Aramaic, a close cognate, not a derivative, of Hebrew, is the language of Dn. 2:4–7:28; Ezr. 4:8–6:18, 7:12–26; Je. 10:11; two words in Gn. 31:47; and of the Targums (Aramaic translations of parts of the OT). In the 9th and following centuries BC, Aramaic and its script (taken from alphabetic Hebrew/Phoenician) rapidly became the international medium of commerce and diplomacy. Already in the 9th century BC, Israel and Damascus had merchants in each other's capitals (1 Ki. 20:34), and in 701 BC Hezekiah's officers sought to be addressed in Aramaic—understood by rulers or merchants, but not by (Hebrew) 'men in the street' (2 Ki. 18:26). In Assyria itself from c. 730 BC under Tiglath-pileser III, Aramaic steadily came into official use: Aramaic dockets on cuneiform tablets, Aramaic annotations by high Assyrian officials and Assyrian sculptures showing the recording of tribute by scribes who write (Aramaic) with pen on parchment as well as in cuneiform on clay tablets. (For full references, see R. A. Bowman, *JNES* 7, 1948, pp. 73–76, to which add the ostrakon listing Hebrew exiles in Assyria found at Calah, J. B. Segal, *Iraq* 19, 1957, pp. 139–145, and Albright, *BASOR* 149, 1958, pp. 33–36.) Note here, too, the Aramaic letter of Adon of Ascalon to the pharaoh of Egypt in 604(?) BC (W. D. McHardy in *DOTT*, pp. 251–255 with bibliography). Unless it is a note to readers that Aramaic directly follows, the note in Dn. 2:4 'in Aramaic' when the Chaldeans address Nebuchadrezzar would fit in perfectly with Assyro-Babylonian court use of Aramaic. Besides examples above, Aramaic epigraphs occur on the very bricks used in constructing the great buildings of Nebuchadrezzar's Babylon and testify to the common use of that language there then (see R. Koldewey, *The Excavations at Babylon*, 1914, pp. 80–81, figs. 52–53). Aramaic ('Reichsaramäisch') became the official medium of communication throughout the polyglot Persian empire—Ezra is the classic biblical example. This is vividly illustrated by Aramaic papyri from Egypt (5th century BC); for these see A. Cowley, *Aramaic Papyri of the Fifth Century BC*, 1923; H. L. Ginsberg in *ANET*, pp. 222–223, 427–430, 491–492; E. G. Kraeling, *The Brooklyn Museum Aramaic Papyri*, 1953; G. R. Driver and others, *Aramaic Documents of the Fifth Century BC*, 1954 and abridged and revised, 1957.

The script is the same as Hebrew, and Aramaic has approximately the same phonological characteristics, including the position of the stress. The vowel-patterns are on the whole more attenuated and on occasions preserve more primitive forms. The consonantal shift between the two languages lacks the consistency of a law. Heb. *z* = Aram. *d* (*ḏ*), Heb. *š* = Aram. *t*, Heb. *š* = Aram. *t*, *etc.*, but the change of Heb. *š* to Aram. *'* and *q* is phonetically hard to explain.

The definite article is *-ā* and is suffixed to its noun. The genitive relation can be expressed as in Hebrew, the noun preceding the genitive is shortened if possible and the group is treated as inseparable. The relationship is more often expressed by *dī*, originally a demonstrative pronoun, thus *hezwā dī lēlyā*, 'vision of the night'.

As in Hebrew, the noun has singular, dual and plural. There are two genders: masculine and feminine. The feminine termination is *-ā*, but many feminine nouns are without any indication. Possessive pronouns are suffixed to the noun.

The verb possesses two tense-aspects: perfective (completed action) with pronominal elements suffixed, and imperfective (incompleted action) with the pronominal elements prefixed. The active participle is widely used to express present or future. There are some eight 'verb-forms' or conjugations: Primary Form, with modifications for active, passive and reflexive; Intensive; and the Causative, designated by either a prefixed *h*, ' or *š*. The verb 'to be', *h'wā*, comes to be used very much like an auxiliary verb.

The verbless sentence is common. In verbal sentences either the verb or the subject may come first, but the latter order seems more common. Word-order is less rigid than in Hebrew.

The Aramaic of the OT is a subject of dispute. S. R. Driver (*LOT*, pp. 502ff.) affirmed that the Aramaic of Daniel was a *Western Aramaic* dialect and hence late. When he wrote, the only material available was too late to be relevant. Subsequently R. D. Wilson, making use of earlier material that had come to light, was able to show that the distinction between E and W Aramaic did not exist in pre-Christian times. This was amply confirmed by H. H. Schaefer. Schaefer also drew attention to the fact that the static nature of 'Imperial Aramaic', as it has come to be called, precludes the possibility of dating documents in it, including Daniel and Ezra. He showed that the criteria adduced to assign to Daniel and Ezra a late date are merely the result of a process of orthographical modernization going on in the 5th century BC (see F. Rosenthal, *Aramaistische Forschung*, pp. 67ff.). From what we know from contemporary documents of the extent of trade and diplomatic contacts, we are not surprised to find loan-words in the most unexpected places.

Advancing knowledge based upon old and new discoveries shows arguments for dating the Aramaic of the OT after the Persian period are often groundless. Recent evidence on one matter must suffice here. In early Aramaic there was a sound *ḏ* (*dh*) which by Persian times had become identical with ordinary 'd' in pronunciation. In the W (Syria) this consonant was written as 'z' (even in a non-Aramaic name, as Miliz for Mild(h), 'Melitene' in Zakir's stele), and this persisted as a 'historical' spelling in the Aramaic papyri of the Persian empire. But in the E, 'dh' was already represented by the Assyrians as 'd' from the 9th century BC (Adad-idi for (H)adad-ezer). The real pronunciation 'd' in Persian times is betrayed by various hints: a remarkable Aramaic text in Egyptian demotic script, 5th century BC, writes 't' 'd' (J. A. Bowman *JNES* 3, 1944, pp. 224–225 and n. 17), while in some of the normal Aramaic papyri there are cases of false archaism in writing 'z' for original 'd' (not 'dh'), cf. E. Y. Kutscher, *JAOS* 74, 1954, p. 235 (*zyn wzbb*).

OT Aramaic writes a phonetically true 'd', not a

W historic 'z'; this is no indicator of late date, but signifies one of two things. Either Daniel, Ezra, etc., simply put Aramaic as spoken in 6th/ 5th-century Babylonia into a directly phonetic spelling, or else they used the historic spelling largely eliminated by a subsequent spelling-revision of rather later date.

K.A.K.

LANGUAGE OF THE NEW TESTAMENT.

I. General characteristics

a. *The nature of 'common Greek'*

The language in which the NT documents have been preserved is the 'common Greek' (*koinē*), which was the *lingua franca* of the Near Eastern and Mediterranean lands in Roman times. It had been established over this wide territory by the conquests and express cultural purpose of Alexander the Great, whose colonies provided *foci* for the continued use of the language. It exercised influence in vocabulary upon Coptic, Jewish Aramaic, rabbinical Hebrew and Syriac, and was spoken as far W as the Rhone valley, colonized from the province of Asia. It represents, as its morphology and accentuation show, a mingling of the Attic, Ionic and W Greek dialects, which in the course of Greek political history before and after Alexander's conquests became fused together into a fully unified language with little trace of dialectal differentiation, so far as our records go. It is the direct ancestor of Byzantine and modern Greek which have recently been much utilized to cast light on its development and normative forms.

A number of the writers of the Roman period strove to attain the Attic ideal, and thus the living dialect is largely obscured in their works (Dionysius of Halicarnassus, Dio Chrysostom, Lucian); and even those who wrote in the *koinē* were inevitably influenced at times by their literary background (Polybius, Diodorus Siculus, Plutarch, Josephus).

The language of the NT, however, belongs to a style which is not moulded by formal literary education, but stands in a tradition of the presentation of technical materials and practical philosophy. The antecedents of this are in the scientific writings of Aristotle and Theophrastus, and in the medical writings of the Hippocratic school. Contemporary parallels to NT Greek are to be found in popular philosophical writings such as the discourses of Epictetus, in business and legal documents known to us from papyrus discoveries, and in various Hellenistic writers on medical and other technical matters. This style provided a convenient medium for the presentation of the matters of general interest

which the early church desired to convey, in a language which was likely to be that which the non-Greek speaker learnt when he entered Graeco-Roman society. It had an intellectual tradition but was not the property of a sophisticated lettered class: it was not the colloquial daily speech but had links with that, as the cultivated literary language did not. The language of the NT, from the solacisms of the Apocalypse to the highly-wrought style of Luke or Hebrews, stands within this common tradition. It is not a separate dialect but draws its peculiarities from its subject-matter, from the background of the LXX and from the imprint of the mother tongue of most of its writers.

The *koinē* is characterized by the loss or attenuation of many subtleties of the classical period, and by a general weakening in force of particles, conjunctions and the *Aktionsart* of verbal conjugations. The extent and particular instances of this tendency to simplification naturally vary even within the NT, and much more within the whole range of the linguistic monuments of the dialect. The dual number has totally disappeared. The optative mood is little used and scarcely ever strictly according to the canons of classical Attic. The distinction of perfect and aorist is sometimes not observed, a feature often reflected in variant readings. Certain particles, e.g. *te*, *hōs*, and even *ge*, are used as mere otiose supplements to others. Distinctions between different prepositions, e.g. *eis* and *en*, *hypo* and *apo*, are blurred; and similarly, the use of the same preposition (e.g. *epi*) with differing cases of the noun.

In vocabulary, compound verbs take the place of simple verbs, and thematic of non-thematic, while back-formations appear; in the noun there is a marked inclination to use diminutives without due implication of smallness. Similarly, the usage of such conjunctions as *hina* and *mē* has been greatly extended; and the pattern of conditional sentences (whether with *ei* or with a relative) has lost its clearly-defined nuances. This is not to imply that the language was in this form totally weakened and bereft of all its powers and subtleties—it remained a keen and precise instrument of expression—but without cognizance of the attenuating processes which were at work the expositor stands in danger of oversubtlety in exegesis.

During the period of our NT writings, under Roman domination, the *koinē* was exposed to the influence of Latin, and this has left its mark upon the language. However, this impression is mainly upon vocabulary and is to be seen in two forms, transliterated words (e.g. *kentyriōn*) and literally transposed phrases (e.g. *to hikanon poiein = satisfacere*). An attempt has been made to argue that the original tongue of Mark's Gospel was Latin, as some Syr. colophons say, and a plausible case erected; but the thesis has not met with acceptance, since much of its evidence may be paralleled either in the papyri or in modern Greek. It is in fact an unchallenged axiom of present-day scholarship in this field that that which is at home in modern Greek is the development of a natural Hellenistic locution, and in its appearance in the NT cannot be the result of a foreign influence upon NT Greek. As regards the language of Mark, it should also be noted that Latinisms of both kinds are to be found in Matthew and John and even in Luke, while the African Latin text, claimed as the original text, is in fact extant for all four Gospels, and not only for Mark.

b. *Hebraisms in the New Testament*

No local dialects are observable within the *koinē*, and in extant records there seems to be little local variation apart from pronunciation. A few 'Phrygianisms' and 'Egyptianisms' have been isolated. But in the NT writings we meet the particular problem of Semitisms, *i.e.* abnormal locutions which reveal an underlying or otherwise influencing Hebrew or Aramaic. We find that here we are dealing with an extremely subtle problem, in solving which a number of different types of influence and reflection may be discerned. Much that seemed curious to earlier scholars and was put down to Hebraism has, since the discoveries of the papyri, proved to be but the common Greek of the period. Yet certain features remain about which debate continues.

Hebraisms are mainly of Septuagintal origin. The Septuagint (LXX) was the Bible text chiefly known and used in the period of the formation of the NT. Its influence upon the NT writers varies. To trace this is again somewhat difficult, except in the case of explicit citation or phraseology, because of different strata in the LXX itself, some parts of which are written in idiomatic *koinē*, others in good literary *koinē*, while the Pentateuch and some other portions, largely for reverential reasons, closely adhere to the Heb. text, even when this entails a certain wrestling of the grammatical usage of Greek. Heb. phrases are rendered word for word into Greek, *e.g.* *passa sarx*, 'all flesh'; *akrobystia*, 'uncircumcision', *enōpion tou kyriou*, 'before the Lord'; pronouns are much used, following Heb. usage; various verbal features of Hebrew, especially the infinitive absolute, are rendered as literally as possible into Greek, *e.g.* in this case by pleonastic participle or cognate noun in the dative case; various periphrastic prepositional forms are used in imitation of Hebrew, *e.g.* *en mesō, dia cheiros*. In some cases, for instance the last named, this represents simply an over-use of a development already observable in popular Greek of the period.

The Greek of the NT, however, is not translated from Hebrew; and where (citations, *etc.*, apart) Hebraism is observable, it is in works otherwise high in the scale of stylistic and literary elegance in the NT. These are Luke, whose Septuagintalism is probably the result of deliberate pastiche, and Hebrews, whose author is steeped in the LXX while himself being capable of a highly complex and subtle Greek style. In Revelation the author's Greek, basically *koinē*, has been moulded by his Semitic mother-tongue. For instance, the verbal pattern of Hebrew and Aramaic has been imposed thoroughly upon his usage of the Greek verb, and Hebrew influence may be seen in the numerals. The resultant style is thoroughly Semitized but distinct from Septuagintal styles.

c. *The so-called 'Aramaic approach'*

This approach is a method even more difficult to pursue than the tracing of Hebraism. This is due to many factors. First, there has been considerable debate over the appropriate dialect of the widespread Aramaic language, in which the sayings of Jesus may be presumed to have been uttered and preserved. In the upshot it would appear that the Palestinian Targum, the Aramaic portions of the Talmud Yerushalmi, and Samaritan Aramaic sources are probably the safest guide, with biblical Aramaic and Christian Palestinian Syriac as useful

auxiliary aids. Secondly, whereas for Hebraisms we have a known translation from Hebrew to guide us, in the case of Aramaic there is no translated literature apart from the versions of biblical books known to have been translated from Aramaic, and various pseudepigrapha presumably translated; and only in the first of these cases have we the originals by which to control our understanding. Josephus' *Jewish War*, originally composed in Aramaic, has been skillfully rendered into Greek in a version which shows little or no trace of its original language. Thirdly, a number of alleged signs of Aramaic origin (*e.g.* *asyndeton*, *parataxis*, an extended use of *hina* said to be based on the Aramaic *d'*) are also to be found in the *koinē*, where simplicity of construction is often found and finer shades of meaning are sometimes lost.

In view of these difficulties, one needs to proceed with care. The more ambitious hypotheses which find all the Gospels and parts of Acts to be translations from Aramaic have failed to meet with general acceptance. More sober positions need to be taken up. We have to assess the probabilities largely by an 'un-Greek' preponderance of, or predilection for, certain locutions, or by means of patent ambiguities directly attributable to errors of translation. We find, then, that, broadly speaking, sayings and discourse material prove to be that which displays the most unambiguous signs of translation out of Aramaic: *viz.* sayings, complexes of sayings, parables, in the Synoptics; peculiarly Johannine discourse material; speeches in Acts. In these sections a number of ambiguities have been resolved by recourse to the syntax and style of Aramaic: this is the most securely established conclusion of this method. The majority of attempts to find flagrant mistranslations, however, in the *crucis interpretum* of the Greek, have not met with general agreement; each scholar tends to put forward his own suggestions, to the detriment of others and in criticism of theirs. In the case of John not all would be willing to find Aramaic sources even behind the discourses: rather, the work of a bilingual author has been postulated, in which the more natural Aramaic has left its indelible imprint on the more mannered Greek. This is certainly so in the case of Paul, whose rugged and vigorous *koinē* is marked throughout by his close acquaintance with the LXX and sometimes, perhaps, by his native Aramaic.

II. Individual stylistic features

Having thus summarized the general characteristics of NT Greek, we may give a brief characterization of each individual author. Mark is written in the Greek of the common man; our increased knowledge of the papyri has done much to illuminate his usage, though Aramaisms still remain, notably his impersonal use of the third person plural of the active verb to express a general action or thought. Matthew and Luke each utilize the Marcan text, but each corrects his solecisms, and prunes his style, in accordance with principles which we may find illustrated in their extreme form in Phrynichus. Matthew's own style is less distinguished than that of Luke—he writes a grammatical Greek, sober but cultivated, yet with some marked Septuagintalisms; Luke is capable of achieving momentarily great heights of style in the Attic tradition, but lacks the power to sustain these; he lapses at length back to the style of his sources or to a very humble *koinē*. In both Evangelists, of course, the Aramaic background of the

material reveals itself again and again, especially in sayings. The first two chapters of Luke have led to some debate: it is common to describe them as a pastiche of the LXX, but it may be plausibly argued that they are translated directly from a Heb. source. John's Greek can be closely paralleled from Epictetus, but in the opinion of most scholars appears to be a *koinē* written by one whose native thought and speech were Aramaic; there may even be passages translated from that language. Certain qualities of his style, notably the 'I AM' type of theophanic declaration, are most closely to be paralleled from the Mandaean writings which have their roots in W Syria; this too underlines the description of the Gospel as markedly Semitic. Acts is clearly the work of Luke, whose style fluctuates here as in the Gospel, and in spite of his spasmodic achievements remains at the mercy of his sources.

Paul writes a forceful Greek, with noticeable developments in style between his earliest and his latest Epistles. The development in Ephesians and in the Pastorals is so striking as to have led to hypotheses of pseudonymous composition; it is naturally patient of other explanations in the view of conservative scholars (*PSEUDONYMIY). Hebrews is written in very polished Greek of one acquainted with the philosophers, and with the type of thought and exegesis exemplified in Philo, yet the LXX has affected the language and style as it has not in Philo's case. James and 1 Peter both show close acquaintance with classical style, although in the former some very 'Jewish' Greek may also be seen. The Johannine Epistles are closely similar to the Gospel in language, but are more uniform and, even, duller in style, though the wide differences of literary type and subject may well be the operative factor in this. Jude and 2 Peter both display a highly tortuous and involved Greek; the latter has in fact with some justification been accused of Atticizing, and has been described as the one NT writing which gains by translation. The Apocalypse, as we have indicated, is *sui generis* in language and style; its vigour, power and success, though a *tour de force*, cannot be denied.

III. Conclusion

So NT Greek, while showing a markedly Semitic cast in places, remains in grammar, syntax and even style essentially Greek. Semantically, however, it has come to be increasingly acknowledged that its terminology is as strongly moulded by the usage of the LXX as by its origins, etymology and usage in Greek. This realization has led to the *TDNT* founded by Kittel, and has made a major contribution towards the current investigations of biblical theology; readily accessible to the English reader, there is also the work of C. H. Dodd in this field, especially in *The Bible and the Greeks* and *The Interpretation of the Fourth Gospel*. Behind 'righteousness' and 'justification', behind 'faith' and 'to believe', behind 'knowledge' and 'grace', stand Heb. concepts which quite transform the Gk. significance and which must be comprehended if the gospel is not to be misunderstood. The lack of this knowledge affects even the best of patristic and mediaeval exegesis, and later theologians too have suffered from lack of it. The realization of it is one of our greatest gains from modern biblical research: but note the criticism of J. Barr.

In summary, we may state that the Greek of the NT is known to us today as a language 'understood of the people', and that it was used with

varying degrees of stylistic attainment, but with one impetus and vigour, to express in these documents a message which at any rate for its preachers was continuous with that of the OT scriptures—a message of a living God, concerned for man's right relation with himself, providing of himself the means of reconciliation. This gospel has moulded the language and its meaning so that even the linguistic disciplines of its analysis become ultimately parts of theology.

LAODICEA. A city of SW Phrygia, in the Roman province of Asia, in the W of what is now Asiatic Turkey. It was founded by the Seleucid Antiochus II in the 3rd century BC, and called after his wife Laodice. It lay in the fertile valley of the Lycus (a tributary of the Maeander), close to *Hierapolis and *Colossae, and was distinguished by the epithet 'on Lycus' from several other cities of the name. It was at a very important cross-road: the main road across Asia Minor ran W to the ports of *Miletus and *Ephesus about 160 km away and E by an easy incline on to the central plateau and thence towards Syria; and another road ran N to *Pergamum and S to the coast at *Attalia.

Laodicea, one of the 'seven churches of Asia' (Rev. 1-3).

LAODICEA

This strategic position made Laodicea an extremely prosperous commercial centre, especially under Roman rule. When destroyed by a disastrous earthquake in AD 60 (Tacitus, *Ann.* 14. 27) it could afford to dispense with aid from Nero. It was an important centre of banking and exchange (cf. Cicero, *ad Fam.* 3. 5. 4, etc.). Its distinctive products included garments of glossy black wool (Strabo, *Geog.* 12. 8. 16 [578]), and it was a medical centre noted for ophthalmology. The site had one disadvantage: being determined by the road-system, it lacked a sufficient and permanent supply of good water. Water was piped to the city from hot springs some distance S, and probably arrived lukewarm. The deposits still encrusting the remains testify to its warmth. The site of Laodicea was eventually abandoned, and the modern town (Denizli) grew up near the springs.

The gospel must have reached Laodicea an early date, probably while Paul was living at Ephesus (Acts 19:10), and perhaps through Epaphras (Col. 4:12–13). Although Paul mentions the church there (Col. 2:1; 4:13–16), there is no record that he visited it. It is evident that the church maintained close connections with the Christians in Hierapolis and Colossae. The 'letter from Laodicea' (Col. 4:16) is often thought to have been a copy of our Ephesians which had been received in Laodicea.

The last of the Letters to 'the seven churches of Asia' (Rev. 3:14–22) was addressed to Laodicea. Its imagery owes relatively little to the OT, but contains pointed allusions to the character and circumstances of the city. For all its wealth, it could produce neither the healing power of hot water, like its neighbour Hierapolis, nor the refreshing power of cold water to be found at Colossae, but merely lukewarm water, useful only as an emetic. The church was charged with a similar uselessness: it was self-sufficient, rather than half-hearted. Like the city, it thought it had 'need of nothing'. In fact it was spiritually poor, naked and blind, and needed 'gold', 'white garments' and 'eyesalve' more effective than its bankers, clothiers and doctors could supply. Like citizens inhospitable to a traveller who offers them priceless goods, the Laodiceans had closed their doors and left their real Provider outside. Christ turns in loving appeal to the individual (v. 20).

M.J.S.R.
C.J.H.

LAPPIDOTH (Heb. *lappîdôt*, 'torches'). The husband of Deborah (Jdg. 4:4). Some Jewish commentators, taking it as a description of Deborah, would render the Hebrew as 'a woman of lightning flashes', but there is little evidence to support this view; other Jewish commentators (with equal lack of evidence) identified him with Barak (Jdg. 4:6), whose name means 'lightning'.

J.D.D.

LASEA, presumably the same town as the Lasos mentioned by Pliny (*NH* 4. 59), has been identified with ruins some 8 km E of *Fair Havens. If this identification is correct, one of the disadvantages

of Fair Havens as a winter harbour would be the distance of the town from it.

K.L.McK.

LASHA. Probably *leşa'*, but written *lāša'* in the interests of prosody in its sole occurrence, which is at the end of a verse (Gn. 10:19). It figures in the designation of the limits of the territory of Canaan in a context which suggests that one travelling from the Mediterranean coast would encounter it as the farthest inland of a group consisting of Sodom, Gomorrah, Admah and Zeboim. This points to a locality somewhere near the SE shore of the Dead Sea, but no site of this name is known there. Ancient tradition equated it with the hot springs of *Kallirrhoe'*, modern Zarqa Ma'in SW of Madaba near the E coast of the Dead Sea, and some modern scholars prefer to identify it with *layiś* of *Dan, but neither of these can be substantiated.

T.C.M.

LASHARON (rv 'Lassharon', avmg. 'Sharon'). A Canaanite royal city mentioned with Aphek as taken by Joshua (12:18). Lxx (B) reads 'the king of Aphek in Sharon'. However, Eusebius (*Onomasticon*, s.v. 'Saron') mentions a district called Sarona, between Mt Tabor and the Sea of Tiberias, and this ancient site, 10 km SW of Tiberias, may be the biblical Lasharon.

J.D.D.

LATIN. The word is mentioned only twice in the NT (Lk. 23:38, rsvmg.; Jn. 19:20). An Indo-European language, it was spoken first in Rome and the contiguous Latian plain by racial elements which entered Italy, probably from the N, before 900 bc. Latin was confined to the Latian enclave by the alien Etruscan language to the N, and to the E and S by the allied languages, Oscan and Umbrian, which came with a later wave of immigrants, possibly across the Adriatic. Latin expanded with Rome, became the second speech of the W Mediterranean, fathered the Romance languages, and contributed major elements to the vocabularies of the Teutonic and Slavonic languages. Latin words appearing in the NT are: *as*, *charta*, *census*, *centurio*, *colonia*, *custodia*, *denarius*, *forum*, *flagellum*, *grabbatus*, *legio*, *lenteum*, *libertini*, *lolium*, *praetorium*, *quadrans*, *macellum*, *membrana*, *modius*, *raeda*, *semi-cinctium*, *sicarius*, *speculator*, *sudarium*, *taberna*, *titulus*, *zizanium*.

E.M.B.

LAW

I. In the Old Testament

Terminology

The OT has a variety of terms for law, the commonest of which are: *tôrâh*, 'law, instruction, teaching'; *hōq*, 'statute, decree'; *mišpāt*, 'judgment, legal decision'; *dābār*, 'word'; *mišwâh*, 'command(ment)'. Their number reflects the importance of law within the Bible. Indeed the first five books are called *tôrâh*, 'law', by Jews and the NT, even though they appear to be as much about history as law. The specifically legal sections are embedded in narratives about Israel's early history, and this context is important for the understanding of biblical law. This article will therefore begin by describing the main groups of law within the Pen-

tateuch; next it will review the relationship of OT law to other collections of laws from the ancient Near East; then it will look at the relationship of the law to the covenant, and finally at its relationship to the narratives.

a. *The Ten Commandments*

The Ten Commandments or Ten Words (Decalogue) (Ex. 20:1–17; Dt. 5:6–21) are rightly regarded as the quintessence of OT law. This is not merely the opinion of modern commentators, but is affirmed by Jesus and Paul and by the OT itself. They alone are said to have been written by ‘the finger of God’, a very emphatic statement of their inspiration.

The Ten Commandments are not case or statute law, or ‘Israel’s criminal law’ (so Philips). No human penalties are specified for breaking them, but dire warnings of punishment by God or promises of his blessing are added to them. And the last commandment about coveting could never be enforced by a human court. This shows that the commandments should not be classed as civil or criminal law, but as a statement of basic religious and ethical principles.

These principles are illustrated and in the other legal collections of the Pentateuch are put into a form that judges could handle. Ex. 22:1–15 shows how theft should be punished, and Dt. 22:13–30, among other passages, gives directions about adultery and kindred offences. Indeed the order of topics in Dt. 12–25 seems to be dictated by the order of the commandments.

This order is not haphazard: it gives an insight into the religious and ethical priorities of the OT. Though every commandment expresses the will of God, and to breach them is to invite his punishment, the most important come first. Other collections of law are put in a similar order. Flagrant breaches of the first six commandments are punished by death. Death is made optional for the seventh, *i.e.* adultery. It is never invoked for ordinary cases of false witness or theft, and covetousness is not brought to court. Thus the Decalogue makes love for God, his name and his day, the Israelite’s first duty, but almost as important is love for parents, human life and marriage. Then comes truth and property, and finally covetousness. Other societies tend to rank these matters differently.

b. *The Book of the Covenant*

Ex. 20:22–23:19 is often referred to as the Book or Code of the Covenant, a title suggested by Ex. 24:7. This was given at the same time as the Ten Commandments, and the context makes it plain that the writer of Exodus saw this collection of laws as an elaboration of the Decalogue. Yet about half of them find good parallels in non-biblical collections of laws, so that scholars assume that there has often been large-scale borrowing from Canaanite sources or a drawing on common Near-Eastern legal tradition which explains these parallels. But the differences between non-biblical collections and the Book of the Covenant are just as striking as the affinities. There has been no mechanical borrowing, for the laws within the Book have been added to or reordered to reflect biblical priorities. For example, oriental collections of law rarely contain rules about worship or other religious matters, but in the Book of the Covenant and the other collections these come first (20:22–26) and last (23:10–19). In the Mesopotamian col-

lections, laws about slaves usually come towards the end, but Ex. 21:1–11 puts them near the beginning. This reflects the OT’s insistence that slaves are human beings, not mere chattels, but it also recalls that as 20:2 puts it, ‘I am the LORD . . . who brought you out . . . of slavery.’ Israel must show kindness to slaves as God did to them (*cf.* Dt. 15:15). The primacy of human life over property is also reflected in these laws.

c. *Leviticus and the Holiness Code*

Source criticism splits the book of Leviticus into two parts: 1–16 is ascribed to the Priestly source and 17–27 to the Holiness Code, an earlier document subsequently incorporated into the Priestly source. The theme of holiness runs through the book of Leviticus. Its motto is: ‘Be holy because I, the Lord your God, am holy.’ The narrative which encases the laws in Leviticus sets their promulgation in Sinai, like the Book of the Covenant. Like the Book of the Covenant, Leviticus shows the same sense of priorities. It begins with seven chapters on sacrifice, showing the acceptable way to worship God. After a short narrative interlude (chs. 8–10), it proceeds with a long section on impediments to worship, *i.e.* unclean conditions (chs. 11–15), more laws on worship, before reaching its section on civil and criminal offences (chs. 18–25), with its acme ‘Love your neighbour as yourself’ (19:18). Once again, duties towards God precede duties to one’s neighbour.

d. *Deuteronomy*

Deuteronomy is Gk. for ‘second law’. This is not the aptest description of this book, for although chapters 12–25 contain much legal material, the genre of the book as a whole is different from the preceding collections. Deuteronomy is a series of sermons by Moses about the law, urging Israel to keep the law if they want to prosper in the land they are about to enter. Much critical debate focuses on whether Moses, the implied author of Deuteronomy, is the actual author, but that is not the issue here. The laws in Exodus and Leviticus profess to have been given by God to Moses, but Deuteronomy is an extended reflection by Moses on the law and an attempt by him to persuade the nation of Israel to keep the laws, especially when they enter Canaan.

The structure of the book owes much to the Near Eastern legal document form exemplified in treaties, law codes and *kudurru* stones. But as already mentioned the section of Deuteronomy that most closely corresponds to a law code, chapters 12–25, appears to follow the order of the Decalogue in its arrangement of laws. Some of the most obvious points are chs. 12–13//1st commandment ‘no other gods’, chs. 15–16//4th commandment ‘sabbath’ = 7th year and festivals, chs. 17–18//5th commandment ‘parents’ = authorities, chs. 19–21//6th commandment ‘murder’, chs. 22–23//7th commandment ‘adultery’, chs. 23–24//8th commandment ‘theft, property’ ch. 25//9th commandment ‘false witness’. Once again the same sense of values emerges here as in the Decalogue itself.

e. *OT law and ancient oriental parallels*

In discussing the Book of the Covenant we noted that many parts parallel laws from other Near Eastern texts, such as the laws of Lipit-Ishtar c. 2100 BC, the laws of Eshnunna and Hammurapi c. 1750 BC, the Hittite laws and the Middle Assyrian laws. There are also thousands of legal documents

dealing with marriage, wills, sale, and disputes spanning nearly three millennia, from Sumer to Egypt, which shed light on Israelite legal practice. Despite the multitude of documents now available, it is difficult to know how much legal practice differed from place to place and in different periods. Though scholars tend to presuppose much evolutionary development, Westbrook argues that the ancient world was a very static society, with relatively little change happening from place to place. Certainly legal texts from very different times and places have contributed to elucidating biblical law.

It is generally agreed that the extrabiblical collections of law are not comprehensive codes trying to cover every legal eventuality. Often the most obvious cases are not discussed, e.g. ordinary homicide or arson, but unusual cases are, e.g. looting at a fire. This suggests we are dealing with collections of traditional case law, perhaps introducing certain innovations or reforms. How far these collections were drawn up for the guidance of judges (they are hardly ever cited in legal cases), or how far they represent an academic exercise by learned scribes as propaganda on behalf of the king, is still a matter of debate. The biblical collections are similar in not being comprehensive and in presupposing at many points the normal legal practices of the Near East. For example, Lv. 18 does not prohibit incest with one's daughter, but presupposing it extends the incest boundaries considerably. The OT does not describe what constituted a legal marriage or divorce, but by using extrabiblical materials, and remarks in biblical law about unusual cases, it is possible to reconstruct more typical procedures. So with the aid of Near Eastern texts, biblical law may be interpreted much more exactly.

However, though legal practice in Israel may at many points have been similar to that of its neighbours, the framework of its understanding was somewhat different. In Mesopotamia, the king was the author of the law, but Israel saw God as the lawgiver. This had profound consequences. First, it meant that all offences were sins. They did not merely affect human relationships, but also the relationship between God and people. Non-observance of the law was a breach of the covenant between God and Israel that was liable to provoke divine judgment. Second, if law comes from God, all life is related to God, therefore it is natural for collections of law to contain reference to religious duties as well as social ones. We have already noted this feature in all the biblical collections of law. Third, the duty of keeping the law fell on every Israelite, not just the king. So every Israelite was expected to know and teach the law, especially to members of his family (cf. Dt. 6:7).

The express purpose of the law was to create a 'kingdom of priests and a holy nation' (Ex. 19:6). But the prologue of Hammurapi's laws dwells on the political and economic benefits that law brings—justice, peace, prosperity and good government. But though the OT recognizes these benefits as flowing from national obedience to the law (cf. Dt. 28:1–14), it also sees a much greater benefit in the law. The law itself is the divine means of creating a holy people. Obedience to the law renews the divine image in man, enabling him to fulfil the command to 'Be holy, for I am holy' and to enjoy the presence of God in the midst of his people (cf. Lv. 11:44–45; 19:2; 20:7; 26).

f. *Biblical law and the Covenant*

All the biblical collections of law are set within a covenant framework. The Ten Commandments and the Book of the Covenant form the centrepiece of the first Sinai covenant, the laws in Leviticus form part of the renewal of that covenant after the golden calf incident, and Deuteronomy renews the covenant some 40 years later in the plains of Moab. It is widely recognized that the Israelite covenant roughly follows the pattern of Near Eastern vassal treaties made between great kings and their underlings. In the OT setting, the Lord is the great king and Israel is his vassal, pledged to total loyalty.

The covenant framework of the law has several implications for its understanding. First, it shows that the law forms part of a personal relationship between God and Israel: they are not anonymous rules imposed by an unknown authority. They are given by the creator God who has chosen one nation out of all the nations to be his treasured possession (Ex. 19:5) and his laws are a gift to them that no other people enjoy and proof of God's nearness to them (Dt. 4:7–8). Second, the law was given to Israel after she had experienced salvation, after they had been brought out of Egypt, not before. Israel was saved by divine mercy, not by their own good works or efforts. The giving of the law was part of God's ongoing grace towards Israel. Third, obedience to the law would lead to yet greater blessings for the nation: good harvests, numerous children, freedom from hunger and disease, victory over their enemies, and God's presence in their land. But, conversely, breaking the laws would lead to all sorts of disasters: drought, hunger, disease and, ultimately, expulsion from the land (Lv. 26; Dt. 28). So though obedience to the law did not earn Israel salvation, it was indispensable if they were to continue to enjoy its benefits.

g. *The law in its narrative context*

The law-giving at Sinai is not an isolated event. As explained above, it was part of the covenant made there, and this in turn is viewed as fulfilment of the promises made to Abraham, Isaac and Jacob (Ex. 3:7–17; 6:2–8). God promised to make Abraham a great nation, give his descendants the land of Canaan and make an everlasting covenant with them (cf. Gn. 12:1–3; 17). The Sinai covenant was a partial fulfilment of these patriarchal promises.

But the Sinai covenant does not simply hark back to these promises to Abraham. It reflects God's plan for mankind foreshadowed in Genesis 1–2. There God gave Adam the garden of Eden. He told him to 'be fruitful and multiply' and provided him with a wife, walked with them in the garden, and gave them a law 'not to eat of the tree'. It was transgression of this one law that led to Adam and Eve forfeiting the benefits of Eden. The story of the rest of Genesis is of God's planning and working to bring to pass his original plan for the human race. The call of Abraham was a first step, the covenant at Sinai was another. Not only did the Lord come down on Sinai but he guided them with the pillar of fire, and eventually 'walked' in the tabernacle as he once walked in Eden. Admittedly, it was only the high priest who could enter the divine presence, whereas in Eden the whole human race enjoyed such intimacy with God. But it was a step in the right direction.

Similarly, the laws given at Sinai, particularly the penal laws and those formulated negatively, e.g. most of the Ten Commandments, should not be

regarded as God's ideals for human behaviour. Rather they represent the floor below which no one should fall—if they do, society or God must step in to punish. God's ideals are set out in the opening chapters of Genesis, where man is created in God's image and therefore expected to imitate him. In the exhortations and motive clauses scattered throughout the collections, similar lofty goals emerge: 'Be holy, for I am holy', 'Love the Lord your God with all your heart and with all your soul and with all your strength.' Therefore the OT law fixes no ceiling on human ethical endeavour: it too encourages man to 'be perfect, as your heavenly Father is perfect' (Mt. 5:48).

II. In the New Testament

a. Jewish background

One of the most important features of OT religion was the law of Moses, which the Jews received when the Sinai covenant was ratified. Obedience to the law of Moses was not conceived as a way of earning God's favour but as a response to his grace in delivering Israel from Egypt (Ex. 20:1–17). Nonetheless, the basic storyline of the OT reveals that Israel failed to keep the law and forsook the God of Israel. Yahweh responded by sending his people into exile for their disobedience of the Torah (Lv. 26; Dt. 28; Jos. 23:14–16; 2 Ki 17:7–23; Dn. 9). In Paul's day the Jews believed that the promises of a glorious, national future were not yet fulfilled, since they were in subjection to Rome, and their servility continued to be ascribed to their failure to obey the Torah. The keeping of the law of Moses, therefore, was considered to be essential for the deliverance of the nation and the fulfilment of God's promises. Most Jews in Second Temple Judaism believed that by exercising their free will they had the ability to keep the law (Ecclus. 15:11–22; *Psalms of Solomon* 9:4–5; 2 *Apocalypse of Baruch* 54:15, 19; 85:7; *Aboth* 3:16). What was required was commitment to carry out its prescriptions.

b. The meaning of the term 'law' and 'works of law' in the NT

Given the OT background, it is not surprising that the term 'law' (*nomos*) in the NT usually refers to the law of Moses. In most cases the focus is on Sinaitic legislation, i.e. the commands and prescriptions of the law (e.g. Lk. 2:22–24, 27, 39; Rom. 2:12–27; 1 Cor. 9:8–9). The phrase 'the law and the prophets' also occurs (e.g. Mt. 5:17; 7:12; 22:40; Lk. 16:16; Jn. 1:45; Acts 13:15; Rom. 3:21; cf. Lk. 24:44), denoting the OT scriptures as a whole. 'Law' in these cases refers to the Pentateuch, while 'prophets' designates the rest of the OT. The term 'law' also occasionally refers to the OT as Scripture and yet does not denote the Pentateuch, for Paul cites passages from Psalms, Proverbs and Isaiah

and labels them as 'law' (cf. Rom. 3:10–19; 1 Cor. 14:21). There are a few other instances in which the term 'law' may not refer to the law of Moses. The 'law of Christ' (Gal. 6:2; cf. 1 Cor. 9:21) is understood by most scholars to be distinct from the law of Moses, although some see it as the fulfilment of the Mosaic law. It has often been said that the word 'law' means 'principle', 'order', or 'rule' in Rom. 3:27; 7:21, 23 and 8:2, although this has been vigorously contested in recent scholarship, with some insisting that the reference is to the law of Moses in every case.

The meaning of the term 'works of law' (*erga nomou*), which occurs eight times in Paul (Gal. 2:16 [three times]; 3:2, 5, 10; Rom. 3:20, 28), has also been the subject of considerable controversy. It has been suggested that the term is shorthand for legalism (Fuller), or that it focuses on the requirements which separate and distinguish Jews from Gentiles, viz., circumcision, food laws, and observance of days (Dunn). More likely, the term refers broadly to all the works or deeds required by the law (Westerholm). This latter view is suggested by the Qumran literature (*Florilegium* 1:7; *Miqsat Ma'aseh Torah*) where the term 'works of the law' denotes all that is required by the law. Even more germane is the context in which the term is found in Romans. Paul asserts in Rom. 3:20 that no one is right before God by 'works of law'. This statement functions as a conclusion to the sustained argument of Rom. 1:18–3:18, where it is demonstrated that all people—both Jews and Gentiles—have sinned and fallen short of God's standard. Indeed, the Jews are indicted in Rom. 2:17–19 for failing to keep the law which they so avidly proclaim. The fundamental argument against the Jews in Rom. 2 is not that they are legalistic, nor that they exclude Gentiles. Rather, they are criticized for failing to observe the law which they treasure and teach. Thus, when Paul concludes his case in Rom. 3:20 by saying that no one is right before God by 'works of law', it follows from the preceding argument that the law, as a whole, is contemplated and that human beings failed to keep it perfectly. It is likely that a similar understanding should be applied in Gal. 2:16 and 3:10. A reference to the whole law is suggested particularly by Gal. 3:10, for Paul says that a curse rests upon those who do not 'abide by all that is written in the book of the law'. The emphasis on 'all' (Paul uses the LXX text which contains the word 'all', not the MT where the word is lacking) intimates that the whole law is in view and that perfect obedience is demanded. If 'works of law' do not justify, then what is the means by which the curse of the law can be removed? Gal. 3:13 proclaims that the curse is removed through the cross of Christ by which he becomes a curse-bearer for believers. Rom. 3:21–26 contains a similar argument: righteousness does not come via the law, but is available through faith by virtue of the atoning death of Christ which turned away the Father's wrath and wiped away our sins.

c. The law and human inability

We have seen that in both the OT and Second Temple Judaism, Israel's failure to realize the promises of national glory was ascribed to disobedience to the Torah. Paul (Rom. 1:18–3:20) also indicts both Gentiles and Jews for their failure to observe the law (cf. Gal. 2:17–18; 3:10; 5:3; 6:13). Other NT writers concur that disobedience was the fundamental problem with the Jews (cf.

Mt. 3:7–10 par.; Jn. 7:19; Acts 7:53; 15:10–11). Indeed, Jesus' most stinging criticism of the Pharisees is not that they are legalistic, but that they themselves do not keep the law (cf. Mt. 5:20; 23:3, 23, 25–26; Mk. 7:8, 13; Lk. 11:37–52).

NT writers do not depart from Second Temple Judaism in their conception that the promises have not yet been realized because of human sin. This would have been common ground between NT writers and their Jewish contemporaries. NT writers differed in their assertion that human beings are *unable* to keep the law (see Laato's work below). Paul is particularly emphatic on this point. He says that those who are in the flesh, *i.e.* unregenerate, 'cannot' keep God's law (Rom. 8:7). They are slaves to sin (Rom. 6:6, 17, 19, 20) and sold under the power of sin (Rom. 7:14) so that they are its captives (Rom. 7:23). Many Jews believed that the law could counter the 'evil impulse' (*yēser hāra'*) in human beings. Paul countered that to be 'under law' was to be under the power of sin (Rom. 6:14–15; 7:14; Gal. 3:22). Those who are of 'works of law' are 'under a curse' (Gal. 3:10). They are enslaved to the elements of the world (Gal. 4:3–5), and can be freed from the tyranny of being 'under law' only when they yield to the leading of the Spirit (Gal. 5:18). This is not to say that the law is evil *per se* (Rom. 7:12), for the 'under' phrases denote an era of salvation history in which the law was given and yet the Spirit was withheld from most of Israel. Thus, the law of Moses was given to increase sin (Rom. 5:20; 7:7–11; Gal. 3:19), and the law apart from the Spirit kills and condemns (2 Cor. 3:6, 9), for 'the power of sin is the law' (1 Cor. 15:56).

d. Is Jewish legalism criticized in the NT?

Ever since the Reformation, scholars have understood NT writers, and Paul in particular, to be opposing Jewish legalism which taught that one could merit right standing before God by doing the works of the law. A few dissenting voices have been raised along the way, but the consensus basically held until 1977. The year 1977 marks a watershed in NT studies, for E. P. Sanders published in that year his massive and influential work *Paul and Palestinian Judaism*. Sanders contends that scholarship has read Paul and Second Temple Judaism through the lenses of the Reformation struggle between Protestantism and Roman Catholicism instead of from a historical perspective. When the extant literary evidence of Judaism is examined, he claims, no evidence of legalism can be supported from the Jewish texts themselves – with the exception of 4 Ezra. Thus, the idea that Judaism was legalistic is a serious misreading of the evidence.

Sanders has convinced many scholars of the validity of his case, and he rightly strikes a balance against a caricature of Second Temple Judaism. Nonetheless, the claim that Judaism was as free of legalism as he suggests is questionable. The failure of Second Temple Judaism to emphasize the covenant and the stress on the minutiae of the law are at least a recipe for legalism which could easily creep into the practice, if not the theology, of some Jews. Neither can NT evidence that points to legalism among the Jews be explained away. The parable of the Pharisee and the tax collector (Lk. 18:9–14) demonstrates that the Pharisee believed he was righteous because of his morality and devotion to religious practices. His religion had become a mask for self-exaltation (v. 14). The Lukan inclu-

sion of this parable can scarcely be accounted for if no one suffered from the problem of legalism.

Several texts in Paul also take aim at merit theology. For instance, Paul explicitly contrasts someone who works for a wage that is owed to him with someone who receives the gift of justification simply by believing (Rom. 4:4–5). This illustration occurs in a context in which all boasting is excluded, since righteousness is obtained by faith instead of works (Rom. 3:27–28; 4:2–3). One must strain the text unduly not to see a critique of legalism here. Those who are convinced that they have done the requisite works (an illusion, of course, since no one keeps the law perfectly—Rom. 1:18–3:20) do not need righteousness as a gift. They believe they have merited righteousness as a wage that is deserved, since they worked to attain it. And thus they believe (vainly!) they have grounds for boasting in their achievement. Rom. 9:30–10:8 should be understood similarly. The problem with the Jews is that they did not pursue the law with faith 'but as from works' (Rom. 9:32). Instead of submitting themselves to God's saving righteousness, they tried to establish their own righteousness by works (Rom. 10:3). The assertion by some (e.g. Dunn) that Paul's criticism of the Jews is limited to their nationalism and ethnocentrism can hardly be sustained here. Not a word is breathed in this context about circumcision, food laws, or observance of days. The text refers to 'works' in general—not even 'works of law'—and thus it would be illegitimate to conclude that the Jews are criticized for excluding Gentiles. The term 'works' should be interpreted in a broad sense, denoting their works-orientation rather than faith-orientation. Paul's critique of the Jews was not from an outsider's perspective, for he had suffered from the same tendency (Phil. 3:2–11). He attempted to obtain right-standing with God on the basis of 'his own righteousness from the law' instead of 'the righteousness of God on the basis of faith' (Phil. 3:9). The critique against legalism in the NT should not be understood as an attack against 'Jews' and an indication of anti-Semitism. Legalism is due to pride, and the desire for self-exaltation, which is a problem common to *all* humanity, not just the Jews.

e. Abrogation and fulfilment of the law

One of the perplexities in reading the NT is that it seems to say contradictory things about the law. In fact, Räisänen makes this his central plank in his book on Paul's view of the law, contending that Paul's theology of the law is inconsistent and contradictory. Räisänen's solution is unsatisfactory, and yet the difficulty is apparent to all careful readers of the NT, since the various statements made about the law are difficult to reconcile. This comes to the forefront in the matter of the abrogation and fulfilment of the law. Some statements imply that the law is still in force and fulfilled in Christ, while others teach that the law has come to an end. The solution to this vexing problem is paradoxical, for NT writers affirm that both are true, *i.e.* the law is abrogated and yet it is also fulfilled.

Matthew, for instance, emphasizes that Christ came to fulfil the law (5:17–20; cf. 5:21–48). What Matthew means by 'fulfil' is the subject of controversy, but it should be related to his christology, since he emphasizes that Christ fulfils OT prophecy (cf. 1:22; 2:15, 17, 23; 4:14; 8:17, *etc.*). Matthew hints (15:1–20) that the food laws of the OT are

no longer binding. Mark, in the parallel text (Mk. 7:1–23), makes it explicit that all foods are now clean (Mk. 7:19). It is also possible that Matthew's words about the Sabbath suggest some change regarding Sabbath regulations (12:1–14). The fulfilment envisaged by Matthew, then, hints at some changes in the law. Food laws and perhaps the Sabbath laws are no longer binding in the same way (cf. also the texts on divorce in 5:31–32; 19:3–12). Nonetheless, the moral norms of the law are not jettisoned, but can now become a reality with the coming of the kingdom (4:17; 5:17–48).

Luke also emphasizes that Jesus fulfils prophecy (1:32–33, 54–55, 68–79; 4:18–19; 24:25–27, 44–49; Acts 2:16–36, etc.), and that the law is eternally valid (16:17). This does not mean that there is no shift in terms of the law, for Acts 10:1–11:18 communicates in unmistakable terms that food laws are no longer required. Moreover, at the Jerusalem council in Acts 15, circumcision is not imposed on the Gentiles. Luke's perspective seems to be a salvation historical one in which the law no longer functions in the same way now that Messiah has come, the Spirit has been poured out, and the gospel goes to the Gentiles (cf. Blomberg). The letter to the Hebrews depicts the covenantal shift in a beautiful argument which is unfolded in chapters 7–10. The law of the old covenant is no longer binding, since there has been a change of priesthood (Heb. 7:11–12). Indeed, the very fact that a Melchizedean priesthood was predicted in Ps. 110:4 signals that the Levitical priesthood was destined to become obsolete. If the Levitical priesthood has been superseded, the same is true of Levitical sacrifices. Ultimately, the blood of animals cannot atone for sin anyway, since they are brute beasts and unwilling victims. OT sacrifices actually anticipated and pointed forward to the sacrifice of Christ which is the fulfilment of what they adumbrated. Thus, the author of Hebrews does not criticize the OT law *per se*. He places it in salvation historical perspective, arguing that it must be interpreted in light of the fulfilment accomplished by Jesus Christ. The OT itself, in promising a new covenant, envisaged a day when the old would be dissolved.

Paul's theology follows the same basic paradigm. The gospel of Christ fulfils the OT scriptures (Rom. 1:2; 3:21). And now that Christ has come, circumcision, food laws and observance of days are not mandated for the people of God (Rom. 2:26–29; 4:9–12; 14:1–23; 1 Cor. 7:19; Gal. 4:10; 2:3–5; 5:2–6; 6:12–13; Col. 2:16–23). The Mosaic covenant has come to an end upon the arrival of Christ (Gal. 3:15–4:7; 2 Cor. 3:4–18), for the promises given to Abraham that all nations would be blessed have become a reality (Gal. 3:6–9, 14–18, 29; Rom. 4:9–17). Circumcision, food laws and Sabbath are not required, because the days of separation between Jews and Gentiles have ended. And yet the deeper reality to which these laws pointed has now been fulfilled. Circumcision of the heart has become a reality through the work of the Holy Spirit (Rom. 2:28–29; Phil. 3:3) and the work of Christ on the cross (Col. 2:11–12). The purity laws of the OT are fulfilled in purity of life and in separation from all evil (cf. 2 Cor. 6:14; 7:1; cf. Peter's application of Lv. 11:44 in 1 Pet. 1:15–16). Paul himself does not enunciate how the Sabbath is fulfilled, but the author of Hebrews (Heb. 4:1–11) sees the Sabbath as coming to fruition in the Sabbath rest which believers now enjoy, and which will

be consummated at the day of Christ's return. The fulfilment of the law for Paul (cf. also Jas. 2:8–12) also involves empowerment so that the moral norms of the law may be kept. Many scholars doubt that Paul operated with a distinction between the moral and ceremonial law, but texts such as Rom. 2:25–29; 8:4; 13:8–10; Gal. 5:2–6, 14; 1 Cor. 7:19, suggest that he operated with such a distinction. Of course, Paul never conceived that the law could be fulfilled in one's own strength. Fulfilling the law was due to the work of the Holy Spirit which enabled believers to obey God's commandments.

LAWGIVER (Heb. *m'hōqēq*; Gk. *nomothetēs*). All six OT occurrences of the Heb. word are in poetry. In Gn. 49:10; Nu. 21:18; Ps. 60:7 (= Ps. 108:8) the rendering 'staff' or 'sceptre' makes better sense in context and with parallels. Dt. 33:21; Jdg. 5:14; Is. 33:22 ascribe judicial leadership to Gad, Manasseh and the Lord. James (4:12) rebukes censoriousness among his readers by reminding them that God alone is judge.

The idea of lawgiver in the NT, if not the word, is much more widespread. In particular, Christ is characterized as Lawgiver by his respect for the Mosaic Law (Mt. 5:17–18), and by comparison with Moses (Mt. 17:3; Jn. 1:17). The superiority of Christ is emphasized in his own pronouncements (Mt. 5:22ff.; 22:36–40) and elsewhere by stressing his status (Gal. 3:19; Heb. 7:11), the scope of his law (Rom. 10:4; 13:8ff.), and its spiritual nature (Rom. 7–8; Jas. 1:25, etc.). P.A.B.

LAWYER. The NT title *nomikos* was used of the scribes synonymously with *grammateus* (scribe) and *nomodidaskalos* (teacher of the law). All scribes were originally students of Scripture, but by the 2nd century BC lay scribes had begun to expound the minutiae of the law without direct reference to Scripture. Lawyers had seats in the Sanhedrin (Mt. 16:21; Lk. 22:66; Acts 4:5).

R.K.H.

LAYING ON OF HANDS. Actions with the * hands were an important part of ancient religious ritual, e.g. in prayer (1 Ki. 8:54; 1 Tim. 2:8) and invocation of divine blessing (Lv. 9:22; Eccles. 50:20; Lk. 24:50). Jacob blessed the sons of Joseph by laying (*šīt*) his hands upon their heads (Gn. 48:8–20), and Jesus similarly blessed children brought to him (Mk. 10:16; Mt. 19:13–15; cf. *SB*, 1, pp. 807f.). Jesus also touched (e.g. Mk. 1:41; 7:33), or laid his hands on, the sick (Mk. 5:23; 6:5;

LAYING ON OF HANDS

7:32; 8:23, 25; Mt. 9:18; Lk. 4:40; 5:13; 13:13), as did the apostles (Acts 9:12, 17; 28:8; Mk. 16:[18]; cf. 1 Qap Gen 20. 21, 28f. The action was symbolic of spiritual blessing flowing from one person to another (cf. Mk. 5:30).

I. In the Old Testament

On the Day of Atonement Aaron placed (*sāmāk*) his hands on the head of the goat which was to be sent into the wilderness and confessed the people's sins over it, thus putting them upon the goat (Lv. 16:21). A similar rite accompanied the burnt, peace, sin and ordination offerings (e.g. Lv. 1:4; 3:2; 4:4; Nu. 8:12), indicating the 'identification' of the people with their offering. (In Lv. 24:14 (cf. Susanna 34) the people who put their hands upon a blasphemer were probably 'thrusting' his guilt upon him.)

The Levites, who as priests represented the people before God, were ordained by the people placing their hands upon them (Nu. 8:10). Moses ordained his successor Joshua by placing his hands upon him and thus investing him with some of his authority (Nu. 27:18–23). This passage describes Joshua as 'a man in whom is the spirit' before his ordination, but Dt. 34:9 states that he was full of the spirit of wisdom because Moses had laid his hands upon him. The implication would appear to be that a worthy person, possessed of the divine Spirit, received additional spiritual gifts when commissioned for service by this rite. At the same time the rite indicated a transfer of authority.

II. In the New Testament

In the NT baptism and the reception of the Spirit were on occasion accompanied by the laying on of hands. In Acts 8:14–19 the gift of the Spirit was conferred only when baptism had been followed by apostolic laying on of hands. It is unlikely that the laying on of hands by Ananias in Acts 9:12, 17 (where it precedes baptism) is to be understood similarly. Acts 19:6 links laying on of hands with baptism and the gift of the Spirit expressed in tongues and prophecy, and Heb. 6:2 refers to teaching about baptisms and laying on of hands, probably as instruction given to new converts. Elsewhere, however, the gift of the Spirit was given without mention of laying on of hands, and once even before baptism (Acts 10:44–48), and it is unlikely that in the NT period baptism was always accompanied by laying on of hands.

