense, e.g. of the sealing of the tomb of Christ after his burial (Mt. 27:66 cf. *Ev. Petr.* 8:33), the sealing of Satan in the abyss (Rev. 20:3) and the sealing of the apocalyptic roll against unauthorized scrutiny (Rev. 5:1-8:1, *passim*). The practice of 'sealing' mentioned in this

SEAL, SEALING

latter context would have been as familiar to Jews as to Romans (cf. Rev. 22:10, where the *logoi* are not 'sealed' because 'the time is at hand', and they are to be imminently used; contrast Dn. 12:4, 9).

b. Figurative use

(i) In Rom. 15:28 Paul refers to his intention of delivering a contribution (*koinōnia*) of the Gentiles to the saints in Jerusalem, and so of having 'sealed' (*sphragisamenos*) their offering. This may possibly imply a guarantee of his honesty ('under my own seal', NEB), but it will in any case denote Paul's approval of the Gentile action (so Theodore of Mopsuestia; cf. Jn. 3:33, where *esphragisen* is used of man's 'approval' of the truth of God, and Jn. 6:27, where precisely the same form of the verb is used with reference to God's attestation of the Christ).

(ii) An unusual use of the word *sphragis*, which carries still the sense of 'authentication', occurs in 1 Cor. 9:2, when Paul describes his converts in the church at Corinth as the 'seal' affixed by Christ to his work; the vindication, indeed, of his apostolate.

(iii) In the discussion of Abraham's exemplary faith in Rom. 4, Paul mentions the *sēmēion* of circumcision as the confirming 'seal' (v. 11; NEB 'hall-mark') of a righteousness which existed, by faith, before the rite itself was instituted. This use of the term 'seal' compares with that in the Apocalypse (Rev. 7:2–8; 9:4), where the servants of God are described as being 'sealed' with 'the seal of the living God' (7:2f.; cf. Ezk. 9:4; Rev. 14:1), as a safeguard as well as a mark of possession, A. G. Hebert suggests (*TWBR*, p. 222) that these passages 'readily fall into a baptismal context'.

III. Sealing by the Spirit

One important NT image associates *sphragis* with *pneuma*. The Pauline characterization of the Christian inheritance in Eph. 1, for example, proceeds against a background filled with Christian hope. In v. 13, accordingly, the Ephesian Christians are described as 'sealed with the promised Holy Spirit'; they have received in time, that is to say, an earnest of what they will become in eternity. Once more this use of 'sealing' includes the concept of 'possession' (cf. 2 Tim. 2:19; Gal. 6:17). Similarly, mention of the Holy Spirit in Eph. 4:30, during a piece of practical exhortation to Christ-like behaviour, is followed by the qualifying phrase, 'in whom (*en hō*) you were sealed for the day of redemption'; while in 2 Cor. 1:21f. believers are described as 'anointed' by God, who has 'put his seal' upon them, and given them the Holy Spirit as an eternal guarantee. We have to consider the nature of this 'seal', as well as the moment and results of the 'sealing'.

a. *The nature of the seal.* Considerable discussion has taken place on this point. R. E. O. White, for example (*The Biblical Doctrine of Initiation*, 1960, p. 203 and n.), takes the aorists of *sphragizō* in Eph. 1:13; 4:30; 2 Cor. 1:22 to refer to the gift of the Spirit, acting as a 'divine seal upon baptism'. He discovers in support of this suggestion a 'regular' NT use of the aorist tense in connection with the reception of the Spirit by the believer in baptism. W. F. Flemington, on the other hand (*The New Testament Doctrine of Baptism*, 1953, pp. 66f.), proposes baptism itself as the seal, and relates this to the word *sphragis* used in connection with the Jewish rite of circumcision. (So also O. Cullmann, *Baptism in the New Testament*, 1950, p. 46.)

Clearly the Heb. background to the theology of baptism, and to the notion of 'seal' itself, cannot be discounted; and Gregory Dix has indicated the extent to which the early Fathers were indebted to their Jewish antecedents in this respect (*Th* 51, 1948, pp. 7–12). At the same time, as Dix points out, it is not necessarily the NT which justifies any later connection made between 'baptism' and 'seal'; even the *Didachē* does not call water baptism a 'sealing', or connect the sacrament in any way with the gift of the Holy Spirit.

b. *The moment of sealing.* These considerations will suggest the doubt that also exists about the precise moment of the believer's 'sealing'. If we are right to associate the gift of the Holy Spirit with baptism (which is a frequent but not altogether regular pattern in the NT, cf. Acts 8:36ff.; 10:44), we may consider that this 'sealing' by the Spirit takes place at baptism, or more precisely, perhaps, at the moment of commitment that finds its focus and expression in the sacrament of baptism. So, e.g. G. W. H. Lampe (*The Seal of the Spirit*, 1951) has carefully examined the origin and meaning of the cognate NT terms *sphragis* and *chrisma*, associated with the 'chrism' of Christ himself in whom the Spirit of God was actively present, and shown that (in Pauline language) incorporation into the body of Christ is effected by baptism (rather than by any equivalent of 'confirmation', incidentally), and 'sealed' by the gift of the Holy Spirit (pp. 6, 61f.; for a summary of the arguments involved, and their proponents, see further White, *op. cit.*, pp. 352ff.).

c. *The results of sealing.* It has become clear from 1st-century papyri that the language of 'sealing' came to acquire in the E the extended and important meaning, particularly in legal circles, of giving validity to documents, guaranteeing the genuineness of articles and so on. (The possible parallels that exist between *sphragizō* and initiation into Gk. mystery cults are less likely to be significant.) It is easy as a result to see how the word *sphragis* and its cognates fit naturally into NT contexts which presuppose the theology of the covenant, and denote, in terms of the gift of the Holy Spirit, authentication as well as ownership. We have already discovered these to be aspects of the meaning of the term in other NT passages.

The occurrence of similar ideas in other contexts may be noticed in this connection. The 'mark' of initiation administered by John the Baptist, e.g., was an entirely eschatological rite (Lk. 3:3ff.; note the reaction of the people to John's identity in v. 15); and in line with normative Jewish apocalyptic his baptism signified an 'earmarking' for salvation in view of coming judgment comparable to certain parts of the *Psalms of Solomon* (e.g. 15:6f., 8; cf. 2 Esdras 6:5), and of the NT itself (2 Tim. 2:19; and cf. the thought of 'sealing for security' already noticed in Rev. 7:2ff., etc.; see White, *op. cit.*, p. 88).

In the NT uses of the term 'seal' we have considered, the ideas of ownership, authentication and security predominate. The three Pauline passages reviewed (Eph. 1:13; 4:30; 2 Cor. 1:22) together indicate that the *arrabōn* of the Holy Spirit given to the believer, incorporated *en Christō* by baptism through faith, is a 'token and pledge of final redemption' (Lampe, *op. cit.*, p. 61). In this way the gift of the Spirit is equivalent to 'putting on' Christ, sharing his *chrisma*, and becoming members of his body, the true Israel of God (*ibid.*; cf. 1 Cor. 12:13). The gift of the Holy Spirit, in fact,

confirms the covenant in which believers are 'sealed' as God's own.

BIBLIOGRAPHY. The standard English work on this subject (NT) is G. W. H. Lampe, *The Seal of the Spirit*, 1951 (esp. Part 1). For the history of the idea see also G. Dix, *Th 51*, 1948, pp. 7–12. For a fuller discussion of the relevant texts see the major works on baptism in the NT, notably O. Cullmann, *Baptism in the New Testament*, 1950; W. F. Flemington, *The New Testament Doctrine of Baptism*, 1953; P.-Ch. Marcel, *The Biblical Doctrine of Infant Baptism*, 1953; R. E. O. White, *The Biblical Doctrine of Initiation*, 1960; R. Schnackenburg, *Baptism in the Thought of St. Paul*, 1964; J. D. G. Dunn, *Baptism in the Holy Spirit*, 1970; R. Schippers, *NIDNTT* 3, pp. 497–501. s.s.s.

SEBA. 1. Son of Cush, classed under Ham (Gn. 10:7; 1 Ch. 1:9). 2. Land and people in S Arabia, apparently closely related to the land and people of *Sheba; in fact *s'ḥā* (Seba) and *s'hā* (Sheba) are commonly held to be simply the Old Arab. and Heb. forms of the one name of a people, i.e. the well-known kingdom of Sheba. In a psalm (72:10) dedicated to Solomon, he is promised gifts from 'the kings of Sheba and (or: "yea") Seba'. In Isaiah's prophecies, Israel's ransom would take the wealth of Egypt, Ethiopia (Cush) and Seba (Is. 43:3), and the tall Sabaeans were to acknowledge Israel's God (Is. 45:14), first fulfilled in the wide spread of Judaism and first impact of Christianity there during the first 5 centuries AD. The close association of Seba/Sheba with Africa (Egypt and Cush) may just possibly reflect connections across the Red Sea between S Arabia and Africa from the 10th century BC onwards; for slender indications of this, see W. F. Albright, *BASOR* 128, 1952, p. 45 with nn. 26–27. Strabo (16. 4. 8–10) names a town Sabai and harbour Saba on the W or Red Sea coast of Arabia. K.A.K.

SECACAH (Heb. *s'kāḳāh*). A settlement in NE Judah (Jos. 15:61); probably Khirbet es-Samrah, the largest (68 m by 40 m) of three fortified sites in el-Buqei 'a, controlling irrigation works which made it possible to settle in this area; first occupied in the 9th century BC, doubtless to secure the frontier. See L. E. Stager, *BASOR* 221, 1976, pp. 145–158; *NEAEHL*, pp. 267–269. J.P.U.L.

SECU (RSV), **SECHU** (AV). The Heb. name, perhaps meaning 'outlook', of a place near Ramah, which Saul visited when seeking David and Samuel (1 Sa. 19:22). A possible but uncertain identification is Khirbet Shuweikeh, 5 km N of el-Rām (biblical Ramah). Some MSS of LXX read the unknown town Sephi, which represents, according to some scholars, Heb. *s'pī*, 'bare hill'; and the Pesh. similarly renders *sūpā*, 'the end'; but other Gk. MSS and the Vulg. support the Massoretic Hebrew.

BIBLIOGRAPHY. F. M. Abel, *Géographie de la Palestine*, 2, 1938, p. 453; C. R. Conder and H. H. Kitchener, *The Survey of Western Palestine*, 3, 1883, p. 52. J.T.

SECUNDUS. A Thessalonian Christian accompanying Paul (Acts 20:4), probably as a delegate, with Aristarchus, of his church, to bring the

collection for Jerusalem (cf. 1 Cor. 16:1ff.). Agreement on the precise significance of Acts 20:4 is incomplete, but Secundus seems included among those who awaited Paul at Troas. Zahn (*JNT*, 1, 1909, p. 213) conjectured that Secundus was another name of the Macedonian Gaius (mentioned with Aristarchus in Acts 19:29), distinguished here from his companion *Gaius of Derbe.

The name is Latin, and attested in Thessalonian inscriptions. A.F.W.

SEED. The fertilized and mature ovule of a flowering plant which enables the species to perpetuate itself. Seed-bearing plants are of great antiquity (Gn. 1:11).

The progeny of the species *Homo sapiens* was also regarded as 'seed' (Gn. 3:15; 13:15). Thus the seed of Abraham constituted Isaac and his descendants (Gn. 21:12; 28:14). The relationship between God and his people provided a perpetual establishment for the seed of Israel (Ps. 89:4), who would be ruled over by a descendant of the house of David (Acts 2:30), interpreted by the early Christians in terms of Christ the Messiah (2 Tim. 2:8).

The idea of the seed as the unit of reproduction of plant life found expression in several of Christ's parables. The spiritual significance of the seed varied with the differing circumstances under which the parables were narrated. In that of the seeds and the sower (Mt. 13:3–23; Lk. 8:5–15), the seed was interpreted in Matthew as the 'word of the kingdom', while in Mark (4:3–20) and Luke it was the 'word of God'. In the parable of the seed and the tares (Mt. 13:24–30), the 'good seed' represented the children of the kingdom, while in the parable of the mustard seed (Mt. 13:31–32; Mk. 4:30–32) the seed represented the kingdom of heaven. In Mk. 4:26–29 the mystery surrounding the development of the divine kingdom was likened to that connected with the germination and growth of a seed.

The Pauline doctrine of the resurrection body (1 Cor. 15:35ff.) reflected the thought of Christ concerning the necessity of wheat-grains dying before they could produce abundantly (Jn. 12:24). The resurrection body of the believer will be significantly different in kind and degree from that laid to rest in the grave, bearing a relationship to it similar to that existing between an acorn and the mature oak. R.K.H.

SEIR. I. The word *sē'ir* defines a mountain (Gn. 14:6; Ezk. 35:15), a land (Gn. 32:3; 36:21; Nu. 24:18) and a people (Ezk. 25:8) in the general area of old Edom. Esau went to live there (Gn. 32:3), and his descendants overcame the original inhabitants, the Horites (Gn. 14:6; 36:20; Dt. 2:12; Jos. 24:4). The Simeonites later destroyed some Amalekites who took refuge there (1 Ch. 4:42–43). 2. A landmark on the boundary of Judah (Jos. 15:10). J.A.T.

SELA. Etymologically the Heb. word (*has-*)*selā'* means '(the) rock' or 'cliff' and may be used of any rocky place. The name occurs several times in the Bible.

I. A fortress city of Moab, conquered by Amaziah king of Judah and renamed Joktheel (2

SELA

Ki. 14:7; 2 Ch. 25:12). Obadiah, in condemning Edom, refers to those who dwell in the clefts of the rock (Sela, Ob. 3). Is. 42:11 may refer to the same place. For centuries the site has been identified with a rocky outcrop behind Petra, an identification which goes back to the LXX, Josephus and Eusebius. The massive rocky plateau Umm el-Biyara towers 300 m above the level of Petra (the Gk. translation of Sela), and 1,130 m above sea level. It was investigated by Nelson Glueck in 1933 and W. H. Morton in 1955. C. M. Bennett uncovered parts of Iron Age stone houses there in 1960–65, built in the 7th century BC. The site was taken by the Nabataeans c. 300 BC and they converted the great valley to the N, some 1,370 m long and 225–450 m across, quite enclosed by mountain walls, into the amazing rock-cut city of Petra—the ‘rose-red city half as old as time’.

More recently it has been claimed that another Iron Age site, *es-Sela*, 4 km NW of Bozra (Buseira) suits the biblical and post-biblical evidence better. This site was overlooked because of the impressive and continuous support for Petra. (See A. F. Rainey, *IDBS*, p. 100.)

2. An unidentified site, on the border of the Amorites in the time of the Judges (Jdg. 1:36), apparently within Judah. 3. Isaiah, referring to the coming judgment of Moab, spoke of fugitive Moabites sending tribute to Judah from distant Sela (Is. 16:1). The site is unidentified.

BIBLIOGRAPHY. On Umm el-Biyara, see P. C. Hammond, *ISBE* 4, pp. 383–384; W. H. Morton, *BA* 19, 1956, pp. 26f.; *RB* 71, 1964, pp. 250–253; C. M. Bennett, *RB* 73, 1966, pp. 372–403. On the identity of Sela, see J. Starcky, *DBS*, 1966, cols. 886–900; *NEAHL*, pp. 1488–1490. J.A.T.

SELAH. An isolated word occurring 71 times in the Psalms and three times in Habakkuk (3:3, 9, 13; ‘the minor Psalter’). Since all of these, except Pss. 41 and 81, name the kind of melody or psalmody in the title, it is generally agreed that Selah must be a musical or liturgical sign, though its precise import is not known. The following are the main suggestions:

1. A term in *music or a musical direction to the singers and/or orchestra to ‘lift up’, i.e. to sing or play *forte* or *crescendo*. Thus LXX has *diapsalma* in each instance, perhaps a musical rather than a doxological interlude.

2. A liturgical mark (*sālal*, ‘to lift up’; cf. Akkad. *sullu*, ‘prayer’), perhaps to lift up the voice or the hands in prayer. It may have come into use, possibly in the exilic period, in connection with psalms used in public worship to denote those places at which the priest should pronounce a benediction. Some take it to mean ‘to lift up’ the eyes, for the purpose of repeating the verse, thus the equivalent of ‘*da capo*’. Others would derive it from an Aramaic root *sl*, ‘to bow’, and so interpret it as directing the worshipper at this point to prostrate himself.

3. The Targ. Aquila and Vulg. render Selah by phrases implying an ejaculation ‘for ever’, and make it a cry of worship like ‘Amen’ and ‘Hallelujah’ (Ps. 46:3) at the close of the liturgy or at specified points within it (Ps. 3:2, 4, etc.).

D.J.W.

SELEUCIA. 1. The former port of Antioch in Syria (1 Macc. 11:8) which lay 8 km N of the

Seleucia was a seaport near the mouth of the R. Orontes in Syria.

mouth of the Orontes river and 25 km away from Antioch. Seleucia (*Seleukeia*) was founded by Seleucus Nicator in 301 BC, 11 years after he had established the Seleucid kingdom. The city lay at the foot of Mt Rhosus, to the N, and was itself in the NE corner of a beautiful fertile plain still noted for its beauty. It was fortified on the S and W and surrounded by walls, but, although regarded as impregnable, it was taken by the Ptolemy Euergetes (1 Macc. 11:8) in the Ptolemaic–Seleucid wars and remained in the hands of the Ptolemies till 219 BC, when Antiochus the Great recaptured it. He greatly beautified it, and, although it was lost again for a short time to Ptolemy Philometor in 146 BC, Seleucia was soon retaken. The Romans under Pompey made it a free city in 64 BC, and from then on it flourished until it began to decay fairly early in the Christian era. It is known in the Bible only in Acts 13:4, as the port of embarkation of Paul and Barnabas after they had been commissioned by the church in Antioch. From Seleucia they set sail for Cyprus on their first missionary journey. It is probably the port inferred in Acts 14:26; 15:30, 39, though it is not named.

Seleucia today is an extensive ruin, subject to archaeological investigation by a number of expeditions since 1937. The city area can be traced, and evidence of buildings, gates, walls, the amphitheatre, the inner harbour and the great water conduit built by Constantius in AD 338 in solid rock to carry off the mountain torrent from the city are all to be seen. The channel which connected the inner harbour to the sea has long been silted up.

2. A city in Gaulanitis SE of Lake Huleh captured by Alexander Yannai during his campaign in Transjordan in the 1st century AD. Josephus records that Agrippa II persuaded the people of the strongly fortified town to surrender to the Romans.

3. A city on the Tigris S of Baghdad founded by Seleucus I (312–280 BC) and occupied by Greeks and Syrians. It became a home for Jews in the 1st

century of the Christian era. Animosity against them led to the slaughter of 50,000; the survivors fled to Nisibis and other towns. This site has been partially excavated by the Italians. J.A.T.

SELEUCUS. One of Alexander's lesser generals, who took control of the far E satrapies after his death and became a leading advocate of partition. After the battle of Ipsus in 301 BC he founded the port of *Seleucia (in Pieria) (Acts 13:4) to serve his new W capital of Antioch, and the Seleucid domains were later extended over most of Asia Minor. The dynasty, many of whose kings bore the names of Seleucus or Antiochus, ruled from Syria for c. 250 years, until suspended by the Romans. The vast and heterogeneous population called for a policy of active hellenization if their power was to be established. This and the fact that Palestine was the disputed frontier with the Ptolemies of Egypt caused trouble for the Jews. The Maccabaeen revolt, with its legacy of petty kingdoms and principalities, and the religious sects of Jesus' time, was the result of the Seleucid attempt to secure Palestine.

SELF-CONTROL (AV 'temperance') translates the Gk. *enkrateia*, which occurs in three NT verses. The corresponding adjective *enkratēs* and verb *enkrateuomai* are used both positively and negatively. Another word translated 'temperate', *nēphalios*, sometimes carries a restricted reference to drinking, such as is often read into the modern word 'temperance'.

The verb *enkrateuomai* is first used in the LXX in Gn. 43:31 to describe Joseph's control of his affectionate impulses towards his brothers. It refers also to the false self-restraint of Saul in 1 Sa. 13:12, and of Haman in Est. 5:10. According to Josephus, the Essenes exercised 'invariable sobriety' (BJ 2. 133), and some of them rejected marriage as incompatible with continence. The Greeks held temperance to be a cardinal virtue.

A very significant use of *enkrateia* is found in Acts 24:25. Since an adulteress sat beside Felix while Paul discussed self-control, its bearing on unchastity is easily apparent, and the verse compares naturally with 1 Cor. 7:9. This restricted reference to chastity often features in later literature. The Encratites enjoined complete abstinence from marriage; and some Christian clergy today may not marry. This distorted interpretation is called demonic in 1 Tim. 4:2-3, and the qualification 'self-controlled' (*enkratēs*) is applied to the married bishop in Tit. 1:8 (cf. 1 Pet. 3:2).

The association of *enkrateia* with righteousness in Acts 24:25 is parallel to other contexts where it is listed in catalogues of graces. In Gal. 5:22-23 it is the last of nine virtues, and seems to be opposed to drunkenness and carousing in the corresponding list of vices. In 2 Pet. 1:6 it forms a midway stage in a distinct moral progress of the believer, which commences in faith and culminates in love. (The form of the passage recalls expositions of Stoic moral *prokopē*.) The related words *nēphalios* and *sōphrōn* (sober-minded) appear in a list of virtues demanded of older Christian men in Tit. 2:2, 12.

The precise reference of *nēphalios*, 'temperate',

is to drunkenness, and the word is actually opposed to 'drunkard' in 1 Tim. 3:2-3. It can broaden out, however, to include other forms of self-control, as in Tit. 2:2 and 1 Tim. 3:11. This extended application should be recollected when rendering the verb *nēphō*, which in RSV is translated 'to be sober', but which usually means 'to be vigilant' in contexts like 1 Thes. 5:6 and 1 Pet. 1:13; 4:7; 5:8. In 1 Cor. 9:25 the widest possible reference is given to *enkrateuomai* when the Christian athlete is said to exercise self-control in all things.

In the NT self-control is essentially a 'fruit of the Spirit' (Gal. 5:22-23). A deliberate antithesis between spiritual life and carnal drunkenness is introduced into several passages describing prophetic inspiration (e.g. Acts 2:15-17 and Eph. 5:18). Believers who 'drink of the Spirit' (1 Cor. 12:13) are thought by the world to be 'drunk'; and indeed so they are, not with wine, but with zeal for the Christian warfare. This passion to be good soldiers of Christ expresses itself not in excess but in sober discipline; it is the true imitation of a Master, whose life, as Bernard says, was the 'mirror of temperance'.

BIBLIOGRAPHY. R. L. Ottley in *ERE* (s.v. 'Temperance'); *BAGD*; H. Rashdall, *Theory of Good and Evil*, 1907; H. Baltensweiler, *NIDNTT* 1, pp. 494-497. D.H.T.

SENAAH. In the list of exiles who returned with Zerubbabel there are 3,630 (Ezr. 2:35) or 3,930 (Ne. 7:38) belonging to the town of Senaah. In Ne. 3:3 the name of the town occurs again with the definite article. Since in both passages Jericho is mentioned in close proximity, Senaah may have been near Jericho. J.S.W.

SENATE, SENATOR. 1. The AV translation in Ps. 105:22 (Heb. *z'qānim*; LXX *presbyteroi*), where RSV has '*elders'. 2. Gk. *gerousia*, 'assembly of elders', Acts 5:21 (*SANHEDRIN). J.D.D.

SENEH ('pointed rock') and **BOZEZ** ('slippery?') were two rocks between which Jonathan and his armour-bearer entered the garrison of the Philistines (1 Sa. 14:4ff.). (*MICHMASH.) No precise identification of the location of these two rocky crags has been made, but see *GTT*, p. 317. J.D.D.

SENIER. According to Dt. 3:9, the Amorite name for Mt Hermon (*s'nir*; AV Shenir); but in Ct. 4:8 and 1 Ch. 5:23, apparently one of the peaks in the ridge, the name being loosely applied to the whole. Manasseh expanded N to Senir (1 Ch. 5:23), and the slopes supplied fir (*TREES) for Tyrian ships, Lebanon yielding cedars (Ezk. 27:5). Shalmaneser III names Senir (*sa-ni-ru*) as a stronghold of Hazael (*ANET*, p. 280). A.R.M.

SENNACHERIB. Sennacherib (Heb. *sanhērib* [but possibly pronounced *shnrīb* as in Aram. papyri; *JSS* 21, 1976, p. 9]; Assy. *Sin-ahhē-eriba*, 'Sin [moon-god] has increased the brothers') ruled Assyria 705-681 BC. When his father, whom he had served as governor of the N frontier, was assassinated, Sennacherib first marched to Babylonia,

SENNACHERIB

where Marduk-apla-iddina II (*MERODACH-BALADAN) was in revolt. He had ousted a local nominee Marduk-zakir-šum in 703 BC and was rallying support against Assyria. It was probably about this time that Merodach-baladan sent envoys to Hezekiah of Judah (2 Ki. 20:12-19; Is. 39). Late in 702 BC Sennacherib defeated the Chaldean and his Elamite and Arab allies in battles at Cutha and Kish. He was then welcomed in Babylon, where he set Bel-ibni on the throne. The Assyrians ravaged Bit-Yakin and returned to Nineveh with many prisoners, Merodach-baladan himself having escaped to Elam.

Sennacherib had little difficulty in controlling his N frontier, an area well known to him while crown prince. After a series of raids against the hill peoples in the E he moved against the W, where an anti-Assyrian coalition, backed by Egypt, was gaining power. The leader, Hezekiah of Judah, had seized Padi, the pro-Assyrian ruler of Ekron (2 Ki. 18:8), strengthened the fortifications and improved the water supplies at Jerusalem by building the *Siloam tunnel (2 Ki. 20:20), and called for help from Egypt (Is. 30:1-4).

Sennacherib's third campaign in Hezekiah's 14th year (701 BC) was directed against this coalition. He first marched down the Phoenician coast, capturing Great and Little Sidon, Zarephath, Mahalliba (*AHLAB), Ushu, Akzib and Acco, but not attempting to lay siege to Tyre. He replaced Luli (Elulæus), king of Sidon, who fled and died in exile, by Ethba'al (Tuba'al). The kings of Sidon, Arvad, Byblos, Beth-ammon, Moab and Edom submitted, but Ashkelon refused and, with its neighbouring towns, including Beth-Dagon and Joppa, was despoiled. Sennacherib claims to have marched to Eltekeh, where he defeated an Egyptian army. He then slew the nobles of Ekron for handing over Padi to Hezekiah, and sent detachments to destroy forty-six walled towns and many villages in Judah, from which he took 200,150 people and much spoil. He himself took part in the siege and capture of *Lachish, and is depicted on his palace reliefs reviewing the spoil. From here he sent officers to demand the surrender of Jerusalem (2 Ch. 32:9).

Sennacherib's own account of this campaign claims tribute from Hezekiah (Annals) and describes how he besieged 'Hezekiah the Jew . . . I shut him up like a caged bird within his royal capital, Jerusalem. I put watch-posts closely round the city and turned back to his fate anyone who came out of the city gate' (Taylor Prism, BM). Hezekiah paid the Assyrians tribute (2 Ki. 18:13-16; Is. 36:1f.) which was later sent to Nineveh (Taylor Prism, dated 691 BC) and freed Padi, to whom some of the former Judean territories were now given.

Sennacherib's account makes no mention of any conclusion of the siege (cf. 2 Ki. 19:32-34) or of the defeat of the Assyrian army by the hand of the Lord, perhaps by a plague (v. 35) described by Herodotus (2. 141) as 'a multitude of field mice which by night devoured all the quivers and bows of the enemy, and all the straps by which they held their shields . . . next morning they commenced their fight and great numbers fell as they had no arms with which to defend themselves'.

The majority of scholars hold that the mention of the approach of the Egyptian forces under *Tirhakah (2 Ki. 19:9; Is. 37:9) is an anachronism (but see K. A. Kitchen, *Third Intermediate Period*

in Egypt, 1972). Moreover, they consider 2 Ki. 19:37 implies that the death of Sennacherib occurred soon after his return to Nineveh. They therefore postulate a second, and unsuccessful, Assyrian campaign against Jerusalem, perhaps following the attack on the Arabs 689-686 BC. Neither the extant Assyrian annals nor Babylonian chronicles mention such a campaign, and vv. 36f. do not necessarily state the length of time between Sennacherib's return from Palestine and his death in 681 BC, and this must have been some years on any interpretation. Thus the theory of a single campaign in 701 BC can still reasonably be held.

In 700 BC the Assyrians once more marched to Babylonia, where Bel-ibni had rebelled. Sennacherib placed his own son, Aššur-nadin-šum, on the throne, and he held sway until captured by the Elamites. In the series of campaigns which followed, Sennacherib fought the Elamites, and in 694 mounted a naval expedition across the Persian Gulf directed against those who had harboured Merodach-baladan. Erech was captured and, finally, Babylon sacked in 689 BC. On other frontiers Sennacherib invaded Cilicia and captured Tarsus, as well as raiding the Arabs S and E of Damascus.

At home Sennacherib was aided by his energetic W Semitic wife, Naqi'a-Zakutu, in the reconstruction of Nineveh, where he built a 'palace without a rival', an armoury, new city walls and gates. By providing a new source of water-supply from the river Gomel (Bavian), led by an aqueduct (Jerwan) down to a dam (Ajeila) E of the metropolis, he was able to irrigate parks and large tracts of land as well as to improve the natural defences of Nineveh formed by the rivers Tigris and Khosr.

He also built extensively at Assur and Kakzi and introduced many technological advances.

Sennacherib was assassinated by his sons while worshipping in the temple of Nisroch (2 Ki. 19:37). The flight of the sons, possibly *Adrammelech and *Sharezer, may be reflected in an account of the disturbances following his death in December 681 BC given by his younger son Esarhaddon, who had been elected crown prince in 687 BC, and now succeeded to the throne (v. 37). There is little support for the theory that Esarhaddon was the unnamed 'son' mentioned as assassin by the Babylonian Chronicle, or that the death took place in Babylon.

D. J. W.

SEPHAR. The name of a 'mountain of the east' (*har haq-qedem*), mentioned in the Table of *Nations in defining the boundary of the territory of the sons of Joktan (Gn. 10:30). Judging from the names of other sons of Joktan, a mountain or promontory in S Arabia seems likely, and the coastal town of Zafār in the E Hadramaut has been suggested. In view, however, of the lack of precision in the Bible statement, and the discrepancy in the sibilants, there can be no certainty.

See J. A. Montgomery, *Arabia and the Bible*, 1934, p. 41.

T. C. M.

SEPHARAD. The place in which captives from Jerusalem were exiled (Ob. 20). The location is as yet unidentified. Of many conjectures, the most plausible identifies the place as Sardis, capital of Lydia in Asia Minor. Known in Persian times as Sfard, it

is written in Aramaic with the same consonants as in Obadiah. It may be the Saparda named in the Assyrian Annals of Sargon and Esarhaddon as a country allied to the Medes. The Targum of Jonathan interpreted it as Spain, hence the term Sephardim for Spanish Jews. A location in Anatolia is favoured by the Vulgate (*in Bosphoro*). See *JNES* 22, 1963, pp. 128–132. D.J.W.

SEPHARVAIM. A city captured by the Assyrians (2 Ki. 17:24, 31; 18:34; 19:13; Is. 36:19; 37:13). The context implies that it lies in Syria or adjacent territory and this is supported by the name of its deities (**ADRAMMELECH*; **ANAMMELECH*). The place is unidentified, though Halévy's suggestion that it is the same as the later Sibraim near Damascus (Ezk. 47:16) is possible. It cannot be the same as the Šab/mara'in of the Babylonian Chronicle, as this is Samaria. The usual interpretation of Sepharvaim as the twin cities of Sippar (of Šamaš and Anunitum) in Babylonia is unsupported (though Sippar-amnanim is mentioned in texts), as Sippar had no independent king (*cf.* 2 Ki. 19:13).

D.J.W.

SEPULCHRE OF THE KINGS, SEPULCHRE OF DAVID. The Bible indicates that the kings of Israel were buried in a special area near Jerusalem. Expressions like 'tombs of the kings of Israel' (2 Ch. 28:27), 'sepulchres of David' (Ne. 3:16), 'tombs of the sons of David' (2 Ch. 32:33), refer specifically to the royal tombs of the Judacan kings of David's line in the city of David. These tombs were close to the King's Garden and the pool of Shelah (1 Ki. 2:10; 2 Ch. 21:20; Ne. 3:15–16). Thus when Nehemiah was building the wall of Jerusalem one of his parties worked 'over against the sepulchres of David', not far from the 'pool of Shelah (Shiloah)' (Ne. 3:15–16).

Most of the kings from David to Hezekiah were buried in the city of David, though some kings had their own private sepulchres, *e.g.* Asa (2 Ch. 16:14), and possibly Hezekiah (2 Ch. 32:33), Manasseh (2 Ki. 21:18), Amon (2 Ki. 21:26) and Josiah (2 Ki. 23:30; 2 Ch. 35:24). Several kings died outside the bounds of Palestine: Jehoahaz in Egypt, Jehoiachin and Zedekiah in Babylon. Possibly Jehoiachim was not buried at all (Je. 22:19), and Jehoram, Joash, Uzziah and Ahaz were not admitted to the royal sepulchre (2 Ch. 21:20; 24:25; 26:23; 28:27).

The location of the tombs in the city of David was still referred to after the Exile. Josephus reported that they were plundered by the Hasmonean king John Hyrcanus and also by Herod (*Ant.* 13. 249; 16. 179).

In the NT the sepulchre of David was still remembered (Acts 2:29) and Josephus (*BJ*, 5. 147) spoke of the third wall passing by the sepulchred caverns of the kings. An inscribed tablet found by E. Sukenik states that the bones of King Uzziah had been removed to the top of the Mount of Olives.

The exact site of the tombs of the kings is not known today. Monuments in the Kedron Valley are late, both architecture and epigraphy pointing to the time of Herod the Great.

The term 'City of David' in the vicinity of which these tombs lay does not denote the entire city of Jerusalem but merely the citadel of the stronghold of Zion. Evidence points to the spur which juts S

between the Tyropoean and Kedron valleys, later known as Ophel, as the location of the City of David. It overlooks the gardens and pools of Siloam. In this general area long horizontal tunnels have been found in the rock and these may have been the burial-place of the kings of David's line. But the site was desecrated and destroyed, possibly at the time of the Bar-Kokhba revolt (AD 135), and thereafter the exact location forgotten.

Various other sites have been proposed over the centuries. A popular tradition reaching back for 1,000 years places the tomb of David on the W hill at the place now called Mt Zion. The tradition was accepted by Jewish, Muslim and Christian traditions, and Benjamin of Tudela (c. AD 1173) reported the miraculous discovery of David's Tomb on Mt Zion during the repair of a church on the site. Pilgrimages are still made to the site, but there is little to commend its authenticity.

The so-called Tombs of the Kings of Judah some distance to the N of the modern wall mark the tomb of Helen, queen of Adiabene, a district in Upper Mesopotamia referred to by Josephus (*Ant.* 20. 17, 35).

SERIAIAH (Heb. *š'ráyā, š'ráyāhū*, 'Yahweh has prevailed'). 1. David's scribe (2 Sa. 8:17, rsv 'secretary'), called also 'Sheva' (2 Sa. 20:25), 'Shisha' (1 Ki. 4:3), and *'Shavsha' (1 Ch. 18:16).

2. Son of Azariah and a chief priest in the time of Zedekiah. He was put to death by the king of Babylon at Riblah (2 Ki. 25:18 = Je. 52:24). 3. A son of Tanhumeth the Netophathite, and a captain who was among those whom Gedaliah, governor of Judaea, advised to submit to the Chaldeans (2 Ki. 25:23 = Je. 40:8). 4. A son of Kenaz (1 Ch. 4:13–14). 5. A Simeonite, son of Asiel (1 Ch. 4:35). 6. A priest who returned with Zerubbabel to Jerusalem (Ezr. 2:2; Ne. 12:1, 12). 7. One who sealed the covenant (Ne. 10:2), perhaps the same as 6 above. 8. A priest, son of Hilkiyah (Ne. 11:11) and 'ruler of the house of God' in post-exilic Jerusalem. 9. One of the officers of King Jehoiachim, ordered by him to arrest Baruch and Jeremiah (Je. 36:26). 10. A prince of Judah who accompanied King Zedekiah to Babylon in the 4th year of his reign. Seraiah carried Jeremiah's prophecy against Babylon (Je. 51:59, 61). Some would associate him with 3 above.

J.D.D.

SERAPHIM. The only mention of these celestial beings in Scripture is in the early vision of Isaiah (Is. 6). The seraphim (incorrectly rendered in AV as 'seraphims') were associated with *cherubim and ophanim in the task of guarding the divine throne. The heavenly beings seen by Isaiah were human in form, but had six wings, a pair to shield their faces, another to conceal their feet and a third for flight. These seraphim were stationed above the throne of God, and appear to have led in divine worship. One chanted a refrain which Isaiah recorded: 'Holy, holy, holy is the Lord of hosts; the whole earth is full of his glory.'

So vigorous was this act of worship that the thresholds of the divine Temple shook, and the holy place was filled with smoke. The prophet lay

SERAPHIM

in self-abasement before God and confessed his iniquity. Then one of the seraphim flew to him with a burning coal taken from the altar, and in an act of purification announced to Isaiah that his sin had been forgiven and his guilt removed.

It would appear that for Isaiah the seraphim were angelic beings responsible for certain functions of guardianship and worship. However, they appear to have been distinct moral creatures, not just projections of the imagination or personifications of animals. Their moral qualities were employed exclusively in the service of God, and their position was such that they were privileged to exercise an atoning ministry while at the same time extolling the ethical and moral character of God.

The origin and meaning of the Heb. term are uncertain. The *šārap* of Nu. 21:6; Dt. 8:15 was a venomous serpent which bit the Israelites in the desert, while Is. 14:29; 30:6 referred to a reptile popular in folklore (see D. J. Wiseman, *TynB* 23, 1972, pp. 108–110). If the noun be derived from Heb. *šārap* 'to burn up', the seraphim may be agents of purification by fire, as Is. 6. indicates. A meaning 'bright, shining ones' cannot be taken from *šārap*.

A sculpture found at Tell Halaf (*GOZAN) depicts a creature with a human body, two wings at the shoulders and four below the waist (*ANEP*, no. 655). It is dated about 800 BC. For other ancient representations, see *CHERUBIM.

SERMON ON THE MOUNT. The Sermon on the Mount is the title commonly given to the teachings of Jesus recorded in Mt. 5–7. Whether the name can be properly used for the somewhat parallel portion in Luke (6:20–49) depends upon one's interpretation of the literary relationship between the two. The latter is often called the Sermon on the Plain because it is said to have been delivered on 'a level place' (Lk. 6:17) rather than 'on the mountain' (Mt. 5:1). But both expressions probably denote the same place approached from two different directions (see W. M. Christie, *Palestine Calling*, 1939, pp. 35f.).

Canon Liddon, in his Bampton Lectures, refers to the Sermon as 'that original draught of essential Christianity'. If this be interpreted to mean that the Sermon on the Mount is Christianity's message to the pagan world, we must counter with the reminder that it is manifestly *didachē* (teaching), not *kerygma* (proclamation). By no stretch of the imagination can it be considered 'good news' to one depending upon fulfilment of its demands for entrance into the kingdom. (Imagine a man outside of Christ, without the empowering aid of the Holy Spirit, trying to exceed the righteousness of the scribes and Pharisees.) It is rather a character sketch of 'those who have already entered the kingdom and a description of the quality of ethical life which is now expected of them. In this sense, it is true, it is 'essential Christianity'.

I. Composition

In times past it was taken for granted that the Sermon on the Mount was a single discourse delivered by Jesus on a specific occasion. Certainly

this is what appears to be the case as it is reported in Matthew. The disciples sat down (v. 1), Jesus opened his mouth and taught them (v. 2), and when it was over the crowds were astonished at his teaching (7:28). However, most scholars are of the opinion that the Sermon is really a compilation of sayings of the Lord—'a kind of epitome of all the sermons that Jesus ever preached' (W. Barclay, *The Gospel of Matthew*, 1, p. 79). It is argued that: (1) There is far too much concentrated material here for one sermon. The disciples, not noted for acute spiritual perception, could never have assimilated such a wealth of ethical teaching. (2) The wide range of topics (description of kingdom blessedness, counsel on divorce, admonition concerning anxiety) is inconsistent with the unity of a single discourse. (3) The abruptness with which certain sections emerge in the Sermon (e.g. the teaching on prayer in Mt. 6:1–11) is very noticeable. (4) Thirty-four verses occur in other, and often more suitable, contexts throughout Luke (e.g. the Lord's Prayer in Luke is introduced by a request from his disciples that he teach them to pray, Lk. 11:1; the saying about the narrow gate comes in response to the question, 'Will those who are saved be few?' Lk. 13:23), and it is more likely that Matthew transposed sayings of Jesus into the Sermon than that Luke found them there and then scattered them throughout his Gospel. (5) It is characteristic of Matthew to gather together teaching material under certain headings and insert them into the narrative of Jesus' life (cf. B. W. Bacon, *Studies in Matthew*, 1930, pp. 269–325), and that the Sermon on the Mount is therefore simply the first of these didactic sections. (Others deal with the themes of discipleship (9:35–10:42), the kingdom of heaven (13), true greatness (18) and the end of the age (24–25).)

These considerations, however, do not force one to view the entire Sermon as an arbitrary composition. The historical setting in Mt. 4:23–5:1 leads us to expect an important discourse delivered on a specific occasion. Within the Sermon itself are various sequences which appear to be 'sermonettes' of Jesus and not topical collections of separate *logia*. A comparison with Luke's Sermon shows enough points of similarity (both begin with Beatitudes, close with the parable of the builders, and the intervening Lucan material—on loving one's enemies (6:27–36) and judging (6:37–42)—follows in the same sequence in Matthew) to suggest that behind both accounts there was a common source. Before either Evangelist wrote there was in all probability a primitive framework which corresponded to an actual discourse delivered on a definite occasion. Such questions as whether the Sermon as it occurs in Matthew is closer to the original than the Lucan version, or whether Matthew followed a framework supplied by an earlier source, are still matters of scholarly debate. For our purpose it is enough to conclude that Matthew took a primitive sermon source and expanded it for his particular purpose by the introduction of relevant material.

II. Language of the Sermon

In the last generation Aramaic scholarship has taught us much about 'The Poetry of Our Lord'—to borrow the title of C. F. Burney's book (1925). Even in translation we can recognize the various types of parallelism, which are the distinguishing feature of Semitic poetry. Mt. 7:6, for example, is a fine illustration of 'synonymous' parallelism:

'Do not give dogs what is holy;
and do not throw your pearls before swine.'

It appears that the Lord's Prayer is a poem of two stanzas, each of which has three lines of four beats apiece (cf. Burney, pp. 112f.). The practical value of recognizing poetry where it occurs is that we are not so likely to interpret the text with such an inflexible literalism as we might employ in interpreting prose. How tragic if someone should (and history records that some have done so) literally 'pluck out his eye' or 'cut off his hand' in an attempt to do away with the passion of lust. A. M. Hunter notes that 'proverbs indeed are principles stated in extremes'. We must always avoid interpreting paradox with a crude literalism, but rather seek the principle that underlies the proverb (*Design for Life*, pp. 19-20).

In this connection let us consider the quality of absoluteness in Jesus' moral imperatives. Verses like Mt. 5:48, 'You, therefore, must be perfect, as your heavenly Father is perfect', have long troubled men. Part of the answer lies in the fact that these are not 'new laws' but broad principles set forth in terms of action. They fall into the category of prophetic injunction, which was always deeper and demanded more than the mere letter of the law. And they were ethics of the new age, designed for those who partook of a new power (cf. A. N. Wilder, 'The Sermon on the Mount', *IB*, 7, 1951, p. 163).

III. Circumstances

Both Matthew and Luke place the Sermon in the first year of Jesus' public ministry; Matthew a little earlier than Luke, who locates it immediately after the choosing of the Twelve and implies that it should be understood as somewhat of an 'ordination sermon'. In either case, it came in that period before the religious teachers could muster their opposition, and yet late enough for Jesus' fame to have spread through the land. The first months of his Galilean ministry were spent in synagogue preaching, but soon the enthusiasm of his crowds necessitated some sort of outdoor preaching. A corresponding change can be seen in the character of his message. The early proclamation, 'Repent: for the kingdom of heaven is at hand' (Mt. 4:17), has given way to exposition on the nature of the kingdom for those who seriously desired to learn.

Since the Sermon falls within the Galilean ministry of Jesus, it is natural to assume that the scene of the Sermon would be one of the foothills which surrounded the N plain. As Jesus entered Capernaum soon after (Mt. 8:5), it was perhaps located in that general area. A Latin tradition, dating from the 13th century, names a two-peaked hill, Karn Hattin, which lies a bit farther to the S, but only guides and tourists seem to take this identification with any degree of seriousness.

The Sermon is addressed primarily to disciples. This is the apparent meaning of both Mt. 5:1-2 and Lk. 6:20. Luke's use of the second person in the Beatitudes, in sayings like 'You are the salt of the earth' (Mt. 5:13), and the exalted ethic of the Sermon as a whole, can only mean that it was designed for those who had deserted paganism for life in the kingdom. Yet at the close of each account (Mt. 7:28-29; Lk. 7:1) we learn of the presence of others. The solution seems to be that the crowd was there and heard Jesus as he taught, but that the discourse itself was directed primarily to

the circle of disciples. Occasional utterances, such as the 'woes' of Lk. 6:24-26, unless rhetorical devices, seem to be 'asides' to some who might be listening in and who needed such admonition.

IV. Analysis

Regardless of whether one sees the Sermon as the summary of an actual discourse or as a mosaic of ethical sayings arranged by Matthew, there is little doubt that Mt. 5-7 has a real unity marked by the logical development of a basic theme. This theme is presented in the Beatitudes and can be expressed as 'the quality and conduct of life in the kingdom'. The following is a descriptive analysis of the content of the Sermon.

a. *The blessedness of those in the kingdom*, 5:3-16

(i) The Beatitudes (5:3-10).
(ii) An expansion of the final Beatitude and a digression to show the role of the disciple in an unbelieving world (5:11-16).

b. *The relationship of the message of Jesus to the old order*, 5:17-48

(i) The thesis stated (5:17). Jesus' message 'fulfills' the law by penetrating behind the letter and clarifying its underlying principle, thus bringing it to its ideal completion.

(ii) The thesis enlarged (5:18-20).
(iii) The thesis illustrated (5:21-48).
1. In the command not to kill, anger is the culpable element (5:21-26).

2. Adultery is the fruit of an evil heart nourished on impure desire (5:27-32).

3. Kingdom righteousness demands an honesty so transparent that oaths are unnecessary (5:33-37).

4. *Lex talionis* must give way to a spirit of non-retaliation (5:38-42).

5. Love is universal in application (5:43-48).

c. *Practical instructions for kingdom conduct*, 6:1-7:12

(i) Guard against false piety (6:1-18).

1. In almsgiving (6:1-4).

2. In prayer (6:5-15).

3. In fasting (6:16-18).

(ii) Dispense anxiety with simple trust (6:19-34).

(iii) Live in love (7:1-12).

d. *Challenge to dedicated living*, 7:13-29

(i) The way is narrow (7:13-14).

(ii) A good tree bears good fruit (7:15-20).

(iii) The kingdom is for those who hear and *do* (7:21-27).

V. Interpretation

The Sermon on the Mount has had a long and varied history of interpretation. For Augustine, who wrote a treatise on the Sermon while still a bishop at Hippo (AD 393-396), it was the 'perfect rule or pattern of Christian life'—a new law in contrast with the old. Monastic orders interpreted it as a 'counsel of perfection' designed not for the populace but for the chosen few. The Reformers held it to be the 'uncompromising expression of divine righteousness directed towards all'. Tolstoy, the Russian novelist and (in later life) social reformer, resolved it into five commandments (suppression of all anger, chastity, no oaths, non-resistance, unreserved love of enemies), which if literally obeyed would do away with the existing evils and usher in

SERMON ON THE MOUNT

a Utopian kingdom. Weiss and Schweitzer held that the demands were too radical for all times, and thus declared their 'interim ethics' for the early Christians, who believed that the end of all things was at hand. Still others, making great allowance for figurative language, understood the Sermon as the expression of a noble way of thinking—teaching which dealt with what man should be rather than with what he should do.

Thus the 20th-century interpreter is presented with a bewildering number of 'keys' with which to unlock the essential meaning of the Sermon on the Mount. With Kittel he can take the demands as purposely exaggerated so as to drive man to a sense of failure (and hence to repent and believe), or with Windisch he can differentiate between historical and theological exegesis and defend the practicability of the demands. With Dibelius he can interpret the great moral imperatives as the absolute ethic of the inbreaking kingdom, or with the Dispensationalists he can relegate the entire sermon to a future millennial reign of Christ.

How, then, shall we interpret the Sermon? The following will at least give us our guide-lines: *a.* Although couched in poetry and symbol, the Sermon still demands a quality of ethical conduct which is breath-taking in its dimensions. *b.* Jesus is not laying down a new code of legal regulations but stating great ethical principles and how they affect the lives of those within the kingdom. 'It would be a great point gained if people would only consider that it was a Sermon, and was preached, not an act which was passed' (J. Denney). *c.* The Sermon is not a programme for the direct improvement of the world, but is directed to those who have denied the world in order to enter the kingdom. *d.* It is neither an impractical ideal nor a fully attainable possibility. In the words of S. M. Gilmour, it is 'the ethic of that transcendental order which broke into history in Jesus Christ, has built itself into history in the church, but whose full realization lies beyond history when God will be "all in all"' (*Journal of Religion* 21, 1941, p. 263).

SERPENT.

I. General.

Serpents or snakes (*ANIMALS) are reptiles that have head, body and tail but no limbs, and move over the ground on their belly, so that with their flickering tongue they are often described as lick-

ing or eating the dust (Gn. 3:14; cf. Is. 65:25; Mi. 7:17; and implicitly, Pr. 30:19). In simile, compare the nations creeping like snakes, to acknowledge Israel's God (Mi. 7:17) and Egypt's flight from battle like a hissing snake down its bolt-hole (Je. 46:22, in contrast to the Egyptian concept of the sacred uraeus-snake on a pharaoh's brow leading him to victory). The ability of various snakes to inject deadly poison into a wound when they bite or strike (Gn. 49:17; Ec. 10:8, 11; implicitly, Mt. 7:10; Lk. 11:11) enters into many biblical similes. Subjects of such similes include the harmfulness of the wicked (Dt. 32:33 (rebellious Hebrews); Pss. 58:4; 140:3) or of overmuch wine (Pr. 23:32), the Day of the Lord (Am. 5:19), and in metaphor foreign oppressors (Is. 14:29). Like war, famine, etc., snake-bite could feature among divine judgments and punishments (Nu. 21:4-6; Je. 8:17; Am. 9:3), and deliverance from this harm could be granted to God's servants (Mk. 16:18; Lk. 10:19; cf. Acts 28:3-6). Some snakes could be charmed (Ec. 10:11), others were considered 'deaf' to the charmer's techniques (Ps. 58:4-5; Je. 8:17). Snake-charmers may possibly be represented on Egyptian scarab-amulets (P. Montet, *L'Égypte et la Bible*, 1959, pp. 90-94, fig. 17). On snake-charming in Egypt, ancient and modern, cf. L. Keimer, *Histoires de Serpens dans l'Égypte Ancienne et Moderne*, 1947, and for Mesopotamia, see N. L. Corkill, 'Snake Specialists in Iraq', *Iraq* 6, 1939, pp. 45-52.

Besides the general word *nāhās*, 'snake, serpent' and *sārāp*, 'burning' (see II, below), Heb. possesses several other words for serpents. The old word *peten* (Dt. 32:33; Jb. 20:14, 16; Pss. 58:4; 91:13; Is. 11:8; av 'adder, asp') occurs as *bin* in the Ugaritic texts of the 14th century BC. This is often considered to be the Egyptian cobra (Arab. *naja haje*; and the related *naja nigricollis*, M. A. Murray, *JEA* 34, 1948, pp. 117-118), and is the 'asp' of classical writers. The cobra gave rise to two Egyptian hieroglyphs. This venomous beast gave point to passages like Dt. 32:33 and Jb. 20:14, 16. The word *'ep'eh* (Jb. 20:16; Is. 30:6; 59:5; av 'viper') is identical with Arab. *afa'a*, and like that word appears to be a further general term for serpents and sometimes more specifically for vipers (cf. L. Keimer, *Études d'Égyptologie*, 7, 1945, pp. 38-39, 48-49). In Gn. 49:17 (av 'adder'), Heb. *š'pīpōn* is often thought to represent the *cerastes* vipers: either or both the 'horned viper', *Cerastes cornutus*, and the hornless *Vipera cerastes*. In Egypt and Palestine these have been familiar from ancient times, and in Egypt became the hieroglyph for 'f', from the onomatopoeic words *fy*, *fyt*, 'cerastes-viper' (Keimer, *Études d'Égyptologie* 7, 1945; P. E. Newberry, *JEA* 34, 1948, p. 118). The identification of *'akšūb* in Ps. 140:3 is uncertain; in Rom. 3:13 it is rendered by Gk. *aspis*, 'asp'. The word *šīp'ōni* is rendered by av as 'adder' in Pr. 23:32, and, like *sepa'* in Is. 14:29, as 'cockatrice' in Is. 11:8; 59:5; Je. 8:17; these words certainly denote snakes of some kind. The animal that fastened on Paul's hand in Acts 28:3 is often considered to be the common viper of the Mediterranean region; the same Greek word (*echidna*) is used in the powerful metaphors of Mt. 3:7; 12:34; 23:33; Lk. 3:7.

II. Specific

a. The first serpent in Scripture is the subtle creature of Gn. 3, used by Satan to alienate man from God (Rom. 16:20; 2 Cor. 11:3), controlled by the

devil like the demons in men and swine in NT days. For its part, the serpent was put under a curse that it would never rise above its (already customary) creeping posture (Gn. 3:14). The serpent thus remained a biblical symbol of deceit (Mt. 23:33), and the arch-deceiver himself is 'that old serpent' (Rev. 12:9, 14-15; 20:2); Christians should match the serpent in his fabled wisdom if in no other respect (Mt. 10:16).

b. A sign performed by Moses before Israel (Ex. 4:2-5, 28-30) and by Moses and Aaron before pharaoh (Ex. 7:8-12) was to cast down his rod so that it became a serpent and take it up again as a rod, having on the latter occasion swallowed up the serpent-rods of the Egyptian magicians (*MAGIC AND SORCERY, 2. II. c).

c. In the wilderness rebellious Israel was once punished by the onset of 'fiery serpents' (*nāhās sārāp*), whose venom was fatal (Nu. 21:4-9; cf. Dt. 8:15). When Israel sought deliverance God commanded Moses to set up a bronze figure of a serpent on a pole, that those bitten might look to it, trusting in God's healing power, and live (*SERPENT, BRONZE). The term *sārāp*, 'burning', or 'fiery', may refer to the effect of the venom or poison of the snakes concerned; it recurs in Is. 14:29 and 30:6 (where 'flying' might refer to the speed with which such reptiles may strike, as though 'winged'—so, modern Arab usage; for this and other explanations, see Keimer, *Histoires de Serpents*, p. 10, n. 2; D. J. Wiseman, *TynB* 23, 1972, pp. 108-110).

d. Some Hebrew references to 'serpents' apply rather to other fearful creatures, or are metaphorical of certain great military powers in the biblical world. Thus, the 'serpent' of Am. 9:3 is probably some large denizen of the deep rather than a snake. In Is. 27:1 the sword to be raised against 'Leviathan the fleeing (or, swift) serpent, Leviathan the twisting (or, winding) serpent, and . . . the dragon that is in the sea' (cf. rsv) most probably expressed coming judgment upon Assyria (land of the swift Tigris), Babylonia (of the winding Euphrates) and Egypt (*tannin*, 'dragon, monster', as in Ezk. 29:3; 32:2) respectively. Isaiah may here be announcing God's judgment on these pagan lands in terms of the ancient Canaanite myth of Baal's destruction of Lōtan or Leviathan and the many Mesopotamian tales of slaying dragons and serpents (Labbu, Zu, etc.), not to mention the Egyptian overthrowing of 'Apep, condemning them under their own popular imagery. In Jb. 26:13 the identity of the 'fleeing serpent' as associated with the sky is uncertain. Since the serpent can stand for Satan (cf. a, above, and Rev. 12:7-10, 14-15; 20:2) one may possibly compare here his alternative (?) designation of fallen Day Star (אֲבֻר 'Lucifer'), to whom the king of Babylon is likened in Is. 14:12, 15; cf. Jude 6 and 2 Pet. 2:4.

In no case does any of these passages, biblical or non-biblical, refer to a creation-struggle of deity and monster, as all the serpent-slaying in them is done within an already created world. Furthermore, the Babylonian Tī'amat, whose death at Marduk's hands is associated with creation, was not a serpent or dragon, and therefore gives no support for assuming a struggle of deity and serpent/dragon at creation either (cf. A. Heidel, *The Babylonian Genesis*, 1951, pp. 83-88, 102-114). (*DRAGON; *LEVIATHAN; *RAHAB.)

In Canaanite, Mesopotamian, Anatolian and Egyptian mythology and cults, serpent deities are

known, and serpents in various contexts are symbols of protection (Egyptian uraeus), of evil (e.g. Egyptian 'Apep or Apopis), of fecundity (Egypto-Canaanite goddesses of sex; ANEP, figs. 471-474), or of continuing life (symbolized by repeated shedding of its skin, cf. A. Heidel, *The Gilgamesh Epic and Old Testament Parallels*, 1949, p. 92, n. 212). For Canaanite altar-stands with serpents modelled on them, see ANEP, figs. 585, 590. In the texts from Ugarit note the prescribed sacrifice of 'a head of small cattle (for) 'Anat-Lōtan' (C. H. Gordon, *Ugaritic Literature*, 1949, pp. 114, 107, n. 1) and an incantation against snakes (C. Virolleaud, in *Ugaritica* 5, 1968, pp. 564ff., No. 7; M. Astour, *JNES* 27, 1968, pp. 13-36; A. F. Rainey, *JAOS* 94, 1974, pp. 189f., 194; M. Dietrich et al., *UF* 7, 1975, pp. 121-125.

K. A. K.

SERPENT, BRONZE. On the borders of Edom, rebellious Israel suffered deadly snakebite as a punishment and begged Moses to intercede with God for them, to save them from the serpents. God then commanded Moses to make a bronze figure of a serpent and set it up on a pole, so that anyone bitten by a serpent need only look at the bronze serpent-figure and he would live (Nu. 21:4-9; 1 Cor. 10:9, 11). By this means God granted the people deliverance and enforced the lesson of dependence upon himself both for that deliverance and as a general principle. Centuries later, during his purge of idolatrous objects and customs, King Hezekiah of Judah destroyed the bronze serpent because the people had turned it into an idol, burning incense to it (2 Ki. 18:4). The following phrase *wayyiqrā' lō n'huštān* may mean either 'he (= Hezekiah) called it Nehushtan' i.e. 'only a bit of bronze', or 'it was called Nehushtan' (i.e. by the people from of old). In either case it is a pun on the phrase *n'haš-n'hošet*, 'serpent of bronze', two very similar-sounding words in Heb. The significance of serpents in surrounding paganism made Hezekiah's action especially imperative (cf. *SERPENT, end of section II. d; see also H. H. Rowley, 'Zadok and Nehushtan', *JBL* 58, 1939, pp. 113ff.). A bronze serpent was found at Gezer (see R. A. S. Macalister, *The Excavation of Gezer*, 2, 1912, pp. 398-399 and fig.; or I. Benzinger, *Hebräische Archäologie*, 1927, p. 327, fig. 418), a serpent standard at Hazor, and a gilded copper snake from a shrine at Timna (B. Rothenberg, *Timna. Valley of the Biblical Copper Mines*, 1972, pp. 152, 183-184, pls. XIX-XX).

When speaking of his coming crucifixion, Jesus Christ used the incident of the serpent, which was lifted up that man might look in faith and live, in order to illustrate the significance of that impending event. Those who put faith in him, uplifted on the cross for their sins, would have life eternal (Jn. 3:14).

K. A. K.

SERPENT'S STONE ('Stone of Zoheleth', אֲבֻר) (*'eben hazzōhelet*). A stone near En-rogel, to the SE of Jerusalem, the scene of the slaughtering of animals by Adonijah (1 Ki. 1:9). The meaning of *zōhelet* is uncertain, but it is usually connected with *zāhal*, 'to withdraw, crawl away'. From this, some would interpret the phrase as 'the stone of slipping' and connect it with a steep and slippery rock slope, called by the Arabs *zahweileh*, or some neighbouring surface, near Siloam. The translation

SERPENT'S STONE

'serpent's stone' may be linked with a possible identification of *En-rogel with the Jackal's Well (No. 2:13).

SERVANT OF THE LORD.

I. In the Old Testament

a. The 'Servant Songs'

B. Duhm's commentary on Isaiah (1892) distinguished four passages which have since been regarded as the 'Servant Songs': Is. 42:1–4; 49:1–6; 50:4–9; 52:13–53:12. Some scholars (e.g. S. Mowinckel) have gone so far as to assign these passages to a separate author and period from the surrounding text. Modern scholarship is generally agreed, however, that they are an integral part of Isaiah 40ff., with many echoes in neighbouring passages. The term 'servant' (*'ebed*) occurs as frequently outside Duhm's selected passages as within them (e.g. Is. 41:8f.; 43:10; 44:1f., 21; 45:4; 48:20), with reference to the nation of Israel. It is also used in the OT for individuals in a close relationship with God, such as the Patriarchs, prophets and kings, and particularly Moses and David (e.g. Gn. 26:24; Ex. 14:31; Dt. 34:5; 2 Sa. 7:5; Is. 20:3; Am. 3:7). But in the 'Servant Songs' a distinctive conception of 'servanthood' comes into sharper focus, so that without divorcing these passages from their context most scholars continue to speak of a 'Servant figure' as a distinct element in the prophet's message; and the most distinctive element in this figure is that of obedient, undeserved suffering, leading to death, as the means of taking away the sin of his people and 'making many to be accounted righteous'.

For a fuller treatment of the character and mission of the Servant in the context of the message of Is. 40ff., see *Messiah, I. b. 1.

b. The identity of the Servant

The following are the main lines of interpretation suggested.

1. *Collective*. The explicit description of Israel as God's 'servant' both in the 'Servant Songs' (Is. 49:3) and in the surrounding text leads many to regard the Songs as a description of the prophet's ideal for Israel, identifying the Servant either as the nation as a whole or, more probably, a pious remnant within the nation, with a mission to Israel (49:5f.), involving suffering to redeem the whole nation (53:4–6, 8, 11f.).

2. *Individual*. The language about the Servant is often strongly individual, describing the birth, suffering, death and eventual triumph of what is apparently a person rather than a group. Various historical identifications have been proposed, such as Moses, Jeremiah, Cyrus, Zerubbabel or the prophet himself. But the traditional interpretation, Jewish and Christian, is that the Servant is an ideal individual figure of the future, God's agent in redeeming his people, i.e. the *Messiah. In later Palestinian Judaism this was the dominant interpretation (Hellenistic Judaism was apparently more favourable to a collective interpretation), so that the *Targum of Jonathan on Is. 53, while clearly embarrassed by the idea of Messianic suffering to the extent of drastically reconstructing the text to eliminate this implication, still explicitly

identifies the Servant as the Messiah (see text in Zimmerli and Jeremias, *The Servant of God*², pp. 69–71; and for other early Jewish interpretations, *ibid.*, pp. 37–79).

3. *Cultic*. Some Scandinavian scholars find the background to the Servant in the Babylonian myth of the dying and rising god *Tammuz and its associated liturgy. The Servant would then be a mythological concept rather than a historically identifiable figure or group. The existence of such myth and ritual in Israel is, however, highly debatable.

4. *'Corporate personality'*. Interpretations 1 and 2 above reflect important characteristics of the texts: both collective and individual aspects are clearly present in the Servant figure. Most scholars today tend, therefore, to look for an exegesis similar to H. W. Robinson's concept of 'corporate personality', i.e. the recognition that in the OT an individual (e.g. king or father) may represent and embody the group of which he is the head, so that he both *is* that group and yet can also be placed over against it as its leader. So the Servant *is* Israel (49:3), he sums up in himself all that Israel represents, and yet he is an individual with a mission *to* Israel (49:5f.) and his experiences on their behalf are the object of the nation's interest (53:1–6). The close juxtaposition of 49:3 and 49:5f. shows that these two aspects of the Servant are inseparable. The individual character of the Servant is most clearly expressed in 52:13–53:12, so that in this passage 'what began as a personification (has) become a person' (Rowley), and here all the emphasis is on the vicarious nature of his suffering as a substitute for his people. But this role is only possible because he *is* Israel, as its representative head.

II. In the New Testament

Some recent scholarship (esp. M. D. Hooker; also C. K. Barrett, C. F. D. Moule) has argued that the Servant figure was a minor element in the NT understanding of Jesus' redemptive work, and that the OT ground for his role of suffering and rejection was found rather in the 'son of man' of Dn. 7. It is pointed out that relatively few formal quotations from Servant passages occur in the NT, and that several of these quotations are of parts of the Songs which do not speak explicitly of suffering, or at least of redemptive suffering.

It is not legitimate, however, to restrict consideration to formal quotations, as allusive references are if anything even more impressive evidence of the influence of the Servant figure, and even where the words alluded to are not directly concerned with redemptive suffering, it is hard to believe that these passages could be referred to with no thought of their most distinctive theme and of its relevance to the mission of Jesus. Above all, it is indisputable that Is. 53 is by far the clearest indication of Messianic suffering in the OT, so that even if no explicit allusions to the Servant occurred, it would be very likely that this was the main source (together with certain psalms and parts of Zc. 9–13) of the repeated conviction that the Messiah *must* suffer, because 'it is written' of him. No such role of Messianic suffering is explicit in Dn. 7, nor did contemporary Jewish exegesis find it there.

In fact the explicit evidence of the influence of the Servant figure (esp. Is. 53, where the redemptive element is emphatic) is far from negligible.

a. In the teaching of Jesus

Is. 53:12 is explicitly quoted in Lk. 22:37. There are further clear allusions to Is. 53:10–12 in Mk. 10:45 and 14:24. Mk. 9:12 probably echoes Is. 53:3, and other possible allusions have been found in Mt. 3:15 (cf. Is. 53:11), Lk. 11:22 (cf. Is. 53:12; not a very likely allusion) and in the use of *paradidosthai* ('be delivered') in Mk. 9:31; 10:33; 14:21 (cf. Is. 53:12). In addition the voice at Jesus' baptism (Mk. 1:11), outlining his mission in terms of Is. 42:1, must have influenced Jesus' thinking.

Note the concentration in these allusions on Is. 53, and particularly on vv. 10–12 where the redemptive role of the Servant is most explicit. In Mk. 10:45 and 14:24 in particular the vicarious and redemptive character of Jesus' death is stressed, in terms drawn from Is. 53.

b. In the rest of the New Testament

The actual title 'servant' (*pais*) is confined to Peter's speech in Acts 3:13, 26 and the prayer of the church in Acts 4:27, 30, but the influence of the Servant figure is clear also in 1 Pet. 2:21–25; 3:18, suggesting that it featured prominently in Peter's understanding of Jesus' mission. Paul's explanations of Christ's redemptive work often contain ideas, and sometimes verbal allusions, which suggest that he too saw Jesus' work foreshadowed in Is. 53. (See e.g. Phil. 2:6–11; Rom. 4:25; 5:19; 8:31, 32–34; 1 Cor. 15:3; 2 Cor. 5:21.) The use of 'lamb of God' by John (1:29, 36) also probably shows the influence of Is. 53:7. Heb. 9:28, 'to bear the sins of many', echoes Is. 53:12.

There are also a number of formal quotations from Servant passages, with reference to Jesus and the gospel, viz. Mt. 8:17; 12:18–21; Jn. 12:38; Acts 8:32f.; Rom. 10:16; 15:21. None of these is with specific reference to Jesus' redemptive work, and some focus on other aspects of his mission, but all testify further to the early church's conviction that the Servant figure, and particularly Is. 53, was a divinely ordained pattern for the Messianic mission of Jesus.

cause, Eve said, 'God has appointed (*sāt*) me another seed instead of Abel' (Gn. 4:25). It was through Seth that the genealogy of Noah passed (Gn. 5:3–4; 1 Ch. 1:1; Lk. 3:38). His son Enosh was born when he was 105 years old (*MT* and *SP*; *LXX* reads 205) and he lived to the great age of 912 years (*MT*, *SP* and *LXX* agree; Gn. 4:26; 5:6–8). The individual in the Sumerian King List, Alalgar, who corresponds to Seth is credited with a reign of 36,000 years.

2. An unknown individual whose name is rendered Sheth (Nu. 24:17, *AV* and *RSV*; *RV* gives 'tumult'), the ancestor of a people mentioned by Balaam as enemies of Israel. T.C.M.

SEVEN WORDS, THE. The 'seven words' are so reckoned by bringing the data of all four Gospels together and identifying the 'loud cry' of Mk. 15:37 with one of the articulate utterances quoted by another Evangelist.

The first of the words spoken by our Lord from the cross (Lk. 23:34) reveals a love that is utterly unexpected and utterly undeserved. He prayed for the Roman soldiers and even, as Peter suggests (Acts 3:17), for the religious guides of the nation. (This saying is omitted by some ancient witnesses to the text, but the omission is probably due to an editor who considered that the events of AD 70 showed that God had not forgiven the Jewish authorities who accused Jesus before Pilate, as though the prayer had them in view.)

The second word was spoken to the penitent brigand (Lk. 23:43), who, beyond the cross, saw the crown and the coming glory, and who said, 'Jesus, remember me when you come in your kingly power' (v. 42). To him Jesus said in effect, 'Not far down the ages, but before the sun sets, you will be with me in the bliss of Paradise'.

The third word (Jn. 19:25–27), comprising sayings addressed both to the mother of Jesus and to the beloved disciple, proves that we have in Jesus the supreme example of a 'heart at leisure from itself, to soothe and sympathize'. Though suffering severe physical pain and enduring far more awful agony of soul, he thought of his mother and made provision for her future. The sword was piercing her heart (Lk. 2:35), but the tender words of her Son must have brought to her deep comfort and healing.

The first three words were spoken during the bright morning hours before noon. The fourth awe-inspiring word (Mt. 27:46; Mk. 15:34) was probably spoken by Jesus as the mysterious, supernatural 3 hours' darkness was lifting (*ELOI, ELOI, LAMA SABACHTHANI).

The fifth word (Jn. 19:28) followed close upon the fourth. It is the only word that speaks of physical suffering. Jesus had refused a drugged drink (Mk. 15:23), but he accepted another kind of drink, in order to moisten his parched throat and lips, so that, with a loud voice, he might make the declaration contained in the sixth word. The Evangelist notes the fulfilment of Ps. 69:21b.

That word (Jn. 19:30) consists of one comprehensive Gk. verb, *tetelestai*, 'It is finished'. It is the cry, not of a vanquished victim but of a Victor, who has finished the work he had to do, has fulfilled all the OT prophecies and types, and has once for all offered the one final sacrifice for sin (Heb. 10:12).

In the final word (Lk. 23:46) Jesus quoted Ps. 31:5, traditionally the pious Jew's evening prayer.

SETH. I. The third son of Adam and Eve, born after the murder of Abel, and called Seth (*sēt*) be-

SEVEN WORDS, THE

The redeemed are so really brothers of the Redeemer (Heb. 2:11-13) that, in the moment of dying, they can use the same language, as they commend their souls into the hands of the Father—his Father, and their Father in him.

BIBLIOGRAPHY. V. Taylor, *Jesus and His Sacrifice*, 1937, pp. 157ff., 197ff.; R. G. Turnbull, *The Seven Words from the Cross*, 1956.

A. R.
F. F. B.

SEVENEH. The RV, ASV rendering of the *MT s'wēnēh* (Egyp. *Swn*, 'place of barter', 'market', Coptic *Suan*, Arab. 'Aswān) in Ezk. 29:10; 30:6, where AV, RSV retain the classical form, *Syene. Located on the first cataract of the Nile, Syene (modern 'Aswān) marked the boundary between Egypt and Ethiopia. 'From Migdol ('tower' in AV, RV) to Syene' means 'the length of Egypt from N to S'. *MT s'wēnēh* should be read *s'wēnā* or *s'wānā*, the *ā* signifying direction: 'to Syene'. A border fortress and a base for expeditions up the Nile, a terminus for river traffic and a source of red granite for Egyp. monuments (syenite), Syene was of special importance to the Jews because of its proximity to the island of Elephantine, which housed a colony of Jews who sought refuge in Egypt after Jerusalem fell (587 BC). The Qumran ms of Is. suggests that 'Syenites' should replace *sinim* (Is. 49:12); LXX reads *Syene* for *Sin* in Ezk. 30:16.

BIBLIOGRAPHY. BA 15, 1952, pp. 50-68; B. Porten, *Archives from Elephantine*, 1968.

D. A. H.

SHAALBIM. A village inhabited by Amorites near Mt Heres and Aijalon when they withstood the Danites. Later the Amorites were subjugated by the house of Joseph (Jdg. 1:35). With Makaz, Beth-shemesh and Elon-beth-Hanan, Shaalbim formed part of Solomon's second administrative district (1 Ki. 4:9). It is almost certainly the same as Shaaalabbin, included with Aijalon in the list of Dan's territory (Jos. 19:42), and Shaalbon, the house of Eliahba, one of David's warriors (2 Sa. 23:32; 1 Ch. 11:33). Because of the similar area covered it has been suggested that Shaalbim of Jdg. 1:35; 1 Ki. 4:9 may also be the same place. The position of modern Selbit, 5 km NW of Aijalon and 13 km N of Beth-shemesh, suits all these contexts well, though the name is philologically different. Shaalbim, etc., may mean 'haunt of foxes'.

D. J. W.

SHAARAIM (Heb. *šā'raim*). 1. On the line of the Philistine flight from Azekah, before the parting of the ways to Gath and Ekron (1 Sa. 17:52). This is compatible with Jos. 15:36. See *GTT*, p. 318. 2. In 1 Ch. 4:31, for *Sharuhen.

J. P. U. L.

SHADOW (Heb. *šēl*, 'shadow', 'shade', 'defence'; Gk. *skia*, 'a shade', 'a shadow'; both words with derivative forms). The representation made by any solid body interposing between the sun or light and another body. As a shadow is constantly varying till at last, perhaps suddenly, it ceases to be, so are our days unsubstantial and fleeting, our death sudden (1 Ch. 29:15; Jb. 14:2; 17:7). Darkness and gloominess are associated with shadows, and thus with 'the shadow of death' (Jb. 3:5; 16:16; 24:17;

Ps. 23:4), though this common interpretation of Heb. *šalmūt* is strictly inaccurate and should be rendered 'deep darkness', as usually in RSV.

As a man can find welcome relief in the shade from the scorching heat (cf. Jon. 4:5-6), so the rule and shelter of the Almighty are called a shadow (La. 4:20; Ezk. 31:6; Ps. 91:1; Is. 25:4; cf. Ct. 2:3). The servant's eagerly anticipated time for stopping work is called the 'shadow' (Jb. 7:2). In contrast to the signs of approaching desolation and ruin, the 'shadows of evening' (Je. 6:4), the day of everlasting glory is when 'the shadows flee' (Ct. 2:17).

The ancient ceremonies are called a 'shadow of the good things to come' (Heb. 10:1; cf. Col. 2:17). The unchangeableness of God is contrasted with the 'play of passing shadows' (Jas. 1:17, NEB). In Heb. 9:5 AV 'shadowing' (RSV 'overshadowing') comes from *kataskiazō*, 'to (cause a) shadow' or 'to shade fully' (cf. Heb. *šālā*).

J. D. D.

SHALEM. A word treated by AV as the name of a place near Shechem, which was visited by Jacob (Gn. 33:18). RV ('in peace') and RSV ('safely'), however, prefer to take it in an adverbial sense, from the verb *šālēm*, 'to be complete, sound', and this appears to make better sense. The word *šālēm*, identical in form, does occur as a place-name in connection with Melchizedek, but is given as *Salem in EVV.

T. C. M.

SHALISHAH. The district reached by Saul after passing through the hills of Ephraim and before reaching the land of Shaalim, or *Salim, in pursuit of his father's lost asses (1 Sa. 9:4). The place seems to have had its own deity or shrine, Baal-shalishah (2 Ki. 4:42). Since the places in conjunction with which Shalishah is cited are of uncertain location, its own situation is not known. Conder proposed the ruins of Khirbet Kefr Thilth, 30 km NE of Jaffa.

D. J. W.

SHALLUM (Heb. *šallūm*, *šallum*). 1. A Jerahmeelite through the line of an ancestor who married an Egyp. slave (1 Ch. 2:40-41; cf. vv. 34-35). 2. A descendant of Korah who served under David as chief gatekeeper at the King's Gate in the sanctuary (1 Ch. 9:17-19; Ezr. 2:42). Apparently this was an inherited position of some importance (cf. Ezr. 2:42; Ne. 7:45). Possibly a short form of Meshlemiah (1 Ch. 26:1; 9:21) and of Selemiah (26:14). 3. Son of Jabez and 16th king of the N kingdom of Israel (c. 745 BC). By assassinating *Zechariah, son of *Jeroboam II, he brought an end to the dynasty of *Jehu (2 Ki. 15:10), thus fulfilling prophecy (10:30; cf. 15:12). He was killed in turn in Samaria by *Menahem after a reign of only 1 month (15:13-15). 4. The husband of *Huldah, the prophetess who was 'keeper of the wardrobe' (2 Ki. 22:14; 2 Ch. 34:22). 5. Son of *Josiah (1 Ch. 3:15; Je. 22:11) and 18th king of Judah (c. 609 BC) whose throne-name was *Jehoahaz. He was deposed after a 3-month reign (2 Ki. 23:31). 6. An Aaronide predecessor of *Ezra (Ezr. 7:2; cf. 1 Ch. 6:12-13). Possibly an abbreviated form of Meshullam (1 Ch. 9:11; Ne. 11:11; 12:13).

The various forms of this name are based on the same root in different nominal patterns.

D. W. B.

SHALMAN. The person who sacked Beth-arbel (Ho. 10:14). This action was sufficiently well known to serve as a warning to Israel. It is generally assumed that this could be a reference to *Shalmaneser V, the Assy. king who besieged Samaria in 725–723 bc. In this event Arbel might be Arbela, W of Galilee (1 Macc. 9:2). But against this, Shalmaneser's name is elsewhere written fully and the Galilee ארבל fell to Tiglath-pileser III in 734–732 bc. Thus Shalman may refer to Salamanu, king of Moab, mentioned in the annals of *Tiglath-pileser. Identification remains uncertain.

D. J. W.

SHALMANESER (Heb. *šalman'esar*; Gk. *Salmennasar*; Assy. *Šulmanu-ašaridu*, 'the god Šulman is chief'). The Heb. may have been read *šlmm'sr* (JSS 21, 1976, p. 8).

Shalmaneser was the name borne by several rulers of *Assyria. The king of Assyria to whom Hoshea of Israel became subject (2 Ki. 17:3) was Shalmaneser V (727–722 bc), son of Tiglath-pileser III. When Hoshea failed to pay tribute in his 7th regnal year Shalmaneser began a 3-year siege of the Israelite capital *Samaria. There are no annals of this king extant, but the Assy. Eponym List records the siege and the Bab. Chronicle says that Shalmaneser 'broke (the resistance of) the city of Shamara'in'. It is likely that the 'king of Assyria' to whom the city fell (2 Ki. 17:6) was this same Shalmaneser, though the final capture of the city is claimed by his successor Sargon II in 722/1 bc. It is possible that Sargon usurped the throne during the siege and continued the campaign (DOTT, pp. 58–63).

Shalmaneser III, king of Assyria 859–824 bc, frequently raided the W, and the first recorded Assy. contact with the Israelites is found in his Annals. In 853 bc he fought a coalition of Syrian kings under Irhuleni of Hamath and Hadadezer of Damascus at Qarqar. Among their allies was 'Ahab the Israelite', who, according to the Assyrians, provided 2,000 chariots and 10,000 men as his contribution. The Assy. advance was temporary and Shalmaneser did not return for 3 years (1 Ki. 16:29; 20:20; 22:1).

In his account of operations against Syria in 841 bc, Shalmaneser III claims to have defeated Hazael of Damascus (see 1 Ki. 19:15). He did not, however, capture the city and moved *via* the Hauran to the Lebanon, where he received tribute from 'Jehu, son of Omri', an event not mentioned in the OT portrayed on the Black Obelisk from Nimrud (*CALAH).

D. J. W.

SHAME. The Eng. word and its cognates appear about 190 times in OT and 46 times in NT. These occurrences are translations of original forms representing at least 10 different Heb. and 7 different Gk. roots and a considerably larger number of Heb. and Gk. words.

Two main meanings can be distinguished: descriptions of states of mind, and descriptions of physical states. The states of mind may be classified into three broad categories: first, those where an individual is or might be the object of contempt, derision or humiliation; second, those where he feels bashfulness or shyness; third, those where he

feels respect or awe. The physical states involve a degree of exposure or nudity, or the words are used as euphemisms for the sexual organs.

The most frequent usage by far involves the ideas connected with contempt, derision and humiliation. Shame follows when the law of God is disregarded or forgotten (Ho. 4:6–7). God sends it upon the enemies of his people (Ps. 132:18). It is the result of sin and is removed in the day of liberty and restoration (Is. 61:7). It appears at times to be a punishment (Ps. 44:7, 9, 15). In contrast, it is also sometimes a positive preventive manifestation of the grace of God (Ezk. 43:10). It may induce positive action (Jdg. 3:25). False shame at that which is not shameful, *viz.* allegiance to Christ, is to be avoided (Mk. 8:38). There is also a figurative use of the term, as in Is. 24:23 and in Jude 13.

The usage representing shyness or bashfulness is not as important, since it occurs infrequently. A clear example is the statement concerning the man and his wife before the fall in Gn. 2:25. The usage which represents awe or respect is also rare. An OT instance is Ezr. 9:6; and there is the apostolic injunction of 1 Tim. 2:9. In the former instance the common Heb. root *bōš*, which appears on over 90 other occasions in the OT text in the Qal stem alone, is used; whereas 1 Tim. 2:9 is the only passage where *aidōs* occurs in the NT.

The uses of the words with a physical reference are concerned with nakedness. These occurrences are not frequent.

The biblical concept of shame is basically that of the mental state of humiliation due to sin, and to departure from the law of God, which brings obloquy and rejection by both God and man. The development of the concept is most extensive in the prophets and in the Pauline Epistles. The references to matters connected with sex are illustrative or figurative, and do not indicate that there is any more basic connection between shame and sexual functions than between shame and other functions which may occasion embarrassment by sinful use.

P. W.

SHAMGAR (Heb. *šamgar*, probably from Hurrian *šimiqari*). A personal name repeatedly attested in Nuzian texts (*cf.* R. H. Pfeiffer and E. A. Speiser, AASOR 16, 1936, p. 161), called 'the son of Anath' (Jdg. 3:31; 5:6), *i.e.* a native of Beth-anath (presumably a S Beth-anath; *cf.* Jos. 15:59). His killing of 600 Philistines must belong to the earliest period of Philistine settlement in Canaan, since the reference to him in the Song of Deborah (Jdg. 5:6) indicates that he flourished before the battle of Kishon (c. 1125 bc). The ox-goad (Heb. *malmād*) with which he wrought such havoc would have a metal tip which was sharpened as required (*GOAD). He is not described as a judge of Israel—indeed, he may well have been a Canaanite—but his exploit afforded the neighbouring Israelites some relief. Some LXX and other recensions repeat Jdg. 3:31 at the end of ch. 16, in a more 'Philistine' context. J. Garstang's surmise that Shamgar is identical with Ben-anath, a Syrian sea-captain and son-in-law of Rameses II (c. 1260 bc) is not convincing (*Joshua—Judges*, 1931, pp. 63f., 284ff.); still less so is Sir C. Marston's suggestion that 'The Ox-goad' was the name of his ship (*The Bible is True*, 1934, pp. 247ff.).

SHAMGAR

BIBLIOGRAPHY. G. F. Moore, 'Shamgar and Sisera', *JAOS* 9, 1898, pp. 159f.; F. C. Fensham, *JNES* 20, 1961, pp. 197-198; B. Maisler, 'Shamgar ben Anath', *PEQ* 66, 1934, pp. 192ff.; E. Danelius, *JNES* 22, 1963, pp. 191-193. F.F.B.

SHAMMAH. 1. A tribal chieftain (Heb. *'allūp*) of Edom, descended from Esau (Gn. 36:17). 2. A brother of King David, and son of Jesse (1 Sa. 16:9). Variant forms of the name are Shammua, Shimeah, Shimeah, Shimeam and Shimei. 3. One of the outstanding three of David's warriors (2 Sa. 23:11), described as a Hararite. The Shammah of 2 Sa. 23:30 is almost certainly the same man, but there are textual problems; cf. NEB. 4. Another of David's warriors, a Harodite (2 Sa. 23:25). 1 Ch. 11:27 renders his name as Shammoth (a plural form of the name), and the Shammuth of 1 Ch. 27:8 may well be the same man. D.F.P.

SHAPHAN. 1. The son of Azaliah who was state secretary (AV 'scribe') to Josiah. Hilkiah reported to him the discovery of the book of the law in the Temple (2 Ki. 22:3; 2 Ch. 34:8-24). He read from this book before Josiah who sent him to the prophetess Huldah. Shaphan was father of at least three sons. (i) Ahikam who assisted the prophet Jeremiah (2 Ki. 22:12; 2 Ch. 34:20; Je. 26:24); (ii) Elashah who, with another man, was entrusted by Jeremiah with a letter to the exiles in Babylonia (Je. 29:3); (iii) Gemariah who tried to prevent Jehoiakim from burning the scroll containing Jeremiah's prophecies (Je. 36:10-12, 25). Shaphan had as grandsons Micaiah (Je. 36:11, 13) and Gedaliah, the governor of Judah after the Babylonian invasions of 589-587 BC, who helped Jeremiah (Je. 39:14).

2. The father of Jaazaniah, seen sacrificing to idols in Ezekiel's vision (Ezk. 8:11).

Even if the name is to be connected with Heb. *šāpān*, 'rock-badger', there is no evidence that it betokens totem worship (as G. B. Gray, *Hebrew Proper Names*, 1896, p. 103). D.J.W.

SHAPHIR (AV Saphir). A town in the Philistine plain against which Micah prophesied (Mi. 1:11). The exact site is uncertain, but may be one of the three hut settlements es-Sūāfir near Ashdod. The identification of Shaphir with Shamir (Jos. 15:48; Jdg. 10:1-2) is tenuous. R.J.W.

SHAREZER. 1. A brother of Adrammelech who with him murdered their father Sennacherib in 681 BC (2 Ki. 19:37; Is. 37:38). His name is known only from this reference and is probably an abbreviation from the Assyrian *šar-ušur*, 'He has protected the king', normally prefixed by the name of a deity. By reference to *Nergilus* in the account by Abydenus of the same event Nergal-sharezer has been proposed. Johns considered the name a corruption of *Szar-ētir-Aššur*, the known name of a son of Sennacherib. Alternatively, a Nabū-šar-ušur, governor of Marqasi and eponym for the year 682 BC, may be in mind.

2. A contemporary of Zechariah who inquired concerning the propriety of continuing the fast celebrating the anniversary of the destruction of the Temple (Zc. 7:2). Because the text is difficult

(see RVMG.) it has been suggested that 'the people of Bethel' may imply that the full name was the common Belshazzar (Bab. *Bel-šar-ušur*) or Bethel-sharezer. D.J.W.

SHARON (Heb. *šārōn*; 'Saron', Acts 9:35, AV) means a level place or plain. It comprises the largest of the coastal plains in N Palestine. Lying between the extensive marshes of the lower Crocodile river (Nahr ez-Zerka) and the valley of Ajalon and Joppa in the S, it runs some 80 km N-S and is 15 km wide. Its features have been largely determined by the Pleistocene shorelines and deposits. Inland from the belt of recent sand-dunes which divert and choke some of the coastal rivers, rises a zone of Mousterian red sands to c. 60 m. forming in the N a continuous belt of some 30 km. Formerly, this zone was thickly forested with oaks, probably *Quercus infectoria*, and today this is one of the richest agricultural districts of Israel, planted with citrus groves. Inland from the belt of Mousterian sands, the streams have partially excavated a longitudinal trough along the foothills of an earlier Pleistocene shoreline. The river valleys, especially in the N of this trough, tended to be marshy until modern drainage developments. In the past, only in the S border of Sharon was the land more favourable for settlement, and it is clear that most of Sharon was never colonized by the Israelites (but Tell Qasile, N of Joppa, was founded c. 1200 BC). In the N, Socoh, a district centre under Solomon (1 Ki. 4:10), and Gilgal, seat of the petty kings defeated by Joshua (Jos. 12:23), lay in the Samaritan foothills E of the plain.

References to Lod and Ono in the S, which were both fortified outposts (1 Ch. 8:12; Ezr. 2:33; Ne. 7:37), and 'the valley of the craftsmen' separating them (Ne. 11:35; cf. 1 Sa. 13:19-20) appear to indicate they were settled by the returning exiles.

The 'majesty' of Sharon (Is. 35:2), like the 'jungle' of Jordan (Je. 12:5; 49:19), would suggest the dense vegetation cover rather than the fertility which Sharon has subsequently proved to possess in its Pleistocene sands, now under orange groves. For settlement it has long remained a 'desert' (Is. 33:9), and was used only for pasturage (1 Ch. 5:16; Is. 65:10). It was here that Shitrai supervised King David's flocks (1 Ch. 27:29). The 'rose of Sharon' (Ct. 2:1-3) suggests the flowers (*PLANTS) of the dense undergrowth. Four red flowers still follow each other in quick succession, an anemone (*Anemone coronaria*), a buttercup (*Ranunculus asiaticus*), a tulip (*Tulipa montana*) and a poppy (*Papaver sp.*).

SHARUHEN. A Simeonite settlement (Jos. 19:6). EGYPT sources mention *Srh'n*, a Hyksos fortress which resisted Ahmose for 3 years c. 1550 BC, barring his way to further conquests; usually identified with Tell el-Far'a, 24 km S of Gaza (NEAEHL, pp. 441-444). Petrie's brief excavation revealed a strong Philistine occupation. The Joshua context also suits Tell el-Huweilfeh, ½ km N of Khirbet Rammamein (Ain Rimmon?), proposed earlier by Albright, *JPOS* 4, 1924, p. 135. See also A. Kempinski, *IEJ* 24, 1974, pp. 145-152; W. Shea, *IEJ* 29, 1979, pp. 1-5; J. M. Weinstein, *BASOR* 241, 1981, pp. 7f. J.P.U.L.

SHAUL (Heb. *šā'ul*, 'asked for'). In Heb., the same as *Saul'. 1. A king of Edom (1 Ch. 1:48-49; cf. Gn. 36:37-38), belonging to Rehoboth. 2. A son of Simeon by a Canaanitess (Gn. 46:10), from whom the Shaulites took their name (Nu. 26:13). 3. A son of Kohath (1 Ch. 6:24), called 'Joel' in 1 Ch. 6:36. G.W.G.

SHAVEH, VALLEY OF. A valley near Salem (Gn. 14:17f.), also known as 'the King's Valley', where Absalom raised his memorial pillar (2 Sa. 18:18). If Salem is Jerusalem, the site may be at the top of the Valley of Hinnom. But an ancient Jewish tradition reads *š-r-h*, another word meaning 'king', for *š-w-h* ('Shaveh'). (This involves only one slight consonantal change.) D.F.P.

SHAVSHA. The name of a secretary of state under David (2 Sa. 8:17, where he is called Seraiah). He is called Shisha in 1 Ki. 4:3, Shavsha in 1 Ch. 18:16, and Sheva in 2 Sa. 20:25. Following de Vaux, Grollenberg (*Atlas of the Bible*) suggests that the form which must underlie these names indicates that the official was an Egyptian. His eldest son's name, Elihoreph, could mean 'my god is the Nile (god)', or in its LXX form Elihaph, 'my god is Apis'. If so, then the Egyp. father gave his son a hybrid name, the first element being Heb. but the second expressing his allegiance to the religion of his Egyp. ancestors. This would further suggest that David brought in Egyptians to fill offices in his kingdom, organizing it at least in part on Egyp. models. But both of these names (and their bearers) may in fact be Semitic; if so, the evidence for Egyp. influence in the organization of David's kingdom is then much less.

T. N. D. Mettinger (*Solomonic State Officials*, 1971, pp. 25-30), largely following A. Cody (*RB* 72, 1965, pp. 381-393), explains Shavsha as a misunderstood corruption of the Egyp. title *sh-š*, 'secretary' ('scribe of letters'); while possible, the assumed phonetic changes are highly dubious.

R.A.H.G.
K.A.K.

SHEAR-JASHUB. A symbolical name ('a remnant will return') given to one of Isaiah's sons to express the truth that out of the judgment God would save a remnant (e.g. Is. 1:9). When Isaiah went to Ahaz, Shear-jashub accompanied him as a reminder that the nation, even at that dark time, would not completely perish (Is. 7:3). E.J.Y.

SHEBA. I. A city (Heb. *šēbā*) in the territory allotted to Simeon in S Palestine near Beersheba and Moladah (Jos. 19:2; *MT* at 1 Ch. 4:28 omits it in the parallel list, but LXX has 'Sama'). LXX reads 'Samaa' in MS B (cf. Jos. 15:26) and 'Sabe' in MS A. S. Cohen (*IDB*, 4, p. 311) suggests that Sheba ('seven') was named for the seven lambs with which Abraham made covenant with Abimelech (Gn. 21:28-29) and may have been the older part of Beersheba.

2. A Benjaminite (*šēbā*) who revolted unsuccessfully against David after Absalom's death (2 Sa. 20:1-2, 6-7, 10, 21-22). 3. A leader (*šēbā*) of the tribe of Gad (1 Ch. 5:13). 4. A descendant (*š'bbā*) of Cush through Raamah (Gn. 10:7; 1 Ch. 1:9); brother of *Dedan. 5. A descendant (*š'bbā*) of Shem through Joktan (Gn. 10:28; 1 Ch. 1:22). 6. Son of Jokshan (*š'bbā*) and grandson of Abraham and Keturah (Gn. 25:3; 1 Ch. 1:32); brother of Dedan.

7. The land (*š'bbā*) whose queen (*SHEBA, QUEEN OF) visited Solomon (1 Ki. 10:1ff.; 2 Ch. 9:1ff.) was in all probability the home of the Sabaeans in SW Arabia. J. A. Montgomery (*JCC, Kings*, 1951, pp. 215f.) contends that the Sabaeans were still in N Arabia in the 10th century bc although they controlled the trade routes from S Arabia. On the other hand, J. Bright (*History of Israel*, 1972, p. 211), while recognizing that the Sabaeans were originally camel nomads, affirms, with greater probability, that by Solomon's time they had settled in the E area of what is modern Yemen. So also G. W. Van Beek, *IDB*, 4, p. 145.

The relationship between the Sabaeans and the three Shebas mentioned in Gn. is by no means clear. They may be distinct tribes, but the similarities among the groupings are striking: Raamah's sons (Gn. 10:7, Hamites, bear the same names as Abraham's grandsons—Sheba and Dedan (25:3); both Cush, the Hamite (10:7), and Joktan, the Semite, have descendants named Sheba and Havilah (10:28-29). The Table of *Nations in Gn. 10 may reflect both the Semitic origin of the Sabaeans and also the fact that they settled in close proximity to Hamitic groups, i.e. Egyptians and Ethiopians. Indeed, classical Abyssinian culture testifies to a blending of Hamitic and Semitic elements, and the role that S Arabians who crossed the Bab al-Mandab as traders and colonists played in shaping this culture is impressive.

It is as traders or raiders (Jb. 1:15, although E. Dhorme, *Job*, E.T. 1967, p. xxv, identifies Sheba here with an area near Tema and Dedan, oases substantially N of the Sabaeans homeland) that the OT most frequently speaks of the people of Sheba. Gold (1 Ki. 10:2; Ps. 72:15; Is. 60:6), frankincense (Is. 60:6; Je. 6:20), spices and jewels (1 Ki. 10:2; Ezk. 27:22) were brought to N markets in their caravans (Jb. 6:19). Commercial opportunists, they were not above engaging in slave trade according to Joel 3:8 (where less preferably LXX reads 'into captivity' for 'to the Sabaeans'). This extensive trading activity apparently led the Sabaeans to found colonies at various oases in N Arabia. These served as caravan bases and probably gave the colonists a degree of control over the N area. Testimony to intercourse between Sheba and Canaan is found in a S Arabian clay stamp (c. 9th century bc) unearthed at Bethel (*BASOR* 151, 1958, pp. 9-16).

The most prominent of the Arab states (which included Hadramaut, Ma'in and Qatabān) during the first half of the 1st millennium bc, Sheba was ruled by *mukarribs*, priest-kings, who supervised both the political affairs and the polytheistic worship of the sun, moon and star gods. Explorations by the University of Louvain with H. St J. Philby (1951-2) and the American Foundation for the Study of Man (1950-3) found some outstanding examples of Sabaean art and architecture, especially the temple of the moon-god at Mārib, the capital, which dates from the 7th century bc, and the

SHEBA

sluices, hewn through solid rock at the dam in Mārib (c. 6th century BC).

SHEBA, QUEEN OF. An unnamed Sabaeen (*SHEBA) monarch who journeyed to Jerusalem to test Solomon's wisdom (1 Ki. 10:1–10, 13; 2 Ch. 9:1–9, 12). A major purpose of her costly (1 Ki. 10:10) yet successful (1 Ki. 10:13) visit may have been to negotiate a trade-agreement with Solomon, whose control of the trade routes jeopardized the income which the Sabaeans were accustomed to receive from the caravans which crossed their territory—an income on which Sheba (or better Saba) was dependent despite considerable achievement in agriculture due to favourable rainfall and an effective irrigation system. The spices, gold and precious stones with which she sought Solomon's favour (1 Ki. 10:3, 10) would have been typical of the luxurious cargoes of these caravans, which linked the resources of E Africa, India and S Arabia to the markets of Damascus and Gaza by way of oases like Mecca, Medina and Tema.

Both Assyr. and S Arab. inscriptions testify to the presence of queens in Arabia as early as the 8th century BC. (See N. Abbott, 'Pre-Islamic Arab Queens', *AJSL* 58, 1941, pp. 1–22.) The widespread domestication of the camel 2 centuries or so before Solomon's time made the Queen of Sheba's trip of about 2,000 km feasible (1 Ki. 10:2).

Her willingness to make this arduous journey is contrasted by Christ with the Jews' complacency in Mt. 12:42, where she is called 'Queen of the South', a title which reflects a Semitic construction like *malkat s'ḥā'* or *malkat yāmin*, Queen of Sheba or Yemen.

This queen is enshrined in Ethiopian legends, particularly the *Kebrā Nagast* ('Glory of the Kings'), as the queen of Ethiopia who bore by Solomon the first king of Ethiopia. This legend reflects the close tie which existed in antiquity between S Arabia and E Africa, which Josephus also

notes when he calls this ruler 'Queen of Egypt and Ethiopia' (*Ant.* 8. 165–175; cf. also Gregory of Nyssa, *Homilies on the Song of Songs* 7). Arabian legends remember her as Bilqis.

BIBLIOGRAPHY. Samuel Abramsky, *EJ*, 15, pp. 96–111; J. Gray, *I and II Kings*³, 1970, pp. 258–262; James B. Pritchard (ed.), *Solomon and Sheba*, 1974. D.A.H.

SHEBNA. A high official under Hezekiah, variously designated minister ('which is over the house', Is. 22:15), secretary (*sōpēr*, 'scribe', 2 Ki. 18:18; 19:2; Is. 36:3), and state official (*sōkēn*, 'treasurer', Is. 22:15). A man of wealth, he was rebuked by Isaiah for preparing a conspicuously monumental rock-hewn tomb and his downfall predicted (Is. 22:15–19). Part of the inscribed lintel from such a tomb has been recovered (N. Avigad, *IEJ* 3, 1953, pp. 137–152; D. J. Wiseman, *IBA*, 1958, p. 59). The full name of Shebna may be Shebanyah(u), a name which occurs in contemporary inscriptions and on Heb. seals (*IEJ* 18, 1968, pp. 166–167), and which may be compared with that later borne by levitical priests (Ne. 9:4–5; 10:10; 1 Ch. 15:24). D.J.W.

SHECHEM. 1. The son of Hamor, the Hivite, prince of Shechem (Gn. 34; Jos. 24:32; Jdg. 9:28) who defiled Jacob's daughter Dinah. **2.** A descendant of Joseph's son Manasseh (Nu. 26:31), founder of a family (Jos. 17:2). **3.** Son of Shemidah, of the tribe of Manasseh (1 Ch. 7:19).

4. An important town in central Palestine with a long history and many historical associations. Normally it appears in the Bible as Shechem (*š'kem*), but also once as Sichem (Gn. 12:6, AV) and twice as Sychem (Acts 7:16, AV). It was situated in the hill country of Ephraim (Jos. 20:7), in the neighbourhood of Mt Gerizim (Jdg. 9:7). The original site is today represented by Tell Balāṭa, which lies at the E end of the valley running between Mt Ebal on the N and Mt Gerizim on the S, about 50 km N of Jerusalem and 9 km SE of Samaria.

Shechem (Sichem) is the first Palestinian site mentioned in Gn. Abram encamped there at the 'oak of Moreh' (Gn. 12:6). The 'Canaanite was then in the land', but the Lord revealed himself to Abram and renewed his covenant promise. Abram thereupon built an altar to the Lord (Gn. 12:7).

Abram's grandson, Jacob, on his return from Haran, came to Shalem, a city of Shechem, and

The early Hebrew inscription formed the lintel of the tomb of one []-yahu, a royal steward ('he who is over the house'), at Siloam, Jerusalem. This may well be the tomb of Shebna, accused by Isaiah of carving a sumptuous grave for himself in the rock (Is. 22:15–16). Length 2.2 m. 7th cent. BC.

Plan and suggested reconstruction of the early phase of the fortress-temple (migdol) excavated at Shechem. The standing stones may not have been erected until the later phase of the building. 17th cent. BC.

SHECHEM

pitched his tent (Gn. 33:18–19) on a parcel of ground which he bought from Hamor, the Hivite prince of the region (Gn. 33:18–19; 34:2). When Shechem, the son of Hamor, defiled Dinah, Simeon and Levi killed the men of the region (Gn. 34:25–26), and the other sons of Jacob pillaged the town (vv. 27–29), though Jacob condemned the action (Gn. 34:30; 49:5–7).

Here Jacob buried the 'strange gods' under the oak (Gn. 35:1–4) and raised an altar to El-elohe-Israel ('God, the God of Israel', Gn. 33:20; *GOD, NAMES OF). Joseph later sought his brothers near the rich pasture-lands round Shechem (Gn. 37:12ff.).

In the 15th century BC the town fell into the hands of the Habiru, as we learn from the Tell el-Amarna letters (*ANET*, pp. 477, 485–487, 489–490). The name probably occurs earlier in Egypt. records dating back to the 19th–18th centuries BC (*ANET*, pp. 230, 329).

After the Israelite conquest of Palestine Joshua called for a renewal of the covenant at Shechem. Various features of the typical covenant pattern well known in the East, 1500–700 BC, may be identified in Jos. 8:30–35 (*SACRIFICE AND OFFERING, I. c. 2). Before his death, Joshua gathered the elders again to Shechem, reiterated the covenant, and received the oath of allegiance to God, the King (Jos. 24). Many modern scholars see in these assemblies a strong suggestion of an amphictyonic league centred at Shechem (cf. M. Noth, *The History of Israel*, 1958).

The boundary between Ephraim and Manasseh passed near the town (Jos. 17:7), which was one of the cities of refuge, and a levitical city assigned to the Kohathite Levites (Jos. 20:7; 21:21; 1 Ch. 6:67). The town lay in Ephraim (1 Ch. 7:28). Here the Israelites buried the bones of Joseph which they had brought from Egypt (Gn. 50:25; Jos. 24:32).

In the time of the judges, Shechem was still a centre of Canaanite worship and the temple of Baal-berith ('the lord of the covenant') features in the story of Gideon's son Abimelech (Jdg. 9:4), whose mother was a Shechemite woman. Abimelech persuaded the men of the city to make him king (Jdg. 9:6; cf. 8:22–23). He proceeded to slay the royal seed, but Jotham, one son who escaped the bloody purge, spoke a parable about the trees as he stood on Mt Gerizim (Jdg. 9:8–15), appealing to the citizens of Shechem to forsake Abimelech. This they did after 3 years (vv. 22–23), but Abimelech destroyed Shechem (v. 45) and then attacked the stronghold of the temple of Baal-berith and burnt it over the heads of those who sought refuge there (vv. 46–49).

After Solomon's death the assembly of Israel rejected Rehoboam at Shechem and made Jeroboam king (1 Ki. 12:1–19; 2 Ch. 10:1–11). Jeroboam restored the town and made it his capital for a time (1 Ki. 12:25), but later moved the capital to Penuel, and then to Tirzah. The town declined in importance thereafter, but continued in existence long after the fall of Samaria in 722 BC, for men from Shechem came with offerings to Jerusalem as late as 586 BC (Je. 41:5).

In post-exilic times Shechem became the chief city of the Samaritans (Ecclus. 50:26; Jos., *Ant.* 11. 340), who built a temple here. In 128 BC John Hyrcanus captured the town (Jos., *Ant.* 13. 255). In the time of the first Jewish revolt Vespasian camped near Shechem, and after the war the town was rebuilt and named Flavia Neapolis in honour of the

emperor Flavius Vespasianus (hence the modern Nablus).

Important excavations conducted at Tell Balāṭa by C. Watzinger (1907–9), E. Sellin and his colleagues (between 1913 and 1934) and by G. E. Wright (1956–66) have revealed the story of this site from the mid-4th millennium BC down to c. 100 BC when the Hellenistic city came to an end. Although there was a sizeable Chalcolithic village during the 4th millennium BC, the city of the historical period arose c. 1800 BC in the Middle Bronze Age and reached the height of its prosperity during the Hyksos period (c. 1700–1550 BC). During these years several courtyard temples and city walls were built. About 1600 BC a massive stone wall was erected, earlier walls covered over and a fortress temple built on the filling, which was to remain with some changes till c. 1100 BC and may well represent in its later stages the temple of Baal-berith (Jdg. 9:4) known to the early Israelites. The town remained important until the 9th–8th centuries BC when it began to deteriorate. Masses of fallen brick and burnt debris attest the destruction of the city by the Assyrians in 724–721 BC. For 4 centuries the town reverted to a village until it gained new life, probably as a Samaritan centre, between c. 325 and c. 108 BC. There is a continuous coin record for this period. The town ceased to exist after its destruction by John Hyrcanus c. 108 BC.

The question of whether Shechem is the same as the *Sychar of Jn. 4:5 has not been solved. There are only a few traces of Roman occupation at Tell Balāṭa. Sychar may have lain in the same general vicinity.

SHEERAH (RSV), **SHERAH** (AV). The Heb. name, meaning 'a female relative', of a daughter of Ephraim, or of the daughter or sister of his son, Beriiah (1 Ch. 7:24). She built or rebuilt three towns in the territory assigned to Ephraim, Lower and Upper Beth-horon and Uzzen-sheerah. This is the only example in the Bible of a woman builder of towns. Codex Vaticanus of the LXX takes this name as a common noun, 'those remaining', and the Pesh. translates the name as a verb, 'she was left', but other Gk. MSS and the Vulg. support the interpretation as a proper name. J. T.

SHEET. I. Heb. *sāḏīn*, rsv 'linen garments' (Jdg. 14:12–13). See reference to 'shirt' in *Dress. 2. Gk. *othonē*, 'a piece of linen', 'a linen sheet', used in describing Peter's vision at Joppa (Acts 10:11: 11:5). J. D. D.

SHEKINAH. The Shekinah (Heb. *š'ḳīnā*), the radiance, glory or presence of God dwelling in the midst of his people, is used by Targumist and Rabbi to signify God himself, for legal Judaism dislikes ascribing form or emotion to deity. Nevertheless the God conceived in purified human terms inspired the noblest prophetic utterances, whereas the legalist God became cold, abstract, aloof. The

Shekinah, nearest Jewish equivalent to the Holy Spirit, became, with other OT ideas or derivatives (Word, Wisdom, Spirit, *etc.*) a bridge between man's corporeality and God's transcendence. The term is post-biblical, but the concept saturates both Testaments. It underlies the teaching that God dwells in his sanctuary (Ex. 25:8, *etc.*), or among his people (Ex. 29:45f., *etc.*). These and cognate passages use the root verb *šākan*, 'to dwell', from which Shekinah is derived.

The glory of God (*kābōd* in the Heb. Bible, *doxa* in LXX and NT) is another name for the Shekinah. The Heb. and Gk. words may be applied to the glory of mere human beings, such as Jacob (Gn. 31:1, AV) or Solomon (Mt. 6:29), but it is clear enough when they refer to God. Thunder, lightning and cloud may be the outward concomitants of God's glory (Ex. 19:16; 24:15ff.; Pss. 29; 97; Ezk. 1:4); or it may be specially associated with the tent of meeting (Ex. 40:34–38) or with the Temple (Ezk. 43:2, 4); but it is manifest also in creation (Ps. 19), and possesses elements more numinous and mysterious than any of these (Ex. 33:18–23). In fact, the glory of God regularly becomes more glorious when it is deliberately divorced from Temple or mercy-seat.

In the NT as in the OT, glory may be predicated of God (Lk. 2:9; Acts 7:55; 2 Cor. 3:18) or ascribed to him (Lk. 2:14; Rom. 11:36; Phil. 4:20; Rev. 7:12, *etc.*). The attribution of this glory is mentioned as a human duty, whether fulfilled (Rom. 4:20) or unfulfilled (Acts 12:23; Rev. 16:9). The glory is present in a special way in the heavenly temple (Rev. 15:8) and in the heavenly city (Rev. 21:23).

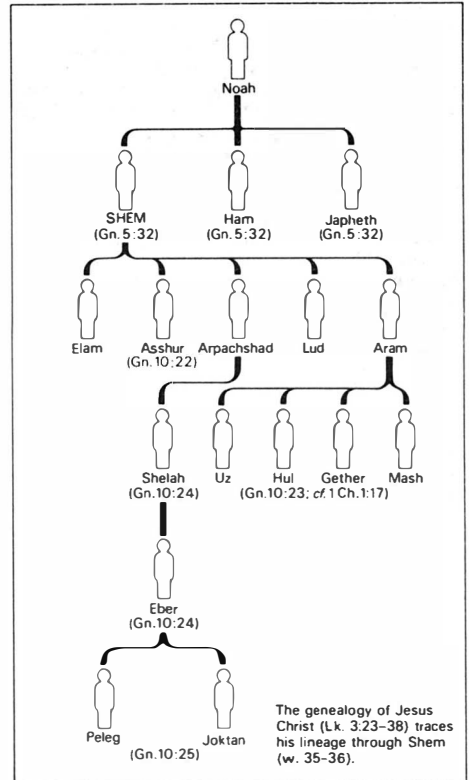

The NT freely ascribes comparable glory to Christ as divine, before as well as after the dividing-point of Easter. The Synoptics are slightly reticent about associating this glory with the earthly Jesus, except in reference to the parousia (Mk. 8:38; 10:37; 13:26; also parallels), or in reference to Christ transfigured (Lk. 9:32). John ascribes this glory much more freely (*cf.* 1:14; 2:11; 11:4); nevertheless he distinguishes a fuller or final revelation as subsequent to the earthly ministry (7:39; 12:16, *etc.*). This seeming fluctuation is not unnatural—the view of the earthly Jesus and the heavenly Christ would sometimes become foreshortened after the Passion. The cognate verb *doxazō* frequently replaces the noun (Jn. 12; 17, *etc.*). The resemblance between the Heb. word and Gk. *skēnē*, *etc.*, may suggest the *shekinah* motif in Jn. 1:14 (*eskēnōsen*, 'dwelt') and Rev. 21:3 (*skēnē*, 'dwelling').

Other passages are worthy of special attention—*cf.* 1 Tim. 3:16; Tit. 2:13; Heb. 1:3; 13:21; Jas. 2:1; 1 Pet. 1:11, 21; 4:13; 5:1; Rev. 5:12f.

SHELAH. 1. Son of Arpachshad of the family of Shem, and father of Eber (Gn. 10:24; 11:12–15; 1 Ch. 1:18, 24; Lk. 3:35). 2. Youngest son of Judah by Shua (Gn. 38:5; 46:12; 1 Ch. 2:3; 4:21), promised by Judah to his daughter-in-law Tamar after Er and Onan had died (Gn. 38:11, 14, 26). Father of the Shelanites (Nu. 26:20). The Syr. gives 'Shelanite' for 'Shilonite' in Ne. 11:5 (*cf.* 1 Ch. 9:5). 3. In Ne. 3:15 (RSV) the name of the pool better known as Siloam. AV gives 'Siloah'. J.G.G.N.

SHEM. The eldest son of Noah (Gn. 5:32; 6:10; 1 Ch. 1:4), and the ancestor of many descendants (Gn.10). He was one of the eight people to escape the Flood in the ark (Gn. 7:13), and after it, when Noah was drunk, he and Japheth covered their father's nakedness (Gn. 9:18, 23, 26–27). Two years after the Flood, when Shem was 100 years old, he became father of Arpachshad (Gn. 11:10), through whom passed the line of descent to the Messiah (Lk. 3:36), and it may be in reference to this fact that Noah made his prophetic statement (Gn. 9:26). Since among the descendants of Shem listed in Gn. 10:21–31 a number are identified with peoples who are known to have spoken related languages in antiquity, the term 'Semitic' has been applied for convenience to this group by modern philologists. This is a modern use of the term, however, and does not imply that all the descendants of Shem spoke Semitic languages. It is stated that Shem lived for 500 years after the birth of Arpachshad (Gn. 11:11), giving him a life of 600 years. All the major versions agree on these figures. An early theory (Poebel) has been recently revived (Kramer), to the effect that the name *šem* is derived, through various phonetic changes, from *šumer*, written *ki.en.gi* by the Sumerians, the Akkadian name of this people who formed an important element in the early population of Mesopotamia. This theory has not been widely accepted.

The genealogy of Shem.

SHEMUEL (Heb. *š' mū'ēl*, '(?) name of God'; cf. Samuel).

1. The son of Ammihud, leader of the tribe of Simeon, appointed to assist in the division of Canaan (Nu. 34:20). In Nu. 1:6; 2:12; 7:36, 41; 10:19 the leader of the tribe is called Shelumiel, the son of Zurishaddai, and the LXX gives the name Salamiēl in all these instances.

2. A grandson of Issachar (1 Ch. 7:2).

R. A. H. G.

SHEOL. This word is used in the OT for the place of the dead. The derivation of the Heb. word *š'ōl* is uncertain. Two main theories have been proposed.

a. Some have suggested that it comes from a weakened form of the root *š'l*, from which derive the words for a hollow hand (Is. 40:12) and a hollow way (between vineyards, Nu. 22:24). In post-biblical Heb. *š'al* means the 'deep' of the sea. If this derivation is correct, the original sense will be the hollow, or more probably deep, place.

b. More scholars now hold the view that it is derived from the root *š'l* meaning 'ask' or 'enquire'. In this case it may have been originally the place of enquiry, where oracles could be obtained. The root *š'l* is frequently used in the OT of consulting oracles, but the idea is certainly not a leading one in the conception of Sheol. There is a connection of *thought* with this root in the personification of Sheol as a gaping, craving monster (Is. 5:14; cf. Hab. 2:5, etc.). Delitzsch (Commentary on Is. 5:14) thought that an equivalent Assy. word had been found in *šualu*, but Jensen and others have disputed the existence of this word (cf. *Transactions of the Society of Biblical Archaeology* 8, 1885, p. 269).

The meaning of Sheol moves between the ideas of the grave, the underworld and the state of death. Throughout the ancient Near East, as elsewhere, the dead were pictured as existing in a subterranean realm known in Bab. as *aralu* and in Ugaritic as *'ereš*, 'earth'. But whereas these were ruled by their own gods, Yahweh was the ruler of Sheol.

Sheol was below the surface of the earth (Ezk. 31:15, 17; Ps. 86:13), a place of dust (Jb. 17:16), darkness (Jb. 10:21), silence (Ps. 94:17) and forgetfulness (Ps. 88:12). Sometimes the distinctions of earthly life are pictured as continuing in Sheol (Is. 14:9; Ezk. 32:27), but always it is a place of weakness and joylessness.

In some passages Sheol has a punitive aspect (e.g. Ps. 49:13–14) and premature committal to Sheol is a form of judgment. The OT sees earthly life as the arena for the service of Yahweh; it is there that his word can be received, his sacrifices offered, his interventions experienced. Therefore in a real sense to be in Sheol is to be cut off from his hand (Ps. 88:3–5). However, Yahweh is both present in Sheol (Ps. 139:8) and able to deliver from it (Ps. 16:10).

Some have seen in words such as "*haddōn*, 'destruction' (Jb. 31:12; 26:6; 28:22; Ps. 88:11; Pr. 15:11; 27:20), *šahat*, 'pit' and perhaps sometimes also 'corruption' (E. F. Sutcliffe, *The Old Testament and the Future Life*, 1946, pp. 39f.; Jb. 33:24;

Ps. 16:10; Ezk. 28:8, etc.) and *bōr*, 'pit' (Ps. 30:3; Ezk. 31:14), a place of punishment within Sheol. But no passage where they occur necessitates this interpretation, and the idea is not explicitly formulated in the OT. These words are better regarded as synonyms of Sheol, with which they all sometimes occur in parallelism.

In the later Jewish literature we meet with divisions within Sheol for the wicked and the righteous, in which each experiences a foretaste of his final destiny (*Enoch* 22:1–14). This idea appears to underlie the imagery of the parable of the rich man and Lazarus in Lk. 16:19–31. The Gk. *hadēs* used in this passage represents the underworld, or realm of the dead, in the classics. In the LXX it almost always translates *š'ōl*, and in the NT the Pesh. renders it by *š'yūl*. It is therefore the NT equivalent of Sheol. It is used in connection with the death of Christ in Acts 2:27, 31, which quotes Ps. 16:10. In Mt. 16:18 Christ says that the gates of Hades (cf. Is. 38:10; Ps. 9:13; 107:18) shall not prevail against his church. As the gates of a city are essential to its power, the meaning here is probably the power of death. The phrase 'brought down to Hades' in Mt. 11:23 is best understood metaphorically of the depths of shame. In Rev., Christ holds the keys of Death and Hades (1:18). Their power (6:8) is broken and they are banished to the lake of fire (20:13–14).

SHEPHELAH (Heb. *š'pēlā*), a geographical term for the low hill tract between the coastal plain of * Palestine and the high central ranges. The term is used only in the AV of 1 Macc. 12:38, which elsewhere translates as 'vale', 'valley' or (low) 'plain(s)', although the district is frequently referred to in the OT. The RV rendering 'lowland' (sometimes also in RSV) would give a truer picture if used in the plural form, to indicate its rolling relief of both hills and valleys. But its root-meaning ('to humble' or 'make low') suggests more accurately a district of relatively low relief at the foot of the central mountains. In RSV 'Shephelah' occurs in 1 Ki. 10:27; 1 Ch. 27:28; 2 Ch. 1:15; 9:27; 26:10; 28:18; Je. 17:26; 32:44; 33:13; Ob. 1:19. Passages such as 2 Ch. 26:10 and 28:18 clearly distinguish it from the coastal plain. The location of the 'Shephelah' of Jos. 11:2, 16 is distinct. There it refers to the hills around the town of Carmel (v. 2). 'Israelite Shephelah' in v. 16, according to G. A. Smith, may mean the land between Carmel and Samaria, a structural continuation of the true Shephelah farther S.

SHEPHERD. Biblical shepherds may be literal or metaphorical: those in charge of sheep; those also, divine or mortal, in charge of men. Similar praise or censure may be applied to both types. The Heb. term for shepherd is the participial *rō'eh*, the Gk. *poimēn*. Care exercised over fellow-mortals may be political or spiritual. Homer and other secular writers frequently called kings and governors

shepherds (*Iliad* 1. 263; 2. 243, etc.), a usage reflected, in deeper metaphors, in Ezk. 34.

The literal shepherd pursued, and still pursues, an exacting calling, one as old as Abel (Gn. 4:2). He must find grass and water in a dry and stony land (Ps. 23:2), protect his charges from weather and from fiercer creatures (*cf.* Am. 3:12), and retrieve any strayed animal (Ezk. 34:8; Mt. 18:12, etc.). When his duties carried him far from human haunts, a bag held his immediate necessities (1 Sa. 17:40, 49), and a tent might be his dwelling (Ct. 1:8). He might use dogs to assist him, like his modern counterpart (Jb. 30:1). When shepherds and flocks take up their more permanent abode in any city, this is a mark of depopulation and disaster through divine judgment (Je. 6:3; 33:12; Zp. 2:13–15). The shepherd on duty was liable to make restitution for any sheep lost (Gn. 31:39), unless he could effectively plead circumstances beyond his foresight or control (Ex. 22:10–13). Ideally the shepherd should be strong, devoted and selfless, as many of them were. But ruffians were sometimes found in an honourable profession (Ex. 2:17, 19), and some shepherds inevitably failed in their duty (Zc. 11, *passim*; Na. 3:18; Is. 56:11, etc.).

Such is the honour of the calling that the OT frequently delineates God as the Shepherd of Israel (Gn. 49:24; Pss. 23:1; 80:1), tender in his solicitude (Is. 40:11), yet able to scatter the flock in wrath, or gather it again in forgiveness (Je. 31:10). Sometimes the note is predominantly one of judgment, when human shepherd and sheep alike stand condemned and punished (Je. 50:6; 51:23; Zc. 13:7; and Gospel applications). These unfaithful shepherds may well tremble to stand before the Lord (Je. 49:19; 50:44). Sometimes there is a note of compassion when the sheep are deserted by those responsible for them (Nu. 27:17; 1 Ki. 22:17; Mk. 6:34, etc.). Two shepherds mentioned with special approval are Moses (Is. 63:11) and, surprisingly enough, that heathen executor of God's purposes, Cyrus (Is. 44:28). Scripture earnestly stresses the serious responsibility of human leaders to those who follow them. One of the most solemn chapters in the OT is the denunciation of the faithless shepherds in Ezk. 34 (*cf.* Je. 23:1–4, and even more sternly Je. 25:32–38). These, for their belly's sake, have fed themselves and not their sheep; they have killed and scattered their charges for their own profit; they have grievously neglected their proper pastoral care; therefore God will re-gather the sheep and judge the shepherds. He will in fact appoint one shepherd (Ezk. 34:23). This is critically interpreted as signifying the union of the N and S kingdoms, but it portrays much better the expected Christ.

In the NT it is Christ's mission to be Shepherd, even Chief Shepherd (Heb. 13:20 and 1 Pet. 2:25; also 1 Pet. 5:4). This is worked out in detail in Jn. 10, which merits detailed comparison with Ezk. 34. John's main points are: the iniquity of those who 'creep, and intrude and climb into the fold'; the using of the door as a mark of the true shepherd; the familiarity of the sheep with the voice of their appointed leader (modern shepherds in the E use precisely the same methods); the teachings regarding the Person of Christ, who is likened to the door (E shepherds frequently slept right across the 'door' or opening in the fold wall); likened to the good shepherd, but contrasted with the worthless hireling. John stresses also the relationship of Christ, his followers and God; the bringing into the 'one flock' of the 'other sheep' (v. 16); and the re-

jection of those who are not the true sheep of Christ. (*Cf.* Milton, *Lycidas*, esp. lines 113–131.)

SHESHACH. Probably an artificial word (Je. 25:26; 51:41, av, rsv mg.), formed by the device known as Athbash. The Eng. equivalent would be to replace a by z, b by y, c by x, etc. The Heb. consonants š-š-k, then, really represent b-b-l, i.e. *bābel*, 'Babylon'. The vowels have no value. The device is here word-play, not cipher, since Je. 51:41 later mentions Babylon explicitly. Possibly, however, Sheshach was a genuine name for Babylon. D. F. P.

SHESHBAZZAR. The person made governor (Heb. *nāšī*, 'prince') of Judah by Cyrus (Ezr. 1:8), to whom the temple vessels captured by Nebuchadnezzar II were entrusted for return to Jerusalem (Ezr. 5:14–15). His name may represent the Bab. *Šaššu-aba-ušur* ('May Šaššu/Shamash protect the father'). His role and identity have been much discussed, some taking this as another, perhaps court, name for *Zerubbabel, others that he was the Bab. official leader of the returning party of Jewish exiles. He may well be the person entitled *Tirshatha in Ezr. 2:63; Ne. 7:65, 70. An identity with Shenazzar (Gk. *Sanesar*; *cf.* 1 Esdr. 2:11), an uncle of Zerubbabel (1 Ch. 3:8) is unlikely (P.-R. Berger, *ZAW* 83, 1971, pp. 98–100). D. J. W.

SHIBAH. The name of a well dug by Isaac's servants and named Sh'bah (Heb. *šib'ā*), or Shebah (Gn. 26:33, av), because of a covenant with Abimelech. The word itself means 'seven' or 'oath'. Already, before Isaac's time, Abraham had encountered trouble with Abimelech king of Gerar and had finally entered into a covenant (Gn. 21:22–34). Seven ewe lambs were presented to Abimelech as a witness to the fact, and Abraham preserved the memory of this covenant by calling the place Beersheba ('well of seven', 'well of an oath'). Isaac revived the old name, using the feminine form *šib'ā* of the word *šebā*'. J. A. T.

SHIBBOLETH. A test-word by which the Gileadites under Jephthah detected the defeated Ephraimites who tried to escape across the Jordan after the battle (Jdg. 12:5–6). Since in the Ephraim local Semitic dialect initial *sh* became *s*, their true identity was disclosed when they pronounced *šibbōlet* as *sibbōlet*. Both words mean 'a stream in flood' (*cf.* Ps. 69:2; Is. 27:12), though the former is also apt to be confused with *šibbōlet*, 'an ear of corn'. Those Ephraimites who were thus discovered were slain immediately (v. 6). In modern usage the word stands for the catchword or mark of a sect or party, often used disparagingly. D. J. W.

SHIHOR-LIBNATH. A small river forming part of the S boundary of the tribe of Asher (Jos. 19:26). Probably the modern Nahr ez-Zerqa, which runs S of Mt Carmel (*EGYPT, RIVER OF). See

SHIHOR-LIBNATH

GTT, p. 190, n. 78; L. H. Grollenberg, *Atlas of the Bible*, 1957, pp. 58–59. Aharoni (*LOB*, pp. 237–238) argued for the *Kishon. T.C.M.

SHILOH. According to Jdg. 21:19, Shiloh is situated 'north of Bethel, on the east of the highway that goes up from Bethel to Shechem, and south of Lebanon'. This identifies it as the modern Seilun about 14 km N of Bethel (Beitin) and 5 km SE of el-Lubban. The site was excavated by Danes between 1926 and 1932, and by Finkelstein, 1981–84. A fortified town with a glacis existed in the Middle Bronze Age (2100–1600 BC); following its destruction, occupation existed on a reduced scale until about 1200 BC when an Israelite settlement was constructed which included complexes of store-houses on the slopes of the MBA glacis. The site was destroyed about 1050 BC, probably by the Philistines. No sign was found of a temple from this period.

According to the biblical record, it was at Shiloh that the tent of meeting was set up in the early days of the Conquest (Jos. 18:1), and it was the principal sanctuary of the Israelites during the time of the Judges (Jdg. 18:31). It was the site of a local annual festival of dancing in the vineyards, perhaps at the Feast of Ingathering (Ex. 23:16), which once provided the men of Benjamin with an opportunity to seize the maidens for wives (Jdg. 21:19ff.), and this festival probably developed into the annual pilgrimage in which Samuel's parents were later to take part (1 Sa. 1:3). By the time of Eli and his sons the sanctuary had become a well-established structure for centralized worship, and the tent of Joshua had been replaced by a temple (*hēkāl*) with door and door-posts (1 Sa. 1:9). Although Scripture does not refer directly to its destruction, it is possible from archaeological evidence that this did take place and this would fit in well with the references to Shiloh as an example of God's judgment upon his people's wickedness (Ps. 78:60; Je. 7:12, 14; 26:6, 9). On the other hand, Ahijah the Shilonite is mentioned in 1 Ki. 11:29; 14:2, and other inhabitants of Shiloh in Je. 41:5. Some limited habitation must have continued after 1050 BC, but the priesthood transferred to Nob (1 Sa. 22:11; cf. 14:3) and Shiloh ceased to be a religious centre.

A reference of peculiar difficulty comes in Gn. 49:10, 'the sceptre shall not depart from Judah, nor the ruler's staff from between his feet, until Shiloh come' (RV). The Heb. *'ad kī-yābō šilōh* can be rendered in several ways. (i) AS RV, taking Shiloh as a Messianic title. (ii) AS RVmg. 'till he come to Shiloh', with the subject as Judah and the fulfilment in the assembling of Israel to Shiloh in Jos. 18:1, when the tribe of Judah nobly relinquished the pre-eminence it had formerly enjoyed. (iii) By emending *šilōh* to *šellōh* and translating with the LXX 'until that which is his shall come', i.e. 'the things reserved for him', a vaguely Messianic hope. (iv) By emending *šilōh* to *šay lō*, as in NEB, 'so long as tribute is paid to him'. (v) Following a variant reading in LXX, 'until he comes to whom it belongs' (RSV), whatever 'it' may be (Onkelos says it is the kingdom).

The last of these was generally favoured by the Fathers, while the first does not seem to have been put forward seriously until the 16th century except in one doubtful passage in the Talmud. Against (i) is its uniqueness: nowhere else is Shiloh used as a

title for the Messiah and the NT does not recognize it as a prophecy. If it were taken as a title it would have to mean something like 'the peace-giver', but this is not very natural linguistically. (ii) is plausible, but it scarcely fits in with what we know of the subsequent history of Judah; nor is it usual for a patriarchal blessing to have such a time-limit. A variant to get round that objection is the translation 'as long as people come to Shiloh', i.e. 'for ever', but it strains the Heb. (iii), (iv) and (v) involve a minor emendation, and the renderings leave much to the imagination, but Ezk. 21:27 (v. 32 in Heb.) shows that a similar construction can stand; indeed, Ezk. 21:27 is probably a deliberate echo and interpretation of Gn. 49:10. The use of *šē-* for the relative particle is, however, normally regarded as late (but cf. Jdg. 5:7).

For reviews of the possible interpretations, see especially the commentaries of J. Skinner and E. A. Speiser; an interesting theory by J. Lindblom is found in *VT Supp.* 1 (= Congress Volume, 1953), pp. 78–87. For archaeological information, see H. Kjaer, 'Shiloh 1981', *IEJ* 32, 1982; I. Finkelstein, *Tel Aviv* 12, 1985, pp. 123–180; *idem*. *BAR* 12, 1986; A. S. Kaufman, 'The Site of the Tabernacle at Shiloh', *BAR* 14, 1988, pp. 46f.; *NEAEHL*, pp. 1364–1370.

J. B. Tr.
J. W.

SHIMEATH. In 2 Ki. 12:21 an Ammonitess, the mother of Jozacar (called Zabad in 2 Ch. 24:26), one of the murderers of Joash. J.D.D.

SHIMEI (Heb. *šimī*, perhaps abridged from *š'mā'yāhū*, 'Yahweh has heard'). The OT records 19 men named Shimei. The first of note was a grandson of Levi (Nu. 3:21), and his family (the Shimeites) had part of the responsibility for maintaining the tent of meeting as their sacred charge (Nu. 3:25–26).

The best-known is Shimei the son of Gera, a Benjaminite and a kinsman of Saul, who cursed David for being a man of blood (2 Sa. 16:5ff.). The reference appears to be twofold: *a.* to David's conciliation of the Gibeonites (2 Sa. 21:1–10) by delivering to them seven of Saul's sons and grandsons to be hanged for Saul's slaughter of the Gibeonites (v. 1); *b.* to Absalom's rebellion, which would bring an end to David's reign, a just recompense for the blood of Saul's house which had been shed before the union of Judah and Israel; in fact David had not been responsible for the killings (2 Sa. 3:6–27; 4:8–11). David seems to have accepted this meekly, believing that Shimei spoke an admonition from the Lord (2 Sa. 16:11–12), as if acknowledging that at all events he was the occasion of the deaths. Later in life, however, David concluded that Shimei had sown dissension, and was not therefore a guiltless man (1 Ki. 2:8–9). Solomon showed clemency to Shimei, giving him a place in Jerusalem; but, to take revenge on Shimei for his bitterness towards David, had him slain, after 3 years, on the (wrong) grounds of his suspected complicity with the Philistines of Gath (1 Ki. 2:36–46).

C. H. D.

SHIMRON-MERON. A Canaanite city whose king was allied with Hazor (Jos. 11:1, simply 'Shimron') and so defeated by Joshua in his Galilean war

(Jos. 12:20); probably identical with Shimron in the territory assigned to Zebulun, in the Bethlehem district (Jos. 19:15). If so, it is possibly the present Tell es-Semuniyeh, about 5 km SSE of Bethlehem, but this is disputed (see A. F. Rainey, *Tel Aviv*, 3.2, 1976, pp. 57–69). *Merom in 'Waters of Merom' is quite distinct from Shimron-meron. Whether Shimron should be identified with the *Šmw' nw/Šm'n* of the Egyp. lists of the 18th and 15th centuries BC (the Šamḥuna of the El-Amarna letters) through the LXX form *Symōōn* is highly doubtful. K. A. K.

SHINAR. The land in which were situated the great cities of Babylon, Erech and Akkad (Gn. 10:10). It lay in a plain to which early migrants came to found the city and tower of Babel (Gn. 11:2) and was a place of exile for the Jews (Is. 11:11; Dn. 1:2). The LXX interprets it as 'Babylonia' (Is. 11:11) or the 'land of Babylon' (Zc. 5:11), and this accords with the location implied in Gn. 10:10. (*ACCAD or Agade, which gave its name to N Babylonia.) Heb. *šīn'ār* represents *šanhar* of cuneiform texts from the Hittite and Syrian scribal schools of the 2nd millennium BC, and was certainly a name for Babylonia. This equation is proved by several texts (see H. G. Güterbock, *JCS* 18, 1964, p. 3; R. Zadok, *ZA* 74, 1984, pp. 240–244), ruling out older ideas. D. J. W.

SHIPS AND BOATS. Rafts constructed from bundles of reeds were in use from a very early period in both Egypt and Mesopotamia and appear as an early pictographic sign on a clay tablet from c. 3500 BC. The raft has remained a popular craft in the marshes of S Mesopotamia. A clay model of a boat found at Eridu from c. 3500 BC is very similar to the round coracle (*quffa*) made from wood and hide depicted in Assyrian relief sculpture of c. 870 BC and which remain in use on the river Euphrates. Rafts of skins, inflated or stuffed with straw, are another ancient craft with a long and continuous history. Official transport in Sumer, however, was undertaken in vessels with high swinging stems and sterns which were propelled by paddles or poles or maybe on occasions towed from the bank. A model of this type of craft was found in a tomb at Fara from c. 3000 BC, enabling a reliable reconstruction of the hull shape which also appears on Sumerian cylinder seals and in Egyp. carvings of the same period. During the 3rd millennium, overseas trade developed from Mesopotamia through the Persian Gulf and into the N Indian Ocean. One text from c. 2000 BC mentions a craft weighing 300 *gur* (28,400 kg or 28 tonnes).

In Egypt the earliest wooden boats were replicas of reed craft, and although hull shape developed to suit timber, decorative motifs such as lotus bud ends common on reed vessels continue. The oldest actual Egyp. boat was found adjacent to the pyramid of Cheops at Giza (c. 2600 BC) and is 43.4 m long; two others, about 10 m in length, were found at Dahshur and belong to the 12th Dynasty (1991–1786 BC). The absence of good timber in Egypt necessitated its importation from Lebanon and so seagoing ships were developed. The presence of Egyp. vessels along the coast of Palestine gives force to Moses' warning that Israel may return to Egypt by ship (Dt. 28:68) especially as Asiatic

slaves are depicted being transported to Egypt in ships as early as in the reign of Sahurê, c. 2500 BC. Expeditions were also made on the Red Sea in ships of about 30 m length and powered by sail and oars. Early Egyp. seagoing ships were kept rigid by a rope truss which passed around each end of the vessel and over forked sticks above the deck where it was tensioned like a tourniquet.

I. In the Old Testament

The tribes of Zebulun, Issachar, Dan and Asher had at some time seaside territories (Gn. 49:13; Dt. 33:19; Jdg. 5:17) and Israel's neighbours, the *Phoenicians and *Philistines, were leading maritime powers. The ship, however, remained a source of wonder for the Hebrews (Pr. 30:19) and a safe passage was considered a demonstration of God's goodness and power (Ps. 107:23–30). A ship's motion was reminiscent of the drunkard (Pr. 23:34) and its swift transit like the passing of life (Jb. 9:26).

The general Heb. word for ship, *'niyyā*, refers most commonly to seagoing merchant vessels (e.g. Pr. 31:14) which are often described as 'ships of Tarshish' (1 Ki. 22:48f.). Whether or not *Tarshish is to be identified with a geographical location such as Tartessus in S Spain or Tarsus in Cilicia or is thought to mean something like 'ore-carrier', the ship so described is a Phoenician long-range merchantman. Barnett (*Antiquity* 32, 1958, p. 226) believes that the Phoenician transport vessels with round bows depicted on relief sculptures of Sennacherib (c. 700 BC) are 'ships of Tarshish', but the absence of sail makes this identification questionable. Phoenician shipping developed during the 2nd millennium BC and is known to us from Egyp. tomb paintings and from texts. The paintings reveal that, unlike contemporary Egyp. ships, Canaanite (early Phoenician) vessels were built with a keel and had a fence-like structure along the deck, which some believe acted as a lee cloth, while others believe that it barricaded the cargo. A document from Ras Shamra, c. 1200 BC, refers to one of these merchantmen as having a cargo of 457,000 kg (450 tonnes) with no indication that it was at all unusual. Such a large vessel had to rely on sail power and could be rowed only for brief periods in an emergency.

The ship that Jonah embarked on at Joppa is called a *s'pīnā* (Jon. 1:5), which may indicate that it was a large vessel with a deck, possibly similar to a Gk. merchantman painted on a cup of c. 550 BC. It was manned by sailors, Heb. *mallāhim* (Jon. 1:5) and captained by one called *rab hahōbēl* (Jon. 1:6), the 'chief pilot'.

Smaller vessels were used by the Phoenicians for short-range cargo assignments. These vessels were paddled and were distinctive because of their high stem and stern posts, one of which bore the carved head of a horse and so they were naturally called *hippos* by the Greeks. An Assyrian relief sculpture, c. 710 BC, depicts these vessels in a logging operation which was no doubt similar to that undertaken by King Hiram of Tyre for Solomon (1 Ki. 5:9).

Another Heb. word for ship, *šī*, would appear to apply specifically to warships. This vessel is mentioned with a 'galley with oars', *'nī šayit* (Is. 33:21), where it is stated that no such ship will approach Jerusalem when the city is at peace. These warships had streamlined hulls being built for speed and with a ram at the front. In order to shorten the vessel and increase its manoeuvrability

SHIPS AND BOATS

without losing speed, the oarsmen, *sātim* (Ezk. 27:8), were double-banked on each side. The Greeks were particularly skilful at fighting in these vessels, which may be referred to as the feared 'ships of Kittim' (Dn. 11:30; cf. Nu. 24:24). Because of their speed warships were particularly suited for delivering urgent messages over water (Ezk. 30:9; Thucydides 3. 49. 3).

C.J.D.

II. In the New Testament

a. On the Sea of Galilee

The Galilean boats were used mainly for *fishing (e.g. Mt. 4:21f.; Mk. 1:19f.; Jn. 21:3ff.), but also generally for communications across the lake (e.g. Mt. 8:23ff.; 9:1; 14:13ff.; Mk. 8:10ff.). Our Lord sometimes preached from a boat so that his voice might not be restricted by the crowd's pressing too close (Mk. 4:1; Lk. 5:2f.).

These vessels were not large: one could accommodate Jesus and his disciples (e.g. Mk. 8:10), but an unusually large catch of fish enclosed by a single net was enough to overload two of them (Lk. 5:7). While they were no doubt fitted with sails, they were regularly equipped with oars to enable them to progress in calm weather and in the heavy storms which occasionally sweep across the lake (Mk. 6:48; Jn. 6:19).

b. On the Mediterranean

The main characteristics of Mediterranean ships had changed little over several centuries. Warships ('long ships', their length being eight or ten times their width) were regularly propelled by oars and rarely went far from the coast. Merchant ships ('round ships', their length being three or four times their width) relied on sails, but might carry some oars for emergencies. Under favourable conditions they would cross the open sea (*PATARA). Most seagoing ships were of between 70 and 300 tonnes, but Pliny mentions one of apparently 1,300 tonnes.

Most of Paul's missionary voyages were probably undertaken in small coastal vessels, but on his journey to Rome he sailed in two of the great grain ships plying between Egypt and Italy, which might easily carry a complement of 276 crew and passengers (Acts 27:37). About the same period Josephus travelled in a ship carrying 600 (*Vita* 15). Lucian (*Navigium* lff.) gives a description of a large grain ship of AD 150; and in recent years underwater archaeologists have examined a number of ancient wrecks. Thus we can get some idea of Paul's 'Twin Brothers' (*CASTOR AND POLLUX). Such a ship would have a central mast with long yard-arms carrying a large square mainsail and possibly a small topsail, and a small foremast sloping forward almost like a bowsprit, with a foresail (Gk. *artemon*) which might be used to give the ship steerage way when it was not desired to take full advantage of the wind (Acts 27:40), and to head the ship round and check drifting in a storm (in Acts 27:17 'lowered the gear' may mean 'set the

foresail' or 'let out a sea-anchor' or 'let down the mast-top gear'). By bracing the sails these ships could sail within about 7 points of the wind.

The bows were swept up to a carved or painted figure to represent the name of the ship (Acts 28:11), and on the stern, which was also raised, generally into a goose-neck shape, was a statue of the patron deity of the vessel's home port. Two large oars in the stern served as rudders, either operated separately or rotated together by means of tiller bars or ropes attached to a central piece of gear. These could be lashed in position in bad weather (cf. Acts 27:40).

Some anchors were wholly of iron, but most had a wooden stock with lead or stone arms. They might weigh more than 600 kg, and had small marker-buoys attached. There would be three or more on board, and when anchoring off a beach one or two of them would be let down from the bows, mooring cables from the stern being attached to the shore. For manoeuvring or riding out a gale, however, anchors might be let out from the stern (Acts 27:29). A sounding-lead was used to check the depth when near shallows (Acts 27:28), and might be greased to bring up samples of the bottom.

A dinghy was towed astern in good weather, but hoisted on board in a storm (Acts 27:16f.) to prevent its being swamped or smashed. This was for use in harbour rather than as a lifeboat: if the ship was wrecked, survivors had to rely on spars. Paul had been shipwrecked three times before his journey to Rome (2 Cor. 11:25).

The risks of any voyage were great, but so were the profits if it was successful (cf. Rev. 18:19). The owner often commanded his ship, perhaps with the assistance of a professional steersman or navigator; but in doubtful situations the passengers might share in making decisions (Acts 27:9-12: the centurion was responsible for his party, not for the ship). There might be as many as three decks on a large merchantman, and some luxuriously fitted cabins, but most passengers camped on deck or in the hold.

Ships were normally dismasted and laid up to avoid the winter storms from mid-November to mid-February (Acts 20:3, 6; 28:11; 1 Cor. 16:6ff.; 2 Tim. 4:21; Tit. 3:12), and periods of about a month before and after this season were considered dangerous (Acts 27:9). The main difficulty seems to have been the obscuring of the sky by storm clouds, thus making navigation by the sun and stars impossible. Delays due to weather were common. According to Josephus (*BJ* 2. 203) one letter from the emperor Gaius in Rome to Petronius in Judaea took 3 months to get there (*SAMOTHRACE).

There is some doubt about the meaning of 'undergirding the ship' in Acts 27:17. The traditional, and most likely, view is frapping, that is, passing ropes under the ship, from side to side, to hold its timbers firm; but some explain it as the use of a hogging truss (unlikely in a large ship with decks to strengthen it), or horizontal cables round the hull.

Our knowledge of Greco-Roman boats is extended by finds from underwater archaeology and boats raised. Construction techniques and equipment such as anchors are now well known. A 26-foot fishing boat with angular bow and high stern dating from the time of Jesus (c. 120 BC-AD 40) has been found near Ginosar, Galilee. It had a mast,

could be rowed by four people (*cf.* Mk. 1:20) and is similar to that shown on a 2nd-century mosaic from nearby Migdal.

c. Figurative use

Nautical metaphors are rare in the NT. In Heb. 6:19 hope is called 'an anchor of the soul'; and Jas. 3:4–5 compares the tongue with a ship's rudder.

Linder, 'Excavating an Ancient Merchantman', *BAR* 18, 1992, pp. 204–235.

D.J.W.
K.L.McK.

SHISHAK. Libyan prince who founded Egypt's 22nd Dynasty as the Pharaoh Sheshonq I. He reigned for 21 years, c. 945–924 BC. He harboured Jeroboam as a fugitive from Solomon, after Ahi-

jah's prophecy of Jeroboam's future kingship (1 Ki. 11:29–40). Late in his reign, Shishak invaded Palestine in the 5th year of Rehoboam, 925 BC. He subdued Judah, taking the treasures of Jerusalem as tribute (1 Ki. 14:25–26; 2 Ch. 12:2–12), and also asserted his dominion over Israel, as is evidenced by a broken stele of his from Megiddo. At the temple of Amūn in Thebes, Shishak left a triumphal relief-scene, naming many Palestinian towns; see *ANEP*, p. 118, fig. 349, p. 290. See also *LIBYA. *SUKKIM. For Shishak's invasion, see K. A. Kitchen, *The Third Intermediate Period in Egypt*², 1986.

K.A.K.

SHITTIM. 1. One of the names given to the final Israelite encampment before they crossed the Jordan, opposite Jericho (Nu. 25:1; Jos. 2:1; 3:1; *cf.* Mi. 6:5). Nu. 33:49 uses a longer form of the name, Abel-shittim ('the brook(?) of the acacias', since *šittim* means 'acacias'), for one extremity of the camp. Josephus mentions a city of his time called Abila, which was 60 stades from the Jordan in this general area (*Ant.* 5. 4), which appears to represent the element 'Abel' of this name. Abila was probably located at Tell el-Hammam (Glueck, Aharoni),

The name of Pharaoh Shishak is shown in Egyptian hieroglyphs on this fragment of a triumphal inscription found at Megiddo. c. 926 BC.

SHITTIM

though other scholars have preferred Tell el-Kefrein, which lies a little to the NW. See *IDB*, 4, p. 339.

2. The 'valley of Shittim/acacias' in Joel 3:18, which is to be watered by a stream flowing from the Temple (cf. Ezk. 47:1-12), cannot be the same place, because a location for it W of the Jordan is required. It is most likely to be either a general term for the wadis of the Judaeen wilderness or a name for the lower part of the Kidron valley, which leads into the Dead Sea from the W (rather than referring to the Wadi es-Sant).

BIBLIOGRAPHY. H. W. Wolff, *Joel and Amos (Hermeneia)*, on Joel 4:18 (3:18). For Shittim wood see *TREES (Acacia). G.I.D.

SHOA. Ezekiel (23:23) prophesies that this people, together with other dwellers in Mesopotamia, will attack Jerusalem. Shoa has been identified with the people called *Sutu* or *Su* in Akkadian sources, though some now question this identification. According to the Amarna letters, they were Semitic nomads living in the Syrian desert in the 14th century BC. Later they migrated to the area E of Baghdad, and Assyr. records often mention them with the *Qutu*, called Koa in Ezk. 23:23, as warring against Assyria. Some scholars (e.g. O. Procksch) take the word usually translated 'crying' (RSV 'shouting') in Is. 22:5 to be the name Shoa.

BIBLIOGRAPHY. F. Delitzsch, *Wo lag das Paradies?*, 1881, pp. 233-237; G. A. Cooke in *ICC*, 1936, on Ezk. 23:23; R. T. O'Callaghan, *Aram Naharaim, Analecta Orientalia* 26, 1948, pp. 88, 92-98, 101. J.T.

SHOBACH. The Aramaean general in command of the forces of Hadadezer, king of Aram, at the time of the war with Ammon (2 Sa. 10:16-18). He is not mentioned in the earlier operations at Rabbah when Joab and Abishai routed the Syrian army (vv. 10-14), but this could be due to the presence of the king himself in command. It is therefore assumed that he held office after the event and is named (*šōbak*; Gk. *sōbak*; cf. *šōpaq*, 1 Ch. 19:16-18) as the leader of the combined forces from Syria and E of the Euphrates in the battle at Helam, E of Jordan. Shobach was fatally wounded and the Aramaeans routed by David. D.J.W.

SHOBAL. 1. The second son of Seir, an Edomite (Gn. 36:20), father of a clan (v. 23) and a Horite leader (v. 29 = 1 Ch. 1:38, 40). 2. A son of Caleb and 'father' (founder) of Kiriath-jearim (1 Ch. 2:50, 52), also a Judaeen (1 Ch. 4:1-2). It is probable that 1 and 2 are related persons. D.J.W.

SHOBI (2 Sa. 17:27-29). An Ammonite, a prince of Rabbah, whose father Nahash (perhaps the son of the Nahash referred to in 1 Sa. 11:1) had shown kindness to David (2 Sa. 10:2; 1 Ch. 19:2), apparently when he was a fugitive.

When David came to the height of his power he, in his turn, showed kindness to the house of Nahash. This kindness was appreciated by Shobi, so that when David was retreating to Mahanaim before Absalom, Shobi was one of those who provided rest and refreshment for David's company. C.H.D.

SHOVEL (Heb. *yā'*). Bronze shovels were made for clearing ashes from off the altar of burnt-offering (Ex. 27:3) and later by Hiram for Solomon's Temple (1 Ki. 7:40, 45). Some Canaanite shovels have been discovered, e.g. at Megiddo (*BA* 4, 1941, p. 29 and fig. 9).

Heb. *rahat* is mentioned in Is. 30:24; it was probably wooden. (*FAN, *AGRICULTURE.) A.R.M.

SHOWBREAD. Heb. *lehem happānim*, lit. 'bread of the face', i.e. bread set before the face or presence of God (Ex. 25:30; 35:13; 39:36, etc.) or *lehem hamma'areket*, lit. 'bread of ordering' (1 Ch. 9:32, etc.). After Moses had received divine instructions concerning the making of a table, dishes, spoons, covers and bowls for the holy place of the tabernacle, he was directed to place 'showbread' on the table. This arrangement was never to cease (Ex. 25:30). The showbread consisted of twelve baked cakes, made of fine flour, each containing two-tenths of an ephah (*WEIGHTS AND MEASURES). These were set in two rows, six to a row (*ma'areket*, Lv. 24:6). Upon each row (lit. 'the row', Lv. 24:7) of cakes frankincense was placed 'as a memorial' (*l'azkārā*) and was offered by fire to the Lord (Lv. 24:7). It was the duty of the priest each sabbath day to place fresh or hot bread on the table (1 Sa. 21:6). The old cakes then became the perquisite of Aaron and his sons who ate them in the holy place because they were 'most holy' (Lv. 24:5-9). It was these loaves that David requested of Ahimelech, the priest, for himself and his men (1 Sa. 21:1-6; cf. Mt. 12:4; Mk. 2:26; Lk. 6:4).

The position of the table upon which the showbread was placed was in the holy place on the N side of the tabernacle opposite the lampstand (Ex. 26:35). The table was made of acacia wood overlaid with gold and bordered with a golden crown. It had a ring at each corner for the rods by which it was carried (Ex. 25:23-28). According to the original commandment it never failed to appear in the appointed place of God's worship (2 Ch. 4:19; 13:11). The Kohathites had charge of the showbread (1 Ch. 9:32).

The passages referred to do not themselves indicate the significance of the showbread, but it is possible to infer from these data that God is man's provider and sustainer, and that man lives constantly in the presence of God. This truth makes it obligatory for man to offer his life to God (Rom. 12:1). D.F.

SHUA. 1. Shua (Heb. *šū'ā'*) the daughter of Heber of the tribe of Asher (1 Ch. 7:32). 2. Shua (*šūa'*) a Canaanite of Adullam whose daughter, Bathshua (1 Ch. 2:3), Judah took to wife (Gn. 38:2, 12). 3. Shuah (*šūah*) a son of Abraham by his wife Keturah (Gn. 25:2; 1 Ch. 1:32). 4. Shuah (*šūhā*) a descendant of Judah and brother of Chelub father of Mehir (1 Ch. 4:11). T.C.M.

SHUAL, LAND OF. A district in Benjamin mentioned as lying in the path of a company of plundering Philistines, as they moved from Michmash to Ophrah (1 Sa. 13:17). Unknown outside the Bible, but probably near Michmash. Shual ('fox') is identified by some with Shaalim where Saul searched for lost donkeys (1 Sa. 9:4). T.C.M.

SHULAMMITE. A feminine noun (*šulammit*) applied to the heroine in Ct. 6:13, 'Shulammitte' has been a formidable problem to scholars. Some (e.g. Koehler's *Lexicon*) have connected it with an unknown town, Shulam; some (e.g. *ISBE*) classify it as a variant of Shunammite (below); others (e.g. L. Waterman and H. Torczyner) identify the Shulammitte with *Abishag, the Shunammite. E. J. Goodspeed (*AJSL* 50, 1934, pp. 102ff.) and H. H. Rowley (*AJSL* 56, 1939, pp. 84-91) deny any connection with Shunem but view the word as a feminine counterpart of Solomon, 'the Solomoness'. Attempts have been made to derive the names Solomon and Shulammitte from the god Shalem. See H. H. Rowley, *The Servant of the Lord*, 1952, p. 223. D.A.H.

SHUNEM, SHUNAMMITE. A town (probably modern Solem) in the territory of Issachar near Jezreel (Jos. 19:18), Shunem (*šūnem*) was the site of the Philistine camp before the battle of Gilboa (1 Sa. 28:4).

Elisha sojourned in Shunem frequently in the home of a generous woman (called the Shunammite, a feminine adjective derived from Shunem) whose son, born according to Elisha's prediction, was miraculously raised up by the prophet after being smitten with sun-stroke (2 Ki. 4:8ff.). It is this woman whose property was restored at Gehazi's behest after she had temporarily abandoned it to seek relief from famine in Philistia (2 Ki. 8:1-6). From Shunem also David's men brought the beautiful *Abishag to comfort their aged king (1 Ki. 1:3, 15). Adonijah's request for her hand in marriage cost him his life (1 Ki. 2:17, 21-22). (*SHULAMMITE.) D.A.H.

SHUR. A wilderness-region in the NW part of the Sinai isthmus, S of the Mediterranean coastline and the 'way of the land of the Philistines', between the present line of the Suez Canal on its W and the 'River of *Egypt' (Wadi el-'Arish) on its E. Abraham and Sarah's handmaid Hagar fled to a well past Kadesh on the way to Shur (Gn. 16:7).

For a time Abraham 'dwelt between Kadesh and Shur' and then sojourned at Gerar (Gn. 20:1); Ishmael's descendants ranged over an area that reached as far as 'Shur, which is opposite [i.e. E of] Egypt' (Gn. 25:18). After passing through the sea (*RED SEA), Israel entered the wilderness of Shur before going S into Sinai (Ex. 15:22). Shur lay on the direct route to Egypt from S Palestine (1 Sa. 15:7 and; most explicitly, 27:8). K.A.K.

SIBMAH. A town wrested from Sihon king of the Amorites and allotted by Moses to the tribe of Reuben (*šibmā*, Jos. 13:19, 21). It is identical with Sebam ('Shebam', אב); possibly its name was changed when it was rebuilt (Nu. 32:3, 38). By the time of Isaiah and Jeremiah, who bewailed its devastation, it had reverted to the Moabites (Is. 16:8-9; Je. 48:32). Originally a land for cattle (Nu. 32:4), it became famous for its vines and summer fruit. Jerome (*Comm. in Is.* 5) placed it about 500 paces from Heshbon: Khirbet Qurn el-Qibsh, 5 km WSW, is a feasible site. J.W.C.

SIDDIM, VALLEY OF (Heb. *siddim*, perhaps derived from Hittite *siyantas*, 'salt'). In Gn. 14:3, 10 a valley identified with the 'Salt Sea' and described as 'full of bitumen pits'. Here the kings of the Jordan pentapolis were defeated by Chedorlaomer and his allies from the E. It was probably a fertile, well-watered region S of the Lisan peninsula, later submerged by the S extension of the Dead Sea through earthquake action and consequent faulting of the rock-formation. From the bituminous products of the Dead Sea (still in evidence) the Greeks called it *Asphaltitis*.

F.F.B.

SIDON (Heb. *šidōn*, *šidōn*). A major walled city and port in ancient *Phoenicia (now located on the coast of Lebanon). Sidon (אב also 'Zidon'; modern Saida) had twin harbours and was divided into Greater Sidon (Jos. 11:8) and Lesser Sidon.

According to tradition, Sidon was the first Phoenician city to be founded and became a principal Canaanite stronghold (Gn. 10:19; 1 Ch. 1:13). For some centuries the harbour was subordinate to the Egyptian 18th-19th Dynasties. With declining Egyptian military control the city ruler Zimri-ada committed defection c. 1390 BC (so *Amarna tablets). It is possible that the attempt to include Dor in Sidonian territory led to war with the Philistines, who c. 1150 BC plundered Sidon, whose inhabitants fled to Tyre. The city was, however, strong enough to oppose Israel (Jdg. 10:12), and during a period of active colonization apparently made an unsuccessful attempt to settle at Laish in the Upper Jordan (Jdg. 18:7, 27). Opposition to Phoenician expansion came also from the Assyrians, who under *Tiglath-pileser I, c. 1110 BC, began to exact tribute from the ports, including Sidon. Ashurnasirpal II (c. 880 BC) claimed the city as a vassal, and in 841 BC *Shalmaneser III marched to the Dog river to receive the tribute of Tyre, Sidon and Israel (*JEHU), and depicted this on the temple gates at Balawat (now in BM). The Assyrian demands increased and the Sidonians rebelled. Tiglath-pileser III captured Tyre and perhaps Sidon in 739-738 (H. Tadmor, *Scripta Hierosolymitana* 8, 1961, p. 269, makes Zc. 9:2 refer to this time). When Sennacherib marched, in an attack foretold by Isaiah (23:2-12), Luli fled and died in exile and was replaced by Ethba'al (Tuba'lu) when Great and Little Sidon had been captured.

On Sennacherib's death Sidon once more revolted and Esarhaddon invaded Sidon, killed the ruler Abdi-milkutti, sacked the port and moved its inhabitants to Kar-Esarhaddon, and brought prisoners from Elam and Babylonia to replace the depleted population.

Sidon recovered its independence with the decline of the Assyrians, only to be besieged again and captured by Nebuchadrezzar c. 587 BC as foretold by Jeremiah (25:22; 27:3; 47:4). Under the Persians it provided the majority of the Persian fleet (cf. Zc. 9:2). About 350 BC, under Tabnit II (Tannes), Sidon led the rebellion of Phoenicia and Cyprus against Artaxerxes III (Ochus). The city was betrayed and 40,000 perished, the survivors burning the city and fleet. The fortifications were never rebuilt. The city under Strato II yielded to

SIDON

Alexander the Great without opposition and helped his siege of Tyre.

Under Antiochus III Sidon was a prosperous part of the kingdom of Ptolemy and later passed to the Seleucids and then to the Romans, who granted it local autonomy. Through all its history the principal temple was that of Eshmun, the god of healing. It is thus significant that it was in the region of Sidon that Christ healed the Syro-Phoenician woman's daughter (Mk. 7:24-31; cf. Mt. 11:21). Many Sidonians listened to his teaching (Mk. 3:8; Lk. 6:17; 10:13-14). Herod Agrippa I received a delegation from Sidon at Caesarea (Acts 12:20) and Paul visited friends in the city on his way to Rome (Acts 27:3). The inhabitants of Sidon, which was renowned as a centre of philosophical learning, were mainly Greek (cf. Mk. 7:26). Many coins bear inscriptions of Sidonian rulers, and among the discoveries in the area are remains from the Middle Bronze Age onwards, the inscribed sarcophagus of Eshmunazar (c. 300 BC) and buildings in the port area of NT times (A. Poidebard and J. Lauffray, *Sidon*, 1951). For Phoenician inscriptions from Sidon, see G. A. Cooke, *North Semitic Inscriptions*, 1903, pp. 26-43, 401-403. D.J.W.

SIGN. In the OT the Heb. word 'ōt is used with several shades of meaning.

1. A visible mark or object intended to convey a clear message, e.g. the sun and moon (Gn. 1:14), the mark of Cain (Gn. 4:15), tribal standards (Nu. 2:2).

2. An assurance or reminder, e.g. rainbow (Gn. 9:12), to Rahab (Jos. 2:12), stones from the Jordan (Jos. 4:6).

3. Omens named by prophets as pledges of their predictions, e.g. the death of Eli's sons (1 Sa. 2:34); Saul's prophetic ecstasy (1 Sa. 10:6f.); the young woman with child (Is. 7:10-14); various symbolic acts (as in Is. 20:3; Ezk. 4:1-3).

4. Works of God. When the word 'sign' is used in the plural together with 'wonders' (*mōpēt*) the events are understood to be the works of God, or attestations of his active presence among his people. This is seen in the account of the Exodus, where the plagues are described as signs (Ex. 4:28; 7:3; 8:23). The Exodus itself, with the deaths of the Egyptian first-born, the crossing of the Red Sea and the destruction of the Egyptian army, provides the supreme example of such signs and wonders (Dt. 4:34; 6:22; 7:19). This conviction is found throughout the OT (e.g. Nu. 14:11; Jos. 24:17; Ps. 78:43; Je. 32:21; Ne. 9:10), and Israel was assured that when God revealed himself again it would be with 'signs and wonders' to herald his coming (Joel 2:30).

Similarly in the NT Gk. *sēmeion* can mean simply some act or object conveying a recognizable meaning (Mt. 26:48; Lk. 2:12; Rom. 4:11; 2 Thes. 3:17). In 1 Cor. 14:22 tongues are 'a sign for unbelievers', since Is. 28:11f. shows that utterance in an unknown language is a sign of God's judgment on unbelief. Signs in heaven are quite frequently mentioned as indications of the last days (Mt. 24:30; Lk. 21:11, 25; Acts 2:19; Rev. 12:1, 3; 15:1). In Mk. 13 the tribulations accompanying the fall of Jerusalem and the end of the age are not a sign (Mk. 13:4; Mt. 24:3; Lk. 21:7) which enables a calculation of the end (Mk. 13:32), but an assurance to those caught up in the tribulation that the end cannot be long delayed.

So too 'signs and wonders' (miraculous healings, exorcisms, etc.) are regarded as proofs of God's powerful activity in the missionary work of the churches (Rom. 15:19; Heb. 2:4). Acts in particular gives a special prominence to such miracles ('wonders and signs', Acts 2:22, 43; 4:30; 5:12; 6:8; 7:36; 14:3; 15:12; see also 4:16, 22; 8:6, 13). Elsewhere however the NT writers (and Jesus) are a good deal more cautious in their talk of signs. Jesus responds critically to the Pharisees' request for signs (Mk. 8:11f.; Mt. 12:38f.; 16:1-4; Lk. 11:16, 29; so with Herod, 23:8f.), and warns against 'false Christs and false prophets' who 'show signs and wonders' (Mk. 13:22; Mt. 24:24). In similar vein Paul warns against the 'pretended signs and wonders' of 'the lawless one' (2 Thes. 2:9) and the seer of Rev. against the signs of the beast, the false prophet and the demonic spirits (Rev. 13:13f.; 16:14; 19:20). Paul is equally critical of the Jews' demand for signs (1 Cor. 1:22); and although he can point to 'signs and wonders' in his own ministry (2 Cor. 12:12), the context of his 'boasting' shows that he values such acts much less highly than the 'false apostles' at Corinth (2 Cor. 10-13).

The Fourth Gospel uses *sēmeion* more often (17 times) than any other NT writing, almost always in reference to Jesus' miracles. John is particularly concerned to demonstrate the true relation between 'sign' (significant action) and faith. Thus he is critical of a faith based on miracles as such—faith in Jesus (merely) as a miracle worker is defective faith, the shallow applause of the fickle crowd (Jn. 2:23-3:2; 4:48; 6:2, 14, 30; 7:31; 9:16; 12:18). The real significance of the miracles of Jesus is that they point forward to Jesus' death, resurrection and ascension, to the transformation brought by the new age of the Spirit, and thus lead to a faith in Jesus the (crucified) Christ, the (risen) Son of God (2:11; 6:26; 12:37; 20:30f.).

The problem with any sign is that it is ambiguous. It can be interpreted in different ways. The message it holds for faith can be seen only by faith. So, e.g., 'the sign of the prophet Jonah' (Mt. 12:39f.) means nothing to those who do not believe in the resurrection (cf. Jn. 2:18f.; Lk. 2:34; 16:31). Consequently a faith based or nurtured exclusively on signs, rather than on the reality to which they point, is immature and at grave risk. Mature faith rejoices in what signs it perceives, but does not depend on them. (*MIRACLE; *POWER; *SYMBOL; *WONDER.)

J.D.G.D.

SIHON. An Amorite king (13th century BC), whose capital was *Heshbon. According to Nu. 21:26-30 and Je. 48:45, Sihon conquered the Moabites and took their territory as far S as the river Arnon. His vassals included five Midianite princes (Jos. 13:21). His domain included the area from the Arnon on the S to the Jabbok on the N, and from the Jordan on the W to the desert on the E (Nu. 21:24; Jdg. 11:22), and Jos. 12:3 and 13:27 seem to extend his control N of the Jabbok to the Sea of Chinnereth. Moses sent an embassy to Sihon asking permission for the Israelites to pass through his kingdom (Nu. 21:21-22; Dt. 2:26-28). When Sihon refused, the Israelites defeated and killed him at Jahaz and occupied his territory (Nu.

21:21–32). This area was assigned to the tribes of Reuben and Gad (Nu. 32:33–38; Jos. 13:10). The victory over Sihon is often recalled in the subsequent history of Israel (Dt. 31:4, by Moses; Jos. 2:10, by Rahab; Jos. 9:10, by the Gibeonites; Jdg. 11:19–21, by Jephthah; Ne. 9:22, by Levites in a prayer of confession; and Pss. 135:11; 136:19). The name Jebel Sīhān for the mountain S of Dībān (biblical Dibon) preserves in Arabic form the name of this king in the area which he once ruled. TB *Niddah* 61a records a tradition not found in the Bible that Sihon was the brother of King Og (also an Amorite), and a son of Ahijah, son of the legendary fallen angel Shamhazai.

SILAS. A leading member of the church at Jerusalem who also had prophetic gifts (Acts 15:22, 32). Silas may be a Semitic name, possibly *š'īlā*, the Aram. form of Saul. There is little doubt that he is to be identified with 'Silvanus' (2 Cor. 1:19; 1 Thes. 1:1; 2 Thes. 1:1; 1 Pet. 5:12), which is probably the Latinized form of 'Silas', though it may be a separate *cognomen* chosen for its similarity.

In Acts Silas was sent by the church at Jerusalem to welcome into fellowship the Gentiles converted through the church of Antioch (Acts 15:22–35). When Paul and Barnabas quarrelled about John Mark, Barnabas went off with Mark and Paul took Silas as his companion on his second missionary journey (15:36–41). The fact of his Roman citizenship (16:37–39) may have been one of the reasons for the choice, and his membership of the Jerusalem church would have been helpful to Paul. His role seems to have been to replace Mark rather than Barnabas. Nowhere is he referred to in a general way as an 'apostle' (contrast Barnabas in Acts 14:14) and his position seems to be subordinate. Mark was the 'minister' (*hypēretēs*) of the apostles before (13:5), and that may indicate that he had some function similar to the synagogue attendants (Lk. 4:20) in looking after the Scriptures and possibly catechetical scrolls later developed into his Gospel. If the function of Silas was similar we can more readily see how he could have the literary role assigned to Silvanus in the Epistles. He accompanied Paul through Syria, Asia Minor, Macedonia and Thessalonica. When Paul left for Athens Silas stayed at Beroea and then joined Paul at Corinth (Acts 16–18). Paul mentions his work there in 2 Cor. 1:19. He was associated with Paul in the letters written from Corinth (1 Thes. 1:1; 2 Thes. 1:1) and is not named again until the reference to him in 1 Peter.

Peter says that he is writing *dia Silouanou* (1 Pet. 5:12). This implies a literary function with probably a good amount of freedom. This could account for some of the resemblances in wording between 1 Peter, 1 and 2 Thessalonians, and the apostolic decree of Acts 15. See E. G. Selwyn, *The First Epistle of St. Peter*, 1946, pp. 9–17. R.E.N.

SILK. The RSV rendering of two biblical words. 1. Heb. *mešī* (Ezk. 16:10, 13), perhaps 'silken thread', but the sense is obscure. Since the Heb. word seems to be an Egyp. loan-word (usually meaning linen in

Egyp.) and silk was not introduced into Egypt until the Roman period, some doubt is cast on the identification. Lxx has *trichaptos*, 'woven hair'; variants occur in other versions. 2. Gk. *sērīkon* (Rev. 18:12) 'silk', 'silken', listed among the precious wares sold in the markets of Babylon.

AV also renders as silk the Heb. *šēš* (Pr. 31:22 and mg. of Gn. 41:42 and Ex. 25:4) which other versions consider to be fine *linen.

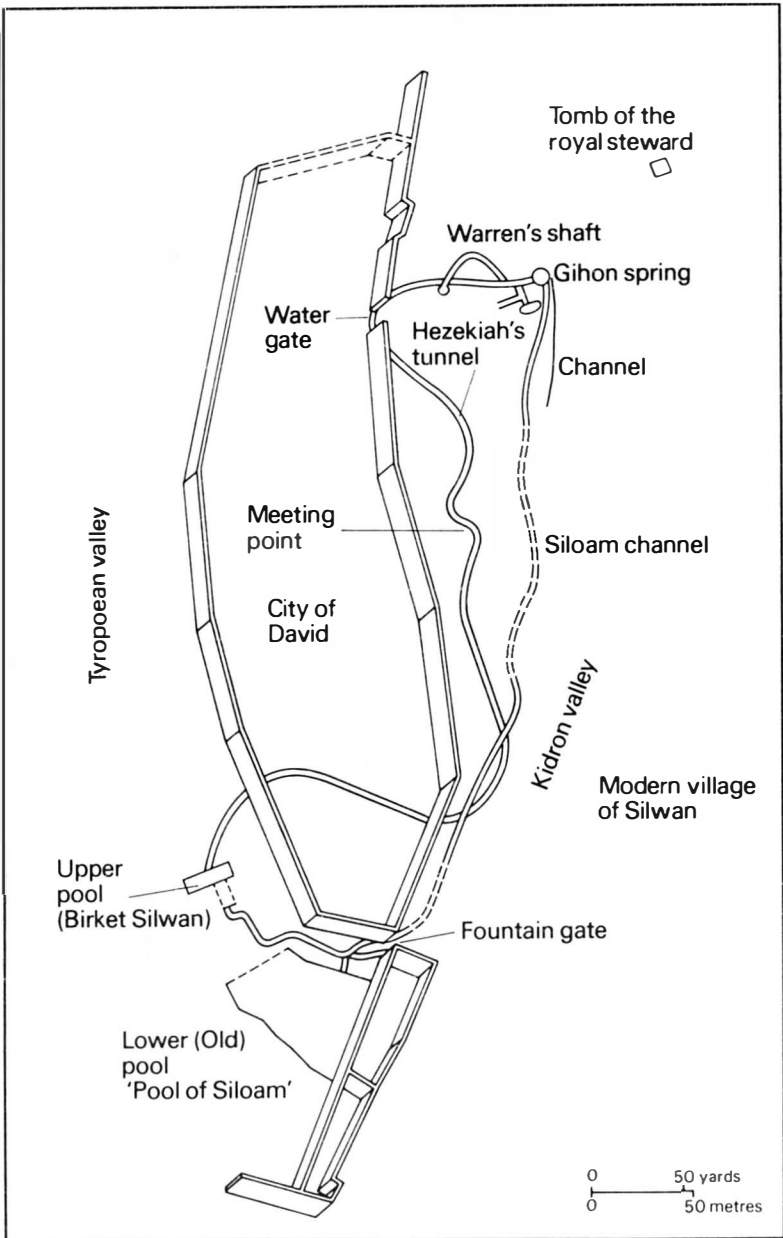

True silk is obtained from the cocoon of a Chinese moth fed on the leaves of white mulberry (*Morus alba*). Silk thread was a precious article of trade imported direct from China, since the rearing of these moths did not take place in the W until the Middle Ages. There is, however, another species of silk moth indigenous to the E Mediterranean that feeds on cypress and oak. It has been generally overlooked that from it in ancient times an industry arose in Cos and Sidon producing transparent silk that may have been intended in the biblical references. J.D.D. F.N.H.

SILOAM. One of the principal sources of water supply to Jerusalem was the intermittent pool of Gihon ('Virgin's Fountain') below the Fountain Gate (Ne. 3:15) and ESE of the city. This fed water along an open canal, which flowed slowly along the SE slopes, called *šīlōāh* ('Sender'; Lxx *Silōam*, Is. 8:6). It followed the line of the later 'second aqueduct' (Wilson) which fell only 5 cm in 300 m, discharging into the Lower or Old Pool (mod. *Birket el-Hamra*) at the end of the central valley between the walls of the SE and SW hills. It thus ran below 'the wall of the Pool of Shelah' (Ne. 3:15) and watered the 'king's garden' on the adjacent slopes.

This Old Pool was probably the 'Pool of Siloam' in use in NT times for sick persons and others to wash (Jn. 9:7–11). The 'Tower of Siloam' which fell and killed 18 persons—a disaster well known in our Lord's day (Lk. 13:4)—was probably sited on the Ophel ridge above the pool which, according to Josephus (*BJ* 5. 145), was near the bend of the old wall below Ophlas (Ophel). According to the Talmud (*Sukkoth* 4. 9), water was drawn from Siloam's pool in a golden vessel to be carried in procession to the Temple on the Feast of Tabernacles. Though there are traces of a Herodian bath and open reservoir (about 18 m by 5 m, originally 22 m square with steps on the W side), there can be no certainty that this was the actual pool in question. It has been suggested that the part of the city round the Upper Pool ('*Ain Silwān*') 100 m above was called 'Siloam', the Lower being the King's Pool (Ne. 2:14) or Lower Gihon.

When Hezekiah was faced with the threat of invasion by the Assyrian army under Sennacherib he 'stopped all the springs', that is, all the rivulets and subsidiary canals leading down into the Kedron 'brook that flowed through the land' (2 Ch. 32:4). Traces of canals blocked at about this time were found by the Parker Mission. The king then diverted the upper Gihon waters through a 'conduit' or tunnel into an upper cistern or pool (the normal method of storing water) on the W side of the city of David (2 Ki. 20:20). Ben Sira tells how 'Hezekiah fortified his city and brought water into the midst of it; he tunnelled the sheer rock with iron and built pools for water' (Ecclus. 48:17–19). Hezekiah clearly defended the new source of supply with a rampart (2 Ch. 32:30). The digging

SILOAM

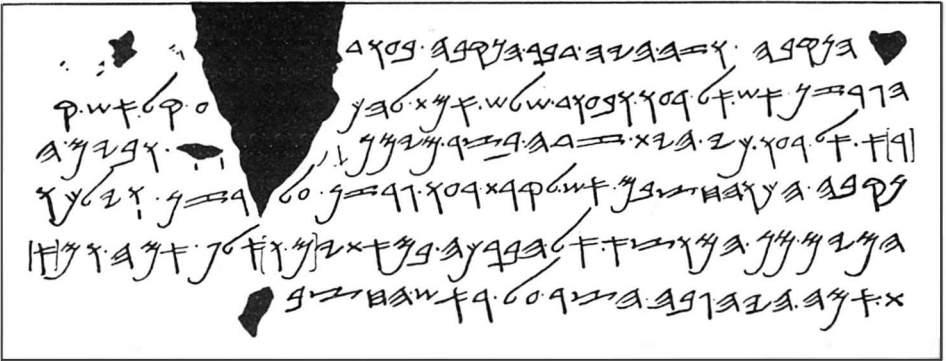

Plan of the Siloam area, including the pools and the channels which carried the water into the city of Jerusalem.

of the reservoir may be referred to by Isaiah (22:11).

In 1880 bathers in the upper pool (also called *birket silwān*) found about 5 m inside the tunnel a cursive Heb. inscription, now in Istanbul (*WRITING), which reads: '... was being dug out. It was cut in the following manner ... axes, each man towards his fellow, and while there were still 3 cubits to be cut through, the voice of one man calling to the other was heard, showing that he was

deviating to the right. When the tunnel was driven through, the excavators met man to man, axe to axe, and the water flowed for 1,200 cubits from the spring to the reservoir. The height of the rock above the heads of the excavators was 100 cubits' (D. J. Wiseman, *IBA*, pp. 61-64).

When this remarkable Judean engineering feat was excavated the marks of the picks and deviations to effect a junction midway were traced. The tunnel traverses 540 m (or 643 m, Ussishkin),

Facsimile of the inscription found in the Siloam tunnel describing how the miners excavating the water conduit from each end finally met. The archaic Hebrew script supports a date in Hezekiah's reign. Jerusalem. Length 75 cm. c. 710 BC.

twisting to avoid constructions or rock faults or to follow a fissure, to cover a direct line of 332 m. It is about 2 m high and in parts only 50 cm wide. Modern buildings prevent any archaeological check that the upper pool is the 'reservoir' (*b'rēkâ*) of Hezekiah or that from this the waters overflowed direct to the lower pool. The pool was probably underground at first, the rock roof collapsing or being quarried away later.

Hezekiah's tunnel begins from an earlier tunnel which channelled water from the spring of Gihon to the bottom of a shaft which rises to join an inclined tunnel which led to a point inside the Jebusite city. This shaft and tunnel system was built by the Jebusites to provide a secure water-supply and is possibly the 'gutter' or 'water shaft' (*sinnôr*) that David's men climbed to capture the city (2 Sa. 5:8).

Below the modern village of Siloam (Silwān, first mentioned in 1697) on the E escarpment opposite the hill of Ophel are a number of rock-cut tombs. These were prepared for the burial of 'Pharaoh's Daughter' and for ministers and nobles of the kingdom of Judah. One of these bore a Heb. inscription, the epitaph of a royal steward, probably the *Shebna who was rebuked by Isaiah (22:15-16). See *IBA*, p. 59; *IEJ* 3, 1953, pp. 137-152; D. Ussishkin, *The Village of Siloam*, 1986.

SIMEON. I. The second son of Jacob by Leah (Gn. 29:33). Heb. *šim'on* was derived from *šama'* ('to hear'), and its significance is given in Gn. 29:33. Simeon took part with Levi in the massacre of the men of Shechem for dishonouring their sister Dinah (Gn. 34). He also played a prominent part in the affair of Joseph and his brothers, being given as a hostage so that they should return with Benjamin. Simeon may have been chosen by Joseph because he played a leading part in selling him to Egypt, or it may be because he was second to Reuben, who had acted more responsibly than the others (Gn. 37:21-22; 42:22). In the blessing of Jacob, Simeon and Levi were rebuked for their violent nature, and they were to be divided and scat-

tered (Gn. 49:5-7). The sons of Simeon were Jemuel, Jamin, Ohad, Jachin, Zohar and Shaul, the son of a Canaanite woman (Gn. 46:10; Ex. 6:15).

2. The tribe of Simeon. The number of the tribe is given as 59,300 in Nu. 1:22-23 and 22,200 'families' in Nu. 26:14. They were to camp next to Reuben (Nu. 2:12-13). The tribe of Simeon was among those to be set on Mt Gerizim and blessed (Dt. 27:12), but it was not named (along with Issachar) in the blessing of Moses in Dt. 33. In the Promised Land it was given a portion at the S extremity and it came almost to be absorbed into the territory of Judah (Jos. 19:1-9). The towns of the area were reckoned to belong to Judah in Jos. 15:26-32, 42 and elsewhere. Judah and Simeon joined forces at the beginning of the conquest of Canaan (Jdg. 1:3, 17), but Judah was clearly the more powerful tribe. The sons of Simeon, despite keeping a genealogical record, did not multiply as fast as Judah (1 Ch. 4:24-33). They did, however, win a victory over the Amalekites under Hezekiah (1 Ch. 4:41-43), and they provided more men for David than did Judah (1 Ch. 12:24-25). The Chronicler seems to imply that Simeon belonged to the N kingdom, but numbers of Simeonites joined Asa in restoring the worship of Yahweh (2 Ch. 15:9). The tribe is not mentioned after the Exile, and the only other reference to it is among those sealed in Rev. 7:7, where it comes seventh in the list.

3. An ancestor of Jesus (Lk. 3:30).

4. A man in Jerusalem who was righteous and devout and who was looking for 'the consolation of Israel' (Lk. 2:25-35). He is not to be identified with Rabbi Simon ben Hillel. He was one of the remnant who were longing for the coming of the Messiah, and had received a direct revelation that he would not die before seeing the Messiah with his own eyes. When the presentation of Jesus was about to take place he was guided by the Spirit to come into the Temple. On seeing Jesus he uttered the hymn of praise now known as the *Nunc Dimittis. He saw that the Messiah would vindicate Israel in the eyes of the Gentiles. Simeon went on to speak to the astonished Mary of the role of Christ within Israel. He was to be like a stone causing some to fall and some to rise. He was to be a sign which would not be heeded but spoken against (34). Her own suffering as she watched his life and death was to be acute and he was to reveal the

The family of Simeon.

inmost thoughts of men (35). Having given his testimony to the Christ, Simeon fades silently from the picture.

5. A disciple at Antioch, with prophetic and teaching gifts, who was one of those who ordained Barnabas and Saul for their first missionary journey (Acts 13:1-2). He was surnamed Niger, which suggests that he was an African, but he has not been proved to be the same person as Simon of Cyrene (Lk. 23:26, etc.). Here RV and RSV read 'Simeon', which is the more normal rendering of the Gk. but not of the Heb.

6. The archaic version of the name of Simon Peter used by James in his speech to the Council of Jerusalem (Acts 15:14). RV and RSV also in 2 Pet. 1:1 (cf. RVmg., NEB). R.E.N.

SIMON. A later form of the OT name of Simeon (see Acts 15:14, where James uses the older form; also 2 Pet. 1:1, RVmg., NEB).

1. The chief disciple and apostle of Jesus, who was the son of Jonas (or John) and the brother of Andrew. Jesus gave him the name of *Peter.

2. The 'Canaanite' (Mt. 10:4; Mk. 3:18, AV). 'Canaanite' here cannot mean an inhabitant of Canaan, nor can it represent one who dwells at Cana. Rather it should be rendered *Canaanean (RV, RSV), an adherent of the party later known as the *Zealots and rendered so by Luke (Lk. 6:15; Acts 1:13). Whether Simon was a zealot in the political sense or the religious sense is a matter of some debate.

3. One of the brothers of our Lord (Mt. 13:55; Mk. 6:3). 4. A leper in Bethany in whose house the head of Jesus was anointed with oil (Mt. 26:6; Mk.

14:3), probably related to *Martha, *Mary and *Lazarus (see J. N. Sanders, 'Those whom Jesus loved', NTS 1, 1954-5, pp. 29-41). 5. A man of Cyrene who was compelled to carry the cross of Jesus (Mk. 15:21), possibly the Simeon of Acts 13:1 (*RUFUS). 6. A Pharisee in whose house the feet of Jesus were washed with tears and anointed (Lk. 7:40). Some scholars equate this Simon with 4 above and regard the stories as doublets; but they are strikingly different in their details (*MARY). 7. Simon Iscariot, the father of *Judas Iscariot (Jn. 6:71; 12:4; 13:2). 8. *Simon Magus. 9. A tanner at Joppa in whose house Peter lodged (Acts 9:43).

F.S.F.

SIMON MAGUS. In the NT we meet Simon in 'the city of Samaria' (Sebaste?—Acts 8:9-24), where he has 'swept the Samaritans off their feet with his magical arts' (NEB, v. 9). Luke does not suggest that Simon was himself a Samaritan. In essence a Levantine mountebank. Simon cultivated the legend that he was a divine emanation—'that Power of God which is called the Great Power'. The concept and the title were pagan enough (cf. for analogies, Ramsay, BRD, p. 117; Deissmann, Bible Studies², 1909, p. 336 n.), but the Samaritans would by 'God' intend 'Yahweh', and Simon must have acclimatized himself to his religious surroundings. He already represents, then, a significant syncretism of magical, Hellenistic and erratic Jewish elements.

In the mass movement attending Philip's preaching Simon professed conversion and was baptized. Luke uses his regular expression 'believed', and there is no reason to doubt Simon's sincerity thus far. The sequel, however, shows that his basic attitudes were still those of the magician. So impressed was he with the visible manifestations of

the Holy Spirit following the apostles' laying on of hands, that he applied to them, as to higher proficients in the same trade, for the formula at an appropriate price. Peter's crushing rebuke evidently terrified him, for he begged the apostles' intercession to avert the threatened peril. Simon was obsessed with the idea of *power*: throughout he conceived of it as residing in the apostles as super-magicians.

Here, rather abruptly, Luke leaves Simon; but a tangle of traditions about his later career survive in primitive Christian literature. If they include incongruities and legends there is no need, with E. de Faye, to discount the patristic descriptions, or to deny a connection between the Simon of Acts and the Simonian sect. Even Lucian's rascally oracle-monger Alexander discoursed on the errors of Epicurus: and there is nothing incredible in Simon, with striking ability and personality, and real psychic powers, and perhaps some education, combining the charlatan and the heresiarch.

Justin (*Apology* 26, cf. 56, and *Trypho* 120), himself from Samaria, says that Simon was born in the village of Gitta; that his companion Helen, a former prostitute, was widely regarded as his first divine 'idea', while he himself was acclaimed by multitudes in Samaria and Rome as a divinity. Indeed, Roman adulation had erected a statue inscribed *Simoni Deo Sancto*, 'to Simon the Holy God'. (This statue may actually have been erected to the Sabine deity Semo Sancus, but the Simonians, who worshipped at statues, perhaps saw opportunities in this one.)

Irenaeus (*Adv. Haer.* 1. 16, Harvey), Hippolytus (*Philos.* 6. 7ff.) and Epiphanius (*Panarion.* 21. 2ff.) describe Simonian doctrine, the two latter employing publications which they allege, perhaps erroneously in Hippolytus' case, to emanate from the sect of Simon. He seems to have developed his old theme of 'the Great Power of God' into a Trinitarian scheme: Simon appeared to the Samaritans as the Father, to the Jews as the Son (he only *seemed* to suffer) and to the world at large as the Holy Spirit. He had a Redemption myth in which he rescued Helen ('the lost sheep') from the bondage of successive transmigrations in various female bodies; and he preached salvation by grace, requiring faith in Helen and himself, but allowing unrestrained liberty in morals afterwards. But Simon also borrowed heavily from Gk. paganism and Gk. philosophy, and some concepts appear which recur in more sophisticated Christian *Gnosticism. Irenaeus and the others regard him as the first major heretic, the initiator of a long chain of interrelated errors. The modern association of Gnostic origins with heretical forms of Judaism may suggest that their instinct was not far wrong.

Literature such as the Clementine romance and the *Acts of Peter* has many imaginative stories of encounters between Simon and Peter in Rome. The once-popular idea that in the Clementines Simon is a cipher for Paul need no longer be taken seriously.) According to Hippolytus, his final exhibition misfired. He was buried alive, promising to reappear in 3 days; but he did not, for, in Hippolytus' laconic phrase, 'he was not the Christ'.

SIN. The Egyp. *sinw*, *swn*, 'fortress', is connected later with Egyp. *sin*, 'clay, mud', hence its Gk. name Pelusium, 'mud-city'. A fortress-city, it is now Tell Farama, on the seashore about 32 km SE of Port Said; an Egyp. key defence-post against invasion from the E through Palestine. Emendation in Ezk. 30:15-16 to Seven(=) (=Aswan) is unnecessary. On the name Sin, see Gardiner, *JEA* 5, 1918, pp. 253-254. K. A. K.

SIN.

I. Terminology

As might be expected of a book whose dominant theme is human sin and God's gracious salvation from it, the Bible uses a wide variety of terms in both OT and NT to express the idea of sin.

There are four main Heb. roots. *hī'* is the most common and with its derivatives conveys the underlying idea of missing the mark, or deviating from the goal (cf. *Jdg.* 20:16 for non-moral usage). The vast proportion of its occurrences refer to moral and religious deviation, whether in respect of man (*Gn.* 20:9), or God (*La.* 5:7). The noun *ḥattā'ā* is frequently used as a technical term for a sin-offering (*Lv.* 4, *passim*). This root does not address the inner motivation of wrong action but concentrates more on its formal aspect as deviation from the moral norm, usually the law or will of God (*Ex.* 20:20; *Ho.* 13:2; *etc.*). *pā'* refers to action in breach of relationship, 'rebellion', 'revolution'. It occurs in a non-theological sense, *e.g.*, with reference to Israel's secession from the house of David (*1 Ki.* 12:19). Used of sin it is perhaps the profoundest OT term reflecting as it does the insight that sin is rebellion against God, the defiance of his holy lordship and rule (*Is.* 1:28; *1 Ki.* 8:50; *etc.*). *wh* conveys a literal meaning of deliberate perversion or 'twisting' (*Is.* 24:1; *La.* 3:9). Used in relation to sin it reflects the thought of sin as deliberate wrongdoing, 'committing iniquity' (*Dn.* 9:5; *2 Sa.* 24:17). It occurs in religious contexts particularly in a noun form *'āwōn* which stresses the idea of the guilt which arises from deliberate wrongdoing (*Gn.* 44:16; *Je.* 2:22). It can also refer to the punishment which is consequent upon the sin (*Gn.* 4:13; *Is.* 53:11). *sāgāh* has as its basic idea straying away from the correct path (*Ezk.* 34:6). It is indicative of sin as arising from ignorance, 'erring', 'creaturely going astray' (*1 Sa.* 26:21; *Jb.* 6:24). It often appears in the cultic context as sin against unrecognized ritual regulations (*Lv.* 4:2). Reference should also be made to *rāsa'*, to be wicked, to act wickedly (*2 Sa.* 22:22; *Ne.* 9:33); and *'amal*, mischief done to others (*Pr.* 24:2; *Hab.* 1:13).

The principal NT term is *hamartia* (and cognates), which is equivalent to *hī'*. In classical Gk. it is used for missing a target or taking a wrong road. It is the general NT term for sin as concrete wrongdoing, the violation of God's law (*In.* 8:46; *Jas.* 1:15; *1 Jn.* 1:8). In *Rom.* 5-8 Paul personifies the term as a ruling principle in human life (cf. *5:12*; *6:12*, *14*; *7:17*, *20*; *8:2*). *paraptōma* occurs in classical contexts for an error in measurement or a blunder. The NT gives it a stronger moral connotation as misdeed or trespass (cf. 'dead through . . .',

Eph. 2:1; Mt. 6:14f.). *parabasis* is a similarly derived term with similar meaning, 'transgression', 'going beyond the norm' (Rom. 4:15; Heb. 2:2). *asebeia* is perhaps the profoundest NT term and commonly translates *pē* in the LXX. It implies active ungodliness or impiety (Rom. 1:18; 2 Tim. 2:16). Another term is *anomia*, lawlessness, a contempt for law (Mt. 7:23; 2 Cor. 6:14). *kakia* and *ponēria* are general terms expressing moral and spiritual depravity (Acts 8:22; Rom. 1:29; Lk. 11:39; Eph. 6:12). The last of these references indicates the association of the latter term with Satan, the evil one, *ho ponēros* (Mt. 13:19; 1 Jn. 3:12). *adikia* is the main classical term for wrong done to one's neighbour. It is translated variously as 'injustice' (Rom. 9:14), 'unrighteousness' (Lk. 18:6), 'falsehood' (Jn. 7:18), 'wickedness' (Rom. 2:8), 'iniquity' (2 Tim. 2:19). 1 Jn. equates it with *hamartia* (1 Jn. 3:4; 5:17). Also occurring are *enochos*, a legal term meaning 'guilty' (Mk. 3:29; 1 Cor. 11:27), and *opheilēma*, 'debt' (Mt. 6:12).

The definition of sin, however, is not to be derived simply from the terms used in Scripture to denote it. The most characteristic feature of sin in all its aspects is that it is directed against God (*cf.* Ps. 51:4; Rom. 8:7). Any conception of sin which does not have in the forefront the contradiction which it offers to God is a deviation from the biblical representation. The common notion that sin is selfishness betrays a false assessment of its nature and gravity. Essentially, sin is directed against God, and this perspective alone accounts for the diversity of its form and activities. It is a violation of that which God's glory demands and is, therefore, in its essence the contradiction of God.

II. Origin

Sin was present in the universe before the Fall of Adam and Eve (Gn. 3:1f.; *cf.* Jn. 8:44; 2 Pet. 2:4; 1 Jn. 3:8; Jude 6). The Bible however does not deal directly with the origin of evil in the universe, being concerned rather with sin and its origin in human life (1 Tim. 2:14; Jas. 1:13f.). The real thrust of the demonic temptation in the account of the Fall in Gn. 3 lies in its subtle suggestion of man's aspiring to equality with his maker ('you will be like God . . .', 3:5). Satan's attack was directed against the integrity, veracity and loving provision of God, and consisted in an enticement to wicked and blasphemous rebellion against man's proper Lord. In this act man snatched at equality with God (*cf.* Phil. 2:6), attempted to assert his independence of God, and hence to call in question the very nature and ordering of existence whereby he lived as creature in utter dependence upon the grace and provision of his creator. 'Man's sin lies in his pretension to be God' (Niebuhr). In this act, further, man blasphemously withheld the worship and adoring love which is ever his proper response to God's majesty and grace, and instead paid homage to the enemy of God and to his own foul ambitions.

Thus the origin of sin according to Gn. 3 ought not to be sought so much in an overt action (2:17 with 3:6) but in an inward, God-denying aspiration of which the act of disobedience was the immediate expression. As to the problem of how Adam and Eve could have been subject to temptation had they not previously known sin, Scripture does not enter into extended discussion. However, in the person of Jesus Christ it witnesses to a Man who, though without sin, was subject to temptation 'in

every respect as we are' (Heb. 4:15; *cf.* Mt. 4:3f.; Heb. 2:17f.; 5:7f.; 1 Pet. 1:19; 2:22f.). The ultimate origin of *evil is part of the 'mystery of lawlessness' (2 Thes. 2:7), but an arguable reason for Scripture's relative silence is that a 'rational explanation' of the origin of sin would have the inevitable result of directing attention away from the Scripture's primary concern, the confession of *my personal guilt* (*cf.* G. C. Berkouwer, *Sin*, 1971, ch. 1). In the end, sin, by the nature of the case, cannot be 'known' objectively; 'sin posits itself' (S. Kierkegaard).

III. Consequences

The sin of Adam and Eve was not an isolated event. The consequences for them, for posterity and for the world are immediately apparent.

a. Man's attitude to God

The changed attitude to God on the part of Adam indicates the revolution that took place in their minds. They 'hid themselves from the presence of the Lord God' (Gn. 3:8; *cf.* v. 7). Made for the presence and fellowship of God, they now dreaded encounter with him (*cf.* Jn. 3:20). * Shame and fear were now the dominant emotions (*cf.* Gn. 2:25; 3:7, 10), indicating the disruption that had taken place.

b. God's attitude to man

Not only was there a change in man's attitude to God, but also in God's attitude to man. Reproof, condemnation, curse, expulsion from the garden are all indicative of this. Sin is one-sided, but its consequences are not. Sin elicits God's wrath and displeasure, and necessarily so, because it is the contradiction of what he is. For God to be complacent towards sin is an impossibility, since it would be for God to cease to take himself seriously. He cannot deny himself.

c. Consequences for the human race

The unfolding history of man furnishes a catalogue of vices (Gn. 4:8, 19, 23f.; 6:2-3, 5). The sequel of abounding iniquity results in the virtual destruction of mankind (Gn. 6:7, 13; 7:21-24). The Fall had abiding effect not only upon Adam and Eve but upon all who descended from them; there is racial solidarity in sin and evil.

d. Consequences for creation

The effects of the Fall extend to the physical cosmos. 'Cursed is the ground because of you' (Gn. 3:17; *cf.* Rom. 8:20). Man is the crown of creation, made in God's image and, therefore, God's viceroy (Gn. 1:26). The catastrophe of man's Fall brought the catastrophe of curse upon that over which he was given dominion. Sin was an event in the realm of the human spirit, but it has its repercussions in the whole of creation.

e. The appearance of death

* Death is the epitome of sin's penalty. This was the warning attached to the prohibition of Eden (Gn. 2:17), and it is the direct expression of God's curse upon man the sinner (Gn. 3:19). Death in the phenomenal realm consists in the separation of the integral elements of man's being. This dissolution exemplifies the principle of death, namely, separation, and it comes to its most extreme expression in separation from God (Gn. 3:23f.). Because of sin death is invested with a fear and terror for man (Lk. 12:5; Heb. 2:15).

IV. Imputation

The first sin of Adam had unique significance for the whole human race (Rom. 5:12, 14-19; 1 Cor. 15:22). Here there is sustained emphasis upon the one trespass of the one man as that by which sin, condemnation and death came upon all mankind. The sin is identified as 'the transgression of Adam', 'the trespass of the one', 'one trespass', 'the disobedience of the one', and there can be no doubt that the first trespass of Adam is intended. Hence the clause 'because all men sinned' in Rom. 5:12 refers to the sin of all in the sin of Adam. It cannot refer to the actual sins of all men, far less to the hereditary depravity with which all are afflicted, for in v. 12 the clause in question clearly says why 'death spread to all men', and in the succeeding verses the 'one man's trespass' (v. 17) is stated to be the reason for the universal reign of death. If the same sin were not intended, Paul would be affirming two different things with reference to the same subject in the same context. The only explanation of the two forms of statement is that all sinned in the sin of Adam. The same inference is to be drawn from 1 Cor. 15:22, 'in Adam all die'. If all die in Adam, it is because all sinned in Adam.

According to Scripture the kind of solidarity with Adam which explains the participation of all in Adam's sin is the kind of solidarity which Christ sustains to those united to him. The parallel in Rom. 5:12-19; 1 Cor. 15:22, 45-49 between Adam and Christ indicates the same type of relationship in both cases, and we have no need to posit anything more ultimate in the case of Adam and the race than we find in the case of Christ and his people. In the latter it is representative headship, and this is all that is necessary to ground the solidarity of all in the sin of Adam. To say that the sin of Adam is imputed to all is but to say that all were involved in his sin by reason of his representative headship.

While the imputation of Adam's sin was immediate according to the evidence of the relevant passages, the judgment of condemnation passed upon Adam, and hence upon all men in him, is in Scripture seen as confirmed in its justice and propriety by every man's subsequent moral experience. Thus Rom. 3:23 'all have sinned' is amply proved by reference to the specific, overt sins of Jews and Gentiles (Rom. 1:18-3:8) before Paul makes any reference whatever to imputation in Adam. In similar vein Scripture universally relates man's ultimate judgment before God to his 'works' which fall short of God's standards (cf. Mt. 7:21-27; 13:41; 25:31-46; Lk. 3:9; Rom. 2:5-10; Rev. 20:11-14).

Rejection of this doctrine betrays not only failure to accept the witness of the relevant passages but also failure to appreciate the close relation which exists between the principle which governs our relation to Adam and the governing principle of God's operation in salvation. The parallel between Adam as the first man and Christ as the last Adam shows that the accomplishment of salvation in Christ is based on the same operating principle as that by which we have become sinners and the heirs of death. The history of mankind is finally subsumed under two complexes, sin-condemnation-death and righteousness-justification-life. The former arises from our union with Adam, the latter from union with Christ. These are the

two orbits within which we live and move. God's government of men is directed in terms of these relationships. If we do not reckon with Adam we are thereby excluded from a proper understanding of Christ. All who die die in Adam; all who are made alive are made alive in Christ.

V. Depravity

Sin never consists merely in a voluntary act of transgression. Every volition proceeds from something that is more deep-seated than the volition itself. A sinful act is the expression of a sinful heart (cf. Mk. 7:20-23; Pr. 4:23; 23:7). Sin must always include, therefore, the perversity of heart, mind, disposition and will. This was true, as we saw above, in the case of the first sin, and it applies to all sin. The imputation to posterity of the sin of Adam must, therefore, carry with it involvement in the perversity apart from which Adam's sin would be meaningless and its imputation an impossible abstraction. Paul states that 'by one man's disobedience many were made sinners' (Rom. 5:19). The depravity which sin entails and with which all men come into the world is for this reason a direct implicate of our solidarity with Adam in his sin. We come to be as individuals by natural generation, and as individuals we never exist apart from the sin of Adam reckoned as ours. Therefore the psalmist wrote, 'Behold, I was brought forth in iniquity, and in sin did my mother conceive me' (Ps. 51:5) and our Lord said, 'That which is born of the flesh is flesh' (Jn. 3:6).

The witness of Scripture to the pervasiveness of this depravity is explicit. Gn. 6:5; 8:21 provides a closed case. The latter reference makes it clear that this indictment was not restricted to the period before the judgment of the Flood. There is no evading the force of this testimony from the early pages of divine revelation, and later assessments are to the same effect (cf. Je. 17:9-10; Rom. 3:10-18). From whatever angle man is viewed, there is the absence of that which is well-pleasing to God. Considered more positively, all have turned aside from God's way and become corrupted. In Rom. 8:5-7 Paul refers to the mind of the flesh, and flesh, when used ethically as here, means human nature directed and governed by sin (cf. Jn. 3:6). Further, according to Rom. 8:7, 'The mind that is set on the flesh is hostile to God'. No stronger condemnatory judgment could be arrived at, for it means that the thinking of the natural man is conditioned and governed by enmity directed against God. Nothing less than a judgment of total depravity is the clear implication of these passages, *i.e.* there is no area or aspect of human life which is absolved from the sombre effects of man's fallenness, and hence no area which might serve as a possible ground for man's justification of himself in the face of God and his law.

Depravity however is not registered in actual transgression to an equal extent in all. There are multiple restraining factors. God does not give over all men to uncleanness, to a base mind, and to improper conduct (Rom. 1:24, 28). Total depravity (total, that is, in the sense that it touches everything) is not incompatible with the exercise of the natural virtues and the promotion of civil righteousness. Unregenerate men are still endowed with conscience, and the work of the law is written upon their hearts so that in measure and at points they fulfil its requirement (Rom. 2:14f.). The doctrine of depravity, however, means that these works,

though formally in accord with what God commands, are not good and well-pleasing to God in terms of the full and ultimate criteria by which his judgment is determined, the criteria of love to God as the animating motive, the law of God as the directing principle, and the glory of God as the controlling purpose (Rom. 8:7; 1 Cor. 2:14; cf. Mt. 6:2, 5, 16; Mk. 7:6-7; Rom. 13:4; 1 Cor. 10:31; 13:3; Tit. 1:15; 3:5; Heb. 11:4, 6).

VI. Inability

Inability is concerned with the incapacity arising from the nature of depravity. If depravity is total, *i.e.* affecting every aspect and area of man's being, then inability for what is good and well-pleasing to God is likewise comprehensive in its reference.

We are not able to change our character or act differently from it. In the matter of understanding, the natural man cannot know the things of the Spirit of God because they are spiritually discerned (1 Cor. 2:14). In respect of obedience to the law of God he is not only not subject to the law of God but he cannot be (Rom. 8:7). They who are in the flesh cannot please God (Rom. 8:8). A corrupt tree cannot bring forth good fruit (Mt. 7:18). The impossibility in each case is undeniable. It is our Lord who affirms that even faith in him is impossible apart from the gift and drawing of the Father (Jn. 6:44f., 65). This witness on his part is to the same effect as his insistence that apart from the supernatural birth of water and the Spirit no-one can have intelligent appreciation of, or entrance into, the kingdom of God (Jn. 3:3, 5f., 8; cf. Jn. 1:13; 1 Jn. 2:29; 3:9; 4:7; 5:1, 4, 18).

The necessity of so radical and momentous a transformation and re-creation as regeneration is proof of the whole witness of Scripture to the bondage of sin and the hopelessness of our sinful condition. This bondage implies that it is a psychological, moral and spiritual impossibility for the natural man to receive the things of the Spirit, to love God and do what is well-pleasing to him, or to believe in Christ to the salvation of his soul. It is this enslavement which is the premise of the gospel, and the glory of the gospel lies precisely in the fact that it provides release from the bondage and slavery of sin. It is the gospel of grace and power for the helpless.

VII. Liability

Since sin is against God, he cannot be complacent towards it or indifferent with respect to it. He reacts inevitably against it. This reaction is specifically his wrath. The frequency with which Scripture mentions the wrath of God compels us to take account of its reality and meaning.

Various terms are used in the OT. In Heb., '*ap̄*' in the sense of 'anger', and intensified in the form *h^rôn' ap̄* to express the 'fierceness of God's anger' is very common (cf. Ex. 4:14; 32:12; Nu. 11:10; 22:22; Jos. 7:1; Jb. 42:7; Ps. 21:9; Is. 10:5; Na. 1:6; Zp. 2:2); *hēmā* is likewise frequent (cf. Dt. 29:23; Pss. 6:1; 79:6; 90:7; Je. 7:20; Na. 1:2); *eb̄rā* (cf. Ps. 78:49; Is. 9:19; 10:6; Ezk. 7:19; Ho. 5:10) and *qesep̄* (cf. Dt. 29:28; Ps. 38:1; Je. 32:37; 50:13; Zc. 1:2) are used with sufficient frequency to be worthy of mention; *zā'am* is also characteristic and expresses the thought of indignation (cf. Pss. 38:3; 69:24; 78:49; Is. 10:5; Ezk. 22:31; Na. 1:6). It is apparent that the OT is permeated with references to the wrath of God. Often more than one

of these terms appear together in order to strengthen and confirm the thought expressed. There is intensity in the terms themselves and in the constructions in which they occur to convey the notions of displeasure, fiery indignation and holy vengeance.

The Gk. terms are *orgē* and *thymos*, the former frequently predicated of God in the NT (cf. Jn. 3:36; Rom. 1:18; 2:5, 8; 3:5; 5:9; 9:22; Eph. 2:3; 5:6; 1 Thes. 1:10; Heb. 3:11; Rev. 6:17), and the latter less frequently (cf. Rom. 2:8; Rev. 14:10, 19; 16:1, 19; 19:15; see *zēlos* in Heb. 10:27).

The * wrath of God is therefore a reality, and the language and teaching of Scripture are calculated to impress upon us the severity by which it is characterized. There are three observations which particularly require mention. First, the wrath of God must not be interpreted in terms of the fitful passion so commonly associated with anger in us. It is the deliberate, resolute displeasure which the contradiction of his holiness demands. Secondly, it is not to be construed as vindictiveness but as holy indignation; nothing of the nature of malice attaches to it. It is not malignant hatred but righteous detestation. Thirdly, we may not reduce the wrath of God to his will to punish. Wrath is a positive outgoing of dissatisfaction as sure as that which is pleasing to God involves complacency. We must not eliminate from God what we term emotion. The wrath of God finds its parallel in the human heart, exemplified in a perfect manner in Jesus (cf. Mk. 3:5; 10:14).

The epitome of sin's liability is, therefore, the holy wrath of God. Since sin is never impersonal, but exists in, and is committed by, persons, the wrath of God consists in the displeasure to which we are subjected; we are the objects. The penal inflictions which we suffer are the expressions of God's wrath. The sense of guilt and torment of conscience are the reflections in our consciousness of the displeasure of God. The essence of final perdition will consist in the infliction of God's indignation (cf. Is. 30:33; 66:24; Dn. 12:2; Mk. 9:43, 45, 48).

VIII. The conquest of sin

Despite the sombreness of the theme, the Bible never completely loses a note of hope and optimism when dealing with sin; for the heart of the Bible is its witness to God's mighty offensive against sin in his historical purpose of redemption centred in Jesus Christ, the last Adam, his eternal Son, the Saviour of sinners. Through the whole work of Christ, his miraculous birth, his life of perfect obedience, supremely his death on the cross and resurrection from the dead, his ascension to the right hand of the Father, his reign in history and his glorious return, sin has been overcome. Its rebellious, usurping authority has been vanquished, its absurd claims exposed, its foul machinations unmasked and overthrown, the baleful effects of the Fall in Adam counteracted and undone, and God's honour vindicated, his holiness satisfied and his glory extended.

In Christ, God has conquered sin; such are the great glad tidings of the Bible. Already this conquest is demonstrated in the people of God, who by faith in Christ and his finished work are already delivered from the guilt and judgment of sin, and are already experiencing, to a degree, the conquest of sin's power through their union with Christ. This process will be culminated at the end of the

age when Christ will return in glory, the saints will be fully sanctified, sin banished from God's good creation and a new heaven and earth brought into being in which righteousness will dwell. (Cf. Gn. 3:15; Is. 52:13-53:12; Je. 31:31-34; Mt. 1:21; Mk. 2:5; 10:45; Lk. 2:11; 11:14-22; Jn. 1:29; 3:16f.; Acts 2:38; 13:38f.; Rom. *passim*; 1 Cor. 15:3f., 22f.; Eph. 1:3-14; 2:1-10; Col. 2:11-15; Heb. 8:1-10:25; 1 Pet. 1:18-21; 2 Pet. 3:11-13; 1 Jn. 1:6-2:2; Rev. 20:7-14; 21:22-22:5.)

B.A.M.

SINAI, MOUNT.

I. Situation

The location of this mountain is uncertain. The following mountains are regarded by various scholars as Mt Sinai: Jebel Mûsa, Ras eṣ-ṣaṣaḥ, Jebel Serbāl and a mountain near al-Hrob. The tradition in favour of Jebel Serbāl can be traced back as far as Eusebius; the tradition in favour of Jebel Mûsa only as far as Justinian. The situation of Jebel Serbāl, e.g. the fact that there is no wilderness at its foot, makes it improbable as the mountain of the covenant. The once widely accepted view of A. Musil that the volcanic mountain near al-Hrob is to be identified with Mt Sinai is no longer popular with scholars, because it makes the reconstruction of the route of the Exodus impossible and it reads too much into Ex. 19. Modern attempts to identify Sinai with volcanic mountains E of the Gulf of Aqabah are so uncertain that not much can be derived from them. This leaves two possibilities: Jebel Mûsa and Ras eṣ-ṣaṣaḥ. These two mountains are situated on a short ridge of granite of about 4 km stretching from NW to SE. Ras eṣ-ṣaṣaḥ (1,993 m) is situated at the N edge and Jebel Msa (2,244 m) at the S one. Tradition and most of the modern scholars accept Jebel Mûsa as Mt Sinai. There is, none the less, a strong preference among certain scholars for Ras eṣ-ṣaṣaḥ as the mountain of the covenant because of the considerable plain at its foot which would have been spacious enough for the large body of Israelites (cf. Ex. 20:18: 'they stood afar off'). However, tradition in favour of Jebel Mûsa is so ancient (about 1,500 years) and the granite formations so imposing that it is quite probably Mt Sinai. Furthermore, a few stations *en route* to the mountain point to the same conclusion.

II. In the Old Testament

Mt Sinai is also called Horeb in the OT. Travelling past Marah and Elim, the Israelites reached Sinai in the 3rd month after their departure from Egypt (Ex. 19:1), and camped at its foot on a plain from which the top was visible (Ex. 19:16, 18, 20). The Lord revealed himself to Moses on this mountain and gave the Ten Commandments and other laws.

The covenant made here between God and the people played a major role in binding the tribes together and moulding them into one nation serving one God. Although the authenticity of this account is rejected by certain modern schools, it is clear from Jdg. 5:5 that the Sinai tradition is an ancient part of Israelite belief. The prominent role of Mt Sinai in the OT and the strong tradition attached to it provide ample evidence in support of the historicity of the account (*EXODUS).

At the foot of Jebel Mûsa is the monastery of St Catherine. It was here that Tischendorf discovered the famous 4th-century uncial MS of the Greek Bible called Codex Sinaiticus. The library of St Catherine has ancient MSS in Gk., Arabic, Ethiopic and Syriac (many of which have recently been made generally available on microfilm).

BIBLIOGRAPHY. B. Rothenberg, *God's Wilderness*, 1961; W. Beyerlin, *Origins and History of the Oldest Sinaitic Traditions*, 1965; G. I. Davies, in J. A. Emerton (ed.), *Studies in the Pentateuch*, 1990.

F.C.F.

III. In the New Testament

I. During his last speech before martyrdom, Stephen twice mentions Mt Sinai in a reference to the theophany to Moses at the burning bush (Acts 7:30, 38; in Ex. 3:1ff. the synonym Horeb is used). Stephen reminds his accusers that even a Gentile place like Sinai in NW Arabia became holy ground because God was pleased to reveal himself there; he was not limited by Jewish geography.

2. In Gal. 4:21-31 Paul uses an allegory to identify Israel first with the slave-wife Hagar (Gn. 16:15; 21:2, 9) and then with Mt Sinai 'in Arabia' (*i.e.* appropriately in a barren wilderness area). Hagar and Sinai are symbolic respectively of being outside the covenant of promise and of bondage to the law of Moses. Together they are taken as representing 'the present Jerusalem', *i.e.* Judaism, which is slavery (to the Law and its intolerable burden of Pharisaic additions as well as to the Romans). By contrast 'the Jerusalem above' is 'free' (freeborn) and 'our mother', the mother of all who are Christians, *i.e.* 'children of promise, as Isaac was'.

3. In Heb. 12:19-29, although not named directly, Mt Sinai, symbolizing the old covenant, is contrasted with Mt Zion, symbolizing the offer of the gospel under the new covenant. The awesome terrors of Sinai at the giving of the Law are described in terms of Ex. 19:16-19; 20:18-21; Dt. 4:11f.; and the reader is warned that rejecting the gospel and its privileges incurs a far more dreadful judgment even than that which followed disobedience to the Law.

BIBLIOGRAPHY. C. Brown, *NIDNTT* 3, pp. 1013-1015; E. Löhse, *TDNT* 7, pp. 282-287. N.H.

SINEW. Heb. *gid*, the sinew viewed as that which bound the bones together (Ezk. 37:6; Jb. 10:11).

The custom mentioned in Gn. 32:32 is obscure. C. A. Simpson in *IB* quotes Robertson Smith as explaining it from the idea that the thigh was sacred as the seat of life, and Wellhausen as calling attention to a trace of it in ancient Arabia. The application of the custom involves the removing of the sinew in the thigh-joint before the flesh is cooked.

The term is not found in the NT.

B.O.B.

SIN, WILDERNESS OF

SIN, WILDERNESS OF. A wilderness through which the Israelites passed between Elim and Mt Sinai (Ex. 16:1; 17:1; Nu. 33:11–12). It is usually identified with Debbet er-Ramleh, a sandy tract below Jebel et-Tih in the SW of the Sinai peninsula; but another suggested location is on the coastal plain of el-Markhah. As its position depends on the fixing of Mt *Sinai, which is uncertain, it is impossible to determine the exact site.

J.M.H.

SION. A synonym for, or part of, Mt Hermon (Dt. 4:48, AV; cf. RSV mg.). It is probably another form of 'Sirion' (Dt. 3:9); indeed, Pesh. reads 'Sirion' here, as also do RSV, NEB. A different word from 'Zion'.

J.D.D.

SIRAH, CISTERN OF (AV 'well of Sirah'). The place from which Joab secretly recalled Abner, former captain of Saul's armies, following his visit to David to discuss the surrender of Israel. Unknown to David, Joab slew Abner (2 Sa. 3:26). Probably modern Ain Sarah, 2½ km NW of Hebron.

J.A.T.

SIRION (Heb. *širyōn*). The Canaanite name for Mt *Hermon as used in the Bible by the Sidonians (Dt. 3:9; cf. Ps. 29:6) and found in the form *šryn* in the Ugaritic texts. See C. H. Gordon, *Ugaritic Textbook*, 1965, p. 495. (*SION.)

T.C.M.

SISERA (*šis'ra'*, a non-Semitic, possibly Illyrian name).

1. The commander of *Jabin's army (Jdg. 4:2f.) and possibly the petty king of Harosheth-ha-goiim (Harosheth of the nations), tentatively identified with Tell el-'Amr, 19 km NW of Megiddo, a strategic location for the deployment of Jabin's 900 chariots. His dominant military role in the battle against Deborah and Barak explains his prominence in the biblical record when compared with his overlord, Jabin (who is not mentioned at all in Jdg. 5). After his crushing defeat at Mt Tabor and subsequent flight, he was treacherously slain by *Jael (Jdg. 4:15–21; 5:24–27). See A. E. Cundall, *Judges and Ruth, TOTC*, 1968, pp. 81–100.

2. The family-name of a class of Temple servants of foreign origin who returned with Zerubbabel from Exile in 537 BC (Ezr. 2:53; Ne. 7:55).

A.E.C.

SITNAH (Heb. *šitnā*, 'hatred', 'contention'). A name given to a well which Isaac's servants dug in Gerar (Gn. 26:21) and which was seized by the servants of Abimelech. For general location, see *GERAR.

J.D.D.

SKIRT. The translation of three Heb. words. 1. *kānāp*, 'wing', 'extremity', is the usual term (Ru. 3:9; 1 Sa. 24:4; etc.). 2. *šūl* (Je. 13:22, 26; La. 1:9; Na. 3:5) means 'hem', and is so rendered elsewhere in AV. 3. *peh* (Ps. 133:2, AV) is the common word for 'mouth', and the context is clearer if we follow RSV, which in the verse concerned renders the Heb. as 'collar'.

J.D.D.

SLAVE, SLAVERY.

I. In the Old Testament

a. Introduction

Under the influence of Roman law, a slave is usually considered to be a person (male or female) owned by another, without rights, and—like any other form of personal property—to be used and disposed of in whatever way the owner may wish. In the ancient biblical East, however, slaves could and did acquire various rights before the law or by custom, and these included ownership (even of other slaves) and the power to conduct business while they were yet under their masters' control. Slavery is attested from the earliest times throughout the ancient Near East, and owed its existence and perpetuation primarily to economic factors.

b. Sources of slaves

(i) *By capture.* Captives, especially prisoners of war, were commonly reduced to slavery (Gn. 14:21; claimed by the king of Sodom; Nu. 31:9; Dt. 20:14; 21:10ff.; Jdg. 5:30; 1 Sa. 4:9 (cf. RSV); 2 Ki. 5:2; 2 Ch. 28:8, 10ff.), a custom that goes back as far as written documents themselves, to roughly 3000 BC and probably further (references in I. Mendelsohn, *Slavery in the Ancient Near East*, 1949, pp. 1–3).

(ii) *By purchase.* Slaves could readily be bought from other owners or general merchants (cf. Gn. 17:12–13, 27; Ec. 2:7). The law allowed Hebrews to buy foreign slaves from foreigners at home or abroad (Lev. 25:44f.). In antiquity, slaves were sold among all kinds of other merchandise and from country to country. Thus, the Midianites and Ishmaelites sold *Joseph to an Egyptian high official (Gn. 37:36; 39:1), and Phoenician Tyre imported slaves and bronze ware from Asia Minor (Ezk. 27:13) and sold Jews to the Ionians, thereby incurring a threat of like treatment of her own nationals (Joel 3:4–8). For evidence of the large numbers of Semitic slaves that reached Egypt in Joseph's general period, probably mainly by trade, see references in *Joseph or in Bibliography below. For Babylonian merchant-enterprise in slave-trading abroad in places such as Tyre, see Mendelsohn, *op. cit.*, pp. 3–5.

(iii) *By birth.* Children 'born in the house' of slave-parents became 'house-born slaves'; such are mentioned in Scripture from patriarchal times onward (Gn. 15:3; 17:12–13, 27; Ec. 2:7; Je. 2:14), and equally early in Mesopotamian documents (Mendelsohn, pp. 57–58).

(iv) *As restitution.* If a convicted thief could not make restitution and pay his fines and damages, funds towards this could be raised by selling him as a slave (Ex. 22:3; cf. a similar provision in Hammurapi's Code, §§ 53–54: *ANET*, p. 168).

(v) *By default on debts.* Debtors who went bankrupt were often forced to sell their children as slaves, or their children would be confiscated as slaves by the creditor (2 Ki. 4:1; Ne. 5:5, 8). The insolvent debtor himself, as well as his wife and family, commonly became the slave of his creditor and gave him his labour for 3 years to work off the debt and then go free, in Hammurapi's Code (§ 117: *DOTT*, p. 30, or *ANET*, pp. 170–171). This seems to be the background to the Mosaic law in Ex. 21:2–6 (and 7–11), and in Dt. 15:12–18, where a Hebrew slave must work 6 years, explicitly a 'double' period of time (Dt. 15:18) compared with

Hammurapi's 3 years (*cf.* Mendelsohn, pp. 32–33), but on release he was to be granted stock to start up on his own again (see also *d.* (i) 1, below). Insolvency was a major cause of reduction to slave status in the biblical East (Mendelsohn, pp. 23, 26–29).

(vi) *Self-sale*. Selling oneself voluntarily into slavery, *i.e.* dependence on another, to escape poverty, was widely known (Mendelsohn, pp. 14–19, for data). Lv. 25:39–43, 47ff., recognized this, but provided for redemption at (or with foreign owners, even before) Jubilee year.

(vii) *Abduction*. To steal a person, and to reduce a kidnapped person to slavery, was an offence punishable by death in the laws of both Hammurapi (§ 14: *DOTT*, p. 30; *ANET*, p. 166) and Moses (Ex. 21:16; Dt. 24:7). The brothers of *Joseph were guilty of essentially such an offence (Gn. 37:27–28 with 45:4), and might well be 'dismayed' and need reassurance not to be 'distressed' (Gn. 45:3, 5, and *cf.* Gn. 50:15).

c. Price of slaves

The price of slaves naturally varied somewhat according to circumstances and the sex, age and condition of slaves, but the average price of slaves gradually rose like that of other commodities during the course of history; the female of child-bearing age being always more valuable than the male slave. In the late 3rd millennium BC in Mesopotamia (Akkad and 3rd Ur Dynasties) the average price of a slave was 10–15 shekels of silver (references in Mendelsohn, pp. 117–155). About 1700 BC Joseph was sold to the Ishmaelites for 20 shekels of silver (Gn. 37:28), precisely the current price for the patriarchal period, where 1/3 of a mina is 20 shekels (§§ 116, 214, 252: *DOTT*, p. 35; *ANET*, pp. 170, 175–176, in *e.g.* Hammurapi's Code, c. 1750 BC), in contemporary Old Babylonian tablets (*cf.* Mendelsohn, *loc. cit.*), and at Mari (G. Boyer, *Archives Royales de Mari*, 8, 1958, p. 23, No. 10, lines 1–4). By about the 15th century BC the average price was 30 shekels at Nuzi (B. L. Eichler, *Indenture at Nuzi*, 1973, pp. 16–18, 87), and could be 20, 30 or 40 shekels at Ugarit in N Syria (Mendelsohn, pp. 118–155; J. Nougayrol, *Palais Royal d'Ugarit*, 3, 1955, p. 228: 2 with refs., p. 23 n. 1) in the 14th/13th centuries BC, comparing well with the contemporary price of 30 shekels reflected in Ex. 21:32. In later days the average price for a male slave rose steadily under the Assyrian, Babylonian and Persian empires, to about 50–60 shekels, 50 shekels and 90–120 shekels respectively (Mendelsohn, pp. 117–118, 155). For 50 shekels in Assyrian times, *cf.* 2 Ki. 15:20, where the Israelite notables under Menahem had to pay their value as slaves, presumably as ransom to avoid deportation to Assyria (D. J. Wiseman, *Iraq* 15, 1953, p. 135, and *JTVI* 87, 1955, p. 28). The successive and identical rises in average price for slaves in both the biblical and external records strongly suggest that the former are based directly on accurate traditions from the specific periods in question, *i.e.* the early and late 2nd millennium and early 1st millennium BC, and are not at these points the elaboration of later traditionists or of over-statistical priestly redactors.

d. Privately owned slaves in Israel

(i) *Hebrew slaves*. 1. The law sought (like Hammurapi's Code 5 centuries earlier) to avoid the risk of wholesale population-drift into slavery and serfdom under economic pressure on small farm-

ers, by limiting the length of service that insolvent debtors (see *b.* (v), above) had to give to 6 years, their release to be accompanied by the provision of sufficient assets to make a new start (Ex. 21:2–6; Dt. 15:12–18). A man already married when thus enslaved took his wife with him at release, but if he was formerly single and was given a wife by his master, that wife and any children remained the master's. Hence, those who wished to stay in service and keep their family could do so permanently (Ex. 21:6; Dt. 15:16f.); at Jubilee he would be released in any case (Lv. 25:40) in connection with the restoration of inheritance then (Lv. 25:28), even if he chose to stay on with his master permanently. Insolvent debtors in temporary enslavement similar to that of Ex. 21:2ff. are probably the subject of Ex. 21:26–27, the permanent loss of a member cancelling the debt and so bringing immediate release from the creditor/master (Mendelsohn, *op. cit.*, pp. 87–88). In Jeremiah's day the king and the wealthy flagrantly abused the law of 7th-year release by freeing their slaves only to seize them again, and were duly condemned for this very sharp practice (Je. 34:8–17).

2. A Hebrew who voluntarily sold himself into slavery to escape from poverty was to serve his master until Jubilee year, when he would go free (Lv. 25:39–43) and receive back his inheritance (Lv. 25:28). But if his master was a foreigner he had the option of purchasing his freedom or being redeemed by a relative at any time before Jubilee (Lv. 25:47–55).

3. Female slaves were the subject of further specific law and custom. That a chief wife's servant-maids might bear children to their master for the childless wife is attested both in the patriarchal narrative (Gn. 16) and in cuneiform documents, *e.g.* from Ur (Wiseman, *JTVI* 88, 1956, p. 124). Under the law, if a Hebrew girl was sold as a slave (Ex. 21:7–11) her marital status was carefully safeguarded: she might marry her master (and be redeemed if rejected), or his son, or become a properly maintained concubine, but would go free if the master failed to implement whichever of the three possibilities he had agreed to. In Mesopotamia such contracts were usually harsher, often having no safeguards whatever (*cf.* Mendelsohn, pp. 10ff., 87).

(ii) *Foreign slaves*. 1. Unlike Hebrew slaves, these could be enslaved permanently and handed on with other family property (Lv. 25:44–46). However, they were included in the commonwealth of Israel on patriarchal precedent (circumcision, Gn. 17:10–14, 27) and shared in festivals (Ex. 12:44, Passover; Dt. 16:11, 14) and sabbath-rest (Ex. 20:10, 23:12).

2. A woman captured in war could be taken as full wife by a Hebrew, and would thereby cease to have slave status; thus, if she was subsequently divorced she went free and did not become a slave (Dt. 21:10–14).

(iii) *General conditions*. 1. The treatment accorded to slaves depended directly on the personality of their masters. It could be a relationship of trust (*cf.* Gn. 24: 39:1–6) and affection (Dt. 15:16), but discipline might be harsh, even fatal (*cf.* Ex. 21:21), though to kill a slave outright carried a penalty (Ex. 21:20), doubtless death (Lv. 24:17, 22). It is just possible that Hebrew slaves, like some Babylonians, sometimes carried an outward token of their servitude (Mendelsohn, p. 49), though this remains uncertain. In some circumstances slaves could claim justice (Jb. 31:13) or go to law (Men-

SLAVE, SLAVERY

delsohn, pp. 65, 70, 72), but—like the Egyptian spared by David—could be abandoned by callous masters when ill (1 Sa. 30:13). In patriarchal times a childless master could adopt a house-slave and make him his heir, as is recorded of Abraham and Eliezer before the births of Ishmael and Isaac (Gn. 15:3), and of various people in cuneiform documents (Ur, cf. Wiseman, *JTVI* 88, 1956, p. 124).

2. Throughout ancient history, the available documents bear witness to the large numbers of people who tried to escape from slavery by running away, and those who in any way aided and abetted them could expect punishment, especially in early times (Mendelsohn, pp. 58ff.). However, slaves that fled from one country to another came under a different category. States sometimes had mutual extradition clauses in their treaties; this may explain how Shimei so easily recovered two runaway slaves of his from King Achish of Gath in Philistia (1 Ki. 2:39–40; cf. Wiseman, *op. cit.*, p. 123). However, some states also at times decreed that if any nationals of theirs enslaved abroad returned to their homeland they would be set free and not be extradited. This was stipulated by Hammurapi of Babylon (Code, § 280: *DOTT*, p. 35; *ANET*, p. 177; cf. Mendelsohn, pp. 63–64, 75, 77–78), and is probably the meaning of Dt. 23:15f. (Mendelsohn, pp. 63–64).

(iv) *Manumission*. In the Heb. laws an enslaved debtor was to be released after 6 years (Ex. 21:2; Dt. 15:12, 18), or as compensation for injury (Ex. 21:26–27), and a girl could be redeemed or set free if repudiated, or if conditions of service were not honoured (Ex. 21:8, 11; see *d.* (i) 3 above). A Hebrew who sold himself into slavery was to be freed at Jubilee, or could be redeemed by purchase at any time from a foreign master (Lv. 25:39–43, 47–55; *d.* (i) 2 above). On Dt. 23:15f., see preceding section. A female captive could become a freed-woman by marriage (Dt. 21:10–14).

In 1 Ch. 2:34f., a Hebrew Sheshan had no sons, and so married his daughter to his Egyptian slave Jarha in order to continue his family line; it is most probable that Jarha would be made free in these circumstances (Mendelsohn, p. 57), and likewise Eliezer of Damascus (Gn. 15:3), if he had not been replaced as heir to Abraham by Ishmael and then Isaac.

In Heb. the term which denotes that a person is 'free', not (or no longer) a slave (*e.g.* Ex. 21:2, 5, 26–27; Dt. 15:12–13, 18; Jb. 3:19; Je. 34:9–11, 14, 16; *etc.*), is *ḥōp̄sī*, which has a long history in the ancient East, occurring as *ḥup̄su* in cuneiform texts from the 18th to the 7th centuries BC, and usually referring to freedmen who are small landholders, tenant farmers or hired labourers. When a Hebrew was freed this is the class he would be in. He would become a small landholder if he regained his inheritance (as at Jubilee) or a tenant or labourer on land held by others. On manumission in the ancient East, see Mendelsohn, pp. 74–91; on *ḥōp̄sī*, see Bibliography below.

e. State and Temple slavery

(i) *State slavery in Israel*. This was practised on a restricted scale. David caused the conquered Ammonites to do forced labour (2 Sa. 12:31), and Solomon conscripted the surviving descendants of the peoples of Canaan into his *mas-ōbēd*, permanent state labour-levy, but not true Israelites (see 1 Ki. 9:15, 21–22; burden-bearers and quarriers, v. 15 and 2 Ch. 2:18). The Israelites served on tem-

porary *corvée* (*mas*) in Lebanon only, by rota (1 Ki. 5:13f.). There is no contradiction between 1 Ki. 5 and 9 on the *corvées*; cf. M. Haran, *VT* 11, 1961, pp. 162–164, following and partly correcting Mendelsohn, pp. 96–98. Cf. A. F. Rainey, *IEJ* 20, 1970, pp. 191–202. The famous coppermines near Ezion-geber (*ELATH) were most likely worked with Canaanite and Ammonite/Edomite slave-labour (N. Glueck, *BASOR* 79, 1940, pp. 4–5; Mendelsohn, p. 95; Haran, *op. cit.*, p. 162). Such use of war-captives was common throughout the Near East, and in other countries outside Israel their less fortunate nationals and ordinary slaves could sometimes be taken over by the state (Mendelsohn, pp. 92–99).

(ii) *Temple slaves in Israel*. After the war with Midian, Moses levied from the warriors and Israel at large 1 in 500 and 1 in 50 respectively of their spoils in persons and goods, for service with the high priest and Levites at the tabernacle, obviously as menials (Nu. 31:28, 30, 47). Then there were added to these the Gibeonites spared by Joshua, who became 'hewers of wood and drawers of water' for the house and altar of the Lord (Jos. 9:3–27), *i.e.* menials for the tabernacle and its personnel. Also, David and his officers had dedicated foreigners (Nethinim) for similar service with the Levites who served the Temple, some of their descendants returning from captivity with Ezra (8:20); to these were added 'Solomon's servants' (Ezr. 2:58). Ezekiel (44:6–9) possibly warned against allowing these uncircumcised menials to usurp a place in the worship of a Temple that was not theirs. Under Nehemiah (3:26, 31) some of these lived in Jerusalem and helped repair its walls.

f. Conclusion: general trends

Generally, a more humane spirit breathes through the OT laws and customs on slavery, as illustrated by the repeated injunctions in God's name not to rule over a brother Israelite harshly (*e.g.* Lv. 25:43, 46, 53, 55; Dt. 15:14f.). Even when Heb. law and custom on slaves shares in the common heritage of the ancient Semitic world, there is this unique care in God's name for these people who by status were not people, something absent from the law codes of Babylon or Assyria. It should, moreover, be remembered that, by and large, the economy of the ancient Near East was never one substantially or mainly based on slave-labour as in 'classical' and later Greece or above all in imperial Rome (cf. Mendelsohn, pp. 111–112, 116:117, 121; I. J. Gelb, *Festschrift for S. N. Kramer*, 1976, pp. 195–207, on statistics and comparisons; limited numbers and economic opportunities of Neo-Babylonian slaves, cf. F. I. Andersen (summary of Dandamayer), *Buried History* 11, 1975, pp. 191–194). And Job (31:13–15) heralds the concept of the equality of all men, of whatever station, before their creator God.

BIBLIOGRAPHY. A fundamental work which makes frequent reference to the OT data is I. Mendelsohn, *Slavery in the Ancient Near East*, 1949, following up earlier studies, and supplemented by *IEJ* 5, 1955, pp. 65–72. The biblical data are summarized and evaluated by A. G. Barrois, *Manuel d'Archéologie Biblique*, 2, 1953, pp. 38, 114, 211–215, and by R. de Vaux, *Ancient Israel: its Life and Institutions*, 1961, pp. 80–90, 525). On Temple slaves in Israel, see M. Haran, *VT* 11, 1961, pp. 159–169. On *ḥōp̄sī*, 'free(dman)', see Mendelsohn, *BASOR* 83, 1941, pp. 36–39, and *ibid.*, 139, 1955,

pp. 9-11; E. R. Lacheman, *ibid.*, 86, 1942, pp. 36-37; D. J. Wiseman, *The Alalakh Tablets*, 1953, p. 10. For the Egyp. data on slavery, see the monograph by A. M. Bakir, *Slavery in Pharaonic Egypt*, 1952, supplemented for Joseph's period by W. C. Hayes, *A Papyrus of the Late Middle Kingdom in the Brooklyn Museum*, 1955, pp. 92-94, 98-99, 133-134, and especially G. Posener, *Syria* 34, 1957, pp. 147, 150-161. K. A. K.

II. In the New Testament

a. Systems of slavery in NT times

Jewish slavery, to judge by the Talmud, remained governed as always by the tight national unity of the people. There was a sharp distinction between Jewish and Gentile slaves. The former were subject to the sabbath-year manumission, and the onus fell upon Jewish communities everywhere to ransom their nationals held in slavery to Gentiles. Thus no fundamental division into bond and free was recognized. At the same time the whole people might be thought of as the servants of Yahweh.

By contrast, Greek slavery was justified in classical theory by the assumption of a natural order of slaves. Since only the citizen class were, strictly speaking, human, slaves were merely chattels. While this idea was carried into practice only in the rare cases where common sense and humanity broke down, the fact remains that throughout classical antiquity the institution of slavery was simply taken for granted, even by those who worked for its amelioration.

There was a very great diversity at different times and places in the extent and uses of slavery. Modern sentiment is dominated by the horrors of the mass agricultural slavery in Italy and Sicily during the 2 centuries between the Punic wars and Augustus, which were dramatized by a series of heroic slave-revolts. This was a by-product of the rapid Roman conquest of the Mediterranean, the main source of the glut of slaves being war prisoners. In NT times, however, there was very little warfare, and in any case the slave ranches were a peculiarly Roman method of farming. In Egypt, for instance, there was practically no agricultural slavery, the land being worked by a free peasantry under bureaucratic supervision. In Asia Minor and Syria there were great temple estates whose tenant farmers were in a kind of serfdom. In Palestine, to judge by the parables of Jesus, slaves were employed on country estates more in administrative positions, the labour being recruited on a casual basis.

Domestic and public slavery were the most widespread forms. In the former case the slaves were purchased and employed as an index of wealth. Where only one or two were owned, they worked beside their master at the same occupations. At Athens they were indistinguishable in the streets from free men, and the familiarity of slaves towards their owners was a stock theme of comedy. At Rome the great houses employed scores of slaves for sheer luxury. Their work was highly specialized and often largely effortless. In the case of public slaves, their status conferred a good deal of independence and respect. They performed all sorts of duties in the absence of a civil service, including even police services in some cases. Professions such as medicine or education were commonly filled by slaves.

The main sources of slavery were: (1) birth, de-

pending on the law of the particular state concerning the various degrees of servile parentage; (2) the widespread practice of exposing unwanted children, who were then available for the use of anyone who cared to rear them; (3) the sale of one's own children into slavery; (4) voluntary slavery as a solution to problems such as debt; (5) penal slavery; (6) kidnapping and piracy; (7) the traffic across the Roman frontiers. Not all these sources were open in one place at any one time: there was a great deal of variation in local law and sentiment. The degree of slavery also varied greatly, and is impossible to calculate. It may have reached one-third of the population in Rome and the great metropolitan cities of the east. In areas where there was a peasant economy, however, it was reduced to a small fraction of that.

Manumission could be readily arranged at any time if owners wished. In Rome it was most commonly performed by testament, and limits had to be placed on the generosity of owners to prevent the too rapid dilution of the citizen body with persons of foreign extraction. In Gk. states 2 common forms were a type of self-purchase, in which the legal incompetence of the slave was overcome by the ownership technically passing to a god, and manumission in return for a contract of services which simply meant that the slave continued in the same employment though legally free.

The condition of slavery was everywhere being steadily mitigated in NT times. Although slaves had no legal personality, owners recognized that they worked better the more their condition approximated to freedom, and the owning of property and contracting of marriages were normally allowed. Cruelty was condemned by the growing sentiment of common humanity, and in some cases legally controlled; in Egypt, for instance, the death of a slave was subject to a coroner's inquest. While in Gk. states emancipated slaves became resident aliens of their former master's city, at Rome they automatically became citizens on manumission. Thus the vast flow of slaves into Italy, especially during the last 2 centuries before Christ, had the effect of internationalizing the Roman republic, anticipating the government's own policy of steadily broadening membership.

b. The NT attitude to slavery

The twelve disciples of Jesus apparently had no part in the system of slavery. They included neither slaves nor owners. The institution figures frequently in the parables, however (e.g. Mt. 21:34; 22:3), because the regal and baronial households to which it belonged afforded a nice analogy for the kingdom of God. Jesus repeatedly spoke of the relation of the disciples to himself as that of servants to their lord (e.g. Mt. 10:24; Jn. 13:16). At the same time he stressed the inadequacy of this figure. The disciples were emancipated, as it were, and admitted to higher privileges of intimacy (Jn. 15:15). Or again, to their acute embarrassment, Jesus himself adopted the servile role (Jn. 13:4-17), with the object of encouraging them to mutual service.

Outside Palestine, however, where the churches were often established on a household basis, the membership included both masters and servants. Slavery was one of the human divisions that became meaningless in the new community in Christ (1 Cor. 7:22; Gal. 3:28). This apparently led to a desire for emancipation (1 Cor. 7:20) and

SLAVE, SLAVERY

perhaps even to the active encouragement of it by some (1 Tim. 6:3-5). Paul was not opposed to manumission if the opportunity was offered (1 Cor. 7:21), but studiously refrained from putting pressure on owners, even where personal sentiment might have led him to do so (Phm. 8, 14). Not only was there the practical reason of not laying the churches open to criticism (1 Tim. 6:1f.), but the point of principle that all human stations are allotted by God (1 Cor. 7:20). Slaves should therefore aim to please God by their service (Eph. 6:5-8; Col. 3:22). The fraternal bond with a believing master should be an added reason for serving him well (1 Tim. 6:2). A master, on the other hand, might well let the fraternal sentiment prevail (Phm. 16), and certainly must treat his slaves with restraint (Eph. 6:9) and strict equity (Col. 4:1).

The fact that household slavery, which is the only kind referred to in the NT, was generally governed by feelings of goodwill and affection, is implied by its figurative use in the 'household of God' (Eph. 2:19). The apostles are regularly God's stewards (1 Cor. 4:1; Tit. 1:7; 1 Pet. 4:10) and even plain servants (Rom. 1:1; Phil. 1:1). The legal character of 'the yoke of slavery' (Gal. 5:1) was not forgotten, however, and the idea of manumission and adoption into the family itself was a proud conclusion to this train of thought (Rom. 8:15-17; Gal. 4:5-7). Thus, whether in practice or by analogy, the apostles clearly branded the institution as part of the order that was passing away. In the last resort the fraternity of the sons of God would see all its members free of their bonds.

SLEEP. The OT uses several words for 'sleep', the NT has fewer; but no particular significance attaches to them. They signify sleep in the sense of physical rest and recuperation.

As might be expected, 'sleep' is used in a figurative sense in both Testaments. In Pr. 19:15, etc., it describes mental torpor, and in Pr. 24:33 it refers to physical sloth and laziness. Paul uses the figure to describe the state of 'spiritual torpor' of the non-Christians (Eph. 5:14), which unmans them and renders them unprepared for Christ's second advent (Mt. 25:22). By contrast, the Christian has awakened from this spiritual torpor, but he is challenged to remain awake (1 Thes. 5:4-8; Rom. 13:11f.; Mt. 25:13; 26:41).

Sleep is also a synonym for physical death (Jb. 14:12; Jn. 11:11-14; 1 Cor. 15:18). This signifies that death, like sleep, is neither a permanent state, nor does it 'destroy the identity of the sleeper' (Lk. 24:39f.), in spite of the change to be effected at the resurrection (1 Cor. 15:13ff.).

'Deep sleep', *tardēma*, was supernaturally induced (Gn. 2:21; 1 Sa. 26:12), and was equivalent almost to a 'trance' (Gn. 15:12), in which visions were granted (Jb. 4:13; Dn. 8:18). Its NT equivalent

is *hypnos* (Acts 20:9). But visions also came in the course of 'ordinary' sleep (Gn. 28:10ff.; 1 Sa. 3:2ff.). See also *DREAM; L. Coenen, *NIDNTT* 1, pp. 441-443. J.G.S.S.T.

SLEIGHT. AV rendering (RSV 'cunning') of Gk. *kybeia*, 'dice-playing', Eph. 4:14 (cf. *kybeuō*, 'to deceive', in Epictetus 2. 19; 3. 21). NEB approaches the Greek differently from AV and RSV, and renders the last part of the verse 'dupes of crafty rogues and their deceitful schemes'. Paul is warning against instability and against those whose slick dealings present a plausible mixture of truth and error. J.D.D.

SMYRNA. A city in the Roman province of Asia, on the Aegean shore of what is now Asiatic Turkey. There was a Gk. colony near by from very early times, but it was captured and destroyed by the Lydians about the end of the 7th century BC and virtually ceased to exist until it was refounded on its present site by Lysimachus in the early 3rd century BC. It grew to be one of the most prosperous cities in Asia Minor. It was the natural port for the ancient trade route through the Hermus valley, and its immediate hinterland was very fertile. Smyrna was a faithful ally of Rome long before the Roman power became supreme in the E Mediterranean. Under the empire it was famous for its beauty and for the magnificence of its public buildings. It is now Izmir, the second largest city in Asiatic Turkey.

The gospel probably reached Smyrna at an early date, presumably from Ephesus (Acts 19:10). The 'angel of the church in Smyrna' is the recipient of the second (Rev. 2:8-11) of the letters to the 'seven churches . . . in Asia'. As in other commercial cities, the church encountered opposition from the Jews (Rev. 2:9; cf. 3:9). The description of the Christ as the one who was dead and lived again (v. 8) may allude to the resurgence of the city to new prosperity after a long period in obscurity. The 'crown' (v. 10) was rich in associations at Smyrna. It may suggest the victor's wreath at the games, or current forms of eulogy which used the image of

Smyrna, one of the 'seven churches of Asia' (Rev. 1-3).

the beauty and glory of the city and its buildings. Cf. also Jas. 1:12. The call to faithfulness (v. 10) is a call to the church to fulfil in the deepest way the historic reputation of the city. It was exemplified in the courage with which the aged bishop Polycarp refused to recant; he was martyred there c. AD 155 or later. (See C. J. Hemer, *Buried History* 11, 1975; *The Letters to the Seven Churches of Asia in Their Local Setting*, 1986; E. M. Yamauchi, *New Testament Cities in Western Asia Minor*, 1980.)

E.M.B.G.
C.J.H.

SNARE. Mechanical device, often with a bait, for catching birds or animals. AV uses 'snare' for 7 Heb. and 2 Gk. words, but RSV translates more accurately by other terms in Jb. 18:8, 10; La. 3:47; 1 Cor. 7:35. Heb. *pah* (cf. Egyp. *phj*) is translated 'snare' 22 times in RSV; literally it is used of bird traps only (see Ps. 124:7; Pr. 7:23; Ec. 9:12; Am. 3:5). The last passage mentions two kinds of traps used by fowlers, one which pins the bird to the ground and one with a noose which catches the bird around the neck and springs up. In the majority of cases *pah* is used figuratively, for example in Jos. 23:13; Jb. 22:10; Ps. 119:110. AV translates *pah* by 'gin' in Jb. 18:9; Is. 8:14. Heb. *môqēš*, perhaps meaning 'striker', is translated 'snare' in RSV 22 times, literally only in Jb. 40:24, which implies that a snare cannot take the behemoth or hippopotamus. Examples of the figurative use of *môqēš* are: Ex. 10:7; 23:33; 2 Sa. 22:6; Ps. 64:5; Pr. 20:25; 22:25; Is. 8:14. AV translates *môqēš* by 'gin' in Pss. 140:5; 141:9; Am. 3:5. Other Heb. words translated 'snare' in a figurative sense are: *māšôq*, 'means of hunting' (Ec. 7:26) and the related *m'sûdâ* (Ezk. 12:13; 17:20).

In the Apocrypha 'snare' (Gk. *pagis*) is used in reference to a gazelle (Ecclus. 27:20) and also figuratively (Ecclus. 9:3, 13; 27:29).

In the NT Gk. *pagis* is translated 'snare' in a literal sense only in Lk. 21:34, which compares the suddenness of the Lord's coming to the springing of a trap. The figurative uses of *pagis* are Rom. 11:9; 1 Tim. 3:7; 6:9; 2 Tim. 2:26.

In Egypt today the following kinds of snares, some with ancient counterparts, are used: a clap-net, a clap-board over a hole, a clap-box, a springing noose, a trap with two jaws which close on the neck of the victim, and a cage with a sliding or springing door.

J.T.

SNOW (Heb. *šeleḡ*). The few references to it indicate its rarity in Palestine, where it is scarcely ever found. S of Hebron and is unknown along the sea coast and Jordan valley. Only twice is a snowfall recorded (in 2 Sa. 23:20 [= 1 Ch. 11:22] and in 1 Macc. 13:22). But the snow cover of Lebanon, 'the white mountain', is proverbial (Je. 18:14), and lower down in the Hauran it is not infrequent (Ps. 68:14). Elsewhere it is a rare feature, as the biblical incident of Benaiah would suggest (2 Sa. 23:20).

Snow as a symbol is variously employed. It is God-given and controlled (Jb. 38:22), one of the wonders of God's power (Jb. 37:6; Ps. 147:16), and

given for fertility (Is. 55:10f.) and to accomplish moral ends (Jb. 38:22–23). It expresses whiteness (Ex. 4:6; Nu. 12:10; 2 Ki. 5:27; La. 4:7; Dn. 7:9), and therefore moral purity (Dn. 7:9; Mk. 9:3; Mt. 28:3; Rev. 1:14). It describes the complete acceptance of the penitent sinner (Ps. 51:7; Is. 1:18).

J.M.H.

SNUFFERS. For trimming and adjusting the wicks of the lamps in the tabernacle and Temple two, clearly distinct (see 1 Ki. 7:49–50; 2 Ch. 4:21–22), instruments were used: 1. *m'zamm'rôt*, translated 'snuffers' (1 Ki. 7:50; 2 Ki. 12:13 (14); 25:14; 2 Ch. 4:22; Je. 52:18), probably a kind of scissors. 2. *melqāhayim*. These latter were 'tongs' (cf. Is. 6:6), but they are variously translated: 1 Ki. 7:49; 2 Ch. 4:21, 'tongs'; Ex. 37:23 'snuffers'; Ec. 25:38; Nu. 4:9, RSV 'snuffers', AV 'tongs'. See G. E. Wright, *Biblical Archaeology*, 1957, pp. 141 f.

D.W.G.

SO. By conspiring with 'So king of Egypt' c. 726/5 BC (2 Ki. 17:4), Hoshea brought Assyrian retribution upon Israel. If So is the proper name of an Egyp. king, he must be either the last shadowy Libyan pharaoh, Osorkon IV (Aa-kheper-rē) c. 727–716 BC, or the *de facto* W-Delta ruler Tefnakht, c. 727–720 BC, or some lesser and unidentified E-Delta kinglet. No mere kinglet could have helped Hoshea, nor can *Sô'* derive from Tefnakht's name; it is possible that *Sô'* could be an abbreviation for Osorkon (IV), as Egyp. *Sese* for Rameses (II).

Some identify So, vocalized *Siwe'* or *Sewe'*, with the Ethiopian Pharaoh Shabako (omitting formative *-ko*) who acted as army commander in Egypt before his accession. This is impossible in 726/5 BC, because the Ethiopians' W-Delta rivals, Tefnakht and Bekenranef (Bocchoris), held Lower Egypt until 716 BC. Others identify So/Siwe with 'Sib'e the *turtan* (army commander) of Egypt' whom Sargon II of Assyria defeated at Raphia in 720 BC. But So cannot be a king in 726/5 BC and then simply army commander in 720 BC, unless he were throughout a petty Delta kinglet acting as commander for Osorkon IV (or Tefnakht and Bekenranef). Therefore, if So is an Egyp. ruler's name, he would be either Osorkon IV abbreviated (but *not* Sib'e the *turtan*) or else a lesser kinglet and army commander under Osorkon IV, Tefnakht or Bekenranef.

S. Yeivin's suggestion in *VT* 2, 1952, pp. 164–168, that *Sô'* is not a proper name but merely a transcription of Egyp. *š*, 'vizier', then *sô' meleḡ mišrayim* = 'the vizier of the king of Egypt' is phonetically unsuitable. The cuneiform name of the Egyp. commander of 720 BC, hitherto read as Sib'e, must now almost certainly be read as Re'e (R. Borger, *JNES* 19, 1960, pp. 49–53); this name cannot be identified with So as a proper name. It is possible that Re'e could be the name of the Egyp. vizier. H. Goedicke (*BASOR* 171, 1963, pp. 64–66) improbably read 'to (city) Sa(š), [to] the king of Egypt', with Tefnakht in mind. See K. A. Kitchen, *The Third Intermediate Period in Egypt*, 1972, pp. 182, 372–376.

K.A.K.

SOAP. 'Soap' is the rendering in the EVV of Heb. *bōriṭ* (Mal. 3:2; Je. 2:22), a word derived from *bārar*, 'to purify'. It probably means 'lye', a solu-

tion of potash (potassium carbonate) and soda (sodium carbonate) in water, which acts as a simple detergent. This is obtained by filtering water through vegetable ash, various alkaline salts being produced, of which potash is the principal. The Heb. term *bōr* is also best rendered 'lye' in Is. 1:25 and Jb. 9:30 (rvmg., rsv), though this is not observed by AV. (* ARTS AND CRAFTS, III. h.)

BIBLIOGRAPHY. R. Campbell Thompson, *A Dictionary of Assyrian Chemistry and Geology*, 1936, p. 14; M. Levey, *Chemistry and Chemical Technology in Ancient Mesopotamia*, 1959, p. 122.

T.C.M.

SOCOH, SOCO. I. A town SE of Azekah in the Shephelah, the scene of the Philistine defeat (1 Sa. 17; see G. A. Smith, *The Historical Geography of the Holy Land*²⁵, 1966, pp. 161-162, for tactical description). The name is preserved in Khirbet Suweike (Roman and Byzantine); slightly farther W, the Early Iron fortification Khirbet Abbad commands the Wadi es-Sunt (Vale of Elah) from the S. Here the Wadi es-Sur from the S is joined by wadis coming down from the hills W of Bethlehem. Either this or 2 below was fortified by Rehoboam and later taken by the Philistines (2 Ch. 11:7; 28:18). Socoh is one of the cities named on royal jar-handle stamps found at *Lachish and other sites, which probably points to its importance as a major Judaean administrative centre in the reign of Hezekiah (* WRITING). Cf. *LOB*, pp. 353, 394-398.

2. A place in the highlands near Debir (Jos. 15:48; v. 35 refers to I); Khirbet Suweike, 3 km E of Dhahiriya (1 Ch. 4:18 probably refers to this place). 3. A town in Solomon's tribute-area of Hopher (1 Ki. 4:10); probably the Bronze Age-Byzantine site Tell er-Ras by Suweike, N of Tulkarm in the plain of Sharon, and 24 km NW of Shechem (Tuthmosis III list no. 67). Cf. *ANET*, pp. 246f., *LOB* pp. 60, 310.

J.P.U.L.

G.I.D.

SOLOMON. The third king of Israel (c. 971-931 BC), son of David and Bathsheba (2 Sa. 12:24); also named Jedidiah ('beloved of the Lord') by Nathan the prophet (2 Sa. 12:25). Solomon (š'ōmōh, probably 'peaceful') does not figure in the biblical narrative until the last days of David (1 Ki. 1:10ff.) despite the fact that he was born (in Jerusalem; 2 Sa. 5:14) early in his father's reign.

I. The rise to power

Solomon's path to the throne was far from smooth. Absalom's opposition was carried on by David's oldest surviving son, Adonijah (2 Sa. 3:4), who made a strong bid for the throne during his father's last days (1 Ki. 1:5ff.). Supported by David's deposed general, Joab, who had slain Absalom (2 Sa. 18:14-15), and the influential priest, Abiathar, Adonijah rallied support and actually held a coronation feast at En-rogel. But Solomon was not without allies. Benaiah, the son of Jehoiada, had his eye on the generalship; Zadok coveted a prominent priestly position. Their spokesman was Nathan the prophet, a confidant of David and Bathsheba (1 Ki. 1:11ff.). After Nathan and Bathsheba reminded David of his unexecuted promise concerning Solomon, the king gave instructions for Solomon's accession and sealed them with an oath (1 Ki. 1:28ff.).

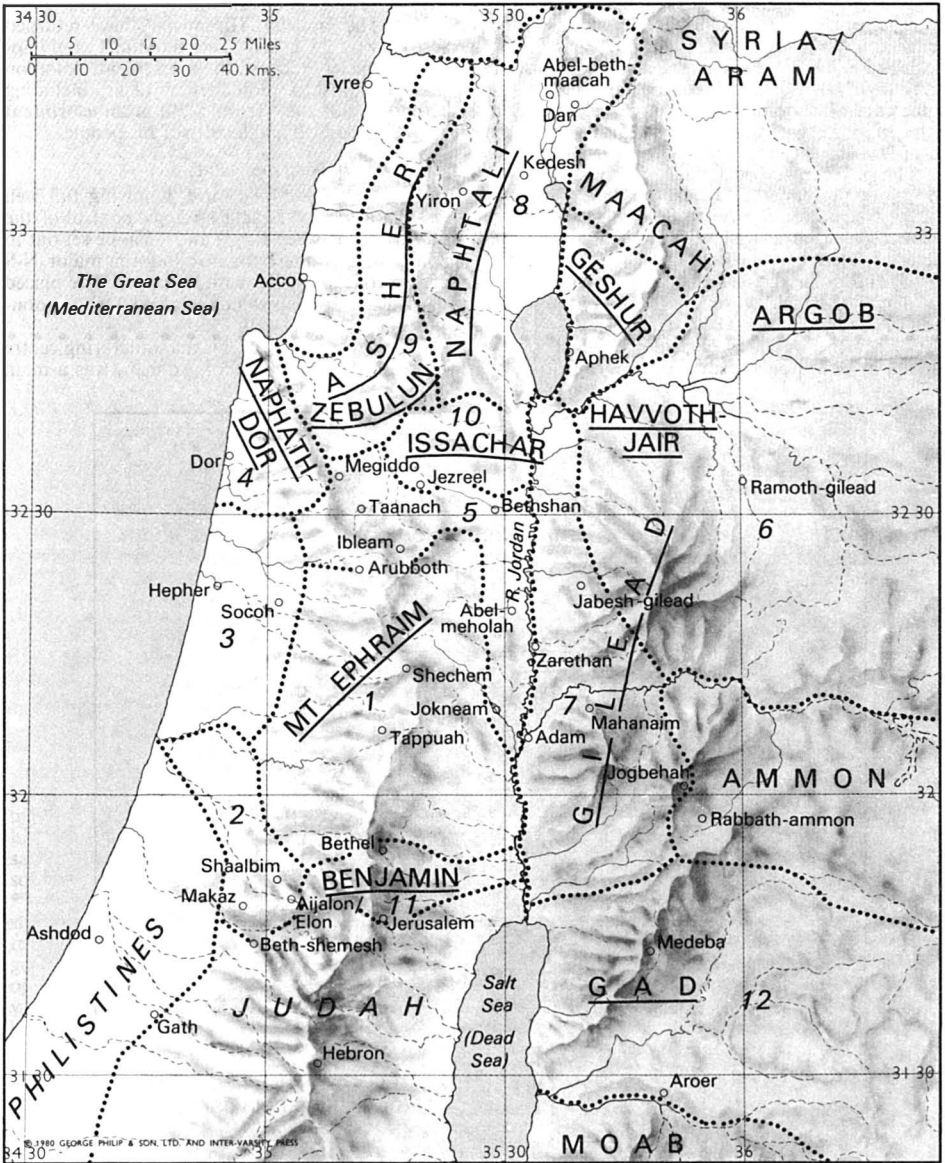

The news of Solomon's coronation, for which David's storied bodyguard of Cherethites and Pelethites offered protection, broke up Adonijah's festivities (1 Ki. 1:41ff.) but not his stratagems to control the kingdom. He implored Bathsheba to influence Solomon to give him Abishag, David's handmaiden (1 Ki. 1:3-4), as wife (1 Ki. 2:13ff.). Solomon, apparently fearing that such a marriage would give Adonijah leverage with which to prise him from the throne, refused. Adonijah paid with his life for his rash proposal (1 Ki. 2:25); when Abiathar the priest was banished from office (1 Ki. 2:26-27) and Joab vengefully slain before the altar (1 Ki. 2:28ff.), Solomon reigned without a rival. The prominent role of the queen-mother in this whole intrigue is noteworthy. Bathsheba seems to have blazed the trail for other queen-mothers in Judah, for the author of Kings faithfully records the name of each king's mother (e.g. 1 Ki. 15:2, 10). The arbitrary manner in which Solomon was chosen boded ill for the future. The elders of Judah and Israel, on whose goodwill true national harmony depended, were bypassed in the decision.

II. The master sage

Solomon was Israel's first *dynastic* ruler. Saul and David, like the judges, were chosen because God had given them a special measure of power: they were *charismatic* rulers. Although Solomon took office without God's *charisma*, he received it during his vision at Gibeon, when the Lord offered him his choice of gifts (1 Ki. 3:5ff.). Realizing the enormity of his task, Solomon chose an 'understanding heart' (v. 9). The story of the harlots' dispute over the baby (1 Ki. 3:16ff.) has become a classic display of Solomon's royal wisdom.

Surpassing his contemporaries in Egypt, Arabia, Canaan, and Edom in wisdom (1 Ki. 4:29ff.), Solomon became the great patron of Israel's *Wisdom literature. No other period of the Monarchy provided the combination of international contacts, wealth and relief from war necessary for literary productivity. Solomon took the lead in this movement, collecting and composing thousands of proverbs and songs (1 Ki. 4:32). The statement that he spoke of trees, beasts, etc. (1 Ki. 4:33) probably refers to his use of plants and animals in his proverbs rather than to accomplishments in botany and zoology, although close observation of these creatures would be necessary before he could use them in his sayings (cf. Pr. 30:24-31).

Two extensive collections in Proverbs (10:1-22:16; 25:1-29:27) are credited to him, and the entire collection bears his name as the chief contributor (1:1). Canticles and Ecclesiastes have traditionally been ascribed to him, although the latter does not mention his name. Though the final composition of these books seems to be much later than the 10th century BC, both may contain accurate descriptions of Solomon's glory and wisdom. Two psalms (72, a royal psalm; 127, a wisdom psalm) complete the list of canonical writings attributed to him. The relationship of *corporate personality* (the view that members of a clan are so inter-related that when one member acts, the others may be viewed as taking part in the act) to problems of authorship is not clear: it is possible that some of the Solomonic writings are products of sages who felt their kinship with their intellectual father so strongly that they credited him with their work. Solomon's literary sponsorship may also have included substantial endeavours in

Solomon's administrative districts as described in 1 Ki. 4:7-19.

collecting and recording Israel's early traditions and the accounts of the beginning of the monarchy.

III. The iron ruler

Solomon's task was to maintain and control the expanse of territory bequeathed him by David. Further, he had to effect as smooth a transition as possible from the tribal confederacy which had characterized pre-Davidic political life to the strong central government which alone could maintain Israel's empire.

The traditional tribal boundaries were replaced by administrative districts: twelve in Israel (1 Ki.

4:7ff.) and perhaps one in Judah; cf. the problematic 4:19 in *rsv*. (See J. Bright, *A History of Israel*, 3, 1981, p. 206 n. 51, for the view that Jos. 15:20-62 contains the list of the twelve districts of Judah.) Each of these tax districts was obligated to provide support for the court for a month during the year (1 Ki. 4:7), which would appear an onerous task according to the list in 1 Ki. 4:22-23. (*Food, I. d (iii).)

In addition to this, Solomon began recruiting labourers from among the Israelites, a measure unpalatable to a people who relished freedom. There is an apparent contradiction between 1 Ki. 5:13ff. and 9:22, the former stating that Solomon

SOLOMON

used 30,000 Israelites in forced labour and the latter affirming that Israelites held positions in the army but were not slaves. It may be that 5:13ff. deals with events subsequent to the summary given in 9:15ff. When Canaanite labour proved insufficient for Solomon's enormous construction enterprises he was compelled to draft labourers from Israel. Further, there may be a technical difference between forced labour (*mas* in 5:13) and the more permanent slave-labour (*mas 'ôbêd* in 9:21). The unpopularity of Solomon's policy is evidenced in the assassination of Adoniram, the superintendent of the labour crews (1 Ki. 4:6; 5:14; 12:18) and in the request for redress of grievances, the denial of which by Rehoboam led to the secession of the N kingdom (1 Ki. 12:4ff.).

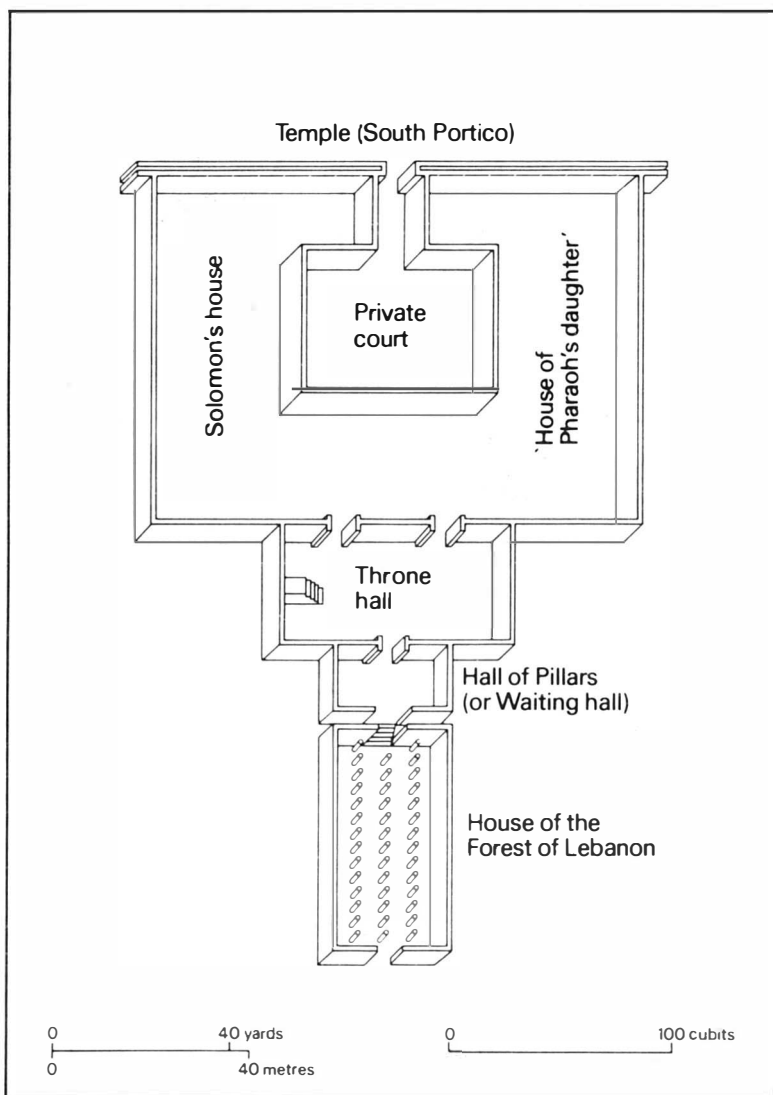

Resentment was also engendered, in all probability, by Solomon's pledging of twenty Gailean

cities to Hiram in return for financial aid (1 Ki. 9:10ff.). The fact that Hiram may have returned these later (as 2 Ch. 8:1-2 seems to hint) would not have completely relieved the resentment. Solomon had accomplished monumental tasks, including the building of the *Temple, but at an exorbitant price: the goodwill and loyalty of his people.

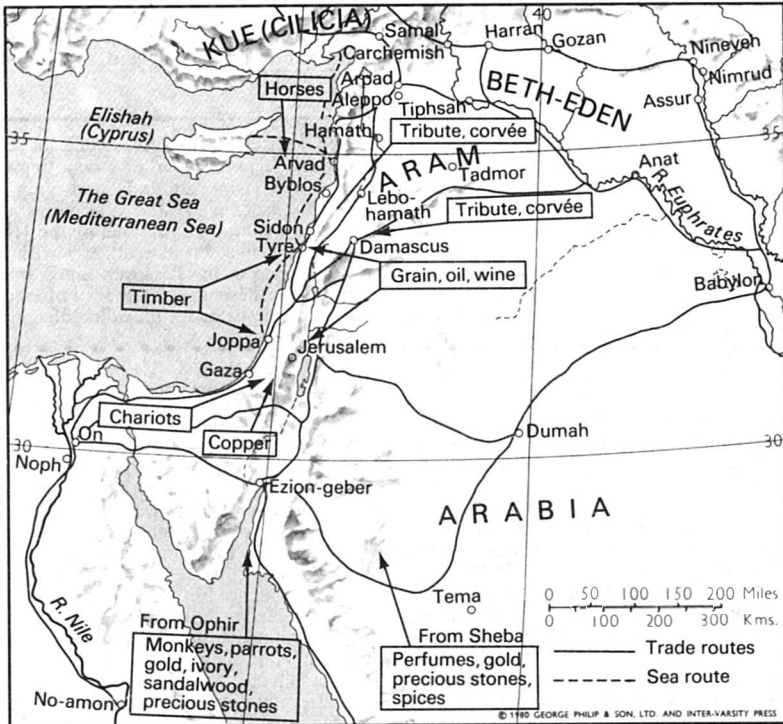

IV. The enterprising merchant

Trading was Solomon's forte. Knowing full well the significance of Israel's strategic control of the land-bridge between Egypt and Asia, he set out to exploit his position by controlling the major N-S caravan routes. His ties with Hiram of Tyre placed at his disposal fleets which enabled him to monopolize sea lanes as well.

Ezion-geber (*ELATH), his manufacturing centre and seaport on the Gulf of Aqabah, was a main

Suggested arrangement of the buildings of Solomon's palace at Jerusalem.

Trade routes in Solomon's time, showing principal imports and their sources.

base of his trading activities. From here his fleet, manned by Phoenicians (the Israelites apparently had neither love for nor knowledge of the sea), sailed to *Ophir carrying smelted copper, whose source is yet undiscovered. The phrase 'ships of *Tarshish' is probably to be translated 'refinery ships', i.e. ships equipped to carry smelted ore. In return, these ships brought back splendid cargo: gold, silver, hardwood, jewels, ivory, and varieties of apes (1 Ki. 9:26-28; 10:11-12, 22; 'peacocks' in v. 22 should probably be translated 'baboons', NIV).

The visit of the Queen of *Sheba (1 Ki. 10:1-13) may have had a commercial purpose. Solomon's control of the trade routes and his sea ventures in the S made him a serious financial threat to the Sabaeans, whose strategic position in SW Arabia enabled them to control trade in incense and spice. The queen's journey was successful, but she probably had to share her profits with Solomon, as did other Arabian monarchs (10:13-15).

Solomon's business acumen took advantage of Israel's location when he became the exclusive agent through whom the Hittites and Aramaeans had to negotiate in order to buy horses from Kue (Cilicia) or chariots from Egypt (1 Ki. 10:28-29). These and other enterprises made silver as common as stone and cedar as sycamore in Jerusalem, where the king lived in oriental splendour, in marked contrast to Saul's rustic simplicity in Gibeah. Although Israel's standard of living was undoubtedly raised, Israelites did not profit uniformly. The tendency towards centralization of wealth which brought the censure of the 8th-century prophets began during Solomon's golden reign.

V. The peaceful emperor

Solomon, who had inherited a large empire from his father, apparently conducted no major military campaigns. His task was to maintain Israel's extensive boundaries and to exploit his position of strength during the power-vacuum created by the temporary eclipse of Egypt and Assyria. The two main pillars of Solomon's foreign policy were friendly alliances, sometimes sealed by marriage, and the maintenance of a formidable army. Among his wives Solomon numbered pharaoh's daughter, an accomplishment almost unprecedented among ancient oriental monarchs. Because of her high station, Solomon built a special wing on his palace for her (1 Ki. 3:1; 7:8). This alliance was profitable for Solomon, for pharaoh (probably one of the last members of the impotent Dynasty 21) gave him the frontier city of Gezer as a dowry (1 Ki. 9:16; see J Bright, *op. cit.*, p. 191, n. 63, for the view that 'Gerar' is a preferable reading to 'Gezer'). In view of Solomon's numerous foreign marriages (1 Ki. 11:1-3), it is not surprising that Arabian, Jewish, and especially Ethiopian traditions describe his amorous relations with the Queen of *Sheba, who according to the Ethiopians bore him a son, Menelik I, the traditional founder of their royal house.

Solomon made the most of his alliance with Hiram (c. 969-936 BC) of Tyre (1 Ki. 5:1-12). The Phoenicians, just entering their colonial heyday, supplied the architectural skill and many of the materials, especially the fine Lebanese woods, for Solomon's Temple and palaces; they designed and manned his ships; they provided a market for the

SOLOMON

Palestinian crops of wheat and olive oil. On at least one occasion Hiram came to Solomon's aid with a substantial loan (1 Ki. 9:11).

The backbone of Solomon's military defence was a ring of cities strategically located near the borders of Israel and manned by companies of charioteers (1 Ki. 9:15-19). His militia included 4,000 stalls for horses (40,000 in 1 Ki. 4:26 is apparently a scribal error; cf. 2 Ch. 9:25), 1,400 chariots, and 12,000 horsemen (1 Ki. 10:26). Several cities have yielded Solomonic remains in recent years, e.g. *Hazor, *Gezer and especially *Megiddo, where 450 stalls with elaborate systems for feeding and watering the horses were discovered. Y. Yadin ('New Light on Solomon's Megiddo', *BA* 23, 1960, pp. 62-68) has disputed the customary crediting of these stables to Solomon. Having found a construction which resembles the Solomonic walls at Hazor and Gezer but differs from the stables, he attributed the latter to Ahab. Results of Yadin's find are still being evaluated, as are suggestions that a chain of Iron Age fortresses in the central Negeb may be Solomonic (see Lemaire, p. 248 n. 85).

Solomon's era of peace was marred by two recorded incidents, both of which are interpreted by the author of Kings in terms of divine judgment (1 Ki. 11:14ff., 23ff.). Hadad, an Edomite prince, who had taken refuge in the court of Egypt during Joab's massacre of the Edomite males, returned to his homeland and apparently harassed Israel's S flank (1 Ki. 11:14-22, 25; Edom may be a scribal error for Aram. See Lemaire, p. 247 n. 59). Hadad's activities may have been confined to scattered skirmishes, for there is no indication that he posed a major threat to Solomon's S port, Ezion-geber. The zest with which the pharaoh courted Hadad's favour is further indication of the Egyptian's *penchant* for forming beneficial alliances during this period.

Solomon's second antagonist was Rezon, who wrested Damascus from Israel and set up an independent kingdom in the city which had been David's N headquarters (2 Sa. 8:6). Solomon's loss of this strategically located, commercially important Aramaean city greatly weakened his control of N and central Syria. The monolithic empire, which at the outset of Solomon's reign had stretched from the Gulf of Aqabah to the Orontes and Euphrates and from the Mediterranean coast to the Transjordan (cf. 1 Ki. 4:24), was in danger of crumbling. (See M. F. Unger, *Israel and the Aramaeans of Damascus*, 1957, pp. 47-57.)

VI. The fatal flaw

Marrying foreign wives was expedient politically, but not spiritually. The historian does not chide Solomon for sensuality but for disobedience to Israel's monotheistic ideal. Foreign marriages brought foreign religions, and the king compromised the convictions expressed in the dedicatory prayer for the Temple (1 Ki. 8:23, 27) by engaging in syncretistic worship to placate his wives. This violent breach of Israel's covenant could not go unpunished. Though judgment was stayed during Solomon's lifetime for David's sake, the seeds of dissatisfaction sown among the people by Solomon's harsh policies of taxation and *corvée* were to bear bitter fruit during the reign of his son and successor, Rehoboam (1 Ki. 11:1-13).

SONG OF SOLOMON. 'Song of Songs' (*šir haššīrīm*, 1:1) is a superlative denoting the best of songs. LXX *Asma Asmatōn* and Vulg. *Canticum Canticorum* (whence the alternative title 'Canticles') are literal translations of the Hebrew. The first of the five scrolls read at Jewish feasts, the Song is used at the Passover. Since analysis must depend on the particular theory of interpretation adopted (see below), no outline of contents is attempted here.

I. Canonicity

The Mishnah (*Yadaim* 3. 5) seems to indicate that the Song was not accepted without dispute. Following an affirmative verdict by Rabbi Judah and a negative opinion by Rabbi Jose, Rabbi Akiba affirms the canonicity of the Song in superlatives: 'the whole world is not worth the day on which the Song of Songs was given to Israel; all the Writings are holy, and the Song of Songs is the holy of holies'. His strong denial of any dispute may well serve as evidence for one.

Undoubtedly the opposition to canonizing the Song stemmed from its erotic nature. This objection was outweighed by the traditional Solomonic authorship and by rabbinic and Christian allegorical interpretations which lifted the poems above a sensual level.

II. Authorship and date

The traditional attribution to Solomon is based on the references to him (1:5; 3:7, 9, 11; 8:11), especially the title verse (1:1). The phrase *lišlōmōh* probably intimates authorship but can mean 'for Solomon'. Solomon's prowess as a song-writer is attested in 1 Ki. 4:32 (cf. Pss. 72; 127). The opinion expressed in *Baba Bathra* 15a that Hezekiah and his scribes wrote the Song of Songs is probably based on Pr. 25:1.

The presence of what seem to be Persian (*pardēs*, 'orchard', 4:13) or Greek ('*appiryōn* from *phoreion*, ἄν 'chariot', better rsv 'palanquin', 3:9) loan-words, a consistent (except for 1:1) use of *š* as the relative pronoun, and numerous words and phrases akin to Aramaic (see S. R. Driver, *Literature of the Old Testament*, p. 448) suggest to some that the final redaction of the book, if not its actual composition, took place after Solomon's time. It seems unnecessary, however, to date the composition as late as the Greek period (c. 300 BC) in view of the evidences for intercourse between Canaan and Ionia from the Solomonic period onwards. Likewise the presence of Aramaisms is no proof of a late date. S. R. Driver (*op. cit.*, p. 449) notes that the linguistic evidence, together with a number of geographical allusions (e.g. Sharon, 2:1; Lebanon, 3:9; 4:8, 11, 15, etc.; Amana, Senir, Hermon, 4:8; Tirzah, 6:4; Damascus, 7:4; Carmel, 7:5), points to a northern origin. But there is no provincialism here. The author is acquainted with the geography of Palestine and Syria from En-gedi, by the Dead Sea (1:14), to the mountains of Lebanon.

III. Literary qualities

The intensely personal speeches of Canticles take two main forms: dialogue (e.g. 1:9ff.) and soliloquy

(e.g. 2:8–3:5). It is not easy to identify the participants in the conversation apart from the two lovers. Daughters of Jerusalem are mentioned (1:5; 2:7; 3:5, etc.), and brief responses have been credited to them (1:8; 5:9; 6:1, etc.). Statements have been attributed to citizens of Jerusalem (3:6–11) and Shulem (8:5). In highly figurative lyrical poetry it is possible that the central figures are reconstructing the responses of others (e.g. the Shulammitte seems to quote her brothers in 8:8–9).

The power of the poetry lies in the intensity of love and devotion expressed and especially in the rich imagery which permeates the descriptions of the lovers and their love. If these descriptions are too intimately detailed to suit Western tastes we must remember that they are the product of a distant time and place. If some of the similes sound less than complimentary (e.g. teeth like ewes, neck like the tower of David, 4:2ff.), A. Bentzen's reminder is apposite: 'Orientals fix the eye on one single striking point, which according to our conceptions is perhaps not characteristic' (*IOT*, 1, p. 130). L. Waterman's opinion that the compliments are back-handed (*JBL* 44, 1925, pp. 179ff.) has not gained scholarly support. The pastoral qualities of the imagery have been noted frequently. The poems abound in references to animals and especially plants. This fact has not gone unnoticed by those who find the source of the Song in pagan fertility rites (see below).