Following the OT analogies and what may have been contemporary rabbinic practice, laying on of hands was also the rite of ordination for Christian service. After the congregation had chosen the seven helpers they (or possibly the apostles) prayed and laid hands on them (Acts 6:5f.; cf. *SB*, 2, pp. 647–661); similarly, the church at Antioch prayed and laid hands on Barnabas and Saul for mission work (Acts 13:3). In 1 Tim. 5:22 Timothy is urged not to be hasty in laying on of hands; this may refer to the ordination of elders or to the restoration of backsliders to fellowship with an act of blessing. 2 Tim. 1:6 refers to Timothy's own reception of the gift of God for the work of the ministry by the laying on of Paul's hands. Cf. 1 Tim. 4:14, where, however, it is the 'presbytery' which laid hands on him. The simplest and best solution is that Paul and the local elders were associated in the act, but D. Daube thinks that the phrase in question means 'ordination to the rank of presbyter'. Such ordination, carried out under divine guidance

(Acts 13:3; cf. 1 Tim. 1:18), was an outward sign that God gave to the person his gifts for some task of ministry, and by it the church acknowledged the divine commission and enabling and associated itself with the Spirit in commissioning and authorizing the minister for his task.

LAZARUS AND DIVES. In the story, which occurs in Lk. 16:19–31, Dives (Lat. 'rich man') is nowhere named. He failed to take notice of the plight of Lazarus, the beggar at his gate. After death Lazarus went to *Abraham's bosom and Dives to Hades. It was impossible for any contact to be made between them. Nor was there any point in Abraham's sending Lazarus to the brothers of Dives, as they had sufficient in Moses and the prophets to bring them to repentance.

The story teaches the dangers of wealth in blinding men to the need of their fellows and the irrevocable decision of our eternal destiny in our life on earth. It does not suggest that poverty is a virtue and wealth a vice, for Abraham was a rich man. Dives failed to learn the unjust steward's lesson (Lk. 16:9). The reference to resurrection in 16:31 applies more naturally to that of Christ than to that of Lazarus of Bethany. (*GULF.)

LAZARUS. The name Lazarus is an abbreviation of the name Eleazar, which was the fourth most common male name among Palestinian Jews in the period 300 BC–AD 200. So it is not surprising that the name Lazarus is borne by two characters in the NT: one a character in a parable (Lk. 16:19–31), the other a close friend of Jesus and brother of Martha and Mary of Bethany (Jn. 11:1–44; 12:1–2, 9–11). Scholars have often postulated a connection between the two, supposing either that the parable in Luke was one of the sources out of which John created the story of the raising of Lazarus, or that the character in the parable was named after the man Jesus raised from the dead. But since the name was extremely common, such speculation is redundant. The fact that resurrection is mentioned in connection with both characters is an artificial similarity. In the parable, the rich man proposes that Lazarus be sent back to the world of the living to warn his brothers of the fate that awaits them after death. The proposal probably envisages only a temporary visit by Lazarus to this world, and it is rejected. This is quite unlike the raising of Lazarus of Bethany, where the purpose of the miracle is not that Lazarus should provide information from his experience of the world of the dead, but that Jesus should demonstrate his power to give life to the dead.

The Lazarus of the parable in Lk. 16 is the only character in a gospel parable who has a name. The reason may be simply that the demands of story-

telling required him to be named. The point of the narrative is that the conditions of the destitute beggar and the wealthy aristocrat are reversed at death. Therefore they cannot be called 'the poor man' and 'the rich man' after their deaths. The telling of the story is greatly facilitated by naming the poor man. Since Eleazar means 'God has helped', the name may have been chosen for its appropriateness. But the naming of Lazarus may also help to associate the parable with the many stories, popular in the ancient world, about people who died, returned to life and were able to reveal the fate of people after death. Such stories usually named their characters. Jesus' parable plays on the notion familiar from such stories, but subverts it. In order to know that the rich should not live in luxury while the poor starve, a revelation from beyond the grave is not necessary because the scriptures are sufficient.

The raising of Lazarus in Jn. 11 plays a key role in both the theological and the historical sequence of John's narrative of Jesus. It is the greatest of the series of 'signs' which Jesus performs in the first half of the Gospel. John refers to the miracles of Jesus as 'signs', because they are acts of divine power whose purpose is to signify something even greater than the miracles themselves: Jesus' power to communicate eternal life. The raising of Lazarus is the most remarkable of the miracles. John emphasizes this by pointing out that Lazarus had been dead and buried for 4 days. According to popular Jewish belief, the spirit of a dead person did not finally desert the body until 3 days after death. So Lazarus is unambiguously dead. As a miracle of resurrection, this is the 'sign' which indicates most clearly that Jesus' mission is to give eternal life. Although Lazarus returns only to mortal life, Jesus' conversation with Martha (11:21-27) shows that the 'sign' points to the eternal life Jesus gives to believers.

By stressing both Jesus' love for Lazarus and his sisters (11:5, 36) and the fact that Jesus risks his own life by helping them (11:8, 16), the narrative foreshadows the way Jesus is soon to sacrifice his own life in order to give eternal life to those he loves. The remarkable stress on Jesus' emotions (11:33, 35, 38) may indicate not only his participation in the sorrow of the family he loves, but also his awareness that his act of helping them is going to lead to his own death. In the sequel to the raising of Lazarus (11:45-53), it becomes the event which determines the decision of the Jewish authorities to put Jesus to death. It also leads to a plot against the life of Lazarus himself (12:10-11). If Lazarus represents all those whom Jesus loves and for whom he gives his life, then there is perhaps the implication that followers of Jesus also risk their lives for him.

Thus history and theological meaning are closely intertwined in this story, as elsewhere in John. This need not mean that the events are not historical. Many have doubted the historicity of the miracle on the grounds that the other three gospels do not record it. However, this should be put in the context of the contrast between John's strong focus on events in and around Jerusalem and the Synoptic Gospels' focus on Galilee. Only one synoptic healing miracle (the healing of Bartimaeus in Jericho) occurs anywhere near Jerusalem. In this context, it is not surprising that the two synoptic resurrection miracles (Mk. 5:21-43; Lk. 7:11-17) occur in Galilee, while only John records one in the

vicinity of Jerusalem. The synoptics are relatively vague about the historical causes of Jesus' execution, but John offers a detailed and plausible account of the political considerations that led to Jesus' death.

Since Lazarus is said to be one whom Jesus loved (11:3, 5, 36), it has sometimes been proposed that he is the anonymous 'disciple whom Jesus loved' (13:23-26; 19:25-27; 20:2-10; 21:7, 20-24). However, John also says that Jesus loved all his disciples (13:1). If Lazarus were *the* 'disciple Jesus loved', it would be odd that he is named in some passages and anonymous in others.

LEAH (Heb. *lē'ā*, 'wild cow'?). The elder daughter of the Aramaean, Laban. Through his deception she became the wife of Jacob, because of the local custom prohibiting the younger daughter from marrying before the elder (Gn. 29:21-30). She was, not unnaturally, jealous of her more attractive sister Rachel.

As the mother of Reuben, Simeon, Levi, Judah, Issachar, Zebulun and Dinah she was acclaimed with Rachel as one of the builders of the house of Israel (Ru. 4:11). Together they allied with Jacob against Laban, and when they went to meet Esau she was given a place in the middle of the procession.

Her burial took place at Machpelah, in Hebron, presumably before Jacob's descent to Egypt (Gn. 49:31). M.B.

LEAVEN (Heb. *š'ōr*, 'leaven', 'leavened bread' in Dt. 16:4; *hāmēs*, 'anything leavened or fermented'; cf. *maššā*, 'without leaven', Lv. 10:12; Gk. *zymē*, 'leaven'; cf. Lat. *levare*, 'to raise').

In Heb. life leaven came to play an important part, not only in bread-making, but also in law, ritual and religious teaching. It was made originally from fine white bran kneaded with must; from the meal of certain plants such as fitch or vetch; or from barley mixed with water and then allowed to stand till it turned sour. As baking developed, leaven was produced from bread flour kneaded without salt and kept till it passed into a state of fermentation.

a. In bread-making

In bread-making the leaven was probably a piece of dough, retained from a former baking, which had fermented and turned acid. This was then either dissolved in water in the kneading-trough before the flour was added, or was 'hid' in the flour (Mt. 13:33) and kneaded along with it. The *bread thus made was known as 'leavened', as distinct from 'unleavened' bread (Ex. 12:15, etc.). There is no clear trace of the use of other sorts of leaven, although it has often been suggested that the Jews used also the lees of wine as yeast.

b. In law and ritual

The earliest Mosaic legislation (Ex. 23:18; 34:25) prohibited the use of leaven during the *Passover and the 'feast of unleavened bread' (Gk. *azymos*) (Ex. 23:15; Mt. 26:17, etc.). This was to remind the Israelites of their hurried departure from Egypt,

LEAVEN

when without waiting to bake leavened bread they carried dough and kneading-troughs with them, baking as they wandered (Ex. 12:34ff.; Dt. 16:3, etc.), much as the bedouin still do.

The prohibition on leaven, as that on honey (Lv. 2:11), was possibly made because fermentation implied disintegration and corruption, and to the Hebrew anything in a decayed state suggested uncleanness. Rabbinical writers often used leaven as a symbol of evil and of man's hereditary corruption (cf. also Ex. 12:8, 15–20). Plutarch echoes this ancient view when he describes leaven as 'itself the offspring of corruption, and corrupting the mass of dough with which it is mixed'. *fermentum* is used in Persius (*Sat.* 1. 24) for 'corruption'.

Doubtless for this reason it was excluded also from the offerings placed upon the altar of Yahweh, only cakes made from flour without leaven (*maššôl*, Lv. 10:12) being allowed. (*SHOWBREAD.)

Two exceptions to this rule should, however, be noted (Lv. 7:13; cf. Am. 4:5). 'Leavened bread' was an accompaniment of the thank-offering, and leavened loaves were used also in the wave-offering—*i.e.* at the Feast of Pentecost.

c. In religious teaching

The figurative uses of leaven in the NT to a large extent reflect the former view of it as 'corrupt and corrupting'. Jesus utters warnings against the leaven of the Pharisees, Sadducees and Herodians (Mt. 16:6; Mk. 8:15): the Pharisees' hypocrisy and preoccupation with outward show (Mt. 23:14, 16; Lk. 12:1); the Sadducees' scepticism and culpable ignorance (Mt. 22:23, 29); the Herodians' malice and political guile (Mt. 22:16–21; Mk. 3:6).

The two Pauline passages in which the word occurs support this view (1 Cor. 5:6ff.; Gal. 5:9), with the former going on to contrast 'the leaven of malice and evil' with 'the unleavened bread of sincerity and truth', remembering the new significance of the old feast: that 'Christ, our paschal lamb, has been sacrificed'.

No such meaning attaches, however, to Jesus' brief but profoundly significant parable which (following that of the slow-growing mustard seed) compares the kingdom of God with 'leaven which a woman took and hid in three measures of flour, till it was all leavened' (Mt. 13:33; Lk. 13:21), clearly an allusion to 'the hidden, silent, mysterious, but all-pervading and transforming action of the leaven in the . . . flour' (*JSBE*, 3, p. 1862).

LEBANON. A mountain range in Syria. The name is also more loosely applied to the adjoining regions (Jos. 13:5), and is also that of a modern republic.

I. Name

Heb. *ʔbānōn* is derived from the root *lbn*, 'white'. The range owes this name to two factors: the white limestone of the high ridge of Lebanon and especially the glittering snows that cap its peaks for 6 months of the year; cf. Je. 18:14. Lebanon is at-

tested in ancient records from at least the 18th century BC onwards; see on history, below. The Assyrians called it *Lab'an*, then *Labnanu*; the Hittites, *Niblani*; the Egyptians, *rmnn* or *rbrn*; and the Canaanites themselves, *eg.* at Ugarit, *Lbnn* just as in Hebrew.

II. Topography

The S end of the Lebanon range is a direct continuation of the hills of N Galilee, and is divided from them only by the deep E–W gorge of the lower reaches of the Litani river, which enters the sea a few km N of Tyre. The Lebanon range is a ridge almost 160 km long, following the SW to NE trend of the Phoenician coast from behind Sidon N to the E–W valley of the Nahr el-Kebir river (the river Eleutherus of antiquity), which divides Lebanon from the next N–S mountain range extending still farther N (Nuseiri or Ansariya Mts).

This ridge is marked by a series of peaks. From S to N, the principal ones are Gebel Rihan, Tomat and Gebel Niha (from over 1,630 m high to nearly 1,900 m) behind Sidon; Gebel Baruk, Gebel Kuneiyseh and Gebel Sunnin (*c.* 2,200 m, 2,100 m and 2,600 m high respectively) behind Beirut; Qurnet es-Sauda, the highest at about 3,000 m, ESE of Tripoli; N is Qurnet Aruba, *c.* 2,230 m high. These high mountains and the coastal strip have a good rainfall, but in the 'rain-shadow' area Damascus and the N half of the Biqā' plain have less than 25 cm a year and must depend on stream water.

The W flanks of this range sweep right down to the Mediterranean, leaving only a narrow coastal plain for the Canaanite/Phoenician cities, and sometimes reach the sea, roads having had to be cut by man round such headlands. Typical of these is the headland of the Nahr el-Kelb just N of Beirut. The E flanks of Lebanon descend into the Biqā'. This plain, or broad vale, is highest in the vicinity of Baalbek, and it is the 'valley (*biq'at*) of Lebanon' of Jos. 11:17. It descends N with the Orontes and S with the Litani and headwater streams of the Jordan. It is the classical *Coele-syria ('Hollow Syria') and is bounded along its E side by the corresponding mountain range of Anti-Lebanon. This latter range also runs from SW to NE and is broken in two by the plateau from which the Barada river descends E to water the incredibly rich oasis of Damascus. The highest peak is Mt Hermon (over 2,800 m) in the S half of the range. The structure of the whole region is clearly expressed in the diagram of D. Baly, *Geography of the Bible*, 1957, p. 11, fig. 3. For routes connecting the Biqā', Anti-Lebanon and Damascus, see *ibid.*, pp. 110–111.

Mt Hermon in Anti-Lebanon was called Sirion by the Sidonians (*i.e.* Phoenicians), and Senir by the Amorites (Dt. 3:9). Both names are independently attested in antiquity. Senir is mentioned as Saniru by Shalmaneser III of Assyria in 841 BC (*ANET*, p. 280b; *DOTT*, p. 48). Besides a Hittite mention of Sirion as Sariyana about 1320 BC (*ANET*, p. 205a), the use of the name Sirion for Hermon by the Canaanites/Phoenicians is confirmed by the Ugaritic texts of the 14th/13th centuries BC that picture Lebanon and Sirion as yielding timber for Baal's temple (*ANET*, p. 134a, § vi). Hermon is often thought to be the 'many-peaked mountain, mountain of Bashan' in Ps. 68:15; but Baly (*op. cit.*, pp. 194, 220, 222) suggests that it could equally well be the impressive peaks

of the Gebel Druze. (*BASHAN, *HERMON, *SENI, *SIRION.)

The biblical writers sometimes define the promised land in general terms as extending 'from the wilderness and Lebanon and from the River . . . Euphrates to the western sea' (Dt. 1:1-24; Jos. 1:4), i.e. within these S-N and E-W limits. For the Phoenician coastal cities, the Lebanon mountain ridge formed a natural barrier to invaders from inland. The Assyrian king Shamshi-Adad I reached Lab'an in the 18th century BC (*ANET*, p. 274b) and the Hittite emperor Suppiluliuma made it his SW boundary in the 14th century BC (Mt Niblani, *ANET*, p. 318b), without their disturbing the coastal cities to any extent.

III. Resources

Lebanon was above all famous for its former dense forest cover. The ample November and March rainfall and limestone ridges gave rise to many springs and streams flowing down to E and W (Ct. 4:15; Je. 18:14). The coastland, Biqā', and lower mountain-slopes support garden-cultivation, olive-groves, vineyards, fruit-orchards (mulberries, figs, apples, apricots, walnuts) and small cornfields (Rawlinson, *Phoenicia*, p. 17). Higher still rises the forest-cover of myrtles and conifers, culminating in the groves of mighty cedars, of which, alas, only one or two isolated groves survive (because of excessive deforestation), the main one being at Bsharreh SE of Tripoli (picture in L. H. Grollenberg, *Shorter Atlas of the Bible*, 1959, p. 13). The fertility and fruitfulness of the Lebanon region is reflected in scriptures such as Ps. 72:16; Ct. 4:11; Ho. 14:5-7, as well as in early inscriptions (Tuthmosis III, 5th and 7th campaigns, 15th century BC, *ANET*, p. 239a, b). Wild beasts also lurked there (e.g. 2 Ki. 14:9; Ct. 4:8).

The mighty cedars were apt symbols of majesty and strength in biblical imagery; cf. Jdg. 9:15; 1 Ki. 4:33; 2 Ki. 14:9 (= 2 Ch. 25:18); Pss. 92:12; 104:16; Ct. 5:15; Is. 35:2; 60:13. They were also symbols of earthly pride subject to divine wrath; cf. Ps. 29:5-6; Is. 2:13; 10:34; Je. 22:6; Ezk. 31:3-14; Zc. 11:1-2. These forests afforded a refuge (Je. 22:23). But above all, Lebanon's cedars and conifers (firs, cypresses, etc.) furnished the finest building timber in the ancient East, sought by the rulers of Egypt, Mesopotamia and Syria-Palestine alike. The most celebrated of such deliveries of timber were those sent to Solomon by Hiram I of Tyre for the Temple at Jerusalem (1 Ki. 5:6, 9, 14 (= 2 Ch. 2:8, 16); 7:2; 10:17, 21 (= 2 Ch. 9:20)). For the price in foodstuffs paid by Solomon for his timber, etc., see *FOOD (Solomon's palace food-supplies). The firs of Lebanon and Anti-Lebanon (Sirion) provided ships for Tyre (Ezk. 27:5) and sacred barges for Egypt (*ANET*, pp. 25b, 27a; c. 1090 BC), as well as furniture (Ct. 3:9). Wood for the second Jerusalem Temple was also cut in Lebanon (Ezr. 3:7).

IV. History

The history of Lebanon is essentially that of the Phoenician cities on its littoral and the story of the exploitation of its splendid timber. From S to N, the Canaanite/Phoenician cities of Tyre, Ahlab, Zarephath, Sidon, Beirut, Byblos (Gebal, modern Jebail) and Simyra (N of Tripoli) all had the wealth of the Lebanon as their hinterland besides their maritime trade. For their detailed histories (except Beirut and Simyra), see separate articles; see also *CANAAN and *PHOENICIA.

The Lebanon timber-trade goes back to the earliest times. The 4th Dynasty pharaoh Snofru fetched forty shiploads of cedars as early as c. 2600 BC (*ANET*, p. 227a), and various of his successors followed suit in later centuries. Byblos in particular became virtually an Egyptian dependency and its princes thoroughly assimilated to Egyptian culture, even writing their Semitic names in hieroglyphs (cf. *ANET*, p. 229a). In exchange for timber, they received handsome gold jewellery from the 12th Dynasty pharaohs (c. 1900-1800 BC).

When the New Kingdom pharaohs conquered Syria they exacted a regular annual tribute of 'genuine cedar of Lebanon' (*ANET*, p. 240b: Tuthmosis III, c. 1460 BC), and a relief of Sethos I (c. 1300 BC) actually depicts the Syrian princes hewing down the timbers of Lebanon for the pharaoh (*ANEP*, p. 110, fig. 331, or Grollenberg, *Shorter Atlas of the Bible*, p. 14; cf. *ANET*, p. 254, § c, end). In later days (20th Dynasty) the pharaohs had to pay handsomely for such timber (cf. Solomon), as Wenamun, envoy of Rameses XI, found to his cost (*ANET*, p. 27a).

From Canaan itself in the 2nd millennium BC, the Ugaritic epics about Baal and Anath and Aqhat allude to 'Lebanon and its trees; Sirion, its choice cedars' providing timber for the house (i.e. temple) of Baal (*ANET*, p. 134a, § vi; C. H. Gordon, *Ugaritic Literature*, 1949, p. 34), and furnishing material for a bow (*ANET*, p. 151b, § vi; Gordon, *op. cit.*, p. 90).

The Assyrians, too, exacted a tribute of timber from Lebanon for temple-building—so Tiglath-pileser I, c. 1100 BC (*ANET*, p. 275a) and Esarhaddon about 675 BC (*ANET*, p. 291b)—but also often drew upon the Amanus forests farther N (*ANET*, pp. 276b, 278a); cf. here, 2 Ki. 19:23; Is. 37:24. Nebuchadrezzar followed their example (*ANET*, p. 307; *DOTT*, p. 87). Habakkuk (2:17) refers to Babylonian despoliation of Lebanon, which was also foreseen by Isaiah (14:8).

K.A.K.
A.K.C.

LEB-KAMAI. An artificial word (Je. 51:1, RV), formed by the device known as Athbash (explained under *SHESHACH). The Heb. consonants *l-b-q-m-y* really represent *k-š-d-y-m*, i.e. *kašdim*, 'Chaldeans'; cf. rsvmg. The vowels added by the Massoretes give the word a quasi-meaning, 'the heart of those that rise up against me' (cf. rvmg). The verse mentions Babylon openly, so the device is here word-play rather than cipher. NEB with some scholars prefers to emend the text. D.F.P.

LEES (Heb. *š'mārīm*, 'preserves', Is. 25:6; Je. 48:11; Zp. 1:12). The dregs at the bottom of wine-jars. See *WINE AND STRONG DRINK, and an excellent comprehensive article under 'Shemarim' in Kitto, *A Cyclopaedia of Biblical Literature*. The expression is used only figuratively in the OT.

J.D.D.

LEG. I. Heb. *k'rā'ayim* occurs chiefly in ritual passages, e.g. Ex. 12:9; 29:17; Lv. 1:9, 13; 4:11, etc. In

LEG

Lv. 11:21 it describes the bending hind-legs of locusts permitted for food, and provides an illustration of judgment in Am. 3:12.

2. *reḡel* normally means foot but is used of Goliath's legs in 1 Sa. 17:6.

3. *śōq* means the upper leg, and is synonymous with 'thigh'. It is used of men in Dt. 28:35; Ps. 147:10; Pr. 26:7; Ct. 5:15; Is. 47:2; Dn. 2:33. In Jdg. 15:8 it is translated 'hip'. It is also used with reference to animals. In several ritual passages, e.g. Ex. 29:22, 27; Lv. 7:32–34; 8:25–26; Nu. 6:20, etc., it is translated 'thigh' in rsv, while in 1 Sa. 9:24 rsv translates as 'leg'. This was one of the choicest pieces of the animal, normally reserved for priests.

4. *sōbel* is incorrectly translated 'leg' in AV of Is. 47:2 (rsv 'robe').

5. Gk. *skelos* occurs only in Jn. 19:31ff., when the legs of those crucified with Jesus were broken to hasten death. J.G.G.N.

LEGION. Gk. *legeōn* (from Lat. *legio*), used four times in the NT, was the main division of the Roman army and comprised between 4,000 and 6,000 men. It was divided into ten cohorts and these in turn into six centuries each. Sometimes a small cavalry division (*ala*) of about 120 was attached. In the 1st century AD three or four legions were normally on duty in Syria, but Palestine saw very few legionaries until the beginning of the first Jewish rebellion in AD 66; previously the policing had been done by auxiliary cohorts. The word is used in the NT to suggest a very great number, as in Mt. 26:53 (of angels) and in Mk. 5:9, 15; Lk. 8:30 (of the demons possessing the Gerasene demoniac). R.P.G.

LEHABIM. The third son of Mizraim (Gn. 10:13; 1 Ch. 1:11). The name (Heb. *l'hābīm*) is unknown apart from these references, but many scholars would equate it with *lūbīm* of 2 Ch. 12:3, etc. (*LUBIM), which is generally identified as referring to the Libyans. In support of this is the LXX reading *Labieim* and the fact that these people, who figure in the ancient Egypt. inscriptions as *rbw*, are not elsewhere mentioned in Gn. 10, unless *lūdim* (v. 13) is to be read for *lūbīm*, as some scholars hold (*LUD, LUDIM). The matter therefore remains uncertain. T.C.M.

LEHI (Heb. *l'hi*, *lehī*, 'jawbone', Jdg. 15:9, 14, 19; 'Ramath-lehi' in Jdg. 15:17). The place in Judah where Samson slew 1,000 men with the jawbone of an ass. The site is unknown, but see F. F. Bruce, in *NBCR*. p. 271. J.D.D.

LEMUEL. King of *Massa, whose mother's instructions concerning good government and the dangers of sensuality and over-indulgence in wine are recorded in Pr. 31:1–9. Modern scholars have not generally accepted the rabbinic tradition, which says that Lemuel and the names in Pr. 30:1 are attributes of Solomon, an attempt to credit Proverbs entirely to Solomon (cf. L. Ginzberg, *The Legends of the Jews*, 6, 1946, p. 277). See W. McKane, *Proverbs*, 1970, pp. 407–412. D.A.H.

LEVI. The third son of Jacob and Leah (Gn.

29:34). The name (Heb. *lēwī*) is here linked with the root *lāwā* (to join), and a play upon this meaning is found in Nu. 18:2, 4.

The only detail of his life known to us, apart from those events common to all Jacob's sons, is his treacherous attack on Shechem in company with Simeon (Gn. 34:25–26). It should in fairness be noted that the natural meaning of Gn. 34:13, 27 is that the two brothers were acting with the connivance of all. The two were specially concerned because Dinah was their full sister. The two lads could carry out the massacre with the help of their father's slaves.

It has almost universally been taken for granted that Gn. 49:5–7 refers to this incident, but this is most doubtful. There is no validity in the versational variation in the last clause of v. 6 represented by AV, 'they digged down a wall'; the Heb. 'they houghed an ox' (RV) is seemingly contradicted by Gn. 34:28. It is better to take the tenses in v. 6 as 'performs of experience' and render, 'For in their anger they slay men, and in their wantonness they hamstring oxen' (RSV). They are cursed for a life of violence and cruelty in which Shechem was merely an early and outstanding example. Later history was to show that the loyalty of Levi's descendants to Yahweh could turn the curse to a blessing, and their division and scattering in Israel was as his representatives. None the less, the curse seems to have hit Levi very heavily. The total census figure in Nu. 3:22, 28, 34 of males from a month upward is strikingly below all the tribal figures in Nu. 1 of males from 20 years upwards. No indication is given how this happened. Levi seems to have had only three sons, Gershon, Kohath and Merari, all born before he went down with Jacob to Egypt.

Modern critical scholarship has questioned the biblical account of the origin of the tribe of Levi in various ways, but most of them have by now fallen into disfavour. We need mention only the conjecture of Lagarde that the Levites were those Egyptians that 'joined themselves' to the Israelites at the Exodus, and that of Baudissin that they were those 'joined to', i.e. escorting, the ark—in other words priestly servants. Much more important is Hommel's linking of *lēwī* with *lawi'a*, meaning 'priest', in Minaean N Arabian inscriptions. The facts and a valuable discussion will be found in G. B. Gray, *Sacrifice in the Old Testament*, pp. 242–245. He points out that the Minaeans might have borrowed the term from Israel. In fact, an overwhelming majority of scholars agree that Gn. 49:5–7 is proof positive that Levi must have originated as a secular tribe. The mention of Aaron as 'the Levite' in Ex. 4:14 is difficult, perhaps best explained as a later scribal addition.

For Levi the son of Alpheus, one of the Twelve (Mk. 2:13), see *MATTHEW. The name also occurs twice in the genealogy of our Lord (Lk. 3:24, 29).

H.L.E.

LEVIATHAN is a transliteration of a Heb. word which occurs in only five passages in the OT. It is generally thought to be from a root *lāwā*, cf. Arab. *lawā*, 'bend', 'twist'. Its literal meaning would then be 'wreathed', i.e. 'gathering itself in folds'. Some scholars have suggested that it may be a foreign loan-word, possibly of Bab. origin. The context of its use in the OT indicates some form of aquatic monster. In Ps. 104:26 it is clearly of the sea and is generally thought to be the whale, although the

dolphin has been suggested. It is used twice symbolically in Is. 27:1, referring to the empires of Assyria (the 'fleeing' serpent is the swift-flowing Tigris) and Babylonia (the 'twisting' serpent is the Euphrates). In Ps. 74:14 it occurs in reference to Pharaoh and the Exodus in parallel with the Heb. *tannin*, 'sea or river monster'. This word occurs again in Ezk. 29:3-5 symbolically of Pharaoh and the Egyptians, where the description of its scales and jaws makes it clear that the crocodile is intended.

Leviathan is referred to twice in Job. In 3:8 it is generally held to be the dragon which, according to popular ancient mythology, was supposed to cause eclipses by wrapping its coils around the sun. The longest description of Leviathan occupies Jb. 41:1-34, and most scholars agree that here the creature is the crocodile (*ANIMALS). Some have objected that the crocodile would not have been described as unapproachable and that there is no reference in the OT to crocodiles in Palestine. However, the author probably had in mind the crocodile of the Nile, and the description of the creature's invincibility is rhetorical. The only alternative interpretation of any significance regards Leviathan as a mythical monster, perhaps to be identified with the Bab. mother goddess Tiamat (father Apsu) who, in the Creation Epic, even in battle against Marduk 'recites charms and casts spells'. The word is cognate with Ugaritic *ltn*, the seven-headed monster whose description as 'the fleeing serpent, . . . the tortuous serpent' smitten by Baal is so reminiscent of the language of Is. 27:1.

LEVITICUS, BOOK OF. The third book of the Pentateuch is referred to in Jewish usage as *way-yiqra* ('and he called'), this being the word with which it begins in Hebrew. In the Mishnah the book is variously named *tōraḥ kōh'nim*, 'priests' law', *sēper kōh'nim*, 'priests' book', *tōraḥ haqgorb-ānim*, 'law of the offerings'; these names refer to the contents of the book. In the LXX it is called *Leuitikon* or *Leuitikon* (*sc. biblion*), 'the Levitical (book)'. The Latin Vulg. entitles it *Leviticus* (*sc. liber*), which similarly means 'the Levitical (book)'; in some Latin mss the name appears as *Leviticum*. The Peshitta calls it 'the book of the priests'.

It can be objected to the name Leviticus that the book has much less to do with Levites than with priests. But the priests in question are levitical priests (*cf.* Heb. 7:11, 'the Levitical priesthood'). The name Leviticus indicates clearly enough that the book has to do with the cult; this name may indeed have been chosen because 'Levitical' was understood in the sense of 'cultic' or 'ritual'.

I. Outline of contents

Leviticus consists mainly of laws. The historical framework in which these laws are set is Israel's residence at Sinai. The book may be divided as follows:

- a. Laws concerning offerings (1:1-7:38).
- b. The tabernacle service put into operation (8:1-10:20).
- c. Laws concerning purity and impurity (11:1-15:33).

- d. The great Day of Atonement (16:1-34).
- e. Various laws (17:1-25:55).
- f. Promises and warnings (26:1-46).
- g. Appendix: valuation and redemption (27:1-34).

As may be seen from this outline, the contents consist largely of ritual law. At the same time it must be noted that the intention is to continue the narrative of Israel's experiences at Sinai. This is evident from the first words of the book, and from the repeated formula 'And the Lord said to Moses' (1:1; 4:1; 5:14, *et passim*), with which we should compare 'And the Lord spoke to Aaron' (10:8) and 'And the Lord said to Moses and Aaron' (11:1; *cf.* 13:1, *etc.*). The historical setting must not be forgotten. As part of the complete Pentateuch, the book occupies its own place in the Pentateuchal narrative.

At Mt Sinai the nation of Israel is equipped for its task, a task stated in the words 'And you shall be to me a kingdom of priests and a holy nation' (Ex. 19:6). Israel had already had committed to it the Decalogue, the Book of the Covenant and the regulations with regard to the tabernacle. This dwelling-place for the Lord had already been set up in the midst of the camp (Ex. 40). It is possible that the laws concerning the offerings (Lv. 1-7) once existed as a separate unit (*cf.* 7:35-38). But they fit very well into the Pentateuchal context in which they now appear. The history of sacrificial offerings, about which the book of Leviticus provides such important information, and in which Christians ought to take a special interest because we know how perfectly their inmost significance was fulfilled by the obedience of Jesus Christ, begins as early in the Pentateuch as Gn. 4:3-5. There are also other passages in the Pentateuch before the book of Leviticus in which sacrifices and offerings are mentioned. But in Leviticus the Lord regulates the whole sacrificial service and institutes a special form of it as a means of atonement for Israel. Lv. 17:11 states the reason for the ban upon eating blood ('the life of the flesh is in the blood'); the ban has already been imposed in 3:17 and 7:26f., but in neither of these places is the reason for it explicitly stated. It is in the light of 17:11 that the shedding of blood and sprinkling with blood prescribed in chs. 1-7 must be viewed. This is an indication of the unity of the book.

Another indication of its unity is the fact that 17:11 prepares us for the transition to the regulations regarding impurity, which come up for detailed treatment in chs. 11-15. Similarly, 10:10 looks forward to the transition to the detailed distinctions between clean and unclean which we have in ch. 11. Viewed in the light of the whole book of Leviticus, the laws concerning purity and impurity point to the necessity laid upon Israel to keep sin at a distance. It is sin which brings about separation between the Lord and his people, so that they have to approach him through the mediation of sacrifice (chs. 1-7) and priesthood (chs. 8-10). Lv. 16:1 follows close on 15:31 and refers back to 10:1f. In 20:25 we have a clear allusion to the law concerning clean and unclean animals in ch. 11; and this verse provides a closer link between the commandments of chs. 18-20 and those of chs. 11-15. This does not support the view of those who accept the existence at one time of a separate Holiness Code, preserved for us in chs. 17-26. In 21:1-22:16 expressions like those of 11:44f.; 19:2; 20:7 are repeated with reference to the priests (*e.g.* 21:8,

LEVITICUS, BOOK OF

'I the Lord, who sanctify you, am holy'). Lv. 25:1 states that the words which follow were revealed to Moses on Mt Sinai, just as is stated of the laws summarized in 7:37f.

In the form in which we now possess Leviticus, it forms a well-knit and coherent whole. The historical portion is larger than one might think at first sight (cf. 10:1-7; 24:10-23; chs. 8-10 and the formula 'And the Lord said to Moses').

Attention is also paid to marriage and chastity, the sanctification of daily life, and Israel's attitude to the commandments of her God (cf. 18:3-5, 30; 19:1-3, 18, 37; 20:26; 22:31-33; 26, etc.).

In view of the character of its contents throughout, we can call Leviticus 'the book of the holiness of Yahweh', whose fundamental requirement is 'You shall be holy to me: for I the Lord am holy' (20:26).

II. Authorship and composition

The author of Leviticus is not named in the book. Yahweh does indeed speak repeatedly to Moses, to Moses and Aaron, or to Aaron; but no command is given to make a written record of what he says. We owe the contents of the book to divine revelation given at Sinai in the time of Moses (cf. 7:37f.; 26:46; 27:34); but that does not settle the question of the authorship of Leviticus. Moses is not named as the author of any single part of the book, as he is named with regard to certain sections of Exodus (cf. Ex. 17:14; 24:4; 34:27). It may be that a later writer set in order the Mosaic material of which Leviticus consists. It may equally well be that Moses himself set it in order in the form which has been handed down to us.

The question of authorship is bound up with the whole problem of the composition of the Pentateuch. Leviticus is commonly assigned to P (the Priestly Code). The objections to this documentary hypothesis in general are equally valid as regards their application to Leviticus. The name 'Holiness Code', given to Lv. 17-26, is due to August Klostermann, who in 1877 wrote for the *Zeitschrift für lutherische Theologie* an article entitled 'Ezekiel und das Heiligkeitgesetz' ('Ezekiel and the Law of Holiness'), which was reprinted in his book *Der Pentateuch: Beiträge zu seinem Verständnis und seiner Entstehungsgeschichte* (*The Pentateuch: Contributions to its understanding and the history of its composition*), 1893, pp. 368-418. The name 'Holiness Code' came into wide vogue; many found it especially apt because of the explicit and repeated emphasis on holiness and sanctification in 19:2; 20:7-8, 26; 21:6-8, 15, 23; 22:9, 16, 32. It is not possible to debate the whole question here; reference should be made to the case for the separate existence of H, based upon distinctive features of style and language, as presented, e.g., in S. R. Driver, *LOT*, pp. 47ff. A close relationship is pointed out between H and Ezekiel; indeed, some have seen in Ezekiel himself the author or redactor of H, while others take the view that Ezekiel was acquainted with H. But the majority opinion is that H is earlier than Ezekiel.

None of the arguments for the view that Lv. 17-26 should be regarded as a separate law-code seems to be conclusive. We must not forget that here as elsewhere the investigator of the OT is greatly influenced by the attitude which he adopts to Holy Scripture as the Word of God. For example, the argument that Lv. 26 must be dated in the time of the Exile, because this exile is foretold in that chap-

ter, is far from doing justice to divine revelation. The absence of a special superscription at the head of Lv. 17 is best explained by the view that here the book of Leviticus continues quite ordinarily.

III. Significance

Leviticus is a book of great significance from many points of view.

First of all, it provides us with a background to all the other books of the Bible. If we wish to understand references to sacrificial offerings and ceremonies of purification, or institutions such as the sabbatical year or the year of jubilee, it is this book that we must consult.

In the second place, it is of interest from a general religious viewpoint. Thanks especially to archaeological excavation, we can compare the institutions dealt with in Leviticus with those of other people, e.g. the Phoenicians, Canaanites, Egyptians, Assyrians, Babylonians and Hittites.

In the third place, orthodox Jews have to this day found their binding regulations—e.g. with regard to food—in this book. Hoffmann, a Jewish exegete of Leviticus, points out that other confessions which draw upon the OT chiefly select Genesis as the subject of their study, while Jews pay special attention to Leviticus.

Fourthly, Leviticus proclaims to us who are Christians the way in which the God of Israel combats sin in Israel. He combats it by means of his institutions of sacrifice and purification—social sin by means of the sabbatical year and year of jubilee, sexual sins by means of the laws of chastity—and also by means of his promises and warnings. And in this combating of sin the book of Leviticus presents to us Christ as the means of atonement, the means of purification, the great Priest, Prophet and Teacher, the King who rules us through his ordinances. That is the abiding significance of Leviticus. It is the book of sanctification, of the consecration of life (the burnt-offering stands in the forefront of the book), the book of the avoidance and atonement of sin, the combating and removal of sin among the people of the Lord. The Day of Atonement occupies a central place in it (Lv. 16); the ceremony of the two goats prescribed for that day reminds us that 'as far as the east is from the west, so far does he remove our transgressions from us' (Ps. 103:12). (* LAW.)

LIBERTY. The biblical idea of liberty (freedom) has as its background the thought of imprisonment or slavery. Rulers would imprison those whom they regarded as wrongdoers (Gn. 39:20); a conquered nation might be enslaved by its conqueror, or a prisoner of war by his captor, or an

individual might, like Joseph, be sold into slavery. When the Bible speaks of liberty, a prior bondage or incarceration is always implied. Liberty means the happy state of having been released from servitude for a life of enjoyment and satisfaction that was not possible before. The idea of liberty appears in Scripture in its ordinary secular application (e.g. Ps. 105:20; Acts 26:32); but it also receives a significant theological development. This sprang from Israel's realization that such freedom from subjugation by foreigners as she enjoyed was God's gift to her. In the NT liberty becomes an important theological concept for describing salvation.

I. Israel's liberty

At the Exodus God set Israel free from bondage in Egypt, in order that henceforth the nation might serve him as his covenant people (Ex. 19:3ff.; 20:1ff.; Lv. 25:55; cf. Is. 43:21). He brought them into the 'land flowing with milk and honey' (Ex. 3:8; cf. Nu. 14:7ff.; Dt. 8:7ff.), settled them there, and undertook to maintain them in political independence and economic prosperity as long as they eschewed idolatry and kept his laws (Dt. 28:1-14). This meant that Israel's freedom would not depend upon her own efforts in either the military or the political realm, but on the quality of her obedience to God. Her freedom was a supernatural blessing, Yahweh's gracious gift to his own covenant people; unmerited and, apart from him, unattainable in the first instance, and now maintained only through his continued favour. Disobedience, whether in the form of religious impiety or social injustice, would result in the loss of freedom. God would judge his people by national disaster and enslavement (Dt. 28:25, 47ff.; cf. Jdg. 2:14ff.; 3:7ff., 12ff.; 4:1ff.; 6:1ff.); he would raise up hostile powers against them, and would ultimately cause them to be deported into a land where no tokens of his favour could be expected (Dt. 28:64ff.; Am. 5; 2 Ki. 17:6-23; cf. Ps. 137:1-4).

The structure of the theological idea of liberty is here fully evident. Liberty, as the OT conceives it, means, on the one hand, deliverance from created forces that would keep men from serving and enjoying their Creator, and, on the other hand, the positive happiness of living in fellowship with God under his covenant in the place where he is pleased to manifest himself and to bless. Liberty is *from* slavery to powers that oppose God *for* the fulfilment of his claims upon one's life. Liberty is not man's own achievement, but a free gift of grace, something which apart from God's action man does not possess at all. In its continuance, liberty is a covenant blessing, something which God has promised to maintain as long as his people are faithful. Liberty does not mean independence of God; it is precisely in God's service that man finds his perfect freedom. Man can enjoy release from bondage to the created only through bondage to his Creator. Thus, the way that God sets men free from their captors and enemies is to make them his own slaves. He frees them by bringing them to himself (Ex. 19:4).

The Isaianic prophecies of the release from captivity and the restoration of Jerusalem gave added religious content to the idea of liberty by stressing that these events would herald a new and unprecedented experience of joyful and satisfying fellowship with Israel's gracious God (Is. 35:3-10; 43:14-44:5; 45:14-17; 49:8-50:3; 51:17-52:12; 54:6; 1:1ff., etc.; cf. Ezk. 36:16-36; 37:15-28).

Since all members of the liberated nation were, as such, God's servants (Lv. 25:42, 55), Israelites who through pressure of poverty sold themselves into household service were not to be treated like foreign slaves, as mere property, in their master's hereditary possession (Lv. 25:44ff.). Every 7th year they were to be released (unless they had voluntarily chosen to make their service permanent) in memory of God's release of Israel from Egyptian bondage (Dt. 15:12ff.). Every 50th year, in addition to a release of Israelite servants, alienated land was also to revert to its hereditary owner (Lv. 25:10). Jeremiah denounced the people because, having thus 'proclaimed liberty' for Hebrew servants, they went back on it (Je. 34:8-17).

II. The Christian's liberty

The full development of the idea of liberty appears in the Gospels and Pauline Epistles, where the enemies from whom God through Christ liberates his people are revealed to be sin, Satan, the law and death.

Christ's public ministry was one of liberation. He opened it by announcing himself as the fulfilment of Is. 61:1: '... he has anointed me ... to proclaim release to the captives' (Lk. 4:16ff.). Ignoring Zealot hankerings after a national liberation from Rome, Christ declared that he had come to set Israelites free from the state of slavery to sin and Satan in which he found them (Jn. 8:34-36, 41-44). He had come, he said, to overthrow 'the prince of this world', the 'strong man', and to release his prisoners (Jn. 12:31f.; Mk. 3:27; Lk. 10:17f.). Exorcisms (Mk. 3:22ff.) and healings (Lk. 13:16) were part of this work of dispossession. Christ appealed to these (Lk. 11:20; cf. Mt. 12:28) as proof positive of the coming among men of the *kingdom of God (*i.e.* the promised eschatological state in which men effectively receive God's forgiveness and salvation and are effectively made subject to his will).

Paul makes much of the thought that Christ liberates believers, here and now, from destructive influences to which they were previously in bondage: from sin, the tyrannical overlord whose wages for services rendered is death (Rom. 6:18-23); from the law as a system of salvation, which stirred sin up and gave it its strength (Gal. 4:21ff.; 5:1; Rom. 6:14; 7:5-13; 8:2; 1 Cor. 15:56); from the demonic 'power of darkness' (Col. 1:13); from polytheistic superstition (1 Cor. 10:29; Gal. 4:8); and from the burden of Jewish ceremonialism (Gal. 2:4). To all this, Paul affirms, freedom from the remaining partial bondages to indwelling sin (Rom. 7:14, 23), and from physical corruption and death, will in due course be added (Rom. 8:18-21).

This freedom, in all its aspects, is the gift of Christ, who by death bought his people out of bondage (1 Cor. 6:20; 7:22f.). (There may be an allusion here to the legal fiction by which Greek deities 'bought' slaves for their manumission.) Present freedom from the law, sin and death is conveyed to believers by the Spirit, who unites them to Christ through faith (Rom. 8:2; 2 Cor. 3:17). Liberation brings with it adoption (Gal. 4:5); those set free from guilt become sons of God, and receive the Spirit of Christ as a Spirit of adoption, assuring them that they are in truth God's sons and heirs (Gal. 4:6f.; Rom. 8:15f.).

Man's response to the divine gift of liberty (*eleutheria*), and indeed the very means of his receiving it, is a free acceptance of bondservice (*douleia*) to

LIBERTY

God (Rom. 6:17-22), to Christ (1 Cor. 7:22), to righteousness (Rom. 6:18), and to all men for the sake of the gospel (1 Cor. 9:19-23) and of the saviour (2 Cor. 4:5). Christian liberty is neither an abolishing of responsibility nor a sanctioning of licence. The Christian is no longer 'under law' (Rom. 6:14) for salvation, but he is not therefore 'without law toward God' (1 Cor. 9:21). The divine law, as interpreted and exemplified by Christ himself, remains a standard expressing Christ's will for his own freed bondservants (1 Cor. 7:22). Christians are thus 'under the law of Christ' (1 Cor. 9:21). The 'law of Christ' (Gal. 6:2)—James' 'law of liberty' (Jas. 1:25; 2:12)—is the law of love (Gal. 5:13f.; cf. Mk. 12:28ff.; Jn. 13:34), the principle of voluntary and unstinting self-sacrifice for the good of men (1 Cor. 9:1-23; 10:23-33) and the glory of God (1 Cor. 10:31). This life of love is the response of gratitude which the liberating gospel both requires and evokes. Christian liberty is precisely freedom for love and service to God and men, and it is therefore abused when it is made an excuse for unloving licence (Gal. 5:13; cf. 1 Pet. 2:16; 2 Pet. 2:19), or irresponsible inconsiderateness (1 Cor. 8:9-12).

Paul wrote the Epistle to the *Galatians to counter the threat to Christian liberty which Judaizing theology presented. The basic issue, as he saw it, was the sufficiency of Christ for salvation apart from works of law. The Judaizers held that Gentiles who had put faith in Christ still needed circumcision for salvation. Paul argued that if this were so, then by parity of reasoning they would need to keep the whole Mosaic law for salvation; but this would be seeking justification by the law, and such a quest would mean a falling away from grace and from Christ (Gal. 5:2-4). The Christian, Jew or Gentile, Paul maintained, is free from all need to perform works of law for acceptance, for as a believer in Christ he is fully accepted already (Gal. 3:28f.), as the gift of the Spirit to him proves (Gal. 3:2f., 14; 4:6; 5:18). There is no reason why a Gentile convert should burden himself with Mosaic ceremonies (circumcision, the festal calendar [Gal. 4:10], etc.), which in any case belonged to the pre-Christian era. The redeeming work of Christ has freed him completely from the need to seek salvation through law (Gal. 3:13; 4:5; 5:1). His task now is, first, to guard his God-given liberty against any who would tell him that faith in Christ alone is not enough to save him (Gal. 5:1) and, second, to put his liberty to the best use by letting the Spirit lead him into responsible fulfilment of the law of love (Gal. 5:13ff.).

Paul makes a similar point elsewhere. The Christian is free from the need to work for his salvation, and he is bound neither by Jewish ceremonialism nor by pagan superstition and taboos. There is a large realm of things indifferent in which 'all things are lawful for me' (1 Cor. 6:12; 10:23). In this realm the Christian must use his liberty responsibly, with an eye to what is expedient and edifying and with a tender regard for the weaker brother's conscience (cf. 1 Cor. 8-10; Rom. 14:1-15:7).

III. 'Free will'

The historic debate as to whether fallen men have 'free will' has only an indirect connection with the biblical concept of freedom. Distinctions must be made to indicate the issues involved.

1. If the phrase 'free will' be taken morally and psychologically, as meaning the power of un-

constrained, spontaneous, voluntary, and therefore responsible, choice, the Bible everywhere assumes that all men, as such, possess it, unregenerate and regenerate alike.

2. If the phrase be taken metaphysically, as implying that men's future actions are indeterminate and therefore in principle unpredictable, the Bible seems neither to assert nor to deny an indeterminacy of future action relative to the agent's own moral or physical constitution, but it does seem to imply that no future event is indeterminate relative to God, for he foreknows and in some sense fore-ordains all things. (*PROVIDENCE. *PREDESTINATION.)

3. If the phrase be taken theologically, as denoting a natural ability on the part of unregenerate man to perform acts that are good without qualification in God's sight, or to respond to the gospel invitation, such passages as Rom. 8:5-8; Eph. 2:1-10; Jn. 6:44 seem to indicate that no man is free for obedience and faith till he is freed from sin's dominion by preventive grace. All his voluntary choices are in one way or another acts of serving *sin till grace breaks sin's power and moves him to obey the gospel. (Cf. Rom. 6:17-22; *REGENERATION.)

LIBNAH (Heb. *libnāh*). I. An important town in the Shephelah, taken by Joshua and assigned to the priests (Jos. 10:29f.; 15:42; 21:13); revolted from Jehoram (2 Ki. 8:22); besieged by Sennacherib (2 Ki. 19:8, 35); the birthplace of Josiah's wife Hamtutal. The identification by Bliss and Macalister with Tell es-Safi (the Crusader Blanchegarde), on a limestone outlier 7 km W of Azekah, is now widely contested; Sennacherib would hardly have passed it to attack Lachish first, and Jos. 15:42 suggests a site further SE. Alternatives are scarce. Tell Bornat (W. F. Albright, *BASOR* 15, p. 19) is too small; Tell Judeideh (Tel Goded), N of the Beit Guvrin basin, is attractive but unproved. See G. E. Wright, *BA* 34, 1971, pp. 81-85; A. F. Rainey, *Tel Aviv* 7, 1980, pp. 195, 198.

2. An unidentified camping-place in the desert (Nu. 33:20; perhaps also Dt. 1:1). J.P.U.L.

LIBNI. A son of Gershon mentioned in Ex. 6:17; Nu. 3:18; 1 Ch. 6:17, 20. In 1 Ch. 6:29 Libni is listed as a son of Merari. The patronymic 'Libnites' is mentioned in Nu. 3:21; 26:58. Libni is 'Ladan' in 1 Ch. 23:7f.; 26:21. R.A.H.G.

LIBYA (LUBIM, AV). First occurs as *Rbw* (= Libu) in Egyp. texts of 13th-12th centuries BC, as a hostile Libyan tribe (Sir A. H. Gardiner, *Ancient Egyptian Onomastica*, 1, 1947, pp. 121*-122*). Libu as *libim* became a Heb. term for Libya, Libyans, and as *libys* became the general Gk. term 'Libyan' for the land and people W of Egypt. Thus the Heb. and Gk. terms cover other Libyans besides the tribe *Rbw*. During the 12th-8th centuries BC, Libyans entered Egypt as raiders, settlers or soldiers in Egypt's armies. Hence the prominence of Lubim in the forces of *Shishak (2 Ch. 12:3); of *Zerah (2 Ch. 14:9 with 16:8); and among the troops of the Ethiopian pharaohs that failed to

protect No-Amon (Thebes) from Assy. devastation (Na. 3:9). *Lubbim*, Dn. 11:43, may be the same word. (*LEHABIM; *PUT.) K.A.K.

LIE, LYING (Heb. *šeger*, 'falsehood', 'deception'; *kāzāb*, 'lie' or 'deceptive' thing'; Gk. *pseudos* and cognates). Essentially, a lie is a statement of what is known to be false with intent to deceive (Jdg. 16:10, 13). Biblical writers severely condemn aggravated forms of lying, e.g. those which perpetrate a fraud (Lv. 6:2-3) or secure wrongful condemnation (Dt. 19:15), and the testimony of false prophets (Je. 14:14). Lies may be expressed in words (Pr. 6:19), a way of life (Ps. 62:9), error (2 Thes. 2:11), or a false form of religion (Rom. 1:25). The prophets regarded lying as a specific expression of the principle of evil (Ho. 12:1). Lying is prohibited as repugnant to the moral conscience of Israel (Pr. 19:22), because of its anti-social effects (Pr. 26:28), and, above all, as incompatible with the divine nature (Nu. 23:19). Jesus declares that Satan is the father of lies (Jn. 8:44). All falsehood is forbidden in the Christian community (Col. 3:9).

Lying is characterized in various ways, e.g. Cain's evasive answer (Gn. 4:9), Jacob's deliberate falsehood (Gn. 27:19), Gehazi's misrepresentation of his master (2 Ki. 5:21-27), and the deception practised by Ananias and Sapphira (Acts 5:1-10). Lying is the sin of Antichrist (1 Jn. 2:22) and all habitual liars forfeit eternal salvation (Rev. 21:27).

1 Sa. 16:2 does not justify the expedient lie. God merely suggested an ostensible reason for Samuel's visit to Bethlehem, and the prophet was under no obligation to divulge his real purpose. Again, 1 Ki. 22:20-23 implies that God permitted a subterfuge that his righteous judgment should be enacted upon Ahab. In such passages as Gn. 12:10-20 it is clear that deception is not condoned nor recorded as an example to follow. (*TRUTH.)

LIFE.

I. In the Old Testament

a. Terms and concepts

I. Inherent in 'life' (Heb. *ḥayyim*) is the idea of activity. Life is 'that which moves' (Gn. 7:21f.; Ps. 69:34; cf. Acts 17:28) in contrast to the relaxed, dormant or inert state of non-life (cf. Rom. 7:8; Jas. 2:17, 20). Running water is 'living' (Gn. 26:19), and rapid labour in childbirth indicates the mother's 'aliveness' (Ex. 1:19). The word's frequently plural form emphasizes the intensity of the concept. Life is associated with light, gladness, fullness, order and active being (Ps. 27:1; Jb. 33:25ff.; Pr. 3:16; Gn. 1) and contrasted with the darkness, sorrow, emptiness, chaos and silence which are characteristic of death and inanimate being (Ec. 11:8; Ps. 115:17).

2. Soul (Heb. *nepeš*), as 'being' or 'self', is common to man and beast, living and dead (Lv. 21:11; Jb. 12:10; Rev. 8:9; 16:3). But its meaningful state is 'living soul' (*nepeš ḥayyā*, Gn. 2:7) and, therefore, may simply mean 'life'. To die is to breathe out one's soul, and to revive is to have it return (Je. 15:9; 1 Ki. 17:21; cf. Acts 20:10); or,

seated in the blood, it is 'poured out' at death (Lv. 17:11; La. 2:12; Is. 53:12). While the soul may continue in split blood (Rev. 6:9; Gn. 4:10) or, corporately, in one's name or descendants, 'life' and 'self' are so closely parallel that to lose one's life means virtually to lose one's self (Pedersen, pp. 151ff.; Jb. 2:4; Ezk. 18).

3. Similarly, spirit (Heb. *ruah*) or breath (*n'sāmā*), as the principle which distinguishes the living from the dead, often may be rendered life (1 Sa. 30:12; Jb. 27:3f.). To die is to lose one's breath or spirit (Jb. 27:3; Ps. 104:29f.; cf. Mt. 27:50); to revive is to 'have it come again' (cf. Lk. 8:55; Rev. 11:11; 13:15).

4. Life is given to man as a psychosomatic unity in which 'our own distinctions between physical, intellectual and spiritual life do not exist' (von Allmen, pp. 231f.); and the OT view of man may be described as 'animated body' (Robinson, p. 27). Thus soul may be paralleled with flesh (Ps. 63:1; cf. Mt. 6:25; Acts 2:31), life (Jb. 33:28) or spirit (Ps. 77:2f.; cf. Lk. 1:46f.), and all terms viewed as the self or 'I'. It is the 'I' which lives—and which dies (cf. Gn. 7:21; Ezk. 18:4).

b. Life unto death

1. What will man give for his life (Jb. 2:4; cf. Mk. 8:37)? Man is not only a unified being, he is a being threatened by death—mortal (Jb. 4:17), barred from the tree of life (Gn. 3:24), existing like cut grass or a morning's dew (Jb. 7:9; Pss. 39:4f.; 90:5f.; cf. 1 Pet. 1:24; Jas. 4:14). Death is at work in the midst of life, and life, therefore, is a battle against the dissolution of death, an ebb and flow, possessed in greater or less degree. The tired slave rests and is 'ensouled' (Ex. 23:12). Deliverance from sickness or an enemy or sorrow is deliverance from death, and to be sick or troubled is to be in Sheol (Nu. 21:8f.; Jos. 5:8; Ps. 30:2f.; cf. Pss. 71:20; 86:13). It is not that these are equated with death, but that anything threatening life is viewed as an invasion of death upon the soul. Thus, Adam and Eve 'died' when they disobeyed (Gn. 2:17); Abimelech, incurring God's displeasure, is a 'dead man' (Gn. 20:3); and Jonah (2:2) in the fish is in Sheol. Standing under threat of death, one may be viewed from that perspective (cf. Lk. 9:60).