IV. Theories of interpretation

Interpretations of the Song have been legion, and there is little agreement among scholars as to its origin, meaning and purpose. The vividly detailed, erotic lyrics, the virtual absence of overt religious themes, and the vagueness of its plot make it a challenge to scholarship and a temptation to imaginative ingenuity. Indispensable to the study of the varieties of interpretation is H. H. Rowley's essay 'The Interpretation of the Song of Songs' in *The Servant of the Lord*, 1952.

The problem of accepting a group of love poems into the Canon was solved for rabbis and church Fathers by an *allegorical* method of interpretation. Traces of this method are found in the Mishnah and Talmud, while the Targum of the Song sees in the love-story a clear picture of God's gracious dealings with Israel throughout her history. Once the allegorical trail had been blazed, the rabbis vied with one another in attempts to expand and redirect it. Allusions to Israel's history were squeezed from the most unlikely parts of the Song. The church Fathers and many subsequent Christian interpreters baptized the Song into Christ, finding within it an allegory of Christ's love for the church or the believer. Various mediaeval writers followed the example of Ambrose in finding the Virgin Mary foreshadowed in the *Shulammitte. Christian interpreters have yielded nothing to the rabbis in imaginative interpretation of details. The allegorical approach has been predominant in Protestant thought until recently, and includes as its advocates such stalwarts as Hengstenberg and Keil.

Closely related is the *typical* method which preserves the literal sense of the poem but also discerns a higher, more spiritual meaning. Avoiding the excesses in detailed interpretation of the allegorical method, typology stresses the major themes of love and devotion and finds in the story a picture of the love relationship between Christ

and his believers. This approach has been justified by analogies from Arabic love-poems which may have esoteric meanings, by Christ's use of the story of Jonah (Mt. 12:40) or the serpent in the wilderness (Jn. 3:14), and by biblical analogies of spiritual marriage, e.g. Ho. 1–3; Je. 2:2; 3:1ff.; Ezk. 16:6ff.; 23; Eph. 5:22ff. Not a few modern conservatives have espoused the *typical* view, e.g. J. H. Raven (*Old Testament Introduction*, 1910), M. F. Unger (*Introductory Guide to the Old Testament*², 1956).

Though Jews and Christians have found devotional benefits in allegorical or typical approaches to the Song, the exegetical basis of these approaches is questionable. Both the abundance of details and the absence of clues as to deeper spiritual significance within the book itself speak against the finding of allegory or type in the Song.

The *dramatic* interpretation of Canticles, suggested by both Origen and Milton, was developed in the 19th century in two major forms. F. Delitzsch found two main characters, Solomon and the Shulammitte girl. Taking her from her village home to Jerusalem, Solomon learnt to love her as his wife with an affection that rose above physical attraction. H. Ewald formulated an interpretation based on three main characters: Solomon, the Shulammitte and her shepherd lover to whom she remains true despite the king's desperate efforts to win her. While Ewald's approach (called the *shepherd hypothesis*), which was accepted by S. R. Driver and refined by other scholars, avoids some of the difficulties of Delitzsch's view by explaining why the lover is pictured as a shepherd (1:7–8) and why the poem ends in a N pastoral setting, it has its own difficulties, e.g. the absence of dramatic instructions, the complexities involved in the dialogues when Solomon describes the Shulammitte's beauty while she responds in terms of her shepherd lover. Dramatic interpretations face another difficulty: the scarcity of evidence for dramatic literature among the Semites, especially the Hebrews.

J. G. Wetstein's study of Syrian marriage customs prompted K. Budde to interpret the Song as a collection of *nuptial songs* akin to those used in the week-long marriage feast in which the bride and groom are crowned as king and queen. Critics of this view have pointed out the danger of using modern Syrian customs to illustrate ancient Palestinian practices. Also, the Shulammitte is not called by the name of 'queen' anywhere in the Song.

The view of T. J. Meek that the Song is derived from the *liturgical rites* of the *Tammuz cult (cf. Ezk. 8:14) has gained widespread attention. But it is unlikely that a pagan liturgy with overtones of immorality would be incorporated in the Canon without a thorough revision in terms of Israel's faith, and the Song bears the marks of no such redaction.

Leroy Waterman, who had originally supported Meek's theory (*JBL* 44, 1925), has recently returned to a historical basis for the Song. This he finds in the story of Abishag, David's *Shunammite maiden (1 Ki. 1:3), who allegedly refused Solomon's overtures in favour of her shepherd lover. This interpretation hangs on the conjectural connection between Shunammite and *Shulammitte.

An increasing number of scholars have viewed Canticles as a collection of *love-poems* not neces-

SONG OF SOLOMON

sarily connected with wedding festivities or any other specific occasion. Attempts to assign the various sections to different authors (e.g. W. O. E. Oesterley divided the Song into 28 distinct poems and emphatically denied the unity of the book; *Song of Songs*, 1936, p. 6b) have been resisted by a number of scholars, especially H. H. Rowley: 'The repetitions that occur leave the impression of a single hand . . .' (*op. cit.*, p. 212).

V. Purpose

If the Song is not an allegory or type conveying a spiritual message, what place does it have in the Canon? It serves as an object-lesson, an extended *māšāl* (* PROVERB), illustrating the rich wonders of human love. As biblical teaching concerning physical love has been emancipated from sub-Christian asceticism, the beauty and purity of marital love have been more fully appreciated. The Song, though expressed in language too bold for Western taste, provides a wholesome balance between the extremes of sexual excess or perversion and an ascetic denial of the essential goodness of physical love. E. J. Young carries the purpose one step further: 'Not only does it speak of the purity of human love, but by its very inclusion in the Canon it reminds us of a love that is purer than our own' (*IOT*, 1949, p. 327).

SONS (CHILDREN) OF GOD.

I. In the Old Testament

a. Individuals of the class 'god'

'Son' (Heb. *bēn*, Aram. *bar*) is commonly used in Semitic languages to denote membership of a class, as 'son of Israel' for 'Israelite', 'son of might' for 'valorous'. 'Son of God' in Heb. means 'god' or 'god-like' rather than 'son of (the) God (Yahweh)'. In Jb. 1:6; 2:1; 38:7; Ps. 29:1; 89:6, the 'sons of God' form Yahweh's heavenly train or subordinates, though Lxx Job calls them *angeloi* of God (*cf.* Dt. 32:8 Lxx, whence rsv 'according to the number of the sons of God' supported by a Heb. Dead Sea Scroll text, 4Q Dt^a, against MT 'sons of Israel'). Similarly the 'son of the gods' in Dn. 3:25 is called the 'angel of the Jews' God' in 3:28.

In Gn. 6:1-2 the 'sons of God' are contrasted with human women in a way which seems to preclude their identification with the line of Cain. Many commentators treat these verses as pagan myth, hardly altered from a polytheistic background. Others argue that the phrase denotes demon-possessed men or fallen angels (*cf.* 1 Pet. 3:19-20; Jude 6). A more attractive interpretation falls into the next category.

b. Men who by divine appointment exercise God's prerogative of judgment

In Ex. 21:6; 22:8-9, 28, 'God' (Heb. *'lōhim*) may stand for 'judges' (so av, rvmg.), his deputies, exer-

cising power of life and death (*cf.* 2 Ch. 19:6), as may be the case in Ps. 82:6.

Kings were titled 'son of god X' in the OT world, and in Israel in sense c, below. M. G. Kline has proposed that this usage be seen in Gn. 6:1-2, referring to rulers of the remote antediluvian era (*WTJ* 4, 1962, pp. 187-204).

c. Those who are related to Yahweh by covenant

Sonship of God chiefly denotes relationship by *covenant and is used (i) of Israel as a whole ('Israel is my first-born son', Ex. 4:22; *cf.* Ho. 11:1); (ii) of the Israelites generally ('You are the sons of the Lord your God', Dt. 14:1; *cf.* Ho. 11:10—of an individual Israelite in later Judaism, e.g. Wisdom 2:18); (iii) of the Davidic king, Yahweh's anointed, who will rule his people for ever ('You are my Son: today I have begotten you', Ps. 2:7). This relationship is not biological, though metaphors of birth, infancy and growth are sometimes used (Ho. 11:1; Dt. 32:6; Is. 1:2; 63:8) and conformity to the Father's character expected. But basically sonship is established by God through his covenant. Dt. 14:1-2 well illustrates the covenantal context of Israel's sonship. The Messiah-King, though called (like Israel with whom he is so closely identified) 'my first-born' (Ps. 89:27) and 'begotten' of Yahweh (Ps. 2:7), no less owes his status to God's covenant with him (Ps. 89:28; 2 Sa. 23:5). The terms of this covenant ('I will be his father, and he shall be my son', 2 Sa. 7:14) are parallel to the terms of the covenant with Israel ('I . . . will be their God, and they shall be my people', Je. 31:33).

D.W.B.R.
A.R.M.

II. In the New Testament

Both expressions, 'sons (Gk. *hyioi*) of God' and 'children (Gk. *tekna*) of God', occur in the NT, but without obvious distinction in meaning. The NT usage is based on one or other of the OT uses of 'sons of God'.

a. Lk. 20:36

This reference, 'they are equal to angels and are sons of God, being sons of the resurrection', reflects the use of 'sons of God' as in Ps. 29:1; 89:6; Dt. 32:8 (Lxx), where it means non-terrestrial beings in the presence of God, in contrast to 'the sons of this age'. That the elect should have this destiny before them was already the belief of many Jews, but it was to acquire a more distinctive meaning in the light of Christ's resurrection.

b. Those who act like God

Lk. 6:35, 'you will be sons of the Most High', means little more than 'you will be like God'. 'Son of . . .' is an idiom for 'having the characteristics of' or 'doing the work of' (*cf.* the parabolic description of the apprentice son in Jn. 5:19), and the 'sons of God' in Mt. 5:9 and 5:45 belong to this category. Ps. 82:6, discussed by Jesus in Jn. 10:34-36, may be an OT example of this sense, judges being men who exercise God's power of life and death. Paul's simple metaphor in Eph. 5:1, 'be imitators of God, as beloved children', reflects this idiom, though it also presupposes a deeper relation between the 'children' and their Father.

c. The sonship of Israel

The collective sonship of Israel ('Israel is my first-born son', Ex. 4:22) is prominent in the thought of

Paul (e.g. Rom. 9:4, 'they are Israelites, and to them belong the sonship . . .') and elsewhere in the NT. Sometimes this sonship is seen as represented and fulfilled in Jesus Christ, as in Mt. 2:15 and in the narratives of his baptism and temptation. However, even without a direct connection with Christ's sonship, 'sons (or children) of God' recalls the OT application of the term to God's covenant people who are to reflect his holiness. If Eph. 5:1 is little more than metaphorical, Phil. 2:15, 'children of God without blemish in the midst of a crooked and perverse generation', is based on the Song of Moses (Dt. 32:5-6, 18-20), and 2 Cor. 6:18 combines a number of covenantal passages (e.g. Is. 43:6; 2 Sa. 7:14). 'The children of God who are scattered abroad' in Jn. 11:52 are the lost sheep of the house of Israel (cf. 10:16). The idea is derived from Ezk. 34 and 37, though whether the reference in John is to Jewish believers only or all believers is a matter of debate.

The sonship of God's people is, however, linked with the special sonship of Jesus in Heb. 2:10-17. (A different word, *paidia*, is used for 'children' in the quotation in vv. 13-14.) Here, Jesus' sonship is that conferred on the Messiah-King, David's son (Ps. 2:7; 2 Sa. 7:14, quoted in Heb. 1:5), which itself is parallel to, and perhaps epitomizes, Israel's covenantal sonship. The 'many sons' are the 'descendants of Abraham' and 'children' by election even before Christ's incarnation. But they are brought 'to glory' through the Son sharing in their 'flesh and blood' in which he secured their salvation by his death.

d. Paul in Romans and Galatians

Though Paul acknowledges that 'the sonship' belongs to Israelites (Rom. 9:4), he insists that not all the offspring of Israel are 'Israel' in the true sense, and that therefore it is not 'the children of the flesh' but 'the children of the promise' who are 'children of God' and true partakers of the privilege (Rom. 9:6ff.).

By this test, Gentiles as well as Jews are included, 'for in Christ Jesus you are all sons of God, through faith' (Gal. 3:26). This doctrine of sonship is expounded in Rom. 8, where Paul invokes the idea of *hyiothesia*, usually rendered 'adoption'. But, though the term was used in contemporary Gk. to denote legal adoption of children (see *MM*), it is not clear how far this enters Paul's thought. Despite the contrast with a former status of slavery, both in Rom. 8:15 (where RSV renders *hyiothesia* as 'sonship') and Gal. 4:5, at least in the latter passage *hyiothesia* seems to correspond to the entering of a child on his inheritance at 'the date set by the father'. The primary model is the sovereign act of God's grace when he declared Israel, and then the Davidic king, to be his son. Neither Israel's sonship (Ex. 4:22) nor that of Messiah (Pss. 2:7; 89:27) was inconsistent with the recipient's being called God's 'first-born', and the *hyiothesia* of the believer is practically identical with the notion of spiritual generation. In Rom. 8:23 the *hyiothesia* is yet to come. Though again associated with the notion of 'redemption' (from slavery?), the positive act is really 'the revealing of the sons of God', showing them to be what they already are. This sonship is indissolubly linked with the sonship of Christ (Rom. 8:17), is attested and controlled by the Spirit (8:14, 16), and its ultimate nature disclosed when Christ's sonship is disclosed and when God's elect are seen as 'con-

formed to the image of his Son, in order that he might be the first-born among many brethren' (8:19, 29).

e. John

John's concept of 'children of God' differs only in emphasis from that of Paul, although he employs simply *tekna*, and reserves *hyios* exclusively for Christ. Westcott held that John deliberately avoided *hyios*, 'the name of definite dignity and privilege', to describe the relation of Christians to God, since 'he regards their position not as the result of an "adoption" (*hyiothesia*), but as the result of a new life which advances from the vital germ to full maturity'. However, Westcott overstated the case. While John undoubtedly exploits the imagery of natural birth and consequent relationship (e.g. 1 Jn. 3:9), he is also aware of the OT background where Israel became God's son by election and calling. We have already referred to Jn. 11:52. In Jn. 1:12 the 'children of God' may be interpreted as believing Israelites before the Word became flesh. In any case, they are described not only as being 'born of God' but also as becoming 'children of God' by having that status conferred on them: 'to them gave he the right to become children of God' (RV). Again in 1 Jn. 3 and 4 believers are described as 'born of God', with special reference to their reproducing God's character of love and righteousness; nevertheless the title 'children of God' is also a privilege bestowed through God's 'calling' (3:1). Though it 'may be seen' now who are children of God by their behaviour (3:10), their final form 'does not yet appear', but will be manifested in the day when the Son of God is manifested and they fully reflect the image of their Father (3:2); which image is in the Son.

SOPATER, SOSPATER, a believer from Berea in Macedonia (Acts 20:4), was one of the missionary party which waited for Paul at Troas, and then accompanied him to Asia on his way to Syria. Sospater is called, in Rom. 16:21, a kinsman (*syngenēs*) of Paul. His greeting was sent to the church at Rome.

Some consider that the references are to the same man. Perhaps Sospater was a fruit of Paul's preaching in Macedonia, and was therefore Paul's kinsman in Christ. He probably represented the Berean church in the delegation which was about to set sail with Paul to carry the Gentile churches' contributions to Jerusalem. C.H.D.

SOREK, VALLEY OF. The home of Delilah (Jdg. 16:4). There is little doubt that this may be equated with the Wadi al-Sarak, a large valley lying between Jerusalem—starting some 20 km from it—and the Mediterranean. It must always have offered a convenient route inland (it is today followed by the railway line). There is a ruin near the valley called Khirbet Surik, preserving the biblical name. Eusebius and Jerome made the same identification. D.F.P.

SOSTHENES. The chief ruler of the synagogue at Corinth, and successor (or possibly colleague) of the converted *Crispus. He was assaulted in court after Gallio disallowed a Jewish prosecution of Paul (Acts 18:17), either in an anti-Semitic demonstration by Greeks (as Western Text) or in Jewish spite against an unsuccessful or lukewarm spokesman.

The latter might indicate pro-Christian sympathy: did 'Paul sow, Apollos water' (cf. 1 Cor. 3:6)? 'Sosthenes the brother' is co-sender of 1 Corinthians (1:1), and Sosthenes is not the commonest of Gk. names. Paul's tact and modesty, in approaching a sensitive church in association with the ex-archisynagogue, then at Ephesus, best explain the allusion. Joint-authorship is not implied.

Sosthenes' inclusion in the Seventy (Clem. Alex., *Hyp.* 5, in Eus., *EH* 1. 12. 1-2) doubtless reflects his assumed participation in a canonical letter.

SOUL. I. The usual Heb. word *nepeš* (*n' sāma*, Is. 57:16, is an exception) occurs 755 times in the OT. As is clear from Gn. 2:7, the primary meaning is 'possessing life'. Thus it is frequently used of animals (Gn. 1:20, 24, 30; 9:12. 15-16; Ezk. 47:9). Sometimes it is identified with the blood, as something which is essential to physical existence (Gn. 9:4; Lv. 17:10-14; Dt. 12:22-24). In many cases it stands for the life-principle. This sense is common in the book of Psalms, though not confined to it.

The numerous occurrences with a psychical reference cover various states of consciousness: (a) where *nepeš* is the seat of physical appetite (Nu. 21:5; Dt. 12:15, 20-21, 23-24; Jb. 33:20; Pss. 78:18; 107:18; Ec. 2:24; Mi. 7:1); (b) where it is the source of emotion (Jb. 30:25; Pss. 86:4; 107:26; Ct. 1:7; Is. 1:14); (c) where it is associated with the will and moral action (Gn. 49:6; Dt. 4:29; Jb. 7:15; Pss. 24:4; 25:1; 119:129, 167). In addition there are passages where *nepeš* designates an individual or person (e.g. Lv. 7:21; 17:12; Ezk. 18:4) or is employed with a pronominal suffix to denote self (e.g. Jdg. 16:16; Ps. 120:6; Ezk. 4:14). A remarkable extension of the latter is the application of *nepeš* to a dead body (e.g. Lv. 19:28; Nu. 6:6; Hg. 2:13). Usually the *nepeš* is regarded as departing at death (e.g. Gn. 35:18), but the word is never used for the spirit of the dead. Since Hebrew psychology lacked precise terminology, there is some overlapping in the use of *nepeš*, *lēb* (*lēhāb*) and *ruah* (*HEART, *SPIRIT).

2. Gk. *psychē*, the corresponding term to *nepeš* in the NT, occurs in the Gospels with similar meanings, but in certain instances, indicating life, more is implied than physical life, ceasing at death (Mt. 10:39; Mk. 8:35; Lk. 17:33; 21:19; Jn. 12:25). In all four Gospels *pneuma*, the equivalent of *ruah*, sometimes denotes the principle of life, although in other cases it means the higher level of psychical life.

Of 12 occurrences in Paul, 6 represent life (Rom. 11:3; 16:4; 1 Cor. 15:45; 2 Cor. 1:23; Phil. 2:30; 1 Thes. 2:8), 2 are personal (Rom. 11:3; 13:1) and 4 are psychical, 3 of these representing desire (Eph. 6:6; Phil. 1:27; Col. 3:23), while the remaining one indicates emotion (1 Thes. 5:23). For the higher aspects of ordinary life and especially the higher life of a Christian he uses *pneuma*. In line with this is his use of the adjectives *psychikos* and *pneuma-*

tikos (1 Cor. 2:14-15). When he employs *psychē* along with *pneuma* (1 Thes. 5:23) he is merely describing the same immaterial part of man in its lower and higher aspects.

Other NT writers provide examples of a somewhat heightened use of *psychē*. The Word of God can save it and recovery from error rescues it from death (Jas. 1:21; 5:20). The outcome of faith is the salvation of the *psychē* (Heb. 10:29; 1 Pet. 1:10), while fleshly desires are inimical to it (1 Pet. 2:11). Hope of what shall be firmly anchors it (Heb. 6:19). In the description of what follows the opening of the fifth seal, *psychē* is used with reference to the martyrs seen below the altar (Rev. 6:9). (*SPIRIT.)

SPAIN. For the discussion of possible OT references to Spain, see *TARSHISH. A series of Gk. commercial colonies founded from Massilia (Marseilles) introduced Spain into world history, and in the 3rd century BC it became a theatre for the long struggle between Carthage and Rome. By 197 BC, the Carthaginians being dispossessed, two Roman provinces, Hispania Citerior and Hispania Ulterior, were set up; but the forcible reconciliation of the Spanish tribes to Roman rule took almost 2 centuries more. Later, however, Spain developed, economically and culturally, perhaps faster than any other part of the empire. Augustus reorganized the peninsula into three provinces, Hispania Tarraconensis, Baetica and Lusitania; Vespasian extended Latin status to all the Spanish municipalities. The Senecas, Lucan, Quintilian, Martial and other prominent Latin writers of that age, as well as the emperors Trajan and Hadrian, were of Spanish birth.

These things show how forward-looking was Paul's plan to travel beyond Rome to Spain (Rom. 15:24, 28), a project in which he clearly expects the co-operation of the Roman Christians. Even if his first object was the Hellenized towns, 'it marks the beginning of an entirely new enterprise; behind it lies Gaul and perhaps Germany and Britain. He is about to pass over from the Greek into the distinctly Roman half of the civilized world' (J. Weiss, *History of Primitive Christianity*, 1, 1937, p. 359).

Whether *Paul achieved his ambition remains uncertain. The silence of the Pastorals may indicate a change of plan. Clement of Rome, c. AD 95, says that Paul reached 'the boundary of the West' (*I Clem* 5)—most naturally interpreted, not of Rome, but of the Pillars of Hercules. The 2nd-century *Acts of Peter* and the Muratorian Fragment are more explicit, but may reflect assumptions based on Rom. 15. The earliest surviving Spanish traditions are too late to help, and later Roman theory was interested in proving that all W churches were founded by Peter's lieutenants (*Innocent, Ep.* 25. 2, AD 416).

SPECK. The word occurs in Mt. 7:3-5, and almost identically in the Lucan parallel (Lk. 6:41-42 b3). The Gk. word is *karphos* (AV 'mote'), and is cognate with the verb *karphō*, 'to dry up'. The noun means a small, dry stalk or twig, a light piece of straw, or even of wool such as might fly into the eye. Metaphorically it is used by Jesus to denote a minor fault. s.s.s.

SPINNING AND WEAVING. Two implements were used in spinning (Heb. *tāwā*; Gk. *nēthō*). The distaff (Heb. *kīšōr*, Pr. 31:19; AV 'spindle'), on which were wound the unspun fibres, was held with the left hand, while the spindle (Heb. *pelek*, Pr. 31:19; AV 'distaff') was worked by the fingers and thumb of the right hand to twist the short natural fibres into yarn. The spindle had a wooden shank 23 to 30 cm long, with a heavy whorl of stone or clay part way down to give momentum to its rotation. A hook at one end held the yarn which, when spun, was twisted on to the spindle shank. A variety of fibres such as flax and wool (Lv. 13:47), goat hair (Ex. 35:26), and camel hair (Mt. 3:4) were used in spinning, though the blending of different kinds of yarn was forbidden, for ritual purity (Lv. 19:19).

In Israel the task of spinning belonged to women (Ex. 35:25; Pr. 31:19). For weaving (Heb. *ārag*; Gk. *hyphainō*), however, both men (Ex. 35:35) and women (2 Ki. 23:7) were employed, and the existence of a guild of weavers is indicated in 1 Ch. 4:21. Whether the horizontal or the vertical loom was more common in Israel is uncertain, though the weaving of the sleeping Samson's hair (Jdg. 16:13) suggests the former in this instance at least. In Egypt horizontal looms were common and such are still in use among Bedouin and peasants in Palestine. Egypt weavers seem to have been famed particularly for their white cloth (Is. 19:9).

The weaver's beam (*mānōr*), to which the massive shaft of Goliath's spear is compared (1 Sa. 17:7), was the means of raising and lowering the longitudinal warp threads (*š'fī*) to allow the shuttle carrying the transverse woof thread (*ēreb*, Lv. 13:48) to pass between them. The woof was then beaten tight by a stick or 'pin' (*yā'ēd*, Jdg. 16:14) to produce firm cloth.

The familiar art of weaving supplies some striking similes in the OT; the speed of the weaver's shuttle portrays the swift passing of man's life (Jb. 7:6), and death is likened to the cutting of finished cloth from the thrums (*dallā*) attached to the loom (Is. 38:12). Spinning and weaving are singled out as examples of unremitting human toil from which the world of nature is free (Lk. 12:27, RSV mg.).

SPIRIT, HOLY SPIRIT. OT, Heb. *rūah* 378 times (plus 11 Aramaic in Dn.); NT, Gk. *pneuma* 379 times.

I. Basic range of meaning of *rūah* and *pneuma*

From earliest Heb. thought *rūah* had various meanings, all more or less equally prominent. 1. *Wind*, an invisible, mysterious, powerful force (Gn. 8:1; Ex. 10:13, 19; Nu. 11:31; 1 Ki. 18:45; Pr. 25:23; Je. 10:13; Ho. 13:15; Jon. 4:8), regularly with the notion of strength or violence present (Ex. 14:21; 1 Ki. 19:11; Pss. 48:7; 55:8; Is. 7:2; Ezk. 27:26; Jon. 1:4). 2. *Breath* (i.e., air on a small scale), or *spirit* (Gn. 6:17; 7:15, 22; Pss. 31:5; 32:2; Ec. 3:19, 21; Je. 10:14; 51:17; Ezk. 11:5), the same mysterious force seen as the life and vitality of man (and beasts). It can be disturbed or activated in a particular direction (Gn. 41:8; Nu. 5:14, 30; Jdg. 8:3; 1 Ki. 21:5; 1 Ch. 5:26; Jb. 21:4; Pr. 29:11; Je. 51:17; Dn. 2:1, 3), can be impaired or diminished (Jos. 5:1; 1 Ki. 10:5; Ps. 143:7; Is. 19:3) and revive again (Gn. 45:27; Jdg. 15:19; 1 Sa. 30:12). That is, the dynamic force which constitutes a man can be low (it disappears at death), or there can be a sudden surge of vital power. 3. *Divine power*, where *rūah* is used to describe occasions when men seemed to be carried out of themselves—not just a surge of vitality, but a supernatural force taking possession. So particularly with the early charismatic leaders (Jdg. 3:10; 6:34; 11:29; 13:25; 14:6, 19; 15:14f.; 1 Sa. 11:6), and the early prophets—it was the same divine *rūah* which induced ecstasy and prophetic speech (Nu. 24:2; 1 Sa. 10:6, 10; 19:20, 23f.).

These should not be treated as a set of distinct meanings; rather we are confronted with a spectrum of meaning where the different senses merge into each other. Note, e.g., the overlap between 1 and 2 in Ps. 78:39, between 1 and 3 in 1 Ki. 18:12; 2 Ki. 2:16; Ezk. 3:12, 14, between 2 and 3 in Nu. 5:14, 30; 1 Sa. 16:14-16; Ho. 4:12, and between 1, 2 and 3 in Ezk. 37:9. Initially at least these are all seen simply as manifestations of *rūah*, and the meanings of *rūah* are not kept strictly separate. In particular, therefore, we may not presuppose an initial distinction in Heb. thought between divine *rūah* and anthropological *rūah*; on the contrary, man's *rūah* can be identified with God's *rūah* (Gn. 6:3; Jb. 27:3; 32:8; 33:4; 34:14f.; Ps. 104:29f.).

It also becomes immediately evident that the concept *rūah* is an existential term. At its heart is the *experience* of a mysterious, awesome power—the mighty invisible force of the wind, the mystery of vitality, the otherly power that transforms—all *rūah*, all manifestations of divine energy.

In later usage the meanings human spirit, angelic or demonic spirit, and divine Spirit predominate and are more distinct. Thus in the NT *pneuma* is used nearly 40 times to denote that dimension of the human personality whereby relationship with God is possible (Mk. 2:8; Acts 7:59; Rom. 1:9; 8:16; 1 Cor. 5:3-5; 1 Thes. 5:23; Jas. 2:26). Slightly more frequent is the sense of unclean, evil, demonic spirit, a power which man experiences as an affliction, an injurious limitation to full relationship with God and with his fellows (chiefly in the Synoptic Gospels and Acts: Mt. 8:16; Mk. 1:23, 26f.; 9:25; Lk. 4:36; 11:24, 26; Acts 19:12f., 15f.; 1 Tim. 4:1; Rev. 16:13f.). Occasionally there is reference to heavenly (good) spirits (Acts 23:8f.; Heb. 1:7, 14), or to spirits of the dead (Lk. 24:37, 39; Heb. 12:23; 1 Pet. 3:19; cf. 1 Cor. 5:5). But by far the most frequent reference in the NT is to the Spirit of God, the Holy Spirit (more than 250 times). At the same time the earlier, wider

SPIRIT, HOLY SPIRIT

range of meaning is still reflected in the ambiguity of Jn. 3:8; 20:22; Acts 8:39; 2 Thes. 2:8; Rev. 11:11; 13:15; and in particular there are several passages where it is not possible to decide with finality whether it is human spirit or divine Spirit that is meant (Mk. 14:38; Lk. 1:17, 80; 1 Cor. 14:14, 32; 2 Cor. 4:13; Eph. 1:17; 2 Tim. 1:7; Jas. 4:5; Rev. 22:6).

II. Characteristics of pre-Christian usage

In the earliest understanding of *rūah* there was little or no distinction between natural and supernatural. The wind could be described poetically as the blast of Yahweh's nostrils (Ex. 15:8, 10; 2 Sa. 22:16=Ps. 18:15; Is. 40:7). And man's God-breathed *rūah* was from the first more or less synonymous with his *nepeš* (soul) (especially Gn. 2:7). *rūah* was precisely the same divine, mysterious, vital power which is to be seen most clearly in the wind or in the ecstatic behaviour of prophet or charismatic leader.

Initially also the *rūah* of God was conceived more in terms of power than in moral terms, not yet as the (Holy) Spirit of God (*cf.* again Jdg. 14:6, 19; 15:14f.). A *rūah* from God could be for evil as well as for good (Jdg. 9:23; 1 Sa. 16:14-16; 1 Ki. 22:19-23). At this early stage of understanding, God's *rūah* was thought of simply as a supernatural power (under God's authority) exerting force in some direction.

The earliest leadership in the emergence of Israel as a nation rested its claim to authority on particular manifestations of *rūah*, of ecstatic power—so with the judges (references above, 3), Samuel who had the reputation of a seer and was evidently the leader of a group of ecstatic prophets (1 Sa. 9:9, 18f.; 19:20, 24), and Saul (1 Sa. 11:6; *cf.* 10:11f.; 19:24). Note the part apparently played by music in stimulating the ecstasy of inspiration (1 Sa. 10:5f.; 2 Ki. 3:15).

Various developments are evident in subsequent periods. We can recognize a tendency to open up a distinction between the natural and supernatural, between God and man. Just as the vivid anthropomorphisms of the earlier talk of God are abandoned, so *rūah* becomes more clearly that which characterizes the supernatural and distinguishes the divine from the merely human (particularly Is. 31:3; so Jn. 4:24). So too a distinction between *rūah* and *nepeš* begins to emerge: the *rūah* in man retains its immediate connection with God, denoting the 'higher' or Godward dimension of man's existence (*e.g.* Ezr. 1:1, 5; Ps. 51:12; Ezk. 11:19), while *nepeš* tends more and more to stand for the 'lower' aspects of man's consciousness, the personal but merely human life in man, the seat of his appetites, emotions and passions (so regularly). Thus the way is prepared for the sharper Pauline distinction between the psychical and the spiritual (1 Cor. 15:44-46).

Also evident is a tendency for the focus of authority to shift from the manifestation of *rūah* in ecstasy to a more institutionalized concept. Possession of the Spirit of God is now conceived as permanent, and capable of being passed on (Nu. 11:17; Dt. 34:9; 2 Ki. 2:9, 15). So presumably the anointing of the king was more and more thought of in terms of an anointing with Spirit (1 Sa. 16:13; and the implication of Ps. 89:20f.; Is. 11:2; 61:1). And prophecy tended to become more and more attached to the cult (the implication of Is. 28:7; Je. 6:13; 23:11; it is likely that some of the psalms

began as prophetic utterances in the cult; Hab. and Zc. were quite probably cult prophets). This development marks the beginning of the tension within the Judaeo-Christian tradition between charisma and cult (see especially 1 Ki. 22:5-28; Am. 7:10-17).

The most striking feature of the pre-exilic period is the strange reluctance (as it would appear) of the classical prophets to attribute their inspiration to the Spirit. Neither the 8th-century prophets (Am., Mi., Ho., Is.) nor those of the 7th century (Je., Zp., Na., Hab.) refer to the Spirit to authenticate their message—with the possible exception of Mi. 3:8 (often regarded as a later interpolation for that reason). In describing their inspiration they preferred to speak of the word of God (especially Am. 3:8; Je. 20:9) and the hand of God (Is. 8:11; Je. 15:17). Why this was so we cannot tell: perhaps *rūah* had become too much identified with the ecstatic both in Israel and in other near-Eastern religions (*cf.* Ho. 9:7); perhaps they were reacting against cult professionalism and abuse (Is. 28:7; Je. 5:13; 6:13; 14:13ff.; *etc.*; Mi. 2:11); or perhaps already emerging was the conviction that the work of God's *rūah* would be primarily eschatological (Is. 4:4).

In the exilic and post-exilic period the work of the Spirit came to renewed prominence. The role of divine *rūah* as inspirer of prophecy was reasserted (Pr. 1:23; *cf.* Is. 59:21—Spirit and word together; Ezk. 2:2; 3:1-4, 22-24; *etc.*—Spirit, word and hand). The inspiration of the earlier prophets too was freely attributed to the Spirit (Ne. 9:20, 30; Zc. 7:12; *cf.* Is. 63:11ff.). The sense that God is present through his Spirit, expressed for example in Ps. 51:11, appears also in Ps. 143:10; Hg. 2:5; Zc. 4:6. And 2 Ch. 20:14; 24:20 may reflect a desire to bridge the gap between charisma and cult.

The tradition which attributed the artistic skills and craftsmanship of Bezalel and others to the activity of the Spirit (Ex. 28:3; 31:3; 35:31), forged a link between the Spirit and more aesthetic and ethical qualities. It is perhaps with this in view, or simply out of the consideration that the Spirit is the Spirit of the holy and good God, that some authors specifically designate the Spirit as God's 'holy Spirit' (only three times in the Old Testament—Ps. 51:13; Is. 63:10f.) or as God's 'good Spirit' (Ne. 9:20; Ps. 143:10).

Another emphasis which appears only infrequently and at different periods is the association of the Spirit with the work of creation (Gn. 1:2; Jb. 26:13; Pss. 33:6; 104:30). In Ps. 139:7 *rūah* denotes the cosmic presence of God.

Probably most important of all from a Christian perspective is the growing tendency in prophetic circles to understand the *rūah* of God in eschatological terms, as the power of the End, the hallmark of the new age. The Spirit would effect a new creation (Is. 32:15; 44:3f.). The agents of eschatological salvation would be anointed with God's Spirit (Is. 42:1; 61:1; and later particularly *Psalms of Solomon* 17:42). Men would be created anew by the Spirit to enjoy a relationship with God much more vital and immediate (Ezk. 36:26f.; 37; *cf.* Je. 31:31-34), and the Spirit would be freely dispensed to all Israel (Ezk. 39:29; Joel 2:28f.; Zc. 12:10; *cf.* Nu. 11:29).

In the period between the Testaments the role attributed to the Spirit is greatly diminished. In Hellenistic Wisdom literature the Spirit is not given any prominence. In speaking about the divine/hu-

man relationship Wisdom is wholly dominant, so that 'spirit' is simply one way of defining Wisdom (Wisdom 1:6f.; 7:22–25; 9:17), with even prophecy ascribed to Wisdom rather than to the Spirit (Wisdom 7:27; Eccles. 24:33). In Philo's attempt to merge Jewish theology and Gk. philosophy the Spirit is still the Spirit of prophecy, but his concept of prophecy is the more typically Gk. one of inspiration through ecstasy (e.g., *Quis Rerum Divinarum Heres Sit* 265). Elsewhere in his speculation about creation the Spirit still has a place, but the dominant category of thought is the Stoic Logos (the divine reason immanent in the world and in men).

In the apocalyptic writings references to the human spirit outweigh those to the Spirit of God by nearly 3:1, and references to angelic and demonic spirits outweigh the latter by 6:1. In only a handful of passages is the Spirit spoken of as the agency of inspiration, but this is a role which is thought of as belonging to the past (e.g., *1 Enoch* 91:1; *4 Ezra* 14:22; *Martyrdom of Isaiah* 5:14).

In rabbinic Judaism the Spirit is specifically (almost exclusively) the Spirit of prophecy. But here, even more emphatically, that role belongs to the past. With the rabbis the belief becomes very strong that Haggai, Zechariah and Malachi were the last of the prophets and that thereafter the Spirit had been withdrawn (e.g., *Tosefta Sotah* 13:2; earlier expressions in Ps. 74:9; Zc. 13:2–6; *1 Macc.* 4:46; 9:27; *2 Baruch* 85:1–3). Most striking is the way in which the Spirit to all intents and purposes is subordinated to the Torah (law). The Spirit inspired the Torah—a view of course also carried over into early Christianity (Mk. 12:36; Acts 1:16; 28:25; Heb. 3:7; 9:8; 10:15; 2 Pet. 1:21; cf. *2 Tim.* 3:16). But for the rabbis this means that the law is now in effect the only voice of the Spirit, that the Spirit does not speak apart from the law. 'Where there are no prophets there is obviously no Holy Spirit' (*TDNT* 6, p. 382). Likewise in the rabbinic hope for the age to come Torah fills a far more prominent role than Spirit. This diminished role for the Spirit is reflected too in the Targums where other words denoting divine activity become more prominent (Memra, Shekinah); and in the Babylonian Talmud 'Shekinah' (glory) has more or less completely supplanted talk of the Spirit.

Only in the Dead Sea Scrolls does 'Spirit' come back into prominence in speaking of present experience (especially *1QS* 3. 13–4. 26), reflecting a conviction of living in the last days not dissimilar to the eschatological consciousness of the first Christians.

III. The Spirit in the teaching of John the Baptist and ministry of Jesus

(1) *In early Judaism*, at the time of Jesus, God was tending to be thought of as more and more distant from man, the transcendent holy God, high and lifted up, dwelling in unapproachable glory. Hence the hesitation even to speak the divine name and the increasing talk of intermediary figures, the name, angels, the glory, wisdom, etc., these all being ways of speaking about God's activity in the world without compromising his transcendence. In early days 'the Spirit' had been one of the chief ways of speaking about the presence of God (note, e.g., the implication of *1 Sa.* 16:13f. and *18:12*, and of *Is.* 63:11f., that the Spirit of the Lord is the presence of the Lord). But now that consciousness

of divine presence was lacking too (with the exception of Qumran). The Spirit, understood principally as the Spirit of prophecy, had been active in the past (inspiring prophet and Torah) and would be poured out in the new age. But in the present, talk of the Spirit had become wholly subordinate to Wisdom and Logos and Torah, and in particular with the rabbis, Torah was becoming more and more the exclusive focus of religious life and authority.

In this context John the Baptist created considerable excitement. Not that he himself claimed to have the Spirit, but he was widely recognized to be a prophet (Mt. 11:9f.; Mk. 11:32) and so to be inspired by the Spirit of prophecy (cf. Lk. 1:15, 17). More striking was his message, for he proclaimed that the outpouring of the Spirit was imminent—the one who was coming would baptize in Spirit and fire (Mt. 3:11; Lk. 3:16; Mk. 1:8 and Jn. 1:33 omit the 'and fire'). This vigorous metaphor was probably drawn partly from the 'liquid' metaphors for the Spirit familiar in the OT (*Is.* 32:15; *Ezk.* 39:29; *Joel* 2:28; *Zc.* 12:10), and partly from his own characteristic rite of water baptism—his drenching with or immersion in water was a picture of an overwhelming experience of fiery Spirit. It would be an experience of judgment (note the emphasis of John's message in Mt. 3:7–12 and particularly on fire in 3:10–12), but not necessarily wholly destructive, the fire could purge as well as destroy (*Mal.* 3:2f.; 4:1). The Baptist here was probably thinking in terms of 'the Messianic woes', the period of suffering and tribulation which would introduce the age to come—'the birth pangs of the Messiah' (*Dn.* 7:19–22; 12:1; *Zc.* 14:12–15; *1 Enoch* 62:4; 100:1–3; *Sibylline Oracles* 3. 632–651). The idea of entry into the new age by immersion in a stream of fiery *ruah* which would destroy the impenitent and purify the penitent was not a strange or surprising one for John to formulate in view of the parallels in *Is.* 4:4; 30:27f.; *Dn.* 7:10; *1QS* 4. 21; *1QH* 3. 29ff.; *4 Ezra* 13:10f.

(2) *Jesus* created an even bigger stir, for he claimed that the new age, the kingdom of God, was not merely imminent but was already effective through his ministry (*Mt.* 12:41f.; 13:16f.; *Lk.* 17:20f.). The presupposition of this was clearly that the eschatological Spirit, the power of the End, was already working through him in unique measure, as evidenced by his exorcisms and successful deliverance of Satan's victims (*Mt.* 12:24–32; *Mk.* 3:22–29), and by his proclamation of good news to the poor (*Mt.* 5:3–6 and 11:5, echoing *Is.* 61:1f.). The Evangelists of course were in no doubt that Jesus' whole ministry had been in the power of the Spirit from the beginning (*Mt.* 12:18; *Lk.* 4:14, 18; *Jn.* 3:34; also *Acts* 10:38). For Matthew and Luke this special working of the Spirit in and through Jesus dates from his conception (*Mt.* 1:18; *Lk.* 1:35), with his birth in Luke announced by an outburst of prophetic activity heralding the beginning of the end of the old age (*Lk.* 1:41, 67; 2:25–27, 36–38). But all four Evangelists agree that at Jordan Jesus experienced a special empowering for his ministry, an anointing which was also evidently bound up with his assurance of sonship (*Mt.* 3:16f.; *Mk.* 1:10f.; *Lk.* 3:22; *Jn.* 1:33f.), hence in the subsequent temptations he is enabled to maintain his assurance and to define what sonship involves, sustained by the same power (*Mt.* 4:1, 3f., 6f.; *Mk.* 1:12f.; *Lk.* 4:1, 3f., 9–12, 14).

Jesus' emphasis in his message was significantly

SPIRIT, HOLY SPIRIT

different from that of the Baptist, not just in his proclamation of the kingdom as present, but in the character he ascribed to the present kingdom. He saw his ministry in terms more of blessing than of judgment. In particular, his reply to the Baptist's question in Mt. 11:4f. seems deliberately to highlight the promise of blessing in the passages he there echoes (Is. 29:18–20; 35:3–5; 61:1f.) and to ignore the warning of judgment which they also contained (*cf.* Lk. 4:18–20). On the other hand, when he looked towards the end of his earthly ministry he did evidently speak of his death in terms probably drawn from the Baptist's preaching (Lk. 12:49–50, baptism and fire), probably seeing his own death as a suffering of the Messianic woes predicted by John, as a draining of the cup of God's wrath (Mk. 10:38f.; 14:23f., 36). He also held out the promise of the Spirit to sustain his disciples when they experienced tribulation and trial in their turn (Mk. 13:11; more fully in Jn. 14:15–17, 26; 15:26f.; 16:7–15). Otherwise, however, 'the Holy Spirit' in Lk. 11:13 is almost certainly an alternative to the less explicit 'good things' (Mt. 7:11); and the repetition of the Baptist's promise in Acts 1:5 and 11:16 is probably intended by Luke as a word of the risen Jesus (*cf.* Lk. 24:49; perhaps also Mt. 28:19).

IV. The Spirit in Acts, Paul and John

The main NT writers agree on their understanding of the Spirit of God, albeit with differing emphases.

a. The gift of the Spirit marks the beginning of the Christian life

In Acts the outpouring of the Spirit at Pentecost is the time when the disciples first experienced 'the last days' for themselves (the free dispensing of the eschatological Spirit being the hallmark of the new age), the time when their 'fully Christian' faith began (Acts 11:17). So in Acts 2:38f. the promise of the gospel to the first enquirers centres on the Spirit, and in other evangelistic situations it is the reception of the Spirit which is evidently seen as the crucial factor manifesting the respondents' acceptance by God (8:14–17; 9:17; 10:44f.; 11:15–17; 18:25; 19:2, 6).

Similarly in Paul the gift of the Spirit is the beginning of Christian experience (Gal. 3:2f.), another way of describing the new relation of justification (1 Cor. 6:11; Gal. 3:14; so Tit. 3:7). Alternatively expressed, one cannot belong to Christ unless one has the Spirit of Christ (Rom. 8:9), one cannot be united with Christ except through the Spirit (1 Cor. 6:17), one cannot share Christ's sonship without sharing his Spirit (Rom. 8:14–17; Gal. 4:6f.), one cannot be a member of the body of Christ except by being baptized in the Spirit (1 Cor. 12:13).

Likewise in John the Spirit from above is the power effecting new birth (Jn. 3:3–8; 1 Jn. 3:9), for the Spirit is the life-giver (Jn. 6:63), like a river of living water flowing from the Christ bringing life to him who comes and believes (7:37–39; so 4:10, 14). In 20:22 the language deliberately echoes Gn. 2:7; the Spirit is the breath of the life of the new creation. And in 1 Jn. 3:24 and 4:13 the presence of the Spirit is one of the 'tests of life'.

It is important to realize that for the first Christians the Spirit was thought of in terms of divine power clearly manifest by its effects on the life of the recipient; the impact of the Spirit did not leave

individual or onlooker in much doubt that a significant change had taken place in him by divine agency. Paul refers his readers back to their initial experience of the Spirit again and again. For some it had been an overwhelming experience of God's love (Rom. 5:5); for others of joy (1 Thes. 1:6); for others of illumination (2 Cor. 3:14–17), or of liberation (Rom. 8:2; 2 Cor. 3:17), or of moral transformation (1 Cor. 6:9–11), or of various spiritual gifts (1 Cor. 1:4–7; Gal. 3:5). In Acts the most regularly mentioned manifestation of the Spirit is inspired speech, speaking in tongues, prophecy and praise, and bold utterance of the word of God (Acts 2:4; 4:8, 31; 10:46; 13:9–11; 19:6). This is why possession of the Spirit as such can be singled out as the defining characteristic of the Christian (Rom. 8:9; 1 Jn. 3:24; 4:13), and why the question of Acts 19:2 could expect a straightforward answer (*cf.* Gal. 3:2). The Spirit as such might be invisible, but his presence was readily detectable (Jn. 3:8).

The gift of the Spirit was thus not simply a corollary or deduction drawn from baptism or laying on of hands but a vivid event for the first Christians. It is most probably to the impact of this experience that Paul refers directly in passages like 1 Cor. 6:11; 12:13; 2 Cor. 1:22; Eph. 1:13; also Tit. 3:5f., though many refer them to baptism. And although Rom. 6:3 and Gal. 3:27 ('baptized into Christ') are usually understood as references to the baptismal act, they could as readily be taken as an abbreviation of the fuller allusion to the experience of the Spirit, 'baptized in Spirit into Christ' (1 Cor. 12:13). Certainly according to Acts the first Christians adapted their embryonic ritual in accordance with the Spirit rather than vice versa (Acts 8:12–17; 10:44–48; 11:15–18; 18:25–19:6). And though Jn. 3:5 probably links baptism ('water') and the gift of the Spirit closely together in the birth from above, the two are not to be identified (*cf.* 1:33) and birth by the Spirit is clearly the primary thought (3:6–8).

Acts, Paul and John know of many experiences of the Spirit, but they know of no distinctively second or third experience of the Spirit. So far as Luke is concerned Pentecost was not a second experience of the Spirit for the disciples, but their baptism in Spirit into the new age (Acts 1:5 and above, III), the birth of the church and its mission. Attempts to harmonize Jn. 20:22 with Acts 2 at a straightforwardly historical level may be misguided, since John's purpose may be more theological than historical at this point, that is, to emphasize the *theological* unity of Jesus' death, resurrection and ascension with the gift of the Spirit and mission (Pentecost, Jn. 20:21–23; *cf.* 19:30, literally, 'he bowed his head and handed over the spirit/Spirit'). Similarly in Acts 8, since Luke does not conceive of the coming of the Spirit in a silent or invisible manner, the gift of the Spirit in 8:17 is for him the initial reception of the Spirit (8:16, 'they had only been baptized in the name of the Lord Jesus'). Luke seems to suggest that their earlier faith fell short of commitment to Christ or trust in God (8:12—'they believed Philip'—as a description of conversion would be without parallel in Acts).

b. The Spirit as the power of the new life

According to Paul the gift of the Spirit is also a beginning that looks to final fulfilment (Gal. 3:3; Phil. 1:6), the beginning and first instalment of a life-long process of transformation into the image of Christ which only achieves its end in the resur-

rection of the body (2 Cor. 1:22; 3:18; 4:16-5:5; Eph. 1:13f.; 2 Thes. 2:13; also 1 Pet. 1:2). The Spirit is the 'first fruits' of the harvest of resurrection, whereby God begins to exercise his claim over the whole man (Rom. 8:11, 23; 1 Cor. 3:16; 6:19; 15:45-48; Gal. 5:16-23).

Life for the believer is therefore qualitatively different from what it was prior to faith. His daily living becomes his means of responding to the Spirit's claim, enabled by the Spirit's power (Rom. 8:4-6, 14; Gal. 5:16, 18, 25; 6:8). This was the decisive difference between Christianity and rabbinic Judaism for Paul. The Jew lived by law, the deposit of the Spirit's revelatory work in past generations, an attitude which led inevitably to inflexibility and casuistry, since revelation from the past is not always immediately appropriate to the needs of the present. But the Spirit brought an immediacy of personal relationship with God, which fulfilled the ancient hope of Jeremiah (31:31-34) and which made worship and obedience something much more free, vital and spontaneous (Rom. 2:28f.; 7:6; 8:2-4; 12:2; 2 Cor. 3:3, 6-8, 14-18; Eph. 2:18; Phil. 3:3).

At the same time, because the Spirit is only a *beginning* of final salvation in this life, there can be no final fulfilment of his work in the believer so long as this life lasts. The man of the Spirit is no longer dependent on this world and its standards for his meaning and satisfaction, but he is still a man of human appetites and frailty and part of human society. Consequently to have the Spirit is to experience tension and conflict between the old life and the new, between flesh and Spirit (Rom. 7:14-25; 8:10, 12f.; Gal. 5:16f.; cf. Heb. 10:29). To those who saw the characteristic life of the Spirit in terms of visions, revelations and the like, Paul replied that grace comes to its full expression only in and through weakness (2 Cor. 12:1-10; cf. Rom. 8:26f.).

Luke and John say little of other aspects of the ongoing life of the Spirit (cf. Acts 9:31; 13:52), but focus attention particularly on the life of the Spirit as directed towards mission (Acts 7:51; 8:29, 39; 10:17-19; 11:12; 13:2, 4; 15:28; 16:6f.; 19:21; Jn. 16:8-11; 20:21-23). The Spirit is that power which bears witness to Christ (Jn. 15:26; Acts 1:8; 5:32; 1 Jn. 5:6-8; also Heb. 2:4; 1 Pet. 1:12; Rev. 19:10).

c. *The Spirit of community and of Christ*

A distinguishing feature of the Spirit of the new age is that he is experienced by all and works through all, not just the one or two (e.g., Acts 2:17f.; Rom. 8:9; 1 Cor. 12:7, 11; Heb. 6:4; 1 Jn. 2:20). In Paul's teaching it is only this common participation (*koinōnia*) in the one Spirit that makes a group of diverse individuals one body (1 Cor. 12:13; 2 Cor. 13:14; Eph. 4:3f.; Phil. 2:1). And it is only as each lets the Spirit come to expression in word and deed as a member of the body that the body grows towards the maturity of Christ (1 Cor. 12:12-26; Eph. 4:3-16). This is why Paul both encourages a full range and free expression of the Spirit's gifts (Rom. 12:3-8; 1 Cor. 12:4-11, 27-31; Eph. 5:18f.; 1 Thes. 5:19f.; cf. Eph. 4:30) and insists that the community test every word and deed which claims the authority of the Spirit by the measure of Christ and the love he embodied (1 Cor. 2:12-16; 13; 14:29; 1 Thes. 5:19-22; cf. 1 Jn. 4:1-3).

The same twin emphasis on a worship which is determined by immediate dependence on the Spirit

(rather than in terms of sacred place or sanctuary) and in accordance with the truth of Christ is present in Jn. 21:24 (cf. Rev. 19:10). Similarly John emphasizes that the believer may expect an immediacy of teaching by the Spirit, the Counsellor (Jn. 14:26; 16:12f.; 1 Jn. 2:27); but also that the new revelation will be in continuity with the old, a reproclaiming, reinterpretation of the truth of Christ (Jn. 14:26; 16:13-15; 1 Jn. 2:24).

It is this tie-in with Christ which finally distinguishes the Christian understanding of the Spirit from the earlier, less well-defined conception. The Spirit is now definitively the Spirit of Christ (Acts 16:7; Rom. 8:9; Gal. 4:6; Phil. 1:19; also 1 Pet. 1:11; cf. Jn. 7:38; 19:30; 20:22; Acts 2:33; Heb. 9:14; Rev. 3:1; 5:6), the other Counsellor who has taken over Jesus' role on earth (Jn. 14:16; cf. 1 Jn. 2:1). This means that Jesus is now present to the believer only in and through the Spirit (Jn. 14:16-28; 16:7; Rom. 8:9f.; 1 Cor. 6:17; 15:45; Eph. 3:16f.; cf. Rom. 1:4; 1 Tim. 3:16; 1 Pet. 3:18; Rev. 2-3), and that the mark of the Spirit is both the recognition of Jesus' present status (1 Cor. 12:3; 1 Jn. 5:6-12) and the reproduction of the character of his sonship and resurrection life in the believer (Rom. 8:11, 14-16, 23; 1 Cor. 15:45-49; 2 Cor. 3:18; Gal. 4:6f.; 1 Jn. 3:2).

The roots of subsequent Trinitarian theology are perhaps evident in Paul's recognition that the believer experiences through the Spirit a twofold relation, to God as Father (Rom. 8:15f.; Gal. 4:6) and to Jesus as Lord (1 Cor. 12:3).

SPIRITS IN PRISON. The single explicit reference is 1 Pet. 3:19, with a possible hint at 4:6. The patristic exegesis of 3:19f. regarded the 'disobedient' of Noah's day as typical of sinners who before the incarnation had no chance of hearing the gospel and repenting. The interval between the death and resurrection of Jesus came later to be understood, especially in the Eastern church, as the occasion when Christ, by his *descent into their 'prison', offered these spirits life. Another suggestion for the meaning of this phrase (Reicke,

SPIRITS IN PRISON

Dalton links it with the proclamation of Christ's victory after his passion (with or without the offer of life) to the *angels* who fell (cf. 2 Pet. 2:4f.; Jude 6; note also the possible influence of *I Enoch*). This is supported by the unqualified use of *pneumata* ('spirits'), which is used elsewhere in the Bible only of supernatural beings, never of departed humans.

SPIRITUAL GIFTS.

I. Name and nature

The term 'spiritual gifts' represents the common rendering in Eng. of the Gk. neuter plural noun *charismata*, formed from *charizesthai* (to show favour, give freely), which is related to the noun *charis* (grace); they are the concrete expression of *charis*, grace coming to visible effect in word or deed. The singular form is used of God's gift of salvation through Christ (Rom. 5:15f.; 6:23) and of any special grace or mercy (Rom. 1:11; 1 Cor. 1:7; 7:7; 2 Cor. 1:11). The plural form is used chiefly in a technical sense to denote the extraordinary gifts of the Holy Spirit bestowed on Christians for special service, and in a few instances the singular form is similarly employed in a distributive or semi-collective sense (1 Tim. 4:14; 2 Tim. 1:6; 1 Pet. 4:10).

A general diffusion of the gifts of the Holy Spirit, marking the new dispensation, was foretold by the prophet Joel (2:28), and confirmed by the promises of Christ to his disciples (Mk. 13:11; Lk. 12:11f.; Jn. 14:12; Acts 1:8; cf. Mt. 10:1, 8 and parallels; Mk. 16:17f.). On the day of Pentecost these prophecies and promises were fulfilled (Acts 2:1–21, 33). Later, numerous spiritual gifts are frequently mentioned by Luke (Acts 3:6ff.; 5:12–16; 8:13, 18; 9:33–41; 10:45f., etc.), by Peter (1 Pet. 4:10), and by Paul (Rom. 12:6–8; 1 Cor. 12–14), who also describes them as 'spiritual things' (Gk. *pneumatika*, 1 Cor. 12:1; 14:1), and 'spirits', that is, different manifestations of the Spirit (Gk. *pneumata*, 1 Cor. 14:12). The gifts are distributed by the Holy Spirit according to his sovereign will (1 Cor. 12:11) and an individual believer may receive one or more of them (1 Cor. 12:8f.; 14:5, 13).

II. Purpose and duration

The purpose of these charismatic gifts is primarily the edification of the whole church (1 Cor. 12:4–7; 14:12), and, secondarily, the conviction and conversion of unbelievers (1 Cor. 14:21–25; cf. Rom. 15:18f.). A disputed question is whether they should be regarded as permanently bestowed on the church or only as a temporary endowment.

The once popular view that the *charismata* were given for the founding of the church and ceased during the 4th century when it became strong enough to continue without their assistance is contrary to historical evidence (B. B. Warfield, *Counterfeit Miracles*, 1972, pp. 6–21). Warfield himself held the view that the *charismata* were given for the authentication of the apostles as messengers of God, one of the signs of an apostle being the possession of those gifts and the power to confer them on other believers. The gifts gradually ceased with the death of those on whom the apostles had con-

ferred them (*op. cit.*, pp. 3, 21ff.). W. H. Griffiths Thomas saw the *charismata* as a testimony to Israel of the Messiahship of Jesus, becoming inoperative after the end of Acts when Israel had refused the gospel (*The Holy Spirit of God*, 1972, pp. 48f.; cf. O. P. Robertson, *WTJ* 38, 1975, pp. 43–53). Those holding these views naturally tend to deny the authenticity of subsequent allegedly charismatic manifestations.

On the other hand, strong evidence for the permanence of *charismata* in the church is found in 1 Cor. 13:8–12, where Paul envisages them as continuing to be manifest until the *parousia*. In that case their intermittent appearance in later history may have been affected by the fluctuating faith and spirituality of the church and by the sovereign purpose of the Spirit himself who distributes the gifts 'as he wills' (1 Cor. 12:11).

III. Individual gifts

The lists of *charismata* in the NT (Rom. 12:6–8; 1 Cor. 12:4–11, 28–30; cf. Eph. 4:7–12) are clearly incomplete. Various classifications of the gifts have been attempted, but they fall most simply into two main categories—those which qualify their possessors for the ministry of the word and those which equip them for practical service (cf. 1 Pet. 4:10f.).

a. Gifts of utterance

(i) **Apostle* (Gk. *apostolos*, lit. 'one sent forth', envoy, missionary, 1 Cor. 12:28f.; cf. Eph. 4:11). The title of 'apostle' was originally given to the Twelve (Mt. 10:2; Lk. 6:13; Acts 1:25f.), but was later claimed by Paul (Rom. 1:1; 1 Cor. 9:1f., etc.), and applied in a less restricted sense to Barnabas (Acts 14:4, 14), Andronicus and Junias (or Junia) (Rom. 16:7), and possibly to Apollos (1 Cor. 4:6, 9), Silvanus and Timothy (1 Thes. 1:1; 2:6), and James the Lord's brother (1 Cor. 15:7; Gal. 1:19). The special function of an apostle was, as its meaning suggests, to proclaim the gospel to the unbelieving world (Gal. 2:7–9).

(ii) **Prophecy* (Gk. *prophēteia*, Rom. 12:6; 1 Cor. 12:10, 28f.; cf. Eph. 4:11). The chief function of the NT prophet was to convey divine revelations of temporary significance which proclaimed to the church what it had to know and do in special circumstances. His message was one of edification, exhortation (Gk. *paraklēsis*) and consolation (1 Cor. 14:3; cf. Rom. 12:8), and included occasional authoritative declarations of God's will in particular cases (Acts 13:1f.), and rare predictions of future events (Acts 11:28; 21:10f.). His ministry was primarily directed to the church (1 Cor. 14:4, 22). Some prophets were itinerant (Acts 11:27f.; 21:10), but there were probably several attached to every church (Acts 13:1), as at Corinth, and a few of them are named (Acts 11:28; 13:1; 15:32; 21:9f.).

The ability to 'distinguish between spirits' (Gk. *diakriseis pneumatōn*, 1 Cor. 12:10; cf. 14:29) was complementary to that of prophecy, and enabled the hearers to judge claims to prophetic inspiration (1 Cor. 14:29) by interpreting or evaluating prophetic utterances (1 Cor. 2:12–16), thus recognizing successfully those of divine origin (1 Thes. 5:20f.; 1 Jn. 4:1–6), and distinguishing the genuine prophet from the false.

(iii) **Teaching* (Gk. *didaskalia*, Rom. 12:7; 1 Cor. 12:28f.; cf. Eph. 4:11). In contrast to the prophet, the teacher did not utter fresh revelations, but expounded and applied established Christian doctrine, and his ministry was probably confined

to the local church (Acts 13:1; cf. Eph. 4:11). The 'utterance of knowledge' (Gk. *logos gnōseōs*, 1 Cor. 12:8), an inspired utterance containing or embodying knowledge, is related to teaching; but the 'utterance of wisdom' (Gk. *logos sophias*, 1 Cor. 12:8), expressing spiritual insight, may be related rather to the apostles and evangelists (cf. 1 Cor. 1:17-2:5, esp. 1:24-30), or to the prophets.

(iv) *Kinds of tongues* (Gk. *genē glōssōn*, 1 Cor. 12:10, 28ff.) and the *interpretation of *tongues* (Gk. *hermēneia glōssōn*, 1 Cor. 12:10, 30).

b. Gifts for practical service

(i) *Gifts of power*. 1. Faith (Gk. *pistis*, 1 Cor. 12:9) is not saving faith, but a higher measure of faith by which special, wonderful deeds are accomplished (Mt. 18:19f.; 1 Cor. 13:2; Heb. 11:33-40). 2. Gifts of healings (Gk. plural *charismata iamaton*, 1 Cor. 12:9, 28, 30) are given to perform miracles of restoration to health (Acts 3:6; 5:15f.; 8:7; 19:12, etc.). 3. Working of miracles (Gk. *energēmata dynamōn*, 1 Cor. 12:10, 28f.), lit. 'of powers'. This gift conferred the ability to perform other miracles of varied kinds (Mt. 11:20-23; Acts 9:36f.; 13:11; 20:9-12; Gal. 3:5; Heb. 6:5).

(ii) *Gifts of sympathy*. 1. Helpers (Gk. *antilēmpseis*, lit. 'acts of helping', 1 Cor. 12:28) denotes the aid given to the weak by the strong (see LXX of Pss. 22:19; 89:19; the verb occurs in Acts 20:35), and refers to special gifts to care for the sick and needy. It probably includes 2. the liberal almsgiver (Gk. *ho metadidous*, Rom. 12:8) and 3. the one who performs works of mercy (Gk. *ho eleōn*, Rom. 12:8). 4. The service (Gk. *diakonia*, Rom. 12:7; cf. Acts 6:1) of the deacon is doubtless in view (Phil. 1:1; 1 Tim. 3:1-13).

(iii) *Gifts of administration*. 1. Administrators (Gk. *kybernēseis*, lit. 'acts of guidance, giving directions') enjoyed the gifts and authority to govern and direct the local church. 2. The 'leader' (Rom. 12:8, NEB, Gk. *ho prohistamenos*) apparently shares the same gift (the Gk. word recurs in 1 Thes. 5:12; 1 Tim. 5:17), unless the term is to be translated (with RSV, Rom. 12:8), 'he who gives aid', in which case a gift of sympathy is indicated.

Some gifts, such as those of apostleship, prophecy and teaching, were exercised in regular ministry; other gifts like tongues and healing were manifested occasionally. In some instances the gifts appear to involve a release or enhancement of natural ability, for example, the gifts of teaching, helping or leadership; others are clearly a special endowment: faith, gifts of healing and the power to work miracles.

Carson, *Showing the Spirit*, 1987; J. Ruthven, *On the Cessation of the Charismata*, 1992. w.g.p.

SPITTING. From early times the Oriental gesture of spitting upon or in the face of a person conveyed deep enmity (Nu. 12:14). Christ submitted to this indignity as the suffering Servant (Is. 50:6; Mt. 26:67).

The Essenes punished spitting in their assembly

with a 30-day penance (Jos., *BJ* 2. 147, and the *Qumran Manual of Discipline*, 7. 13).

'Saliva' (Gk. *ptysma*) was used by Christ to cure the blind (Mk. 8:23; Jn. 9:6) and a deaf mute (Mk. 7:33). It was probably placed in the mouth to facilitate speech in the latter case. Its use with clay in Jn. 9:6 was said by Irenaeus to be creative. The healing technique was common to both Jews and Greeks. Suetonius says Vespasian cured a blind man by spittle. The rabbis condemned its use when accompanied with incantations. The usage persisted with the word *ephphatha* in baptismal rites in Rome and Milan. See A. E. J. Rawlinson, *The Gospel according to St Mark*⁵, 1942, p. 102. D.H.T.

SPOKESMAN. The *rhētōr* was a professional teacher of rhetoric, or, as Tertullus (Acts 24:1, av 'orator') a speech-writer who might accept a barrister's brief himself. The extreme refinement of the rhetorical art, which formed the hallmark of higher education, and the difficulties of a hearing before a foreign court, made his services indispensable to the Jews. They were rewarded with a fine speech, notable for its ingratiating exordium. Paul, a master of the art himself, was able to reply in his own person. Elsewhere (1 Cor. 2:4) he disdained professional skill.

BIBLIOGRAPHY. G. A. Kennedy, *The Art of Rhetoric in the Roman World*, 1972. E.A.J.

STACHYS. A friend of Paul (Rom. 16:9) with an uncommon Gk. name (but see instances in Arndt). Lightfoot (*Philippians*, p. 174) finds one Stachys a *medicus* attached to the Imperial household near this time. (*AMPLIAS.) A.F.W.

STARS

I. General use of the term

Stars (Heb. *kōkābīm*; Gk. (LXX, NT *asteres*) are nowhere in the Bible the subject of scientific curiosity. The term is used generally of any luminous non-terrestrial body, other than sun and moon. The great number of the stars is symbolic of God's prodigality (Ex. 32:13; Dt. 1:10; 10:22; 28:62; 1 Ch. 27:23; Ne. 9:23; Heb. 11:12). God promises Abram that his seed shall be numerous as the stars (Gn. 15:5; 22:17; 26:4). Pre-Christian astronomers (e.g. Hipparchus, 150 BC) mapped about 3,000 stars; not until the beginning of telescopic astronomy by Galileo in 1610 was it appreciated how many stars there were. This is, however, implied by the Bible references given above.

They are seen poetically as a majestic manifestation of God's 'otherness' in relation to men. He alone makes, controls, numbers them. Man's arrogant pride sometimes endeavours to usurp this authority (Gn. 1:16; Pss. 8:3; 136:9; 147:4; Am. 5:8; Jb. 9:7; Je. 31:35; Is. 14:13; Ob. 4; Na. 3:16; cf. Gn. 37:9). A constant temptation was to worship stellar deities; but the stars are insignificant compared with Yahweh himself (Dt. 4:19; Je. 7:18; Am. 5:26; Acts 7:43). He is at the zenith of the heavens (Jb. 22:12).

God's final acts of redemption and judgment are foreshadowed by astronomical signs. The prophets and our Lord foretell such signs; and in Revelation they are prominent (Is. 13:10; Ezk. 32:7; Dn. 8:10;

STARS

Joel 2:10; 3:15; Mt. 24:29; Mk. 13:25; Lk. 21:25; Rev. 6:13; 8:10-12; 9:1).

The word 'star' is also used metaphorically without astronomical reference, usually to imply dignity, either innate or usurped (Jb. 38:7; Dn. 12:3; Rev. 1:16, 20; 2:1; 3:1; 12:1; 22:16).

II. Named constellations

A few constellations are mentioned in the Bible by name.

a. *The Bear* (AV 'Arcturus') (Jb. 9:9; 38:32). The prominent circumpolar constellation Ursa Major. Hence, 'with its children'—the seven main stars of the group. NEB renders 'Aldebaran'.

b. *Mazzaroth* (Jb. 38:32). Meaning obscure. Possibly the (twelve) zodiacal signs (so NEB), or the S ones only. (Aram. *Mazzaloth*, 'girdling stars', i.e. the Zodiacal circle.)

c. *Orion* (Jb. 9:9; 38:31; Am. 5:8). 'The Hunter'—an outstanding S constellation, containing the first magnitude stars Betelgeuse (top left, red) and Rigel (bottom right, blue). The range of colour and brightness of these and adjacent stars is an interesting illustration of 1 Cor. 15:41.

d. *Pleiades* (Jb. 9:9; 38:31; Am. 5:8). A compact cluster of seven faint stars in Taurus, constituting a connected system enveloped in nebulous material about 300 light-years from the sun. The expressions 'binding the chains' and 'loosing the cords' may refer to the supposed heralding of spring and autumn respectively by the Pleiades and Orion. An attractive but probably unacceptable alternative is that the 'binding' of the Pleiades by their mutual attraction, or (poetically) by the nebulosity surrounding them, is contrasted with the 'loosing' of Orion, the stars of which are physically unconnected, and associated for us only by our line of sight.

e. *Chambers of the south* (Jb. 9:9). Obscure; possibly the constellations which appear over the horizon as one travels S along the trade route to Arabia. NEB renders 'the circle of the southern stars'.

Particularly interesting is the NEB rendering of Jb. 9:12-15, with its twofold mention of the Dog-star and its description of dawn, 'when the light of the Dog-star is dimmed and the stars of the Navigator's Line go out one by one'—a rendering which makes sense of an otherwise unintelligible passage.

III. The star of Bethlehem

The star heralding the birth of Jesus is mentioned in Mt. 2 only, though seemingly foretold in Nu. 24:17 and Is. 60:3. It has historically been explained in three ways: as a major comet; as a planetary conjunction or sequence of conjunctions; or as a supernova.

A planetary conjunction occurs when two or more major planets appear to stand very close to each other, as Jupiter and Saturn did three times in 7 BC. The location of such an event in the sky would also be seen as significant in an age when astrology and astronomy were largely undifferentiated.

A supernova occurs when a star explodes with great violence and becomes extremely brilliant (perhaps a hundred million times as bright as the sun) for a short time before sinking back, usually into insignificance. Although no such stars have been observed within our own galaxy since 1604,

they would be very spectacular indeed, and could easily dominate the night sky.

In recent years, many astronomers and scientific historians have taken the story of the star of Bethlehem very seriously indeed, and have put much effort into trying to identify it in relation to the astonishingly detailed and accurate Chinese astronomical records for that period. Their conclusions do, of course, vary (see bibliography), but a very attractive treatment by Humphreys suggests that planetary conjunctions were seen by the Magi as a sign that an important event was about to happen. A tailed comet observed by the Chinese for over 70 days in 5 BC could have been the actual 'star' that led them to Bethlehem.

IV. Astronomy

There is no real 'astronomy' in the Bible and the scientific approach of, for example, the Babylonians, who by the 4th century BC could predict many astronomical events, is not found there. But a view of the universe is assumed which is not inconsistent with modern scientific cosmology. It is, of course, easy to find references to a primitive and unacceptable world-view comparable, for example, with the Babylonian creation myths. But to judge the Bible only by these is as uncritical as to judge our modern knowledge of the universe by our use of such terms as 'sunrise' and 'the canopy of heaven'. (* CREATION.)

Our own star system, or galaxy, is estimated to contain at least 100 billion stars: light takes 100,000 years to cross it. Our sun is an average star about two-thirds of the way out from the centre. But billions of other similar galaxies may be observed, up to about ten billion light years away from us. (Estimates as of 1994; a billion is a thousand million.) The contrast between this cosmos and the three-decker universe of Semitic mythology is striking. The Bible is often closer to the former than the latter in spirit. For the universe of the biblical writers is rational, and of awe-inspiring immensity. Ps. 104, for example, speaks of a world which is completely rational, and depends entirely on God's laws; this is typical of the outlook of the biblical writers. In the promise to Abram, God couples the number of stars with the number of grains of sand. Only c. 3000 stars are visible to the naked eye, so on the face of it this is a feeble comparison. But the total number of stars in the galaxy is comparable with the number of grains of sand in all the world! The Bible is full of such implications of vastness quite beyond the knowledge of its day.

We assert, then, that the Bible consistently assumes a universe which is fully rational, and vast in size, in contrast to the typical contemporary world-view, in which the universe was not rational, and no larger than could actually be proved by the unaided senses. The books of I. Velikovsky (*Worlds in Collision*, 1950, etc.), though highly controversial, are written from a Jewish standpoint and are full of interest to the OT student who is also interested in astronomy.

STEPHANAS. A Corinthian, whose family, one of the few baptized by Paul himself (1 Cor. 1:16), was known for its exertions in voluntary Christian service; Paul, perhaps thinking of the Corinthian factions, speaks recognition of such leadership (1 Cor. 16:15ff.). The phrase 'the first converts of Achaia' (cf. Rom. 16:5) has been taken to indicate an Athenian origin (Acts 17:34), but it may rather indicate the first Christian *family* in the province, and thus the earnest of the church there (cf. Ramsay, *BRD*, pp. 385ff.). The link sometimes made with the apostolic ordination of their 'first-fruits' in *1 Clement* 42 is purely verbal.

Stephanas, with *Fortunatus and *Achaicus, delighted Paul with a visit at Ephesus (1 Cor. 16:17): no doubt they carried the Corinthians' letter and returned with 1 Cor. No connection with the 'household of *Chloe' is likely.

The name is a pet-form (from *Stephanēphoros*?). Two late mss of Acts 16:27 identify him with the Philippian jailor. A.F.W.

STEPHEN (Gk. *stephanos*, 'crown'). Stephen was one of the seven men chosen by the disciples soon after the resurrection to look after the distribution of assistance to the widows of the church, so that the apostles themselves should be free for their spiritual tasks (Acts 6:1-6). All seven had Gk. names, which suggests that they were Hellenistic Jews (one of them indeed, Nicolas of Antioch, was a proselyte). Stephen is recorded as standing out from the others in faith, grace, spiritual power, and wisdom (6:5, 8, 10). He had time to do more than the special work assigned to him, for he was among those foremost in working miracles and preaching the gospel.

He soon fell foul of the Hellenistic synagogue, which brought him before the Sanhedrin on charges of blasphemy (6:9-14). Stephen, with angelic face, replied to the charges with a survey of the history of Israel and an attack upon the Jews for continuing in the tradition of their fathers and killing the Messiah (6:15-7:53). This brought upon him the fury of the council, and when he claimed to see Jesus standing at the right hand of God (probably as his advocate or witness in his defence) he was seized and stoned to death (7:54-60). He met his end courageously, as did his Master, on accusations by false witnesses of seeking to overthrow the Temple and law (cf. Mt. 26:59-61). He prayed as Jesus had done (Lk. 23:34) for his persecutors to be forgiven and committed his soul into Christ's keeping (cf. Lk. 23:46). Whether it was a legal execution or not, it seems that Pilate, who normally lived in Caesarea, turned a blind eye to it all.

There were striking consequences from Stephen's death. The persecution which followed (Acts 8:1) led to a more widespread preaching of the gospel (8:4; 11:19). Stephen's death was also undoubtedly a factor in bringing Saul of Tarsus to Christ (7:58; 8:1, 3; 22:20). But above all, Stephen's speech was the beginning of a theological revolution in the early church, as the principles of the universal mission were clearly stated for the first time. Luke records it at great length, and this surely indicates the importance he attached to it.

Stephen's theme in reviewing the history of Israel was that God's presence cannot be localized, and that the people have always rebelled against

the will of God. He showed first of all that Abraham lived a pilgrim life, not inheriting the land promised to him (7:2-8). Then he demonstrated how Joseph likewise left Canaan, sold by his brothers through jealousy (vv. 9-16). A long section deals with Moses, against whom Stephen was alleged to have spoken (vv. 17-43). Moses also was shown to have been rejected by his brethren when he came to deliver them. Yet God vindicated him by sending him back to Egypt to bring his people out. Again they turned aside to idolatry in the wilderness and refused to obey Moses. This idolatry continued until the Babylonian Exile owing to their desire to have visible gods.

The next section (vv. 44-50) deals with the tabernacle and the Temple. The tabernacle was mobile and went with God's people on their pilgrimage. The Temple was static and too easily gave rise to a localized view of God. But the Most High does not dwell in manufactured houses (cf. Mk. 14:58). The Jewish religion had become static and failed to move on towards the new Temple, the body of Christ.

The references to the tabernacle and the whole idea of the real but invisible Christian cultus is developed in the Epistle to the Hebrews, which has been seen to have close affinities with this speech. It is certain that Paul, too, worked out the principles stated by Christ and developed here by Stephen. When these principles were understood by the church there ensued a break with the old Temple worship (Acts 2:46). The Christians saw in practice that they were not just a sect of the old Israel. They were the new people of God, with the true temple, altar and sacrifice, living the truly pilgrim life, and rejected, as the prophets and as Jesus had been, by the Jews.

R.E.N.

STEPS (Heb. *ma'lot*, from *ma'la*, 'a going up', 'ascent', cf. Lat. *gradus*; Gk. *bathmos*, 'a step' (so LXX), 'ascent'). That the shadow should go back ten steps was the sign by which the Lord confirmed to Hezekiah his recovery from mortal illness (2 Ki. 20:8-11; cf. Is. 38:8). Josephus (*Ant.* 10. 29) suggested that the stairs of the king's palace may have constituted a type of sun-dial, but for a detailed discussion of the whole incident and possible interpretations, see C. F. Keil, *The Books of the Kings*, 1854, pp. 463-465 and S. Iwry, 'The Qumrān Isaiah and the End of the Dial of Ahaz', *BASOR* 147, 1957.

The word is found also in the titles of Pss. 120-134, which in AV are called Songs of Degrees (RSV 'ascents') and said to have been sung by processions of pilgrims while ascending Mt Zion during the great Temple festivals (*PSALMS).

The term occurs once in the NT (1 Tim. 3:13), where the Gk. word denotes 'good standing'. According to Arndt, a technical term of the mysteries may be involved here, implying a 'step' in the soul's journey heavenward. J.D.D.

STEWARD. In the OT a steward is a man who is 'over a house' (Gn. 43:19; 44:4; Is. 22:15, etc.). In the NT there are two words translated steward:

STEWARD

epitropos (Mt. 20:8; Gal. 4:2), *i.e.* one to whose care or honour one has been entrusted, a curator, a guardian; and *oikonomos* (Lk. 16:2-3; 1 Cor. 4:1-2; Tit. 1:7; 1 Pet. 4:10), *i.e.* a manager, a superintendent—from *oikos* ('house') and *nemō* ('to dispense' or 'to manage'). The word is used to describe the function of delegated responsibility, as in the parables of the labourers, and the unjust steward.

More profoundly, it is used of the Christian's responsibility, delegated to him under 'Christ's kingly government of his own house'. All things are Christ's, and Christians are his executors or stewards. Christians are admitted to the responsibilities of Christ's overruling of his world; so that stewardship (*oikonomia*) can be referred to similarly as a dispensation (1 Cor. 9:17; Eph. 3:2; Col. 1:25).
C.H.D.

STOCKS (Heb. *mahpeket*, 'pillory'; *sad*, 'fetters'; *šinōg*, 'a collar'). Referred to in later OT passages only, this instrument of punishment comprised two large pieces of wood into which were inserted the feet, and sometimes also the hands and neck, of the prisoner. The prophets Jeremiah (Je. 20:2-3; cf. 29:26) and Hanani (2 Ch. 16:10) were subjected to it, and Job uses the idea figuratively in mourning his affliction (Jb. 13:27; 33:11).

In the NT Gk. *xylon*, 'wood', is used in describing the Philippian incident when Paul and Silas were put in the stocks (Acts 16:24). (*PRISON.)
J.D.D.

STOICS. The Stoic school of philosophy derived its name from the Stoa Poikile, the portico in Athens where Zeno of Citium (335-263 BC) first taught its characteristic doctrines. His teaching was systematized and extended by Chrysippus (c. 280-207 BC), the 'second founder' of Stoicism. By the time when Paul encountered Stoics at Athens (Acts 17:18) their general attitude had been modified by elements taken from Platonism; of this more syncretist Stoicism Posidonius was a leading exponent.

Grappling with that same uncertainty of life which led the Epicureans to seek happiness in serene detachment, the Stoics sought salvation in aligning the will with the inherent Reason of the universe, *Logos. Man is happy when he does not want things to be any other than they are; let him, then, seek clear knowledge of the cycle of nature and cultivate a willing acceptance of it. Though a man must play his part willy-nilly in the outworking of universal Reason, for his own peace of mind it is essential that he do so consciously and willingly; he must seek out the things which befit his place in the natural order (*ta kathēkonta*) and pursue them not with desire, which might be disappointed, but with disinterested virtue. His fellow men he must serve not from love, which would make him suffer if service failed to help them, but from a pure recognition that the life of service is the 'natural' life for man. The universal Reason is God; traditional mythologies were given a symbolic interpretation in this sense.

All this seems very formal and austere, but individual Stoics, including the Roman emperor Marcus Aurelius, set a high standard of personal conduct. The form could, moreover, in part be adapted to receive a Christian content; much of

Paul's language in the apologetic discourse on Mars' Hill (*AREOPAGUS) is drawn from that of Stoicism.

BIBLIOGRAPHY. H. von Arnim, *Stoicorum Veterum Fragmenta*, 1903-5; J. M. Rist, *Stoic Philosophy*, 1969; F. H. Sandbach, *The Stoics*, 1975.

M.H.C.

STOMACH, BELLY. Principally, Heb. *beten* or *mē'im*; Gk. *kolia*. Indistinguishable from *bowels or *womb in OT and NT, these words being translated by 'stomach' or 'belly' generally when referring to eating, or wounding (Jdg. 3:21; Ezk. 3:3; Jon. 1:17; Lk. 15:16 [rsvvmg.]; often translated 'body' in rsv [e.g. Nu. 5:21]).

Once in the NT the word *stomachos* is used (1 Tim. 5:23) of the stomach. In early Gk. usage it referred to an opening, or the *mouth (*stoma*), later the opening of the stomach, so having a more precise physiological reference than in the OT.
B.O.B.

STOMACHER. The somewhat misleading AV translation of Heb. *p'liḡil*, a word of uncertain meaning which occurs only in Is. 3:24 as an antithesis for 'a girding of sackcloth'. rsv 'a rich robe' seems to fit this requirement.
J.D.D.

STONE. The chief biblical words are Heb. *'eben* and Gk. *lithos* and *akrogōniaios* ('cornerstone').

The common word 'stone' is used in the Bible with a variety of reference. Small stones made a convenient weapon (1 Sa. 17:40), were a means of attack and even execution (Nu. 35:17; cf. Jn. 8:59; Acts 7:58f.), formed a handy measure of weight (Lv. 19:36, where *'eben* is so translated), and were used, when sharpened, as knives (Ex. 4:25). Larger stones were used to cover wells (Gn. 29:2), to close the mouth of caves (Jos. 10:18) and of tombs (Mt. 27:60), to serve as a landmark (2 Sa. 20:8), as a memorial (Jos. 4:20ff.), and as a pillar or altar which had specifically religious associations (Gn. 28:18; Dt. 27:5). Stones were also, of course, a primary building material.

Figurative as well as literal uses of the term 'stone' occur in the Bible. Notably, the 'stone' image is used in the NT to describe the person of Jesus. In the Synoptic Gospels, for example, the parable of the vineyard (Mk. 12:1-11 and parallels) is followed by the Lord's citation of Ps. 118:22, which is obviously applied to himself ('The very stone which the builders rejected has become the head of the corner'). This provides us with an important clue to the self-understanding of Jesus. The meaning of 'head stone' (LXX, *eis kephalēn gōnias*) in this psalm is 'top stone' or 'coping stone', that is, the carefully chosen and perfectly made stone which completes a building (cf. Zc. 4:7). Probably the immediate reference here was to Israel herself, rejected by men but chosen by God. The real significance of the passage in its NT setting is made abundantly clear from Peter's quotation of Ps. 118:22, with reference to Jesus, during his speech before the Jewish court in Jerusalem (Acts 4:11). God has vindicated him whom the Jews cast out, and exalted him to the headship of the new Israel. In the *Epistle of Barnabas* (6:4) these words are quoted directly from the LXX (Ps. 118), and also applied to Christ.

The only OT occurrences of the phrase 'corner stone' are Jb. 38:6 (LXX *lithos gōniaios*) and Is. 28:16 (LXX *akrogōniaios*); and these are both figurative (cf. Ps. 144:12). But unlike 'head of the corner', the stone referred to here would seem to be part of the foundation of a building, and to bear its weight. This is evidently the meaning of *akrogōniaios* in 1 Pet. 2:6, where the writer quotes Is. 28:16 itself. Christ is now the corner-stone of the church, the location of which is the heavenly Zion (cf. Eph. 2:20, where the same Gk. word is used, and 1 Cor. 3:11). In v. 7 of the same passage, however, the writer goes on to quote the psalmic reference we have noted (118:22, echoed in v. 4), and he thus gives us the complementary truth that Christ is also the *head* of the church, exalted by God the Father to that position of vindication. In this exaltation, moreover, believers will share. The writer's use of *lithos* in v. 8 with reference to stumbling suggests a confusion of images; although it is possible, as J. Y. Campbell points out (*TWBR*, p. 53), that a stone at the corner of the foundation of a building might also form a stumbling-stone (cf. also Rom. 9:32f.). Christ is described in the same passage (v. 4) as a 'living stone' (*lithon zōnta*), alive and giving life to those who as believers are incorporated into him, and built up as *lithoi zōntes* into the spiritual building of his church for purposes of worship (v. 5) and witness (v. 9).

STONING (Heb. *sāqal*, 'to stone', 'to be stoned'; Heb. *rāqam*, 'to collect or cast stones'; Gk. *katalithazō*, 'to stone (thoroughly)'; Gk. *lithazō*, 'to stone'; Gk. *lithoboleō*, 'to cast stones'). Stoning was the usual Heb. form of execution (Ex. 19:13; Lv. 20:27; Lk. 20:6; Acts 7:58, *etc.*). The prosecution witnesses (the law required at least two such) had to cast the first stone (Dt. 13:9f.; cf. Jn. 8:7), and afterwards if the victim still lived the spectators carried out the sentence, and the body was suspended until sunset (Dt. 21:23).

For an excellent summary of offences for which stoning was prescribed, and further details of the execution, see W. Corswant, *A Dictionary of Life in Bible Times*, E.T. 1960, p. 261. J.D.D.

STORE-CITIES. Towns (Heb. *'arē-misk'nōt*) where provisions, often revenue paid in kind (grain, oil, wine, *etc.*) and weapons were laid up in magazines or storehouses by the central government, for maintaining frontier and defence forces, and as reserve supplies, *etc.* The Hebrews had to labour on Pharaoh's store-cities Pithom and Ra'amses on the eve of the Exodus (Ex. 1:11). The Delta-residence Ra'amses (Egypt. *Pi-Ramessē*) was frequently boasted of in Egypt. texts as being in a region of plenty, with stores and treasuries abundantly filled (*ANET*, 1955, pp. 470–471; *JEA* 5, 1918, pp. 186f., 192, 194f.). Solomon had store-cities and depots in Israel and Hamath (1 Ki. 9:19; 2 Ch. 8:4–6). When summoned against Baasha of Israel by Asa of Judah, Ben-hadad I of Aram-Damascus smote stores in ('of') cities of Naphtali

(2 Ch. 16:4). Jehoshaphat built store-cities in Judah (2 Ch. 17:12), and Hezekiah was proud of his well-filled storage-magazines for revenue in grain, wine and oil (2 Ch. 32:28). And likewise some of his contemporaries: Asitawanda king of Cilicia (c. 725 BC) 'filled the storehouses (or, depots) of (the city) Pa'ar' (*ANET*, p. 499; cf. Dupont-Sommer, *Oriens* 1, 1948, pp. 196–197). Remains, possibly those of government storehouses, have been excavated in Palestine. For remains at Beth-shemesh and Lachish, cf. Wright, *Biblical Archaeology*, 1957, p. 130. For Hazor and Samaria, cf. K. M. Kenyon, *Archaeology in the Holy Land*, 1960, pp. 271–272, 279, and Y. Yadin, *Hazor*, BM Exhibition Guide, 1958, p. 17 and fig. 30. K.A.K.

STORM. The more violent activities of nature are usually associated with rain- and hail-storms. Generally the incidence of violent rain-storms and cloud-bursts occurs at the commencement of the rainy season, or at the beginning of each renewed spell of rain during the cooler months. At Haifa, for example, on 9 December 1921, 28 cm fell in 24 hours. Thunder-storms are most frequent in Nov. and Dec. and occur most commonly in the Jordan Valley. Hail not infrequently accompanies thunder between Dec. and March. Scripture vividly describes its disastrous effects upon the growing crops (Ps. 78:47; Is. 28:2; Ezk. 13:13–14; Hg. 2:17). The wind-storms that sweep down upon the Sea of Galilee are vividly recorded in the events of Mk. 4:37f., and perhaps in the parable of the badly founded house sited in some dried-up water-bed, when 'the rain fell, and the floods came, and the winds blew and beat against that house' (Mt. 7:27).

God spoke in the thunderstorm (Ex. 9:28; 19:16, 19; 1 Sa. 7:10; 12:18; Jb. 37:1–5; Pss. 18:13; 29:3–9; 104:7), as he judged in the earthquake (Je. 4:24–26; Na. 1:5). The Hebrews in conceiving how 'thy glory passed through the four gates of fire and earthquake and wind and ice' (2 Esdras 3:19) had to learn, however, that Yahweh was more revelatory to them in the Exodus than in storm and earthquake. This certainly was the experience of Elijah, who had the consciousness of 'the still small voice' as more expressive of the divine presence and power than earthquake, wind and fire (1 Ki. 19:11–13). (*EARTHQUAKE, *EUROCLYDON, *RAIN, *THUNDER, *WHIRLWIND, *WIND.)

J.M.H.

STRANGLER (THINGS). Gk. *pnikta* (Acts 15:20, 29; 21:25) refers to animals killed without shedding their blood, to eat which was repugnant to Jews (cf. Lv. 17:13; Dt. 12:16, 23). For general principles involved, see *IDOLS, MEATS OFFERED TO. J.D.D.

STRIPES. The rendering of several Heb. and Gk. words, only one of which (Gk. *plēgē*) occurs more than twice. The Deuteronomic law limited to forty the number of blows which a judge could prescribe (Dt. 25:2–3). The punishment was generally carried out by a three-thonged scourge, and the executioner himself was punished if the stipulated number were exceeded. Thus, what Paul describes in his 'foolish boasting' (2 Cor. 11:24) was in fact the maximum penalty, for the forty strokes were in

STRIPES

practice reduced by one on the principle of 'setting a hedge around the law'.

Stripes can be a symbol of salutary correction (Ps. 89:32; cf. Pr. 13:24) and a reminder of the Lord's sacrifice (Is. 53:5; 1 Pet. 2:24). (*SCOURING.) J.D.D.

STUMBLING-BLOCK. In the OT the Heb. root *kāšal*, 'to stagger', 'to stumble', forms the basis of *mikšōl*, *makšēlā*, 'that against which anyone stumbles' (Lv. 19:14). It is used figuratively of idols (Is. 57:14; Ezk. 7:19, 14:3-4; Zp. 1:3).

In the NT two Gk. words are used. *proskomma* (*tou lithou*), 'stone of stumbling' (Rom. 9:32-33; 14:13; 1 Cor. 8:9; 1 Pet. 2:8), is used of any form of barrier. *skandalon* (Rom. 11:9; 1 Cor. 1:23; Rev. 2:14), originally the trigger stick of a trap, is used in LXX to translate Heb. *mikšōl*, but also *môqēš*, 'a snare', 'a trap' (cf. Pss. 69:22; 140:5). Cf. also Mt. 16:23, 'you are a hindrance (*skandalon*); AV 'offence' to me'. See W. Barclay, *New Testament Wordbook*, 1955 (s.v. *skandalon*, *skandalizein*).

J.B.TT.

SUBURB. In AV and RV most commonly the equivalent of Heb. *miḡrās*, more accurately rendered 'pasture lands' in RVmg. and 'common land' in RSV in Lv. 25:34. It is used specially, but not exclusively, with regard to the uncultivated land, suitable for the pasturing of cattle, surrounding the levitical cities; its alienation from levitical ownership was forbidden (Lv. 25:34, etc.).

In 2 Ki. 23:11, AV, the word 'suburbs' is the rendering of Heb. *parwārim* (RV and RSV 'precincts'), a word of doubtful origin and meaning, but possibly derived, like 'Parbar' in I Ch. 26:18, from Old Persian *frabada*, 'forecourt'. F.F.B.

SUCCOTH. I. First site on the journey of the Israelites during the Exodus, possibly equivalent to the Old Egyp. *tkw* (Pithom), which was in the E part of Wadi Tumilat (Ex. 12:37; 13:20; Nu. 33:5-6). This was the normal way in or out of Egypt for displaced persons. We find it mentioned in the Story of Sinuhe, in Papyrus Anastasi V and VI. (*ENCAMPMENT BY THE SEA, *PITHOM.)

2. City of the tribe of Gad (Jos. 13:27) in the Jordan Valley not far from a water passage (Jdg. 8:5, 16) and from Zarethan (1 Ki. 7:46). It is perhaps the modern Tell Akhsās or Tell Dêr Allah.

The name Succoth is explained in Gn. 33:17, where it is connected with 'booths', since Jacob established himself there. C.D.W.

SUCCOTH-BENOTH. The name of an object made by Babylonians exiled in Samaria c. 722 bc and named among the pagan deities worshipped there (2 Ki. 17:30). The *MT* *sukkōt-b'nōt* implies an interpretation as 'booths of daughters' (cf. Gk. *sokchōthbenitheî*). This has been explained either as places of prostitution or as shrines in which were carried images of female deities, e.g. Banitu (an epithet of the Babylonian goddess Ishtar).

The parallelism with Nergal of Cutha seems to require the name of a deity here also. Following Rawlinson, Zêr-bānit (Zarpanitum) the consort of Marduk (*MERODACH) has been proposed, but this is very doubtful. D.J.W.

SUFFERING. In the Bible suffering is regarded as an intrusion into this created world. Creation was made good (Gn. 1:31). When sin entered, suffering also entered in the form of conflict, pain, corruption, drudgery and death (Gn. 3:15-19). In the new heaven and earth suffering has been finally abolished (Rev. 21:4; Is. 65:17ff.). The work of Christ is to deliver man from suffering, corruption and death (Rom. 8:21; 1 Cor. 15:26), as well as from sin (Mt. 1:21). Though Satan is regarded as having power to make men suffer (2 Cor. 12:7; Jb. 1:12; 2:6), they suffer only in the hand of God, and it is God who controls and sends suffering (Am. 3:6; Is. 45:7; Mt. 26:39; Acts 2:23).

The burden of suffering was always keenly felt by God's people (Gn. 47:9; 2 Sa. 14:14). Its presence often became a problem, since it was regarded as sent by God (Ps. 39:9), and thus had to be related to the fact of God's love and righteousness (Ps. 73). Therefore, in the midst of suffering, man was forced to decide how far he could live by faith, and resist the demand for a rational explanation. The problem was not so acute at times when the sense of solidarity within the community was strong, and the individual, as a responsible member of his tribe or family in all circumstances, was able to accept the judgment and suffering that fell on his people as his own responsibility (Jos. 7). But the problem became more urgent as the responsible relation of each individual to God was emphasized (Je. 31:29; Ezk. 18:2-4).

True faith, wrestling with the problem and burden of suffering, does not require an immediate and complete justification of God. It can wait in the darkness (Hab. 2:2-4).

It finds in the reality of God's presence and goodness a more decisive factor in the present situation than even the bitterness of pain (Ps. 73:21-23), and is willing to set against the distorted shape of things present the perfect new order of things in the kingdom of God, of which it has already received a foretaste (Ps. 73:24-26; Rom. 8:18; 2 Cor. 4:16-18). But the man of faith is not insensitive to the baffling nature of the problem. The book of Job shows him experiencing in an extreme degree the bitterness and perplexity of unexplained suffering, refusing to acquiesce in rational theories that make God's ways subject to simple human calculation, temporarily losing his balance, but able ultimately to recover, and finally, through an overwhelming vision of God himself, reaching a certainty in which he can triumph over all his difficulties even though he is not yet, and knows he never will be, able to provide a rational explanation for all circumstances in this life.

Though it is thus asserted that such solutions are inadequate when applied generally, yet sometimes definite understandable reasons are given for instances of suffering (cf. Ps. 37), and several lines of thought on the problem appear and converge. Suffering can be the harvest of sin (Ho. 8:7; Lk. 13:1-5; Gal. 6:8), both for the individual (Ps. 1) and for the community and nation (Am. 1-2). It can be regarded at times as a punishment administered by God, or a chastisement designed to correct the ways of his people (Pr. 3:12; Jdg. 2:22-3:6), or a means whereby men are tested or purified (Ps. 66:10; Jas. 1:3, 12; 1 Pet. 1:7; Rom. 5:3) or brought closer to God in a new relationship of dependence and fellowship (Ps. 119:67; Rom. 8:35-37). Thus suffering can be for good (Rom.

8:28f.), or it can have the opposite effect (Mt. 13:21).

In bearing their witness to the sufferings of the coming Messiah (1 Pet. 1:10–12) the OT writers are taught how God can give a new meaning to suffering. Their own experience of serving God in his redemptive purposes in Israel taught them that the love of God must involve itself in sharing the affliction and shame of, and in bearing reproach from, those he was seeking to redeem (Ho. 1–3; Je. 9:1–2; 20:7–10; Is. 63:9). Therefore his true Servant, who will perfectly fulfil his redeeming will, will be a *suffering Servant*. Such suffering will not simply arise as a result of faithfulness to God in pursuing his vocation, but will indeed constitute the very vocation he must fulfil (Is. 53). A new vicarious meaning and purpose is now seen in such unique suffering in which One can suffer in the place of, and as the inclusive representative of, all.

Suffering can have a new meaning for those who are members of the body of Christ. They can share in the sufferings of Christ (2 Cor. 1:5ff.; Mk. 10:39; Rom. 8:17), and regard themselves as pledged to a career or vocation of suffering (Phil. 1:29; 1 Pet. 4:1–2), since the members of the body must be conformed to the Head in this respect (Phil. 3:10; Rom. 8:29) as well as in respect of his glory. Whatever form the suffering of a Christian takes it can be regarded as a cross which may be taken up in following Christ in the way of his cross (Mt. 16:24; Rom. 8:28–29). Such suffering is indeed the inevitable way that leads to resurrection and glory (Rom. 8:18; Heb. 12:1–2; Mt. 5:10; 2 Cor. 4:17f.). It is by tribulation that men enter the kingdom of God (Acts 14:22; Jn. 16:21). The coming of the new age is preceded by birth pangs on earth, in which the church has its decisive share (Mt. 24:21–22; Rev. 12:1–2, 13–17; cf., e.g., Dn. 12:1; Mi. 4:9–10; 5:2–4). Since the sufferings of Christ are sufficient in themselves to set all men free (Is. 53:4–6; Heb. 10:14), it is entirely by grace, and not in any way by necessity, that the sufferings in which his people participate with him can be spoken of as filling up what is lacking in his affliction (Col. 1:24), and as giving fellowship in his vicarious and redemptive suffering.

SUKKIIM (Egyp. *šktm*, *šk*). Libyan auxiliaries in the Egyp. army when *Shishak invaded Palestine (2 Ch. 12:3). They were employed as scouts from 13th to 12th centuries bc. See references in R. A. Caminos, *Late-Egyptian Miscellanies*, 1954, pp. 176–177, 180. K.A.K.

SUMER is the land of the **SUMERIANS**, Sumerian its language. Sumer derives from the Akkadian term for the land, *šumeru*. Sumerians called their land, KI-EN-GI(R) and their language EME-GI(R). Downstream from the later city of Baghdad, Sumer's chief cities (e.g. Eridu, Kish, Lagash, Nippur. Ur and Uruk) lay near the Euphrates

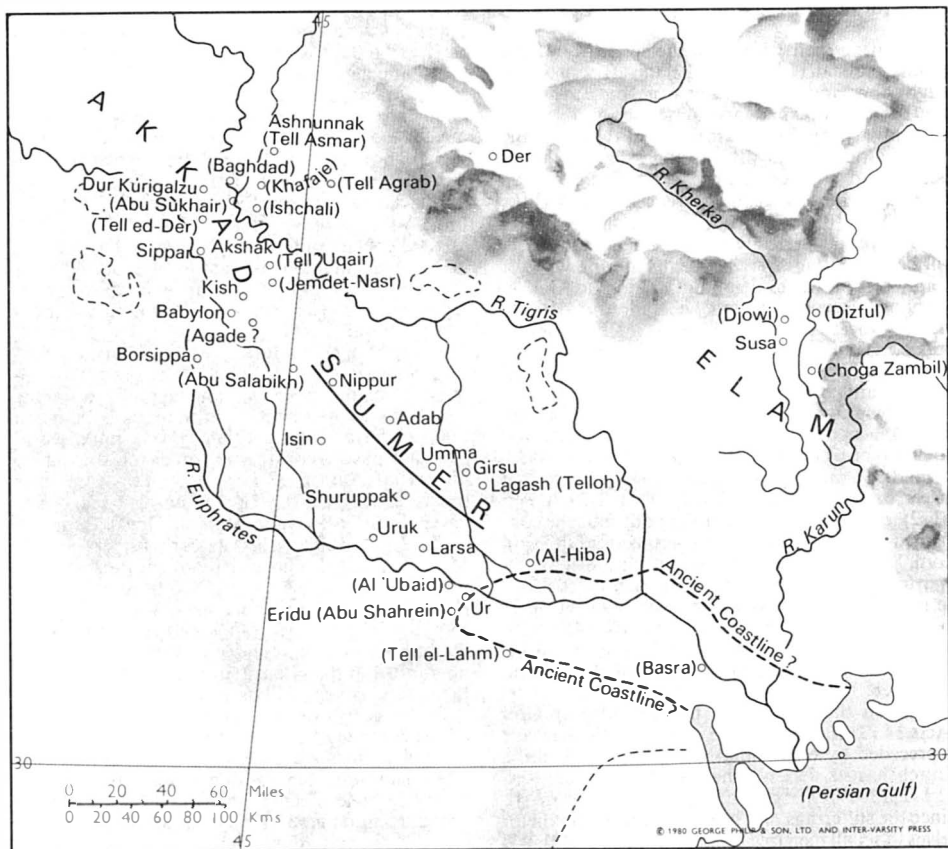

River. Sumerian civilization flourished in the 3rd millennium bc. Archaic texts of Uruk from as early as 3100 bc attest to the presence of the Sumerian language. Because the names of cities in this region seem unrelated to the Sumerian language, many have argued that Sumerians emigrated from outside the country. However, no one has identified Sumerian language and culture elsewhere. The Sumerian name for Babylonians and other peoples as 'black headed', and Sumerian references to the Indus Valley may suggest Indian origin. The waters of the Persian Gulf moved N throughout the millennia, reaching their present level about 4000 bc (Roux 1982). Earlier Sumerian habitation in this region may have disappeared under Gulf waters.

The Sumerian language and its literature became the most enduring legacy of this civilization. Sumerian is not a Semitic language. It has no relationship to any known language. There is some discussion as to whether the Sumerians designed the cuneiform script that they used or imported it. Scholars have reconstructed much of the earlier history of Sumer, c. 3000–2500 bc, from later myths and legends. Contemporary seals, uncovered in the excavations of the Royal Tombs of Ur (c. 2600–2500 bc), feature early leaders such as Meskalamdug. The historicity of the most famous figure, Gilgamesh, is not certain. If he did live, he may exemplify the manner in which early figures took on semi-divine status as the mythological literature developed. This common tendency has no parallel in the biblical literature with its monotheism and consequent exclusion of other deities.

Detailed histories of Sumer focus on the kings of a succession of dominant city states through the 3rd millennium bc, relying on compositions that often date from later periods. The political history of Sumer divides between the earlier period of the 3rd millennium bc and the later period in the final century of that millennium. The earlier period ended in the 23rd century with the conquest by the Semitic king, Sargon of Akkad. The city of Ur dominated the second period and caused a revival of Sumerian culture. The kings, Ur-Nammu and Shulgi, dominated this third dynasty of Ur. The city fell c. 2000 bc. The Old Babylonian period that flourished in the following centuries preserved Sumerian as a language of scribes and special literary compositions. This began a practice, continued well into the 1st millennium bc, of writing literary and religious texts of special significance in Sumerian. Sumerian became the religious language of the Assyro-Babylonian worlds and beyond.

Some have identified Shinar, first mentioned in Gn. 10:10, with Sumer. However, Zadok (1984) has related Shinar to a name for Babylonia and its foreign rulers used by the Hittites and others in the Late Bronze Age (1550–1200 bc), i.e. Shanḫar. There are two reasons why Sumer and Sumerians do not appear in the Bible. First, the Sumerians flourished earlier than most of the events of the Bible. Second, they lived in a region at the geographic periphery of the Bible. The exception to this is the departure of Abram from Ur of the Chaldees, a site often associated with the Ur of Sumer. If Abram lived in the 2nd millennium bc then Abram's association would date from the period subsequent to Ur's conquest by non-Sumerians. Sumer had an impact on the Bible in two important ways: the development of literary forms and the world of Gn. 1–11.

Walton (1989) and Hallo (1992) compare

Sumer, the S part of Babylonia.

Sumerian literature with that of the Bible. Most types have parallels in other Near Eastern literature. There was no direct borrowing between the Bible and Sumerian. However, an identification of the types of literature serves as an important tool in the interpretation of the biblical texts. In the pre-Sargon era Hallo identifies incantations, hymns, epics, and wisdom literature. Of these, incantations have no parallel in the Bible. Incantations ascribe a magical power to the words recited to manipulate the spirit world. The Bible rejects contacts with the spirit world (Lv. 19:31; 20:6, 27; Dt. 18:10-12; 1 Sam. 28). It emphasizes the power of God's Word that the believer should hear and obey (Dt. 6-8; Is. 55).

Hymns praise deities and temples. This form occurs in the Psalms where many hymns praise the God of Israel (Pss. 33; 93; 96-99) and express love for the Temple of Jerusalem (Pss. 46; 76; 87). Epics and mythologies recite the achievements of divine and human heroes (cf. the Judges of the Bible). There are no deities involved other than the God of Israel but hymns to God's anointed as king appear in the Psalms (2, 110). Elegies to fallen kings also contain similarities to the Sumerian descriptions of the achievements of the kings (2 Sa. 1:19-27). Congregational laments over the destruction of a city occur in Sumerian. The best known one is the lamentation over the destruction of Ur.

Sumerian treaties and legal collections have the sort of Ancient Near Eastern literary forms followed in the covenant and law codes found in the Pentateuch and Joshua.

Sumerian wisdom literature begins in the early period and continues into the 2nd millennium BC. Most frequent are the collections of proverbs. They are similar to the Proverbs of the Bible. 'A petition to a man's personal god' laments the loss of health and wealth until the deity restores them. This form continues in the Akkadian theme of the righteous sufferer and appears in the book of Job.

The most important influences from Sumer occur in Gn. 1-11. Scholars have compared the accounts of creation and the flood, as well as the genealogies (Hess and Tsumura, 1994). A Sumerian version of the Atra-Hasis epic demonstrates that it formed part of that language's literary corpus. Similar in general structure to the creation and flood stories of Genesis, it diverges on many points of detail and in its overall purpose. The Bible describes the purpose of flood as moral; the cuneiform myths as the reduction of the population of humans because they trouble the gods.

The genealogies of Gn. 4, 5 and 11 contain similarities and differences when compared with the Sumerian king list. The king list names only rulers. The Bible lists members of a family. While the Sumerian king list (and others) establishes the legitimacy of one dynasty over other rivals, the biblical genealogies demonstrate God's gracious

preservation of his chosen line through which blessing to all nations of the world would come (Gn. 12: 1-3). The Sumerian king list also contains names of the apkallu, wisdom figures associated with antediluvian kings. Insofar as these resemble specific cultural achievements, they appear similar to the figures in Cain's line of Gn. 4 whose names and epithets connect them with similar accomplishments. Some have also found here parallels to the Enoch who ascends to heaven (Gn. 5:24) and to the mysterious 'giants' of Gn. 6:1-4. Lambert (1988) suggests that the long lives of the pre-Flood figures and other matters have similarities with cuneiform king lists and wisdom figures associated with them. This material entered Israelite tradition before the 1st millennium, probably during the international period of the Amarna Age (14th century BC).

SUN (Heb. *šemeš*; Gk. *hēlios*). In addition to many references which merely indicate the time of day, the Bible mentions natural effects of the sun, such as causing the fruits of the earth to grow (Dt. 33:14; 2 Sa. 23:4), withering growth that is insufficiently rooted (Mt. 13:6), producing physical injury (Ps. 121:6; Is. 49:10; Jon. 4:8; Rev. 7:16; 16:8, etc.), and inspiring the desire for life (Ec. 11:7).

Such poetical allusions as 'a tabernacle for the sun' (Ps. 19:4) and the 'habitation' of the sun (Hab. 3:11) may have been suggested by the Heb. term for the setting sun, *bō'*, meaning literally 'to go in'. A parallel idea finds expression on certain Bab. seals, which represent the sun issuing from a gate. Sun-worship, which was expressly forbidden (Dt. 4:19; 17:3), assumed various forms in Judah (2 Ki. 23:11; Ezk. 8:16-17). Several passages indicate God's control of the sun (Jos. 10:12-14; 2 Ki. 20:8-11; Is. 38:7-8). Ahaz's sundial (2 Ki. 20:11; Is. 38:8) probably had the form of a stairway (*STEPS).

In the book of Psalms the sun is thrice mentioned as an emblem of constancy (Pss. 72:5, 17; 89:36) and God himself is said to be a sun (Ps. 84:11), implying that he is the source of spiritual light and gladness. The face of Jesus at the time of the transfiguration is compared to the shining sun (Mt. 17:2) and it appeared to John in Patmos 'like the sun shining in full strength' (Rev. 1:16). On the other hand the glory of God and of Christ is declared to be greater and more enduring than sunlight (Is. 24:23; 60:19; Acts 26:13; Rev. 21:23; 22:5). Malachi foretells that in the day of the Lord 'the sun of righteousness' shall rise with healing in its rays for them that fear God. In its context this implies that not only will the wicked be punished, but the justice of God will be vindicated and the desire for righteousness of person and environment fully met (Mal. 4:2). The Fathers understood the expression as referring to Christ, and the objection that *šemeš* is feminine cannot be pressed in view of its use in Ps. 84:11 (see above). Part of the imagery associated with 'the day of the Lord' in Scripture is an eclipse of the sun (Is. 13:10; Joel 2:10; 3:15; Am. 8:9; Mt. 24:29; Rev. 6:12), while a third of the sun ceases to function after the fourth trumpet sounds (Rev. 8:12). W.J.C.

SUPERScription (Lat. *superscriptio*, 'a writing on or above', = Gk. *epigraphē*, which it translates). The word is used on two occasions in the NT.

1. In Mt. 22:20 (Mk. 12:16; Lk. 20:24) it is used with the word *eikōn* to refer to the head of the

The superscription 'The King of the Jews', put on the cross, was written in Hebrew, Latin and Greek (Jn. 19: 19-20). Here reproduced in letters of styles current in the 1st cent. AD.

SUPERScription

emperor and accompanying inscription on the obverse of a silver *denarius* (***MONEY**). The *denarius* then in circulation bore the *eikōn* of the head of Tiberius and the *epigraphē* **TI. CAESAR DIVI AUG. F. AUGUSTUS** ('Tiberius Caesar Augustus, son of the divine Augustus').

2. In Mk. 15:26 (Lk. 23:38) the superscription is the placard, consisting of a board smeared with white gypsum and bearing in black letters the name of a condemned criminal and the offence for which he was being executed. Hence Mt. 27:37 calls it an *aitia* (accusation): Jn. 19:19–20 uses the official Roman word *titulus*, calling it a *titlos*. This was usually hung about the criminal's neck on the way to execution, and subsequently affixed to the cross over his head. The superscription written by Pilate for Jesus in Hebrew, Greek and Latin was 'This is Jesus of Nazareth, the King of the Jews'.
D.H.W.

SUPH. In Dt. 1:1 this may be a place-name (so in RV, RSV, 'over against Suph') whose location is quite uncertain (cf. *GTT*, §431, p. 255, n. 223). In rendering 'over against the Red Sea', AV understands Suph as standing for *yam-sūp*, referring to the Gulf of Aqabah, which is also possible (***RED SEA**). In Nu. 21:14, Suph(ah), 'storm'(?), is perhaps an area in which Waheb is located, in the brief quotation from the *Book of the Wars of the Lord*. Its relation to Suph in Dt. 1:1 is uncertain. Musil suggested it might be Khirbet Sufah, some 6 km SSE of Madaba (*GTT*, §441, pp. 261–262, n. 229 end). On Suph and Suphah, cf. also E. G. Kraeling, *JNES* 7, 1948, p. 201.
K.A.K.

SURETY. A surety is a person who undertakes responsibility for a debt, or the fulfilment of an engagement by another. The word is also used to describe a pledge deposited as a security against loss or damage. It means also 'certainty'. In the latter sense we find the word used in the AV of Gn. 15:13; 18:13; 26:9; Acts 12:11 (RSV translates variously: 'indeed', 'I am sure', etc.).

Scripture counsels extreme caution in standing surety (Pr. 11:15; 17:18; 22:26–27). The phrase 'to strike hands' (AV) is equivalent to being surety (Pr. 6:1–2; 17:18).

Judah undertook to be a personal surety for Benjamin's safety (Gn. 43:9; 44:32). The giving of hostages (2 Ki. 18:23; Is. 36:8) is a similar idea. The word is used of our Lord (Heb. 7:22; cf. Ps. 119:122).
M.R.G.

SUSA (AV Shushan), the ruins of which lie near the river Karun (***URAI**), SW Persia, was occupied almost continuously from prehistoric times until it was abandoned by the Seleucids. Here was the capital of *Elam, whose royal inscriptions of the 2nd millennium have been recovered. It maintained its importance under the Kassites and its independence until sacked in 645 BC by Ashurbanipal, who sent men of Susa (Susanchites) to exile in Samaria (Ezr. 4:9). Under the Achaemenids Susa flourished as one of the three royal cities (Dn. 8:2; Ne. 1:1). Darius I built his palace here, the ruins of which, restored by Artaxerxes I (Longimanus) and II (Mnemon), remain, with the Apadana, one of the outstanding Persian architectural features of the 5th–2nd century BC. This palace figures prominently in

the book of ***Esther** (1:2, 5; 2:3; 3:15, etc.). (***AHASUERUS**.) The site was first excavated by Loftus in 1851, and subsequently extensive operations have been undertaken there by the French.

D.J.W.

SYCHAR. The Samaritan town whence the woman came to fetch water from Jacob's well, where she met Jesus who taught her the nature of spiritual worship (Jn. 4). Sychar is commonly identified with Askar, a village 1 km N of Jacob's well, on the E slope of Mt Ebal.
A.R.M.

SYENE (AV Sinim, Sinites). 1. Heb. *sinim*. A distant land from which the people will return (Is. 49:12), named with the N and W, so either in the far S or E (so LXX 'land of the Persians'). Scholars have looked for a connection with classical Sinae (China), but it is unlikely that Jews had settled in so distant a place by this period. Therefore Sin (Pelusium, Ezk. 30:15) or Sin in Sinai (Ex. 16:1) has been proposed. Most likely is identification with Syene of Ezk. 29:10; 30:6, on the far S border of Egypt. This is Egypt. *swn* 'market', Coptic *Suan*, modern 'Aswān'. A Jewish community living there in the 5th century BC has left us many Aram. papyri in which the place name is written *swn*, hence RV, RSV ***Sevneh** in Ezk. 29 and 30, better taken as 'to Seven'. 'From Migdol (AV, RV 'tower') to Syene' means from one end of Egypt to the other. Syene, on the first cataract of the Nile, was a fortress and base for expeditions into Nubia (Cush), a terminus for river traffic and a source of red granite for monumental buildings (syenite). The Qumran MS of Isaiah (1Q Is*) suggests that 'Syenites' should replace *sinim* (Is. 49:12); LXX has *Syene* for *Sin* in Ezk. 30:16.

2. Sinites (Heb. *sinī*) were a Canaanite people (Gn. 10:17; 1 Ch. 1:15), probably to be identified with a region, near Arqā, on the Lebanon coast, named in texts from ***Mari** and possibly ***Ebla**. The name survives in Nahr as-Sinn and is Ugaritic *syn*, Akkad. *siyanu*.

SYMBOL. This word is not found in the Bible, but the use of symbols is common to all religions. The Gk. word *symbolon* had several uses, e.g. as a sign, pledge, token, and its importance derived from the fact that it was a representative object which guaranteed the reality of that which it symbolized. The *Concise Oxford Dictionary* defines a symbol as a 'thing regarded by general consent as naturally typifying or representing or recalling something. (esp. an idea or quality) by possession of analogous qualities or by association in fact or thought'. This clear distinction between object and symbol is inevitable in analytical philosophy, but is not found in primitive thought. Malinowski emphasized that symbolism is founded, not in a relationship between an object and a sign, but in the influence that a sign or action has upon a receptive organism (*A Scientific Theory of Culture*, 1944). It is important to remember this when examining symbolism in the Bible.

I. In the Old Testament

a. Personal symbols

In early Israelite thought the clan or the family was the fundamental unit, not the individual. The life (*nep̄es*) of the individuals made up the life of the group: the life of the group was extended through all the individuals. This psychological conception has been termed corporate personality (Wheeler Robinson) or group consciousness (Radcliffe Brown), and helps to explain how one person could symbolize a group of people (2 Sa. 18:3) or the presence of God (Ex. 7:1).

There is an expression, *'is hā'lohīm*, used more than 70 times and translated 'man of God', which could be translated 'divine man'. 27 times it refers to Elisha, and in the remaining instances to prophets such as Elijah and Samuel, or Moses and David. Elisha is credited with divine powers, such as restoring life (2 Ki. 4:35) and mind reading (2 Ki. 5:26). He stands in the place of God, does the works of God, and is the symbol of God's presence. Similarly, Moses was as God to Aaron (Ex. 4:15) and to pharaoh (Ex. 7:1), in word and deed (Ex. 14:16; 17:9). All the prophets spoke the word of God, and when the Israelites heard them they heard God himself; consequently, the person of the prophet was immune from harm. There is little evidence to show that the Israelite monarchy was regarded as divine, but it is possible that Solomon set himself up as a symbol of God.

b. Objective symbols

External objects were also used to symbolize the presence of God, in representative or conventional manner. The rainbow was accepted as the assurance that God's wrath had passed and that he would remember his covenant (Gn. 9:13). Moses made a bronze serpent, symbolizing the wisdom and healing power of God (Nu. 21:9); golden calves were made to symbolize the great power of God (Ex. 32 and 1 Ki. 12). More frequently objects were made without representing particular characteristics of God, one important example being the altar. The Heb. word *mizbēah*, from the root *zbl* ('slaughter'), suggests the place where the animal was prepared for sacrifice. One should note, however, that in the earliest accounts the Patriarchs erected altars after an appearance by God, to mark the site and claim it for him for ever. In Israelite worship the altar symbolized the meeting-place of God with man, while the ark symbolized the presence of God because it contained the tablets of the Decalogue, and where the Word of the Lord was, there was the Lord himself.

When the Temple was built it symbolized the universal power of God. The Temple itself was a symbol of the earth, the brazen laver a symbol of the sea and the golden candlestick a symbol of the sun. It was necessary that a priest should be properly vested when he entered the tabernacle or Temple, and the vestments were clearly symbolic. They were made of linen (Ex. 28:39), which was regarded as having protective qualities (Lv. 6:8-12). Two reasons are possible. As the sacrifices were animal, the flax as vegetable conferred an immunity which would not have been found in woollen or leather garments. But it is more likely that, as in many folk stories, flax was regarded as the symbol of immortality or indestructibility. Jewish scholars have suggested symbolic meanings for the colours of the vestments, and for each sep-

arate item. The ephod and breastpiece symbolized the 12 tribes and judgment, and as the priest put them on they gave him power of judgment in the name of the Lord. His robe was decorated with pomegranates and bells—symbols of fertility and warnings to evil spirits. On his head was a mitre engraved with the words 'Holy to the Lord' (Ex. 28:36), which made the priest himself the extension of the presence of God—the divine symbol.

c. Acted symbols

These symbols were actions that were illustrative or purposive beyond their immediate context. They demonstrated or introduced new circumstances. They must be distinguished from magic, which was designed to compel a particular action from God. When an Israelite slave preferred to surrender himself to permanent slavery rather than accept his freedom, the owner pierced the slave's ear and fastened him to the doorpost to signify that the slave was from then on part of the household (Ex. 21:6). Other symbolic actions of a domestic nature were the surrender of a shoe to symbolize the surrender of all personal rights of inheritance (Ru. 4:7) and the cutting of hair to symbolize the offering of the mourner's life to a dead relative (Is. 22:12).

Among religious symbolic actions, *circumcision has always been a significant rite; originally connected with marriage, it was performed to avert the evil intentions of spirits that watch over the bridal chamber, but in Israel it was pushed back into childhood and then into infancy, and represents the dedication of the reproductive powers to divine guidance, and the incorporation of the child into the community.

The ceremony of the scapegoat by which the sins of the people were transferred to a goat on the Day of Atonement was a ritual of a type well known in many countries; it has been described as a clear instance of the principle of vicarious solidarity, here between priest, people and goat (C. Lattey, *VT* 1, 1951, p. 272).

Other instances of transference by symbolic action are the red heifer (Nu. 19), which transferred uncleanness, and anointing, which transferred spiritual power (e.g. 1 Sa. 16:13).

Special attention should be paid to the importance of the symbolic actions of the prophets. These men not only proclaimed their message but performed actions to demonstrate what God would do, and thereby helped to bring about the result. They did not perform these actions to influence the will of God, but to prepare the way for that which he had decreed. Thus, Isaiah went about naked as a sign that God would bring poverty and exile upon Israel (Is. 20:2). Jeremiah buried a new girdle in damp earth and later dug it up, spoilt, to show how Israel, once so close to God, had now been rejected and would be despoiled (Je. 13). Ezekiel drew a city on a tile and set model siege-engines round it to demonstrate the destruction of Jerusalem which God had already decided (Ezk. 4:1-3). Other examples are in 1 Sa. 15:27; Je. 19:11; 28:11.

II. In the New Testament

Here the situation is quite different. There are no symbolic persons; Jesus Christ was not a symbol of God, for he was God, as he claimed in the words, 'I and my Father are one' (Jn. 10:30). Neither could one describe the disciples as symbols, because they were servants under discipline, not representatives.

SYMBOL

But Jesus performed symbolic actions and approved them for the church. His healing miracles were not merely deeds of sympathy, but symbols or signs demonstrating the approach of the kingdom of God. Similarly, when he took the bread and the wine and gave them to the disciples, saying, 'Do this in remembrance of me', he was not simply exhorting them to good fellowship, but giving them a rite by which they could symbolize his presence eternally with his church. So the church has accepted the symbolism of the sacraments. In the bread and the wine the worshipper receives by faith the true body and blood of the Lord. In the waters of baptism sin is symbolically washed away and the person made a member of Christ's flock. In these actions the church symbolizes its faith; the * sacraments are not only illustrations but the appointed channels of divine grace.

In addition to the sacramental symbols, the church has used the symbol of the cross. This is a true symbol in that it is a pictorial representation of a historical fact, a visual summary of certain essential features of the Christian faith, and at the same time a means of grace to the worshipper. In the history of Christian art there have crystallized accepted pictorial symbols of the 12 apostles, e.g. the keys for St Peter and the symbols of the four Evangelists. At one time the fish was a popular symbol of the Christian faith as the letters of the Gk. word for fish, *ichthys*, formed the initials of Gk. words meaning 'Jesus Christ, son of God, Saviour'. The Christian church has never forbidden the use of symbols, because they are rooted in the nature and experience of man, but it has not encouraged them, lest in stressing the symbol the Christian should lose the Lord Jesus Christ himself.

SYNAGOGUE. In the OT 'synagogue' occurs only in Ps. 74:8, AV (RSV 'meeting places'), where it is a translation of Heb. *mō'ēd*. It is not definite that the reference has its present connotation. The Gk. term *synagōgē* is used frequently in the LXX for the assembly of Israel, and occurs 56 times in the NT. The basic sense is a place of meeting, and thus it came to denote a Jewish place of worship. The Heb. equivalent of the Gk. noun is *k'nēsef*, a gathering of any persons or things for any purpose. In the Scriptures it is a gathering of individuals of a locality for worship or common action (Lk. 12:11; 21:12). It came to refer to the building in which such meetings were held.

I. Its significance

The importance of the synagogue for Judaism cannot be overestimated. More than any other institution it gave character to the Jewish faith. Here Judaism learnt its interpretation of the law. Ezk. 11:16, 'I have been a sanctuary to them for a while', was interpreted by Jewish authorities to mean that in world-wide dispersion Israel would have the synagogue as a sanctuary in miniature to replace the loss of the Temple. Unlike the Temple, it was located in all parts of the land, and put the people in touch with their religious leaders. A. Menes states: 'On the Sabbaths and holy days the loss of the Temple and the absence of the solemn sacrificial celebrations were keenly felt by the exiles . . .

the synagogue . . . served as a substitute for the Temple. In the synagogue there was no altar, and prayer and the reading of the Torah took the place of the sacrifice. In addition the prayer house performed an important social function . . . it was a gathering point and a meeting place where the people could congregate whenever it was necessary to take counsel over important community affairs. The synagogue became the cradle of an entirely new type of social and religious life and established the foundation for a religious community of universal scope. For the first time Jewish monotheism emancipated itself in religious practice from its bonds to a specific and designated site. God was now brought to the people wherever they dwelt' ('The History of the Jews in Ancient Times', *The Jewish People*, 1, pp. 78-152). Today the synagogue is still one of the dominant institutions of Judaism, and the centre of the religious life of the Jewish community. The book of Acts indicates the significant role the synagogue played in the propagation of the new Messianic faith.

II. Its origin

Neither OT nor NT furnishes any definite information about the origin of the synagogue, nor do the Apocryphal books mention any burning of synagogues during the persecutions of Antiochus Epiphanes in the 2nd century BC. Many see the Exile, when worship in the Temple at Jerusalem was an impossibility, as the time when the synagogue arose.

The oldest references to synagogues are in Gk. inscriptions from Egypt of the 3rd century BC. At Delos in the Aegean there was a synagogue in the 1st century BC, termed a *proseuche*, a 'place of prayer'. The Gk. inscription of Theodotos, a 'ruler of the synagogue' (*archisynagogos*), found in Jerusalem and archaeological discoveries in Palestine (see III) prove the existence of synagogues there in the first century.

III. General description

In the 1st century AD synagogues existed wherever Jews lived. Cf. Acts 13:5 (Salamis in Cyprus); 13:14 (Antioch in Pisidia); 14:1 (Iconium); 17:10 (Beroea). Large cities, such as Jerusalem and Alexandria, had numerous synagogues. One legend has it that there were 394 synagogues in Jerusalem when Titus destroyed the city in AD 70; another legend sets the number at 480.

The Gospels speak of the synagogues of Nazareth (Mt. 13:54; Lk. 4:16) and Capernaum (Mk. 1:21; Jn. 6:59) as places where our Lord ministered. The apostle Paul found them wherever he went in Palestine, Asia Minor and Greece. According to the Talmud (*Shabbath* 11a), it was required that synagogues be built on high ground or above surrounding houses. Archaeological evidence does not confirm such a practice for Palestine. Examples excavated at Gamala, E of Galilee, and at Herodium and Masada reveal a common plan, a hall with columns at the edges of the floor and benches in tiers along each wall. There might be a cupboard to house the scrolls of the Law and the Prophets. For the readings, they would be carried to a reading desk or platform (*bemā' Megillah* 3.1) in the centre of the hall. In later synagogues the *bema* often lay against one wall, facing towards Jerusalem. Seats near the reading desk were the more honourable (Mt. 23:6; Jas. 2:2-3), and there was a special place, 'the seat of Moses' (Mt. 23:2). Mai-

monides said, 'They put a platform in the middle of the house, so that he who reads from the Law, or he who speaks words of exhortation to the people, may stand upon it, and all may hear him.' There is no evidence for men and women sitting separately in the early synagogues.

IV. Its purpose and practice

The synagogue was, literally, a meeting-place, the term used in Theodotus' inscription when he records his building of 'a synagogue for reciting the Law and studying the commandments'. It was especially a place for prayer (*proseuche*), like the Temple (see Mt. 21:13, *etc.*; Acts 16:13). Subject to the law of the land, the synagogue had its own government (Jos., *Ant.* 19. 291). The congregation was governed by elders who were empowered to exercise discipline and punish members. Punishment was by scourging and excommunication. The chief officer was the ruler of the synagogue (*cf.* Mk. 5:22; Acts 13:15; 18:8). He supervised the service to see that it was carried on in accord with tradition. The attendant (Lk. 4:20) brought the scrolls of Scripture for reading, replaced them in the ark, punished offending members by scourging and instructed children to read. The dispenser of alms received the alms from the synagogue and distributed them. Finally, a competent interpreter was required to paraphrase the Law and the Prophets into the vernacular Aramaic.

Those qualified were permitted to conduct the services (Christ, Lk. 4:16; Mt. 4:23; Paul, Acts 13:15). The Sabbath was the appointed day for public worship (Acts 15:21). The Mishnah (*Megillah* 4. 3) indicates that the service consisted of five parts. First, the *Shema* was read. This prayer covers Dt. 6:4-9; 11:13-21; Nu. 15:37-41. Then synagogical prayers were recited, the most ancient and best known being the eighteen petitions and benedictions.

The first of the 'Eighteen Benedictions' reads: 'Blessed art Thou, the Lord our God, and the God of our fathers, the God of Abraham, the God of Isaac, and the God of Jacob: the great, the mighty and the terrible God, the most high God Who showest mercy and kindness, Who createst all things, Who rememberest the pious deeds of the patriarchs, and wilt in love bring a redeemer to their children's children for Thy Name's sake; O King, Helper, Saviour and Shield! Blessed art Thou, O Lord, the Shield of Abraham.'

Another prayer is worded: 'And to Jerusalem, Thy city, Thou wilt return in mercy and wilt dwell in her midst, as Thou hast said. And do Thou build her soon in our days an eternal building, and the throne of David Thou wilt speedily establish in the midst of her.'

The restoration of Israel to the land of their fathers, the return of the Shekinah glory to the Temple and rebuilt city of Jerusalem, and the re-establishment of the Davidic dynasty are recurring themes in the prayers.

These were followed by the reading of the Law. The Pentateuch, which is now read in the synagogues in annual cycles, was originally covered in 3 years. After the reading from the first portion of the OT Canon a selection from the Prophets was read. In the time of Christ this portion was not yet fixed, but the reader was permitted to make his own choice (Lk. 4:16ff.). The reading of Scripture was central. The portion of the Prophets was ex-

pounded, and an exhortation drawn from it. The benediction concluded the service. Later additions were the translation and exposition of the Scripture portions read. To conduct public worship in the synagogue ten adult males were required.

'Synagogue of the Libertines' (AV) (*libertinoi*, from Lat. *libertini*, *'freedmen', RSV) was the name given to worshippers in a synagogue in Jerusalem who disputed with Stephen (Acts 6:9). They were Jews who had been captured in Pompey's campaign, then were freed later by their masters. Thus the privileges of Roman citizenship were accorded them.

Reference is made in Rev. 2:9 and 3:9 to the 'synagogue of Satan'. Since the citations are general in character, it is impossible with certainty to identify those who are meant by John. A heretical party within the infant church would seem to be indicated.

C.L.F.

SYNZYGUS. Gk. *synzygos* (*syzygos*), 'yokefellow' (Phil. 4:3), is treated as a personal name by *WH* mg. and others, as though Paul meant 'Yokefellow by name and yokefellow by nature'. The word, however, is certainly to be taken as a common noun, the person addressed being (not Lydia, supposed by S. Baring-Gould and others to have been Paul's wife, but) possibly Luke, who seems to have stayed in Philippi for the 7 years separating the first 'we' section of Acts (ending 16:17) from the second (beginning 20:5). (This identification presupposes that the letter, or at least this part of it, was sent from Ephesus.)

F.F.B.

SYRACUSE. A city with a large harbour on the E. coast of Sicily. Founded in 734 BC by Corinthian colonists, it had by the end of the 5th century BC become the most important city, politically and commercially, in Sicily, especially under the tyrants Gelon and Dionysius I. With its allies it was strong enough to defeat the great Athenian expedition to Sicily in 415-413 BC. The Romans captured it in 212 BC, in spite of a defence strengthened by the inventions of the great mathematician Archimedes, and made it the seat of government of the province of Sicily, which became one of the sources of grain for Rome. Syracuse continued to flourish down to the 3rd century AD.

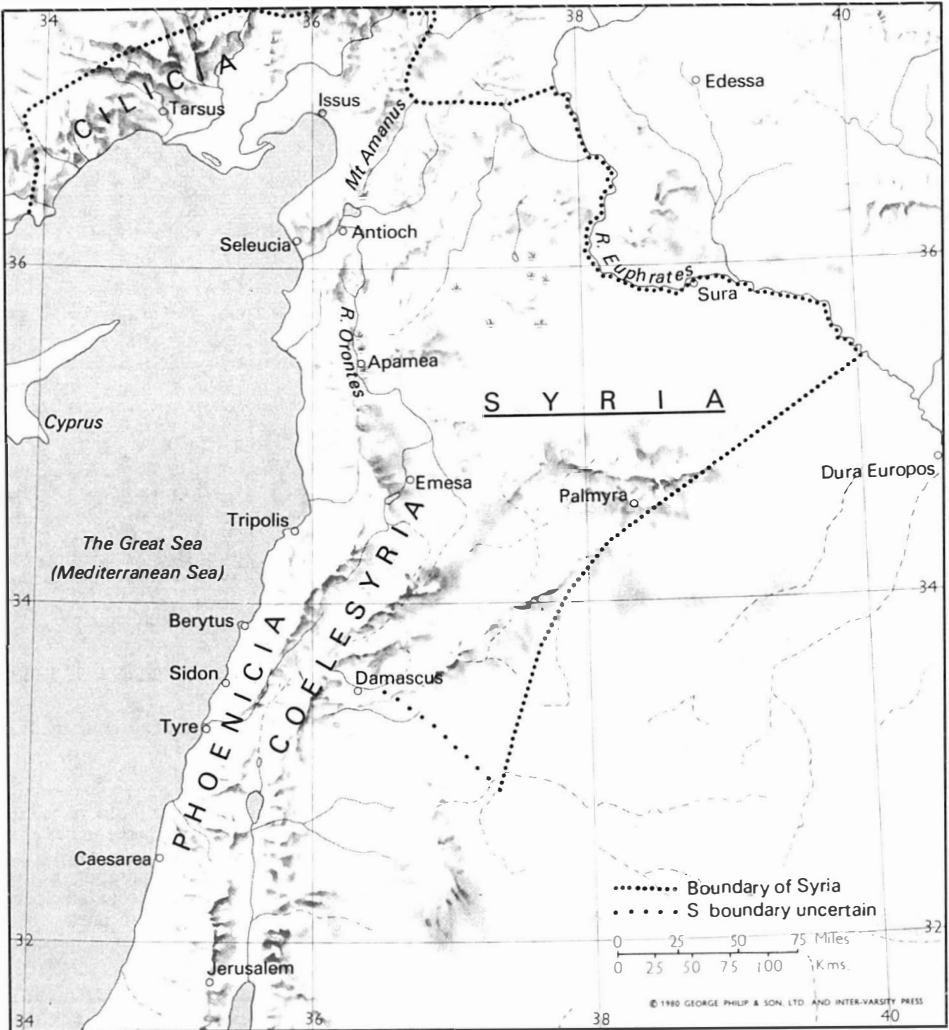

On the last stage of his journey to Rome Paul's ship stayed there for 3 days (Acts 28:12), presumably waiting for a suitable wind.

K.L.McK.

SYRIA, SYRIANS. 1. In the Eng. OT this merely denotes *Aramaean.

2. The geographical entity Syria is bounded by the Taurus Mountains in the N, the W bend of the Euphrates river and the Arabian desert-edge from there to the Dead Sea in the E, the Mediterranean

SYRIA, SYRIANS

Syria in NT times.

Sea on the W, and the Sinai isthmus at the extreme S (R. Dussaud, *Topographie Historique de la Syrie Antique et Médiévale*, 1927, pp. 1-2, etc.; see this work generally).

3. 'Syria' is a Gk. term; Nöldeke derived it from *Assyrios*, 'Assyria(n)', and this suggestion is open to the least objection. Cf. F. Rosenthal, *Die Aramaisische Forschung*, 1939, p. 3, n. 1.

4. Historically, ancient Syria existed as a political unit only during the period of the Hellenistic Seleucid monarchy, founded by Seleucus I (312-281 BC), who ruled over a realm that stretched from E Asia Minor and N Syria across Babylonia into Persia to the border of India; in 198 BC all 'Syria' belonged to this kingdom when Antiochus III finally gained Palestine from Ptolemy V of Egypt. But from 129 BC, with the death of Antiochus VII, everything E of the Euphrates was lost, and the Seleucids held Syria only. After this, internal dynastic strife disrupted the shrinking state until

Pompey annexed the region for Rome in 64 BC. Syria as defined in 2 above constituted the Rom. province of Syria, with which Cilicia was closely associated (Judaea being separate from AD 70). *ANTIOCH (Syrian), *ANTIOCHUS, *UGARIT, *ALALAH, etc., and also CAH. K.A.K.

SYROPHOENICIAN. An inhabitant of Phoenicia, which in NT times was part of the Rom. province of Cilicia and Syria. It was a Syrophenician woman (*syrophoinikissa*), a Greek from the region of Tyre and Sidon, who pleaded with Jesus to heal her daughter (Mk. 7:26; cf. Mt. 15:21-28). The parallel verse in Mt. 15:22 calls the woman a Canaanite, using the ancient name by which these people were known. The name Syrophenician combines the area of Phoenicia which included Tyre and Sidon, and the larger Rom. province of Syria. Phoenicians who lived in Carthage were called Libyphoenicians. J.A.T.

T

TAANACH. Modern Tell Ta'annek on the S edge of the valley of Jezreel, guarding a pass across Mt Carmel following the Wadi Abdullah.