2. Likewise long life as the gift of Wisdom or God (Pr. 3:16; Dt. 5:16) has implicit in it the idea of the good life. 'I have set before you . . . life and good, death and evil' (Dt. 30:15). 'Long live the king' (1 Sa. 10:24) does not mean merely length of life but a reign of peace, prosperity and victory. The death of the righteous at an old *age and full of years is a blessing in that life has been lived to the full and a progeny blessed by God carries on the name (Gn. 25:8; Nu. 23:10).

3. Nevertheless, the present life is life unto death. 'What man can live and never see death? Who can deliver his soul from the power of Sheol?' (Ps. 89:48). Man is a thing moulded of clay; his breath goes back to God, man dies and returns to dust (Gn. 3:19; Jb. 10:9; Ps. 144:4; Ec. 12:7). One may continue to 'live' in his name or progeny (Ps. 72:17; Is. 66:22), and in a very real way these are viewed as a corporate extension of one's own soul (Pedersen, pp. 254ff.). But personal life ends and personal being belongs no more to the 'land of the living' (cf. Ps. 52:5; Je. 11:19). To live is to speak of *my* life; in death a man's plans perish and he returns to the common earth, gathered to and sleeping with the fathers (Gn. 25:8; 37:35; Dt. 31:16). Man's end

is 'like water spilt on the ground, which cannot be gathered up again' (2 Sa. 14:14).

4. Death is not merely the momentary event of dying; it is the death state, *i.e.* Sheol. Sheol is 'in the dust' (Jb. 17:13ff.) and is probably best understood generically as 'the grave'. As a synonym for death it is the common goal and final leveller of all life: man and beast, righteous and wicked, wise and foolish (Jb. 3:13ff.; Ps. 49; Ec. 2:14; 3:19). It is a state of sleep, rest, darkness, silence, without thought or memory (Jb. 3:16f.; 17:13ff.; Ps. 6:5; Ec. 9:5, 10) in which one does not praise God and from which one does not return (2 Sa. 12:23; Jb. 7:9; Ps. 30:9; Is. 38:18). It is like an insatiable monster and its prospect, except in the most desperate straits, is one of foreboding (Hab. 2:5; *cf.* 2 Sa. 22:5f.).

A few times Sheol is pictured as a massive grave in which, amid the maggots, an enfeebled ghost-life continues (Ezk. 31-32; Is. 14:4ff.) and from which one's 'shade' may be called up (1 Sa. 28:8ff., *AV*). While the first two passages are obviously poetic symbolism, the medium of Endor séance reflects a common—though forbidden—practice. It is not representative of the general OT view, which sees life and death in utter opposition (*contra* Johnson, p. 89).

Although not strictly non-being, Sheol is the end of meaningful existence and is 'virtual annihilation' (Johnson, p. 93). 'The paths of glory lead but to the grave', and this conclusion to human life gives rise to the Preacher's refrain: 'Vanity of vanities, all is vanity' (Ec. 12:8; Ps. 89:47). To this victory of death the OT does offer a hopeful answer; it lies not in the nature of man but in the power of the living God.

c. The living God

I. The common formula for an oath, 'as the Lord lives' (*cf.* Nu. 14:21, 28; 1 Sa. 14:39), stresses that God is the God who speaks and acts because he is 'the living God'. This quality distinguishes Yahweh from all idols and attests not only his own vitality but his creative power and providential activity (Jos. 3:10; Je. 10:10; Is. 46:5ff.). He is the source and upholder of all life, the spring of living water (Je. 17:13; Ps. 36:9f.), who gives man breath and who, delivering from Sheol, leads one in the path of life (Gn. 2:7; Ps. 16:11; Pr. 5:6). God is the God who makes alive and who kills (Gn. 6:17; Dt. 32:39; Jdg. 13:3, 23; 1 Sa. 2:6; 2 Ki. 5:7).

2. Such is man's dependence upon God for life that man's breath or spirit may be called God's breath and God's spirit (Jb. 27:3f.; 33:4; Gn. 6:3; Is. 42:5). God gave manna in the wilderness that Israel might learn that even physical life is maintained by 'everything that proceeds out of the mouth of the Lord' (Dt. 8:3; *cf.* Mt. 4:4; Lk. 12:15, 20). God imparts breath and man lives (Gn. 2:7; *cf.* Rev. 11:11); if God 'should take back his spirit to himself, and gather to himself his breath, all flesh would perish together, and man would turn to dust' (Jb. 34:14f.; *cf.* Ec. 12:7; Pss. 90:3; 104:29f.). Man's life then is loaned to him at God's good pleasure, and true life consists not in the transient, even though prosperous, life of the wicked, but in having God as 'my portion for ever' (Ps. 73:17, 26). One's life is assured if he is 'bound in the bundle of the living in the care of the Lord' (1 Sa. 25:29).

3. Because life is 'life in relatedness to God', life and death are moral alternatives. The fate of the individual and nation, whether blessing and life or misfortune and death, hangs upon one's right-

eousness or sinfulness, obedience or disobedience to Yahweh (Dt. 30:15ff.; Jdg. 2:18ff.; Ezk. 18). Universal death is viewed (when viewed at all) as a judgment upon sin; because of disobedience man is barred from the 'tree of life' (Gn. 3:17ff.; *cf.* Jb. 14:1ff., 16f.; contrast Ps. 89:47). Although not always apparent, righteousness tends to life and evil to death (*cf.* Ps. 73:17; Pr. 11:19); righteousness is a 'way of life', and by it one is delivered from the threats of Sheol (Am. 5:4, 14; Pr. 6:23; Hab. 2:4).

4. God has no relationship to Sheol or to those in it. But this must not be confused with the mistaken notion that God has no power in Sheol. It is basic to the OT faith—as expressed in all strata of the literature—that Yahweh, the living God, reigns over death and/or Sheol. To heal (2 Ki. 5:7, 14), to raise the dead (1 Ki. 17:20ff.; 2 Ki. 4:16, 33ff.), to deliver Israel from national death (Jdg. 7:2ff.; Ho. 13:14; Ezk. 37), to cause life to bud in a barren woman (Gn. 17:15ff.; Jdg. 13:2f.; 2 Sa. 1:19f.; 2:6)—all these reveal God's power over Sheol. For the maladies are themselves invasions of death into which God interjects resurrection power.

While God's power to deliver individuals from Sheol is implicit throughout the OT, his purpose to do so comes to explicit expression in comparatively few passages (*cf.* Is. 25:8; 26:19; Jb. 19:26; Pss. 16:8-11; 49:14f.; Dn. 12:2). When it does appear, however, the conviction is full-grown and seemingly is not an innovation (W. O. E. Oesterley, *The Jews and Judaism during the Greek Period*, 1941, p. 183). The concept is related to and perhaps an inference from: (i) God's expressed relationship to the righteous dead, and (ii) God's redemption of Israel understood within the framework of a 'corporate personality' in which the reality of the individual is preserved in the reality of the whole. In a later day Jesus Christ, as well as other rabbis, urged the former as a key to the proper understanding of the OT at this point (Mt. 22:31f.; Lk. 20:37f.; *cf.* SB, I, pp. 893ff.): (i) God says to Moses, 'I am the God of Abraham.' (ii) Abraham is in Sheol. (iii) God is the God of the living and has no relationship with Sheol. (iv) Therefore, it is to be inferred that God will resurrect Abraham from Sheol.

5. Resurrection-life is pictured (as in intertestamental Judaism) in materialistic terms. It is restored life in which 'life', *i.e.* prosperity, peace and fullness, is multiplied and Sheol threats are removed (Is. 27; *cf.* Rev. 21-22). Its realization (in Is. 26:19; Dn. 12:2) belongs to the coming Messianic deliverance and, as creation life, it is solely the result of God's sovereign and gracious act. God, who by his creative word called man into being, again calls dust into life through resurrection.

II. In the New Testament

a. Terms and concepts

I. Life (Gk. *bios*), means 'course of life' or 'necessities of life maintenance' (Mk. 12:44; 1 Tim. 2:2; 1 Jn. 3:17). While *zōē* characteristically (and always in the Johannine literature) describes resurrection-life, it also denotes 'course of life' (Lk. 16:25; Phil. 1:20; *cf.* Lk. 15:13; Rom. 6:2), soul-life or natural vitality (Acts 8:33; 17:25; Phil. 1:20; 1 Tim. 4:8; *cf.* Jn. 4:50), and life duration (Jas. 4:14). Soul (*psychē*) and spirit (*pneuma*) continue their ambiguous role of 'self' and 'life'. As life, soul is simply 'being', 'natural-life' (Lk. 9:25; Mk. 8:36). It may be preserved to resurrection-life (Jn. 12:25), but at present it exists as natural vitality, lost at

death (Mt. 2:20; Jn. 15:13; Acts 20:10; 1 Jn. 3:16) or, more importantly, as Adamic life, life of the old age, life under divine judgment (Lk. 12:20; cf. 1 Cor. 2:14; 15:44ff.; Jas. 3:15). While spirit can mean, as in ancient Israel, the vitalizing principle of Adamic life (Jn. 19:30; Acts 7:59), it tends to be associated with resurrection-life and, as such, to stand in contrast to soul-life, *i.e.* life under judgment (cf. Jude 19; Jn. 6:63; 1 Cor. 15:45).

2. As in the OT, man's life and being, although viewed from different aspects, is a psychosomatic unity (cf. Bultmann). The Gk. soul-body dualism is incidentally reflected in the parable of Lk. 16:19ff., but is not in accord with the general NT outlook or teaching.

b. Life under death

1. The OT view continues. (i) Life is borrowed, transitory, dependent upon and at the disposal of God (cf. Mt. 4:4). Man can neither prolong his soul-life nor destroy it (Mt. 6:25ff.; Lk. 12:25; Jas. 4:15); God can either forfeit it or redeem it to resurrection-life (Mt. 10:28; Lk. 12:20; 1 Cor. 15:44; 1 Jn. 5:16; cf. Jas. 5:20). (ii) Life is ebb and flow: to live is to live in health (Jn. 4:50).

2. In radical development of OT thought the moral quality of life as relationship to God comes into sharp focus. One related to God, although dead, may be viewed as 'living' (Lk. 20:38). On the other hand, soul-life alienated from the life of God (Eph. 4:18) is no life at all. Anyone in it—not only those under immediate threat of Sheol (Mk. 5:23; cf. Mt. 9:18)—may be regarded as 'dead' (Lk. 9:60; Rom. 8:10; 1 Jn. 3:14; Rev. 3:1; cf. Lk. 15:24). Even when called life, 'this life' is contrasted to real life (1 Cor. 15:19; 1 Tim. 6:19) and has meaning only in conjunction with the life of the coming age (Gal. 2:20; Phil. 1:22; 1 Tim. 4:8).

3. The cry of John the Baptist, 'Repent', sets the mood of the NT (Mt. 3:2; cf. Acts 11:18; 17:30f.). All life stands under imminent judgment, and decision is demanded of all who would share the life of the new age. Criminals suffering ignominious execution are not special sinners: 'unless you repent you will all likewise perish' (Lk. 13:3). Nor can prosperity be relied upon as a token of God's favour: in the midst of man's ease God speaks, 'Fool, this night your soul is required from you' (Lk. 12:20). While this (OT) view of the judgment of the soul-life by physical death is present, more often the *locus* of judgment shifts to the eschatological consummation—the parousia (Mt. 24:36ff.; 25:31ff.), the resurrection of judgment (Jn. 5:28f.), the second death (Rev. 21:8—in which God destroys 'soul and body' in hell (Mt. 10:28)). Soul-life (*psychē*), in contrast to resurrection-life (*zōē*), is Adamic life, life under judgment, which without *zōē* must perish (Jn. 3:16). Indeed the 'soulish' man is one directing his life toward the perishing old age, the 'soulish' body one controlled by the Sheol-power dominating the old age (1 Cor. 2:14; 15:44; Jas. 3:15; Jude 19).

4. The judgment of death is executed corporately and representatively in Jesus Christ, the eschatological Adam (1 Cor. 15:45), who 'becomes sin' and voluntarily delivers his soul to Sheol as 'a ransom' (Mk. 10:45; Jn. 10:15; 2 Cor. 5:21; cf. Mk. 14:34; Is. 53:6, 10; Acts 8:32ff.; 1 Pet. 2:24) to give resurrection-life to the world (Jn. 6:51). However, Christ's soul is not left in Sheol; in resurrection victory he takes his soul again (Acts 2:31; Jn. 10:17). And by the power of an 'indestructible life'

he becomes a 'life-giving spirit' who shares his victory and imparts resurrection-life to whom he will (Heb. 7:3; 1 Cor. 15:45; Eph. 4:8; Jn. 5:21; 17:2). Thereby, Christ removes for ever the Sheol threat to man's soul.

5. Man's soul-life, then, need not be forfeited. If he loves it or seeks to preserve it, he will lose it, but if he loses it or gives it up for Christ, the gospel, or the brethren, it will be preserved, caught up in resurrection-life (Mk. 8:35f.; Jn. 12:25; 1 Jn. 3:16; 2 Cor. 12:15; Phil. 2:30; Rev. 12:11). To believe or to convert a sinner is to save a soul from death (Heb. 10:39; Jas. 1:21; 5:20; 1 Pet. 1:9). One who believes shall never taste real death (Jn. 8:51f.; 11:26; cf. Jn. 10:28; Mk. 9:1), for in Christ death is transformed into a temporary 'sleep in Jesus' (1 Thes. 4:14; cf. Mk. 5:39; Jn. 11:11). Both soul-life and resurrection-life are the life of the self, the whole man. The latter does not displace the former, but preserves it and transforms it.

c. Resurrection-life

1. The OT ideal of the good life has in the NT an eschatological fulfilment as resurrection-life (*zōē*). Since it is the only true life, it may be called simply 'life' (Acts 5:20; 11:18; Rom. 5:17; 2 Pet. 1:3; 1 Jn. 5:16). It is associated with light (Jn. 8:12), glory (1 Pet. 5:1, 4; cf. Jas. 1:12), honour (Rom. 2:7), abundance (Jn. 10:10), immortality (2 Tim. 1:10), resurrection (Jn. 6:40; 11:25), eternal life, the kingdom of God (Col. 1:13; Mt. 25), holiness (Rom. 6:22f.), joy (1 Thes. 2:19), spirit (Jn. 6:63; cf. 1 Cor. 15:45), the imperishable (Heb. 7:16; 1 Pet. 1:23); and is contrasted with darkness (Col. 1:13), dishonour (Rom. 2:7), death (1 Jn. 3:14), mortality (2 Cor. 5:4), destruction (Mt. 7:13f.), judgment (Jn. 5:28f.), corruption (Gal. 6:8), wrath (Rom. 2:7f.; Jn. 3:36), eternal punishment (Mt. 25:46). To have life is to 'abide' (Jn. 6:27). To lack it is to wither and be burnt as a severed branch (Mt. 7:13, 19; Lk. 3:9; cf. Jn. 15:6) and to be destroyed in hell (Mt. 10:28; Mk. 9:43ff.; Rev. 20:14f.).

2. As in the OT, life is properly the life of God, the Ever-Living One (Rom. 5:21; Rev. 4:9), who has life in himself and alone has immortality (Jn. 5:26; 1 Tim. 6:16). He can make alive and he can kill (Rom. 4:17; 2 Cor. 1:9; 1 Tim. 6:13; Mt. 10:28f.; Jas. 4:14f.; Lk. 12:20).

3. This life of God is manifest in Jesus Christ. In the Synoptic Gospels Jesus simply assures his followers of resurrection-life (Mk. 8:34ff.; 9:41ff.; 10:29f.; Mt. 25:46) and evidences his power to bestow it: to heal is to 'save souls' (Lk. 6:9) and cause to 'live' (Mk. 5:23). Sheol itself is robbed by Christ's creative word (Mk. 5:39ff.; Lk. 7:14f.; cf. Jn. 11:43). The Fourth Gospel and the Epistles, written with Christ's resurrection in more deliberate perspective, are more explicit and elaborate: Christ is 'the true God, and eternal life' (1 Jn. 5:20; Jn. 1:4; 14:6), the 'Author of life' (Acts 3:15), to whom the Father has granted 'to have life in himself' (Jn. 5:26). He is 'the resurrection and the life' (Jn. 11:25), 'the bread of life' (Jn. 6:35), and his words are 'spirit and life' (Jn. 6:63). By his resurrection he manifests himself Lord and Judge over the living and the dead (Mt. 25:31ff.; Mk. 14:62; Jn. 5:27ff.; Acts 10:42; 17:31; Rom. 10:9f.; 14:9; 2 Tim. 4:1; cf. 1 Pet. 4:5; Rev. 11:18).

In Jesus Christ's resurrection immortal life has been actualized on the plane of history. His resurrection becomes the basis for all resurrection, and all resurrection is to be understood in terms of his

(cf. 1 Cor. 15; Col. 3:4; 1 Jn. 3:2). No longer does the hope of resurrection rest, as in the OT, merely upon prophetic vision or upon inferences from God's covenant relationships. No longer is resurrection to be defined simply as renewed life out of Sheol. Resurrection-life now finds its meaning in the image of Jesus Christ (Rom. 8:29).

4. For man, then, true life is grounded in Jesus Christ who 'became a life-giving spirit' (1 Cor. 15:45; cf. Jn. 6:63; 2 Cor. 3:17). The core of the gospel proclamation is that he who was dead is 'alive for evermore' (Acts 2:31ff.; 1 Cor. 15:3ff.; Rev. 1:5, 18) and by the power of an indestructible life gives life to the world (Heb. 7:16; Jn. 6:33). If Christ has not been raised from death one must write over the Christian dead, *finis* (1 Cor. 15:18, 32). But Christ is risen and has the 'keys to Sheol'; because Sheol could not conquer him, neither can it prevail against his church (Mt. 16:18; Rev. 1:18). His Life is mediated to the believer through repentance, faith and baptism (Acts 11:18; Jn. 3:16; 11:25f.; Rom. 6:4); by it one is 'saved' (Rom. 5:10). In Christ's death and resurrection God pierces radically into the world of man to make him see the fatality of sin and the utter grace of the new life from God—an unfathomable, unexpected and freely-bestowed act of salvation.

5. Resurrection-life, like Adamic soul-life, is imparted and sustained by God's creative word. Man has no control over it. He may inherit, receive or enter it (Mk. 9:43ff.; 10:17, 30; Tit. 3:7; 1 Pet. 3:7). By evil deeds or rejection of the gospel he may judge himself unworthy of it (Acts 13:46; cf. Rom. 1:32) or, conversely, by the Spirit he may perform deeds yielding eternal life (Mk. 10:17ff.; Jn. 5:28f.; Rom. 2:7; 2 Cor. 5:10; Gal. 5:22; 6:8). Such deeds are possible only by a relationship to Christ through faith (Rom. 1:17; Jn. 20:31) which itself imparts life (Jn. 6:53f.; Rom. 6:23; Col. 3:3; 1 Jn. 3:14; 5:13). God gives life to those whom he wills (Jn. 1:13; 5:21), who are ordained for it, and who from the foundation of the world are written in the book of life (Acts 13:48; Rom. 9:11; Phil. 4:3; Rev. 17:8; 20:12ff.). The new life is a resurrection, a new birth, a sovereign and gracious act of the creator God (Jn. 5:24f.; Rom. 6:4; Col. 3:1ff.; Eph. 2:1ff.; Jn. 1:13).

6. In the Synoptic Gospels life is always viewed as future and associated with the coming kingdom of God (Mk. 10:17, 23; 9:43, 47; Mt. 25:46). The way to it is blocked by sin and found by few; yet to attain life is the highest possible goal and worthy of any sacrifice (Mk. 9:42ff.; Mt. 7:14; 13:44ff.), for only in this way can one's soul be preserved (Mk. 8:34ff.; cf. Jn. 12:25).

7. In the Johannine and Pauline literature this parousia perspective continues (Jn. 5:24, 28f.; 6:40; 11:24; 14:3, 6, 19; Rom. 5:10; 6:22; 2 Cor. 5:4; 13:4; Phil. 3:10f.; cf. 1 Cor. 15:52ff.), but resurrection-life is also viewed as a present possession of the believer. One passes 'from death to life' at conversion (1 Jn. 3:14; cf. Jn. 5:24; Eph. 2:1ff.), and one may even speak in the past tense of having been crucified, raised to life, brought into Christ's kingdom, glorified and made to sit in heaven (Gal. 2:20; Eph. 2:5f.; Col. 1:13; Rom. 8:30). However, in Paul (and probably in John) this is always viewed as a corporate participation in Christ's death and resurrection (Rom. 6:4; 8:2; 2 Tim. 1:1; cf. Jn. 6:33, 51ff.) vouchsafed by the Spirit, the 'down-payment' of the new-age life (cf. 2 Cor. 4:12; 5:5). Our life is hid with Christ (Col. 3:3), and to have life means

simply to have Christ (1 Jn. 5:11f.). Individually, resurrection-life is now being realized in ethical renewal and psychological transformation (Rom. 8:10; 12:1; Gal. 5:22f.; Col. 3:1ff., 9f.; Eph. 4:18ff.); but the self in its mortality remains under death. Only in the parousia is mortality 'swallowed by life' and Sheol's power vanquished (1 Cor. 15:26, 52ff.; 2 Cor. 5:4; cf. Rev. 20:13). At present the victory is actualized personally only in Jesus Christ, 'the first fruits of those who have fallen asleep', 'the first-born among many brethren' (1 Cor. 15:20; Rom. 8:29).

8. As in ancient Israel, the problem of death finds its answer neither in philosophical speculation about immortality nor in the sub-life of Sheol, but in deliverance from Sheol; to be a son of God is to be a son of the resurrection (Lk. 20:36). And it is the resurrected Son of God who imparts this victory to his church; in Adam all die, so in Christ all shall be made alive (1 Cor. 15:22). Not Bach's 'come, sweet death' but John's 'come, Lord Jesus' expresses the NT attitude towards death.

Resurrection-life is bodily life—the life of the whole man (Lk. 24:39ff.; Jn. 5:28f.; 1 Cor. 15; Phil. 3:21; Rev. 20:13). It is to be with Christ (Jn. 14:3; Col. 3:4; 1 Thes. 4:17), to have a full vision of God (1 Cor. 13:12; 2 Cor. 5:7; 1 Jn. 3:2; Rev. 22:4), to enter the kingdom (Mt. 25:34, 46), to enjoy the fulfilment of 'righteousness and peace and joy in the Holy Spirit' (Rom. 14:17; cf. Rev. 21–22) in which all Sheol-threats are removed.

Resurrection-life will be 'my life'. One's personal continuity does not rest, however, in the residual monad of Leibnitz nor in the escaping soul of Plato. It rests in God in whose mind 'all live' (Lk. 20:38) and 'who can bring the dead to life and can call to himself the things that do not exist as though they did' (Rom. 4:17, Williams).

E. E. E.

LIGHT. The word is used in connection with joy, blessing and *life in contrast to sorrow, adversity and death (cf. Gn. 1:3f.; Jb. 10:22; 18:5f.). At an early time it came to signify God's presence and favour (cf. Ps. 27:1; Is. 9:2; 2 Cor. 4:6) in contrast to God's judgment (Am. 5:18). From this and other sources arises an ethical dualism between light and

darkness, *i.e.* good and evil, which is quite marked in the NT (*cf.* Lk. 16:8; Jn. 3:19ff.; 12:36; 2 Cor. 6:14; Col. 1:12f.; 1 Thes. 5:5; 1 Pet. 2:9). Some, *e.g.* C. H. Dodd, have regarded Hellenistic parallels to be significant in this regard, but the presence of this usage in Judaism, *e.g.* *The War of the Sons of Light and the Sons of Darkness* in oSS, makes such an inference unnecessary and provides a more pertinent commentary on the NT concepts.

God's *holiness is expressed in terms of light, *e.g.* in 1 Tim. 6:16, where he is said to dwell 'in unapproachable light'; *cf.* 1 Jn. 1:5, where it is said that 'God is light', and other passages in that Epistle where the implications of this for the believer are worked out. The same thought is seen in the typically Heb. expression 'children of light' which is twice used by Paul (Eph. 5:8; *cf.* 1 Thes. 5:5; Jn. 12:36).

In John's Gospel the term light refers not so much to God's holiness as to the *revelation* of his love in Christ and the penetration of that love into lives darkened by sin. So Christ refers to himself as 'the light of the world' (Jn. 8:12; 9:5; *cf.* 12:46), and in the Sermon on the Mount applies this term to his disciples (Mt. 5:14-16). Similarly Paul can refer to 'the light of the gospel of the glory of Christ' and to God himself who 'has shone in our hearts' (2 Cor. 4:4-6).

LIGHTNING. I. Lightning which accompanies *thunder is a well-known phenomenon in Palestine, especially in the cool season, with a maximum in November or December. The word is sometimes rendered 'glitter' or 'glittering' (Dt. 32:41; Jb. 20:25; Ezk. 21:15; Na. 3:3; Hab. 3:11). Lightning is a figure used for brightness of countenance (Dn. 10:6; Mt. 28:3) and of raiment (Lk. 24:4). In some passages the usage of 'fire' refers to lightning (*e.g.* Ex. 9:23; 1 Ki. 18:38; 2 Ki. 1:10, 12, 14; 1 Ch. 21:26; Jb. 1:16; Ps. 148:8). Lightning is poetically described with thunderstorms (2 Sa. 22:15; Pss. 18:14; 97:4; 135:7; Je. 10:13; 51:16).

2. Lightning is associated with theophanies as at Sinai (Ex. 19:16; 20:18), in Ezekiel's vision (Ezk. 1:13-14) and several times in the Apocalypse (Rev. 4:5; 8:5; 11:19; 16:18). It is regarded as an instrument of God's judgment (Ps. 144:6; Zc. 9:14; Lk. 10:18). J.M.H.

LILITH (Heb. *lilit*, Is. 34:14, rvmg., JB; LXX *onokentaurus*; Symm., Vulg. *lamia* (Jerome, 'avenging fury'); AV 'screech owl'; AVmg., RV 'night-monster'; rsv 'night hag'; niv 'night creatures').

This name appears in a description of the terrible desolation of Edom, and presents great difficulties of interpretation. At a time when Bab. and Persian influence was developing, Lilith appears evidently as a loan-word derived from the Assyrian female demon of the night, *Lilitu*.

It may, however, be misleading to regard the creature as necessarily associated with the night: the darkness which some demons were said to love was that caused by desert storms (*cf.* Sumerian

LIL.LÁ, 'storm-wind'; and also a possible conclusion from Jerome's translation cited above). Some scholars regard it as the equivalent of the English vampire.

Later Jewish literature speaks variously of Lilith as the first wife of Adam, but she flew away and became a demon; as a fabulous monster which stole and destroyed newly-born infants; and as a demon against which charms were used to keep it from the haunts of men, lest it enter and bring disease.

There is, however, no real evidence for insisting on a mythological interpretation of the word, and it is perhaps significant that most of the other creatures listed in Is. 34 are real animals or birds. If the LXX rendering is understood as something akin to a tail-less monkey (*cf.* G. R. Driver, *loc. cit.*, p. 55), it seems an unlikely habitué of a desolate place. A similar objection applies also to both the tawny and the night owl, neither of which is a desert bird. Driver suggests a goat-sucker or nightjar (NEB), several species of which are found in waste land.

LIME, LIMESTONE. Chemically, lime is calcium oxide, made by heating limestone in a kiln, of which there must have been many in ancient Palestine. The Heb. Bible uses three words, *sîd*, 'plaster', 'lime' or 'whitewash' (Dt. 27:2, 4; Is. 33:12; Am. 2:1), *gîr*, 'chalk' or 'lime' (Dn. 5:5) and '*abnê gîr*, 'stones of lime' (Is. 27:9, rsv 'chalkstones').

Limestone is abundant in Palestine. Geologically it was formed from the compacting together of shells, *etc.*, on the sea bed, which was then thrust up by earth movement. Palestine was under the sea more than once, at least in part. The bulk of the limestone visible today on both sides of the Jordan is from the Cretaceous period.

LINE. The commonest OT word is *qaw*, *qāw* or *qeweh*, denoting a measuring-line such as was used to measure the circumference of the Temple laver (1 Ki. 7:23) or to mark out a city, or land for building (Is. 34:17; Je. 31:39; Zc. 1:16). It is used for measuring distances of 1,000 cubits from Ezekiel's Temple to test the water depth (Ezk. 47:3), and by an extension of meaning it is the plumbline used to check the integrity of a city or land (2 Ki. 21:13; Is. 28:17; 34:11; La. 2:8), or the lines of instruction of a teacher (Is. 28:10, 13, where the picture is one of children reciting the alphabet, *qāw* being an alternative way of naming the letter *qōp*).

The word *hebel*, 'cord' or 'rope', also refers to an instrument for dividing up land or an inheritance (Pss. 16:6, AV; 78:55, AV; Am. 7:17; Zc. 2:1). In 2 Sa. 8:2 it is used of the lines of Moabites drawn up by David, some destined for life and some for death.

The words *hūt* (1 Ki. 7:15), *pā'il* (Ezk. 40:3) and *šerēd* (Is. 44:13) have special uses. Rahab's red cord is *tiqwā* (Jos. 2:18, 21, AV). (*WEIGHTS AND MEASURES, *ARTS AND CRAFTS.) J.A.T.

LINEN. The Heb. word *šēs* (Egyp. *ss*) is rendered 'fine linen'. The following Heb. words are rendered by 'linen': *baḏ*, *pištā*, *būš* and '*ētūn* (*cf.* Egyp. '*idmy*, 'yarn' in RV). The word *pištā* means actually the

LINEN

flax of which linen was made. As early as the 14th century BC the word *pšt*, or plural *pštm*, was used in Ugarit for linen (cf. Virolleaud, *PRU*, Mission Ras Shamra 7, II). *būš* is present only in later books (cf. Gk. *bysos*). RSV, AV translate the following Gk. words by linen: *sindōn*, *othonion* and *linon*.

Linen is made of flax (*Linum usitatissimum*). After treatment the thread of the rind gives linen and the seed linseed-oil. After the flax was treated it was spun by women and made into material (Pr. 31:13, 24). Flax was never extensively grown in Palestine in biblical times. According to Ex. 9:31; Ho. 2:5 and probably Jos. 2:6, it was, however, cultivated from early times. An extra-biblical witness is the Gezer calendar (c. 1000 BC), where we read in the fourth line: 'His month is hoeing up of flax' (Albright's translation in Pritchard, *ANET*³). The great cultivator and exporter of flax was Egypt. In Pr. 7:16 we read of Egyptian linen (cf. Heb. *h'atubōt*, 'many coloured'). Red linen was especially precious in ancient Egypt and was called 'royal linen'. It is quite probable that linen (cf. Egyp. words *sš* and *'idny* as possible loan-words in Hebrew and Canaanite) was imported from Egypt by the inhabitants of Palestine from the earliest times. We know from Egyp. documents that linen was exported from Egypt to Phoenicia (cf. also Ezk. 27:7) and especially Byblos through many centuries.

The use of linen in OT times was prescribed for priests (Ex. 28:39). The coat, turban and girdle must be of fine linen. This is, according to Ezk. 44:17, prescribed for the coolness of the material. The high priest used a woollen overcoat, but was draped in linen on the great Day of Atonement (Lv. 16:4, 23). Linen the Israelites brought along from Egypt was used for the ten curtains of the tabernacle (Ex. 26:1), the veil (26:31) and the screen of the door of the tent (26:36). Samuel wore an ephod ('*ēpōd*) of linen (1 Sa. 2:18); David danced in front of the ark draped in a linen ephod (2 Sa. 6:14). It seems as if the use of linen was associated with special, holy persons, e.g. the man with the writing-case in Ezk. 9:2 and the man Daniel saw in Dn. 10:5 and 12:6-7. Linen and fine linen were regarded as precious gifts to the woman a man loved. In Ezk. 16:10, 13 the Lord speaks to Jerusalem as a husband to his wife and reminds her how he has decked her with linen and fine linen. It is obvious from Pr. 31:22 that the use of linen by women was highly esteemed (as in *embroidery). It was a luxury (Is. 3:23). The word *būš*, 'linen', is used in the later books as the material for the rich and important people, e.g. Mordecai went to the Persian king draped with a mantle of fine linen (Est. 8:15). Linen was commonly used for fine furnishings, sails and for protection of precious carpets.

The word linen is sparingly used in the NT. In the parable of the rich man and the beggar Lazarus the former is described as decked out in fine linen (Gk. *bysos*) and purple (Lk. 16:19). The young man who followed Jesus to Gethsemane lost his linen cloth (or sheet?) in his flight from the scene (Mk. 14:51). The body of Jesus was wrapped in linen according to Mt. 27:59 and parallel texts. According to Rev. 19:8, the Bride of the Lamb is clothed in fine linen, which is the righteous deeds of the saints. In Rev. 19:14 the eschatological armies are described as arrayed in fine white linen.

LINUS. A Rom. Christian who greeted Timothy, 2 Tim. 4:21; for his relation to others in *loc.*, see *CLAUDIA. The name (a son of Apollo) is not common. Succession lists show a Linus, identified by Irenaeus (*Adv. Haer.* 3. 3. 2) and subsequent writers with Timothy's friend, as first bishop of Rome after the apostles. On the problems of such lists, cf. Lightfoot, *Clement I*, pp. 201-345; A. Ehrhardt, *The Apostolic Succession*, 1953. Writers dominated by later practice (e.g. Rufinus, Preface to *Clem. Recog.*) labour to reconcile the apostolic appointment of both Linus and *Clement. Linus made little further mark on tradition or legend. (Cf. *Liber Pontificalis*, ed. Duchesne, 1, pp. 53, 121, for meagre notices; Tischendorf, *Acta Apocrypha*, pp. xixf., for martyrdoms of Peter and Paul.)

A.F.W.

LION OF JUDAH. An abbreviated form of one of Christ's Messianic titles found in Rev. 5:5, 'the Lion of the tribe of Judah'. An obvious allusion to Gn. 49:9, 'Judah is a lion's whelp', this title depicts Christ as the culmination of the courage, might and ferocity of the tribe of Judah. Like a lion Satan stalks the saints (1 Pet. 5:8), but Christ is the conquering lion, worthy to open the seven seals of judgment. The use of the term 'lion' (*ANIMALS) in connection with judgment may reflect passages like Is. 38:13; La. 3:10; Ho. 5:14; 13:8, where God's judgment is likened to a lion's attack. Emperors of Ethiopia, convinced that they stemmed from Judah as descendants of Solomon and the Queen of Sheba, proudly appropriated this title ('Conquering Lion of Judah') until the overthrow of Haile Selassie's regime in 1974. D.A.H.

LIP. Both the Heb. word *sāpā*, and (less frequently) the Gk. word *cheilos*, mean not only the human lip but also the brink or shore of the sea, or the bank of a river (Gn. 22:17; 41:3; Heb. 11:12) and, in the case of the Heb. word, edge of a garment (Ex. 28:26), though the primary application is to lips. Another Heb. word *sāpām* refers to the upper lip or moustache, usually in respect of covering it, with the hand or garment, as a sign of grief or shame (Lv. 13:45). Cf. the reference to covering the face in 2 Sa. 19:4.

In the case of the lips we find clear examples of the Hebrew way of speaking whereby the organs seem to feel and act themselves, which is partly synecdoche, and partly due to the lack of physiological understanding of the nervous system (*BODY). However, the connection of the lips with the mind or heart is brought out in Pr. 16:23. For an explanation of this connotation, see *HEART.

The lips not only speak (Jb. 27:4) but shout for joy (Ps. 71:23), quiver (with fear) (Hab. 3:16), guard knowledge (Pr. 5:2), offer praise (Ps. 63:3), plead (Jb. 13:6) and possess ethical qualities of truthfulness or righteousness, or, conversely, sinning or speaking lies (Jb. 2:10; Pr. 12:19; 16:13). The parallelism with *tongue or *mouth is natural, and these are used in much the same senses (Pss. 34:13; 51:15). Just as with these words, lip can be extended to mean speech, words (Jb. 12:20) or language (Gn. 11:1; Is. 19:18). B.O.B.

LIVER. Only in the OT does this word occur. The Heb. *kābēd* is from a root meaning 'to be heavy', or by extension of meaning 'to be honoured'. So, it is the heavy organ. Of the 14 occurrences, 11 are in Ex. and Lv., referring to the liver of a sacrificial beast.

The 'appendage (אֵב 'caul') of the liver' (Ex. 29:13, *etc.*), always associated with the kidneys, was burnt on the altar. Josephus lists the parts burnt on the altar (*Ant.* 3. 228) 'the kidneys, the caul, all the fat along with the lobe of the liver'.

It is, however, unlikely that the 'caul', *yōteret*, refers to a lobe of the liver, but probably to fat upon it, or possibly the pancreas. The word literally means 'remainder' or 'appendage' (RSV), so it is not stated specifically that the liver itself was burnt on the altar, but the internal fat and the kidneys.

From Ezekiel (21:21) it appears that the liver was the material for a form of divination, based on the internal markings of the liver. Many artificial livers of clay have been unearthed in the Middle East, and were made for this purpose. A similar practice was known among the Etruscans, from whom it passed to the Romans (Lat. *haruspices* = 'liver diviners').

B.O.B.

LO-DEBAR. Where Mephibosheth lived before David recalled him (2 Sa. 9:4); E of the Jordan (*cf.* 2 Sa. 2:29; 17:27); possibly *DEBIR, 3.

J.D.D.

LOGOS. A common Gk. word used in a quasi-technical sense as a title of Christ in the Johannine writings. It carries a large number of different meanings: its basic translation is 'word', *i.e.* meaningful utterance, whence develop its many senses 'statement, declaration, discourse, subject-matter, doctrine, affair' and, by another development, 'reason, cause, sake, respect'. As a grammatical term it means a finite sentence, in logic a factual statement, definition or judgment, in rhetoric a correctly constructed piece of oratory. As a term of psychology and metaphysics it was used by the Stoa, following Herakleitos, to signify the divine power of function by which the universe is given unity, coherence and meaning (*logos spermatikos*, 'seminal Word', which, like seed, gives form to unformed matter): man is made in accordance with the same principle, and is himself said to possess Logos, both inwardly (*logos endiathetos*, reason) and expressed in speech (*logos prophorikos*). The term is also used as the pattern or norm of man whereby he lives 'according to Nature'.

In the LXX Logos is used to translate Heb. *dābār*. The root of this signifies 'that which lies behind', and so when translated as 'word' it, too, means meaningful sound; it may also mean 'thing'. In accordance with a common feature of Heb. psychology a man's *dābār* is regarded as in some sense an extension of his personality and further as possessing a substantive existence of its own. The Word of God, then, is his self-revelation through Moses and the prophets; it may be used to designate both single visions and oracles and the whole content of the total revelation, and thus especially the Pentateuch. The Word possesses a like power to the God who speaks it (*cf.* Is. 55:11) and effects his will without hindrance. Hence the term may refer to the creative word of God. In the Wisdom litera-

ture the creative power of God is referred to as his wisdom, and in a number of passages is spoken of as an *hypostasis* distinct from him (see especially Pr. 8:22-30; Wisdom of Solomon 7:21ff.).

Influenced both by the OT and by Hellenic thought, Philo made frequent use of the term Logos, to which he gave a highly-developed significance and a central place to his theological scheme. He derived the term from Stoic sources and, in accordance with his discovery of Gk. thought in the Heb. Scriptures, made use of it on the basis of such passages as Ps. 33:6 to express the means whereby the transcendent God may be the Creator of the universe and the Revealer of himself to Moses and the Patriarchs. On the Gk. side he equates the Logos with the Platonic concept of the World of Ideas so that it becomes both God's plan and God's power of creation. On the side of biblical exegesis the Logos is identified with the Angel of the Lord and the Name of God, and is described by a variety of terms as High Priest, Captain and Steersman, Advocate (Paraclete) and Son of God. It is termed a second God and, on the other hand, described as the Ideal Man, the Pattern of God's earthly creation of man. In spite of all this terminology of personification, however, the term remains—invariably, in view of Philo's staunch Judaism (at least, in intention)—a philosophical and theological term and tool.

A further possible determining factor in the use of Logos in the passages which we need to review is the use of the term to signify the gospel message. The term is used absolutely (*e.g.* to preach the Word) and with a number of genitives (the Word of God, of Christ, of the cross, of reconciliation, of life, *etc.*). These show that the gospel story is seen in the NT as essentially a presentation of Jesus himself; he is the Word which is preached. But this is by no means always implicit in the phrase.

Three places are found at which the use of Logos in a technical sense has been concerned, *viz.* Jn. 1:1 and 14; 1 Jn. 1:1-3; Rev. 19:13.

Jn. 1:1 is the only unambiguous case. Here we have a highly metaphysical prologue to the Gospel in which the significance of the Christ is interpreted theologically. Divergence is found among scholars in the identification of the primary source of these verses and the chief meaning of Logos here. Attempts have been made to link the prologue primarily with the OT use of *dābār* alone, or with the rabbinical teaching concerning the Torah. These fail because these concepts are not sufficiently differentiated from the supreme Godhead to stand without alteration in v. 14. The figure of Wisdom provides more parallels but lacks identification in our sources with the Word: the teaching about the Primal or Heavenly Man which others have invoked is too conjectural to command much confidence. Only the Philonic Logos-teaching provides a clear theological scheme in which the Word possesses a like unity with God and a like distinction from him, and in which both creative and sustaining activity in the universe and revelatory activity towards man is ascribed to it. Further, the necessarily unique concept of incarnation is nevertheless a proper development of the identification of Philo's Logos with the Ideal Man. Either a direct use of Philo or a similar background in intellectual circles of Hellenistic Jewry may lie behind this.

In 1 Jn. 1:1 the phrase 'Word of life' is unlikely

to bear the meaning of Logos in its technical theological sense; both context and construction are against this. Even if this be from the same pen as the Gospel (which some scholars regard as doubtful), the letter may date from a time prior to the adoption of a full-grown Logos-doctrine. The sense of 'Christian gospel' fits this context best.

In Rev. 19:13 the sense of 'gospel' may lie behind the ascription of the title Logos of God to the triumphant figure; compare 6:2, where in the view of some exegetes the mounted figure is the triumphant advancing gospel.

We may compare also the imagery of Wisdom of Solomon 18:15-16. But since in Revelation the figure is explicitly declared to be King of kings and Lord of lords, some more metaphysical meaning must be latent here. The literary genre of the book amply explains why this meaning is not developed here in the same fashion as in the Fourth Gospel.

All three places illustrate how the fullness of Christ consistently exhausts all preparatory imagery and thought; and how many places need an exegesis which draws on many sources for full exposition. Jesus gives fresh meaning to terminology which prior to him was expressive of lesser mysteries.

BIBLIOGRAPHY. Pauly-Wissowa, art. 'Logos'; A. Debrunner *et al.*, *TDNT* 4, pp. 69-143; H. Haerbeck *et al.*, *NIDNTT* 3, pp. 1078-1123; R. Mortley, *From Word to Silence*, 2 vols., 1986. J.N.B.

LOIS. Timothy's grandmother, presumably the mother of *Eunice (2 Tim. 1:5). Paul doubtless alludes to her Christian faith: had she been simply a godly Jewess, her devotion is less likely to have been known to him. The name is hard to parallel in the period. A.F.W.

LORD'S DAY. The expression is found only once in Scripture. In Rev. 1:10 John discloses that the vision of the Apocalypse came to him while he was rapt 'in the Spirit on the Lord's day'. This is the first extant occurrence in Christian literature of *hē kyriakē hēmera*. The adjectival construction suggests that it was a formal designation of the church's worship day. As such it certainly appears early in the 2nd century (Ignatius, *Epistle to the Magnesians*, 1. 67).

Little support can be adduced for the theory that the term referred to Easter day, except, of course, in the sense that each Lord's day is a paschal recapitulation. But it must be noted that such reputable scholars as J. J. Wettstein, G. A. Deissmann and F. J. A. Hort, among others, prefer to interpret the verse as indicating that John was transported in his spiritual ecstasy to the great day of judgment itself (*cf.* Rev. 6:17; 16:14). J. B. Lightfoot believes that there are 'very good, if not conclusive reasons' for such a view (*The Apostolic Fathers*, 2, Section 1, Part II, p. 129). The majority opinion, however, inclines to feel with H. B. Swete that such an interpretation is foreign to the immediate context and contrary to linguistic usage (LXX always has *hē hēmera tou kyriou* for the prophetic 'day of the Lord': *kyriakos* does not appear). It would seem reasonably safe, therefore, to conclude that as the actual location of John's vision is recorded in v. 9, so the actual occasion is recorded in v. 10.

Even if a late date for Revelation be accepted (*cf.* AD 96), it is not necessary to assume with Harnack

that *hē kyriakē hēmera* was not in use before the close of the 1st century. It may even have emerged as soon as AD 57 when Paul wrote 1 Corinthians. In 11:20 he speaks of *kyriakon deipnon* ('the Lord's supper'). It is interesting that Pesh. reads 'Lord's day' here. But it would hardly appear that the term was in current use, for later in the Epistle Paul has *kata mian sabbatou* (16:2).

Deissmann has thrown further light upon the title by showing that in Asia Minor and Egypt even before the Christian era the first day of each month was called Emperor's Day or *Sebastē*. This may eventually have been transferred to a day of the week, probably Thursday (*dies Iovis*). 'If these conclusions are valid,' comments R. H. Charles, 'we can understand how naturally the term "Lord's Day" arose; for just as the first day of each month, or a certain day of each week, was called "Emperor's Day", so it would be natural for Christians to name the *first day* of each week, associated as it was with the Lord's resurrection and the custom of Christians to meet together for worship, as "Lord's Day". It may have first arisen in apocalyptic circles when a hostile attitude to the Empire was adopted by Christianity' (R. H. Charles, *The Revelation of St. John*, 1, 1920, p. 23; *cf.* Deissmann, *Bible Studies*, pp. 218ff.).

'Lord' here clearly signifies Christ and not God the Father. It is Christ's own day. It belongs to him because of his resurrection, when he was 'designated Son of God in power' (Rom. 1:4). McArthur is surely right in claiming that the title ultimately derives from the Lordship of Jesus Christ which was made manifest in the resurrection on 'the first day of the week' (Mk. 16:2; see A. A. McArthur, *The Evolution of the Christian Year*, 1953, p. 21). Christian worship is essentially an *anamnēsis* (remembrance) of the Easter event which revealed the triumph of God's redemptive purpose. Hence the prevailing note of joy and praise. The first day was also appropriate, as it recalled the initial day of creation, when God made light, and the fact that the Christian Pentecost fell on Sunday. Furthermore, it may well have been the expectation of the primitive Christians that our Lord's return would take place on his own day.

The earliest piece of evidence relating to the Christian observance of the first day of the week lies in 1 Cor. 16:1-2, but there is no explicit reference to an actual assembly. Acts 20:7 is more specific and probably reflects the continued Christian use of the Jewish calendar under which the Lord's day would begin at sunset on Saturday. Alford sees in the readiness of Gentiles to accept this Jewish reckoning 'the greatest proof of all that this day was thus observed' (Henry Alford, *The New Testament for English Readers*⁶, 1871, p. 788). On the other hand, there is no trace in the NT of any sabbatarian controversy. The Lord's day, while fulfilling all the beneficent purposes of God in the institution of the Sabbath for mankind, was kept 'not under the old written code but in the new life of the Spirit' (Rom. 7:6).

LORD'S PRAYER, THE. The prayer which our Lord taught his disciples as the model prayer for their regular use. In Mt. 6:9–13 it is given as an integral part of the Sermon on the Mount. But in Lk. 11:2–4 it is given by our Lord in different circumstances. It is probable that since he meant this prayer to serve as a pattern for all his disciples at all times, he would have repeated it on different occasions.

In Mt. 6:9–13 he gives it as an example which complies with all the requisites which he himself had laid down as essential for true prayer: 'Pray then like this,' he said (v. 9). He was thus continuing to teach his disciples *how* to pray. After having warned them not to pray as hypocrites (v. 5) nor to 'heap up empty phrases' as the heathen do (v. 7), he taught them what sort of prayer is acceptable before God. But in Lk. 11:1–4, in response to the request of a disciple, he gives the prayer this time, not only as an example of a prayer which complies with his teaching, but as a definite prayer which must be prayed by his followers: 'When you pray, say . . .' (v. 2).

In Lk. 11:2–4 the prayer is given in a shorter form than in Mt. 6:9–13, as follows: 'Father, hallowed be thy name. Thy kingdom come. Give us each day our daily bread; and forgive us our sins, for we ourselves forgive every one who is indebted to us; and lead us not into temptation.'

The short form probably represents the compass of the prayer as Jesus originally phrased it: the simple address 'Father' corresponds to the form 'Abba' which he used himself (cf. Mk. 14:36) and which the early Christians followed his example in using (cf. Rom. 8:15; Gal. 4:6). The amplified Matthaean text has been adapted for Christian liturgical use, the address 'Our Father who art in heaven' being taken over from synagogue usage. Here we shall consider the full Matthaean text.

It is obvious that our Lord gave the prayer originally in Aramaic. By the time Matthew and Luke wrote their Gospels, however, the prayer would naturally have been used by Christians in Greek also. This probably explains why Mt. 6 and Lk. 11 have general agreement in language and both use the unique term *epiousios* (rendered 'daily') in the prayer.

By the opening words of the prayer—'Our Father who art in heaven'—we are taught the correct attitude and spirit in which we should pray to God. Addressing him as 'Our Father', we look up to him in love and faith, as to the One who is near us in perfect love and grace. By the words 'who art in heaven' we give expression to our holy reverence for him who is the Almighty Ruler over all. The introductory words of the prayer also remind us of the fact that all Christian believers are one in him, for we are to pray to him as 'Our Father'. The believer's heart being rightly attuned by the invocation, the first petitions are those concerning the glory and divine purpose of our heavenly Father. 'Hallowed be (*hagiasthētō*) thy name' is a prayer asking God to enable us and all men to recognize and honour him. His name, *i.e.* he himself in his self-revelation, is to be acknowledged as holy; and he is to receive all the honour and glory due to the One who perfectly loves us, our holy and omnipotent Creator. (* GOD, NAMES OF.) The petition 'Thy kingdom come' may, for general purposes, be used as a supplication that the divine dominion (*basileia*) of God will be extended 'here and now' (in

this present age) in the heart of individuals as well as in the world as a whole. Primarily, however, this petition has an eschatological connotation; it is a supplication that the kingly rule of God may be established 'with power' (Mk. 9:1) at the glorious appearing of the Son of man. (* KINGDOM OF GOD.)

The third petition, 'Thy will be done on earth as it is in heaven', which is absent in the authentic text of Lk. 11:2, is practically an elaboration of the previous petition. In heaven, where the rule of God is gladly and unconditionally accepted by all, the will of God is continuously, spontaneously and joyfully obeyed by all. Believers should thus pray that God's will shall in the same way be obeyed by all on earth, and especially in their own lives. This petition has a partial reference to the present age, but it opens up vistas to the time when every knee shall bow before the King of kings and the powers of darkness will be finally destroyed. God will then be all in all and his will shall reign supreme (1 Cor. 15:25–28). The three imperatives *hagiasthētō* ('be hallowed'), *elthātō* ('come') and *genēthētō* ('be done') are all aorist and point to the final consummation.

The first three petitions having centred upon the glorification of God, the next three petitions are concerned with the physical and spiritual well-being of believers.

Believers should thus pray expressly for the aid and blessing of God regarding all aspects of life in this world. The petition 'Give us this day our daily bread' asks God as our heavenly Father to grant us the physical necessities of life. The word 'bread' here sums up all that we really need for our earthly existence. In view of the foregoing petitions, this is a supplication asking God continually to supply us with the material necessities of life so that we may most effectively sanctify his name, labour for the coming of his kingdom and do his will on earth. Our prayer for daily sustenance is thus not meant to be a selfish prayer, or a prayer for material luxury, but a prayer in which we confess our utter dependence on God and look to him in faith and love to supply us with all things which we really need to enable us to live according to his will.

The Gk. word *epiousios*, translated 'daily', occurs only in Mt. 6:11 and Lk. 11:3, and (reportedly) in one papyrus document (unfortunately no longer extant), where the neuter plural form *epiousia* appears to have meant 'daily rations'. Although finality has not yet been reached regarding its correct etymological derivation, and some prefer to translate it by 'for the coming day' or 'that is needful or sufficient', the translation 'daily' seems to be quite in order. The rendering 'supersubstantial bread' goes back to Jerome, as though the reference were to Jesus as the true bread of life. J. Jeremias relates this petition to the eschatological emphasis of its predecessors as though the reference were to 'eating bread in the kingdom of God' (cf. Lk. 14:15). But in the context, what is meant is the constant provision of what is really needed and adequate for us day by day in the realm of our physical, material existence.

The next petition, 'And forgive us our debts, as we also have forgiven our debtors', is both a prayer and a confession. For he who prays for forgiveness at the same time admits that he has sinned and is guilty. In Lk. 11:4 this petition reads: 'And forgive us our sins; for we ourselves forgive every one who is indebted to us.' The Gk. word *hamartias*, here

LORD'S PRAYER, THE

rendered 'sins', has the primary meaning of 'missing the mark' and thus 'acting wrongly' and 'breaking the law of God'. In Mt. 6:12 *opheilēmata* ('debts') preserves the Aramaic idiom in which the word for 'debt' (*hōbā*) is also used in the sense of 'sin'. By sinning we have incurred a moral and spiritual debt to our Father and Creator, who has full authority over our lives. In this petition we therefore humbly ask him for a remission of our debts, seeing that we ourselves can never earn our forgiveness.

The words 'as we also [*hōs kai hēmeis*, 'in the same way also as we'] have forgiven [aorist] our debtors' (Mt. 6:12) and 'for we ourselves forgive [present indicative] every one who is indebted to us' (Lk. 11:4) do not mean that we are to ask forgiveness on the ground of our forgiving those who sin against us. We can receive forgiveness through grace alone. But in order to pray to God for forgiveness in sincerity and without hypocrisy, we must be free from all spirit of hatred and revenge. Only when God has given us the grace truly to forgive those who sin against us can we utter a true prayer for forgiveness. This was looked upon by our Lord as of such importance that he reiterated it in Mt. 6:14-15 (cf. Mt. 18:23-35; Mk. 11:25).

The final petition in Lk. 11:4 reads: 'And lead us not into temptation'. In Mt. 6:13, the words 'but deliver us from evil' (rsvmg. 'the evil one') follow. These additional words help to make the petition one of general application. Those who sincerely pray for forgiveness of sins long to be enabled not to sin again. Thus it is fitting that this petition follows the previous one. God never tempts anyone to do evil (Jas. 1:13), but he controls the circumstances of our lives. In this prayer we humbly confess that we are prone to sin and thus plead with him not to allow us to be brought into situations or conditions which involve grave temptation to sin. As a further elaboration of this there follows 'but deliver us from the evil one', i.e. shield, protect, guard (*rhyesthai*) us against the onslaughts of the devil (*tou ponērou*). This final petition, although applicable to every day in our lives, points very clearly to the consummation when our Lord will put an end to all that is evil, and establish his eternal kingdom of righteousness and holiness.

This brings us to the consideration that in the setting of Jesus' ministry this petition struck an eschatological note. The NEB rendering ('And do not bring us to the test') indicates this, albeit too cryptically. The test is that crucial test of the disciples' faith which, without divine strength, would prove too intense for them to resist. The form taken by that test was shown in the setting of Gethsemane (the final test also for Jesus himself). The exhortation to the disciples, 'Watch and pray that you may not enter into temptation' (Mk. 14:38) probably means 'Keep awake, and pray not to fail in the test'. This suggests that the petition in the Lord's Prayer means, 'Grant that we may not fail in the test' (cf. C. C. Torrey, *The Four Gospels*, 1933, p. 292). And today, over and above the general plea to be delivered from temptation, Christians may use the petition as a prayer for grace and power to keep them from failing when their faith is challenged by a supreme test.