Thothmes III mentions Taanach in the account of his conquest of W Palestine (c. 1450 BC; *ANET*, pp. 234ff.), as does *Shishak. Amarna letter 248 complains of a raid by men of Taanach on Megiddo, which was loyal to Egypt. The Israelites defeated the king of this city, but the tribe to which it was allotted, Manasseh, was unable to take possession of it (Jos. 12:21; 17:11; Jdg. 1:27). It was one of the levitical cities (Jos. 21:25) and was also occupied by Issachar (1 Ch. 7:29). Taanach and Megiddo are closely associated in Solomon's administrative division of Israel (1 Ki. 4:12) and in the Song of Deborah, where 'Taanach, by the waters of Megiddo' (Jdg. 5:19) is the site of the Canaanite defeat. Excavations in 1901-4, 1963, 1966 and 1968 revealed an Early Bronze Age city, a Middle Bronze II occupation with typical glacis fortification, destroyed violently, and a prosperous town of Late Bronze I (14 Akkad. cuneiform tablets were found). At the end of the Late Bronze Age there was another destruction, perhaps the work of Deborah's men. In the debris a clay tablet inscribed in a Canaanite cuneiform alphabet was found. The Early Iron Age city, containing a supposed cultic building with stone stelae, numerous pig bones and an elaborate pottery incense-stand, appears to have been destroyed by Shishak. Thereafter the city declined.

TABERNACLE. I. The tabernacle of the congregation (AV), more properly 'tent of meeting', as in RV, RSV: a small, provisional meeting-place of God and his people in use before the large tabernacle was built (Ex. 33:7-11). This tent of meeting was pitched outside the camp. Moses would enter it and the Cloud, marking the divine Presence, would descend and stand outside it at the door. In this the function of the tent resembled that of the cleft of the rock in which Moses was placed (Ex. 34:22-23), and that of the cave in which Elijah stood (1 Ki. 19:9-18), to be addressed by God while the glory of God passed by outside. The tabernacle, by contrast, was erected in the midst of the camp, and the Cloud of glory rested not outside but inside it, so that at first Moses had to stay outside (Ex. 40:34-35).

2. The tabernacle commonly so-called was the portable sanctuary in which God dwelt among the Israelites in the desert. After their entry into

Canaan, it was stationed successively at Shiloh (Jos. 18:1), at Noh (1 Sa. 21) and at Gibeon (1 Ch. 16:39). Eventually Solomon brought it up to the Temple (1 Ki. 8:4). It is called simply *miškān* = 'dwelling' (EVV 'tabernacle'), as in Ex. 25:9; or *miškān YHWH* = 'dwelling of Yahweh' as in Lv. 17:4; or *miškān ha'ēdūt* = 'dwelling of the *covenant terms' (AV, RSV 'of the testimony'), because it housed the covenant tablets, as in Ex. 38:21; or *'ōhel mō'ēd* = tent (AV 'tabernacle') of meeting', i.e. the appointed meeting-place between God and his people, as in Ex. 28:43; or *miškān 'ōhel mō'ēd* = 'dwelling of the tent of meeting', as in Ex. 39:32; or *miqdāš* = 'sanctuary' as in Ex. 25:8; or *qōdeš* = 'holy place' (AV, RSV 'sanctuary'), as in Ex. 38:24. It is also called *bet YHWH* = 'house of Yahweh', as in Ex. 34:26.

The materials used in its construction are listed at Ex. 25:3-7. The metal translated 'bronze' (AV 'brass') was more probably copper. The colour 'blue' was probably a violet-blue and the colour 'purple' a reddish-purple. The material translated 'goatskins' (RSV; AV 'badgers' skins') was probably dugong (or 'porpoise', NEB) skin.

I. Tabernacle, tent, coverings and frames

In its stricter technical meaning the term 'tabernacle' refers to a set of ten linen curtains, which when draped round a structure of wooden frames formed God's dwelling-place. The curtains were of linen with figures of cherubim woven into the violet-blue, reddish-purple and scarlet tapestry-work. Each measuring 28 cubits by 4, they were sewn together along their length into two sets of five, which when assembled were held together by fifty golden clasps (AV 'taches') passing through loops on the edge of each set (Ex. 26:1-6). The tabernacle was covered by eleven goats'-hair curtains, called in strict terminology 'the tent' (Ex. 26:7-15). They each measured 30 cubits by 4, were sewn together into two sets, one of five, the other of six, which when assembled were held together, like the tabernacle, by loops and clasps, only their clasps were of copper.

Over the tent went a covering of tanned (literally, 'reddened') rams' skins, and over that again (cf. NEB 'an outer covering'; AV, RV 'above') a covering of dugong skin (Ex. 26:14).

These curtains were spread over the top, back and two sides of a framework (Ex. 26:15-30) assembled from forty-eight units, each 10 cubits high and 1½ wide, called *q'rāšīm*. The most likely interpretation of these *q'rāšīm* is that given by A. R. S. Kennedy (*HDB*, 4, pp. 659-662); they were not solid boards (as AV, RV), nor planks (as NEB), but open frames, each consisting of two long uprights (*yādōt*: not 'tenons' as in most versions) joined by cross-rails somewhat like a ladder. Such frames would have three advantages over solid planks:

TABERNACLE

they would be much lighter, less liable to whip, and instead of hiding the beautiful tabernacle curtains would allow them to be seen from the inside all round the walls. The feet of the two uprights in each frame stood in sockets made of silver obtained from the census tax (Ex. 30:11–16; 38:25–27). Twenty frames in their sockets, stationed side by side, formed each side of the tabernacle; six formed the rear. In each corner at the rear was an extra frame. The purpose of these extra frames, to give rigidity to the whole structure, is clear; but the details of the specification are not.

Perhaps the best explanation is that given by U. Cassuto: each corner frame was coupled (not 'separate' as rsv) at the bottom and the top so as to form a twin with the end frame in the side, and then clamped to its twin by means of a metal ring (translating v. 24 'into the one ring' and not 'at the first ring', as rsv). To keep the frames in alignment five bars ran along the sides and rear through gold rings attached to the cross-rails of each frame. The middle bar ran the whole length, the other four only part of the way. The frames and bars were made of acacia wood overlaid with gold.

When the frames were assembled the distance from the top of the frames at the front along the roof and down to the bottom of the frames at the rear was $20 \times 1\frac{1}{2} + 10 = 40$ cubits. The assembled tabernacle curtains measured 28 cubits by $10 \times 4 = 40$ cubits. They were spread over the frames so that the 40 cubits ran from the top front of the frames to the rear bottom. The assembled tent curtains measured 30 cubits by $11 \times 4 = 44$ cubits. When they were spread over the tabernacle curtains, the extra 2 cubits (30 as against 28) gave an overhang of 1 cubit on each side (Ex. 26:13). The extra 4 cubits in the other direction (44 as against 40) were disposed as follows: at the rear the tent extended 2 cubits beyond the tabernacle curtains (v. 12), and at the front the other 2 cubits were doubled back and, presumably, tucked under the tabernacle curtains all the way along the top and sides, so protecting what otherwise would have been an exposed edge of tabernacle curtain (v. 9). The word used for arranging the curtains over the frames is not the normal word for pitching a tent, *natā*, but *pāras*, which means 'to spread' (it is used of wrapping cloths round the furniture). The roof was flat. To prevent the curtains from sagging at the roof and so causing the frames to collapse inwards, there were probably (the text does not say so, but it omits many details which one would need to know to make a tabernacle) wooden struts running across the top of the framework from side to side (see, for comparison, the portable pavilion of Hetep-heres). J. Fergusson (*Smith's Dictionary of the Bible*, 3, pp. 1452–1454) and many others have argued unconvincingly that the curtains must have been spread over a ridge-pole. Some of their arguments presuppose that the sides and rear of the tabernacle were formed of solid planks; since they were formed not of planks but of open fragments, their arguments are invalid, and would lead to the impossible result of exposing the holy place and the most holy to view from the outside. Other arguments are invalidated by their failure to observe that the term 'tabernacle' in Ex. 26:1–13 refers not to the building in general but to the ten linen curtains.

II. The interior

The interior of the dwelling was divided into two

compartments by a veil hung under (not 'from' as rsv) the clasps that joined the tabernacle curtains (Ex. 26:31–34). Hence we know that the first compartment was 20 cubits long, the second 10. The height of the frames, 10 cubits, gives us the second dimension, and in all probability the breadth of both compartments was 10 cubits likewise: for while the six frames at the back give a total breadth of 9 cubits, allowance must be made for the thickness of the side frames and corner frames. The first compartment is called 'the holy place', the second 'the holy of holies', *i.e.* the most holy place, or simply 'the holy place' (Lv. 16:2–3; Heb. 9:12; 10:19, *rv.* rsv 'sanctuary' in these latter two verses is misleading: entry into the holy of holies is intended). Again, the first compartment is sometimes called 'the first tabernacle' and the second 'the second tabernacle' (Heb. 9:6–7, *av, rv;* rsv 'the outer tent' and 'the second' respectively). The dividing veil (*pārōket*: a term used of no other hanging), made of the same material, colours and design as the tabernacle curtains, was hung by gold hooks on four acacia-wood pillars overlaid with gold and standing in silver sockets. The pillars had no capitals. At the door (= doorway) was a linen screen of violet-blue, reddish-purple and scarlet (but without cherubim). It hung by gold hooks on five acacia-wood pillars overlaid with gold standing in copper sockets. These pillars did have capitals and were overlaid with gold, as were their fillets (Ex. 26:36; 37:38). To distinguish the *pārōket* from this screen, the *pārōket* is sometimes called the second veil.

III. The furniture

In the most holy place stood the *ark of the covenant (Ex. 25:10–22). A slab (*av, rsv* 'mercy seat') of pure gold with a cherub at each end rested on top. The name of this slab, *kappōret*, means not 'lid' but 'propitiatory', *i.e.* place where the blood of propitiation was sprinkled. This is how the LXX (*hīlastērion*) understood it, as does the NT (Heb. 9:5; *rsv* 'mercy seat'). The poles for carrying the ark ran through rings attached to the feet (not 'corners', as in *av*) of the ark (Ex. 25:12). There is no implied discrepancy between Ex. 25:15 and Nu. 4:8. The latter verse indicates that to facilitate the covering of the ark for transport the poles were temporarily removed and immediately replaced: the former verse directs that at all other times the poles were to be left in their rings even when the ark was not travelling.

In the holy place in front of the veil was the incense-altar (Ex. 30:1–10). Made of acacia wood and overlaid with pure gold—hence its other name, 'the golden altar'—it was a cubit square and 2 cubits high, with horns projecting at the four corners and an ornamental gold moulding round the top. (For a pagan, stone incense-altar with horns, see *ALTAR.) For transport, two poles were shot through gold rings attached just under the moulding. The altar stood directly opposite the ark (note the emphasis of 30:6), and so was regarded as 'belonging to' the most holy place (*cf.* 1 Ki. 6:22 and Heb. 9:4, where 'golden altar of incense' and not 'censer' seems to be the right translation). With the position of the altar compare the position of the two incense-altars in the temple at Arad (*BA* 31. 1968, pp. 22ff.).

On the N side (Ex. 26:35) stood a table for the Bread of the Presence (*av* 'shewbread'; *SHOW-BREAD) (Ex. 25:23–29). One such table and a lamp-

stand (see below) from Herod's Temple are represented on Titus' Arch at Rome. Some doubt is cast, however, on the accuracy of these sculptures, since on the lampstand's base various non-Jewish figures appear. The detail of v. 25 is uncertain. Some translators envisage an 8-cm wide horizontal border, some an 8-cm high vertical rim, or frame, running round the top of the table, others, in agreement with apparent vestiges on Titus' Arch, envisage 8-cm broad cross-struts between the legs of the table.

The vessels connected with the table were: plates, presumably for the bread; dishes (*kappōt*: for incense, so rsv; cf. *kaḇ*, in Nu. 7:14 = AV 'spoon'); and flagons and bowls for drink-offerings (not as AV 'to cover with').

On the S side (Ex. 26:35) stood the *lampstand, *m'nōrah* (AV 'candlestick') (Ex. 25:31-40), in the form of a stylized tree. In strict technical parlance the base and central shaft form the lampstand proper; the six branches are then described as 'going out of the lampstand' (v. 33). In v. 31 the rsv's literal translation, 'its cups, its capitals, and its flowers', i.e. three items, is to be preferred to interpretative renderings such as that of NEB 'its cups, both calyxes and petals', i.e. one item made up of two parts. The capitals were round protuberances of some kind, in the arms and shaft of the lampstand (not, as 'capital' might suggest, on the ends of them). It is probable, but not completely certain, that the six branches rose to the same height as the central shaft. The seven lamps were presumably placed one on the end of each of the six branches and one on the central shaft. There were provided *snuffers and *trays.

IV. Court

The tabernacle stood in the W half of a courtyard, 100 × 50 cubits, the long sides running N and S (Ex. 27:9-19). The tabernacle door faced E.

The courtyard was bounded by a linen screen (EVV 'hangings') 5 cubits high hung on pillars. There was an opening for a gate, 20 cubits wide, set centrally in the E end. The gate screen was linen, embroidered in violet-blue, reddish-purple and scarlet.

The pillars were apparently made of acacia wood (they are not mentioned in the list of copper articles, Ex. 38:29-31), and stood in copper sockets. They were stabilized by guy-ropes and pegs, and had capitals overlaid with silver, and silver bands, called fillets, round the neck.

Three main methods are advocated for spacing the pillars:

(1) On the basic assumption that there was one pillar per 5 cubits of hanging, and that no pillar was counted twice, sixty pillars in all are placed to make twenty spaces along the two long sides and ten spaces along the two ends. The gate screen then hangs on four of its own pillars and one of the others.

It is questionable whether this satisfies the direction for the 20 cubits of gate-screen '... their pillars four ...'.

(2) The *Baraita on the Erection of the Tabernacle*, 5, has it that the pillars stood in the middle of each imaginary space of 5 cubits and that there were no pillars in the corners. (For an attempted solution of the difficulties this would create at the corners and the gate, see M. Levine, *The Tabernacle*, 1969, pp. 76, 81.)

(3) Since the text nowhere says that the pillars

were 5 cubits apart, maybe at the corners the two end pillars stood together. Or perhaps the corner pillars were counted twice (the text does not explicitly state that the total was sixty). The gate could then be recessed (or advanced). But this system gives very awkward measurements for the spaces between the pillars.

In the E half of the court stood an altar. It was called the copper altar from its covering material and the altar of burnt-offering from the chief *sacrifice offered on it (Ex. 27:1-8). It was a hollow framework of acacia wood, 5 cubits square and 3 high, with projecting horns at the top corners. The whole was overlaid with copper. Halfway up the altar, on the outside, was a horizontal ledge (AV 'compass') running all round. (For a stone altar of comparable dimensions with horns, see Y. Aharoni, *BA* 37, 1974, pp. 2-6; *ALTAR.) Running vertically all round from the ground up to the ledge (not 'extending halfway down the altar' as rsv) was a grating of copper network, on the four corners of which were the rings for the carrying-poles. The grating was not a hearth, and the altar was topless and hollow. Some suppose that in use it was filled with earth and stones, others that it acted like an incinerator, draught being supplied through the grating. Its service vessels were *pots for ashes, *shovels, *basins, *forks (AV *'fleshhooks') and *firepans.

Between the altar and the door of the tabernacle stood the laver (Ex. 30:17-21; 38:8; 40:29-32). It was a copper basin standing on a copper base. Nothing is told us of its size, shape and ornamentation (nor of its means of transport, though the absence of this detail from the *MT* of Nu. 4 may be accidental: LXX gives the expected information). It held water for the priests' ablutions.

In camp the tabernacle court was surrounded first by the tents of the priests and Levites, and outside them by those of the twelve tribes (Nu. 2; 3:1-30).

V. Problems arising

Revision of source-critical theories, particularly those relating to the so-called Priestly texts, together with archaeological discoveries have considerably modified the earlier arguments of the liberal school against the historicity of the tabernacle. See e.g. G. Henton-Davies, *IDB*, 3, pp. 503-506; Y. Aharoni, *Orient and Occident* (ed. H. A. Hoffner, Jr), 1973, p. 6; C. L. Meyers, *IDBS*, p. 586. Allegations that the instructions for the building of the tabernacle are in parts impracticable, and thus evidently the work of an idealist, would be valid only if the records were intended to be fully detailed blueprints. They are not that, of course, but records 'for our learning'. Hence many practical details of no aesthetic, symbolic or spiritual value are omitted. At the same time portable pavilions, employing practically the same constructional techniques as the tabernacle, are known to have been in actual use in Egypt long before the time of Moses; see K. A. Kitchen, *Eretz Israel* 24, 1993, pp. 119-129. From the fact that the instructions for the making of the incense-altar stand in Ex. 30, and not as expected in Ex. 25, it used to be argued that its description is a late addition to Exodus and that the incense-altar was not introduced into Israel's worship until a comparatively late date. But since incense-altars have been discovered at Arad and at various Canaanite sites dating from the 10th century BC, it is highly improbable that Israel lacked

TABERNACLE

one in the early period. Similarly, on the basis of the wide divergence of the LXX from the MT in Ex. 36-40, it used to be argued that the last chapters of Exodus in Heb. had not yet reached their final form when the LXX was translated, and that the LXX followed in part a Heb. tradition which knew of no incense-altar. But the argument is not valid: see D. W. Gooding, *The Account of the Tabernacle*, 1959.

VI. Significance

Theologically the tabernacle as a dwelling-place of God on earth is of immense importance, as being the first in the series: tabernacle, Temple, the incarnation, the body of the individual believer, the church. It follows from the fact that the tabernacle was built to God's design as 'a copy and shadow of heavenly things' (Heb. 8:5) that its symbols conveyed spiritual meaning to the Israelites of the time. What that meaning was is often stated explicitly, as with the ark and mercy seat (Ex. 25:16, 22; Lv. 16:15-16), the veil and the two-compartment structure (Lv. 16:2; Heb. 9:8), the incense-altar (Ps. 141:2; cf. Lk. 1:10-13; Rev. 5:8; 8:3-4), the laver (Ex. 30:20-21), the copper altar (Lv. 1:3-9; 17:11); and where it is not stated explicitly, as with the table and the lampstand, it is self-evident from their declared function. How far these symbols were also types of spiritual realities later to be revealed to us is disputed. Understandably, the extravagant interpretations that from the early centuries have been placed upon the subject have brought it into disrepute. But the NT declares that the law had 'a shadow of the good things to come', which good things actually came with Christ (Heb. 10:1; 9:11). So Christ is said to have entered through the veil (Heb. 6:19-20), and to be set forth as a propitiatory, or mercy seat (Rom. 3:25, *hilasterion*; cf. LXX Ex. 25:17-22; Lv. 16:15-16. rsv 'expiation' is scarcely exact); while the writer to the Hebrews indicates that he could have expounded in this fashion all the tabernacle vessels and not simply the one feature which was relevant to his immediate argument (Heb. 9:5).

D.W.G.

TABERNACLES, FEAST OF. Heb. *haḡ hasukkôt*, 'festival of booths' (Lv. 23:34; Dt. 16:13), or *haḡ hā'āsīp*, 'festival of ingathering' (Ex. 23:16; 34:22). This was one of the three great pilgrimage-festivals of the Jewish year; it was kept for 7 days from the 15th to the 22nd day of the 7th month. It came at the end of the year when the labours of the field were gathered in, and was one of the three annual festivals at which every male was required to appear (Ex. 23:14-17; 34:23; Dt. 16:16). It was a time of rejoicing (Dt. 16:14). The designation 'feast of booths (tabernacles)' comes from the requirement for everyone born an Israelite to live in booths made of boughs of trees and branches of palm trees for the 7 days of the feast (Lv. 23:42). Sacrifices were offered on the 7 days, beginning with thirteen bullocks and other animals on the 1st day and diminishing by one bullock each day until on the 7th seven bullocks were offered. On the 8th day there was a solemn assembly when one bul-

lock, one ram and seven lambs were offered (Nu. 29:36). This is the last day, 'that great day of the feast', probably alluded to in Jn. 7:37. As a feast, divinely instituted, it was never forgotten. It was observed in the time of Solomon (2 Ch. 8:13), Hezekiah (2 Ch. 31:3; cf. Dt. 16:16), and after the Exile (Ezr. 3:4; Zc. 14:16, 18-19). The ceremony of water-pouring, associated with this festival in post-exilic times and reflected in Jesus' proclamation in Jn. 7:37f., is not prescribed in the Pentateuch. Its recognition of rain as a gift from God, necessary to produce fruitful harvests, is implied in Zc. 14:17 (cf. 1 Sa. 7:6).

This feast had a historical reference to the Exodus from Egypt and reminded the Jews of their wandering and dwelling in booths in the wilderness (Lv. 23:43). However, this is not evidence of the conversion of the agricultural festival to a historical one. Rather it points to the truth that Israel's life rested upon redemption which in its ultimate meaning is the forgiveness of sin.

This fact separates this feast from the harvest festivals of the neighbouring nations whose roots lay in the mythological activity of the gods.

BIBLIOGRAPHY. N. Hillyer, *TynB* 21, 1970, pp. 39-51. D.F.

TABLE. I. A table as an article of furniture (Heb. *šulhān*; Gk. *trapeza*). The table in the steppe, or wilderness (Pss. 23:5; 78:19), was a prepared area or skin laid out on the ground (Heb. *šlḥ*). Elsewhere the word is used, as its modern counterpart, for the table made of wood or metal which was a common item of furniture (2 Ki. 4:10). To eat 'at the king's table' was a signal honour (2 Sa. 9:7; cf. Lk. 22:21), while to eat at 'one's own table', as well as having its literal meaning, denoted living at one's own expense (1 Ki. 18:19; Ne. 5:17). 'The table of the Lord' (Mal. 1:7, 12; Ezk. 41:22; 44:16; 1 Cor. 10:21; *ALTAR) implies that at which he is the host. Ps. 69:22 is of uncertain meaning.

2. For AV 'table' standing for writing-table (rsv 'tablet', Lat. *tabula*) see *WRITING. The AV also has 'table' for Heb. *lūah*, for a plank used in the construction of the altar (Ex. 27:8), a ship (Ezk. 27:5), a door (Ct. 8:9), and the metal plates at the base of Solomon's lavers (1 Ki. 7:36). All these were also potential surfaces for inscriptions. D.J.W.

TABOR. If Jos. 19:22; Jdg. 8:18; and 1 Ch. 6:77 refer to the same place, Tabor was on the Zebulun-Issachar border: and it was presumably on or near Mt Tabor. The 'oak', or 'terebinth' (NEB), of 1 Sa. 10:3 must have been at a different Tabor, in Benjaminite territory. D.F.P.

TABOR, MOUNT. A notable mountain rising from the Plain of Jezreel to 588 m above sea-level. Its slopes are steep, and the views from the summit magnificent; hence it was considered worthy of comparison with Mt Hermon, in spite of the latter's much greater bulk and height (cf. Ps. 89:12). It was the scene of Barak's mustering (Jdg. 4:6) and of an idolatrous shrine in Hosea's day (cf. Ho. 5:1). In later times there was a town on the summit, which was taken and then fortified by Antiochus III in 218 bc. In 53 bc it was the scene of a battle between the Romans and Alexander the son of Aristobulus. Josephus, in his role as Jewish general,

Chart showing the daily offerings during the Feast of Tabernacles (Nu. 29:12-35).

gave the town on the summit a defensive rampart in AD 66; remains of this wall can still be seen. The mountain also figured in the events of Crusader times.

Since the 4th century AD, and perhaps earlier, tradition has held that Mt Tabor was the scene of the transfiguration. This is not very likely; more probable is the view that Mt Tabor is intended in Dt. 33:19. The Arabs called the mountain Jabal al-Tur; the Israelis have given it its old Heb. name, *Har Tābôr*.
D.F.P.

TADMOR. This place-name occurs twice in AV (1 Ki. 9:18; 2 Ch. 8:4), and is usually identified with mod. Tudmur, 'Palmyra', 200 km NE of Damascus; mentioned as *Tadmar* in Assy. texts c. 1110 BC. Tadmor in AV in 1 Ki. 9:18 is based on *q'rē* and the ancient versions. The *k'lib* is *tāmār*. The ancient versions have 'Palmyra' (Gk. for 'palm tree' = Heb. *tāmār*). The problem is whether the Tamar of 1 Ki. 9:18 (RV, RSV) is identical with the Tadmor of 2 Ch. 8:4. The following solutions are

TADMOR

proposed: 1. Later in the time of the Chronicler, when the government of Solomon was idealized, the unimportant Tamar of the Judaean desert was changed to the then well-known, illustrious Tadmor in the Syrian desert. 2. *Q'rē'* and the ancient versions are to be followed in identifying the place in 1 Ki. 9:18 with Tadmor, the later Palmyra in the Syrian desert. 3. Tamar of 1 Ki. 9:18 and Tadmor of 2 Ch. 8:4 are different places. Tamar, the modern *Kurnub*, called *Thamara* in the *Onomasticon* of Eusebius, was situated on the route between Elath and Hebron. This city was fortified to protect the trade with S Arabia and the seaport Elath. Tadmor was the famous trading-centre NE of Damascus and could have been brought under Solomon's rule with the operations against the Syrian Hamath and Zobah.

The third solution is acceptable, because Tamar in 1 Ki. 9:18 is expressly called 'in the land' and thus in Israelite territory (cf. also Ezk. 47:19; 48:28).

BIBLIOGRAPHY. J. Starcky, *Palmyra*, 1952.

F.C.F.

TAHPANHES. An important Egyptian settlement in the E Delta, named with Migdol, Noph (Memphis), etc. (Je. 2:16; 44:1; 46:14; Ezk. 30:18 as Tephaphnes), to which certain Jews fled c. 586 BC, taking thither the prophet Jeremiah (Je. 43). The same consonantal spelling *Thpnhs* recurs in a Ptolemy papyrus letter of the 6th century BC found in Egypt (cf. A. Dupont-Sommer, *PEQ* 81, 1949, pp. 52-57). The LXX form Taphnas, Taphnais, probably equates Tahpanhes with the Pelusian Daphnai of Herodotus (2. 30, 107) where the 26th Dynasty pharaoh Psammetichus I (664-610 BC) established a garrison of Gk. mercenaries. On grounds of geographical location, the equivalence of Arabic Defneh with Daphnai, and the excavation at Defneh of Gk. pottery and other objects, Tahpanhes-Daphnai is located at modern Tell Defneh ('Defenneh'), about 43 km SSW of Port Said. The Egyptian for Tahpanhes is not inscriptionally attested, but may be *T'-h(wt)-p'-nhsy*, 'mansion of the Nubian', names compounded with *nhsy*, 'Nubian', being known elsewhere in Egypt (so Spiegelberg).

'Pharaoh's house in Tahpanhes' and the 'brick-work' (RV) at its entry in which Jeremiah hid stones to presage Nebuchadrezzar's visitation there (Je. 43:9) may just possibly be the fortress of Psammetichus I, with traces of a brick platform on its NW side, excavated by Petrie (*Nebesheh (Am) and Defenneh (Tahpanhes)* bound with *Tanis II*, 1888).

K.A.K.

TAHPENES. An Egyp. queen whose sister the pharaoh married off to Hadad of Edom (1 Ki. 11:19-20; *PHARAOH, II. 6). B. Grdseloff (*Revue de l'Histoire Juive en Égypte*, No. 1, 1947, pp. 88-90) took Heb. *thpnns* as a transcription of the Egyp. title *t'(-)h(mt)-p'(-)ns(w)*, 'Royal Wife'. W. F. Albright (*BASOR* 140, 1955, p. 32) postulated an Egyp. name *T'(-)h(nt) -p'(-)(or pr-) -ns(w)*, for which partial parallels exist.

K.A.K.

TAHTIM-HODSHI. In 2 Sa. 24:6 a place in the N of David's realm, near the frontier with the kingdom of Hamath, mentioned in his census record. On the basis of LXX, *MT 'eres tahtim hodsi* (AV 'the

land of Tahtim-hodshi') has been very plausibly emended to *qādēs 'eres ha-hittim* (RSV 'Kadesh in the land of the Hittites'). (*KADESH; *HITTITES.)

F.F.B.

TALE. The AV rendering of four Heb. words, each of which is thus translated once only. Three of them mean 'number': *mispār* (1 Ch. 9:28); *matkōneh*, 'measure', 'proper quantity' (Ex. 5:8); and *tōken*, 'a weight', 'measure' (Ex. 5:18).

In the fourth occurrence the Heb. word is *hegeh*, which could mean 'meditation' or 'utterance' and is found in the phrase 'as a tale that is told' (Ps. 90:9), a rendering much disputed. LXX and Vulg. read 'as a spider's web'. The literal translation is 'like a sigh', and this is retained by RSV. J.D.D.

TALEBEARING, SLANDER. These words translate, in the OT, expressions implying secrecy (Pr. 18:8, 'whisperer'), evil report (Nu. 14:36), the giving out (Ps. 50:20) or carrying (Pr. 11:13) of slander, or the (wrong) use of tongue (Ps. 101:5) or feet (2 Sa. 19:27). In the NT the words translate accusation (1 Tim. 3:11, *diabolos*), speaking against (2 Cor. 12:20; 1 Pet. 2:1, *katalalia*) or defaming (Rom. 3:8, *blasphēmō*). All talebearing, whether false (cf. Mt. 5:11) or not (cf. Dn. 3:8), malicious (Ps. 31:13; Ezk. 22:9) or foolish (Pr. 10:18; cf. 18:8 = 26:22; Mt. 12:36), especially between neighbours (Je. 9:4) or brothers (Jas. 4:11), is condemned (Lv. 19:16) and punished (Ps. 101:5) by God, and causes quarrelling (Pr. 26:20). Slander springs from the heart (Mk. 7:22) of the natural man (Rom. 1:30), excludes from God's presence (Ps. 15:3), and must be banished from the Christian community (2 Cor. 12:20; Eph. 4:31; Col. 3:8; 1 Pet. 2:1; cf. [of women] 1 Tim. 3:11; Tit. 2:3), which itself suffers slander (Mt. 5:11; cf. Rom. 3:8).

P.E.

TALITHA CUMI. 'Little girl, . . . arise.' Mk. 5:41 records these words spoken by Jesus in a Galilean Aramaic dialect to the daughter of Jairus, the Jewish leader. The word used for girl comes from a root meaning 'lamb' and is an affectionate term, like the Eng. 'lambkin'. MSS N, B, C read *koum* for *koumi*. This is due to the fact that the final vowel is not pronounced in some dialects.

R.A.H.G.

TALMAI. I. A descendant of 'Amaq, a 'giant' (*ANAK), resident in Hebron at the time of the Conquest (Nu. 13:22) but driven out by Caleb (Jos. 15:14). He is described as a Canaanite in Jdg. 1:10, which records his death.

2. The son of Ammihud and ruler of Geshur. David married his daughter Maacah, who bore Absalom (2 Sa. 3:3; 13:37; 1 Ch. 3:2). After the assassination of Amnon Absalom fled for refuge with Talmai in *Geshur (2 Sa. 13:37). The (Hurrian?) name Talmai occurs in texts from *Alalah and *Ugarit of the 14th century BC and as a later Nabataean name.

D.J.W.

TALMUD AND MIDRASH.

I. Talmud

The Talmud is composed of the *Mishnah*, the oral law which was in existence by the end of the 2nd

century AD, and was collected by Rabbi Judah the Prince; and the *Gemara*, the comments of the Rabbis from AD 200 to 500 on the Mishnah. The Talmud contains *Halakhah*, legal enactments and precepts with the elaborate discussions whereby decisions were reached; and *Haggadah*, non-legal interpretations. The Talmud is the source from which Jewish law is derived. It is binding for faith and life on orthodox Jews. Liberal Jews do not consider it authoritative, though interesting and venerable. It is important for our knowledge of how the Jews interpreted the OT. It also throws light on portions of the NT.

The position is taken that the law of Moses had to be adapted to changing conditions in Israel. The claim is made that the 'Great Synagogue' (120 men) had such authority, but there is no proof to support the assertion. Rabbi Akiba (c. AD 110-35) or an earlier scholar made a comprehensive collection of traditional laws. Rabbi Judah the Prince utilized this material along with other portions in his edition of the Mishnah. The earliest collection of Mishnah may be assigned to the time of the noted schools of Hillel and Shammai, who flourished at the time of the second Temple.

The Mishnah is divided on three principles: (1) subject-matter; (2) biblical order; and (3) artificial devices, such as numbers. The Mishnah is found in six orders or main divisions (called *s'darim*), which contain the material of sixty tractates. The main categories are subdivided into tractates, chapters and paragraphs. The first order (*Seeds*) treats of agricultural laws and religious duties relating to cultivation of the land, including commandments concerning the tribute of agricultural products to be given to the priest, the Levite, and the poor. The second division (*Feasts*) sets forth the various festivals of the religious calendar, including the observance of the sabbath, with the ceremonies and sacrifices to be brought on those days. The third order (*Women*) deals with the laws of marriage, divorce, the levirate marriage, adultery and regulations for the Nazirite.

The fourth division of the Mishnah (*Fines*) handles civil legislation, commercial transactions of different kinds, legal procedures and a collection of the ethical maxims of the Rabbis. *Sacred Things*, the fifth order of the Mishnah, presents legislation concerning sacrifices, the first-born, clean and unclean animals, together with a description of Herod's Temple. The sixth part of the Mishnah (*Purifications*) lays down the laws touching levitical cleanness and uncleanness, clean and unclean persons and objects, and purifications. In all these portions it was the aim of Rabbi Judah to differentiate between current and obsolete law, and between civil and religious practices.

The Mishnah is marked by brevity, clarity and comprehensiveness, and was employed as a textbook in rabbinical academies. After the editing of the Mishnah, it soon became the official standard of the Academies of Palestine (Tiberias, Caesarea, Sepphoris and Lydda) and Babylonia (Sura, Pumbedita and Nehardea), resulting in the Palestinian Talmud and the Babylonian Talmud respectively. Discussion in these seats of learning became the nucleus for the study of the law, which became known as the Talmud.

The greater part of the discussions in the Talmud is in dialogue form. The dialogue introduces questions and seeks after causes and origins.

There are numerous lengthy digressions into the Haggadah. This is actually a literary device to relieve the complexity and monotony of legal discussions. The extant Talmud is a commentary on only two-thirds of the Mishnah. It contains rejected as well as accepted decisions of the law. The observation of A. Darmester is amply justified: 'The Talmud, exclusive of the vast Rabbinic literature attached to it, represents the uninterrupted work of Judaism from Ezra to the sixth century of the common era, the resultant of all the living forces and of the whole religious activity of a nation. If we consider that it is the faithful mirror of the manners, the institutions, the knowledge of the Jews, in a word of the whole of their civilization in Judaea and Babylonia during the prolific centuries preceding and following the advent of Christianity, we shall understand the importance of a work, unique of its kind, in which a whole people has deposited its feelings, its beliefs, its soul' (*The Talmud*, p. 7).

II. Midrash

The term *midrash* derives from the Heb. root *dāraś*, 'to search out, investigate', that is, to discover a thought not seen on the surface. It has reference, then, to a didactic or homiletic exposition. It occurs twice in the OT, in 2 Ch. 13:22, where the 'story' (AV, RSV) or 'commentary' (RV) of the prophet Iddo is spoken of, and in 2 Ch. 24:27, where the 'story' (RV; RSV 'Commentary') of the book of the Kings is referred to. 'They were probably didactic developments of the historical narratives we possess, making use of these narratives to emphasize some religious truth; but nothing is known of them beyond their titles' (*HDB*, 1, p. 459).

Our term has received its widest usage in extra-biblical context. Midrash is sometimes used in contrast to Mishnah, in which case it denotes that branch of rabbinic learning which has especially to do with the rules of traditional law. It is impossible at this stage of our knowledge to state which is the older method of study, Midrash or Mishnah. (See G. F. Moore, *Judaism*, 1, pp. 150ff.) Suffice it to say, after the return of the Jews from Babylon with the activity of Ezra and his school on behalf of the law, exposition and commentary for the congregation became a necessity.

The oral form of these commentaries was later crystallized into writing. Since the greater portion of the important works is no longer extant in the original composition, the date of compilation is almost impossible to ascertain. Midrashic activity came to an end soon after the completion of the Babylonian Talmud. In time the Midrash was displaced by the disciplines of history, grammar and theology.

Midrashim are divided into expository and homiletical. The former comment on the text of Scripture according to their present order, or join to them tales, parables and the like (H. L. Strack, *Introduction to Talmud and Midrash*, pp. 201-205). The latter deal with individual texts, mostly from the beginnings of Scriptural lections. Midrashim exist on the Pentateuch, the Five Rolls, Lamentations, the Psalms, Proverbs and other books.

TALMUD AND MIDRASH

Talmud and Midrash, 1931; *JewE* (s.v. 'Midrash'); *EJ* (s.vv. 'Midrash', 'Mishnah', 'Talmud').

C.L.F.

TAMAR (Heb. *tāmār*, 'palm'). 1. The wife, first of Er the eldest son of Judah, then of *Onan (Gen. 38:6ff.). After Onan's death his father Judah, not recognizing Tamar, became by her the father of twins, Perez and Zerah. The story of Tamar reveals something of the marriage customs in early Israel. (*MARRIAGE, IV.)

2. Daughter of David, violated by Amnon her half-brother, and avenged by Absalom (2 Sa. 13:1ff.; 1 Ch. 3:9). 3. A daughter of Absalom (2 Sa. 14:27). 4. A city in SE Judah (Ezk. 47:19; 48:28), near the Dead Sea. For discussion of location, see *TADMOR.

J.D.D.

TAMMUZ. The deity whose cult was characterized by ritual offerings and lamentations. In a vision Ezekiel saw women sitting in the N gate of the *Temple in Jerusalem weeping for 'the Tammuz' (8:14). The Tammuz cult is little known and it is by no means certain that mourning for this god was made in the 4th month of the Babylonian *calendar which was named after him.

Tammuz was a pre-deluvian Sumerian shepherd and ruler who married the goddess *Ishtar. When he died she followed him into the underworld to try for his release and all fertility ceased on the earth. It was once thought that the death and resurrection of Tammuz was reflected in the disappearance of the vegetation in June and its revival in the following spring.

However, it now seems to be more likely from textual evidence that he did not rise (*JSS* 7, 1962, p. 153), or if he did it was for no more than for half the year when his place below was taken by the goddess Geshtinanna (*BASOR* 183, 1966, p. 31), or he was but a ghost coming with others for the funerary offerings prepared for him (*JSS* 11, 1966, pp. 10-15). Babylonian sources provide hymns and lamentations for the god but little about his worship. Tammuz seems to have had devotees at Air and Arad (*BASOR* 208, 1970, pp. 9-13) and later in *Phoenicia and Syria where a similar legend is told of Adonis (identified in *Egypt with Osiris) and Aphrodite whose temple at Byblos (Gebal) was a centre of the cult in Hellenistic times.

D.J.W.

TAPPUAH ('quince?'). 1. A village in the *Shephelah, E. of Azekah (Jos. 15:34, 53, Beth-tappuah), sometimes identified with Beit Netif, c. 18 km W of Bethlehem. The place-name may derive from a Calebite from Hebron (1 Ch. 2:43). 2. A town in Ephraim territory (Jos. 16:8) on the S border of Manasseh (Jos. 17:7-8), possibly mod. Sheikh Abu Zarad, c. 12 km S of Shechem. Its Canaanite king was defeated by Joshua (Jos. 12:17; *Test. Judah* 3:2; 5:6). If 2 Ki. 1:15:16 refers to this same place (so *RSV*, after LXX; cf. AV Tiphshah), it was later attacked by Menahem of Israel.

D.J.W.

TARGUMS. The Heb. word *targum* (plural *tar-*

gumim) denotes an Aram. translation or paraphrase of some part of the OT. Targums are extant for every book except Ezra, Nehemiah and Daniel.

I. Historical survey

Targums gradually came into being as the *synagogue evolved. After the Babylonian Exile, Aramaic came to predominate over Hebrew as the language of the Jews; in consequence it became customary for the reading of the Heb. scriptures to be followed by an oral rendering into Aramaic for the benefit of the worshippers. Perhaps cf. Ne. 8:8. No doubt such renderings were free and spontaneous at first, but they became more and more fixed and 'traditional' as time passed. The next stage was to commit such material to writing; the earliest extant targumic material is from the 2nd century BC, from Qumran.

In the 1st millennium AD Judaism had two chief centres, Babylonia and Palestine. It would seem that most if not all the traditional targumic material originated in Palestine; some of it was transmitted to Babylonia, where in due course Targum Onkelos for the Pentateuch and Targum Jonathan on the Prophets (see below) were given official status. (N.B. References to 'the Targum' without further definition are normally to Onkelos or Jonathan.) Onkelos is claimed by TB (*Megillah* 3. 1) to have been a 1st-century AD proselyte, while Jonathan ben Uzziel lived in the 1st century BC; but considerable doubt surrounds the appropriateness of both names (cf. M. McNamara, *Targum and Testament*, p. 174). Neither Targum is likely to be so early; but both were in final, standard form by the 5th century.

Meanwhile an independent targumic tradition developed inside Palestine, and some of it attained a semi-official status there. It is convenient to call this tradition 'the Palestinian Targum', in spite of its varied and rather disparate character. The dating of the various individual targums has been and remains much disputed; it is even more difficult to decide the date of origin of specific features within any targum.

II. General characteristics

At one extreme, Targum Onkelos is for the most part an accurate, word-for-word rendering of the Hebrew. In view of their synagogue purpose, however, it is not surprising that targums were used as a medium of interpretation and instruction. Even the more literal of them display interpretative traits: e.g. place-names are brought up to date, difficulties are smoothed over and obscurities clarified. In the more paraphrastic targums (e.g. Pseudo-Jonathan), the text is expanded to a marked degree. Not only can the whole sense of a verse or passage be altered, but a great deal of additional material ('midrash') may be incorporated. Thus a targum may be scarcely recognizable as a translation of the Heb. original (see, e.g., the translation of Is. 53 in J. F. Stenning, *The Targum of Isaiah*, 1949).

III. List of Targums

The targums follow the divisions of the Heb. Bible (*CANON OF THE OT, III).

a. The Law

(i) Targum Onkelos (or Onqelos): the official version of Babylonian Jews, among whom it was authoritative no later than the 4th century.

(ii) The Palestinian Targum is extant in three recensions. The only complete version is Neofiti I, probably of the 3rd century AD, although its first editor has claimed a pre-Christian date. Incomplete are the Jerusalem Targums I and II (often known as 'Pseudo-Jonathan', due to a mediaeval error, and 'Fragment Targum' respectively). The former is very complex, at times identical with Onkelos, elsewhere extremely paraphrastic. Fragments of the Palestinian Targum on the Pentateuch are also extant among the Cairo Genizah scrolls.

b. The Prophets

(i) Targum Jonathan ben Uzziel: the official Babylonian version, authoritative from the 4th century AD.

(ii) The Palestinian Targum has not survived, apart from fragments and occasional citations.

c. The Writings

Separate targums are extant on Job-Psalms, Proverbs, the Five Scrolls and Chronicles. These, which were never official, were later in origin than those on the Law and Prophets. From Qumran there are fragments of a much earlier and totally different targum on Job (4Q_{tg} Job; 11Q_{tg} Job).

IV. Value

a. Language

Targumic material offers some of the major evidence for the vernacular speech of ancient Palestine. It is therefore of special importance for the study of the *ipsissima verba* of Jesus and of the Aramaic substratum of the NT as a whole. Major problems remain, however, in view of uncertainties about the date of the various targums, and the problem of the existence of various dialects within Palestine.

b. Text

The targums offer an important witness to the text of the OT, comparable in value with the LXX, Peshitta and Vulgate (*TEXTS AND VERSIONS, I). The evidence is much more reliable in literal than in paraphrastic targumic material, for obvious reasons. Occasionally NT quotations from the OT are closer to the targums than to other Versions or to the MT.

c. New Testament background

The targums bear witness to Jewish modes of expression, exegetical methods and current interpretations in the early Christian centuries. Many of them are reflected, whether directly or in a more diffuse way, in the NT. The targums therefore often throw light on the NT, although their evidence is not to be used in isolation from all other rabbinic sources.

D.F.P.

TARSHISH. I. A grandson of Benjamin, son of Bilhan (I Ch. 7:10). 2. One of the seven notable princes of Ahasuerus, ruler of Persia (Est. 1:14).

3. The son of Javan, grandson of Noah (Gn. 10:4; I Ch. 1:7). The name Tarshish (*taršīš*), which occurs 4 times in AV as Tharshish (I Ki. 10:22 (twice); 22:48; I Ch. 7:10), refers both to the descendants and to the land.

Several of the references in the OT are concerned with ships and suggest that Tarshish bordered on the sea. Thus Jonah embarked on a ship sailing to Tarshish (Jon. 1:3; 4:2) from Joppa in order to flee to a distant land (Is. 66:19). The land was rich in such metals as silver (Je. 10:9), iron, tin, lead (Ezk. 27:12), which were exported to places like Joppa and Tyre (Ezk. 27). A land in the W Mediterranean where there are good deposits of mineral seems a likely identification, and many have thought of Tartessus in Spain. According to Herodotus (4. 152), Tartessus lay 'beyond the Pillars of Hercules', and Plinius and Strabo placed it in the Guadalquivir Valley. Certainly the mineral wealth of Spain attracted the Phoenicians, who founded colonies there. Interesting evidence comes from Sardinia, where monumental inscriptions erected by the Phoenicians in the 9th century BC bear the name Tarshish. W. F. Albright has suggested that the very word Tarshish suggests the idea of mining or smelting, and that in a sense any mineral-bearing land may be called Tarshish, although it would seem most likely that Spain is the land intended. An old Semitic root found in Akkad. *rašāšu* means 'to melt', 'to be smelted'. A derived noun *taršīšu* may be used to define a smelting-plant or refinery (Arab. *ršš*, 'to trickle', etc., of liquid). Hence any place where mining and smelting were carried on could be called Tarshish.

There is another possibility as to the site of Tarshish. According to I Ki. 10:22 Solomon had a fleet of ships of Tarshish that brought gold, silver, ivory, monkeys and peacocks to Ezion-geber on the Red Sea, and I Ki. 22:48 mentions that Jehoshaphat's ships of Tarshish sailed from Ezion-geber for Ophir. Further, 2 Ch. 20:36 says that these ships were made in Ezion-geber for sailing to Tarshish. These latter references appear to rule out any Mediterranean destination but point to a place along the Red Sea or in Africa. The expression "*ni taršīš*", navy of Tarshish or Tarshish fleet, may refer more generally to ships which carried smelted metal either to distant lands from Ezion-geber or to Phoenicia from the W Mediterranean. For the view that Tarshish vessels were deep seagoing vessels named after the port of Tarsus, or Gk. *tarsos*, 'oar' see *SHIPS AND BOATS.

These ships symbolized wealth and power. A vivid picture of the day of divine judgment was to portray the destruction of these large ships in that day (Ps. 48:7; Is. 2:16; 23:1, 14). The fact that Is. 2:16 compares the ships of Tarshish with 'the pleasant place' (RSV 'beautiful craft') suggests that whatever the original identification of Tarshish may have been, it became in literature and in the popular imagination a distant paradise from which all kinds of luxuries might be brought to such areas as Phoenicia and Israel.

TARSUS

TARSUS. A city on the Cilician plain, watered by the Cydnus, and some 16 km inland after the fashion of most cities on the Asia Minor coast. To judge from the extent of its remains, Tarsus must have housed a population of no less than half a million in Roman times. The lower Cydnus was navigable, and a port had been skilfully engineered. A major highway led N to the Cilician Gates, the famous pass through the Taurus range some 50 km distant.

Nothing is known of the foundation of Tarsus. It was probably a native Cilician town, penetrated at a very early date by Gk. colonists. The name of Mopsus is traditionally associated with Gk. settlement in Cilicia, and may indicate, as Ramsay believed (*The Cities of St. Paul*, 1907, pp. 116f.), early Ionian settlement. Gn. 10:4, 'The sons of Javan, Elishah, Tarshish . . . ' may support this theory. Josephus' identification of Tarshish with Tarsus in this passage does not preclude a different interpretation in other contexts. The antiquity of Gn. 10 is a graver objection, but the words may be evidence of Ionian intrusion of very remote date.

Tarsus appears sporadically in history. It is mentioned in the Black Obelisk of Shalmaneser as one of the cities overrun by the Assyrians in the middle of the 9th century BC. Median and Persian rule followed, with that typically loose organization which permitted the rule of a Cilician subject-king. Xenophon, passing through in 401 BC, found Tarsus the royal seat of one Syennesis, ruling in such capacity. This petty king may have been deposed for his association with Cyrus' revolt which brought Xenophon and the Ten Thousand to Cilicia, for Alexander, in 334 BC, found the area in the hands of a Persian satrap. The coinage of the period suggests a mingling of Greek and Oriental influence, and gives no indication of autonomy. Ramsay professes to trace a decline of Greek influence under the Persian rule.

Nor did the Seleucid kings, who ruled after Alexander, promote the influence of the Greeks in Tarsus. Their general policy, here as elsewhere, was to discourage the Greek urge to city autonomy and its attendant liberalism. It is possible that the shock of the Roman defeat of Antiochus the Great and the peace of 189 BC reversed the process. The settlement limited the Syrian domain to the Taurus, and Cilicia became a frontier region. The

fact seems to have prompted Syria to some reorganization, and the granting of a form of autonomy to Tarsus. The Tarsus of Paul, with its synthesis of East and West, Greek and Oriental, dates from this time.

A story in 2 Macc. 4:30-36 reveals the rapid growth of independence, and the reorganization of the city which a Tarsian protest won from Antiochus Epiphanes in 171 BC. The formation of a 'tribe' of Jewish citizens after the Alexandrian fashion may date from this time. (Antiochus' anti-semitism was against metropolitan recalcitrance.) Tarsian history in the rest of the 2nd century BC is obscure. The 1st century BC is better known. Roman penetration of Cilicia began in 104 BC, but Roman and Greek influence were both overwhelmed in Asia by the Oriental reaction under Mithridates (83 BC). Pompey's settlement in 65-64 BC reconstituted Cilicia as a 'sphere of duty', which is the basic meaning of 'province', rather than a geographical entity, and the governors, Cicero among them (51 BC), had a roving commission to pacify the pirate coast and hinterlands and to protect Roman interests.

In spite of Roman experimentation with the land at large, Tarsus flourished, played some part in the civil wars, was visited by Antony, and favoured by Augustus as the home town of Athenodorus, his teacher at Apollonia and life-long friend. The Roman citizenship of some Tarsian Jews dates probably from Pompey's settlement.

E.M.B.

TARTAK. The name of an idol or deity (Heb. *tartāq*) worshipped by the men of *Avva who were settled in Samaria after its capture by the Assyrians in 722 BC (2 Ki. 17:31). The identification must remain open until the location of Avva itself is sure. TB (*Sanhedrin* 63b) ascribes the form of an ass to Tartak, but this is probably conjecture, as is the suggestion that the deity Atargatis is intended.

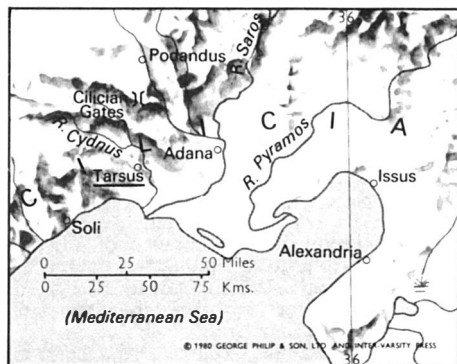

D.J.W.

TARTAN. The title of a high Assyrian officer. Two are mentioned in the OT. The first was sent by Sargon II to besiege and capture Ashdod in 711 BC (Is. 20:1, AV). The second came from Sennacherib with other officials (*RABSARIS, *RABSHAKEH) and a military force to demand the surrender of Jerusalem in 701 BC (2 Ki. 18:17). In neither case is the personal name of the officer given. The Assy. *turtanu* is listed in the Assyrian Eponym texts as the highest official after the king. He was also titular head of the province of which Harran was the capital.

D.J.W.

TATTENAI (Heb. *tatt'nai*; AV 'Tatnai'; cf. Gk. *Sisimnes*, 1 Esdras 6:3; 7:1, RSV). The Persian governor, successor of Rehum, of the Samaria district during the reign of Darius Hystaspes and Zerubbabel (Ezr. 5:3, 6; 6:6, 13). He investigated and reported in a sympathetic manner on complaints made from Jerusalem against Jews in his district. He is called 'Tattanni, of the District across the River' (as Ezr. 5:6) in a cuneiform inscription from Babylon, dated 5 June 502 BC (*JNES* 3, 1944, p. 46), and appears to be under the satrap of Babylon Ushtani at this time.

D.J.W.

Tarsus, a city of Cilicia.

TAVERNS, THREE (Lat. *Tres Tabernae*). This was a station about 50 km from Rome on the Via Appia, which led SE from the city. It is mentioned by Cicero in his correspondence with Atticus (2. 10). When the apostle Paul and his company were on their way from Puteoli to Rome, Christians came out of the city and met him here (Acts 28:15).

B.F.C.A.

TAX COLLECTOR. The Gk. word *telōnēs* (AV 'publican') means a collector of tax or custom on behalf of the Romans, employed by a tax farmer or contractor. As early as 212 bc there existed in Rome a class of men (*ordo publicanorum*, Livy, 25. 3. 8-19) who undertook state contracts of various kinds. They were closely associated with, and supported by, the equestrian order; and at a later date were active in a number of provinces (Cicero, *In Verrem*, 2. 3. 11, §§ 27-28), where their work included the collection of tithes and various indirect taxes. The system was very open to abuse, and the *publicani* seem to have been prone to extortion and malpractice from the very beginning, so that while the grossest excesses were restrained by the government, and cases sometimes brought to justice, a generally bad reputation has come down to us. Cicero considered such occupations as that of customs officer vulgar on account of the hatred they incurred (*de Officiis*, 1. 42, § 150) and Livy records the opinion, expressed in 167 bc, that where there is a *publicanus* allies have not liberty (45. 18. 3-4). The central contractors were often foreign to the provinces whose taxes they farmed, though there was nothing to prevent their being natives, and they might employ native sub-contractors. (The expression *architelōnēs* in Lk. 19:2 seems to imply that Zacchaeus was the contractor for the whole of the taxes of Jericho and had collectors under him—*SB*, 2, p. 249.) But the collectors were usually from the native population, for they needed to know local people and their ways to avoid being deceived. Their generally extortionate practices (*cf.* what amounts to an admission in the words of Zacchaeus, Lk. 19:8, and the conditions implied by the counsel of John the Baptist, Lk. 3:13) made them an especially despised and hated class, so that our Lord could refer to them as typical of a selfish attitude (Mt. 5:46). For the strict Jew, however, this quite natural attitude of hatred was aggravated and altered in character by the religious consideration that the *telōnēs* was regarded as ceremonially unclean, on account of his continual contact with Gentiles, and his need to work on the sabbath. This uncleanness, and the rabbis' teaching that their pupils should not eat with such persons, account for the attitude evidenced by the expressions *tax collectors and sinners* (Mt. 9:10f.; 11:19; Mk. 2:15f.; Lk. 5:30; 7:34; 15:1) and *tax collectors and harlots* (Mt. 21:31), and for the questions of Mt. 9:10f.; 11:19; Mk. 2:15f.; Lk. 5:29f. (*cf.* *SB*, 1, pp. 498f.), and indicates the intention of the command of Mt. 18:17. This also lends point to both the negative and positive aspects of the denunciation of the chief priests and elders in Mt. 21:31b, to the statement of Mt. 11:19; Lk. 7:34, and to the story of the Pharisee and the tax collector, Lk. 18:10ff.

TAXES. Regular payments extracted from a state and its provinces by its own rulers are taxes, distinct from wealth received from conquered states which is *tribute.

In Israel's infancy the only taxes required were to maintain the tabernacle and its ministers, a practice renewed after the Exile (Dt. 18:1-5; 14:22-27, etc.; Ne. 10:32-39; *ΤΙΤΗΝΕΣ). With the Monarchy came heavier demands as listed by Samuel (1 Sa. 8:15, 17), comparable with the habits of all ancient kings. Occasionally there were exceptional levies to pay tribute to foreign conquerors (2 Ki. 15:19-20; 23:35).

In NT times Roman provinces paid regular taxes to Caesar in Roman coin, as Mt. 22:17; Mk. 12:14 are aware, whereas Herodian rulers collected dues in their realms (Mt. 17:24-27). In these passages Mt. and Mk. used Gk. *kēnsos*, borrowed from Lat. *censum*, 'poll-tax', while Lk. has the more general *phoros*, 'tribute, tax' (Lk. 20:22). (*CENSUS; *TAX COLLECTOR.)

TEKOA. 1. A town in Judah, about 10 km S of Bethlehem, the home of Amos (Am. 1:1). When Joab 'perceived that the king's heart went to Absalom' he sent to Tekoa for a wise woman who might reconcile David and Absalom (2 Sa. 14:1f.). Rehoboam fortified the town (2 Ch. 11:6). Later, when Jehoshaphat was faced by Ammonites and Moabites, he consulted with the people in 'the wilderness of Tekoa' (2 Ch. 20:20). Jeremiah called for the blowing of a trumpet in Tekoa in the face of the advancing enemy (Je. 6:1). After the Exile the town was re-inhabited (Ne. 3:5, 27). In Maccabean and Roman times the place was known, and the name lingers today as Khirbet Taqū'a, a ruined village of some 5 acres, which has seen little excavation. Tombs of the Iron Age have been found nearby.

2. A descendant of Hezron, the grandson of Judah, belonging to the general Calebite stock (1 Ch. 2:24; 4:5).

BIBLIOGRAPHY. D. Baly, *Geography of the Bible*², 1974, pp. 89, 182; J. J. Davis, *Bulletin of the Near East Archaeological Society* 4, 1974, pp. 27-49; C. E. DeVries, *ISBE* 4, p. 746. J.A.T.

TELAIM. The place where Saul gathered his army before his attack on the Amalekites (1 Sa. 15:4). The incident described in 1 Sa. 15, in which Saul disobeyed God's word given by the prophet Samuel, provoked the severe rebuke of 1 Sa. 15:22-23, 'to obey is better than sacrifice'. Telaim (Heb. *t'la'im*) is identified by some with Telem (Jos. 15:24), in the Negeb. Some mss allow of an occurrence of the word in 1 Sa. 27:8, and read 'they of Telaim' for 'of old'. J.A.T.

TELASSAR. A place inhabited by the 'children (sons) of Eden' and cited by Sennacherib's messengers to Hezekiah as an example of a town des-

TELESSAR

troyed in previous Assyrian attacks (as also *GOZAN, *HARAN, *REZEPH). The name *r'laššār* (2 Ki. 19:12) or *r'laššār* (Is. 37:12) represents Tell Assur ('mound of Assur'). The *b'nē 'eden* probably lived in the area between the Euphrates and Balih rivers, called in Assyrian Bit-Adini (Beth-Eden), but no Tell-Assur has been found in this region, although the area does suit the context. A Til-Aššur named in the annals of Tiglath-pileser III and Esarhaddon appears to lie near the Assyrian border with Elam. The common form of the place-name means that it may not yet be identified. There is no need to emend to Tell Bassar (Basher), SE of Raqqa on the Euphrates (as L. Grollenberg, *Atlas of the Bible*, 1956, p. 164).
D.J.W.

TEMA. The name (Heb. *tēmā*) of the son and descendants of Ishmael (Gn. 25:15; 1 Ch. 1:30) and of the district they inhabited (Jb. 6:19). It is mentioned, with Dedan and Buz, as a remote place (Je. 25:23) and as an oasis in the desert on a main trade route through Arabia (Is. 21:14). Aramaic stelae of the 5th century BC were found in the ruins of Taima' about 400 km NNW of Medina in NW Arabia. The city (Bab. *Tema'*) is also named in documents recording its occupation by Nabonidus during his exile (*AS* 8, 1958, p. 80; *ANET*³, p. 562).
D.J.W.

TEMAN. The grandson of Esau (Gn. 36:11; 1 Ch. 1:36), who may have given his name to the district, town or tribe of that name in N Edom (Je. 49:20; Ezk. 25:13; Am. 1:12). The inhabitants were renowned for wisdom (Je. 49:7; Ob. 8f.). Eliphaz the Temanite was one of Job's comforters (Jb. 2:11, etc.). A chief (*'allūp*) of Teman (*tēmān*) is named among the chiefs of Edom (Gn. 36:15, 42; 1 Ch. 1:53), and Husham was one of the early rulers (Gn. 36:34). The prophets include Teman among Edomite towns to be destroyed (Je. 49:20; Ezk. 25:13; Am. 1:12; Ob. 9). Habakkuk in his great vision saw God the Holy One coming from Teman (Hab. 3:3).

N. Glueck (*The Other Side of Jordan*, 1940, pp. 25–26) identified it with Tawilān, since excavated to show a large Edomite town of the 8th to 6th centuries BC (*RB* 76, 1969, pp. 386ff.). R. de Vaux argued that it denoted S Edom (*RB* 77, 1969, pp. 379–385).
J.A.T.

TEMPLE.

I. Historical background

Some of the earliest structures built by man were temples or shrines where he could worship his god in his 'house' (see K. M. Kenyon, *Archaeology in the Holy Land*⁴ pp. 24, 33, for the Mesolithic and Neolithic shrines at Jericho). The Tower of *Babel is the first structure mentioned in the Bible which implies the existence of a temple (Gn. 11:4). Although this seems to have been intended as a place where man might meet God, it symbolized the self-confidence of man attempting to climb up to heaven, and for such pride it was doomed.

In Mesopotamia, which Abraham left, each city had a temple dedicated to its patron deity. The god was looked upon as the owner of the land, and if it was not blessed by him it would be unproductive,

resulting in poor revenues for his temple. The local king or ruler acted as steward for the god.

There was no purpose in the semi-nomadic Patriarchs building one particular shrine for their God. He revealed himself as and where he pleased. Such occasions were sometimes the scene of a sacrificial *altar. They might be commemorated by a *pillar (Gn. 28:22).

After Israel had grown into nationhood a central shrine became a necessity, as a gathering-point for all the people, a symbol of their unity in the worship of their God. This need was supplied by the *tabernacle during the trek through the wilderness and by recognized shrines during the period of the judges (e.g. Shechem, Jos. 8:30ff.; 24:1ff.; Shiloh, 1 Sa. 1:3).

The nations of Canaan had their own temples, simply called 'Dagon's house' or the house of whoever the patron deity was (Heb. *bēt dāgōn*, 1 Sa. 5:5; *bēt 'astārōt*, 1 Sa. 31:10; cf. *bēt yhw*, Ex. 23:19). A variety have been uncovered at Bethshan, Hazor and other sites.

The lack of a shrine of Yahweh appeared invidious when David had consolidated his power and built a permanent palace for himself. The king said, 'I dwell in a house of cedar, but the ark of God dwells in a tent' (2 Sa. 7:2). It was not given to him to build the Temple because he was stained with the blood of his enemies, but he collected materials, gathered treasure and bought the site (1 Ch. 22:8, 3; 2 Sa. 24:18–25). Solomon began the actual construction in his 4th year, and the Temple was completed 7 years later (1 Ki. 6:37–38).

II. Solomon's Temple

a. The site

That it stood within the area now called 'Haram esh-Sherif' at the E side of the 'Old City' of *Jerusalem is undisputed. The precise location within the vast enclosure is less certain. The highest part of the rock (now covered by the building known as 'The Dome of the Rock') may have been the site of the innermost sanctuary or of the altar of burnt-offering outside (2 Ch. 3:1). This rock was presumably part of the threshing-floor of *Araunah, bought by David for a sum given as 50 silver shekels (2 Sa. 24:24) or 600 gold shekels (1 Ch. 21:25).

Nothing of Solomon's structure remains above ground, nor were any definite traces found in the diggings sponsored by the Palestine Exploration Fund. Indeed, it is likely that the work of levelling the rock and building up the great retaining walls for the courtyard of Herod's Temple obliterated earlier constructions.

b. Description

The passages 1 Ki. 6–7 and 2 Ch. 3–4 must be the bases of any reconstruction of Solomon's Temple. These accounts, while detailed, do not cover every feature, are not entirely understood and contain some apparent discrepancies (e.g. 1 Ki. 6:2 and 16f.). They may be supplemented by incidental references and by the description of Ezekiel's Temple, an elaborated version of Solomon's building (Ezk. 40–43). The Temple proper was an oblong, orientated E and W. It is reasonable to assume that, like Ezekiel's Temple, it stood on a platform (cf. Ezk. 41:8). No dimensions are given for the surrounding area. Again following Ezekiel's plan, it seems that there were two courtyards, inner and outer; a sug-

gestion supported by 1 Ki. 6:36; 7:12; 2 Ki. 23:12; 2 Ch. 4:9.

The bronze altar for burnt-offerings stood in the inner court (1 Ki. 8:22, 64; 9:25). It was 20 cubits square and 10 cubits high (2 Ch. 4:1). Between this and the porch was the bronze laver holding water for ritual washings (AV 'molten' or 'brazen sea', 1 Ki. 7:23–26). This great basin, 10 cubits in diameter, rested upon four groups of four bronze oxen orientated to the four compass-points. These were removed by Ahaz (2 Ki. 16:17).

At the dedication of the Temple, Solomon stood on a bronze 'scaffold' (2 Ch. 6:12f., Heb. *kīyyōr*, the word used for 'laver' elsewhere, Ex. 30:18, etc.; here it may denote an inverted basin), which has parallels in Syr. and Egyp. sculptures and possibly in Akkadian (see W. F. Albright, *Archaeology and the Religion of Israel*, 1953, pp. 152–154).

A flight of steps would have led up from the inner court to the *porch (Heb. *ūlām*). The entrance was flanked by two pillars, *Jachin and Boaz, with elaborately ornamented capitals. Their purpose remains indeterminate; they were not part of the structure. Gates probably closed the passage (cf. Ezk. 40:48).

The porch was 10 cubits long and 20 cubits wide (on the length of the cubit, see *WEIGHTS AND MEASURES). Its height is given as 120 cubits (2 Ch. 3:4), but this is surely erroneous, as the remainder of the building was only 30 cubits high. W of the porch was the large chamber in which the ordinary rituals were performed. This 'holy place' (AV 'temple'; Heb. *hēkāl*, a word derived through Canaanite from Sumerian *é.gal*, 'great house') was 40 cubits long, 20 in breadth, and 30 high. It was shut off from the porch by double doors of cypress wood, each composed of two leaves. The doorposts were 'a fourth' (Heb. *m'zūzōl mē'ēl r'bi'it*, 1 Ki. 6:33; rsv 'in the form of a square' follows LXX); possibly the doorway was one-quarter of the width of the dividing wall (see A. R. Millard, *Eretz Israel* 20, 1989, pp. 135–139).

Latticed windows near the ceiling lighted the holy place (1 Ki. 6:4). Here stood the golden incense-altar, the table for *showbread, and five pairs of *lampstands, together with the instruments of *sacrifice. The double doors of cypress leading to the inner sanctuary (Heb. *d'bir*, 'innermost place'; AV 'oracle' is an unlikely rendering) were rarely opened, probably only for the high priest at the atonement ceremony. The doorposts and lintel are said to have been a fifth (Heb. *hā'ayil m'zūzōl h'miššit*, 1 Ki. 6:31). As with the *hēkāl*, this may be explained as one-fifth of the dividing wall, 4 cubits.

The inner sanctuary was a perfect cube of 20 cubits. Although it might be expected that the floor was raised above the *hēkāl*, there is no hint of this. Within stood two wooden figures side by side, 10 cubits high. Two of their wings met in the centre above the *ark of the covenant, and the other wing of each touched the N and S walls respectively (1 Ki. 6:23–28; *CHERUBIM). In this most holy place the presence of God was shown by a cloud (1 Ki. 8:10f.).

Each room was panelled with cedar wood and the floor planked with cypress (or pine, Heb. *b'rōš*; *TREES). The walls and doors were carved with flowers, palm trees and cherubim, and overlaid with gold in the way approved for ancient temples, as inscriptions testify. No stonework was visible.

The outer walls of the inner sanctuary and the holy place were built with two offsets of 1 cubit to

support the joists of three storeys of small chambers all around. Thus the ground-floor chambers were 5 cubits wide, those above 6, and the uppermost 7. A door in the S side gave access to a spiral staircase serving the upper floors. These rooms doubtless housed various stores and vestments, and offerings of goods and money, and maybe provided accommodation for the priests in course (see K. A. Kitchen, *Eretz Israel* 20, 1989, pp. 107–112).

Much has been made of the proximity of the royal palace to the Temple and the inference drawn that it was the 'Chapel Royal'. While admitting such a relationship (emphasized by the passage connecting the two buildings, 2 Ki. 16:18), it should be remembered that it was appropriate for the viceroy of Yahweh to reside near to the house of God; entry was not restricted to the king.

Solomon hired a Tyrian to take charge of the work and used Phoenician craftsmen (1 Ki. 5:10, 18; 7:13–14). It is not surprising to find parallels to the design of the Temple and its decoration in surviving examples of Phoenician or Canaanite handiwork. The ground plan is very similar to that of a small shrine of the 9th century BC excavated at Tell Tainat on the Orontes. This shows the three rooms, an altar in the innermost and two columns in the porch, but supporting the roof (for full report see R. C. Haines, *Excavations in the Plain of Antioch*, 2, 1971). At Hazor a Late Bronze Age shrine is also tripartite and was constructed with timbers between the stone-courses (Y. Yadin, *Hazor*, 1972, pp. 89–91; cf. 1 Ki. 5:18; 6:36). Numerous carved ivory panels (from the walls or furnishings of palaces) found throughout the ancient East are Phoenician work, often with Egyp. themes. Among the common subjects are flowers, palms and winged sphinxes, undoubtedly comparable with the carvings in the Temple. As with the Temple's panelling, these carvings were overlaid with gold and set with coloured stones.

c. Later history

Ancient temples generally served as state treasuries, emptied to pay tribute or filled and decorated with booty according to the power of the land. If, for some reason, a ruler paid little attention to the temple it would lose its revenue and rapidly fall into disrepair (cf. 2 Ki. 12:4–15). Solomon's Temple was no exception. The treasures which he had gathered in the Temple were raided in the reign of his son, Rehoboam, by Shishak of Egypt (1 Ki. 14:26). Later kings, including even Hezekiah, who had adorned the Temple (2 Ki. 18:15f.), used the treasure to purchase allies (Asa, 1 Ki. 15:18) or to pay tribute and buy off an invader (Ahaz, 2 Ki. 16:8). The idolatrous kings added the appurtenances of a Canaanite shrine, including the symbols of pagan deities (2 Ki. 21:4; 23:1–12), while Ahaz introduced an altar of foreign type, displacing the laver, at the time of his submission to Tiglath-pileser III (2 Ki. 16:10–17). By the time of Josiah (c. 640 BC), 3 centuries after its construction, the Temple was in need of considerable repair, which had to be financed by the contributions of the worshippers (2 Ki. 22:4). In 587 BC it was looted by Nebuchadrezzar and sacked (2 Ki. 25:9, 13–17). Even after the destruction men came to sacrifice there (Je. 41:5).

III. Ezekiel's Temple

The exiles were heartened in their grief (Ps. 137) by the vision of a new Temple granted to Ezekiel

TEMPLE

(Ezk. 40–43, c. 571 BC). More details are given of this than of Solomon's structure, although it was never built. The actual shrine was different in little other than its size (porch 20 cubits wide, 12 long; holy place 20 cubits wide and 40 long; inner sanctuary 20 cubits each way). The walls were again panelled and carved with palms and cherubim. The building was set on a platform mounted by ten steps which were flanked by two bronze pillars. Three tiers of rooms enfolded the inner sanctuary and the holy place. The vision gives a description of the surrounding area, something lacking from the account of the first Temple. An area of 500 cubits square was enclosed by a wall pierced by a single gateway on each of the N, E and S sides. Three more gates, opposite the former, led to an inner courtyard, where the altar of sacrifice stood before the shrine. All these gates were well fortified to prevent the entry of any but Israelites. There were various buildings in the courtyards for storage and for the use of the priests.

IV. The Second Temple

This stood for almost 500 years, longer than either the first or Herod's Temple. Yet it is only vaguely known from incidental references. The exiles who returned (c. 537 BC) took with them the vessels looted by Nebuchadrezzar, and the authorization of Cyrus for the rebuilding of the Temple. Apparently the site was cleared of rubble, an altar built and the laying of the foundations commenced (Ezr. 1; 3:2–3, 8–10). A stretch of walling on the E side of the present enclosure, abutting the Herodian stonework, may be a part of these foundations. When eventually finished it was 60 cubits long and 60 cubits high, but even the foundations showed that it would be inferior to Solomon's Temple (Ezr. 3:12). Around the shrine were store-places and priests' rooms. From some of these Nehemiah expelled the Ammonite Tobiah (Ne. 13:4–9). 1 Macc. 1:21; 4:49–51 give information about the furnishings. The ark had disappeared at the time of the Exile and was never recovered or replaced. Instead of Solomon's ten lampstands, one seven-branched candelabrum stood in the holy place with the table for showbread and the incense altar. These were taken by Antiochus IV Epiphanes (c. 175–163 BC), who set up the 'desolating sacrilege' (a pagan altar or statue) on 15 December 167 BC (1 Macc. 1:54). The triumphant *Maccabees cleansed the Temple from this pollution and replaced the furniture late in 164 BC (1 Macc. 4:36–59). They also turned the enclosure into a fortress so strong that it resisted the siege of Pompey for 3 months (63 BC).

V. Herod's Temple

The building of Herod's Temple, commenced early in 19 BC, was an attempt to reconcile the Jews to their Idumaean king rather than to glorify God. Great care was taken to respect the sacred area during the work, even to the training of 1,000 priests as masons to build the shrine. Although the main structure was finished within 10 years (c. 9 BC), work continued until AD 64.

As a basis for the Temple buildings and to provide a gathering-place, an area about 450 m from N to S and about 300 m from E to W was made level. In places the rock surface was cut away, but a large part was built up with rubble and the whole enclosed by a wall of massive stone blocks (normally about 1m high and up to 5 m long; cf. Mk.

13:1). At the SE corner, overlooking the Kidron ravine, the inner courtyard was about 45 m above the rock. Perhaps the parapet above this corner was the pinnacle of the Temple (Mt. 4:5). Stretches of this wall still stand. One gateway pierced the N wall (Tadi Gate), but was apparently never used, and one led through the wall on the E (under the present Golden Gate). Traces of the two Herodian gates on the S side are still visible beneath the Mosque of el-Aqsa. Ramps led upwards from these to the level of the court. Four gates faced the city on the W. They were approached by viaducts across the Tyropoeon valley (*JERUSALEM). At the NW corner the fortress of Antonia dominated the enclosure. This was the residence of the procurators when in Jerusalem, and its garrison was always at hand to subdue any unrest in the Temple (cf. Lk. 13:1; Acts 21:31–35). The high priest's robes were stored therein as a token of subjection.

A portico surrounded the outer court. Josephus describes the South or Royal Porch as having four rows of columns (*Ant.* 15. 410–416). The porticoes of the other sides each had two rows. Solomon's Porch stretched along the E side (Jn. 10:23; Acts 3:11; 5:12). In these colonnades the scribes held their schools and debates (cf. Lk. 2:46; 19:47; Mk. 11:27) and the merchants and money-changers had their stalls (Jn. 2:14–16; Lk. 19:45–46). The inner area was raised slightly above the court of the Gentiles and surrounded by a balustrade. Notices in Gk. and Lat. warned that no responsibility could be taken for the probable death of any Gentile who ventured within. Two of these inscriptions have been found. Four gates gave access on the N and S sides and one on the E. This last had doors of Corinthian bronze-work and may be the Beautiful Gate of Acts 3:2.

The first court inside (Women's Court) contained the chests for gifts towards the expenses of the services (Mk. 12:41–44). Men were allowed into the Court of Israel, raised above the Court of the Women, and at the time of the Feast of Tabernacles could enter the innermost (Priests') Court to circumambulate the *altar. This was built of unhewn stone, 22 cubits away from the porch (cf. Mt. 23:35). The plan of the shrine copied Solomon's. The porch was 100 cubits wide and 100 cubits high. A doorway 20 cubits wide and 40 high gave entry, and one half that size led into the holy place. This was 40 cubits long and 20 cubits wide. A curtain divided the holy place from the inner sanctuary (the veil, Mt. 27:51; Mk. 15:38; cf. 2 Ch. 3:14). The inner sanctuary was 20 cubits square and, like the holy place, 40 cubits high. An empty room above the holy place and the inner sanctuary rose to the height of the porch, 100 cubits, thus making a level roof. Three storeys of chambers surrounded the N, S and W sides to a height of 40 cubits. Golden spikes were fixed on the roof to prevent birds from perching there.

Masonry uncovered since 1967 reveals the magnificence of the structure in beautifully cut cream stone with elaborately carved vaults. The building was barely finished (AD 64) before Roman soldiers destroyed it (AD 70). The golden candelabrum, the table of showbread and other objects were carried in triumph to Rome, as depicted on the Arch of Titus.

For organization of the Temple, see *Priests and Levites.

BIBLIOGRAPHY. The best summary is A. Parrot,

The Temple of Jerusalem, 1957, with a comprehensive bibliography. For a detailed survey, see L. H. Vincent, *Jérusalem de l'Ancien Testament*, 1-2, 1954; M. VI. 'Temple' in the New Testament

Two Gk. words, *hieron* and *naos*, are translated 'temple'. The former refers to the complex of buildings which comprised the Temple of Jerusalem, the latter refers more specifically to the sanctuary. The term preferred by the NT writers to describe the church as the temple of God is *naos*, but not too much should be made of the distinction between *naos* and *hieron*. In Mt. 17.5 *naos* is almost certainly to be understood in the sense of *hieron*, otherwise we have the formidable difficulty of explaining how Judas penetrated the area which was closed to all except priests. The statement in Jn. 2:20, that 46 years were spent in building the *naos*, must have more than the sanctuary in mind. The use of *naos* as a synonym for *hieron* is also present in Herodotus (2. 170) and Jos. (*BJ* 5, 207-211).

With the literal use of 'temple' in the NT, cf. 'house' (*oikos*) and 'place' (*topos*). For a description of the Temple of Jerusalem in the time of Jesus, see V, above. The metaphorical use of 'temple' should be compared with the metaphorical use of 'house', 'building' (*oikodome*), 'tent' (*skene*), 'habitation' (*katoiketerion*; NRSV 'dwelling place').

a. 'Temple' in the Gospels

The gospels reflect two opposing attitudes on the part of Jesus to the Temple of Jerusalem. On the one hand, Jesus respected the temple; on the other hand, he attached relatively little importance to it. Thus, he called it the 'house of God' (Mt. 12:4; cf. Jn. 2:16) and said that everything was sanctified by God who dwelt in it (Mt. 23:17ff.). Concern for the abuses of the temple made him cleanse it (Mk. 11:1ff. and parallels) and thought of the impending doom of Jerusalem caused him to weep (Lk. 19:41ff. cf. Mt. 23:37f.; parallels). In contrast are those passages in which Jesus relegated the temple to a subordinate position. It had become a cover for the nation's spiritual barrenness (Mk. 11:12-26 and parallels). Soon it would perish, for a terrible desecration would render it unfit to exist (Mk. 13:1f., 14ff.). Climatically, the death of Jesus caused the veil of the temple to be rent in two (Mk. 14:38 and parallels). See also Mk. 14:57f., 15:29f. and parallels. These differing attitudes are not, however, without explanation.

At the beginning of his ministry Jesus addressed himself to the Jews and summoned all Israel to repentance. (Mk. 1:14ff.). In spite of mounting opposition, we find him appealing to Jerusalem (Mk. 11:1ff. and parallels). The Temple was cleansed with a view to reforming the existing order (11:15ff. and parallels). But the implications of this action (Mal. 3:1ff.; cf. *Psalms of Solomon* 17:32ff.; Mk. 11:27ff.) engendered still greater hostility on the part of the religious leaders, and Judaism, persistently unreformable, was in the end judged as unworthy of the divine presence (Mk.

12:1-12). So Jesus, who began by venerating the Temple, finally announced that his rejection and death would issue in its destruction. The accusation produced at the trial which asserted that Jesus had taught, 'I will destroy this temple that is made with hands, and in three days I will build another not made with hands' (Mk. 14:58; cf. 15:29) would therefore be a fitting peroration to the appeal of our Lord. Mark attributes the saying, however, to false witnesses, and what constituted the falsity of the witness is a matter of conjecture among scholars. It is probably wisest to understand the charge as an unscrupulous combination of the prediction of Jesus that the Temple of Jerusalem would be destroyed (Mk. 13:2 and parallels) and the logion that the Son of man would be destroyed and rise again on the third day (Mk. 8:31; 9:31; 10:34 and parallels). That is to say, the falsity lay in misrepresentation of what Jesus actually had taught. One reason why Mark did not trouble to correct the misrepresentation may be due to the fact that the accusation was true in a deeper sense than the witnesses had in mind. The death of Jesus did in fact result in the supersession of the Temple of Jerusalem, and his resurrection put another in its place. The new temple was the eschatological congregation of Jesus Messiah (Mt. 18:20; cf. Jn. 14:23). Luke and John, therefore, made no reference to the false witness because when they wrote their Gospels the accusation was no longer seen to be groundless.

b. 'Temple' in the Acts of the Apostles

Some time elapsed, however, before the full ramifications of the work of Christ became apparent, and in the Acts we find the apostles continuing to worship at the Temple of Jerusalem (Acts 2:46; 3:1ff.; 5:12, 20f., 42; cf. Lk. 24:52). It appears that the Hellenistic-Jewish party represented by Stephen was the first to discover that belief in Jesus as Messiah meant the abrogation of the order symbolized by the Jerusalem Temple (Acts 6:11ff.). Accordingly, Stephen's defence became an attack on the Temple, or, more correctly, on the attitude of mind to which the Temple gave rise (Acts 7). But whether it is justifiable to find in Stephen's denunciation of the Temple a hint of the new temple made without hands, as some commentators do, is not at all certain. The 'tabernacle of David' of Am. 9:11 is used in Acts 15:13-18, but it is doubtful if this is hinting that the church is God's new temple, even though the same OT text is spiritualized at CDC 7.16, cf. 4Q Florilegium 1:11-12. But the use of Am. 9:11 in the eschatology of the Covenanters of Qumran to support their novel conception of a spiritual temple (CDC 3. 9) permits us to see here an adumbration of the doctrine of the church as God's new temple which is so common a feature of the Epistles.

c. 'Temple' in the Epistles

The doctrine of the church as the realization of the eschatological temple of OT and intertestamental writings is most prominent in the epistles of Paul. See 1 Cor. 3:16-17; 6:19; 2 Cor. 6:16-7:1; Eph. 2:19-22. The appeal to prophecy is particularly strong in the case of 2 Cor. 6:16ff., where we have an OT couplet (Lv. 26:12; Ezk. 37:27) which was already in use in Jewish eschatology on the Messianic temple (*Jubilees* 1:17). Also characteristic of the temple image in 1 and 2 Cor. is its hortatory and admonitory application. Since Chris-

TEMPLE

tians are the realization of the long-cherished hope of the glorious temple, they ought to live holy lives (2 Cor. 7:1; cf. 1 Cor. 6:18ff.). Unity is likewise enjoined upon them. Since God is one, there is only one habitation in which he can dwell. Schism is tantamount to profanation of the temple, and merits the same terrible penalty of death (1 Cor. 3:5-17). In Eph. the figure of the temple is employed in the interests of doctrinal instruction. Uppermost in the mind of the writer is the interracial character of the church. The language of the context of 2:19-22 makes it plain that the apostle borrowed liberally from the OT hope of the ingathering of Israel and the nations to the eschatological temple at Jerusalem. For example, the words 'far' and 'near' of vv. 13 and 17 (cf. Is. 57:19; Dn. 9:7) were rabbinic technical terms for the Gentiles and the Jews (*Numbers Rabbah* 8:4). Similarly, the 'peace' mentioned in vv. 14 and 17 is an allusion to the eschatological peace which was to prevail when Israel and the nations were united in the one cult at Zion (Is. 2:2ff.; Mi. 4:1ff.; *Enoch* 90:29ff.). Paul undoubtedly regarded the fruits of his Gentile mission as the fulfilment of Jewish faith at its widest and most generous expression. He spiritualized the ancient hope of a reunited mankind, and represented Jews and Gentiles as the two walls of one building, joined by and resting upon Christ, the foremost cornerstone (Eph. 2:19-22). The statement that the building 'grows' (*auxein*) into a 'temple' introduces a different figure, viz. that of the body, and reveals a certain fusion of images. 'Temple' and 'body' are largely coterminous ideas of the church. Note the juxtaposition of the two conceptions in Eph. 4:12, 16.

Parallels for Paul's use of the metaphor in 1 and 2 Cor. are sometimes sought in the writings of Philo and the Stoics, where the individual is called a 'temple'. The practice is scarcely justifiable, however. 1 Cor. 6:19-20 does indeed have the individual in mind, but only as a member of the community which corporately comprises the temple of God. Philo and the Graeco-Roman humanists spiritualized the word 'temple' for the sake of anthropology, whereas the NT was occupied with ecclesiology and eschatology and had only a very secondary interest in anthropology. If comparisons are desired one may look for them with greater justification in the writings of the Jews of Qumran (1QS. 5. 6; 8. 4-10; 9. 5-6).

With 'temple' in the Pauline corpus cf. 'house' in 1 Pet. 2:4-10, where it is manifest that the numerous allusions in the NT to the priestly and sacrificial character of Christian life stem from the conception of the church as God's sanctuary. See also 'house' in Heb. 3:1-6.

d. 'Temple' in Hebrews and Revelation

The idea of a heavenly temple, which was common among the Semites and which helped to sustain Jewish hope when the exigencies of the intertestamental period made it appear that the Temple of Jerusalem would never become the metropolis of the world, was adopted by the early Christians. Allusions to it are present in Jn. 1:51; 14:2f.; Gal. 4:21ff.; and possibly in Phil. 3:20. The 'building from God . . . eternal in the heavens' in the notoriously difficult passage 2 Cor. 5:1-5 may also bear some connection with the idea. The conception is, of course, most developed in Heb. and Rev.

According to the writer to the Hebrews the sanctuary in heaven is the pattern (*typos*), i.e. the ori-

ginal (cf. Ex. 25:8f.), and the one on earth used by Jewry is a 'copy and shadow' (Heb. 8:5). The heavenly sanctuary is therefore the true sanctuary (Heb. 9:24). It belongs to the people of the new covenant (Heb. 6:19-20). Moreover, the fact that Christ our High Priest is in this sanctuary means that we, although still on earth, already participate in its worship (10:19ff.; 12:22ff.). What is this temple? The writer supplies a clue when he says that the heavenly sanctuary was cleansed (9:23), i.e. made fit for use (cf. Nu. 7:1). The assembly of the first-born (Heb. 12:23), that is to say, the church triumphant, is the heavenly temple (*TABERNACLE).

The heavenly temple in Rev. is part of the grand scheme of spiritualization undertaken by the author, and note should also be taken of the heavenly Mt Zion (14:1; 21:10) and the new Jerusalem (3:12; 21:2ff.). In point of fact, the prophet of Patmos was shown two temples, one in heaven and the other on earth. The latter is in mind in 11:1ff. The harassed church on earth is depicted under the guise of the Temple of Jerusalem, or, more accurately, the sanctuary of the Temple of Jerusalem, for the forecourt, that is, the lukewarm who are on the fringe of the church, is excluded from the measurement. The imagery owes something to Zc. 2:5, and appears to have the same meaning as the sealing of the 144,000 in 7:1-8. Those measured, alias the numbered, are the elect whom God protects.

Similar spiritualizing is evident in the author's vision of the temple in heaven. On the top of Mt Zion he sees not a magnificent edifice, but the company of the redeemed (14:1; cf. 13:6). That John intends his readers to regard the martyr-host as taking the place of a temple is hinted at in 3:12: 'He who conquers, I will make him a pillar in the temple of my God.' The heavenly temple thus 'grows', like its earthly counterpart (see above on Eph. 2:21f.), as each of the faithful seals his testimony with martyrdom. The building will eventually be completed when the decreed number of the elect is made up (6:11). It is from this temple of living beings that God sends out his judgment upon impenitent nations (11:19; 14:15ff.; 15:5-16:1), just as he once directed the destinies of the nations from the Temple of Jerusalem (Is. 66:6; Mi. 1:2; Hab. 2:10).

The new Jerusalem has no temple (21:22). In a document like Rev. which follows the traditional images and motifs so closely, the idea of a Jerusalem without a Temple is surely novel. John's statement that he 'saw no temple in the city' has been taken to mean that the whole city is a temple; note that the shape of the city is cubical (21:16), like the holy of holies in Solomon's Temple (1 Ki. 6:20). But that is not what John says. He states plainly that God and the Lamb is the Temple. What he very likely means is that in the place of the temple is God and his Son. Such indeed would appear to be the grand dénouement for which the writer prepares his readers. First he dramatically announces that the temple in heaven is opened and its contents laid bare for human eyes to see (11:19). Later he drops the hint that the divine dwelling may be none other than God himself (21:3; note the play on the words *skēnē* and *skēnōseis*). Finally, he states quite simply that the temple is the Lord God Almighty and the Lamb. One after another the barriers separating worshippers from God are removed until nothing remains to hide God from his people. 'His servants . . . shall see his face' (22:3f.; cf. Is. 25:6ff.).

This is the glorious privilege of all who enter the new Jerusalem.

The use made of the ancient motif of the ingathering and reunion of Israel and the nations at the eschatological temple by the author of Rev. is thus different from, although complementary to, that of Paul. Paul, as we noted above, applied it to the terrestrial church; John projects it into the heavenly realm and into the world to come. The difference is another illustration of the flexibility of the Temple image.

TEMPTATION. The biblical idea of temptation is not primarily of seduction, as in modern usage, but of making trial of a person, or putting him to the test; which may be done for the benevolent purpose of proving or improving his quality, as well as with the malicious aim of showing up his weaknesses or trapping him into wrong action. 'Tempt' in AV means 'test' in this unrestricted sense, in accordance with older English usage. It is only since the 17th century that the word's connotation has been limited to testing with evil intent.

The Heb. noun is *massā* (EVV 'temptation'); the Heb. verbs are *māsā* (EVV usually 'tempt') and *bāhan* (EVV usually 'prove' or 'try': a metaphor from metal refining). The LXX and NT use as equivalents the noun *peirasmos* and the verbs (*ek*)*peirazō* and *dokimazō*, the latter corresponding in meaning to *bāhan*.

The idea of testing a person appears in various connections throughout the Bible.

1. Men test their fellow human beings, as one tests armour (1 Ki. 10:1; cf. 1 Sa. 17:39; *māsā* both times), to explore and measure their capacities. The Gospels tell of Jewish opponents, with resentful scepticism, 'testing' Christ ('trying him out', we might say) to see if they could make him prove, or try to prove, his Messiahship to them on their terms (Mk. 8:11); to see if his doctrine was defect-

ive or unorthodox (Lk. 10:25); and to see if they could trap him into self-incriminating assertions (Mk. 12:15).

2. Men should test themselves before the Lord's Supper (1 Cor. 11:28; *dokimazō*), and at other times too (2 Cor. 13:5; *peirazō*), lest they become presumptuous and deluded about their spiritual state. The Christian needs to test his 'work' (i.e. what he is making of his life), lest he go astray and forfeit his reward (Gal. 6:4). Sober self-knowledge, arising from disciplined self-scrutiny, is a basic element in biblical piety.

3. Men test God by behaviour which constitutes in effect a defiant challenge to him to prove the truth of his words and the goodness and justice of his ways (Ex. 17:2; Nu. 14:22; Pss. 78:18, 41, 56; 95:9; 106:14; Mal. 3:15; Acts 5:9; 15:10). The place-name Massah was a permanent memorial of one such temptation (Ex. 17:7; Dt. 6:16). Thus to goad God betrays extreme irreverence, and God himself forbids it (Dt. 6:16; cf. Mt. 4:7; 1 Cor. 10:9ff.). In all distresses God's people should wait on him in quiet patience, confident that in due time he will meet their need according to his promise (cf. Pss. 27:7–14; 37:7; 40; 130:5ff.; La. 3:25ff.; Phil. 4:19).

4. God tests his people by putting them in situations which reveal the quality of their faith and devotion, so that all can see what is in their hearts (Gn. 22:1; Ex. 16:4; 20:20; Dt. 8:2, 16; 13:3; Jdg. 2:22; 2 Ch. 32:31). By thus making trial of them, he purifies them, as metal is purified in the refiner's crucible (Ps. 66:10; Is. 48:10; Zc. 13:9; 1 Pet. 1:6f.; cf. Ps. 119:67, 71); he strengthens their patience and matures their Christian character (Jas. 1:2ff., 12; cf. 1 Pet. 5:10); and he leads them into an enlarged assurance of his love for them (cf. Gn. 22:15ff.; Rom. 5:3ff.). Through faithfulness in times of trial men become *dokimoi*, 'approved', in God's sight (Jas. 1:12; 1 Cor. 11:19).

5. Satan tests God's people by manipulating circumstances, within the limits that God allows him (cf. Jb. 1:12; 2:6; 1 Cor. 10:13), in an attempt to make them desert God's will. The NT knows him as 'the tempter' (*ho peirazōn*, Mt. 4:3; 1 Thes. 3:5), the implacable foe of both God and men (1 Pet. 5:8; Rev. 12). Christians must constantly be watchful (Mk. 14:38; Gal. 6:1; 2 Cor. 2:11) and active (Eph. 6:10ff.; Jas. 4:7; 1 Pet. 5:9) against the devil, for he is always at work trying to make them fall; whether by crushing them under the weight of hardship or pain (Jb. 1:11–2:7; 1 Pet. 5:9; Rev. 2:10; cf. 3:10; Heb. 2:18), or by urging them to a wrong fulfilment of natural desires (Mt. 4:3f.; 1 Cor. 7:5), or by making them complacent, careless and self-assertive (Gal. 6:1; Eph. 4:27), or by misrepresenting God to them and engendering false ideas of his truth and his will (Gn. 3:1–5; cf. 2 Cor. 11:3; Mt. 4:5ff.; 2 Cor. 11:14; Eph. 6:11). Mt. 4:5f. shows that Satan can even quote (and misapply) Scripture for this purpose. But God promises that a way of deliverance will always be open when he allows Satan to tempt Christians (1 Cor. 10:13; 2 Pet. 2:9; cf. 2 Cor. 12:7–10).

The NT philosophy of temptation is reached by combining these last two lines of thought. 'Trials' (Lk. 22:28; Acts 20:19; Jas. 1:2; 1 Pet. 1:6; 2 Pet. 2:9) are the work of both God and the devil. They are testing situations in which the servant of God faces new possibilities of both good and evil, and is exposed to various inducements to prefer the latter. From this standpoint, temptations are Satan's work; but Satan is God's tool as well as his foe (cf.

TEMPTATION

Jb. 1:11f.; 2:5f.), and it is ultimately God himself who leads his servants into temptation (Mt. 4:1; 6:13), permitting Satan to try to seduce them for beneficent purposes of his own. However, though temptations do not overtake men apart from God's will, the actual prompting to do wrong is not of God, nor does it express his command (Jas. 1:12f.). The desire which impels to sin is not God's, but one's own, and it is fatal to yield to it (Jas. 1:14ff.). Christ taught his disciples to ask God not to expose them to temptation (Mt. 6:13), and to watch and pray, lest they should 'enter into' temptation (*i.e.* yield to its pressure) when at any time God saw fit to try them by it (Mt. 26:41).

Temptation is not sin, for Christ was tempted as we are, yet remained sinless (Heb. 4:15; *cf.* Mt. 4:1ff.; Lk. 22:28). Temptation becomes sin only when and as the suggestion of evil is accepted and yielded to.

TEN COMMANDMENTS. The 'ten words' (Heb. *d'ḥārim*; *cf.* Ex. 34:28; Dt. 4:13; 10:4) were originally uttered by the divine voice from Sinai in the hearing of all Israel (Ex. 19:16–20:17). Afterwards, they were twice written by the finger of God on both sides of two tables of stone (Ex. 31:18; 32:15–16; 34:1, 28; *cf.* Dt. 10:4). Moses shattered the first pair, symbolizing Israel's breaking of the covenant by the sin of the golden calf (Ex. 32:19). The second pair were deposited in the ark (Ex. 25:16; 40:20). Later, Moses republished the Ten Commandments in slightly modified form (Dt. 5:6–21).

The common designation of the contents of the two tables as 'the Decalogue', though it has biblical precedent, has tended to restrict unduly the general conception of their nature. To classify this revelation as law is not adequate; it belongs to the broader category of covenant. The terminology 'covenant' (Heb. *b'rit*; Dt. 4:13) and 'the words of the covenant' (Ex. 34:28; *cf.* Dt. 29:1, 9) is applied to it. It is also identified as the 'testimony' (Heb. *ēdūt*; Ex. 25:16, 21; 40:20; *cf.* 2 Ki. 17:15), which describes the covenant order of life as one solemnly imposed and sworn to so that 'ēdūt becomes practically synonymous with *b'rit*. The two tables are called 'the tables of the covenant' (Dt. 9:9, 11, 15) or 'testimony' (Ex. 31:18; 32:15; 34:29).

The historical occasion of the original giving of this revelation was the establishment of the theocratic covenant. The principles of Ex. 20:2–17 as elaborated and applied in casuistic form in the book of the covenant (Ex. 20:22–23:33) served as a legal instrument in the ratification of that covenant (Ex. 24:1–8). The later, Deuteronomic, version is part of a document of covenant renewal.

When, therefore, the Scripture designates the revelation of the two tables as 'the ten words', it clearly does so as *pars pro toto*. At the same time, this terminology and the preponderance of law content which it reflects indicates that the type of covenant involved is essentially the establishment of a kingdom order under the lordship of the covenant suzerain.

The covenantal character of the Decalogue is illuminated and corroborated by ancient international treaties of the type used to formalize the

relationship of a suzerain and vassal (*COVENANT). Suzerainty treaties began with a preamble identifying the covenant lord, the speaker (*cf.* Ex. 20:2a), and a historical prologue recounting especially the benefits previously bestowed on the vassal through the favour and might of the lord (*cf.* Ex. 20:2b). The obligations imposed on the vassal, the longest section, followed. The foremost stipulation was the requirement of loyalty to the covenant lord or negatively the proscription of all alien alliances (*cf.* Ex. 20:3–17, the first and great principle of which is whole-hearted love of Yahweh, who is a jealous God). Another section enunciated the curses and blessings which the gods of the covenant oath would visit on the vassals in accordance with their transgressions or fidelity. These sanctions were sometimes interspersed among the stipulations (*cf.* Ex. 20:5b, 6, 7b, 12b). Among other parallels are the 'I–thou' style, the practice of placing a copy of the treaty in the sanctuaries of the two parties, and the administrative policy of renewing the covenant with the successive generations of the vassal kingdom. In covenant renewal documents, modification of the stipulations to meet new conditions was customary. That explains the various differences between the Ex. 20 and Dt. 5 forms of the Decalogue. For example, Dt. 5:21 adds 'his field' because of the relevance of land ownership to Israel's now imminent inheritance of Canaan.

In brief, the two tables contained the essence of the Sinaitic Covenant. Yahweh, Creator of heaven, earth, sea and all that is in them, is presented as covenant Suzerain. The theocratic covenant relationship is traced to Yahweh's redemptive election and deliverance, and its continuance to the thousandth generation is attributed to his faithful mercies. The covenant way of life is sovereignly dictated in ten commandments, the standard of Israel's consecration to her Lord.

The very fact that the law is embedded in divine covenant disclosure points to the religious principle of personal devotion to God as the heart of true fulfilment of the law. But there is no incompatibility between the divine demand communicated in concrete imperatives and the call of God to personal commitment to him in love. Yahweh describes the beneficiaries of his covenant mercy as 'those who love me and keep my commandments' (Ex. 20:6; *cf.* Jn. 14:15). The biblical ethic is rooted in biblical religion, and biblical religion is not shapeless mysticism but a structured order.

The revelation of the law in the context of redemptive covenant action indicates that conformity to the law must be a gracious accomplishment of Yahweh, saving from bondage. In this context even the preponderantly negative form of the Decalogue serves to magnify the grace of God, who presents this protest against man's sin not as a final condemnation but as a summons to the godliness which is the goal of restored covenantal communion. The negative form thus becomes a divine promise to the redeemed servants of perfect ultimate triumph over the demonic power that would enslave them in the hell of endless alienation from God. An ethic rooted in such religion possesses the dynamic of faith, hope and love.

The laws of the Decalogue are formulated in terms appropriate to the covenantal order for which it was the treaty-constitution. For example, the specific form of the sabbath law reflects the OT

eschatological perspective and the promise appended to the fifth word (and elsewhere related to the entire law, cf. Dt. 5:33–6:3) employs the imagery of the contemporary, typical manifestation of God's kingdom. This does not mean the Ten Commandments are not normative for covenant life today; but in determining their precise application we must always reckon with our eschatological location.

As for the division into ten words, the Decalogue's parallelism with the suzerainty treaty structure shows the error of regarding the preamble and historical prologue as a commandment. Also, the variant forms of the prohibition of covetousness in Ex. 20:17 and Dt. 5:21 contradict the division of it into two commandments, and that obviates the associated error of combining into one what most Protestants, following the oldest tradition, have regarded as the first and second commandments. The customary division of the Decalogue into 'two tables' stems from failure to recognize the two tables as duplicate treaty texts.

Speculative higher criticism, though postulating an early (even Mosaic) Decalogue, regards the canonical form as the result of later expansive revisions. Such a reconstruction is incompatible with the form-critical identification of the treaty-nature of the Decalogue, for treaties were not subject to revisionary tampering. Moreover, the treaty form called for by the covenantal context of Sinai would be lost in the shrunken hypothetical original. The theory that Ex. 34:11–26 is a primitive cultic 'decalogue' rests on a mistaken identification of this passage with the 'ten words' mentioned in Ex. 34:28. The actual relation of Ex. 34:5–27 to the second two Decalogue texts (Ex. 34:1–4, 28) is akin to that of Ex. 20:22–23:33 to the original tables.

BIBLIOGRAPHY. R. E. Davies, *Making Sense of the Commandments*, 1990; B.-Z. Segal (ed.), *The Ten Commandments in History and Tradition*, 1990. M.G.K.

TENT. A collapsible structure of cloth or skins supported on poles, and often held firm by cords stretched from the poles to pegs or stakes fixed in the ground all round. Compare Is. 54:2, which mentions the curtains, cords, stakes or tent-pegs (but not the poles); the tent-cloth was often dark in colour (Ct. 1:5). Tents were among the earliest habitations made by man himself (Gn. 4:20; 9:21). They were the normal dwelling of both nomadic and semi-nomadic people. The Heb. Patriarchs lived in tents (Gn. 18:1, 6, 9–10, etc.); and the womenfolk sometimes had their own tents (Sarah, Gn. 24:67; Jacob, Leah, the maids, Rachel, Gn. 31:33), doubtless adjoining those of their husbands. On their journeyings from Egypt to Canaan, Israel lived in tents (Ex. 16:16; 33:8, 10; Nu. 16:26; 19:14), taking up more permanent dwellings when occupying Canaan. In the days of Jeremiah, the Rechabite sect held to the nomadic ideal of dwelling in tents and scorned the ways of sedentary life (Je. 35:7), but even the romantic ideal of independent tent-nomadism was not to be treasured above devotion to God (Ps. 84:10). Death is compared to packing up the tent in Jb. 4:21; cf. 2 Cor. 5:1.

Among other peoples, Scripture mentions the tents of the Midianites (Jdg. 6:5; 7:13), of Kedar (Ct. 1:5), and Cushan (Hab. 3:7, also Midian), all dwellers in the desert fringes of Transjordan and

NW Arabia. Tents had specific uses in settled nations. Besides the peaceful shepherd tenting in his pastures (Ct. 1:8; Is. 38:12), kings and armies camped in tents in the field, cf. 1 Sa. 17:54 (David); 2 Ki. 7:7–8 (Arameans). Finally, 'tent' in ordinary speech came to be used of any kind of dwelling (not only literally; cf. 1 Ki. 8:66; 2 Ki. 13:5, both rendered 'homes' in rsv), perhaps because the tent was largely used in the summer by many town and village dwellers. The external data on tents illustrate that in Scripture. In the patriarchal period the Egyptian Sinuhe in Canaan had a tent and encampment and plundered that of his adversary (*ANET*, p. 20b, line 145). In the period following Israel's Exodus and initial settlement, Rameses III (c. 1192–1161 BC) records that he 'devastated Se'ir (i.e. Edom) among the nomadic tribes, and pillaged their tents ('*hr*, from Heb. *ohel*) of people and goods' (*ANET*, 262a). Cf. Midian, Cushan or Kedar. For pictures of Assyr. military tents (round, supported on poles and sticks), see *ANEP*, figs. 170–171, 374 (royal war-tent). Tents of patriarchal age, cf. D. J. Wiseman, in G. A. Tuttle (ed.), *Biblical and Near Eastern Studies* (Essays in Honor of W. S. LaSor), 1978. (*TABERNACLE.) K.A.K.

TERAH. I. The father of Abram, Nahor and Haran (Gn. 11:27; Av 'Thara', Lk. 3:34). Heb. *terah* is usually taken as connected with the moon-god and compared with *Turahi*, a place near Harran. Terah emigrated from Ur of the Chaldees and settled in Harran, where he died long after Abram's departure (Acts 7:4 is an oral slip). In Jos. 24:2 he is described as an idolater.

2. An unidentified Israelite encampment in the wilderness between Tahath and Mithkah (Nu. 33:27–28; Av 'Tarah'). J.W.C.

TERAPHIM. These objects are mentioned in every OT period: the Patriarchs (Gn. 31:19); the judges (Jdg. 17:5–18:30); early and late Monarchy (1 Sa. 15:23; 19:13–16; 2 Ki. 23:24; Ho. 3:4; Ezk. 21:21; and post-exile (Zc. 10:2). When mentioned in Israelite contexts they are almost always condemned, directly (1 Sa. 15:23; 2 Ki. 23:24) or indirectly (Jdg. 17:6; Zc. 10:2). In their use, they are mostly associated with *divination: note the pairing of ephod and teraphim in the idolatrous religion of Micah (Jdg. 17:5, etc.); the association with divination by arrows and hepatoscopy (Ezk. 21:21), and with spiritist practices (2 Ki. 23:24). Nowhere are we told how they were consulted, nor even what their appearance was. While Gn. 31:34 suggests that they were small objects, 1 Sa. 19:13–16 suggests a life-size figure, or at least a life-size bust. However, it is possible that Michal placed the teraphim 'beside' rather than 'in' the bed, and that they were considered to have some prophylactic or curative propensity. W. F. Albright (*Archaeology and the Religion of Israel*, 1942, p. 114) reasonably urges that all available evidence is against the former view in that 'no "idols" of comparable size have ever been found in Palestine excavations'. He further suggests (*op. cit.*, p. 207) that, from a Canaanite *trp*, 'to wear out', the 'teraphim' in question here might not be any sort of figure but 'old rags', presumably used to simulate the recumbent figure of David.

These last two references (also Jdg. 17:5ff.) associate *t'raḥim* with the home, and Laban, at least,

TERAPHIM

considered them as household gods (Gn. 31:30). The suggestion that Rachel's theft of her father's gods (Gn. 31:19, 30-35) signified an inheritance claim on the basis of Nuzi custom can no longer be sustained, however. Possession of household gods at Nuzi probably indicated family headship, but such a privilege was given, not seized (see M. Greenberg, *JBL* 81, 1962, pp. 239-248; see further, M. J. Selman, *TynB* 27, 1976, pp. 123-124). Rachel's purpose can only be surmised, but examples from Mesopotamia suggest that she may have desired protection on the dangerous journey to Palestine.

Heb. *t'rāpīm* is a plural form, for which the corresponding singular is unknown. Possible derivations have been proposed from *rāpā*, 'to heal', or post-biblical *tōrēp*, 'obscenity' (W. F. Albright, *From the Stone Age to Christianity*, 1957, p. 311), but the most likely association is with Hittite *tarpiš*, a type of spirit, sometimes evil, sometimes protective (H. A. Hoffner, *POTT*, pp. 215ff.; *JNES* 27, 1968, pp. 61-68). Other suggestions have connected *t'rāpīm* with ancestor worship, perhaps in the form of an ancestor's mask (A. Phillips, *Ancient Israel's Criminal Law*, 1970, p. 61) or mummified human heads (H. L. Ellison, *Ezekiel: The Man and his Message*, 1956).

J.A.M.
M.J.S.

TERTIUS. The amanuensis who wrote Romans at Paul's dictation (Rom. 16:22); on the process, see B. M. Metzger, 'Stenography and Church History', in *TCERK*, 2, pp. 1060f., and references there. He appends his own greetings, perhaps at the point where he resumes his pen after Paul has written some personal greetings in autograph (cf. Gal. 6:11; Col. 4:18; 2 Thes. 3:17). This may suggest that he had Roman connections himself. The name is Latin and appears in a 1st-century inscription in the Roman cemetery of St Priscilla (cited in *MM*).

A.F.W.

TERTULLUS. A fairly common Rom. name, in origin a diminutive of Tertius. Nothing is known of the orator Tertullus who accused Paul before Felix except what can be deduced from Acts 24:1ff.

From his use of the first person in vv. 3-4 and 6-7 (although found only in the Western Text, v. 7 is undoubtedly genuine) it seems probable that Tertullus was a Jew. The words 'this nation' (v. 2) and 'the Jews' (v. 5) are not inconsistent with this deduction. It was not uncommon for Jews at this period to have Gentile names, and it was possible for a good Jew to be also a Roman citizen, with a Roman name, like Paul.

The fulsome flattery of Felix in Tertullus' opening sentences is in accordance with the rhetorical fashion of the period, but the rest of the speech is unimpressive. Even in his précis Luke makes it clear that Tertullus was trying to cover up a weak case with rhetorical padding.

In addition to the real charge that Paul had attempted to 'profane the temple', Tertullus tries to represent him as one of the sedition-mongers and Messianist politicians who were so often a problem to the Rom. rulers of Palestine.

K.L.McK.

TETRARCH. This title (Gk. *tetraarchēs*, contracted *tetrarchēs*) was used in classical Gk. to denote the ruler of a fourth part of a region, and especially applied to the rulers of the four regions of Thessaly. The Romans gave it to any ruler of part of an Oriental province. When Herod the Great, who ruled Palestine as a client-king under the Romans, died in 4 BC, his sons disputed their father's will. Appeal on their part to Augustus Caesar led to the division of the territory among three sons: Archelaus being appointed *ethnarch of Judaea, Samaria and Idumaea; Antipas tetrarch of Galilee and Peraea; and Philip tetrarch of Bata-nea, Trachonitis, Ituraea, Gaulanitis and Auranitis, areas NE of the Sea of Galilee. In the NT the noun is used solely in reference to Herod Antipas (Mt. 14:1; Lk. 3:19; 9:7; Acts 13:1), though in Lk. 3:1 the cognate verb is applied to *Antipas, *Philip and *Lysanias, tetrarch of Abilene.

D.H.W.

TEXTS AND VERSIONS. Texts and versions provide the raw materials for the discipline known as textual criticism. The ultimate aim is to provide a text in the form intended by its author. Generally speaking, the greater the age of a document, the greater is its authority. There may be cases, however, where this does not hold; for instance, of two MSS, the older may have been copied from a recent and poor exemplar, while the other goes back to a very much earlier and better one. The history of a document must be taken into consideration before a verdict can be given on readings.

Documents are exposed to the ravages of time and the frailty of human nature, and the latter gives rise to most of our problems. The errors of scribes, however, seem to run in well-defined channels. Among common errors are:

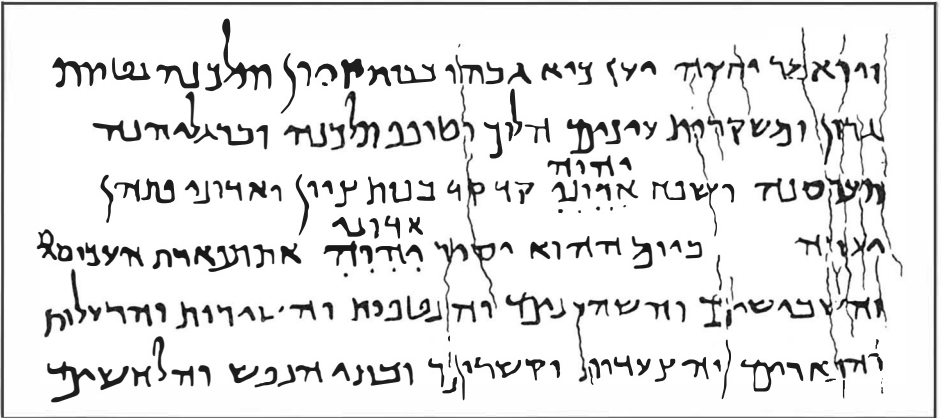

1. *haplography* (failure to repeat a letter or word);
2. *diittography* (repeating what occurs only once);
3. *false recollection* (of a similar passage or of another MS);
4. *homoeoteleuton* (omission of a passage between identical words);
5. *line omission* (sometimes through homoeoteleuton);
6. *confusion of letters of similar form*;
7. *insertion into body of text of marginal notes*.

The comparative study of texts can help towards the elimination of corruptions. Here numerical preponderance is not decisive: several representatives of the same archetype count as only one witness. The form of textual transmission is best depicted as a genealogical tree, and the facts of the genealogical relations can be applied to the assessment of evidence for any given reading.

I. OLD TESTAMENT: HEBREW

The documentary evidence for the OT text consists of Heb. MSS from 3rd century BC to 12th century AD, and ancient versions in Aramaic, Greek, Syriac and Latin.

From earliest times the Jews had at their disposal the means of producing written records. The Semitic alphabet was in existence long before the time of Moses (*WRITING). Moses would have been familiar with Egypt. writing and literary methods. He may, too, have been acquainted with cuneiform, for the el-*Amarna and other letters show that Akkadian was widely used during the

Is. 3:16–20 in the Dead Sea Scroll (1Q15) showing alterations to the divine Name (from 'adōnāy to Yahweh in line 3 and from Yahweh to 'adōnāy in line 4).

15th to 13th centuries BC as a diplomatic language. If the Bible did not expressly state that Moses was literate (Nu. 33:2 and *passim*), we should be compelled to infer it from collateral evidence. There is, therefore, no need to postulate a period of oral tradition. Analogies drawn from peoples of disparate culture, even if contemporary, are irrelevant. The fact is, that the peoples of the same cultural background as the Hebrews were literate from the 4th millennium BC onwards, and from the 3rd millennium men were being trained not merely as scribes but as expert copyists. It is unlikely that under Moses the Hebrews were less advanced than their contemporaries or that they were less scrupulous in the transmission of their texts than the Egyptians and Babylonians (*cf.* W. J. Martin, *Dead Sea Scroll of Isaiah*, 1954, pp. 18f.).

Before describing the sources at our disposal for the restoration of the text of the OT, it is important to recall the attitude of the Jews to their Scriptures. It can best be summed up in the statement by Josephus: 'We have given practical proof of our reverence for our own Scriptures. For, although such long ages have now passed, no one has ventured either to add, or to remove, or to alter a syllable; and it is an instinct with every Jew, from the day of his birth, to regard them as the decrees of God, to abide by them, and, if need be, cheerfully to die for them. Time and again ere now the sight has been witnessed of prisoners enduring tortures and death in every form in the theatres, rather than utter a single word against the laws and the allied documents' (*Against Apion* 1. 42f.).

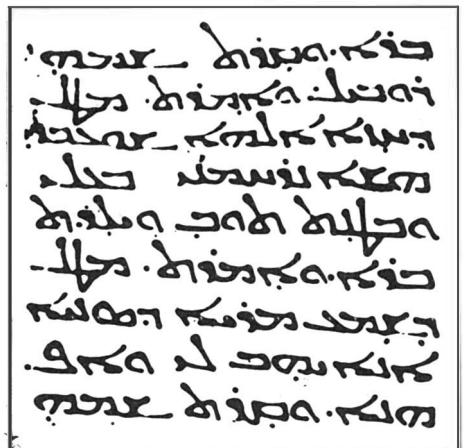

That Josephus is merely expressing the attitude of the biblical writers themselves is clear from such passages as Dt. 4:2 ('You shall not add to the word which I command you, nor take from it, that you may keep the commandments of the Lord your God which I command you') or Je. 26:2 ('... all the words which I command you to speak to them; do not hold back a word'). There is no reason to suppose that the Jews ever abandoned these principles. Many of the divergences in texts may be due to the practice of employing the same scribes to copy both biblical texts and Targums. As the latter are frequently paraphrastic in their treatment of the text, this laxity could subconsciously easily affect the copyists.

I. The transmission of the text

Measures for the preservation of the text were already in use in the pre-Christian era, for in the Dead Sea Scroll of Isaiah (*e.g.* plate XXIX, lines 3 and 10) dots are put over doubtful words, just as the Massorettes did later. In NT times the scribes were too well established to be a recent innovation. It was doubtless due to their activity that terms such as *'jot' and 'tittle' owed their currency. The Talmud states that these scribes were called *sōp' rim* because they counted the letters in the Torah (*Qiddushin* 30a). Since their intensive pre-occupation with the text of Scripture qualified them as exegetes and educationalists, the transmission of the text ceased to be regarded as their prime responsibility.

II. The Massorettes

The writing of the consonants only was sufficient as long as Heb. remained a spoken language.

Gn. 29:32–33 in the Syriac peshitta version. Vellum MS. 5th cent. AD.

ז ז ז ז · ז ש פ ט ז · ז א ג א ג
 ז ז ז ז · ז א ג א ג · ז ז ז ז
 ז ז ז ז · ז א ג א ג · ז ז ז ז
 ז ז ז ז · ז א ג א ג · ז ז ז ז

Dt. 27:4 from the Samaritan Pentateuch. Mt Gerizim is substituted for Mt Ebal at the beginning of line 4.

Where a word might be ambiguous 'vowel-letters' could be used to make the reading clear. These 'vowel-indicators' were in origin residual: they arose through 'waw' (w) and 'yod' (y) amalgamating with a preceding vowel and losing their consonantal identity, but they continued to be written, and in time came to be treated as representing long vowels. Their use was then extended to other words, where etymologically they were intrusive. Their insertion or omission was largely discretionary. Consequent variants have no significance. It was not until about the 7th century of our era that the Massoretes introduced a complete system of vowel-signs.

The Massoretes (lit. 'transmitters') succeeded the old scribes (*sōp'rim*) as the custodians of the sacred text. They were active from about AD 500 to 1000. The textual apparatus introduced by them is probably the most complete of its kind ever to be used. Long before their time, of course, others had given much thought to the preservation of the purity of the text. Rabbi Akiba, who died about AD 135, was credited with the saying, 'The (accurate) transmission is a fence for the Torah.' He stressed the importance of preserving even the smallest letter. In this he was by no means the first, as the statement in Mt. 5:18 shows: 'Till heaven and earth pass away, not an iota, not a dot, will pass from the law, until all is accomplished.'

The Massoretes introduced vowel-signs and punctuation or accentual marks into the consonantal text. Three systems of vocalization had

been developed: two supralinear (Babylonian and Palestinian) and one infralinear, except for one sign. This system, called the Tiberian, supplanted the other two, and is the one now used in Heb. texts.

As it was the resolute purpose of the Massoretes to hand on the text as they had received it, they left the consonantal text unchanged. Where they felt that corrections or improvements should be made, they placed these in the margin. Here the word preferred and which they intended to be read (called the *Q'rē*, 'that which is to be read') was placed in the margin, but its vowels were placed under the consonants of the word in the inviolable text (called the *K'tib*, 'the written'). It is possible that a form given in the margin (*Q'rē*) was sometimes a variant reading. The view held in some quarters that the scribes or Massoretes boggled at giving variant readings, and in fact deliberately suppressed them, is contrary to what we know of the actual practice of the copyists.

The Massoretes retained, for instance, certain marks of the earlier scribes relating to doubtful words and listed certain of their conjectures (*s'birin*). They used every imaginable safeguard, no matter how cumbersome or laborious, to ensure the accurate transmission of the text. The number of letters in a book was counted and its middle letter was given. Similarly with the words, and again the middle word of the book was noted. They collected any peculiarities in spelling or in the forms or positions of letters. They recorded the

יִשְׂרָאֵל עַל-כָּל-אֲשֶׁר עָשׂוּ נַאֲם-יְהוָה: הִנֵּה יָמִים
 נַאֲם-יְהוָה וּבִנְתָה הָעִיר לַיהוָה מִמְּנַדֵּל חֲנָנָאֵל שְׁעַר הַפְּנֵה:
 וַיֵּצֵא עוֹד קוֹה הַמִּדְּבָר נִגְדוּ עַל גְּבֻעַת גְּרֵב וְנִסַּב נִעְתָּה: וְכָל-
 הָעֵמֶק הַפְּגָרִים וְהַדְּשֵׁן וְכָל-הַשְּׂרָמוֹת עַד-נַחַל קָדְרוֹן
 עַד-פְּנֵת שְׁעַר הַסּוּסִים מִזְרָחָה קָדֵשׁ לַיהוָה לֹא-יִנְתָּשׁ וְלֹא-
 יִהְרַס עוֹד לְעוֹלָם: • v. 40. הַשְּׂדֵמוֹת ק'

The Massoretic text of Je. 31:38-40. A scribal error (haššārēmoṭ for haššādēmoṭ) in verse 40 is corrected by a marginal note (Q'rē).

The Lxx of Je. 38:40 (in MT Je. 31:40) from the Codex Sinaiticus. The translators have copied into Greek letters (sar möth) a Hebrew word which they did not understand because of a scribal error in the Hebrew MS.

number of times a particular word or phrase occurred. Among the many lists they drew up is one containing the words that occur only twice in OT. Their lists finally included all orthographic peculiarities of the text.

The textual notes supplied by the Massoretes are called the *Massorah*. The shorter notes placed in the margin of the codices are referred to as the *Massorah Parva*. They were later enlarged and arranged into lists and placed at the top or bottom of the page. In this form they were called *Massorah Magna*. This fuller form may give, for instance, the references to the passages where a certain form occurs, whereas the shorter would give only the number of the occurrences. The notes provide the results of their analysis or textual peculiarities. They give variant readings from recognized codices, such as the Mugah and Hilleli (both now lost).

Among the names of Massoretes known to us is that of Aaron ben Asher, who was active in the first half of the 10th century AD. Five generations of his family seem to have worked on the Heb. text, and under Aaron the work reached a definitive stage. The best codex of this school is thought to be the one formerly in Aleppo, now in Israel. Another noted family of Massoretes was that of ben Naphtali, one of whom was apparently contemporary with Aaron ben Asher. The differences between them in their treatment of the text was largely confined to matters of vocalization. The 'Reuchlin' codex in Karlsruhe is a representative of the ben Naphtali approach.

The text edited by Jacob ben Chayyim for the second rabbinic Bible published by Daniel Bomberg in Venice in 1524-5 came to be accepted practically as a standard text. The text was eclectic in character, and scholars have been aware for some 250 years that it could be improved. It is significant, however, that M. D. Cassuto, a scholar who probably had a finer sense for Heb. than any other in this field, and who had an unrivalled knowledge at first hand of the Aleppo Ben Asher codex, evidently saw no reason for preferring this to the Ben Chayyim text, which he retained for his fine edition of the Hebrew Bible (Jerusalem, 1953). The non-expert might easily be misled by the somewhat hyperbolic language used of the extent of the differences to be found in the various mss. They relate mostly to matters of vocalization, a not altogether

indispensable aid in Semitic languages. Linguistically considered they are largely irrelevant minutiae, at the most of diachronistic interest. Belief in the golden age of the phoneme dies hard; it ranks with the naïveté that believes 'honour' is a better spelling than 'honor'. Vocalization in a Semitic language belongs primarily to orthography and grammar, and to exegesis, and only to a limited extent to textual criticism. There never was an original *vocalized* text to restore. It is clear that the Massoretic text is a single type which became recognized as authoritative after the Fall of Jerusalem in AD 70. All Hebrew Bible fragments found with relics of the Second revolt (AD 132-135) in caves near the Dead Sea belong to it, in contrast to the situation at Qumran before AD 70 (see III, below).

III. The Dead Sea Scrolls

The discovery of biblical mss, in caves to the W of the Dead Sea, has revolutionized the approach to the OT text by going some 800 years behind the Massoretic apparatus. It has also been a salutary reminder that the purpose of the discipline is the restoration of a consonantal text. The original find included one complete ms of Isaiah and another containing about one-third of the book. The later discoveries brought to light fragments of every book of the Bible, with the exception of Esther, as well as Bible commentaries and works of a religious nature.

The Dead Sea biblical mss give us for the first time examples of Heb. texts from pre-Christian times, about 1,000 years earlier than our oldest mss; thus they take us behind the alleged suppression of all divergent texts in AD 100. According to the Talmud, an attempt was made to provide a standard text with the help of three Scrolls formerly belonging to the Temple, by taking in cases of disagreement the reading that had the support of two (TJ, *Ta'anith* 4. 2; *Soferim* 6. 4; *Sifre* 356). The finds have helped to relegate questions of vocalization to their proper sphere, that of orthography and grammar, and have deprived of much of its pertinency the work done in the field of Massoretic studies by providing us with mss much older than any hitherto at our disposal.

The Isaiah mss provide us with a great variety of scribal errors, but all of them familiar to textual criticism. We find examples of haplography, dit-

TEXTS AND VERSIONS

tography, harmonization (*i.e.* alteration to something more familiar), confusion of letters, homoeoteleuton, line omission and introduction into the text of marginal notes.

The great significance of these mss is that they constitute an independent witness to the reliability of the transmission of our accepted text. There is no reason whatever to believe that the Qumran community would collaborate with the leaders in Jerusalem in adhering to any particular recension. They carry us back to an earlier point on the line of transmission, to the common ancestor of the great Temple scrolls and the unsophisticated scrolls from Qumran. Beside mss close to the *MT*, fragments of others display Heb. texts that differ. Until all the material is published, it is hard to evaluate them; by their nature these have attracted most attention (see **DEAD SEA SCROLLS* for details). That any are generally superior to *MT* or represent an older text is questionable; each passage has to be considered separately in the light of known scribal customs.

IV. The Cairo Genizah

The mss discovered from 1890 onwards in the Genizah of the Old Synagogue in Cairo are of considerable importance for the vocalized text. (A Genizah was the depository for scrolls no longer considered fit for use.) The lack of uniformity in vocalization and the virtual absence of variations from the consonantal text show that the vocalization was secondary. Among the fragments of biblical mss from this Genizah are some with supralinear vowel-signs. In the collection were also quantities of fragments of Targum and of rabbinic literature. Some of the mss may be older than the 9th century.

V. The Hebrew Pentateuch of the Samaritans

The Heb. Pentateuch preserved by the *Samaritans is unquestionably derived from a very ancient text. The Samaritans, probably the descendants of the mixed population of Samaria, the result of a partial deportation of Jews by Sargon in 721 BC, followed by the plantation of foreigners (*cf.* 2 Ki. 17:24; 24:15-16), were refused a share in the rebuilding of the Temple by the Jews returning under Ezra and Nehemiah. The breach which followed (probably in the time of Nehemiah, c. 445 BC) led to the establishment of a separate Samaritan cultic centre at Mt *Gerizim, near Shechem. Contacts between the two communities virtually ceased during the 2nd century BC, and it is to this period that the distinctive Samaritan text form is assigned. It is probably a revision of a form current much earlier. All copies are written in a derivative of the 'Phoenician' alphabet akin to that on Jewish coins of the 2nd century BC, not the Aramaic 'square' script used for Hebrew after the Exile.

The oldest ms is in all probability the one traditionally accredited to Abishua, the great-grandson of Aaron (1 Ch. 6:3f.). The ms itself, written on thin vellum, is not uniformly old; the oldest part seems to be that from the end of Nu. onwards. Expert opinion would assign this scroll to the 13th century AD, or not much earlier than its alleged discovery by the high priest Phinehas in 1355.

The first copy of the Samaritan Pentateuch reached Europe in 1616 through Pietro della Valle, and in 1628 an account of it was published by J. Morinus, who claimed it to be far superior to the

Massoretic text. This seems to be the case with every new discovery of documents, prompted either by a preference for the LXX or an innate hostility to the traditional Jewish text. There was in this instance another motive at work: the desire on the part of certain scholars to weaken the position of the Reformers in their stand for the authority of the Bible. Gesenius, probably Germany's greatest Hebrew scholar, brought this barren controversy to an end and demonstrated the superiority of the Massoretic text (1815). We are witnessing in our day an attempt to reinstate the Samaritan Pentateuch. Some of its protagonists betray by their faith in the trustworthiness of the Samaritan transmission an ingenuousness never surpassed by the most extreme conservatives. It is true that in some 1,600 places the Samaritan agrees with the LXX, but the disagreements are equally numerous. It is not easy to account for the agreements; one possibility is that when corrections had to be made in the Samaritan Hebrew Pentateuch an Aram. *targum was used (the Samaritan dialect and Aram. are practically identical, and the Samaritan version, that is, the translation of the Pentateuch into Samaritan, in places agrees verbatim with the Targum of Onkelos). There are numerous traces of the influence of the targums in the LXX.

For many of the variants a simple explanation can be given: the attempt to show that God had chosen Gerizim. After the Ten Commandments in Ex. 20 and in Dt. 5, the Samaritan inserts the passage Dt. 27:2-7 with 'Mount Ebal' replaced by 'Mount Gerizim', and Dt. 11:30 changes 'over against Gilgal' into 'over against Shechem'.

Many of the variants are due to a misunderstanding of grammatical forms or syntactical constructions. Others consist of gratuitous additions from parallel passages. Some stem from dialect influence. Many arise from their effort to remove all anthropomorphic expressions.

There is no evidence that the Samaritans ever had a body of trained scribes, and the absence of any proper collations of mss, as attested by the numerous variations, is not compatible with any serious textual knowledge. Neither do the deliberate changes or superfluous additions distinguish them as conscientious custodians of the sacred text. Therefore, its variants must be treated with extreme caution. See the important survey by B. K. Waltke, in J. B. Payne (ed.), *New Perspectives on the Old Testament*, 1970, pp. 212-239.

A.R.M.

2. THE SEPTUAGINT

The oldest and most important Gk. translations of OT books are to be found in the so-called Septuagint (commonly denoted by 'Lxx').

I. Its varied contents and uncertain limits

The LXX is a collection of very varied works: it contains at least one translation into Gk. of each of the OT canonical books, and sometimes, as with Dn. and Ezr.–Ne., more than one. The translations were later radically revised, some more than once, and the LXX MSS now present varying mixtures of revised and unrevised translations. Some of the canonical books, such as Est. and Dn., are enlarged by the insertion of apocryphal material, though again not all MSS contain the same amount of insertion. Then, of course, the LXX nowadays contains many apocryphal books, though these do not coincide in number (it tends to have more), nor always in name, with the books of the English *Apocrypha. Moreover the early LXX codices do not themselves agree on the number of apocryphal books they include, and in consequence neither do the modern editions. Some of the latter even include Christian canticles and hymns. The apocryphal books likewise differ among themselves in that some are translations from an original Heb. (or Aram.), while some were originally composed in Gk. The date of all this varied material is equally varied: the translation of the Pentateuch was made in Alexandria in the first half of the 3rd century BC; the translation of Ec. is probably the work of Aquila, and if so, was done in Palestine in the 2nd century AD. Some scholars think that the Pss. may have first been translated in Palestine and then taken to Alexandria. Some believe that parts of Sa.–Ki. were originally translated in Ephesus, and some apocryphal books composed in Antioch. Originally this varied material would have stood as single books, or as groups of small books, on separate scrolls; nor was it even possible to collect it together in one volume until advancing technology (and wealth) made available to the Christians of the 2nd century AD onwards the large-codex format. The so-called LXX, then, is far from homogeneous: different accounts must be given of its different parts.

II. Origins

a. Pentateuch

The earliest source of information on the origin of the LXX Pentateuch is the Alexandrian Jewish phil-

osopher, Aristobulus (c. 170 BC), the surviving fragments of whose writings have in recent years been proved authentic. Aristobulus asserts that a translation of the Law was made in the reign of Ptolemy II Philadelphus (285–247 BC), and we have no reason to doubt it. He adds that Demetrius of Phalerum made the arrangements for it. Since upon accession Philadelphus banished Demetrius, there is a discrepancy here, unless Aristobulus means that Demetrius had made some preliminary arrangements before being banished.

The next source is Aristeas, author of the so-called *Letter to Philocrates*. He purports to be a Greek who was present in Ptolemy's court when Demetrius suggested that the Jewish Law should be translated, and who was subsequently sent to request from the high priest at Jerusalem an accurate copy of the Law and 72 Jewish experts to translate it (whence in part has come the name Septuagint, which later generations applied to the whole Gk. OT). Aristeas, however, was not a Greek, but a Jew, and wrote not in the time of Philadelphus, but at some point between c. 170 and 100 BC. Despite the extravagantly unhistorical details of his story, his basic claim that the Law was translated in the reign of Ptolemy II agrees with that of Aristobulus, and is generally accepted.

Josephus relates Aristeas' story and so is not an independent witness. Philo (*Vit. Mos.* 2. 5ff.) may perhaps be independent of Aristeas; he likewise attributes the translation to Ptolemy II's reign, but adds miraculous details to the story.

Of the Christian fathers some soberly follow Aristeas' story, others follow Philo, and add yet more miraculous elements. Justin Martyr (c. AD 100–165) is the first to extend Aristeas' account to cover the whole OT; Augustine (AD 354–430) observes that it was customary in his day to call the translation 'the Septuagint'.

In the rabbinic literature the tradition persists that the translation of the Law was made in the time of a Ptolemy; but there is disagreement over the number of the translators: TB *Megillah* 9a gives it as 72, but *Massekhet Soferim* 1. 7–10 as five (though some scholars regard this as a scribal error).

Both Aristobulus and Aristeas assert that there had been earlier translations before the time of Ptolemy II. But Aristobulus' assertion is made in order to explain how, according to Aristobulus, Plato was able to incorporate material from Moses into his philosophy; while Aristeas asserts that, although there was an earlier translation, divine

ET RESPONDE NS DIXIT ILLIS IHS
 UIDETE HAS MAGNAS STRUCTURAS
 AMENDICO VOBIS
 QUI ANON RELINQUETUR HIC LAPIS
 SUPER LAPIDEM QUI NON ESTRUATUR
 ET POST TERTIUM DIEM
 ALIUT RESUSCITE TUR SIN MANIBUS

The Latin text of Mk. 13:2 with the addition 'and after three days another shall be raised up without hands'. From the Codex Bezae (D).

TEXTS AND VERSIONS

intervention had prevented any Gentile from ever citing it. This conflicting testimony is of little worth. Scholars nowadays leave open the question whether there may in fact have been earlier translations; but unlike Paul Kahle, whose theories were widely accepted in the 50s and 60s, they find no evidence of such translations either within the LXX MS tradition or without.

b. *The other canonical books*

From remarks made by Ben Sira's grandson in the Prologue to his translation of his grandfather's book, translations of 'the Law, the prophets and the rest of the books', *i.e.* of the whole of the OT, seem to have been in existence by the end of the 2nd century BC, though, as noted above, the translation of Ec. that now stands in the LXX comes from the 2nd century AD, and the revised and considerably enlarged edition of the Gk. Est. which we now have was introduced into Egypt, as we learn from the colophon, in the year 78–77 BC.

c. *The non-canonical books*

Dates of translation (or composition) vary widely from the 2nd century BC to the 1st century AD.

III. Revisions

The original translations (designated OGr. = Old Greek), were many of them subsequently subjected in whole or part to a series of revisions. The most important of these revisions were:

1. *The so-called kaire recension.* Made probably in Palestine, but perhaps in Alexandria, around the turn of the two eras, it aimed at making the Gk. represent the Heb. extremely literalistically. Its original extent is unknown, but it survives in parts of a number of books.

2. *Origen's recension.* Completed about 245 AD, Origen's edition was arranged in six parallel columns (hence the name Hexapla) containing: (1) the Heb. text; (2) the Heb. text transliterated into Gk. letters; (3) Aquila's translation; (4) Symmachus' translation; (5) the LXX as revised by Origen himself; (6) Theodotion's translation, or some other such as Quinta. Sometimes, as in the Minor Prophets, Theodotion's translation was placed in a 7th column. The chief purpose of the edition, which covered the whole OT, was to show where the LXX had material that was not in the Heb., and where the LXX lacked material present in the Heb.

3. *Hesychius' recension.* Little is known about this recension; some scholars even dispute its existence, while those who argue for it cannot identify it in many parts of the OT. Its author, a bishop in Egypt, died AD 311.

4. *The Lucianic recension.* Made by Lucian the martyr towards the end of the 3rd century AD, this recension has long been famous because in some books, notably Sa., it presents readings that appear to be based on a Heb. text of better quality than the MT. Nowadays however it is thought that these better readings were not supplied by Lucian, who in fact contributed little of importance, but were already present in the MSS on which he based his recension. The better readings may in fact be the OGr., and the variants in the other MSS the result of revisions. Unfortunately the Lucianic tradition, while prominent in some books, seems entirely absent or unidentifiable in others.

The results of these major, and many other minor, revisions are spread in varying mixtures throughout the surviving MSS, and in consequence

care is needed in using popular editions of the LXX to check whether the printed text in any one place represents the OGr., translated in the 3rd–2nd century BC, or some later revision, emanating from Egypt, Palestine, or Asia Minor in the course of the next 3 centuries.

IV. Character of the LXX translations

Here two questions arise: (1) how accurately does the Gk. convey the meaning of its original Heb., and (2) how idiomatic is the Gk.? On both counts the translations and revisions vary enormously. Nowhere is the Gk. of the translated books straightforward *koinē* Gk. At its best it abounds with Hebraisms; at its worst it is little more than Heb. in disguise. The literalistic translations follow the Heb. so closely that the result would have been largely unintelligible to a Greek who knew no Heb. The more idiomatic translations may, like that of the Pentateuch, convey the meaning of the Heb. fairly accurately, or may like Pr. be free paraphrase, including material and ideas that never stood in the Heb. at all. However, even translators who normally follow their Heb. closely, on occasions deliberately depart from the Heb. Sometimes reverence dictates the change: *e.g.* in Ex. 24:10 'they saw the God of Israel' has been altered to 'they saw the place where the God of Israel stood'. Sometimes the translator, or some subsequent reviser—it is not always possible to tell which—substitutes for straight translation a midrashic interpretation which patently goes beyond, or even contradicts, the plain meaning of the Heb., and not seldom such midrashic interpretations can be paralleled in later rabbinic literature. The strange interpretation of the dimensions of width and height of the E end of the tabernacle court given in the Gk. of Ex. 27:14–16, for instance, is also to be found in TB 'Erubin 2b and Zebahim 59b, where it arises not from some non-MT-type Heb. text, but from rabbinic exegesis. Similarly in the historical books the characters of David, Solomon and Ahab are in the LXX 're-interpreted' to their advantage according to principles of exegesis which were later formally enunciated in talmudic schools. The mere fact that the Pentateuch was translated in Egypt is enough to account for some of its departures from the Heb. text. Egypt. influence is marked in Is., and in Lv. the technical terms for the various Temple sacrifices are inexactly and inconsistently rendered: perhaps in Alexandria, where such sacrifices could not be offered, accuracy and consistency were of no great importance. In addition to making deliberate alterations, the translators, when faced with Heb. words of which they did not know the meaning, were obliged to conjecture. The conjectures of course were not necessarily always correct.