In some ancient and many later MSS of Mt. 6:13 a doxology follows. In the AV it reads, 'For thine is the kingdom, and the power, and the glory, for ever. Amen.' Although the most authoritative MSS do not have the doxology, it has been used in the

Christian church from the earliest times (cf. the *Didache* and the Western Text), and it is certainly a most suitable and worthy ending for the Lord's Prayer. That it does not, however, belong to the original text of Matthew is apparent from the fact that vv. 14 and 15 follow naturally after vv. 12 and 13a.

Someone has rightly said that the Lord's Prayer is Jesus' message of the kingdom of God summarized in prayer form. It is the prayer which all Christians should regularly offer to God in order to be enabled to live as his children ever more completely until the day when his sovereignty is perfectly established.

It should be noted that our Lord (when teaching his disciples this prayer) did not say, 'we must pray' but 'you pray'. The Lord's Prayer is the prayer which he taught, not one which he used. He does not appear ever to have used the expression 'Our Father' in such a way as to include his disciples with himself (cf. Jn. 20:17, 'my Father and your Father'), nor is there any hint that he ever felt the need to ask forgiveness for himself.

While the individual petitions in the Lord's Prayer are paralleled in various contexts in Jewish religious literature, nothing comparable to the prayer as a whole is found. The Lord's Prayer is unique, and unsurpassed even to this day—gathering in a few words all the essentials of true prayer.

LORD'S SUPPER, THE. It will be most convenient to set out the NT evidence for the Christian ordinance under the headings of 'The Last Supper'; 'The breaking of bread'; 'The Pauline Eucharist'; and 'Other NT material'.

I. The Last Supper

a. Was it the Passover?

The precise nature of the meal which the Lord shared with his disciples on the night in which he was betrayed is one of the most warmly debated topics of NT history and interpretation. Various suggestions have been made.

1. The traditional explanation is that the meal was the customary Passover feast, and this can claim the support of the Gospel records, both Synoptic (e.g. Mk. 14:1-2, 12-16) and Johannine (e.g. 13:21-30). There are features of the meal which students of Judaism (notably P. Billerbeck and G. H. Dalman) have noted as distinguishing features of the Paschal feast, e.g. reclining at the table (*ABRAHAM'S BOSOM), the distribution of alms (cf. Jn. 13:29), and the use of the 'sop' which is dipped in the special *harōset* sauce as a memorial of the bitterness of the Egypt. bondage. See the full details in G. H. Dalman, *Jesus-Jeshua*, E.T. 1929, pp. 106ff., and J. Jeremias, *The Eucharistic Words of Jesus*, E.T. 1966, pp. 41ff. But the evidence is not so compelling as to exclude all other interpretations, although there is a tendency today, espe-

cially since the first publication of Jeremias' book in 1949, to give more respectful consideration to the Passover view than was formerly done. The earlier judgment was similar to that expressed by Hans Lietzmann, who dismissed the Paschal theory of the Supper as containing scarcely 'the least vestige of probability' (*Mass and Lord's Supper*, E.T. 1953, p. 173). There has been a reaction from this extreme negativism.

2. The data which caused some questioning of the traditional view are mainly derived from the Fourth Gospel, which apparently dates the events of the Supper evening and the passion a day earlier than the Synoptics. According to Jn. 13:1; 18:28; 19:14, 31, 42, the crucifixion happened a day before Nisan 15, which is the Synoptic reckoning, and the Last Supper was, of course, eaten on the evening before that. Thus it cannot have been the regular paschal meal, for the Lord died at the same time as the lambs for that meal were being immolated in the Temple ritual. Thus there is an apparent *impasse*, which is further complicated by the allegation that the Synoptic account is not consistent with itself; for instance, Lk. 22:15 may be read as an unfulfilled wish. For those scholars who prefer to support the Johannine dating (e.g. J. H. Bernard in the *ICC on John*) and believe that the last meal could therefore not have been the Passover, the question arises, what type of meal, then, was it? They answer this question by postulating a sabbath *Qiddūsh*, i.e., according to this view, Jesus and his followers constituted a religious group which met on the eve of the sabbath and the Passover, and held a simple service in which a prayer of sanctification (*Qiddūsh*) over a cup of wine was said.

3. As a modification of this suggestion Hans Lietzmann put forward the idea that the meal was an ordinary one, and the Lord and his disciples, who shared it, formed a religious association called a *habūrāh*, similar to the groups in which the Pharisees met. All these ideas have met with severe criticism, and there is apparent deadlock in the debate; though it is now being reopened through the investigation of the new evidence of the Qumran scrolls.

4. In the light of recent researches into the influence of separate calendars which were used for calculating feast-days, it is now possible to consider again the older submissions of P. Billerbeck and J. Pickl that the two strata of Gospel evidence may be harmonized on the assumption that both are understandable, with each reflecting a different tradition. Billerbeck and Pickl distinguished between the Pharisaic date of the Passover which Jesus used and the Sadducean dating a day earlier which lies behind the Fourth Gospel. This was dismissed by critics as lacking in supporting evidence, but the Dead Sea Scrolls show that there were divergent calendars in use in heterodox Jewry, and it is possible that separate traditions were, in fact, in vogue at the time of the passion. Mlle A. Jaubert has recently reconstructed the events on this basis so as to harmonize the data of the Gospels and early liturgical witnesses (in her book *The Date of the Last Supper*, E.T. 1965. See for an acceptance of her thesis, E. E. Ellis, *The Gospel of Luke*, *NCB*, 1974, pp. 249f. and Mlle Jaubert's later contribution in *NTS* 14, 1967-8, pp. 145-164.

Whether the date of the Supper will ever be conclusively determined is uncertain; but we may certainly believe that, whatever the exact nature of the meal, there were Passover ideas in the Lord's mind

when he sat down with the disciples. The Jewish Passover, based on Ex. 12 and interpreted in the *Haggādāh* for Passover and the Mishnaic tractate *Pesahim*, provides the indispensable key to an understanding of the meal and also the meaning of the Lord's Supper in the early church. This conclusion is reinforced by recent studies in typology which have shown the importance of the OT events in their 'typological' significance for the NT writers; and no complex of saving events comes more decisively to the foreground in the thinking of early Christianity than the Exodus and redemption from Egypt (cf. H. Sahlin, 'The New Exodus of Salvation according to St Paul', in *The Root of the Vine*, ed. A. Fridrichsen, 1953, pp. 81-95; J. Daniélou, *Sacramentum Futuri*, 1950, Book IV, pp. 131ff.). Reference may also be made to the important contribution of T. Preis, *Life in Christ*, E.T. 1954, p. 90, who shows the place of 'the totality of the events of the Exodus centring on the Passover' in both Jewish and Christian traditions.

b. *The words of institution*

We turn now to examine more closely the last meal in the upper room. Two questions immediately arise. What was the *form* of the words of institution, spoken over the bread and wine? And what was their *meaning*?

1. The original form of the words is not easily discoverable because there are several sets of variants, represented chiefly in the Marcan and the Pauline traditions respectively. Lk. 22:15-20 has peculiarities of its own, both textual and hermeneutical. There is a recent tendency to accept the longer recension of the Lucan text against the shorter readings of the Western ms D and certain Old Lat. and Syrian mss which omit verses 19b and 20. The value of the Lucan *pericope* lies in its place as independent evidence of the same tradition as that used by Paul with the unusual order 'cup—bread' in Lk. 22:17-19 and 1 Cor. 10:16, 21 (cf. *Didache* 9); and the preservation in both accounts of the command to repeat the rite (Lk. 22:19b; 1 Cor. 11:25). The originality of the 'longer text' has been virtually established by H. Schürmann, *Bib* 32, 1951, pp. 364-392, 522-541. Cf. E. E. Ellis, *Luke*, pp. 254-256 (biblio).

On the issue of Marcan versus Pauline form the arguments on both sides are inconclusive. Some scholars feel that Jesus could never have suggested that the disciples were to drink his blood, even symbolically, and the Pauline version, 'This cup is the new covenant in my blood' (1 Cor. 11:25), is more likely to be original, especially as the Marcan formula is liturgically symmetrical with that about the bread, and is aligned to Ex. 24:8 (LXX). Against this it has been contended by A. J. B. Higgins that the Marcan form is more primitive because of its harsh Semitisms in the Greek and the obvious dependence on the Servant passages in Isaiah, although Higgins would wish to excise some of the Marcan phrases. At all events, we may consider the following to be somewhere near the original: 'Jesus took a loaf, pronounced a blessing, broke it and said, This is my body. And he took a cup, blessed it and said, This cup is the new covenant in my blood (Paul), or, This is my blood of the covenant (Mark).' Then followed the eschatological pronouncement, cf. Mk. 14:25; 1 Cor. 11:26. On the 'vow of abstinence', see J. Jeremias, *New Testament Theology*, 1, E.T. 1971, pp. 298f.

2. If we begin with the eschatological utterance

LORD'S SUPPER, THE

this will be explained as the hope of the early believers, instructed by the Lord, that their fellowship with him will be fulfilled in the perfected kingdom of God; and this sets a *terminus ad quem* for the Pauline Eucharist, for when the Lord returns in glory to unite his people in fellowship the memorial table-fellowship will cease (cf. M. Dibelius, *From Tradition to Gospel*, E.T. 1934, p. 208).

The interpretative words over the elements have been variously estimated. There is no ground for a literal equivalence as in the doctrine of transubstantiation. The copula 'is' is the exegetical *significat* as in Gn. 41:26; Dn. 7:17; Lk. 8:11; Gal. 4:24; Rev. 1:20; and in the spoken Aramaic the copulative would be lacking, as in Gn. 40:12; Dn. 2:36; 4:22. The figurative, non-literal connotation 'ought never to have been disputed' (Lietzmann).

The words, 'body, blood', are sometimes taken in the sense that Jesus is referring to his impending death on the cross when his body was broken (but cf. Jn. 19:31–37) and his blood shed in violent death. The principal objection to this symbolic view is that the word over the bread was not spoken when it was broken but when it was distributed, and the wine had been poured out at an earlier part of the paschal meal. Also there is nothing unusual or unique in the fact that bread was broken. 'To break bread' was a common Jewish expression for the sharing of a meal.

Another view takes the Gk. term *sōma* (body) to denote the Aramaic *gūḇ*, which means not only 'body' but 'person', as though Jesus said, 'This is my person, my real self'; and points to his continuing fellowship as risen Lord with his people as they repeat the table-fellowship. Jeremias, however, has objected to this suggestion of Dalman (*op. cit.*, p. 143) by remarking that the true counterpart to 'blood' is not 'body', *sōma*, but 'flesh', *sarx*, for which the Aramaic is *bisrī*, 'my flesh'. But see E. Schweizer, *The Lord's Supper according to the New Testament*, E.T. 1967, pp. 14–17.

The most valuable clue to the meaning of the Lord's instituting words is to be found in the part which food and drink play in the Passover ritual. Following Higgins' interpretation, we may take the words of the institution to be the Lord's own addition to the order of the paschal liturgy at two vital points, before and after the main meal. He tells his disciples, by his words and prophetic symbolism, that the original meaning of the paschal rite has now been transcended, inasmuch as he is the paschal Lamb fulfilling the OT prefigurement (1 Cor. 5:7). His words and action in taking the bread and the cup are parables which announce a new significance. The bread becomes under his sovereign word the parable of his body yielded up in the service of God's redeeming purpose (cf. Heb. 10:5–10); and his blood outpoured in death, recalling the sacrificial rites of the OT, is represented in the cup of blessing on the table. That cup is invested henceforward with a fresh significance as the memorial of the new Exodus, accomplished at Jerusalem (Lk. 9:31).

The function of the elements is parallel, then, to that of the Passover dishes. At the annual feast the Israelite is linked, in a realistic and dynamic way, with his forebears whom the Lord redeemed from Egypt. The bread on the table is to be regarded as though it were 'the bread of affliction' which the Jews of old ate (Dt. 16:3 as interpreted in the Passover *Haggādāh*); he is to account himself as though he personally was set free from Egypt. tyr-

anny in that first generation of his nation long ago (Mishnah, *Pesahim* 10. 5). At the Lord's Table which is genetically related to the upper room the church of the new Israel is gathered as the people of the new covenant (Je. 31:31ff.); is confronted afresh with the tokens of that once-offered sacrifice; and relives that experience by which it came out of the Egypt of sin and was ransomed to God by the precious death of God's paschal Victim. Further details of this 'dynamic' significance of the Lord's supper elements are given in R. P. Martin, *Worship in the Early Church*, 1974 ed., pp. 114ff.

II. The breaking of bread

In the early church of the Acts there are scattered references to table-fellowship, e.g. Acts 2:42, 46 where the phrase is 'breaking of bread'. In Acts 20:7 (but not 27:35, which describes an ordinary, non-cultic meal) there is a reference to a fellowship meal, using the identical phrase. The fact that no mention of the cup is ever made in Acts leads H. Lietzmann (see *ExpT* 65, 1953–54, pp. 333ff. for a clear, yet critical, statement of his theory) to the elaborate thesis that this Jerusalem communion in one kind is the earliest and most original form of the sacrament, though hardly deserving the name. It was, *ex hypothesi*, a fellowship meal beginning with the familiar Jewish custom of breaking of bread—a continuation, in fact, of the common meals of the Galilean ministry when the Lord fed the crowds and in which the Lord and his disciples formed a *ḥabūrāh*. The motif of the Jerusalem rite was not the death of Jesus, but the invisible presence of the exalted Lord in their midst. The Lord's Supper of 1 Cor. 11 with its emphasis on the atoning significance of the death of Christ was Paul's own new contribution, received by special revelation from the Lord in glory. So Lietzmann suggests.

But this elaboration is unnecessary. There is little suggestion that Paul was such an innovator. As A. M. Hunter remarks, 'It staggers belief that he could have successfully foisted his innovation . . . on the church at large' (*Paul and His Predecessors*, 1961, p. 75). The non-mention of the cup may not be significant; the name 'breaking of bread' may be a quasi-technical expression for the whole meal. What is significant about the early form of the Eucharist is the note of joy which stems directly, not so much from the Galilean meals as from the post-resurrection appearances, many of which are associated with a meal between the victorious Lord and his own (Lk. 24:30–35, 36–48; Jn. 21:9ff.; Acts 1:4 (rvmg.); 10:41; Rev. 3:20).

III. The Pauline Eucharist

The common meals of the Galilean ministry are more likely to find their fulfilment in the *agapē* or love feast of the Corinthian church (1 Cor. 11:20–34). At Corinth there were two parts of the cultic observance: a common meal, taken for the purpose of nourishment (cf. *Didache* 10. 1: 'after you are filled'), followed by a solemn rite of the Eucharist. (* LOVE FEAST.) There were serious excesses within the Corinthian assembly, such as greediness, selfishness, drunkenness and gluttony. Paul issued a grave warning, and the impression we gather is that it was his desire to have the two parts kept separate, as happened in the later church. Let the hungry eat at home, and come with reverence and self-examination to the Table, is his caution (11:22, 30–34).

Paul's distinctive eucharistic teaching serves to enhance the significance of the Supper by anchoring it firmly in God's redeeming purpose; so that it proclaims the Lord's death (1 Cor. 11:26) as the Passover ritual set forth (hence the title, *Haggādāh*, i.e. declaration, for which the Gk. equivalent would be the Pauline *katangellein* of 1 Cor. 11:26) the redeeming mercy of God under the old covenant. He also expounds the inner meaning of the Table as a communion (*koinōnia*) with the Lord in his death and risen life, signified in the bread and the wine (1 Cor. 10:16). Therein he discovers the unity of the church, for as the members share together the one loaf they sit down as the one body of Christ (cf. A. E. J. Rawlinson's essay in *Mysterium Christi*, ed. Bell and Deissmann, 1930, pp. 225ff.). There are eschatological overtones likewise, as in the evangelic tradition, with the forward look to the advent in glory. *Marānāthā* in 1 Cor. 16:22 may very well be placed in a eucharistic setting so that the conclusion of the letter ends with the invocation 'Our Lord, come!' and prepares the scene for the celebration of the meal after the letter has been read to the congregation (cf. Lietzmann, *op. cit.*, p. 229; J. A. T. Robinson, 'The Earliest Christian Liturgical sequence?', *JTS* n.s. 4, 1953, pp. 38-41; but see C. F. D. Moule, *NTS* 6, 1959-60, pp. 307ff.). See, too, G. Wainwright, *Eucharist and Eschatology*, 1971. Further exposition of Paul's teaching on the Supper is offered in R. P. Martin, *op. cit.*, ch. 11.

IV. Other New Testament material

It is surely significant that there is little other *direct* NT witness to the sacrament apart from the references we have already given. This fact is especially important when it comes to an assessment of Paul's so-called 'sacramentalism'. The writer of 1 Cor. 1:16-17 could never have been one who regarded the sacraments as the last word about the Christian faith and practice; yet we must equally admit that, in C. T. Craig's words, 'Paul would not have understood an expression of Christian faith apart from a community in which the Lord's Supper was celebrated' (quoted by A. M. Hunter, *Interpreting Paul's Gospel*, 1954, p. 105). Adolf Schlatter, we believe, gives the truest estimate in his observation on the apostle's sacramental theology: Paul 'can express the word of Jesus, not in half measure but completely, without mentioning the sacraments at all. But if they come into view he connects with them the entire riches of the grace of Christ, because he sees in them the will of Jesus, not partially but fully expressed and effective' (*Die Briefe an die Thessalonicher, Philipper, Timotheus und Titus*, 1950, p. 262).

What is true of Paul is true of the other NT writers. There may be allusions to the Lord's Supper in such places as Heb. 6:4; 13:10; and John's Gospel contains the notable synagogue discourse which many scholars relate to the eucharistic tradition of the later church (Jn. 6:22-59); but we should not overpress these references, as O. Cullmann seems to have done in finding numerous subtle references to sacramental worship in the Fourth Gospel (see his *Early Christian Worship*, 1953, pp. 37ff., especially p. 106).

There is the witness of 2 Pet. 2:13 and Jude 12 to the *agapē* meal. Apart from these somewhat exiguous data and meagre details, the NT is silent about the ordering and observance of eucharistic wor-

ship in the primitive communities, mainly owing to the fact that what is generally received and practised is not usually the subject of extended comment. For the development of the rite, and, it must be confessed, a fruitful source of heresy and confused doctrine, we must await the correspondence, epistles and liturgies of the 2nd and subsequent centuries, from 1 Clem. 40. 2-4; Ignatius, *Smyr-naeans*. 8. 1; *Didache* 9-10, 14 onwards.

BIBLIOGRAPHY. This article has mentioned some of the main works of importance. Of special value is A. J. B. Higgins, *The Lord's Supper in the New Testament*, 1952; and for the later development, J. H. Srawley, *The Early History of the Liturgy*, 1947. Useful surveys of recent discussion of the NT evidence are books by E. Schweizer, *The Lord's Supper according to the New Testament*, E.T., 1967 (bibliography); H. Patsch, *Abendmahl und historisch Jesus*, 1972; I. H. Marshall, *Last Supper and Lord's Supper*, 1980. See, for a more popular treatment, R. P. Martin, *Worship in the Early Church*, 1974. R.P.M.

LOT (Heb. *lōt*, 'covering?'). The son of Haran, Abraham's youngest brother, and so Abraham's nephew. Apart from the account of his life in Genesis, his name is absent from the OT (except for references to his descendants in Dt. 2:9, 19; Ps. 83:8), but he is mentioned by our Lord in Lk. 17:28-32 and also by Peter in 2 Pet. 2:7f.

He accompanied Terah, Abram and Sarai as they journeyed from Ur to Harran, and went on with Abram and Sarai into Canaan, down into Egypt and then out again into Canaan (Gn. 11:31; 12:4-5; 13:1). Flaws in his character first appear when he selfishly chose the well-watered Jordan valley (Gn. 13:8-13). This brought him into the midst of the wicked men of Sodom, and he had to be rescued from the results of his folly, first by Abraham (Gn. 14:11-16), and then by the two angels (Gn. 19). In the latter incident he revealed both his weakness and his inclination to compromise. His salvation from Sodom is expressly linked with God's remembrance of Abraham in Gn. 19:29.

Through his drunkenness his two daughters obtained children by him, and these became the ancestors of the Moabites and the Ammonites (Gn. 19:30-38; cf. Dt. 2:9, 19; Ps. 83:8).

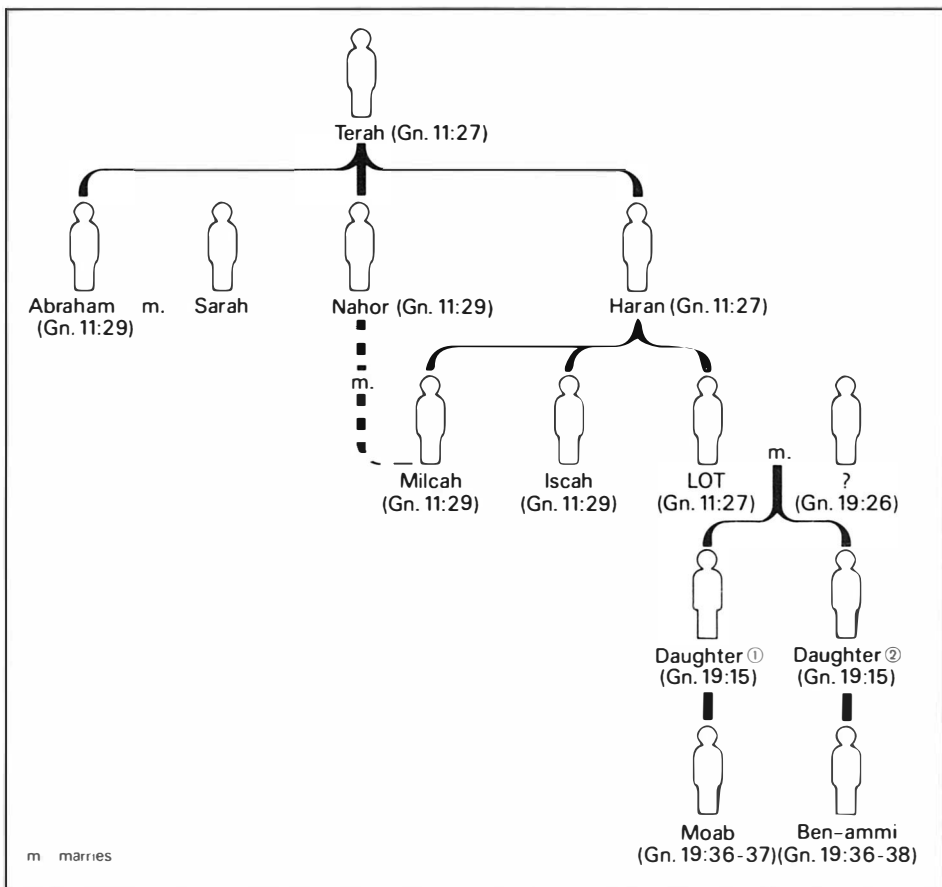

Our Lord illustrated his teaching on the subject of his return from the story of Lot and his wife (Lk. 17:28-32), thus setting his seal upon its historicity, and 2 Pet. 2:7f. emphatically asserts his righteousness. It is probable that Peter is here deliberately alluding to Abraham's prayer for the 'righteous' in Sodom. G.W.G.

LOVE, BELOVED.

I. In the Old Testament

a. Etymology

Love is the translation in the evv primarily of the Heb. *āhēb*, which is in every way as broad in its usage as the English word, and easily the most common word for every range of its meaning. Other Heb. words are *dōd* and *rā'yā* (respectively of passionate love and its female object, especially in Ct.), *yādad* (e.g. Ps. 127:2), *hāšaq* (e.g. Ps. 91:14), *hābab* (only Dt. 33:3), *'āgab* (e.g. Je. 4:30, of paramours) and *rāham* (Ps. 18:1).

Lot's family (see p. 699).

In the OT love, whether human or divine, is the deepest possible expression of the personality and of the closeness of personal relations. In the non-religious sense *'āhāv* is most commonly employed of the mutual urge of the sexes, in which there is no restraint or sense of uncleanness (see Ct. for its most sublime expression). It is also used of a multitude of personal (Gn. 22:2; 37:3) and sub-personal (Pr. 18:21) relations which have no connection with the sexual impulse. Fundamentally it is an inner force (Dt. 6:5, 'might') which impels to performing the action which gives pleasure (Pr. 20:13), obtaining the object which awakens desire (Gn. 27:4), or in the case of persons to self-sacrifice for the good of the loved one (Lv. 19:18, 34), and unswerving loyalty (1 Sa. 20:17-42).

b. God's love for men

(i) *Its object.* This is primarily a collective group (Dt. 4:37, 'your fathers'; Pr. 8:17, 'those who love me'; Is. 43:4, 'Israel'), though the implication is clear that the individual shares in the divine regard for the group. Only in three places is God said in so many words to love an individual, and in each case it is a king (2 Sa. 12:24 and Ne. 13:26, Solomon; Is. 48:14, ?Cyrus). Here the special relationship may be because Israel's king is in some sense regarded

as a son of God (cf. 2 Sa. 7:14; Pss. 2:7; 89:26f.), while Cyrus in the Isaianic passage may be a representative figure.

(ii) *Its personal nature.* Being rooted firmly in the personal character of God himself, it is deeper than that of a mother for her children (Is. 49:15; 66:13). This is most clear in Ho. 1-3, where (in whatever order the chapters are to be read) the relation between the prophet and his unfaithful wife Gomer is illustrative of the ultimate basis of the divine covenant in a deeper than legal relationship, in a love that is willing to suffer. God's love is part of his personality, and cannot be swayed by passion or diverted by disobedience (Ho. 11:1-4, 7-9; this passage is the nearest the OT approaches to a declaration that God is love). Israel's unfaithfulness can have no effect upon it, for 'I have loved you with an everlasting love' (Je. 31:3). The threat to 'love them no more' (Ho. 9:15) is best interpreted as one to be their God no more.

(iii) *Its selectiveness.* Dt. in particular bases the covenant relationship between Israel and God on God's prior love. Unlike the gods of other nations, who belong to them for natural and geographic reasons, Yahweh took the initiative and chose Israel because he loved her (Dt. 4:37; 7:6ff.; 10:15; Is. 43:4). This love is spontaneous, not evoked by any intrinsic worth in its object, but rather creating

that worth (Dt. 7:7). The corollary is also true, that God hates those whom he does not love (Mal. 1:2f.). Although in various passages, notably Jon. and the Servant Songs of Is., a doctrine of universal love is foreshadowed, it nowhere finds concrete expression.

c. Love as a religious duty

(i) *Towards God.* Love for God with the whole personality (Dt. 6:5) is God's demand; though this is not to be understood as meaning merely a punctilious observance of an impersonal divine law but rather as summoning to a relationship of personal devotion created and sustained by the work of God in the human heart (Dt. 30:6).

It consists in the simple joyful experience of communion with God (Je. 2:2; Pss. 18:1; 116:1), worked out in daily obedience to his commandments (Dt. 10:12, 'to love him, to serve the Lord your God'; Jos. 22:5, 'to love the Lord your God and to walk in all his ways'). This obedience is more fundamental to the nature of love for God than any feeling. God alone will be the judge of its sincerity (Dt. 13:3).

(ii) *Towards fellow men.* Love is ordained by God to be the normal, ideal human relationship, and as such is given the sanction of the divine law (Lv. 19:18), though the parallel prohibition of hatred with its reference to the heart (Lv. 19:17) shows clearly that this too is deeper than a merely legal relationship. An enemy is never commanded to be loved, though he is to be helped (Ex. 23:4f.), even if for somewhat selfish motives (Pr. 25:21f.).

II. In the New Testament

a. Etymology

The commonest Gk. word in the NT for all forms of love is *agapē*, *agapaō*. This is one of the least frequent words in classical Greek, where it expresses, on the few occasions it occurs, that highest and noblest form of love which sees something infinitely precious in its object. Its use in the NT derives not directly from classical Greek so much as from the LXX, where it occurs in 95% of all cases where *evv* translate the Hebrew by 'love', and in every case of love from God to man, man to God and man to his neighbour. The dignity which the word possesses in the NT has been contributed by its use as a vehicle of the OT revelation. It is pregnant with OT associations.

phileō is the alternative word to *agapaō*. It is more naturally used of intimate affection (Jn. 11:3, 36; Rev. 3:19), and of liking to do things which are pleasant (Mt. 6:5), though there is considerable overlapping of usage between the two words. Much exegesis of Jn. 21:15-17 has turned on Peter's willingness to say *philō se* ('I am your friend', J. B. Phillips), and apparent reluctance to say *agapō se*. It is difficult to see why a writer of such simple Greek as John should have used the two words in this context unless he intended a distinction to be drawn between their meanings. The existence of any clear distinction, here or elsewhere, is, however, seriously disputed by scholars, and is not noticed by ancient commentators, except perhaps by Ambrose (*On Luke* 10. 176) and in the Vulg., which in this passage employs *diligō* and *amō* to translate *agapaō* and *phileō* respectively. (B. B. Warfield, 'The Terminology of Love in the New Testament', *PTR* 16, 1918; J. H. Bernard, *St John*, ICC, 2, 1928, pp. 701ff.)

b. God's love

(i) *For Christ.* The relationship between the Father and the Son is one of love (Jn. 3:35; 15:9; Col. 1:13). The word 'beloved' (*agapētos*), carrying with it a strong sense of 'only-beloved', is employed in the Synoptics only of the Christ, either directly (Mt. 17:5; Mk. 1:11) or by inference (Mt. 12:18; Mk. 12:6) (B. W. Bacon, 'Jesus' Voice from Heaven', *AJT* 9, 1905, pp. 451ff.). This love is returned and mutual (Jn. 14:31; cf. Mt. 11:27). Since this love is historically prior to creation (Jn. 17:24), it follows that, though known by men only as revealed in Jesus Christ and in redemption (Rom. 5:8), it is of the very nature of the Godhead (1 Jn. 4:8, 16), and that Jesus Christ, who is love incarnate and personified (1 Jn. 3:16), is God's self-revelation.

(ii) *For men.* Jesus is not recorded in the Synoptic Gospels as using *agapaō* or *phileō* to express God's love for men. Rather he revealed it by his countless acts of compassionate healing (Mk. 1:41; Lk. 7:13), his teaching about God's acceptance of the sinner (Lk. 15:11ff.; 18:10ff.), his grief-stricken attitude to human disobedience (Mt. 23:37; Lk. 19:41f.), and by being himself a friend (*philos*) of tax-collectors and outcasts (Lk. 7:34). This saving activity is declared in Jn. to be a demonstration of the love of God, imparting an eternal reality of life to men (Jn. 3:16; 1 Jn. 4:9f.). The whole drama of redemption, centring as it does on the death of Christ, is divine love in action (Gal. 2:20; Rom. 5:8; 2 Cor. 5:14).

As in the OT, God's love is selective. Its object is no longer the old Israel, but the new, the church (Gal. 6:16; Eph. 5:25). God's love and his choosing are closely connected, not only in Paul but clearly too by inference in certain sayings of Jesus himself (Mt. 10:5f.; 15:24). Those whom God's life-giving love does not reach are 'children of wrath' (Jn. 3:35f.; Eph. 2:3ff.) and of 'the devil' (Jn. 8:44). God's intention, however, is clearly the salvation of the whole world (Mt. 8:5; 28:19; Rom. 11:25f.), which is ultimately the object of his love (Jn. 3:16; 6:51), through the preaching of the gospel (Acts 1:8; 2 Cor. 5:19). Individuals are loved by God under the new covenant (Gal. 2:20), though response to his love involves fellowship in the people of God (1 Pet. 2:9f., a passage generally regarded as having a baptismal context).

c. Love as a religious duty

(i) *Towards God.* Man's natural state is to be God's enemy (Rom. 5:10; Col. 1:21), and to hate him (Lk. 19:14; Jn. 15:18ff.), this enmity being seen for what it is in the crucifixion. This attitude is transformed into one of love by the prior action of God in loving man (1 Jn. 4:11, 19). So closely related is God's love for man and man's for God that it is often difficult to decide whether the phrase 'the love of God' denotes a subjective or objective genitive (e.g. Jn. 5:42).

Jesus himself, though he accepted and underlined the Shema with his own authority (Mk. 12:28ff.), and expected men to love God and himself when there was ample opportunity for them not to (Mt. 6:24; 10:37f.; Lk. 11:42; Jn. 3:19), preferred to speak of the ideal man-God relationship as one of faith (Mt. 9:22; Mk. 4:40). The word love appears not to have sufficiently emphasized for him the humble trust which he regarded as vital in man's relationship to God. Accordingly, though

LOVER, BELOVED

love to God, worked out in service to one's fellows, is enjoined in the rest of the NT (1 Cor. 2:9; Eph. 6:24; 1 Jn. 4:20; 5:2f.), the writers more commonly follow Jesus' example and enjoin faith.

(ii) *Towards fellow men.* As in the OT, mutual love is to be the ideal human relationship. Jesus corrected contemporary Jewish thought in two directions. (a) He insisted that the commandment to love one's neighbour is not a limiting ordinance (Lk. 10:29), as in much rabbinic exegesis of Lv. 19:18, but rather means that the neighbour is to be the first object, because the nearest, of the love which is the characteristic of the Christian heart (Lk. 10:25-37). (b) He extended this demand for love to include enemies and persecutors (Mt. 5:44; Lk. 6:27), though none but the new people of God can be expected to have this attitude, for the demand belongs to a new time (Mt. 5:38f.), involves supernatural grace ('reward', Mt. 5:46; 'credit', Lk. 6:32ff.; 'more', Mt. 5:47), and is addressed to a group of 'hearers' (Lk. 6:27), who are sharply differentiated from sinners (Lk. 6:32ff.) and tax-collectors (Mt. 5:46f.).

This new attitude is far from a sentimental utopianism, for it must issue in practical help to those who need it (Lk. 10:33ff.), nor is it a superficial virtue, for it involves a fundamental response of the heart (1 Cor. 13 *passim*) to the prior love of God (1 Jn. 4:19), and an acceptance of the Spirit's work in the depths of a man's being (Gal. 5:22).

The characteristic form of this love in the NT is love for the fellow Christian (Jn. 15:12, 17; Gal. 6:10; 1 Pet. 3:8; 4:8; 1 Jn. 2:10; 3:14), love for the outsider being expressed in the evangelistic outreach (Acts 1:8; 10:45; Rom. 1:15f.) and in the patient endurance of persecution (1 Pet. 2:20). The Christian loves his brother: (a) to imitate God's love (Mt. 5:43, 45; Eph. 5:2; 1 Jn. 4:11); (b) because he sees in him one for whom Christ died (Rom. 14:15; 1 Cor. 8:11); (c) because he sees in him Christ himself (Mt. 25:40). The very existence of this mutual love, issuing as it does in the unity of Christian people (Eph. 4:2f.; Phil. 2:1ff.), is the sign *par excellence* to the outside world of the reality of Christian discipleship (Jn. 13:35).

LOVE FEAST. The Christian duty to love one another has always been expressed in gatherings for fellowship. Such fellowship was realized from early times by participation in a common meal, and love feasts, *agapai*, are mentioned by Jude (v. 12; cf. 2 Pet. 2:13, rv). Among the Jews meals for fellowship and brotherhood were common, and similar convivial gatherings took place among the Gentiles. It was natural, therefore, that both Jewish and Gentile Christians should adopt such practices. The name *agapē* was later given to the fellowship meal. It is an anachronism, however, to apply it in its later sense to the conditions described in Acts and 1 Corinthians. 'The breaking of bread' referred to in Acts 2:42, 46 may describe a common meal which included both *Agapē* and Eucharist (see F. F. Bruce, *Acts of the Apostles*, 1951). St Paul's account (in 1 Cor. 11:17-34) of the administration of the Eucharist shows it set in the context of a fellowship supper. His farewell discourse at Troas

which continued till midnight was delivered at a fellowship meal on the first day of the week which included the Eucharist (Acts 20:7ff.).

Although the common custom of fellowship meals among the Jews may have been sufficient ground for the primitive *Agapē*, some would trace the practice to the actual circumstances of the Last Supper. The sacrament was instituted at a Passover meal. Some scholars contend for another type of fellowship meal customary in the *giddish* and *habūrāh* gatherings. The early disciples probably reproduced the setting of the first Eucharist, preceding it with such a fellowship meal. The separation of the meal or *Agapē* from the Eucharist lies outside the times of the NT. The theory of Lietzmann that Eucharist and *Agapē* can be traced to two different types of sacramental observance in the NT is generally rejected (***LORD'S SUPPER**).

For later development of *Agapē* and Eucharist, see Pliny's letter to Trajan, *Didache*, Justin Martyr, *Apol.* 1. 67, Tertullian, *de Corona* 3.

LOVING-KINDNESS. One rendering of the Heb. word *hesed* given prior to the 20th century in all evv from the time of Coverdale. Most of its occurrences are in the Pss., but it comes seven times elsewhere in AV, which has ten other renderings, the most frequent being 'mercy', 'kindness' and 'goodness'. There have been many suggestions as to how it should best be translated, including 'leal-love' (G. Adam Smith), 'piety' (C. H. Dodd), 'solidarity' (*KB*) and 'covenant-love' (N. H. Snaith). RSV frequently, although not consistently, renders it 'steadfast love'. Its etymological origin is uncertain. An examination of the passages where it is found (e.g. Ps. 89, where it is rendered 'mercy' as well as 'loving kindness' in AV) reveals its close connection with the two ideas of covenant and faithfulness. Its meaning may be summed up as 'steadfast love on the basis of a covenant'. It is employed both of God's attitude towards his people and of theirs to him, the latter especially in Hosea.

LUCIFER (Lat. 'light-bearer'). This was the Lat. name for the planet Venus, the brightest object in the sky apart from the sun and moon, appearing sometimes as the evening, sometimes as the morning, star. In Is. 14:12 it is the translation of *hēlēl* ('shining one': Lxx *heōsphoros*, 'light-bearer'; cf. the Arabic for Venus, *zuhratun*, 'the bright shining one'), and is applied tauntingly as a title for the king of Babylon, who in his glory and pomp had set himself among the gods. This name is appropriate, as the civilization of Babylon began in the grey dawn of history, and had strong astrological connections. Babylonians and Assyrians personified the morning star as Belit and Ištar. Some have considered that the phrase 'son of the morning' might refer to the crescent moon; cf. Gray in *ICC*, *ad loc.*; others (e.g. S. H. Langdon, *ExpT* 42, 1930-1, pp. 172ff.) argue for an identification with the planet Jupiter. The similarity of the description here with that of such passages as Lk.

10:18 and Rev. 9:1 (cf. 12:9) has led to the application of the title to Satan. The true claimant to this title is shown in Rev. 22:16 to be the Lord Jesus Christ in his ascended glory.

D.H.W.

LUCIUS. Gk. *Loukios*, transcribing or imitating the Roman praenomen. *Loukas* (Luke) was a diminutive. (Cf. Ramsay, *BRD*, pp. 370–384, for inscriptions.)

1. A Cyrenian prophet and teacher of Antioch (Acts 13:1), probably one of its first missionaries (cf. Acts 11:19–21). A strange African quotation of Acts 13:1 noted by Zahn (cf. *INT*, 3, pp. 28f.) adds 'who remains to this day'. Probably this writer, like Ephraem Syrus *in loc.*, identifies Lucius with the traditionally Antiochene Luke.

2. A companion of Paul in Corinth, sending greetings in Rom. 16:21. He is Paul's 'kinsman', i.e. a Jew (cf. Rom. 9:3). Origen *in loc.* mentions an identification with Luke.

That either is Luke is improbable. They were undoubtedly Jews; Luke was almost certainly a Gentile (see Col. 4:11, 14).

BIBLIOGRAPHY. H. J. Cadbury, *BC*, 1. 5, pp. 489–495.

A.F.W.

LUD, LUDIM. In Gn. 10:22 and 1 Ch. 1:17 Lud is one of the descendants of Shem, and Josephus (*Ant.* 1. 144) refers to the Lydians (**LYDIA*) as his descendants. Herodotus' account of the Lydians (50. 7) does not preclude a Semitic origin. In Is. 66:19 Lud is a Gentile nation characterized by the use of the bow (probably not true of Lydia); in Ezk. 27:10 and 30:5 they are allies of Tyre and of Egypt respectively, and as such Lydia (*Lūdu*) is mentioned in Neo-Babylonian annals.

Ludim appears in Gn. 10:13 and 1 Ch. 1:11 as a descendant of Ham, and in Je. 46:9 as a bow-bearing auxiliary of Egypt. This may be an unknown African nation, but some scholars emend to *Lubim* (Libya), and even the singular *Lud to Lub* in some passages.

K.L.McK.

LUHITH, ASCENT OF. A place in Moab where the people fled from the Babylonians (Is. 15:5; Je. 48:5). Eusebius places it between Areopolis and Zoar, but it has not yet been certainly identified.

J.D.D.

LUKE. Among the companions of Paul who send their greetings in his letter to Colossae there appears 'Luke (Gk. *Loukas*) the beloved physician' (Col. 4:14); the way in which he is described suggests that he had given medical care to Paul, no doubt during the latter's imprisonment. In Phm. 24, probably written at the same time, he is described as a fellow-worker of Paul, which suggests that his help in the work of the gospel was not confined to his medical skill. There is a third reference to him in what appears to have been one of Paul's last messages: 'Luke alone is with me' (2 Tim. 4:11), and this confirms the close link between the two men. He is generally thought to have been a Gentile, but E. E. Ellis (pp. 51–53) has argued that Col. 4:11 refers to a particular group within the wider circle of Jewish Christians, and that consequently Luke may have been a Jewish Christian of the Dispersion.

Irenaeus (c. AD 180) is the first person to refer clearly to Luke and to name him as the author of the third Gospel and Acts. The same tradition is found in the Muratorian Canon and the so-called anti-Marcionite Prologue to the Gospel of Luke. The last of these documents speaks of Luke as coming from Antioch in Syria, and as serving the Lord without the distractions of a wife or family until he died at the age of 84 in Boeotia; the earliness and reliability of this tradition are uncertain.

The tradition that Luke was the author of Lk. and Acts can probably be traced back to earlier in the 2nd century. The fact that Marcion, a fanatical follower of Paul's theology, chose Lk. as the one Gospel which he recognized, probably implies that he regarded it as the work of a companion of Paul. Acts contains a number of passages written in the 1st person plural which describe events from the point of view of a companion of Paul (Acts 16:10–17; 20:5–21:18; 27:1–28:16). The fact that the author of Acts made no attempt to rewrite these passages in the 3rd person is best explained by identifying him as their original author. Of the possible companions of Paul, known to us from his Epistles but not named in Acts, Luke stands out as the probable composer of Acts and hence of Lk. This identification is found in a variant reading of Acts 20:13 ('But I Luke, and those who were with me, went on board') which may go back to early in the 2nd century.

The argument from the internal evidence of Acts is strong. It is confirmed by the external evidence of 2nd-century tradition cited above, and especially by the fact that no other candidate for the authorship of Acts was ever suggested. The claim that the tradition rests on a deduction from the NT evidence and has no independent value is pure hypothesis. There is more force in the objection that the picture of the early church in Acts, and of Paul in particular, are not such as might be expected from a companion of Paul, but this objection can be answered (F. F. Bruce, *NBCR*, pp. 968–973).

The literary style of Lk. and Acts demonstrates that their author was a well-educated person with considerable gifts of expression. The traces of medical language and the interest in medical matters displayed in them are consistent with authorship by the 'beloved physician'. Luke's gifts as a historian have been recognized by many scholars who have viewed his work against its classical background and compared him favourably with the best of ancient historians.

Luke's admiration for Paul comes out clearly in the course of Acts. Through his close contact with him and with other Christian leaders, and as a consequence of his visits to Jerusalem and Caesarea (cf. Acts 21:17ff.), Luke had ample opportunities to gain first-hand knowledge about the life of Jesus and the history of the earliest Christian church. He could rightly claim in the prologue to his Gospel that he was well qualified for his task, having carefully and thoroughly investigated all the relevant facts, as they were handed down by responsible witnesses in the church (Lk. 1:1–4).

The picture which emerges is of a self-effacing man possessed of strong human sympathies who regarded himself as a servant of the Word. With his considerable literary, historical and theological gifts, he was well fitted to recount the story of the beginnings of Christianity in a new way, adapted to the needs of the second generation in the church.

LUKE, GOSPEL OF.

I. Outline of contents

- a. Preface (1:1-4).
- b. The birth and childhood of Jesus (1:5-2:52).
- c. John the Baptist and Jesus (3:1-4:13).
- d. The ministry in Galilee (4:14-9:50).
- e. Progress towards Jerusalem (9:51-19:10).
- f. The ministry in Jerusalem (19:11-21:38).
- g. The passion and resurrection of Jesus (22:1-24:53).

II. The sources of the Gospel

In its general pattern Lk. is similar to the other two *Synoptic Gospels. It shares with Mt. an interest in the birth of Jesus, although the two Gospels tell this story from different angles. It follows the general outline of the ministry of Jesus found in Mk. (and also in Mt.), but has a considerably longer section on the progress of Jesus from Galilee to Jerusalem. Whether or not Mk. originally included some account of the resurrection appearances of Jesus, Lk. and Mt. each contain their own individual accounts of these appearances.

To a considerable extent the contents of Lk. are also shared with the other Gospels. It is generally agreed that one of Luke's major sources was Mk., and that like Matthew he drew the most part of his account of the ministry and deeds of Jesus from the earlier Gospel. Nearly all of Mk. has been incorporated in Lk., but it has been rewritten in Luke's more developed literary style. Luke also includes a good deal of the teaching of Jesus which is found in Mt. (but not in Mk.), and it is generally assumed that the two Gospels were dependent on some common source (or a collection of sources), written or oral. It is much less likely that one Gospel was dependent on the other for this material. Although the relation between the sources of Jn. and the other Gospels continues to be uncertain, it is clear that Lk. and Jn. reflect some use of common traditions, especially in the story of the passion and resurrection. In addition, there is a good deal of information about Jesus peculiar to Lk., much of it to be found in the account of Jesus' journey to Jerusalem. In some places where Luke is at first sight dependent on Mk., such as the account of the Last Supper, it is highly probable that he had access to other traditions also.

All this means that Luke was dependent upon a variety of sources of information for his Gospel and illustrates his own statement (Lk. 1:1-4) that many other persons had made earlier attempts to draw up accounts of what had happened. The same statement suggests that Luke was acquainted not only with written accounts of the ministry of Jesus but also with persons who had been eyewitnesses of it, and that he wrote his Gospel after careful research into his various sources of information.

III. Authorship, date and place of composition

The question of the authorship of Lk. is closely bound up with that of Acts. The two books are

parts of one work, and attempts to deny their common authorship have not been successful. The traditional ascription of both books to *Luke still remains the most probable view. The evidence is basically derived from *Acts. So far as the Gospel is concerned, it contains little concrete evidence for or against the traditional ascription of authorship. The claim that it breathes the atmosphere of the sub-apostolic period (*i.e.* the time after Luke's death) is too subjective to carry any conviction.

What the modern discussion of authorship has brought out is that Luke was not a slavish imitator of Paul in his theological outlook. He had his own distinctive slant on the Christian faith. His Gospel, therefore, is in no way a Pauline reinterpretation of the story of Jesus, but represents his own, independent assessment of the significance of Jesus, based on traditions handed down from the early church. We do not know how Paul regarded the earthly life of Jesus, since he makes so little mention of him in his letters, and we have, therefore, no way of comparing his views with those of Luke. If we cannot ascertain the measure of their agreement, we are equally unable to posit any disagreement between them.

In one sense, identification of the author of the Gospel sheds little light on it, since we know scarcely anything about the author additional to what can be gleaned from Lk. and Acts. In another sense, however, the knowledge of the author's identity is valuable because it confirms that he was a person well qualified (in accordance with his own explicit claim) to learn the contents of the Gospel tradition and to reformulate them. The historical credentials of the Gospel are greater than if it was the work of some unknown figure from a later date.

We do not know when or where the Gospel was written. There are two serious possibilities regarding the date, either in the early 60s or in the later decades of the 1st century. A decision depends on the date to be assigned to Mk. and on whether Luke was writing after the fall of Jerusalem prophesied by Jesus. A date before AD 70 is certainly not to be ruled out for Mk. In the case of Lk. the comparatively frequent and more precise references to the fall of Jerusalem, while based on genuine prophecy by Jesus, may be thought to reflect interest in the fulfilment of the prophecy. On the other hand, the lack of interest in the fall of Jerusalem in Acts, and the way in which that book ends its story before the death of Paul, are strong indications of a date before AD 70. It is possible that the composition of the books was largely complete before that date, although the date of completion may have been later.

Although there is a tradition of uncertain date connecting the composition of the Gospel with Achaia, there is nothing in the writing itself to substantiate this view. It is more likely that we should connect the Gospel with Rome (where Mk. was available and where Luke was present with Paul) or with Antioch in Syria (with which Luke is also connected by what is probably a more reliable tradition, and where the 'Q' source which he shared with Matthew was probably compiled). Behind the Gospel, however, there ultimately lie traditions current in Palestine. Luke's connection with the early church in Palestine and Syria is ultimately of more significance than where he adventitiously happened to produce his Gospel.

IV. Purpose and character

We are singularly fortunate in that Luke has given us his own statement of intention at the beginning of the Gospel. At the same time we can draw certain conclusions from the character of the work itself. His concern was to present the story of Jesus in such a way as to bring out its significance and its reliability for those who believed in him; and he did this in the context of a two-part work which went on to tell the story of the early church so as to demonstrate how the message of the gospel spread, in accordance with prophecy and God's command, to the ends of the earth and brought salvation to those who responded to it. Luke was writing for people at some remove from the ministry of Jesus, both in geography and in time. He addresses himself to a certain *Theophilus, whose identity remains quite unknown, but clearly this is no more than a literary dedication to a friend of the author and the book was intended for a wider audience. The dedication suggests that it was meant for members of the church, and its contents reinforce this view, but at the same time it could be used both as a handbook and as a tool for evangelism; its outward form, conforming to that of historical and literary works of the time, strongly suggests that a wider audience was in view.

Luke wrote as a man of culture and education, and his work has much more of a claim to being a deliberate literary production than the other Gospels have. It is clear that the author was a man of letters, well acquainted with the OT in Gk. and also with the style of contemporary literature, who was able to produce a work that would commend the gospel by its literary quality. Even if E. Renan intended to damn rather than to praise when he described Lk. as 'the most beautiful book that was ever written', his comment is not without some truth. Here literary art is employed as a servant of the gospel.

At the same time, Luke writes specifically as a historian. The evidence for his historical interests and abilities is more obvious in Acts, but the Gospel too is meant as a historical work whose aim is to demonstrate the reliability of the traditions about Jesus. Where we can compare his story with its sources, Luke has faithfully reproduced them, although of course he does not follow them with slavish literalness.

Literary art and historical skill are, however, servants of a conscious evangelistic and theological purpose. Two important groups of words take us to the centre of Luke's interest. The first is the verb 'to preach the gospel' (*euangelizomai*), a word which characterizes the Christmas message (Lk. 1:19; 2:10), the preaching of John (Lk. 3:18), the ministry of Jesus (Lk. 4:18, 43; 7:22; *et al.*) and the activity of the early church (Acts 5:42; 8:4; *et al.*). The fact that the verb, found frequently in Paul, is virtually absent from the other Gospels (Mt. 11:5; the corresponding noun, however, is used more often) is an indication of its significance for Luke in describing the nature of the work of Jesus and the early church. The other keyword is 'salvation' (with its cognates). Particularly in the birth stories the thought of God bringing a Saviour to his people is prominent (Lk. 1:47, 69, 71, 77; 2:11, 30); although the word-group is not so conspicuous elsewhere in Lk. and Acts, the opening emphasis on it gives the key to the nature of the gospel message, just as John's opening stress on the Word

gives the key to his Gospel. By contrast with Mark, Luke brings out the nature of Jesus' message of the kingdom of God as salvation for the lost; and where Matthew tends to present Jesus as the Teacher of true righteousness, Luke lays more stress on his action as Saviour; these contrasts, however, can be misleading if taken too far.

Luke shows how the ministry of Jesus represents the fulfilment of OT prophecy (Lk. 4:18-21; 10:23f.; 24:26f., 44-47). The new era of salvation has dawned, characterized by the preaching of the good news of the kingdom (Lk. 16:16). Although the full realization of the reign of God belongs to the future (Lk. 19:11), nevertheless God has already begun to deliver men and women from the power of Satan and the demons (Lk. 11:20; 13:16), and sinners can enjoy forgiveness and fellowship with Jesus. In Jesus the saving power of God himself is manifested (Lk. 7:16; Acts 10:38).

The One through whom God acts in this way is clearly a prophet, anointed with the Spirit, but for Luke he is more than a prophet, more even than the unique prophet like Moses for whom the people were waiting (Lk. 24:19-21; Acts 3:22f.). He is the anointed King who will reign in the future kingdom (Lk. 22:29f.; 23:42), and already he can be described as the 'Lord', the title which indicates the role of Jesus confirmed by his resurrection and exaltation (Acts 2:36). Behind these roles fulfilled by Jesus there lies his unique nature as the Son of God (Lk. 1:32).

In his presentation of the ministry of Jesus Luke draws particular attention to the concern of Jesus for outcasts; all the Gospels bear witness to this undoubted historical fact, but it is Luke who takes most delight in drawing attention to it (Lk. 14:15-24; 15; 19:1-10). He demonstrates how Jesus was concerned for women (Lk. 7:36-50; 8:1-3), for the Samaritans (Lk. 9:51-56; 10:30-37; 17:11-19) and for the Gentiles (Lk. 7:1-9); yet Luke respects the historical fact that Jesus' ministry was almost exclusively to the Jews by confining himself to hints of the wider spread of the gospel in Acts (Lk. 2:32; 13:28f.; 24:47). Another concern of Jesus to which Luke draws attention is his care for the poor and his warnings that the rich who have lived for themselves thereby shut themselves out of the kingdom of God. In the kingdom human values are subjected to a radical reappraisal. There is no room for the self-sufficient who think that worldly wealth will shield them from judgment (Lk. 6:20-26; 12:13-21; 16:19-31) or for the self-righteous who see no need for repentance (Lk. 18:9-14). On the contrary, entry to the kingdom is reserved for the poor, *i.e.*, those who know their poverty and therefore trust in God, and the repentant who recognize their sin and cast themselves upon the mercy of God. Such repentance means whole-hearted turning from sin and readiness to follow Jesus, whatever the cost (Lk. 9:23); and that cost may involve renunciation of one's possessions (Lk. 14:33; 19:8).

The picture of Jesus in Lk. is no doubt meant as an example and a pattern for his disciples. This can be seen from a comparison of the life of Jesus in the Gospel with Luke's description of the church and its members in Acts. Thus, just as the life of Jesus was governed by the plan of God, partly revealed in OT prophecy, so the life of the church is at every point guided and directed by God. As Jesus did his work in the power of the Spirit (Lk. 4:14, 18), so the early church was filled with the Spirit for its task of witness (Lk. 24:49). Similarly,

LUKE, GOSPEL OF

just as Jesus was a man of prayer, drawing guidance and inspiration from his communion with God (Lk. 3:21; 6:12; 9:18, 28f.; 22:32), so the church is to be continuously in prayer to God (Acts 1:14).

Such—in broadest outline—is the characteristic Lucan picture of Jesus and his teaching. It has a number of significant features. First, it presents the story of Jesus in terms of fulfilment of prophecy. For Luke the category of promise and fulfilment is of great significance and it provides the structure of his historical thinking. Second, Luke strongly emphasizes the actual presence of salvation in the ministry of Jesus. The accent falls on what Jesus accomplished rather than on the future, although the future dimension is by no means lacking. Third, Luke links the ministry of Jesus to the rise of the early church and shows how the latter follows on from the former. He is aware that the beginning of Christianity included both of the areas covered in the Gospel and Acts.

The effect of these considerations is to show that for Luke the story of Jesus was a part of history. The most important modern discussion of Luke, that of H. Conzelmann, argues that Luke saw the ministry of Jesus as the mid-point of history (preceded by the history of Israel and followed by the period of the church). Conzelmann claims that this was a new understanding of Jesus and stood in contrast with earlier views. The earlier understanding of Jesus was as the proclaimer of the imminent kingdom of God. Luke wrote at a time when the church was beginning to enjoy a settled existence and the future consummation of the kingdom had proved to be a disappointing hope. In effect he remoulded Christian theology to fit it for the second and subsequent generations by virtually abandoning hope of the imminent end of the world and regarding the ministry of Jesus as the midpoint in the history of God's dealings with men rather than as the immediate prelude to the end. The Christian summons to repent before the imminent end was turned into a historical account of the coming of Jesus, and the period of the church, during which the Holy Spirit would lead its members in mission, replaced the hope of the future kingdom of God.

Like so many first statements of a case, Conzelmann's understanding of Luke is one-sided and exaggerated, but it has had the merit of demonstrating that Luke was a careful theologian and of encouraging other scholars to offer a more balanced understanding of his theology. The truth is rather that the message of Jesus and the early church was not as one-sidedly futurist as Conzelmann suggests, and that Luke is simply drawing attention to the present features in that message. 'Salvation history' was by no means an invention of Luke. At the same time, Luke by no means gives up the hope of the coming of the end, and his work retains that element of tension between present realization and future hope which is typical of early Christianity. The effect of his work, however, is to lead the church away from looking for apocalyptic signs of the coming of the end to a concentration on the task of spreading the gospel.

We have to draw a distinction between the factors which moulded Luke's work and the conscious purposes which governed his writing. Among the former we must number the need to represent the story of Jesus in a way that brought it up-to-date for the church of his day. Among the latter the chief was the desire to present Jesus as

the Saviour and to show how the Spirit of God had constituted the church as the witness to Jesus. In the combination of these factors and purposes we can find the key to the distinctive nature of this Gospel in which a historical record has become a means of equipping the church for evangelism.

I. H. M.

LUST. The Eng. word was originally a neutral term describing any strong desire; hence its use in early translations of Gn. 3:16; Jn. 1:13; Nu. 14:8; Heb. 10:6. In its modern restricted sense of sexual passion it cannot adequately render many familiar contexts in AV.

The Heb. *nepeš* expresses craving or desire in Ex. 15:9 and Ps. 78:18, and carries the promise of satisfaction in Pr. 10:24. Gk. *epithymia* expresses any strong desire, the context or a qualifying adjective determining its nature, whether good or evil. Hence it is used of the intensely pure desire of Christ, Lk. 22:15, and of Paul's desire to be with Christ, Phil. 1:23, and of his longing to see his converts, 1 Thes. 2:17. Yet in 1 Pet. 4:3 it stands among a list of Gentile vices, and the adjectives 'worldly', 'evil', 'youthful' and 'deceitful' are attached to it in Tit. 2:12; Col. 3:5; 2 Tim. 2:22; and Eph. 4:22 respectively. The restricted reference to sexual passion is found in Eph. 2:3; 1 Jn. 2:16; 1 Pet. 2:11 (*cf.* LXX and Jos., *Ant.*). The strong desire of the Spirit is set over against that of the flesh in Gal. 5:17. Other cognate words are *pathos*, 'passion' (1 Thes. 4:5); *orexis*, 'strong desire' (Rom. 1:27), and *hedonē*, 'pleasure' (Jas. 4:3). The word 'lusty' when used in Jdg. 3:29 (AV); Is. 59:10 (RV); Ps. 73:4 (Prayer Book) carries no derogatory tone, and simply means able-bodied or vigorous.

D. H. T.

LUZ. The ancient name of *Bethel, which was so named by Jacob after he had dreamed of the ladder from heaven to earth after spending the night near to the city (Gn. 28:19; 35:6; 48:3). It was the site of Jacob's sojourn near to the city, rather than the city itself, that received the name Bethel (Jos. 16:2), but this site later became so important that the name was applied to the city as well (Jos. 18:13; Jdg. 1:23). The city was, however, still known to the Canaanite inhabitants as Luz, because when the Israelites took the city at the time

of the conquest a Canaanite whom they pressed to show them the entrance to it in return for his life escaped to the 'land of the Hittites' and founded another city of that name (Jdg. 1:24-26).

LYCAONIA, a territory in S-central Asia Minor, so called from the *Lykaones* who inhabited it, mentioned by ancient writers from Xenophon (early 4th century BC) onwards. In Pompey's settlement of W Asia Minor (64 BC) the W part of Lycaonia was added to Cilicia, the E part to Cappadocia, and the N part to *Galatia, which became a Roman province in 25 BC. E Lycaonia later became independent of Cappadocia and from AD 37 onwards formed part of the client kingdom of Antiochus, king of Commagene, and was known as Lycaonia Antiochiana. In the NT 'Lycaonia' denotes that part of the territory which constituted a region of the province of Galatia, Lycaonia Galatica. Lystra and Derbe are designated 'cities of Lycaonia' in Acts 14:6, in a context which implies that Iconium lay on the Phrygian side of the frontier separating Lycaonia Galatica from Phrygia Galatica. W. M. Ramsay has put it on record that it was this geographical note that led to his 'first change of judgment' with regard to the historical value of Acts. Paul and Barnabas on their first 'missionary journey' (AD 47-8) doubtless recognized that they had crossed a linguistic frontier between Iconium and Lystra, for in the latter place (near modern Hatunsaray) they heard the indigenous population speak 'in Lycaonian' (Acts 14:11, Gk. *lykaonisti*). Lycaonian personal names have been identified in inscriptions hereabout, e.g. in one at Sedasa which records the dedication to Zeus of a statue of Hermes (cf. Acts 14:12). When, after leaving Lystra, Paul and Barnabas came to Derbe (modern Kerti Hüyük) and planted a church there, they turned back; had they gone farther they would have crossed into the kingdom of Antiochus, but it was no part of their plan to evangelize non-Roman territory.

Van Elderen, 'Some Archaeological Observations on Paul's First Missionary Journey', in *Apostolic History and the Gospel*, ed. W. W. Gasque and R. P. Martin, 1970, pp. 156-161. F.F.B.

LYCIA. A small district on the S coast of Asia Minor containing the broad valley of the river Xanthus. mountains rising to over 3,000 m, and the seaports *Patarra and *Myra (Acts 21:1; 27:5). Although some sculptures and inscriptions have been preserved, the origin of the Lycian people is obscure. They alone of the peoples of W Asia Minor successfully resisted the Lydian kings, but they succumbed in 546 BC to the Persians.

Freed by Greeks in the following century, they were greatly influenced by Gk. civilization and eventually submitted voluntarily to Alexander. They adopted the Gk. language and script, and were thoroughly Hellenized by the time they came under Roman protection in the 2nd century BC. Claudius in AD 43 annexed Lycia to the province of Pamphylia, but apparently Nero restored their freedom, for Vespasian again reduced them to pro-

vincial status (Suetonius, *Vespasian* 8). Through these changes the federation of Lycian cities maintained its general political framework.

K.L.McK.

LYDDA. A town some 18 km SE of the coast at Jaffa, in the Shephelah plain. It is almost certainly to be identified with the OT Lod, which is mentioned in the Karnak list of Thothmes III. In Israelite times it was a Benjaminite town; reoccupied after the Bab. Exile, it later fell to the authority of the governor of Samaria, and was not reclaimed by the Jews till 145 BC (1 Macc. 11:34). It was burnt down in Nero's reign. After the fall of Jerusalem (AD 70) it became a rabbinical centre for a period. It had a bishop in the early Christian centuries. Since then it has borne the names Diospolis, Ludd and Lod again (today). D.F.P.

LYDIA. A woman of Thyatira in Lydia, who at Philippi became Paul's first European convert and gave him hospitality, with Silas and Luke (Acts 16:14-15, 40). Lydia may be an adjectival form, 'the Lydian woman' (such ethnic names were common), but it was also a personal name (e.g. Horace, *Od.* 1. 8; 3. 9). Evidently a woman of rank (cf. Acts 17:4, 12), she was head of a household, and thus either widowed or unmarried. Lydian purple dye, in which she traded, was renowned (cf. Homer, *Il.* 4. 141). She was a Jewish proselyte, engaging in prayers and ablutions at the riverside on the sabbath; her connection with the Jewish faith probably went back to the colony in Thyatira. For the Christian church established there, cf. Rev. 1:11; 2:18-29. Lydia may be included in Paul's reference in Phil. 4:3, but since she is unmentioned by name she may have died or left the city. Her hospitality became traditional in the church there (cf. Phil. 1:5; 4:10). B.F.H.

LYDIA, a district in the centre of the W slope of Asia Minor, included the Caÿster and Hermus valleys, the most fertile and highly cultivated areas of the peninsula, and between them the mountains of Tmolus, rising to 2,000 m. Besides its natural wealth its position on the main routes from the coast to the interior of Asia Minor gave its cities (including *Sardis, *Thyatira and *Philadelphia) great commercial importance. Lydia was bordered by Mysia, Phrygia and Caria. Some of the coastal cities (including Smyrna and Ephesus) were sometimes reckoned as Lydian, sometimes as Gk.

The origins of the Lydian race are obscure, but there may have been Semitic elements (*LUD). Croesus, the last king of Lydia, dominated the whole of Asia Minor before he was conquered by Cyrus the Persian in 546 BC. The region was subsequently ruled by Alexander and his successors, and became part of the Attalid kingdom of Pergamum before becoming part of the Roman province of Asia in 133 BC. Some Lydian inscriptions of the 4th century BC have been discovered, but by the beginning of the Christian era Gk. had become the common language and, according to Strabo, Lydian was little used.

Lydia was the first state to use coined money and was the home of some innovations in music.

K.L.McK.

LYSANIAS

LYSANIAS, listed in Lk. 3:1 as 'tetrarch of *Abilene', c. AD 27-8. So Josephus (*Ant.* 20. 138) speaks of 'Abila, which had been the tetrarchy of Lysanias'. His name appears on an inscription of Abila, dated between AD 14 and 29, recording a temple dedication by a freedman of 'Lysanias the tetrarch' (*CIG*, 4521). It is uncertain whether coins superscribed 'Lysanias tetrarch and high priest' refer to him or to an earlier Lysanias, 'king of the Ituraeans' (so Dio Cassius), executed by Antony c. 36 BC (*Jos.*, *Ant.* 15. 92; *cf.* 14. 330). Two members of this family called Lysanias, of different generations, are named in *CIG*, 4523.

LYSTRA. An obscure town on the high plains of Lycaonia (near modern Hatunsaray), singled out by Augustus as the site of one of a number of Roman colonies that were intended to consolidate the new province of Galatia. Its advantages are not

known. Its remote position and proximity to the unsettled S mountains suggest defensive motives, as also does the considerable Latin-speaking settlement implied by surviving inscriptions. If it was the security of such a place that attracted Paul and Barnabas in their hasty retreat from Iconium (Acts 14:6) they were badly let down. Superstitious veneration, disabused by the apostles themselves, was converted by agitators into drastic hostility, which apparently secured official support for the stoning that was inflicted upon Paul (v. 19). There is no suggestion of Roman order or justice. Nor does the NT even disclose that it was a colony. There was plainly a substantial non-hellenic population (v. 11), as well as the usual Greeks and Jews (Acts 16:1). Nevertheless, a church was established (Acts 14:20-23) which provided in Timothy (unless, as is just possible, he came from the nearby Derbe, Acts 16:1-2) Paul's most devoted 'son'.

M

MAACAH, MAACHAH. 1. Maacah is used as a man's name for the following: the father of Shephatiah, one of David's henchmen (1 Ch. 27:16); the father of Hanun, one of David's warriors (1 Ch. 11:43); the father of *Achish, king of Gath at the time of David and Solomon.

2. It is also used as a woman's name for the following: the concubine of Caleb, mother of Sheber and Tirhanah (1 Ch. 2:48); the wife of Machir, mother of Peresh (1 Ch. 7:16); the wife of Gibeon, or Jehiel, one of the ancestors of Saul (1 Ch. 8:29; 9:35); the daughter of Talmai, king of Geshur, who married David and was the mother of Absalom and Tamar (2 Sa. 3:3); the favourite wife of Rehoboam and the mother of Abijah and the daughter of Absalom (2 Ch. 11:20–22); the mother of Asa, the queenmother of Judah until she was removed because of her idolatry (2 Ch. 15:16). (*QUEEN.)

3. The child of Nahor, the brother of Abraham, and his concubine Reumah, was called Maacah, but there is no indication as to sex (Gn. 22:24).

4. It is also the name for a small state to the SW of Mt Hermon, on the edge of the territory of the half-tribe of Manasseh (Dt. 3:14; Jos. 13:8–13) and possibly extending across the Jordan to Abel-beth-Maacah. At the time of David, its Aramaean king provided 1,000 soldiers for the Ammonite and Aramaean attempt to crush Israel. Following the defeat at Helam, Maacah probably became tributary to David (2 Sa. 10). Maacah was later absorbed into the kingdom of Damascus, which had been reestablished during Solomon's reign (1 Ki. 11:23–25).

MAAREH-GEBA (Jdg. 20:33, RV; AV 'meadows of Gibeah'). Heb. *ma'ārēh* means 'open, bare place', but LXX(A) *dysmōn* and Vulg. *occidentali urbis parte* suggest Heb. *ma'ārāb*, 'west', which yields a better sense here. (*GEBA.)

A. R. M.

MACCABEES. *Makkabaios* was the Gk. form of the surname of the Jewish hero Judas ben Mattathias (1 Macc. 2:4): its application has been extended to his family and his party. The derivation is quite obscure: 'the hammerer' or 'the eradicator' are perhaps the commonest modern interpretations. According to Josephus the family name seems to have been *Hašmōn*: hence the title 'Hasmonaeans' reflected in rabbinic literature.

I. The Maccabean revolt

Palestine was perennially a theatre for the power

politics of the Seleucid and Ptolemaic heirs of Alexander the Great's empire. One result was the growth of a pro-Syrian and a pro-Egyptian party in Judaea, and tension between these groups was inextricably bound up with Jewish internal politics and family jealousies, and with a movement among 'liberal' Jews to adopt the customs and standards of the Gk. world. Resulting conflict brought about the decisive intervention of Syria. The Seleucid king, Antiochus IV (Epiphanes), who was mad, bad and dangerous, sold the high-priesthood to the highest bidder, one Menelaus, who was quite unentitled to it, and when, in 168 bc, his nominee was ejected, Antiochus sent his officer to sack Jerusalem and kill its inhabitants.

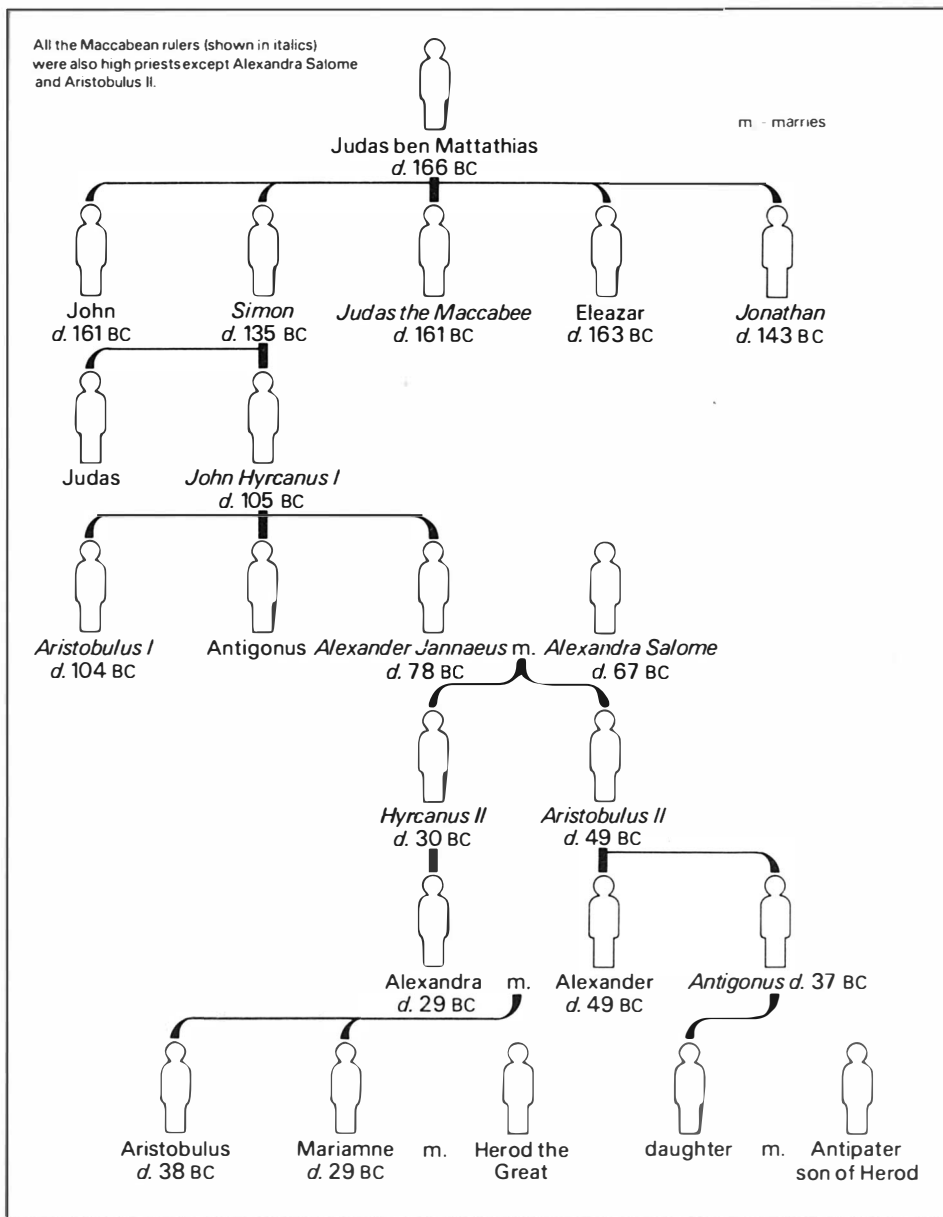

Soon afterwards, Antiochus instituted a religious persecution of unprecedented bitterness. Sabbath-keeping and the practice of circumcision were forbidden under pain of death: pagan sacrifices and prostitution were established in the Temple; and law-loving Jews were subjected to every degradation and brutality (cf. Dn. 11:31–33). Doubtless many succumbed, but many endured heroic suffering (1 Macc. 1:60ff.; 2:29ff.; 2 Macc. 6:18ff.), and Antiochus could not have estimated the sober resilience of the *Hasidim* (or men of the covenant), who 'offered (themselves) willingly for the law' (1 Macc. 2:42). More drastic action began in Modein, some 30 km from Jerusalem, where the aged Mattathias angrily killed a Jew who had come to sacrifice on the royal altar, and the Syrian officer who had come to supervise, and then called on everyone zealous for the Law to follow him and his five sons, John, Simon, Judas, Eleazar and Jonathan, to the mountains. The Maccabean revolt had begun.

II. Judas Maccabaeus

The Judaeans hills were suited to guerrilla warfare. Mattathias and his sons were joined by many *Hasidim*, and at first were content with terrorizing apostates, destroying altars and enforcing the Law. Mattathias died, and his third son, Judas, proved a leader of Gideon's type and stature. Perhaps no army has ever had higher morale than the force with which he won his brilliant victories against numerically superior Syrian forces. Antiochus was occupied in larger wars with the Parthians, and his regent Lysias had no option but to conclude peace with Judas and withdraw the abominable decrees in 165 bc. Amid great rejoicing, Judas marched to Jerusalem, the Temple was solemnly cleansed, and the worship of God restored (1 Macc. 4)—an event commemorated by the Feast of Hanukkah, or the Dedication (Jn. 10:22).

Maccabean success had led to furious persecution of Jewish minorities in cities of mixed population. Judas raised the cry, 'Fight today for your brethren' (1 Macc. 5:32) and, with his brother Jonathan, carried out effective punitive expeditions

MACCABEES

The family of the Maccabees.

in Transjordan, while Simon dealt similarly with Galilee. On the death of Antiochus Epiphanes in 164/3 BC Judas tried to seize the *Akra*, the Syrian fortress in Jerusalem, the symbol of Seleucid suzerainty: he was trapped, and was on the brink of disaster when political upheaval in Syria caused a diversion, and the Syrians had to be content with a treaty virtually securing the *status quo*.

Eventually Demetrius I (Soter) made good his claim to the throne, and he appointed a pro-Syrian high priest, Alcimus. Many Hasidim were prepared to support this man, since he was an Aaronite, but

his outrageous actions played into Judas' hands. Judas took revenge on deserters, and a large Syrian force had to be called in. The Syrians were defeated at Adasa, but, after an interval, scattered the Jewish army at Elasa, where Judas was killed in battle in 161 BC.

III. Jonathan

Jonathan, youngest of the brothers, now headed the Maccabean party. For a long time he was reduced to guerrilla fighting in the hills, but internal faction had become endemic in the Seleucid

empire, and he was more and more left to himself by the Syrians. In time he was the effective ruler of Judaea, and rival claimants to the Seleucid throne competed for his support. One such, Alexander Balas, appointed him high priest in 153 BC, and military and civil governor in 150. He continued to exploit Seleucid weakness until treacherously murdered by a pretended ally in 143 BC.

IV. Simon

Simon, the last survivor of the sons of Mattathias, showed a resolution not inferior to that of his brothers. He drove a hard bargain with Demetrius II whereby the latter virtually resigned the suzerainty of Judaea and 'the yoke of the Gentiles was removed from Israel' (1 Macc. 13:41). The Syrians were ejected from the *Akra*, Judaea was aggrandized at the expense of her neighbours at several points, and a period of relative peace and prosperity began, with Simon as high priest and unchallenged ruler.

V. The later Hasmonaeans

Simon died at the hand of his son-in-law in 135 BC. His son John Hyrcanus was forced into temporary submission to the disintegrating Seleucid empire, but at his death in 104 BC the Jewish realm was at its greatest extent since Solomon's time. His son Aristobulus (104–103 BC) formally claimed the title of king, and with him begins the sorry story of murder and intrigue and family jealousy which left the Jewish state a prey to the rising power of Rome. Antigonos, the last of the Hasmonaeen high-priestly kings, was executed in 37 BC, and the pro-Roman *Herod the Great began a new era. Several later members of the house of Herod had Hasmonaean blood by the maternal side.

VI. The significance of the Maccabees

According to Dn. 11:34, the Maccabean revolt was to be only 'a little help' to God's people, for Daniel depicts events on the huge canvas of God's ultimate gracious purpose. Many Hasidim, looking for God to accomplish this, probably thought military action had gone far enough when the proscription of Judaism was abrogated and the Temple cleansed in 165 BC. At all events there are after that date increasing signs of Hasidim and Maccabees parting company. The assumption of the high-priesthood by Jonathan, and then Simon and his family, who were all of priestly but not Aaronic stock, must have been bitter to the Hasidim, and the latter's heirs, the Pharisees, were wholly alienated from the worldly and tyrannical Hasmonaean high-priest kings, who reached a grotesque climax in the drunken and unhinged Alexander Jannaeus (103–76 BC).

It would, nevertheless, be a mistake to divide Maccabean aims into the achievement first of religious liberty, and then of political liberty. Judas and his brethren were fighting for *Israel*, and desired, in the name of the God of Israel, to take away the 'yoke of the Gentiles'. The easy and natural process whereby the hereditary high-priesthood, which comprehended unquestioned civil leadership, assumed into itself the revived monarchy, is eloquent. John Hyrcanus and the Hasmonaean kings in their campaigns clearly have the ideal of the Davidic kingdom in mind, and there are records of some territories they conquered being forcibly Judaized.

In some respects, the Maccabees set the pattern

of Jewish nationalism and Messianic thought for the NT period. Judas and his successors were invariably on good terms with the Romans, but in their day Rome was not yet ready to control Palestine. By NT times the Jews were firmly under 'the yoke of the Gentiles' once more, this time that of Rome. But the memory lingered of how Israel had once in the name of God defied another heathen empire, engaged her in single combat, and won; of how her borders had approached those of her Davidic glory. 'The ministry of Jesus falls . . . when the Jews of Palestine had still the memory of the Maccabean triumphs and no foreknowledge of the horrors of the siege under Titus' (T. W. Manson, *The Servant-Messiah*, 1953, p. 4).

W. R. Farmer has pointed to the preponderance of Maccabean names among anti-Roman agitators of NT times, and has associated the *Zealot party with Maccabean ideals, and the crowd's reaction to our Lord's triumphal entry with the deliberate recall of the triumphs of Judas and Simon.

The once fashionable habit of dating many Psalms in the Maccabean period has almost passed. For other literary questions, see *APOCRYPHA, *DANIEL, BOOK OF, *PSEUDEPIGRAPHIA, *ZECHARIAH.

A. F. W.

MACEDONIA. A splendid tract of land, centred on the plains of the gulf of Thessalonica, and running up the great river valleys into the Balkan mountains. It was famous for timber and precious metal. Anciently ruled by cavalry barons under a hellenized royal house, its kings dominated Greek affairs from the 4th century BC, and after Alexander Macedonian dynasties ruled throughout the E Mediterranean until superseded by the Romans. The home monarchy was the first to go when in 167 BC Macedonia was constituted a series of four federations of republics (to which structure Acts 16:12 may refer), thus completing its hellenization. They were subsequently grouped under Roman provincial control, and, until the consolidation of Moesia and Thrace as provinces in NT times, were heavily garrisoned against the intractable N frontier. The province embraced the N part of modern Greece from the Adriatic to the Hebrus river, and was crossed by the Via Egnatia, the main land route from Italy to the E. After 44 BC the proconsul sat at Thessalonica, while the assembly of the Greek states met at Beroea, the seat of the imperial cult. The province included six Roman colonies, of which Philippi was one. There were also tribally organized communities. In spite of this diversity, the area is normally treated in the NT as a unit, following Roman usage.

Paul's vision of 'a man of Macedonia' (Acts 16:9) marks a distinct development in his methods of evangelism. At Philippi (Acts 16:37) for the first time he took advantage of his high civil station. He now enjoyed support in the cultivated circles to which he naturally belonged (Acts 16:15; 17:4, 12) in contrast to their hostility at earlier points on his route (Acts 13:50; 14:5). He looked back upon Macedonia with profound affection (1 Thes. 1:3;

MACEDONIA

Phil. 4:1), and was always eager to return (Acts 20:1; 2 Cor. 1:16). The Macedonians were willing donors to his Jerusalem fund (2 Cor. 8:1-4), and several of their number were added to his regular retinue of assistants (Acts 19:29; 20:4). It was in Macedonia then, it seems, that Paul finally proved himself as an independent missionary leader.

MACHAERUS. A fortress E of the Dead Sea (modern el-Mekawar), near the S frontier of the region of Peraea, built by Alexander Jannaeus (103-76 BC), destroyed by the Roman commander Gabinius (57 BC), rebuilt by Herod (37-4 BC), who appreciated the hot springs at Calirrhoe not far away (Wadi Zerka Ma'in). Here, according to Josephus (*Ant.* 18. 112, 119), Herod Antipas imprisoned John the Baptist and later had him put to death; here too Antipas' first wife, the daughter of the Nabataean king Aretas IV, broke her journey on her way home to her father's capital at Petra when Antipas divorced her for Herodias. When Peraea was added to the province of Judaea (AD 44), Machaerus was occupied by a Roman garrison, which evacuated the place on the outbreak of war in AD 66. It was then occupied by a force of Jewish insurgents, but surrendered to the governor Lucilius Bassus in AD 71.

MACHIR (Heb. *mākîr*). I. A grandson of Joseph and son of Manasseh was named Machir (Gn. 50:23). We later learn that he was the father of Gilead, ancestor of the Gileadites (Nu. 26:29). His children later took Gilead, dispossessing the Amorites (Nu. 32:39-40). Gilead is later attributed to Machir (Jos. 17:1-3). For other references, cf. Dt. 3:15; Jos. 13:31; Jdg. 5:14; 1 Ch. 2:21-23; 7:14-17.

2. The son of Ammiel who protected Mephibosheth in Lo-debar (2 Sa. 9:4-5). Later Machir was one of those who brought provisions to David (2 Sa. 17:27-29). E.J.Y.

MACHPELAH. The name applied to the field, cave and surrounding land purchased by Abraham as a burial-place for his wife Sarah (Gn. 23). It was purchased from Ephron, a Hittite, for 400 shekels of silver (vv. 8-16). It lay E of Mamre (v. 17) in the district of Hebron. Here were later buried Abraham (Gn. 25:9), Isaac and Rebekah (Gn. 49:31) and Jacob (Gn. 50:13).

The Heb. (*hammakpēlā*) implies that the name is in some way descriptive and the Gk. (*to diploun*, 'the double') is taken to describe the form of the cave in Gn. 23:17 (LXX). The reading of Shechem for Hebron in Acts 7:16 may be due to the summary nature of the record of this speech, which originally referred also to Joseph's burial at Shechem.

The modern site of the burial-cave (60 m by 34 m), now incorporated in the S end of the Haram al-Ḥalil at Hebron, is much venerated by Jews, Christians and Muslims. It is jealously guarded by

massive stone walls, probably of Herodian work, though the antiquity of the cave itself and its furnishings has not been verified by archaeological research. The 'cenotaph of Sarah' is still to be seen among others in the mosque above the cave (see Vincent, Mackay and Abel, *Hébron, le Haram al Khalil*, 1923).

The antiquity of the details of Abraham's purchase of Machpelah (Gn. 23) had been thought to find support in Middle Assyrian and Hittite laws prior to 1200 BC (*BASOR* 129, 1953, pp. 15-23), but this claim has now been questioned (*JBL* 85, 1966, pp. 77-84). D.J.W.

MADMANNAH (*maḏmannāh*). A town in SW Judah. At one time Calibbite (1 Ch. 2:49), it may have passed to Simeon and become known as Beth-marcaboth (cf. Jos. 15:31 with 19:5; W. F. Albright, *JPOS* 4, 1924, pp. 159f.). Khirbet umm Deimneh, 6 km SW of Dhahiriyah, and Kh. Tatrît, 2½ km further S, have been suggested as possible locations. J.P.U.L.

MADMEN. A town of Moab against which Jeremias prophesied (48:2).

Since this place is otherwise unknown, it has been suggested, either that the Heb. text read *gm-dmm tamm*, 'also thou (Moab) shalt be utterly silenced' (LXX, Syr., Vulg.), or that it stands for Dimon, a possible (but unlikely) rendering of the name of the capital *Dibôn*. Modern Khirbet Dimneh may be the site. Madmen is unlikely to be the same as *Madmannah, which lay in the Negeb (Jos. 15:31; 1 Ch. 2:49), or *Madmenah, N of Jerusalem (Is. 10:31). D.J.W.

MADMENAH. A place mentioned only in Isaiah's description of the route whereby an invading army approached Jerusalem from the N (Is. 10:31). Shu'fat, 2 km N of Mt Scopus, is the supposed site. A.R.M.

MADON (Heb. *mādōn*). A city of N Canaan (Jos. 11:1; 12:19; LXX *marrōn*, * as in 11:7 for *Merom). If the names are identical (so *LOB*, pp. 117f., 226, 231f.), *d* is a transcription error for *r*. *Mdn* of Tuthmosis III list (no. 20) is not equivalent. For Kh. Madjan/Qarn Hattin see *Adamah. J.P.U.L.

MAGBISH. Either a town in Judah (*GTT*, p. 380) or the name of a clan. *Ezr.* 2:30 records that 156 of its 'sons' (or 'inhabitants') returned after the exile. It is inexplicably omitted from the parallel list in *Ne. 7*. D.J.A.C.

MAGDALA, MAGDALENE. The name 'Magdala' occurs only once in the NT (Mt. 15:39, AV), where the best MSS (followed by RSV, NEB) read 'Magadan'. Some MSS, however, also read 'Magdala' or 'Magadan' for *'Dalmanutha' (otherwise unknown) in Mk. 8:10. The town of Magdala (or Tarichaea) stood on the W shore of the Sea of Galilee, N of Tiberias and Hammath, and S of Capernaum. The name derives from the Heb. *miḡdāl*, 'tower'. It is probable that the modern

Khirbet Mejdal stands on the site today. Magadan was the *locality* on the W shore of the lake to which Jesus crossed after feeding the crowds, and it probably included the town of Magdala. Evidently Mary called Magdalene came from this town or area. (For 'Mary Magdalene', see *MARY, 3.)
s.s.s.

MAGI. The term is used in Herodotus (1. 101, 132) of a tribe of the Medes who had a priestly function in the Persian empire; in other classical writers it is synonymous with priest. Complementing this, Daniel (1:20; 2:27; 5:15) applies the word to a class of 'wise men' or astrologers who interpret dreams and messages of the gods. In the NT the usage broadens to include all who practise magic arts (*cf.* Acts 8:9; 13:6, 8).

Both Daniel and Herodotus may contribute to the understanding of the Magi of Mt. 2:1-12. Apparently the Magi were non-Jewish religious astrologers who, from astronomical observations, inferred the birth of a great Jewish king. After inquiring of Jewish authorities, they came to Bethlehem to do homage. Whether 'the East' from which they came is Arabia, Babylon or elsewhere is uncertain.

The historicity of the visit of the Magi has been questioned on account of the silence of other sources concerning both the event and Herod's subsequent slaughter of the infants, and also because of what is regarded as the legendary character of parts of the narrative. While full weight must be given to the poetic descriptions in the story (*e.g.* the star standing over Bethlehem), descriptive symbolism neither affirms nor negates the historicity of the event involved. A literalist approach, either to dehistoricize the story or to exaggerate the miraculous, is out of keeping with the Evangelist's meaning. For Matthew the Magi's visit represents the Messiah's relationship to the Gentile world and is also a fitting introduction to other prophetically significant events of Christ's infancy. The story is in keeping with the 'royal' Messianic expectations of the Jews and with the character of Herod. Perhaps there is some astronomical confirmation of the *star in the conjunction of Jupiter and Saturn in 7 BC and in the report of a later (4 BC) evanescent star in Chinese records. But such parallels must be applied with caution.

Later Christian traditions regard the Magi as kings (because of Ps. 72:10; Is. 49:7; 60:3?) and number them at three (because of the gifts) or twelve. In the Christian calendar Epiphany, originally associated with Christ's baptism, reflects the importance of the Magi's visit for later Christendom. (*ANNUNCIATION; *MAGNIFICAT.) E.E.E.

MAGIC AND SORCERY.

1. The biblical view

Magic and sorcery attempt to influence people and events by supernatural or occult means. They may be associated with some form of *divination, though divination by itself is the attempt to use supernatural means to discover events without influencing them.

Magic is universal, and may be 'black' or 'white'. Black magic attempts to produce evil results through such methods as curses, spells, destruction

of models of one's enemy and alliance with evil spirits. It often takes the form of witchcraft. White magic tries to undo curses and spells, and to use occult forces for the good of oneself and others. The magician tries to compel a god, demon or spirit to work for him; or he follows a pattern of occult practices to bend psychic forces to his will. There is no doubt that magic and sorcery are not always mere superstitions, but have a reality behind them. They must be resisted and overcome through the power of God in the name of Jesus Christ.

I. Biblical terms

The following root words are used in Scripture to denote magical practices and practitioners.

a. In the Old Testament

1. *kšp*. 'Sorcerer', 'sorcery', 'witch-(craft)'. The root probably means 'to cut', and could refer to herbs cut for charms and spells (Ex. 22:18; Dt. 18:10; Is. 47:9, 12; Je. 27:9, *etc.*).

2. *hrtm*. 'Magician'. This term derives from Egyp. *hry-tp*, 'chief (lector-priest)', the title borne by Egypt's most renowned magicians (Gn. 41:8; Ex. 7:11, *etc.*).

3. *hbr*. 'Enchantment', 'charmer' (Dt. 18:11; Is. 47:9, 12, *etc.*). The root has the idea of binding, probably with amulets and charms.

4. *kašdim*. 'Chaldeans'. In Dn. the term is used racially (*e.g.* Dn. 5:30; 9:1) and of a special class linked with magicians (Dn. 2:2, 4, 10, *etc.*). The word is used in a similar sense by Herodotus (1. 181f.), and may have been current earlier with this special meaning. See A. R. Millard, *EQ* 49, 1977, pp. 69-71.

5. *qsm*. 'Divination', especially of future (Dt. 18:10; Ezk. 21:21). Of false prophets (Je. 14:14; Ezk. 13:6).

6. *lt*. 'Secret arts'. Pharaoh's magicians (Ex. 7:22).

7. *nhš*. 'Enchantment' with spells (Nu. 23:23; 24:1).

8. *lhf*. 'Expert in charms' (Is. 3:3). Snake charming (Ps. 58:5; Ec. 10:11; Je. 8:17).

b. In the New Testament

1. *magos* (and cognates). 'Magician', 'magic'; in Mt. 2, 'wise men'. Originally a Magian, a racial group in Media, it came, like 'Chaldean', to have a technical use (*e.g.* Acts 8:9, 11; 13:6, 8; found only in Mt. and Acts; *MAGI).

2. *pharmakos* (and cognates). 'Sorcerer', 'sorcery', 'witchcraft'. The root idea is that of drugs, potions (Rev. 9:21; 18:23; 21:8; 22:15; elsewhere only in Gal. 5:20).

3. *goēs*. 'Imposter' (AV 'seducer') (2 Tim. 3:13), it may also signify a spell-binding magician. It has the magical sense in classical and hellenistic Greek.

4. *perierga*. 'Magic arts', AV 'curious arts' (Acts 19:19). The adjective has the root idea of being exceedingly occupied, then of being occupied with other people's business, then of interfering with others by magical arts.

5. *baskainō*. In Gal. 3:1 metaphorically of Galatians bewitched into false beliefs.

II. The biblical judgment on magic

The references given in the first part of this article show that magic and sorcery are always condemned in Scripture. Magic is a rival to true religion, though it can be practised in conjunction with false religious ideas. True religion centres in

MAGIC AND SORcery

the personal experience of the one God, with an attempt to live a life that is conformable to his will. The believer walks humbly with his God, prays to him, and is prepared to accept the circumstances of life as the sphere in which to glorify him. Magic, on the other hand, deals with lower supernatural beings, or attempts to force issues by using psychic forces, irrespective of whether the issues are for the glory of God. The following practices come under the specific condemnation of the Bible.

a. The wearing of charms

Among the list of women's ornaments in Is. 3:18-23 the word translated 'amulets' in v. 20 is the root *lhš* (I.a. 8, above); some consider that the word may originally have been *nhs*, 'serpent', in which case the charm would have been a serpent figure. In this same passage there is a reference in v. 18 to 'crescents'. These are clearly moon-images, and the only other occurrence of the word (*šah^rōnīm*) is in Jdg. 8:21, 26, where they are worn both by camels and by the kings of Midian. The previous word in Is. 3:18 (*š^rbīsīm*), translated 'headbands' (AV 'cauls') occurs only here in Scripture, but a similar word in the Ras Shamra tablets apparently denotes sun-pendants.

It is probable that there is a reference to charms in Gn. 35:2-4, where Jacob's household put away their 'foreign gods' and their 'earrings'. This is the normal word for ear-ring, but the association with idols here suggests that they were charms of some kind.

b. Workers of magic; sorcerers; witches

Genesis and Exodus speak of the magicians of Egypt, and 2 Tim. 3:8 names two of them as Jannes and Jambres. The Exodus record says that the Egypt. magicians copied Moses in turning their rods into serpents (7:11), in turning water into blood (7:22), and in producing frogs (8:7), but failed to produce the lice (8:18-19), and were themselves incapacitated by the boils (9:11). The account leaves us free to decide whether they were clever conjurers or used occult methods.

There is little direct allusion to sorcerers and witches in Israel. It is incorrect to speak of the 'witch' of Endor (1 Sa. 28) since the Bible describes her as a medium, and not as a worker of magic. It is significant that Jezebel practised sorcery (2 Ki. 9:22), and Mi. 5:12 suggests that it was by no means rare in Israel. Manasseh personally encouraged it among other evils (2 Ki. 21:6).

There is an indication of magical practices in Is. 28:15, where people were initiated into some magical pact which they believed would give immunity from death.

The most striking reference to Heb. witchcraft is Ezk. 13:17-23. Here Heb. prophetesses were also practising magic arts for the preservation and destruction of individuals. In this they were going farther than the false prophets of Mi. 3:5, who gave messages of good or ill to individuals according to whether they were prepared to pay. The details of the magical practices here are not easy to follow. The armbands and veils are worn both by victims (18) and witches (20-21). Witchcraft practice suggests a psychic link between witch and client through interchange of material charged with good or evil spells. Alternatively, the veils are made to size (18), and maybe the witch made a veil of a size to represent one's enemy. The witch then wore it for a time and impregnated it with malevo-

lent spells (*cf.* the use of doll figures). The wrist bands would bring luck to the wearers. J. G. Frazer, in his *Folk-Lore in the Old Testament*, suggests that the women professed to catch souls and bind them up in cloth bands. The imprisonment would cause the owner of the soul to waste away. The soul might be represented by some object from the victim, *e.g.* blood, hair or nails.

III. Does the Bible countenance magic?

We now deal with some of the passages where the Bible might seem to countenance magic and superstition.

a. The use of mandrakes

Down through the centuries E women have made use of mandrakes to ensure conception (*cf.* Gn. 30:14-18). Since modern investigations have shown that primitive medicines often contain some element that is really effective, it would be foolish to dismiss this example as magic.

b. Jacob and the peeled rods

In Gn. 30:37-41 Jacob was probably influenced by primitive ideas of the effect of seen objects upon the unborn young. But v. 40 indicates that the results really came about through selective breeding (see D. M. Blair, *A Doctor Looks at the Bible*, 1959).

c. Samuel and the water

This incident (1 Sa. 7:6) is often thought to denote sympathetic magic, the solemn pouring out of water to induce a storm. There is, however, not the slightest indication of this in the context. Water poured on the ground, according to 2 Sa. 14:14, is a symbol of human frailty and impermanence, and Samuel's action may best be interpreted as a sign of abasement and humiliation before God.

d. Samson's hair

Frazer and others have produced stories from all parts of the world in which the soul or the strength of someone resided in his hair, or even in some external object. The biblical story, however (Jdg. 16), shows that Samson's uncut hair denoted his faithfulness to the *Nazirite vow, and that the Spirit of God empowered him so long as he was faithful to this vow (*e.g.* Jdg. 13:25; 14:19). Those who wish to argue from a natural level may note that the loss of strength could be accounted for on psychological grounds when Samson realized his guilt. There are well-recognized cases of hysterical blindness, paralysis, etc.

e. Rousing up leviathan

Job asks that the day of his birth should be cursed by those who curse the day, who are ready to rouse up leviathan (Jb. 3:8). Some find here a reference to magicians who were thought to rouse up a dragon to swallow the sun at an eclipse. If this is correct, it is part of the extravagant language of Job, who calls upon everyone, bogus or true, who might claim to bring ill-luck on his birthday.

f. The power of blessing and cursing

The OT lays great stress on this. The Patriarchs bless their children, and Isaac cannot reverse what he has promised to Jacob (Gn. 27:33, 37). Balaam is called upon to curse Israel (Nu. 22f.). Throughout the rest of the OT there are other incidental references. It should be noted that the Bible does

not visualize anyone's pronouncing an effective blessing or curse contrary to God's will. The Patriarchs believe that God is showing them the future of their descendants, and their blessing is declaratory of this. Balaam cannot effectively curse those whom God has blessed (Nu. 23:8, 20). The psalmist knows that God can turn the undeserved curse into a blessing (Ps. 109:28), while David's reluctance to interfere with Shimei is based on the fear that God may have inspired the curse for something that David had done (2 Sa. 16:10).

g. Miracles

The pagan world certainly regarded 'private' miracles as magic (Acts 8:9-11), but the Bible never treats divine miracles as superior magic, *i.e.* there is no use of incantations, invocation of spirits or spells. Moses did not silence Pharaoh's magicians by being a better magician, but acted solely as the agent of God, behaving when and how God instructed him. His rod was not a conjuror's magic wand, but the symbol of God's designation. It was 'the rod of God' (Ex. 4:20).

As regards exorcisms and healings, one need not be surprised to find linguistic resemblances between the Gospel records and pagan magic, since the vocabulary of demonology and illness is limited. But neither Christ nor the disciples are ever regarded as using the accompaniments of magical practice. For a full linguistic discussion see John M. Hull, *Hellenistic Magic and the Synoptic Tradition*, 1974. J.S.W.

2. Egyptian and Assyro-Babylonian

I. Ancient magic

Where the ordinary relationships and processes of life could readily be regulated through observation of obvious cause and effect, and by acting on an acquired modicum of knowledge and/or skill, this sufficed. But where mystery shrouded the causes of effects, and when ordinary means did not suffice to obtain desired results, then magic was appealed to. Magic was the exploitation of miraculous or occult powers by carefully specified methods to achieve ends otherwise unattainable.

Magic and religion were closely linked, in that whereas 'society' principally covers relationships between man and man, and 'religion' the relationship between deity and mankind, the powers of magic found application in both spheres. In general, *cf. Sources Orientales 7: Le monde du sorcier*, 1966.

II. Egyptian magic in the Bible

Learned in sacred writings, rituals and spells, trained in the 'House of Life' (temple 'schools' where this and other literature was composed, copied and taught), Egypt's greatest magicians were the chief lector-priests, in Egyp. *hry-hbt hry-tp*, later abbreviated by Moses' time (13th cent. BC) to *hry-tp*. This very title gave the Heb. *hartôm*, 'magician'. This essentially Egyp. term recurs in an Assy. document (7th century BC), as *har-tibi*, and as *hirtb* in 1st-century AD tales of magicians. (See A. H. Gardiner, *JEA* 24, 1938, pp. 164-165; and, more fully, J. Vergote, *Joseph en Egypte*, 1959, pp. 66-94, 206, with full references.) Thus the association of 'magicians' with 'wise men' generally in Gn. 41:8 and Ex. 7:11 reflects authentic Egyp. tradition; see paragraphs a and c. below.

BIBLIOGRAPHY. For a good formal analysis of Egyptian magic, see A. H. Gardiner in *ERE*, 8, pp.

262-269. Much material is collected (texts and pictures) in F. Lexa, *La Magie dans l'Égypte Antique*, 3 vols., 1925.

a. Magicians and dreams of Joseph's pharaoh

In Gn. 41:8, Joseph's pharaoh calls upon his magicians and wise men to interpret his dreams. This reflects the importance of dreams in ancient Egypt and the E; dreams and their interpretations were gathered into manuals, veritable handbooks of dream-interpretation. The original of one such ms, Papyrus Chester Beatty 3 (19th Dynasty, 13th century BC) may date back to the Middle Kingdom age, while the Papyri Carlsberg 13 and 14 of the 2nd century AD contain further collections from early sources. The common pattern is, that if a man sees himself in a dream doing or experiencing such-and-such, it is good or bad, and means that so-and-so will befall him. For this whole topic, see A. L. Oppenheim, *The Interpretation of Dreams in the Ancient Near East*, 1956; *Sources Orientales 2: Les Songes et leurs Interprétations*, 1959.

b. Joseph and divination

In Gn. 44:4-5, 15, Joseph play-acts the learned Egyptian, master of the divinatory art, before his brothers. Two interpretations of this incident are possible.

(i) Joseph had it said by his steward, according to the usual translations of v. 5, that he divined by means of his silver cup; this would imply knowledge of cup-divination (lecanomancy) in Hyksos-period Egypt, c. 1700 BC. By this technique, omens for interpretation were obtained by observing the movement or configuration of drops of oil upon water in a cup. This technique is of Mesopotamian origin, apparently already used by the Sumerians (*cf.* B. Meissner, *Babylonien und Assyrien*, 2, 1925, p. 284). A handbook to this technique is preserved on two cuneiform tablets dating from the 19th-17th centuries BC, *i.e.* within Joseph's general period.

In Egypt, however, cup-divination is attested only twice, once doubtfully. Two small statuettes of apparently Middle Kingdom date (c. 1900-1700 BC) each show a figure kneeling with chin on a cup held in the hands, and it is just possible that these depict cup-divination (J. Capart, *Chronique d'Égypte* 19, 1944, p. 263). Egypt offers no further example until the technique recurs in papyri of the 2nd century AD. But Bab. influence, including divination, was already felt in Palestine in the 2nd millennium BC. Bab. divinatory practice is attested at Hazor: in Temple II of the 15th century BC was found a clay model liver inscribed in cuneiform (see Y. Yadin, *BA* 22, 1959, p. 7 with fig. 5). Hence on this evidence there is no difficulty whatever in presupposing some knowledge of other forms of Mesopotamian divination such as lecanomancy in the Palestine of Joseph's day or in the immediately adjacent Egyp. E Delta, then under Hyksos (Semitic) control.

(ii) One may, on the other hand, render Joseph's steward's speech as 'Is it from this cup that my lord drinks, and concerning which he will assuredly divine?', *i.e.* to unmask the theft. On this rendering Joseph's cup is solely a drinking-vessel, cup-divination would not be alluded to, and the form of his pretended divination remains wholly unspecified. This fits well with v. 15 when Joseph says to his brothers, 'Do you not know that such a man as I can indeed divine?', *i.e.* he pretends to have

MAGIC AND SORCERY

apprehended them in their theft by divination, to recover his cup. For this view, see J. Vergote, *Joseph en Égypte*, 1959, pp. 172–173.

c. *Moses and the magicians*

In Ex. 7:8–13, when Aaron at Moses' command casts down his rod as a serpent before Pharaoh, his magicians and sorcerers 'did in like manner with their enchantments' (v. 11). For this kind of conjuring, it would appear that the Egyp. cobra (Arab. *naja haye*) can be rendered immobile (catalepsy) if pressure be applied to the muscles at the nape of the neck; cf. L. Keimer, *Histoires de Serpents dans l'Égypte ancienne et moderne (Mémoires, Institut d'Égypte, 50)*, 1947, pp. 16–17. The serpent must first be charmed, then seized at the neck as shown on several ancient Egyptian scarab-amulets (Keimer, *op. cit.*, figs. 14–21) and thus be temporarily immobilized (cf. H. S. Noerdlinger, *Moses and Egypt*, 1956, p. 26; *EB*¹¹, 6, p. 613). Aaron's serpent restored to a rod manifested the wholly-other omnipotence of God, however. On the plagues, see * Plagues of Egypt.

III. Assyro-Babylonian magic

a. *Its role*

Defensive and curative magic was mainly resorted to to obtain deliverance from affliction—illness, demon possession, etc.—which may originate with the sufferer. The exorcist might then often employ rites and spells from the 'handbook' *Šurpu*, 'Burning' (i.e. in purificatory rite), listing every conceivable fault the sufferer might have committed. Or affliction may have entered from without—some sorcerer's evil spell. To counter such, there was the companion 'handbook' of tablets, *Maqlu*, also 'Burning' (of wax or wooden effigies of sorcerers). 'As this image quivers, dissolves and melts away, even so may the sorcerer and sorceress quiver, dissolve and melt away!' (E. A. W. Budge, *British Museum: A Guide to the Babylonian and Assyrian Antiquities*, 1922, p. 201). Collections of prayers for release or absolution also exist. There is a full modern translation of *Šurpu* in E. Reiner, *Šurpu, A Collection of Sumerian and Akkadian Incantations*, 1958; and of *Maqlu* in G. Meier, *Die Assyrische Beschwörungssammlung Maqlu*, 1937.

Prognostic magic, i.e. divination, was based on the conviction that any event, good or ill, may be announced or accompanied by some portent observable by men. Learned priests systematically compiled long series of omens with interpretations in veritable reference-manuals. Omens were either observed from signs in nature or sought by specific techniques.

1. Natural portents were taken from the whole gamut of man's observation: haloes and eclipses of sun and moon, conjunctions of heavenly bodies, etc. (astrology); the flight of birds, actions and states of animals and insects; births of animals and humans, especially if abnormal—all in long series of omen-tablets. For a sick person, omens good or bad would determine their survival or decease (see R. Labat, *Traité Akkadien de Diagnostics et Prognostics Médicaux*, 2 vols., 1951). Is. 47:9–13 criticizes such proceedings.

2. Specific techniques of divination included observation of configurations of and on a sheep's liver (hepatoscopy, extispicy), and observation of patterns of oil on water (or vice versa) in a cup (lecanomancy). For translations of reports of the

liver, see A. Goetze, *JCS* 11, 1957, pp. 89–105. This most famous form of Bab. divinatory magic penetrated among the Hittites of Asia Minor and the Canaanites in N Syria and Palestine alike (see Egyptian Magic, II.b. above). Cf. also Ezk. 21:21–22. Dream-interpretation was as important as in Egypt. Cf. also *La divination en Mésopotamie ancienne (Rencontre, Strasbourg)*, 1966; A. Caquot, M. Leibovici, *La divination*, 1–2, 1968.

c. *Its practitioners*

As in Egypt, magic was practised by priestly scholars attached to the temples. Exorcisms were performed by the *āšipu*-priest (cf. Heb. *'asāpīm*, 'enchanters', Dn. 1:20) by virtue of the gods Ea and Marduk, the master-magicians. The elaborate apparatus of divination was the province of the *bārū*-priest; he had to be physically perfect, undertake long studies and be initiated. Those attached to the royal court were called upon at any time to interpret all manner of things. See G. Contenau, *Everyday Life in Babylon and Assyria*, 1954, pp. 281–283, 286–295.

BIBLIOGRAPHY. On Mesopotamian magic, see also briefly L. W. King, *ERE*, 4, 1911, pp. 783–786; 8, 1915, pp. 253–255. Useful notes can be found in E. Dhorme and R. Dussaud, *Les Religions de Babylonie et d'Assyrie . . . des Hittites, etc.*, 1949, pp. 258–298. Fully detailed surveys of magic and divination respectively, with copious translations from texts, can be found in M. Jastrow, *Die Religion Babylonien und Assyrien*, 1–2, 1912. Specific studies are by G. Contenau, *La Magie chez les Assyriens et les Babyloniens*, 1940; B. Meissner, *Babylonien und Assyrien*, 2, 1925, pp. 198–282.

IV. Assyro-Babylonian magic in the Bible

a. *Balaam*

Balaam of Nu. 22–24 is apparently a diviner turned prophet under divine constraint. Thus Balak sent emissaries to hire Balaam 'with the fees for divination in their hand' (Nu. 22:7; cf. v. 18), and at first Balaam went 'to meet with omens', their nature unspecified (Nu. 24:1). Balak evidently required of Balaam evil omens wherewith to curse Israel. An astrological text was found at Qatna (*Revue d'Assyriologie* 44, 1950, pp. 105–112) and *bārū*-diviners in 18th- and 14th-century BC texts from Alalah (D. J. Wiseman, *The Alalah Tablets*, 1953, p. 158 sub '*bārū*'), both in N Syria. Further, an early 2nd millennium seal of one 'Manum the *bārū* (diviner)' turned up at Beth-shan in Jezreel in levels of the 13th century BC, Balaam's own period, to which his oracles can be dated linguistically (W. F. Albright, *JBL* 63, 1944, pp. 207–233). It is therefore wholly in keeping with known facts that a Moabite ruler should hire a diviner from N Syria (Pethor by the River [Euphrates]), in the land of the sons of Amaw (Nu. 22:5; cf. Albright, *BASOR* 118, 1950, pp. 15–16, n. 13).

b. *The law and magic in Canaan*

The prohibitions in the Mosaic law against the magic and sorcery practised by other nations (e.g. Lv. 19:26; 20:27; Dt. 18:10–14) were very relevant to conditions in contemporary Canaan. For Bab. influence there, see above. The N Canaanite epics from *Ugarit/Ras Shamra (tablets of the 14th/13th century BC) show Danil kissing the growing plants and grain, invoking an oracular blessing upon Aqhat (*ANET*, p. 153: 60ff.); Pugat's activ-

ities are much less certainly connected with sorcery. That Ex. 22:18 expressly condemns sorceresses is also noteworthy.

c. Daniel

In Dn. 1:4 the procedure for educating the well-favoured Heb. youths in Bab. learning as laid down by Nebuchadrezzar accurately reflects that which was usual for the *bārû* scholar-magicians.