V. Status of the translations

This is a topic on which widely differing views have been, and still are, held. Philo, for instance, claims that the translators of the Law 'became as it were possessed, and under inspiration wrote, not each several scribe something different, but the same word for word, as though dictated to by an invisible prompter . . . the Gk. words used corresponded literally with the Chaldaean' (*Vit. Mos.* 2. 37–38). This exaggerated claim contrasts vividly with the realism of the earlier, Palestinian Jew, the grandson of Ben Sira. Recently arrived in Alexandria, and having experienced the difficulties involved in translating his grandfather's work into

Gk., he remarks in the Prologue to his translation: 'For what was originally expressed in Heb. does not have exactly the same sense when translated into another language. Not only this work, but even the Law itself, the prophecies, and the rest of the books differ not a little as originally expressed.'

Aristeas, for his part, is aware that the Heb. MSS circulating in Alexandria are not of the best quality (30), and he is doubtless aware also of criticisms that the Gk. translation is not everywhere accurate. He therefore invents a story designed to invest the Gk. translation of the Law, now already 100, perhaps 150 or more, years old, with supreme cultural authority, that of the reigning Ptolemy, with supreme religious authority, that of the high priest at Jerusalem, and with supreme academic authority, that of Demetrius of Phalerum (who he wrongly supposes was the head of the famous library at Alexandria). In saying moreover that the translation was done by 72 translators, six drawn from each of the twelve tribes, and that upon completion it was solemnly read before the assembled Jewish community along with their priests and elders, who received it with great acclaim and pronounced curses on any who should subsequently alter it, Aristeas, as H. M. Orlinsky has pointed out, is doubtless claiming canonicity for the translation. It is therefore the more remarkable that, unlike Philo, he does not claim that the translators produced their work by divine inspiration, but rather that they used the normal scholarly procedures, 'making all details harmonize by comparing their work each with the other' (302). Aristeas' story would hardly have convinced his near contemporary, Ben Sira's grandson; but his keenness to assert the authority of the translation of the Law suggests that it was currently the official translation used in the synagogues of Alexandria. For the translations of the other canonical books Aristeas makes no claim, even though by his time most, if not all, of them had been, or were in the process of being, translated. Of the exact origin and immediate purpose of these translations we know practically nothing. Were they scholarly products made in the course of study by historians and theologians? Or were they made primarily to serve as translations in the synagogues? Some may have had this latter purpose in mind, but others, like the translation of Pr., surely not. 1 Ki., even at the OGr. level, often reads more like a midrash than a Gk. targum. Its peculiar timetable of events, and its re-ordering of the book's contents to agree with that timetable, may well have originated in the discussions conducted in schools such as that led by the Alexandrian Jewish chronographer, Demetrius (early 2nd century BC).

It is almost unnecessary to say that the non-canonical books would never have been regarded as inspired even by Alexandrian Jews. 2 Macc., for instance, a confessedly uninspired book, composed directly in Gk., was aimed by Palestinian Jews at persuading their Alexandrian brethren to observe certain festivals, recently introduced in Palestine in connection with the Maccabean victories, in spite of the fact that they had no biblical authority. 1 Macc., likewise, was translated into Gk. to impress Gk.-speaking Jews with the devotion of the Hasmoneans to the Temple and the Law. But it freely admits that in certain matters they had been unable to decide what to do, since Scripture gave no guidance and they had no inspired prophet among them to direct them.

As early as the 2nd century BC Palestinian Jews became interested in the Gk. translations of the OT. Eupolemus, the friend of the Maccabees, seems in his history to be dependent on the Gk. translation of Ch. In the following 2 centuries it would seem that Palestine as well as Alexandria spent a good deal of effort on revising the Gk. translations to make them conform more closely to the Heb., which incidentally shows where the Jews as a whole considered the ultimate authority lay. When later the Christians began using the translations in their controversies with the Jews, the latter, already dissatisfied with the translations, eventually abandoned them and produced fresh versions of their own (see below). In the Talmud two attitudes to the LXX are to be found, one favourable and one hostile. They probably reflect the earlier and the later views of Judaism respectively.

The NT writers frequently cite LXX-translations, particularly in formal quotations. But they do not quote them exclusively: when it suits them they cite other versions. In their day, in addition to the so-called LXX translation of Dn., there was available another, more exact, translation (later commonly, but wrongly, attributed to Theodotion). They cited the latter rather than the former. In later centuries, however, some church Fathers who could not read Heb. for themselves came to regard the LXX translations as equally inspired as the Heb. originals, and, in case of disagreement, to be preferred. In support of this claim (and to Jerome's great annoyance), they embroidered Aristeas' and Philo's stories with additional marvels and miracles, and extended them to cover not only the Law but the other canonical and non-canonical books as well. Jerome eventually discarded the Old Lat. versions of the LXX and made new Lat. translations of the canonical books direct from the Heb. It is these translations that stand today in the Vulgate.

VI. Other translations

a. Aquila. Produced in AD 128, Aquila's version was extremely literalistic: it was designed to express in Gk. the minutiae of the Heb. language which were important to the rabbinic exegesis of the time. Only fragments (though some are extensive) survive.

b. Theodotion. Traditionally associated with Ephesus, Theodotion, whoever he was, seems to have produced sometime towards the end of the 2nd century AD a version which was in reality merely a revision of an older version or revision, commonly called nowadays Ur-Theodotion. Opinions, however, differ on who this Ur-Theodotion may have been and on the extent of his work. Some think he belonged to Asia Minor and there translated a great deal of the OT which the Alexandrian Jews had not completed, but which they eventually took over from him. Others believe that he was a Palestinian and none other than Jonathan ben Uzziel, author of the kaige recension.

c. Symmachus. Produced towards the end of the 2nd century AD, or the beginning of the 3rd, Symmachus' version stands at the opposite extreme from Aquila's, being both idiomatic and elegant.

Of the origin and nature of other versions, known as Quinta, Sexta and Septima, little is known: indeed it is uncertain whether they were independent versions or merely revisions.

TEXTS AND VERSIONS

VII. History of the text

The LXX translations were themselves translated by the early Christian missionaries into Latin, Syriac, Coptic, Armenian, Ethiopic, Gothic, Georgian and Arabic. Moreover they were copiously cited by the Gk.-speaking church Fathers, and the Lat. version(s) by the Lat.-speaking Fathers. These translations and citations, together with the hundreds of LXX MSS, ranging in date from the 3rd century BC to the advent of printing, form the evidence from which we must try to reconstruct the history of the text. Ideally the prime aim should be to recover the text of the original translations as they left the pen of the translator(s), by removing all changes brought about either by error or by revision. In many books the aim is attainable, within reasonable limits. In some books, however, the text-history is exceedingly problematic, and it is doubtful if it will ever be possible to identify the original with any certainty, though the more limited and necessary task of showing what the text looked like at various major stages in its history may still be possible.

VIII. Importance

The LXX translations are valuable for four major reasons among others: (1) they are a witness to the influence of Hellenism on Judaism both in the Diaspora and in Palestine; (2) they form a linguistic bridgehead between the theological vocabulary of the OT and that of the NT; (3) they were the translations in which the church Fathers read their OT in the centuries when they were building their formal theologies; (4) they are an important part of the evidence for the reconstruction of the history of the text of the Heb. OT. The translators undoubtedly sometimes had before them a Heb. text superior to the *MT*; and the NT itself sometimes (e.g. in Heb. 11:21) follows the LXX rather than the *MT*. Moreover the Dead Sea Scrolls have shown us that the LXX's disagreements with the *MT* are more often based on non-*MT*-type Heb. MSS than some scholars had previously thought. On the other hand the fact that some ancient Heb. MS agrees with the LXX against the *MT*, does not necessarily mean that MS automatically represents the original better than the *MT* does. The matter still has to be decided by the ordinary canons of textual criticism. Moreover, where the LXX disagrees with the *MT* and no non-*MT* Heb. MS survives, the use of the LXX to reconstruct the original Heb. is fraught with difficulties. Obviously in books where the LXX translation is paraphrastic, it is almost impossible to be sure in any one place what stood in its Heb. But even in books where the translators have followed their Heb. closely, certainty in knowing what Heb. they had before them in any one place is for various reasons often more difficult to attain than might at first be thought. And even where the *MT* makes no sense and the LXX offers what seems to make very good sense, that does not necessarily mean that the LXX translators found their good sense in the Heb. MS before them: like modern scholars, faced with a Heb. text difficult to construe, and having to put something in their translation, they may have resorted to conjecture. And finally when one attempts to retrovert a Gk. word or phrase into Heb., it not seldom happens that more than one retroversion is possible. That does not mean that we should not call on the LXX's evidence; but we need to use it with great

caution. Major problem areas are the OGr. text of Jb. (one-sixth shorter than the *MT*), of Je. (one-eighth shorter than the *MT* and with a different order of contents, finding some support in the Qumran Heb. MS 4Q Jer^b), of the last six chapters of Ex., and of parts of Sa.-Ki. Much more research needs to be done before we can properly understand and interpret the LXX evidence: and until it is done, it is ill-advised to fill new translations with disputable conjectures based on the LXX.

3. THE SYRIAC VERSION

After the LXX, the oldest and most important translation of the Heb. Scriptures is the Syriac Version. This translation, used by the Syriac church, was described since the 9th century as the Peshitta (Syr. *pšittā*) or 'simple' translation.

I. Origins

No direct information of the authorship or date of the version has been discovered, and as early as Theodore of Mopsuestia (died 428) details concerning its provenance were unknown.

Internal evidence, however, indicates its probable origin. Linguistic affinities have been noted between the Palestinian Aram. Targum and the Syriac translation of the Pentateuch, whereas Syriac (the name usually given to Christian Aram.) is an E Aram. language, and an explanation of this phenomenon offered by P. Kahle throws some light on the possible origin of the version.

These linguistic traces of W Aram., in a version otherwise in E Aram. dialect, reveal some acquaintance with a Palestinian Targum to the Pentateuch. Similarly, A. Baumstark has shown the direct agreement of the Peshitta text of Gn. 29:17 with a Genizah text and the Palestinian Targum as against Targum Onkelos and Pseudo-Jonathan ('Neue orientalische Probleme biblischer Textgeschichte', *ZDMG* 14, 1935, pp. 89-118). These facts suggest that the Peshitta Pentateuch originated in an E Aram. district which had some relationship with Jerusalem.

The ruling house of Adiabene was converted to Judaism about AD 40. Judaism spread among the people of Adiabene, and they needed the Heb. Scriptures in a language they could understand, *i.e.* Syriac, so it is probable that parts of the Syriac OT, and at first the Pentateuch, were introduced into the kingdom in the middle of the 1st century. The Palestinian Targum composed in the W Aram. dialect of Judaea was in current use at that time in Palestine, and we must suppose that this was transposed into the Aram. dialect spoken in Adiabene.

This, however, is not a complete solution, as Baumstark has shown that the original text of the Syriac version goes back even farther than the Palestinian Targum. The Palestinian Targum contains haggadic explanations which in general are not

found in the Syriac Bible. On the other hand, the oldest preserved fragment of this Targum containing part of Ex. 21 and 22 does not possess any haggadic explanation, while the Syriac version of Ex. 22:4-5 follows the usual Jewish interpretation. Hence it is supposed that this fragment represents an older type of the Targum than that which might have been sent to Adiabene.

ms of the Peshitta Pentateuch indicate the early existence of two recensions, one a more literal translation of the Heb. and the other a rendering, as has been described above, closely related to the Palestinian Targum. Many scholars think that the literal translation is the earlier as Syriac church Fathers show more familiarity with a text which followed the Heb. more closely than did the text in common use in the 6th century, e.g. W. E. Barnes, *JTS* 15, 1914, p. 38. However, against this view is the fact that Apbraates and Ephrem did not always quote the 'literal' translation.

It would seem that the literal translation made by Jewish scholars for the Jewish community was taken over by the Syriac church improved in style, and this text was accepted as standard about the 5th century AD. This Syriac church had taken root in the district of Arbela, the capital of Adiabene, before the end of the 1st century, and in the course of the 2nd century Edessa, E of the Upper Euphrates, was the centre of Mesopotamian Christianity.

When at the beginning of the 4th century the Christian faith was declared the official religion of the Roman empire, codices of the LXX were produced, and B. J. Roberts writes (*The Old Testament Text and Versions*, 1951, p. 222), 'It is reasonable to suppose that a similar development was taken with the Peshitta version. Thus it is held that an attempt was made to revise the Syriac version in order to bring it more into harmony with the LXX. It took place shortly after the NT Peshitta was revised, but it is obvious that the recension was not carried out in the same way for all the sacred books. Thus the Psalter and the Prophetic books, because of their relatively greater importance for the NT, were more carefully collated with the Gk. version. Job and Proverbs, on the other hand, were scarcely touched and the same may be said to be true, but to a lesser degree, of Genesis.'

An alternative view concerning origin is advanced by R. H. Pfeiffer (*JOT*, 1941, p. 120), quoting F. Buhl (*Kanon und Text des Alten Testaments*, 1890, p. 187) that 'the Peshitta owed its origin to Christian efforts: in part older individual Jewish translations were utilized, in part the remainder was commissioned to Jewish Christians for translation'. Such a view is possible, as the Syriac Christians included a large Jewish element and came possibly from an originally Jewish congregation.

Concerning the influence of the LXX on the Peshitta, the conclusion of W. E. Barnes may also be quoted (*JTS* 2, 1901, p. 197): 'The influence of the Septuagint is for the most part *sporadic*, affecting the translation of a word here and of a word there. The Syriac translators must indeed have known that their knowledge of Hebrew was far in advance of the knowledge possessed by the Septuagint, and yet the stress of Greek fashion had its way now and again. The Syriac transcribers on the contrary were ignorant of Hebrew and ready to introduce readings found in a Greek version or recommended by a Greek Father. So the Peshitta in its later text has more of the Septuagint than in its

earlier form. It is only in the Psalter (so it seems to me at the present stage of my work) that any general Greek influence bringing in a new characteristic is to be found. That characteristic is a dread of anthropomorphisms from which the Syriac translators of the Pentateuch were free.'

II. Language and translation

An examination of the character of the Syriac translation in the various books of the OT shows there is no uniformity of rendering between the various books, and this implies a variety of authors. Of the Peshitta of Samuel S. R. Driver has written (*Notes on the Hebrew Text and the Topography of the Books of Samuel*, 1913, p. lxxi): 'The Hebrew text presupposed by the Peshitta deviates less from the Massoretic text than that which underlies the LXX, though it does not approach it so closely as that on which the Targums are based. It is worth observing that passages not infrequently occur, in which Peshitta agrees with the text of *Lucian*, where both deviate from the Massoretic text. In the translation of the books of Samuel the Jewish element alluded to above is not so strongly marked as in that of the Pentateuch; but it is nevertheless present, and may be traced in certain characteristic expressions, which would hardly be met with beyond the reach of Jewish influence. . . .'

For the character of the translation in other books we may quote B. J. Roberts (*The Old Testament Text and Versions*, 1951, pp. 221f.): 'The book of Psalms, for example, is a free translation showing considerable influence of the Septuagint; Proverbs and Ezekiel closely resemble the Targumim. Isaiah and the Minor Prophets, for the most part, are again fairly freely translated. The book of Job, although a servile translation, is in parts unintelligible, due partly to textual corruption and partly to the influence of other translations. The Song of Songs is a literal translation, Ruth a paraphrase. Chronicles more than any other book is paraphrastic, containing Midrashic elements and exhibiting many of the characters of a Targum. This book did not originally belong to the Syriac Canon, and it is conjectured that the Syriac version was composed by Jews in Edessa in the third century AD. Christian tendencies, perhaps emanating from an early Christian re-editing, are to be observed in the translation of many passages, prominent among them being Gn. 47:31; Is. 9:5; 53:8; 57:15; Je. 31:31; Ho. 13:14; Zc. 12:10. Many Psalms evidently derive their superscriptions from Christian origins, although in places they also embody some Jewish traditions. How far, however, these may be due to later redactional activity cannot be determined.'

III. Later history of the Peshitta text

A schism in the Syriac church at the end of the 1st quarter of the 5th century resulted in Nestorius and his followers withdrawing E. Nestorius was expelled from the bishopric of Constantinople in 431 and he took with him the Peshitta Bible. Following the destruction of their school at Edessa in 489, the Nestorians fled to Persia and established a new school at Nisibis. The two branches of the church kept their own Bible texts, and from the time of Bar-Hebraeus in the 13th century others have been distinctive Eastern and Western. The Eastern, Nestorian, texts have undergone fewer revisions based on Heb. and Gk. versions on account of the more isolated location of this church.

TEXTS AND VERSIONS

IV. Other translations

Other Syriac translations were made at an early date, but there remains no complete MS evidence. Fragments exist of a Christian Palestinian Syriac (Jerusalem) translation, a version of the OT and NT dating from the 4th to the 6th centuries. This was made from the LXX and intended for the religious worship of the Melchite (Palestinian-Syriac) church. It is written in Syriac characters, and the language is Palestinian Aram.

Philoxenus of Mabbug commissioned the translation of the whole Bible from Gk. (c. AD 508); of this only a few fragments remain, giving portions of the NT and Psalter. Baumstark states that the extant remains are confined to fragments which are based on a Lucianic recension of the text of Is. These belong to the early 6th century AD.

Another Syriac version of the OT was made by Paul, Bishop of Tella in Mesopotamia, in 617 and 618. This follows the text of the Gk. and also keeps the Hexaplaric signs in marginal notes. Readings are given from Aquila, Symmachus and Theodotion. As this is really a Syriac version of the LXX column of Origen's Hexapla, it is known as the Syro-Hexaplaric text, and it is a valuable witness to the Hexaplar text of the LXX.

V. The manuscripts and editions of the Peshitta

The oldest dated biblical MS yet known, British Museum MS Add. 11425, dated AD 464, contains the Pentateuch except the book of Lv. (MS 'D'). Other extant mss of Is. and Pss. date to the 6th century. The important W Syriac Codex Ambrosianus in Milan of the 6th or 7th century has been published photolithographically by A. M. Ceriani (*Translatio Syra Pescitto Veteris Testamenti*, 1867). This consists of the whole of the OT and is close to the MT.

The writings of the Syriac church Fathers, e.g. Ephrem Syrus (died AD 373) and Aphraat (letters dated 337-345), contain quotations from the OT, giving textual readings of an early date. The commentaries of Philoxenus, Bishop of Mabbug 485-519, give Jacobite readings. The most valuable authority for the text is the 'Auşar Raze' of Bar-Hebraeus, composed in 1278.

The *editio princeps* of the Peshitta was prepared by a Maronite, Gabriel Sionita, for inclusion in the Paris Polyglot of 1645. He used as his main source the MS *Codex Syriacque b* in the Bibliothèque Nationale in Paris. This is an erratic 17th-century MS.

The Peshitta text in Brian Walton's Polyglot of 1657 is that of the Paris Polyglot; S. Lee's *Vetus Testamentum Syriace*, 1823, is essentially a reprint of the texts of the Paris and Walton Polyglots, although Lee had access to Codex B (the Buchanan Bible, 12th century) and three mss, p, u and e, W Syriac mss of the 17th century.

The Urmia edition was published in 1852, and in many places follows the readings of Nestorian mss. In 1887-91 the Dominican monks at Mosul published both OT and NT, also depending upon an E Syriac tradition.

A critical edition of the Syriac version is in preparation by the Peshitta Commission of the International Organization for the Study of the OT.

4. ARAMAIC

I. Aramaic text of the Old Testament

See *LANGUAGE OF THE OT. II.

II. Aramaic in the New Testament

From the time of the Exile Aram. spread as the vernacular language in Palestine, and was the commonly spoken language in the country in NT times, probably more so than Gk., introduced at the time of the conquests of Alexander the Great.

The Gospels record Christ's words in Aram. on three occasions: Mk. 5:41—*Talitha cumi; Mk. 7:34—*ephphatha*, representing a dialect form of *'itpattah*; and his cry upon the cross, Mk. 15:34—**Eloi, Eloi, lama sabachthani?* (cf. Mt. 27:46). When Jesus prayed in the Garden of Gethsemane he addressed God the Father as **'Abbā*, Aram. for 'father'.

In Rom. 8:15 and Gal. 4:6 Paul also uses this intimate form *'Abba*, Father', as an intimation that God has sent the Spirit of his Son into the hearts of believers in Christ when they pray, *'Abba*, Father'. Another Aramaism current in early churches, **Maranatha* (*maranā tā*), 'Our Lord, come!' is recorded by Paul in I Cor. 16:22. Other Aram. words found in the NT are **Akeldama* ('field of blood', Acts 1:19), and several place-names and personal names.

Acts 26:14 mentions that Paul heard the risen Christ speaking to him 'in the Hebrew tongue', for which we should undoubtedly understand Aram. (see F. F. Bruce, *The Book of the Acts*, 1954, p. 491, n. 18), as also in Acts 22:2. See also *LANGUAGE OF THE NT.

5. OTHER VERSIONS

Of the other translations of the OT the Coptic is based on the LXX. It was probably made in the 3rd century AD. There are two versions: one in Bohairic, the dialect of Lower Egypt; the other and older in Sahidic, the dialect of Thebes.

The Ethiopic translation, apparently made from the LXX, is too late to be of any real value.

The best-known Arabic translation is that of Saadia ha-Gaon (892-942). It would be surprising if this was the first translation into such an important language as Arabic. A midrashic reference to an Arabic translation of the Torah may have been prompted by an existing one. Arabic translations known to us are all too late to provide material for the textual criticism of the OT.

6. THE NEW TESTAMENT

The NT has been handed down amidst many hazards encountered by all the literature of antiquity. The mistakes of the scribe and the corrections of the redactor have left their mark upon all the sources from which we derive our knowledge of its text (or wording). Before we may ascertain the original text, we have to apply to the prolific mass of material a series of disciplines, viz. (1) *Codicology*—the study of ancient documents and their interrelation, closely linked with palaeography, the science of ancient writing. In some cases stemmata (family trees) may be established: the stages of transmission ascertained (with or without stemmatic precision), and, in ideal conditions, an archetypal text. (2) *Rational criticism*—the method of informed choice between the variants of the documents or their archetypes where these differ uncompromisingly and cannot be explained in terms of simple error. (3) *Conjectural emendation* may be invoked where insoluble difficulties remain. In the text of the NT, there is much still to be done in the study of single documents and their interrelationship, although there has been much work of this kind: recent decades have laid greater stress on rational criticism as a way towards the original text. The sources of information are many and very few scholars seek recourse to conjectural emendation.

The Gk. sources are very numerous. The standard list of Gk. NT MSS begun by C. R. Gregory (*Die griechischen Hss. des NTs*, 1908, reprinted 1973), is superseded by K. Aland, *Kurzgefasste Liste der griechischen Hss. des NT*, 1963; *Materialien z. nt. Handschriftkunde*, 1, 1969, pp. 1–53; *Bericht der Stiftung z. Foerderung der nt. Textforschung*, 1972–4; *idem*, 1975–6. In this there now appear 88 papyri, 274 uncial mss, 2,795 minuscule mss, and 2,209 lectionary mss. Here indeed is *embarras de richesse*. Moreover, besides sources in the original Gk., recourse may be had to the ancient translations (usually termed 'versions') in the languages of Christian antiquity and to the citations made by Christian writers from the Scriptures. Both these prove to be sources of the most important evidence for the establishment of the text and its history.

I. Manuscripts

Our primary source is in Gk. mss, which are found in a number of different materials. The first of these is *papyrus*; this is a durable writing material made from reeds. It was used throughout the ancient world, but has been preserved mainly in the sands of Egypt. Among the most significant of the 88 listed papyri of the NT (indicated in the list of Gregory-von Dobschütz–Aland by a 'p' in Gothic style, followed by a numeral) are the following.

(i) *Of the Gospels*. P⁴⁵ (Chester Beatty papyrus of the Gospels, Dublin), c. AD 250, contains large parts of Lk. and Mk., somewhat less of Mt. and Jn.; P⁵² (John Rylands University Library, Manchester), c. AD 100–150, is our earliest fragment of the NT; P⁶⁶ (Bodmer papyrus II, Geneva), c. AD 200, contains the Gospel of Jn., with some gaps in chs. 14–21; P⁷⁵ (Bodmer papyrus XIV–XV), 2nd century, contains Lk. 3–14; Jn. 1–15.

(ii) *Of the Acts of the Apostles*. P³⁸ (Michigan pap. 1571, Ann Arbor), dated by some in the 3rd century, by some in the 4th, contains Acts 18:27–19:6; 19:12–16; P⁴⁵ (Chester Beatty, as above) contains parts of Acts 5:30–17:17; P⁴⁸ (Florence

from the 3rd century, a single leaf containing Acts 23:11–29.

(iii) *Of the Pauline Epistles*. P⁴⁶ (Chester Beatty papyrus of the Epistles, Dublin), c. AD 250, contains considerable parts of Rom., Heb., 1 and 2 Cor., Gal., Eph., Phil., Col., 1 Thes., in this order.

(iv) *Of the Catholic Epistles*. P⁷² (Bodmer papyrus VII–VIII), 3rd or 4th century, contains Jude, 1 Pet., 2 Pet. (mingled with apocryphal and hagiographical writings, and Pss. 33, 34).

(v) *Of the Revelation*. P⁴⁷ (Chester Beatty papyrus of Rev., Dublin) contains Rev. 9:10–17:2.

All these papyri make significant contributions to our knowledge of the text. It should be particularly noted, however, that it is the age of these MSS, not their material or place of origin, which accords such significance to them. A late papyrus need not of necessity have any great importance.

The second material of which Gk. MSS were made is *parchment*. This was the skin of sheep and goats dried and polished with pumice; it made a durable writing material resistant to all climates. It was used from antiquity till the late Middle Ages, when paper began to replace it. The form of the manuscript book was originally the scroll, but few Christian writings survive in this form. The Christian book was usually the codex, i.e. the form of binding and pagination familiar to us. (*WRITING, IV.) Many parchment codices survive (the papyri are also in this form) and some are works of great beauty. Some were even 'de luxe' editions coloured with purple and written in gold or silver ink. At certain periods, however, parchment became scarce and the writing on old MSS would be erased and the parchment re-used. Such re-used MSS ARE CALLED *palimpsests*: it is often the erased writing which is of importance to modern scholarship, in which case the use of chemical reagents, photography and other modern technical methods is frequently required before it can be deciphered.

The parchment MSS of the NT (together with the relatively few paper MSS of the 15th and 16th centuries) are divided by a threefold classification. The first main demarcation is that between MSS containing continuous texts and those arranged according to the lections for daily services and church festivals. The latter are termed lectionaries or *evangelistaria*; they are indicated in the Gregory-von Dobschütz–Aland list by the letter 'l' followed by a numeral ('1' alone indicates a gospel lectionary; '13' indicates a lectionary of the Epistles; '1 + 2', a lectionary containing both Gospels and Epistles). This group of MSS was formerly little studied in any systematic way: the series *Studies in the Lectionary Text of the Greek New Testament* (1933–1966), and R. E. Cocroft (*Studies and Documents* 32, 1968) have redressed much of the balance. The former group is further divided into two sub-groups distinguished by the style of writing employed in their execution and roughly consecutive in point of time. The relatively older group is that of the *Uncials*, i.e. MSS written in capital letters: the relatively younger group is that of the *Minuscules* or *Cursives*, i.e. MSS written in the stylized form of the lower case perfected by scribes of the 10th century and thereabouts, and perhaps popularized from the Stoudios monastery.

As in the case of the papyri it should be noted that an uncial MS is not *ipso facto* a better representative of the NT text than a minuscule. Some older uncials rightly occupy a chief place in critical apparatus; some younger are comparatively worth-

TEXTS AND VERSIONS

less. Similarly, minuscules, though later in date, may prove to be faithful copies of early mss; such then have as great importance as uncials.

Uncials are indicated in the Gregory-von Dobschütz-Aland list by capital letters of the Lat. and Gk. alphabets or by a numeral preceded by a zero. Important among the uncials are the following: (1) Codex Sinaiticus (Σ or 01), a 4th-century ms of OT and NT; in addition to its intrinsically important text it contains a series of corrections made in the 6th century and probably to be connected with the critical work of Pamphilus of Caesarea. (2) Codex Vaticanus (B or 03), a ms of similar content, but lacking the latter part of the NT from Heb. 9:14 to the end of Rev. Both these mss are probably of Egyp. origin. (3) Codex Alexandrinus (A or 02), a 5th-century ms containing OT and NT, probably of Constantinopolitan origin. (4) Codex Ephraemi Rescriptus (C or 04), a 5th-century palimpsest ms of OT and NT re-used in the 13th century for the works of Ephraem the Syrian in Gk. translation. (5) Codex Bezae (Cantabrigiensis) (D or 05), 4th or 5th century and of uncertain provenance—suggestions range from Gaul to Jerusalem; it presents a Gk. text on the left page, a Lat. on the right, and contains an incomplete text of the Gospels and Acts with a few verses of 1 Jn. (6) Codex Washingtonianus (the Freer Codex) (W or 032), probably a 4th-century ms, containing the Gospels of which the text-type varies considerably from place to place. (7) Codex Koridethianus (Θ or 038), which it is impossible to date, since it was apparently written by a scribe unaccustomed to Gk., probably a Georgian; the ms copied by him was apparently a late uncial of the 10th century. (8) Codex Laudianus (E^a or 08), a 6th- or 7th-century Graeco-Lat. ms of the Acts. (9, 10, 11) Codices Claromontanus, Boernerianus, Augiensis (D^{Paul} or 06; G^{Paul} or 012; F^{Paul} or 010), a group of Graeco-Lat. mss, the former of the 6th, the two latter of the 9th century, containing the Pauline Epistles. (12) Codex Euthalianus (H^{Paul} or 015), 6th-century ms much fragmented and scattered, containing the Pauline Epistles connected, according to a colophon (*i.e.* appended note), with a ms in the library of Pamphilus of Caesarea.

These mss give the varying text-types existing in the 4th century; it is around these that debate has centred in the last 100 years and on these mss that critical texts have been based. As an exploratory investigation this is justifiable, but, as more recent discoveries have shown, the complexity of the data is greater than this procedure would imply.

The researches of Lake, Ferrar, Bousset, Rendel Harris, von Soden, Valentine-Richards and many others have made it abundantly plain that a fair proportion of minuscules of all dates contain in larger or smaller measure important ancient texts or traces of such texts: to give then even an approximate indication of all important minuscules is virtually impossible. The following remarks give some idea of the significance of this material. Two mss numbered 33 and 579 in Gregory's list are very closely allied to the text of B; 579 has even been described as presenting a text older than B itself. The text of Θ, otherwise unknown in the uncials save in part of W, is also found in 565, 700 and some others; as such a text was known to Origen, these are of great significance. Closely allied texts are found in the minuscule families known as family 1 and family 13 and in mss 21, 22 and 28. In the Acts some of the peculiarities of D and E are

attested by various minuscules, pre-eminent among which are 383, 614 and 2147. In the Pauline Epistles the minuscule evidence has not been so thoroughly sifted yet, save in the unsatisfactory work of von Soden. However, 1739 has attracted much study, and with its congeners 6, 424, 1908, and the late uncials erroneously placed together as M^{Paul}, proves to attest a text of equal antiquity and comparable significance to that of P⁴⁶ and B. In Rev., 2344 is an ally of A and C, the best witnesses to the original text of that book.

II. Versions

By the mid-3rd century parts at least of the NT had been translated from the Gk. original into three of the languages of the ancient world: Lat., Syriac and Coptic. From that time on, these versions were revised and expanded: and in their turn became the basis of other translations. Especially in the E, Bible translation became an integral part of the missionary work of both Gk.-speaking and Syriac-speaking Christians. As churches developed and theology flourished, versions would be revised to the standard of the Gk. text then prevalent. So, both by reason of their ultimate antiquity and by their contacts with the Gk. at various historical points, the versions preserve much significant material for textual criticism.

From this outline it will be plain that each version has a history. There is need, then, for internal textual criticism of any version before it can be used in the determination of the Gk. text; and in scarcely any case may we speak of 'such and such a version' but need to speak of such mss or such a form or stage of the version in question. This, already observed for the Lat. and Syriac versions, should become the general rule.

In tracing the internal history of a version we have the advantage of the phenomenon of 'rendering' to aid us, which is not to be found in dealing with the Gk. text. In the Gk., text-types can be differentiated by variant readings alone: in any version even the same reading may be found differently rendered in particular mss. Where this is so, different stages in the evolution of the version may be traced.

Difficulties are to be met, however, in the use of any version for the criticism of the Gk. text. These arise because no language can reproduce any other with complete exactness. This is so even in the case of cognates of Gk. such as Lat. or Armenian; it is more strikingly true of languages of other linguistic type such as Coptic or Georgian. Particles essential to the one are found to have no equivalent or no necessary equivalent in the other; verbs have no equivalent conjugation; nuances and idioms are lost. Sometimes a pedantic translator will maltreat his own language in order to give a literal rendering of the Gk.; in such a case we may have an almost verbatim report of the Gk. model. But in the earliest versions pedantry has no place and we encounter the difficulties of racy idiom and sometimes paraphrase. Nevertheless, the evidence of the versions needs to be mastered in the quest for the original text.

Some have claimed that an important factor in the history of many versions is the *Diatessaron*, a harmony of the four Gospels and some apocryphal source made c. AD 180 by Tatian, an Assyrian Christian converted in Rome and a disciple of Justin Martyr (*CANON OF THE NT). Unfortunately for research, no unequivocal evidence

of it has been available, until recently, in Syriac, its probable original language. The most important witnesses to it are a commentary upon it by Ephrem the Syrian preserved in Armenian (a considerable portion of the Syriac original of this commentary came to light in 1957); a translation into Arabic extant in several MSS, but apparently much influenced before its translation by the text of the Syriac Peshitta; the Lat. Codex Fuldensis, similarly influenced by the Lat. Vulgate; and a fragment in Gk. found at Dura-Europos. Its widespread vogue and influence may be shown by the existence of harmonies in Old High German, Middle High German, mediaeval Dutch, Middle English, the Tuscan and Venetian dialects of mediaeval Italian, Persian and Turkish. It is quite clear that a *Diatessaron* lies beneath the oldest stratum of the Syriac, Armenian and Georgian versions, but the view that it influenced the Lat. has many flaws. These matters are still an area for research and debate.

The three basic versions made directly from Gk. are the Lat., Syriac and Coptic. Of none of these is the earliest stage certainly known. Tertullian usually translated directly from the Gk., with wide variety of rendering, in which his acquaintance with an early form of the Old Lat. translation shows itself. Our MS evidence for the pre-Vulgate stage of the Lat. consists of about 30 fragmentary MSS. These show a somewhat bewildering richness of variants well meriting the *bon mot* of Jerome, '*tot sunt paene (exemplaria) quot codices*'. Scholars usually distinguish two or three main types of text (*viz.* 'African', 'European' and sometimes 'Italian') in the various parts of the NT before Jerome; the *Vetus Latina* Institute of Beuron is presenting in its edition a more precise analysis with alphabetical sigla for text-types and sub-text-types.

But in the Gospels at least there is more interconnection between types than is usually thought; and even in the 'African' Lat. of MSS k and e there may be discerned more than one stage of translation and revision. Jerome undertook a revision of the Lat. Bible (normally known as the Vulgate) at the request of the Pope Damasus about AD 382. It is uncertain how far his revision actually extended. The latter books of the NT are probably very little revised. In the course of time this revision itself became corrupt and a number of attempts at purification figure in its history, most notably those of Cassiodorus, Alcuin and Theodulph.

The Syriac church, after using an apocryphal Gospel, was first introduced to the canonical Gospels in the form of the *Diatessaron*: this remained long in vogue, but was gradually supplanted by the separated Gospels in the form known to us in the Curetonian and Sinaitic MSS and in citations. This retained much of Tatian's language in a four-Gospel form. We have no MSS of a parallel version of the Acts and Epistles, but the citations made by Ephrem indicate its existence. Towards the end of the 4th century a revision was made of an Old Syriac base to a Gk. standard akin to Codex B of the Gk.; this was the Peshitta, which in course of time became the 'Authorized Version' of all the Syriac churches. Its author is unknown: more than one hand has been at work. The version comprises in the NT the canonical books apart from 2 Pet., 2 and 3 Jn., Jude and Rev. Later scholarly revisions—by Polycarp, at the command of Mar Xenaia (Philoxenus) of Mabbug (AD 508) and by Thomas of Harkel (AD 616) made good the omis-

sion. Few MSS of either remain, and the existence of a separate Harklean version (as distinct from the addition of scholarly marginal apparatus to the Philoxenian) is still a matter of debate. The version in the quite distinct Palestinian Syriac dialect is generally thought to be unconnected with this stream of translation, but otherwise its origins are at present obscure. Much of the NT is extant in lectionary form.

Biblical remains are found in several dialects of Coptic: the entire NT in Bohairic, the dialect of Lower Egypt and the Delta; almost the whole in Sahidic, the dialect of Upper Egypt; considerable fragments in Fayyumic and Achmimic; and the Gospel of John in sub-Achmimic. To trace in detail the history of the versions in these dialects and in the various parts of the NT is still an unaccomplished task: neither the dates of the versions nor the interrelations between them, if any, have yet been elucidated from the abundant materials to hand. The Sahidic is usually dated in the 3rd or 4th century, while for the Bohairic dates as diverse as the 3rd century and the 7th have been proposed. In the main these versions agree with the Gk. text-types found in Egypt: the *Diatessaron* element discerned in the Lat. and Syriac texts is scarcely present here, and it may be concluded that, whatever the internal relations of the versions in the different dialects, the Coptic as a whole stands in a direct relation to the Gk. text.

The majority of other versions are dependent on these. From the Latin come mediaeval versions in a number of W European languages: while these mainly reflect the Vulgate, traces of Old Lat. readings are to be found. Thus, Provençal and Bohemian versions preserve an important text of the Acts. The Syriac versions served as base for a number of others, the most important being the Armenian (from which the Georgian was in its turn translated), and the Ethiopic. These have complex internal history, their ultimate form conformed to the Gk., but their earlier stages less so. Persian and Sogdian versions derive from the Syriac, while the many Arabic versions and the fragmentarily preserved Nubian have both Syriac and Coptic ancestry. The Gothic and the Slavonic are direct translations from the Gk. in the 4th and 10th centuries respectively.

III. Patristic citations

For dating different text-types and for establishing their geographical location, we rely on the data provided by scriptural citations in early Christian writings. Much significant work has been done in this field, the most important results being in respect of Origen, Chrysostom and Photius among Gk. writers, of Cyprian, Lucifer of Cagliari and Novatian among the Latins, and of Ephrem and Aphraat among the Syrians. About the effects of the work of Marcion and Tatian on the NT text and concerning the text attested by Irenaeus—all matters of great importance—we are still in some uncertainty.

The whole field is much complicated by the vagaries of human memory and customs of citation. We also find instances where the writer on changing his domicile changed his MSS or on the contrary took a particular text-type with him. For these reasons few would accept a reading attested in citation alone; yet F. Blass and M.-E. Boismard have dared to do this in works on the text of the Gospel of Jn.

TEXTS AND VERSIONS

IV. Analysis

In many cases of classical literature it is found that the material available for the establishment of the text may be analysed into one *stemma* or line of descent, leading down from the archetype which may be adequately reconstructed even where a careful transcript is not to be discovered among the MSS, as is often the case. The NT material is not patient of such analysis in spite of the efforts of a number of scholars to apply a genealogical method to it. Westcott and Hort used the criterion of conflated readings as the primary stage in such an analysis. In this way they established the inferiority of the text of the mass of the late MSS, a conclusion corroborated by their second criterion, the evidence of patristic citation. They were then faced, however, with two main types of text, viz. that attested by B^κ and that attested by D^{lat}. Between these texts of equal antiquity they were unable to decide by these two objective criteria, and so fell back on a third, inevitably somewhat subjective, namely, that of intrinsic probability. By this means they were enabled to follow the B^κ text in most cases and to reject the D^{lat} text.

H. von Soden's analysis of the same material arrived at a system of three recensions, all dating in his view from the 4th century: by a simple arithmetical procedure he thought himself able to arrive at a pre-recensional text, always allowing for the factor of harmonization which he considered all-pervasive (and due in the Gospels to the corrupting influence of the *Diatessaron*).

Neither theory has met with unqualified approval subsequently. Von Soden's methodology is open to criticism because of the sometimes artificial rigidity of his triple pattern, and his uncritical use of the Arabic *Diatessaron*. He is, in Lake's phrase, 'so often instructive, so rarely correct'. Hort's theory has a whole history of subsequent debate. Slavishly followed at first, it was then put in doubt by the growing knowledge of the Lat. and Syriac versions, and of minuscule families with early patristic links, both of which helped to create a picture of an early complex of 'mixed texts' rather than a simple clearcut twofold division of text-types. But more recently, anticipated by rational-critical approbation of the codex B and its allies by Lagrange and Ropes, new discoveries and fresh examination have resulted in a growing consensus that the P⁷⁵-B text in Lk. and Jn., the P⁴⁶-B text in the Pauline Epistles, is in most of its features an intrinsically good text. Presence of possible corruption within it is not, however, denied. Hort's fault was to suggest, whether intentionally or not, that the third criterion of intrinsic probability had the 'objectivity' of the genealogical method exemplified in the first and second. In fact, he was using rational criticism, and in many of his conclusions, although probably not in all, his judgment appears to have been sound. We need the analysis of text-types and their history and the definition of recensions if these existed: but the concluding stage of any search for the original text can only be pursued by rational criticism, *i.e.* the practice of scientific judgment by intrinsic probability. A number of objective criteria may be established for this purpose.

V. Criteria

In this matter stylistic and linguistic standards play a large part. In every part of the NT enough remains without serious variation to enable studies

of the characteristic style and usage of individual writers to be made. In cases of textual doubt we may use such knowledge of the accustomed style of the book in question. Furthermore, we shall in the Gospels prefer variants where the influence of parallel Synoptic passages is absent; or those in which a strongly Aram. cast in the Gk. reveals the underlying original tradition. Throughout, we shall avoid constructions of Attic or Atticizing Gk., preferring those of the Hellenistic vernacular. In other places, factors from a wider sphere may be discerned. Palaeography can elucidate variants which derive from primitive errors in the MS tradition. The history or economics of the 1st century AD can sometimes show us the choice between variants by providing information on technical terms, value of currency, *etc.* Church history and the history of doctrine may reveal where variants show accommodation to later doctrinal trends.

It will be plain from the fact that such criteria can be applied that in spite of the profusion of material the text of the NT is fairly well and accurately preserved, well enough at least for us to make stylistic judgments about, *e.g.*, Paul or John, or to judge in what case doctrine has transformed the text. The text is in no instance so insecure as to necessitate the alteration of the basic gospel. But those who love the Word of God will desire the greatest accuracy in the minutest details, knowing the nuances of meaning made possible by word-order, tense, change of particle, *etc.*

VI. History of the text

In brief outline we may thus sketch the history of the NT text. Many of the factors earliest at work are those described in the history of the growth of the * Canon of the NT. The circulation of separate Gospels, but of the Pauline letters as a corpus; the chequered history of the Acts and Rev.; the overshadowing of the Catholic Epistles by the rest: all these are reflected in the textual data for the several books. During the period of the establishment of the Canon a number of factors were at work. There was a tendency as early as we can trace to attempt emendation of the Gk. according to prevailing fashions or even scribal whim; in the case of the Gospels a close verbal identity was sought, often at the expense of Mk. In some cases, 'floating tradition' was added; or items were taken away from the written word. Such heretical teachers as Marcion and Tatian left the mark of tendentious correction upon their editions of the text, and doubtless their opponents were not blameless in this. In the Acts, alterations were made perhaps for purely literary or popularizing motives. Nevertheless, good texts were to be found, whether preserved by miracle or by philology, although no text known is without some corruption. In the 2nd and 3rd centuries, we find a mixture of good and bad, in differing proportions, in all our evidence.

It has seemed to a number of scholars that at some time in the late 3rd or early 4th century attempts at recensional activity took place. But there is little direct evidence of this, and recent discovery and discussion have put a completely new look on the question. We now know from the close affinity of P⁷⁵ and B that the text-type of the latter, known in the Alexandrian Fathers, was not a creation of the shadowy Hesychius (named, with Lucian, by Jerome in his letter to Damasus, as author of a recension), but existed in the 2nd century. Since, however, as we know from the papyri, other types

were known in Egypt, scholarly work may have rescued that one which commended itself on traditional philological grounds. The Byzantine text has been associated with the name of Lucian, and this has been supported by the similarity of many of its features to those of the Lucianic recension of the LXX. That recension, however, may antedate Lucian, at least in some of its elements, and likewise in the NT we have some evidence of Byzantine readings in papyri earlier than his date. The so-called Caesarean text, which Streeter and Lake were confident to have found in the citations of Origen and Eusebius, and in codex Θ and various minuscules, has disintegrated upon closer examination. While there may be a recensional form in some of the witnesses adduced, there was a pre-recensional stage, known, for instance, in P⁴⁵. In other words, Christian scholars, where their activity may be discerned, were not creating new texts so much as choosing from a variety which already existed. In the Epistles their scope for choice was apparently less since only three forms (Alexandrian, Byzantine and 'Western') are found, but in Rev. there is a distinct fourfold pattern, yet one unrelated to the textual divisions of the Gospels. The data which earlier generations termed 'Western text' exemplify the way in which ancient readings could co-exist in specific traditions with material evidently secondary. It is the principles of choice utilized by the Christian scholars of the 3rd and 4th centuries which demand our scrutiny, and the general sobriety of Alexandrian judgment shows itself more and more. Yet no critic today would follow a single text-type alone, even if he were to give pride of place to one in particular.

In the Middle Ages the Alexandrian text seems to have suffered eclipse. Various forms of Caesarean and Byzantine wrestled for supremacy till about the 10th century. After this, the Byzantine text may be said to have been supreme in the sense that many MSS of nearly identical type were produced and have been preserved. But variants from even the earliest times are recrudescing in late MSS, and important MSS of other recensions and even of pre-recensional type come from very late dates, while some late MSS in fact change their allegiance in a bewildering fashion from text-type to text-type.

VII. Conclusion

Thus the task of NT textual criticism is vast and unfinished. Certainly, advances have been made since the material began to be collected and examined in the 17th century. Both Hort and von Soden present texts better than the printed texts of the Renaissance, and provide a sound basis upon which satisfactory exegesis may proceed. It is evident that many of the principles behind the Alexandrian text were sound. But it must be constantly borne in mind that even the best philological work of antiquity demands critical scrutiny if we seek the original text. The textual critic will be as the scribe disciplined in the kingdom of heaven, bringing forth from his treasures things new and old. The busy textual projects of the post-war years should bring us nearer to the apostolic *ipsisima verba* than previous generations were favoured to come; yet we cannot but build on other men's foundations.

THADDAEUS. This name occurs only in the list of the 12 apostles (Mt. 10:3; Mk. 3:18). The equivalent in Lk. 6:16 is 'Judas the son of James' (cf. also Acts 1:13). *av* in Mt. 10:3 reads 'Lebbaeus, whose surname was Thaddaeus'. Most textual critics now read simply 'Thaddaeus' and treat 'Lebbaeus' as an intrusion from the Western Text, though some have suggested 'Lebbaeus' to be correct and 'Thaddaeus' to have been introduced from Mk. 3:18. 'Thaddaeus' is probably derived from Aram. *taḡ*, meaning the female breast, and suggests warmth of character and almost feminine devotedness. 'Lebbaeus' comes from Heb. *lēb*, 'heart', and it may therefore be an explanation of the other name. Attempts have been made to derive 'Thaddaeus' from 'Judah' and 'Lebbaeus' from 'Levi'.

There seems little doubt that Thaddaeus is to be identified with 'Judas of James' (see F. F. Bruce, *The Acts of the Apostles*³, 1990, p. 105). The name 'Judas' would not be popular with the deed of Judas Iscariot in mind, and this may be why it is not used in Mt. and Mk. The post-canonical literature does not help us to obtain a clear picture, but Jerome says that Thaddaeus was also called 'Lebbaeus' and 'Judas of James', and that he was sent on a mission to Abgar, king of Edessa. Eusebius, on the other hand, reckoned him to be one of the Seventy. The mention of the Gospel of Thaddaeus in some MSS of the *Decretum Gelasii* is thought to be due to a scribal error. R.E.N.

THEATRE. Gk. theatres were usually cut in some naturally concave hillside such as might be afforded by the acropolis of the town concerned. There was thus no limit to size, provided the acoustic properties were adequate, and some theatres seated many thousands of persons. The seats rose precipitously in a single tier around the *orchēstra*, or dancing space. Behind this the theatre was enclosed by a raised stage, the *skēnē*. Together with the gymnasium, the theatre was the centre of cultural affairs, and might be used as a place for official assemblies, as at Ephesus (Acts 19:29). This

THEATRE

particular theatre stood facing down the main thoroughfare of the city towards the docks, and as in most Gk. states remains the most substantial relic of the past. E.A.J.

THEBES (Heb. *No*, as אֲנֹ). Once Egypt's most magnificent capital. Heb. *No* corresponds to the Egyp. *nw(t)*, 'the City *par excellence*, and No-Amon to the Egyp. phrase *nw(t)-'lmm*, 'the City of (the god) Amūn'. In Gk. it is called both Thebes, the usual term in modern writings, and Diospolis magna. Some 530 km upstream from Cairo as the crow flies, its site on the two banks of the Nile is marked on the E side by the two vast temple precincts of the god Amūn (*AMON), now known by the Arab. names Karnak and Luxor, and on the W side by a row of royal funerary temples from modern Qurneh to Medinet Habu, behind which extends a vast necropolis of rock-cut tombs.

Thebes first rose to national importance in the Middle Kingdom (early 2nd millennium BC), as the home town of the powerful pharaohs of the 12th Dynasty (*EGYPT, History); however, the land was then administered not from Thebes in the far S, but from the better-placed Itjet-Tawy just S of ancient *Memphis and modern Cairo. During the Second Intermediate Period Thebes became the centre of Egyp. opposition to the foreign Hyksos kings, and from Thebes came the famous 18th Dynasty kings, who finally expelled them and established the Egyp. empire (New Kingdom). During the imperial 18–20th Dynasties, c. 1550–1070 BC, the treasures of Asia and Africa poured into the coffers of Amūn of Thebes, now state god of the empire. All this wealth plus the continuing gifts of Late Period pharaohs such as *Shishak fell as spoil to the conquering Assyrians under Ashurbanipal in 663 BC amid fire and slaughter. In predicting mighty Nineveh's fall, no more lurid comparison could Nahum (3:8–10) draw upon than the fate of Thebes. The force of this comparison rules out attempts occasionally made to identify Nahum's No-Amon with a Lower Egyp. city of the same name. The Nile, Nahum's 'rivers', was truly Thebes' defence. The Late Period pharaohs made full use of its E Delta branches and irrigation and drainage canals as Egypt's first line of defence, with sea-coast forts at the Nile mouths and across the road from Palestine —perhaps alluded to in the phrase 'wall(s) from the sea' (coast inwards?). To this protection was added Thebes' great distance upstream, which invaders had to traverse to reach her. In the early 6th century BC Jeremiah (46:25) and Ezekiel (30:14–16) both spoke against Thebes. See C. F. Nims, *Thebes*, 1965. K. A. K.

THEBEZ (Heb. *tēbēs*, 'brightness'). A fortified city in Mt. Ephraim, in the course of capturing which *Abimelech was mortally wounded by a millstone hurled down on him by a woman (Jdg. 9:50ff.; 2 Sa. 11:21). Thebez is the modern Tübās, about 16 km N of Nablus, and NE of Shechem on the road to Beth-shan. J. D. D.

THEOPHILUS (Gk. *theophilos*, 'dear to God', 'friend of God'), the man to whom both parts of Luke's history were dedicated (Lk. 1:3; Acts 1:1). Some have thought that the name indicates generally 'the Christian reader', others that it conceals a

well-known figure, such as Titus Flavius Clemens, the emperor Vespasian's nephew (so B. H. Streeter, *The Four Gospels*, 1924, pp. 534ff.). But it is most probably a real name. The title 'most excellent' given to him in Lk. 1:3 may denote a member of the equestrian order (possibly in some official position) or may be a courtesy title (cf. Acts 23:26; 24:3; 26:25). Theophilus had acquired some information about Christianity, but Luke decided to supply him with a more orderly and reliable account. He may have been a representative of that class of Rom. society which Luke wished to influence in favour of the gospel, but scarcely the advocate briefed for Paul's defence before Nero (so J. I. Still, *St Paul on Trial*, 1923, pp. 84ff.). F. F. B.

THESSALONIANS, EPISTLES TO THE.

I. Outline of contents

1 Thessalonians

- a. Greeting (1:1).
- b. Thanksgiving for the Thessalonian Christians' faith and steadfastness (1:2–10).
- c. Paul's explanation of his recent conduct (2:1–16).
- d. Narrative of events since he left Thessalonica (2:17–3:10).
- e. His prayer for an early reunion with them (3:11–13).
- f. Encouragement to holy living and brotherly love (4:1–12).
- g. Concerning the parousia (4:13–5:11).
- h. Some exhortations (5:12–22).
- i. Prayer, final greeting and benediction (5:23–28).

2 Thessalonians

- a. Greeting (1:1–2).
- b. Thanksgiving and encouragement (1:3–12).
- c. Events which must precede the day of the Lord (2:1–12).
- d. Further thanksgiving and encouragement (2:13–3:5).
- e. The need for discipline (3:6–15).
- f. Prayer, final greeting and benediction (3:16–18).

II. Authorship

Both the Epistles to the Thessalonians are superscribed with the names of Paul, Silvanus (= Silas) and Timothy; but in both Paul is the real author, although he associates with himself his two companions who had recently shared his missionary work in Thessalonica. In 1 Thes. Paul speaks by name in the first person singular (2:18) and refers to Timothy in the third person (3:2, 6); in 2 Thes. he appends his personal signature (3:17) and is therefore to be identified with the 'I' of 2:5. His use of 'we' and 'us' when he is referring to himself alone is as evident in these Epistles as in others, especially so in 1 Thes. 3:1: 'we were willing to be left behind at Athens alone' (cf. Acts 17:15f.).

There has been little difficulty about the Pauline authorship of 1 Thes.; F. C. Baur's ascription of it to a disciple of Paul's who wrote after AD 70 to revive interest in the parousia is but a curiosity in the history of criticism.

Greater difficulty has been felt with 2 Thes. Its style is said to be formal as compared with that of the first Epistle; this judgment, based on such expressions as 'we are bound' and 'as is fitting' in 1:3,

is not of great moment; it certainly needs no such explanation as that offered by M. Dibelius—that this Epistle was written to be read in church—for the same is true of the first Epistle (cf. 1 Thes. 5:27). More serious is the argument that the eschatology of 2 Thes. contradicts that of 1 Thes. The first Epistle stresses the unexpectedness with which the day of the Lord will arrive, 'like a thief in the night' (1 Thes. 5:2), whereas the second Epistle stresses that certain events will intervene before its arrival (2 Thes. 2:1ff.), and does so in a passage whose apocalyptic character is unparalleled in the Pauline literature.

A. Harnack accounted for the difference with the suggestion that 1 Thes. was written to the Gentile section of the church of Thessalonica, and 2 Thes. to the Jewish section. This is not only rendered improbable by the direction of 1 Thes. 5:27 that that Epistle be read to 'all the brethren' but is incredible in the light of Paul's fundamental insistence on the oneness of Gentile and Jewish believers in Christ. Equally unconvincing is F. C. Burkitt's supplement to Harnack's theory—that both Epistles were drafted by Silvanus and approved by Paul, who added 1 Thes. 2:18 ('1 Paul') and 2 Thes. 3:17 in his own hand.

Alternative suggestions to the Pauline authorship of both letters raise greater difficulties than the Pauline authorship does. If 2 Thes. is pseudonymous, it was an unbelievable refinement of subtlety on the writer's part to warn the readers against letters forged in Paul's name (2:2); the salutation in 2 Thes. 3:17 is intelligible only as Paul's safeguard against the danger of such forged letters. The difficulties raised by the Pauline authorship can best be accounted for by considering the occasion and relation of the two letters. Both letters were included in the earliest ascertainable edition of the Pauline corpus.

III. Occasion

a. *The First Epistle*

Paul and his companions had to leave Thessalonica hastily in the early summer of AD 50, after making a number of converts and planting a church in the city (Acts 17:1-10). The circumstances of their departure meant that their converts would inevitably be exposed to persecution, for which they were imperfectly prepared, because Paul had not had time to give them all the basic teaching which he thought they required. At the earliest opportunity he sent Timothy back to see how the Thessalonian Christians were faring. When Timothy returned to him in Corinth (Acts 18:5) he brought good news of their steadfastness and zeal in propagating the gospel, but reported that they had certain problems, some ethical (with special reference to sexual relations) and some eschatological (in particular, they were concerned lest at the parousia those of their number who had died should be at a disadvantage as compared with those who were still alive). Paul wrote to them immediately, expressing his joy at Timothy's good news, protesting that his recent abrupt departure from them was through no choice of his own (as his detractors urged), stressing the importance of chastity and diligence in daily work, and assuring them that believers who died before the parousia would suffer no disadvantage but would be raised to rejoin their living brethren and 'meet the Lord in the air' at his coming.

b. *The Second Epistle*

Before long, however, further news reached Paul which indicated that there were still some misapprehensions to be removed. He suspected that some of these misapprehensions might be due to misrepresentations of his teaching to the Thessalonian church. Some members of the church had inferred that the parousia was so imminent that there was no point in going on working. Paul explains that certain events must take place before the parousia; in particular, there will be a worldwide rebellion against God, led by one who will incarnate the forces of lawlessness and anarchy, which at present are being held in check by a power which he need not name in writing, since his readers know what he means. (The allusiveness of his reference to this power makes it likely that he had in mind the Roman empire, whose maintenance of law and order gave him cause for gratitude several times in the course of his apostolic service.) As for those who were disinclined to work, he speaks to them even more sharply than in the former Epistle; to live at the expense of others is unworthy of able-bodied Christians, who had seen an example of the worthier course in the conduct of Paul himself and his colleagues. Spongers and slackers must be treated by their fellow-Christians in a way that will bring them to their senses.

An attempt has sometimes been made to relieve the difficulties felt in relating the two Epistles to each other by supposing that 2 Thes. was written first (cf. J. Weiss, *Earliest Christianity*, 1, 1959, pp. 289ff.; T. W. Manson, *Studies in the Gospels and Epistles*, 1962, pp. 268ff.; R. G. Gregson, 'A Solution to the Problems of the Thessalonian Epistles', *EQ* 38, 1966, pp. 76ff.). But 2 Thes. does presuppose some previous correspondence from Paul (2:15), while the language of 1 Thes. 2:17-3:10 certainly implies that 1 Thes. was Paul's first letter to the Thessalonian Christians after his enforced departure.

IV. Teaching

With the possible exception of *Gal., the two Thessalonian letters are Paul's earliest surviving writings. They give us an illuminating, and in some ways a surprising, impression of certain phases of Christian faith and life 20 years after the death and resurrection of Christ. The main lines have already been laid down; the Thessalonian Christians (formerly pagan idolaters for the most part) were converted through hearing and accepting the apostolic preaching (1 Thes. 1:9f.); Jesus, in whom they had put their trust, is the Son of God who can be freely and spontaneously spoken of in terms which assume rather than assert his equality with the Father (cf. 1 Thes. 1:1; 3:11; 2 Thes. 1:1; 2:16); the gospel which has brought them salvation carries with it healthy practical implications for everyday life. The living and true God is holy, and he desires his people to be holy too; this holiness extends to such matters as relations with the other sex (1 Thes. 4:3) and the honest earning of their daily bread (1 Thes. 4:11f.; 2 Thes. 3:10-12). The apostles themselves had set an example in these and other matters (1 Thes. 2:5ff.; 2 Thes. 3:7ff.).

Both Epistles reflect the intense eschatological awareness of those years, and the unhealthy excesses to which it tended to give rise. Paul does not discourage this awareness (indeed, eschatology had evidently been prominent in his preaching at Thes-

THESSALONIANS, EPISTLES TO THE

salonica), but he teaches the Thessalonians not to confuse the suddenness of the parousia with its immediacy, and he impresses on them the ethical corollaries of Christian eschatology. He himself did not know then whether he would still be alive at the parousia; he hoped he would be, but he had received no assurance on the point. His prime concern was to discharge his appointed work so faithfully that the day would not find him unprepared and ashamed. So to his converts he presents the parousia as a comfort and hope for the bereaved and distressed, a warning to the careless and unruly, and for all a stimulus to holy living. The parousia will effect the ultimate conquest of evil; it will provide the universal manifestation of that triumph which is already guaranteed by the saving work of Christ.

THESSALONICA. Founded after the triumph of Macedonia to grace her new position in world affairs, the city rapidly outstripped its older neighbours and became the principal metropolis of Macedonia. Situated at the junction of the main land route from Italy to the E with the main route from the Aegean to the Danube, her position under the Romans was assured, and she has remained a major city to this day. Thessalonica was the first place where Paul's preaching achieved a numerous and socially prominent following (Acts 17:4). His opponents, lacking their hitherto customary influence in high places, resorted to mob agitation to force the government's hand. The authorities, neatly trapped by the imputation of disloyalty towards the imperial power, took the minimum action to move Paul on without hardship to him. In spite of his success, Paul made a point of not placing himself in debt to his followers (Phil. 4:16f.; 1 Thes. 2:9). Not that they were themselves without generosity (1 Thes. 4:10); Paul was apparently afraid that the flourishing condition of the church would encourage parasites unless he himself set the strictest example of self-support (2 Thes. 3:8-12). The two Epistles to the *Thessalonians, written soon after his departure, reflect also his anxiety to conserve his gains from rival teachers (2 Thes. 2:2) and from disillusionment in the face of further agitation (1 Thes. 3:3). He need not have feared. Thessalonica remained a triumphant crown to his efforts (1 Thes. 1:8).

BIBLIOGRAPHY. E. Oberhammer, *RE*, s.v. 'Thessalonika'. E.A.J.

THEUDAS. 1. In Acts 5:36 an impostor (possibly a Messianic pretender) who some time before AD 6 gathered a band of 400 men, but he was killed and

his followers dispersed. His activity was probably one of the innumerable disorders which broke out in Judaea after Herod's death in 4 BC. Origen (*Contra Celsum*, 1. 57) says he arose 'before the birth of Jesus', but that may simply be an inference from this passage, where Gamaliel speaks of his rising as having preceded that of *Judas.

2. In Josephus (*Ant.* 20. 97-99) a magician who led many followers to the Jordan, promising that the river would be divided at his command, so that they could cross it dry-shod. They were attacked by cavalry sent against them by the procurator Fadus (c. AD 44-46), and Theudas' head was brought to Jerusalem. F.F.B.

THIGH. Heb. *yārēk*, also translated 'side' in RSV, of altar or tabernacle (Nu. 3:29; 2 Ki. 16:14). The variant form *yar'kâ* is almost always used of objects or places generally, mostly in the dual, i.e. derived from the thought of the two thighs. The other word translated 'thigh' in RSV (Ex. 29:22, 27) refers to the *leg. The Gk. *mēros* is used once (Rev. 19:16), where it probably refers to the locality of the inscription on the garment. (See *NBCR*, p. 1304.)

The Heb. word is found in similar usage to *motlomacri:nayim* or *l'lasayim* and Gk. *osphys*, 'loins', in respect of the parts of the body usually clothed (Ex. 28:42; cf. Is. 32:11), and especially of the position where a sword is worn (Ps. 45:3); also of the locality of the genital organs, and so by figure of speech to one's offspring (Gn. 46:26; cf. Gn. 35:11; Acts 2:30; *motnayim* is not used in this sense). The custom of making an oath by placing the hand under another's thigh (Gn. 24:2f.; 47:29ff.) signifies the association of the peculiar power of these parts, perhaps with the idea of invoking the support of the person's descendants to enforce the oath. For association in a particular form of oath, see Nu. 5:21ff.

Smiting upon the thigh is a sign of anguish (Je. 31:19). For a discussion of the custom of not eating the sinew of the thigh joint (Gn. 32:32), see *SINEW. B.O.B.

THOMAS. One of the twelve apostles. In the lists of the Twelve which are arranged in three groups of four each, Thomas occurs in the second group (Mt. 10:2-4; Mk. 3:16-19; Lk. 6:14-16; Acts 1:13). He is linked with Matthew in Mt. 10:3 and with Philip in Acts 1:13. The name comes from Aram. *t'ōmā*, meaning 'twin'; John three times uses the Gk. version of it, 'Didymus' (11:16; 20:24; 21:2). The question whose twin he was cannot be answered with certainty. Various traditions (Syriac and Egyp.) suggest that his personal name was Judas.

It is only in the Fourth Gospel that there are any personal references to Thomas. He was prepared to go with Jesus to the tomb of Lazarus and to possible death at the hands of the Jews (Jn. 11:16). He confessed himself unable to understand where Jesus was going when he warned the Twelve of his impending departure (Jn. 14:5). The chief incident for which he has always been remembered, and for which he has been called 'Doubting Thomas', is his disbelief in the resurrection. He missed the appearance of Christ to the other apostles (Jn. 20:24) and said that he needed visual and tactual proof of the resurrection (20:25). A week later Christ ap-

Thessalonica, a major city of Macedonia.

peared again to the Eleven and he offered Thomas the opportunity to test the reality of his body.

Thomas' confession of faith, 'My Lord and my God' (20:28), marks the climax of the Fourth Gospel; blessing is promised to those who can come to faith without the aid of sight. R.E.N.

THORNS, CROWN OF. This was made by the Roman soldiers and placed on the head of Christ when he was mocked before the crucifixion (Mt. 27:29; Mk. 15:17; Jn. 19:2).

It was, with the sceptre of reed and the purple robe, symbolic of the fact that he had been said to be King of the Jews. The superscription on the

cross likewise proclaimed this in mockery. Yet Christians have seen the life of Jesus as a royal road from the manger of Bethlehem to the cross of Calvary, and the very incidents in which he least seemed to be a king have won their allegiance more than anything else. For John especially the moment of Christ's humiliation is the moment of his glory (12:31-33; cf. Heb. 2:9).

It is uncertain exactly what plant is signified by *akantha*. There are a number of plants with sharp spines which grow in Palestine. Christians have seen the thorns as symbolic of the effects of sin (Gn. 3:18; Nu. 33:55; Pr. 22:5; Mt. 7:16; 13:7; Heb. 6:8).

H. St J. Hart (*JTS* n.s. 3, 1952, pp. 66ff.) suggests

THORNS, CROWN OF

that the crown was made from palm leaves, which would be readily available. *Phoenix dactylifera* has sharp spines. The crown might thus have been intended to resemble the 'radiate crown' of a divine ruler, so that Christ was being mocked as 'God' as well as 'king'.

See also *PLANTS(Thorns).

R.E.N.

THRACE. A tribally organized region lying between Macedonia and the Gk. states of the Bosphorus coast. It had always maintained a sturdy independence of Gk. control, and the Romans left it as an isolated enclave under its own dynasties until AD 44, when it was incorporated into the Caesarean province under a low-ranking procurator. Republican institutions were not widely developed before the 2nd century AD. There is no record of Christianity there in NT times.

BIBLIOGRAPHY. A. H. M. Jones, *Cities of the Eastern Roman Provinces*², 1970; J. Keil, *CAH*, 11, 1936, pp. 570-573. E.A.J.

THRESHOLD. 1. *miptān* is used for the threshold of the temple of Dagan at Ashdod (1 Sa. 5:4-5), the Jerusalem Temple (Ezk. 9:3; 10:4, 18) and Ezekiel's Temple (46:2; 47:1). Zephaniah alludes to an idolatrous practice of leaping over the threshold (1:9). An example of a threshold was found at Hazor (Y. Yadin, *Hazor*, 1972, pl. 22a).

2. *sap̄* (AV also as gate, door, doorpost) applies mainly to sacred buildings, although 1 Ki. 14:17 probably refers to Jeroboam's house, Est. 2:21; 6:2 to a palace, and Jdg. 19:27 to a house. Most references (2 Ki. 12:9; Is. 6:4; Am. 9:1) imply that the threshold indicated belongs to the sanctuary of the Jerusalem Temple, although in the Temple of

Ezekiel (40:6-7) it refers to the single gateway in the outer wall. The threshold itself was made of stone and may have contained the cupped socks in which the door-posts swivelled.

3. "*suḥim* (Ne. 12:25), 'thresholds' (AV), is better 'storehouses' (RSV). C.J.D.

THRONE. Heb. *kissē* may refer to any seat or to one of special importance (1 Ki. 2:19). Its root (Heb. *kāsā*, 'to cover') suggests a canopied construction, hence a throne (e.g. Ex. 11:5; Ezk. 26:16). The throne symbolizes dignity and authority (Gn. 41:40; 2 Sa. 3:10), which may extend beyond the immediate occupant (2 Sa. 7:13-16). Since the king is Yahweh's representative, his throne is 'the throne of the kingdom of the Lord over Israel' (1 Ch. 28:5); it typifies Yahweh's throne in the heavens (1 Ki. 22:10, 19; cf. Is. 6:1). Righteousness and justice are therefore enjoined upon its occupants (Pr. 16:12; 20:28; cf. Is. 9:7; 2 Sa. 14:9). Although Yahweh's throne is transcendent (Is. 66:1; cf. Mt. 5:34), he graciously condescends to sit enthroned upon the cherubim (e.g. 1 Sa. 4:4). In the Messianic age 'Jerusalem shall be called the throne of the Lord' (Je. 3:17; cf. Ezk. 43:7). The thrones of judgment in Dn. 7:9ff. form a good introduction to the usual sense of the word in the NT.

Jesus receives 'the throne of his father David' (Lk. 1:32; cf. Acts 2:30; Heb. 1:5-9, all of which allude to 2 Sa. 7:12-16. Cf. also Heb. 8:1; 12:2). As Son of man, he will judge from his throne (Mt. 25:31ff.). In the world to come the disciples will have thrones and assist the Son of man (Mt. 19:28; cf. Lk. 22:30). The faithful are promised a seat on the throne of the Lamb (Rev. 3:21), and the pre-millennial judgment appears to be committed to them (20:4; cf. Dn. 7:9, 22). In the post-millennial

A prince receives tribute, seated on a throne supported by a winged cherubim (cf. 1 Sa. 4:4). Ivory from Megiddo. Height 4 cm. 8th cent. BC.

judgment, however, there is only the great white throne (20:11). The disparity is more apparent than real, for Dn. 7 forms the background of each vision. Similarly, the vision of the august throne of God and the Lamb in Rev. 22:3 compares with Mt. 19:28 and Lk. 22:30, because John, in adding 'and they shall reign . . .' (22:5), undoubtedly has in mind the thrones of the faithful. Cf. 'throne of grace' (Heb. 4:16).
R. J. MCK.

THUMB. Heb. *böhen*, in the OT equally and always together, of the thumb and big toe, differentiated by the designation, 'of the hand' or 'of the foot'. The root is related to an Arabic word meaning 'to cover' or 'shut', hence of that member which closes or covers the hand.

The practice of placing blood from the sacrificial beast upon the right thumb, great toe and also *ear of the priests probably indicated the dedication of the prominent organs of hearing, doing and walking, symbolizing the securing of the whole man (Ex. 29:20; Lv. 8:23, etc.). Similarly, the practice of cutting off the thumbs and great toes of a defeated enemy probably symbolized his being rendered powerless (Jdg. 1:6f.), and also ceremonially incompetent to discharge any sacral duties.
B. O. B.

THUNDER. Most frequent during the winter season, thunder is vividly described in Jb. 37 and Ps. 29. The few rainstorms of summer are usually associated with thunder (e.g. 1 Sa. 12:17); the coincidence of this event with Samuel's message helped to deepen the warning to Israel when they desired a king. A desert thunderstorm seems the most plausible explanation for the narrative of 2 Ki. 3:4-27, when 'the country was filled with water', presumably as a result of a desert thunderstorm on the plateau E of the Zered valley. In another military campaign a thunderstorm decided the result of the battle between Israel and the Philistines (1 Sa. 7:10).

Thunder is frequently associated with the voice of God and is spoken of as a voice in Pss. 77:18; 104:7. The creative voice of God which bade the waters go to their appointed place (Gn. 1:9) is identified with thunder (Ps. 104:7). It was associated with the giving of the law at Sinai (Ex. 19:16; 20:18), and the voice out of heaven which answered Christ (Jn. 12:28f.) was identified by those present as a thunder-peal. Voices like thunder are referred to in the Apocalypse (Rev. 6:1; 14:2; 19:6), where they are even given articulate meaning (Rev. 10:3f.).

(* PLAGUES OF EGYPT.)

J. M. H.

THYATIRA. A city in the Roman province of Asia, in the W of what is now Asiatic Turkey. It occupied an important position in a low-lying 'corridor' connecting the Hermus and Caicus valleys. It was a frontier garrison, first on the W frontier of the territory of Seleucus I of Syria, and later, after changing hands, on the E frontier of the kingdom of Pergamum. With that kingdom, it passed under Roman rule in 133 bc. But it remained an important point in the Roman road-system, for it lay on the road from Pergamum to Laodicea, and thence to the E provinces. It was also an important centre of manufacture: dyeing, garment-making, pottery

Thyatira, one of the 'seven churches of Asia' (Rev. 1-3).

and brass-working are among the trades known to have existed there. A large town (Akhisar) still stands on the same site.

The Thyatiran woman Lydia, the 'seller of purple' whom Paul met at Philippi (Acts 16:14), was probably the overseas agent of a Thyatiran manufacturer; she may have been arranging the sale of dyed woollen goods which were known simply by the name of the dye. This 'purple' was obtained from the madder root, and was still produced in the district, under the name 'Turkey red', into the present century.

The Thyatiran church was the fourth (Rev. 1:11) of the 'seven churches of Asia'. Some of the symbols in the letter to the church (Rev. 2:18-29) seem to allude to the circumstances of the city. The description of the Christ (v. 18) is appropriate for a city renowned for its brass-working (*chalkolibanos*, translated 'fine brass', may be a technical term for some local type of brassware). The terms of the promise (vv. 26-27) may reflect the long military history of the city. 'Jezebel' (the name is probably symbolic) was evidently a woman who was accepted within the fellowship of the church (v. 20). Her teaching probably advocated a measure of compromise with some activity which was implicitly pagan. This is likely to have been membership of the social clubs or 'guilds' into which the trades were organized. These bodies fulfilled many admirable functions, and pursuance of a trade was almost impossible without belonging to the guild; yet their meetings were inextricably bound up with acts of pagan worship and immorality. (See C. J. Hemer, *The Letters to the Seven Churches of Asia in their Local Setting*, 1986; E. M. Yamauchi, *New Testament Cities in Western Asia Minor*, 1980.)

C. J. H.

TIBERIAS. A city on the W shore of the Sea of *Galilee which subsequently gave its name to the lake. It was founded by Herod Antipas about AD 20 and named after the emperor Tiberius. The principal factors influencing Herod's choice of site seem to have been: (1) a defensive position represented

TIBERIAS

by a rocky projection above the lake; (2) proximity to some already-famous warm springs which lay just to the S. Otherwise, the site offered little, and the beautiful buildings of the city (which became Herod's capital) rose on ground that included a former graveyard, and so rendered the city unclean in Jewish eyes.

Tiberias is mentioned only once in the Gospels (Jn. 6:23; 'sea of Tiberias' appears in Jn. 6:1; 21:1), and there is no record of Christ ever visiting it. It was a thoroughly Gentile city, and he seems to have avoided it in favour of the numerous Jewish towns of the lake shore. By a curious reversal, however, after the destruction of Jerusalem it became the chief seat of Jewish learning, and both the Mishnah and the Palestinian Talmud were compiled there, in the 3rd and 5th centuries respectively.

Of the towns which surrounded the Sea of Galilee in NT times, Tiberias is the only one which remains of any size at the present day.

BIBLIOGRAPHY. *NEAEHL*, pp. 1464–1473.

J.H.P.

TIBERIUS. The stepson of Augustus Caesar, reluctantly adopted as his heir when all other hope of a direct succession was lost. On Augustus' death in AD 14, Tiberius at 56 years of age had a lifetime's experience of government behind him. It was nevertheless a momentous decision when the Senate transferred Augustus' powers bodily to him, thus recognizing that the *de facto* ascendancy of Augustus was now an indispensable instrument of the Roman state. For 23 years Tiberius loyally and unimaginatively continued Augustus' policies. His dourness gradually lost him the confidence of the nation, and he withdrew to a disgruntled retirement on Capri until his death. In his absence treason trials and the intervention of the praetorian guard set dangerous new precedents in Roman politics. He is referred to in Lk. 3:1 and indirectly wherever 'Caesar' is mentioned in the Gospels.

E.A.J.

TIBHATH. A town in the Aramaean kingdom of Zobah (*sôbâ*). After David defeated a composite force of Aramaeans, including men from Zobah and Damascus, he pressed on to the towns of Tibhath (*tibhat*) and Chun, from which he took booty (1 Ch. 18:8).

J.A.T.

TIDAL. One of four kings who subdued five kings of the cities of the plain (Sodom, Gomorrah, etc.), quelling their revolt 13 years later, in Abraham's time (Gn. 14:1–9). Heb. *tid'âl* derives from the old Anatolian name *Tudhali(y)a*, based on that of a sacred mountain (E. Laroche, *Les noms des Hittites*, 1966, pp. 191, 276, 283), attested also in the alphabetic texts at Ugarit as *tdgl, ttgl* (C. Virolleaud, *Palais royal d'Ugarit*, 2, 1957, pp. 64–66 (No. 39:21), 92 (No. 69:4)).

'Tidal king of *gōyim*' (nations, groups) cannot be identified at present. The Hittite kings Tudkhaliya II–IV (15th–13th centuries BC) are chronologically too late, likewise the Ugaritic occurrences. The name does go back, however, to the first half of the 2nd millennium BC. A possible Tudkhaliya I (17th century BC?), father of Pusarruma, occurs in Hit-

tite royal offering-lists ('C'; H. Otten, *Mitteilungen d. Deutsch. Orient-Gesellschaft* 83, 1951, pp. 62ff.; K. A. Kitchen, *Suppiluliuma and the Amarna Pharaohs*, 1962, p. 53, and Otten, *Die hethitischen historischen Quellen und die altorientalische Chronologie*, 1968, p. 26). In the story of the siege of Urshu, a little later, occurs back-reference to an official(?) named Tudkhaliya (H. G. Güterbock, *ZA* 44, 1938, pp. 122/3:17; p. 135). Still earlier (c. 19th/18th centuries BC), Tudkhaliya occurs at least twice as a private personal name in Old-Assyrian tablets from Cappadocia (Laroche, *op. cit.*, p. 191:1389:1; P. Garelli, *Les Assyriens en Cappadoce*, 1963, p. 160).

In the early 2nd millennium BC, alliances of kings are commonly attested in Mesopotamia; likewise in Anatolia then, the existence of paramount chiefs and their vassal-rulers—several such are solidly attested (A. Goetze, *Kleinasien*, 1957, p. 75; Garelli, *op. cit.*, pp. 61ff., 206, n. 4), but by no means exhaust the total of all that once existed. Therefore, it is a reasonable hypothesis that Tidal of Gn. 14 was some such Anatolian chief who (like Anum-hirbi) penetrated S into the Levant. Cf. also Kitchen, *Ancient Orient and Old Testament*, 1966, pp. 44–46, with references.

K.A.K.

TIGLATH-PILESER, TILGATH-PILNESER.

This king of Assyria is known by more than one name. *tiglat-pil' eser* (2 Ki. 15:29; 16:7–10) is close to Assy. *Tukulti-apil-Ešarra* ('My trust is in the son of Ešarra') and the Aram. *tgltpl'sr* (Zinjirli Stele; Ashur ostrakon. The variant *tilgat-piln' eser* (1 Ch. 5:6; 2 Ch. 28:20; Lxx *Alghathphellasar*) may be an inner-Hebrew form (JSS 21, 1976, p. 7). The king's other name, Pul, is given in both the OT (2 Ki. 15:19; 1 Ch. 5:26) and the Babylonian Chronicle (*Pulu*).

Tiglath-pileser III (745–727 BC) was a son of Adad-nirari III (*AFO* 3, 1926, p. 1, n. 2). The history of his reign is imperfectly known owing to the fragmentary nature of the extant inscriptions, mainly found at Nimrud (*CALAH), but the primary events are listed in the Assyrian Eponym canon.

The first campaign was directed against the Aramaeans in Babylonia, where Pul 'took the hands of Bel' and regained control until the rebellion of Ukīn-zēr in 731 and the siege of Sapia, following which the Chaldean chief Marduk-apla-iddina (*MERODACH-BALADAN) submitted to the Assyrians. Other campaigns were directed against the Medes and Urartians (Armenia).

In 743 BC Tiglath-pileser marched to subdue the N Syrian city states which were under Urartian domination. During the 3-year siege of Arpad he received tribute from Carchemish, Hamath, *Tyre, Byblos, Rezin of Damascus and other rulers. Among those listed, *Menahem (*Menuhimme*) of Samaria, who was to die soon afterwards, raised his contribution by collecting 1 mina (50 shekels) from each of the 60,000 men of military age 'so that his hands (*i.e.* Tiglath-pileser's) would be with him to confirm the kingdom in his hands' (2 Ki. 15:19–20; cf. *Iraq* 18, 1956, p. 117).

While Tiglath-pileser himself was fighting Sarduri of Urartu, a revolt was instigated by 'Azriyau of Yaudi' (Annals). It would seem that when the Urartians imposed control on Carchemish, Bit-Adini (Beth-eden) and Cilicia, the weakened Ara-

maean states in S Syria came under the leadership of Azariah of Judah, who at this time was stronger than Israel. Azariah-Uzziah (the names 'zr and 'zz are variants; G. Brin, *Leshonenu* 24, 1960, pp. 8–14), however, died soon afterwards (2 Ki. 15:7), and 'Judaean's are named among captives settled in Ullubu (near Bitlis). N Syria was organized into an Assyrian province (Unqi) under local governors.

When opposition to Assyria continued, Tiglath-pileser marched again to the W in 734. The Phoenician seaports were plundered and heavy tribute imposed on Ashkelon and on Gaza, whose ruler Hanun fled to Egypt. Statues of the Assyrian king were set up in their temples.

The army which had marched through the W border of Israel (Bit-Humri; the earlier reading of the names Galilee and Naphtali in these Annals is now disproved) turned back at the 'River of Egypt' (*naḥal-muṣur*). Rezin of Damascus, Ammon, Edom, Moab and (Jeho)ahaz of Judah (*Jauhazi* [mat]*Jaudaia*) paid tribute to the king of Assyria. (2 Ch. 28:19–21).

Ahaz, however, received no immediate help from Assyria against the combined attacks of Rezin and Pekah of Israel, who, with Edomites and Philistines, raided Judah (2 Ch. 28:17–18). Jerusalem itself was besieged (2 Ki. 16:5–6) and relieved only by the Assyrian march on Damascus late in 733 BC. When Damascus fell in 732 BC, Metenna of Tyre also capitulated and Israel, including Ijon, Abel of Beth-Maachah, Janoah, Kadesh, Hazor, Gilead, Galilee and all Naphtali, was despoiled and captives were taken (v. 9). A destruction level at *Hazor is attributed to this period. Tiglath-pileser claims to have replaced Pekah (*Paqaḥa*) on the throne of Israel by Hoshea (*Ausi'*) and may well have plotted the murder of the former as described in 2 Ki. 15:30.

Ahaz paid for Assyrian help by becoming a vassal, which probably required certain religious concessions and practices to be observed (cf. 2 Ki. 16:7–16). Tiglath-pileser extended his control to include Samsi, queen of Aribi (Arabia), Sabaeans and Idiba'it (Adeel of Gn. 25:13). With captive labour Tiglath-pileser III built himself a palace at Calah, from which have been recovered reliefs depicting the king himself and his campaigns. Although Tiglath-pileser I (1115–1077 BC) invaded Phoenicia, there is no reference to him in the OT.

Falkner, *Sculptures of Tiglath-pileser III*, 1962; H. Tadmor, *Inscriptions of Tiglath-pileser III*, 1978. D.J.W.

TIGRIS. The Gk. name for one of the four rivers marking the location of Eden (*Hiddekel*; Gn. 2:14; Akkad. *Diglat*; Arab. *Dijlah*). It rises in the Armenian Mountains and runs SE for 1,900 km via Diarbekr through the Mesopotamian plain to join the river *Euphrates 64 km N of the Persian Gulf, into which it flows. It is a wide river as it meanders through Babylonia (Dn. 10:4) and is fed by tributaries from the Persian hills, the Greater and Lesser Zab, Adhem and Diyala rivers. When the snows melt, the river floods in Mar.–May and Oct.–Nov. Nineveh, Calah and Assur are among the ancient cities which lay on its banks. D.J.W.

TILE, TILING. Ezekiel was commanded to scratch a representation of Jerusalem on a sun-dried brick (4:1; Heb. *l'ḥēnā*, AV 'tile'). Plans engraved on clay tablets have been found (e.g. *ANEP*, no. 260). When Moses and the elders were given a vision of the God of Israel (Ex. 24:10) there was beneath him 'as it were a pavement of sapphire stone'. This may well be a comparison with the contemporary dais built for Rameses II at Qantir which was covered with blue glazed tiles; cf. 'Sapphire' under *JEWELS AND PRECIOUS STONES and W. C. Hayes, *Glazed Tiles from a Palace of Rameses II at Qantir*, 1937. Roof tiles were not used in ancient Palestine, so far as is known, so in Lk. 5:19 Gk. *keramos* should be translated more generally 'roofing'. (*HOUSE.) A.R.M.

TIME. Biblical words for time are not in themselves a sound basis for reflection on biblical concepts of time. These must be gathered from the contexts in which the words are used.

I. Times and seasons

The Hebrews had their ways of measuring the passing of time (*CALENDAR) but the most frequent contexts for the words translated 'times' and 'seasons' suggest a concern for appointed times, the right time, the opportunity for some event or action. The commonest word is *'ēl* (cf. Ec. 3:1ff. for a characteristic use); *z'mān* has the same meaning. *mō'ēd* comes from a root meaning 'appoint' and is used of natural periods such as the new moon (e.g. Ps. 104:19) and of appointed festivals (e.g. Nu. 9:2). In particular, all these words are used to refer to the times appointed by God, the opportunities given by him (e.g. Dt. 11:14; Ps. 145:15; Is. 49:8; Je. 18:23). In NT the Gk. *kairos* often occurs in similar contexts, though it does not in itself mean 'decisive moment' (cf. Lk. 19:44; Acts 17:26; Tit. 1:3; 1 Pet. 1:11).

The Bible thus stresses not the abstract continuity of time but rather the God-given content of certain moments of history. This view of time may be called 'linear', in contrast with the cyclical view of time common in the ancient world; God's purpose moves to a consummation; things do not just go on or return to the point whence they began. But calling the biblical view of time 'linear' must not be allowed to suggest that time and history flow on in an inevitable succession of events; rather the Bible stresses 'times', the points at which God himself advances his purposes in the world (*DAY OF THE LORD).

God is sovereign in appointing these times, and so not even the Son during his earthly ministry knew the day and hour of the consummation (Mk. 13:32; Acts 1:7). God's sovereignty extends also to the times of an individual life (Ps. 31:15).

In the Aramaic of the book of Daniel the word *'iddān* refers to chronological periods of time (e.g. 2:9; 3:15), often apparently a year (e.g. 4:16; 7:25, though not all interpreters agree that years are meant). God's sovereignty is still stressed (2:21).

The word *chronos* sometimes refers in the NT, as in secular Gk., simply to the passing of time (e.g. Lk. 20:9; Acts 14:28). The context may give it the sense of 'delay', 'time of tarrying or waiting' (e.g. Acts 18:20, 23); this is probably the meaning of Rev. 10:6 rather than that 'time shall have an end'.

TIME

II. Eternity

Heb. has the words 'ad and 'olam for lengthy or remote time such as that which brings an end to man's life (cf. 1 Sa. 1:22, 28) or the age of the hills (Gn. 49:26). Above all, these words are applied to God, whose being is unlimited by any bound of time (Ps. 90:2). This absence of temporal limit also belongs to all God's attributes and to his grace towards his people (cf. Je. 31:3; 32:40; Ho. 2:19). To express more intensely the conviction that God is not limited to any fixed span Heb. uses a poetic intensive plural (e.g. Ps. 145:13; Dn. 9:24) or a double form (e.g. Ps. 132:14).

The NT usage of *aiōn* is similar; it can be used of a lifetime (1 Cor. 8:13, Phillips) or of a remote time in the past (Lk. 1:70) or future (Mk. 11:14). It is intensively used in phrases such as *eis tous aiōnas tōn aiōnōn* (e.g. Gal. 1:5); that such uses are intensive rather than true plurals envisaging a series of world periods, 'ages of ages', is suggested by Heb. 1:8, where the genitive is in the singular. God is also described as active *pro tōn aiōnōn*, 'before the ages' (1 Cor. 2:7).

These uses in both OT and NT correspond to the Eng. use of 'eternal, eternity' to point to that which always has existed and will exist; the language used in the Bible does not itself determine the philosophical questions concerning time and eternity, which are discussed briefly below.

The adjective *aiōnios* corresponds to the use of *aiōn* with reference to God, and therefore adds to its temporal sense of 'everlasting' a qualitative overtone of 'divine/immortal'. This tendency is helped by the fact that in late Heb. 'olam is used in the spatial sense of 'the world'; cf. the AV translation of *aiōn* in, e.g. Mk. 10:30; Eph. 1:21.

III. The two ages

The NT picks out one of the times appointed by God as decisive. The first note of Jesus' preaching was 'The time is fulfilled' (Mk. 1:15). The life and work of Jesus mark the crisis of God's purposes (Eph. 1:10). This is the great opportunity (2 Cor. 6:2) which Christians must fully seize (Eph. 5:16; Col. 4:5). Within the period of Jesus' earthly ministry there is a further narrowing of attention to the time of his death and resurrection (cf. Mt. 26:18; Jn. 7:6).

It is the fact that this decisive time is in the past which makes the difference between the Jewish and Christian hopes for the future: the Jew looks for the decisive intervention of God in the future; the Christian can have an even keener expectation of the consummation of all things because he knows that the decisive moment is past 'once for all'. The last times are with us already (Acts 2:17; Heb. 1:2; 1 Jn. 2:18; 1 Pet. 1:20).

The NT makes a striking modification of the contemporary Jewish division of time into the present age and the age to come. There is still a point of transition in the future between 'this time' and 'the world to come' (Mk. 10:30; Eph. 1:21; Tit. 2:12-13), but there is an anticipation of the consummation, because in Jesus God's purpose has been decisively fulfilled. The gift of the Spirit is the mark of this anticipation, this tasting of the powers of the world to come (Eph. 1:14; Heb. 6:4-6; cf. Rom. 8:18-23; Gal. 1:4). Hence John consistently stresses that we now have eternal life, *zōē aiōnios* (e.g. Jn. 3:36). It is not simply that *aiōnios* has qualitative overtones; rather John is urging the fact that Christians now have the life into which

they will fully enter by resurrection (Jn. 11:23-25). This 'overlapping' of the two ages is possibly what Paul has in mind in 1 Cor. 10:11.

IV. Time and eternity

Many Christian philosophers have maintained that the intensive time language of the Bible points to aspects of the Being of God which in philosophy can best be expressed in terms of an eternity in some way qualitatively different from time.

Others have held that any talk of God's Being as timeless is unscriptural; that our language is necessarily time-referring and we cannot talk about timeless being without the risk of so abstracting it from the world that it cannot be thought to influence the world's life directly at all. Thus if the Christian view of God as active in history is to be preserved, we must adhere to biblical language rather than use any Platonist terminology which contrasts the world of time 'here' with a world of eternity 'there'. Nevertheless, the NT goes beyond a simple antithesis of this world and the next, 'now' and 'then', by its doctrine of anticipation.

Whatever the outcome of the philosophical debate, Scripture roundly asserts that God is not limited by time as we are, that he is 'the king of ages' (1 Tim. 1:17; cf. 2 Pet. 3:8).

BIBLIOGRAPHY. J. Barr, *Biblical Words for Time*, 1962; O. Cullmann, *Christ and Time*, 1951; H. Sasse, *TDNT* 1, pp. 197-209; H. W. Wolff, *Anthropology of the OT*, 1973, ch. 10; J. Guhr, H.-C. Hahn, *NIDNTT* 3, pp. 826-850. M.H.C.

TIMNA. 1. A concubine of Eliphaz the son of Esau, mother of Amalek (Gn. 36:12). 2. A daughter of Seir and sister of Lotan (Gn. 36:22). 3. A chief of Edom (1 Ch. 1:51; wrongly called 'Timnah' in Gn. 36:40, AV). J.D.D.

TIMNAH (Heb. *timnāh*). 1. A town on the N boundary of Judah, formerly counted as Danite (Jos. 15:10; 19:43). It changed hands more than once between Israelites and Philistines (Jdg. 14:1; 2 Ch. 28:18). Samson's first wife lived there. This may be the place Tamnā, later mentioned in the annals of Sennacherib, c. 701 BC (ii. 83). Tell Batashi, 9 km S of Gezer, is probably the site, though Khirbet Tibneh (4 km SE) has the name; see B. Mazar, *IEJ* 10, 1960, pp. 65-73; *NEAEHL*, pp. 152-157.

2. S of Hebron (Gn. 38:12; Jos. 15:57); copper was mined here (B. Rothenberg, *Timna*, 1972). J.P.U.L.

TIMNATH-HERES, TIMNATH-SERAH (Heb. *timnat-heres, timnat-serah*). The personal inheritance of Joshua, where he was buried (Jos. 19:50; 24:30; Jdg. 2:9). The Samaritans claimed Kafir Haris, 16 km SW of Shechem, as the site; but H. W. Hertzberg (*PJB* 22, 1926, pp. 89ff.) proposed Khirbet Tibneh, a Late Bronze and Early Iron site 27 km from Shechem and from Jerusalem. It lies on the S side of a deep ravine (cf. Jos. 24:30); the traditional tomb of Joshua, mentioned by Eusebius, is in the side of the valley towards the E.

heres is a rare word for 'sun' (Jdg. 1:35; 8:13; Job. 9:7; Is. 19:18, where AV 'destruction' reads *herem*). If it had idolatrous implications, the variant *serah* ('extra') was perhaps intended to avoid them (G. F.

Moore, *Judges, ICC*, 1895, on 2:9); but this leaves unexplained the retention of *heres* in 2:9 and of *semes* in other place-names. See C. F. Burney, *Judges*, 1918, p. 32.

J.P.U.L.

TIMOTHY. The son of a mixed marriage; his mother, who evidently instructed him in the Scriptures, was a Jewess and his father a Greek (Acts 16:1; 2 Tim. 1:5). He was a native of Lystra (Acts 16:1) and was highly esteemed by his Christian brethren both there and in Iconium (Acts 16:2). When he became a Christian is not specifically stated, but it is a reasonable inference that he was a convert of Paul's first missionary journey, which included Lystra in its itinerary, and that on that occasion he witnessed Paul's sufferings (2 Tim. 3:11). It is not certain when Timothy's mother Eunice became a Christian, perhaps before Timothy, but certainly before Paul's second missionary journey.

The apostle was strongly attracted to the young man and although he had only recently replaced Barnabas by Silas as his travelling companion he added Timothy to his party, perhaps as a substitute for John Mark whom he had refused to take (Acts 15:36f.). This choice appears to have had other endorsement, for Paul later refers to prophetic utterances which confirmed Timothy's being set apart for this work (*cf.* 1 Tim. 1:18; 4:14). He had received at this time a special endowment for his mission, communicated through the laying on of the hands of the elders and of Paul (1 Tim. 4:14; 2 Tim. 1:6). To allay any needless opposition from local Jews, Timothy was circumcised before setting out on his journeys.

He was first entrusted with a special commission to Thessalonica to encourage the persecuted Christians. He is associated with Paul and Silvanus in the greetings of both Epistles directed to that church, and was present with Paul during his preaching work at Corinth (2 Cor. 1:19). He is next heard of during the apostle's Ephesian ministry, when he was sent with Erastus on another important mission to Macedonia, whence he was to proceed to Corinth (1 Cor. 4:17). The young man was evidently of a timid disposition, for Paul urges the Corinthians to set him at ease and not to despise him (1 Cor. 16:10-11; *cf.* 4:17ff.). From the situation which resulted in Corinth (see 2 Cor.) Timothy's mission was not successful, and it is significant that, although his name was associated with Paul's in the greeting to this Epistle, it is Titus and not Timothy who has become the apostolic delegate. He accompanied Paul on his next visit to Corinth, for he was with him as a fellow-worker when the Epistle to the Romans was written (Rom. 16:21).

Timothy also went with Paul on the journey to Jerusalem with the collection (Acts 20:4-5) and is next heard of when Paul, then a prisoner, wrote Colossians, Philemon and Philippians. In the latter Epistle he is warmly commended and Paul intends soon to send him to them in order to ascertain their welfare. When the apostle was released from his imprisonment and engaged in further activity in the E, as the Pastoral Epistles indicate, it would seem that Paul left Timothy at Ephesus (1 Tim. 1:3) and commissioned him to deal with false teachers and supervise public worship and the appointment of church officials. Although Paul evidently hoped to rejoin Timothy, the fear that he

might be delayed occasioned the writing of the first letter to him, and this was followed by another when Paul was not only re-arrested but on trial for his life. Timothy was urged to hasten to him, but whether he arrived in time cannot be ascertained. Later Timothy himself became a prisoner as Heb. 13:23 shows, but no details are given, and of his subsequent history nothing definite is known.

He was affectionate (2 Tim. 1:4) but very fearful (2 Tim. 1:7ff.), needing not a few personal admonitions from his father in the faith; he is warned not to give way to youthful lusts (2 Tim. 2:22) and not to be ashamed of the gospel (2 Tim. 1:8). Yet no other of Paul's companions is so warmly commended for his loyalty (1 Cor. 16:10; Phil. 2:19ff.; 2 Tim. 3:10ff.). It is fitting that the apostle's concluding letter should be addressed so affectionately to this almost reluctant successor, whose weaknesses are as apparent as his virtues.

D.G.

TIMOTHY AND TITUS, EPISTLES TO. The two Epistles to Timothy and one to Titus, commonly grouped together as the *Pastoral Epistles, belong to the period at the close of Paul's life and provide valuable information about the great missionary apostle's thoughts as he prepared to pass on his tasks to others. They are addressed to two of his closest associates, and for that reason introduce a different kind of Pauline correspondence from the earlier church Epistles.

I. Outline of contents

1 Timothy

a. Paul and Timothy (1:1-20)

The need for Timothy to refute false teaching at Ephesus (1:3-11); Paul's experience of God's mercy (1:12-17); a special commission for Timothy (1:18-20).

b. Worship and order in the church (2:1-4:16)

Public prayer (2:1-8); the position of women (2:9-15); the qualifications of bishops and deacons (3:1-13); the church: its character and its adversaries (3:14-4:5); the church: Timothy's personal responsibilities (4:6-16).

c. Discipline within the church (5:1-25)

A discussion of the treatment suitable for various groups, especially widows and elders.

d. Miscellaneous injunctions (6:1-19)

About servants and masters (6:1-2); about false teachers (6:3-5); about wealth (6:6-10); about the aims of a man of God (6:11-16); more about wealth (6:17-19).

e. Concluding admonitions to Timothy (6:20-21)

2 Timothy

a. Paul's special regard for Timothy (1:1-14)

Greeting and thanksgiving (1:1-5); exhortations and encouragements to Timothy (1:6-14).

b. Paul and his associates (1:15-18)

The disloyal Asiatics and the helpful Onesiphorus (1:15-18).

c. Special directions to Timothy (2:1-26)

Encouragements and exhortations (2:1-13); advice on the treatment of false teachers (2:14-26).

TIMOTHY AND TITUS, EPISTLES TO

d. Predictions about the last days (3:1-9)

The times of moral deterioration to come.

e. More advice to Timothy (3:10-17)

A reminder of Paul's early experiences of persecution (3:10-12); an exhortation to Timothy to continue as he had begun (3:13-17).

f. Paul's farewell message (4:1-22)

A final charge to Timothy (4:1-5); a confession of faith (4:6-8); some personal requests and warnings (4:9-15); Paul's first defence and his future hope (4:16-18); greetings and benediction (4:19-22).

Titus

a. Paul's greeting to Titus (1:1-4)

The apostle's consciousness of his high calling.

b. The kind of men Titus must appoint as elders (or bishops) (1:5-9)

c. The Cretan false teachers (1:10-16)

Their character and the need to rebuke them.

d. Christian behaviour (2:1-10)

Advice about the older and younger people and about slaves.

e. Christian teaching (2:11-3:7)

What the grace of God has done for Christians (2:11-15); what Christians ought to do in society (3:1-2); how Christianity contrasts with paganism (3:3-7).

f. Closing admonitions to Titus (3:8-15)

About good works (3:8); about false teachers (3:9-10); about Paul's companions and his future plans (3:11-15).

II. The historical situation

It is difficult to reconstruct this period of Paul's life, because there is no independent court of appeal such as the Acts supplies in the case of the earlier Epistles. But certain data may be ascertained from the Epistles themselves. At the time of writing 1 Tim. and Tit., Paul is not in prison, but when 2 Tim. was written he is not only a prisoner (1:8; 2:9), but appears to be on trial for his life, with the probability that an adverse verdict is imminent which will result in his execution (4:6-8). From 1 Tim. 1:3 it is clear that Paul had recently been in the vicinity of Ephesus, where he had left Timothy to fulfil a specific mission, mainly of administration. The Epistle to Titus provides additional historical data, for from 1:5 it may be inferred that Paul had paid a recent visit to Crete, on which occasion he must have had opportunity to ascertain the condition of the churches and to give specific instructions to Titus for rectifying any deficiencies. At the conclusion of the letter (3:12) the apostle urges Titus to join him at Nicopolis for the winter, and it is fairly safe to assume that this was the city situated in Epirus, in which case it is the sole reference to Paul visiting that district. Titus is also instructed to help Zenas and Apollos on their journey (3:13), but the precise point of this allusion is obscure.

2 Tim. is much more specific in historical information. In 1:16 Paul refers to Onesiphorus as having sought him out while in Rome, which suggests that the writer is still in Rome as a prisoner.

In 4:16 he mentions an earlier trial which is generally regarded as the preliminary examination preparing for the official trial before the Roman authorities. Paul makes an interesting request in 4:13 for a cloak which he had left behind at the house of Carpus at Troas, which would seem to imply that he had recently visited there. In the same passage Paul mentions that he recently left Trophimus sick at Miletus (4:20), while Erastus, an associate of his, had stayed behind at Corinth.

It is impossible to fit all these historical data as they stand into the Acts history, and there is therefore no alternative if their authenticity is to be maintained (see later discussion) but to assume that Paul was released from the imprisonment mentioned at the close of Acts, that he had a period of further activity in the E, and that he was rearrested, tried and finally executed in Rome by the imperial authorities. The data available from the Pastorals are insufficient to facilitate a reconstruction of Paul's itinerary, but further activity in Greece, Crete and Asia is at least certain. Some scholars, on the basis of Rom. 15:24, 28, have also fitted into this period a visit to Spain, and if this assumption is correct this W visit must have preceded Paul's return to the E churches. But if Col., Phm. and Phil. are assigned to the Roman imprisonment (see separate articles) it seems clear that Paul's face was turned towards the E and not the W at the time of his release. (*CHRONOLOGY OF THE NEW TESTAMENT.)

III. Purpose

Assuming therefore that all three of these Epistles were written within a comparatively short interval of time, it must next be noted that they have a common purpose. They are all designed to supply Paul's associates with exhortations and encouragements for both present and future responsibilities. There is a good deal of instruction about ecclesiastical administration, but it would be wrong to assume that such instruction wholly accounts for the underlying purpose of each. Of the three Epistles the motive for writing 2 Tim. is clearer than that of the others. The apostle is delivering his final charge to his timid successor, and in the course of it reminds Timothy of his early history (1:5-7) and exhorts him to act worthily of his high calling. Many times throughout the Epistle solemn exhortations are directed to him (1:6, 8, 13f.; 2:1, 22; 3:14; 4:1f.), which suggest that Paul was not too certain of his courage in face of the heavy responsibilities now falling upon him. The apostle yearns to see him again and twice urges him to come as soon as possible (4:9, 21), although the tone of the concluding part of the letter suggests that Paul is not convinced that circumstances will permit a reunion (cf. 4:6). There are warnings about ungodly men who cause trouble to the church both in the present and in the last days (3:1f.), and Timothy is urged to avoid these. He is to entrust to worthy men the task of passing on the traditions already received (2:2).

The purpose behind the other two Epistles is less plain, for in both instances Paul has only recently left the recipients, and the need for such detailed instructions is not immediately apparent. It would seem probable that much of the subject-matter had already been communicated orally, for in both Epistles detailed qualifications are given for the main office-bearers of the church, and it is inconceivable that until this time neither Timothy

nor Titus had received any such instruction. In all probability the Epistles were intended to strengthen the hands of Paul's representatives in their respective tasks. Timothy appears to have had some difficulty in commanding respect (*cf.* 1 Tim. 4:12f.), while Titus had a particularly unenviable constituency in Crete according to Tit. 1:10ff. Both men are to have sober concern for sound doctrine and right conduct and to teach it to others (1 Tim. 4:11; 6:2; Tit. 2:1, 15; 3:8).

It is not to be expected that in these letters the apostle would present to his closest friends anything in the nature of a theological treatise. There was no need to dwell on the great Christian doctrines, oral expositions of which both Timothy and Titus must often have heard from their master's lips. But they did need to be reminded of the futility of wasting time with certain groups of false teachers whose teachings were dominated by irrelevances and wordy combats which led nowhere (see 1 Tim. 1:4; 4:1f.; 6:3f., 20). There does not appear to be any close connection between these heresies in the Ephesian and Cretan churches and that combated by Paul in his letter to Colossae, but they may have been different forms of the tendency which later developed into 2nd-century Gnosticism.

IV. Authenticity

Modern criticism has so much challenged the Pauline authorship of these Epistles that the attestation of the early church is of prime importance in a fair examination of the whole question. There are few NT writings which have stronger attestation, for these Epistles were widely used from the time of Polycarp, and there are possible traces in the earlier works of Clement of Rome and Ignatius. The omission of the Epistles from Marcion's Canon (c. AD 140) has been thought by some to be evidence that they were not known in his time, but, in view of his propensity to cut out what did not appeal to him or disagreed with his doctrine, this line of evidence can hardly be taken seriously. The only other possible evidence for the omission of the Epistles is the Chester Beatty papyrus, but since these are incomplete it is again precarious to base any positive hypothesis upon their evidence, especially in view of the fact that the Epistles were known and used in the E at an earlier period than the papyrus represent.

Objections to authenticity must therefore be regarded as modern innovations contrary to the strong evidence from the early church. These objections began seriously with Schleiermacher's attack on the genuineness of 1 Tim. (1807) and have been developed by many other scholars, among whom the most notable have been F. C. Baur, H. J. Holtzmann, P. N. Harrison and M. Dibelius. They have been based on four main problems. At different periods of criticism different difficulties have been given prominence, but it is probably the cumulative effect which has persuaded some modern scholars that these Epistles cannot be by Paul.

a. The historical problem

The historical situation cannot belong to the period of the Acts history and the consequent need for postulating Paul's release has caused some scholars to suggest alternative theories. Either all the personal references are the invention of the author, or else some of them are genuine notes

which have been incorporated into the author's own productions. There has never been anything approaching unanimity among the advocates of the latter alternative as to the identification of the 'notes', which in itself raises suspicions against the theory. Moreover, the notion of a fiction-writer producing personal notes of such verisimilitude is improbable, and neither theory is necessary if the perfectly reasonable supposition that Paul was released from his first Roman imprisonment is maintained.

b. The ecclesiastical problem

It has been claimed that the ecclesiastical situation reflects a 2nd-century state of affairs, but this line of criticism has been widely influenced by the assumption that: (i) 2nd-century Gnosticism is combated in the Epistles, and (ii) the church organization was too developed for the primitive period. The force of the first assumption is reduced to nothing by the increasing modern recognition that Gnosticism had much earlier roots than was at one time imagined and that the form of heresy combated in these Epistles is far removed from developed Gnosticism. The second assumption is equally insecure in view of the fact that the church organization is certainly more primitive than in the time of Ignatius and betrays no anachronism with the period of the apostle.

c. The doctrinal problem

The absence of the great Pauline doctrinal discussions as found in the earlier letters and the presence of stereotyped expressions such as 'the faith' and 'sound doctrine', which suggest a stage of development when Christian doctrine had reached fixity as tradition, have given rise to further doubts about Pauline authorship. But the recognition of the mainly personal character of these communications and of the knowledge that both Timothy and Titus already had of Paul's main teaching is sufficient to account for the first objection, while the second may be annulled by the valid assumption that Paul as a far-sighted missionary pioneer, however creative and dynamic his earlier pronouncements may have been in his church Epistles, could not have been unmindful of the need to conserve true doctrine, and the aptness of the terms used for this purpose must be admitted.

d. The linguistic problem

These Epistles contain an unusually large number of words used nowhere else in the NT and a number not found anywhere else in Paul's writings, and these indications are claimed to demonstrate their un-Pauline character, especially when supported by the absence of many pronouns, prepositions, and particles used by the apostle. But word-counts of this kind can be effective only if sufficient data exist to serve as a fair basis of comparison, and this cannot be maintained in the case of the Pauline Epistles, where the total vocabulary does not exceed 2,500 different words. There appears to be no valid reason why the differences of vocabulary and style could not have taken place in the writings of one man. Some, who in all other respects regard the Epistles as genuine but find some difficulties in the linguistic problem, resort to the hypothesis that Paul used a different amanuensis.

In conclusion, it may be stated that these objections, even when cumulatively considered, do not

TIMOTHY AND TITUS, EPISTLES TO

provide adequate reason for discarding the acknowledged and unchallenged conviction of the Christian church until the 19th century that these three Epistles are genuine writings of the apostle Paul.

V. Value

Throughout the history of the church these Epistles have been used to instruct the ministers of Christ in their duties and demeanour, and have been invaluable in providing a pattern of practical behaviour. Yet their usefulness and appeal have not been restricted to this, for they contain many gems of spiritual encouragement and theological insight which have greatly enriched the devotional life of the church. Such passages as 1 Tim. 3:16 and Tit. 2:12ff.; 3:4ff., among many others, draw the reader's attention to some of the great truths of the gospel, while the last chapter of 2 Tim. preserves the moving swan-song of the great apostle.

D.G.

TIPSAH (Heb. *tīṣah*, 'a ford', 'a passage'). Probably Thapsacus, an important crossing on the W bank of the Middle Euphrates. At the NE boundary of Solomon's territory (1 Ki. 4:24), it was placed strategically on a great E-W trade route.

J.D.D.

TIRAS (Heb. *tīrās*). A son of Japheth, and brother of Gomer, Madai, Javan and Muški (Gn. 10:2; 1 Ch. 1:5), all probably N peoples (*NATIONS, TABLE OF). The name is commonly identified with the Tursha (*Trš.w*) mentioned among the N invaders in the 13th century BC by Merenptah (*EGYPT). These are in turn often equated with the *Tyrrēnoi* (dialectal form of *Tyrrhēnoi*) of Gk. literature, connected by many with the Etruscans, though this identification is still questioned.

BIBLIOGRAPHY. A. H. Gardiner, *Ancient Egyptian Onomastica*, Text, 1, 1947, p. 196*; M. Pallottino, *The Etruscans*, 1955, pp. 55–56; see also AS 9, 1959, pp. 197ff.; N. K. Sanders, *The Sea Peoples*, 1978.

T.C.M.

TIRHAKAH. The pharaoh Taharqa of Egypt's 25th ('Ethiopian') Dynasty; he reigned 26 years, c. 690–664 BC. 2 Ki. 19:9 (= Is. 37:9) appears to indicate that Tirhakah led those Egypt. forces which *Sennacherib had to defeat at *Eltekeh in 701 BC while attacking Hezekiah of Judah. If so, Tirhakah was then only the army-commander, as he was not king until 11 years later. The epithet 'king of Ethiopia' is that of the source used in Is. and 2 Ki., and would date from 690 BC or after. An

alternative view, namely that Sennacherib again invaded Palestine early in Tirhakah's actual reign (c. 688 BC?), requires two major assumptions: a second Palestinian campaign by Sennacherib, otherwise unknown, and a conflation of the two campaigns into one by the OT narrators; references in W. F. Albright, *BASOR* 130, 1953, pp. 8–9. The theory of M. F. L. Macadam (*Temples of Kawa*, 1, 1949, pp. 18–20) that Tirhakah was born c. 709 BC, and so could not command troops in 701 BC, is unnecessary and open to other objections; see J. Leclant and J. Yoyotte, *Bulletin de l'Institut Français d'Archéologie Orientale* 51, 1952, pp. 17–27; K. A. Kitchen, *The Third Intermediate Period in Egypt*², 1986; pp. 383–386, 552–558, 584–586.

K.A.K.

TIRSHATHA. A title used of the governor of Judaea under the Persian empire (AV, Ezr. 2:63; Ne. 7:65, 70; 8:9; 10:1). It is probably a Persian form (cf. Avestan *taršta*, 'reverend') roughly equivalent to the Eng. 'His Excellency'. The title puzzled the Gk. translators, who either omit it or render it as a proper name, 'Athersastha', 'Atharates' or 'Atharais'.

J.S.W.

TIRZAH. I. The youngest daughter of Zelophehad (Nu. 26:33; 27:1; Jos. 17:3).

2. A Canaanite town noted for its beauty (Ct. 6:4) which lay in the N part of Mt Ephraim at the head of the Wadi Far'ah along which passed the road from Transjordan to the central hill country where Shechem, Samaria, Dothan and other towns lay. It was captured by Joshua (Jdg. 12:24) and was assigned to Manasseh (Jos. 17:2–3). Jeroboam I lived at Tirzah (1 Ki. 14:17) and the town became the capital of the N kingdom in the time of Baasha (1 Ki. 15:21, 23; 16:6), Elah and Zimri (1 Ki. 16:8–9, 15). Zimri burnt the palace over his own head when trapped there by Omri (1 Ki. 16:17–18). After 6 years Omri transferred the capital to Samaria which was more central and easier to defend. In c. 752 BC Menahem, a resident of Tirzah, was able to overthrow Shallum and usurp the throne (2 Ki. 15:14, 16).

De Vaux identified the large mound of Tell el-Far'ah, about 11 km NE of Nablus, as the site of Tirzah and over the course of several years excavation revealed the archaeological story of the site. There was continuous settlement here from Chalcolithic times, before 3000 BC, down to Assyrian times. The last period of the city's life (Level I) represents the years of Assyrian domination culminating in the destruction of the city at the end of the 7th century, possibly by Nebuchadrezzar. The Israelite occupation during the days of the N kingdom is represented by levels I to III. The 9th-century level showed a standard type of house over a wide area with one larger administrative building near the gate (Level III). By the 8th century there were several large houses, a great administrative building and a considerable number of very poor houses, confirming the picture drawn by the 8th-century prophets (Am. 5:11; Is. 9:8–10). This latter phase of the city ended with the Assyrian invasion of 723–721 BC (Level II).

Far'ah and the site of ancient Tirzah', *PEQ*, 1956, pp. 125-140; A. F. Rainey, *ISBE* 4, pp. 860-861; R. de Vaux, *NEAHL* 2, pp. 433-440. J.A.T.

TISHBITE, THE (Heb. *hattišbi*). An epithet of Elijah (1 Ki. 17:1; 21:17, 28; 2 Ki. 1:3, 8; 9:36). Generally seen as denoting one from a town Tishbeh in Gilead. N. Glueck read 1 Ki. 17:1 as 'Jabeshite, from Jabesh-Gilead'. A town Tishbeh in Gilead is not otherwise known (Tobit 1:2 places one in Naphthali), but tradition locates it at al-Istib, 12 km N of the Jabbok. The word has been read as *hattōš'bi*, 'the sojourner', related to the following word 'settlers' (rsvmg.).

BIBLIOGRAPHY. N. Glueck, *AASOR* 25-28, 1951, pt. 1, pp. 218, 225-227; F. M. Abel, *Géographie de la Palestine*, 2, 1937, p. 486. D.W.B.

TITHES. The custom of tithing did not originate with the Mosaic law (Gn. 14:17-20), nor was it peculiar to the Hebrews. It was practised among other ancient peoples. There are three main questions to consider.

1. What were the Hebrews required to tithe? The Torah legislated that 'the seed of the land' (crops), 'the fruit of the trees' and 'herds and flocks' (Lv. 27:30-32) were to be tithed. The manner of tithing livestock was as follows: the owner counted the animals as they passed out to pasture, and every tenth one was given to God. In this way there was no possibility of selecting inferior animals for the tithing of the flocks and herds (Lv. 27:32f.). If a Hebrew preferred to dedicate the tenth of his cereal and fruit yields in the form of their monetary value he was free to do so, but a fifth of that sum had to be added to it. He was not allowed to redeem the tenth of his flocks and herds in this way (Lv. 27:31, 33).

2. To whom were the tithes paid? They were to be given to the Levites (Nu. 18:21ff.). But in Heb. 7:5 it is said to be the sons of Levi 'who receive the priestly office' who are to be the recipients of the tithes. This departure from the Law may have been due to the Levites' unwillingness to fulfil their duties in Jerusalem after the return under Ezra (Ezr. 8:15ff.). The Levites, because of the nature of their status and functions in the community, had no means of income, livelihood or inheritance to ensure their support; therefore, and in return 'for their service which they serve, the service in the tent of meeting', they were to receive 'the tithe of the people of Israel' (Nu. 18:21, 24). This passage in Nu. 18 mentions only the tithing of cereal and fruit crops (v. 27). The Levites, however, were not allowed to keep the whole of the tenth. They were directed to present an offering which was to be taken out of the tenth, which represented 'a tithe of the tithe' (Nu. 18:26). This 'tithe of the tithe' was to be 'from all the best of them' (v. 29) and was to be given to the priests (v. 28; Ne. 10:39).

3. Where were the Hebrews to offer their tithes? They were to bring them to 'the place which the Lord your God will choose out of all your tribes, to put his name there' (Dt. 12:5f., 17f.); *i.e.* Jerusalem. And the offering of the tithes was to take the form of a ritual meal, in which the Levite was to share (Dt. 12:7, 12). If Jerusalem was a long way off from a man's village the transporting of the tithe of his crops might create a problem, but he

could always take his tithe in the form of money (Dt. 14:22-27). Every third year the tithe was to be offered in each man's own locality (Dt. 14:28f.), although on these occasions he was still obligated to go up to Jerusalem to worship after the offering of his tithes in his home community (Dt. 26:12f.).

To these comparatively simple laws in the Pentateuch governing tithing there were added a host of minutiae which turned a beautiful religious principle into a grievous burden. These complex additions are recorded in the Mishnaic and Talmudic literature. This unfortunate tendency in Israel undoubtedly contributed to the conviction that acceptance with God could be merited through such ritual observances as tithing (Lk. 11:42), without submitting to the moral law of justice, mercy and faith (Mt. 23:23f.).

The tithes paid by Abraham, the ancestor of Israel and, therefore, of the Aaronic priesthood, to Melchizedek (Gn. 14:20), and his receiving the blessing of this priest-king (Gn. 14:19), signify in Heb. 7:1ff. that Melchizedek's priesthood was infinitely superior to the Aaronic or Levitical priesthood. Why Abraham paid tithes to Melchizedek is not explained in Gn. 14:18-20.

The NT reference to the tithing of 'mint and dill and cummin' (Mt. 23:23; Lk. 11:42) illustrates a Talmudic extension of the Mosaic law, ensuring that 'everything that is eaten . . . and that grows out of the earth' must be tithed. J.G.S.S.T.

TITUS. Although not mentioned in Acts, Titus was one of Paul's companions in whom he placed a considerable amount of trust. He is first heard of at the time of the Gentile controversy when he accompanied Paul and Barnabas to Jerusalem (Gal. 2:1). He provided a test case, since he was a Gentile, but he was apparently not compelled to be circumcised (Gal. 2:3). Titus probably accompanied Paul on his subsequent journeys, but no definite information of his work is available until the time of the Corinthian crisis. He had evidently been acting as Paul's representative at Corinth during the year preceding the writing of 2 Cor. (cf. 8:16) with a special commission to organize the collection scheme there. The task was unfinished, for Titus is later urged by Paul to return to Corinth to see its completion (2 Cor. 8:6).

A more delicate task was the smoothing over of the tense situation which had arisen between Paul and the Corinthians, a task which clearly demanded a man of great tact and force of character. He appears to have been a stronger personality than Timothy (cf. 1 Cor. 16:10; 2 Cor. 7:15) and possessed ability as an administrator. A comparison of 2 Cor. 2 and 7 suggests that he carried a letter from Paul to the Corinthians which has since been lost (the 'severe letter') and in which the apostle took them to task with much anguish of heart for their high-handed attitude. Titus eventually rejoined Paul in Macedonia (2 Cor 7:6) with good news, and as a result 2 Cor. was written and was willingly carried by Titus (2 Cor. 8:16f.), who seems to have possessed a particular affection and serious concern for the Corinthians. He is described by the apostle as his 'partner and fellow worker' (8:23), who would not think of taking advantage of those entrusted to his care (12:18).

From the Epistle addressed to him it may be surmised that Titus accompanied Paul to Crete

TITUS

subsequent to the latter's release from the Roman imprisonment and was left there to consolidate the work (Tit. 1:5f.). The letter urges the use of authority in establishing a worthy ministry, in overcoming opposition, and in the teaching of sound doctrine. He was summoned to rejoin Paul at Nicopolis when relieved by either Artemas or Tychicus (Tit. 3:12), and may possibly have been further commissioned at Nicopolis for an evangelistic mission to Dalmatia on which he was engaged at the time when Paul wrote 2 Tim. (2 Tim. 4:10). Later tradition, however, assumed his return to Crete and described him as bishop there until his old age (Eusebius, *EH* 3. 4. 6). For the possibility that he was Luke's brother (which might explain the absence of his name from Acts), see W. M. Ramsay, *SPT*, p. 390. D.G.

TOB. The name of an Aramaean city and principality lying N of Gilead, mentioned in connection with Jephthah and David (Jdg. 11:3; 2 Sa. 10:6); the district named in 1 Macc. 5:13 is probably identical. The likely location of the city is al-Taiyiba (preserving the ancient name), some 20 km ENE of Ramoth-gilead. For its history, cf. B. Mazar, *BA* 25, 1962, pp. 98–120. D.F.P.

TOBIAH. I. One of *Nehemiah's principal opponents, Tobiah is described by him as 'the servant (or 'slave', *NEB*), the Ammonite' (Ne. 2:10). 'Servant' may well be an honourable title for a high-ranking Persian official; 'Ammonite' could refer to his ancestry, though he seems at least half Jewish, since his name means 'Yahweh is good', his son is called Jehohanan ('Yahweh is merciful'; Ne. 6:18), and he has many important friends among the Jews (6:18f.; 13:4f.). Some have seen him as Persian governor of the sub-province of Ammon, or even governor of Jerusalem before Nehemiah's arrival (cf. Ne. 5:15), but his close association with Sanballat, governor of Samaria (4:7; 6:1) suggests rather that he was Sanballat's deputy. It is uncertain

whether this Tobiah had any connection with the famous family of the Tobiads, who in the 3rd century BC ruled a large area of Ammon from their fortress at 'Araq el-Amir, 20 km NW of Heshbon, and were one of the most influential pro-Greek families in Jerusalem (Josephus, *Ant.* 12. 160–236). The inscription at 'Araq el-Amir mentioning a Tobiah is now thought to be no earlier than the 2nd century BC.

2. The name of a clan unable to prove its authentic Israelite ancestry at the time of the 6th-century return from exile (Ezr. 2:60; Ne. 7:62; 1 Esdras 5:37). The *Tobijah of Zc. 6:10, 14, a leading nobleman in Jerusalem, c. 520 BC, may perhaps belong to the Tobiah family.

BIBLIOGRAPHY. B. Mazar, *IEJ* 7, 1957, pp. 137–145, 229–238; C. C. McCown, *BA* 20, 1957, pp. 63–76; P. W. Lapp, *BASOR* 171, 1963, pp. 8–39. D.J.A.C.

TOGARMAH. The third son of Gomer, grandson of Japheth and brother of Ashkenaz and Riphath (Gn. 10:3; 1 Ch. 1:6). (Beth-) Togarmah, with Tubal, *Javan and *Meshech, supplied horses and mules to Tyre (Ezk. 27:14) and soldiers to *Gog (Ezk. 38:6). During the 2nd millennium BC Old Assyrian and Hittite texts locate Tegarama near Carchemish and Harran on a main trade-route. It was called Til-garimmu in the Annals of Sargon and Sennacherib, and was the capital of Kammamu on the border of Tabal (*TUBAL), until destroyed in 695 BC. Perhaps to be identified with classical Gauraena, modern Gürün, 120 km W of Malatya. D.J.W.

TOLA (Heb. *tôlā*'). I. A family name in a clan of Issachar (Gn. 46:13; Nu. 26:23; 1 Ch. 7:1–2). 2. Tola ben Puah, of Shamir, an unknown village in Mt Ephraim, who was a national judge for 23 years after Abimelech's reign (Jdg. 10:1). Puah was also a family name in Issachar. J.P.U.L.

Reconstruction of the façade of a shrine built by the Tobiad family at Araq el-Emir, Jordan. c. 175 BC.

TONGUE. Heb. *lāšōn*, Gk. *glōssa*, both of the tongue of man and, by extension, of man's language. The Heb. is also used of the tongue of animals and reptiles (Jb. 20:16), with the still common misapprehension that the poison of a snake lies in its tongue. It is also used of tongue-shaped objects or phenomena, e.g. a wedge of gold (Jos. 7:21) or a bay of the sea (Jos. 15:2).

It was apparently believed in biblical times that dumbness was due to some paralysis or binding of the tongue or its cleaving to the palate (Ps. 137:6; Mk. 7:35; Lk. 1:64) (see *BODY for a statement on the apparent belief among the Hebrews that the organs functioned semi-independently).

The tongue is used in parallel with or interchangeably for *lip and *mouth, as the instruments of speech or related concepts, and is spoken of as good or evil (Ps. 120:2; Pr. 6:17; 10:20), taught (Is. 50:4), singing (Ps. 51:14) and speaking (Ps. 71:24). As the mouth can be said to contain something, so wickedness can be hidden under the tongue (Jb. 20:12).

The metaphor of a sharp tongue was used in OT times. The tongue was spoken of as being whetted like a sword (Ps. 64:3; cf. Ps. 140:3; Heb. 4:12; Rev. 1:16) and the simile of a bow and arrow is also used (Je. 9:3, 8). The tremendous influence of words for good or ill is expressed by attributing power to the tongue (Pr. 18:21; Jas. 3:5-6).

Famine and thirst are described as causing the tongue to cleave to the palate (La. 4:4), and it rots through disease (Zc. 14:12).

The tongue is used in Ps. 55:9 figuratively to refer to the confusion of language as at Babel (Gn. 11:1ff., where the word for language is 'lip', *sāpā*; cf. Is. 19:18). The alienation of man from man due to the gulf created by language difference, cutting, as it does, across the whole area of instinctive feelings, common interests and co-operation, is attributed in the Gn. passage to the sinful pride of man, bringing upon them this form of visitation by God.

The word 'tongue' is thus used to describe the different nations, or tribes, which generally have distinctive languages (Is. 66:18; Rev. 5:9).

(*TONGUES, GIFT OF.)

O.O.B.

TONGUES, GIFT OF. Speaking in tongues, or glossolalia (a 19th-century formation from Gk. *glōssa*, tongue, and *lalia*, speech), is a spiritual gift mentioned in Mk. 16:17, rsvmg.; Acts 10:44-46; 19:6, and described in Acts 2:1-13; 1 Cor. 12-14. The same phenomenon may lie behind such passages as 1 Thes. 5:19; Rom. 12:11.

When the assembled disciples were filled with the Holy Spirit on the day of Pentecost they began 'to speak in other tongues (*lalein heterais glōssais*), as the Spirit gave them utterance' (Acts 2:4), so that many Jews of the Dispersion were astonished to hear the praises of God in their own native languages (*glōssa*, v. 11; *dialektos*, vv. 6, 8). Although it is generally agreed that Luke intended the phrase 'to speak in other tongues' to mean that the disciples spoke in foreign languages, this explanation has not been universally accepted. From the days of the early Fathers some have seen in v. 8 evidence for a miracle of hearing performed on the audience. Gregory Nazianzen (*Orat.* 41. 10, *In Pentecosten*) rejected this view on the ground that it transfers the miracle from the disciples to the unconverted multitude. It also overlooks the fact that

speaking in tongues began before there was any audience (v. 4; cf. v. 6) and some bystanders thought what they heard was drunken babbling (v. 13).

In the opinion of most modern scholars the glossolalia of Acts 2:1-13 was similar to that described in 1 Cor. 12-14, and consisted of unintelligible ecstatic utterances. They advance various theories to explain why Luke wrote instead about foreign languages. Some think he may have misinterpreted his sources and inserted 'other' (Acts 2:4) on his own initiative; others suggest that he may have interpolated the reference to foreign languages as a more favourable explanation when glossolalia fell into disrepute. Yet others regard his narrative as a dogmatic creation combining reports of ecstatic glossolalia with legends of the giving of the law at Sinai in the 70 languages of mankind (Midrash *Tanhuma* 26c), the conception of Pentecost as a reversal of the curse of Babel (Gn. 11:1-9) and his own universalism. However, it is unlikely that Luke, a careful historian (Lk. 1:1-4) and close companion of Paul (who spoke in tongues, 1 Cor. 14:18), misunderstood the nature of glossolalia. If the disciples did not actually speak in foreign languages at Pentecost, then the most satisfactory explanation is that Luke records from his sources the convictions of those present who believed they had recognized words of praise to God in other languages. The straightforwardness of the narrative and the scorn of the mockers (v. 13) count against the mediating view that the disciples' speech was delivered from its peculiarities (v. 7; cf. Mk. 14:70) and made intelligible to their hearers, most of whom would probably know Greek or Aramaic.

Speaking 'in new tongues' (*glōssais kainais*) is mentioned in Mk. 16:17 (not an original part of the Gospel) as a sign following faith in Christ. It accompanied the outpouring of the Holy Spirit upon the first Gentile converts (Acts 10:44-46; 11:15), and was doubtless one of the manifestations among the earliest Samaritan believers (Acts 8:18). The isolated group of disciples at Ephesus, who may have been early believers in Christ unaware of Pentecost (N.B. Stonehouse, *WTJ* 13, 1950-1, pp. 11ff.) also spoke in tongues when the Holy Spirit came on them (Acts 19:6). In each case spontaneous glossolalia was perceptible evidence of the repetition, in association with the ministry of an apostle (cf. 2 Cor. 12:12), of the initial bestowal of the Spirit at Pentecost, and apparently served to endorse the inclusion of new classes of believers into the cautious Jewish-Christian church (cf. Acts 10:47; 11:17-18). If tongues serve as a sign of covenantal judgment for Israel (Is. 28:10ff.; cf. Dt. 28:49; 1 Cor. 14:21ff.), and the tongues of Pentecost represent the taking of the kingdom from Israel and giving it to men of all nations (see O. P. Robertson, *WTJ* 38, 1975, pp. 43-53), the pattern of glossolalic occurrences in Acts emphasizes this transition.

Corinthian glossolalia differed in some respects from that described in Acts. In Jerusalem, Caesarea and Ephesus, whole companies on whom the Spirit fell immediately broke into tongues, whereas at Corinth not all possessed the coveted gift (1 Cor. 12:10, 30). Glossolalia in Acts appears to have been an irresistible and possibly temporary initial experience, whereas Paul's instructions to the Corinthians imply a continuing gift under the control of the speaker (1 Cor. 14:27-28). At Pentecost

TONGUES, GIFT OF

'tongues' were understood by the hearers, but at Corinth the additional gift of interpretation was necessary to make them intelligible (1 Cor. 14:5, 13, 27). Only at Pentecost is speaking in foreign languages explicitly mentioned. On the other hand, glossolalia is everywhere represented as consisting of meaningful utterances inspired by the Holy Spirit and employed primarily for worship (Acts 2:11; 10:46; 1 Cor. 14:2, 14-17, 28).

The 'various kinds of tongues' (1 Cor. 12:10) may include unlearned languages, non-languages, or other forms of utterance (cf. S. D. Currie, *Int* 19, 1965, pp. 274-294). At Corinth they were apparently not foreign languages, which Paul denotes by a different word (*phōnē*, 14:10-11), because a special gift, not linguistic proficiency, was necessary to understand them; nor were they for him meaningless ecstatic sounds, though the mind was inactive (v. 14) and the utterances, without interpretation, unintelligible even to the speaker (v. 13), because words (v. 19) and contents (vv. 14-17) were recognized, and interpreted tongues were equivalent to prophecy (v. 5). A definite linguistic form is suggested by the Gk. words for 'to interpret', which elsewhere in the NT, except Lk. 24:27, always mean 'to translate' (cf. J. G. Davies, *JTS* n.s. 3, 1952, pp. 228ff.; R. H. Gundry, *JTS* n.s. 17, 1966, pp. 299-307), and Paul probably regarded them as special heavenly languages not having ordinary human characteristics, inspired by the Holy Spirit for worship, for a sign to unbelievers (O. P. Robertson, *op. cit.*; J. P. M. Sweet, *NTS* 13, 1966-7, pp. 240-257), and, when interpreted, for the edification of believers. The Corinthians so overrated and abused glossolalia that Paul strictly limited its exercise in public (1 Cor. 14:27-28), and emphasized the superior value of prophecy for the whole church (1 Cor. 14:1, 5). Whilst it is uncertain how far later manifestations of glossolalia resemble the NT phenomenon, recent studies evaluate them as cadences of vocalization, not languages.

Mills, *Glossolalia: A Bibliography*, 1985; *idem*, *A Theological/Exegetical Approach to Glossolalia*, 1985; *idem* (ed.), *Speaking in Tongues: A Guide to Research on Glossolalia*, 1986; W. J. Samaritan, *Tongues of Men and Angels*, 1972; A. C. Thiselton, 'The "Interpretation" of Tongues?' *JTS* n.s. 30, 1979; C. G. Williams, *Tongues of the Spirit: A Study of Pentecostal Glossolalia and Related Phenomena*, 1981. W.G.P.

TOPHEL. Mentioned only in Dt. 1:1 as the locality where Moses addressed the Israelites. The identification with el-Tafieh, 25 km SE of the Dead Sea, is philologically unlikely (N. Glueck, *AASOR* 18-19, 1939, pp. 42-43). Tophel may well have been a stopping-place in the Israelites' wilderness itinerary. D.J.W.

TOPHETH (AV **TOPHET**). This was a 'high place' in the valley of *Hinnom just outside Jerusalem, where child sacrifices were offered by fire to a deity *Molech. Josiah defiled this idolatrous shrine (2 Ki. 23:10), and Jeremiah prophesied that the place would be used as a cemetery (Je. 7:32f.). The root of the noun seems to be the *tp̄t* of Aram. and Arab. denoting 'fireplace'. The vowels are artificial, taken from the Heb. noun *bōšēṭ*, 'shame'. D.F.P.

TORCH. The word is usually a translation of Heb. *lappid* in OT and of Gk. *lampas* in NT. *lappid* signifies the traditional torch consisting of a long pole with rags soaked in oil wrapped round the top of it. The word is translated as 'lightnings' in Ex. 20:18. *lampas* is normally translated 'torch' in Jn. 18:3 and Rev. 4:5; 8:10. In Acts 20:8, where the scene is a domestic one, translations generally render it as 'lamp' or 'light' (RSV). The other occurrences are all in Mt. 25:1-8, the parable of the wise and foolish maidens. While most translations favour the rendering 'lamp', it would probably be more appropriate to see a reference to the torches which were used in wedding processions. R.E.N.

TOWN CLERK. The *grammateus* (Acts 19:35) was frequently the secretary of a board of magistrates, responsible for the accurate recording of official decisions. At Ephesus he was clearly the president of the assembly. His punctilious regard for legal niceties, and anxiety about Roman intervention, mark him as a member of the Romanized aristocracy, among whom Paul found support (v. 31). His speech has been much admired as a little masterpiece of political *savoir faire*. E.A.J.

TRACHONITIS. The only biblical reference is Lk. 3:1, where, linked with *Ituræa, it is called the tetrarchy of Philip (the brother of Herod, tetrarch of Galilee). Trachonitis must have been the district around Trachon (Josephus uses both names); Trachon corresponds with the modern al-Laja', a pear-shaped area of petrified volcanic rock some 900 square km in area, to the E of Galilee and S of Damascus. It is on the whole extremely unproductive, but here and there are patches of fertile ground, with a spring or two. The cracked and broken nature of its terrain made it ideal for outlaws and brigands. Among others Varro (governor of Syria under Augustus), Herod the Great and Herod Agrippa I endeavoured to civilize the area, with varying success. Later on a Roman road was built through it. Targum Jonathan identifies the OT *Argob with Trachonitis. D.F.P.

TRADE AND COMMERCE.

I. In the Old Testament

*Palestine has always been the only natural bridge between Europe and Asia on the N and Africa on the S. This accounts for the fact that, although she was a poor country, she was constantly enriched by the trade and commerce that went through her land. Ezk. 27:12-25 presents a cross-section of the world commerce that passed through her territory.

Palestine's major contributions to commerce in OT times were agricultural products and metals. Phoenicia just to the N was a manufacturing area forced to import food. Israel supplied her with grain, oil and wine. Egypt to the S had a surplus of grain, but was short of olive oil and wine. As the desert peoples to the E became more influential after David's day they too absorbed Palestine's agricultural products.

Iron, which had been earlier introduced by the Philistines, appeared in such quantity after David's wide conquests in Syria that it could also be passed

on to iron-hungry Egypt. Solomon traded down the Red Sea to the backward peoples of Arabia and Africa. These lands in return sent precious incense, spices and gold to the Mediterranean *via* Palestine as well as Egypt. This Arabian commerce in Palestine was at its peak in Nabataean times. During the intertestamental period the asphalt traffic from the Dead Sea was so important that its body of water was called the Asphalt Sea, and it entered into international politics. Perfumes and spices were always items of exchange, some varieties moving out of the country and others moving in. Both were more important in ancient times than today. Spices, for example, were a common method of varying a rather monotonous menu.

Palestine's flocks produced a surplus of wool, which was probably exported both in bulk and as manufactured goods. Moab was a major wool producer. The excavations at Tell Beit Mirsim have shown that this was a manufacturing city devoted exclusively to weaving and dyeing of cloth. Flax was also used for clothing. If it was exported, then it was sent to Phoenicia, since Egypt was a heavy producer of linen. The wide distribution of expensive garments is shown by the finding of a Babylonian garment at the time of Joshua's conquest of Jericho, although that city was of minor importance. The value of good raiment is seen in the fact that it was commonly included in the list of booty taken in war.

* Egypt was the outstanding manufacturing nation along the Mediterranean in early days, but Phoenicia began to cut into her trade by imitating and modifying Egypt. craftsmanship. With Phoenicia's expanding manufacturing and shipping trade, Israel had a constantly increasing market for her agricultural products. Palestine itself entered the manufacturing field about the time of the written prophets. Indeed, much of their social criticism deals with the inevitable economic crises which come when any agricultural people shifts into full-scale manufacturing. An early date to Pentateuchal laws is demonstrated by the absence of any manufacturing code. Palestine used modern assembly-line techniques and standardization of forms and sizes. Their mass-production material was of good quality, although they were often using poorer materials and cheaper labour. Their manufactured goods, however, seemed to have been primarily for local consumption. Trade guilds came in at this time, and trade marks were used by the pottery manufacturers. (*ARTS AND CRAFTS.) In OT times agricultural taxes were largely paid in kind, and the government had its own potteries making official government standardized containers with the government seal stamped on the handles.