To 'dissolve doubts' (Dn. 5:12, 16, av), i.e. to dissipate anxiety caused by a (yet unexplained) dream or omen (cf. Dn. 4:5), was the purpose of interpreting or 'resolving' dreams. Then a good dream's benefits could be accepted and the threat from a bad one averted magically. On this, see A. L. Oppenheim, *The Interpretation of Dreams in the Ancient Near East*, pp. 218–220, 300–307. This emphasis on dreams is characteristic of the neo-Bab. kings, particularly Nabonidus, father of Bels-hazzar. For his dreams, see Oppenheim, *op. cit.*, pp. 202–206, 250, and, in part, T. Fish in *DOTT*, pp. 89f. New texts of, and new dreams by, Nabonidus and his venerable mother come from stelae of this king at Harran; see C. J. Gadd, *AS 8*, 1958, pp. 35–92 and pls. 1–16, especially pp. 49, 57, 63; *ANET*³, pp. 560–563. Closely parallel to Dn. 4 is the 'Prayer of Nabonidus' in the Dead Sea Scrolls in which an exiled Jewish sage (name not preserved) is granted to the king to explain the cause of the latter's affliction. E.T. in M. Burrows, *More Light on the Dead Sea Scrolls*, 1958, p. 400; text published by J.-T. Milik, *RB* 63, 1956, pp. 407–415; brief comments, D. N. Freedman, *BASOR* 145, 1957, pp. 31–32.

BIBLIOGRAPHY. 'Magic (Jewish)' in *ERE*; E. Langton, *Good and Evil Spirits*, 1942; *idem*, 'The Reality of Evil Powers Further Considered', *HJ* 132, July 1935, pp. 605–615; M. F. Unger, *Biblical Demonology*, 1952, pp. 107–164; A. D. Duncan, *The Christian, Psychotherapy and Magic*, 1969; D. Basham, *Deliver us from Evil*, 1972. K.A.K.

MAGISTRATE. In Ezr. 7:25 'magistrate' translates the Heb. *sōpēt*, 'judge'. In Jdg. 18:7, av 'there was no magistrate in the land' is a paraphrase of the Heb. idiom *yāraš 'ešer*, 'to possess restraint' (RSV 'lacking nothing'). Dn. 3:2–3 lists magistrates (Aram. *tiḫāyē*, av 'sheriffs') among officials summoned by Nebuchadrezzar.

In the NT Luke uses in his Gospel (12:11, 58) the words *archē* and *archōn* ('rule' and 'ruler') to refer to civil authorities in general. Paul was beaten, imprisoned and subsequently released by the magistrates at Philippi (Acts 16:20, 22, 35–36, 38). Here the Gk. word is *stratēgoi*, which literally means generals, or leaders of the host, but came to be used in a political context as an equivalent for Lat. *praetores*. This latter was the title found in some inscriptions as a popular designation for the leading men of the colony, though their correct title was *duoviri*. Evidence for the titles of the Philippian magistrates is to be found in *CIL*, 3. 633, 654, 7339, 14206⁵. (* SANHEDRIN, * POLICE.) D.H.W.

MAGNIFICAT. Like other hymns in Lk. 1–2, the prophecy of Mary (Lk. 1:46–55) takes its name from the Lat. Vulg. Believing 'Mary' (Lk. 1:46) to be the secondary reading, some commentators accept the less well-attested reading 'Elizabeth' (cf. Creed). It may be that Luke originally wrote simply 'she said', and that both 'Mary' and 'Elizabeth'

were attempts of copyists to assign the song to a particular person. The reading 'Mary' became universally accepted. Scholars are divided on the question of whether the contents of the hymn are more suitable to Mary or Elizabeth. The episode which forms the setting is, however, transitional from the annunciation to the birth stories; it stands in close conjunction with the former and continues its Messianic theme. Most probably, therefore, Luke viewed it as *Mary's* song regarding Christ.

This lyrical poem is modelled upon OT psalms and has also a special affinity to the Song of Hannah (1 Sa. 2:1–10). The sequence of the narrative is moulded by Luke's theme; and the hymn need not be regarded as Mary's spontaneous or exact reply. But neither should it be considered merely as an editorial reconstruction. Its significance for Luke lies in the fact that it is Mary's prophecy, i.e. that its contents sprang from her lips and express her mind and heart.

As this lyric forms a climax to the section, so also within the Magnificat itself the mood rises to a crescendo. It is divided into four strophes, describing (1) Mary's joyous exaltation, gratitude and praise for her personal blessing; (2) the character and gracious disposition of God to all who reverence him; (3) his sovereignty and his special love for the lowly in the world of men; and (4) his peculiar mercy to Israel. The cause of Mary's song is that God has deigned to choose her, a peasant maid of low estate, to fulfil the hope of every Jewish maiden. For it is probable that, in Judaism, that which gave deepest meaning and joy to motherhood was the possibility that this child might be the Deliverer.

The last part of the poem is a description of God's Messianic deliverance and is a virtual paraphrase of OT passages. This redemption is prophesied in terms of a national deliverance from human oppressors. This is a typical mode of expression of pre-Christian Messianism. The NT does not contradict it, but does transfer it to Messiah's parousia in the eschatological 'age to come' (cf. Acts 1:6ff.). As is often the case in OT oracles, these Messianic acts of God are viewed as though they were already accomplished: the promise of God has the efficacy of the act itself (cf. Gn. 1:3); his word is the word of power. The specific object of God's mercy is 'Israel his servant' (Lk. 1:54f.; cf. Acts 3:13, 26; 4:27, 30). Whether there is reflected here the OT distinction between the whole nation and the righteous remnant is uncertain; the concept is often left in an undifferentiated whole, and the contrast in vv. 51–53 may be only between the Jewish nation and the Gentile overlord. But in the mind of Luke—and in the mind of his first readers—certainly the distinctly Christian interpretation in such concepts as 'Israel' (cf. Lk. 24:21–26; Jn. 12:13; Acts 1:6; Rom. 9:6), 'servant', and 'the seed' (Jn. 8:39; Gal. 3:16, 29) is not absent, and it probably enters into his understanding and interpretation of Mary's prophecy. (* ANNUNCIATION; * BENEDICTUS.)

BIBLIOGRAPHY. R. Laurentin, 'Les Évangiles de l'enfance', *Lumière et Vie* 23, 1974, pp. 84–105; S. Farris, *The Hymns of Luke's Infancy Narratives*, 1985. E.E.E.

MAGOR-MISSABIB (Heb. *māḡōr missābīb*, 'terror on every side'). A symbolic name that

MAGOR-MISSABIB

Jeremiah gave to Pashhur son of Immer (Je. 20:3, AV; see *PASHHUR, 1). J.D.D.

MAHANAIM (Heb. *mahⁿnayim*, 'two camps'). A place in Gilead where Jacob saw the angels of God before he reached Penuel and met Esau (Gn. 32:2). Appointed to be a levitical (Merarite) city from the territory of Gad (Jos. 21:38; 1 Ch. 6:80), Mahanaim was on the border of Gad with Gileadite Manasseh (Jos. 13:26, 30). It was briefly capital of Ishbosheth, Saul's son (2 Sa. 2:8, 12, 29), and later David's refuge from Absalom (2 Sa. 17:24, 27; 19:32; 1 Ki. 2:8), and then became the seat of a district-officer of Solomon's (1 Ki. 4:14). The location of Mahanaim is still uncertain; cf. J. R. Bartlett in *POTT*, p. 252, n. 47. It is usually placed in the middle of N Gilead at Khirbet Mahneh, 20 km N of the Jabbok river, but as the boundary of Gad is linked with the course of the Jabbok, Mahanaim is probably better located somewhere on (or overlooking) the N bank of the Jabbok. Mahanaim was at some distance from the Jordan, on the evidence of 2 Sa. 2:29, however 'Bithron' be interpreted. If (as is commonly taken) Bithron means 'cleft, ravine', Abner went from Jordan up the vale of the Jabbok E and through its narrow part before reaching Mahanaim. If the rsv reading be adopted, then 'the whole forenoon' was needed in any case for Abner's E flight. Hence perhaps Mahanaim was in the Jerash area, or up to 10-15 km SSW of Jerash, overlooking the N bank of the river Jabbok. See K.-D. Schunck, *ZDMG* 113, 1963, pp. 34-40. (*GAD, *GILEAD.) K.A.K.

MAHANEH-DAN (Heb. *mahⁿnēh-dān*, 'camp of Dan'). Where Samson experienced the stirring of God's Spirit (Jdg. 13:25), and the first staging-post of the Danites in their quest for an inheritance (Jdg. 18:12). The geographical references given, 'between Zorah and Eshtaol' and 'W of Kirjath-jearim', cannot be reconciled, and the name itself suggests a temporary settlement. As the Danites had no secure inheritance (Jdg. 18:1), probably due to Philistine pressure, there is no problem in two places bearing the same name. It is not surprising that no trace of such temporary encampments has survived. A.E.C.

MAHER-SHALAL-HASH-BAZ. A symbolical name ('speed the spoil, hasten the prey') given to one of the sons of *Isaiah to signify the speedy removal of Syria and Israel as enemies of Judah by the Assyrians. This removal was to take place before the child could lisp 'my father and my mother' (Is. 8:3-4). E.J.Y.

MAHLI (Heb. *mahlī*, 'weak', 'sickly'). 1. Eldest son of Merari and grandson of Levi (Ex. 6:19, AV 'Mahali'; Nu. 3:20; 1 Ch. 6:19, 29; 23:21; 24:26, 28; Ezr. 8:18). His descendants are mentioned in Nu. 3:33; 26:58. 2. The son of Mushi, another son of Merari (1 Ch. 6:47; 23:23; 24:30); therefore nephew of 1, above. J.D.D.

MAHOL (Heb. *māhōl*, 'dance'). The father of certain sages whom Solomon excelled in wisdom (1 Ki. 4:31). But in 1 Ch. 2:6 they are said to be 'sons

of Zerah'. 'Sons' may simply mean 'descendants' in either case. However, 'sons of Mahol' may be an appellative expression meaning 'sons of the dance' (cf. 'daughters of music' in Ec. 12:4). Such dancing would then be part of the ritual of worship, as in Pss. 149:3; 150:4 (cf. also the titles of Pss. 88-89). J.G.G.N.

MAKKEDAH (Heb. *maqqēdāh*). A town in the Shephelah captured by Joshua (Jos. 10:28; 12:16); in the district of Lachish (15:41). Adonizedek and his allies hid in a cave nearby after their defeat (10:16ff.). Eusebius (*Onom.* p. 126) put Makkedah 8 Roman miles from Beit Guvrin; Khirbet el-Kheishum, NE of Azekah, seems to be too far, while Tell Bornat (Kallai-Kleinmann, *VT* 8, 1958, p. 155) is only 3 km from Beit Guvrin. El-Mughar, SE of Yibna, was once favoured but is unlikely.

BIBLIOGRAPHY. F. M. Abel, *Géographie de la Palestine*, 2, 1937, p. 378; D. Dorsey, *Tel Aviv* 7, 1980, pp. 185-193. J.P.U.L.

MAKTESH. A site in Jerusalem or near by (Zp. 1:11). The name means 'mortar' or 'trough'. The oldest suggestion is that it was the Kidron Valley; so says the Targum. But most scholars today believe it to have been some part of the Tyropoeon Valley, within the walls of the city, where foreign merchants gathered; cf. NEB 'Lower Town'. D.F.P.

MALACHI, BOOK OF.

I. Authorship, date and background

The LXX takes the word not as a proper name but as a common noun, and renders 'my messenger', which is the meaning of the Heb. word. Many scholars follow LXX, and believe that the name of the author is not given. But the analogy of the other prophetic books which give the author's name would support the view that the name is here intended to indicate the author. This is supported by the Targum, which adds the phrase 'whose name is called Ezra the scribe'.

From internal evidence the approximate date of the prophecy may be determined. Sacrifices were being offered in the Temple (1:7-10; 3:8). This implies that the Temple was standing; indeed, that it had been standing for some time, a fact which would point to the 5th century BC. This is substantiated by the reference in 1:8 to the *pehā* or Persian governor. Mixed marriages seem to have been practised (2:10-12). The phrase 'the daughter of a foreign god' means 'a woman of foreign religion'. Apparently this practice of marrying outside the covenant people was so widespread that the earlier prohibitions had long since been forgotten. Nor was great care exhibited in the offering of the sacrifices (1:7). The priests had despised the Lord in offering polluted bread. When blemished offerings are brought it is a sign of a lax attitude, and such an attitude would not well comport with the early zeal displayed by the returned exiles. This appears to have been accompanied by a neglect in paying the requisite tithes (3:8-10). The abuses which Malachi condemns are those which Nehemiah sought to correct.

It is impossible to date the book precisely, but it may be that it was composed during Nehemiah's

visit to Susa. At least it would seem to come from approximately this time.

II. Outline of contents

The book falls into two main parts, and its purpose may best be ascertained through a study of its contents. The first part (chs. 1 and 2) deals with the sin of Israel, and the second part (chs. 3 and 4) with the judgment that will befall the guilty and the blessedness that will come upon those who repent.

We may analyse the book thus:

a. *The superscription* (1:1)

There is a connection between this heading and that found at the beginning of ch. 3. Whether or not Malachi is a proper name, it exemplifies the fact that he is a messenger of God.

b. *The Lord's love for Israel* (1:2-5)

God declares his love for the people in that he chose Jacob and rejected Esau. This fact is seen in that Edom is devastated and refugees from Edom will never be able to return and rebuild, whereas Israel is back in the promised land.

c. *A delineation of Israel's sin* (1:6-2:9)

In bold fashion the prophet now begins to delineate the chief and characteristic sins of the nation which were again bringing the wrath of God upon the nation's head. God is the Father of the people, for he has nourished and brought them up. A father deserves honour and love, but such have not been shown to God by Israel. This complaint is directed particularly to the priests who are the representatives of the people before God. These priests who should have set the example of godly fear in worship have, in fact, despised the name of the Lord. Unworthy worship had been characteristic of their predecessors in the 8th and 7th centuries until the Exile had been brought upon Judah. Now, however, the Exile is past, and its lessons have not yet been learnt. Restored to her land, able to worship in the Temple, Judah yet sins against the Lord in the same manner as before.

The accusation against Israel is carried on in the form of a dialogue. Against each charge of the Lord a question or challenge is raised. For example, God charges that the priests have offered polluted food. They reply, 'How have we polluted it?' (1:7). It is thus brought out in clear-cut fashion that the priests have been bringing blemished sacrifices. This was in direct contravention of the law, which required that the offerings should be perfect. Instead, they had brought what was blind and lame, and in so doing had exhibited contempt for the Lord.

When such sacrifices come from their hands, how can they expect to be accepted as individuals and to find favour with him? (1:9). It would be better that the gates of the Temple were closed entirely than for such offerings to be brought (1:10). Both the offerer and his offering are unacceptable to the Lord, and the priests are despised by the people.

Such sacrifices are not desired by God, for even among the Gentiles his name will prove itself to be great so that pure sacrifices are offered to him (1:11). This does not refer to the offerings which the heathen nations bring to their gods, but to the time when the true gospel will be spread throughout the world and the true God worshipped by all peoples. Israel, however, had pro-

faned the Lord's table, and found his service boring, resulting in a people who practised deception and were selfish.

If there is no repentance, then a curse will come upon the priests. In 2:5-7 the Lord makes clear the true duty of the priests, and thus there appears a great contrast between what the priest should be and what he actually was. Indeed, through his own poor example, he, instead of instructing others, has led them astray. He has been partial in instructing others (2:9b).

d. *Condemnation of mixed marriages and divorce* (2:10-17)

Israel had a common Father: God had created the nation. Therefore, it should have manifested unity. Instead of that, however, it had dealt treacherously. It had profaned the holiness of the Lord in the practice of mixed marriages. Those who had thus acted, however, were to be cut off. Divorce was also common, and the Lord hates divorce. These sins had been glossed over and rationalized. The Lord declares that the people have wearied him with their words. They have ignored him and acted as though he did not exist.

e. *The coming Day of the Lord* (3:1-6)

Malachi now breaks into the exalted language of prophecy in declaring that the messenger of the Lord will truly come and prepare the day for the Lord whom the people seek. He will appear as a refiner, to purify and purge the nation, and who can face the day of his coming? As a result of his work, the offering of Judah and Jerusalem will be pleasing to the Lord (3:4). Yet the coming will bring judgment, and this will fall upon those in the nation who are oppressing others. Nevertheless, Jacob will not be entirely wiped out, for the Lord does not change; he remains faithful to his promises (3:6).

f. *Repentance and tithing* (3:7-12)

The nation's apostasy is not new, but has continued from of old. For one thing, it has shown itself in withholding from God the tithes which had been commanded. This amounted to robbing God. If the nation would bring the tithes as it should, God would respond to its worship and pour upon it an overflowing blessing which would call forth comment from other nations.

g. *A promise of deliverance for the godly* (3:13-4:3)

The nation had been saying resentful things against God. It would seem that the people considered it did not pay them to serve God. But among them there were also those who 'feared the Lord', and they encouraged one another. These the Lord takes note of, and he will not only spare them but make them his own possession. The day of judgment will surely come, and it will consume the arrogant, but to those who fear the Lord's name righteousness will rise like a sun, and in its wings there will be healing, joy and victory.

h. *Conclusion* (4:4-6)

The prophecy closes with an exhortation to remember the law of Moses, and with the announcement that Elijah will come before there appears the great and terrible Day of the Lord.

J.G.B.

MALCAM. 1. A Benjaminite, son of Shaharaim by Hodesh (1 Ch. 8:9).

2. God of the Ammonites, possibly their chief deity (Am. 1:15, AV, RSV 'their king'), almost certainly to be identified with *Milcom (1 Ki. 11:5, 33; 2 Ki. 23:13), and *Molech or Moloch (Lv. 18:21; 1 Ki. 11:7; Je. 32:35, etc.). All these terms have the basic root *mlk* which conveys the idea of king, kingship. Both AV and RV translate *malkām* as 'their king' in Je. 49:1, 3 (RSV 'Milcom'). Cf. Zp. 1:5 (RSV 'Milcom').
J.A.T.

MALACH IJAH ('Yah is King'). This is a common OT name, sometimes translated as Malchiah. It was the name of the following: 1. A descendant of Gershom and ancestor of Asaph (1 Ch. 6:40); 2. a priest, the father of Pashhur (1 Ch. 9:12; Je. 21:1); 3. the head of a priestly course (1 Ch. 24:9), perhaps the same as 2; 4, 5, 6. three Israelites who had taken foreign wives in post-exilic times (Ezr. 10:25, 31). In 1 Esdras 9:26, 32 they are called Melchias, Asibias and Melchias respectively; 7. 'the son of Rechab', who repaired the dung gate (Ne. 3:14); 8. 'the goldsmith's son', possibly the same as 4, 5, 6 or 7, who helped to repair the wall (Ne. 3:31).

9. One who stood beside Ezra at the reading of the Law (Ne. 8:4); 10. one who sealed the covenant, perhaps the same as 9 (Ne. 10:3); 11. a priest who took part in the purification of the wall (Ne. 12:42), perhaps the same as 9 and/or 10.

12. The owner of the pit in which Jeremiah was imprisoned and probably a member of the royal family (Je. 38:6).
J.D.D.

MALCHUS (Gk. *Malchos* from Heb. *melek*, 'king'). The high priest's servant whose ear Peter cut off when Jesus was arrested in the Garden of Gethsemane (Mt. 26:51; Mk. 14:47; Lk. 22:50; Jn. 18:10). Only John mentions the man's name, thus confirming his close acquaintance with the high priest Caiaphas and his household (cf. Jn. 18:15); and only Luke (22:51), with his interest in medical matters, mentions the healing of the ear. Malchus is a common Arab name in Nabatean and Palmyrene inscriptions.
J.D.D.

MALICE. In the NT this translates Gk. *kakia*, which has the following meanings: 1. 'Wickedness', 'evil' (1 Cor. 14:20; Jas. 1:21; 1 Pet. 2:1, 16; and also in Acts 8:22, of an individual sinful act). 'Malice' in 17th-century (AV) English had primarily this meaning. 2. 'Ill-will', 'spitefulness'; i.e. 'malice' in the modern sense of the word. 3. 'Trouble', 'harm' (Mt. 6:34). In lists of sins (e.g. Rom. 1:29; Col. 3:8; Tit. 3:3), sense 2 is probably to be preferred, except, perhaps, in 1 Pet. 2:1 and Eph. 4:31, where 'all *kakia*' implies 'all kinds of wickedness'.

Malice characterizes the life of men under the wrath of God (Rom. 1:29). It is not only a moral deficiency but destroys fellowship (W. Grundmann, *TDNT* 3, pp. 482-484). For believers it belongs to the old life (Tit. 3:3); but there is still need for exhortation to 'clean it out' (1 Cor. 5:7f.) or 'strip it off' (Jas. 1:21; Col. 3:8). Christians are to

be 'babes in evil' (1 Cor. 14:20), for Christian liberty is not lawlessness (1 Pet. 2:16).
P.E.

MALTA (Gk. *Meliē*; Acts 28:1, AV 'Melita'). An island in the centre of the Mediterranean, 100 km S of Sicily and in area about 246 sq km (not to be confused with the island Mljet or Melitene off the Dalmatian coast; cf. O. F. A. Meinardus, 'St Paul Shipwrecked in Dalmatia', *BA* 39, 1976, pp. 145-147.) Here Paul's ship was driven from Crete by the ENE wind *Euraquilo* (27:14, RSV 'the northeaster'; *WIND). After being shipwrecked he spent 3 months on the island before continuing his journey to Rome *via* Syracuse, Rhegium and Puteoli (28:11-13). Paul performed acts of healing, and the party was treated with great respect.

Malta had been occupied from the 7th century BC by Phoenicians. The name itself means 'refuge' in that language (J. R. Harris, *ExpT* 21, 1909-10, p. 18). Later, Sicilian Greeks also came; there are bilingual inscriptions of the 1st century AD on the island. In 218 BC the island passed from Carthaginian to Roman control (Livy, 21. 51), later gaining the 'civitas'. Its inhabitants were *barbaroi* (28:2, 4) only in the sense of not speaking Greek. Luke may refer to one of their gods in v. 4 as *Dikē* (Justice). Publius, 'the chief man' (v. 7), probably served under the propraetor of Sicily. His title (Gk. *prōtos*) is attested by inscriptions (*CIG*, 14. 601; *CIL*, 10. 7495).

The site of the shipwreck is thought to have been 'St Paul's Bay', 13 km NW of modern Valletta (cf. W. M. Ramsay, *SPT*, pp. 314ff.).

BIBLIOGRAPHY. J. Smith, *Voyage and Shipwreck of Paul*, 1880; W. Burridge, *Seeking the Site of St Paul's Shipwreck*, 1952; J. D. Evans, *Malta*, 1959; C. J. Hemer, 'Euraquilo and Melita', *JTS* n.s. 26, 1975, pp. 100-111.
B.F.H.

MAMMON. This word occurs in the Bible only in Mt. 6:24 and Lk. 16:9, 11, 13, and is a transliteration of Aramaic *māmōnā*. It means simply wealth or profit, but Christ sees in it an egocentric covetousness which claims man's heart and thereby estranges him from God (Mt. 6:19ff.): when a man 'owns' anything, in reality it owns him. (Cf. the view that mammon derives from Bab. *mimma*, 'anything at all'.) 'Unrighteous mammon' (Lk. 16:9) is dishonest gain (F. Hauck, *TDNT* 4, pp. 388-390) or simply gain from self-centred motives (cf. Lk. 12:15ff.). The probable meaning is that such money, used for others, may be transformed thereby into true riches in the coming age (Lk. 16:12).

BIBLIOGRAPHY. C. Brown, *NIDNTT* 2, pp. 836-840; J. D. M. Derrett, *Law in the New Testament*, 1970.
E.E.E.

MAMRE (Heb. *mamrē*). 1. A place in the Hebron district, W from Machpelah (Gn. 23:17, 19; 49:30; 50:13), associated with Abraham (Gn. 13:18; 14:13; 18:1) and Isaac (Gn. 35:27). Abraham resided for considerable periods under the terebinth of Mamre; there he built an altar, there he learned of the capture of Lot, there he received Yahweh's promise of a son and pleaded for Sodom, and from there he saw the smoke of Sodom and its neighbour-cities ascend. The site has been identified at Râmet el-Khalîl, 4 km N of Hebron. Here Constantine built a basilica beside an ancient tere-

Mamre, identified with modern Rāmet el-Khalīl.

binth which was pointed out in his day (as by Josephus 250 years earlier) as the tree beneath which Abraham 'entertained angels unawares' (Gn. 18:4, 8). There was a shrine there under the Monarchy, but it was a sacred place before Abraham's time in the Early Bronze Age.

2. An Amorite chief at Mamre who with his brothers Eshcol and Aner joined Abraham's expedition against Chedorlaomer (Gn. 14:13, 24).

BIBLIOGRAPHY. E. Mader, *Mambre*, 1957; NEAEHL, pp. 939-942. F.F.B.

MAN. The Genesis account of creation accords to man a supreme place in the cosmos. Not only is his creation the final work of God, but in it the work of the other 5 days finds its fulfilment and its meaning. Man is to possess the earth, make it serve him, and to rule the other creatures (Gn. 1:27-2:3). The same witness to man's dominion and centrality in creation is given elsewhere (Am. 4:13; Is. 42:5f.; Pss. 8:5f.; 104:14f.), and is supremely given in the incarnation (*cf.* Heb. 2).

a. Man in nature

It is emphasized throughout the Bible that man is part of nature. Being dust, and made from dust (Gn. 2:7), his biological and physical similarity to the animal creation is obvious in many aspects of his life (Gn. 18:27; Jb. 10:8-9; Ps. 103:14; Ec. 3:19-20; 12:5-7). Being 'flesh' he shares in the helpless dependence of the dumb creation on God's mercy (Is. 2:22; 40:6; Pss. 103:15; 104:27-30). Even in making nature serve him he has to serve nature, tend it, and bring it to fruition (Gn. 2:15). He is subject to the same laws as the natural world, and can find himself overwhelmed in the midst of the grandeur of the world in which he lives (Jb. 38-42).

Nature is not simply a neutral framework or background for man's life. Between nature and man there are deep and mysterious bonds. The natural world falls under the curse of corruption through the Fall of man (Gn. 3:17-18), and now suffers pain and death, waiting for the final

demption of mankind before it can expect its own (Rom. 8:19-23). Nature is regarded in the Bible as rejoicing in the events that lead to man's redemption (Ps. 96:10-13; Is. 35; 55:12-13) when it, too, shall enjoy deliverance (Is. 11:6-9; 65:25). Man, on his side, has an instinctive sympathy with nature (Gn. 2:19) and must respect its ordinances (Lv. 19:19; Dt. 22:9-10; Jb. 31:38-40), realize his dependence on it, and toil to gain from his natural environment sustenance for his life and enrichment for his culture (Gn. 3:17; 9:1-7).

b. Man's destiny

Yet man cannot find the true meaning of his life within this context. The animals can provide no 'helper fit for him' (Gn. 2:18). He has a history and a destiny to fulfil, unique among the rest of creation. He is made 'in the image of God' (Gn. 1:27). While some have suggested that this image is expressed in man's dominion over the earth, or in his power of reasoning, or even in his physical characteristics, it seems better to find it neither in man's relationship with the world nor in any static impress on man's being, but in his responsibility towards his Creator. In the Genesis account of creation God, when he creates man, is regarded as taking up an attitude of deeper personal concern for him (Gn. 1:26; *cf.* 1:3, 6, *etc.*), and an approach that involves himself in a closer relationship with man his creature (Gn. 2:7) than with the rest of creation. God approaches man and addresses him as a 'thou' (Gn. 3:9, AV), and man is made to respond to God's gracious word in personal love and trust. Only in this response can man be what he truly is. God's word by which he lives (*cf.* Mt. 4:4) offers him a relationship that lifts him above the rest of creation around him, and confers on him his dignity as a child of God, made in his image and reflecting his glory. This dignity, moreover, is not something he possesses as an isolated individual before God, but only as he also stands in responsible and loving relationship to his fellowmen. It is as man within his family and social relationships that he truly reflects the image of God (Gn. 1:27-28; 2:18).

c. Man's structure

Various words are used to describe man in his relationship to God and to his environment, and in the structure of his own being. These are: spirit (Heb. *rūah*, Gk. *pneuma*), soul (Heb. *nepeš*, Gk. *psychē*), body (only in NT Gk., *sōma*), flesh (Heb. *bāsar*, Gk. *sarx*). These words are used according to the different aspects of man's activity or being which it is intended to emphasize, but they must not be regarded as describing separate or separable parts which go to make up what man is. The use of the word 'soul' may emphasize his individuality and vitality with emphasis on his inner life and feeling and personal consciousness. The use of the word 'body' may emphasize the historical and outward associations that affect his life. But the soul is, and must be, the soul of his body, and vice versa. Man is also in such a relation to the Spirit of God that he has spirit, and yet not in such a way that he can be described as spirit, or that spirit can be regarded as a third aspect of his identity. Man as 'flesh' is man in his connection with the realm of nature and with humanity as a whole, not only in its weakness but also in its sinfulness and opposition to God.

Other words are used to define the seat of certain particular aspects or functions of man. In the

OT emotional impulses and feelings are attributed, really and metaphorically, to organs of the body such as the *heart (*lēb*), *liver (*kābēd*), *kidneys (*k'layōt*) and *bowels (*mē'im*). The *blood is also regarded as being closely identified with the life or *nepeš*. It is especially the heart (*lēb*) that is the seat of a wide range of volitional and intellectual as well as emotional activities, and tends to denote the soul, or man viewed from his inward and hidden side. In the NT the same use is made of the Gk. word *kardia* (= *lēb*, heart). Two more words, *nous*, 'mind', and *syneidēsis*, 'conscience', are brought into use, and a clearer distinction is made between the 'inward' and 'outward' man, but these two aspects of the one man cannot be separated, and the future holds not the mere 'immortality of the soul' but the 'resurrection of the body', which means the salvation and renewal of the whole man in the fullness of his being.

d. Man's sin

The Fall of man (Gn. 3) involves his refusal to respond to God's word, and to enter the relationship in which he can fulfil the purpose for which he was created. Man seeks to find within himself the justification for his existence (Rom. 10:3). Instead of seeking to enter a true relationship with God and his fellow-men in which he can reflect God's image and glory, he seeks to find the meaning of his destiny merely in his relationship with the created world in the context of his immediate environment (Rom. 1:25). The result is that his life has become characterized by bondage (Heb. 2:14-15), conflict with evil powers (Eph. 6:12), frailty and frustration (Is. 40:6; Jb. 14:1), and he is so perverted and evil in his mind and heart (Gn. 8:21; Jb. 14:4; Ps. 51:5; Mt. 12:39; 15:19-20) that he turns the truth of God into a lie (Rom. 1:25).

e. Man in God's image

Yet in spite of the Fall, man under the promise of Christ must still be regarded as in the image of God (Gn. 5:1ff.; 9:1ff.; Ps. 8; 1 Cor. 11:7; Jas. 3:9), not because of what he is in himself, but because of what Christ is for him, and because of what he is in Christ. In Christ is now to be seen the true meaning of the covenant which God sought to make with man in the Word, and the destiny which man was made to fulfil (cf. Gn. 1:27-30; 9:8-17; Ps. 8; Eph. 1:22; Heb. 2:6ff.), for the unfaithfulness of man does not nullify the faithfulness of God (Rom. 3:3). Therefore in the sight of God, man, seen both in the individual (Mt. 18:12) and corporate (Mt. 9:36; 23:37) aspects of his life, is of more value than the whole realm of nature (Mt. 10:31; 12:12; Mk. 8:36-37), and the finding of the lost man is worth the most painful search and complete sacrifice on God's part (Lk. 15).

Jesus Christ is the true image of God (Col. 1:15; 2 Cor. 4:4) and thus the true man (Jn. 19:5). He is both the unique individual and the inclusive representative of the whole race, and his achievement and victory mean freedom and life for all mankind (Rom. 5:12-21). He fulfils the covenant in which God bestows on man his true destiny. In Christ, by faith, man finds himself being changed into the likeness of God (2 Cor. 3:18) and can hope confidently for full conformity to his image (Rom. 8:29) at the final manifestation of his glory (1 Jn. 3:2). In 'putting on' this image by faith he must now 'put off the old nature' (Eph. 4:24; Col. 3:10), which seems to imply a further renunciation of the

idea that the image of God can be thought of as something inherent in the natural man, though even the natural man must be regarded as being created in the image of God (cf. 2 Cor. 5:16-17).

In the development of the doctrine of man, the church came under the influence of Gk. thought with its dualistic contrast between matter and spirit. Emphasis was placed on the soul with its 'divine spark', and there was a tendency to regard man as a self-contained individual entity whose true nature could be understood by the examination of the separate elements constituting his being. Emphasis was placed by some of the Fathers on the rationality, freedom and immortality of the soul as being the main element in man's likeness to God, though others found the image of God also in his physical being. Irenaeus regarded the image of God as a destiny which man was created to grow into. Augustine dwelt on the similarity between the Trinity and the threefold structure in man's memory, intellect and will.

An exaggerated distinction was also suggested between the meanings of the two words 'image' and 'likeness' (*selem* and *d'mūt*) of God, in which man was said to be created (Gn. 1:26), and this gave rise to the scholastic doctrine that the 'likeness' (Lat. *similitudo*) of God was a supernatural gift given by God to man in his creation, i.e. an original righteousness (*justitia originalis*) and perfect self-determination before God, which could be, and indeed was, lost in the Fall. The 'image' (*imago*), on the other hand, consisted of what belonged to man by nature, i.e. his freewill, rational nature and dominion over the animal world, which could not be lost even in the Fall. This means that the Fall destroyed what was originally supernatural in man, but left his nature and the image of God in him wounded, and his will free.

At the Reformation Luther denied the distinction between *imago* and *similitudo*. The Fall radically affected the *imago*, destroyed man's freewill (in the sense of *arbitrium*, though not of *voluntas*), and corrupted man's being in its most important aspects, only a tiny relic of his original image and relationship to God being left. Calvin, however, also stressed the fact that the true meaning of man's creation is to be found in what is given to him in Christ, and that man comes to be in God's image as he reflects back to him his glory, in gratitude and faith.

In later Reformed dogmatics the concepts of *imago* and *similitudo* were again differentiated when theologians spoke of the essential image of God which could not be lost, and the accidental but natural endowments (including original righteousness) which might be lost without the loss of humanity itself. In more modern times Brunner has attempted to use the concept of the 'formal' *imago* consisting of the present structure of man's being, based on law. This has not been lost in the Fall, and is a point of contact for the gospel. It is one aspect of a unified theological nature of man which even in its perversion reveals traces of the image of God. 'Materially', however, for Brunner, the *imago* has been completely lost. R. Niebuhr has returned to the scholastic distinction between, on the one hand, the essential nature of man which cannot be destroyed, and, on the other hand, an original righteousness, the virtue and perfection of which would represent the normal expression of that nature.

Karl Barth, in formulating his doctrine of man,

has chosen a path different from that followed by church tradition. We cannot know real man till we know him in and through Christ, therefore we must discover what man is only through what we find Jesus Christ to be in the gospel. We must not take sin more seriously than grace, therefore we must refuse to regard man as being no longer the one God made him. Sin creates the conditions under which God acts, but does not so change the structure of man's being that when we look at Jesus Christ in relation to men and mankind, we cannot see within human life analogical relationships which show a basic form of humanity corresponding to and similar to the divine determination of man. Though man is not by nature God's 'covenant-partner', nevertheless in the strength of the hope we have in Christ human existence is an existence which corresponds to God himself, and in this sense is in the image of God. Barth finds special significance in the fact that man and woman together are created in the image of God, and stresses the mutual communication and helpfulness of man to man as being of the essence of human nature. But only in the incarnate Son, Jesus Christ, and through his election in Christ, can man know God and be related to God in this divine image.

MANAEN. The Gk. form of the Heb. name Menahem ('comforter'). Brought up with ('foster-brother of') Herod Antipas, Manaen's life took a very different turn from that of the tetrarch, and he is found as one of the Christian leaders at Antioch along with Paul and Barnabas (Acts 13:1). He may have been related to an earlier Manaen or Mena-hem, an Essene who, according to Josephus (*Ant.* 15. 373), was a friend of Herod the Great. J.D.D.

MANAHATH, MANAHATHITES. 1. Son of Shobal, son of Scir the Horite (Gn. 36:23; 1 Ch. 1:40), who was the eponymous ancestor of a clan of Mt Seir later absorbed by Edom.

2. The name of a city to which certain Ben-jaminites were carried captive (1 Ch. 8:6), and

which seems to have been somewhere in the vicinity of Bethlehem (so *GTT*, p. 155). *ISBE* and Grol-lenberg suggest an identification with Manocho, a town in the hill-country of Judah listed in Jos. 15:59, LXX, and probably to be identified with the modern Malīḥa, SW of Jerusalem. Mahanath may also be the 'Nohah' of Jdg. 20:43, for both names mean 'resting-place'. Amarna Letter 292 (*ANET*, p. 489) mentions a Manhatu in the realm of Gezer which is probably the same place.

Manahathites, inhabitants of Manahath, are mentioned in 1 Ch. 2:52, 54. They were the descendants of Caleb. Half of them were the progeny of *Shobal, and the others of Salma (*SALMON).

J.D.D.

MANASSEH ('making to forget'). 1. Elder son of Joseph, born in Egypt of an Egyptian mother, *Asenath, daughter of *Potiphera, the priest of On (Gn. 41:51). Israel accepted Manasseh and Ephraim as co-equals with Reuben and Simeon, but Manasseh lost the right of *firstborn* (*b'kôr*) in favour of his younger brother Ephraim (Gn. 48:5, 14). An interesting and early parallel is found in Ugaritic literature, *Keret Legend* (Tab. 128, 3. 15), 'The youngest of them I will make *firstborn* (*abrkn*).'

2. The tribe of Manasseh derived from seven families: one from Machir, and the remaining six from Gilead. They occupied land on both sides of Jordan; the E portion being granted by Moses, the W by Joshua (Jos. 22:7). After the crossing of Jordan and the settlement in the land, Joshua permitted the half-tribe of Manasseh, together with Reuben and Gad, to return to the conquered territory of Sihon, king of Heshbon, and Og, king of Bashan (Nu. 32:33). The E lot of the half-tribe of Manasseh covered part of Gilead and all of Bashan (Dt. 3:13). The W half of the tribe was granted good land N of Ephraim, and S of Zebulun and Issachar (Jos. 17:1-12). This W part was divided into ten portions: five to those families having male descendants, and five to Manasseh's sixth family, *i.e.* the posterity of Hephher, all females and daughters of Zelophehad (Jos. 17:3). W Manasseh included a chain of Canaanite fortresses and strong cities, among which were *Megiddo, *Taanach, *Ibleam and *Bethshan. These they failed to conquer but compelled their inhabitants eventually to pay tribute. Though the lot of Manasseh and Ephraim, the tribe of Joseph, was large, they lodged a complaint with Joshua for more land. In reply he advised them to show their worth by clearing the unclaimed forest areas (Jos. 17:14-18). Golan, a city of Bashan, in E Manasseh, was one of the six '*cities of refuge' (Jos. 20:8; 21:27; 1 Ch. 6:71).

The tribe was renowned for its valour; among its heroes was Gideon in the W (Jdg. 6:15), and Jephthah in the E (Jdg. 11:1). Some of the tribe of Manasseh deserted to David at Ziklag (1 Ch. 12:19-20), and also rallied to his support at Hebron (v. 31). Manassites were among those deported to Assyria by Tiglath-pileser (1 Ch. 5:18-26).

Difficulties have been found in the genealogies of the tribe of Manasseh, given in Nu. 26:28-34; Jos. 17:1-3; 1 Ch. 2:21-23; 7:14-19 (see *HDB* on 'Manasseh'). But if allowance is made for a corrupt text in 1 Ch. 7:14-15, then harmony can be restored. It is probable that the words 'Huppim

MANASSEH

Map showing the land allotted to the tribe of Manasseh.

and Shuppim' are glossed into v. 15 from v. 12, and possible that the word 'Asriel' is a dittograph.

A comparison of the Heb. text of these verses with LXX, Syr. Peshitta and Vulg. indicates that the original text may have had the following words: 'The son of Manasseh (Asriel) . . . whom his Syrian concubine . . . bore Machir the father of Gilead and Machir took a wife . . . and his sister's name Maacha and the name of the . . . Zelophehad and Zelophehad had daughters . . .' Apart from these verses, the genealogies are consistent.

3. Son of Hezekiah and Hephzibah, he began his reign in Jerusalem at the age of 12 and reigned 55 years (2 Ki. 21:1; 2 Ch. 33:1); probably as co-regent with his father 696-686 BC, and as sole ruler 686-642 BC (E. R. Thiele, *The Mysterious Numbers of the Hebrew Kings*, 1951, pp. 154ff.). His reign was a time of religious retrogression, caused by terror of Assyria and a fascination for her cults. This resulted in a syncretism of Baalism, a cult of Astarte at the 'high places', astral worship, with spiritism and divination. His long reign was bloody and reactionary, and notorious for the introduction of illegal altars into the Temple courts, and

'the passing of his sons through the fire' in the valley of the son of Hinnom.

The name 'Manasseh, king of Judah' appears on the Prism of Esarhaddon (*Me-na-si-i sar Ia-ii-di*), and on the Prism of Ashurbanipal (*Mi-in-si-e sar Ia-ii-di*), among twenty-two tributaries of Assyria (ANET, pp. 291, 294). The Chronicler narrates Manasseh's deportation to Babylon, his repentance and release (2 Ch. 33:10-13). A parallel to this is the capture and the subsequent release of Neco I, king of Egypt, by Ashurbanipal (*Rassam Cylinder*, ANET, p. 295). Since a revolt against Assyria occurred in Manasseh's reign, in support of Shamash-shum-ukin, viceroy of Babylon, he may well have been involved in it (ANET, p. 298). His reformation appears to have been superficial and was swept away in the reign of his son. R.J.A.S.

MANGER. The feeding-trough for animals in a stall or stable, translated 'crib' in Jb. 39:9 (AV, RSV); Pr. 14:4 (AV); Is. 1:3 (AV, RSV). Gk. *phatnē* has an extended meaning of 'stall' (Lk. 13:15), and is used in LXX to translate various Heb. words, 'urwā, 'stall' (2 Ch. 32:28), *reḡet* (Hab. 3:17), *ēbūs* (Jb.

39:9; Pr. 14:4; Is. 1:3). In the NT it occurs in Lk. 2:7, 12, 16; 13:15.

Mangers are known in other lands besides Palestine. In Palestine the stable or stall was attached to the owner's house and was furnished with a manger. The stables at *Megiddo, now dated by the Omrid dynasty, had hollowed-out limestone blocks for feed boxes. Christian tradition holds that Jesus was born in a cave in the neighbourhood of Bethlehem. In that case the manger may have been cut out of the rock walls. J.A.T.

MANNA. A substance which was the Israelites' chief food during their 40 years' sojourn in the wilderness (Ex. 16:35). When Israel grumbled at the lack of food in the wilderness of Sin, God gave them 'bread from heaven' (Ex. 16:4; Ps. 78:23-24), and his provision did not cease until they crossed into Canaan and ate the food of that land (Jos. 5:12), despite their grumbling (Nu. 11:6; cf. Ne. 9:20). The Israelites were to collect an omer each for five days and double that amount on the sixth day to last them over the sabbath, as none would appear on that day. Usually it did not keep overnight but became maggoty and malodorous if left over, but the manna to be kept for sabbath use was preserved by being cooked or baked beforehand (Ex. 16:4-5, 16-30). Each morning after the dew had gone there was found on the ground a 'small, round thing' like hoar-frost, whitish, like coriander-seed and bdellium, with a honey taste; it could be ground and used in cooking and baking. The people said, 'What (Heb. *man*) is it?' and called it manna (*man*). Such are the data in Ex. 16:14-15, 31; Nu. 11:7-9. An omerful was preserved by Aaron at God's command as a witness for future generations (Ex. 16:33-34; Heb. 9:4).

Many have speculated on the precise nature of this manna, and several partial parallels are known. To the present time in Sinai, certain insects produce honeydew excretions on tamarisk-twigs seasonally every June for some weeks. At night these drops fall from the trees to the ground, where they remain until the heat of the sun brings forth the ants which remove them. These drops are small, sticky, light-coloured, and sugary-sweet, quite strikingly like the biblical descriptions in Ex. 16 and Nu. 11. Other honeydew-producing insects are known in Sinai and elsewhere, e.g. certain cicadas. However, these products do not fit the biblical description in all particulars. On them, see F. S. Bodenheimer, *BA* 10, 1947, pp. 1-6; for a photo of tamarisk-twigs with drops, see W. Keller, *The Bible as History*, 1956, plate between pp. 112-113. In S. Algeria in 1932 and also about 70 years before, after unusual weather 'there were falls of a whitish, odourless, tasteless matter of a farinaceous kind which covered tents and vegetation each morning' (A. Rendle Short, *Modern Discovery and the Bible*', 1952, p. 152). Also in 1932, a white substance like manna one morning covered an area of ground 640 × 18 m on a farm in Natal and was eaten by the natives (H. S. Gehman in *WDB*, p. 375a). None of these phenomena satisfies the biblical data, and the provision of the manna remains ultimately in the realm of the miraculous, especially in its continuity, quantity and 6-day periodicity. The partial parallels cited above may indicate, however, the kind of physical bases used by God in this provision.

The manna was used by God to teach lessons for

spiritual instruction as well as physical sustenance. Israel was told that with the failure of other food ('suffered thee to hunger'), his provision of manna was to 'make you know that man does not live by bread alone, but that man lives by everything that proceeds out of the mouth of the Lord' (Dt. 8:3, cf. v. 16). God used the provision of manna on 6 days and not the seventh to teach Israel obedience, and convicted them of disobedience (Ex. 16:19, cf. vv. 20, 25-30). Jesus Christ uses the manna, God-given 'bread from heaven', as a type of himself, the true bread of life, and contrasts the shadow with the substance: 'your fathers ate the manna in the wilderness, and they died' (Jn. 6:49), but he could say, 'I am the bread of life . . . which came down from heaven; if any one eats of this bread, he will live for ever' (Jn. 6:35, 51, and cf. vv. 26-59 *passim*). Eternal life was made available to man by the merits of Christ's death (v. 51). In Rev. 2:17 the 'hidden manna' represents spiritual sustenance imparted by the Spirit of Christ. K.A.K.

MANOAH. Samson's father. The name is identical in form with a word meaning 'resting-place, state or condition of rest' from the root *nwh*, 'to rest' (*BDB*), and with the Wādi el-Munāh, which runs into Wādi Šarār from Tibneh (= Timnah). Manoah was a Danite from Zorah (*šor'ā*) (Jdg. 13:2), and one name may be derived from the other. A connection with the Manahathites of I Ch. 2:54 is more dubious. These were a Calebite clan of Judah (I Ch. 2:50ff.), and may have been among those Judahites who lived in Zorah in post-exilic times (Ne. 11:29). For a discussion of these coincidences, see C. F. Burney, *Book of Judges*, 1920, p. 341. Manoah is best known for the angelic annunciation of Samson's birth. He appears as a man of prayer and godly fear, and he tried to dissuade his son from marrying outside the covenant people (Jdg. 14:3). He predeceased his son (Jdg. 16:31). A.G.

MANSIONS (AV) (Gk. *monai*, Vulg. *mansiones*, rvmg. 'abiding-places', rsv 'rooms'). Various speculations have been made about this figure of speech used by our Lord in Jn. 14:2 (e.g. B. F. Westcott, *The Gospel according to St John*, 2, 1908, p. 167). Most scholars agree that what is intended is that the Father will provide room and to spare in the eternal abode. The Gk. word elsewhere in NT occurs only in v. 23 of this chapter. See F. Hauck, *TDNT* 4, pp. 579-581. J.D.D.

MAON, MAONITES. I. Descendants of the Calebite branch of the tribe of Judah. Maon was the son of Shammai and the father of the inhabitants of Beth-zur (I Ch. 2:45). The town Maon features in Judah in the list in Jos. 15:55. In this area David and his men sheltered from Saul (I Sa. 23:24-25), and the churlish Nabal lived there (I Sa. 25:2). The Maonites are mentioned in the official list of those who returned from Exile (Ezr. 2:50, AV 'Mehunim', rsv 'Meunim'; Ne. 7:52, 'Meunim'). Khirbet-el-Ma'in, 14 km S of Hebron and 65 km W of Gaza, marks the ancient site. Traces of Early Iron Age I pottery and a remarkable late 4th-6th century AD synagogue with mosaics were found there. It is surrounded by pasture-lands, probably the 'wilderness of Maon' where David

MAON, MAONITES

sought refuge from Saul (1 Sa. 23:24–25) and was saved by a Philistine raid (1 Sa. 23:27f.).

2. A hostile people in Transjordan, linked with Amalek and the Zidonians as oppressors of Israel (Jdg. 10:12); a pastoral people attacked by Hezekiah (rsv 'Meunim', 1 Ch. 4:41), and Uziah (2 Ch. 26:7). Their association with Arabs and Ammonites (2 Ch. 20:1) suggests *Ma'an*, SE of Petra, as their home.

J.A.T.

MARAH (Heb. *mārā*, 'bitter'). This was the first named camp of the Israelites after the Red Sea crossing, called Marah because only bitter water was found there (Ex. 15:23; Nu. 33:8–9), and perhaps also by comparison with the sweet water of the Nile Valley to which they had been accustomed. On the likely assumption that the route from the crossing led to the mountains in the S of the Sinai peninsula, Marah is often identified with the modern Ain Hawarah, c. 75 km SSE of Suez. However, H. H. Rowley (*From Joseph to Joshua*, 1950, p. 104) and J. Gray (*VT* 4, 1954, pp. 149f.) identify Marah with *Kadesh, a view refuted by *GTT*, p. 252, n. 218; B. Rothenberg and Y. Aharoni, *God's Wilderness*, 1961, pp. 11, 93f., 142ff., present both views. (*WILDERNESS OF THE WANDERING.)

G.I.D.

MARANATHA. An Aramaic formula used in transliteration without explanation at 1 Cor. 16:22, av. In the *Didache* (10. 6) it figures as part of the eucharistic liturgy. The phrase is probably to be resolved as *māranā tā*, 'our Lord, come!' (see G. H. Dalman, *Grammatik des jüdisch-palästinisch Aramäisch*, pp. 120, n. 2; 297, n. 2; also *Jesus-Jeshua*, 1929, p. 13, for the resolution *māran* 'tā of identical meaning). The anticipation and longing expressed in this early Christian prayer may be seen reflected in 1 Cor. 11:26 (cf. the context in the *Didache*) and in Rev. 22:20. The occurrence of the phrase at 1 Cor. 16:22 derives from the idea of judgment implicit in v. 21, which is closely linked with the idea of the second coming (cf. the Old Latin ms g and the Ethiopic version, which render *maranatha* as 'at the coming of the Lord').

In Gk. mss with accents and punctuation the phrase is often written as if it represented *māran* 'tā, 'our Lord has come'. This seems less likely in view of the ideas of the Eucharist and the judgment with which it is linked in the context, unless it be a reference to the Lord's manifestation of himself through the Eucharist.

J.N.B.

MARESHAH (Heb. *mārēšāh*). A town in the Shephelah (Jos. 15:44), covering the road up the Wadi Zeita to Hebron; now Tell Sandahanna (Tel Maresha). The inhabitants claimed descent from Shelah (1 Ch. 4:21). Rehoboam fortified it, and in this area Zerah of Ethiopia was defeated by Asa;

Eliezer the prophet was born here (2 Ch. 11:8; 14:9; 20:37). Later it was a Sidonian colony and an important stronghold of Idumaea (1 Macc. 5:66; 2 Macc. 12:35; Zeno, Cairo Museum pap. 59006; Josephus, *Ant.* 12. 353; 14. 75). The Parthians destroyed it in 40 BC (*Ant.* 14. 364); in its place rose Eleutheropolis, now Beit Guvrin or Jibrin, 1½ km to the N; a village to the W is now Khirbet Mar'ash. The name, probably derived from *rōš* (head), was perhaps not unique (Rudolph on 1 Ch. 2:42). See *NEAEHL*, pp. 948–957.

J.P.U.L.

MARI, mod. Tell Ḥariri, is a site located on the middle Euphrates river in mod. Syria. A Parrot excavated the site from 1933. Since 1979 J. Margueron has continued the excavations. Situated midway up the valley, 2 km from the Euphrates, it forms a mid-point on the river between Babylon to the SE and Emar to the NW. The site was first built near the end of the fourth millennium BC. Its central importance grew throughout the third millennium BC. In the early second millennium BC it emerged as a centre of Amorite culture under the leadership of Yahdun-Lim and his successors. However, Hammurabi conquered the last of the dynasty, Zimri-Lim. The king of Babylon destroyed the city in the mid-18th century BC. The city never again flourished. Excavation of the site has revealed a palace preserving many rooms and organized around two large courtyards. The rooms contain frescoes. Although its foundations date earlier, Zimri-Lim made the structure a centre of international renown for its magnificence. It has been compared with other palaces of the mid-second millennium, especially that of the Minoan civilization found at Knossos on Crete.

Archaeologists have excavated more than 20,000 tablets and fragments. Although a few dozen date from the 23rd century and a handful from the following centuries, most originate in the final two decades of the Amorite dynasty (c. 1780–1760 BC). Many record the administration of the palace. From the palace there are numerous letters, and a few treaties, literary and religious texts. The gaps in the letters and treaties, as well as the mutilated state of the latter, led Durand in 1992 to suggest that Hammurabi removed these documents when he conquered the city. Many thousands of personal names of the citizens of Mari have come to light from census lists. These attest to the dominance of a W Semitic population, called Amorite. The OT dates the patriarchs to this period. As W Semitic ancestors of Israel, they too would have been Amorites. Sharing a common culture, Mari practices parallel those of Israel. Thus the *asakum* at Mari resembled Israel's *hērem*, i.e. the 'ban' imposed on Canaanite property and lives, as in the conquest of Jericho (Jos. 6; Malamat). Both terms can refer to the property of a deity. As with Joshua, at Mari a military commander could impose a ban on the spoils of war by public proclamation. In both cases, violation of the ban incurred serious penalty. Study of the Mari texts has illuminated the OT in many areas, including patriarchal customs, prophecy and proper names.

Texts describe the making of peace treaties through the slaughter of various animals (Held, Malamat). This resembles the covenant God makes with Abram in Gn. 15 which also involves the slaughter of animals. Genesis portrays the

lifestyle of the patriarchs as (enclosed) nomadic pastoralists, who move about with their herds while maintaining commercial relations with cities. This parallels Mari, where various nomadic tribal groups (Mari *gāyūm*, cf. Heb. *gōy* 'people, nation') sought water and pasture rights for their livestock (Mari *nawūm*, 'people, livestock, camp', cf. Heb. *nāweh*, 'pasture, abode'; Malamat). Both urban and tribal groups benefited. Nomads might settle in order to obtain a better life. The reverse also occurred. Jacob grew up in a nomadic family, settled at Haran, and then returned to a nomadic lifestyle. *Naḥālum*, 'to give or inherit property (especially land)' resembles Heb. *naḥlāh*, 'inheritance' of land given to God's people.

The Heb. *m'baššēr*, 'bringer of good news' (Is. 40:9; 41:27; 52:7), underlies NT 'evangelize'. At Mari, the *mubassiru* was a military messenger who brought good news of victory (Fisher). Heb. *nābī*, 'prophet', resembles the Mari (and Emar) *na-bī-i* who work with diviners (*bārūm*) and whose role is to invoke deities in prayer, blessing or inquiry. Cf. Baal's prophets (1 Ki. 18:26–29) and Naaman's expectation (2 Ki. 5:11) which contrast with the Heb. *nābī* who responds to God's initiative (Nu. 11:25–27; 1 Sa. 10; 19; Fleming). Cruder, but reminiscent of Ezekiel's acts and Amos' wordplay, a *muhūm* prophet devours a raw lamb and uses the same word to announce that the land will be devoured. Mari attests to a divine council (Ps. 82; Je. 23), to divine commissioning of a prophet (Is. 6:8), to prophets as messengers, and to critical and ethical messages towards the king (Gordon).

Mari gentiles (Benjaminites, Canaanites) and personal names or their elements (Adam [but feminine], Seth, Mahalalel, Reu, Shem, Ham, Milcah, Arioch, Ab[a]ram, Jacob, David) correspond to biblical names but refer to different name-bearers. The relationship of the Ḫabiru, 'socially disenfranchised people', to Heb. is not established. Mari place names and divine names do refer to the same biblical sites (Haran, Nahor, Serug [but a personal name]) and deities (Hadad, Dagan, Baal, El). Hazor, a trading partner of Mari, is the only Israelite city mentioned.

BIBLIOGRAPHY. Texts are published in the continuing series, *Archives royales de Mari*. This series includes texts in photograph, hand copy, transliteration and translation into French. The major journal studying the archives is *MARI, Mari: Annales de recherches interdisciplinaires*; M. R.S.H.