Coined *money came into Palestine towards the close of OT times. Previously gold and silver in ingots, bars and rings were weighed out. Jewels offered a more convenient and fairly safe method of investing and transporting larger sums than would be convenient in bullion. After Alexander the Great, coined money was common. During the intertestamental period, Jewish bankers came into prominence, and the synagogues of Asia Minor in NT times are in part due to Jewish influence in banking and commerce. During this same period Alexandria, which had become probably the greatest manufacturing city of the world, attracted a heavy Jewish population.

Only in the days of Solomon and Jehoshaphat did sea commerce play an important part in Pales-

tinian trade, and both ventures were short-lived. Sea commerce was predominantly in the hands of foreigners, first Philistines and other sea peoples, then later Phoenicians and Greeks.

For land travel the ass was the beast of burden until about David's day, when the camel, previously used primarily for war, also became available for the caravan trade. Part of Palestine's commercial wealth came from these caravans, which purchased necessary supplies from farmers and craftsmen as they moved through the country. At the local market-place the population absorbed foreign news, and the efficacy of this news medium can be seen in the sermons of Amos, with their broad picture of world affairs. Ishmaelites and Midianites handled much of the early commerce on the desert fringe. Later the Ammonites took over from them and became the dominant camel-owning people before the Nabataeans, who brought desert commerce to its financial peak.

Ben-hadad and the Omri dynasty had business depots in each other's capital city, and this was probably common practice between adjacent nations. Israel and Phoenicia were normally on far better terms with each other than Israel and Syria. A good source of income for the government was the tax on commerce entering the country. This source of wealth, of course, was at its peak in the days of David and Solomon. But there was a second peak of prosperity under Jeroboam II in Israel and Uzziah in Judah.

The major trade routes of Palestine ran N and S. The most important came out of Egypt, crossed the Philistine plain, continued along the E edge of the plain of Sharon, crossed the Carmel ridge at Megiddo, and then went on to Dan either *via* Hazor of Galilee or *via* Beth-shan and the upland road just N of the Yarmuq river. The high ridge road *via* Beersheba, Hebron, Jerusalem, Shechem and Beth-shan handled more local traffic than through commerce. E of the Jordan valley was the King's Highway coming out of the Gulf of Aqabah and touching the key cities of Kir, Dibon, Medeba, *etc.*, along the centre of the populated areas. A second road followed a parallel track to the E of the King's Highway and just inside the desert fringe. Today a modern road follows the former and the railway the latter. These routes picked up the Arabian trade at such points as Petra, Amman and Edrei.

E and W roads were less profitable, except the most S one, where Arabian commerce came *via* Nabataean Petra to Gaza. Commerce also came out of the caravan city of Amman, down the Jabbok valley, up to Shechem and over to the Mediterranean. More commerce, however, probably came through the Hauran down to Beth-shan and up the plain of Esdraelon to the Mediterranean. The great grain fields of the Hauran sold their wheat down this route. A shorter road cut across Galilee from the Sea of Galilee to Accho. The major seaports used in OT times were Joppa, Dor and Accho. Ashkelon was the Philistine seaport, and Gaza was the Mediterranean outlet for the Nabataean trade.

J.L.K.

II. In the New Testament

Trade and commerce have no large place in the NT. The coast of Palestine is harbourless and swept with surf, and no natural port formed a cross-road for trade. The sea in Heb. metaphor is a barrier, not a pathway, and such an attitude was natural in a land which fronted the unbroken border of the waters. The ruins of artificial harbours are common enough, and suggest rather the futility than the success of man's attempts to tame the E end of the Mediterranean (see G. A. Smith, *The Historical Geography of the Holy Land*²⁵, 1931, pp. 127-144).

Caravan routes, on the other hand, naturally converged on Palestine, and the NT is aware of the activities of the trader. Such parables as those of the talents and the merchant who found 'a pearl of great price' were obviously meant to be understood by the audience to which they were addressed. But this was the petty trade of a small, poor and under-privileged land.

Major activities in trade and commerce, all through NT times, were in the hands of the Romans and Italians. State interference with the processes of trade, which became a sombre feature of late imperial times, was already visible in the 1st century. The legal machinery by which a 'mark in hand or head' could prevent the non-conformist from buying and selling (Rev. 13:16-17) was early apparent. The foreign trade of the empire was extensive and varied. There is also evidence that it was unbalanced, for the hoards of Rom. coins found commonly in India are clear indication of a perilous leakage of bullion, and one cause of the creeping paralysis of inflation.

Lat. and Gk. words in early Irish, German, Iranian, Indian and even Mongolian tongues are evidence of the wide influence of Rom. trade. Archaeology, especially on the S Indian coast, has a similar word to say. An excavation at Pondicherry has established the fact of a large Rom. trade with India in the 1st century. Rom. merchants, indeed, were ubiquitous. There was a Rom. market, the remains of which may still be seen, outside the sacred precincts at Delphi. Trade was no doubt brisk in amulets and souvenirs, and may have been typical of petty Italian enterprise abroad wherever crowds were gathered. Similar activity in the Temple of Jerusalem had been cannily kept in the hands of the Sadducean chief priests.

From the 2nd century before Christ a Rom. city stood on Delos, the Aegean centre of the slave-trade, and when Mithridates in 88 BC massacred the Italian residents of Asia Minor and the Aegean islands, 25,000 fell in Delos alone out of a total of 100,000 victims. They must have been mostly traders and the agents of commerce. The capital itself, whose population in the 1st century was something like one million, was a vast market, and a grim, satiric chapter in the Apocalypse (Rev. 18), constructed after the fashion of an OT 'taunt-song', and in imitation of Ezk. 27, speaks of the wealth and volume of Rome's luxury trade, and the economic disruption sure to follow the loss of a market so rich. Ostia, Rome's port, is full of warehouses.

Rom. trade extended far beyond the boundaries of the empire. The 'far country' of Mt. 25:14 is quite literal. Merchants from Italy carried their foods into unsubdued Germany, along the 'amber route' to the Baltic, to India and perhaps China.

All this activity sprang from Rome's dominance, the peace which she policed, and above all from the absence of political frontiers over significant areas of the world. Petronius' Trimalchio, the *nouveau riche* of the *Satiricon*, could make fortunes and lose them, and make them again. Of Augustus the merchants said that 'through him they sailed the seas in safety, through him they could make their wealth, through him they were happy'.

The account of the last journey of Paul to Rome, so ably told by Luke, first in a ship of Adramyttium of Asia Minor, and then in an Alexandrian freighter, probably under charter to the Rom. government for the transport of Egypt corn, gives a vivid picture of the hazards of trade and navigation.

Apart from the list of Rev. 18, which may have been deliberately selected in accordance with the polemic and satirical purpose of the passage, the commodities of export trade are not widely known. No cargo lists survive. Oysters came from Britain to Rome in barrels of sea-water. Cornish tin, no doubt, came down the same sea-route. N Gaul seems to have had the rudiments of an exporting textile industry, and Gaul certainly exported cheap Samian pottery. Underwater archaeology on wrecked ships has revealed that large cargoes of wine were carried. A monogram device of a double S in a trident seems to indicate that one such freighter, wrecked near Marseilles, was the property of one Severus Sestius, who occupied 'the House of the Trident' on Delos.

On the subject of mass production for such trade there is little information, and none on the business organization necessarily involved. Certain localities, however, became famous for special products, and the resultant commerce would have been in the control of specialist traders who would create and operate their own markets. A striking example is Lydia, 'a seller of purple goods', from the city of Thyatira in Asia Minor (Acts 16:14), whom Paul's party met at Philippi in Macedonia. Corinthian bronze, in ornaments and mirrors (1 Cor. 13:12), and the *cilicium* or goats'-hair cloth, which was either the product or the raw-material of Paul's tent-making (Acts 18:3), were probably distributed by similar private enterprise. The imagery of John's letter to Laodicea (Rev. 3:14-18) is partly derived from the trade and commerce of the town. Ramsay has established the existence of a Laodicean trade in valuable black woollen garments. Laodicea and Colossae produced black fleeces, the evidence of which is still genetically apparent, it is said, in the sheep of the area today. There was also a Laodicean eye-salve, based probably on the kaolin of the thermal area at Hierapolis, 10 km away. Hence the taunt about 'white garments' and 'eye-salve' (see W. M. Ramsay, *The Letters to the Seven Churches of Asia*, chs. 29-30).

*Thyatira, of the earlier letter, was also a centre of trade and commerce, though probably without Laodicea's export emphasis. Lydia has already been mentioned, and archaeological evidence speaks of wool- and linen-workers, dyers, leather-workers, tanners, potters, slave-traders and bronze-smiths. The dyers, and Lydia was probably one of them, dealt in a purple dye made from the madder root, which undercut the expensive sea-dye from the murex shell.

It is curious to note that, in writing to Thyatira, John uses the figure of Jezebel, sign and symbol of Israel's compromising trade partnership with

Phoenicia, to describe a local 'Nicolaitan'. 'Jezebel' of Thyatira had no doubt taught some form of compromise with the surrounding pagan world. In a town of brisk trade activity some such adjustment would appear more urgently necessary because of the power of the trade guilds.

These organizations were a source of major difficulty to Christians, who sought, in their daily converse with the pagan world around, to keep a clear conscience. The trade guilds or *collegia* appear in Acts 19 as a force of organized opposition to Christianity. An important trade commodity of Ephesus, now that the harbour was silting, and commerce was passing to Smyrna, was the manufacture of silver souvenirs and cult objects of Artemis, for sale to the pilgrims who visited the famous shrine. Ephesus saw the guilds concerned exercise sufficient pressure to end Paul's ministry. A famous letter of Pliny (*Ep.* 10.96), which vividly describes the suppression of a vigorous church in Bithynia in AD 112, is also a clear indication of such influence. The guild of the butchers, alarmed at the falling sales of sacrificial meat, successfully stirred up official action against the church. It was difficult for Christians, whose trade depended upon a measure of goodwill, to carry on their daily activities if they obviously abstained from fellowship with their colleagues. On the other hand, since all the callings of trade and commerce were under the patronage of pagan deities, fellowship, and indeed membership of a trade *collegium*, involved the compromising act of libation or sacrifice at the guild dinner. Records exist of a considerable number of such organizations, and the strictures of Jude, Peter and John against the 'Nicolaitans', the 'followers of Balaam' and 'Jezebel', suggest that the simple functions of trade and commerce may have proved a source of deep division in the early church.

TRADITION (Gk. *paradosis*). That which is handed down, particularly teaching handed down from a teacher to his disciples. The concept is often present without the word being mentioned. The main references in the Gospels occur in Mt. 15 and Mk. 7, and concern Jewish tradition.

I. Jewish tradition

The word tradition does not occur in the OT, but between the Testaments much teaching in explanation of the OT was added by the rabbis. Tradition was handed down from teacher to pupil, and by Jesus' day had assumed a place alongside Scripture. This equation of human commentary with divine revelation was condemned by the Lord. By such tradition the Word of God was 'transgressed', 'made of none effect', laid aside, and rejected (Mt. 15:3, 6; Mk. 7:8-9, 13). The doctrines taught by tradition were 'the commandments of men' (Mt. 15:9; Mk. 7:6-7).

II. Christian tradition

Jesus placed his own teaching alongside the Word of God as an authoritative commentary, which he handed down to his disciples. Thus in the Sermon on the Mount Jesus quoted from the Law, but put beside it his own words, 'but I say to you' (Mt.

5:22, 28, 32, 34, 39, 44; cf. 6:25). His justification for so doing is found in his Person. As the Spirit-anointed Messiah, the Word made flesh, he alone could make a valid and authoritative commentary on the Spirit-inspired Word of God. Likewise the Epistles emphasize the Person of Christ in contrast to tradition. In Col. 2:8 Paul warns against falling prey to 'philosophy and empty deceit . . . according to human tradition . . . and not according to Christ'. So in Gal. 1:14, 16 Paul abandoned the elders' tradition when God revealed his Son in him; Christ not only created the true tradition but constitutes it.

Christian tradition in the NT has three elements: (a) the facts of Christ (1 Cor. 11:23; 15:3; Lk. 1:2, where 'delivered' translates *paredosan*); (b) the theological interpretation of those facts; see, e.g., the whole argument of 1 Cor. 15; (c) the manner of life which flows from them (1 Cor. 11:2; 2 Thes. 2:15; 3:6-7). In Jude 3 the 'faith . . . once for all delivered' covers all three elements (cf. Rom. 6:17).

Christ was made known by the apostolic testimony to him; the apostles therefore claimed that their tradition was to be received as authoritative (1 Cor. 11:2; 2 Thes. 2:15; 3:6). See also Eph. 4:20-21, where the readers had not heard Christ in the flesh but had heard the apostolic testimony to him. Christ told the apostles to bear witness of him because they had been with him from the beginning; he also promised the gift of the Spirit who would lead them into all truth (Jn. 15:26-27; 16:13). This combination of eyewitness testimony and Spirit-guided witness produced a 'tradition' that was a true and valid complement to the OT. So 1 Tim. 5:18 and 2 Pet. 3:16 place apostolic tradition alongside Scripture and describe it as such.

One influential form-critical school of theology questions the historical validity of NT tradition saying that in this tradition Christians were concerned with proclaiming the Christ of faith rather than passing on facts of history. This concern in turn led to their account being coloured by their belief, and therefore the biblical scholar's task is seen as identifying that which originally belonged to Christ and that which was added by early believers. B. Gerhardsson challenges the validity of this form-critical presupposition. He points out that the very thorough methods of transmission of tradition in the rabbinic schools later can be traced back to NT times. Methods such as learning by heart, memorizing the actual words of the teacher, condensing the material into short texts and the use of notebooks were common in the days of Christ. The apostles and the early church were also seriously concerned with a conscious handing down of a valid tradition of Christ and not just with an unconscious transmission of a diluted tradition through preaching. When the uniqueness of Jesus in the eyes of the early church is also taken into account, the likelihood of additions to the story becomes even more suspect.

Gerhardsson's work provoked strong reaction, which questioned the reading back of later rabbinic methods into the early church period and pointed to the distinctiveness of Christian teaching over against contemporary Jewish teaching. Although Gerhardsson may have overstated his case, he has shown that the environment in which the Gospels were written was deeply concerned for the correct handing on of tradition and not as interested in supplementing fact with imagined improvement, as some scholars believe. The exhort-

TRADITION

ations of Paul regarding the 'tradition' gain added significance in this context. The apostolic office was limited to eyewitnesses, and, as only eyewitnesses could bear a faithful witness to Christ as he lived and died and rose again, true tradition must also be apostolic. This was recognized by the church in later years when the Canon of the NT was eventually produced on the basis of the apostolic nature of the books concerned. Apostolic tradition was at one time oral, but for us it is crystallized in the apostolic writings containing the Spirit-guided witness to the Christ of God. Other teaching, while it may be instructive and useful and worthy of serious consideration, cannot claim to be placed alongside OT and NT as authoritative without manifesting the same defects as condemned Jewish tradition in the eyes of our Lord.

TRANCE. The Gk. word *ekstasis* (lit. 'standing outside' or 'being put outside', i.e. of one's normal state of mind) is rendered 'trance' in Acts 10:10; 11:5; 22:17, where it forms the condition of a vision. The trance state has never been fully explained, but it involves an overriding of normal consciousness and perception. In the only two occurrences of the strange Heb. word *samw'irim*, translated 'blindness' in Gn. 19:11 and 2 Ki. 6:18, it is clear that a trancelike state of hypnotic suggestibility is indicated. J.S.W.

TRANSFIGURATION. The transfiguration is recorded in Mt. 17:1–8; Mk. 9:2–8; Lk. 9:28–36. Its absence from John is usually accounted for on the ground that the whole of Christ's life was a manifestation of the divine glory (Jn. 1:14; 2:11, etc.). There is also a reference to it in 2 Pet. 1:16–18.

In the Synoptic Gospels the event takes place about a week after Peter's confession of the Messiahship of Jesus. He took his three closest disciples, Peter, James and John, up to a mountain (probably Hermon, which rises to a height of 2,814 m above sea-level). There he was transformed (rather than changed in appearance) and his garments shone with heavenly brightness. Moses and Elijah then appeared and talked to him, and Peter suggested making three tents for them. A voice then came from a cloud declaring Christ's Sonship and his authority, after which the vision ended. The narrative suggests that the whole event was objective, though many modern scholars have sought to describe it in terms of a subjective experience of Jesus or of Peter.

The transfiguration marks an important stage in the revelation of Jesus as the Christ and the Son of God. It is an experience similar to his baptism (Mt. 3:13–17; Mk. 1:9–11; Lk. 3:21f.). Here his glory is revealed not just through his deeds, but in a more personal way. The glory denotes the royal presence, for the kingdom of God is in the midst of his people.

There are many features about the account which derive significance from the OT. Moses and

Elijah represent the Law and the Prophets witnessing to the Messiah and being fulfilled and superseded by him. Each of them had had a vision of the glory of God on a mountain, Moses on Sinai (Ex. 24:15) and Elijah on Horeb (1 Ki. 19:8). Each of them left no known grave (Dt. 34:6; 2 Ki. 2:11). The law of Moses and the coming of Elijah are mentioned together in the last verses of the OT (Mal. 4:4–6). The two men at the empty tomb (Lk. 24:4; Jn. 20:12) and at the ascension (Acts 1:10) and the 'two witnesses' (Rev. 11:3) are sometimes also identified with Moses and Elijah. The heavenly voice, 'This is my beloved Son; listen to him' (Mk. 9:7), marks Jesus out not only as the Messiah but also as the Prophet of Dt. 18:15ff.

The cloud symbolizes the covering of the divine presence (Ex. 24:15–18; Ps. 97:2). There is a cloud to receive Christ out of his disciples' sight at the ascension (Acts 1:9). The return of Christ will be with clouds (Rev. 1:7).

In Luke we are told that the subject of their conversation was the *exodos* which he was to accomplish at Jerusalem. This seems to mean not simply his death but the great facts of his death and resurrection as the means of redemption of his people typified by the OT Exodus from Egypt.

The transfiguration is therefore a focal point in the revelation of the kingdom of God, for it looks back to the OT and shows how Christ fulfils it, and it looks on to the great events of the cross, resurrection, ascension and parousia. Peter was wrong in trying to make the experience permanent. What was needed was the presence of Jesus alone and attention to his voice.

TRAVAIL. 17th-century English made no distinction between the words 'travel' and 'travail', the two spellings being employed indiscriminately for the two ideas in the earlier editions of the AV. Later editions have, on the whole, conformed to the changing usage, as does RSV. The Eng. word translates a number of Heb. and Gk. words, all of which are normally connected with childbirth. The word is sometimes employed metaphorically, notably in Rom. 8:22 and Gal. 4:19, and in simile as in Ps. 48:6 and Mi. 4:9–10.

G.W.G.

TRAVEL IN BIBLICAL TIMES. Travel in the world of biblical times was governed by the available land and water routes. Early in the history of the ancient Near East, especially in Mesopotamia and Egypt, rivers and coastal waters provided the best means for trade or travel. Bridle tracks developed to link villages and villages grew up at crossroads in a continuing double process. As trade developed international sea and land routes came into being. The Mediterranean world was greatly privileged for sea travel because of its climate, coastal pattern and access to other areas (cf. 1 Ki. 9:26ff.; Paul's journeys). Palestine was a vital land-bridge between Eurasia and Africa for both sea and land travellers, and so played an important role in communication and *trade. With the establishment of the Roman peace and road system

travel in the biblical world was greatly facilitated, playing an important part in the spread of the gospel.

I. Old Testament times

Land travel in the early OT period was relatively restricted, caravans and military forces being the main groups on the move. Although individuals tended to remain in their home areas so as not to lose their status as citizens, there is evidence of group migrations during the Middle Bronze age. The relatively widespread trade empire of *Ebla in the latter 3rd millennium, from the Mediterranean to the Persian Gulf, indicates reasonable communications and the possibility of travel in the Near East well before the patriarchal age.

A number of Heb. words are used for roads or paths. Of these *derek*, that which is trodden underfoot, and *m'sillāh*, the levelling and filling of a track, suggest best the nature of ancient roads. Although the evidence is not final, it does appear that properly constructed roads were unknown before the Roman road system. Prior to these roads were paths followed regularly by men and animals. Some tracks were better maintained, such as to provincial centres or the cities of refuge (Dt. 19:3), but this meant essentially the clearing of stones and limited levelling (cf. Is. 40:3; 62:10). Tiglath-pileser I (1115–1077 bc) of *Assyria used engineers to lay bridges and level tracks for carts and siege-engines. An Egypt. writer, a century earlier, described Palestinian roads as 'filled with boulders and pebbles, . . . overgrown with reeds, thorns and brambles' (*ANET*, p. 478a). Such references indicate unpaved roads but tracks which could be maintained. Even the royal roads of the Persians, including the 2,600 km major link between Sardis and Susa, were probably formed but not paved except perhaps in immediate city areas. Paved streets seem to have been limited to some towns (e.g. Nineveh, Babylon). Travellers, caravans, official messengers and armies would use these tracks, travellers normally going with caravans for safety (cf. Jdg. 5:6).

Usually travellers would walk, although the ass was used for both riding and as a pack animal from early times. Chariots and horses were used for military purposes. The ox wagon carried heavy loads and probably people (Gn. 46:5). In later times the camel was also utilized. Throughout river and coastal traffic remained very important modes of travel. Little is known of resting-places, but it seems that the traveller prior to Roman times needed to provide and fend for himself (Jos. 9:3–14). People would travel mainly to trade, sometimes to attend religious festivals, and on occasions when migrating due to war, famine or similar reasons.

Roads may be classified as international or internal routes. Often local roads linked international highways, as the E–W roads of Palestine sometimes ran between the 'way of the sea' (Is. 9:1; the so-called Via Maris) and the 'King's Highway' (Nu. 20:17). The former ran from Egypt along the coast of Palestine then inland to Megiddo where it divided, although the main route continued N to Damascus and on to Mesopotamia. The *'King's Highway' also ran N–S between Bozrah in Edom to Damascus, linking both Arabia and Egypt with the N. Lesser N–S roads in Palestine followed the Jordan Valley and the central mountain ridge. Numerous latitudinal roads linked these high-

ways, including the road from Jerusalem to Jericho (see *LOB*). Sea travel was not normally a feature of Israelite life, although ships traversed the coast of Palestine and sailed from Ezion-geber on the Gulf of Aqabah. Jonah's flight illustrates that some individuals did travel on cargo ships in OT times (*SHIPS AND BOATS; *TRADE AND COMMERCE).

International land routes linked important cities of Egypt, Mesopotamia, Syria and Asia Minor. The two highways through Palestine linked Arabia and Egypt with Damascus. From thence one road ran to Babylon via Tadmor (2 Ch. 8:4) and Mari; another went N to Carchemish, W to Haran and Ashur, then S to Babylon and the Persian Gulf. Finally a road N from Carchemish linked up with the Hittite city of Kanish in Asia Minor.

II. New Testament times

By NT times the Roman peace and authority had made travel relatively safe and constant. The simple acceptance in the Gospels and Acts of both short and long journeys as normal demonstrates this. Although some classical writers give the impression that travel, especially by sea, was to be avoided, those who really knew the world of their day, like Pliny and Philo, confirm the NT picture. Extensive plans for travel by land and sea were made and executed, and assurances given of return visits despite the distances involved (e.g. Rom. 15:24–25; Acts 15:36; 18:18–21). Such journeys were within the Roman empire: travel in foreign lands, although not unknown, was exceptional.

Within Palestine the Gospels indicate regular movement of people, including annual visits to Jerusalem for the Passover (Lk. 1:39; 2:3–5, 41ff.; Jesus' ministry). These journeys were usually made on foot and lasted a number of days, e.g. 5 from Nazareth to Jerusalem. As the Roman road system was not extended to Palestine until late in the 1st century AD, such internal travel would have been on the older road system (*IEJ* 1, 1950, pp. 54ff.). Journeys were also made to or from Palestine (Mt. 2:1, 13–15). Most significant are the extensive travels of *Paul. He utilized to the full the free access to travel within the Roman world. The government's support for shipping, the extermination by Augustus of pirates at sea and much brigandage on land, and the extensive road system leading to Rome, all helped the early Christian traveller. In fact, Christianity first spread directly along the great roads which led to Rome. The great E road illustrates this, with the diversion to Macedonia through divine guidance as a corollary (Acts 16:6–10); the route ran from Caesarea via Syrian Antioch, Tarsus, Derbe, Iconium, Pisidian Antioch, Laodicea, Ephesus, by sea to Corinth, and then to Brundisium or Puteoli, and by land along the Appian Way to Rome.

Begun in 312 bc the Appian Way was the first great Roman highway built. These roads, well planned and constructed, running as much as possible on a straight course, provided ready travel unequalled until the coming of the railway many centuries later. Major roads were paved over a width of 6–8 m; minor roads surfaced with sand or gravel were cambered to ditches 6 m or 3 m apart. Because of their strategic importance it was the army that often built these roads, although Augustus appointed permanent road boards in 22 bc. Josephus records that Vespasian had road-

TRAVEL IN BIBLICAL TIMES

surveyors with his army during the 1st Jewish Revolt (*BJ* 3. 118). Milestones set at 1,000 paces (1,480 m) recorded the distance from the road-head or nearest city. These are valuable sources of information today. Maps of roads, and certainly lists of resting-places and distances both by land and sea were available for travellers to plan their journeys. Such itineraries, more or less complete, have been found belonging to post-NT times, but they must have existed earlier as Strabo (64 BC-AD 19) and other geographers obviously drew information from them.

Apart from the army the road system was used for the imperial post and by other travellers. The royal courier service not only handled communications but also provided transport for officials. Ordinary travellers had to make their own arrangements; so did private persons wishing to send correspondence to others, as in Paul's case. Resting-places with fresh horses were provided at cities or every 25 Roman miles, with probably two intermediary stops in between. Again only couriers and officials were catered for. The ordinary traveller could stay at inns run by private owners. Some provided food and lodging; some lodgings only. Those in the E provinces seem to have been superior in quality, but the over-all picture of inns and innkeepers suggests a generally poor standard. Many were little removed from brothels. Hence the stress in early Christian literature on providing *hospitality. Normal distances travelled would be 16 Roman miles a day by foot, and about 25 by horse or carriage. On some occasions couriers or officials covered 100 miles a day, but on the other hand letters to Cicero from Syria took respectively 50 and 100 days for delivery. Winter months hampered or stopped travel, especially in mountainous regions or plateaux, just as most shipping ceased between mid-November and mid-March at least, preferring to sail between 26 May and 14 September (*Acts* 27:9ff.). Prevailing winds also determined the courses followed by the ships. Paul used trading ships, whose movements were regulated by considerations of freight, and seems to have avoided ships apparently especially provided for Jews of the Dispersion to go to Jerusalem for the Passover (*Acts* 20:1ff.). His final journey to Rome was by two grain ships (*SHIPS AND BOATS).

Travel on land would have been similar to that in OT times. Most would go by foot. Officials with permits could use the facilities of the courier system, both horses and carriages. Various light carriages were used (*cf.* *Acts* 8:29—a travelling chariot?) and some ordinary travellers rode on the heavier ox-wagons, both open and covered. There was even a drive-yourself carriage, the *essedum!* The horse, with a cloth but no saddle, was used by messengers, troops (with Paul, *Acts* 23:23f., 32) and some travellers; the ass continued its burden-bearing task as it does today. Both personal and group travel were common in NT times. People moving around the empire included government officials, traders, workers seeking employment, especially in large cities, students going to centres of study and the infirm seeking healing sanctuaries. In particular people in large numbers would attend games and great religious festivals. These included not only the Jewish feasts but major events in Greece and Italy. Not least among the travellers were the early Christians using the facilities provided by Rome as they spread the Gospel and corresponded with one another.

BIBLIOGRAPHY. *LOB*; M. Avi-Yonah, 'The Development of the Roman Road System in Palestine', *IEJ* 1, 1950-1; C. Singer *et al.* (ed.), *A History of Technology*, 1, 1967; 2, 1972; D. Baly, *The Geography of the Bible*, 1967; L. Casson, *Travel in the Ancient World*, 1974. G.G.G.

TRAYS. Heb. *mahtōt* (AV 'snuff dishes') were vessels made of gold, used for removing the trimmings from the lamps in the tabernacle and Temple (*Ex.* 25:38; 37:23; *Nu.* 4:9). To be distinguished from the copper firepans and censers, likewise called *mahtōt* (*Ex.* 27:3; *Nu.* 16:6). D.W.G.

TREASURE, TREASURY. 'Treasure' usually refers to valuables, such as silver or gold. 'Treasuries of darkness' (*Is.* 45:3) are hoarded riches; 'treasures of wickedness' (*Mi.* 6:10; *cf.* *Pr.* 10:2) are ill-gotten gains. In *Mt.* 2:11 'treasures' are boxes containing valuables.

'Treasury' and 'treasure house' frequently signify a place where treasure is stored, generally attached to a sanctuary (*Jos.* 6:19, 24; 1 *Ki.* 7:51; *Dn.* 1:2) or belonging to a king (2 *Ki.* 12:18; *Est.* 3:9). In *Ezr.* 2:69; *Ne.* 7:70f., 'treasury' is a fund for rebuilding the Temple. In *Mk.* 12:41; *Lk.* 21:1 it refers to the thirteen trumpet-shaped offertory boxes placed in the Court of the Women in the Temple; it is apparently used of the vicinity of these boxes in *Jn.* 8:20.

'Treasure' also has the wider meaning of a store. In 2 *Ki.* 20:13 'treasure house' is a storage place in the palace (*cf.* v. 15). In *Mt.* 13:52 it is a store-room.

The Bible uses 'treasure' and 'treasury' metaphorically too. Yahweh keeps sin in the treasuries of his memory (*Dt.* 32:34). Wisdom is to be treasured in the mind, *i.e.* valued and taken to heart (*Pr.* 2:1; 7:1). Awe of Yahweh is Zion's treasure (*Is.* 33:6). The sky is Yahweh's 'good treasury' containing rain (*Dt.* 28:12); in poetry, snow, hail (*Jb.* 38:22) and the wind (*Ps.* 135:7; *Je.* 10:13; 51:16) also have 'storehouses' or treasuries. In *Zc.* 11:13 *MT hayyōšēr*, 'potter' (rsvmg.), has been emended to *hā'ōšār*, 'treasury' with Pesh., but it is possible that *MT* can mean 'foundry worker' (*cf.* *LXX*, *NEBmg.* 'foundry').

In the Synoptic Gospels Jesus often uses 'treasure' figuratively. Since God rewards whole-hearted service in the hereafter, it is termed laying up treasure in heaven, which is contrasted with money-making in *Mt.* 6:19f.; *Mk.* 10:21 and parallels; *Lk.* 12:33 (*cf.* *Mt.* 19:21; *Lk.* 18:22). As the storehouse of either good or evil the heart controls conduct (*Mt.* 12:35; *Lk.* 6:45). A man's heart is where his treasure is (*Mt.* 6:21; *Lk.* 12:34), *i.e.* his interests are determined by what he values most.

Paul's phrase 'treasure in earthen vessels' (2 *Cor.* 4:7) contrasts the glory of the divine gospel with the weakness of its human ministers. Wisdom and knowledge are treasures to be found only in Christ (*Col.* 2:3).

'Peculiar treasure' was the AV and RV rendering of *s' gullā* in *Ex.* 19:5; *Ps.* 135:4; *Ec.* 2:8. The RV also translated it thus in *Mal.* 3:17 (AV 'jewels'). The Heb. word occurs with 'people' in *Dt.* 7:6; 14:2; 26:18. It means 'personal property', and the RSV generally renders one's 'own possession' or the like. Apart from 1 *Ch.* 29:3; *Ec.* 2:8, where it is used literally of kings' possessions (RSV 'treasure').

šgullā is applied to Israel as Yahweh's very own people. Tit. 2:14; 1 Pet. 2:9 and possibly Eph. 1:14 use the LXX equivalents of the new Israel.

L.C.A.

TREES. Comments in the article on *PLANTS concerning the uncertainty of identifications apply equally to the trees.

Trees and timber are frequently mentioned in the Bible. The Holy Land itself can never have been thickly afforested, though woodlands are known to have occurred in areas now devoid of trees. Deciduous oaks covered parts of the Plain of Sharon, while evergreen oaks occurred on much of the hill country, including Carmel where remnants still exist. Aleppo pines also grew on suitable soils in the hills. Bashan and Lebanon were important sources of timber and the cedar of Lebanon is famous. Timber was required for buildings (although rough branches would suffice for humbler dwellings), ships, wooden musical instruments, farm implements, household items and even idols.

Acacia (Heb. *šittim*, *av shittah*, *shittim*). Several species of acacia (*Acacia albidia*, *A. tortilis*, *A. ragaensis*) occur in the desert wadis of Sinai and the hot Jordan valley, where the place Shittim was named after them (Jos. 2:1). The hard timber was used by the Israelites for the ark and parts of the *tabernacle or tent of meeting (Ex. 25). These spreading, thorny trees were some of the few available in Sinai and likely to produce pieces of wood of sufficient size.

Algum (Heb. *'algūmmim*, 2 Ch. 2:8; 9:10–11). Apparently a tree native to Lebanon, and possibly the coniferous tree called the Cilician fir (*Abies cilicia*). The eastern savin or Grecian juniper (*Juniperus excelsa*) and the evergreen cypress (*Cupressus sempervirens*) have also been suggested. A doubtful suggestion is that the algum is identical with the almug tree of Ophir and that it was re-exported to Judah from Lebanon and thought by the Chronicler to be native there. The reference to 'algum trees' in 2 Ch. 9:10–11 appears to be an example of metathesis, or it may be simply an alternative form.

Almond. The almond (*Prunus dulcis* or *Amygdalus communis*) blooms in the Holy Land as early as Jan. Its Heb. name, *šāqēd*, 'waker', suggests the first of the fruit trees to awake after the winter. Blossoms are pink-flushed white, demonstrating an analogy with the hoary-headed patriarch (Ec. 12:5). The almond's beauty was often copied in ornamental work (Ex. 25:33–34). As well as being oil-producing, the kernel was a favourite food in Palestine, and an acceptable gift when sent by Jacob to Egypt (Gn. 43:11). It is probably denoted in Gn. 30:37, where *av* renders 'hazel', and is mentioned in Je. 1:11–12, where a play on the words (*šāqēd* and *šōqēd*) illustrates God's prompt fulfilment of his promises. See A. Goor and M. Nurock, *Fruits of the Holy Land*, 1968, pp. 241–254.

Almug (Heb. *'almūggim*, 1 Ki. 10:11–12). Imported into Judah with gold from Ophir. The location of Ophir remains a matter of conjecture, and the identity of the tree is uncertain. The traditional identification is with red sandal-wood (*Pterocarpus santalinus*), a large leguminous tree native to India and Ceylon. Others argue, however, that *'algūmmim* and *'almūggim* should both be identified with a Lebanese tree.

Apple (Heb. *tappūah*). Referred to chiefly in Can-

ticles, this fruit's identity has long been discussed in view of the (untenable) objection that Palestine is too hot and dry to allow satisfactory cultivation of the true apple (*Malus pumila* or *Pyrus malus*). The Heb. and Arab. words, however, favour this reading; the tree affords good shade, the fruit is sweet (Ct. 2:3) and the perfume is much appreciated (Ct. 7:8). The cultivated apple may have originated in the Caucasus area and it certainly grows well in cultivation in parts of the Holy Land. Though most of these attributes apply also to the apricot (*Armeniaca vulgaris* or *Prunus armeniaca*), about which the image in Pr. 25:11 concerning 'apples of gold' would be more apposite, it is questionable whether the apricot was established in Palestine at this time. This objection is even more serious in the case of the Chinese citron (*Citrus medicus*), a third suggestion. A W Asiatic fruit, the quince (*Cydonia oblonga*), has been proposed also, but its taste is somewhat bitter, and the Mishnah renders it by a different Heb. word. See Goor and Nurock, *op. cit.*

Cedar (Heb. *'erez*; Gk. *kedros*). *Cedrus libani*, the cedar of Lebanon, a large spreading coniferous tree formerly abundant in Mt Lebanon where it is now reduced to scattered remnants and is protected. The wood was highly esteemed for its durability and was used, for example, for building David's house (2 Sa. 5:11, etc.), Solomon's Temple (1 Ki. 5:6–10, etc.) and the new Temple built after the Babylonian Exile (Ezr. 3:7). Extra-biblical texts speak of Nebuchadrezzar's exploitation of the Lebanese forests (cf. Hab. 2:17). Solomon had chariots, or more probably sedans (Heb. *'appiryōn*), made of cedar (Ct. 3:9). Cedars may attain a height of 40 m and OT writers used them as a figure of stature in man (Ezk. 31:3; Am. 2:9), grandeur (Ps. 92:12) and majesty (2 Ki. 14:9). The meaning of Heb. *'ezrah* in Ps. 37:35 is obscure (*av* 'bay tree', rsv 'cedar of Lebanon'), but elsewhere in OT means 'native', and a plant indigenous to Palestine is indicated here.

The cedar-wood burnt by a priest during levitical cleansing (Lv. 14:4–6, 49–52; Nu. 19:6) would not have been the cedar of Lebanon but a small tree of the Sinai desert, the Phoenician juniper, *Juniperus phoenicea*, which is fragrant when burnt. See Pine, below.

Cypress. A tree (*Cupressus sempervirens*) with a dense habit 13–20 m high, with numerous branchlets having scale leaves and providing excellent timber. Often planted in Mediterranean cemeteries as the columnar variety (var. *pyramidalis*). rsv renders as 'cypress' the Heb. *b'rōš* (Is. 41:19; 55:13; *av* 'fir'), yet the variant *b'rōtīm* (Ct. 1:17) is taken to be 'pine'. Evidence favours cypress as being Heb. *t'āssūr* (Is. 41:19; 60:13; *av* 'box tree'). The reference in Ho. 14:8 to an 'evergreen cypress' (rsv) or 'green fir tree' (*av*) continues with a mention of its fruit, which is presumably edible. This is probably the stone pine (*Pinus pinea*), which has a spreading crown and edible seeds in the cone.

Ebony (Heb. *hobnim*, Ezk. 27:15; Egyp. *hbny*). The reddish black heart-wood of *Dalbergia melanoxylon*, a leguminous tree of the drier parts of tropical Africa. It was used extensively in ancient Egypt for fine furniture, valuable vessels, veneers, sceptres and idols. Only later was this Egyp. word transferred to the jet black timbers of the genus *Diospyros* obtained from tropical Africa, and now especially to *D. ebenum* of Ceylon. See A. Lucas and J. R. Harris, *Ancient Egyptian Materials*⁴,

TREES

1962, pp. 434–435; F. N. Hepper, 'On the transference of plant names', *PEQ* 109, 1977, pp. 129f.

Fir. The rsv renders Heb. *b'róš*, *b'róšim* as 'cypress' and 'fir', which popularly applies to coniferous trees in general. Heb. scholars accept these names as applying to the tall Grecian juniper, *Juniperus excelsa*, of which the timber was imported from Lebanon for the construction of Solomon's house and Temple (1 Ki. 5:8, 10), from Senir (Hermon) for ship boards (Ezk. 27:5) and also for musical instruments (2 Sa. 6:5).

Holm (Heb. *tirzâ*, Is. 44:14). A wood used for making a heathen idol. If the 'holm tree' of rsv indicates the timber of the evergreen holm oak (*Quercus ilex*) of the central Mediterranean area, it would have had to be imported. But an indigenous tree, such as one of the native oaks, is evidently intended by the context. *av* renders the Heb. word as 'cypress' (*Cupressus sempervirens*), other versions as 'plane-tree' (*Platanus orientalis*); both are native in Palestine. The Heb. word *tirzâ* is similar to the Ugaritic *tisr* for cypress.

Oak (Heb. *'allôn*, *êlôn*). In Palestine there are three species of oak (*Quercus*). The kermes oak (*Q. coccifera*, also known as *Q. calliprinos*) is evergreen and inhabits the hills where it is often seen as a shrub, although the Palestinian variety may form a rounded tree with a stout trunk when protected. One of the deciduous oaks (*Q. infectoria*) is unlikely to be referred to in the Bible owing to its limited occurrence at high altitudes. The other one, the Vallonea or Tabor oak (*Q. aegilops*, also known as *Q. ithaburensis*), occurs in lowland Palestine, but extensive felling has eliminated the woodlands that used to cover the Sharon Plain. Oaks are sturdy, hardwood trees which live to a great age, and the fruit, or acorn, is set in a cup. There is some confusion with the terebinth which has a similar stature and Heb. name, although botanically it is distinct.

An oak was a favourite tree under which to sit (1 Ki. 13:14), or to bury the dead (Gn. 35:8; 1 Ch. 10:12). Solitary trees were landmarks (1 Sa. 10:3; *av* 'plain'). Its timber is seldom mentioned; it is hard and was used for oars (Ezk. 27:6). Bashan was renowned for its oaks (Is. 2:13; Ezk. 27:6; Zc. 11:2), and to this day there are many finely grown trees of *Q. aegilops* in that region. The scarlet or crimson dye, used in Heb. rites (Ex. 25:4; 26:1; Heb. 9:19, *etc.*), was obtained from a scale-insect that covered branchlets of the kermes oak. Absalom was caught by his hair in an oak (2 Sa. 18:9–10).

Heb. *'šērâ* is translated in *av* (following LXX *alos*) as an idolatrous 'grove' or a 'high place' (Ex. 34:13; Dt. 16:21; 2 Ki. 17:16, *etc.*) since it was thought to refer to a clump of oaks. But recent scholarship holds that the reference is not to trees but to an image or cult-pole of the Canaanite goddess Asherah, consort of El, hence the rsv use of 'Asherah' and 'Asherim'. However, trees were often involved, too: 'You shall not plant any tree as an asherah' (Dt. 16:21); 'They sacrifice . . . under oak, poplar, and terebinth, because their shade is good' (Ho. 4:13). To this day 'sacred' groves of oaks and terebinths may be seen in various parts of Palestine.

Palm (Heb. *tāmār*, Gk. *phoenix*). The date palm, *Phoenix dactylifera*, a tall, slender, unbranched tree with a tuft of feather-like leaves 3–4 m long at its crown. The male and female flower clusters among the leaves are borne on separate trees. It flourishes in groves in the hot Jordan valley and appears,

from the numerous references, to have been commonly planted as an isolated tree (Jdg. 4:5) in biblical times, although the fruit from highland trees was of poor quality. The palm often gave its name to the place where it grew, *e.g.* Tamar (Ezk. 47:18–19; 48:28); Hazazon-tamar (Gn. 14:7, *etc.*). Jericho was called 'the city of palm trees' (2 Ch. 28:15). The palm typified grace, elegance and uprightness (Ps. 92:12; Je. 10:5), and Tamar was used as a woman's name (2 Sa. 13:1; 14:27). It was also a symbol of victory and rejoicing, and the use of palm leaves ('branches') during Jesus' entry into Jerusalem (Jn. 12:13) was significant (*cf.* Rev. 7:9). The form of the palm was used in architectural ornamentation (1 Ki. 6:29, 32; Ezk. 40:31). See Goor and Nurock, *op. cit.*, pp. 121–151.

Pine. There is reason to believe that Heb. *'ōren* of Is. 44:14 applies to the Aleppo pine (*Pinus halepensis*), and not the cedar (rsv) or ash (*av*). This pine occurs on the Palestinian hills where the soil is suitable. It is a tall slender tree with pairs of needle leaves and soft, workable timber.

Plane (Heb. *'armôn*, Gn. 30:37; Ezk. 31:8). A large deciduous tree, the plane (*Platanus orientalis*) grows in rocky stream beds in N Palestine. It has digitate leaves and round hanging flower-heads. In *av* the Heb. is rendered 'chestnut' (chestnut), which is not native to that region.

Pomegranate (Heb. *rimmôn*). A small tree or bush (*Punica granatum*) growing wild in some E countries, but much prized and cultivated from earliest times, several places in Palestine bearing its name, *e.g.* Rimmon (Jos. 15:32), Gath-rimmon (Jos. 19:45), En-rimmon (Ne. 11:29). It has numerous spreading branches, dark green deciduous leaves, occasional thorns, large persistent calyx and bright red flowers. When fully ripe the apple-shaped fruit is a mixture of yellow, brown and maroon in colour, and contains multitudinous seeds covered with thin skin and surrounded by watery pink pulp. There are two varieties, sweet and acid. A refreshing drink is made from the juice, a syrup (grenadine) from the seeds and an astringent medicine from the blossoms. Ornamental pomegranates decorated the high priest's robe (Ex. 28:33), the capitals of Solomon's Temple pillars (1 Ki. 7:20) and the silver shekel of Jerusalem in circulation 143–135 bc. See Goor and Nurock, *op. cit.*, pp. 70–88.

Poplar (Heb. *libneh*, *b'kâ'im*, 2 Sa. 5:23–24; 1 Ch. 14:14–15; rsv 'balsam tree', *av* 'mulberry'). Rods of poplar, almond and plane were peeled in Jacob's deception of Laban (Gn. 30:37). The poplar tree (*Populus euphratica*) is tall with rustling leaves (2 Sa. 5:23–24; 1 Ch. 14:14–15) and, like willow (see below), grows beside the Jordan and streams where its branches root easily (Ho. 14:5). It is therefore unlikely to be found on the top of mountains as one of the shady trees under which sacrifices and offerings were made (Ho. 4:13) and this may refer to the storax (*Styrax officinalis*) which has leaves white on the lower surface. The 'ben-tree' of Gn. 49:22 (נֶבְמִג) is thought to have been the Euphratean poplar.

Sycamine (Gk. *sykaminos*, Lk. 17:6). The black mulberry or sycamine (*Morus nigra*), a small, sturdy tree with blood-red, edible fruits, is cultivated in Palestine. Some consider this may refer to the sycomore fig, but there is no reason to doubt that the black mulberry had been introduced by NT times.

Sycamore (Heb. *šiqmâ*, Gk. *sykomōraia*). The

sycamore-fig (sycamore, RSV), *Ficus sycomorus*, a sturdy tree 10-13 m high, with a short trunk, widely spreading branches and evergreen leaves. It was, and still is, planted in Egypt and the lowlands of Palestine (1 Ki. 10:27; 2 Ch. 1:15; 9:27). Its timber was important in Egypt, where trees were scarce, for the construction of coffins and other wooden objects. The fruits are edible and were sufficiently important for King David to appoint an overseer to look after the olive-trees and sycamore-trees (1 Ch. 27:28) and for the psalmist to regard the destruction of the sycomores by frost as a calamity for the Egyptians comparable with the destruction of their vines (Ps. 78:47). In Am. 7:14 the AV translation, 'a gatherer of sycamore fruit', is incorrect, since the Heb. means a dresser or tender of the fruit. This is the operation of cutting the top of each fig to ensure its ripening as clean, insect-free fruit. Zacchaeus climbed a sycamore to see Jesus pass (Lk. 19:4); sycamore trees are still to be seen as street trees in some Palestinian towns. This should not be confused with the European sycamore (*Acer pseudoplatanus*) or the N American plane (*Platanus*) also known as sycamore.

Tamarisk (Heb. *ʿēšēl*, Gn. 21:33; 1 Sa. 22:6; 31:13; AV 'grove', 'tree'). A soft-wooded tree of desert wadis with numerous slender branchlets, scale-like leaves and small tassels of pink or white flowers. Several similar species grow in Palestine (*Tamarix aphylla*, *T. nitotica*, *T. pentandra*, *T. tetragyna*) especially around Beersheba where Abraham planted one. (*MANNA.)

Terebinth, turpentine tree (Heb. *ʿēlā*, Is. 6:13, AV 'teal tree'; Ho. 4:13, 'elm'). The Palestine terebinth (*Pistacia terebinthus* var. *palestina*, or *P. palestina*) is a small tree occurring very frequently in the hills. The much larger Atlantic terebinth (*P. atlantica*) of hotter drier places resembles an oak and having a similar name may be confused with it in OT. The terebinth was one of the trees under which sacrifice and offerings were made 'because their shade is good' (Ho. 4:13).

Thyine Wood (Gk. *thyinos*, Rev. 18:12, RSV 'scented wood'). Timber from the sanderac-tree (*Tetraclinis articulata*), a small coniferous tree native to NW Africa. The wood is dark, hard and fragrant, and was valued by the Greeks and Romans for cabinet-making. Another name for it is citron wood (botanically unrelated to *Citrus*), and some versions use that name here; others identify it with the almond tree.

Willow (Heb. *ʿrābīm*, *ṣaṣṣāḇā*). Willows (*Salix acmophylla* and other species) are commonly found beside perennial streams in the Middle East, and in the biblical references are usually linked with their habitat (Jb. 40:22; Is. 25:7; 44:4; Ezk. 17:5). They are shrubs or small trees forming thickets. The 'willows of the brook' (Lv. 23:40) and the 'willows' of Babylon (Ps. 137:2) are now usually regarded as being poplar (*Populus euphratica*). Indeed M. Zohary (*Flora Palaestina*, 1, 1966, p. 29) states that in post-biblical literature the Heb. names for willow and poplar were exchanged.

The 'green withs' or new ropes used by Delilah to bind Samson (Jdg. 16:11) may have been willow bark or the fibrous twigs of the desert shrub *Thymelaea hirsuta*. F.N.H.

(Mk. 14:53). Jn. 18:12-13 preserves an independent account of a preliminary examination before Annas, the father-in-law of the high priest Caiaphas. There follows an interrogation concerning his disciples and his teaching, which is inconclusive because Jesus refuses to answer direct questions put by the high priest (Jn. 18:19). He is abused (Jn. 18:22) and sent as a prisoner to Caiaphas (Jn. 18:24).

The reference to 'the high priest' in Jn. 18:19 has raised a difficulty. If the Lord is questioned by Caiaphas in 18:19, why does Annas remit him to the same person in 18:24? It is tempting to see in this preliminary investigation the first of the two Jewish 'trials' which are described in Mk. 'The high priest' in Jn. 18:19 will then be Caiaphas, but the enquiry will be of an informal character. Its chronological placing will be the evening of the arrest. Jn. 18:24, which records the official appearance before Caiaphas and the full Sanhedrin, will be dated the following morning (cf. Jn. 18:28) and be parallel with the consultation of Mk. 15:1.

John, however, makes no mention of the issues which are so prominent in the Synoptic report of the first 'trial': the question of Jesus' Messiahship and the accusation of blasphemy.

Mk. 14:53-65 describes an appearance of the prisoner before an assembly of 'all the chief priests and the elders and the scribes' (Mk. 14:53), under the presidency of the high priest. The gravamen of the charge is the witnesses' statement that Jesus had prophesied the destruction of the Jerusalem sanctuary (cf. Mk. 13:2; Acts 6:13-14) and the establishment of a new temple. The claim to be the builder of a new temple seems to be the equivalent to the claim to Messiahship, according to contemporary Jewish expectation. But it was the new temple of his body, the church (Jn. 2:19; 1 Cor. 3:16; Eph. 2:21), that he had in view. (See R. J. McKelvey, *The New Temple*, 1969.)

The incriminating challenge of the high priest, 'Are you the Christ, the Son of the Blessed?' drew from him the reply, 'I am,' according to Mk. 14:62. Further, his use of the title 'the Son of man' and his quotation of Ps. 110:1 and Dn. 7:13 are an unmistakable claim to his unique status and destiny, which Caiaphas was quick to grasp and interpret as overt blasphemy. 'It was not blasphemy to claim to be the Messiah, but to speak with assurance of sharing the throne of God and of the fulfilment of Daniel's vision in himself and his community was blasphemy indeed' (Vincent Taylor).

The symbolic action of the high priest's tearing of his clothes, as laid down in the Mishnah, is the prelude to the verdict, 'guilty of death' (Mk. 14:64), and the horseplay of the officers (14:65).

A second meeting of the Sanhedrin the following morning was necessary if, with Vincent Taylor, we take Mk. 14:64 to record a condemnation of Jesus as deserving of death but not the judicial verdict which was required to be passed by 'the whole council' (15:1). The prisoner is then led away to the Roman governor: Pilate for the sentence of death to be pronounced. Whether the Jewish council had the power to pronounce and carry out the death sentence on religious grounds (as Juster and Lietzmann believe) or not (so Jn. 18:31; see Barrett's full note) is a complicated question. There is evidence for the view that the Jewish leaders had the power to carry out death sentences at this time. For example, in the Mishnah the tractate *Sanhedrin* gives a variety of regulations for the different

TRIAL OF JESUS. The arrest of our Lord in the garden is followed, in the Synoptic tradition, by his removal to a meeting of the Jewish leaders

TRIAL OF JESUS

types of execution. The warning inscription on Herod's Temple, promising death to any foreigner who is caught inside the barrier and fence around the sanctuary, does not read like an idle threat. Stephen is put to death following a session of the Jewish Sanhedrin. These pieces of evidence seem hardly to harmonize with the admission of Jn. 18:31: 'It is not lawful for us to put any man to death'. E. C. Hoskyns in his commentary (pp. 616f.) sees in the use of the verb 'put to death' (*apokteinai*) a veiled and subtle reference to death by crucifixion as distinct from the customary method of capital punishment for blasphemy, viz. stoning. The Jewish admission, then, that they cannot carry out a judicial sentence by crucifixion is recorded by the Evangelist who means his readers to see in it (v. 32) the way in which it fulfilled unconsciously yet providentially God's age-old plan adumbrated in such verses as Dt. 21:23; Ex. 12:46; Nu. 9:12; cf. Jn. 19:36. See G. D. Kilpatrick's brochure, *The Trial of Jesus*, 1953; T. A. Burkill in *VC* 10, 1956, and 12, 1958.

Before Pilate the allegation turns on Jesus' claim to kingship (Mk. 15:2; Lk. 23:2) which the Jews would wish Pilate to construe in a political sense. Thus the main charge preferred is one of *majestas* or treason against the Roman imperial authority. See Jn. 19:12. Pilate, however, from the first, is suspicious of these charges and sees through the accusers' motives (Mk. 15:4, 10). He tries to extricate himself in three separate ways from the task of sentencing Jesus to death. He tries to pass the responsibility to Herod (Lk. 23:7ff.); then to offer to punish Jesus by flogging and release him (Lk. 23:16, 22); finally to release Jesus as an act of clemency at the feast (Mk. 15:6; Jn. 18:39). All these expedients fail. Herod sends him back; the fickle and disappointed crowd will not be content with any punishment less than the death sentence (Lk. 23:18, 23); and Barabbas, a condemned murderer, is preferred to Jesus the Christ. And, in spite of the repeatedly confessed innocence of the prisoner (Lk. 23:14-15, 22), he is sentenced to the death of the cross by the judgment of the procurator (Mk. 15:15), and as the Lord himself had foreseen (Jn. 12:33; 18:32).

TRIBES OF ISRAEL. When the Israelites entered Canaan they entered as twelve tribes, and portions of the land were assigned to each of the twelve (cf. Jos. 13:1ff.). These twelve tribes were descended from the twelve sons of Jacob who had gathered themselves about their father and heard his prophecies uttered concerning them and their future (Gn. 49).

Modern scholarship has proposed a number of possible revisions of the biblical picture. First, it was held (by M. Noth and others) that Israel infiltrated gradually from disparate origins into Palestine, where it formed into a tribal alliance centred on the worship of Yahweh at a central sanctuary, that worship having been imported by a group which had experienced an 'exodus' from

Egypt. Second, it has been argued by others (notably N. Gottwald, G. Mendenhall) that 'Israel' arose from the indigenous Canaanite population as a result of a kind of 'peasants' revolt' against the despotic city-states of Canaan, with the egalitarianism of Yahwism as a motivating and binding force for social revolution. Variations on these themes include the view that Israel was formed originally from refugees from political victimization outside Canaan, who settled in the inhospitable hill-country of Judah and Samaria (N. P. Lemche). In all these cases the tribal picture is secondary to historical actuality.

According to the Pentateuchal narrative, however (Nu. 32:33-42; 34:1-35:8), Moses himself made a division between tribes to inhabit the E and those to inhabit the W side of the Jordan river. On the E side portions were allotted to the tribes of Reuben and of Gad, together with the half-tribe of Manasseh. This last was to occupy the territory S of the Sea of Galilee, including the villages of Jair together with Ashtaroth and Edrei. Gad was to occupy the land immediately S of that of Manasseh extending to the N end of the Dead Sea, and S of this section was the territory of Reuben, which reached as far S as Arzer and the Arnon.

On the W side of the Jordan in Canaan proper the remainder of the tribes were to settle. Their inheritance was to be determined by lot, save that to the tribe of Levi no inheritance was to be given. Eventually the tribes became divided into N and S, represented respectively by Ephraim and Judah. The N kingdom came to be designated by the term Israel.

In the S territory was allotted to Simeon, who appears to have occupied land in the Negeb. Above him was the allotment of Judah, including the Judaean hill country and extending as far N as to include Bethlehem and almost to the city of Jerusalem itself. Immediately above the territory of Judah and extending E to the Jordan was the territory of Benjamin. This section reached to the N only a few kilometres and only as far W as the edge of the hill country. To its W was the small section given to the tribe of Dan.

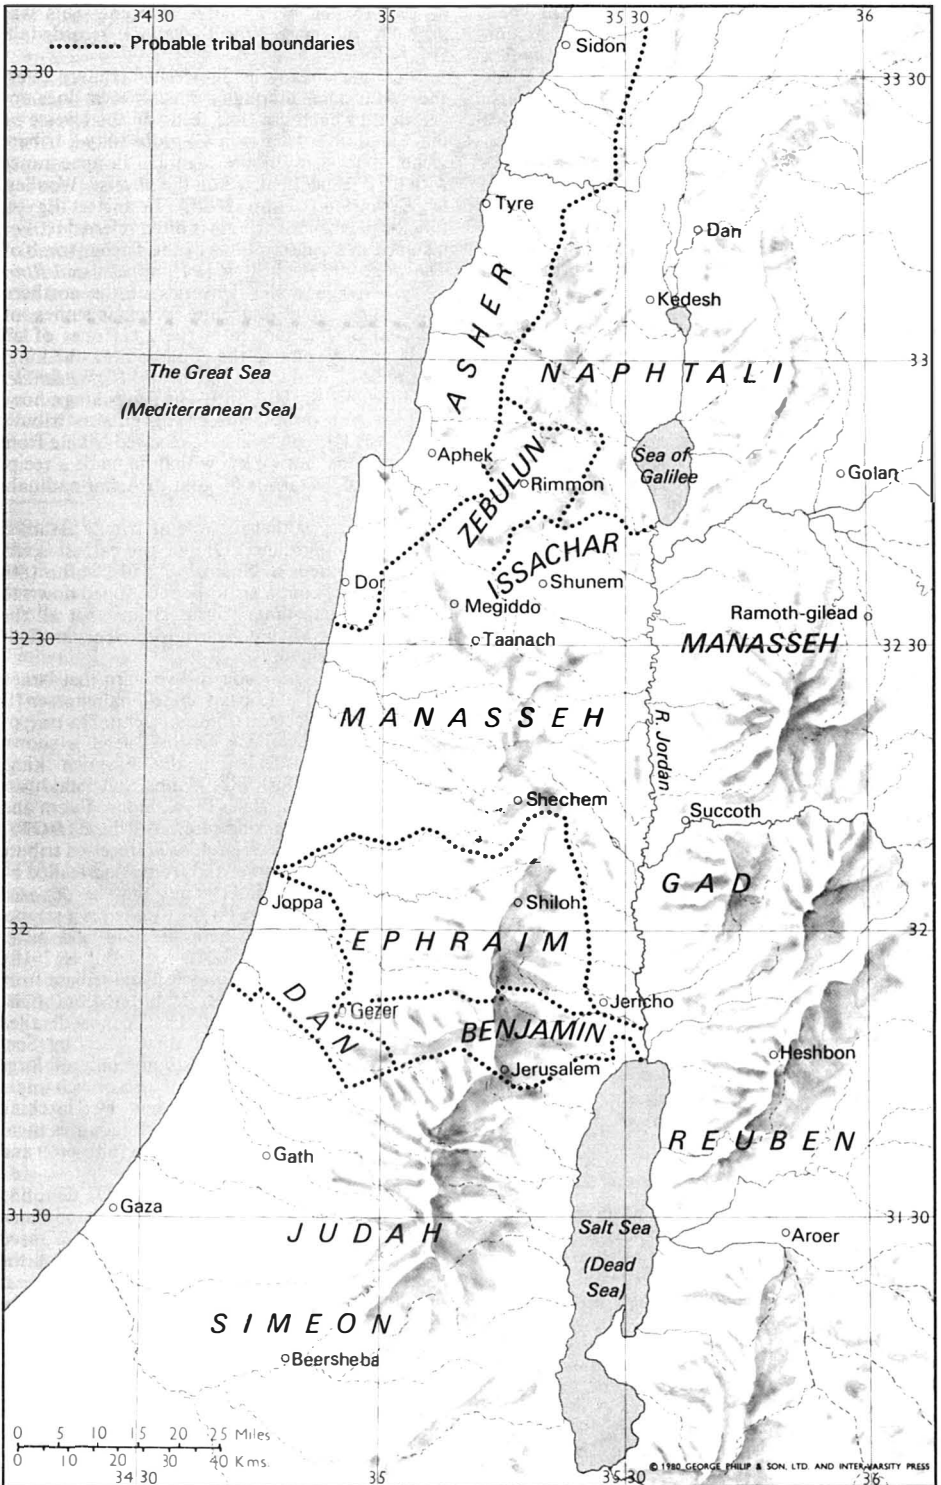

Above the two tribes of Dan and Benjamin was the territory which had been allotted to Ephraim which reached as far N as the river Kanah and Shechem. Then came the large section assigned to the half-tribe of Manasseh, comprising everything between the Mediterranean and the Jordan river and extending N to Megiddo. Above Manasseh was Issachar and Zebulun, and on the sea-coast, reaching N from Carmel, the territory of Asher.

As time went on the tribe of Judah gained more and more in significance, for it really embraced Benjamin, and Jerusalem became the capital. In the N the tribal distinctions seemed to become less important than at first, and the N kingdom as such became the enemy of Judah. Tribal distinctions became of less and less significance, and practically disappeared after the Exile.

TRIBULATION. The Heb. word most commonly translated as tribulation in the Eng. Bible is *šārā* and its cognates. The root meaning is 'narrow' (cf.

TRIBES OF ISRAEL

The tribes of Israel.

TRIBES OF ISRAEL

Nu. 22:26) or 'compressed' (Jb. 41:15) from which arises the figurative sense of straitened circumstances, and hence, affliction, distress or tribulation (Dt. 4:30; Jb. 15:24; Ps. 32:7; Is. 63:9; Jon. 2:2). The LXX uses *thlipsis* (vb. *thlibō*) to translate all the Heb. terms within this area of meaning. The basic idea here is 'severe constriction', 'narrowing' or 'pressing together' (as of grapes) (cf. Mt. 7:14; Mk. 3:9). Similar notions underlie the Lat. *tribulum* (a threshing sledge), which is the source of the Eng. word tribulation. The great bulk of the biblical references to tribulation are to sufferings endured by the people of God. The central and dominating factor in the biblical understanding of such suffering however is the mystery of the *thlipsis* of the *Messiah (Col. 1:24; Rev. 1:9; cf. Is. 63:9). All the tribulations of the Messianic people stand in this light.

1. The tribulation of the Christ is the pattern and norm for the experience of the Christian community. Thus tribulation is inevitable and to be anticipated (Mt. 13:21; Jn. 16:33; Acts 14:22; Rom. 8:35; 12:12; 1 Thes. 3:3f.; 2 Thes. 1:4; Rev. 1:9). The tribulation of Israel under the old testament finds its counterpart in the tribulation of the church under the new (Heb. 11:37; 12:1). This tribulation is particularly the lot of the apostles who exemplify in a special manner the path of suffering discipleship (Acts 20:23; 2 Cor. 1:4; 4:8, 17; 6:4; Eph. 3:13).

2. The tribulation of the people of Christ is in some sense a participation in the sufferings of Christ (Col. 1:24; cf. 2 Cor. 1:5; 4:10f.; Phil. 3:10; 1 Pet. 4:13). Underlying the NT teaching here may be the notion of the so-called 'afflictions of the Messiah', a tally of suffering to be endured by the righteous before the consummation of the redemptive purpose of God (cf. SB, 1, p. 95).

3. The tribulations of the people of Christ are instrumental in promoting their moral transformation into the likeness of Christ (Rom. 5:3f.; 2 Cor. 3:18 with 4:8-12, 16f.). In particular the experience of tribulation promotes the upbuilding of the community through enabling the comforting of others in similar experiences (2 Cor. 1:4f.; 4:10f.; Col. 1:24; 1 Thes. 1:6f.).

4. The tribulations of the people of Christ are eschatological; i.e. they belong to the last age, the kingdom of the end time. As such they are a witness to the inbreaking and presence of the kingdom (Mt. 24:9-14; Rev. 1:9; 7:14). A certain intensification of these tribulations will prelude the return of Christ and the consummation of the kingdom (Mt. 24:21; Mk. 13:24; 2 Thes. 1:5-6; 2 Tim. 3:1f.).

B. A. M.

be sent to deal with the recalcitrant. This was probably the reason for the attack recorded in Gn. 14.

There are already in Sumerian literature references to tribute, although a specific term does not yet seem to be in use. The scene on the reverse of the 'Standard' of Ur is in all probability a tribute scene, as the carriers are identical in appearance with the enemies depicted on the obverse (Woolley, *Ur Excavations*, 2, pp. 266ff.). In ancient Egypt, too, the payment of tribute is often referred to. For instance, in the inscriptions of the Theban tomb of *Tnn* we read: 'The bringing of imposts from *Rtnw* (Syria, etc.), and the deliveries of the northern lands: silver, gold, malachite, precious stones, of the land of the god, from the great ones of all lands, as they came to the good god (i.e. the king) to supplicate, and to ask for breath' (*Urkunden des äg. Altertums*, 4, 1007, 8ff.). The Egyp. kings, however, are not above representing gifts as tribute. Tutmosis III reports having received tribute from the Assyrians, but we know that he made a reciprocal gift of 20 talents of gold to Ashur-nadinahi (EA 16, 21).

It is in Assyria that the role of tribute assumed its greatest importance. One of the earliest references to tribute is by Shamshi-Adad I in the 18th century bc. It continues to be mentioned down to Neo-Babylonian times. Cyrus claims that all the kings from the Mediterranean to the Persian Gulf brought him tribute.

From the Assyrian sources we learn that Israel, too, was compelled to pay tribute. Shalmaneser III (858-824 bc) exacted tribute of Jehu. On one of the panels of the Black Obelisk, Jehu is shown prostrating himself before the Assyrian king. Adad-nirari III (810-782) claims that Israel was among a number of states (Tyre, Sidon, Edom and Philistia) from whom he received tribute (*DOTT*, p. 51). Tiglath-pileser III (745-727) received tribute from Menahem of Israel and from Ahaz (called by him Jehoahaz). He later states that he deposed Pekah, and put Hoshea on the throne (as a puppet king), and received tribute of gold and silver (*DOTT*, pp. 54ff., and 2 Ki. 15:17-30; 16:7-18). Sargon II (722-705) not only exacted tribute from Israel but deported part of the population of Samaria (2 Ki. 17:6, 24-34; 18:11). The most detailed list of a tribute payment is that given by Sennacherib (705-681). It consists not only of large quantities of gold and silver but also of rich inlaid furniture and even musicians sent by Hezekiah (*DOTT*, p. 67). Manasseh, king of Judah, is mentioned as a tributary of Esarhaddon (681-669) and Ashurbanipal (668-627).

There are a number of terms in the OT denoting taxes in general, but none seems to be confined exclusively to the meaning of tribute. *ēškār*, used only twice (Ps. 72:10; Ezk. 27:15), could have the meaning of tribute, at least in the Psalm. *mas* occurs 22 times, but seems generally to have the meaning of corvée (cf. Ex. 1:11 or 1 Ki. 5:13); in a passage like Esther 10 it would refer to tribute. *maššā* twice seems to mean impost or tax (Ho. 8:10 and 2 Ch. 17:11). *ōneš* in 2 Ki. 23:33, and possibly also in Pr. 19:19, denotes tribute, but the verb from the same root can mean to impose a fine (cf. Ex. 21:22). *meķes*, translated 'tribute' in the AV in Nu. 31:28, 37-41, was a levy on the spoils of war. *b'lō* (Aram.), as it is used of a group in the community, cannot refer to 'tribute' in the strict sense (Ezr. 4:13, 20; 7:24). *middā*, used in both Heb.

TRIBUTE. Tribute in the sense of an impost paid by one state to another, as a mark of subjugation, is a common feature of international relationships in the biblical world. The tributary could be either a hostile state or an ally. Like deportation, its purpose was to weaken a hostile state. Deportation aimed at depleting the man-power. The aim of tribute was probably twofold: to impoverish the subjugated state and at the same time to increase the conqueror's own revenues and to acquire commodities in short supply in his own country. As an instrument of administration it was one of the simplest ever devised: the subjugated country could be made responsible for the payment of a yearly tribute. Its non-arrival would be taken as a sign of rebellion, and an expedition would then

and Aram. contexts (Ezr. 4:13, 20; 6:8; 7:24; Ne. 5:4), may refer to tribute.

In several passages the Heb. *minhā* may refer to tribute, as RSV at 2 Sa. 8:2, 6, brought by conquered Moabites and Syrians to David, or 2 Ki. 17:4, sent by Egypt to Assyria, but it is clearly a gift in 2 Ki. 20:12, for *Merodach-baladan was no vassal of Hezekiah.

That tribute is not given greater prominence in the OT may be due to the fact that Israel, being a small nation, had few opportunities of imposing tribute. The gifts that Hiram, king of Tyre, brought to Solomon were the gifts of an ally and a friend, and it was probably taken for granted that Solomon would reciprocate (1 Ki. 5:10 and *passim*; 9:11).

A.R.M.

TRINITY. The term 'Trinity' is not itself found in the Bible. It was first used by Tertullian at the close of the 2nd century, but received wide currency and formal elucidation only in the 4th and 5th centuries. Three affirmations are central to the historic doctrine of the Trinity: 1. there is but *one* God; 2. the Father, the Son and the Spirit is each fully and eternally God; 3. the Father, the Son, and the Spirit is each a distinct person. Nowhere does the Bible explicitly teach this combination of assertions. It may, nevertheless, be claimed that the doctrine of the Trinity is a profoundly appropriate *interpretation* of the biblical witness to God in the light of the ministry, death and resurrection-exaltation of Jesus – the 'Christ event'.

I. The biblical basis for Trinitarian confession

The OT witness is fundamentally to the *oneness* of God. In their daily prayer, Jews repeated the *Shema* of Dt. 6:4, 'The Lord our God, the Lord is one'. In this they confessed the God of Israel to be the transcendent creator, without peer or rival. Without the titanic disclosure of the Christ event, no one would have taken the OT to affirm anything but the *exclusive*, i.e. unipersonal monotheism that is the hallmark of Judaism and Islam. It was NT writers, exploring the implications of the revelation of God in the Son, who first provided the basis for interpreting this monotheism *inclusively*, i.e. as involving more persons than one. Initially this took Christocentric shape in various forms of the affirmation that Jesus was one with the Father. Recognition of the divine personhood of the Spirit was then seen to follow especially from Jesus' exaltation Lordship of the Spirit. Once this step had been taken, it was natural for the later Church, which affirmed the unity of the Testaments in one Bible, to seek the Trinity in the OT too.

a. In the Old Testament

The robust monotheism of the OT concedes only a few hints of plurality within the One God. Principal amongst these are: 1. the enigmatic plurals in God's own speech in Gn. 1:26; 3:22; 11:7; Is. 6:8; 2. occasions where two separate figures appear to be addressed as 'God' or 'the Lord' (Pss. 45:6–7; 110:1); 3. the 'divine' angelic trio who come to Abraham in Gn. 18:1–22; 4. the 'word' of God

active in creation (Gn. 1:3; Ps. 33:6) and redemption (Is. 55:11); 5. the creative 'wisdom' figure of Pr. 8:22–31; 6. the Spirit of God, regularly portrayed as bringing God's revelation, wisdom and empowering to his people. It is unlikely that any of these was understood by the OT authors or their contemporary readers to denote eternal personal distinctions within Israel's one God. They would take 4 as poetic reference to God's powerful command, and 5 as literary personification for God's own wisdom. 2 and 3 would naturally be taken as instances of the common phenomenon of divine agency (an exalted creature indwelt by and representing God). The Spirit, 6, was considered the extension of God's own 'life', 'vitality' and 'person' (after the analogy of the human spirit: cf. 1 Cor. 2:10–11!). The deliberative plurals (1) would be perceived as plurals of divine council. Only developments reflected in the NT make it appropriate to read a deeper (Trinitarian) sense into these passages.

b. In the life and teaching of Jesus

The gospels clearly present Jesus as the supreme agent of God's messianic redemption and revelation. As the 'Son of God' (a Messianic title, rather than an ascription of divinity, in the Synoptic Gospels, though filial uniqueness of some kind is indicated in Mt. 11:27; Mk. 12:6; 13:32; Lk. 1:35), and as the Isaianic liberator empowered by the Spirit (cf. Lk. 4:18–21), Jesus brings God's eschatological reign into the present. He does this through miracles of deliverance and healing (Mt. 12:15–21, 28; Lk. 7:18–23; Acts 10:38, etc.), through the extension of divine forgiveness and sonship to the marginalized (cf. Mk. 2:3–12; Lk. 7:36–50; 14:15–24; 15:1–32, etc.), and through transformative teaching which fulfils and surpasses the law of Moses in authority (Mt. 5:17–20; 12:5–6; Mk. 2:23–28; 7:14–23, etc.). In the fourth gospel, Jesus claims to be: the true Bethel (1:51 – i.e. the place where heaven comes down to earth); the true temple (2:19–21); the source of the water of life and salvation (4:10, 14; 7:37–39); the true bread from heaven (6:25–59); the light of the world (8:12), and the life of the world to come (11:25). He pre-exists Abraham (8:58), he descends from the Father (3:13, 31–36), and he is so much one with the Father that to see and hear him is to see and hear the Father revealed (10:30, 38; 14:6–11; cf. 1:18). According to all four gospels, Jesus also anticipated ascension to the Father, and (in the Synoptics) that he would sit at his right hand (Mk. 14:62 par.).

These claims are entirely consistent with Trinitarian (or, at least, binitarian) thinking. But, taken on their own, they stop somewhat short of an outright claim to eternal, divine Sonship. The claims above are thus overpressed when taken (with the resurrection) as hard 'proofs' of Jesus' divinity. It needs to be remembered that the disciples too worked miracles, were given the authority to forgive sins (cf. Jn. 20:23), and were called to share in the sort of unity with the Father and the Son, that the Son himself had evinced (so Jn. 17:21–22). Even Jesus' claim to pre-exist Abraham does not itself 'prove' eternal divinity, for the angels and other heavenly creatures were considered to pre-exist the world. Similarly, at least some rabbis considered David might be given the seat at God's right hand, in accordance with Ps. 110:1. In short, the claims above could all be accounted for (e.g.)

TRINITY

on the understanding that Jesus thought of himself as a pre-existent Messiah – *i.e.* an exalted divine agent of great glory, endowed with extraordinary powers and prerogatives, but a creature, nevertheless, in whom God dwelt uniquely – rather than God the Son.

But in one line of affirmation, Jesus makes a claim that goes beyond anything that could be considered possible of any creature, however exalted. In Jn. 15:26, 16:6 and Lk. 24:49, Jesus promises he will send/commission the Spirit to the disciples from heaven, and in Jn. 14:16–23 he teaches that the Spirit will mediate to them the presence of the Father and the Son (*i.e.* it is through the promised Spirit that Jesus and the Father are to make their self-revealing dwelling with the disciples). As the phrase ‘Spirit of God’ was understood as referring to God himself in action (speaking, revealing, empowering, etc.), Jesus’ implicit claim to be Lord of the Spirit goes beyond the bounds of creaturely possibility. The same claim also pushes pneumatology in a Trinitarian direction. The Spirit can no longer be thought of as a way of speaking of the Father himself, without making Jesus’ commissioning of the Spirit tantamount to his being Lord in some respect over the Father! It is not surprising that in the very context in which the Spirit is revealed as the One who will come as the Spirit of Jesus (*i.e.* in the Paraclete discourses of Jn. 14–16), the Spirit also emerges as a divine person, distinguishable from both the Father and the Son. Thus, (1) he comes from the Father and the Son as a full personal replacement for Jesus (‘another Paraclete of the same kind’: 14:16), (2) he is so united with them that he mediates their presence and activity (as Jesus had the Father’s), and (3) he glorifies the Son in his teaching, just as the Son had glorified the Father (Jn. 16:14; *cf.* 17:4). A similar perspective is perhaps encapsulated in the great commission of Mt. 28:19, where disciples are instructed to baptize in the *one* name of the Father and of the Son and of the Spirit.

c. The New Testament church and its writings

Peter’s Pentecost speech chimes well with the teaching in the Johannine Farewell Discourses. The apostle affirms, ‘This Jesus . . . being . . . exalted at the right hand of God, and having received from the Father the promise of the Holy Spirit, he has poured out this which you see and hear’ (Acts 2:32–33). Jesus is hereby declared to fulfil the promise of Joel 2:28–32 that God would pour out his Spirit (*cf.* 2:17). Accordingly, in 2:36, 38, Peter concludes that Jesus has become one with ‘the Lord’ of Joel 2:32 (*cf.* Acts 2:21) on whose name people should call for salvation.

While Trinitarian theology could have taken off from such proclamation, it is perhaps not surprising that the early church devoted more time to elucidating its Christology than its pneumatology. This was the appropriate response to the Christ-event, which was a scandal to unbelievers, but was perceived as the definitive revelation of God’s saving love by Christians. In seeking to demonstrate the proclamation about Jesus as the fulfilment of Israel’s faith and hopes, much attention naturally focused on Jesus as the resurrected Messiah, exalted to the throne at God’s right hand (*e.g.* Acts 2:25–36), and as the Danielic ‘Son of Man’ who would come again in glory at the Parousia to exercise God’s judgment. But some of these attempts to integrate the unity of the new faith with

that of the OT pushed more towards a divine Christology. As early as 1 Cor. 8:6, the Father and Jesus are identified as the one God and one Lord of Dt. 6:4 (Israel’s prototypical monotheistic confession has thus become a binitarian confession!), and both are portrayed as the wisdom that brought creation into being and sustains it (*cf.* also Col. 1:15–20; Heb. 1:2–3; Jn. 1:1–18). Similarly, the assertion of Phil. 2:6, that Jesus was ‘in the form of God’ but ‘did not count equality with God as something to be exploited’ provides another early hymnic confession of Jesus’ pre-existent divinity. That this is the intent of the language is confirmed in 2:9–10, where the exalted Jesus is revealed as the Lord of Is. 45:21–24 – as fiercely monotheistic a passage as can be found anywhere in the OT! Despite their conservative tendency to keep the title *ho theos* (‘God’) for the Father, on seven or eight occasions NT writers specifically apply the title ‘God’ to Jesus (Heb. 1:8 – citing Ps. 45:6–7; Jn. 1:1, 18 – some mss; 20:28; 1 Jn. 5:20; Rom. 9:5; Tit. 2:13 and 2 Pet. 1:1). Beyond these lie many less direct affirmations of divinity. Amongst them we may make special mention of two striking phenomena. 1. The opening salutations of Paul’s letters (Rom. 1:7; 1 Cor. 1:3, etc.) invoke divine grace from both God and the Lord Jesus (no Jew thought of ‘any human or heavenly creature as the source of divine grace!’). 2. Even more significantly, Jesus is offered the community’s prayer and worship (*cf.* Mt. 28:17; Jn. 20:28; Acts 7:59; 1 Cor. 16:22b (*Maranatha!*); Rev. 5:11–14; 22:1–5, 17, 20, etc., not to mention the hymnic confessions mentioned earlier). It was widely considered unthinkable and blasphemous to worship any but God alone within the Judaism from which Christianity sprang, yet worship here is directed to Jesus.

Scholars have not found it easy to explain how Christians came to this startling conviction that the crucified and resurrected Messiah was somehow one God with the Father, and that it was appropriate to offer him worship. But the readiest explanation is the church’s continuing experience of the risen Lord as presented to them through the Spirit. By the Spirit they had visions of him (*cf.* Acts 7:55–56; 9:10–16; 18:9–10; 22:17–21; 2 Cor. 12:1–7, etc.), including the telling visions in Revelation which saw the Lamb on God’s throne, receiving the worship of the heavenly congregation (Rev. 5, etc.). Also they themselves received words and guidance from the risen Lord (*cf.* Acts 16:17; 2 Cor. 12:8–9, etc.). More important, they experienced the Spirit of God as bearing the *character* of Jesus and impressing this on their own lives (*cf.* Rom. 8:9–10, 15; Gal. 4:6). If the Spirit of God had become the ‘Spirit of Jesus Christ’ too (*cf.* Acts 16:7; Gal. 4:6; Rom. 8:9–10; Phil. 1:19), the means of the presence of Jesus’ grace and gifts (*cf.* Acts 2:33; 1 Cor. 12:4–6), then this could hardly mean anything less than that he shared in the divinity of the Father and the Spirit. Indeed the presence of this Spirit-of-God-and-of-Jesus would probably have been understood to evoke the response of confession, prayer and worship in question (*cf.* 1 Cor. 12:3; 14:14–16; Rom. 8:26–27).

All this takes us back from incipient binitarianism to incipient Trinitarianism. Once Jesus is seen to give his character to the Spirit, and to exercise Lordship through the Spirit, the church can no longer be content with the Jewish understanding of the Spirit as the invisible inner life of a unipersonal Father, extending into the world in action

and self-revelation (lest the person now acknowledged as the Son be made Lord of the Father). For the Spirit to mediate the Father and the Son, implies his own divine personhood. Accordingly, Paul can even posit sufficient personal 'space' between God the Father and the Spirit to say that God 'knows the mind of the Spirit' who intercedes through the saints (Rom. 8:27): *i.e.* the Father knows the Spirit in the same way as he knows the Son, in intimate unity yet with a real distinction between them. It is not surprising that Paul links Father, Son and Spirit in a triadic, indeed triune pattern as for example in Gal. 4:4-6, 1 Cor. 12:4-6, Rom. 1:1-4, Eph. 4:4-6 (*cf.* 2 Pet. 1:2), and in what are probably Paul's most often repeated words, the closing 'grace' of 2 Cor. 13:13.

While no NT writer fully articulates a 'doctrine of the trinity', the implicitly Trinitarian thought-forms of the teaching of Paul and John (especially) provide much of the basis for that later formulation.

II. The doctrinal development of the doctrine of the Trinity

Whilst the 'incipient Trinitarianism' of the NT remained implicit and as yet undefined, it was clearly demarcated by both the biblical belief in God's oneness (monotheism) and the threefold naming of God as Father, Son and Spirit (Trinitarianism). Positively, this combination of unity and plurality controlled all subsequent discussions of the identity of God. Theologians such as Origen, Irenaeus and Tertullian essentially continued the biblical way of thinking and speaking with little change beyond highlighting the Son's identity as cosmic *logos* (word). The formal doctrine of the Trinity was the result of several inadequate attempts to analyse who and what the Christian God really is. The first major attempt was that of Sabellius. He proposed that whilst God is Father, Son and Spirit, he is not eternally and intrinsically so but only in relation to creation and salvation. In addition, God is only ever *one* of the three at any given time. This was rejected on the grounds that it undermined both the biblical witness and the eternal identity of God.

If Sabellius raised the problem of God's plurality, Arius raised the problem of monotheism. In order to defend God's radical oneness, he argued that the Son was created. This was rejected, however, on the grounds that it undermined the eternal identity of God as Father: if there was a time when the Son was not, then God's real identity cannot be that of Father. Ultimately, on Arius's view, we do not know God's real identity.

To deal with these problems the Church Fathers met in 325 at the Council of Nicaea to set out an orthodox biblical definition concerning the divine identity. Here it was established that the Son is *homoousios* (of the same substance) with the Father. God, it was affirmed, is definitely Father and Son. Then in 381, at the Council of Constantinople, the divinity of the Spirit was affirmed with equal explicitness, due mainly to the efforts of the Cappadocian Fathers, Basil the Great, Gregory of Nazianzus and Gregory of Nyssa. At this point in the history of Christian faith, believers were given words in which to affirm their belief in God as one, because the Father, the Son and the Spirit have the same nature, as partakers of the single reality of divine being; they are fully but only distinct in the sense that each is a different *hypostasis* (person-in-

relation) within that unitary nature. Thus, when talking about God's unity Christians have used *essence* (=being, or traditionally substance) and *nature* language. When referring to that which makes God three, however, we refer to the relations or personal identities of Father, Son and Spirit.

This distinction between the One and the Three is reflected in the subsequent development of the doctrine of the Trinity. In the Gk. E, the emphasis has always been on the personal relations of Father, Son and Spirit, the Father being understood as the personal or relational 'origin' of the Son and Spirit. The personal identity of the Son and the Spirit is determined by their relation to the Father alone: the Son is 'begotten' of the Father; the Spirit 'proceeds' from the Father. Consequently, when W bishops in 1014 officially asserted that the Spirit proceeds from the Father and the Son (*Filioque*), deep divisions arose between the E and W churches. Easterners have always rejected this view on the grounds that it confuses the personal identities of Father and Son in relation to the Spirit. However, due to the fact that the Latin W, following Augustine and ratified by Aquinas, has habitually begun its thinking with the One not the Three, the usual starting point for W Trinitarianism is the divine substance. If the E temptation was to a kind of monarchianism (through placing the Father as superior to Son and Spirit) that of the W was to various kinds of modalism (through over-emphasizing the oneness).

Each tradition has unpacked itself culturally. Some commentators see in the W interpretation the seeds of present-day individualism. Stress on the oneness of God, it is argued, leads to its individual and human counterpart, while the relational and communitarian dimension of the E understanding has led to a more communal and inter-related culture. The truth seems to be that only in holding together both the W and the E perspectives do we arrive at a robust and balanced understanding of divine being and, as a consequence, of what it means to be made in God's image as individual and as church.

TROAS. The principal seaport of NW Asia Minor, established some 20 km SSW of the site of Troy (Ilium) by the successors of Alexander the Great, and named Alexandria after him. 'Troas' was originally a distinguishing epithet, but it became the usual designation of the city after Augustus made it a Roman colony. The place grew rapidly around its artificial harbour-basins, which provided neces-

TROAS

Troas, the principal seaport of NW Asia Minor at the time of Alexander the Great.

sary shelter from the prevailing northerlies at a focal meeting-point of sea-routes, close to the mouth of the Hellespont (Dardanelles). Troas was the port for the crossing to *Neapolis in Macedonia for the land-route to Rome. Though rarely mentioned in secular literature, it had a strategic function in the Roman system of communication, and its importance emerges clearly from unobtrusive references both in Acts and the Epistles. It was the scene of the vision of the 'man of Macedonia' (Acts 16:16-11) and the raising of Eutychus (Acts 20:5-12). The former incident was the occasion of the coming of the gospel from Asia to Europe, though this aspect is not stressed in Acts. Perhaps this also marks the meeting of Paul with Luke, for the 'we-passages' begin at Acts 16:10. Later Paul found an 'open door' at Troas (2 Cor. 2:12), and again stayed there as long as possible when in haste to reach Jerusalem (Acts 20:6, 13). Paul's urgent request in 2 Tim. 4:13 may reflect a hurried departure from Troas under arrest. Ignatius, too, after sending three of his epistles from Troas, had to sail in haste for Neapolis as a prisoner bound for Rome (*Ep. to Polycarp* 8), when the weather permitted.

The site of Troas at Daylan is now deserted, but there are remains of the harbour, baths, stadium and other buildings, and several kilometres of the walls may be traced.

TROGYLLIUM (or Trogyllia). A promontory of the W coast of Asia Minor between Ephesus and Miletus, and reaching to within 2 km of Samos. Paul's delay there (Acts 20:15) was no doubt due to the difficulty of navigating a strait in darkness. The Alexandrian text omits reference to this delay at Trogyllium, but is almost certainly at fault here.

K.L.MCK.

TROPHIMUS. An Ephesian Christian who evidently accompanied Paul to Europe after the Ephesian riot, later re-crossing and awaiting Paul at Troas for the journey to Jerusalem—doubtless as one of the delegates of the Asian churches with the collection (Acts 20:1-5; cf. 1 Cor. 16:1-4). In Jerusalem, however, Jewish pilgrims from Asia recognized him in Paul's company, and afterwards, finding Paul in the Temple with four others, jumped to the false conclusion that he had introduced Trophimus there (Acts 21:27ff.). Trespass beyond the Court of the Gentiles would for Trophimus be to risk the death penalty. The incident issued in a riot, and Paul's arrest.

2 Tim. 4:20 states that Paul left Trophimus sick at Miletus. This was near Trophimus' own city; but if Timothy was himself in the Ephesus area it may seem strange that he needed this information. The circumstances and intention of the verse are, how-

ever, uncertain: it may be connected with greetings, like the immediate context, or perhaps Paul's mind has reverted to the diminution of his band of helpers (cf. vv. 10-12). P. N. Harrison (*Problem of the Pastoral Epistles*, 1921, pp. 118ff.) argues that Paul was en route for Troas (cf. 2 Cor. 2:12) when he left Trophimus; G. S. Duncan (*St. Paul's Ephesian Ministry*, 1929, pp. 191ff.) that he was returning from Corinth to Asia (cf. 2 Cor. 1:8). Preferable to these intricate hypotheses is the view that Paul was heading W, destined for his second Roman imprisonment.

A. F. W.

TRUMPETS, FEAST OF. 'Day of blowing the trumpets' (Heb. *yôm t'rû'â*, Nu. 29:1) or 'memorial of blowing of trumpets' (Lv. 23:24). The 7th month in the Jewish * calendar, *tîšri* (Sept./Oct.), was the beginning of the civil year. The first day of the month was to be 'a day of solemn rest', in which 'no laborious work' was to be done. The LXX of Nu. 29:1 renders the phrase *yôm t'rû'â* by *hēmera sēmasias*, 'a day of signalling', but the Mishnah and traditional Jewish practice have understood by this the use of the *sōpār*, usually, though not always, made of ram's horn. Tradition is not clear as to what precisely was meant by the trumpet-blowing, which was accompanied by reading of relevant passages of Scripture (H. G. Friedmann, *JQR* 1, 1888, pp. 62ff.).

T. H. J.

TRUTH. Truth, like its relation *knowledge, is used in the OT in two senses: (1) the intellectual, of facts which may be ascertained to be true or false (Dt. 17:4; 1 Ki. 10:6); (2) far more commonly, the existential and moral, of truth as the attribute of a person. Joseph's brothers are detained in prison 'that your words may be tested, whether there is truth in you' (Gn. 42:16), i.e. whether they are dependable, consistent, of reliable character. It is significant that of the Heb. words translated 'truth' (*'meḡ*, *'mūnā*), the latter is sometimes rendered by the EVV as 'faithfulness' (Dt. 32:4; Ho. 2:20) (*AMEN). The OT thinks much more of the basis of truth in a reliable person than of the mere facts of the case. This reliability is basically an attribute of God (Ps. 31:5; Je. 10:10), whose truth 'reaches to the clouds' (Ps. 108:4). The God of the Bible is thus very far removed from the capricious pagan deities. He is true, i.e. consistent, both in his loving care for his children (Gn. 32:9f.) and in his implacable hostility against sin (Ps. 54:5).

It is no far cry from truth as an attribute of God himself to one of his activity. So he judges truly (Ps. 96:13), and sends truth forth (Ps. 57:3, Av). His word is true in the sense that it is permanently valid. 'As Thou art truth, so is Thy word truth, for it is written "Thy word, O God, stands fast in heaven"' (Ps. 119:89) (Exodus Rabbah on 29:1). Truth is demanded of man as his response to God in obedience to the law (Ps. 119:151) and in his inmost nature (Ps. 51:6), and is the bedrock of all human relationships (Ex. 20:16; Dt. 5:20).

In Gk. literature, the words for truth (*alētheia*, *alēthēs*, *alēthinos*) do not have the same personal and moral connotation. Rather, truth is intellectual. It is 'the full or real state of affairs . . . As in judicial language the *alētheia* is the actual state of affairs to be maintained against different state-

ments, so historians use it to denote real events as distinct from myths, and philosophers to indicate real being in the absolute sense' (R. Bultmann, *TDNT* 1, p. 238).

In the NT these Gk. words occur commonly, and bring with them both their OT and their classical and Hellenistic Gk. meanings, so that it is often an extremely delicate matter to decide which nuance predominates. It is possible, however, to distinguish three broad senses in which the words are used, even though these may overlap.

1. Dependability, truthfulness, uprightness of character (the Heb. sense predominating). This applies to God (Rom. 3:7; 15:8) and to men (2 Cor. 7:14; Eph. 5:9) alike. The use of the actual word 'truth' in this sense is not common, but the thought of a God who can be trusted to keep his word is implicit throughout the NT.

2. Truth in the absolute sense of that which is real and complete as opposed to what is false and wanting (Mk. 5:33; Eph. 4:25). The Christian faith in particular is the truth (Gal. 2:5; Eph. 1:13). Jesus claimed that he was truth personified (Jn. 14:6; cf. Eph. 4:21). He mediates the truth (Jn. 1:17) and the Holy Spirit leads men into it (Jn. 16:13; cf. 14:17; 1 Jn. 4:6), so that Jesus' disciples know it (Jn. 8:32; 2 Jn. 1), do it (Jn. 3:21), abide in it (Jn. 8:44), and their new birth as God's children rests upon it (Jas. 1:18). This truth is more than a credal formula, it is God's active word which must be obeyed (Rom. 2:8; Gal. 5:7).

3. The adjective *alēthinos* especially sometimes carries the 'Platonic' sense of something real as opposed to mere appearance or copy. The Christ is thus a minister of the true tabernacle (Heb. 8:2) in contrast with the shadows of the levitical ritual (Heb. 8:4f.). In clear allusion to the words of institution of the Lord's Supper, Jesus declares that he is the true bread (Jn. 6:32, 35) and the true vine (Jn. 15:1), i.e. that he is the eternal reality symbolized by the bread and wine. Similarly, the true worshippers (Jn. 4:23) are not so much sincere as real. Their worship is a real approach to God who is spirit, in contrast to the ritual which restricts God to Jerusalem or Mt Gerizim (Jn. 4:21), and which can at best symbolize and at worst distort him.

F. H. P.

TRYPHAENA AND TRYPHOSA. Two women, probably—from the manner of mentioning them and the similarity of their names—sisters, and possibly twin sisters, greeted in Rom. 16:12. Like other women addressed there (Mary, v. 6; Persis, v. 12), they were noted for 'work'—the recurrence of this term may indicate some regular form of service (cf. W. Sanday and A. C. Headlam, *Romans, ICC*, 1902, p. xxxv). The names ('Delicate' and 'Dainty') were widely used, including in Rome, where Lightfoot (*Philippians*, pp. 175f.) pointed to several examples in 'Caesar's household' in Paul's time. Another contemporary Tryphaena was the daughter of Polemon I of Pontus, mother of three kings, who appears in the *Acts of Paul and Thecla*.

A. F. W.

TUBAL-CAIN. The son of Lamech by Zillah (Gn. 4:22) and half-brother of *Jabal and *Jubal. In the words of *av* he was 'an instructor of every artificer in brass and iron', but this could be as well translated 'a hammerer of every cutting tool of copper or iron', and could mean either that he was a metal-smith, the most commonly held view, or that he discovered the possibilities of cold forging native copper and meteoric iron, a practice attested archaeologically from the pre-historic times.

T. C. M.

TYCHICUS. An Asian—the 'Western' Text says an Ephesian—who accompanied Paul to Jerusalem, doubtless as a delegate of his church, with the collection (Acts 20:4; cf. 1 Cor. 16:1-4). He was the apostle's personal representative—probably (taking 'sent' as an epistolary aorist) the bearer of the letters—to the Colossians (Col. 4:7-9) and Ephesians (Eph. 6:21-22), and, should *Ephesians be a circular letter, to other Asian churches as well. Paul seems to have considered him a possible relief for Titus in Crete (Tit. 3:12), and to have sent him to Ephesus (bearing 2 Tim.?) just when Timothy was needed elsewhere (2 Tim. 4:12). These commissions reflect that trustworthiness which Paul commends (Eph. 6:21; Col. 4:7). His designation as a 'minister' in these contexts probably relates to service to the church, possibly to service to Paul, most improbably to the status of *deacon. Some who have questioned the authenticity of Eph. have connected Tychicus with its origin (cf. W. L. Knox, *St. Paul and the Church of the Gentiles*, 1939, p. 203; C. L. Mitton, *Epistle to the Ephesians*, 1950, p. 268).

A. F. W.

TYPOLOGY (Gk. *typos*, 'seal-impression'). A way of setting forth the biblical history of salvation so that some of its earlier phases are seen as anticipations of later phases, or some later phase as the recapitulation or fulfilment of an earlier one.

I. In the Old Testament

There are two archetypal epochs in the OT which are repeatedly presented in this way: the creation and the Exodus from Egypt. The Exodus is viewed as a new creation, or at least as a repetition of the original creative activity. He who in the beginning constrained the unruly sea within bounds, saying, 'Thus far shall you come, and no farther' (Gn. 1:9f.; Jb. 38:8-11), manifested the same power when he restrained the waters of the sea of reeds at the Exodus (Ex. 14:21-29). This parallelism is specially emphasized when the Creator's overthrow of the primeval symbols of chaos, *Rahab and the dragon (Jb. 26:12f.), is taken up and applied to his victory at the Exodus (Pss. 74:12-14; 89:8-10). Rahab becomes a 'type' of Egypt (cf. Is. 30:7) and the dragon (Leviathan) of Pharaoh (cf. Ezk. 29:3).

The restoration of Israel from the Babylonian captivity is portrayed as both a new creation and a new exodus. The verbs which are used of the Creator's workmanship in Gn. 1 and 2 (Heb. *bārā*, *yāsar*, *āšā*) are used of his activity in the restoration of the exiles (cf. Is. 43:7, where all three verbs appear together). The dragon-typology of creation, which had already been taken over as a picture of Yahweh's victory at the Exodus, now became a means of describing this new victory.

When the arm of Yahweh is called upon to 'awake . . . as in days of old', when it 'cut Rahab in pieces' and 'didst pierce the dragon' (Is. 51:9), God is being urged to repeat in this new situation the mighty acts of creation and Exodus. If at the Exodus he saved his people by making 'a way in the sea, a path in the mighty waters' (Is. 43:16), so he will be with the returning exiles when they pass through the waters (Is. 43:2), making 'a way in the wilderness and rivers in the desert' (Is. 43:19). As the Exodus generation was led by a pillar of cloud by day and fire by night, which moved behind them when danger threatened from the back, so the exiles receive the promise: 'The Lord will go before you, and the God of Israel will be your rear guard' (Is. 52:12). Of the later generation as of the earlier it would be true that 'they thirsted not when he led them through the deserts; he made water flow for them from the rock' (Is. 48:21).

In the language of typology, the earlier series of events constituted a 'type' of the later; the later series was an 'antitype' of the earlier. Or it may be said that the successive epochs of salvation-history disclose a recurring pattern of divine activity, which the NT writers believed to have found its definitive expression in their own day.

II. In the New Testament

The typological relation between the two Testaments was summed up in Augustine's epigram: 'In the OT the NT lies hidden; in the NT the OT stands revealed.' In the NT the Christian salvation is presented as the climax of the mighty works of God, as the 'antitype' of his 'typical' mighty works in the OT. The Christian salvation is treated as a new creation, a new exodus, a new restoration from exile.

a. New creation. 'It is the God who said, "Let light shine out of darkness," who has shone in our hearts to give the light of the knowledge of the glory of God in the face of Christ' (2 Cor. 4:6). The Fourth Gospel perhaps provides the clearest instance of creation typology, with its exordium 'In the beginning . . .' echoing the opening words of Gn.: the divine Word which called the old creation into being has now become flesh to inaugurate a new creation. Those who are 'in Christ', according to Paul, constitute a 'new creation' (2 Cor. 5:17; Gal. 6:15). Paul and the seer of Patmos join in seeing the curse of the primordial fall reversed by the redemptive work of Christ (Rom. 8:19-21; Rev. 22:1-5). The gospel establishes 'new heavens and a new earth in which righteousness dwells' (2 Pet. 3:13; cf. Rev. 21:1).

b. New exodus. The exodus typology is particularly pervasive in the NT. Matthew seems to view the infancy of Jesus as a recapitulation of the early experiences of Israel, which went down to Egypt and came up again (Mt. 2:15). John, by the chronology of his Gospel and otherwise, implies that Christ is the antitypical Passover lamb (cf. Jn. 19:14, 36). Peter's language points in the same direction (1 Pet. 1:19), while Paul makes the thought explicit: since 'Christ, our paschal lamb, has been sacrificed', the ensuing festival should be celebrated by his people 'with the unleavened bread of sincerity and truth' (1 Cor. 5:7f.). As the Israelites passed through the Sea of Reeds, so Christians have been baptized into Christ; as the Israelites received bread from heaven and water from the rock, so Christians have their distinctive 'supernatural food and drink' (1 Cor. 10:1-4). As, despite all

those blessings, the Exodus generation died in the wilderness because of unbelief and disobedience and so failed to enter the promised land, Christians for their part are exhorted to take warning lest they fall (1 Cor. 10:5–12; cf. Heb. 3:7–4:13; Jude 5). For these things befell the Israelites 'as a warning (*typhkōs*), but they were written down for our instruction, upon whom the end of the ages has come' (1 Cor. 10:11). This typology has an intensely ethical and paraenetic emphasis.

c. *New restoration.* The very word 'gospel' (*euangelion*) and its cognates are probably derived by the NT writers from their occurrences in Is. 40–66 to denote the 'good tidings' of return from Exile and rebuilding of Zion (Is. 40:9; cf. 52:7; 61:1). No stretch of OT prophecy has provided such a fertile 'plot' of gospel *testimonia*, from the 'voice' of Is. 40:3 through the ministry of the Servant in Is. 42–53 to the new heavens and new earth of Is. 65:17; 66:22.

d. *Typical persons.* In Rom. 5:14 Adam is called 'a type (*typos*) of the one who was to come' (*i.e.* of Christ, the last Adam). Adam, as head of the old creation, is an obvious counterpart to Christ, head of the new creation. All humanity is viewed as being either 'in Adam', in whom 'all die', or 'in Christ', in whom all are to 'be made alive' (1 Cor. 15:22).

No other OT character is expressly called a *typos* of Christ in the NT. But other OT characters typify him in some degree, by comparison or contrast—Moses, as prophet (Acts 3:22f.; 7:37), Aaron, as priest (Heb. 5:4f.), David, as king (Acts 13:22). The writer to the Hebrews, taking his cue from Ps. 110:4, sees in Melchizedek a specially apt counterpart of Christ in his priestly office (Heb. 5:6, 10; 6:20ff.). He also hints that the details of the apparatus and services of the wilderness tabernacle might yield typical significance although, from what he says in Heb. 9:6–10, this significance would involve the difference rather than the resemblance between that order and the new order introduced by Christ. It is only in the light of the antitype that the relevance of the type can be appreciated.

III. Post-biblical developments

The post-apostolic age witnessed the beginning of a more unfettered Christian typology. From the first half of the 2nd century the *Epistle of Barnabas* or Justin's *Dialogue with Trypho* illustrate the length to which the typological interpretation of OT episodes could be carried in the absence of exegetical controls. The result was that the OT acquired its chief value in Christian eyes as a book of anticipatory pictures of the person and work of Christ—pictures presented in words and even more in visible art. Perhaps the most impressive example in art is Chartres Cathedral, where the sculptures and windows on the N side depict a wealth of OT analogies to the NT story depicted by their counterparts on the S side. Thus Isaac carrying the wood is a counterpart to Christ carrying his cross, the sale of Joseph for 20 pieces of silver is a counterpart to Christ's being sold for 30 pieces, and so forth. The whole OT is thus made to tell the Christian story in advance, but not on principles which the biblical writers themselves would have recognized.

What was spontaneous in the early Middle Ages tends to become studied and artificial when attempts are made to revive it at the present day. 'If the appeal to Scripture is to be maintained in its

proper sense, and Christian doctrine is to be set on a less unstable foundation than the private judgment of ingenious riddle-solvers, some attempt is urgently needed to establish a workable criterion for the legitimate use of the typological method, and so to smooth the path of 'biblical theology' (G. W. H. Lampe. *Theology* 56, 1953, p. 208).

Barton, *Oracles of God*, 1986; G. W. Buchanan, *Typology and the Gospel*, 1987. F.F.B.

TYRANNUS. There is no known reference to Tyrannus apart from Acts 19:9, in which Paul at Ephesus is said to have reasoned daily in the *scholē* of Tyrannus. The word *scholē* (AV 'school', RSV 'hall') means a group or place where lectures are given and discussed. It is not known whether Tyrannus was the founder of the lecture-hall or its owner at the time of Paul's stay. The word translated 'one' in AV, which would support the latter view, is not in the best MSS. D.R.H.

TYRE, TYRUS. The principal seaport on the Phoenician coast, about 40 km S of Sidon and 45 N of Akko, Tyre (mod. *Sūr*; Heb. *šār*; Assy. *Šur(r)u*; Egyp. *Daru*; Gk. *Tyros*) comprised two harbours. One lay on an island, the other 'Old' port on the mainland may be the Uššu of Assyrian inscriptions. The city, which was watered by the river Litani, dominated the surrounding plain, in the N of which lay Sarepta (*ZAREPHATH).

I. History

According to Herodotus (2. 44), Tyre was founded c. 2700 BC, and is mentioned in Execration Texts from *Egypt (c. 1850 BC) and in a Canaanite poem (Keret, *ANET*, pp. 142f.) from Ras Shamra (*UGARIT). It took an early and active part in the sea-trade in trade and luxuries with Egypt which led to the Egyptian campaigns to control the Phoenician coast. During the Amarna period the local ruler of Tyre, Abimilki, remained loyal, writing to Amenophis III of the defection of surrounding towns and requesting aid against the Amorite Aziru and king of Sidon. When the Philistines plundered Sidon (c. 1200 BC) many of its inhabitants fled to Tyre, which now became the 'daughter of Sidon' (Is. 23:12), the principal Phoenician port. By the late 2nd millennium BC it was counted as a strongly defended city on the border of the land allocated to Asher (Jos. 19:29), and this reputation continued (2 Sa. 24:7; RSV 'fortress').

With the decline of Egypt Tyre was independent, its rulers dominating most of the Phoenician coastal cities, including the Lebanon hinterland. Hiram I was a friend of David and supplied materials for building the royal palace at Jerusalem (2 Sa. 5:11; 1 Ki. 5:1; 1 Ch. 14:1), a policy he continued during the reign of Solomon, when he sent wood and stone for the construction of the Temple

TYRE, TYRUS

(1 Ki. 5:1–12; 2 Ch. 2:3–16) in return for food supplies and territorial advantages (1 Ki. 9:10–14). Tyrians, including a bronze-caster also named Hiram, assisted in Solomon's projects (1 Ki. 7:13–14). During his reign Hiram I linked the mainland port with the island by an artificial causeway and built a temple dedicated to the deities Melqart and Astarte. As part of his policy of colonial expansion and trade he assisted Solomon's development of the Red Sea port of Ezion-geber for S voyages (1 Ki. 9:27), his ships reaching distant places (1 Ki. 9:28; *OPHIR). From this time, often called 'the golden age of Tyre', the people became the merchant princes of the E Mediterranean (Is. 23:8), and were henceforth noted for their seafaring prowess (Ezk. 26:17; 27:32). The primary trade was in their own manufactured *glass and the special scarlet-purple dyes, called 'Tyrian', made from the local *murex* (*ARTS AND CRAFTS; *PHOENICIA).

The Canon of Ptolemy is still a primary source for the king list, though, despite correlations with Assyrian and Hebrew history, there remains a divergence of about 10 years in the chronology of the earlier rulers. Thus Hiram I is dated c. 979–945 BC (cf. Albright, Katzenstein, c. 969–936 BC). His successor Baal-esser I (= Balbazeros) was followed by Abd-Ashtart, who was murdered by his brothers, the eldest of whom, Methus-Astartus, usurped the throne. Phelles, who succeeded Astarymus c. 897 BC, was overthrown by the high priest Ethbaal (Ithobal), whose daughter Jezebel was married to Ahab of Israel to confirm the alliance made between their countries (1 Ki. 16:31). Ethbaal was also a contemporary of Ben-hadad I. His success against Phelles may have been connected with the invasion of Ashurnasirpal II of Assyria, who took a heavy tribute from Tyre.

The port suffered another blow in 841 BC, when, in his 18th regnal year, Shalmaneser III of Assyria received tribute from Ba'alimanzar at the same time as Jehu paid him homage at the Nahr-el-Kelb (*Sumér* 7, 1951, 3–21). Baalezer II was followed by Mattan I (c. 829–821) and by Pygmalion (Pu'm-yaton), in whose 7th year (825 BC; others 815 BC) Carthage was founded from Tyre.

Assyrian pressure on Phoenicia continued, and Tyre paid tribute to Adad-nirari III of Assyria in 803 BC and its king Hiram II sent gifts to Tiglath-pileser III, who claims that his *Rabshakeh took 150 talents of gold from Mattan II, the next king of Tyre (c. 730 BC; *ANET*, p. 282). By peaceful submission the city retained a large measure of autonomy. According to Josephus (*Ant.* 9. 283), Shalmaneser V of Assyria (whose own records are wanting) laid siege to Tyre in 724, and the city fell with Samaria into the hands of Sargon II in 722 BC. Local Assyrian officials supervised the return of taxes in kind to Nineveh, but considerable unrest was fomented from Egypt, to whom the Tyrians turned for help. This led to denunciation of Tyre by the Heb. prophets who followed Isaiah and by Joel (3:5–6) for their selling them as slaves to the Greeks. Tyre came under the domination of Sidon,

and when Sennacherib approached its ruler Luli (Elulaeus) fled and died in exile. This saved the city from assault, for the Assyrians installed their nominee Tuba'alu (Ethbaal III) in 701 BC.

Esarhaddon, who was keeping the route open to attack Egypt, executed Abdi-milkitti of Sidon (c. 677 BC) and set Ba'ali (I) on the throne, binding him by treaty to Assyria. However, Tyre, instigated by Tirhakah of Egypt, rebelled and Esarhaddon besieged the port, which did not, however, fall since Ba'ali submitted. His influence and independence must have been great in Phoenicia, since he retained the throne throughout his life. When he rebelled again in 664 BC the city fell to Ashurbanipal, who made Azi-Baal king, taking his sisters and many officials as hostages to Nineveh.

With the decline of Assyria at the end of the reign of Ashurbanipal (c. 636–627 BC), Tyre regained her autonomy and much of her former sea-trade. Nevertheless, Jeremiah prophesied Tyre's subjection to the Babylonians (25:22; 27:1–11), as did Ezekiel later (26:1–28:19; 29:18–20) and Zechariah (9:2ff.). Nebuchadrezzar II besieged Tyre for 13 years, c. 587–574 BC (Jos., *Ant.* 10. 228; *JBL* 51, 1932, pp. 94ff.), but no contemporary record of this remains (cf. Ezk. 29:18–20). The city (under Ba'ali II) eventually recognized Babylonian suzerainty, and a number of Babylonian contracts confirm this and give the names of the local Babylonian officials. For a decade the city was ruled by 'judges' (*špīl*).

In 332 BC Alexander the Great laid siege to the island port for 7 months and captured it only by building a mole to the island fortress. Despite heavy losses, the port soon recovered under Seleucid patronage. Herod I rebuilt the main temple, which would have been standing when our Lord visited the district bordering Tyre and Sidon (Mt. 15:21–28; Mk. 7:24–31). People of Tyre heard him speak (Mk. 3:8; Lk. 6:17), and he cited Tyre as a heathen city which would bear less responsibility than those Galilean towns which constantly witnessed his ministry (Mt. 11:21–22; Lk. 10:13–14). Christians were active in Tyre in the 1st century (Acts 21:3–6), and there the scholar Origen was buried (AD 254).

II. Archaeology

The main extant ruins date from the fall of the Crusader city in AD 1291, but excavations from 1921 (*Syria* 6, 1922), and from 1937 in the harbour, have traced some of the earlier foundations. The many coins minted in Tyre from the 5th century BC onwards, found at sites throughout the ancient Near East and Mediterranean, attest its greatness.

The 'ladder of Tyre' (Jos., *BJ* 2. 188), which marked the division between Phoenicia and Palestine proper (1 Macc. 11:59), is identified with the rocky promontory at Ras en-Naqara or Ras el-'Abyad.

U

UGARIT is modern Ras Shamra, located 1 km from the Mediterranean Sea and 10 km N of Syrian Latakia. C. F. A. Schaeffer began excavations in 1928, first at Ugarit's port by the bay of Minet el-Beida, then at Ras Shamra until 1969. M. Yon has directed the work since 1978. Although occupied as early as the 7th millennium BC, the site flourished in the 2nd millennium. In the Late Bronze Age (1550–1200 BC) the city-state controlled a region of 2,000 square kms, including a large agricultural plain and an excellent port (Yon). It enjoyed a moderate Mediterranean climate. Historical archives begin with King Niq-maddu II (1360–1330 BC) followed by the Hittite domination of the region through the intermediary Carchemish at the end of the 14th century. The Hittite-Egyptian treaty (c. 1270 BC) allowed the kingdom to develop with an increasing centralization of power. The king controlled a large palace that formed the centre of a fortified acropolis within the city. This and the towering temple of Baal were the two most impressive landmarks. Ugarit disappeared shortly after 1200 BC for reasons unknown but perhaps related as much to climatic change and internal problems as to any invasion from the sea (Dupont).

Excavators of Ugarit have unearthed thousands of inscriptions from the Late Bronze Age. Texts preserving Egyptian, Cypro-Minoan, Hurrian and Hittite languages occur, but most of the clay tablets preserve writing in Akkadian and Ugaritic languages. Ugaritic script represents one of the earliest alphabets, composed of twenty-nine letters written in cuneiform. The Ugaritic language is one of the earliest West Semitic languages attested by a sizeable corpus and variety of inscriptions. Rivalled only by the Dead Sea Scrolls, the texts from Ugarit represent the most important collection of written evidence yet discovered for better interpreting the OT. Study of the Ugaritic language has demonstrated a flexibility in the use of prepositions and other syntactical features, and has expanded the West Semitic vocabulary of known words and their usage. When applied to biblical Heb., this has provided for new interpretations of difficult texts and rendered unnecessary many textual emendations of previous generations.

Although the citizens of Ugarit distinguished themselves from 'Canaanites', they shared a common culture. Religious, epistolary, lexical, administrative, legal and contractual texts have been discovered at Ugarit (Pardee and Bordreuil). Scholars have made many comparisons between aspects of the Ugaritic mythologies and the OT. Canaanite deities are attested such as Asherah, Anat, Ashtart (Ugaritic Athtart), Baal and El as well as divine personifications of the sea, (Yam) and death (Mot). Leviathan also occurs. El

appears as the senior deity who grants the requests of gods and humans. Baal acts to defeat Yam and to build a palace. Mot kills him but Baal reappears and brings fruitfulness. Kings such as Keret and Danel (*cf.* Ezk. 28:3) request sons to inherit their thrones. Other myths emphasize marriage (Nikkal) and procreation, sometimes in a crude fashion (Birth of Shahar and Shalim) that recalls the condemnation by the biblical prophets of the sexual excesses of Canaanite religion. Other texts include lists of deities and offerings they receive. Mesopotamian traditions brought inscribed liver models and other omen texts, the flood story of Atrahasis, the 'Babylonian Job' and other 'wisdom' compositions.

The texts from Ugarit have affected almost every area of OT studies (Brooke, Curtis and Healey). We may consider examples from law, history, poetry and prophecy (Craigie, 1983, pp. 67–90). Although no legal collections have yet appeared at Ugarit, ritual instructions parallel biblical law. Sacrificial texts use similar terms to describe 'whole burnt' (*kll*), 'communion' (*šlmn*) and 'gift' (*mnhh*) offerings as in Lv. 2, 3 and 6. Other OT terms such as 'priest' (*khn*), 'sacrifice' (*zbh*), 'cultic functionary' (*qds*) and 'tent of meeting' (*hlm'd*) occur at Ugarit (Smith, 1990, pp. 2–3). A ritual text (*KTU* 1.40) describes how to deal with sins such as anger and impatience by animal sacrifice (Pardee). 'Il ib 'god of the father' also occurs at Ugarit, and invites comparison with the patriarchal God of the fathers (Ex. 3:16) as a deity associated with one's ancestors. 'El brt occurs in a Hurrian religious text. Some have compared this to El-Berith, *i.e.* El of the Covenant, as at Shechem (Jdg. 9:46). However, the Hurrian context renders this translation unlikely and illustrates the dangers of making comparisons without careful linguistic controls.

Although Ugarit flourished before Israel settled in Canaan, its administrative records demonstrate a continuity between city-states of the Late Bronze Age Levant and the Jerusalem administration as it developed under David and Solomon (Heltzer). In both cases the 'servants of the king' formed the administrative core of the kingdom, as royal dependents, with specific skills for tasks at the palace and in the governing apparatus. Similarities exist between the description of Baal's construction of his palace or temple, and the rituals surrounding it, and David's transport of the Ark into Jerusalem (2 Sa. 6; Seouw). Letter writers of Ugarit sometimes addressed requests to the queen mother instead of going directly to the king, reflecting her influential role (*cf.* 1 Ki. 2:13–25; 15:11–13; 22:52; 2 Ki. 11). Many personal names correspond to biblical names, though they designate different people. Administrative records mention inhabitants of Palestinian sites such as Ashdod. Gurgashites (Dt. 7:1; Jos. 3:10) are attested at Ugarit (*grgš*). The

UGARIT

role of Ugaritic Rephaim as dead warriors and ancestors may relate to the biblical group of the same name (Dt. 3:10).

An understanding of the Canaanite background is useful for the study of biblical *poetry (Craigie). Ps. 29 contains many similar ideas and even phrases used of Baal in Ugaritic poetry. However, the biblical psalmist wishes to affirm that Yahweh, not Baal, is Lord of nature. Like God in Ps. 104:3, Baal is a rider on the clouds. Fire and flame assist Baal as well as God (v.4). The voice of Baal is also thunder (v.7) and the cedars of Lebanon form Baal's palace (*cf.* v.16). The psalmist transforms the Canaanite motifs by confessing that the God of Israel is creator of the whole world, not merely a temple in Jerusalem. As the Heb. psalms do with 'selah', 'sheminih', etc., Hurrian poetical compositions contain musical annotations. Poems throughout the Bible describe God as a warrior coming from a distant mountain to do battle on behalf of Israel with the power of the storm (Ex. 15; Dt. 33; Jdg. 5; Ps. 68; Heb. 3). This motif occurs in the Baal cycle from Ugarit (*KTU* 1.4, 29-35; 1.101.1-4; Smith 1990: 49). However, the Bible transforms these images. Thus Ex. 15, the Song of the Sea, celebrates Israel's deliverance from Egypt. Although its confession of God's reign resembles the confession of Baal's reign at Ugarit, the distinction between Baal's victory over the sea god, Yam, differs from God's victory over Egypt. The God of Israel acts in history to redeem; the deities of Ugarit and Canaan act within the cycles of nature. In addition, many similarities exist in the form and structure of Ugaritic and Heb. poetry (Watson).

The taunt of the Babylonian king, Helel, 'the shining one' of Is. 14:12-14, who tries and fails to take God's place, resembles that of Athtar, also called 'the shining one', who tries and fails to occupy Baal's throne in his absence (Craigie). Athtar's feet are too short! Am. 1:1 notes that the prophet was a shepherd. The term used (*nōqēd*) is rare in the Bible. Its occurrences in the administrative texts from Ugarit suggest that it describes owners and managers of large herds, engaged in marketing wool and other produce. This sophisticated background helps to explain the international character of Amos' prophecies and rhetoric. Texts from Ugarit also attest to the *marzeah*, a religious banquet, associated with the drinking of wine. Je. 16:5-9 and perhaps Am. 6:4-7 describe the practice and condemn it (King). However, it continued into the Christian era.

ULAI. The canal or river flowing E of Susa in Elam (SW Persia) where Daniel heard a man's voice (Dn. 8:16). The river (Heb. *ūlāi*; Assy. *Ulai*; classical *Eulaeus*) has changed its course in modern times, and the present Upper Kherkhah and Lower Karun (Pasitigris) rivers may then have been a single stream flowing into the delta at the N of the Persian Gulf. The river is illustrated in the Assyrian reliefs showing Ashurbanipal's attack on Susa in 646 bc (R. D. Barnett, *Assyrian Palace Reliefs*, 1960, plates 118-127). D.J.W.

UNBELIEF. Expressed by two Gk. words in the NT, *apistia* and *apeitheia*. According to *MM*, the word *apeitheia*, together with *apeitheō* and *apeithēs*, 'connotes invariably disobedience, rebellion, contumacy'. So Paul says that the Gentiles have obtained mercy through the rebellion of the Jews (Rom. 11:30). See also Rom. 11:32; Heb. 4:6, 11. This disobedience springs from *apistia*, 'a want of faith and trust'. *apistia* is a state of mind, and *apeitheia* an expression of it. Unbelief towards himself was the prime sin of which Christ said that the Spirit would convict the world (Jn. 16:9). Unbelief in all its forms is a direct affront to the divine veracity (*cf.* 1 Jn. 5:10), which is why it is so heinous a sin. The children of Israel did not enter into God's rest for two reasons. They lacked faith (*apistia*, Heb. 3:19), and they disobeyed (*apeitheia*, Heb. 4:6). 'Unbelief finds its practical issue in disobedience' (Westcott on Heb. 3:12).

UNCTION. In its three NT occurrences, *i.e.* 1 Jn. 2:20, 27 (twice), *av* renders Gk. *chrisma*, 'unction'. and *rsv* has 'anointed', '*anointing'. Christians who, by virtue of their 'unction' (vv. 20, 27), are all able to discern schism (v. 19) and heresy (denial of the incarnation, v. 22) are exhorted to adhere to the apostolic message (v. 24), which led them to confess the Father and the Son. Grammatically, 'unction' must be either (a) 'that which is smeared on' (so B. F. Westcott, *The Epistles of John*, 1892); or (b) 'the act of anointing' (so A. E. Brooke, *ICC*, 1912); but in either case the word refers to the gift of the Holy Spirit, of which baptism is the outward sign, and whose sensible reception, leading to awareness of dangers to the church, is the consequence of true incarnational faith. This exegesis is compatible with, though not necessarily proving, the belief that the anointing of the Spirit leads to spoken prophecy within the church.

M.R.W.F.

UNKNOWN GOD (Gk. *agnōstos theos*). In Acts 17:23 Paul refers to an Athenian altar-dedication 'to the unknown God' which forms the text of his *Areopagus address. Pausanias (*Description of Greece*, 1. 1. 4) says that in Athens there are 'altars of gods called unknown' and Philostratus (*Life of Apollonius of Tyana*, 6. 3. 5) similarly speaks of 'altars of unknown divinities' as set up there. They are frequently associated with a story told by Diogenes Laertius (*Lives of Philosophers*, 1. 110) about the setting up of 'anonymous altars' in and around Athens on one occasion to avert a pestilence. Similar dedications are attested elsewhere, if the name of a local deity was uncertain or the wording of an original dedication had become lost.

UPHAZ. An unidentified location from which came fine gold (Je. 10:9; Dn. 10:5). It may, however, be a technical term for 'refined gold' itself (so 1 Ki. 10:18, *mūpāz*; cf. *mippāz*, Is. 13:12) similar to the definition 'pure gold' (*zāhāb tāhōr*; 2 Ch. 9:17). Others, with some support from vss, read *ūpīr* (*ΟΡΗΙΡ; cf. Je. 10:9) for *ūpāz* owing to the similarity of Heb. *z* and *r*. D.J.W.

UR OF THE CHALDEES. The city which Terah and Abram left to go to Harran (Gn. 11:28, 31; 15:7; Ne. 9:7). Considered by Stephen to be in Mesopotamia (Acts 7:2, 4). An old identification of Heb. *ūr* with Urfa (Edessa), 32 km NW of Harran, is unlikely on philological grounds, and *Ura* is the name of several places known in Asia Minor. Moreover, such an identification would require Abraham to retrace his steps E before setting out W towards Canaan. This identification requires that the 'Chaldea' which identifies the location must be equated with *Haldai* (part of ancient Armenia). The *Chaldeans were a Semitic people known in Babylonia from at least the end of the 2nd millennium BC, but there are no references to their presence in N Mesopotamia. LXX wrote 'the land (*chōra*) of the Chaldees', perhaps being unfamiliar with the site. However, Eupolemus (c. 150 BC) refers to Ur as a city in Babylonia called *Camarina* ('the moon') or *Ouria*. The Talmudic interpretation of Ur as Erech is unlikely since the latter is distinguished in Gn. 10:10.

The most generally accepted identification is with the ancient site of 'Ur (*Uri*)', modern Tell el-Muqayyar, 14 km W of Nasiriyeh on the river Euphrates in S Iraq. Excavations at this site in 1922–34 by the joint British Museum and University Museum, Philadelphia, expedition under Sir C. L. Woolley traced the history of the site from the 'Al 'Ubad period (5th millennium BC) until it was abandoned about 300 BC. Many spectacular discoveries were made, especially in the royal cemeteries of the early Dynastic 3 period (c. 2500 BC). Beneath these a layer of silt was at first equated with the flood of the Epic of Gilgamesh and Genesis (see now *Iraq* 26, 1964, pp. 65ff.). The ruins of the temple tower (*ziggurat*) built by Ur-Nammu, the founder of the prosperous 3rd Dynasty (c. 2150–2050 BC) still dominate the site (*BABEL). The

history and economy of the city is well known from thousands of inscribed tablets and the many buildings found at the site. The principal deity was Nannar (Semitic Sin or Su'en), who was also worshipped at Harran. The city was later ruled by the Neo-Babylonian (Chaldean) kings of Babylonia.

BIBLIOGRAPHY. P. R. Moorey and C. L. Woolley, *Ur of the Chaldees*, 1982; *Ur Excavations Texts* 1–7, 1928–74; *Excavations at Ur* 1–10, 1934–74; *CAH* 1/2, 1971, pp. 417–468, 595–617.

URBANUS. Latin servile (cf. A. Deissmann, *Bible Studies*², 1909, pp. 271ff.) recurrent in inscriptions of the imperial household (e.g. *CLL*, 6. 4237)—perhaps the Urbanus greeted in Rom. 16:9 (AV, Urbane) belonged to it (cf. Phil. 4:22; Lightfoot, *Philippians*, p. 174). 'Our fellow-worker' need not imply service with Paul personally. Paul, exact with pronouns, uses 'my fellow-worker' for companions (cf. Rom. 16:3, 21). (*AMPLIAS.) A.F.W.

URIAH (Heb. *ūrīyāyā*, *ūrīyīyāhū*, 'Yahweh is my light'). 1. A Hittite whose name may be Hurrian *Ariya* conformed to Heb. Uriah, one of several non-Israelites among David's mighty warriors (2 Sa. 23:39; 1 Ch. 11:41). While Uriah was away with the army besieging *Rabbah, David committed adultery with his wife *Bathsheba in Jerusalem (2 Sa. 11:1–4; cf. 1 Ki. 15:5). In order to legalize this relationship, David had Uriah placed in a vulnerable position in battle so that he was killed (2 Sa. 11:6–21). He is mentioned in the genealogy of Jesus as the husband of Bathsheba, mother of Solomon (Mt. 1:6).

2. A priest and one of two 'reliable witnesses' to the prophecy concerning Maher-shalal-hash-baz (Is. 8:2). He aided *Ahaz in introducing a foreign-inspired altar and in making other unorthodox changes in the cult (2 Ki. 16:10–16).

3. A prophet from Kiriath-jearim, whose message supported his contemporary, Jeremiah. Flight to Egypt to escape Jehoiakim's wrath, which his prophecies had incited, did not protect him since he was extradited to Judah and executed there (Je. 26:20–24).

4. Father of Meremoth, a priest during the time of Ezra (Ezr. 8:33; cf. N. 8:4). D.W.B.

URIEL (Heb. *ūrī'el*, 'God is my light'). 1. Chief of the Kohathites in the reign of David. He assisted in the bringing up of the ark from the house of Obed-edom (1 Ch. 15:5, 11). He is perhaps the same as in 1 Ch. 6:24. 2. The maternal grandfather of Abijah (2 Ch. 13:2). M.A.M.

URIM AND THUMMIM. In association with the office of high priest, God made a provision for giving guidance to his people (Dt. 33:8, 10) but particularly to the leaders of his people (Nu. 27:21, cf. below). Almost everything, however, about this provision remains unexplained. The words Urim and Thummim have received no satisfactory etymology and the technique whereby guidance was made plain has not been recorded. A further mystery is the apparent disappearance of the Urim and Thummim from national life between the early monarchy (e.g. 1 Sa. 23:6) and some revival of the usage envisaged in Ezr. 2:63; Ne. 7:65.

URIM AND THUMMIM

Three passages are of particular interest. Abiathar came to David (1 Sa. 23:6) with the 'ephod'. It is reasonable to assume that this was the high-priestly ephod, not the ordinary ephod of priestly wear (1 Sa. 22:18), for otherwise why should it be mentioned? In the light of the remainder of the story we must assume that 'ephod' here acts as a comprehensive term for that whole unit of high-priestly garb: ephod-breastpiece-Urim (*cf.* Ex. 28:28-30; see 1 Sa. 14:18, where 'ark' [LXX reads 'ephod'] seems similarly to summarize the oracular equipment of the priest). David (1 Sa. 23:9-12) asks direct questions and elicits affirmative answers. In point of fact no examples of negative answers are anywhere recorded. The second passage is 1 Sa. 14 and it presents similarities: *cf.* 14:3, 41 with 23:6, 9; note the identical title in 14:41; 23:10 (a customary formula?). According to *MT* Saul requests: 'Give perfect things' (*tāmim*, related, presumably, to Thummim). *RSV* accepts the reconstruction of the text here, helped by LXX, and reads 'If this guilt is in me or in Jonathan . . . give Urim . . . if this guilt is in thy people . . . give Thummim.' The third passage shows that the Urim and Thummim could not be compelled to give an answer: 1 Sa. 28:6; *cf.* 14:36-37.

It is extremely difficult if not impossible to offer a coherent suggestion on the basis of this evidence. H. H. Rowley conjectures that Urim (related to *ārar*, to curse) gives the negative answer and Thummim (related to *tāmam*, to be perfect) gives the affirmative. On the assumption that the Urim and Thummim were two flat objects each with a 'yes' side and each with a 'no' side, then on being taken or tossed out of the pouch (*cf.* Pr. 16:33) a 'yes' (two Thummim) and 'no' (two Urim) and a 'no reply' (one Urim and one Thummim) were all possible. This is intriguing and plausible but, of course, must rest in part on the reconstruction of 1 Sa. 14:41 and ignore the lack of evidence for negative replies.

BIBLIOGRAPHY. H. H. Rowley, *The Faith of Israel*, 1956, pp. 28ff.; *VT* 12, 1962, pp. 164ff.; Josephus, *Ant.* 3. 214-218; S. R. Driver, *Notes on the Hebrew Text of the Books of Samuel*, 1913, p. 117; J. Mauchline, *I and II Samuel*, 1971.

J.A.M.

UZ. 1. Son of Aram and grandson of Shem (Gn. 10:23). In 1 Ch. 1:17 Uz (Heb. *ūš*, perhaps related to Arab. *ʿAwd*, the name of a deity) is named among the sons, *i.e.* descendants, of Shem. 2. Son of Nahor and Milcah and brother of Buz (Gn. 22:21, where *AV* reads Huz). 3. Son of Dishan and grandson of Seir, the Horite (Gn. 36:28).

4. The land of Uz was Job's homeland (Jb. 1:1; *cf.* Je. 25:20 and La. 4:21), the location of which is uncertain. Of the numerous suggestions (*e.g.* near Palmyra, near Antioch, or in N Mesopotamia) the two most likely are Hauran, S of Damascus, and the area between Edom and N Arabia. The former is supported by Josephus (*Ant.* 1. 145) and both Christian and Muslim traditions. On this view (favoured by F. I. Andersen, *Job*, 1976) Uz is the land settled by the son of Aram.

Many modern scholars (*e.g.* E. Dhorme, *Job*, E.T. 1967) incline towards the more S location. Job's friends seem to have come from the vicinity of Edom, *e.g.* Eliphaz the Temanite (Jb. 2:11). Uz appears to have been accessible both to Sabaeans bedouin from Arabia and Chaldean marauders

from Mesopotamia (Jb. 1:15, 17). The postscript to the LXX locates Uz 'in the regions of Idumaea and Arabia', but partly on the basis of a spurious identification of Job with Jobab (Gn. 36:33). Uz in Je. 25:20 is coupled with Philistia, Edom, Moab and Ammon, while La. 4:21 indicates that the Edomites were occupying the land of Uz. However, the LXX omits Uz in both of these passages, and the identity of this land of Uz with Job's is not certain. The fact that Job is numbered with the people of the E (1:3; *cf.* Jdg. 6:3, 33; Is. 11:14; Ezk. 25:4, 10) seems to substantiate a location E of the great rift (Arabah) in the area where Edom and W Arabia meet.

D.A.H.

UZAL. 1. Heb. *ūzāl* in Gn. 10:27 and 1 Ch. 1:21 signifies an Arabian descendant of Joktan, perhaps connected with 'Azal, given by Arab historians as the ancient name of San'a in Yemen.

2. Ezk. 27:19, *AV* translates 'Dan also and Javan going to and fro occupied in thy fairs' from Heb. *w'dān w'yāwān m'ūzāl b'izbōnayik nātānū*, which *RVmg.* renders 'Vedan and Javan traded from Uzal for thy wares', while *RSV* reads 'and wine from Uzal they exchanged for your wares' (following LXX). Uzal may be identified with Izalla in NE Syria, whence Nebuchadrezzar obtained wine (S. Langdon, *Neubabylonische Königsinschriften*, no. 9, l. 22; *cf.* l. 23 'wine from *Hilbunim*' with Helbon of Ezk. 27:18). The alteration of *w'yāwān* to *w'yayin*, 'and wine', is very slight. Although *w'dān* may be omitted as a scribal error due to the proximity of Dedan (v. 20), it might be a cognate of Akkad. *dannu* (and Ugaritic *dn*), 'a large jar or vat used for storing wine or beer'. This would lead to a translation, 'and vat(s) of wine from Uzal they exchanged for your wares'; *cf.* *NEB*.

See A. R. Millard, *JSS* 7, 1962, pp. 201-203.

A.R.M.

UZZA (Heb. *uzzā*). 1. A descendant of Ehud, a Benjamite (1 Ch. 8:7). 2. A son of Merari (1 Ch. 6:29). 3. The head of a family of Merarim who returned from the Exile (Ezr. 2:49). 4. A son of Abinadab, probably a Levite (*cf.* 1 Sa. 7:1), who drove the new cart carrying the ark when it was removed from Kiriath-jearim (2 Sa. 6:3). When the oxen stumbled he 'put out his hand to the ark of God and took hold of it', for which irreverent handling of the ark he was struck dead by God (2 Sa. 6:6-7). 5. The otherwise unknown owner of a garden in which Manasseh and Amon were buried (2 Ki. 21:18, 26).

M.A.M.

UZZI. A priest in the line of descent from Eleazar (1 Ch. 6:5; Ezr. 7:4), probably contemporary with *Eli. For others of the same name in Benjamite families, see 1 Ch. 7:7; 9:8; in Issachar, 1 Ch. 7:2-3; and Levites (Ne. 11:22; 12:19, 42).

D.J.W.

UZZIAH (Heb. *uzziyyā*, *uzziyāhū*, 'Yahweh is my strength'). An alternative form is Azariah, '*zaryā*, '*zaryāhū*, 'Yahweh has helped', the difference in spelling is one letter in Heb. The two words, 'strength' and 'help', became almost synonymous, and they were apparently interchangeable.

1. Son of *Amaziah who was made tenth king of Judah by the people upon the assassination of

A limestone plaque, found in Jerusalem, inscribed in Aramaic. 'Hither were brought the bones of Uzziah, king of Judah. Not to be opened'. Probably to be dated in the 1st cent. AD at a time of reburial of the bones. Height 35 cm.

his father (c. 767 bc; 2 Ki. 14:18–21; 2 Ch. 25:27–26:1). He was probably co-regent from c. 791 bc when his father was imprisoned (cf. 2 Ki. 14:13; 2 Ch. 25:23). Although this is not explicit in the text, it is required by the *chronology in the light of his 52-year reign (2 Ki. 15:2; 2 Ch. 26:3).

Uzziah extended Judah's borders, regaining control of the Red Sea port of Elath and rebuilding it (2 Ki. 14:22), as well as successfully campaigning against the Philistines, Arabs and Ammonites (2 Ch. 26:6–8). For his internal security he strengthened the fortifications of Jerusalem, perhaps introducing new defensive techniques (vv. 9–15; Y. Yadin, *The Art of Warfare in Biblical Lands*, 1963, p. 326), and maintaining a standing army. A king Azriyau who is mentioned by *Tiglath-pileser III as leader of a revolt against Assyria has been identified with Azariah-Uzziah (*DOTT*, pp. 54–56; *ANET*, p. 282; H. Tadmor, *Scripta Hierosolymitana* 8, 1961, pp. 232–271), but a more recent examination of the sources throws considerable doubt on this (N. Na'aman, *BASOR* 214, 1974).

For a cultic misdemeanour, Uzziah was struck

with leprosy, and his son Jotham became co-regent (2 Ch. 26:16–21). Josephus (*Ant.* 9. 225) retains a tradition that the earthquake occurred at that moment which was long remembered (Am. 1:1; Zc. 14:5).

A stone slab found in Jerusalem bears an Aramaic notice of the 1st century AD recording the reburial of the king's remains: 'Hither were brought the bones of Uzziah, king of Judah---do not open!'

2. A Kohathite Levite (1 Ch. 6:24 = Azariah, v. 36). 3. A Judean who lived in Jerusalem after the exile (Ne. 11:4).

D.W.B.
A.R.M.

UZZIEL (Heb. 'uzzi'el, 'God is my strength'). 1. A Levite, son of Kohath and father of *Mishael, *Elzaphan and Sithri (Ex. 6:22). 2. The founder of a levitical family subdivision (Nu. 3:19, 30), twice called Uzzielites (Nu. 3:27; 1 Ch. 26:23) whose members helped David bring the ark to Zion and were subsequently assigned responsibility in the Temple (1 Ch. 23:12, 20; 24:24).

D.W.B.

V

VAGABOND. In rsv only at Pr. 6:11, where the sluggard is warned that poverty will come upon him like a vagabond (AV 'as one that travelleth'). 'Highwayman' is apt (C. H. Toy, *Proverbs, ICC*, 1899). Vagabond occurs in AV for (1) Heb. *nūḏ*, 'to wander', to describe Cain's lot after God's sentence, Gn. 4:12, 14; cf. *NOD; (2) *nūa*, 'to wander about' (like beggars), Ps. 109:10; (3) Gk. *perierchomai*, 'to go around', to refer to Jewish exorcists, Acts 19:13 (RV, NEB 'strolling'; RSV 'itinerant'; cf. Lat. *vagari*, 'to wander'). N.H.