MARK, GOSPEL OF.

I. Outline of contents

a. Prologue (1:1–13)

The ministry of John (1:1–8); baptism and temptation of Jesus (1:9–13).

b. The earlier Galilean ministry (1:14–6:44)

The kingdom of God in Galilee (1:14–45); the beginning of conflict (2:1–3:6); conflict increases (3:7–35); division caused (parables of the Kingdom) (4:1–34); Jesus, by-passing the synagogue, communicates himself to Israel (4:35–6:44).

c. The later Galilean ministry (6:45–9:50)

Jesus, removing the barriers, communicates himself to Gentiles (6:45–8:10); the Pharisees are refused a sign and the disciples cannot see one when it is given (8:11–26); confession and transfiguration (8:27–9:10); the passion foretold (9:11–50).

d. The road to Jerusalem (10:1–52)

Debates in Peraea (10:1–34); the test of greatness (10:35–45); the healing of Bartimaeus (10:46–52).

e. The Jerusalem ministry (11:1–13:37)

Entry into Jerusalem (11:1–14); cleansing of the Temple (11:15–19); exhortation and debate (11:20–12:44); the * Olivet discourse (13:1–37).

f. Passion and resurrection (14:1–16:8)

The Last Supper (14:1–25); agony in Gethsemane (14:26–42); the arrest (14:43–52); Jesus before the Sanhedrin (14:53–72); Jesus before Pilate (15:1–15); the crucifixion (15:16–41); burial and resurrection (15:42–16:8).

(16:9–20 form a later addition to the Gospel.)

The scope of Mark's Gospel is thus identical with that of the primitive apostolic preaching, beginning with John the Baptist and ending with the resurrection (cf. Acts 10:36–43; 13:24–37). Those scholars who maintain that Mark originally ended at 13:37, at least in its 'first edition' (e.g. E. Trocmé), would say that verses like 9:9 assume the resurrection witness, so that the scope of the Gospel is still the same.

II. Authorship

This record of our Lord's ministry, the shortest and simplest of all the Gospels, was traditionally compiled by John Mark of Jerusalem, who at different times was a younger companion of Paul, Barnabas and Peter (* MARK (JOHN)). Other modern guesses have included Philip the evangelist.

a. Evidence of Papias

The earliest statement about the origin of this Gospel is that given by Papias (preserved in Eusebius, *EH* 3. 39): 'Mark, who was the interpreter of Peter, wrote down accurately all that he remembered, whether of sayings or doings of Christ, but not in order. For he was neither a hearer nor a companion of the Lord; but afterwards, as I have said, he accompanied Peter, who adapted his instruction as necessity required, not as though he were making a compilation of the Lord's oracles. So then Mark made no mistake when he wrote down thus some things as he remembered them; for he concentrated on this alone—not to omit

MARK, GOSPEL OF

anything that he had heard, nor to include any false statement among them.'

Papias' information (c. AD 140) is amplified a generation or so later in the anti-Marcionite prologue to Mark and in Irenaeus. The anti-Marcionite prologue, only part of which has survived, says that Mark 'was called "stumpy-fingered" (*kolobodaktulos*) because his fingers were short in relation to the rest of his body; he was Peter's interpreter, and after Peter's departure he committed his Gospel to writing in the parts of Italy'. Irenaeus (*Adv. Haer.* 3. 1. 1), after referring to Mark as having been written 'when Peter and Paul were preaching the gospel in Rome and founding the church there', adds that 'after their departure (*exodos*) Mark, Peter's disciple, has himself delivered to us in writing the substance of Peter's preaching'. Both of these authorities therefore suggest a date shortly after Peter's death, though later Fathers claim, perhaps tendentiously, that it was written in Peter's lifetime.

b. Influence of Peter

Mark's Gospel has sometimes been popularly called Peter's Gospel (to be distinguished from later heretical works with this or similar titles), not only because of the evidence of these 2nd-century writers but also since, even if the hand be Mark's, the voice is Peter's voice, to judge from the nature of the incidents, choice of matter, and manner of treatment. It is, however, only fair to say that alternative explanations can be found for all of these (see Nineham and Trocmé) taken individually: nevertheless, their cumulative evidence is strong. It may thus be no empty tradition that this is the written record of the preaching of Peter, originally delivered to Christian catechumens, whether at Rome, or in the Gk. East, and reduced to writing either on the death of its oral source or when the death became imminent. This would put the date of the Gospel somewhere in the second half of the 1st century, perhaps between the death of Peter in AD 65 and the fall of Jerusalem in AD 70, if ch. 13 was written before the fall, as seems most probable (unlike the parallel passages in Matthew and Luke). In any case, to allow use by Matthew and Luke, it could hardly be later than AD 75.

Others have chosen to describe it as the Gospel for the Romans (if it had the influence of the powerful Roman church behind it, then its rapid and apparently universal acceptance would be immediately explicable), or the Gospel for the Gentiles; but in the first of these identifications they may have been influenced more by the Lat. name borne by Mark, in addition to his Heb. name of John, and by the traditional place of origin of the Gospel, rather than by an examination of the contents of the book. Luke has more claim, in every way, to be regarded as the Gentile Gospel; and, while Peter was initially used by God for the conversion of the Gentile Cornelius (Acts 15:7), yet he was universally recognized in the early church as apostle to the circumcision (Gal. 2:8), not apostle to the Gentiles, as was Paul. Thus it is *a priori* unlikely that Peter's teaching forms would be initially aimed at, and adapted to, Gentile audiences. In any case, modern scholarship shows increasingly the thoroughly Jewish nature of *all* the Gospels, although it is true that Mark is at pains to explain Jewish words and customs, as though to a Hellenistic Gentile public.

III. Relationship to Matthew and Luke

For over a century, since Lachmann's day, the question of the literary relationship of Mark to the other Gospels has attracted the attention of W scholars. Apart from the Gospel of John, which in many ways stands by itself, it is obvious that some close link exists between the other three, usually called the Synoptic Gospels because, taken together, they present a very similar picture of the ministry and teaching of Christ. Source criticism is the science of investigation of the assumed direct literary dependence of one Gospel upon another, or of both alike upon some third document, either present or hypothetical.

a. Primacy of Mark's Gospel

Most subsequent Protestant scholars have held firmly, with Lachmann, to the primacy of Mark, considering it to be the earliest of the three Synoptic Gospels, if not in its present form, at least in what might be called an early edition, possibly containing only chs. 1-13. Indeed, most modern scholars consider that Mark was the originator of the form of the *gospel*, a form which became very popular later (Lk. 1:1-3), by his combination of various unconnected sayings and miracles of Jesus, setting them in a framework of his own making. How far this framework is chronological, and how far it is theological, is disputed: and nowadays, some scholars hold that even this framework was traditional within the church. If this were true, Mark would underlie both Matthew and Luke as a principal source. A second presumed early written source was a mass of non-Marcian matter common to Matthew and Luke; this, when isolated, was denoted by the symbol 'Q', for German *Quelle*, 'source'. Mark and Q were thus two of the earliest strands in the Gospel tradition, although Matthew and Luke were acknowledged each to have their own peculiar material as well, for which suitable alphabetical symbols were adopted. Mark, under this system, was considered as a product of the years immediately preceding the fall of Jerusalem in AD 70, and the first Gospel to be written; some of its peculiarities were thus explained, as arising from its 'primitive' nature. The danger was that, if Matthew and Luke seemed to deviate from Mark, they would be considered as less reliable, as having controlled their source for some end of their own. But it is more and more apparent that even Mark selected his material from a vastly larger store (*cf.* Jn. 21:25) and arranged it with a theological purpose (even if it was that of the whole church) so that these strictures are unjustified. All the Evangelists stand or fall together, as far as the historicity of their material is concerned.

b. Primacy of Matthew's Gospel

Roman Catholic scholars for a long time would have none of this, although the situation is very different nowadays; for them it was an article of faith to believe in the primacy of Matthew, and they argued their case with great ingenuity, although without producing much conviction outside their own ranks. They could at least argue that the early church believed in the primacy of Matthew—else why put Mark as the second Gospel? But the principle of arrangement of books within the various sections of the NT is still too little understood to make such a psychological argument valid. Their view, if true, would make

Mark only a secondary authority, and his words would tend to be treated as less weighty than those of Matthew. This is most unlikely: we can see reasons for Matthew's 'smoothing-out' or 'toning-down' of Mark, for instance, but no reasons at all for the reverse process taking place. The battle raged; mathematical symbols multiplied, and ultimately the multiplication of assumed literary sources led to fragmentation. Instead of Gospels, there were bundles of documents, and scholars were left in a morass of literary agnosticism. Was there a way out? As in contemporary OT scholarship, the literary hypothesis had broken down under its own weight.

c. Form criticism

Meanwhile, on the flank, a new force had arisen, which would in itself nullify and make meaningless the whole battle. This was form criticism, originated about 1920 by M. Dibelius, followed closely by R. Bultmann. This might be described as the abandonment of the study of the whole in favour of the study of the part, and, in origin, was purely a descriptive and classificatory science. The various incidents and sayings recorded in Mark (usually called 'pericopes', from the Gk. word for 'paragraph') were now examined, and classified by nature and content. So far, so good. This classification was made from a new angle, had the merit of freshness, and produced some positive and valuable results. But the next step was to examine the hypothetical circumstances and practical religious needs of the community that led to the preservation of each saying; and to make exegesis dependent upon hypothetical reconstruction is dangerous. In the case of extreme critics, this meant that the story was either created or moulded by the needs of the infant church; less extreme scholars would simply say that the story was selected and told with these needs in view. Thus, what had begun as a purely neutral movement ended by passing judgments on the historicity of the text of Scripture. In a sense, such a statement as the last phrase is meaningless to an adherent of this school, for documentary hypotheses have been abandoned in favour of oral tradition, exactly as in contemporary OT scholarship. It is doubtful, however, whether there is any ultimate difference between considering a particular mass of material as a written document or as a complex of oral tradition, especially in view of the fixity of oral tradition in the rabbinical world of the 1st century.

Nevertheless, this stress on form criticism and oral tradition has outdated rather than solved much of the old discussion. Further, it has made the question of the date of Mark's Gospel unanswerable, if not meaningless. The scholar may tentatively date the compilation of the tradition in its present literary form, but the origins of Mark lie much farther back, in the oral traditions of the generation of the crucifixion and resurrection. This, of course, has its good side, in that the reader is confronted directly with the recollections of those who had themselves been eyewitnesses of the events (Lk. 1:2). Much work along these lines has been constructive and cautious; and valuable results have emerged. In particular, it appears that many of the traditions used by Mark were 'church traditions' rather than 'individual traditions': the stories were already old when he used them, and represent the witness of a church (perhaps the Roman church?) to Christ.

d. History of tradition

A still more recent study is the attempt to discover by what means the oral tradition reached its present form, by delving further into the pre-literary history of the text. This, by its nature, is even more hypothetical. We can tell what a particular Marcan saying or incident became in Matthew or Luke, and we can suggest tentative reasons: but we have at present no way of getting behind the text of Mark except by guesswork. Ultimately, we must deal with the text that we have: the only Christ that we know is the Christ of the Gospels. To say that this is the Christ of faith is true: to deny that this is the Christ of history is unwarranted assumption.

e. Redaction criticism

Another recent movement concentrates on the contribution of the Evangelists themselves (redaction criticism). In the case of Mark's Gospel, this leads to an examination of Mark as a theologian. There is no doubt that the Evangelist has been selective in his use of material, but caution is needed to avoid the impression that he has imposed on it his own type of theology.

f. Liturgical approach

There has been an increasing tendency (probably representing the spirit of the times rather than any new discovery) to explain not only Matthew but also Mark as a 'church Gospel', and to see, for instance, his passion narrative as written around the 'holy week' observance of the primitive church. Sometimes this goes along with the belief that even the order of the Gospel may be linked with a primitive liturgical calendar. This, however, while not objectionable, seems too sophisticated for so early, especially outside Jerusalem: it sometimes goes along with the view that Mark was written by a 1st-century 'angry young man' to combat certain ecclesiological and un-missionary views in the early church. This again seems too modern a concept: young men did not act in that way in those days. In any case, Mark does not give the impression of being a brilliant individualist, but of a humdrum church member, faithfully reproducing the common tradition, whether in a liturgical context or not.

g. Recent discoveries

As against this swing towards oral tradition, a reaction in favour of early written documents as sources has been helped by the discovery in Egypt, during the last generation, of several early Gk. papyri containing portions of both canonical and uncanonical Gospels. By their early date, these have pushed back the emergence of written Gospels, in the modern sense of the word, to at least the end of the 1st Christian century. These finds, important as they are, have been overshadowed by the discovery in 1947 and the following years, in caves near Qumran, in the territory of Jordan, of caches of manuscripts in Heb., Aram. and Gk. These *Dead Sea Scrolls are largely of pre-Christian date, apparently the property of a semi-monastic community of Jewish sectaries. The very existence of these manuscripts proves that there is no *a priori* evidence against the existence of 1st-century Christian documents, Gk. or Aram., as sources of the Gospels, particularly collections of 'Messianic prophecies', or 'testimonies'.

MARK, GOSPEL OF

h. Aramaic influences

Further, the discovery of such Sem. documents has raised again the issue, already live for half a century, as to whether Gk. or Aram. was the original language of the sources of the Gospels, and, in this instance, of Mark's Gospel. In the light of form criticism, this may well be a 'non-question': it all depends on what stage of the tradition we designate as 'sources' of the Gospel, since, the further back we go, the more likely they are to be in Aram., particularly in Galilee. This leads to the further question, as to how far the Gk. of Mark is not only *koinē* Gk., the *lingua franca* of the 1st-century Roman Mediterranean (*LANGUAGE OF THE NEW TESTAMENT), but actually 'translation Greek'. The many Semitisms in Mark would thus be due, not only to OT reminiscences, nor to influence by the 'translation Greek' of the Septuagint, the Gk. OT, nor even to Semitic speech-patterns persisting in the language of a Palestinian Jew (Mark's local knowledge can hardly be explained otherwise) even if he habitually spoke Gk. in later years at least, but directly to Aram. originals lying before the Evangelist. Indeed, to scholars pursuing this line, many difficult verses in Mark have appeared either as misunderstandings or mistranslations of a lost Aram. original, whether written or spoken. It appears certain that Aram. was the mother-tongue of the Lord and his apostles, to judge from the fossilized Aram. words and phrases that appear even in Gk. dress (cf. Mk. 5:41; 7:34; 15:34). While C. C. Torrey's theory of entirely translated Gospels has not generally commended itself to scholars, as being too extreme and involving too many forced arguments, yet few would deny the importance of the underlying Aram. substratum in every Gospel, and the value of considering Aram. vocabulary or idiom when the Gk. text presents difficulties. Recent and more cautious approaches in English have been made, especially by Matthew Black. There is traditional support for some such translation process in the evidence of Papias, preserved in Eusebius; but when he says that Mark was the 'interpreter' of Peter, he can hardly mean simply that Mark turned Peter's Aram. preaching into Gk. The Latinisms of Mark may support a Roman origin for the work: on the other hand, they may simply show the vulgar Gk. of the E part of the empire. In any case, they are not as significant as his Semitisms.

IV. Special characteristics

Basically, Mark is the most blunt and clipped of the Gospels; Matthew contains much of specifically Jewish interest nowhere to be found in Mark, and Luke has much of a 'medical' or of a 'human' interest not found in Mark, as for example the three famous parables of Luke 15. The abrupt ending of Mark is a problem in itself, although it is probably to be seen as a textual rather than a theological problem. The various alternatives put forward by the manuscripts suggest that the original ended abruptly at the same place, whether by accident or by design: this last is hard to believe. It will be objected that the above is a purely negative definition of Mark's nature and contents. Indeed, this was precisely why, in the heyday of source criticism, Mark was seen as the earliest and most primitive of the Gospels, and as a source for both the other Synoptists. But if all documentary sources alike disappear in a welter of oral tradition, what then? The basic observation as to the

nature and style of Mark still holds good. Nor is this a purely subjective impression on the part of the 20th century; Papias of Hierapolis shows that the problem was felt equally keenly in the 2nd century. If Mark knew more facts about the Lord, why did he not recount them? Why does he omit so much that the other Evangelists record? Why, on the other hand, are his narratives commonly more detailed and more vivid than parallel accounts in the other Gospels? In addition, Mark appears on first sight to be constructed on a chronological framework of the Lord's life and thus to approach a 'biography' in the Hellenistic and modern sense of the word (although Mark himself warns us that it is a 'gospel', not a 'biography', Mk. 1:1). But is Mark so constructed? and, if not, is there any discernible principle of arrangement? In earlier days attempts were made to fit the other Gospels willy-nilly into Mark's assumed chronological framework. But this proved impossible, although Matthew and Luke do, broadly speaking, follow the same outline, and weave their own material into it—perhaps for the sake of convenience, or perhaps because the framework was already generally known and accepted.

Perhaps the answer is to be found in the cautious use of the new understanding of the nature and importance of oral tradition as underlying the present Gospel of Mark. For it is a plain fact that constant oral repetition leads not to diversity but to uniformity, especially when such repetition is by unimaginative and elderly teachers, whose aim is not to entertain but to instruct catechumens within the context of the church. Stories are not ramified but simplified, if told with a purely didactic end in view; events are boiled down to their bare bones. Variant stories do not grow from one original in such a tradition; if anything, the tendency is to assimilate original variants, all unconsciously. Scholars have not always recognized this, because they have too often considered the earliest custodians of Christian tradition in the light of professional story-tellers, Arabic, Celtic or Scandinavian, according to the culture-pattern the scholars already knew. The aged Sunday-school teacher in a country church might be a closer parallel, for with his continual practice of 'extempore prayer' he tends to become in such circumstances quasi-liturgical, and fixed in form. Seen in this light, Mark is not the most primitive and least developed of the Gospels. The second Gospel is not a bare recital of facts, to which other writers have added flowery details, as imagination prompted them. Rather, Mark is the most developed of the Gospels in the sense that it is threadbare with use, pared of all but significant fact, the record of teaching forms that have stood the test of time. After all, that is exactly what Papias said.

This does not say anything about the actual date of the writing of Mark in its present form; it is merely the empirical observation that it bears, more clearly than any other Gospel, the marks of being a virtual 1st-century Teachers' Handbook, a summary of facts, with all save what was deemed significant ruthlessly pruned. By contrast, Luke was specifically composed *de novo* as a written document, in the face of other existing written documents (Lk. 1:1-4), and in deliberate and pointed contrast to such disconnected instruction as Mark records. Luke, in fact, had claims to be regarded as a work of literature, as had Acts (Acts 1:1); Mark had none. He was not, in all probability,

a well-educated man like Luke or Paul, and this may well account for some of the honest uncouthness of his Gospel. But his hearers were not well-educated men either, and his purpose was not to attain to literary excellence, but to communicate the truth. Even Matthew and John bear marks of careful arrangement, although on varying principles; but, for such matters as Mark contains, the principle of arrangement seems to be largely mnemonic. Stories and sayings are linked by keywords or similarity of subject rather than by strict chronological sequence. Where the order of incident varies, as against that given in Matthew and Luke, it is sometimes demonstrably because a different keyword or link is used.

All this would fit perfectly with the above sketch of the origin and nature of Mark, and when it is found to accord exactly with the earliest traditions about the Gospel the case becomes even stronger. For Papias, our oldest witness, in the extract quoted above, appears to be defending Mark against exactly the charges which a modern scholar might bring against him—omission of significant detail and lack of chronological arrangement. The defence is seen to lie in the very nature of the Gospel, which, says Papias, is but a permanent record of the teaching of Peter, thus preserved for posterity at a time when its primary source was passing away. Careful chronological order and full cataloguing of fact, says Papias, are not to be found in Peter because they were not his aim, which was purely practical and instructional; it is unfair to blame any man for failure to achieve something foreign to his purpose. If all this be so, Mark is absolved, along with Peter, and the reasons for many other aspects of his Gospel become apparent at once. (* GOSPELS.)

MARK (JOHN). Traditional author of the second Gospel, apparently a Jew and a native of Jerusalem. His Heb. name was the OT *yōhānān*, 'Yahweh has shown grace' (cf. 2 Ki. 25:23, etc.), shortened in English to the familiar 'John'. The reason for his adopted Lat. name of 'Marcus' is uncertain; sometimes Jewish families that had been captured as slaves in war, and later freed, took, as 'freemen', the name of the Roman family to which they had been enslaved; but this is unlikely in his case, the more so as Marcus is a praenomen, not a family name. It was not uncommon for 1st-century Jews to bear a Gk. or Rom. name in addition to their Heb. name, 'in religion'; see Acts 1:23 for another such 'surname', again Lat. and not Gk. in origin. The same phenomenon is common among Jews today. If his early nickname of *kolobodaktylos*, 'stumpy-fingered', is a genuine tradition (see the anti-Marcionite prologue to Mark, dating from the

later 2nd century, which is the earliest evidence for it), then it may refer either to a physical peculiarity on the part of the author or to some strange stylistic features of the Gospel which have puzzled critics of all ages. It may, however, be only a late conjecture, due to the confusion of 'Marcus' with the Lat. adjective *mancus*, 'maimed'.

Scripture gives some very clear evidence about his family, and there are also several conjectures of varying degrees of probability. His mother, named Mary, was related to Barnabas (Col. 4:10), the wealthy Levite from Cyprus, who was a landowner (Acts 4:36) and, whatever his country of origin, was a resident of Jerusalem in the days of the opening chapters of Acts. Mary herself appears to have been a woman of wealth and position, as well as a Christian; certainly her house was large enough to house a number of people, boasted at least one maidservant and was used as a meeting-place by the apostolic church even in time of persecution (Acts 12:12). It is significant that Peter, released from prison, has no doubt as to where he will find the Christians gathered. John Mark's father is nowhere mentioned in Scripture, and, from the fact that the house of Acts 12:12 is called Mary's, it has been inferred, probably correctly, that he was dead by that date, and Mary a widow. To John Mark himself there is no certain early reference, although the young man of Mk. 14:51, who saved himself by ignominious flight, is usually taken to be Mark. (Was he sleeping in a hut on the family property, guarding the fruit?) It would be neither safe nor customary for an author to mention his own name in such circumstances (cf. Jn. 21:24 for similar deliberate anonymity). Less likely, as partly dependent on the above tentative identification, is the theory that the Last Supper of Mk. 14 actually took place in John Mark's house; the shadowy 'goodman of the house' of v. 14 would thus be John Mark's father, still alive then, although dead before the date of Acts 12:12.

John Mark apparently remained at home until brought to Antioch by Barnabas and Paul, who were returning from a relief mission to Jerusalem (Acts 12:25). When the two departed to Cyprus on the first missionary journey some time later he accompanied them, as travelling companion and attendant on the two older men (Acts 13:5). When, however, the party reached Perga, on the mainland of Asia Minor, John Mark left them, and returned to Jerusalem (Acts 13:13), while Barnabas and Paul continued alone. Paul apparently regarded this as desertion, and thus, when Barnabas suggested Mark as a travelling companion for the second journey, he refused point-blank (Acts 15:38). With both men, the attitude towards John Mark was no whim, but a point of principle (cf. Acts 9:27 and 11:25 for the character of Barnabas), so a separation was inevitable, Barnabas taking Mark back to Cyprus with him, and Paul taking Silas instead.

After that, Mark is lost to view in Acts, but appears spasmodically in the Epistles. By the date of Col. 4:10 he is in the company of Paul the prisoner, presumably at Rome; Paul is apparently intending to send him on a mission to Colossae, so that he must have forgiven and forgotten the past. Phm. 24 also mentions him among the same apostolic group, which includes Luke. By the time of writing 2 Tim. 4:11 Mark is now away with Timothy, but there has been no rift; presumably this means that Paul had sent Mark on the mission to Asia Minor

MARK (JOHN)

envisaged above, if Timothy was indeed in Ephesus.

In the Petrine correspondence there is one significant mention, in 1 Pet. 5:13, where the wording shows the 'paternal' relationship existing between the older and younger disciples. If, as is probable, 'Babylon' in this verse stands for 'Rome', then the tradition of the Roman origins of Mark's Gospel may well be true. The tradition that Mark later founded the church of Alexandria (Eusebius, *EH* 2. 16) lacks support. As 'Mark' was the commonest of all Roman names, some have argued that the biblical references concern more than one person. But, in such cases, the Bible differentiates (e.g. Jn. 14:22), so we may reject the objection. For Bibliography, see * MARK, GOSPEL OF. A.C.

MARKET, MARKET-PLACE. In the OT this translates Heb. *ma'arab*, 'merchandise', in Ezk. 27:13, 17, 19, 25. In Is. 23:3 the word is *sāhar*, 'emporium' (of Tyre). Both describe the trading centre of an E town.

In the NT the word used is *agora*, 'place of assembly', the chief place not only of trade but of public resort, often ornamented with statues and colonnades. Here the sick were brought (Mk. 6:56), children played games (Mt. 11:16; Lk. 7:32) and idlers waited to hire out their services (Mt. 20:3; cf. Acts 17:5, *agoraioi*, 'of the rabble'). In the market-places greetings were exchanged, according to social rank, and this the Pharisees particularly loved (Mt. 23:7; Mk. 12:38; Lk. 11:43; 20:46), but they were careful to remove any defilement (Mk. 7:4). Here also in Gentile towns preliminary trial hearings were held (Acts 16:19; cf. 19:38ff.) and philosophical or religious discussions took place, e.g. Paul in Athens (Acts 17:17-18). For an ancient description of this *agora*, cf. Pausanias 1. 2-17; for its modern excavation, Am. Sch. Class. Studs., *The Athenian Agora*, 1962. B.F.H.

MARKS. The variety of 'marks' mentioned in the Bible is reflected in the number of different Heb. and Gk. words which are used to describe them.

1. The various verbal forms which occur correspond to our Eng. verb 'to mark' in the sense of 'to consider' (Ps. 48:13), 'pay attention to' (Ps. 37:37), 'scrutinize with fixed gaze' (1 Sa. 1:12), 'observe closely' (Lk. 14:7), etc. With the meaning of 'to make a mark', Isaiah refers to the carpenter who draws a line with pencil and compasses (44:13), while Jeremiah speaks of Judah's sins being indelibly marked like a stain on cloth which neither lye nor soap can eradicate (2:22).

2. The first arresting use of 'mark' as a noun is found in Gn. 4:15. Here it is a translation of Heb. *ōt*, which describes the mark on Cain's forehead. In the OT *ōt* usually means 'sign', but it signifies also 'omens' (1 Sa. 10:7, 9), 'symbols' (Is. 8:18), 'miracles' (Ex. 7:3). However, underlying many of these different uses is the common idea of 'pledge', as, e.g., of good (Ps. 86:17), of God's presence (Ex. 4:8f.), and of covenant (Gn. 9:12-13, 17). Hence *ōt*, when used with reference to the mark on Cain's brow, should be understood in terms of a sign, a pledge or token, of the Lord's protection which would shield him from retribution. If this is correct, then *ōt* might signify a token of some kind of covenant by which God promises to protect Cain (Gn. 4:15).

3. 'Mark' in the sense of 'target' is a rendering of the Heb. *matārā* (1 Sa. 20:20). Job complains that God has made him a target at which he shoots his arrows (16:12; cf. La. 3:12).

4. In Ezk. 9:4, 6, the Heb. word *tāw* is rendered 'mark' in the sense of 'sign'. This is the mark which is placed on the forehead of the righteous, and was an attestation that those who bore the sign were the Lord's people (cf. Jb. 31:35, RV, where *tāw* is rendered 'signature'), were distinguished from idolaters, and were therefore exempt from judgment because of the Lord's protection (cf. Ex. 12:22f.). Here 'mark' might have the meaning 'seal' (cf. Rev. 7:3; 14:1; 22:4).

5. Another word which is rendered 'mark' occurs only once in the Bible: *qa'qa'*. Its etymology is obscure, but in Lv. 19:28 it probably refers to tattoo marks which, along with 'cuttings in your flesh' (i.e. 'incisions' or 'lacerations'), the Israelites were forbidden to make. The prohibition probably points to their having pagan and magical associations.

6. In the well-known Pauline metaphor of 'pressing towards the mark' (*skopos*) in order to win the prize (Phil. 3:14, AV) 'mark' signifies the 'goal' (RSV). The apostle here uses the language of the chariot races to describe the intensity with which he concentrates on winning the crown—the honour of being called by God in Christ.

7. The next Gk. word rendered 'mark' is one that has entered the Eng. language without undergoing any alteration, *stigma*. Like *skopos*, it occurs only once (Gal. 6:17). The root means 'to prick', but probably Paul uses it in the sense of tattoo- or brand-marks with which slave-owners stamped their slaves for identification purposes. Paul was proud of being Christ's bondslave (cf. Rom. 1:1, RVmg.); for him no stigma attached to Christ's brand-marks with which he had been branded (Gal. 6:17) in the course of his Christian ministry (2 Cor. 11:23-27).

8. The last word, *charagma* (Rev. 13:16), is reminiscent of Heb. *tāw* in Ezk. 9:4, 6, but the circumstances are reversed. In Rev. 13:16 it is 'the mark of the beast', and is borne by the followers of Antichrist, who is the embodiment of apostasy. Whether a literal or a moral designation, this 'mark' may have stood for a travesty of God's 'seal' upon the Christians. J.G.S.S.T.

MARRIAGE. Marriage is the state in which men and women can live together in sexual relationship with the approval of their social group. Adultery and fornication are sexual relationships that society does not recognize as constituting marriage. This definition is necessary to show that in the OT polygamy is not sexually immoral, since it constitutes a recognized married state; though it is generally shown to be inexpedient.

I. The status of marriage

Marriage is regarded as normal, and there is no word for 'bachelor' in the OT. The record of the creation of Eve (Gn. 2:18-24) indicates the unique relationship of husband and wife, and serves as a picture of the relationship between God and his people (Je. 3; Ezk. 16; Ho. 1-3) and between Christ and his church (Eph. 5:22-33). Jeremiah's call to remain unmarried (Je. 16:2) is a unique prophetic sign, but in the NT it is recognized that for specific

purposes celibacy can be God's call to Christians (Mt. 19:10–12; 1 Cor. 7:7–9), although marriage and family life are the normal calling (Jn. 2:1–11; Eph. 5:22–6:4; 1 Tim. 3:2; 4:3; 5:14).

Monogamy is implicit in the story of Adam and Eve, since God created only one wife for Adam. Yet polygamy is adopted from the time of Lamech (Gn. 4:19), and is not forbidden in Scripture. It would seem that God left it to man to discover by experience that his original institution of monogamy was the proper relationship. It is shown that polygamy brings trouble, and often results in sin, e.g. Abraham (Gn. 21); Gideon (Jdg. 8:29–9:57); David (2 Sa. 11; 13); Solomon (1 Ki. 11:1–8). In view of oriental customs Heb. kings are warned against it (Dt. 17:17). Family jealousies arise from it, as with Elkanah's two wives, one of whom is an adversary to the other (1 Sa. 1:6; cf. Lv. 18:18). It is difficult to know how far polygamy was practised, but on economic grounds it is probable that it was found more among the well-to-do than among the ordinary people. Herod the Great had nine wives at one time (Jos., *Ant.* 17. 19). Polygamy continues to the present day among Jews in Muslim countries.

When polygamy was practised the status and relationship of the wives can be gathered both from the narratives and the law. It was natural that the husband would be drawn to one rather than another. Thus Jacob, who was tricked into polygamy, loved Rachel more than Leah (Gn. 29). Elkanah preferred Hannah in spite of her childlessness (1 Sa. 1:1–8). In Dt. 21:15–17 it is admitted that the husband may love one wife and hate the other.

Since children were important to carry on the family name, a childless wife might allow her husband to have children by her slave. This was legal in civilized Mesopotamia (e.g. the Code of Hammurapi, §§ 144–147), and was practised by Sarah and Abraham (Gn. 16) and Rachel and Jacob (Gn. 30:1–8), though Jacob went farther and accepted Leah's maid also, even though Leah had already borne him children (Gn. 30:9). In these cases the rights of the wife are safe-guarded; it is she who gives her maid to her husband for a specific occasion. It is difficult to give a name to the status of the maid in such a relationship; she is a secondary, rather than a second, wife, though, if the husband continued to have relations with her, she would have the position of concubine. This is perhaps why Bilhah is called Jacob's concubine in Gn. 35:22, while Hagar is not classed with Abraham's concubines in Gn. 25:6.

Wives would normally be chosen from among the Hebrews (e.g. Ne. 13:23–28). Betrothal and marriage would then follow a normal pattern (see below). Sometimes they were bought as Heb. slaves (Ex. 21:7–11; Ne. 5:5). It is commonly asserted that the master of a household had sexual rights over all his female slaves. No doubt there were flagrant examples of such promiscuity, but the Bible says nothing about them. It is noteworthy that Ex. 21:7–11 and Dt. 15:12 distinguish between an ordinary female slave, who is to be released after 7 years, and one who has been deliberately taken as a wife, or concubine, and who cannot claim her release automatically. Since her rights are here established by law, the head of the house or his son must have gone through some ceremony, however simple, of which the law can take cognizance. In speaking of her rights this passage does not make them depend upon her word against the word of the head of the house, nor even upon her having

borne him or his son a child. It is difficult to say what her status was. No doubt it varied according to whether she was the first, second, or only 'wife' of the householder. Where she was given to the son of the house, she might well have full status as his wife. The fact is that this law, as the context shows, deals with her rights as a slave and not primarily as a wife.

Wives might also be taken from among captives after a war, provided that they were not Palestinians (Dt. 20:14–18). Some writers regard these captives as concubines, but the regulations of Dt. 21:10–14 regard them as normal wives.

There is no law dealing with concubines, and we do not know what rights they had. Obviously they had an inferior position to the wives, but their children could inherit at their father's discretion (Gn. 25:6). Judges records the rise to power of Abimelech, the son of Gideon's concubine (Jdg. 8:31–9:57), and also tells the tragic story of the Levite and his concubine (Jdg. 19). The impression given by 19:2–4 is that this concubine was free to leave her 'husband', and that the man relied on persuasion to bring her home. David and Solomon copied oriental monarchs in taking many wives and concubines (2 Sa. 5:13; 1 Ki. 11:3; Ct. 6:8–9). In the last two passages it seems that the concubines were drawn from a lower class of the population.

In normal marriages the wife came to the husband's home. There is, however, another form of marriage in Jdg. 14–15. This is practised among the Philistines, and there is no record of it among the Israelites. Here Samson's wife remains at her father's home, and Samson visits her. It might be argued that Samson had intended to take her home after the wedding, but went off alone in a rage after the trick that she had played on him. Yet she is still at her father's house in 15:1, even though in the meantime she has been married to a Philistine.

II. Marriage customs

The marriage customs of the Bible centre in the two events of betrothal and wedding.

a. Betrothal

In the Near East betrothal (Talmudic *'ērūsin* and *qiddūšin*) is almost as binding as marriage itself. In the Bible the betrothed woman was sometimes called 'wife' and was under the same obligation of faithfulness (Gn. 29:21; Dt. 22:23–24; Mt. 1:18, 20), and the betrothed man was called 'husband' (Joel 1:8; Mt. 1:19). The Bible does not legislate for broken betrothals, but the Code of Hammurapi (§§ 159–160) stipulated that if the future husband broke the engagement the bride's father retained the bride-gift; while if the father changed his mind he repaid double the amount of the gift (see also the Law codes of Lipit-Ishtar, 29, and Eshnunna, 25). Presumably there was some formal declaration, but the amount of publicity would depend on the bridegroom. Thus Joseph wished to dissolve the betrothal to Mary as quietly as possible (Mt. 1:19).

God's love and faithfulness towards his people are pictured in terms of a betrothal in Ho. 2:19–20. The betrothal included the following steps:

(i) *Choice of a spouse.* Usually the parents of a young man chose his wife and arranged for the marriage, as Hagar did for Ishmael (Gn. 21:21) and Judah for Er (Gn. 38:6). Sometimes the young man did the choosing, and his parents the

MARRIAGE

negotiating, as in the case of Shechem (Gn. 34:4, 8) and Samson (Jdg. 14:2). Rarely did a man marry against the wish of his parents, as did Esau (Gn. 26:34–35). The girl was sometimes asked whether she consented, as in the case of Rebekah (Gn. 24:58). Occasionally the girl's parents chose a likely man to be her husband, as did Naomi (Ru. 3:1–2) and Saul (1 Sa. 18:21).

(ii) *Exchange of gifts*. Three types of gifts are associated with betrothal in the Bible: 1. The *mōhar*, translated 'marriage present' in rsv and 'dowry' in av (Gn. 34:12, for Dinah; Ex. 22:17, for a seduced maiden; 1 Sa. 18:25, for Michal). The *mōhar* is implied but not so named in such passages as Gn. 24:53, for Rebekah; 29:18, the 7 years' service performed by Jacob for Rachel. Moses' keeping of the sheep for his father-in-law may be interpreted in the same way (Ex. 3:1). This was a compensation gift from the bridegroom to the family of the bride, and it sealed the covenant and bound the two families together. Some scholars have considered the *mōhar* to be the price of the bride, but a wife was not bought like a slave. 2. The dowry. This was a gift to the bride or the groom from her father, sometimes consisting of servants (Gn. 24:59, 61, to Rebekah; 29:24, to Leah) or land (Jdg. 1:15, to Achsah; 1 Ki. 9:16, to Pharaoh's daughter, the wife of Solomon), or other property (Tobit 8:21, to Tobias). 3. The bridegroom's gift to the bride was sometimes jewellery and clothes, as those brought to Rebekah (Gn. 24:53). Biblical examples of oral contracts are Jacob's offer of 7 years' service to Laban (Gn. 29:18) and Shechem's promise of gifts to the family of Dinah (Gn. 34:12). In TB a contract of betrothal is called *š'tar qiddušin* (*Moed Katan* 18b) or *š'tar ʿērūsin* (*Kiddushin* 9a). In the Near East today the contributions of each family are fixed in a written engagement contract.

b. Wedding ceremonies

An important feature of many of these ceremonies was the public acknowledgment of the marital relationship. It is to be understood that not all of the following steps were taken at all weddings.

(i) *Garments of bride and groom*. The bride sometimes wore embroidered garments (Ps. 45:13–14), jewels (Is. 61:10), a special girdle or 'attire' (Je. 2:32) and a veil (Gn. 24:65). Among the adornments of the groom might be a garland (Is. 61:10). Eph. 5:27; Rev. 19:8; 21:2 refer figuratively to the white garments of the church as the Bride of Christ.

(ii) *Bridesmaids and friends*. Ps. 45:14 speaks of bridesmaids for a royal bride, and we assume that lesser brides had their bridesmaids also. Certainly the bridegroom had his group of companions (Jdg. 14:11). One of these corresponded to the best man at our weddings, and is called 'companion' in Jdg. 14:20; 15:2, and 'the friend of the bridegroom' in Jn. 3:29. He may be the same as 'the steward (av 'governor') of the feast' in Jn. 2:8–9.

(iii) *The procession*. In the evening of the day fixed for the marriage the bridegroom and his friends went in procession to the bride's house. The wedding supper could be held there: sometimes circumstances compelled this (Gn. 29:22; Jdg. 14), but it may have been fairly common, since the parable of the Ten Virgins in Mt. 25:1–13 is most easily interpreted of the bridegroom going to the bride's house for the supper. One would, however, expect that more usually the bridegroom escorted

the bride back to his own or his parents' home for the supper, though the only references to this in Scripture are in Ps. 45:14f.; Mt. 22:1–14 (royal weddings), and probably in Jn. 2:9f.

The procession might be accompanied by singing, music and dancing (Je. 7:34; 1 Macc. 9:39), and by lamps if at night (Mt. 25:7).

(iv) *The marriage feast*. This was usually held at the house of the groom (Mt. 22:1–10; Jn. 2:9) and often at night (Mt. 22:13; 25:6). Many relatives and friends attended; so the wine might well run out (Jn. 2:3). A steward or friend supervised the feast (Jn. 2:9–10). To refuse an invitation to the wedding feast was an insult (Mt. 22:7). The guests were expected to wear festive clothes (Mt. 22:11–12). In special circumstances the feast could be held in the bride's home (Gn. 29:22; Tobit 8:19) The glorious gathering of Christ and his saints in heaven is figuratively called 'the marriage supper of the Lamb' (Rev. 19:9).

(v) *Covering the bride*. In two cases in the OT (Ru. 3:9; Ezk. 16:8) the man covers the woman with his skirt, perhaps a sign that he takes her under his protection. D. R. Mace follows J. L. Burckhardt (*Notes on the Bedouin*, 1830, p. 264) in saying that in Arab weddings this is done by one of the bridegroom's relations. J. Eisler, in *Wellenmantel und Himmelszelt*, 1910, says that among the bedouin the bridegroom covers the bride with a special cloak, using the words, 'From now on, nobody but myself shall cover thee.' The Bible references suggest that the second custom was followed.

(vi) *Blessing*. Parents and friends blessed the couple and wished them well (Gn. 24:60; Ru. 4:11; Tobit 7:13).

(vii) *Covenant*. Another religious element was the covenant of faithfulness which is implied in Pr. 2:17; Ezk. 16:8; Mal. 2:14. According to Tobit 7:14, the father of the bride drew up a written marriage contract, which in the Mishnah is called *k'ṭūbā*.

(viii) *Bridechamber*. A nuptial chamber was specially prepared (Tobit 7:16). The Heb. name for this room is *huppā* (Ps. 19:5; Joel 2:16), originally a canopy or tent, and the Gk. word is *nymphōn* (Mk. 2:19). The word *huppā* is still used among Jews today of the canopy under which the bride and bridegroom sit or stand during the wedding ceremony.

(ix) *Consummation*. The bride and groom were escorted to this room, often by the parents (Gn. 29:23; Tobit 7:16–17; 8:1). Before coming together, for which the Heb. uses the idiom 'to know', prayer was offered by husband and wife (Tobit 8:4).

(x) *Proof of virginity*. A blood-stained cloth or chemise was exhibited as a proof of the bride's virginity (Dt. 22:13–21). This custom continues in some places in the Near East.

(xi) *Festivities*. The wedding festivities continued for a week (Gn. 29:27, Jacob and Leah) or sometimes 2 weeks (Tobit 8:20, Tobias and Sarah). These celebrations were marked by music (Pss. 45; 78:63) and by joking like Samson's riddles (Jdg. 14:12–18). Some interpret Canticles in the light of a custom among Syrian peasants of calling the groom and bride 'king' and 'queen' during the festivities after the wedding and of praising them with songs.

III. Forbidden degrees of marriage

These are listed in Lv. 18 in detail, and less fully in

Lv. 20:17–21; Dt. 27:20–23. They are analysed in detail by David Mace, *Hebrew Marriage*, pp. 152f. We presume that the ban held good both for a second wife during the first wife's lifetime and for any subsequent marriage after the wife's death, except for marriage with the wife's sister: for Lv. 18:18, in saying that the wife's sister may not be married during the wife's lifetime, implies that she may be married after the wife is dead.

Abraham (Gn. 20:12) and Jacob (Gn. 29:21–30) married within degrees of relationship that were later forbidden. The scandal in the church at Corinth (1 Cor. 5:1) may have been marriage of a stepmother after the father's death, but, since the woman is called 'his father's wife' (not *widow*), and the act is called *fornication*, it is more likely to be a case of immoral relationship with the man's young second wife.

IV. The levirate law

The name is derived from Lat. *levir*, meaning 'husband's brother'. When a married man died without a child his brother was expected to take his wife. Children of the marriage counted as children of the first husband. This custom is found among other peoples besides the Hebrews.

The custom is assumed in the story of Onan in Gn. 38:8–10. Onan took his brother's wife, but refused to have a child by her, because 'the seed should not be his' (v. 9), and his own children would not have the primary inheritance. This verse does not pass any judgment on birth control as such.

Dt. 25:5–10 states the law as applying to brethren who dwell together, but allows the brother the option of refusing.

The book of Ruth shows that the custom extended farther than the husband's brother. Here an unnamed kinsman has the primary duty, and only when he refuses does Boaz marry Ruth. A further extension of the custom here is that it is Ruth, and not Naomi, who marries Boaz, presumably because Naomi was too old to bear a child. The child is called 'a son to Naomi' (4:17).

The levirate law did not apply if daughters had been born, and regulations for the inheritance of daughters are given to the daughters of Zelophehad in Nu. 27:1–11. It might seem strange that vv. 9–11 seem to ignore, or even contradict, the levirate law. It could be argued that Dt. 25:5–10 had not yet been promulgated. On the other hand, when a law arises out of a specific occasion one must know the exact circumstances in order to judge what the law professes to cover. There would be no contradiction of the levirate law if Zelophehad's wife had died before he did, and the law here confines itself to similar cases. Nu. 27:8–11 would operate when there were daughters only, or when a childless wife had predeceased her husband, or when the late husband's brother refused to take the childless widow, or when the wife remained childless after the brother had married her.

In Lv. 18:16; 20:21 a man is forbidden to marry his brother's wife. In the light of the levirate law this clearly means that he may not take her as his own wife, whether she has been divorced during her husband's lifetime or has been left with or without children at her husband's death. John the Baptist rebuked Herod Antipas for marrying the wife of his brother Herod Philip (Mt. 14:3–4); Herod Philip was still alive.

In the NT the levirate law is used by the Sad-

duces to pose a problem about the resurrection (Mt. 22:23ff.).

V. Divorce

a. In the Old Testament

In Mt. 19:8 Jesus says that Moses 'allowed' divorce because of the hardness of the people's hearts. This means that Moses did not command divorce, but regulated an existing practice, and the form of the law in Dt. 24:1–4 is best understood in this sense. *av* and *rv* imply a command in the second half of v. 1, but the *rsv* follows Keil, Delitzsch, S. R. Driver and *Lxx*, in making the 'if' of the protasis extend to the end of v. 3, so that v. 4 contains the actual regulation. On any translation we gather from this section that divorce was practised, that a form of contract was given to the wife, and that she was then free to remarry.

The grounds of divorce here are referred to in such general terms that no precise interpretation can be given. The husband finds 'some uncleanness' in his wife. The Heb. words, *'erwat dābār* (literally, 'nakedness of a thing'), occur elsewhere only as a phrase in Dt. 23:14. Shortly before the time of Christ the school of Shammai interpreted it of unfaithfulness only, while the school of Hillel extended it to anything displeasing to the husband. We must remember that Moses is not here professing to state the grounds of divorce, but accepting it as an existing fact.

There are two situations in which divorce is forbidden: when a man has falsely accused his wife of pre-marital unfaithfulness (Dt. 22:13–19); and when a man has had relations with a girl, and her father has compelled him to marry her (Dt. 22:28–29; Ex. 22:16–17).

On two exceptional occasions divorce was insisted on. These were when the returned exiles had married pagan wives (Ezr. 9–10 and probably Ne. 13:23ff., although divorce is implied here, rather than stated). In Mal. 2:10–16 some had put away their Jewish wives so as to marry pagans.

b. In the New Testament

In comparing the words of Jesus in Mt. 5:32; 19:3–12; Mk. 10:2–12; Lk. 16:18, we find that he brands divorce and remarriage as adultery, but does not say that man *cannot* put asunder what God has joined together. In both passages in Matthew fornication (*rsv* 'unchastity') is given as the sole ground on which a man may put away his wife, whereas there is no such qualification in Mark and Luke. *Fornication* is commonly taken as here being equivalent to *adultery*; similarly, the conduct of the nation as Yahweh's wife is branded both as adultery (Je. 3:8; Ezk. 23:45) and as fornication (Je. 3:2–3; Ezk. 23:43); in Eccles. 23:23 an unfaithful wife is said to have committed adultery in fornication (*cf.* also 1 Cor. 7:2 where 'immorality' is Gk. 'fornication').

The reason for the omission of the exceptive clause in Mark and Luke could be that no Jew, Roman or Greek ever doubted that adultery constituted grounds for divorce, and the Evangelists took it for granted. Similarly, Paul in Rom. 7:1–3, referring to Jewish and Rom. law, ignores the possibility of divorce for adultery which both these laws provided.

Other theories have been held about the meaning of Christ's words. Some refer *fornication* to pre-marital unfaithfulness, which the husband

MARRIAGE

discovers after marriage. Others have suggested that the parties discover that they have married within the prohibited degrees of relationship, a thing which must have happened too rarely for it to be the subject of a special exception in Christ's words. Roman Catholics hold that the words sanction separation, but not remarriage. It is difficult to exclude permission to remarry from Mt. 19:9; and among the Jews there was no such custom as separation without permission to remarry.

Some have doubted the authenticity of Mk. 10:12, since a Jewish wife could not normally divorce her husband. But a wife could appeal to the court against her husband's treatment of her, and the court could compel the husband to divorce her. Moreover, Christ may have had Gk. and Rom. law in mind, and here the wife could divorce her husband, as Herodias had divorced her first husband.

There is a strong body of opinion both among Protestants and Roman Catholics that I Cor. 7:10-16 gives another ground for divorce. Here Paul repeats the teaching that the Lord had given when on earth, and then, under the guidance of the Spirit, gives teaching beyond what the Lord had given, since a new situation had arisen. When one party in a pagan marriage is converted to Christ he or she must not desert the other. But if the other insists on leaving the Christian 'a brother or sister is not under bondage in such cases'. This latter clause cannot simply mean that they are free to be deserted, but must mean that they are free to be remarried. This further ground, which on the face of it is of limited application, is known as the 'Pauline Privilege'.

In the present modern tangle of marriage, divorce and remarriage the Christian church, in dealing with converts and repentant members, is often compelled to accept the situation as it is. A convert who previously has been divorced, on sufficient or insufficient grounds, and who has remarried, cannot return to the original partner, and the present marriage cannot be branded as adulterous (I Cor. 6:9, 11).

J.S.W.
J.T.

MARSHAL. There are two Heb. words rendered 'marshal'. 1. *sōpēr* (Jdg. 5:14. 'they who wield the marshal's staff'). The word *sōpēr* usually means 'writer' (so AV and Syr., Targ.; cf. *LXX grammateus*, 'scribe'). 2. *tiṣār* (Je. 51:27) or *tiṣēr* (Na. 3:17). Probably from Akkad. *tuṣarru*, 'tablet writer'; hence 'official', 'marshal'. For both these instances, cf. I Macc. 5:42, where Gk. *grammateus* means 'marshal'.

The seeming proper name *Tartan (Is. 20:1; 2 Ki. 18:17) is from the Akkad. *turtanu*, a title of high military rank which may be rendered 'marshal'.

R.J.W.

MARTHA. The name derives from an Aram. form not found in Heb., meaning 'lady' or 'mistress'. It occurs only in the NT, and is used of only one person (Lk. 10:38-41; Jn. 11:1, 5, 19-39; 12:2). Martha was the sister of the Mary who anointed our Lord shortly before his death (Mt. 26:6ff., and parallels); and Lazarus, whom Jesus raised from the dead (Jn. 11), was their brother. According to Jn. 11:1 the family came from Bethany, a village probably about 4 km from Jerusalem on the road to Jericho. Luke seems to suggest by his placing of events that Martha's house was in Galilee (Lk. 10:38). This difficulty is removed, however, if we either allow the possibility that the Lucan incident is chronologically misplaced (so *HDB*, 3, p. 277) or, more reasonably, assume that this was one of the several journeys undertaken by Jesus to Jerusalem during the last 6 months of his earthly life (cf. Jn. 10:22).

Matthew, Mark and John all agree that our Lord was anointed in Bethany, and Matthew and Mark specify (presuming the same occasion is referred to) that it took place in the house of Simon the leper. Since Jesus was received into Martha's house in the Lucan record, and Martha served at the supper in Simon's house at Bethany during which Mary anointed our Lord, it has been supposed that Martha was the wife (or even the widow) of Simon. The lead she takes on both occasions suggests that she was the elder sister.

In Luke's narrative (10:38ff.) Martha is gently rebuked by Christ for her impatience with her sister, and her excessive concern for the practical details of the meal (v. 40). She was no less devoted to Jesus than Mary (cf. her faithful response to the Lord recorded at Jn. 11:27), but she failed to see the way of receiving him which would please him most—'one thing is needful'. Some of the oldest mss read at this point, 'few things are needful, or only one' (so rsvmg.). 'Few' refers presumably to material provision, 'one' to spiritual apprehension.

See J. N. Sanders, 'Those whom Jesus loved', *NTS* 1, 1954-5, pp. 29ff.; and the comment on Lk. 10:38-42 in E. E. Ellis, *The Gospel of Luke, NCB*, 1974, pp. 161f. (*MARY, 2) s.s.s.

MARY. The name appears as *Maria* or *Mariam* in the NT. Both are Graecized forms of the Heb. name Miriam, which appears in LXX as *Mariam* (used of the sister of Moses), and may just possibly be derived from the Egp. *Maryē*, 'beloved' (but see A. H. Gardiner, *JAOS* 56, 1936, pp. 194-197). In the NT the name is used to refer to the following:

I. Mary the mother of the Lord. Our information about the mother of Jesus is largely confined to the infancy narratives of Mt. and Lk. There we learn that when the angelic announcement of the birth of Jesus occurred, Mary was living at Nazareth, in Galilee, and was engaged to a carpenter named Joseph (Lk. 1:26f.). Luke tells us that Joseph was of Davidic descent (*ibid.*), and although no mention of Mary's lineage is made it is possible that she came from the same line, particularly if, as seems likely, the *genealogy of Christ in Lk. 3 is to be traced through his mother. The conception of Jesus is described as 'of the Holy Spirit' (Mt. 1:18; cf. Lk. 1:35), and his birth as taking place at Bethlehem towards the end of Herod the Great's reign (Mt. 2:1; Lk. 1:5; 2:4). (*VIRGIN BIRTH.)

It is recorded in both Mt. 2:23 and Lk. 2:39 that after the birth the holy family lived at Nazareth. Matthew alone mentions the flight into Egypt, where Joseph and Mary and the child Jesus took refuge from the jealous anger of Herod. Luke records Mary's visit to her cousin Elizabeth, who greeted her as 'the mother of my Lord' with the words 'Blessed are you among women' (1:42f.). Luke also has Mary's song of praise (1:46-55, where a few ancient witnesses read 'Elizabeth' for 'Mary' as the name of the speaker; *MAGNIFICAT). A single appealing glimpse of Christ's childhood is given to us by Luke (2:41-51), who records the typically anxious words of his mother at the discovery of the lost boy (v. 48), and the well-known reply, 'Did you not know that I must be in my Father's house?' (v. 49).

The remaining references to Mary in the Gospels are few and relatively uninformative. Apparently she did not accompany our Lord on his missionary journeys, although she was present with him at the marriage in Cana (Jn. 2:1ff.). The rebuke uttered by Jesus on this occasion, 'O woman, what have you to do with me?' (v. 4), reveals amazement rather than harshness (cf. Lk. 2:49, and the tender use of the same word *gynai*, 'woman', in Jn. 19:26; see also Mk. 3:31ff., where the Lord places spiritual fidelity above family relationship; with v. 35 cf. Lk. 11:27f.). Finally, we meet Mary at the foot of the cross (Jn. 19:25), when she and the beloved disciple are entrusted by him to each other's care (vv. 26-27). The only other explicit NT reference to Mary is in Acts 1:14, where she and the disciples are described as 'devoting themselves to prayer'.

The brief NT sketch of Mary and her relationship to our Lord leaves many gaps in the record which pious legend has not been slow to fill. But we are not able to press the Gospel records beyond their historical limit, and this means that we must be content at least to notice Mary's humility, obedience and obvious devotion to Jesus. And as she was the mother of the Son of God, we cannot say less about her than did her cousin Elizabeth, that she is 'blessed among women'.

BIBLIOGRAPHY. J. de Satgé, *Mary and the Christian Gospel*, 1976; R. E. Brown (ed.), *Mary*, 1977; J. McHugh, *The Mother of Jesus in the New Testament*, 1975.

2. Mary the sister of Martha. She appears by name only in Lk. and Jn. In Lk. 10:38-42 it is recorded that after the return of the Seventy Jesus came into 'a village' (identified subsequently in Jn. 11:1 as Bethany, about 2 km E of the summit of the Mount of Olives), where *Martha, who had a sister called Mary, received him into her house. In the account which follows Martha is rebuked by the Lord for complaining about her sister Mary, who listened to his 'word' rather than helping with the work.

Jn. 11 gives us the description of the meeting at Bethany between Jesus and the sisters Martha and Mary, on the occasion of the death of Lazarus their brother. Mary is now described (v. 2) as the one who 'anointed the Lord with ointment, and wiped his feet with her hair'; and after the raising of Lazarus by Jesus (11:43f.) we are told almost immediately of this anointing (12:1ff.).