VALE, VALLEY. In Palestine, where rain falls only at a certain time of year, the landscape is cut by many narrow valleys and stream-beds (wadis), wet only in the rainy season (Heb. *nahal*; Arab. *wadi*). Often water may be found below ground in such wadis during the dry months (cf. Gn. 26:17, 19). Perennial rivers flow through wider valleys and plains (Heb. *'ēmeq*, *biq'ā*) or cut narrow gorges through the rock. Heb. *š'pēlā* denotes low ground, especially the coastal plain (*SHEPHELAH); *gay* is simply a valley. For geographical details, see under proper names: *HINNOM; *JEHOSHAPHAT; *SALT (VALLEY OF); etc. A.R.M.

VANITY, VAIN. The three main Heb. words translated in evv 'vanity' are distributed broadly as follows: *hebel*, Pss., Ec., Je.; *šāw*, Jb., Ezk.; *tōhū*, Is. *hebel*, lit. 'a vapour', 'a breath' (cf. Pss. 78:33; 94:11; Is. 57:13, etc.), indicates the fruitlessness of human endeavours. Such is man's natural life (Jb. 7:3; Ps. 39:5). Figuratively *hebel* conveys the idea of unsubstantial, worthless, thus 'the vanity of idols' (cf. Je. 10:15; 51:18, AV). The worship of such is consequently unprofitable (Dt. 32:21; 1 Sa. 15:23; Pss. 4:2; 24:4, etc.). Unprofitable, too, are those who turn to such vain things (1 Sa. 12:21; 2 Ki. 17:15; Is. 41:29; 44:9). Idolatry is the worship of a 'no-god', by which God is provoked (Dt. 32:21; 1 Ki. 16:13, 26, etc.), in contrast with the true worship of God (cf. Is. 30:7; 40). Because idols and their worship raise vain hopes, worthless likewise must be the proclamation of false prophets (Je. 23:16; Ezk. 13:1-23; Zc. 10:2). A 'vain offering' (Is. 1:13) is ritual without righteousness. Wealth got by vanity dwindles (Pr. 13:11; LXX, Vulg., 'in haste'; cf. 21:6). *hebel* has reference to man's human life: 'man at his best estate' (Heb. 'standing firm') is 'a few handbreadths' (Pss. 39:5; cf. v. 11; 62:9; 78:33, etc.). This *hebel* of all human existence is fully treated in the book of Ecclesiastes.

With *šāw* the idea of 'foul', 'unseemly', 'evil' is introduced. Jb. 31:5 illustrates this with reference to behaviour; Pss. 12:2; 41:6; Ezk. 13:8 to speech; Ezk. 13:6, 9 (cf. v. 23); 21:29; 22:28 to sight. The word *'āwen* meaning 'breath' is also translated

'vanity' (e.g. Jb. 15:35; Ps. 10:7; Pr. 22:8; Is. 41:29; 58:9; Zc. 10:2). It inclines, however, more to the idea of iniquity, and is thus translated by such terms as 'deceit', 'iniquity', 'calamity', 'delusion', 'wickedness', 'nonsense', in the rsv. *tōhū*, lit. 'a waste' (cf. Gn. 1:1; Dt. 32:10, etc.), then figuratively 'emptiness', 'uselessness'; so God the Lord regards the nations (Is. 40:17, cf. v. 23). Ps. 4:2; Hab. 2:13 have the word *riq*, translated 'vanity' in evv, lit. 'emptiness' (cf. Je. 51:34), in the figurative sense a useless thing.

In the NT the word vanity occurs three times only in the AV, but not at all in the RSV, where the purely biblical and ecclesiastical *mataiotēs* is used (LXX for *hebel* and *šāw*'). (1) In Eph. 4:17 (rsv 'futility') it refers to behaviour and there 'includes moral as well as intellectual worthlessness or fatuity. It is of all that is comprehended under the word *nous*, the understanding of the heart, that this vanity is predicated. Everything included in the following verses respecting the blindness and depravity of the heart is therefore comprehended in the word vanity' (C. Hodge, *The Epistle to the Ephesians*, 1856, *ad loc.*). (2) In Pet. 2:18 (rsv 'folly') the reference is to speech with the idea of 'devoid of truth', 'inappropriate'. (3) In Rom. 8:20 (rsv 'futility') the thought is 'frailty', 'want of vigour' (cf. use of verb in Rom. 1:21 'to make empty', 'foolish'). 'The idea is that of looking for what one does not find—hence of futility, frustration, disappointment. Sin brought this doom on creation; it made a pessimistic view of the universe inevitable. *hypetagē*: the precise time denoted is that of the Fall, when God pronounced the ground cursed for man's sake' (J. Denney in *EGT*).

Heathen deities are vanities, vain things (Acts 14:15; cf. Je. 2:5; 10:3, etc.). Cognate with the word 'vanity' is 'vain', literally 'devoid of force or purpose'. Our Lord pronounced Gentile worship and Pharisaic piety so (Mt. 6:7; 15:9; Mk. 7:7); so too Paul estimated pagan philosophy (Rom. 1:21; Eph. 5:6, etc.). It is possible through faithlessness in Christian service to become so (cf. 1 Cor. 9:15; 2 Cor. 6:1; 9:3; Phil. 2:16; 1 Thes. 3:5). Where Christ's resurrection is denied, preaching is 'false' (1 Cor. 15:14) and faith without force (1 Cor. 15:17). Allegiance to the law robs faith of its worth (Rom. 4:14), and Christ's death of its effect (Gal. 2:21). Yet faith without works is as vain as works without faith (Jas. 2:20).

BIBLIOGRAPHY. E. Tiedtke *et al.* *NIDNTT* 1, pp. 546-553. H.D.McD.

VASHNI. According to AV, following the *MT* of 1 Ch. 6:28, Vashni was the elder son of Samuel. RV and RSV following the Syriac, and Lagarde's recension of the LXX and the parallel text 1 Sa. 8:2 supply Joel as the name of Samuel's elder son; the

Hebrew letters of 'Vashni' are then repointed with 'the' inserted to give the meaning 'and the second' Ahijah. R.A.H.G.

VEGETABLES (Heb. *zērō'im*, 'seeds', AV 'pulse', Dn. 1:12; *zēr'ōnim*, seeds, RVmg. 'herbs', Dn. 1:16). A general term for something that is sown, but usually denoting edible seeds which can be cooked, such as lentils, beans, etc. In the biblical context the word is used of the plain vegetable food sought by Daniel and his friends, instead of the rich diet of the king's table.

The Heb. word *pōl* (2 Sa. 17:28) denotes the beans brought for David and his men. Ezk. 4:9 refers to them as a substitute for grain meal in famine bread. Ezekiel's bread probably did not break the levitical law against mixing diverse kinds (see ICC, *ad loc.*) The Mishnah uses the same word with the national adjective for Egyptian beans, as do the Greek writers with *kyamos*. The precise species is open to question since the modern Arabic word has wide scope, but there were several plants of the pea family available in biblical times, such as broad bean (*Vicia faba*), chick pea (*Cicer arietinum*) and lentil (*Lens culinaris*).

Vegetables were grown in gardens (Dt. 11:10, 1 Ki. 21:2), and other crops such as leeks, onions and melons were cultivated. Many wild plants were gathered for use as vegetables and *herbs. See also *AGRICULTURE.

Cucumber (Heb. *qiššu'im*). One of the articles of food which made the discontented Israelites, wandering in the wilderness of Paran, hanker after the pleasures of Egypt (Nu. 11:5). This is most likely to have been the snake cucumber, *Cucumis melo*, which was well known in ancient Egypt, rather than the present-day cucumber, *Cucumis sativus*, which is a native of India and reached the Mediterranean area much later.

The 'lodge' referred to in Is. 1:8 as being in 'a cucumber field' (Heb. *miqšā*) was a crude wooden hut on four poles or other rough booth. It sheltered the watchman who protected the plants, but after the season was over it was abandoned and allowed to disintegrate, presenting a picture of utter desolation.

Garlic (Heb. *šūmīm*). A kind of onion well known in ancient Egypt and craved after by the wandering Israelites (Nu. 11:5). Garlic (*Allium sativum*) differs from other onions in having scales ('cloves') instead of the usual tunicated bulb; it never sets seeds and is unknown in the wild state.

Leeks (Heb. *hāšīr*, 'herb'). Only in Nu. 11:5; the Heb. word is elsewhere translated 'grass' or 'herb'. The leek of ancient Egypt, judging by samples from the tombs, was the salad leek (*Allium kurrat*) with grass-like leaves narrower than those of the familiar common larger leek (*A. porrum*). Both are evidently cultivated varieties of the wild *A. ampeloprasum*.

Lentils (Heb. *'dāšīm*). A small pea-like plant (*Lens culinaris*, formerly called *L. esculenta* or *Ervum lens*) of the pea family, lentils are easily grown and are still a favourite food throughout the Near East. The parched seeds are regarded as the best food to carry on a long journey or in an emergency (cf. Ezk. 4:9). Lentils formed the 'pottage' associated with Esau (Gn. 25:29-34), and were among the foods offered to David at Mahanaim (2 Sa. 17:28). A field of lentils is mentioned in 2 Sa. 23:11-12 as the scene of an Israelite warrior's

doughty deeds against the Philistines. See D. Zohary, 'The wild progenitor and the place of origin of the cultivated lentil', *Economic Botany* 26, 1972, pp. 326-332.

Melons (Heb. *'baṭṭiḥim*). Mentioned in Nu. 11:5. The reference is to the water-melon (*Citrullus vulgaris*), a member of the marrow family *Cucurbitaceae*, with white or red flesh of the fruit, cultivated from the earliest times in Egypt and the Orient, and seeds of which have been frequently found in Egypt. tombs.

Onions (Heb. *b'sālīm*). The onion (*Allium cepa*) is mentioned only once in the Bible (Nu. 11:5). It has always been a common and much appreciated food, and regarded, moreover, as possessing medicinal qualities. Cultivated by the Egyptians from the earliest times, the onion is represented on some of their tomb-paintings. F.N.H.

VESSELS. Before the invention of pottery (during the 6th millennium BC) vessels were containers made from skins, rushes, wood and stone. These, made of perishable materials, have seldom survived. The dry sands of Egypt have preserved some leather and basketry (see S. Cole, *The Neolithic Revolution*, BM (Natural History), 1959, Plate XI). The peculiar geological conditions at Jericho have resulted in the preservation of a quantity of wooden dishes and trays in tombs of the mid-2nd millennium BC (K. M. Kenyon, *Jericho 2*, 1965). Such wooden vessels, together with leather containers, baskets and sacks, all widely used by the modern Palestinian peasants, were probably as important as pottery in daily life (cf. Lv. 11:32). Bottles for carrying both water and wine were simply skins sewn up tightly (Heb. *'ob*, Jb. 32:19; *hēmeṭ*, Gn. 21:14; *n'ōd*, Jos. 9:4; *nēḇel*, 1 Sa. 1:24; Gk. *askos*, Mt. 9:17). Soft stones, limestone, alabaster, basalt and even obsidian were cut and ground into shape as bowls, jars, dishes, etc. After the introduction of metal tools (*ARCHAEOLOGY) elaborately carved stone vessels were produced, and these often formed part of the equipment of a temple (e.g. at Hazor, see Y. Yadin, *Hazor*, 1958, plates 21, 23). Large jars of stone or earthenware were used for storing liquids. The porous earthenware of which the vessels were made absorbed a little of the liquid, thus hindering evaporation and keeping the contents cool (Heb. *kaḏ*, 'pitcher', Gn. 24:14; cf. 1 Ki. 17:12ff., AV 'barrel'; Gk. *lithinai hydriai*, 'stone water-jars', Jn. 2:6). The rich could afford vessels of metal, glass and ivory (Jb. 28:17; Rev. 18:12). Metal vessels are rarely found in Palestine, but bronze bowls of Phoenician workmanship found at Nimrud (H. Frankfort, *Art and Architecture of the Ancient Orient*, 1954, plates 141-143) show the type in use during the Monarchy. Gold and silver vessels were a convenient method of storing wealth before the introduction of coined money, and formed the bulk of temple and royal treasures and payments of tribute (see DOTT, p. 48, c). Some metal shapes were imitated in pottery. *Glass and *ivory were mainly used for small cosmetic flasks and toilet instruments (see BA 20, 1957; IEJ 6, 1956).

Definition of the various Heb. terms describing vessels is not usually possible. Many containers, although differently named, could serve the same purpose (1 Sa. 2:14). For the types and proposed identifications of earthenware vessels, see *POTTER. The following terms seem to describe

VESSELS

metal vessels only, mostly used in the tabernacle and the Temple: 1. Heb. *gārtāl* (Ezr. 1:9), a large bowl; 2. *gullā* (Zc. 4:2; cf. 1 Ki. 7:41), a round bowl for holding the oil in a lamp, in Ec. 12:6 perhaps a hanging lamp; 3. *kaḥ* (Nu. 7:14), a shallow open dish for holding incense; 4. *k'pōr* (1 Ch. 28:17), a small bowl; 5. *m'naqqiyyā* (Ex. 25:29), the golden bowl from which libations were poured; 6. *merqāhā* (Jb. 41:31), an apothecary's compounding jar, possibly pottery; 7. *mizraq* (Ex. 27:3), a large basin used at the altar of burnt-offering, probably to catch the blood, and also a large banqueting bowl (Am. 6:6); 8. *šinṣeneṭ* (Ex. 16:33), the golden jar in which the specimen of manna was kept (cf. Heb. 9:4); 9. *q'ārā* (Ex. 25:29; Nu. 7:13), a plate; 10. *qašwā* (Ex. 25:29), the golden pitcher containing wine for libations. For Heb. *dūd*, *sir* and *qallahat* translated 'caldron', see *POTTER; in Jb. 41:20 Heb. *agmōn* is not 'caldron' but possibly 'rushes' (cf. Is. 58:5 where *agmōn* is 'rush').

The Gk. *chalkion* (Mk. 7:4) is simply any bronze vessel. Heb. *k'lf*, Aram. *mān*, Gk. *skeuos* are general words for implements, equipment (1 Sa. 8:12; Acts 9:15) and hence, in many contexts, vessels both actual (1 Sa. 9:7; Jn. 19:29) and metaphorical (1 Pet. 3:7).

BIBLIOGRAPHY. J. L. Kelso, *The Ceramic Vocabulary of the Old Testament*, BASOR Supplementary Studies 5-6, 1948. A.R.M.

VESTURE. An archaic word denoting *dress used once in RSV for the obscure *sūt*, which appears only in Gn. 49:11 (AV 'clothes', JB 'coat', NEB 'robes'). In AV 'vesture' translates: Heb. *beḡed*, 'cloak', 'garment', 'covering' (Gn. 41:42); Heb. *k'sūt*, 'a covering' (Dt. 22:12, *FRINGES); Heb. *'būs*, 'clothing', 'dress', 'attire' (Pss. 22:18; 102:26); Gk. *himation*, 'an outer garment' (Rev. 19:13, 16), possibly a large square piece of cloth which could be used as a shawl or as a cloak (so rendered in Mt. 5:40; 'raiment' in Lk. 9:29); Gk. *himatismos*, 'dress', 'apparel' (Mt. 27:35; Jn. 19:24); Gk. *peribolaion*, 'what is thrown round one' (Heb. 1:12).

In 2 Ki. 10:22 there is a reference to the one who was over the 'vestry' (*meltāhā*; cf. 'keeper of the wardrobe', 2 Ki. 22:14), who cared for the 'vestments' (*malbūs*) or sacred dresses used by priests in the temple of Baal. J.D.D.

VIAL. 1. Heb. *paḳ*, 'a flask'. A vial of oil was used in anointing Saul (1 Sa. 10:1) and Jehu (2 Ki. 9:1, 3, AV *'box', RSV 'flask'). 2. Gk. *phialē*, a broad shallow 'bowl' (RSV) used for incense and drink offering. The word is translated by AV as 'vial' eight times in Revelation (Rev. 5:8, etc.). (*POTTER.) J.D.D.

VICTORY. The primary biblical assertion is that victory belongs to God (Jon. 2:9; 1 Cor. 15:54-57; Rev. 7:10). This is succinctly expressed in the phrase 'the battle is the Lord's' (1 Sa. 17:47), i.e. victory belongs exclusively to the Lord: it is his to bestow at will.

There are three special features of the Lord's victory which enable us to glimpse its inner character. In the first place, sometimes the Lord's victory is the defeat of his people (e.g. Jdg. 2:14; Is. 42:24-25; Je. 25:8-9). The Lord's victory is the exercise of holy sovereignty in the course of history.

'Victory' is another way of saying that the government of the world rests in the hands of a holy God, who orders all things according to inflexible principles of morality, so that sometimes his holiness must be asserted against his people, and becomes 'his strange deed' (Is. 28:21).

Secondly, this holy government of the world will issue in the great victory of the eschatological *'Day of the Lord'. The power of victory is annexed to the holy rule of the only God. Therefore the issue of that conflict is not in doubt. Just as, at creation, there was no possibility of opposing the Creator's will, so, at the new creation, he will speak and it shall be done (Ezk. 38-39; Rev. 19).

Thirdly, the people of God enter upon victory by the obedience of faith: i.e. they experience victory in God's victory (Ex. 14:13-14; Dt. 28:1-14; Ps. 20; Eph. 6:16; 1 Jn. 5:4-5). As the Lord Jesus said, only the Son can set men free (Jn. 8:36); those who abide in his word know the truth, and the truth sets them free (Jn. 8:31-32).

The OT associates *'peace', *'righteousness' and *'salvation' with victory. The peace of the victor (e.g. 1 Ki. 22:28; Is. 41:3, Heb. text) is not simply cessation of hostilities—even the defeated have that! It is the enjoyment of total well-being which victory brings. Salvation is, positively, the personal enlargement, and negatively, the deliverance, which victory effects (1 Sa. 14:45; Jdg. 6:14). Righteousness is the personal quality which guarantees victory (Is. 59:16-17). All these cluster in a unique way round the cross of the Lord Jesus Christ, the supreme victory of God: peace (Eph. 2:14ff.), salvation (Tit. 3:4-7) and righteousness (Rom. 1:17; 3:21-27).

BIBLIOGRAPHY. J.-J. von Allmen, *Vocabulary of the Bible*, 1958, s.v. 'Victory'; N. T. Wright, *Jesus and the Victory of God*, 1994. J.A.M.

VILLAGE. The biblical village was usually, as today, a small group of dwellings, distinct from a *city (Lv. 25:29, 31, etc.) in being unwalled and without defences (Ezk. 38:11). Many OT and NT 'cities' (so RSV, NIV, AV) could well be translated 'village' in the British sense. However, the distinction between town and village is not always maintained, e.g. Bethlehem is called a town (Gk. *polis*) in Lk. 2:4 and a village (*kōmē*) in Jn. 7:42. A village might be enlarged into a town or city (1 Sa. 23:7).

Villages were often grouped as 'daughters' (lit. Heb.; Nu. 21:25, etc.) around the city on which as agricultural communities they depended politically and economically (Jos. 15:13-63). The inhabitants would retreat within the nearest city defences in time of war. The common Semitic word for village (Heb. *kāpār*; Akkad. *kapru*) may not necessarily relate to this 'protection' so much as denote a hamlet or village set in open country (hence *prz* of Jdg. 5:7, 11 (see AV); cf. Est. 9:19), farmsteads or suburban settlement around a city. Nomadic camps were also designated 'villages' (Gn. 25:16; Is. 42:11), and names like *Havvoth-jair may reflect this. A village might have its own local government of elders (Ru. 4:2), and sometimes a shrine or sacred place. D.J.W.

VINE, VINEYARD. The common grape-vine, *Vitis vinifera* L., is a slender plant which trails on the ground or climbs supports by means of tendrils. It is mentioned throughout Scripture, fre-

quently in a symbolic sense. First named in connection with Ararat (Gn. 9:20), perhaps its original habitat, it was also cultivated in ancient Egypt. Paintings found on the walls of Egypt tombs depicted the various stages of wine-making, while inscriptions and sculptures attested to the importance of the vine.

Viticulture was practised in Canaan prior to the Hebrew invasion, as is indicated by the provisions set out by Melchizedek (Gn. 14:18), the report of the spies (Nu. 13:20, 24) and the references of Moses to the Promised Land (Dt. 6:11). That Judah was already renowned for its viticulture may be inferred from the blessing of Jacob (Gn. 49:11). The valley of Eshcol ('grape-cluster') then as now was a particularly productive locality, as was the valley of Sorek in the Philistine plain (Jdg. 14:5; 15:5; 16:4). The En-gedi vineyards were also notable (Ct. 1:14), as were those of Sibmah (Je. 48:32), for whose ruin Jeremiah lamented. Ezekiel recorded that the wine of Helbon was exported to Tyre (Ezk. 27:18), while Hosea referred to the scent of the wine of Lebanon (Ho. 14:7). The ideal of the invading nomadic Israelite was realized when sedentary occupation made it possible for every man to sit 'under his vine and under his fig tree' (1 Ki. 4:25).

The preparation of a vineyard (Is. 5:1ff.; Mk. 12:1) usually involved terracing the hillsides and clearing the stones. These were used for the retaining walls, which were thicker than necessary if the stones were abundant, with still more piled in heaps (cf. Ho. 12:11). A living hedge of boxthorn (*Lycium*)—in modern times the American *Opuntia cactus* was substituted and then *Acacia farnesiana*—was planted, or a low wall built and topped with dead spiny burnet (*Poterium spinosum*) to deter animals and thieves. A watch-tower or stone hut served as a cool shelter during the summer when the labourers lived in the vineyards. The enclosed area of ground was dug over carefully, and when the soil was friable young vines were planted. Normally they were arranged in rows about 2.5 m apart, and when the fruit-bearing branches developed they were raised above the ground on supports (Ezk. 17:6). The vines were pruned each spring (Lv. 25:3; Jn. 15:2) by means of pruning-hooks (Joel 3:10). The vine-dressers, who pruned and cultivated the vines, appear to have belonged to the poorer classes (Is. 61:5). A covered wooden structure, the watchtower, was erected on an elevation overlooking the vineyard (Mk. 12:1), where the householder and his family kept a watch throughout the vintage period (Jb. 27:18; Is. 1:8).

When the grapes had reached maturity they were gathered in baskets and taken to the wine-presses (Ho. 9:2), which were hewn out of the solid rock. The grapes were trodden out by helpers (Am. 9:13), who shouted and sang together (Is. 16:10; Je. 25:30). The fermenting wine was stored in strong new goatskin bags (Mt. 9:17) or in large pottery containers. Tax-collectors claimed their share of the produce (cf. Is. 3:14), and accumulated debts were often discharged in terms of wine (2 Ch. 2:10). Exemption from military service was granted to men engaged in the vintage. No other plants were to be sown in a vineyard (Dt. 22:9), and the vines were allowed to lie fallow every 7th year (Ex. 23:11; Lv. 25:3). When the harvest had been gathered in, the poor were permitted to enter the vineyard to glean any remaining bunches (Lv. 19:10; Dt. 24:21). When a vineyard had become com-

pletely unproductive it was abandoned (cf. Is. 16:8) and the dry vines used for fuel and making charcoal (Ezk. 15:4; Jn. 15:6).

Apart from their use in the form of wine, grapes constituted an important item in the diet of the Hebrews, supplying iron and other essential minerals. A certain proportion of the harvest was preserved in the form of raisin cakes. Raisins (Heb. *šimmūqim*, 'dried fruits') have from earliest times been a staple food in biblical lands (cf. Nu. 6:3). The grapes were laid out, often on house-tops, to dry in the hot sun (Pliny, *NH* 16). A welcome food for the hungry, being full of energizing sugars (1 Sa. 30:12; 1 Ch. 12:40), raisins were an easily carried and acceptable gift (1 Sa. 25:18; 2 Sa. 16:1).

Used symbolically, the vine was the emblem of prosperity and peace among the ancient Hebrews. More particularly it symbolized the chosen people. They were the vine which God had taken out of Egypt (Ps. 80:8–14; Is. 5:1–5) and planted in a particularly choice land. They had been given all the attention necessary for the production of outstanding fruit, but instead yielded only wild grapes. For this they were to be abandoned to the depredations of their enemies.

No fewer than five parables of Jesus related to vines and their culture. These were the fig in the vineyard (Lk. 13:6–9); labourers in the vineyard (Mt. 20:1–16); new wine in old wineskins (Mt. 9:17); the two sons (Mt. 21:28–32); and the wicked husbandmen (Mt. 21:33–41; Mk. 12:1–11; Lk. 20:9–18). Particularly significant was Christ's description of himself as the true vine (Jn. 15:1ff.), with whom all true believers are in organic relationship. At the Last Supper the fruit of the vine symbolized Christ's atoning blood, becoming the sacramental wine of the Christian Communion service. In Christian art the fruitful vine has often symbolized the union of Christ with his followers.

F. N. H.

VINEGAR (Heb. *hōmeš*, Gk. *oxos*). A sour liquid resulting from acetous fermentation in wine or other strong drink. The acid nature of vinegar is indicated in Pr. 10:26; 25:20, while a reference in Ps. 69:21 not merely attests to its nauseous flavour but implies that it was used in punishment.

The vinegar of Ru. 2:14 is typical of the fermented acid drinks enjoyed by labourers in wine-growing countries. The *posca* of the Romans was very similar in nature, and formed part of the soldiers' rations. It was this which was offered to the crucified Christ as refreshment (Mk. 15:36; Jn. 19:29–30), and was different from the myrrh-flavoured anodyne which he had refused earlier (Mt. 27:34; Mk. 15:23). Wine or vinegar was prohibited to Nazirites (Nu. 6:3), hence the gravity of the offence in Am. 2:12.

R. K. H.

VIRGIN. Heb. *b'ṭūlā* comes from a root meaning 'to separate' and is the common word for a woman who has never had sexual intercourse (Gk. *parthenos*). Metaphorically it is used of nations and place-names, e.g. the virgin of Israel (Je. 18:13;

VIRGIN

3l:4, 21; Am. 5:2); the virgin daughter of Zion (Is. 37:22); Judah (La. 1:15); Sidon (Is. 23:12); Babylon (Is. 47:1); Egypt (Je. 46:11). *almā* derives from a root meaning 'to be sexually mature', and refers to a woman of marriageable age who has not yet borne children, though she may be married. It occurs seven times and is translated 'young woman' (Gn. 24:43; Is. 7:14), 'maiden' (Ct. 1:3; 6:8; Pr. 30:19; Ps. 68:25) and 'girl' (Ex. 2:8). The Gk. equivalent is usually *neanis*, 'a young woman', but in Gn. 24:43 (of Rebekah) and in Is. 7:14 *parthenos* is used. As a result, the Isaiah passage has been regarded since early Christian times as a prophecy of the *virgin birth of Christ (Mt. 1:23).

The primary meaning of Isaiah's sign to Ahaz is probably that in less than 9 months (reading *rsvmg.*, 'with child and shall bear') the tide would turn in such a way that a child would be given the name of Immanuel, 'God is with us'. The Messianic interpretation is based on the coincidence of the name Immanuel, which expressed so well the early Christians' belief in the deity of the Christ, and the LXX rendering 'the virgin (*hē parthenos*) shall be with child and shall bear a son', which is a legitimate translation of the Heb. words but which imports into the sign to Ahaz the implication that the mother of Immanuel was a specific woman who was at the time of writing still a virgin (*i.e.* in at least 9 months' time a son would be called Immanuel). The door is thus left open for Matthew and the early church to see a remarkable verbal correspondence with what happened at the birth of Jesus Christ. For a fuller study of this passage, and a different viewpoint, see *IMMANUEL.

VIRGIN BIRTH. By 'virgin birth' Protestants generally mean 'virginal conception'. Roman Catholicism and Orthodoxy believe also in a literal virgin birth, whereby the baby passed out of Mary's body in such a way as to leave her virginity anatomically unimpaired (virginity *in partu*, 'in giving birth', as well as *ante partum*, 'before...'). This belief is found first in writings of Syrian origin from the mid-2nd century, such as the *Protevangelium of James*. It quickly became a standard part of the doctrine of Mary's 'perpetual virginity', *i.e.* including also virginity *post partum*, 'after giving birth' to Jesus (so that 'the brethren of the Lord' could not have been Mary's children). The Reformers were virtually unanimous in holding to Mary's perpetual virginity. This article will follow common practice in using 'virgin birth' to denote virginal conception.

The two accounts of the birth of Jesus in Matthew and Luke are clearly independent of one another, and both record that he was born through the direct action of the Holy Spirit, without a human father (Mt. 1:18–25; Lk. 1:34). So the only two gospels that record the circumstances of Jesus' birth present him as born from a virgin – although greater stress falls on conception by the Spirit than on Mary's virginity.

Yet the historicity of the virgin birth is doubted

or denied by many scholars, who often regard the birth-narratives in Matthew and Luke not as historical record but as some form of imaginative literature, expressing the significance of Jesus' birth in symbolic, poetic, mythical or midrashic terms. The absence of explicit reference to the virgin birth elsewhere in the NT, especially Mark and Paul, is held to confirm that it was not part of the earliest traditions about Jesus.

However there may well be supporting evidence in the rest of the NT. Although a person may not say directly what he believes, he shows his belief by a turn of phrase. Thus Mark has no birth narrative, since he starts where the preachers in Acts start, namely, with the baptism by John. Yet in 6:3 he alone of the Synoptists quotes objectors as saying, 'Is not this the carpenter, the son of Mary?' By contrast Mt. 13:55 has 'the carpenter's son', and Lk. 4:22 'Joseph's son'. Identifying a son by his mother was highly unusual, and perhaps disparaging, in a Jewish context.

John also begins Christ's earthly ministry with the Baptist. Later he indicates that there were rumours about the illegitimacy of Jesus when in 8:41 the Jews declared, 'We (emphatic pronoun and emphatic position) were not born of fornication'. Less evidential, although accepted by some Christian writers from Tertullian onwards, is the reading in the Verona Latin codex on Jn. 1:13, which has the singular, 'who was born not of blood, nor of the will of the flesh, but of God'. (This reading is not attested in any Gk. ms.)

Paul, the companion of Luke, uses language that implies acceptance of the virgin birth. When he speaks of the coming, or birth, of Jesus Christ, he uses the general verb, *ginomai*, not *gennaō*, which tends to associate the husband (*e.g.* Rom. 1:3; Phil. 2:7). This is particularly marked in Gal. 4:4, where 'God sent forth his Son, coming (*genomenon*) from a woman'. By contrast, in 4:23 Ishmael 'was born', *gegennētai* (from *gennaō*).

There is no evidence that a virgin birth was part of Jewish Messianic expectations. Is. 7:14 is not specific enough to have given rise to such a belief: its use by Matthew presupposes the prior existence of such a conviction about Jesus' birth. Nor do pagan stories of gods in human form impregnating women provide a credible source for the gospels' account. Matthew and Luke do not present Mary as impregnated by the Holy Spirit – as though Jesus had a human mother and a divine father – but as conceiving miraculously without male intervention at all.

Theologically it has been argued that the reason given for the title 'the Son of God' in Lk. 1:35 cannot be reconciled with the idea of the eternal Son of God of the epistles. This argument assumes that Mary and Joseph would have been given a full theological statement. The two records give the contents of what they were told, namely, that Mary was to be the mother of the promised Messiah, the Son of God and 'God with us'. The fact that Matthew and Luke do not here reflect later theology is a further argument for the authenticity of their records.

Theologically it is also commonly alleged that someone born of only one parent could not truly be said to share our real humanity. This objection misses the significance of a proper concentration on conception. From that point onwards, there are no grounds for seeing Jesus' birth as other than wholly normal. (The objection also sounds increas-

ingly weak in the light of modern medical techniques to facilitate child-bearing.)

A general prejudice against the miraculous in general and the incarnation in particular, often animates denial of the virgin birth. Yet it is wonderfully congruent with the much more fundamental truth of the incarnation itself. To hold to the latter as Christian faith has traditionally believed in it, while rejecting the former, is rather like straining out a gnat while swallowing a camel. Although theologians have given different interpretations of Jesus' birth from the virgin, it at least attests that the entry of God's Son fully into human life was a gift of divine initiative, a new beginning independent of normal male action. The start of the new creation is God's *fiat*, grounded in his grace alone.

D.F.W.
J.S.W.

VIRTUE. The word used in the OT is Heb. *hayil*, 'ability', 'efficiency', often involving moral worth, as in Ru. 3:11; Pr. 12:4; 31:10 ('*ēšet hayil*, 'a woman of worth', 'a virtuous woman'); cf. Pr. 31:29 ('*āsā hayil*, 'to do worthily').

In the NT AV renders two words as 'virtue'. I. Gk. *aretē*, meaning any excellence of a person or thing (1 Pet. 2:9, rsv 'wonderful deeds', AV 'praises'; 2 Pet. 1:3, 5). In Homer the word is used especially of manly qualities (cf. Phil. 4:8). In the LXX it is the equivalent of Heb. *hōd*, 'splendour', 'majesty' (of God, Hab. 3:3), and *hillā*, 'praise' (Is. 42:12; 43:21, quoted in 1 Pet. 2:9). 2. *dynamis*, 'power', 'influence' Mk. 5:30; Lk. 6:19; 8:46), is used of the healing influence proceeding from our Lord. The word is commonly translated 'power' (e.g. 2 Cor. 12:9; Heb. 11:11). D.O.S.

VISION. The border-line between vision and dream or trance is difficult, if not impossible, to determine. This is reflected in the biblical vocabulary of 'vision'.

Heb. *hāzōn* comes from a root used to describe the beholding of a vision by the seer while in an ecstatic state (Is. 1:1; Ezk. 12:27); while the word *marā*, from the ordinary root 'to see', means vision as a means of revelation (Nu. 12:6; 1 Sa. 3:15). The NT uses two words in this connection: *horama* (Acts 9:10, 12; 10:3, 17, 19) and *optasia* (Lk. 1:22; Acts 26:19; 2 Cor. 12:1). They signify 'appearance' or 'vision'.

The emphasis here seems to be upon the ecstatic nature of the experience, and the revelatory character of the knowledge, which came to the biblical prophets and seers. The experience points to a special awareness of God shared by saintly men (e.g. Je. 1:11; Dn. 2:19; Acts 9:10; 16:9), and to God's readiness to reveal himself to men (Ps. 89:19; Acts 10:3).

The circumstances in which the revelatory visions came to the seers of the Bible are varied.

They came in men's waking hours (Dn. 10:7; Acts 9:7); by day (Acts 10:3) or by night (Gn. 46:2). But the visions had close connections with the dream-state (Nu. 12:6; Jb. 4:13).

In the OT the recipients of revelatory visions were the prophets, 'writing' (Is. 1:1; Ob. 1; Na. 1:1) and 'non-writing' (2 Sa. 7:17; 1 Ki. 22:17-19; 2 Ch. 9:29). But the outstanding examples were Ezekiel and Daniel.

In the NT Luke manifests the greatest interest in visions. He reports, e.g., the visions of Zechariah (Lk. 1:22), Ananias (Acts 9:10), Cornelius (10:3), Peter (10:10ff.) and Paul (18:9); although Paul treated visions with much reserve (2 Cor. 12:1ff.). The supreme set of visions in the NT is that in the book of the *Revelation.

Biblical visions concerned both immediate situations (Gn. 15:1f.; Acts 12:7) and the 'far-off divine event' of the kingdom of God, as the writings of Isaiah, Daniel and John testify. In this connection the passages in 1 Sa. 3:1; Pr. 29:18 are especially relevant.

VOW. The idea of 'vow' in Semitic thought may well have been derived from the name of a deity. If so, it illustrates the fact that in biblical usage a vow is always used with reference to God and offers a new interpretation for such passages as Je. 32:35: they must then be construed as the sacrificing of children, not 'to Molech' (*mōlek*), but 'as a *mōlek*', i.e. a votive or 'vowed' offering. On Jdg. 11:30f., see *JEPHTHAH. A vow may be either to perform (Gn. 28:20ff.) or abstain from (Ps. 132:2ff.) an act in return for God's favour (Nu. 21:1-3) or as an expression of zeal or devotion towards God (Ps. 22:25). It is no sin to vow or not to vow, but, if made—presumably uttered (Dt. 23:23)—a vow is as sacredly binding as an *oath (Dt. 23:21-23). Therefore, a vow should not be made hastily (Pr. 20:25); for the person vowing, e.g. to offer a sacrifice, then enters into 'the sphere of the offering' and is released only when the sacrifice is made (Pedersen). To have this fulfilment is the state of the happy man (Jb. 22:27), and the character of Israel's future blessedness (Na. 1:15). On the other hand, to substitute a blemished animal for the one vowed reveals a sin and brings God's curse (Mal. 1:14).

What is already the Lord's (e.g. firstlings, tithes (Lv. 27:26)), or an abomination to the Lord (Dt. 23:18), cannot be vowed or consecrated; but since a first-born child might be redeemed (Lv. 27; Nu. 3:44ff.), it is proper for Hannah to give Samuel to the Lord as a *Nazirite (1 Sa. 1:11). A vow has no virtue in itself (Ps. 51:16ff.), and may be only the pious pretence of a treacherous (2 Sa. 15:7ff.) or immoral (Pr. 7:14) person. Thus, in the NT the religionist's vow of Corban is condemned by Christ (Mk. 7:11). Paul's (probably not Aquila's) vow (*euchē*) no doubt was a temporary Nazirite vow—a sincere and proper expression of the ancient Hebrew faith (Acts 18:18, cf. 21:23).

W

WAFER. Heb. *rāqīq*, 'thin cake', refers to homemade *bread, named from its thinness (Ex. 29:2; Nu. 6:15, etc.; cf. Arab. *warak*, 'foliage', 'paper'). Heb. *sappihit*, 'a cake', appears once only (Ex. 16:31).

J.D.D.

grace of a beneficent God who delights to give his people all things richly to enjoy. The knowledge of these gratuitous rewards is given to us in order to strengthen our perseverance in the way of righteousness.

D.B.K.

WAGES. Basically the payment made for services rendered. The frequency of the term in the Bible is somewhat obscured in that the Heb. and Gk. terms are sometimes translated 'reward' or 'hire'.

In OT society the hired labourer was not common. The family worked the farm. The family group included slaves and relatives whose wages would be in kind, e.g. those of Jacob as he worked for Laban. But a Levite received money as well as his keep for his service as family priest (Jdg. 17:10). And when Saul consulted Samuel, the seer, he first planned to pay the fee in kind, but finally resolved on a monetary fee (1 Sa. 9:7-8).

In primitive communities the employer had great power in fixing wages, and Jacob could complain that Laban had changed his wages ten times (Gn. 31:41). But the OT legislated to protect the wage-earner. Unscrupulous employers must not take advantage of his economic weakness. He must be given a fair wage, and paid promptly each day (Dt. 24:14-15).

Men working for wages meet us in the NT, both in actuality (Mk. 1:20) and in parable (Mt. 20:1-2; Lk. 15:17, 19; Jn. 10:13, etc.). The principle is laid down in the maxim, 'the worker earns his pay' (Lk. 10:7, NEB). Paul makes use of this to lay bare the essential truth at the heart of the gospel. 'To one who works,' he says, 'his wages (Gk. *misthos*) are not reckoned as a gift but as his due' (Rom. 4:4). Then he goes on to point out that men are saved, not by working for a heavenly wage but by trusting 'him who justifies the ungodly' (Rom. 4:5). By contrast the lost receive an exact if grim wage, for 'the wages of sin is death' (Rom. 6:23; cf. 2 Pet. 2:13, 15).

There is a sense in which the preachers of the gospel receive wages from those to whom they preach (*misthos* is used in this connection in Lk. 10:7; 2 Cor. 11:8; 1 Tim. 5:18). Our Lord himself enjoined the principle that 'those who proclaim the gospel should get their living by the gospel' (1 Cor. 9:14; cf. D. L. Dungan, *The Sayings of Jesus in the Churches of Paul*, 1971, pp. 3-80). This must not be misinterpreted, however, for in both OT and NT those who teach for the sake of money are castigated (Mi. 3:11; Tit. 1:7; 1 Pet. 5:2).

There are many passages which speak of God as giving wages or reward for righteousness (e.g. Lk. 6:23, 35; 1 Cor. 3:14; 2 Jn. 8). The metaphor is striking, but Scripture makes it clear that we are not to think of any rewards that God may give as merited in any strict sense. They are the acts of

WALK. Of the very many occasions when this verb is used in Scripture, the vast majority have the strictly literal sense of moving along or making one's way. It was the normal activity of men, but where the ability to walk had been lost it was capable of being restored by Christ. This outward healing corresponded to an inward renewal which Jesus claimed to be able to effect (Mk. 2:9). Jesus is further represented in the Gospels as walking and enabling others to walk under conditions not normally given to men (Mk. 6:48). Here again, as Matthew's Gospel makes clear, the physical act has a spiritual significance (Mt. 14:31). Walking can be understood as representative of the whole range of human activity to which an impotent man is restored (Acts 3:6).

The term is used in an anthropomorphic sense of God who walks in the garden in the cool of the evening (Gn. 3:8), and metaphorically it is applied to the heart (Jb. 31:7), to the moon (Jb. 31:26), to the tongue of the wicked (Ps. 73:9) and to the pestilence (Ps. 91:6). More frequently it stands for the whole manner of a man's life and conduct, and to the attitude which God takes up towards him, so that God can say: 'If you . . . walk contrary to me, then I also will walk contrary to you' (Lv. 26:23-24).

On occasion the term can be used in a more limited sense, referring to specific laws and observances enjoined upon men (Acts 21:21; cf. Heb. *h'lakā*, 'rule', lit. 'walk'), while in John's Gospel it sometimes assumes the connotation of unwearied activity (Jn. 11:9), and sometimes of public appearance (Jn. 7:1). Metaphorically it denotes a studied observance of the new rule of life, and it is this sense which dominates the usage of all the forms in the Epistles, where there is a frequent contrasting of the walk which was characteristic of believers in their unregenerate days, and that to which they are called through faith in Christ. Baptism is to mark decisively the dividing-point between these two (Rom. 6:4), which is as clear as the distinction between the life of Christ before and after his resurrection. This renewal of life can equally well be expressed as walking in the spirit in contrast to walking according to the flesh. The word *stoicheō*, which appears once in Acts and four times in the Pauline Epistles, is used of the setting of plants in rows, and of soldiers walking in file, but the choice of verb appears to have no special significance.

F.S.F.

WALLS. To build his earliest houses, man used any available stone or lumps of unbaked mud, roughly shaped, e.g. Jarmo in E Iraq (*Antiquity* 24, 1950, pp. 185–195), Jericho (*PEQ* 88, 1956, plates X–XI). In Palestine stone foundations were often surmounted by brick walls. The enormous city walls of the mid-2nd millennium BC consisted of a strong stone footing to contain a sloping rampart which was smoothed over with plaster, with thick brick walls, sometimes containing chambers inside them, rising above (for those at Jericho, see *ANEP*, no. 715; *PEQ* 84, 1952, plate XVI. 1; see also P. J. Parr, *ZDPV* 84, 1968, pp. 18–45).

Wooden balks were frequently incorporated into brickwork; in Egypt at least, this served to prevent warping as the mud-brick structure dried out, and to bind the whole (Petrie, *Egyptian Architecture*, p. 9). In Asia Minor, the Aegean and N Syria such beams were commonly inserted on stone foundations under or in mud-brick or stone walls (R. Naumann, *Architektur Kleinasiens*, 1955, pp. 83–86, 88–104, and figs. 63–66, 72–89)—so in houses of 14th–13th centuries BC at Canaanite Ugarit (Schaeffer, *Ugaritica*, 1, 1939, plate 19, with pp. 92–96 and fig. 90). This widespread and venerable use of brick upon wood over stone is apparently referred to in 1 Ki. 6:36; 7:12, as used by Solomon in buildings at Jerusalem. This technique was actually found in the Israelite Megiddo of Solomon or Ahab's day (Guy, *New Light from Armageddon*, Oriental Institute Communication No. 9, 1931, pp. 34–35; cf. building illustrated in Heaton, *Everyday Life in Old Testament Times*, 1956, fig. 106 opposite p. 207. See also H. C. Thomson, *PEQ* 92, 1960, pp. 57–63).

WAR. Heb. *milhāmā*, 313 times in the OT from *lāham*, 'to fight'; cf. Arab. *lahama*, 'fit close together', denoting the army in battle array (*BDB*). NT Gk. *polemos*, used 18 times.

I. Strategic importance of Palestine

The position of Palestine in relation to Mesopotamia and Egypt was truly axial. And the existence of the great Arabian desert between these two ancient centres of civilization further ensured that contact was almost always via Palestine. This contact was frequently of an inimical sort, so that Palestine could not avoid being the theatre of war—and a prize of war—for considerable periods during the last two millennia BC. Added to this was the fact that the people of Israel secured a kingdom for themselves only by embarking on a war of conquest and that, once established, they had to engage in defensive wars to fend off the Philistines who were challenging their claim to the title-deeds of Canaan. Neither were David's territorial gains made without military engagements beyond the borders of Israel. The imperial era was short-lived, however, and the divided kingdoms of Israel and Judah are soon to be seen defending themselves against their immediate neighbours, and finally against the unrelenting might of Assyria and Babylonia. It is no wonder, then, that war so stalks the pages of the OT.

II. War and religion

In the Near East generally war was a sacred undertaking in which the honour of the national god was very much at stake. The OT writers' conception of Israel's wars bears a superficial resemblance to this. The difference was that the God of Israel was transcendent and did not rise and fall with the fortunes of his people. For all that, he is 'the God of the armies of Israel' (1 Sa. 17:45) and far more involved in the struggles of his people than Marduk or Asshur were ever thought to be (cf. 2 Ch. 20:22). God himself is described as a 'man of war' (Ex. 15:3; Is. 42:13) and one of his titles is 'Lord of hosts'. This latter may refer to heavenly hosts (1 Ki. 22:19) or to Israelite armies (1 Sa. 17:45). It was God who led the armies of Israel into battle (Jdg. 4:14) so that the earliest account of Israelite triumphs was called 'the Book of the *Wars of the Lord' (Nu. 21:14). Indeed, at every stage in preparations for battle Israel's dependence upon God was acknowledged. First, enquiry was made as to whether this was the propitiatory moment for attack (2 Sa. 5:23–24); then sacrifice had to be offered. So vital did the latter preliminary seem that Saul in desperation arrogated priestly privilege to himself, lest battle be joined before the favour of the Lord had been sought (1 Sa. 13:8–12).

The battle cry had a religious significance (Jdg. 7:18, 20) and, further, acclaimed the presence of God as symbolized in the *ark of the covenant (1 Sa. 4:5–6; cf. the manner in which the arrival of the ark in Jerusalem was greeted, 2 Sa. 6:15). Because of the divine presence the Israelites could join battle in confidence of victory (Jdg. 3:28; 1 Ch. 5:22), even if the forces of nature had to be invoked to secure the victory (Jos. 10:11–14).

After battle it often happened that the Israelites observed a *ban' (*hērem*), which meant that a whole city or country, people and possessions, would be set apart for God. No Israelite was permitted to appropriate for personal needs anything or anyone belonging to a place which had been put under a ban; failure in this matter met with the direst consequences (Jos. 7; 1 Sa. 15). Sometimes the ban might not be so comprehensive as in the case of Jericho (Jos. 6:18–24), but always the right of God to the fruit of victory was being asserted. The ban was God's way of dealing with 'the iniquity of the Amorites' (Gn. 15:16) and is central to the OT concept of 'the holy war'. Moreover, if pagan tendencies were discovered among the Israelites themselves, the offending community was likewise to be put under a ban (Dt. 13:12–18). And if the whole nation incurred God's displeasure, as they often did, then the agents of retribution could be the very pagans whom God had previously repudiated (Is. 10:5–6; Hab. 1:5–11). The ultimate is reached at the end of the monarchical period, when God announces his intention of himself fighting against Judah and on the side of the Babylonians (Je. 21:5–7). For a considerable time, however, the prophetic community had enjoyed the assurance of a better hope—nothing less than the eradication of war from the earth and the inauguration of a new era of peace by a Davidic 'Prince of Peace' (Is. 9:6; cf. Is. 2:4; Mi. 4:3).

III. Method of warfare

In the days before Israel had a standing army the national militia was summoned for action by

means of the trumpet (Jdg. 3:27) or by messenger (1 Sa. 11:7). When on the offensive the Israelites set much store by military intelligence (Jos. 2; 2 Ki. 6:8-12); since there was no such thing as a declaration of war, the advantage for the assailant was all the greater. Usually expeditions were undertaken in spring when the roads were suitable (2 Sa. 11:1). Tactics naturally depended on the terrain and on the numbers involved, but in general the Israelite commanders were able, in defensive engagements at least, to exploit their superior knowledge of local geography. When it was a case of a head-on confrontation, as between Josiah and Pharaoh Neco at Megiddo, the Israelites do not seem to have fared so well. As well as the trumpet, signalling could be done by means of fires—to which practice one of the *Lachish ostraca bears testimony. The conventional methods of warfare are all represented in the OT; foray (1 Sa. 14), siege (1 Ki. 20:1) and ambush (Jos. 8) figure alongside the set piece. (*ARMOUR; *ARMY.)

IV. War in the New Testament

Extending Christ's kingdom by military means is clearly not part of the ideal of the NT. 'My kingship is not of this world; if my kingship were of this world, my servants would fight' (Jn. 18:36) was the principle enunciated by our Lord when he stood before Pilate. And his words to Peter as recorded in Mt. 26:52 cast a certain shadow on the use of force whatever the circumstances may be. But the Christian is a citizen of two worlds and has duties to both; tension between the conflicting demands is inevitable, especially since the secular powers have been ordained by God and do not 'bear the sword in vain' (Rom. 13:4). Paul availed himself not only of Roman citizenship but also of the protection of Roman troops, as when his life was threatened in Jerusalem (Acts 21). Piety was not regarded as incompatible with the pursuit of a military career, moreover, and those soldiers who inquired of John the Baptist as to their higher duty were not encouraged to desert (see Acts 10:1-2; Lk. 3:14). We are to assume, on the other hand, that the cause which bound together Matthew the tax collector and Simon the Zealot in the original Twelve required *both* to abandon their erstwhile occupations. In the early church a military career for the Christian was generally frowned upon; Tertullian is representative in his view that the two callings were incompatible, though he made allowances for those already committed to military service before conversion.

The Christian's warfare is pre-eminently a spiritual warfare and he has been equipped with all the armour necessary if he is to obtain victory (Eph. 6:10-20). It follows that he should be under military discipline, and to this end the NT abounds in injunctions couched in military terms (cf. 1 Tim. 1:18; 1 Pet. 5:9) and in military metaphors generally (cf. 2 Tim. 2:3-4; 1 Pet. 2:11). The critical battle was won at Calvary (Col. 2:15) so that the emphasis in a passage like Eph. 6:10-20 is not so much on the gaining of new ground, but on the holding of what has already been won. Victory ultimate and complete will come when Christ is revealed from heaven at the end of the age (2 Thes. 1:7-10). The final clash between Christ and the minions of darkness is depicted in chs. 16, 19 and 20 of Revelation. A decisive battle is fought at a place called *Armageddon (or Har-Magedon) according to Rev. 16:16. The most likely explanation

of the name is that which links it with the hill (Heb. *har*) of Megiddo(n). Megiddo was the scene of many great battles in history (cf. 2 Ch. 35:22) and its appearance in an apocalyptic context is most fitting. For the enemies of Christ this encounter will mean destruction (Rev. 19:17-21). But thus will Ps. 110 and a host of OT passages find their fulfilment as the era of Messianic rule begins. The harbingers of that blessed age will indeed be 'wars and rumours of wars' (Mt. 24:6), but when Messiah reigns 'of the increase of his government and of peace there will be no end' (Is. 9:7).

V. The Qumran War Scroll

Among the first *Dead Sea Scrolls to be discovered was one which has become known as 'The War of the Sons of Light against the Sons of Darkness'. It is undoubtedly a product of the community which was once installed at Qumran and it issues directions to the community in anticipation of a protracted war between the forces of good—represented by the sectaries—and the forces of evil. The war will be fought in accordance with all the laws of warfare which Moses laid down, and although victory is predetermined by God there will be serious setbacks. Prominent among the 'sons of darkness' are the 'Kittim', and these are almost certainly to be identified as the Romans. It would seem that this scroll was one of the more exotic products of the age of Rom. domination of Palestine, an age when apocalyptic was at a premium and Messianic expectation at fever pitch.

WARS OF THE LORD, BOOK OF THE.

A document mentioned and quoted in Nu. 21:14f. The quotation ends with the word 'Moab' (v. 15), but possibly fragments of poetry in vv. 17-18 and 27-30 come from the same source. The work was evidently a collection of popular songs commemorating the early battles of the Israelites. The name indicates that the Israelites viewed Yahweh virtually as their commander-in-chief, and credited him with their victories. Another similar work was probably the Book of Jashar of 2 Sa. 1:18; it is evident that this document was compiled after the time of David, and probably the Book of the Wars of the Lord appeared at the same period. A few scholars, following the LXX, would emend the text of Nu. 21:14 to excise the reference to any such document. D.F.P.

WASHBASIN (Heb. *sir rahas*). Probably a wide, shallow bowl in which the feet were washed. The word is applied in triumphant scorn to Moab's inferiority (Pss. 60:8; 108:9; AV 'washpot'). A.R.M.

WATCH. 1. The 'guard' (rsv) of soldiers (Gk. *koustodia*) mentioned in Mt. 27:65 as being deposited to watch over our Lord's tomb.

2. A measure of time into which the 12 hours of the night were divided. In Israelite times the division was threefold (Jdg 7:19). In NT times the Rom. division into four watches seems to have been used (cf. Mk. 6:48).

BIBLIOGRAPHY. H.-G. Schütz. C. Brown, in *NIDNTT* 2, pp. 132–137. J.D.D.

WATCHMAN, WATCH-TOWERS. Watchman is in Heb. *šōpēh* and *sōmēr*, in Gk. *phylax* and *tērōn*; watch-tower is in Heb. *mišpā*, *miḡdāl* and *baḥan*. Watch-towers were used for two different purposes in biblical times: (1) Towers were built from the earliest times (cf. Gn. 35:21) in the pastures to protect cattle and sheep against wild animals and thieves (cf. 2 Ch. 26:10; Mi. 4:8). It is possible that towers were erected in vineyards and cornfields for protection against thieves (cf. Is. 27:3). (2) Towers of a more complex structure were built in the defence works of larger cities. The oldest Israelite tower of this kind as yet known was excavated by W. F. Albright at Tell el-Ful, the citadel of Saul. It is a corner tower which forms part of a casemate wall.

Important is the discovery by Albright at Tell beit Mirsim in S Palestine of a gate tower with a rectangular court. This court gives access to six paved rooms probably for guests (*ARCHITECTURE). Excavations at Tell en-Nasbeh show that towers were constructed in the city's defence wall at distances of about 30 m apart and extending about 2 m to the outside. Square towers were built in early Israelite times, but later round ones were favoured. Herod erected in *Jerusalem three massive towers, called Hippicus, Phasael and Mariamme. The ground structure of the so-called 'tower of David' is possibly that of Phasael (8 m × 40 m). The *miḡdāl* and *millō* (Jdg. 9:6, 20; 2 Sa. 5:9; 1 Ki. 9:15) were citadels or a kind of acropolis in a walled city. This citadel was used as a final place of refuge after the city was conquered. A good ex-

ample of a *miḡdāl* was excavated at Beth-shean (cf. C. Watzinger, *Denkmäler*, 2, 1935, plates 19–21).

In the watch-towers were watchmen on the alert for hostile action against the city. They were also there to give word to the king of any person approaching the city wall (e.g. 2 Sa. 18:24–27; 2 Ki. 9:17–20). In time of hostility the dangers of the night were especially feared and the watchmen eagerly looked forward to the break of day (Is. 21:11). (*FORTIFICATION AND SIEGECRAFT.) F.C.F.

WATER (Heb. *mayim*, Gk. *hydōr*). In a part of the world where water is in short supply, it naturally features significantly in the lives of the people of the Bible. Nothing is more serious to them than absence of water (1 Ki. 17:1ff.; Je. 14:3; Joel 1:20; Hg. 1:11), and conversely rainfall is a sign of God's favour and goodness. An equally serious menace to life is water that has been polluted or rendered undrinkable. This was one of the plagues of Egypt (Ex. 7:17ff.). The Israelites found the water at Marah bitter (Ex. 15:23), and the well at Jericho was unpleasant in Elisha's day (2 Ki. 2:19–22).

It was common practice in time of warfare for an invading army to cut off the water-supply of beleaguered cities, as did Jehoshaphat with the wells of Moab (2 Ki. 3:19, 25), and Holofernes at

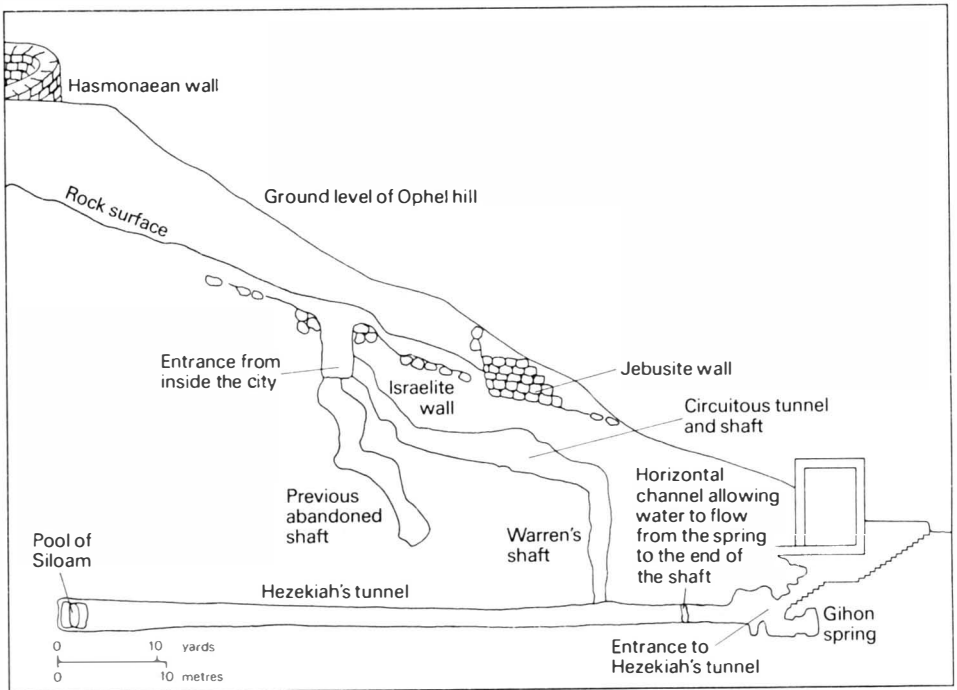

Bethulia (Judith 7:7ff.). Hezekiah averted this danger by the construction of the tunnel which exists to this day in Jerusalem, running from the Virgin's fountain (Gihon), outside the city walls of his day, to the Pool of *Siloam (2 Ch. 32:30). Under conditions when water had to be rationed (La. 5:4; Ezk. 4:11, 16), the phrase 'water of affliction' could fittingly be used (Is. 30:20), but the context usually suggests punishment (1 Ki. 22:27; 2 Ch. 18:26).

Frequently water is symbolical of God's blessing and of spiritual refreshment, as in Ps. 23:2; Is. 32:2;

The 'pool of Siloam' and the mouth of Hezekiah's tunnel.

WATER

Cross-section of the water-system of ancient Jerusalem, including Hezekiah's tunnel.

35:6-7; 41:18, *etc.*, and the longing for it indicates spiritual need (Pss. 42:1; 63:1; Am. 8:11). In Ezekiel's vision of God's house (47:1-11) the waters that poured out from under the threshold represented the unrestricted flow of Yahweh's blessings upon his people (*cf.* Zc. 14:8). Jeremiah describes Yahweh as 'the fountain of living waters' (2:13; 17:13), a phrase that is echoed in Jn. 7:38 of the Holy Spirit. In the NT water is connected with eternal life as the supreme blessing that God gives (Jn. 4:14; Rev. 7:17; 21:6; 22:1, 17), but in Eph. 5:26; Heb. 10:22, the predominant idea is that of baptismal cleansing for forgiveness of sins.

The idea of cleansing comes next to that of refreshment. In the ceremonial system washing was a prominent feature. Priests were washed at their consecration (Ex. 29:4); Levites too were sprinkled with water (Nu. 8:7). Special ablutions were demanded of the chief priest on the Day of Atonement (Lv. 16:4, 24, 26), of the priest in the 'water of separation' ritual (Nu. 19:1-10), and of all men for the removal of ceremonial defilement (Lv. 11:40; 15:5ff.; 17:15; 22:6; Dt. 23:11). The laver before the *tabernacle was a constant reminder of the need for cleansing in the approach to God (Ex. 30:18-21). A developed form of this ritual ablution was practised by the Qumran sect and by a variety of Jewish baptist sects which flourished before and after the turn of the Christian era. These provide the background to John's baptism of repentance and to the Christian *baptism of cleansing, initiation and incorporation into Christ.

A third aspect is that of danger and death. The story of the Flood, the drowning of the Egyptians in the Red Sea, and the general fear of the sea and deep waters expressed by the psalmist (18:16; 32:6;

46:3; 69:1ff., *etc.*) indicate that water could in Yahweh's hands be an instrument of judgment, although at the same time there was the thought of salvation through danger for the faithful people of God (*cf.* Is. 43:2; 59:19). It is hard to say to what extent these ideas were moulded by the Canaanite myths of the contest of Baal with the tyrannical waters of the sea, recounted in the Ras Shamra texts. Scandinavian scholars and Hooke's 'Myth and Ritual' school saw in these OT references, especially in the Psalms, a clue to the existence in Israel of an annual kingly festival at which the victory of Yahweh, personified by the king, was reenacted. That Heb. thought and poetry echoed the language of Near Eastern mythology is clear (*cf.* the references to Rahab, Leviathan, the dragon, *etc.*), but to hold that the Canaanite rituals themselves or the doctrinal beliefs underlying them were taken over by the religion of Israel goes beyond the evidence. See A. R. Johnson, 'The Psalms', *OTMS*, 1951.

WAY. 1. OT usage. Apart from the obvious literal uses, there are a number of closely linked metaphorical ones. They derive from the fact that one on a public path becomes known and his goal and purposes are revealed by the road he takes. Most important is the sense of God's purposes and will, *e.g.* Ex. 33:13; Jb. 21:14, 31; Ps. 67:2; Pr. 8:22; Ezk. 18:25. There follows the idea of God's commandments, *cf.* especially Ps. 119. 'Way' is used generally of man's conduct, good or bad, and even of that

of animals, e.g. Ps. 1:1, 6; Pr. 30:19–20. These usages are common in the Qumran literature.

2. NT usage. There are two developments of OT usage that call for comment. In Mt. 7:13–14 (cf. Lk. 13:24) we have the two ways in which man can walk contrasted. The earliest evidence for this thought is found at Qumran (1QS 3.13–4.26); it is common in rabbinic literature and was developed in the *Didache*, the *Epistle of Barnabas* and later patristic writings. From Acts 9:2; 19:9, 23; 22:4; 24:14, 22 we learn that 'the Way' was the oldest designation of the Christian church for itself. This is partly an extension of a use already found in the OT; cf. Is. 40:3 with 40:10–11, where God's people are seen being led along God's way. It can also be explained from Mt. 7:14 as the Way to salvation. Probably Jn. 14:6 was most influential of all, for here Christ claims to be the summing up of all 'the Way' means in relationship to God.

WAYMARK. A conspicuous mark, monument or sign, usually made of a heap of stones, to mark a track (Je. 31:21, plural; av 'high heaps'). The meaning is clear from the context and parallelism: Heb. *šyyūn*, cf. Arab. *šuwwah*, 'guide-stone'; Syr. *šwāyā*, 'stone-heap'. The same Heb. word is used of a monument or pile of stones used to mark the burial-place of the dead (Ezk. 39:15, 'sign'; 2 Ki. 23:17, av 'title'). The standing stone over Rachel's grave may have been such a marker (Gn. 35:20; *PILLAR). D.J.W.

WEALTH. The view of the OT and of the NT is that wealth is a blessing from God. Abraham is a typical example of a wealthy God-fearing man (Gn. 13:2). The psalmists celebrate material blessings. The godly man flourishes 'like a tree planted by streams of water' (Ps. 1:3). 'Wealth and riches' are in the house of the man that 'fears the Lord' (Ps. 112:1, 3). God is beneficent, and material wealth is a consequence of his bounty: 'God . . . richly furnishes us with everything to enjoy' (1 Tim. 6:17).

The possession of wealth, however, brings with it the duty of generous liberality towards those in need (1 Tim. 6:18; 2 Cor. 8 and 9). (*ALMS) Such is Christ's own example, 'Though he was rich, yet for your sake he became poor, so that by his poverty you might become rich' (2 Cor. 8:9). Faithfulness in the use of riches brings spiritual reward (Lk. 16:11); for true wealth and true riches are the spiritual blessings which God gives, rather than his material blessings (Lk. 12:33; 16:11).

The Bible recognizes that the possession of material wealth brings with it great dangers. For example, there is the danger of failing to acknowledge that God is the source of the blessing (Dt. 8:17–18; Ho. 2:8). There is the related danger of trusting in riches (Ps. 52:7). This danger of trusting in riches is so great that our Lord said that it was extremely difficult for a rich man to enter the kingdom of heaven, explaining the hard saying by the paraphrase 'those who have riches'. The disciples rightly concluded that all men have this besetting sin; to which our Lord replied that God alone can change the heart (Mk. 10:23, 27). Another spiritual danger associ-

ated with riches is materialism, that is, making riches the centre of one's interest. This was the case of the wealthy farmer in Lk. 12:21, who was not rich towards God; and of the church of Laodicea (Rev. 3:17). This temptation that wealth brings is described in the parable of the sower (Mt. 13:22), where the deceitfulness of riches chokes the word, so that it becomes unfruitful in the life. (*MAMMON.)

Covetousness, or the desire to be rich, is an evil against which the Scriptures frequently warn. The love of money is described as the root of all kinds of evil (1 Tim. 6:9–10). Consequently a spirit of contentment with such things as God has given is a virtue inculcated in both Testaments (Ps. 62:10; 1 Tim. 6:8; Heb. 13:5).

Because of the dangers of riches into which the possessor so frequently falls, rich men are, as a class, denounced in several passages of the Scriptures, e.g. Lk. 6:24f. and Jas. 5. Blessings are, however, pronounced on the poor (Lk. 6:20ff.); for poverty should quicken faith in God, which riches so frequently in practice deadens.

WEIGHTS AND MEASURES.

I. IN THE OLD TESTAMENT

Metrology, an exact science, requires legal sanction to enforce the authority granted to any particular system. In the ancient Near East standards varied between districts and cities, and there is no evidence that Israel had or used an integrated system. David (2 Sa. 14:26) and Ezekiel (45:10) pronounced certain basic standards of weight and measurements. Rabbinic tradition that standard measures were deposited in the Temple is unverified (cf. 1 Ch. 23:29). The law, however, prescribed that the Hebrew keep a just weight, measure and balance (Lv. 19:35–36; Ezk. 45:10). The prophets spoke against those merchants who, by increasing or decreasing their weights (Dt. 25:13), or using deceitful weights (Mi. 6:11) or false balances (Pr. 11:1; 20:23), defrauded their fellows. Since ancient balances had a margin of error of up to 6% (*PEQ* 74, 1942, p. 86), and few Heb. weights yet found of the same inscribed denomination have proved to be of exactly identical weight, the importance of this exhortation can be seen. These, and other variants, mean that ancient weights and measures can be given only their approximate equivalent in modern terms.

I. Weights

Ancient weights were stones (Heb. *'eben*) carved in shapes, usually with a flat base, which made them easy to handle or recognize (e.g. turtles, ducks, lions). They were often inscribed with their weight and the standard followed. Weights were carried in a pouch or wallet (Dt. 25:13; Mi. 6:11; Pr. 16:11) in order that the purchaser could check with the 'weights current among the merchants' at a given place (Gn. 23:16).

a. *Talent* (Heb. *kikkār*, 'a round'; Akkad. *bitlu*, 'a burden'; Gk. *talanton*, 'a weight'). This was the largest unit, probably named after the characteristic shape in which large metal lumps were moulded, as in the lead cover of the ephah (Zc. 5:7). It was used to weigh gold (2 Sa. 12:30, etc.), silver (1 Ki. 20:39), iron (1 Ch. 29:7) and bronze (Ex.

38:29). 666 talents of gold were included in Solomon's annual revenue (1 Ki. 10:14).

The 30 talents of gold paid by Hezekiah's tribute (2 Ki. 18:14) corresponds with the amount Sennacherib claims to have received (Annals), implying a similar talent in use in Judah and Assyria at this time. This might be the 'light' talent of about 30 kg, as inscribed Babylonian duck-weights of this value range 29.76–30.27 kg. A weight found at Tell Beit Mirsim (4,565 gm) has been interpreted as this talent of 30.43 kg or, more likely, of 28.53 kg (*i.e.* 8 minas of 570.6 gm = 8 × 50 shekels of 11.41 gm; see below).

Other Babylonian weights show that a 'heavy' or double standard talent was also in use, weighed examples ranging from 58.68 to 59.82 kg, *i.e.* about 60 kg.

b. Mina (AV 'maneh'; Heb. *māneh*; Akkad. *manū*) was a weight used to measure gold (1 Ki. 10:17), silver (Ezr. 2:69; Ne. 7:71–72) and other commodities. The talent was subdivided into 60 minas of 50 shekels or 50 minas of 60 shekels. There is some evidence that in Palestine, as at Ras Shamra, the 50-shekel mina was in use in pre-exilic times. The payment by 603,550 men of a poll-tax of 1/2 shekel (see *f. beka*) produced 100 talents, 1,775 shekels, *i.e.* 3,000 shekels to the talent (as at Ras Shamra), but could be interpreted by either standard. However, multiples of 50 shekels (*e.g.* 400—Gn. 23:15; 500—Ex. 30:24; 5,000—1 Sa. 17:5; 16,750—Nu. 31:52) seem to be conclusive evidence for the use of a 50-shekel mina.

Ezekiel's metrological reforms included the re-division of the mina to 60 shekels (45:12, *MT*, 20 + 25 + 15). Thus the new Heb. mina at 20 (*gerahs*) 60 (shekels) kept the value of the mina unchanged in relation to the Babylonian, which comprised 24 (*girū*) 50 (*šiqḷu*) = 1,200 *gerahs*.

c. The shekel (Heb. *šeḡel*; Akkad. *šiqḷu*; Aram., Ugar. *lḡl*) was common to all Semitic metrologies and was the basic weight (*šāqal*, 'to weigh'). Its value varied considerably at different times and areas:

(i) The royal shekel, set by 'the king's weight' (2 Sa. 14:26), was a standard known also in Babylonia. This was probably the 'heavy shekel' of Ras Shamra (*kbd*). Analysis of weights discovered at Gibeon, Gezer, Megiddo and Tell en-Nasbeh show a 'heavy' shekel of 12.5–12.88 gm, *i.e.* about 13 gm (0.457 oz).

(ii) The common shekel was often used to weigh metal objects (1 Sa. 17:5; Goliath's armour of 5,000 shekels = 56.7 kg or 125 lb), foodstuffs (2 Ki. 7:1; Ezk. 4:10), and commonly gold and silver, thus implying its use as a means of payment. Silver shekel coins (*sigloi*) first appeared in the reign of Darius I (*MONEY).

Some fifty inscribed weights of a shekel or multiples upwards show a variation 11.08–12.25; average 11.38 gm. This compares well with calculations based on the inscribed weights of smaller denominations (see below), which confirm a possible devaluation in post-exilic times to about 11.7–11.4 gm (0.401 oz) for the shekel.

Inscriptions on the weights use the symbols I : II : III : T : A : IA : IIA : T : - : A : = : = : x . Interpreted by Y. Yadin (*Scripta Hierosolymitana* 8, 1961, pp. 1–62) as 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 20, 30, royal (*Imk*). Others (Scott, Aharoni) however equate these markings as the equivalent of the shekel in terms of Egyp. weights, 8 shekels = 1 *deben* = 10 *qedets* (1 *deben* = about 91 gm). Thus

Egyp. hieratic numerals were engraved on the weights to show their value; I and II for 1 and 2 shekels, 4 and 8 shekel weights bearing the numbers 5 and 10 (I and A), then values in *qedets*.

(iii) The temple shekel or 'shekel of the sanctuary' (Ex. 30:13; Lv. 5:15, *etc.*) was related to a *beḡa* or 1/2 shekel (RSV 'bekah', AV 'bekah', Ex. 38:26) and 20 *gerahs* (Ezk. 45:12), though later with re-valuation it equalled 1/3 shekel (Ne. 10:32). This shekel is believed to be the *nsp* (see *d.* below), of which examples have been discovered weighing 9.28–10.5 gm, *i.e.* about 10 gm (0.353 oz) depreciating to about 9.8 gm (0.349 oz).

d. nsp or 'part' was 1/3 shekel. Thirteen examples give it a weight of about 10 gm (see *c.* above).

e. pim (Heb. *pīm* or *payim*) is mentioned only in 1 Sa. 13:21 (AV 'Yet they had a file [with mouths]') which should be translated 'and the charge was a *pim* for the ploughshares . . .' (so RSV). This weight was 1/3 of a unit (*cf.* Akkad. [šini]pu), probably of the common shekel, since twelve inscribed *pim* weights (from Lachish, Jerusalem, Gezer, Tell en-Nasbeh, *etc.*) average 7.8 gm.

f. beka (Heb. *beḡa*, 'fraction, division', AV 'bekah') was used for weighing gold (Gn. 24:22) and for paying the poll-tax said to be the equivalent of 'half a shekel, after the shekel of the sanctuary' (Ex. 38:26). Since seven inscribed weights inscribed *bq* or abbreviated as *b* have been found (at Lachish, Jerusalem, Gezer and Beth-zur), this enables a check to be made of the value of the shekel. These *bq* have an average weight of 6.02 gm.

g. hmš, '1/2' was inscribed on a turtle-shaped weight from Samaria weighing 2.499 gm. This compares with another inscribed '1/4 *nsp*, 1/4 *šql*', implying a subdivision of the Ezekiel shekel.

h. gerah (Heb. *gērā*; Assyri. *girū*). This was defined as 1/2 shekel (Ex. 30:13; Ezk. 45:12).

i. Other weights. The *peres* (Aram. pl. *parsin*) of Dn. 5:25, 28 was a subdivision of the shekel in use at Babylon (*cf.* Old Bab. *paras*), and like the *parisu* (Alalakh) possibly equal to 1/2 shekel since a term for any weight (here 'fraction') had a precise value. Thus the writing on the wall superficially implied a statement of weight 'Mina, mina, shekel, half-shekel'. The *q'sittā* (*qesitah*, RSVmg., Gn. 33:19; Jos. 24:32; Jb. 42:11) appears to be a unit of as yet unknown weight. A stone weight of Darius II is inscribed 120 *krš* = 20 mina.

The table on p. 1246 indicates the relation of these weights to each other and gives approximate modern equivalents, which should be used with caution owing to the varying standards in use in antiquity.

II. Linear measures

Linear measures were based on the 'natural' units which could be easily applied.

a. The *reed* (*qāneh*), though often denoting a measuring instrument rather than a measure (*ARTS AND CRAFTS), was of 6 cubits length and exact enough to be reckoned as a unit of length (Ezk. 40:5; *cf.* 'rod', Rev. 21:15).

b. The *cubit* (Heb. *ammā*; Akkad. *ammātu*; Lat. *cubitus*) was the distance from elbow to finger tip. This 'natural' cubit (AV 'cubit of a man', RSV 'common cubit', Dt. 3:11) was used to indicate the general size of a person (4 cubits the height of a man; *cf.* 1 Sa. 17:4; 1 Ch. 11:23) or object (Est. 5:14; Zc. 5:2). It described depth (Gn. 7:20) or distance (Jn. 21:8).

WEIGHTS AND MEASURES

A more precisely defined cubit was used for exact measurement. This *standard Hebrew cubit* was 17.5 inches (44.45 cm), slightly shorter than the common Egypt. cubit of 17.6 inches (44.7 cm). This generally accepted figure compares closely with the length given for the Siloam tunnel as '1,200 cubits', equivalent to a measured 1,749 feet (533.1 m), giving a cubit of 17.49 inches or 44.42 cm. Excavated buildings at Megiddo, Lachish, Gezer and *Hazor reveal a plan based on multiples of this measure. Also Solomon's bronze laver of 1,000 *bath* capacity (i.e. 22,000 litres; 1 Ki. 7:23–26; 2 Ch. 4:2, 5), when calculated for the capacity of a sphere, gives a cubit of 17.51 inches or 44.48 cm (R. B. Y. Scott, *JBL* 77, 1958, pp. 210–212).

The *long* or 'royal' cubit was a handbreadth ('palm') longer than the standard cubit of 6 palms (Ezk. 40:5), i.e. 20.4 inches or 51.81 cm. With this compare the Babylonian cubit of 50.3 cm (of 30 fingers length marked on a statue of Gudea) which was '3 fingers' shorter than the Egypt. cubit of 52.45 cm (Herodotus, *Hist.* 1. 178).

c. The *gōmed* (AV, RSV 'cubit') occurs only in Jdg. 3:16, where it measures a weapon, probably a dagger rather than a sword, and has thus been interpreted as a subdivision (perhaps $\frac{3}{4}$) of the cubit, or as the short cubit of 5 palms mentioned in the Mishnah.

d. The *span* (*zereṭ*), or outstretched hand from the thumb to the little finger (Vulg. wrongly *palms*), was a half-cubit (1 Sa. 17:4; Ex. 28:16; Ezk. 43:13), though 'half a cubit' could be expressed literally (Ex. 25:10).

e. The *palm* (*teṣāh*; *ṭōṣāh*) or 'handbreadth' was the width of the hand at the base of the 4 fingers (hence Vulg. *quattuor digitiis*), i.e. 7.37 cm. This was measured the thickness of the bronze laver (1 Ki. 7:26 = 2 Ch. 4:5), the edge of the tabernacle table (Ex. 25:25; 37:12), and of that in Ezekiel's Temple (40:5; 43:13). A man's life is but (a few) handbreadths in length (Ps. 39:5).

f. The *finger* or digit (*'ešba*) was a $\frac{1}{4}$ handbreadth (Je. 52:21), and the smallest subdivision of the cubit in common use in Palestine, as in Egypt and Mesopotamia. It is generally taken to be 1.85 cm.

g. *Distance*, as opposed to the measurement of objects, was in pre-exilic times reckoned by equation with a known average. It is reckoned as a 'bow-shot' (Gn. 21:16), the length of a ploughed furrow (1 Sa. 14:14), 'a day's journey' (Nu. 11:31; 1 Ki. 19:4), or 'a journey of three days' (Gn. 30:36; Ex. 3:18; Jon. 3:3). It is not proved that the latter is to be taken merely as general indication of 'a long distance' (cf. 'a seven days' journey', Gn. 31:23), for exact standards were used by the Babylonians; e.g. *bēru*, 'double-hour' march of 10.692 km (AFO 16, 1953, p. 20, n. 138).

The step (*peša*') in 1 Sa. 20:3 was used metaphorically rather than in the exact manner of the contemporary Assyrian 'foot' (= 32.92 cm). Similarly the 'stretch of the ground' (*kibrat hā'areš*, RSV 'some distance', Gn. 35:16; 48:7; 2 Ki. 5:19) was only a vague indication of distance.

In Maccabean times Hellenistic measures were introduced. Thus Beth-zur was about 5 *schoinoi* from Jerusalem (2 Macc. 11:5, RSV 'leagues'), i.e. 30.5 km at the Ptolemaic value of a *schoinos* of 6.1 km. The Alexandrian *stadion* of 184.9 m was employed. Jerusalem to Scythopolis was 600 *stades* (2 Macc. 12:29, RSV mg.), which corresponds well with the known distance of 110 km between these two cities.

III. Measures of area

Superficial areas were not specifically expressed but described by giving the necessary dimensions. Thus the square was of four sides of equal dimension (*m'rubbā'at*, AV 'four-square', 1 Ki. 7:31; Ezk. 40:47; 45:2), the circumference of a circle (1 Ki. 7:23) and the diameter the distance 'from brim to brim' (2 Ch. 4:2).

The area of land was calculated empirically. Thus vineyards (Is. 5:10) or a field (1 Sa. 14:14) could be measured by the *šemed* ('acre'), i.e. the area a pair of yoked animals could plough in a day (cf. Arab. *faddan*). In Babylonia this was defined as 6,480 square cubits = $\frac{2}{3}$ acre (1,618 sq m). This in later times was the Lat. *jugum*, *jugerum* of 28,800 square Rom. feet = $\frac{1}{4}$ acre (2,529 sq m). Another method was to estimate the area by the amount of seed (*s'ā*) required to sow it (Lv. 27:16; 1 Ki. 18:32). In the Hellenistic period this was $3\frac{1}{2}$ seahs to a *jugerum* of land, i.e. 0.173 acre (700 sq m) per seah or 5.19 acres (2.1 hectares) per homer of 30 seahs (*JBL* 64, 1945, p. 372), which seems to have improved to 0.193 and 5.79 acres respectively by the 2nd century AD.

The specific measurement of the pastures round the levitical cities (Nu. 35:4–5) presents difficulties. It may have been an area 2,000 cubits square (v. 5), the centres of the sides of which were also reckoned as at a radius of 1,000 cubits from the city walls (v. 4).

IV. Dry measures of capacity

The terms used derive originally from the receptacles which contained an agreed amount and thus served as a measure.

a. *Homer* (Heb. *hōmer*; Akkad. *imēr*), 'a donkey load', was commonly used throughout Asia S of Anatolia and W of Euphrates in the 2nd millennium and thereafter as a measure for cereals. The *homer* is older than the *kor* (*RA* 67, 1973, p. 78); cf. Lv. 27:16; Ezk. 45:13. The collection of 10 homers of quails (Nu. 11:32) implied gluttony, whereas the return of only an ephah of wheat from a homer of seed was a picture of failure (Is. 5:10), there being 10 ephahs to the homer, which equalled about 220 litres (48.4 gallons).

b. *Kor* (RSV 'cor') (Heb. *kōr*; Sum. *gur*; Akkad. *kurrū*) was a large dry measure equal to the homer (Ezk. 45:14) used of fine flour (*šōlet*), meal (*qemah*, 1 Ki. 4:22), wheat and barley (2 Ch. 2:10; 27:5). It also appears as a liquid measure for oil (Ezk. 45:14), though 2 Ch. 2:10 and Gk. reads *bath* (cf. the parallel passage, 1 Ki. 5:11).

c. *Half-homer* (Heb. *letek*) occurs only in Ho. 3:2 as a measure for barley. As it is mentioned after the homer, Aq., Sym. and Vulg. interpret as $\frac{1}{2}$ *kōr* or $\frac{1}{2}$ homer, but there is no confirmatory evidence for this. The *letek* may be a Phoenician measure.

d. *Ephah* (Heb. *'ēpā*; Egypt. *ipt*) is the name of a vessel large enough to hold a person (Zc. 5:6–10), and thence of an exact measure (Lv. 19:36). Used only of cereals, and with subdivision of $\frac{1}{4}$ (Ezk. 45:13; 46:14) or $\frac{1}{2}$ (Lv. 5:11), it was in common use from an early period (Jdg. 6:19). The ephah must never be diminished (Am. 8:5) but always be of equal (just) measure (Dt. 25:14; Pr. 20:10). The ephah was equal to the liquid measure *bath*, both being $\frac{1}{4}$ of a homer (Ezk. 45:11).

e. *Seah* (Heb. *s'ā*; Akkad. *sītu*) was also a measure for flour and cereals (Gn. 18:6; 1 Ki. 18:32).

f. *Omer* (Heb. *'ōmer*, cf. Arab. *'umar*, 'a small

bowl') occurs only in the account of the collection of manna (Ex. 16), being used both of the measure itself (vv. 18, 32–33) and of the amount measured (vv. 16, 22). The *omer* was equal to $\frac{1}{2}$ ephah (v. 36).

g. A 'tenth deal' (AV; Heb. *iššārōn*) was a measure used for flour (Ex. 29:40; Nu. 15:4) equal to $\frac{1}{10}$ ephah (Nu. 28:5), and therefore equal to the omer.

h. *Cab* (Heb. *qab*), a measure of capacity which occurs only in 1 Ki. 6:25, where among the inflated prices at the siege of Samaria $\frac{1}{4}$ *qab* of carob pods was sold for 5 (shekels) of silver. The *cab* = $4\text{log} = \frac{1}{2}$ seah = $\frac{1}{2}$ hin = about 2 pints.

i. The 'measure' (Heb. *šālīs*) of Ps. 80:5; Is. 40:12 is literally ' $\frac{1}{3}$ ', but no unit is expressed, so that the measure of capacity is unknown.

It will be noted that these dry measures combine the Babylonian sexagesimal reckonings (1 *kur* = 30 *sutu* = 180 *qa*) with the decimal system (also employed by the Assyrians). See the table on p. 1246.

V. Liquid measures of capacity

a. *Bath* (Heb. *bat*; Gk. *batos*, Lk. 16:6 only) was the equivalent in liquid of the ephah (Ezk. 45:11, 14). It was used to measure water (1 Ki. 7:26), wine (Is. 5:10) and oil (2 Ch. 2:10; so also 1 Ki. 5:11). It was an exact and standard measure (Ezk. 45:10, about 22 litres).

b. *Hin* (Heb. *hin*; Egyp. *hnhw*, 'a pot') was used of the vessel employed as a measure (Lv. 19:36) and of the measure of water (Ezk. 4:11), oil (Ex. 29:40) or wine (Lv. 23:13). According to Josephus (*Ant.* 3. 197; 4. 234), the *hin* was equal to $\frac{1}{2}$ *bath*.

c. *Log* (Heb. *lōg*) is used only in Lv. 14:10 as a measure of oil in the ceremony for the purification of the leper. According to the Talmud, this was equal to $\frac{1}{4}$ *hin*.

The values of these liquid measures depend upon that of the *bath*. This is uncertain, since the only inscribed vessels marked *bt* (Tell beit Mirsim) and *bt mlk* (Lachish) are fragmentary and cannot be reconstructed with certainty; thus the value of the *bath* has been variously calculated between 20.92 and 46.6 litres. On the assumptions that the *bath* measure was half the size of the 'royal *bath*' and that these inscriptions denoted the full capacity of the vessels, the proposal of 22 litres in biblical times (Albright) and 21.5 litres in Hellenistic times is usually adopted as a basis for calculation, since it receives some support from the comparison with the capacity of Solomon's laver, which held 1,000 *baths* = 22,000 litres. For weights in the Talmud, see *EJ*, 16, 1971, pp. 388–392.

2. IN THE NEW TESTAMENT

I. Weights

Only two weights are mentioned in the NT. The *litra* of Jn. 12:3; 19:39 (cf. Lat. *libra*: 'pound')—from this weight we have our abbreviation *lb* for pound) was a Rom. measure of weight equivalent to 327.45 gm. In Rev. 16:21 the adjective *talantaios*, 'weighing a talent'; rsv 'hundredweight', is used to describe hailstones: Arndt maintains that this talent equalled 125 *librae*, and so would be about 41 kg in weight, but *HDB* calculates it as weighing about 20.5 kg.

II. Linear measures

a. The *cubit*. As in OT times, measurements were related to the parts of the body, and the basic unit was still the *pēchys* ('forearm') or cubit. Under the Rom. empire there were two different measurements for a cubit: the Rom. cubit of 6 hand-breadths of 74 mm = 44.4 cm, and the Philetarian cubit of 52.5 cm. Julian of Ascalon relates that the latter system of measurement was customary in Palestine and Egypt (Jeremias, p. 11n.), and this is probably the length indicated in Jn. 21:8; Rev. 21:17. In Mt. 6:27; Lk. 12:25 the term is also used.

b. The *orgyia* ('fathom', Acts 27:28) was the length of the outstretched arms, and so was approximately 1.8 m. This was a Gk. unit of measure, derived from the verb *oregō*, 'I stretch'. Herodotus (2. 149) says that it equalled 6 Gk. feet or 4 Gk. cubits.

c. The *stadion* ('furlong' AV, Lk. 24:13; Jn. 6:19; 11:18; Rev. 14:20; 21:16) was 100 *orgyiai* and equalled about 185 m. As the race-course at Olympia was supposed to be exactly a stade long, the word was used for an arena, as in 1 Cor. 9:24—hence the English 'stadium'.

d. The *milion* ('mile', Mt. 5:41) was a Gk. transliteration of the Rom. measurement *mille passuum*, 'a thousand paces'. This was 1,478.5 m, or 8 stades, and was calculated on the basis of 5 Rom. feet (each of 29.57 cm) to the pace (1.48 m).

e. The Sabbath day's journey mentioned in Acts 1:12 was not a proper measurement, but rather the product of rabbinical exegesis of Ex. 16:29 and Nu. 35:5 (cf. Lumby in *CGT*, *ad loc.*). It was fixed at 2,000 cubits (Talmud *'Erubin* 51a) and was called *t'hum ha-sabbāt*—the limit of the sabbath.

III. Measures of area

None is used in the NT, but the basic unit under the Rom. empire was the *jugerum*, or acre, calculated on the amount of land a yoke of oxen could plough in a day. This was estimated at one *actus*, or furrow (36.6 m), by two (73.2 m); so the *jugerum* was the equivalent of 2 square *actus*, or 0.27 hectares, about $\frac{1}{4}$ acre.

IV. Dry measures of capacity

a. The *choenix* ('quart', Rev. 6:6), is variously estimated at $1\frac{1}{2}$ –2 pints, and the best calculation would be just over 1 litre. It was a Gk. measure, and Herodotus (7. 187) narrates that it was the daily ration of grain per man in Xerxes' invasion army.

b. The *saton* (Aram. *sā'tā*, Heb. *s'ā*) was the *s'ā* of OT times: Josephus (*Ant.* 9. 85) rates this as equivalent to $1\frac{1}{2}$ *modii* (see below). It is the measure mentioned in Mt. 13:33; Lk. 13:21, where leaven is added to 3 *sata* of wheat-flour: each would be about 12.3 litres.

c. The *koros* of Lk. 16:7 (a 'measure of wheat') was Heb. *kōr*. Josephus (*Ant.* 15. 314) equates it to 10 Attic *medimnoi*, and, as the *medimnos* contained 48 *choinikes*, this would rate the *koros* at 525 litres. Since Ezk. 45:11 rates the *baton* as the tenth of a *koros*, it is generally regarded that Josephus here mistook the *medimnos* for the *metrētēs*, and that the *koros* contained 10 *metrētai*, about 395 litres. It was used for both dry and liquid measure.

d. The *modios* ('bushel') of Mt. 5:15; Mk. 4:21; Lk. 11:33 was Lat. *modius*, and all three references use the word to denote the vessel used to measure this amount. It was a grain measure containing 16

WEIGHTS AND MEASURES

sextarii: 6 *modii* equalled the Gk. *medimnos* (Cornelius Nepos, *Attica* 2). Thus the *modius* contained 8 *choinikes* and was about 8.75 litres.

V. Liquid measures of capacity

a. The *xestēs* of Mk. 7:4 (RSV 'pot') is again a reference to the vessel used for measuring this capacity, and is taken by most scholars (but see Moulton and Howard, *Grammar of New Testament Greek*, 2, 1929, p. 155) to be a corruption of the Lat. *sextarius*. This was a liquid and dry measure of $\frac{1}{6}$ *modius*, about 500 cc.

b. The *batos* ('measure' of oil in Lk. 16:6) is a Gk. form of Heb. *bat* (see above). According to Josephus (*Ant.* 8. 57), it contains 72 *sextarii* or $4\frac{1}{2}$ *modii*—about 39.5 litres.

c. The *metrētēs* mentioned in Jn. 2:6 (AV 'firkin') was a Gk. liquid measure approximately equivalent to the *bat*, and so containing about 39.5 litres. Thus the stone water-pots used in the wedding-feast at Cana held between 80 and 120 litres each.

BIBLIOGRAPHY. R. G. Bratcher, 'Weights, Money, Measures and Time', *BTh* 10.4, 1959; R. Gower, *The New Manners and Customs of Bible Times*, 1987. D.H.W.

WELL. I. An artificial shaft sunk to reach underground water, percolating or collected (Heb. *b'ēr*; Arab. *bir*; Gk. *phrear*), whereas a spring (Heb. and Arab. *'ayin*; Gk. *pēgē*) is the work of nature. AV confusion of terminology is due to the same confusion in 17th-century English, reflected also in Milton. Heb. and Gk. are unambiguous.

2. An artificial shaft sunk to reach a natural underground spring—a fusion of concepts in which the terms could be interchanged correctly. There is a reasonable presumption that the well from which Rebekah drew (Gn. 24) was of this type—likewise Jacob's well at Shechem, where Jesus met the woman of Samaria (Jn. 4). This would explain satisfactorily the puzzling alternation of words in these two chapters.

3. A *cistern or pit, large or small, public or private, for collecting rain-water: Heb. *bôr*; Gk. *lakkos*. The well at Bethlehem (I Ch. 11:17–18) was probably an example.

4. A shaft, dry or with miry clay, used as a dungeon, for which the same Heb. word is used (Gn. 37:24; Ps. 40:2; Je. 38:6, etc.). The praise of the well of living water in folk-song is reflected in Nu. 21:17–18.

In the arid parts of the E *water may become as precious as gold. Wells were, and still remain, the subjects of fierce disputes and even strife (cf. Gn. 21:25, etc.). They became hereditary, and were exploited by human monopolies at an earlier date than land. R.A.S.

WHEEL. The earliest attested wheels (Heb. *galgal*, *ōpān*) are clay models of chariot wheels and fragments of a potter's wheel (cf. Je. 18:3, Heb. *ōbḡnayim*) of the 4th millennium BC (see C. L. Woolley, *Ur Excavations*, 4, 1956, p. 28, plate 24). Early wheels were made from wooden planks pegged together, with leather tyres (see *ANEP*, nos. 163, 169, 303), but with the displacement of the ass by the horse c. 1500 BC lighter spoked wheels came into use (see *ANEP*, nos. 167–168, 183–184). The bronze stands made for Solomon's Temple were

miniature chariot wheels, with axles, rims, spokes and hubs (I Ki. 7:33). Daniel saw the Ancient of Days seated on a throne with wheels of fire (7:9), and Ezekiel gives a description of the wheels in his visions of the chariot of God (1; 10). The rumble of chariot wheels betokened the approach of an enemy (Je. 47:3; Na. 3:2), but all those hostile to God's people will be blown away like whirling dust (Ps. 83:13; Is. 17:13). In later Heb. *galgal* is used *pars pro toto* for wagon (Ezk. 23:24; 26:10). Wheels were also used as part of the machinery for drawing water (Ec. 12:6). On the wheel of birth (Jam. 3:6, AV 'course of nature'), see D. J. Mo., *Jesus*, *TNTC*, 1985, pp. 125f. A.R.M.

WHIRLWIND. The Eng. translation of Heb. *sūpā* applies loosely to any violent storm and is not restricted to a rotary movement of air (Jb. 37:9; Pr. 1:27; 10:25; Is. 5:28; 17:13; 21:1; 66:15; Je. 4:13; Am. 1:14; Na. 1:3). In AV it is translated 'storm' in other passages (Jb. 21:18; Ps. 83:15; Is. 29:6). *s'ārā* is used synonymously, translated 'whirlwind' when it stands alone (e.g. 2 Ki. 2:1; Jb. 38:1; 40:6; Is. 40:24; 41:16) but sometimes 'storm' (Ps. 107:29). RV uses the expression only once in its technical sense (Je. 23:19).

The whirlwind is used aptly as a figure for the sudden attack of the invader (Is. 5:28; Je. 4:13; Dn. 11:40; Am. 1:14f.). It also symbolizes divine judgment because of its sudden motion (Ps. 18:10; Na. 1:3) and divine wrath (Ps. 58:9; Pr. 10:25; Is. 17:13; 28:17; 66:15; Ho. 8:7). It is similarly used of the Messianic wrath, described in Mt. 7:24–27. (*WIND.) J.M.H.

WICKED. In the OT, Heb. *rāšā'*, 'wicked, ungodly', and *ra'*, 'evil', are most common; Gk. *ponēros*, 'bad, malignant', as contrasted with *chrēstos*, is the usual NT word, although *athesmos*, *anomos* and *kakos* are also used. While the term is often used in the general sense of 'wrong' (Ps. 18:21), it refers more specifically to evil, not in its moral or judicial sense, but in its active form, i.e. mischief (Nu. 16:26). As such, it denotes perversity of mind (Pr. 15:26; Rom. 1:29) by which the natural man surrenders himself to evil impulses (Ps. 10:1–11). Wickedness has its seat in the heart (Je. 17:9; Mk. 7:21–23), and is inspired by Satan (Mt. 13:19; I Jn. 3:12). It is progressive (Gn. 6:5) and contagious (I Sa. 24:13) in its manifestation. The wicked man is utterly perverse, finding unholy delight in the infliction of injury (Pr. 21:10). Jesus often characterized the *sin of his contemporaries as wickedness (Mt. 16:4), while Peter declares that wicked men crucified the Saviour (Acts 2:23).

The Psalms frequently contrast the righteous and the wicked, raising the question of the prosperity of the wicked, and offering suggestions which provide a partial answer (Pss. 37:35–36; 9:15, *et passim*). But this question, which is part of the general problem of evil, is insoluble in the light of the OT revelation. Throughout the Scriptures there is a strong insistence on the certainty of punishment for all who are wicked (Ps. 9:17; Je. 16:4; Mt. 13:49). It is significant to note that *ponēros* is never applied to believers; in I Cor. 5:13 the reference is to a nominal member of the Christian community. It is by wicked works that unbelievers are alienated from God (Col. 1:21), but those who are progressing in faith have overcome 'the wicked

one' (1 Jn. 2:13), for the shield of faith is a sure defence against his attack (Eph. 6:16). A.F.

WIDOW.

I. In the Old Testament

Heb. legislation has always been solicitous for widows and, together with the fatherless and strangers, made special provision for them (e.g. Ex. 22:21f.; Dt. 14:29; 16:11, 14; 24:17; cf. Je. 7:6). Even in pre-Mosaic times there was recognition of the predicament of the childless widow and arrangements made for her (Gn. 38; *MARRIAGE, IV), and these were formally enjoined under Moses (Dt. 25:5ff.; *KIN).

Since the bearing of children was accounted a great honour, and one still more enhanced later when the nation looked for Messiah (Is. 11:1), widowhood in such as were not past the age of childbearing, as well as *barrenness, was reckoned a shame and a reproach (Is. 4:1; 54:4). The widows of kings, however, continued in their widowhood, and were the property, though not always the wives, of the new king. To ask any of them in marriage was tantamount to a claim to the kingdom (1 Ki. 2:13ff.).

As widows are often overlooked by men, God has a peculiar concern for them (Pss. 68:5; 146:9; Pr. 15:25), and kindness to them was commended as one of the marks of true religion (Jb. 29:13; Is. 1:17). The oppression and injury of widows, on the other hand, would incur dire punishment (Ps. 94:6; Mal. 3:5). Jerusalem and Babylon are likened in their desolation to widows (La. 1:1; Is. 47:8), and the effect of violent death compared to that of wives becoming widows (La. 5:3; Ezk. 22:25). (*ORPHAN.)

II. In the New Testament

The Christian church inherited from Judaism the duty of providing for the widow. The Jewish-Christian author of James states categorically that to give assistance to widows in their distress is a mark of the kind of religion with which God can find no fault (1:27). Even if widows were left comparatively well-off, they needed to be protected from the unscrupulous. One of the things that Jesus condemned in some Pharisees was that they 'devoured widows' houses' (Mk. 12:40); and he was probably drawing an illustration from contemporary life when he told the story of the widow who by her persistence in demanding justice was wearing out the judge! (Lk. 18:1-5). More often widows were left in penury. One of the earliest good works that engaged the attention of the church at Jerusalem was an organized daily distribution of alms to widows in need; and seven men were appointed to see that the Gk.-speaking widows were not overlooked in favour of those who spoke Aramaic (Acts 6:1-4). Acts also gives a striking illustration of charity shown by one individual when, after the death of Tabitha, it records that 'all the widows' at Joppa assembled to testify before Peter to the kindness she had shown to them (9:39).

Paul told the Corinthians that he thought it good that widows should not marry again, but he was far from making this a rule. Remarriage, however, should be within the Christian fellowship (see 1 Cor. 7:8-9, 39). On the other hand, in writing to Timothy, he expresses his desire that *young* widows

should marry again; and urges that widows 'in the full sense', i.e. those who have no relatives to support them, and who are regular in their religious duties, should be given a special status and be a charge upon the church. A roll should be kept of these, and only those should be placed upon it who were over 60 years of age and who had given evidence of their good works, by caring for children, by hospitality or by rendering service to those of God's people who were in distress (1 Tim. 5:9-10).

In Rev. 18:7 'widow' is used metaphorically of a city bereaved of its inhabitants and stricken by plague and famine.

R.V.G.T.

WILDERNESS. In Scripture the words rendered 'wilderness' or 'desert' include not only the barren deserts of sand dunes or rock that colour the popular imagination of a desert, but also steppe-lands and pasture lands suitable for grazing livestock.

The commonest Heb. word is *midbār*, a word already well-attested in Canaanite epics from Ugarit (14th century BC, going back to earlier origin) as *mdbr* (Gordon, *Ugaritic Manual*, 3, 1955, p. 254, No. 458). This word can indicate grassy pastures (Ps. 65:12; Joel 2:22), supporting sheep (cf. Ex. 3:1), sometimes burnt up by the summer droughts (Je. 23:10; Joel 1:19-20), as well as denoting desolate wastes of rock and sand (Dt. 32:10; Jb. 38:26). The same applies to Gk. *erēmos* in the NT; note that the 'desert' (AV; RSV 'lonely place') of Mt. 14:15 does not lack 'much grass' (Jn. 6:10).

The Heb. *y'simôn*, sometimes rendered as a proper name 'Jeshimon', is used of relatively bare wildernesses in Judaea in 1 Sa. 23:19, 24; 26:1, 3. The wilderness viewed from Pisgah (Nu. 21:20; 23:28; cf. Dt. 34:1ff.) would doubtless include the marly waste-lands on either side of the Jordan's channel before it entered the Dead Sea, the slopes of Pisgah and its range into the Jordan valley, and perhaps the edges of the Judean wilderness opposite, behind Jericho and N and S of Qumran. For general references, cf. Dt. 32:10; Ps. 107:4; Is. 43:19. Besides its use as a proper name for the long rift valley from the Dead Sea to the Gulf of Aqabah, the term **rāḥā* can be used as a common noun for steppe or scrubland where wild creatures must seek out their food (Jb. 24:5; Je. 17:6) or else of barren desert (Jb. 39:6 in parallel with saltflats). The words *siyyā*, 'dry lands' (Jb. 30:3; Ps. 78:17) and *tōhū*, 'empty waste' (Jb. 6:18; 12:24; Ps. 107:40) likewise refer to barren, uninhabitable deserts.

K.A.K.

WILDERNESS OF WANDERING.

I. Limits

After leaving Egypt by crossing the Sea of Reeds (Ex. 14:10-15:27), and until they finally by-passed Edom and Moab to reach the Jordan (Nu. 20ff.), Israel spent long years in the intervening territory, comprising (1) the peninsula of Sinai flanked by the Gulfs of Suez and Aqabah and separated from the Mediterranean on the N by the dusty 'way of the land of the Philistines' that linked Egypt to Palestine, (2) the long Arabah rift-valley extending

WILDERNESS OF WANDERING

S from the Dead Sea to the Gulf of Aqabah, and (3) the wilderness of Zin S of Beersheba.

II. Physical features

The road from Egypt by 'the way of the land of the Philistines' to Raphia (Rafa) and Gaza, runs roughly parallel to the Mediterranean coast, passing through and along the N fringes of a barren sandy desert—the wilderness of *Shur—which lies between the line of the modern Suez Canal and the Wadi el-'Arish (River of *Egypt), and then through cultivable land which becomes more evident between El-'Arish and Gaza (*NEGEB; cf. A. H. Gardiner, *JE* 6, 1920, pp. 114–115; C. S. Jarvis, *Yesterday and Today in Sinai*, 1931, p. 107); 30–60 km S of the coast road runs the 'way of the wilderness of Shur', from Egypt to the region of Kadesh and NE to Beersheba. S of this road there gradually rise the hills and wadis of the limestone plateau of Et-Tih which, from a 'base-line' N of a line drawn between the heads of the Suez and Aqabah Gulfs, occupies a great semi-circle projecting into the peninsula of Sinai. Across the plateau to Aqabah ran an ancient trade-route. S of the plateau is a triangular-shaped area of granite, gneiss and other hard, crystalline rocks forming mountain ranges, which include the traditional Mt Sinai, several peaks rising to 2,000 m. This region is separated at its NW and NE corners from the limestone plateau by sandstone hills containing deposits of copper ores and turquoise. In the E the limestone plateau of Et-Tih gives way to the jumbled rocks and wadis of the S Negeb, bounded by the Rift Valley of the Arabah between the Dead Sea and the Gulf of Aqabah.

There are wells and springs at intervals of a day's journey all down the W coast from the Suez region to Merkhah; the water-table is usually close to the gravelly ground-surface. The wadis usually have some kind of scanty vegetation; where more permanent streams exist, notably in the broad Wadi Feiran (the finest oasis in Sinai), the vegetation flourishes accordingly. There is a 'rainy season' (up to 20 days) during winter, with mists, fogs and dews.

In the past, there has been much and persistent wholesale destruction of tamarisk and acacia groves for firewood and charcoal, there being a steady export of the latter to Egypt in the 19th century (Stanley, *Sinai and Palestine*, 1905 edn., p. 25). Thus, in ancient times the Sinai peninsula may have had more vegetation in its wadis and consequently better rains; but there has apparently been no fundamental climatic change since antiquity.

III. The route of the journeyings

The precise route taken by Israel from the Sea of Reeds (between Qantara and Suez; *RED SEA) to the edges of Moab is still conjectural, as almost none of the names of Israelite stopping-places has survived in the late, fluid and descriptive Arabic nomenclature of the peninsula of Sinai. Various stopping-places were named by the Israelites in relation to events that occurred on their travels, e.g. Kibroth-hattaavah, 'graves of craving' (Nu. 11:34), and they left no sedentary population behind to perpetuate such names. Furthermore, the traditions attaching to the present Mt Sinai (Gebel Musa and environs) have not been traced back beyond the early Christian centuries; this does not of itself prove those traditions wrong, but permits

of no certainty. The traditional route ascribed to the Israelites is certainly a possible one. From the wilderness of *Shur they are usually considered to have passed S along the W coast-strip of the Sinai peninsula, Marah and Elim often being placed at 'Ain Hawarah and Wadi Gharafen respectively. That the camp after Elim (Ex. 16:1) is 'by the *yam sūp*' (Heb. of Nu. 33:10), i.e. the Sea of Reeds, or here by extension the Gulf of Suez (cf. *RED SEA), indicates clearly that Israel had kept to the W side of the Sinai peninsula and not gone N (the way of the Philistines). The Gulf of Aqabah is too far away to be the *yam sūp* in this passage. Somewhat later, Israel encamped at Dophkah. This name is sometimes considered to mean 'smeltery' (G. E. Wright, *Biblical Archaeology*, 1957, p. 64; Wright and Filson, *Westminster Historical Atlas of the Bible*, 1957 edn., p. 39) and so to be located at the Egp. mining centre of Serabit el-Khadim. For copper and especially turquoise mining in that area, see Lucas, *Ancient Egyptian Materials and Industries*, 1962, pp. 202–205, 404–405; J. Cerný, A. H. Gardiner and T. E. Peet, *Inscriptions of Sinai*, 2, 1955, pp. 5–8.

As Egp. expeditions visited this region only during January to March (rarely later), and did not live permanently at the mines (cf. Petrie, *Researches in Sinai*, 1906, p. 169), the Israelites would not meet them there, as they left Egypt in the month Abib (Ex. 13:4), i.e. about March (cf. *PLAGUES OF EGYPT), and left Elim a month later (Ex. 16:1), i.e. about April. However, Dophkah could be any copper-mining spot in the metalliferous sandstone belt across S-central Sinai (which favours a S route for Israel in any case). Rephidim is sometimes identified with Wadi Feiran, sometimes with Wadi Refayid, and Mt Sinai with the summits of Gebel Musa (or, less likely, Mt Serbal near Feiran). See the works of Robinson, Lepsius, Stanley and Palmer (Bibliography below). Beyond Mt Sinai, Dhahab on the E coast might be Dizahab (Dt. 1:1; so Y. Aharoni, *Antiquity and Survival*, 2, 2/3, 1957, pp. 289–290, fig. 7); if so, Huderah on a different road is less likely to be the Hazeroth of Nu. 11:35; 33:17–18. The next fixed points are Kadesh-barnea (*KADESH) on the borders of the wilderness(es) of Zin and Paran (Nu. 12:16; 13:26) at 'Ain Qudeirat or 'Ain Qudeis and the surrounding region, including 'Ain Qudeirat, and Ezion-geber at the head of the Gulf of Aqabah (Nu. 33:35f.).

For the phenomenon of the earth swallowing up Korah, Dathan and Abiram (Nu. 16), a most interesting explanation was offered by G. Hort, *Australian Biblical Review* 7, 1959, pp. 2–26, especially 19–26. She would locate this incident in the Arabah Rift Valley between the Dead Sea and the Gulf of Aqabah. Here are to be found mudflats known as *kewirs*. A hard crust of clayey mud overlying layers of hard salt and half-dry mud, about 30 cm thick, eventually forms over the deep mass of liquid mud and ooze. When this crust is hard it may be walked on with impunity, but increased humidity (especially rainstorms) will break up the crust and turn the whole into gluey mud. Dathan, Abiram and Korah's adherents withdrew from the main camp probably to one of these deceptively level, hard mudflats. From his long years of experience in Sinai and Midian (Ex. 2–4), Moses had probably learnt of this phenomenon, but not so the Israelites. When a storm approached he saw the danger and called the Israelites away from the tents

of the rebels. The crust broke up and the rebels, their families and their possessions were all swallowed up in the mud. Then the storm broke, and the 250 men with censers were struck by lightning—smitten down by the fire of the Lord.

Miss Hort thought that this incident occurred at Kadesh-barnea, and therefore that Kadesh should be located in the Arabah. But there are possible reasons for locating *Kadesh in the region of 'Ain Qudeis and 'Ain Qudeirat, and in fact Nu. 16 does *not* state that the revolt(s) of Korah, Dathan and Abiram occurred at Kadesh. It should be noted that it is the whole, unitary account of the twin rebellions in Nu. 16 and their awesome end that alone makes sense and fits the physical phenomena in question; the supposed sources obtained by conventional documentary literary analyses severally yield fragmentary pictures that correspond to no known realities.

The long list of names in Nu. 33:19–35 fall into the 38 years of wandering, and cannot be located at present. The precise route past Edom (Nu. 20:22ff.; 21; 33:38–44) is also obscure. Some of the incidents in these long journeys reflect the natural phenomena of the area. The repeated phenomenon of water coming from the smitten rock (Ex. 17:1–7; Nu. 20:2–13) reflects the water-holding properties of Sinai limestone: an army NCO once produced quite a good flow of water when he accidentally hit such a rock face with a spade! See Jarvis, *Yesterday and Today in Sinai*, 1931, pp. 174–175. The digging of wells as recorded in Nu. 21:16–18 (cf. Gn. 26:19) reflects the known occurrence of sub-surface water in various regions of Sinai, the Negeb and S Transjordan (see references above, and N. Glueck, *Rivers in the Desert*, 1959, p. 22). The references to the catching of quail (Ex. 16:13; Nu. 11:31–35) have been interpreted by some as requiring a N route for the Exodus along the Mediterranean (e.g. Jarvis, *op. cit.*, pp. 169–170; cf. J. Bright, *A History of Israel*, 1960, p. 114, after J. Gray, *VT* 4, 1954, pp. 148–154; G. E. Wright, *Biblical Archaeology*, 1957, p. 65). But that route was explicitly forbidden to Israel (Ex. 13:17f), and in any case the quails land on the Mediterranean coast of Sinai (from Europe) only in the *autumn* and at dawn, whereas Israel found them in the *spring* in the evening, in or following Abib, i.e. March (Ex. 16:13), and a year and a month later (Nu. 10:11; 11:31). These two points exclude the Mediterranean coast from Israel's route on these two occasions, and directly favour the S route by the Gulfs of Suez and Aqabah *via* 'Mt Sinai'. The quails return to Europe in the spring—the season when Israel twice had them—across the upper ends of the Gulfs of Suez and Aqabah, and in the evening (Lucas, *The Route of the Exodus*, 1938, pp. 58–63 and refs., and p. 81, overstressing Aqabah at the expense of Suez).

A minority view would make Israel cross the Sinai peninsula more directly to the head of the Gulf of Aqabah and locate Mt Sinai in Midian. Among the best advocates of such a view is Lucas (*The Route of the Exodus*, 1938) who does not invoke non-existent active volcanoes as some have done. However, this view is no freer of topographical difficulties than any other, and fails entirely to account for the origin of the traditions of the Christian period that attached themselves to the peninsula now called Sinai and not to Midian or NW Arabia.

For a good comparative table of the data on the

route and stopping-places on Israel's wanderings in Exodus–Numbers, Nu. 33 and Deuteronomy, see J. D. Davis and H. S. Gehman, *WDB*, pp. 638–639; literary background, cf. G. I. Davies, *TynB* 25, 1974, pp. 46–81; Bronze Age sites in Sinai, cf. T. L. Thompson, *The Settlement of Sinai and the Negev in the Bronze Age*, 1975.

IV. The numbers of the Israelites

When Israel left Egypt there went '600,000 men on foot' besides their families and the mixed multitude, while from a census of the men from the tribes other than Levi held at Sinai comes the total of 603,550 men over 20 who could bear arms (Nu. 2:32). These figures are commonly held to imply a total number of Israelites—men, women and children—of somewhat more than two million. That the slender resources of Sinai were of themselves insufficient to support such a multitude is indicated by the Bible itself (as well as suggested by exploration) in that Israel's chief sustenance came from God-given *manna (Ex. 16; cf. vv. 3–4, 35). Israel never went wholly without (Dt. 2:7), although the water-supply sometimes nearly failed them (e.g. at Rephidim, Ex. 17:1; Kadesh, Nu. 20:2). In any case, they would soon learn to subsist on very little water per head indeed, as illustrated by Robinson's guide in Sinai, who was able to go without water for a fortnight by living on camel's milk, while sheep and goats as well as camels can sometimes go without water for 3–4 months if they have had fresh pasture (E. Robinson, *Biblical Researches*, 1, 1841 ed., p. 221).

Furthermore, it is wholly misleading to imagine the Israelites marching in long 'columns of four' up and down Sinai, or trying to encamp all together *en masse* in some little wadi at each stop. They would be spread out in their tribal and family groups, occupying a variety of neighbouring wadis for all their scattered encampments; after they left Sinai with the ark and tabernacle (as baggage when on the move), the sites where these were successively lodged would be the focus of the various tribal camps, as in Nu. 2. In various parts of Sinai the water-table is near the ground-surface; the scattered Israelite encampments would thus often get the little they needed by digging small pits over an area. Cf. Robinson, *Biblical Researches*, 1, 1841, pp. 100 (general observations), 129; Lepsius, *Letters, etc.*, 1853, p. 306; Currelly in Petrie, *Researches in Sinai*, 1906, p. 249; Lucas, *The Route of the Exodus*, 1938, p. 68.

There have been many attempts down the years to interpret the census-lists in Nu. 1 and 26 and related figures in Ex. 12:37; 38:24–29, besides the levitical reckoning (Nu. 4:21–49) and other figures (e.g. Nu. 16:49), in order to gain from the Heb. text a more modest total for the number of the people of Israel involved in the Exodus from Egypt through Sinai to Palestine. For recent attempts, see R. E. D. Clark, *JTV* 187, 1955, pp. 82–92 (taking 'lp as 'officer' instead of '1,000' in many cases); G. E. Mendenhall, *JBL* 77, 1958, pp. 52–66 (taking 'lp as a tribal sub-unit instead of '1,000'), who refers to earlier treatments; and J. W. Wenham, *TynB* 18, 1967, pp. 19–53, esp. 27ff., 35ff. While none of these attempts accounts for all the figures involved, they indicate several possible clues to a better understanding of various apparently high figures in the OT. The fact is that these records must rest on some basis of ancient reality; the apparently high figures are beyond absolute disproof, while no

WILDERNESS OF WANDERING

alternative interpretation has yet adequately accounted for all the data involved. (*NUMBER.)

V. Later significance

Theologically, the wilderness period became the dual symbol of God's leading and providing and of man's rebellious nature typified by the Israelites (cf., e.g., Dt. 8:15-16; 9:7; Am. 2:10; 5:25 (cf. Acts 7:40-44); Ho. 13:5-6; Je. 2:6; Ezk. 20:10-26, 36; Pss. 78:14-41; 95:8-11 (cf. Heb. 3:7-19); 136:16; Ne. 9:18-22; Acts 13:18; 1 Cor. 10:3-5).

WIND (Heb. *ri'ah*). 1. The Hebrews conceived of climate as influenced by the four winds from the four corners of the earth (Je. 49:36; Dn. 7:2; Rev. 7:1). The wind may be a source of blessing or a curse, according to its source. Its vast power suggests the wind is the breath of God (Is. 40:7), controlled by him (Ps. 107:25; Pr. 30:4; Mk. 4:41), created by him (Am. 4:13) and creative for his purposes (Gn. 1:2; Ezk. 37:9).

2. As compound names for winds are impossible in Hebrew, the four cardinal points are used freely to describe other directions (Ezk. 37:9; Dn. 8:8; Zc. 2:6; Mt. 24:31; Rev. 7:1).

a. The N wind (*ri'ah šāḥōn*) is associated with cold conditions, the NE wind dispersing the rain (Jb. 37:9, 22; Pr. 25:23).

b. The S wind (*ri'ah dārōm*) is variable in its effects, whether tempestuous (Is. 21:1; Zc. 9:14) or gentle (Acts 27:13). The sirocco, usually associated with the S wind, is particularly hot and desiccating, a katabatic wind which descends from the highlands of Sinai and Arabia (Jb. 37:16-17; Je. 4:11; Ho. 12:1; Lk. 12:55). But the katabatic effects can be caused wherever there is a sudden change of gradient, so that its effects are also described as E winds (Is. 27:8; Ezk. 17:10; Ho. 13:15; Jon. 4:8). It destroys the grass, and all vegetation wilts (Ps. 103:16; Is. 40:6-8; Jas. 1:11).

c. The E wind (*ri'ah qāḏīm*) is similarly described as a dry wind from the wilderness (Jb. 1:19; Je. 4:11; 13:24), strong and gusty (Ex. 14:21; Jb. 27:21; 38:24; Je. 18:17) and with scorching heat (Am. 4:9; Ho. 13:15), affecting the vegetation (Gn. 41:6, 23, 27; Ezk. 17:10; 19:12).

d. The W wind (*ri'ah yām*) is in Arabic described as 'the father of rain' (I Ki. 18:44-45; Lk. 12:54). Distinction, however, should be made between the diurnal sea breezes which are a marked feature of the coast in summer, bringing down the high tem-

peratures, and the westerlies which blow strongly in winter, exposing all anchorages to NW gales. The wind is symbolic of nothingness (Is. 41:29) and of the transitoriness of man (Ps. 78:39), and is used also in connection with the Spirit of God (Jn. 3:8; Acts 2:2; *SPIRIT, HOLY).

e. *Euraquilo* (RV, rightly, for AV 'Euroclydon'), a hybrid formation from Gk. *euros*, 'east wind', and Lat. *aquilo*, 'north wind', and probably a nautical term, is the name given to the typhonic storm described at Paul's shipwreck (Acts 27:14). J. Smith has made a strong case for the wind being the 'north-easter' (so RSV, NEB), and that the shipwreck was, in fact, off the coast of *Malta. Recently, A. Acworth argued that the shipwreck was situated off Mljet in the Adriatic and that the wind was a south-easter. This has been conclusively challenged by C. J. Hemer, who reaffirms the location off Malta. Maltese sailors use the term 'gregale' to refer to violent winds, accompanied by sea-storms in the winter season, associated with depressions over Libya or the Gulf of Gabes. A small Rom. ship, caught in such a storm, having crossed Sicily, would welcome the sighting of the Maltese islands. For there stretched another 320 km or more of open sea between them and safety on the Tunisian coast.

WINE AND STRONG DRINK.

I. In the Old Testament

Among a considerable number of synonyms used in the OT the most common are *yayin* (usually translated 'wine') and *šēḳār* (usually translated 'strong drink'). These terms are frequently used together, and they are employed irrespective of whether the writer is commending wine and strong drink as desirable or warning against its dangers. A third word, *tirōs*, sometimes translated 'new' or 'sweet wine', has often been regarded as unfermented and therefore un-intoxicating wine, but an example such as Ho. 4:11, together with the usage of the Talmud, makes clear that it is capable of being used in a bad sense equally with the others. Furthermore, while there are examples of the grapes being pressed into a cup and presumably used at once (Gn. 40:11), it is significant that the term 'wine' is never applied to the resultant juice.

The term 'new wine' does not indicate wine which has not fermented, for in fact the process of fermentation sets in very rapidly, and unfermented wine could not be available many months after the harvest (Acts 2:13). It represents rather wine made from the first drippings of the juice before the winepress was trodden. As such it would be particularly potent and would come immediately to mind as a probable explanation of what seemed to be a drunken state. Modern custom in Palestine, among a people who are traditionally conservative as far as religious feasts are concerned, also suggests that the wine used was fermented. It may be said, therefore, that the Bible in employing various synonyms makes no consistent distinction between them.

Naturally in a land and climate particularly suited to the cultivation of the vine, we find that wine was often associated with grain, and together they stand for a full and adequate supply of food and of the good gifts of life. They can be promised therefore as the tokens of the blessing of God (Gn. 27:28), and they are acceptable to him when offered back upon the altar (Ex. 29:40). As a discipline, however, they are on occasion to be dispensed with, as when a man engages in priestly service (Lv. 10:9), or in the case of a *Nazirite during the course of his vow (Nu. 6:3). The abstinence of the *Rechabites falls within a different category, for it was in an attempt to preserve the nomadic life that they dwelt in tents, and their refusal of wine was not on account of the dangers of its abuse, but because they were associated with the planting of vineyards, the sowing of seed and the building of houses (Je. 35:7). Evidence is by no means lacking, however, that even to those who accepted the agricultural way of life the dangers of strong drink were apparent. The warnings of the book of Proverbs are clear, and in the time of Isaiah even the priests fell into the snare.

These two aspects of wine, its use and its abuse, its benefits and its curse, its acceptance in God's sight and its abhorrence, are interwoven into the fabric of the OT so that it may gladden the heart of man (Ps. 104:15) or cause his mind to err (Is. 28:7), it can be associated with merriment (Ec. 10:19) or with anger (Is. 5:11), it can be used to uncover the shame of Noah (Gn. 9:21) or in the hands of Melchizedek to honour Abraham (Gn. 14:18).

In metaphorical usage the same characteristics are to be observed. Wine may represent that which God himself has prepared (Pr. 9:5), and which he offers to as many as will receive it from his hand (Is. 55:1); yet, on the other hand, it may equally well represent the intoxicating influence of Babylonian supremacy which brings ruin (Je. 51:7).

II. In the New Testament

In the NT the common word is Gk. *oinos* (cf. Heb. *yayin*). Once we find *sikera*, 'strong drink' (Lk. 1:15), a loan-word from Semitic (cf. Heb. *šēkār*), and once *gleukos*, 'new wine' (Acts 2:13). This last word means literally 'sweet wine'; the vintage of the current year had not yet come, but there were means of keeping wine sweet all year round.

The references in the NT are very much fewer in number, but once more the good and the bad aspects are equally apparent, and many of the points which we noticed in the OT have their counterpart in the NT. John the Baptist is to abstain from wine in view of his special commission (Lk. 1:15), but this does not imply that of itself wine is evil, for Jesus is not only present at the wedding in Cana of Galilee, but when the wine fails he replenishes the supply in extraordinarily ample measure, and later his readiness to eat and drink with publicans and sinners draws forth the accusation that he is gluttonous and a wine-bibber. The refusal of Jesus to drink the wine offered to him in accordance with Jewish custom at his crucifixion (Mk. 15:23) was not based upon an objection to wine as such, but was due to a determination to die with an unclouded mind. Later he accepted the wine (vinegar) which was the ordinary drink of labourers in the field and of the lower class of soldiers.

On more than one occasion Jesus used wine to illustrate his teaching. Mk. 2:22 points to the current practice of putting new wine into new skins

and emphasizes the impracticality of doing otherwise. Commentators differ regarding the interpretation of this parable. For, while the new wine clearly points to the lively and powerful working of Christ's new teaching, the skins which are broken may equally well refer to certain conventional forms or to the whole Judaistic system or to the human heart, all of which need to be recast in accordance with the challenge of the new age which has arrived. Unfortunately the Pharisees were unwilling to face the changes which would have been involved, and obstinately clung to the system upon which their livelihood depended (Lk. 5:39).

Metaphorically in the NT the word 'wine' is again used in both a good and a bad sense. The latter is found several times in Revelation, where the inhabitants of the earth are depicted as having been made drunk by the fornication of Babylon (Rev. 17:2) while she herself is drunk with their blood (Rev. 17:6). On the other hand, Paul exhorts his readers to be filled with the Spirit (Eph. 5:18) in contrast with their being intoxicated with wine. There are, of course, certain similarities between the two conditions, a consideration which may well have led Paul to express himself in this way. Certainly on the Day of Pentecost there were many who took the evidences of the Spirit to be nothing else than the result of strong drink. This same interpretation had been placed long before upon the movement of the lips of Hannah as she prayed in the presence of Eli, a supposed fault which Eli was quicker to rebuke in her than in his own sons (1 Sa. 1:14).

Timothy is exhorted by Paul to take a little wine because of its medicinal properties (1 Tim. 5:23; cf. its application in a different form in the story of the good Samaritan), but in the Pastoral Epistles there is a recognition of the grave dangers of excess, and those who bear office or in any way give leadership within the Christian community, both men and women, are specifically warned against this fault, which would unfit them for their task (1 Tim. 3:8; Tit. 2:3). This abuse is particularly unfitting within the church, for if it is true that drunkenness is in general a sign of heedlessness in spiritual matters, and a disregard of the imminent return of Christ (Rom. 13:13), how much more is it to be deplored at the Lord's table, where it reveals not only a spirit of complete indifference towards God but a spirit of utter thoughtlessness in regard to those who stand together within the Christian fellowship (1 Cor. 11:21).

To sum up, then, it may be said that while wine is not condemned as being without usefulness, it brings in the hands of sinful men such dangers of becoming uncontrolled that even those who count themselves to be strong would be wise to abstain, if not for their own sake, yet for the sake of weaker brethren (Rom. 14:21). If it is argued that there are many other things which may be abused besides wine, the point may be immediately conceded, but wine has so often proved itself to be peculiarly fraught with danger that Paul names it specifically at the same time as he lays down the general principle. That this principle has application within the setting of modern life is beyond dispute among those who take their Christian responsibility seriously.

WISDOM.

I. In the Old Testament

Like all Heb. intellectual virtues, wisdom (generally *hoḳmā*, though other words are used; e.g.: *binā*, 'understanding', Jb. 39:26; Pr. 23:4; *r'ḅunā*, 'insight', Ps. 136:5; *śēkel* or *sēkel*, 'prudence', Pr. 12:8; 23:9) is intensely practical, not theoretical. Basically, wisdom is the art of being successful, of forming the correct plan to gain the desired results. Its seat is the heart, the centre of moral and intellectual decision (cf. 1 Ki. 3:9, 12).

Those who possess technical skill are called wise: Bezalel, chief artisan of the tabernacle (Ex. 31:3; rsv 'ability'); artificers of idols (Is. 40:20; Je. 10:9); professional mourners (Je. 9:17); navigators or shipwrights (Ezk. 27:8–9). Practical wisdom may take on a sinister aspect, as in Jonadab's crafty advice (2 Sa. 13:3).

Kings and leaders were in special need of wisdom. On them hung the responsibility for correct decisions in political and social affairs. Joshua (Dt. 34:9), David (2 Sa. 14:20), Solomon (1 Ki. 3:9, 12; 4:29ff.) were granted wisdom to enable them to deal with their official duties. The Messianic King predicted by Isaiah (11:2) was to be equipped with wisdom to judge impartially. 'Wonderful Counsellor' (9:6) avers that his advice would be amazingly successful. See N. W. Porteous, 'Royal Wisdom', in *Wisdom in Israel and in the Ancient Near East*.

A special class of wise men (or women, cf. 2 Sa. 14:2) seems to have developed during the Monarchy. By Jeremiah's time they had taken their place beside prophets and priests as a major religious and social influence. Their task was to formulate workable plans, to prescribe advice for successful living (Je. 18:18). For the view that 'wise men' described not a professional class but persons of uncommon intelligence whose wisdom was sought after by their fellow citizens, see R. N. Whybray, *The Intellectual Tradition in the Old Testament* (1974). The wise man or counsellor stood in a parental relationship to those whose well-being hinged on his advice: Joseph was a 'father' to the pharaoh (Gn. 45:8); Deborah, a 'mother' in Israel (Jdg. 5:7). See P. A. H. de Boer, 'The Counsellor' in *Wisdom in Israel and in the Ancient Near East*.

Wisdom in the fullest sense belongs to God alone (Jb. 12:13ff.; Is. 31:2; Dn. 2:20–23). His wisdom is not only completeness of knowledge pervading every realm of life (Jb. 10:4; 26:6; Pr. 5:21; 15:3) but also 'consists in his irresistible fulfilment of what he has in his mind' (J. Pedersen, *Israel: Its Life and Culture*, 1–2, p. 198). The universe (Pr. 3:19f.; 8:22–31; Je. 10:12) and man (Jb. 10:8ff.; Ps. 104:24; Pr. 14:31; 22:2) are products of his creative wisdom. Natural (Is. 28:23–29) and historical (Is. 31:2) processes are governed by his wisdom, which includes an infallible discrimination between good and evil and is the basis for the just rewards and punishments which are the lot of the righteous and the wicked (Pss. 1; 37; 73; Pr. 10:3; 11:4; 12:2, etc.). Such wisdom is inscrutable (Jb. 28:12–21): God in his grace must reveal it if man is going to grasp it at all (Jb. 28:23, 28). Even wisdom derived from natural abilities or distilled from experience is a gracious gift, because God's creative activity makes such wisdom possible.

Biblical wisdom is both religious and practical. Stemming from the fear of the Lord (Jb. 28:28; Ps. 111:10; Pr. 1:7; 9:10), it branches out to touch all

of life, as the extended commentary on wisdom in Proverbs indicates. Wisdom takes insights gleaned from the knowledge of God's ways and applies them in the daily walk. This combination of insight and obedience (and all insight must issue in obedience) relates wisdom to the prophetic emphasis on the knowledge (*i.e.* the cordial love and obedience) of God (e.g. Ho. 2:20; 4:1, 6; 6:6; Je. 4:22; 9:3, 6; and especially Pr. 9:10).

Pagan wisdom, though it, too, may be religious, has no anchor in the covenant-God and, therefore, is doomed to failure, as the prophets frequently point out (Is. 19:11ff.; Ezk. 28:2ff.; Ob. 8). When secularism, materialism and disdain of the covenant-ideals squeezed the fear of God out of Israel's wisdom, it became practical atheism, as vivid as its pagan counterpart, and drew Isaiah's fire: 'Woe to those who are wise in their own eyes' (5:21; cf. 29:14; Je. 18:18).

A special problem is the personification of wisdom in Pr. 8:22ff. Jb. 28 anticipates this personification by depicting wisdom as a mystery inscrutable to men but apparent to God. In Pr. 1:20–33 wisdom is likened to a woman crying in the streets for men to turn from their foolish ways and to find instruction and security in her (cf. also Pr. 3:15–20). The personification continues in Pr. 8 and reaches its climax in vv. 22ff., where wisdom claims to be the first creation of God and, perhaps, an assistant in the work of creation (8:30; cf. 3:19; the difficult *'āmōn*, 'as one brought up' in *av*, should be translated 'master workman', as in *rv*; see W. F. Albright in *Wisdom in Israel and in the Ancient Near East*, p. 8). The purpose of wisdom's recitation of her credentials is to attract men to pay her rightful heed, as 8:32–36 indicates. Therefore, caution must be exercised in reading into this passage a view of hypostatization, *i.e.* that wisdom is depicted as having an independent existence. The Hebrews' characteristic resistance to speculation and abstraction frequently led their poets to deal with inanimate objects or ideals as though they had personality. See H. W. Robinson, *Inspiration and Revelation in the Old Testament*, 1946, p. 260; H. Ringgren, *Word and Wisdom*, 1947. For the influence of the personification of wisdom on the Logos idea of the Fourth Gospel, see *LOGOS.

II. In the New Testament

By and large NT wisdom (*sophia*) has the same intensely practical nature as in the OT. Seldom neutral (although cf. 'the wisdom of the Egyptians', Acts 7:22), it is either God-given or God-opposing. If divorced from God's revelation it is impoverished and unproductive at best (1 Cor. 1:17; 2:4; 2 Cor. 1:12) and foolish or even devilish at worst (1 Cor. 1:19ff.; Jas. 3:15ff.). Worldly wisdom is based on intuition and experience without revelation, and thus has severe limitations. The failure to recognize these limitations brings biblical condemnation on all (especially the Greeks) who haughtily attempt to cope with spiritual issues by human wisdom.

The truly wise are those to whom God has graciously imparted wisdom: Solomon (Mt. 12:42; Lk. 11:31), Stephen (Acts 6:10), Paul (2 Pet. 3:15), Joseph (Acts 7:10). One of Christ's legacies to his disciples was the wisdom to say the right thing in times of persecution and examination (Lk. 21:15). A similar wisdom is necessary for understanding the apocalyptic oracles and enigmas (Rev. 13:18;

17:9). Wisdom is essential not only for leaders of the church (Acts 6:3) but for all believers that they may perceive God's purposes in redemption (Eph. 1:8-9) and may walk worthily of God (Col. 1:9; Jas. 1:5; 3:13-17) and discreetly before unbelievers (Col. 4:5). As Paul has taught his hearers in all wisdom (Col. 1:28), so they who are mature enough to understand this spiritual wisdom (I Cor. 2:6-7) are to instruct others in it (Col. 3:16).

God's wisdom is clearly demonstrated in his provision of redemption (Rom. 11:33), which is manifested in the church (Eph. 3:10). It is supremely revealed 'not in some esoteric doctrine . . . addressed to . . . initiates of some secret cult, but in action, God's supreme action in Christ on the Cross' (N. W. Porteous, *op. cit.*, p. 258). This wisdom, previously veiled to human minds, brooks no philosophical or practical rivals. The best attempts of men to untangle the problems of human existence are shown to be foolishness in the light of the cross.

The incarnate Christ grew in wisdom (Lk. 2:40, 52) as a boy and astonished his audiences by his wisdom as a man (Mt. 13:54; Mk. 6:2). His claims included wisdom (Mt. 12:42) and a unique knowledge of God (Mt. 11:25ff.). Twice he personifies wisdom in a manner reminiscent of Proverbs: Mt. 11:19 (= Lk. 7:35) and Lk. 11:49 (Mt. 23:34ff.). In both passages Christ may be alluding to himself as 'Wisdom', although this is not certain, especially in the latter instance. (See Arndt for suggested interpretations.) Paul's wisdom Christology (I Cor. 1:24, 30) was probably influenced both by Christ's claims and by the apostolic consciousness (grounded in Christ's teachings in Matthew) that Christ was the *new Torah*, the complete revelation of God's will, replacing the old law. Since the commandments and wisdom are linked in Dt. 4:6, and especially in Jewish thought (e.g. Ecclus. 24:23; *Apocalypse of Baruch* 3:37ff.), it is not unexpected that Paul would view Jesus, the *new Torah*, as the wisdom of God. That Paul saw in Christ the fulfilment of Pr. 8:22ff. seems apparent from Col. 1:15ff., which strongly reflects the OT description of wisdom.

Paul's wisdom Christology is a dynamic concept, as is shown by the emphasis on Christ's activity in creation in Col. 1:15ff. and in redemption in I Cor. 1:24, 30. The latter verses affirm that in the crucifixion God made Jesus our wisdom, a wisdom further defined as embracing righteousness, sanctification and redemption. As the slain yet exalted Lord of the church, he is lauded for wisdom (Rev. 5:12). 'Receive' in this verse implies acknowledgement of attributes which are already Christ's; for in him 'are hid all the treasures of wisdom' (Col. 2:3).

D.A.H.

wisdom—short, pithy sayings which state rules for personal happiness and welfare (e.g. Proverbs), and speculative wisdom—monologues (e.g. Ecclesiastes) or dialogues (e.g. Job) which attempt to delve into such problems as the meaning of existence and the relationship between God and man. This speculative wisdom is practical and empirical, not theoretical. Problems of human existence are discussed in terms of concrete examples: 'There was a man . . . whose name was Job.'

The roots of wisdom literature are probably to be found in short, crisp popular sayings which express rules for success or common observations concerning life. OT examples are found in I Ki. 20:11; Je. 23:28; 31:29, *inter al.* The transition from oral to literary wisdom took place in Egypt c. 2500 BC (e.g. *Instruction of the Vizier Ptah-Hotep*) and in Sumer shortly after. Throughout the Near East, a class of scribes or wise men arose whose highly honoured task was to create or collect and polish sagacious sayings (Ec. 12:9), usually under the patronage of court or temple. The sources of these sayings may have been clan wisdom, instruction in schools or sayings circulated among the nobility. Two of Israel's kings are credited with important contributions in this area: Solomon (I Ki. 4:29-34) and Hezekiah (Pr. 25:1). By the 7th century BC the wise man (*hākām*) had assumed sufficient prominence in Judah to be classed with prophet or priest (Je. 8:8-9; 18:18), although there is some question as to whether he was yet viewed as a professional or merely as an unusually wise citizen. As the phenomenon of prophecy faded in the Persian and Greek periods, the wise men gained in stature, as the important apocryphal works, Ecclesiasticus and Wisdom of Solomon, and the Mishnaic tractate *Pirḡe Aboth* (Sayings of the Fathers), show.

The wise men employed several literary devices as aids to memory. The most frequent device was the use of poetic parallelism of either a synthetic (e.g. Pr. 18:10) or antithetic (e.g. Pr. 10:1) type. Comparisons are common (e.g. Pr. 17:1), as are numerical sequences (e.g. Pr. 30:15ff.). Alliteration and acrostic patterns (e.g. Ps. 37; Pr. 31:10-31) are employed occasionally. Riddles (Jdg. 14:12ff.; cf. I Ki. 10:1), fables (e.g. Jdg. 9:7-15; Ezk. 17:3ff.; 19:1ff.), parables, which are extensions of the comparisons mentioned above (e.g. 2 Sa. 12:1-4; Is. 28:4), and allegories (e.g. Is. 5:1-7) are part of the wise man's repertoire. This sampling testifies to the impact made by wisdom literature on historical and prophetic writings. H. Gunkel has categorized certain psalms as wisdom poetry: Pss. 127; 133 (simple proverbial type); Pss. 1; 37; 49; 73; 112; 128. S. Mowinckel has called these psalms examples of 'learned psalmography'. Whether stories that teach responsible conduct as a key to success like those of Joseph (Gn. 37:39-50), the succession narrative (2 Sa. 9-20; I Ki. 1f.), Esther and Daniel bear wisdom's stamp is still under debate. Cf. R. N. Whybray, *The Intellectual Tradition in the Old Testament*, 1974; *contra* J. L. Crenshaw, 'Method in Determining Wisdom Influence upon "Historical" Literature', *JBL* 88, 1969, pp. 129-142. Wisdom's contribution is most readily discernible when its peculiar vocabulary, techniques and didactic content are all present in a text. Such influence is detectable in the NT, both in the teaching methods of Christ, who as the Master Sage employs parables and proverbs, and also in the Epistle of James (e.g. 1:5ff.; 3:13ff.).

Though an international phenomenon, as the

WISDOM LITERATURE. A family of literary genres common in the ancient Near East in which instructions for successful living are given or the perplexities of human existence are contemplated. There are two broad types: proverbial (*PROVERB)

WISDOM LITERATURE

OT freely recognizes (Edom in I Ki. 4:31; Ob. 8; Je. 49:7; and Egypt in Gn. 41:8; I Ki. 4:30; Is. 19:11–15 were particularly renowned), wisdom literature has not escaped Israel's peculiar stamp. Israel's sages confessed that true wisdom stemmed from God (cf. Jb. 28). The impact of Israel's prophets upon her sages cannot be ignored. H. Wheeler Robinson (*Inspiration and Revelation in the Old Testament*, 1946, p. 241) goes so far as to define the wisdom movement as 'the discipline whereby was taught the application of prophetic truth to the individual life in the light of experience'.

At the same time prophets like Amos, Isaiah and Jeremiah occasionally used the forms, techniques and teachings of wisdom literature to enrich and reinforce their oracles, as S. Terrien ('Amos and Wisdom', in *Israel's Prophetic Heritage*, ed. B. W. Anderson and W. Harrelson, 1962, pp. 108–115), H. W. Wolff (*Amos, the Prophet: the Man and His Background*, E.T. 1973) and J. W. Whedbee (*Isaiah and Wisdom*, 1970) have shown.

D.A.H.

WITNESS. In EVV 'to witness', 'to bear witness', a 'witness', 'to testify', 'testimony' (with a few minor additional renderings) represent a somewhat arbitrary and not always consistent rendering of the following Heb. and Gk. words. In the OT: *ʾānā* (lit. 'to answer'), *ʾūd* (verb), *ʿēd*, *ʿēdā*, *ʿēdūt*, *ʾūdā*; in the NT: *martyreō* (verb) and compounds, *martyrs*, *martyria*, *martyrion*. Though 'to witness' is used with a wide range of connotations, the forensic often being virtually forgotten, it never occurs in the frequent modern Eng. usage as a synonym of 'to see'.

ʿēd and its rare synonym *ʿēdā* always refer to the person or thing bearing witness, examples of the latter being Gn. 31:48, 52; Jos. 22:27–28, 34; 24:27; Is. 19:20. The NT equivalent, *martyrs*, is used only of persons, there being no example of a thing as bearer of witness.

Heb., disliking abstracts, rarely speaks of witness in the sense of evidence given. In the three cases it does (Ru. 4:7; Is. 8:16, 20) it uses *ʾūdā*. Gk. uses the conception frequently, but distinguishes between *martyria*, the act of testifying or the testimony, and *martyrion*, that which may serve as evidence or proof or the fact established by evidence.

ʿēdūt, always rendered 'testimony' except in the AV of Nu. 17:7–8; 18:2; 2 Ch. 24:6, where it is 'witness', has lost its forensic meaning completely and is a technical religious term (*COVENANT), rendered by KB 'monitory sign, reminder, exhortation'. The outstanding example of *ʿēdūt* is the tables of the Ten Commandments (Ex. 16:34; 25:16, 21, etc.). Hence the ark which contained them became 'the ark of the testimony' (Ex. 25:22, etc.), the tent which sheltered them, 'the tent of the testimony' (Nu. 17:7), and the veil dividing off the Holy of holies, 'the veil of the testimony' (Lv. 24:3). The term is then enlarged to cover the law as a whole, e.g. Pss. 78:5; 119:2 and frequently. The meaning in 2 Ki. 11:12 is doubtful (see ICC, *ad loc.*).

AV translation 'martyr' in Acts 22:20; Rev. 2:13; 17:6 (in the last of these also RV, RSV) is hardly justified, though *martyrs* quickly developed this meaning; cf. Arndt, p. 495b.

BIBLIOGRAPHY. L. Coenen, A. A. Trites, *NIDNTT* 3, pp. 1038–1051; A. A. Trites, *The New Testament Concept of Witness*, 1977; *BAI CS* 6, f.c. H.L.E.

WOE. The rendering of the Gk. interjection *ouai*, meaning 'Alas for'. When Jesus says 'Woe unto you', he is not so much pronouncing a final judgment as deploring the miserable condition in God's sight of those he is addressing. Their wretchedness lies not least in the fact that they are living in a fool's paradise, unaware of the misery that awaits them. The state of the materially-minded blinded by wealth to their spiritual needs, of the self-satisfied, of the impenitent and unsympathetic, and of those who are universally popular is declared by Jesus to be wretched (Lk. 6:24–26). Similarly, the woeful condition of the Pharisees and scribes (Lk. 'lawyers') lies, Jesus tells them, in the hypocritical zeal, the lack of proportion, the love of display and the self-complacency which disfigure their religion (Mt. 23:13–33; Lk. 11:42–52). When Jesus addresses the words 'Woe to you' to the unrepentant cities Chorazin and Bethsaida, he follows them with a prophecy of the doom that awaits them (Mt. 11:21) as they are in a woeful state for having refused the gospel. Paul says he would be in a woeful state if he failed to preach it (1 Cor. 9:16). The seer in the Revelation uses the word *ouai* as an interjection in his dirge over fallen Babylon (Rev. 18:10–16), and as a noun to describe three 'woes', a comprehensive term covering various plagues and disasters which will herald the final judgment (Rev. 9:12; 11:14).

WOMAN (Heb. *ʾiššā*, Gk. *gynē*). The common humanity and equal value of woman and man, created 'in the image of God', is a theme of Gn. 1:27. Complementarity and the incompleteness of each without the other is a theme of Gn. 2:20, where woman is created to be man's helper or partner. (*EVE). Gn. 3:16 speaks of the pain of dependence and domination between women and men in a sinful world.

Monogamy was the OT ideal, but widespread polygamy was regulated rather than condemned in the Law. Parenthood was highly prized. Women in biblical narratives mainly operate within a household, naming the children and being responsible for their early education. Mothers were to be honoured (Ex. 20:12), feared (Lv. 19:3) and obeyed (Dt. 21:18ff.). Men took responsibility for and protected women family members but, if there were no male heirs, a woman could independently inherit land (Nu. 27:1–8).

Women and men met together for worship (Ezr. 10:1). Individual women made sacrifices and took Nazirite vows of dedication to Yahweh (Nu. 6:2). They sometimes exercised spiritual leadership as prophets, such as Miriam and Huldah, or intellectual leadership as 'wise' counsellors (2 Sam 14:1; 20:16). Deborah, the judge, was the nation's leader at a crucial time.

Partnership of men and women of faith plays a

key role in Luke's account of Jesus' birth. The amazed parents, Elizabeth and Zechariah, Simeon, and the Prophet Anna witnessed the dawning of God's salvation. *Mary, supported by Joseph, trusted God's Word despite the shame and ridicule involved, pondering what she did not yet fully understand (Lk. 2:19). God took flesh and became a man; a woman had the privilege of bringing him to birth. He obeyed her in childhood, separated from her to undertake his ministry (Mk. 3:31-35), and cared for her even on the cross.

Later rabbinical writings tended to undervalue women's spiritual contribution but Jesus showed them love and respect. He forgave them, healed them, taught them. They served him with provisions, hospitality and deeds of love. Women visiting his tomb became the first eyewitnesses of his resurrection.

Jesus included them in his teaching illustrations. He used a woman searching for a lost coin as a parable for God's search for his lost ones. He demanded the same standards from both sexes and offered the same way of salvation.

After the resurrection, women disciples are together with the men, praying, electing a new apostle (Acts 1:12-26) and receiving the power and gifts of the Holy Spirit at Pentecost (Acts 2:17-18).

Acts and the epistles mention many women playing a full part in the church. Dorcas, the carer, is raised by Peter. Lydia, the businesswoman, is Paul's first convert in Europe. Priscilla, with Aquila, taught the gifted Apollos. Philip's four daughters prophesied. Paul mentions many women workers, including Phoebe the deacon and Junia (now widely admitted to be a female name) who, with Andronicus, was prominent among the apostles (Rom. 16:1, 7).

Unlike circumcision, the sign of baptism was for women as well as men. Paul stressed the church as a community without prejudice based on race, class or gender; 'all are one in Christ Jesus' (Gal. 3:28). Christians, however, have to live in a fallen world with existing power structures and conventions. He urged Christian wives, slaves and citizens to submit to authority within such structures. There is ongoing debate about how his metaphor of man and woman as head and body should be applied to relationships within the church today, but agreement that it emphasizes a united, faithful, loving partnership in *marriage.

V.M.S.
M.B.

WOMB. Heb. *beṭen*, *mē'im* and *rehem* or *raham*; Gk. *gastēr*, *koilia* or *mētra*, the former two in both cases being used also of the belly generally, indicating the Heb. vagueness about the internal physiology (*STOMACH, *BOWELS). The reference is generally to the place or time of life's beginning (Jb. 1:21; Is. 49:1), and so figuratively of the origin of anything (Jb. 38:29). The formation of the babe in the womb is a wonderful mystery to the biblical writers, who, understandably enough, attribute it to the direct action and care of God (Jb. 31:15; Ec. 11:5). The presence of the living babe in the womb

some time before birth is mentioned in the NT (Lk. 1:41). *Barrenness is attributed to the closing up of the womb, sometimes specifically stated to be done by God (1 Sa. 1:5). This is a great cause of sorrow and shame to the woman concerned (v. 6). The *first-born, referred to as that which opens the womb, is regarded as holy (Ex. 13:2; Lk. 2:23).

B.O.B.

WOOL. The high value set upon wool as the basic fabric for clothing (Jb. 31:20; Pr. 31:13; Ezk. 34:3) is reflected in its inclusion among the first fruits to be offered by the priests (Dt. 18:4) and as an important item in Mesha's tribute (2 Ki. 3:4). Damascus wool was prized at Tyre market (Ezk. 27:18); the LXX compares its quality to that of Miletus which was famous in the ancient world (Pliny 8. 73). The reason for the Mosaic prohibition against wearing cloth made of a mixture of wool and linen (Dt. 22:11) is not clear. Josephus (*Ant.* 4. 208) claims that garments of wool and linen mixture were reserved for priests, but gives no evidence. Static electricity in such a mixture would be uncomfortable to the wearer (*NBCR*, p. 223). The brilliant whiteness of wool after thorough washing is used to illustrate purity (Is. 1:18) and beautiful teeth (Ct. 4:2) and is likened to snowflakes (Ps. 147:16).

N.H.

WORD. In the OT 'the word (*dābār*) of God' is used 394 times of a divine communication which comes from God to men in the form of commandment, prophecy, warning or encouragement. The usual formula is 'the word of Yahweh came (lit. was) to . . .' but sometimes the word is 'seen' as a vision (Is. 2:1; Je. 2:31; 38:21). Yahweh's word is an extension of the divine personality, invested with divine authority, and is to be heeded by angels and men (Ps. 103:20; Dt. 12:32); it stands for ever (Is. 40:8), and once uttered it cannot return unfulfilled (Is. 55:11). It is used as a synonym for the law (*tôrâ*) of God in Ps. 119, where alone its reference is to a written rather than a spoken message.

In the NT it translates two terms, **logos* and *rhēma*, the former being supremely used of the message of the Christian gospel (Mk. 2:2; Acts 6:2; Gal. 6:6), though the latter also bears the same meaning (Rom. 10:8; Eph. 6:17; Heb. 6:5, etc.). Our Lord spoke of the word of God (in the parable of the sower, Lk. 8:11; see also Mk. 7:13; Lk. 11:28), but in the Synoptic Gospels he always used the plural of his own message ('my words', Mt. 24:35 and parallels; Mk. 8:38; Lk. 24:44). In the Fourth Gospel, however, the singular is often found. To the early church the word was a message revealed from God in Christ, which was to be preached, ministered and obeyed. It was the word of life (Phil. 2:16), of truth (Eph. 1:13), of salvation (Acts 13:26), of reconciliation (2 Cor. 5:19), of the cross (1 Cor. 1:18).

J.B.Tr.

WORK. The main words here are the Heb. *ma'aseh* (181 times), 'an act', 'a doing' (*cf.* Gn. 5:29; Ex. 5:4, etc., and especially in the Psalms of God's act, see Pss. 8:3, 6; 19:1, etc.); *m'lā'kā* (117 times; *cf.* Gn. 2:2-3; Ex. 20:9, etc.); *pō'al* (30 times), 'a deed'

WORK

(cf. Dt. 32:4, etc.). Gk. *ergon* (142 times) is found frequently in Jn., Heb., Jas. and Rev. Less frequent is the abstract *energeia*, literally 'energy' (evv 'working'). This is a specific Pauline word (Eph. 1:19; 3:7; 4:16; Phil. 3:21; Col. 1:29; 2 Thes. 2:9). Note should be taken also of the Heb. *y'grā*, 'labour', 'weariness', and *āmāl*, 'labour', 'misery'; cf. Gk. *kopiaō*, 'to labour', 'to be wearied out' (cf. Mt. 11:28; Jn. 4:38, etc.), and *ergatēs*, 'a worker' (Mt. 9:37–38; 20:1–2, 8; Lk. 10:2, 7; Jas. 5:4).

In classical Gk. the verb *kopiaō* has reference to the weariness which labour produces (cf. *LSJ, ad loc.*), but in the NT it signifies the toil itself (cf. Mt. 6:28; 11:28; Lk. 5:5; 12:27; Jn. 4:38). The word *ergatēs* has reference to the business or the trade by which men gain their subsistence (Acts 19:25), and it is also used to denote the profit which results from their activity (Acts 16:16, 19) as well as the toil which the pursuit of their gain involves. *ergasia* occurs in an ethical sense in Eph. 4:19 and means literally 'to make a trade of'; cf. 'worker' (*ergatēs*) in Lk. 13:27; 2 Cor. 11:13; Phil. 3:2, and in a good sense Mt. 10:10; 2 Tim. 2:15. Luke's usage of the Latinism *dos ergasian*, 'make an effort' (av 'give diligence') (Lk. 12:58), to emphasize Christ's warning concerning reconciliation with an adversary is thought by some to be derived from his medical studies, where the term had reference to the making of some mixture, the mixture itself, and the work of digestion, and of the lungs, etc. (cf. W. K. Hobart, *The Medical Language of St Luke*, 1882, p. 243). The phrase, however, occurs in the LXX (cf. Wisdom 13:19) with which Luke was familiar.

I. The general sense

It is clear from the interchangeable use of certain words to indicate God's activity and man's that work is itself a God-ordained thing. Work was from the beginning God's purpose for men, and is set forth in Ps. 104:19–24 and Is. 28:23–29 as a provision of the divine wisdom. Creation itself 'works' (cf. Pr. 6:6–11). The fact of work as forming an integral part of the pattern of the divine purpose for man is implied in the fourth commandment. But the entrance of sin changed work from a joy to a toil (cf. Gn. 3:16–19). Work has thus become a burden instead of a blessing, and, although not bad in itself, it has lost its true value. It has become an occasion for sin; idolatry results when it becomes an end in itself (cf. Ec. 2:4–11, 20–23; Lk. 12:16–22). By some it has become the means of exploitation and oppression (cf. Ex. 1:11–14; 2:23; Jas. 5:4). But in redemption, work is again transformed into a means of blessing. From the beginning Christianity has condemned idleness even when this has been indulged in in the name of religion (cf. 1 Thes. 4:11; also Eph. 4:28; 1 Tim. 5:13). Our Lord, working as a carpenter (Mk. 6:3), has sanctified common toil, and Paul set an example in honest labour (Acts 18:3). He virtually established a law of social economics in his announcement in 2 Thes. 3:10: 'this we commanded you, that if any would not work, neither should he eat'. On the other side the principle proclaimed by our Lord remains the basis of society, 'the labourer deserves his wages' (Lk. 10:7).

In the experience of grace human tasks are given a new value and become more worth while. They are performed for the sake of the Name. And in their fulfilment in this context they are thrice blessed. The one who works is himself blessed in his reception of divine grace to carry through his

labours for the glory of God; those who receive the results of such tasks done in a new spirit and with a new quality are benefited also; and in all God is himself glorified. Such work is done 'in' and 'for' the Lord (cf. Rom. 14:7–8; Eph. 6:5–9; Col. 3:23–24). In this way man becomes a steward of God's riches (1 Cor. 4:1–2; cf. Mt. 25:14–30) and a servant of his neighbour (Mt. 25:40; Gal. 5:13; 1 Pet. 4:10). The genuineness of man's faith is proved in the end by the quality of his works (cf. Mt. 16:27, *praxis*). Yet in the end the acceptance of the labourer will be an act of divine grace (cf. 1 Cor. 3:8–15; note especially v. 10).

II. The spiritual and ethical reference

The word 'work' is used with reference to God's act of creation and providence. In the Psalms this note is given special emphasis. God's work or works are great and manifold (cf. Pss. 92:5; 104:24; 111:2, etc.). They give him everlasting praise (cf. Ps. 145:4, 9–10), declare his righteousness (145:17) and bring him joy (104:31). It is the same in the NT (cf. Heb. 4:10; Jn. 1:3; Acts 13:41; Rev. 15:3). The term is used also for the work of salvation committed by the Father to the Son. This is specifically a Johannine idea.

The Son has come to do the Father's work (cf. Jn. 4:34; 5:36; 9:4; 10:25, 37, etc.), which work he has finished (Jn. 15:24; 17:4). This means that nothing can be added to the work he has done, since it is once and for all. *Salvation is therefore not a matter of works or merit but of *grace. But the redeemed man will work and serve and labour and thus commend himself in the Lord. He will be fruitful in every good work (Col. 1:10; cf. Gal. 6:4; 2 Thes. 2:17; 2 Tim. 2:21; etc.). Those who undertake special work for God are to be esteemed for their work's sake (cf. 1 Thes. 5:13; also Phil. 2:29). Yet no work for God can be done apart from the inworking of his grace (cf. Eph. 2:10; 3:20; Phil. 2:13; Col. 1:29, etc.). Such is the 'work of faith, and labour of love' (1 Thes. 1:3; cf. 2 Thes. 1:11).

WORKS. The three main uses of this term, although distinct, are essentially related: the works of God, the works of Jesus Christ and the works of man in relation to faith.

I. In the OT the works of God are presented as evidence of God's supreme power, authority, wisdom and benevolence. The OT defines the Deity not by abstract terms such as omnipotence, but by his activity. Moses adduced the works of God as evidence of his unique distinction from other gods (Dt. 3:24). In the Psalms the works of God are frequently proclaimed as providing confidence in his power and authority and his sole right to receive worship. These works are his creative activity (Ps. 104:24) and his sovereign acts in relation to his redeemed people (Ps. 77:11–20) and to the nations (Ps. 46:8–10).

2. It was by his works that Jesus revealed that he was both Messiah and Son of God, exemplified by his answer to John the Baptist (Mt. 11:2–5). John's Gospel records the significant activity of Jesus with set purpose to reveal his Messiahship and deity so as to induce faith in his Person (Jn. 20:30–

31). Frequently Jesus pointed to his works as evidence that he was sent by the Father (Jn. 5:36; 10:37–38). Being the very works of God (Jn. 9:3–4), his works are sufficient ground for faith in him as being uniquely related to the Father (Jn. 10:38; 14:10–11). It was through equating his work with that of God that he was accused of blasphemy in identifying himself with God (Jn. 5:17–23). His death completed that work (Jn. 17:4; 19:30).

3. The believer also demonstrates by his good works the divine activity within him (Mt. 5:16; Jn. 6:28; 14:12). Conversely, the man who has no faith demonstrates by his evil works his separation from God (Jn. 3:19; Col. 1:21; Eph. 5:11; 2 Pet. 2:8, etc.). Good works are therefore the evidence of living faith, as James emphasizes in opposition to those who claim to be saved by faith alone without works (Jas. 2:14–26). James is in harmony with Paul, who also repeatedly declared the necessity for works, *i.e.* for behaviour appropriate to the new life in Christ following our entry into it by faith alone (Eph. 2:8–10; 1 Cor. 6:9–11; Gal. 5:16–26, etc.). The works rejected by Paul are those which men claim as earning God's favour and securing their discharge from the guilt of sin (Rom. 4:1–5; Eph. 2:8–9; Tit. 3:5). Since salvation is given by God in grace, no degree of works can merit it. The good works of the heathen are therefore unavailing as a means of salvation, since the man himself relies on the flesh and not on the grace of God (Rom. 8:7–8). J.C.C.

WORLD. The Gk. word *kosmos* means by derivation 'the ordered world'. It is used in the NT, but not in LXX, sometimes for what we should call the 'universe', the created world, described in the OT as 'all things' or 'heaven and earth' (Acts 17:24). The 'world' in this sense was made by the Word (Jn. 1:10); and it was this 'world' of which Jesus was speaking when he said it would not profit a man anything if he gained the whole of it and lost his soul in the process (Mt. 16:26).

But, because mankind is the most important part of the universe, the word *kosmos* is more often used in the limited sense of human beings, being a synonym for *hē oikoumenē gē*, 'the inhabited earth', also translated in the NT by 'world'. It is into this 'world' that men are born, and in it they live till they die (Jn. 16:21). It was all the kingdoms of this world that the devil offered to give to Christ if he would worship him (Mt. 4:8–9). It was this world, the world of men and women of flesh and blood, that God loved (Jn. 3:16), and into which Jesus came when he was born of a human mother (Jn. 11:27).

It is, however, an axiom of the Bible that this world of human beings, the climax of the divine creation, the world that God made especially to reflect his glory, is now in rebellion against him. Through the transgression of one man, sin has entered into it (Rom. 5:18) with universal consequences. It has become, as a result, a *disordered* world in the grip of the evil one (1 Jn. 5:19). And so, very frequently in the NT, and particularly in the Johannine writings, the word *kosmos* has a sinister significance. It is not the world as God intended it to be, but 'this world' set over against God, following its own wisdom and living by the light of its own reason (1 Cor. 1:21), not recognizing the Source of all true life and illumination (Jn. 1:10). The two dominant characteristics of 'this world' are *pride*, born of man's failure to accept his

creaturely estate and his dependence on the Creator, which leads him to act as though he were the lord and giver of life; and *covetousness*, which causes him to desire and possess all that is attractive to his physical senses (1 Jn. 2:16). And, as man tends in effect to worship what he covets, such covetousness is idolatry (Col. 3:5). Accordingly, worldliness is the enthronement of something other than God as the supreme object of man's interests and affections. Pleasures and occupations, not necessarily wrong in themselves, become so when an all-absorbing attention is paid to them.

'This world' is pervaded by a spirit of its own, which has to be exorcized by the Spirit of God, if it is not to remain in control over human reason and understanding (1 Cor. 2:12). Man is in bondage to the elements which comprise the world (Col. 2:20) until he is emancipated from them by Christ. He cannot overcome it till he is himself 'born of God' (1 Jn. 5:4). Legalism, asceticism and ritualism are this world's feeble and enfeebling substitutes for true religion (Gal. 4:9–10); and only a true knowledge of God as revealed by Christ can prevent men from relying upon them. It was because the Jews relied upon them that they did not recognize either the Christ in the days of his flesh (Jn. 1:11) or his followers (1 Jn. 3:1). Similarly, false prophets who advocate such things, or antichrists who are antinomian in their teaching, will always be listened to by those who belong to this world (1 Jn. 4:5).

Christ, whom the Father sent to be the Saviour of this world (1 Jn. 4:14), and whose very presence in it was a judgment upon it (Jn. 9:39), freed men from its sinister forces by himself engaging in mortal combat with its 'prince', the perpetual instigator of the evil within it. The crisis of this world came when Jesus left the upper room and went forth to meet this prince (Jn. 14:30–31). By voluntarily submitting to death, Jesus brought about the defeat of him who held men in the grip of death, but who had no claims upon himself (Jn. 12:31–32; 14:30). On the cross, judgment was passed on the ruler (av 'prince') of this world (Jn. 16:11); and faith in Christ as the Son of God, who offered the sacrifice which alone can cleanse men from the guilt and power of sin (a cleansing symbolized by the flow of water and blood from his stricken side, Jn. 19:34), enables the believer to overcome the world (1 Jn. 5:4–6), and to endure the tribulations which the world inevitably brings upon him (Jn. 16:33). The love of a Christian for God, the Father of Jesus Christ his Redeemer, who is the propitiation for the sins of the whole world (1 Jn. 2:2), acts with the expulsive power of a new affection; it makes it abhorrent to him to set his affections any longer upon 'this world', which, because it is severed from the true source of life, is transitory and contains within itself the seeds of its own decay (1 Jn. 2:15–17). A man who has come to experience the *higher* love for God, and for Christ and his brethren, must abandon the lower love for all that is contaminated by the spirit of the world: friendship of the world is of necessity enmity with God (Jas. 4:2).

Jesus, in his last prayer in the upper room, did not pray for the world, but for those whom his Father had given him out of the world. By this 'gift', these men whom Jesus described as 'his own' ceased to have the characteristics of the world; and Jesus prayed that they might be kept safe from its evil influences (Jn. 17:9), for he knew that after his

WORLD

own departure they would have to bear the brunt of the world's hatred which had hitherto been directed almost entirely against himself. As the risen and ascended Christ he still limits his intercessions to those who draw near to God through him (Heb. 7:25); and he continues to manifest himself not to the world but to his own that are in the world (Jn. 14:22).

But it is very certain that Christ's disciples cannot and must not attempt to retreat from this world. It is into this world, *all* the world (Mk. 16:15), that he sends them. They are to be its light (Mt. 5:14); and the 'field' in which the church is to do its work of witnessing to the truth as it is in Jesus is no less comprehensive than the world itself (Mt. 13:38). For the world is still God's world, even though at present it lies under the evil one. In the end, 'earth's true loveliness will be restored'; and, with all evil destroyed and the sons of God manifested, the whole creation will be 'set free from its bondage to decay and obtain the glorious liberty of the children of God' (Rom. 8:21). Then God will be 'everything to every one' (1 Cor. 15:28); or, 'present in a total manner in the universe' (J. Héring in *Vocabulary of the Bible*, 1958). The seer of Rev. envisages the day when great voices in heaven will proclaim: 'The kingdom of the world has become the kingdom of our Lord and of his Christ, and he shall reign for ever and ever' (Rev. 11:15).

R.V.G.T.

WORSHIP. 'Worship' (Old English 'weorthscipe' = 'worth-ship') originally referred to the action of human beings in expressing homage to God because he is worthy of it. It covers such activities as adoration, thanksgiving, prayers of all kinds, the offering of sacrifice and the making of vows. Nowadays, however, 'worship' is used for any kind of interaction between God and his people, expressed in (but not confined to) cultic or formal activity by a religious group or individuals. It therefore includes not only the human approach to God but also the communications of God with his people, and the whole communal activity that takes place when the people gather together religiously. Such activity is the formal expression of spiritual attitudes which should characterize God's people at all times (Rom. 12:1). Insofar as serving other people is a divine command, the fulfilment of it is a part of worship.

The term 'worship' is misunderstood if it gives the impression that the major element is what *human beings* do or offer to God. Biblical religion is primarily concerned with what *God* does for his people (Mk. 10:45). This is particularly evident in the NT, where words expressing the human activity of worshipping God are surprisingly rare in descriptions of church meetings (Heb. 13:15f.; 1 Pet. 2:5). Worship is human response to a gracious God, and it needs to be placed in this context if it is to be properly understood.

In the OT there is an extensive vocabulary of words expressing this response to God (especially *histaḥwā*; Gk. *proskynein*, 'to bow in reverence'). The activities carried on at the Temple (or the earlier tabernacle) were largely human offerings to God, although it should not be forgotten that the priests were also intended to instruct people. The danger that ritual might not be the outward expression of a spiritual attitude was frequently criticized (Ps. 40:6-8; Am. 5:21-24).

By NT times local synagogues were replacing the temple as the regular meeting places of the Jews, the majority of whom were too far distant from the Temple to visit it other than on special occasions. Activity here centred on the reading of Scripture, accompanied by a 'sermon' based on the text, and placed in the context of prayers and praises to God.

Christians met in house-groups, in meetings that were primarily for themselves but were not closed to outsiders. These meetings reflected the temple in that the living community of believers was now the place where God was present and revealed to his people (1 Cor. 14:25). The influence of the synagogue was important. The Scriptures and Christian documents (such as Paul's letters) were read and expounded (1 Thes. 5:27). Instruction and prophecy were given by persons gifted by the Spirit, and prayer was offered. Thus God's communication with his people and their human response took place in an informal, largely unstructured gathering. Paul lays emphasis on the need for all that happens in the church meeting to 'build up' the congregation in Christian character. The contrast, however, is not between worshipping God and edifying the congregation, but between activities (like prophecy) which are intelligible and helpful and others (like speaking in tongues) which are not (1 Cor. 14:26). From an early date Christians met weekly on the Lord's Day (Acts 20:7; 1 Cor. 16:2). An Easter celebration (1 Cor. 5:7f.) is also likely. At Corinth certainly a weekly church gathering was usual and included a meal with sacramental significance as the proclamation of the death of Jesus (1 Cor. 11:17-34).

I.H.M.

WRATH. The permanent attitude of the holy and just God when confronted by sin and evil is designated his 'wrath'. It is inadequate to regard this term merely as a description of 'the inevitable process of cause and effect in a moral universe' or as another way of speaking of the results of sin. It is rather a personal quality, without which God would cease to be fully righteous and his love would degenerate into sentimentality. His wrath, however, even though like his love it has to be described in human language, is not wayward, fitful or spasmodic, as human anger always is. It is as permanent and as consistent an element in his nature as is his love. This is well brought out in the treatise of Lactantius, *De ira Dei*.

The injustice and impiety of men, for which they have no excuse, *must* be followed by manifestations of the divine wrath in the lives both of individuals and of nations (see Rom. 1:18-32); and the OT contains numerous illustrations of this, such as the destruction of Sodom and Gomorrah and the downfall of Nineveh (see Dt. 29:23; Na. 1:2-6). But until the final 'day of wrath', which is anticipated throughout the Bible and portrayed very vividly in Rev., God's wrath is always tempered with mercy, particularly in his dealings with his chosen people (see, e.g., Ho. 11:8ff.). For a sinner, however,

to 'trade' upon this mercy is to store up wrath for himself 'on the day of wrath when God's righteous judgment will be revealed' (Rom. 2:5). Paul was convinced that one of the main reasons why Israel failed to arrest the process of moral decline lay in their wrong reaction to the forbearance of God, who so often refrained from punishing them to the extent they deserved. They were presuming upon 'the riches of his kindness and forbearance and patience', and failed to see that it was intended to lead them to repentance (Rom. 2:4).

In their unredeemed state men's rebellion against God is, in fact, so persistent that they are inevitably the objects of his wrath (Eph. 2:3), and 'vessels of wrath made for destruction' (Rom. 9:22). Nor does the Mosaic law rescue them from this position, for, as the apostle states in Rom. 4:15, 'the law brings wrath'. Because it requires perfect obedience to its commands, the penalties exacted for disobedience render the offender more subject to the divine wrath. It is, to be sure, only by the merciful provision for sinners made in the gospel that they can cease to be the objects of this wrath and become the recipients of this grace. The love of God for sinners expressed in the life and death of Jesus is the dominant theme of the NT, and this love is shown not least because Jesus experienced on man's behalf and in his stead the misery, the afflictions, the punishment and the death which are the lot of sinners subject to God's wrath.

Consequently, Jesus can be described as 'the deliverer from the wrath to come' (see 1 Thes. 1:10); and Paul can write: 'Since, therefore, we are now justified by his blood, much more shall we be saved by him from the wrath of God' (Rom. 5:9). On the other hand, the wrath of God remains upon all who, seeking to thwart God's redemptive purpose, are disobedient to God's Son, through whom alone such justification is rendered possible.

WRITING. Throughout the ancient Near East, from at least c. 3100 BC onwards, writing was a hallmark of civilization and progress. In the 2nd millennium BC there were several experiments which led to the development of the alphabet, with a consequent general increase in literacy. Although the number of documents from the pre-exilic period found in Palestine is small when compared with the many thousands from Egypt, Mesopotamia and Syria, they show it is reasonable to assume that proximity to other cultural centres stimulated the art of writing there through all periods. The commonest words for writing (Heb. *kāṭab*; Aram. *k'atāb*; Gk. *graphō*) occur more than 450 times in OT and NT.

I. Biblical references

Moses is said to have written (Ex. 17:14) the Decalogue (Ex. 24:12; 34:27), the words of Yahweh (Ex. 24:4), the Law (Torah, Jos. 8:31), and spoken about a written copy of it (Dt. 27). He also wrote all the statutes (Dt. 30:10) and judgments (Ex. 34:27; cf. 2 Ki. 17:37), as well as legal enactments (Dt. 24:1; Mk. 10:4), details of the journeys made by the Is-

raelites (Nu. 33:2), and the words of the victory song (Dt. 31:19, 22). In these he was helped by officials (probably literate *sof'rim*, Nu. 11:16, 'officers'; cf. Akkad. *šaṭāru*, 'to write') who, by reason of their ability to record decisions, were closely connected with the judiciary (Dt. 16:18; I Ch. 23:4; Jos. 8:33). During the Exodus wanderings priests also wrote down curses (Nu. 5:23) and names of objects (17:3). Joshua wrote a copy of the Ten Commandments (Jos. 8:32) and of the renewed covenant (24:26).

Samuel wrote down the charter of the newly created kingship of Saul (1 Sa. 10:25). David wrote letters to his commander Joab (2 Sa. 11:14) and details of the Temple administration, as did his son Solomon (2 Ch. 35:4), who corresponded with Hiram of Tyre in writing (2 Ch. 2:11). The king of Syria wrote a letter to the king of Israel about Naaman (2 Ki. 5:5). As in all periods, court *scribes were frequently employed to write lists of persons (I Ch. 4:41; 24:6; see also Nu. 11:26; Is. 10:19; Je. 22:30; Ne. 12:22).

Isaiah the prophet wrote (2 Ch. 26:22; Is. 8:1) and dictated to a scribe (30:8). In his time Hezekiah both wrote letters (*iggereṭ*) to Ephraim and Manasseh (2 Ch. 30:1; cf. Is. 38:9 entitled 'the writing [*miqāṭāb*] of Hezekiah') and received them from the Assy. king Sennacherib (Is. 37:14, 39:1; 2 Ch. 32:17). Jeremiah dictated to his amanuensis Baruch (Je. 30:2; 36:27; 45:1), as probably did Hosea (8:12) and Malachi (3:16), for the written word was an important part of prophecy (2 Ch. 21:12); its value being emphasized also by Job (19:23).

Daniel and the Babylonian savants could read, and therefore presumably could themselves write, Aramaic (Dn. 5:24f.). There was an active correspondence within the empire as in earlier periods (*RUNNERS, *ASSYRIA, *BABYLONIA). Nehemiah wrote down the covenant (Ne. 9:38), while his opponents in Samaria wrote to the Persian king (Ezr. 4:6-7), as did other district-governors (Ezr. 5:7; 6:2). Ezra himself was a scribe who wrote decrees or state documents in the local dialects (8:34), in the style of court officials, including Mordecai, on behalf of the king (Est. 9:28f.), who affixed his *seal (Dn. 6:25).

Jesus Christ and his apostles made constant reference to the written Scriptures (e.g. 'it is written'—*gegraptai*—occurs 106 times). Our Lord himself was literate (Jn. 7:14-15), reading (Lk. 4:16-19) and writing publicly on at least one occasion (Jn. 8:6). Zechariah the priest wrote on a wax-covered writing-board (Lk. 1:63), and the Roman governor Pilate had a trilingual inscription written to be placed on the cross (Jn. 19:19, 22).

John (21:24), Luke (1:3; Acts 1:1), and Paul himself (Gal. 6:11; Phm. 19; Rom. 15:15), though often using an amanuensis such as Tertius (Rom. 16:22), wrote the historical records and letters which have come down to us. Through to Rev. there is constant reference to writing in its use for letters, legal evidence and record (Rev. 1:11; 21:5). Since writing, by its nature, is a means of communication, declaration and testimony, it is used to illustrate the impression, written in (*engraphō*, 2 Cor. 3:2f.) or upon (*epigraphō*, Heb. 8:10; 10:16) the mind and heart (cf. Je. 31:33; Pr. 3:3) by the Holy Spirit.

II. Materials

Almost any smooth surface was used for writing.

WRITING

a. Stone

Inscriptions were carved on stone or rock surfaces (Jb. 19:24), monumental texts being cut on a prepared stele, obelisk or cliff-face (e.g. Heb. tomb inscription, *SHEBNA, *IBA*, fig. 53, cf. 43, 48). The softer or more rugged surfaces could be covered with a plaster coating, before inscription, as in Egypt, and on the altar stones (Jos. 8:32; Dt. 27:2f.). Stone tablets were normally used for royal, commemorative or religious texts or public copies of legal edicts (*HAMMURABI). Stone tablets, no larger than 45 × 30cm (they fitted inside the Ark), were used for the Ten Commandments (Ex. 32:16). These tablets (*luhôt* **hānim*) were like the stone flakes used as writing material in Egypt (*PAPYRI & OSTRACA Ib). The 'writing of God' (*miktāb 'lōhim*) is taken to be a clear, well-formed script. There is no reason to suppose these were clay tablets with cuneiform writing. See A. R. Millard, 'Recreating the Tablets of the Law', *Bible Review* 10, 1994, pp. 48–53.

b. Writing-boards

The tablets used by Isaiah (30:8) and Habakkuk (2:2) may have been writing-boards made of wood or ivory with a recess to hold a wax surface (Akkad. *lē'u*). Such writing-boards, usually hinged to form a diptych or polyptych, could be used for writing in any script. The individual leaf was called a 'door', a term also used for a column of writing (Je. 36:23, av 'leaves'). The earliest known comes from a Late Bronze Age shipwreck off the coast of S Turkey, but the writing had disappeared (R. Payton, *AS* 41, 1991, pp. 99–110). At Nimrud in Assyria, a set of twelve ivory wax-covered leaves contained a composition of 6,000 lines, copied c. 705 BC (D. J. Wiseman, 'Assyrian Writing Boards', *Iraq* 17, 1955, pp. 3–13). Assyrian and other sculptures show scribes with such boards (*IBA*, fig. 60; *ANEP*, p. 460) and they were common in Gk. and Roman times (Lk. 1:63; *pinakidion*, a small writing-tablet, av 'table').

c. Clay tablets (see also IV. a).

The 'brick' (*l'ḥēnā*) used by Ezekiel (4:1) was probably of clay similar to the tablets used for plans and surveys in Babylonia, though the word could be used to describe any flat tile. The great 'tablet' on which Isaiah had to write with the 'pen of a man' (as opposed to that of a skilled scribe?) was a sheet or 'blank surface' of an unspecified material (Is. 8:1, *gillāyōn*).

d. Papyrus

Papyrus is not directly mentioned in the OT as a writing-material (Egyp. *nī[t]r[w]*; Akkad. *nī'aru*). It was, however, obtainable from Phoenicia, Lake Huleh and the Jordan (*PAPYRI) from the 11th century BC onwards, and its use is attested by the marks on the backs of seal impressions originally attached to this perishable substance (e.g. the reverse of the seal of *GEDALIAH). One example of ancient Heb. writing on papyrus was found in a cave near the Dead Sea (see Gibson, 1, pp. 31ff.). Papyrus (from which the Eng. word 'paper' is derived) was also known to the Assyrians and Babylonians in the 7th century (R. P. Dougherty, 'Writing on Parchment and Papyrus among the Babylonians and the Assyrians', *JAOS* 48, 1928, pp. 109–135). Used extensively in Egypt in all periods, papyri were found among the *Dead Sea Scrolls of the 2nd century BC–2nd century AD period. Isaiah's

'paper reed' (19:7 [av], **ārōt*), though possibly an indirect reference to papyri, is better interpreted as 'bare place'. The 'paper' used by John (2 Jn. 12) was probably papyrus (Gk. *chartēs*).

e. Leather and parchment

Leather was sometimes used in Egypt for working records because the ink could be washed off and the surface re-used (K. A. Kitchen, *TynB* 27, 1976, p. 141). During at least the Persian period skins were prepared for writing in Babylonia where papyrus did not grow. Skins of goats and sheep would have been available to the Israelites, and their use for copies of the biblical texts by the NT period (*DEAD SEA SCROLLS) may reflect earlier practice.

f. Ostraca

Potsherds or ostraca were another common writing material, since their low cost and availability made them especially useful for the writing of short memoranda with pen or brush and ink. Such potsherds have been recovered in considerable quantity from Palestine, being all but indestructible unless the ink was rubbed. About 240 have been found from the period of the Monarchy. See A. Lemaire, *Inscriptions Hébraïques*, 1, *Les Ostraca*, 1977 (*PAPYRI AND OSTRACA).

Pottery sometimes had characters inscribed on it before or after firing. They usually give the owner's name or the content or capacity of the vessel (*PEKAH; *SEAL, I. f).

III. Writing implements

1. Metal chisels and graters were readily available for inscribing stone, metal, ivory or clay (*ARTS AND CRAFTS; *SEAL). The 'stylus' (*heret*) or 'pen' (*'ēt*) used by Jeremiah (17:1) with its 'iron' point has been interpreted either as used for writing with a soft 'nib' or as a hard (emery?) point for use on iron, lead or other hard surface (Is. 8:1, Vulg. *stylus*; see also Jb. 19:24). None of the many pointed instruments so far excavated can be identified beyond question as used for writing a linear script. The 'pen of the scribes' (Je. 8:8) used for writing with ink on ostraca, papyrus or other smooth surfaces was a reed, split or cut to act as a brush. In ancient Egypt such pens were cut from rushes (*Juncus maritimus*) 15–40 cm long, the end being cut to a flat chisel shape so that the thick or thin strokes might be made with the broad or narrow edges. In Graeco-Roman times reeds (*Phragmites communis*) were cut to a point and split like a quill-pen (A. Lucas, *Ancient Egyptian Materials and Industries*, 1948, p. 417). This type of pen was the *kalamos* used in NT times (3 Jn. 13). The stylus used for writing the cuneiform script was a square-ended reed. For a discussion of the shape, method of use and illustrations of scribes with pens, chisels and styli, see G. R. Driver, *Semitic Writing*³, 1976, pp. 17ff.

2. Ink was usually a black carbon (charcoal) mixed with gum or oil for use on parchment or with a metallic substance for papyrus. It was kept as a dried cake on which the scribe would dip his moistened pen. The ink of the Lachish ostraca was a mixture of carbon and iron (as oak-galls or copperas). The Romans also used the juice of cuttlefish (Persius, *Satires* 3. 13), which, like most inks, could easily be erased by washing (Nu. 5:23) or by scratching with the 'penknife' (Je. 36:23, Heb. *ta'ar sōpēr*, 'scribe's knife') normally used for trimming

or cutting pens or scrolls. It has been suggested that Heb. *d'yô*, 'ink' (Je. 36:18), should be emended to *r'yô* (= Égypt. *ryt*, 'ink'; T. Lambdin, *JAOS* 73, 1953, p. 154), but this is not certain. The ink used by Paul (2 Cor. 3:3) and John (2 Jn. 12) is simply designated 'black' (*melan*).

The 'inkhorn' (Ezk. 9:2–3, 11; Heb. *qeset*) may be the palette (Égypt. *gsti*), the narrow rectangular wooden board with a long groove to hold the rush pens and circular hollows for the cakes of black and red ink. For illustrations of these palettes, etc., see W. C. Hayes, *The Sceptre of Egypt*, 1, 1953, pp. 292–296; J. B. Pritchard, *The Ancient Near East*, 1958, figs. 52, 55; *IBA*, p. 32, fig. 27. Similar palettes were in use in Syria, being carried by the scribe 'by his side' (Ezk. 9:2–3, 11), as shown on the Aram. stele of Bar-Rekub (*ANEP*, p. 460).

IV. Forms of documents

a. Tablets

The clay documents on which cuneiform script was inscribed vary in size (about 6 mm square to 45 × 30 cm) according to the amount of space required for the text. The inscription from left to right ran in lines (sometimes ruled) down the obverse (flat) side along the lower edge, then on down the reverse (convex) side, the upper and left edges. Where more than one tablet was needed to complete a work each text in the series was linked by a catchline and colophon (see VI, below) to indicate its correct place.

Contracts were often enclosed in a clay envelope on which the text was repeated and the * seals of the witnesses impressed. Larger historical or commemorative inscriptions were written on clay prisms or barrel-shaped cylinders which were often placed as foundation deposits. Wooden tablets or writing-boards varied both in size and in the number of leaves as required.

b. The roll

The usual form of the 'book' in Bible times was a roll or scroll (*m'gillâ*) of papyrus, leather or parchment in which the text was written 'within' (recto) and, when necessary, continued 'without' on the back (verso) as described by Ezekiel (2:10). This was sometimes called the 'roll of a book' (*m'gillat sēper*; Ps. 40:8; Ezk. 2:9); the LXX (B) of Je. 36:2, 4 (*chartion biblion*) implies the use of papyrus. The term for scroll (*cf.* Bab. *magallatu*) is not necessarily a late one in Heb. (*BDB*) and it is likely that the Jewish tradition requiring copies of the law to be made on a leather roll (*Soferim* 1. 1–3) reflects earlier practice.

The Heb. *sēper*, usually translated 'book' in AV, could refer to a roll or scroll (so AV Is. 34:4, correctly). It denotes any parchment or papyrus document (R. P. Dougherty, *op. cit.*, p. 114) and means a 'writing, document, missive, or book' (*cf.* Akkad. *šipru*). It is synonymous with the term for 'letter' (*iggere*, Est. 9:25), being also used for a letter or order from the king (2 Sa. 11:14; 2 Ki. 5:10; 10:1; Is. 37:14) or published decree (Est. 1:22).

sēper, as a general term for writing, is used of the communication from a prophet (Je. 25:13; 29:1; Dn. 12:4); a legal certificate of divorce (Dt. 24:1; Je. 3:8; Is. 50:1); a contract for the purchase of real estate (Je. 32:11); or an indictment (Jb. 31:35). It also denotes a general register (Ne. 7:5; Gn. 5:1), a covenant (Ex. 24:7) or law book (Dt. 28:61; Jos.

8:31), a book of poems (Nu. 21:14; Jos. 10:13) as well as collections of historical data (1 Ki. 11:41; 14:19; 1 Ch. 27:24; 2 Ch. 16:11; 25:26). Once 'the books' (plural *s'pārim*) refers to the canonical scriptures of the time (Dn. 9:2). It refers to the divine records (Pss. 69:28; 139:16; Mal. 3:16; Ex. 32:32; Dn. 12:1) and once to book-learning in general (Is. 29:11; *cf.* Dn. 1:4). The word and its cognates were current with similar meanings in the texts of *Ugarit, and *sēper*, 'scribe', appears as a loan word in Egypt during the 13th century BC.

The scroll, as the writing-boards and clay tablets, was inscribed in as many columns (*d'āōt*), and therefore of any length, as required (Je. 36:23).

In NT times the 'book' (*biblion*) was a roll as used for the law (Mk. 12:26; Lk. 4:17–20). It formed a scroll (Rev. 6:14) made up of sections of *papyrus, the inner bark of which (*byblos*) was used. Like the Heb. *sēper*, the Gk. *biblion* could be used of any (or unspecified) form of written document, including registration lists (Phil. 4:3; Rev. 13:8). 'The books' (plural *ta biblia*; Jn. 21:25; 2 Tim. 4:13, hence our 'Bible') came to be a term for the collected Scriptures. Where a small scroll was in mind *biblaridion* was used (Rev. 10:2, 8–10).

c. The codex

About the 2nd century AD the roll began to be replaced by the codex, a collection of sheets of writing-material folded and fastened together at one edge and often protected by covers. This was an important step in the development of the modern 'book', and was based on the physical form of the writing-tablet. At first these papyrus or parchment notebooks were little used for pagan literature, but were used in Palestine (Mishnah, *Kelim* 24. 7), and especially in Egypt, for biblical writings where the adaptation of 'the codex form to receive all texts both OT and NT used in Christian communities . . . was complete, as far as our present evidence goes, before the end of the 2nd century, if not earlier'. See C. H. Roberts, T. C. Skeat, *The Birth of the Codex*, 1983. Outside Christian circles the codex form was generally accepted by the 4th century AD. It has even been suggested, but not proved, that this form was developed by the early Christian church because of the ease of transport and reference. Certainly the *membranai* requested by Paul (2 Tim. 4:13) could have been a papyrus notebook of his own addresses or other writings or, more likely, an early Christian writing, perhaps the second Gospel or the Book of Testimonies, an anthology of OT passages used to support the Christian claim. These writings were a contrast to 'books' (*ta biblia*), in general probably rolls (of the LXX?). For the significance of the early codices in the history of the *Canon of Scripture, see C. H. Roberts in P. R. Ackroyd (ed.), *Cambridge History of the Bible*, 1, 1970, p. 57.

V. Scripts

a. Hieroglyphs

(i) *Egyptian*. The native script of pharaonic Egypt appears in three forms: hieroglyphic (Gk. *hieros*, 'sacred', and *glyphē*, 'carving'), hieratic (Gk. *hieratikos*, 'priestly'), and demotic (Gk. *demotikos*, 'popular').

1. The *hieroglyphic* system. The Égypt. hieroglyphs are pictorial signs, originally pictures to express the things they represent; many of them were soon used to express sounds—specifically the con-

WRITING

sonants of the Egyp. word for the thing represented by the picture-hieroglyph. Such a sign could then be used to stand for the same consonants in spelling out other words. Some of these phonetic signs came to stand for just one such consonant, becoming thus the world's first alphabetic signs. However, the Egyptians never isolated these as a separate alphabet as did their W Semitic neighbours. After most Egyp. words as spelt out by phonetic or sound signs, there comes a picture-sign or 'determinative' which signifies the general class into which the word falls. However, in very many cases it would be more accurate to say that the phonetic signs were actually added in front of the picture-sign (so-called 'determinative') as complements to determine the precise reading or sound of the latter, and thus its correct meaning, rather than that the picture-sign acted as classifier to the phonetically written word (cf. H. W. Fairman, *Annales du Service des Antiquités de l'Égypte* 43, 1943, pp. 297–298; cf. P. Lacau, *Sur le Système hiéroglyphique*, 1954, p. 108). Where a phonetic sign could have more than one sound-value, supplementary alphabetic signs could be added to show which reading was intended, though these were sometimes added even where no ambiguity existed.

2. *Hieratic and demotic.* The other two Egyp. scripts, hieratic and demotic, are adaptations of the hieroglyphic script which retained its splendid pictorial shapes throughout Egyp. history. The hieratic script is a cursive form of hieroglyphic script, written with pen and ink on papyrus, reduced to formal symbols no longer pictorial, for ease of rapid writing. Hieratic is to hieroglyphs what our long-hand script is to printed characters. The hieroglyphs first appear in Egypt just before the foundation of the pharaonic monarchy (1st Dynasty) c. 3000 BC, and hieratic came into use soon after. The third form of Egyp. script, demotic, is simply an even more rapid and abbreviated form of hieratic handwriting that first appears about the 7th century BC, and like the other two scripts lasted until the 5th century AD.

3. *Decipherment.* The ancient scripts of Egypt finally passed out of use in the 4th (hieroglyphic) and the 5th (demotic) centuries AD, and remained a closed book for 13 centuries until the discovery of the Rosetta Stone in 1799 during Napoleon's Egyptian expedition made possible the decipherment of Egypt's ancient scripts and language. The Rosetta Stone is a bilingual decree of Ptolemy V, 196 BC, in Gk. and Egyp., the latter in both hieroglyphic and demotic scripts. This and the Bankes obelisk eventually enabled the Frenchman, J. F. Champollion, to achieve the basic decipherment of the Egyp. hieroglyphs in 1822, showing that they were largely phonetic in use and that the Egyp. language was in fact simply the parent of Coptic, the language of the native Egyp. church.

4. *Scope.* From the very beginning, the Egyp. hieroglyphs were used for all purposes: historical records, religious texts and the mundane purposes of administration. They were accordingly drawn on papyrus or ostraca, carved on stone monuments, and engraved in wood or metal wherever inscriptions were required. However, from early in the 3rd millennium, the more rapid cursive script—hieratic—became customary for writing on papyrus, and so for all the records of daily life and administration, while hieroglyphs continued in use for all formal texts, stone inscriptions and monu-

mental purposes. Eventually, from the 7th century BC, demotic largely replaced hieratic as the script of business and administration, and hieratic from the 10th century BC onwards became largely the script of religious papyri.

BIBLIOGRAPHY. On the Egyp. scripts, see A. H. Gardiner, *Egyptian Grammar*, 1957, pp. 5–8. On the hieroglyphs themselves as pictures, see N. M. Davies, *Picture Writing in Ancient Egypt*, 1958, illustrated in colour. On the origin and early development of the hieroglyphic system, see S. Schott, *Hieroglyphen: Untersuchungen zum Ursprung der Schrift*, 1950, and P. Lacau, *op. cit.* For the Rosetta Stone, see BM brochure *The Rosetta Stone*, and, for its discoverer, W. R. Dawson, *JEA* 43, 1957, p. 117, with *ibid.*, 44, 1958, p. 123. On the decipherment of the hieroglyphs, see F. L. Griffith, *JEA* 37, 1951, pp. 38–46, or A. H. Gardiner, *op. cit.*, pp. 9–11; *Egypt of the Pharaohs*, 1961, pp. 11–14, 19–26.

(ii) *Hittite.* The system of hieroglyphs used by the Hittites in Anatolia and Syria, mainly in the latter half of the 2nd millennium BC, was deciphered in 1946 (see *AS* 3, 1953, pp. 53–95) and this script is now being studied in detail and used for comparison with the Hittite dialects written in the cuneiform script. It is a series of simple syllables (*ba, da, etc.*) with word-signs for common nouns (earth, king); see E. Laroche, *Les Hiéroglyphes Hittites*, 1, 1960.

b. Cuneiform scripts

(i) *Akkadian.* In Babylonia pictographs were used for writing on clay and stone from c. 3100 BC onwards. It was, however, soon found difficult to draw curved lines on clay, and the pictograph was gradually replaced by its representation made by a series of wedge-shaped incisions. A further change for convenience from writing down columns from right to left resulted in the classical script being written horizontally in columns, the lines running from left to right. In a major development, word-signs (ideograms) were used to represent words with the same sounds but differing meanings (e.g. meat, meet) or syllables in other words (e.g. meat, metre). Certain signs were also used as determinatives placed before or after words of a distinct class (e.g. deities, personal and place-names, animals, wooden objects, etc.). By 2800 BC the cuneiform script had fully developed, though the forms of signs were modified at different periods (for a table illustrating this development see *IBA*, fig. 22).

From the 3rd millennium BC, the cuneiform, using at least 500 different signs, was widely in use outside Mesopotamia (where it was employed for the Sumerian, Bab. and Assyr. languages). It was adapted for writing other languages, notably W Semitic dialects, Hurrian, the various Hittite tongues. During the 15th–13th centuries BC in Palestine the chief cities used it for diplomacy and administration. Thirty-three cuneiform tablets have been found at Palestinian sites, including *Taanach(13), *Aphek(8), *Shechem(2), *Megiddo(2). The fragment of the Epic of Gilgamesh from Megiddo (*Atiqot* 2, 1959, pp. 121–128) and lexical texts from Aphek show scribes were trained in traditional Babylonian style, using standard texts.

(ii) *Ugaritic.* At Ras Shamra scribes employed cuneiform Akkadian for international correspondence and some economic texts in the 15th–13th centuries BC. Parallel with this, however, a unique system of writing was developed. It combined the simplicity of the existing Canaanite (Phoenician)

alphabet with the Mesopotamian system of writing with a stylus on clay, thus transcribing the consonantal alphabet by means of cuneiform writing. Since it was employed for both Semitic and non-Semitic (Hurrian) languages, 29 signs were developed (by the addition of a few wedges in a simple pattern bearing little or no relation to Akkadian) to represent the consonants and three *'alep* signs with variant vowels ('a' i' u). A number of scribal practice tablets give the order of the alphabet which prefigured the Hebrew order (C. Virolleaud, *Palais royal d'Ugarit*, 2, 1957).

This script was used for both religious, literary (mythological) and administrative texts and for a few letters. Although easier to learn than Akkadian, there is as yet little evidence of it being widely used; but a few examples of a variant form have been found as far afield as Beth-shemesh, Tabor and Taanach in Palestine, and places in S. Syria. The invention appears to have come too late to oust the already established and simplified Phoenician linear script. For a general survey, see C. H. Gordon, *Ugaritic Textbook*, 1967.

(iii) *Old Persian*. By the late 7th century BC the Aramaic alphabetic script had largely displaced the cuneiform script, except in a few traditional centres and types of temple documents for which, as at Babylon until AD 75, the Bab. cuneiform script continued to be used.

Under the Achaemenid Persians a special system, derived from the cuneiform of Babylonia, was employed alongside the Aramaic script for their Indo-Iranian (Aryan) language. This simplified cuneiform is mainly known from historical texts of the reigns of Darius I and Xerxes. An inscription of the former written on a rock at Behistun in Old Persian, Bab. and Elamite provided the key to the decipherment of the cuneiform scripts, the Old Persian version being deciphered soon after Rawlinson's copy of 1845 had been published. This cuneiform script comprises 3 vowel signs, 33 consonantal signs with inherent vowel plus 8 ideograms and 2 word dividers. A variant form of cuneiform script was used for the Elamite (SW Persia) language in its earliest forms, and later for more than 2,000 economic texts from Persepolis c. 492-460 BC (G. G. Cameron, *Persepolis Treasury Tablets*, 1948; R. T. Hallock, *Persepolis Fortification Tablets*, 1969).

c. Linear scripts

(i) Wide use of Egyp. hieroglyphs and Bab. cuneiform in Syro-Palestine from the 3rd millennium BC on (e.g. *EBLA) stimulated the production of simpler writing systems for local languages. At Byblos (*GEBAL) a system of about 100 syllabic signs flourished during the 2nd millennium BC, but they are as yet not fully understood. At the same time Linear A and Linear B scripts arose in Crete with a related script in Cyprus of which examples have been found at Ugarit (Cypro-Minoan). Isolated discoveries attest the existence of other scripts at this period, notably three clay tablets from Tell Deir 'Alla in the Jordan valley, and a stele from Balu'ah in Moab.

(ii) *Alphabetic*. Early in the 2nd millennium BC, it would seem that a scribe living in Syro-Palestine, perhaps at Byblos, realized that his language could be represented by many fewer signs than any of the current more cumbersome syllabaries employed; each consonant could be shown by one symbol. The symbols adapted were pictures on the Egyp.

model. The hieroglyphic script included pictures which stood for the initial sounds of their names only, e.g. *r* 'mouth' for *r*. The value of the alphabetic principle lay in reducing the number of symbols until there was only one for each consonantal sound in the language. Vowels were not separately represented until the Greeks took over the alphabet. It is probable that the symbols were treated initially as consonants plus appropriate vowel (e.g. *ba, du, gi*). With this outstanding invention mankind gained a simple means of recording which eventually broke the monopoly of the *scribes and placed literacy within the reach of everyone (see VI, below).

Examples of this ancestor of all alphabets have been found in Palestine and can be dated shortly before 1500 BC. These exhibit a few signs only, probably personal names, scratched on pottery and metal. The full range of signs—about thirty—appears in the only early group of texts written in a form of this alphabet recovered so far, the 'Proto-Sinaitic' inscriptions. These are short prayers and dedications scratched on the surfaces by Canaanites employed in the Egyp. turquoise mines at Serbit el-Khadim in SW Sinai during the 16th century BC. During the next 500 years the signs were simplified, losing their pictorial form. Examples from sites in Canaan show widespread use and growing standardization (e.g. potsherds from Lachish, Hazor, arrowheads from near Bethlehem and the Lebanon) see B. Sass, *The Genesis of the Alphabet and its Development in the Second Millennium BC*, 1988.

The order of the letters is attested by the cuneiform alphabet of Ugarit (13th century BC), an early imitator, by an ostracum from 'Izbet Sar'ah, near Aphek (c. 1100 BC; M. Kochari, *Tel Aviv* 4, 1977, pp. 1-13). Heb. acrostics also display it (Na. 1:2-14; Pss. 9, 10, 25, 34, 37, 111, 112, 119, 145; La. 1-4; Pr. 31:10-31; Eccles. 5:13, 29). The Greeks borrowed the letters in the same order. The reason for the arrangement is uncertain. Mnemonic needs and similarities in names or the nature of sounds expressed have been suggested (Driver, *op. cit.*, pp. 180-185, 271-273).

(iii) *Phoenician-early Hebrew*. In the main from 1000 BC onwards we can trace the history of the letters clearly, although there are few specimens written between 1000 and 800 BC. The direction of the writing was standardized, from right to left, as in Egypt. Most documents were made of papyrus and so have perished in the damp soil. Those that survive, on stone, pottery and metal, prove the ready acceptance of the script for all purposes. It was evidently well established before the end of the 2nd millennium BC, a ready tool for the Israelites to employ in recording and teaching the laws of God and the history of his works on their behalf (see A. R. Millard, *EQ* 50, 1978, pp. 67 ff.).

1. The major *monumental* inscriptions for the study of Heb. epigraphy are: (a) The agricultural calendar from *Gezer, variously attributed to an archaic or unskilled hand and dated to the 10th century BC (*DOTT*, pp. 201-203). (b) The stele of Mesha', king of Moab (*MOABITE STONE). This 34-line inscription is important historically and as an example of the development of the monumental Heb. cut in use in a remote place c. 850 BC. The well-cut letters already show a tendency to become cursive. This is further seen in (c) the *Siloam Inscription (*IBA*, fig. 56), dating from the reign of Hezekiah, c. 710 BC, and (d) the Tomb

WRITING

inscription of the Royal Steward from Siloam of about the same date (*SHEBNA; *IBA*, fig. 53). For the lapidary form of the script, see *seals. By this time Phoenician and Aram. letters had taken their own distinctive forms.

2. The *ursive* hand which the OT writers would have originally employed is seen in the inscribed arrow-heads and other smaller writings of c. 1000 BC. The earliest body of texts is 75 ostraca from Samaria, some assigned to the reign of Jeroboam II (c. 760 BC; A. Lemaire, *op. cit.* (II), pp. 23–81; *DOTT*, pp. 204–208). These show a clear, flowing script written by scribes long practised in the art. The unvocalized words are divided by small dots. Inscribed sherds from many sites show the development of the script down to the time of the *Lachish Letters and most of the ostraca from *Arad at the end of Judah's history (*DOTT*, pp. 212–215; *ANET*, pp. 568–569; A. Lemaire, *op. cit.*).

(iv) *Aramaic*. Aramaeans adopted the Canaanite alphabet as they settled in Syria and gradually gave it distinctive features. The earliest texts (c. 850–800 BC) are the Tell Fekheriye Statue inscription (A. Abou Assaf, P. Bordreuil, A. R. Millard, *La Statue de Tell Fekheriye et son inscription bilingue assyro-araméenne*, 1982, the partly illegible Melqart Stele of Bar-hadad (*BEN-HADAD; *DOTT*, pp. 239–241, but note the second line cannot be read 'son of Tabrimmon'), the *Dan Stele and two pieces of ivory bearing the name of *Hazeal. Soon after 800 BC Zakkur, king of *Hamath, erected a stele with 46 lines of inscription, and about 750 BC a treaty between the unknown Bar-gayah and Mati-el of *Arpad was recorded on three stelae. An increasingly cursive style is attested by the Bar-rakkab Stele (*ANEP*, p. 460). As Aramaic spread, the alphabet quickly took root in Assyria and Babylonia, to the disadvantage of the cuneiform script. Papyrus documents have perished, but a list of names on a sherd from Nimrud (*CALAH) in Assyria of the early 7th century BC (J. B. Segal, *Iraq* 19, 1957, pp. 139–145), notes scratched on clay tablets, and a long letter written on a potsherd and sent from Erech to Ashur about 650 BC, show its use. Papyrus documents found in Egypt show the script developing from c. 600 BC (letter from Philistia to Egypt) until the end of the Persian period, notably in the 5th-century documents from Elephantine (*DOTT*, pp. 256–269) and other places (G. R. Driver, *Aramaic Documents of the Fifth Century BC*, 1954).

(v) *Early Jewish scripts*. The discoveries of MSS from the Wadi Qumran (*DEAD SEA SCROLLS), Judaean caves (especially the dated texts from Murabba'at) and inscribed ossuaries from the Jerusalem area have produced a wealth of material for the study of the formal and cursive Palaeo-Hebrew and early Jewish scripts from the 3rd century BC to the 2nd century AD. The fall of the Persian empire and the displacement of the common Aramaic of the imperial court led to many local variations.

1. The Archaic or proto-Jewish script of Judah, c. 250–150 BC, as reflected in the Qumran MSS, shows a formal hand derived from the Persian Aramaic which, by the late 3rd century, is a cross between the formal and cursive scripts and close to the common Aramaic scripts of Palmyra and Nabataea which also emerged at this time. While these national scripts cannot yet be more precisely dated, formal, semi-formal and true cursive hands can sometimes be distinguished. This script is also to be seen on coins of the period.

2. The Hasmonaeen period (c. 150–30 BC) saw the development of the formal, squarer and more angular hand seen in its first stages in the Nash Papyrus, now dated c. 150 BC.

3. The Herodian period (30 BC–AD 70) was a time of swift development, and texts can thus be closely dated.

4. The post-Herodian period (after AD 70) is now well known from dated commercial and legal documents. The cursive script is not a literary but highly involved hand. The development of all these Jewish hands is illustrated and discussed in detail by F. M. Cross (*The Bible and the Ancient Near East*, ed. G. E. Wright, 1961, pp. 133–202). Study of early Heb. writing, the scribes' habits and letter forms, is of especial value in considering how errors may, or may not, have crept into the OT text.

(vi) *Greek*. The Gk. alphabet was by tradition attributed to a Phoenician trader Cadmus (Herodotus, *Hist.* 5. 58–59) and, by comparison between the early Gk. alphabets at Athens, Crete, Thera, Corinth and Naxos and dated Phoenician texts (see above), this view is justified. It would seem probable from the form of the letters that the Greeks had by the middle of the 9th century BC adapted the script to the needs of their Indo-European language. They used the Phoenician symbols for sounds which they did not possess ('h' 'h' 'u [w] y), for the vowel sounds they required (a e ē o y i respectively), and thus created the first true alphabet in which consonants and vowels were represented by distinct signs.

The abundance of monumental and manuscript evidence makes the study of Gk. epigraphy and palaeography an important and exact science for the background of the biblical Gk. texts. From W Greece the alphabet reached the Etruscans, and thus through the Roman script entered Europe.

(vii) *Other scripts*. As well as the development of the Phoenician script for use in the Gk., and thence Roman and subsequently European scripts, the early Canaanite script was developed for writing S Semitic dialects. Examples have been found in S Palestine and S Babylonia from c. 600 BC, and from S Arabian sites from slightly later.

VI. Literacy and literary methods

Evidence for the degree of literacy, which varied according to time and place, is small. Gideon was able to lay hands on a young man of Succoth in Jordan who wrote down a list of the city elders (Jdg. 8:14; Heb., rsv, avmg., rvmg. 'write', av, rv, unjustifiably 'describe'). Such ability among the young to write (Is. 10:19) was enhanced by the advent of the alphabet and by the establishment of *schools for scribes attached to temples and shrines. Every Israelite householder had to write the words of the Law (Dt. 6:9; 11:20). Writing, though not so well attested in the West as in Babylonia, was certainly widespread in Syria and Palestine by the 2nd millennium, when at least five scripts were in use, viz. Egyp. hieroglyphs, Byblian syllabary, Canaanite alphabet, Akkad. cuneiform and the Ugaritic alphabetic cuneiform (see above).

Writing was generally undertaken by trained *scribes who could be drawn from any class of the population (*contra* E. Nielsen, *Oral Tradition*, 1954, pp. 25, 28), though most higher officials in administration were literate. The mass of cuneiform tablets, ostraca and papyri so far found shows the prominent place of the written word throughout the ancient Near East. A percentage is difficult

to estimate owing to the incompleteness of the records, but the six scribes to a population of about 2,000 at Alalakh in Syria in c. 1800–1500 BC is probably indicative of the literacy in important towns (D. J. Wiseman, *The Alalakh Tablets*, p. 13). Recent studies show that scribes may have learnt their Akkadian at main ‘university’ centres such as Aleppo in Syria or Babylon itself.

Documents were stored in baskets, boxes or jars (Je. 32:14) and laid up in the local temple (1 Sa. 10:25; Ex. 16:34; cf. 2 Ki. 22:8) or special archive stores (Ezr. 6:1). Specific reference books were held by scribes (as, e.g., at Nippur, c. 1950 BC). Tiglath-pileser I (c. 1100 BC) at Assur and Ashurbanipal (c. 650 BC) at Nineveh collected copies of texts or had them written for their libraries. When copying texts a scribe would often quote the source, giving the condition of the document from which he copied, and stating whether the text had been checked with the original document, or only copied down from oral tradition, which was considered a less reliable

method (J. Læssøe, ‘Literacy and Oral Tradition in Ancient Mesopotamia’, *Studia Orientalia Ioanni Pedersen*, 1953, pp. 205–218). Oral tradition was conceived as existing alongside the written word but not taking the place of primary authority. The colophon (both Akkadian and Egypt.) would also give the title or catchline which designated the work; but authorship was often, though not invariably, anonymous. It is likely that the Heb. writers used similar methods.

K. A. K.
A. R. M.

Y

YARN. In the Bible the yarns mentioned are goats' hair, camels' hair, cotton (Heb. *karpas*; Est. 1:6; cf. *Ebi*, 1, p. 915), linen and silk (Ezk. 16:10; Rev. 18:12). Cotton, from the lint around the seeds produced by the shrub *Gossypium herbaceum*, originated in ancient India, but spread E only in the Gk. period. The 'linen yarn' in the AV of 1 Ki. 10:28 and 2 Ch. 1:16 is due to a misunderstanding of the Heb. text. The correct translation, referring to a country called Kue (*i.e.* *CILICIA), is to be found in the RSV.

F.N.H

YOKE. The rendering of several Heb. and Gk. words, used either literally for the wooden frame joining two animals (usually oxen), or metaphorically as describing one individual's subjection to another. The words are *mōt* (Na. 1:13) and *Mōtā* (Is. 58:6; Je. 27:2, *etc.*), 'a bar'; *ōl* (Gn. 27:40; La. 1:14, *etc.*), 'a yoke'; *šemed* 1 sa. 11:7; Jb. 1:3, *etc.*), 'yoke of oxen'; *zeugos* (Lk. 14:19), 'a pair'; *zygos* (Mt. 11:29; 1 Tim. 6:1, *etc.*), 'a yoke', 'a balance' (*AGRICULTURE).

In 2 Cor. 6:14 Paul uses *heterozygeō*, 'to be yoked with one of another kind'. For the 'yoke-fellow' of Phil. 4:3 see *SYNZYGUS. J.D.D.

Z

ZAANAN. A place mentioned in Mi. 1:11, the inhabitants of which remained in their city when invading forces passed through the land. It may be identical with Zenan in the Shephelah of Judah listed in Jos. 15:37. J.D.D.

ZAANANNIM, ZAANAIM (Heb. *ṣaʿnannīm*). On the S border of Naphtali, near Kedesh (Jos. 19:33); Heber the Kenite camped there (Jdg. 4:11; *v.*, *Kʿīṭh* 'Zaanaim'); perhaps Elon ('Oak')-in-Zaananim, *cf.* G. F. Moore, *ICC*, 1903, on Idg. 4:11).

Khan et-Tuggar, 4 km NE of Tabor, preserves the name in its Arabic equivalent ('traveller'). Khan Leggun near Tell abu Qedeis, 4 km N of Gaanach, has been suggested as a more likely refuge for Sisera (Jdg. 4:17), but would have been the wrong side of the flooded Kishon; *cf.* R. Boling, *Judges*, 1975, pp. 96f.; J. Soggin, *Judges*, 1987, pp. 66, 75. J.P.U.L.

ZABAD. 1. An Ephraimite (1 Ch. 7:21). 2. A man of Judah, of the lineage of Hezron (1 Ch. 2:36f.). 3. One of David's mighty men (1 Ch. 11:41), probably to be equated with 2; note the name Ahlai in the parentage of both. 4. A conspirator against Ioshabab (2 Ch. 24:26). The correct form of the name is *Jozachar. *Cf.* 2 Ki. 12:21. 5, 6, 7. Three laymen who put away their foreign wives, as directed by Ezra (Ezr. 10:27, 33, 43). D.F.P.

ZABBAI. Possibly a shortened form of Heb. *zāḇadyā*, 'The Lord bestowed upon' (W. Rudolph). This name is found in Ezr. 10:28 and Ne. 3:20. Zabbai was forced by Ezra, according to Ezr. 10:28, to put away his foreign wife. Zabbai in Ne. 3:20 is problematic. He was the father of Baruch who helped with the rebuilding of the walls of Jerusalem. Either he is the same person as in Ezra, or a different person with the same name, or Zabbai must be replaced by Zakkai (*cf.* Ezr. 2:9 and various mss, Vulg. and Syr.). F.C.F.

ZABDI. 1. The grandfather of Achan who took some of the devoted spoil at Jericho (Jos. 7:1, 17-18). He is also called Zimri (1 Ch. 2:6). 2. A Beniaminite (1 Ch. 8:19). 3. An officer of David's vineyards (1 Ch. 27:27). 4. A Levite (Ne. 11:17), also called Zichri (1 Ch. 9:15). R.A.H.G.

ZACCHAEUS, from Heb. and Aram. *Zakkai*, a reduced form of Zechariah. A chief tax-collector at Jericho who became a disciple of Christ (Lk. 19:1-10). He was probably the general tax-farmer

of Jericho and undoubtedly had abused his position on occasions to enrich himself. Being a small man, he climbed a tree to see Jesus, who then asked to stay at his house. Zacchaeus welcomed him and showed practical repentance in giving half his goods to the poor and fourfold compensation to any whom he had defrauded. Christ said that this showed him to be a true son of Abraham and declared that salvation had come, not only to him, but to his house. The self-righteous in the crowd were critical of Jesus' action, but he declared his mission to be the seeking and saving of the lost.

BIBLIOGRAPHY. P. Kariamadam, *The Zacchaeus Story*, 1985. R.E.N.

ZADOK (Heb. *šādōq*, 'righteous?'). 1. Son of Ahitub, who was, according to 1 Ch. 6:1ff., 50ff., a descendant of Eleazar, third son of Aaron. He was priest at David's court along with Abiathar (2 Sa. 8:17) and had charge of the ark (2 Sa. 15:24f.); he took part in the anointing of Solomon as David's successor when Abiathar supported Adonijah (1 Ki. 1:7ff.). He and his descendants discharged the chief-priestly duties in Solomon's Temple until its destruction in 587 BC. Ezekiel restricts the priestly privileges in his new commonwealth to the Zadokite family on the ground that they alone were innocent of apostasy under the Monarchy (Ezk. 44:15ff.). In the second Temple the Zadokites retained the high priesthood continuously until 171 BC, when it was transferred to Menelaus by Antiochus IV; even after that a Zadokite priesthood presided over the Jewish temple at Leontopolis in Egypt until Vespasian closed it soon after AD 70. The Qumran community remained loyal to the Zadokite priesthood and looked forward to its restoration.

2. A descendant of Zadok, grandfather of Hilkiah (1 Ch. 6:12; 9:11; Ne. 11:11). 3. Father-in-law of King Uzziah and grandfather of Jotham (2 Ki. 15:33; 2 Ch. 27:1). 4, 5. Two builders of the wall under Nehemiah (Ne. 3:4, 29); one or the other of these may be the same as Zadok, a signatory to the covenant (Ne. 10:21), and 'Zadok the scribe' (Ne. 13:13).

BIBLIOGRAPHY. H. H. Rowley, 'Zadok and Nehushtan', *JBL* 58, 1939, pp. 113ff.; *idem*, 'Melchizedek and Zadok' in *Festschrift für A. Bertholet* (ed. W. Baumgartner), 1950, pp. 461ff.; R. de Vaux, *Ancient Israel*, 1961, pp. 372-405; J. R. Bartlett, 'Zadok and his successors at Jerusalem', *JTS* n.s. 19, 1968, pp. 1-18. F.F.B.

ZAIR. 2 Ki. 8:21 records that King Joram passed over to Zair to crush a revolt of the Edomites, hence its probable location was on the border of Edom. Some mss of the LXX read here Z(e)ior, and

ZAIR

Zair may possibly be identical with *Zior, listed in Jos. 15:54, in the Judean hill-country.

R. A. H. G.

ZALMON. I. A personal name. One of David's mighty men, said to be an Ahohite (2 Sa. 23:28). He is called Ilai in 1 Ch. 11:29.

2. The name of a mountain in the vicinity of the tower of Shechem (Jdg. 9:48). Its identification is far from certain; both Gerizim and Ebal have been suggested.

3. Another mountain, mentioned in Ps. 68:14 (spelt Salmon in AV). Some have equated it with the foregoing, but this mountain would appear to have been to the E of the Jordan and is usually identified with Jebel Ḥaurān. D.F.P.

ZAMZUMMIM (*zamzummim*, meaning uncertain; possibly 'whisperers', 'murmurers', from a root known in Arabic). The name given by the *Ammonites to the people (known also as *Rephaim) whom they themselves displaced from their territory in central Transjordan (Dt. 2:20-23). It is at present difficult to associate them with any particular archaeological remains but, assuming that the Ammonites settled in the 13th century BC, one might consider these people as the Middle Bronze/Late Bronze Age occupants of the region, whose presence is attested by a few recent discoveries (cf. *IDBS*, p. 20). Whether the *Zuzim in Gn. 14:5 are the same people remains uncertain.

J. G. G. N.

G. I. D.

ZANOAH (Heb. *zānōah*). I. A town in the Shephelah (Jos. 15:34; Ne. 3:13; 11:30); Khirbet Zanū', 3 km S of Beth-shemesh, W of modern Zanoah. 2. A town in the hills near Juttah (Jos. 15:56; 1 Ch. 4:18); may be Khirbet Beit Amra, overlooking the Wadi el-Halil (W Hevron), part of which is called Wadi Abu Zenah (Grollenberg, Abel); or Khirbet Zanuta, SW of Eshtemoa (Rudolph, *Chronik-bucher*, 1955, *ad loc.*; Israeli Survey); or Khirbet Yaqin, 6 km SE of Hebron (Noth, *Josua, ad loc.*, citing LXX to read 'Zanoah of Kain'; but the readings are doubtful). J. P. U. L.

ZAPHENATH-PANEAH. An Egyp. name bestowed by the pharaoh upon Joseph at his investiture (Gn. 41:45). The search for its Egyp. original has produced many widely divergent suggestions. Steindorff's *D(d)-p'-nt(r)-f-w.f.-nh* is phonetically good, but is circumstantially inappropriate in meaning and of too late a date. Most other suggestions are either phonetically unacceptable or else lack any real Egyp. parallels. However, the Heb. consonantal form *š-p-n-t p'-n-h* may, with one slight change (for euphony in Heb.) to *š-t-n-p-p'-n-h*, stand for (*yōšēp*) *qd-n.f 'Ip-nh* (Joseph), who is called *'Ip'ankh*; *qd-n.f* would be the well-known construction introducing a second name, the name itself being *'Ip'ankh*, a common name in the Middle Kingdom and Hyksos periods, *i.e.* in the patriarchal and Joseph's age. K. A. K.

ZAPHON. A town referred to in Jos. 13:27 and Jdg. 12:1, lying in Gadite territory in the Jordan

valley. TJ identifies it with the Amathus of Josephus, which is to be located at Tell 'Ammatah; but this is improbable. Other proposed locations for Zaphon are Tell al-Sa'idiya and Tell al-Qos. D.F.P.

ZAREPHATH ('smelting place'). Akkad. *šariptu*; cf. *šarāpu*, to refine (metals), to fire (bricks). A small Phoenician town (mod. Sarafand), originally belonging to *Sidon, it appears in late 13th century Papyrus Anastasi I (*ANET*³, p. 477). It was captured by Sennacherib in 701 BC (Zarebtu, *ANET*³, p. 287) and by Esarhaddon, c. 680-669 BC, who gave it to Ba'ali, king of Tyre (J. B. Pritchard, 'Sarepta in History and Tradition', in J. Reumann (ed.), *Understanding the Sacred Text*, 1971, pp. 101-114).

Situated about 13 km S of Sidon on the Lebanese coast on the road to *Tyre, it is mentioned in 1 Ki. 17:9ff. as the place to which *Elijah went during the drought in Ahab's reign and where he restored life to the son of the widow with whom he lodged. Lk. 4:26 refers to this incident, the town there being called by the Gk. and Lat. name, Sarepta.

Obadiah prophesied that in the Day of the Lord those of the children of Israel who were deported by Sargon after the fall of Samaria should possess Phoenicia as far as Zarephath.

For excavations begun in 1969, see *AJA* 74, 1970, p. 202; 76, 1972, p. 216; *Archaeology* 24, 1971, pp. 61-63; J. Pritchard, *Sarepta*, 1975. R. A. H. G.

ZARETHAN. This town is spelt variously Zartan, Zartanah and Zarthan in AV; and the name appears as Zeredah (AV Zeredathah) in 2 Ch. 4:17. Zarethan is mentioned in connection with Bethshean, Adam and Succoth, and lay in the Jordan valley, near a ford over the river. Its exact site has been debated, but it almost certainly lay W of the Jordan. One suggested location, Qarn Sartaba, perhaps recalls the name Zarethan; but most authorities prefer Tell al-Sa'idiya. (Excavated 1964-7; 1985 onwards, see *NEAEHL*, pp. 1295-1300.) Tell Umm Ḥamād is another possibility. D.F.P.

ZEAL. In modern Eng. usage, fervour in advancing a cause or in rendering service. But the corresponding Heb. and Gk. words in the Bible can have a bad sense. Thus *qānā* (verb), *qin'ā* (noun), are often rendered 'envy', 'envious' (as in Gn. 26:14; Ps. 37:1), or '*jealous', 'jealousy' (Gn. 37:11; Jb. 5:2), and once 'passion' (Pr. 14:30), as well as 'zeal' in a positive sense (2 Sa. 21:2).

The phrase 'the zeal of the Lord (of hosts)' occurs several times (2 Ki. 19:31; Is. 9:7; 37:32; cf. Is. 26:11; 63:15) and means his jealous concern for his own people and their welfare: their relationship to him is as a wife to a husband, hence NEB's 'jealous anger' in Is. 59:17 (Heb. *qin'ā*; rsv 'fury').

Similarly, in NT the Gk. terms *zēloō* (verb) and *zēlos* (noun) can have a bad or a good sense, according to context. Thus rsv gives 'jealous' (Acts 7:9), 'jealousy' (Acts 5:17) and 'covet' (Jas. 4:2), but translates in a good sense as 'earnestly desire' (1 Cor. 12:31), 'make much of' (Gal. 4:17) or 'zeal' (2 Cor. 7:7). But 'jealousy' can have a positive meaning. In 2 Cor. 11:2 Paul is 'jealous' (*zēloō*) over his converts 'with a divine jealousy' (*zēlos*), not

meaning the human jealousy of selfish possessiveness or a concern for his own reputation, but the jealousy which a lover feels for his beloved; and a 'divine' jealousy because it is as felt by God himself for his own people, who stand as in the marriage relationship to him (cf. Ex. 20:5; 34:14; Dt. 5:9, etc.).

zēlōtēs, *'zealot', is applied to the apostle Simon (Lk. 6:15; Acts 1:13), called in Mt. 10:4 and Mk. 3:18 Simon the Cananean, where *ho kananaios* may translate Aram. *qan'ān*, 'zealot'. *zēlōtēs* also occurs in 1 Cor. 14:12, where Paul's readers who are zealots (RSV 'eager') for manifestations of the Spirit are bidden to strive (*zēteō*) to excel in building up the church, i.e. to realize that the purpose of spiritual gifts is communal and not for selfish ends. Elsewhere *zēlōtēs* is translated by RSV as 'zealous' (Acts 21:20; 22:3; Gal. 1:14; Tit. 2:14; 1 Pet. 3:13).

The verb *spoudazō* is translated 'zealous' (2 Pet. 1:10, 15; 3:14), but also 'eager' (Gal. 2:10; Eph. 4:3; 1 Thes. 2:17), 'do your best' (2 Tim. 2:15; 4:9, 21; Tit. 3:12), 'strive' (Heb. 4:11). The adjective *spoudaios* occurs in 2 Cor. 8:17, 22 ('earnest'), and the adverb *spoudaiōs* in Lk. 7:4 ('earnestly'), Phil. 2:28; 2 Tim. 1:17 ('eagerly'), Tit. 3:13 ('do your best'). RSV renders *spoudē* as 'zeal' (Rom. 12:8, 11; 2 Cor. 7:12), 'haste' (Mk. 6:25; Lk. 1:39), 'eagerness' (2 Cor. 8:7-8, 16; Heb. 6:11), 'effort' (2 Pet. 1:5).

ZEALOT (Gk. *zēlōtēs*). One of the twelve apostles is called Simon the Zealot (Lk. 6:15; Acts 1:13), either because of his zealot temperament or because of some association with the party of the Zealots (*CANANAEAN). Paul speaks of himself as having been a religious zealot (Acts 22:3; Gal. 1:14), and the many members of the church of Jerusalem are described as all 'zealots for the law' (Acts 21:20).

The party of the Zealots, described by Josephus as the 'fourth philosophy' among the Jews (*BJ* 2. 117; *Ant.* 18. 23), was founded by *Judas the Galilean, who led a revolt against Rome in AD 6 (*CENSUS). They opposed the payment of tribute by Israel to a pagan emperor on the ground that this was treason to God, Israel's true King.

These men were called Zealots because they followed the example of Mattathias and his sons and followers, who manifested zeal for the law of God when Antiochus IV tried to suppress the Jewish religion (1 Macc. 2:24-27), and the example of Phinehas, who showed comparable zeal in a time of apostasy in the wilderness (Nu. 25:11; Ps. 106:30f.). When the revolt of AD 6 was crushed they kept its spirit alive for 60 years. Members of Judas's family were Zealot leaders; two of his sons were crucified by the procurator Alexander c. AD 46 (Jos., *Ant.* 20. 102), and a third, Menahem, attempted to seize the leadership of the anti-Roman revolt in AD 66 (Jos., *BJ* 2. 433). Zealots were active throughout the war of AD 66-73; the last Zealot stronghold, Masada, fell in May AD 74, but even then the Zealot spirit was not completely quenched. (*ASSASSINS.)

ZEBAH (Heb. *zēbah*, 'slaughter', 'sacrifice'). One of two kings of Midian who raided Palestine in the days of Gideon the judge. Some of Gideon's people had been slain in a Midianite raid (Jdg. 8:18f.). Gideon carefully selected 300 and pursued the raiders. The people of Succoth and Penuel refused to help him and were later punished. At Karkor (v. 10) Gideon captured the two chiefs Zebah and Zalmunna and slew them. Following this exploit, Gideon was invited to be king over Israel, but refused (Jdg. 8:22-23). In Ps. 83:1-12 this incident finds a place among the list of victorious God gave his people. J.A.T.

ZEBEDEE (Gk. *Zebēdaios* from Heb. *zib'diyāhū*, 'the gift of Yahweh'). The father of the apostles James and John (Mk. 1:19) and husband of Salome (Mt. 27:56; Mk. 15:40). A Galilean fisherman, probably of some means (cf. Mk. 1:20); he evidently lived at or near Bethsaida. J.D.D.

ZEBOIM (NEB ZEBOYIM). One of the cities of the plain (Gn. 14:2) eventually destroyed with *Sodom and Gomorrah (Dt. 29:23). Its location seems to have been in the vicinity of *Admah. D.F.P.

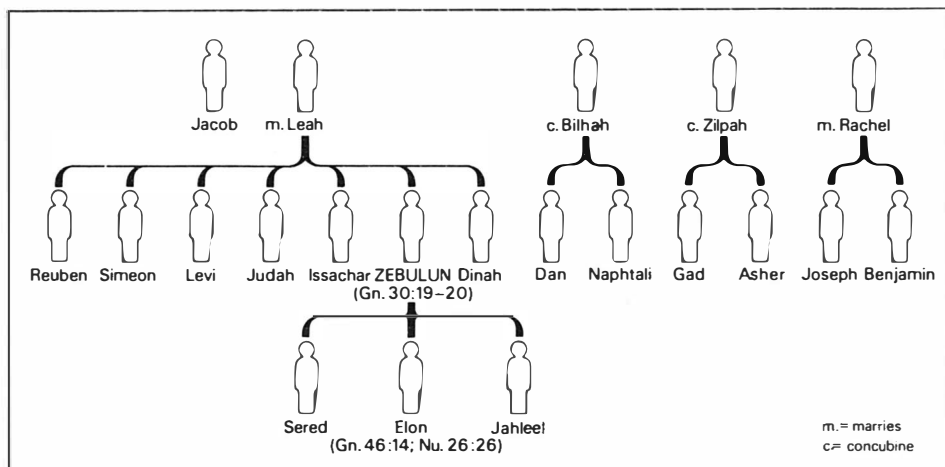

ZEBOIM. 1. A valley near Michmash in Benjaminite territory (1 Sa. 13:18), modern Wadi Abu Daba'. The Heb. phrase means 'ravine of hyenas' (*gē s'bō'im*). **2.** A Benjaminite town of post-exilic times, near Lydda (Ne. 11:34). D.F.P.

ZEBUL (Heb. *z'bul*, 'exalted', i.e. prince, or height). Ruler of Shechem under the self-styled 'king' Abimelech, whom he rescued from Gaal's revolt (Jdg. 9:26-41). In Ugaritic, *zbl* (I), 'prince', is used of Baal, lord of the earth, while *zbl* (II) is 'sick (man)'; cf. (e.g.) C. H. Gordon, *Ugaritic Text-book*, 3, 1965, p. 393, Nos. 815-816. K.A.K.

ZEBULUN. The tenth son of Jacob and the sixth son of Leah (Gn. 30:19f.). The original form of the name may have been Zebulon or Zebul, the name of Abimelech's lieutenant (Jdg. 9:26-41). In the account of his birth a double derivation is suggested: *zābal* to 'honour' and *zābad* to 'endow' or 'bestow'. Similar forms are found in Egypt., Akkad. and Canaanite sources. Before the descent into Egypt Zebulun had three sons, Sereb, Elon and Jahleel (Gn. 46:14), founders of their respective tribal clans.

Zebulun was able to possess more of its allotted territory than most of the tribes, possibly because it comprised largely virgin country, with no great cities (Jos. 19:10-16). Kitron (perhaps the Kattath of Jos. 19:15) and Nahalol are mentioned as incompletely conquered (Jdg. 1:30). Generally speaking, Zebulun occupied a broad wedge in S Galilee between Asher and Naphtali with Manasseh to the SW and Issachar to the SE. The S boundary was probably the river Kishon in the

ZEBULUN

The genealogy of Zebulun.

Valley of Esdraelon, which gave Zebulun, like Issachar, control over the trade routes. The Blessing of Jacob (Gn. 49:13) promises Zebulun access to the sea, although it is not clear whether Galilee or the Mediterranean is meant. In either case this was never realized, but the reference may be to the strategic commercial position shared with Issachar (*cf.* Dt. 33:18f.). These tribes also shared the same holy mountain (Dt. 33:19), probably Tabor (*cf.* Jdg. 4:6), on the fringe of Zebulun's territory. Although one of the smaller tribal areas, it was fertile, being exposed to the rain-bearing W winds. With 57,400 and 60,500 warriors respectively in the two census lists (Nu. 1:31; 26:27), it was the fourth largest tribe.

In the great covenant-renewal ceremony at Shechem, Zebulun was assigned an inferior place with Reuben and the 'handmaiden' tribes (Dt. 27:13). But in the Judges period it distinguished itself in the conflicts against the Canaanites and Midianites (Jdg. 4:6, 10; 5:14, 18; 6:35). One of the minor judges, Elon, came from Zebulun (Jdg. 12:11). When David became king over a united Israel, considerable initial military and economic support was supplied (1 Ch. 12:33, 40). The prophet Jonah was a Zebulunite from Gath-hepher (2 Ki. 14:25; *cf.* Jos. 19:18). Zebulun suffered severely in the Assy. invasion under Tiglath-pileser (2 Ki. 15:29; *cf.* Is. 9:1), many of its inhabitants were deported and its territory was assimilated into the Assy. empire. However, its tribal identity survived, and its inhabitants are included among the participants in Hezekiah's Passover (2 Ch. 30:10-22). In the NT, apart from the quotation in Mt. 4:13-16, Zebulun is mentioned only in Rev. 7:8, but Nazareth, where Jesus spent his early years, was within its traditional borders.

A.E.C.

found in the book that bears his name. As these two prophets were enthusiasts for the rebuilding of the Temple in 520 BC, one must account for their silence during the period 536-520 BC, when the Temple building was neglected. Either their parents had brought them as infants in the return in 537 BC or they did not return until about 520 BC; in this case also they must have been infants in 537 BC, or their enthusiasm would have brought them back then. This means that Zechariah was a young man when he began to prophesy, and indeed it may be he, and not the man with the measuring line, who is referred to as 'this young man' in Zc. 2:4. It is likely that the second part of his book belongs to his old age (*ZECHARIAH, BOOK OF).

In the NT Zechariah is the father of John the Baptist (Lk. 1:5, *etc.*). There is also a mention of 'Zechariah son of Barachiah, whom you murdered between the sanctuary and the altar' (Mt. 23:35; *cf.* Lk. 11:51). Since the prophet Zechariah was the son of Berechiah (Zc. 1:1), it is possible that he was martyred, although there is no independent record of this. Others suppose that the reference is to the martyrdom of Zechariah the son of Jehoiada in 2 Ch. 24:20-22, and that the error of the father's name is due either to the Evangelist, or, since it does not occur in the best MSS of Lk., to a copyist's addition. Since Chronicles is the last book in the Heb. Bible, the naming of Abel and Zechariah in this verse would be the equivalent of our phrase 'from Genesis to Revelation'. There is also a Zechariah the son of Jerebchiah, who is called as a witness in Is. 8:2, but there is no reason to suppose that he is the one referred to by Christ.

J.S.W.

ZECHARIAH, BOOK OF.

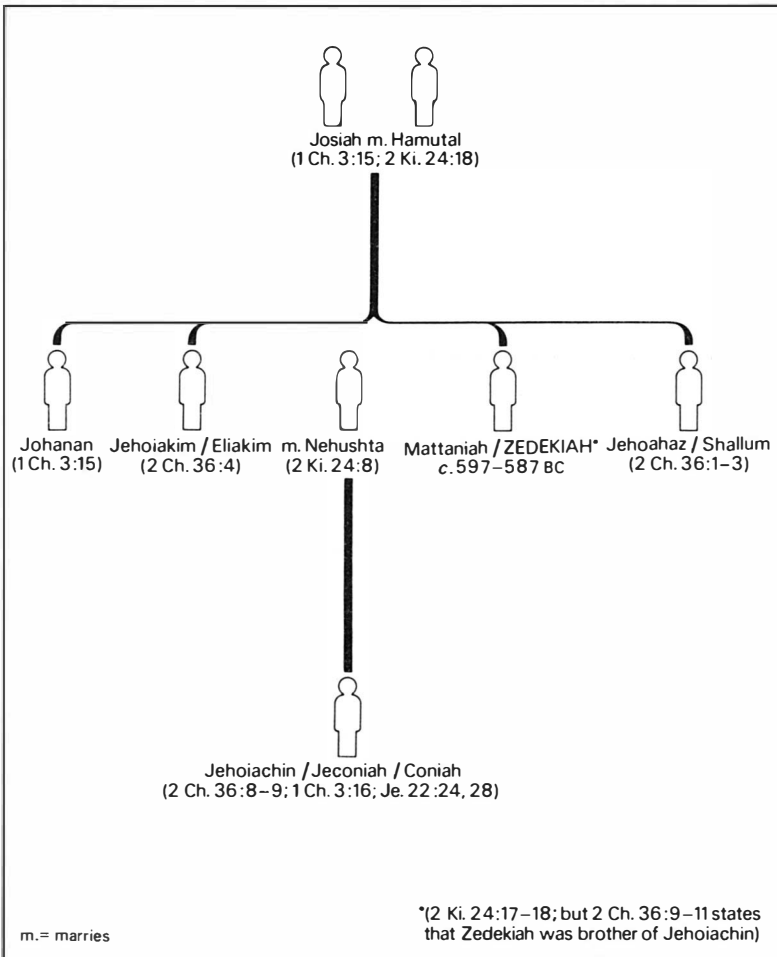

I. Outline of contents

a. Prophecies dated between 520 and 518 BC, during the rebuilding of the Temple, 1:1-8:23

(i) Introduction. Zechariah in the line of the true prophets (1:1-6).

(ii) First vision. Angelic riders are told that God will restore Jerusalem (1:7-17).

ZECHARIAH, ZACHARIAH, ZACHARIAS. Some 28 men bear this name in the Bible, most of them mentioned only once or twice, including the last king of Jehu's line (2 Ki. 14:29; 15:8, 11). The best known is the prophet, who is mentioned with Haggai in Ezr. 5:1; 6:14, and whose prophecies are

An interpretation of King Zedekiah's family tree.

(iii) Second vision. Four destroying horns are destroyed by four smiths (1:18-21).

(iv) Third vision. The new Jerusalem cannot be contained by walls, but will be the home of Jews and Gentiles (2:1-13).

(v) Fourth vision. Joshua the high priest, accused by Satan, is vindicated by God, given access to his presence and made a type of the Branch-Messiah (3:1-10).

(vi) Fifth vision. A seven-branched candlestick, or lamp, fed by two branches (probably Joshua and Zerubbabel), from two olive trees. A special word of encouragement to Zerubbabel (4:1-14).

(vii) Sixth vision. An immense flying scroll carries God's words of condemnation of sin (5:1-4).

(viii) Seventh vision. A woman in an ephah measure, symbolizing sin, is removed to the unclean land of Babylon, the place of exile (5:5-11).

(ix) Eighth vision. Four chariots go out through the earth as God's executives (6:1-8).

(x) Joshua is crowned as a symbol of the Branch-Messiah who builds the Temple, and who rules as Priest-King (6:9-15).

(xi) A question about observing fasts that had

been instituted to commemorate the fall of Jerusalem in 587 BC. Fasts will become feasts, and all nations will share the blessing (7:1-8:23).

b. Undated prophecies, which could be from a later period in Zechariah's ministry, 9:1-14:21

(i) The judgment of Israel's enemies is seen in the light of the coming of the Prince of Peace (9:1-17).

(ii) Evil shepherds give place to God's Leader, who gathers in his people (10:1-12).

(iii) The Good Shepherd confounds the evil shepherds, but is rejected by the flock, who consequently suffer under yet another evil shepherd (11:1-17).

(iv) Jerusalem in distress looks to the One whom her people have pierced, and repents with true sorrow (12:1-14).

(v) Jewish prophecy ceases when the Good Shepherd is smitten and opens the fountain that cleanses from sin (13:1-9).

(vi) The distress of Jerusalem is followed by the blessings and judgments of God's kingdom (14:1-21).

II. Authorship and unity

Throughout chs. 1–8 Zechariah is named as the author, and the period is that of Ezr. 5–6. This claim is generally accepted, though occasionally attempts have been made to distinguish the Zechariah of the prophecies from the Zechariah of the visions (e.g. by S. B. Frost, *Old Testament Apocalyptic*, 1952).

The problem of chs. 9–14 is more complicated, and many hold that these chapters are neither to be ascribed to Zechariah nor are a unity in themselves. A moderate view, adopted by, e.g., H. L. Ellison in *Men Spoke from God*, 1952, is that three anonymous prophecies have been added at the end of the Minor Prophets, each introduced by the phrase, 'The burden of the word of the Lord'. The three are Zc. 9:1–11:17; Zc. 12:1–14:21; Mal. 1:1–4:6. Others (e.g. W. O. E. Oesterley and T. H. Robinson, *Introduction to the Books of the Old Testament*, 1934) find in these chapters fragments from various dates.

The main arguments against Zechariah's authorship are: (i) the difference of atmosphere between 1–8 and 9–14. The former are full of hope and promise; the latter show bad leadership and threat of attack. There is no reference to the recent rebuilding of the Temple. (ii) There is a reference in 9:13 to Greece as the dominant power, not Persia as in the days of Zechariah. (iii) The derogatory reference to prophecy in ch. 13 and apocalyptic pictures in ch. 14 are marks of a late date.

The first two contentions assume that, if the chapters are by *Zechariah, they must belong to approximately the same period as 1–8. We have no means of knowing the length of Zechariah's prophetic ministry, but there are indications that he was a young man when he was first called to prophesy in 520 bc. Jeremiah prophesied for over 40 years, and Isaiah for over 50. If these chapters were uttered in Zechariah's old age they would be drawing near to the time of Malachi, Ezra and Nehemiah, and perhaps Joel, when the atmosphere of first enthusiasm had given place to coldness, formality, poor leadership and fear of attack.

The reference to Greece is not, then, a serious objection, even if one does not give any weight to belief in divine prediction, which is certainly present in the King and the Shepherd references in these chapters. Greece, or Javan, is named by Ezk. 27:13, 19, and also by Is. 66:19, as one of the places to which missionaries will go to declare God's glory. It is worth noting for the sake of the argument that many commentators would make 'Trito-Isaiah' (Is. 56–66) a contemporary of the actual Zechariah who wrote 1–8. It is probable that Zechariah had seen the vision of the chariots going 'toward the west country' (6:6), and in 8:7 he foresees captives returning from the W. Later Joel 3:6 refers to Jews who had been sold by the Phoenicians as slaves to the Greeks.

From about 520 bc onwards the Greeks in Asia Minor were a continual source of trouble to Darius, and in 500 bc a great Ionian revolt occurred. In 499 bc the Athenians burnt the Persian stronghold of Sardis, and in 490 bc and 480 bc the Persians, in a full-scale invasion of Greece, were defeated at Marathon and Salamis. From a purely human point of view, Zechariah could have looked to Greece as a power that would harass the countries in the Persian empire whose sea-

board looked towards the W. Indeed, there may already have been raids on the coasts of Palestine. It should, however, be noted that Javan is only one out of several powers who are dealt with in ch. 9.

The contention about the derogatory reference to prophecy in ch. 13 reads too much into the passage. The writer cannot be belittling prophecy, since he is himself professing to be a prophet. In the context the thought is of the pierced Shepherd, whose death opens the fountain for sin, as being the climax of prophecy, so that true prophecy ceases, and any professed prophecy that remains is only false.

The contention about the later apocalyptic imagery of ch. 14 is a subjective opinion. It should be realized that the dating of eschatological and apocalyptic passages in the OT is based largely on opinion. Because there is much apocalyptic in the intertestamental period, it is assumed that similar pictures in the prophets, e.g. Isaiah and Zechariah, must be given a late date.

From the positive standpoint, there are certain definite links between 1–8 and 9–14; e.g. the need for repentance and cleansing (1:4; 3:3–4, 9; 5:1–11; 7:5–9; 9:7; 12:10; 13:1, 9); Jerusalem as the head (1:16–17; 2:11–12; 12:6; 14:9f.); the return of the nation (2:6, 10; 8:7–8; 9:12; 10:6–12); Israel's enemies are to be subdued (1:21; 12:14) and converted (2:11; 8:20–23; 9:7; 14:16–19). There are also some similarities of style: e.g. the fondness for the number 'two' (4:3; 5:9; 6:1; 11:7; 13:8); the vocative address (2:7, 10; 3:2, 8; 4:7; 9:9, 13; 11:1–2; 13:7); the phrase 'pass through nor return' occurs in 7:14 and 9:8 (AV; RSV 'to and fro') and nowhere else in the OT.

It is not possible to prove the unity of the book but one should not too readily abandon it. It is not necessary to look for contemporary figures in 9:8 16–17 and 12:10, though upholders of the later date suggest various priestly characters of the Maccabean age. If contemporary identifications were needed, the conservative commentator would be bound to say that we know nothing about the leaders in Judaea between 516 and 458 bc, and personal intrigues and assassinations were as likely then as in Maccabean times.

ZEDAD. One of the sites on the N border of the promised land (Nu. 34:8), mentioned also in Ezekiel's vision of the limits of restored Israel (Ezk 47:15). There are two main candidates for identification with it, corresponding to the two views that are taken about the line of the N border described in these texts as a whole. The dominant view (e.g. Aharoni) sees the name as preserved at Sadad, c. 110 km ENE of Byblos; this accords well with the preferred location for the 'entrance of *Hamath' the adjacent point on the boundary. A minority of scholars advocate a more S position, at Kh Serādā, a few miles N of Dan, reading the name as Zerad, with LXX and the Samaritan text.

 R.A.H.G.
 G.I.D.

ZEDEKIAH (Heb. *šidqiyāhū—šidqiyā*, only in 1 Ki. 22:11; Je. 27:12; 28:1; 29:3—‘Yahweh is (my) righteousness’). 1. One of 400 court prophets under *Ahab who lied by prophesying his victory over Syria (1 Ki. 22:1-12; 2 Ch. 18:1-11). When Micaiah revealed the truth, Zedekiah symbolically called him a liar by striking his cheek (1 Ki. 22:13-28; 2 Ch. 18:12-27).

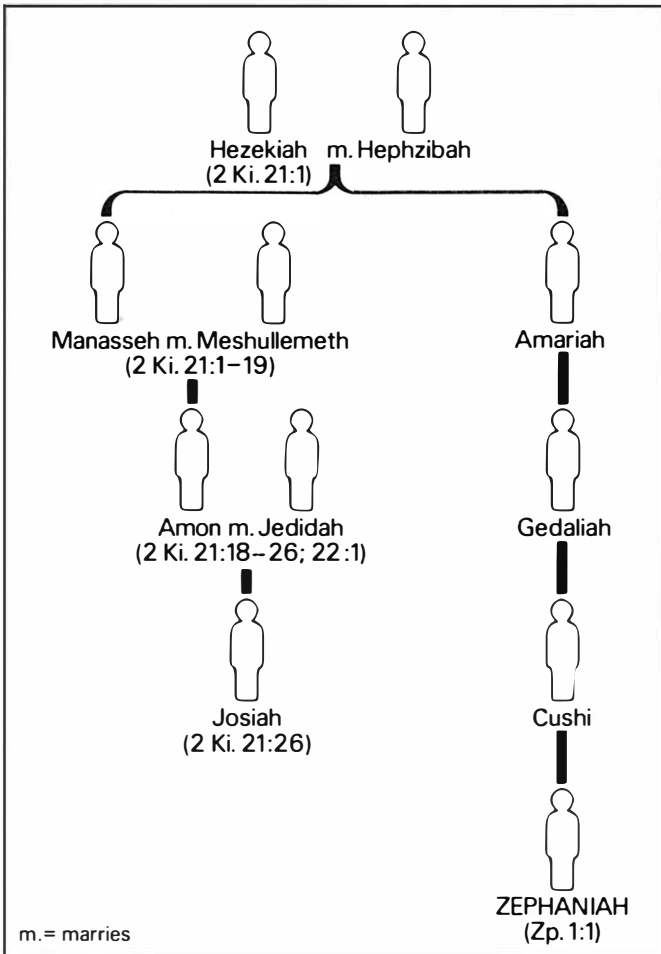

2. A false prophet among the exiles in Babylon whose death at the hand of Nebuchadrezzar is foretold by Jeremiah (Je. 29:21-23).

3. A prince of Judah who heard the scroll of Jeremiah read during the reign of Jehoiachin (Je. 36:11-13).

4. The twenty-first, and last, king of Judah (c. 597-587 BC). The third son of Josiah (1 Ch. 3:15),

he was placed on the throne by Nebuchadrezzar in the place of *Jehoiachin, his nephew. His name was also changed from *Mattaniah, showing his vassalage to Babylon (2 Ki. 24:17). Enthroned at the age of 21, he reigned for 11 years (v. 18; 2 Ch. 36:11).

Since the leading citizens had been deported with Jehoiachin (2 Ki. 24:14-16), Zedekiah was left with the undesirables, whose advice, which he was not able to refuse, finally led to Yahweh’s punishment (Je. 24:8-9; 29:16-19; Ezk. 11:14-21). Rebellion in Babylonia in c. 594 BC (A. K. Grayson, *Assyrian and Babylonian Chronicles*, 1975, p. 102, Ezk. 11:21-24) gave the W vassals an opportunity to conspire to throw off their subjugation, sending to Judah, where there was evidence of an anti-Babylonian faction (Je. 28:1-10), for support (27:3). Jeremiah saw the Babylonian overlordship as divinely ordained (Je. 27; cf. 28:12-14). Zedekiah went to Babylon in 593 BC, possibly to allay suspicion concerning his involvement in the plot (Je. 51:59).

The genealogy of Zephaniah, based on the assumption that 'Hezekiah' (Zp. 1:1) was King Hezekiah of Judah.

ZEDEKIAH

Zedekiah finally did revolt (2 Ki. 24:20), breaking a covenant with Babylon (Ezk. 17:12–13). This was possibly related to the arrival of the pharaoh Hophra (Apries; Je. 44:30), whose aid, as indicated by Lachish Letter 3, might have been sought by Judah (DOTT, p. 214). In 588 BC, Nebuchadrezzar and his army invaded Judah and laid siege to Jerusalem. The siege was lifted for a period to meet the approaching Egyptians (Je. 37:5) but, as Jeremiah predicted (vv. 6–10; 34:21–22), the siege was resumed. When the famine inside the city had reached its peak, the wall was breached in July, 586 BC, and the city fell (2 Ki. 25:3–4; Je. 52:6–7). The Temple was plundered and burnt and people exiled (2 Ki. 25:17–20). Zedekiah fled towards the Jordan, where he was captured and taken to Nebuchadrezzar's military headquarters at Riblah. There his sons were executed before him. He was then blinded and led off to Babylon (2 Ki. 25:4–7; Je. 52:7–11). D.W.B.

ZELOPHEHAD. The son of Hopher, grandson of Gilead of the tribe of Manasseh, father of five daughters (Nu. 26:33; Jos. 17:3; 1 Ch. 7:15). After his death in the wilderness wanderings, because he was without male issue, his daughters successfully claimed the inheritance before Moses and Eleazar (Nu. 27:1, 7). Thus originated the law whereby the property of a man without a male heir should pass first to his daughters (v. 8). This is evidence of a custom, attested in Syria, Babylonia and Elam from early times, whereby property could be transmitted through daughters in the absence of male heirs. They had to marry within their own family and so keep the line within the tribe to which their father belonged (Nu. 36:2–9). (See Z. Ben-Barak, *JSS* 24, 1979.) The Gileadite chiefs later made the further request that the women should marry only within their own tribe to ensure the continuity of possession of such inheritances within the same tribe. This, being granted, also became Heb. law (Nu. 36:2–9). D.J.W.

ZELZAH. After Samuel had anointed Saul 'prince over his people Israel' (1 Sa. 10:1), one of the signs given to Saul was that he would meet 'two men by Rachel's tomb . . . at Zelzah' (1 Sa. 10:2). LXX translates Zelzah by 'leaping furiously' (from *sōl'him*), and the Vulgate 'in the south'. The village Beit Jala between Bethel and Bethlehem, to the W, may be the location. R.A.H.G.

ZEMARAIM. I. A Benjaminite town, listed with Beth-arabah and Bethel (Jos. 18:22). Proposed locations are Khirbet al-Samra, Ras al-Zaimara and Ras al-Tāhūna.

2. A mountain in the hill country of Ephraim (2 Ch. 13:4). Bethel was presumably in the same general locality (cf. v. 19), so probably the mountain was near to, and named after, the town Zemaraim. D.F.P.

ZEMARITES. A Canaanite tribe, mentioned in Gn. 10:18 and 1 Ch. 1:16. In both instances the name is listed between Arvadites and Hamathites. The tribe's home was the Šumur of the Tell el-Amarna letters, the Šimirra of Assyrian texts. Its

modern name is Sumra, and it lies on the Mediterranean coast N of Tripoli (Tarabulus). D.F.P.

ZENAS. Gk. pet-name from Zenodorus (cf. Lightfoot on Col. 4:15); a lawyer (*nomikos*), accompanying Apollos to an unknown destination: Titus was to provide them with supplies and a good send-off (Tit. 3:13). They doubtless brought Titus Paul's letter (cf. Zahn, *INT*, 2, p. 49). Despite the association with Apollos, *nomikos* here probably does not refer to expertise in the Torah. Zenas' proficiency was probably in Roman law: *nomikos* is used of eminent jurists like Mucius Scaevola (Plutarch, *Sulla* 36) or of humble notaries (cf. examples in *MM*).

An *Acts of Titus* (5th century) claims his authority, and menologies include him in the Seventy. A.F.W.

ZEPHANIAH. The only biographical reference to Zephaniah appears in the first verse of the book which bears his name. The genealogy of the prophet is carried back four generations to Hezekiah. Although this Hezekiah is not identified as the Judaeen king of that name, the unusual form of Zephaniah's genealogy is best explained on that assumption.

The name of Zephaniah, 'Yahweh has hidden', may indicate that the prophet was born during the time of the atrocities perpetrated by Manasseh, who 'shed very much innocent blood' (2 Ki. 21:16).

Zephaniah prophesied during the reign of his kinsman, Josiah, the great-grandson of Hezekiah. Josiah came to the throne at the age of 8 (640 BC) and was largely influenced by Hilkiah the high priest. It may be presumed that Zephaniah also had an influence for godliness on King Josiah. In his 18th year the young king ordered the renovation of the Temple during which the 'book of the law of Yahweh' was found. When read before the king and the people of Jerusalem, this Scripture brought about a reformation in the life of the nation.

Zephaniah probably ministered early in the reign of Josiah. He speaks of the 'remnant of Baal' in Jerusalem (Zp. 1:4), and other idolatrous customs which were abandoned after the discovery of the law (1:5; cf. 2 Ki. 22:1–23:25; 2 Ch. 34:1–7).

Nahum, who prophesied the destruction of Nineveh, which took place in 612 BC, was probably a contemporary of Zephaniah, as was Jeremiah, who lived to see the destruction of Jerusalem (587 BC). The length of the ministry of Zephaniah is not known. C.F.P.

ZEPHANIAH, BOOK OF. This book is the ninth of the Minor Prophets. It is pre-eminently concerned with the Day of Yahweh, which had earlier appeared as a factor in the prophecies of Amos (Am. 5:18–20).

Zephaniah, however, made the Day of Yahweh his central message. The visions of the Day of Yahweh subsequently played a conspicuous part in apocalyptic literature.

I. Outline of contents

a. *Warning of the impending Day of Yahweh*, 1:1–2:3

- (i) Superscription (1:1).
- (ii) The destruction of all things (1:2–3).
- (iii) Judgment on Judah and Jerusalem (1:4–13).
- (iv) Judgment described (1:14–18).
- (v) Judgment may be avoided (2:1–3).

b. Judgment on foreign nations, 2:4–15

- (i) Philistia (2:4–7).
- (ii) Moab and Ammon (2:8–11).
- (iii) Egypt (2:12).
- (iv) Assyria (2:13–15).

c. Judgment on Jerusalem and subsequent blessing, 3:1–20

- (i) The sins of Jerusalem judged (3:1–8).
- (ii) The remnant of Judah blessed (3:9–20).

II. Historical background

The religious state of the kingdom of Judah deteriorated markedly following the death of Hezekiah. Manasseh, his son, rebuilt the altars to Baal which Hezekiah had destroyed (2 Ch. 33:1–11). Religion was debased to the level of crass externalism. The revival of idolatrous worship, common in the days of Ahaz (2 Ki. 16:3–4), was from the prophetic viewpoint a rejection of Israel's covenant with Yahweh.

Scythian invaders attacked Assyria in 632 BC. Josiah was able to carry out his reforms without fear of Assyrian interference. The Scythians moved into W Asia and reached the Egypt. border where

they were bought off by pharaoh Psammetichus I. They do not appear to have attacked Israel, although the ferocity of their assault provided a background against which Zephaniah pictured the wrath of Yahweh.

III. Message of the book

Zephaniah's prophecies begin with a message of gloom. The prophet denounced the idolatry which he saw in Jerusalem, where there had been no spiritual revival since the days of Hezekiah. Zephaniah declared that God's judgment was imminent both on Judah's idolatrous neighbours (2:4–15) and on Judah and Jerusalem (1:4–18; 3:1–7).

The prophet, however, is not a pessimist. Beyond the impending doom he sees a better day. God must bring his people through the afflicting fires in order to prepare them to be a means of blessing to all mankind.

Some of the abuses denounced by Zephaniah were removed in Josiah's reformation (621 BC).

BIBLIOGRAPHY. J. H. Eaton, *Obadiah, Nahum, Habakkuk, Zephaniah, TBC*, 1961; J. D. W. Watts, *Joel, Obadiah, Jonah, Nahum, Habakkuk and Zephaniah, CBC*, 1975; D. W. Baker, *Nahum, Habakkuk and Zephaniah*, 1988; P. R. House, *Zephaniah, A Prophetic Drama*, 1988; A. Berlin, *Zephaniah*, 1994. C.F.P.

ZEPHATHAH (Heb. *š'pāṭāh*). 'The valley of Zephathah at (*I*) Mareshah', 2 Ch. 14:10 (v. 9 *MT*). The LXX apparently read *baggai miššāpōn* ('in the valley to the north') for *b'gē' š'pāṭāh*. Complex re-entrants in gently-sloping country lie N and S of *Mareshah. J.P.U.L.

ZER. A fortified city in the territory of Naphtali (Jos. 19:35). It is not necessary to adopt the LXX

reading *Tyros*, i.e. Tyre, which presupposes a Heb. reading *šōr* instead of *MT šēr*. J.D.D.

ZERAH. From Heb. *zārah*, 'to rise, shine/come forth', especially of the sun.

1. Son of Reuel son of Esau and Basemath (Gn. 36:4, 10, 13, 17; 1 Ch. 1:35, 37), who might be same as: 2. Father of Jobab, second of the early kings of Edom (Gn. 36:33; 1 Ch. 1:44).

3. Son of Judah by Tamar, and twin of Perez (Gn. 38:29–30; 1 Ch. 2:4); progenitor of the Judaeian clan of Zerahites (Nu. 26:20), among whom was Achan who sinned at Jericho (Jos. 7:1, 17–18, 24; 22:20; 1 Ch. 2:6), besides others (1 Ch. 9:6; Ne. 11:24).

4. Son of Simeon and progenitor of a Simeonite clan of Zerahites (Nu. 26:13; 1 Ch. 4:24); the Zohar of Gn. 46:10; Ex. 6:15. 5. Descendant of Levi through Gershom (1 Ch. 6:21, 41).

6. An Ethiopian who invaded Judah with large Ethiopian and Libyan forces (2 Ch. 14:9–15; 16:8) and was routed in battle at Mareshah by Asa in his 14th year, c. 897 BC (cf. 2 Ch. 15, especially v. 10, and E. R. Thiele, *The Mysterious Numbers of the Hebrew Kings*¹, 1965, pp. 58–60, on 2 Ch. 15:19; 16:1). Whether Zerah's starting-point was Egypt or Arabia is disputed. The only point favouring Arabia is the Semitic form of the name Zerah. His retreat by Gerar might hint, and the presence of Libyans in his forces strongly indicates, that Zerah had come from Egypt. Note that Zerah is *not* called king; hence he cannot be the Libyan pharaoh Osorkon I (c. 924–889 BC) in whose reign the battle occurred. The clear difference between Heb. *h* and Egyp. *k* probably excludes identification of the names Zerah, *zrh*, and Osorkon, (*w*)*srk(n)*; no convincing Egyp. or Ethiopian original for Zerah's name is yet forthcoming. Zerah would therefore probably be an Ethiopian army-commander leading the Egyp. forces on behalf of Osorkon I, who was seeking to follow up the success of his father Shishak; Zerah's ignominious defeat is unlikely to appear in the scanty Egyp. records of the period. K.A.K.

ZERED, a mountain-torrent (Heb. *nahal*) or wadi crossed by the Israelites on their journey round the frontiers of Edom and Moab (Nu. 21:12; Dt. 2:13f.). In Nu. it is mentioned as a camping-ground, which accords with the order to 'rise up' in Dt. 2:13. Its identification is disputed; probably it is mod. Wadi-el-Hesā, which runs into the Dead Sea from the SE. The comments which follow in Dt. 2:14ff. show that its crossing was regarded as an important stage in the journey. G.T.M.

ZERUBBABEL. The exact meaning of the name is uncertain; perhaps it is from Akkad. *zeru-Babili*, 'seed of Babylon'. He was the son of Shealtiel, or Salathiel, and thus grandson of King Jehoiachin (Ezr. 3:2; Hg. 1:1; Mt. 1:12). In 1 Ch. 3:19 the Heb., though not LXX, makes him the son of Pedaiah, Shealtiel's brother. If this is not a copyist's error, there may have been a levirate marriage. It is most unlikely that Zerubbabel is to be identified with *Sheshbazzar, since the account given in the letter sent to Darius (Ezr. 5:6–17) is hardly intelligible unless Sheshbazzar was dead at the time of the interview which it records, whereas Zerubbabel is

ZERUBBABEL

actively building the Temple. Sheshbazzar may have been Zerubbabel's uncle, Shenazzar (1 Ch. 3:18), but, whoever he was, he was more of a figurehead, while Zerubbabel and Joshua were the active leaders. Zerubbabel returned with the main party under Sheshbazzar in 537 BC, and laid the foundations of the Temple (Ezr. 3). Ezra records that the work was hindered until 520 BC, when a fresh beginning was made, with Zerubbabel and Joshua again in the lead (Ezr. 5-6; Hg. 1-2). In Hg. 1:1; 2:2 Zerubbabel is called 'governor'.

The visions of Zechariah encourage both Joshua and Zerubbabel in their work, and Zc. 4:6-10 promises that the mountain of opposition (probably that of Ezr. 5) will be removed, and Zerubbabel will complete the work. It is often held that the crowning of Joshua in Zc. 6:9-15 was really the crowning of Zerubbabel, but there is no MS evidence for this, and in 38 it appears to be Joshua who is the type of the Messianic Branch, as here. Since E. Sellin in 1898 it has been increasingly assumed, on the basis of the crowning and the promise of protection in Hg. 2:20-23, that Haggai and Zechariah induced the Jews to crown Zerubbabel as king, though this act of rebellion was speedily crushed by Persia. There is no shred of evidence for or against this theory.

ZERUIAH (Heb. *š'rūyā*, *š'ruyā*; possibly from Arab. root, either (1) 'run blood, bleed', or (2) the name of an odoriferous tree, or its gum). The mother of Abishai, Joab and Asahel, David's officers (1 Sa. 26:6; 2 Sa. 2:18; 8:16, etc.). Her husband is never mentioned, for which there are several explanations. He may have died young, or she may have been the more significant character. It may reflect the ancient custom of tracing kinship through the female line, or she may have married a foreigner, remaining in her own clan, her children being reckoned as belonging to that clan. She was also David's sister (1 Ch. 2:16), though 2 Sa. 17:25 may imply that she was strictly a step-sister, Jesse's wife being earlier married to Nahash; however, the text of this verse is uncertain. J.G.G.N.

ZEUS. The Gk. deities, *Zeus* and *Hermēs (Acts 14:12), rendered in AV by their Roman equivalents, Jupiter and Mercurius, presumably in turn represent unknown local gods, whom the Lycaonian-speaking people of Lystra recognized in Barnabas and Paul. Why a miraculous healing should have prompted this particular identification is not clear. Hermes, the divine wayfarer and messenger of Zeus, suggested himself for Paul 'because he was the chief speaker'. The fact that there was a local cult of Zeus (v. 13) may have clinched the identity of Barnabas. The two gods were associated as wanderers on earth in the tale of Philemon and Baucis (Ovid, *Metamorphoses* 8. 618-724), who secured their favour by being the only ones to give them hospitality. This possibly explains the anxiety of the Lycaonians not to miss their opportunity.

Paul and Barnabas were naturally greatly distressed and managed only with difficulty to divert

the people from their plan to offer sacrifice to them. But Paul also improved the occasion with remarkable dexterity: rising to his role of Hermes, he takes up the familiar picture of Zeus as the god of the sky who displays himself in the phenomena of the weather, and with delicacy and restraint reinterprets it to display the principles of the gospel.

BIBLIOGRAPHY. A. B. Cook, *Zeus*, 1914-40; W. K. C. Guthrie, *The Greeks and their Gods*, 1950. E.A.J.

ZIBA (Heb. *šibā*, *šibā*, 'a post'). A servant of Saul (2 Sa. 9:2) who introduced Mephibosheth to David when he desired to honour Jonathan's memory. When Mephibosheth was given a place at court, Ziba was appointed steward of Saul's estates bestowed on Mephibosheth (2 Sa. 9). When David was driven out by Absalom's rebellion Ziba brought him food and also falsely accused Mephibosheth of deserting the king. David accepted his story, did not ascertain the other side, and gave the property to Ziba (2 Sa. 16:1-4). On David's return, Ziba hastened to meet him (2 Sa. 19:7), but later his treachery was revealed. David, in a difficult position, divided the property between them, and Mephibosheth was seemingly content (2 Sa. 19:24-30). J.G.G.N.

ZIKLAG. Ziklag appears in Jos. 15:31 as being near the Edomite boundary, in the S of Judah. It was apportioned to the Simeonites, but later fell into Philistine hands. David, when a Philistine vassal, ruled it and was later able to retain and incorporate it in his own realm. It remained in the hands of Judah in both pre-exilic and post-exilic times. At least four locations have been proposed, of which Tell al-Shari'a (Tel Sera', see *NEAEHL*, pp. 1329-1335), c. 25 km SE of Gaza, seems the most probable. D.F.P.

ZILPAH. The handmaid of Jacob's first wife Leah, given to Leah by her father Laban (Gn. 29:24). Leah later gave her to Jacob as a concubine, and she bore him Gad and Asher. J.D.D.

ZIMRAN (Heb. *zimirān*, meaning uncertain). Possibly derives from *zimirā*, 'song, fame', thus 'the celebrated one', i.e. in song or fame. Alternatively, it may derive from *zemer*, 'mountain-sheep or goat'. A son of Abraham by the concubine Keturah (Gn. 25:2; 1 Ch. 1:32). J.D.D.

ZIMRI (Heb. *zimirī*). 1. A Simeonite prince (Nu. 25:6-15) who was put to death by Phinehas, the grandson of Aaron, for his audacious wickedness in bringing a Midianitess into the camp in contempt of the general spirit of penitence among the Israelites for the apostasy of *Baal-peor.

2. King of Israel c. 876 BC (1 Ki. 16:9-20). He reigned in Tirzah for only a week following his assassination of Elah in fulfilment of the prophecy against the dynasty of Baasha (1 Ki. 16:1-4). He lacked popular support, the majority following Omri, who immediately laid siege to Tirzah. When the city fell, Zimri burnt down the palace over his own head. J.C.J.W.

ZIN (Heb. *sin*). A name loosely applied to the Wilderness of Zin traversed by the Israelites in the Exodus, close to the borders of Canaan (Nu. 13:21). It refers to the extensive area between the camping-place of the Israelites at the oasis of Kadesh-barnea in NE Sinai, to the Ascent of Aqrabbim or Scorpion Pass constituting the limit between Edom and Judah (Jos. 15:1-4; cf. Nu. 34:1-5). The wilderness of Paran lay to the S of it, though Kadesh appears to have been included in both territories, and the two wildernesses occur within the broader term *'Negeb'.

BIBLIOGRAPHY. C. L. Woolley and T. E. Lawrence, *The Wilderness of Zin*, 1936. J.M.H.

ZIOR. A city listed in Jos. 15:54 in the Judaeen hill-country NE of Hebron and allocated to the tribe of Judah; modern Si'ir (*ZAIR). J.D.D.

ZIPH. 1. A town in S Judah, near the Edomite boundary (Jos. 15:24), perhaps to be located at al-Zaifa. 2. A town in the hill-country of Judah (Jos. 15:55), associated with David and with Rehoboam, who fortified it. It is identified with Tell Zif, 7 km SE of Hebron. Named on royal jar-handle stamps found at *Lachish and other sites, which probably points to its importance as a major Judaeen administrative centre in the reign of Hezekiah. The adjoining area was known as the Wilderness of Ziph. 3. A man of Judah (I Ch. 4:16). D.F.P.

ZIPPOR (Heb. *šippôr, šippôr*, 'little bird', perhaps 'sparrow'). Father of Balak, the Moabite king who suborned Balaam to curse Israel (Nu. 22:2, 4, 10, 16; 23:18; Jos. 24:9; Jdg. 11:25). Some think the name implies totemistic associations. J.G.G.N.

ZIPPORAH. Daughter of Jethro priest of Midian and wife of *Moses. She apparently opposed the circumcision of their second son Gershom, but felt compelled to perform the duty herself when Moses' life was endangered because of its omission (Ex. 4:24-26). M.A.M.

ZIZ. The name of an ascent used by the Moabites and Ammonites in a campaign against Jehoshaphat of Judah (2 Ch. 20:16). Their army lay previously at Engedi, on the W shore of the Dead Sea; and they reached the wilderness of Tekoa. These details make the Wadi Hasasa, just N of Engedi, a virtually certain identification. D.F.P.

ZOAN. Ancient city, Egp. *d'n(t)* to which Heb. *Šō'an* exactly corresponds. The Gk. Tanis and modern site of the San el-Hagar near the S shore of Lake Menzaleh in NE Delta. The curious note in Nu. 13:22 that Hebron was built 7 years before Zoan in Egypt may indicate a refounding of Zoan in the Middle Kingdom (c. 2000-1800 BC); or more probably by the Hyksos kings in the 16th century BC, whose N capital Avaris Zoan may possibly be. For the era of Tabnis, see *Chronology of the Old Testament. III. b. Ps. 78:12, 43 places the Exodus miracles in 'the field of Zoan', precisely the Egp.

šht d'(nt), 'field of Dja'(ne)', a term apparently applied to the region near Zoan; the possible identity of Zoan and *Ra'amses is now unlikely. From 1100 BC until about 660 BC, Zoan was the effective capital of Egypt in the 21st to 23rd Dynasties, and the N base of the Ethiopian 25th Dynasty. Hence the prominence of Zoan as the seat of pharaoh's counsellors and princes (Is. 19:11, 13; 30:4) and among Egypt's great cities in Ezekiel's (30:14) word of judgment. On Zoan/Tanis, see A. H. Gardiner, *Ancient Egyptian Onomastica*, 2, 1947, pp. 199*-201*, and P. Montet, *Les Enigmes de Tanis*, 1952; H. Kees, *Tanis*, 1964. K.A.K.

ZOBAH. An Aramaean kingdom which flourished during the early Heb. Monarchy, and which took the field against Saul and David. One of its kings was Hadadezer (2 Sa. 8:3). It lay between Hamath, to its N, and Damascus to its S, and at its height its influence reached these cities. It is unnecessary to postulate two Zobahs, one of them S of Damascus, merely because it is listed with Beth-rehob and Maachab in 2 Sa. 10:6 (both S of Damascus).

BIBLIOGRAPHY. B. Mazar, *BAR*, 2, 1977, pp. 127-151; W. Pitard, *Ancient Damascus*, 1987, pp. 88-97. D.F.P.

ZOPHAR. The third of the friends of *Job was Zophar the Naamathite (Jb. 2:11). We have no knowledge where his home was, except that it was presumably E of Jordan. He is distinguished by the brutality of his commonsense position. He speaks in chs. 11, 20, and possibly in 27:13-23. H.L.E.

ZOPHIM. This place-name comes from Heb. *šōpīm*, 'watchers'. The location of 'the field of the watchers' (Nu. 23:14, AV) is difficult to determine. It must have been on a high part of the Pisgah Mts, from which Balaam could see the encampment of the Israelites at Shittim. Some propose to take the Heb. *sādeh* here in the meaning of the Akkad. *sādū*, 'mountain' ('the mountain of the watchers'). The word 'watcher' is sometimes used in the sense of prophet (cf. Is. 52:8; 56:10) and is thus especially applicable to Balaam (cf. Ramathaim-zophim; Ramah, I Sa. 1:1). F.C.F.

ZORAH. A town in the lowlands of Judah (Jos. 15:33), closely connected with the Samson stories. Its site is Šar'a, on the N side of the Wadi al-Šarar, the biblical valley of Sorek. The Tell el-Amarna letters refer to it as Zarkha. It was fortified by Rehoboam (2 Ch. 11:10) and reoccupied after the Babylonian Exile (Ne. 11:29). The references to Hebron and Beersheba in these two passages, however, may suggest that there was another similarly named city a considerable distance S of Samson's territory. D.F.P.

ZUZIM (Heb. *zūzīm*; Gk. *ethnē ischyra*, 'strong peoples'). A people, conquered by Chedorlaomer, whose territory lay E of Jordan (Gn. 14:5). Their principal city, Ham, is probably to be identified with the modern village of the same name NE of the Gilboa Mts in N Jordan. Tristram (*Moab*, pp. 182ff.) and others, however, have sought to identify them with the Moabite village of Ziza, between

ZUZIM

Bozra and Lejūn. Because the Zuzim are mentioned in parallel with the Rephaim and Emim, it may be that it is descriptive of the inhabitants (so LXX) rather than a tribal name. For this reason some

equate them with *Zamzummim who are identified with, or described as, Rephaim (Dt. 2:20), whose territory was later overrun by Ammonites.
D.J.W.

Index

Maps and diagrams

There is no separate index of maps and diagrams, but references are distinguished by the use of different styles of type, divided by semi-colons.

References in bold roman type indicate an article or principal reference within an article under that title.

References in ordinary type indicate significant appearance(s) of the word in the body of the Dictionary.

References in bold italic type indicate diagrams, charts or line drawings.

References in medium italic type indicate maps and serve as a gazeteer.

An abbreviated key appears at the head of each page.

Asterisks

Asterisks mean 'see' or 'see also', referring the reader to other index entries.

Snail 48
Spider 48
'Swarming things' 48
Tick 48
Wasp 47
Worm 48

Acknowledgments

Relief maps

Cartography by George Philip and Son Limited,
12–14 Long Acre,
London WC2E 9LP, England.

Diagrams and town plans

Designed by Thumb Design Partnership Limited,
20–21 D'Arbly Street,
London W1V 3FN, England.

Acknowledgment of the sources of illustrations

The publishers have made every effort to trace the copyright holders of illustrations in this book. Should any have been inadvertently missed, copyright holders are asked to contact the publishers.

The publishers are glad to acknowledge their indebtedness to a variety of sources as indicated below.

In acknowledging the source, 'After' indicates that the material remains essentially as it appears in the source acknowledged but has been redrawn. 'Based on' means that the substance of the source material has been retained but reinterpreted.

For abbreviations see pp. (x)–(xiv).

ANTIOCH, p. 51
After *ACA*, p. 222.

ARCHITECTURE, p. 77
After C. L. Woolley, *History of Mankind* (Allen and Unwin, 1963), vol. 1, part 2.

ATHENS, p. 101
Based on *ACA*, pp. 148f.

BABEL, p. 109 (Temple-tower)
After D. J. Wiseman, *IBA*, fig. 18.

BABYLON, p. 111 (Sites of ziggurats)
Based on A. Parrot, *Ziggurats et tour de Babel* (© Albin Michel), fig. 27, p. 53.

BRICK-KILN, p. 148
Based on information from B. Meissner, *Babylonien und Assyrien* (Carl Winters, Heidelberg, 1920), vol. 1, p. 234, figs. 55 and 56.

CISTERN, p. 205
After *BASOR* 185, 1967, p. 24.

CROSS, p. 246
Based on N. Haas, 'Skeletal Remains from Giv'at ha-Mivtar', *IEJ* 20, 1970, pl. 24.

DAGON, p. 252
Plan after *EAEHL*, vol. 1, p. 216. Reconstruction after A. Rowe, *Four Canaanite Temples of Bethshan* (University of Pennsylvania, 1940), fig. 5.

DEUTERONOMY, p. 273
Based on information supplied by Kenneth Kitchen.

ESSENES, p. 340
Based on J. Murphy and O. O'Connor, 'The Essenes in Palestine', *Biblical Archaeologist*, September 1977, p. 122.

FEASTS, p. 366
Based on information from *Encyclopaedia Judaica*, 1971, vol. 6.

FLOOD, p. 372
Based on information from M. E. L. Mallowan, *Iraq XXVI* (British School of Archaeology in Iraq, 1964), p. 82, pl. 20.

FOOD, pp. 376f.
Based on information from R. J. Forbes, *Studies in Ancient Technology* (E. J. Brill, Leiden, 1955), p. 54.

GEZER, p. 408 (Gate, plan)
After *EAEHL*, vol. 2, p. 437.

GEZER, p. 408 (Gate, reconstruction)
After material supplied by C. J. Davey.

GIBEON, p. 411 (Jar handle)
After J. B. Pritchard, *Hebrew Inscriptions and Stamps from Gibeon*, fig. 1, no. 1.

HOUSE (Ur), p. 488
After material supplied by C. J. Davey.

HOUSE (villa), p. 489
Based on W. F. Albright, *Archaeology of Palestine* (Penguin, 1947), fig. 17.

JERUSALEM (David, Solomon and Herod), pp. 558ff.
Based on Walter de Gruyter (ed.), *Atlas of Jerusalem*, Maps 3:1, 3:2 and 3:6 (Jewish History Publications, 1973).

JOT AND TITTLE, p. 615
Supplied by A. R. Millard.

MENE, p. 750
Supplied by A. R. Millard.

MINING, p. 767
After material supplied by C. J. Davey.

MOABITE STONE, p. 778
Courtesy of Maurice Chazeville/Louvre Museum.

MUSIC, pp. 790f.
Based on J. Rimmer, *Ancient Musical Instruments of Western Asia* (British Museum, 1969), pp. 50f.

Acknowledgments

NERO, p. 815

After M. Grant, *Nero* (Weidenfeld and Nicolson, 1970), p. 265.

OHOLIBAMA, p. 843

After B. Rothenberg, *Timna* (Thames and Hudson, 1972), p. 152.

PERSIA, p. 904 (Rulers)

Based on E. Porada, *The art of Ancient Iran* (Holle Verlag, Baden-Baden, 1965), p. 256.

SACRIFICE AND OFFERING, pp. 1036, 1040

Based on A. R. S. Kennedy, *Leviticus and Numbers*, CB, 1910, p. 349.

SHECHEM, p. 1089 (Plan)

Based on G. E. Wright, *Shechem* (Gerald Duckworth, 1964), fig. 41.

SHECHEM, p. 1089 (Reconstruction)

After material provided by C. J. Davey.

SHISHAK, p. 1097

From *Hazor* by Yigael Yadin (Weidenfeld and Nicolson, 1975).

SOLOMON, p. 1118

Based on *IDB*, vol. 2, p. 657.

SUPERSCRPTION, p. 1139

Supplied by A. R. Millard.

THRONE, p. 1184

Oriental Institute, University of Chicago.

WATER, p. 1232 (cross-section)

Based on W. G. Dever and S. M. Paul, *Biblical Archaeology* (Keter Publishing House, Jerusalem, 1973), p. 132, fig. b.

WRITING, pp. 1252–53

After information provided by A. R. Millard.