All four Gospels contain an account of the anointing of Jesus by a woman (Mt. 26: 6-13; Mk. 14:3-9; Lk. 7:37-50; Jn. 12:1-8). The difficulty is to decide whether these four accounts report an identical occasion, and if not whether more than one

woman is involved. Matthew and Mark more or less agree in their versions; the Lucan account differs widely (particularly in placing the event in Galilee while John the Baptist was in prison, rather than in Bethany shortly before the death of Christ); while the Johannine account is independent of all three. Only in John is the woman named, and there, as we have seen, she is clearly identified as Mary the sister of Martha. Luke alone adds that the woman was 'a sinner' (7:37); Matthew and Mark set the scene specifically 'in the house of Simon the leper'; and Matthew and Mark agree against Luke and John that it was the head and not the feet of Jesus that the woman anointed.

There have been various attempts to resolve these differences. One is to suggest that Luke describes a different occasion, but that it is the same woman who performs the anointing. The difficulty in this view (mostly held in the Latin church) is the earlier description 'sinner' for the saintly Mary of Bethany. It was this ascription indeed, together with the absence of further information, which led mediaeval scholars to identify the sinful woman of Luke's account with Mary Magdalene (for a discussion of which see below under 'Mary Magdalene'), and the Magdalene herself, by the further confusion just noted, with Mary of Bethany. Yet John could not have been unaware of the real identity of the two Marys, or been content to confuse his readers. There is really no justification for identifying Mary of Bethany with Mary Magdalene, and certainly none for associating either with the sinful woman of Lk. 7.

The second main view is that two anointings of our Lord occurred during his earthly ministry, one administered by a penitent sinner of Galilee, and the other by Mary of Bethany. In this case the description of Mary in Jn. 11:2, as the one who 'anointed the Lord', has a prospective reference. The only difficulty in this view is the repetition of what is evidently regarded by Jesus as an otherwise unique action, the singular character of which he clearly intends to underline by his commendation (Mt. 26:13; Mk. 14:9). This interpretation seems the most satisfactory one, however, and it solves more problems than it raises. Origen suggested that at least three anointings took place, involving either two or three different people.

The action of Mary is recognized as a spontaneous expression of devotion to Jesus, which in its character as well as its timing anticipates his death and is therefore associated with it.

3. Mary Magdalene. The name probably derives from the Galilean town of *Magdala. Her appearance prior to the passion narratives is confined to Lk. 8:2, where we read that among the women cured of possession by evil spirits who accompanied the Lord and his disciples during their evangelistic ministry was 'Mary called Magdalene, from whom seven demons had gone out' (cf. Mk. 16:9, in the longer ending).

It is not possible, at least from the biblical evidence, to limit the illness from which Mary was healed to one sphere alone, the physical, the mental or the moral. This is a further reason for resisting any identification between Mary Magdalene and the 'sinful woman' of Lk. 7 (see above, under 2). If Luke had known that the Mary of ch. 8 was the same person as the sinner of ch. 7, would he not probably have made the connection explicit?

Mary reappears at the crucifixion, in company with the other women who had journeyed with our

MARY

Lord from Galilee (see below, under 4). In the Johannine account of the resurrection we have the description of the Lord's appearance to Mary alone. Mark's version, in the longer ending, is brief and not placed chronologically. Slight differences occur in the reports of the arrival of the women at the tomb. Mary sets out with the others (Mt. 28:1; Mk. 16:1), but apparently runs ahead of them and arrives first at the tomb (Jn. 20:1). She then tells Peter and the beloved disciple what has happened (Jn. 20:2), and is joined there by the other women (Lk. 24:10). She returns with Peter and the beloved disciple to the tomb, and lingers behind weeping after they have gone (Jn. 20:11). It is then that she sees two angels (v. 12), and finally the risen Christ himself (v. 14), who addresses to her the famous *noli tangere* injunction (v. 17). Clearly Mary's relationship to her Lord, following his resurrection, is to be of a different kind and to continue in another dimension.

4. Mary the mother of James; 'the other Mary'; Mary 'of' *Clopas'. It is very probable that these three names all refer to the same person. Mary the mother of James and Joseph is listed with Mary Magdalene among the women who accompanied our Lord to Jerusalem and were present at the crucifixion (Mt. 27:55f.). When Mary Magdalene and 'the other Mary' are described immediately afterwards (v. 61) as 'sitting opposite the sepulchre' after the burial it seems likely that the same Mary, the mother of James, is intended. 'The other Mary' again appears with Mary Magdalene on the resurrection morning (Mt. 28:1).

From the other Synoptists we learn further details. Mark refers to her (15:40) as 'Mary the mother of James the younger and of Joseph', who was present at the crucifixion in the company of Mary Magdalene and Salome. In Mk. 15:47 she is called *Maria hē Iōsētōs*, and in 16:1 she reappears (as 'Mary the mother of James') with Salome and Mary Magdalene as one who brought spices to the tomb on the morning of the resurrection to anoint the dead body of Jesus. Luke adds (24:10) that Joanna, as well as Mary Magdalene and Mary the mother of James, was among the women who had been onlookers at the passion of Christ, and who reported the events of the resurrection to the apostles.

John uses the descriptive term *Klōpa* ('of Clopas') for this Mary, when he records (19:25) that standing by the cross of Jesus were his mother and his mother's sister, Mary 'the wife of Clopas' and Mary Magdalene. It appears correct to translate the genitive *Klōpa* as '(wife of Clopas', rather than as '(daughter) of Clopas'. Judging, then, by the list given in Mk. 15:40, and noted above, it seems fairly clear that Mary of Clopas (*pax* Jerome) is the same person as Mary of James. Hegesippus tells us (see Eus., *EH* 3. 11) that *Clopas (AV Cleophas) was the brother of Joseph, the husband of the Virgin Mary. (The 'Cleopas' of Lk. 24:18 is a different name.)

5. Mary the mother of Mark. The sole NT reference to this Mary occurs in Acts 12:12. After Peter's escape from prison (12:6ff.) it is to her house in Jerusalem, evidently a meeting-place for Christians, that he goes first. Since *Mark is described as the cousin of Barnabas (Col. 4:10), Barnabas was evidently Mary's nephew.

6. Mary greeted by St Paul. Her name appears among the 24 people listed in Rom. 16 to whom Paul sent greetings (v. 6). There she is described as

one who 'worked hard' in (or for) the church. Otherwise nothing is known of her. s.s.s.

MASSA. The seventh of the twelve princes of Ishmael according to Gn. 25:14 and 1 Ch. 1:30, who apparently settled in N Arabia. Probably this tribe is to be identified with the Mas'a who paid tribute with Tema to Tiglath-pileser III (*ANET*, p. 283) and with the *Masanoi*, located by Ptolemy (5. 19, 2) NE of Duma. Perhaps Meshech in Ps. 120:5 should be emended to Massa, which more closely parallels Kedar. In Pr. 30:1 and 31:1 *hammaššā* ('the prophecy' in AV) should possibly be read as a proper name. If Agur and *Lemuel are Massaites, their collections of proverbs are examples of the international character of Heb. *wisdom literature, which on occasion was adopted and shaped by the Israelites to conform to their historic faith.

D.A.H.

MASSAH. According to Dt. 6:16 and 9:22, a place in the wilderness where Israel put God to the test: Massah (from *nissā*, 'to test') means 'testing'. In Ex. 17:7 the name is coupled with Meribah (= 'quarrel, complaint', from *riḅ* = 'strive, complain') in a story from the older Pentateuchal sources which shows the Israelites protesting because of lack of water at *Rephidim, close to Mt Horeb (v. 6). The two names again appear together in Ps. 95:8, a warning to later generations which could refer to this episode.

The name Meribah also occurs (without Massah) in conjunction with *Kadesh, both in a boundary-list (Ezk. 47:19) and as the location of a similar episode (mainly drawn from P), which results in both Moses and Aaron being denied the privilege of entering the promised land (Nu. 20:1–13 (*cf.* v. 24); 27:14; Dt. 32:51; Ps. 106:32).

Both narratives are aetiological, *i.e.* imply that the names were given as a result of these events of the Mosaic period. But because of the legal connotations of the verb *riḅ* it has often been suggested that Meribah was first of all a place where legal disputes were settled (*cf.* En-mishpat, 'well of judgment', another name for Kadesh [Gn. 14:7]). This can only be a hypothesis, but there are other reasons for wondering whether the straightforward explanation of the names is historically correct.

The attempt has frequently been made to separate out a Massah-story and a Meribah-story in Ex. 17:1–7, but, although there is a little unexpected repetition (vv. 2–3), it is not sufficient to justify analysis into two separate stories, deriving from different sources. The same must be said for Nu. 20:1–13. What is more likely is that, in both cases, there has been some amplification of the original account by a later author. In Ex. 17:1–7 this amplification may be responsible for the introduction of the allusion to Meribah (and perhaps Massah also) in vv. 2 and 7.

Dt. 33:8 and Ps. 81:7, where these names also occur, can scarcely refer to the same episodes, since here there is no hint of criticism and it is God, not the people of Israel, who is doing the 'testing'. The theme of God testing Israel is one that is encountered several times in Exodus (15:25; 16:4; 20:20). It seems likely that other events, perhaps mentioned elsewhere in the Bible (Ex. 32?), perhaps not, were at one time connected with these places. To date, no fully satisfactory correlation of

the various passages has been made, and it may be that the literary and historical problems are insoluble. For some ingenious, if speculative, suggestions see H. Seebass, *Mose und Aaron*, 1962, pp. 61ff.

BIBLIOGRAPHY. B. S. Childs, *Exodus*, 1974, pp. 305–309. G.I.D.

MASTER. The translation of five Heb. and seven Gk. words. In the OT the most common term is *ādōn*, 'lord', 'sir', found 96 times, particularly when the reference is to persons other than God—e.g. a master of servants (Gn. 24:14, etc.; TDOT 1, pp. 59–72). *ba'al*, 'owner', 'master', appears five times, generally denoting the master of a house (Jdg. 19:22; cf. Mt. 10:25, Gk. *oikodespotēs*; TDNT 2, p. 49; TDOT 2, pp. 181–200). (For the Phoenician god, see *BAAL.) *rab*, 'great', 'elder', occurs four times, notably in combination with another word—e.g. 'chief of the magicians' (Dn. 4:9; 5:11), 'chief eunuch' (Dn. 1:3). On two occasions the Heb. word is *šar*, 'prince', 'chief', 'commander' (Ex. 1:11; 1 Ch. 15:27), and once it is *ēr*, 'to awake', 'to stir up' (Mal. 2:12), where RV and AVMG. render 'him that waketh' and RSV has 'any to witness' (reading *ēd* for *ēr*).

In the NT the most frequent term is *didaskalos* (TDNT 4, pp. 148–159), 'teacher', 'instructor', found 47 times, all in the Gospels except for Jas. 3:1. *despotēs* (TDNT 2, pp. 44–49) generally denotes a master over slaves, and is used five times (e.g. 1 Tim. 6:1–2). A word peculiar in this connection to Luke's Gospel and found there six times, always when the disciples are addressing Jesus, is *epistatēs* (TDNT 2, pp. 622–623), 'superintendent', 'overseer' (e.g. Lk. 5:5). *kyrios* (TDNT 3, pp. 1039–1095), 'lord', 'sir', is translated 'master' 14 times, often signifying God or Christ (e.g. Mk. 13:35; Eph. 6:9). Another word translated as master is *kathēgētēs*, 'a leader', 'a guide' (in the scholastic sense) (Mt. 23:8, 10). Gk. *rhabbi* (TDNT 6, pp. 961–965), *'Rabbi', from Heb. *rabbi*, 'my master', is used of Jesus (e.g. Jn. 4:31) in 12 of its 15 NT occurrences. Finally, *kybernētēs* (TDNT 3, pp. 1035–1037), 'ship-master', 'pilot', is found twice (Acts 27:11; Rev. 18:17). J.D.D.

MATTHEW. Matthew appears in all the lists of the twelve apostles (Mt. 10:3; Mk. 3:18; Lk. 6:15; Acts 1:13). In Mt. 10:3 he is further described as 'the tax-collector'. In Mt. 9:9 Jesus finds him 'sitting at the tax-office' and bids him follow him. In the parallel passages in Mark and Luke the tax-collector called from the tax-office is designated Levi, Mark adding that he was 'the son of Alphaeus'. The *Gospel of Peter* also speaks of Levi the son of Alphaeus as a disciple of Jesus. Subsequently, Jesus is a fellow-guest with many tax-collectors and sinners. Neither Mt. 9:10 nor Mk. 2:15 makes it clear at whose house the meal was held, but Lk. 5:29 states that 'Levi made him a great feast in his house'. From the evidence it is usually supposed that Matthew and Levi were the same person.

The statement of Papias that Matthew 'compiled the oracles' (*synegrapsato ta logia*) in Hebrew was taken by the early church as evidence that Matthew was the author of the Gospel which had been handed down as 'according to Matthew'. Most modern scholars believe that Papias was re-

ferring to a compilation by Matthew either of the sayings of Jesus or of Messianic proof-texts from the OT. It may be that the subsequent embodiment of some of these sayings or proof-texts in the Gospel was the reason why that document came to be styled 'according to Matthew' from the middle of the 2nd century. MATTHEW, GOSPEL OF.

I. Outline of contents

a. Events associated with the birth of Jesus the Messiah (1:1–2:23).

b. Jesus is baptized and tempted and begins his Galilean ministry (3:1–4:25).

c. The ethics of the kingdom of God are taught by Jesus by injunctions and illustrations (5:1–7:29).

d. Jesus demonstrates his power over disease, the devil and nature (8:1–9:34).

e. Jesus commissions the Twelve and sends them out as preachers (9:35–10:42).

f. Jesus commends John the Baptist, issues a gracious invitation to the heavy laden, claims to be Lord of the sabbath day, argues that he cannot be Beelzebub and explains the qualifications for membership in his new family (11:1–12:50).

g. Jesus gives seven parables about the kingdom of heaven (13:1–52).

h. Jesus is rejected by his fellow-townsmen of Nazareth, and John the Baptist is martyred (13:53–14:12).

i. Further miracles are performed by Jesus, who is acknowledged to be the Christ by Peter. Later Jesus is transfigured before three disciples and predicts his coming death and resurrection (14:13–17:27).

j. Jesus teaches his disciples to be humble, careful in conduct, and very forgiving in practice (18:1–35).

k. Jesus travels to Jerusalem. On the way he gives teaching on divorce, the position of children, the snare of riches and the wickedness of God's people the Jews; he heals two blind men at Jericho (19:1–20:34).

l. After making a triumphal but humble entry into Jerusalem, Jesus shows his authority by cleansing the Temple, by cursing a fruitless fig-tree, and by attacking and counter-attacking the chief priests and Pharisees (21:1–23:35).

m. Jesus predicts the fall of Jerusalem and his own glorious second coming (24:1–51).

n. Jesus gives three parables on judgment (25:1–46).

o. Jesus is betrayed, tried, denied, mocked, crucified and buried (26:1–27:66).

p. Jesus is raised from the dead and is seen by his friends (28:1–10).

q. Jesus gives his final orders before returning to God in heaven (28:11–20).

II. Characteristics and authorship

In this Gospel the incidents in the life of Jesus which constituted 'the gospel' preached by the apostles are combined to a greater extent with the ethical teaching of Jesus than elsewhere in the NT; and it is this feature of the book, together with the orderly manner in which the material is presented, which made it from the earliest days the most widely read and in some respects the most

MATTHEW, GOSPEL OF

influential of the four Gospels. Modern scholars hesitate to accept the tradition that its author was the apostle *Matthew, for he seems to have been dependent upon a document composed by a non-apostolic writer, the Gospel of Mark, to a degree improbable in an original apostle. For a full discussion of the question of authorship see the writer's Introduction to the *TNTC*.

III. The influence of Mark

It is clear that Matthew has included almost the whole of Mark, though he has greatly abbreviated the Marcan stories of the miracles to make space for the large amount of non-Markan material he desires to insert (*GOSPELS; *MARK, GOSPEL OF). Along with the stories from Mark, the Evangelist inserts numerous sayings of Jesus, taken, it would seem, from a source common to himself and Luke; and he conflates these sayings with others found only in his Gospel, the resultant groupings constituting five blocks of teaching, chs. 5-7, 10, 13, 18 and 24-25, each block ending with the formula: 'When Jesus had finished these sayings.' The subject-matter of the Gospel is rendered complete by the addition of several narratives found nowhere else. These would appear for the most part to be elaborations of traditions used by Christians for apologetic purposes in defence against Jewish slanders. Evidence of style suggests that these particular narratives were first put in writing by the Evangelist himself (see G. D. Kilpatrick, *The Origins of the Gospel according to St. Matthew*, 1946).

IV. Differences from Mark's Gospel

The fact that this Gospel originated in a Gk.-speaking Jewish-Christian community accounts largely for the particular emphasis which it places upon the different elements that composed the primitive Christian preaching, and also for the manner in which the teaching of Jesus is presented. The note of *fulfilment* finds stronger emphasis here than in the Gospel of Mark. The author is most concerned to establish the truth that the earthly history of Jesus, in its origin and its purpose, and in the actual manner of its unfolding, was the activity of God himself, who was therein fulfilling his own words spoken by the prophets. No Gospel so closely links together OT and NT; and no document in the NT sets forth the person of Jesus, and his life and teaching, so clearly as the fulfilment of 'the law and the prophets'. Not only does the Evangelist add OT references to passages taken over from Mark, as, e.g., at 27:34 and 43; but at various points in the narrative he introduces with the impressive formula 'this was to fulfil what was spoken by the prophet' some eleven special quotations from the OT, the cumulative effect of which is remarkable (see 1:23; 2:18; 2:23; 4:15f.; 8:17; 12:18ff.; 13:35; 21:5, and 27:9f.). Events are recorded as happening in the way they did because God had willed that it should be so. They were not freak events isolated and unexplained. They happened 'according to the scriptures', in which God's will had been expressed.

V. The story of Jesus

The record of the events in the life and death of Jesus which were of special importance and significance for the Christian gospel that we find presented in Matthew is for the most part Mark's story. Our Evangelist collects in chs. 8 and 9, in three groups of three, many of the Marcan narra-

tives of the miracles; and in chs. 11 and 12 he combines from Mark and other sources stories about the relations of Jesus with prominent people of his days such as John the Baptist and the Pharisees. He makes no attempt to relate these incidents in chronological sequence. Such sequence is to be found only in the story of the passion, which, because it lay at the centre of the Christian gospel, was probably told in chronological form from very early days. Matthew, however, renders Mark's story of the life of Jesus more complete by prefacing it with a *genealogy and traditions about the infancy of Jesus and by following it with accounts of two of the appearances of the risen Jesus. The infancy narratives of Matthew do not contain an account of the birth of Jesus, which is mentioned only in passing in 2:1. The purpose of the Evangelist seems to be, by the genealogy, to show that Jesus, though born of a virgin-mother, was nevertheless legally of Abraham's seed and a son of the royal house of David; and, by the material contained in 1:18-25, to answer the calumny that Jesus was an illegitimate child of Mary, and to defend the action of Joseph. The subsequent story of the flight into Egypt is partly an answer to the Jewish cavil why, if Jesus, known as Jesus of Nazareth, was really born in Bethlehem, so much of his life was spent at Nazareth.

The two resurrection appearances peculiar to Matthew (28:9-10, 16-20) may be an attempt to round off the Marcan story. Certainly, the abruptness of Mark's ending is avoided by the statement that the women, instead of saying nothing to anybody of what they had heard and seen, at once obeyed the angel's command to report to the Lord's brethren that they were to go to Galilee where they would see him, and that, as the women were setting out on their errand, they met the risen Jesus. The momentous disclosure by the risen Jesus in Galilee that by his victory over death universal sovereignty had been given him, and his commission to the eleven disciples to embark upon a world-wide evangelistic mission with the assurance that he would be with them to the end of time, provide the climax of the Gospel of Matthew.

In these infancy and post-resurrection narratives Matthew is making definite additions to the story of Jesus as it had been set forth in Mark. Where he expands such Marcan stories as he embodies, it is usually by adding material which reflects interests that were of concern to the Christian church at the time he was writing. For example, the story of Peter walking over the waves to Jesus (14:28-31) and the famous Petrine passage in 16:18-19 were important at a time when that apostle was playing a leading part in the church; and the problem presented by taxation, especially after AD 70, when, on the destruction of the Temple, the tax for its upkeep was transferred to the temple of Jupiter Capitolinus, would receive some elucidation from the narrative recorded in 17:24-27. Moreover, as time went on, and biographical curiosity tended to increase, greater attention seems to have been paid to the secondary characters in the story of Jesus. Thus the Matthean account of the fate of Judas Iscariot (27:3-10) and the incident of Pilate's wife (27:19) would help to answer the puzzling questions, 'Why did Judas betray his Master?' and, 'Why did Pilate condemn Jesus?'

In his account of the crucifixion and resurrection Matthew makes four main additions to the Marcan narrative which at this point he is follow-

ing closely. He relates that at the moment of Jesus' death an earthquake occurred accompanied by a resurrection of the saints, who had foretold the coming of the Messiah and who now rose to salute his death on Calvary (27:51-53). The three further additions of Matthew to Mark's resurrection narrative, viz. the special guarding and sealing of the tomb (27:62-66); the failure of these precautions due partly to the semi-mortification of the guards after another earthquake and partly to the presence of an angelic visitor who rolled the stone from the tomb (28:2-4); and the bribing of the guards to circulate the story, still current in the Evangelist's day, that the disciples of Jesus had come during the night and stolen the body (28:11-15)—are all of an apologetic nature. Their purpose is to dismiss the possibility that the body of Jesus could have been removed from the grave except in a supernatural manner. In many respects the Gospel of Matthew might be called an early Christian apology.

VI. The new Israel

The chief consequence of the life and death of Jesus emphasized in the Gospel of Matthew is the coming into being of the universal church of God, the new Israel, in which Gentiles as well as Jews find a place. The Gospel opens with the prophecy that Jesus is Emmanuel, God with us (1:23); and it closes with the promise that this same Jesus, now the risen Christ, will be with his disciples, drawn from all the nations, till the end of time. The note of universality, sounded at the beginning in the story of the manifestation of Jesus to the Magi, is re-echoed in the command with which the Gospel closes to go into all the world and make disciples of all nations. The Evangelist finds significance in the fact that the ministry of Jesus was exercised partly in 'Galilee of the Gentiles' (4:15); and describes him as God's servant who would 'proclaim justice to the Gentiles . . . and in his name will the Gentiles hope' (12:18, 21). The Christian church, universal in its membership, is, however, no new church. It is the old Israel transformed and widened because of Jesus' rejection by the majority of the Jews. It was to 'the lost sheep of the house of Israel' that Jesus confessed himself primarily to have been sent (15:24); and it was to the same lost sheep that he despatched his apostles to proclaim the arrival of the kingdom (10:6). But greater faith was found in a Roman centurion than in any in Israel (8:10); and in consequence the places at the Messianic banquet, unfilled by the Jew, would be thrown open to believers from E and W, while 'the sons of the kingdom' would remain outside (8:11-12). Because the Messiahship of Jesus had become to the Jews 'a stone of stumbling', the kingdom would be taken away from them and given to a nation 'producing the fruits of it' (21:42-43). The patriarchs of the new Israel, the apostles, would share in the Messiah's final victory, acting as his co-assessors in judgment, as Jesus makes clear in the words recorded by Matthew in 19:28, and as the Evangelist emphasizes by inserting the words 'with you' in the Marcan saying inserted at 26:29.

VII. Jesus as Judge

The fourth element in the primitive preaching was the call to repentance in view of the return of Jesus as Judge of living and dead. This call is sounded loudly in Matthew. John the Baptist in this Gospel calls Israel to repent in the same words as Jesus because they stand on the threshold of the Mes-

siah's ministry (3:2); and at the close of the teaching of Jesus we read the parable of the great assize, found only in this Gospel (25:31-46). This parable concludes a group of sayings and parables concerned exclusively with the coming of the Messiah in judgment. By the time the Gospel was written, perhaps in the early 80s of the 1st century, part of the divine judgment had already descended upon Israel in the fall of Jerusalem; and the words of 21:41 and 22:7 had indeed been fulfilled.

Many of the parables peculiar to Mt., such as the tares of the field, the unforgiving debtor, the guest without a wedding garment and the ten virgins, stress the inevitability and the serious nature of the divine judgment; and it is in them that we find constantly repeated the solemn phrases peculiar to this Gospel, 'the outer darkness', 'the close of the age' and 'the weeping and gnashing of teeth'. In the perspective of this Gospel this final coming of the Christ, though absolutely certain, is not pictured as immediate, because, as we have seen, the closing pronouncement of the risen Christ implies a period of indefinite duration, during which he is present and exercises his reign in his church, before his final appearance as Judge. It is probable, therefore, that in the light of the teaching of the Gospel as a whole we ought to interpret the two very difficult sayings in 10:23 and 16:28 as referring to the exaltation of Jesus to the right hand of God after the triumph of his resurrection, when he entered upon a more extended reign in the hearts of his followers. Otherwise we are forced to the unsatisfactory conclusion that either they remained unfulfilled, and were therefore false prophecies, or that they are not genuine sayings of Jesus.

VIII. Ethical teaching

The Gospel of Matthew is also remarkable for the extent to which and the manner in which the ethical teaching of Jesus is presented. To this Evangelist, as to Jewish Christians generally, and also to Paul (for the very phrase is his), there is such a thing as 'the law of Christ'. Some scholars have thought that the five groups of teaching in this Gospel were regarded by the author as comparable to the five books of the law. Be this as it may, it would seem clear that he presents Jesus as the great Teacher who proclaims a revised law for the new Israel from the mountain (5:1), even as Moses had spoken the divine law given to him on Mt Sinai. The Messiah calls Israel not only to repentance but to good works; and the desire to do them, and the willingness to suffer for doing them, render the doers blessed (5:6, 10). The righteousness of Christ's disciples must exceed that of the Pharisees (5:20). It is true that by their traditions, by their slavery to isolated texts and their failure to grasp the wider implications of the law, the Pharisees had rendered much of it void; but the law remained an integral part of divine revelation. It is this law which finds its fulfilment in Christ, who came not to destroy it but to supply what it lacked and to correct scribal misinterpretations of it (5:17). Accordingly, a large part of the Sermon on the Mount is taken up with an explanation of the Decalogue in which Jesus lays down the moral standards by which the conduct of his disciples is to be judged.

One of the major difficulties of this Gospel is that it presents Jesus as upholding the validity of the Mosaic law and also claiming authority so to 'fulfil' it that sometimes he has been thought to be

MATTHEW, GOSPEL OF

contradicting it. That he regarded the OT as possessing permanent validity as the Word of God is explicit in the uncompromising saying of 5:17–19. At the same time, so strongly is the binding authority of Christ's own utterances stressed, that in certain instances the abiding nature of the old law *seems* to be denied. In view, however, of the categorical statement about the law's validity, the Evangelist cannot have meant his readers to infer that there was any real antithesis between the statements contained in it and Jesus' comments upon them. Six times in the Sermon on the Mount he appears to be setting his own pronouncements against what had been previously spoken, and in each instance what had been previously spoken consists of, or at least includes, a quotation from the Mosaic law.

It has, however, been well pointed out that the expressions in ch. 5, 'You have heard that it was said' or 'It was said', do not correspond exactly to 'It is written', which Jesus so often uses when he is appealing to the authority of Scripture. By them he is, in fact, drawing attention not only to what the law said but to what the people had been told by their teachers was its meaning. In Judaism the law occupied the supreme position. In Christianity that place is occupied by Christ himself. In the Jewish-Christian Gospel of Matthew Christ remains the dominant authority. It is significant that it is in this Gospel alone that we read his gracious but imperious invitation, 'Come to me, all who labour and are heavy laden, and I will give you rest. Take my yoke upon you, and learn from me; for I am gentle and lowly in heart, and you will find rest for your souls. For my yoke is easy, and my burden is light' (11:28–30).

MATTHIAS. The successor of Judas Iscariot, following the latter's defection from the Twelve (Acts 1:15–26). The fact and manner of his election have sometimes been called in question as hasty and unspiritual, and supervening on the place intended for Paul (*cf.*, e.g., G. Campbell Morgan, *Acts*, 1924, *ad loc.*), but Luke gives no hint of such a view: the basis of the lot-casting, with its OT precedent (*cf.* 1 Sa. 14:41; *URIM AND THUMMIM), was that God had *already chosen* his apostle (v. 24), and it was fitting that the foundational apostolate should be complete at the outpouring of the Spirit on the church and its first preaching (*APOSTLE). That Matthias fulfilled the qualifications of vv. 21–22 makes the statement of Eusebius (*EH* 1. 12) that he was one of the Seventy not unlikely.

Of his later career nothing is known. His name was often confounded with that of Matthew, a process doubtless encouraged by the Gnostic groups who claimed secret traditions from him (Hippolytus, *Philos.* 7. 8). A book of so-called traditions was known to Clement of Alexandria (*Strom.* 2. 9; 3. 4; *cf.* 7. 17). Other apocryphal literature was fathered upon him.

The early identification of Matthias with Zac-

chaeus (Clement, *Strom.* 4. 6) may also arise from confusion with Matthew the tax-collector. The substitution of 'Tholomaeus' in the Old Syriac of Acts 1 is harder to understand.

The name is probably a contraction of Mat-thathias. A.F.W.

MATTOCK. Heb. *maḥ^arēšā* in 1 Sa. 13:20 (end), 21, and the similar form *maḥ^arēšet* (earlier in v. 20) represent cutting instruments (root *ḥrš*, 'to plough, engrave'), *i.e.* probably mattocks and hoes. Among other terms in these verses, the second one, Heb. *ēṭ*, is a metal head: of an axe in 2 Ki. 6:5 and so perhaps of a ploughshare or more strictly a metal cap for a wooden plough (rather than AV's 'coultter'); *cf.* Is. 2:4 = Mi. 4:3; Joel 3:10, feasible adaptations as well as evocative. The third term in v. 20 (*qardōm*) is a pickaxe (AV 'axe').

In AV 'mattock' also translates Heb. *ma'dēr* in Is. 7:25, hoe, used in the vineyard terraces (*cf.* also Is. 5:6) and *b'ḥarbōlēthem* in 2 Ch. 34:6, which should probably be rendered 'in their ruins' with RV, RSV (from *ḥorbā*).

For an iron mattock of about 10th century BC found at Tell Jemmeh in SW Palestine, see G. E. Wright, *Biblical Archaeology*, 1957, p. 92, fig. 57:3. (*ARTS AND CRAFTS.) K.A.K.

MEADOW. I. Heb. *āḥū*: AV 'meadow'; RV, RSV 'reed grass'. This Heb. word is a loan-word from Egypt. *ḥ(y)* and, like it, means 'papyrus thicket(s)'. The picture of cattle pasturing in the papyrus thickets and marshes (Gn. 41:2, 18) is typically Egyptian: cattle are shown thus in tomb-scenes, while texts mention bringing 'best grass from the papyrus marshes' for livestock. In Jb. 8:11 *gōme'* and *āḥū* are parallel: 'papyrus' or 'reeds' and 'papyrus thicket', which must have mud and water. In Hō. 13:15 it is possible to render *āḥim* as 'reed thickets' rather than 'brothers' (*cf.* RSV). See J. Vergote, *Joseph en Égypte*, 1959, pp. 59–66 (especially 62ff.) for full references; also *cf.* T. O. Lambdin, *JAOS* 73, 1953, p. 146, for other related Egypt. and Ugaritic terms.

2. In Jdg. 20:33 AV renders *ma^arēh-gēbā'* as 'meadows of Geba'. This may be the 'bare place' by Geba, or perhaps a Maareh-geba close by, or even (with LXX) to be read as *ma^arab-gebā'*, '(on) west of Geba' (RSV). K.A.K.

MEALS.

I. Non-biblical sources

What is probably the oldest banquet scene in the world has been preserved on a lapis-lazuli cylinder seal recovered from the mound at Ur in Mesopotamia. Now in the University of Philadelphia Museum, the artefact dates from the time of Queen Shub-ad (c. 2600 BC). It depicts a meal at which the royal guests are seated on low stools and are being served with beakers of wine by attendants who wear skirts of fleece. Musical entertainment is provided by a harpist, while other servants employ fans in an attempt to cool the guests in the hot Mesopotamian air.

Similar scenes have been preserved by Bab. artists from subsequent periods, one of the more interesting of which is a large bas-relief from Assyria. King Ashurbanipal is seen eating with his

wife in the garden of the royal palace at Nineveh. As the king reclines on a pillowed dining-couch he raises a bowl of wine to his lips. His wife is also shown drinking from an elegant bowl, but she is seated upon a small chair which has a low shelf in the form of a foot-rest. As in the case of the Ur artefact, attendants stand ready with fans to cool the diners and dispel annoying insects. The relief shows a few musical instruments placed on the ground beside some vines and palm trees in readiness for the court musicians.

The earliest detailed menu of which we have any record relates to a feast given by Ashurnasirpal II at the dedication of his new palace at Nimrud. It was attended by 69,574 persons and lasted for 10 days. The details are given on a monument set up in 879 BC (see *IBA*, fig. 43).

II. Biblical references

a. Palace meals

The type of elegance mentioned above, which was characteristic of Mesopotamian antiquity, was far surpassed by the delicacy and expertise which surrounded the royal meals of ancient Egypt. Paintings on the walls of tombs and other buildings have furnished remarkable evidence of the splendour such a celebration as the palace birthday banquet of pharaoh in the time of Joseph (Gn. 40:20). On such occasions the guests, elegantly bewigged and perfumed, were seated on couches near to low tables. Their food would include a variety of roast fowl, vegetables, roast beef, a wide range of pastries and numerous sweetmeats. Popular beverages included beer brewed from barley, and wine. Representations on tomb walls show servants bringing in large containers of wine and handing the guests bent glass tubes which were then dipped into the jar. The guests drank until they were inebriated and fell to the floor near their dining-couches.

Banqueting customs in Persia in the 5th century BC have been preserved by the book of Esther, which describes no fewer than five such festive occasions at Susa. The first was a marathon feast lasting 180 days, given by the king in honour of the Persian and Median princes (Est. 1:3ff.). This was followed by a 7-day banquet in the royal gardens, to which all the palace staff were invited. The guests were shielded from the sunlight by awnings of blue, green and white, the royal Persian colours, while the dining-couches were inlaid with gold and silver. The other feasts mentioned included one for the palace women (Est. 1:9), the wedding feast of Queen Esther (2:16–18), the wine-banquet given to Ahasuerus and Haman (5:4; 7:1–8) and the festival period known as Purim (9:1–32).

By contrast the Heb. palace meals were austere until the days of Solomon. Guests and retainers were numerous even in the time of Saul, and the royal displeasure could be incurred by refusing an invitation to dine with the king (1 Sa. 20:6). The generosity of David was shown in the provision made at the royal board for Mephibosheth, the crippled son of Jonathan (2 Sa. 9:7). Solomon imitated the monarchs of surrounding nations in the elaborateness and splendour of his feasts. It has been suggested that Solomon would probably have his summer meals served in some such garden as that mentioned in Canticles. In the royal court at Samaria Queen Jezebel supported a retinue of 400 prophets of the Asherah and 450 Baal prophets (1

Ki. 18:19). The poverty of post-exilic Judaea contrasted sharply with the fare provided by Nehemiah the governor. He supported 150 Jews in addition to other guests, and the day's food included six sheep, an ox, numerous fowls, fruit and wine (Ne. 5:17–19).

b. Working-class meals

For the labouring classes in biblical times, however, the situation was very different. The day began early, and instead of eating a formal breakfast, the workers carried in their girdles or in other containers small loaves, goat's-milk cheese, figs, olives and the like, which they ate as they journeyed to work. The Egyptians apparently had their main meal of the day at noon (Gn. 43:16), but Heb. workers generally contented themselves with a light repast and a rest period (Ru. 2:14). Abstinence from this meal constituted fasting (Jdg. 20:26; 1 Sa. 14:24). Supper, the most important meal of the day, took place after the work had been done (Ru. 3:7). Once the food had been prepared, the entire family dined together along with any guests who might be present. On festive occasions it was customary for entertainment to be provided, and this included riddles (Jdg. 14:12), music (Is. 5:12) and dancing (Mt. 14:6; Lk. 15:25). In the patriarchal period the diners sat in a group on the ground (Gn. 18:8; 37:25), but at a later time it became customary for them to sit at a table (1 Ki. 13:20; Ps. 23:5; Ezk. 23:41) after the Egypt. fashion, but perhaps in a semi-recumbent position (Est. 7:8).

c. Seating arrangements

In NT times meals were often eaten on a floor above that normally occupied by animals and domestic pets (*cf.* Mk. 7:28). Guests invariably reclined on couches, which were arranged on three sides of a square around a low table. Normally not more than three persons reclined on each couch, though occasionally this number was increased to four or five. Each couch was provided with cushions on which the left elbow rested and the right arm remained free, following the contemporary Graeco-Roman fashion. The guests so arranged themselves on the couches that each person could rest his head near the breast of the one who was reclining immediately behind him. He was thus reclining 'in the bosom' of his neighbour (Jn. 13:23; *cf.* Lk. 16:22), the close proximity of whom furnished adequate opportunity for an exchange of confidential communications. The place of greatest honour or 'highest couch' was the one immediately on the right of the servants as they entered the room to serve the meal. Conversely, the 'lowest room' was on the left of the servants, directly opposite to the 'highest couch'. The three guests on each couch were spoken of as highest, middle and lowest, a designation which was suggested by the fact that a guest who reclined on another's bosom always appeared to be below him. The most coveted seat (Mt. 23:6) was therefore the 'highest' place on the 'highest' couch. No questions of physical elevation were involved in such a usage of 'high' and 'low'.

d. The meal itself

The main meal of the day was generally a relaxed, happy occasion. Guests always washed their hands before partaking of food, since it was customary for all of them to eat from a communal dish. This

MEALS

was a large pottery container filled with meat and vegetables, and placed on a table in the centre of the couches. Only one instance is recorded in the OT of a blessing being pronounced before food was eaten (1 Sa. 9:13), but the NT mentions several occasions on which Christ pronounced grace before a meal commenced (Mt. 15:36; Lk. 9:16; Jn. 6:11).

While the general practice was for each guest to dip his hand into the common bowl (Mt. 26:23), there were occasions when separate portions were served to each guest (Gn. 43:34; Ru. 2:14; 1 Sa. 1:4-5). In the absence of knives and forks, small pieces of bread were held between the thumb and two fingers of the right hand to absorb the gravy from the dish (Jn. 13:26). They were also used after the fashion of spoons to scoop up a piece of meat, which was then conveyed to the mouth in the form of a sandwich. If a guest acquired a particularly delectable morsel by such means it was deemed an act of great politeness for him to hand it over to a companion (Jn. 13:26). When the meal was at an end it was customary for grace to be pronounced once again in compliance with the injunction of Dt. 8:10, after which the guests washed their hands a second time.

It would appear from instances such as those of Ruth among the reapers (Ru. 2:14), Elkanah and his two wives (1 Sa. 1:4-5), and the sons and daughters of Job (Jb. 1:4) that the womenfolk commonly partook of their meals in company with the men. But since it is probable that the task of preparing the food and waiting upon the guests normally devolved upon the women of the household (Lk. 10:40), they would doubtless be forced to take a somewhat more irregular and brief repast.

An ordinary family meal would not involve the preparation of more than one dish of food, so that when it had been served the member of the household who had cooked the meal would have no further work to do. This thought probably underlies the rebuke to *Martha (Lk. 10:42), when Christ suggested that only one dish was really necessary. In OT times, when the meal had been brought in by the person who had prepared it (1 Sa. 9:23), the head of the household allotted the various servings (1 Sa. 1:4), the size of which might well vary with the preference which he exercised towards individuals in the assembled group (Gn. 43:34; 1 Sa. 1:5).

e. Special meals

Special feasts celebrating birthdays, marriages or the presence of honoured guests were normally marked by an increased degree of ceremony. Visitors were received by the host with a kiss (Lk. 7:45) and provided with a refreshing footbath (Lk. 7:44). On certain occasions special clothing was furnished (Mt. 22:11) and the guests were decked out with floral wreaths (Is. 28:1). The head, beard, face and sometimes even the clothes were anointed with perfumes and ointments (Ps. 23:5; Am. 6:6; Lk. 7:38; Jn. 12:3) in celebration of an important festal occasion. The conduct of the banquet itself was under the direction of a special person known in NT times as the 'steward' of the feast (Jn. 2:8), to whom fell the task of sampling the various items of food and drink before they were placed on the table.

Guests were seated according to their respective rank (Gn. 43:33; 1 Sa. 9:22; Mk. 12:39; Lk. 14:8; Jn. 13:23), and were often served with individual

portions of food (1 Sa. 1:4-5; 2 Sa. 6:19; 1 Ch. 16:3). Honoured guests were usually singled out by being offered either larger (Gn. 43:34) or more delectable (1 Sa. 9:24) portions than the others who were present at the banquet.

In the days of Paul the banquet was an elaborate meal which was generally followed by a symposium or intellectual discussion. On such occasions the discourse would often last far into the night, and would treat of such subjects as politics and philosophy.

f. Jesus' presence at meals

The NT records a number of occasions on which Jesus was a guest at an evening meal. The wedding feast at Cana (Jn. 2:1-11) was a festal occasion for which formal invitations had been issued, as was also the case in the parable of the king who gave a feast when his son was married (Mt. 22:2-14). The occasion on which Matthew was host at a banquet (Mt. 9:10) followed the more formal pattern of 1st-century AD Graeco-Roman meals. Jesus reclined at the table in company with his disciples, the tax-collectors and other invited guests. It is probable that the dining-room opened on to the street, with curtains placed near the entrance so that the guests would be shielded to some extent from the curious gaze of passers-by. The customs of the day, however, permitted people to look in through the curtains and gossip about those present at the feast. It was this practice which prompted the Pharisees to question the propriety of Christ's dining with publicans and sinners (Mt. 9:11).

On another occasion in a similar dining-room (Lk. 7:36-50) Jesus was noticed by a passing woman who returned with an alabaster flask from which she poured ointment on the feet of Christ. Her action was interpreted as supplying the traditional unguent of hospitality which the host had neglected to furnish in honour of his guest. It would also appear that he had failed to provide a container of water in which the guest could wash his feet, an omission which constituted a grave breach of courtesy in those days. The meal served to Jesus in Jericho by Zacchaeus (Lk. 19:6) was probably of lavish proportions. More modest were the family gatherings in Bethany (Lk. 10:40; Jn. 12:2), and the interrupted meal at Emmaus (Lk. 24:30-33) on the first Easter day. Occasionally Christ omitted the traditional hand-washing as a preliminary to a meal in order to teach an important spiritual principle (Lk. 11:37-42).

g. Meals on journeys

Persons undertaking journeys to parts of the country where hospitality was uncertain usually carried an earthen bottle of water (Gn. 21:14) and items of food, such as cakes of figs or raisins, bread and parched corn. The plight of those who 'forgot to take bread' (Mk. 8:1-9, 14) could be very serious under certain circumstances.

III. Religious significance of meals

a. Among the Semites

The communal aspect of a meal was carried over into the religious sphere by all Semitic peoples. Archaeological discoveries at Ras Shamra (Ugarit) have shown the prevalence of such meals in Canaanite religious life. Baal temples were frequently dedicated amidst prolonged feasting and revelry. At Shechem the remains of a Hyksos temple indi-

cated the presence of rooms for banquets consequent upon the performance of sacrificial rites. The Hebrews sought both divine fellowship and pardon by means of meals (*PASSOVER, *SACRIFICE, *FEASTS) at which the blood and fat were the divine requisite, while the priests and people received their appointed portions (Lv. 2:10; 7:6). Such sacrifices were common in the kingdom period (1 Sa. 9:11-14, 25; 1 Ch. 29:21-22; 2 Ch. 7:8-10), but were devoid of the licentiousness and debauchery which characterized Canaanite religious meals.

b. In Christianity

The principal sacred meal of Christianity was the Lord's Supper, instituted by Christ just prior to his crucifixion (Mk. 14:22-25; Mt. 26:26-29; Lk. 22:14-20). In the early church the Agape, a communal meal denoting brotherly love among believers, frequently preceded celebrations of the Lord's Supper. (*LOVE FEAST; *FOOD.)

BIBLIOGRAPHY. *ISBE* 2, pp. 327-331; E. W. Heaton, *Everyday Life in Old Testament Times*, 1956, pp. 81ff.; A. C. Bouquet, *Everyday Life in New Testament Times*, 1954, pp. 69ff. R.K.H.

MEAT MARKET (Gk. *makellon*; Lat. *macellum*). Jewish law forbade dealing in such pagan markets, which sold the flesh of ritually unclean animals. In 1 Cor. 10:25 Paul counsels his readers to avoid what in a later age was known as scrupulosity. On the meat market in Corinth see *JBL* 80, 1934, pp. 134-141. J.D.D.

MECONAH (AV, **MEKONAH**). A town near Ziklag occupied by the Jews under Nehemiah (Ne. 11:28). Simons (*GTT*, p. 155) equates it with Madmannah, but Grollenberg with Machbena, named separately from Madmannah as a Calebite settlement (1 Ch. 2:49). The site is unknown. J.P.U.L.

MEDAN. A son of Abraham by *Keturah (Gn. 25:2; 1 Ch. 1:32). The names of some of the other sons and descendants of Keturah, such as Midian and Dedan, were later known as those of N Arabian tribes (*ARABIA), so it may be assumed that Medan likewise settled in this area, though the name is unknown outside the Bible. Medanites were associated with Midianites in the sale of Joseph, according to Gn. 37:36, *MT*. T.C.M.

MEDEBA (Heb. *mēd'bā*, possibly 'water of quiet'). A plain and city of Reuben (Jos. 13:9, 16) N of the Arnon. An old Moabite town taken from Moab by Sihon (Nu. 21:21-30), it was used by the Syrian allies of Ammon as a camping-site after their defeat at the hand of Joab (1 Ch. 19:6-15). Thereafter it seems to have changed hands several times. It is mentioned in the *Moabite Stone as having been taken by Omri, perhaps from Moab, and as recovered by Mesha and fortified. Recaptured from Moab by Jeroboam II, it is again Moabite in Is. 15:2.

It figured also in the history of the intertestamental era (1 Macc. 9:36ff. as 'Medaba'; Jos., *BJ* 1. 63), before being captured by Hyrcanus after a long siege (Jos., *Ant.* 13. 11, 19).

The site, today called Mādabā, is 10 km S of Heshbon. There in 1896, during excavation of the site of a church, was discovered a 6th-century AD mosaic map showing part of Palestine from Bethshan to the Nile. See M. Avi-Yonah, *The Madaba Mosaic Map*, 1954. In addition, there are considerable ruins, dating mainly from the Christian era, including a large temple and extensive cisterns. Tombs of Iron Age date have also been found. *NEAEHL*, pp. 992-1001. J.D.D.

MEDES, MEDIA (Heb. *madai*; Assy. (*A*)*mada*; Old Pers. *Mada*; Gk. *Medai*).

Media was the name for NW Iran, SW of the Caspian Sea and N of the Zagros Mountains, covering the modern province of Azerbaijan and part of Persian Kurdistan. The inhabitants were called Medes or Medians and were Japhethites (Gn. 10:2), whose Aryan lineage is confirmed by Herodotus (7. 62), Strabo (15. 2. 8) and by the surviving traces of their language. The Medes were steppe-dwellers whose name is first mentioned by Shalmaneser III who raided their plains in 836 BC to obtain their famous, finely bred horses. Later Assy. kings followed him and sought to keep the E passes open to the traders. Adad-nirari III (810-781 BC) claims to have conquered 'the land of the Medes and Parsua (Persia)', as did Tiglath-pileser III (743 BC) and Sargon II (716 BC). The latter transported Israelites to Media (2 Ki. 17:6; 18:11) after he had overrun the part of the land ruled by Dayaukku (Deioces), whom he exiled for a time to Hamath.

Esarhaddon bound his Median vassals by treaty (*Iraq* 20, 1958, pp. 1-91), but they soon rebelled and joined the Scythians (Ashguza) and Cimmerians against the declining power of Assyria after 631 BC. Under Phraortes there began the open attacks which culminated in the fall of Nineveh (612 BC) and Harran (610 BC) to Kyaxares of Media and his Bab. allies. The Medes controlled all lands to the N of Assyria and clashed with Lydia until peace was ratified in 585 BC.

In 550 BC *Cyrus of Anshan (*ELAM) defeated Astyages and brought Media under control, capturing the capital Ecbatana and adding 'King of the Medes' to his titles. Many Medes were given positions of responsibility and their customs and laws were combined with those of the Persians (Dn. 6:8, 15). Media was sometimes used to denote Persia but more usually combined with it as a major part of the new confederation (Dn. 8:20; Est. 1:19). The Medes, as seen by the prophets Isaiah (13:17) and Jeremiah (51:11, 28), took part in the capture of Babylon (Dn. 5:28). The new ruler of Babylon, *Darius, was called 'the Mede' (Dn. 11:1), being the son of Ahasuerus of Median origin (Dn. 9:1).

The Medes later rebelled under Darius I and II (409 BC). The history of the Jews in Media is recounted in Esther (1:3, 14, 18-19) and the Medians under Syrians (Seleucids) and Parthians are referred to in 1 Macc. 14:1-3; Josephus, *Ant.* 10. 232. Media was organized as the 11th and 18th Satrapies. The Medes are mentioned, with the Parthians and Elamites, in Acts 2:9. After the Sassanids Media was used only as a geographical term.

MEDIATOR

MEDIATOR. The term occurs infrequently in the Scriptures (Gal. 3:19–20; 1 Tim. 2:5; Heb. 8:6; 9:15; 12:24; Jb. 9:33, LXX). But the idea of mediation and therefore of persons acting in the capacity of mediator permeates the Bible. The function of a mediator is to intervene between two parties in order to promote relations between them which the parties themselves are not able to effect. The situation requiring the offices of a mediator is often one of estrangement and alienation, and the mediator effects reconciliation. In the sphere of human relations Joab acted the part of mediator between David and Absalom (2 Sa. 14:1–23). Job expresses the need in regard to his relations to God when he said, 'There is no umpire (AV 'daysman') between us, who might lay his hand upon us both' (Jb. 9:33).

I. In the Old Testament

In the OT the prophet and the priest fulfilled, most characteristically, the office of mediator in the institution which God established in terms of covenant relations with his people. The prophet was God's spokesman; he acted for God in the presence of men (*cf.* Dt. 18:18–22). The priest acted on behalf of men in the presence of God (Ex. 28:1; Lv. 9:7; 16:6; Nu. 16:40; 2 Ch. 26:18; Heb. 5:1–4; *cf.* Jb. 42:8). In the OT, however, Moses, of all human instruments, was the mediator *par excellence* (*cf.* Ex. 32:30–32; Nu. 12:6–8; Gal. 3:19; Heb. 3:2–5). He was the mediator of the old covenant, because it was through his instrumentality that the covenant at Sinai was dispensed and ratified (*cf.* Ex. 19:3–8, 24:3–8; Acts 7:37–39). It is with Moses that Jesus as Mediator of the new covenant is compared and contrasted.

II. Christ as mediator

The designation 'Mediator' belongs pre-eminently to Christ, and even those men who executed mediatory offices in the OT institution were thus appointed only because the institution in which they performed these functions was the shadow of the archetypal realities fulfilled in Christ (*cf.* Jn. 1:17; Heb. 7:27–28; 9:23–24; 10:1). Jesus is the Mediator of the new covenant (Heb. 9:15; 12:24). And it is a better covenant (Heb. 8:6) because it brings to consummate fruition the grace which 'covenant administration embodies. Christ is the 'one mediator between God and men' (1 Tim. 2:5). To invest any other with this prerogative is to assail the unique honour that belongs to him as well as to deny the express assertion of the text.

Though the title 'Mediator' is not often used, the Scripture abounds in references to the mediatory work of Christ.

a. Pre-incarnate mediation

As the eternal and pre-existent Son he was Mediator in the creation of the heavens and the earth (Jn. 1:3, 10; Col. 1:16; Heb. 1:2). This activity in the economy of creation is correlative with his mediatorship in the economy of redemption. The omnipotence evidenced in the former and the prerogatives that belong to him as Creator are indispensable to the execution of redemption. It is in redemption, however, that the extensiveness of his mediation appears. All along the line of the redemptive process from its inception to the consummation his mediacy enters.

Election as the ultimate fount of salvation did

not take place apart from Christ. The elect were chosen in him before the foundation of the world (Eph. 1:4) and they were predestinated to be conformed to his image (Rom. 8:29).

b. Mediation in salvation and redemption

It is particularly in the once-for-all accomplishment of salvation and redemption that his mediatory action is patent (*cf.* Jn. 3:17; Acts 15:11; 20:28; Rom. 3:24–25; 5:10–11; 7:4; 2 Cor. 5:18; Eph. 1:7; Col. 1:20; 1 Jn. 4:9). The accent falls upon the death, blood and cross of Christ as the action through which redemption has been wrought. In the Scriptures the death of Christ is always conceived of as an event in which Jesus is intensely active in obedience to the Father's commandment and in fulfilment of his commission (*cf.* Jn. 10:17–18; Phil. 2:8). It is Jesus' activity as Mediator in the shedding of his blood that accords to his death its saving efficacy. When salvation wrought is viewed as reconciliation and propitiation, it is here that the mediatory function is most clearly illustrated. Reconciliation presupposes alienation between God and men and consists in the removal of that alienation. The result is peace with God (*cf.* Rom. 5:1; Eph. 2:12–17). Propitiation is directed to the wrath of God and Jesus, as the propitiation, makes God propitious to us (*cf.* 1 Jn. 2:2).

c. Continued mediation

Christ's mediation is not confined to his finished work of redemption. His mediatory activity is never suspended. In our participation of the fruits of redemption we are dependent upon his continued intervention as Mediator. Our access to God and our introduction into the grace of God are through him; he conveys us into the Father's presence (Jn. 14:6; Rom. 5:2; Eph. 2:18). It is through him that grace reigns through righteousness to eternal life, and grace and peace are multiplied to the enjoyment of the fullness of Christ (*cf.* Rom. 1:5; 5:21; 2 Cor. 1:5; Phil. 1:11). The most characteristic exercises of devotion on the part of the believer are offered through Christ. Thanksgiving and prayer are not only exercised in the grace which Christ imparts but are also presented to God through Christ (*cf.* Jn. 14:14; Rom. 1:8; 7:25; Col. 3:17; Heb. 13:15). The acceptableness of the believer's worship and service springs from the virtue and efficacy of Christ's mediation, and nothing is a spiritual sacrifice except as rendered through him (1 Pet. 2:5). Even the pleas presented to others for the discharge of their obligations derive their most solemn sanction from the fact that they are urged through Christ and in his name (Rom. 15:30; 2 Cor. 10:1; *cf.* Rom. 12:1).

The continued mediation of Christ is specially exemplified in his heavenly ministry at the right hand of God. This ministry concerns particularly his priestly and kingly offices. He is a Priest for ever (Heb. 7:21, 24). An important aspect of this priestly ministry in the heavens is intercession directed to the Father and drawing within its scope every need of the people of God. Jesus is exalted in his human nature, and it is out of the reservoir of fellow feeling forged in the trials and temptations of his humiliation (Heb. 2:17–18; 4:15) that he meets every exigency of the believer's warfare. Every grace bestowed flows through the channel of Christ's intercession (Rom. 8:34; Heb. 7:25; *cf.* 1 Jn. 2:1) until the salvation which he has secured will reach its

fruition in conformity to his image. The priestly ministry of Christ, however, must not be restricted to intercession. He is High Priest over the house of God (Heb. 3:1-6), and this administration involves many other functions. In his kingly office he is exalted above all principality and power (Eph. 1:20-23), and he will reign to the end of bringing all enemies into subjection (1 Cor. 15:25). This is Christ's mediatorial dominion, and it embraces all authority in heaven and in earth (Mt. 28:18; Jn. 3:35; 5:26-27; Acts 2:36; Phil. 2:9-11).

It is eschatology that will finally manifest and vindicate Christ's mediatorship; the resurrection and judgment will be wrought by him. All the dead, just and unjust, will be raised by his summons (Jn. 5:28-29). It is in him that the just will be raised to immortality and incorruption (1 Cor. 15:22, 52-54; 1 Thes. 4:16), and with him they will be glorified (Rom. 8:17; cf. Jn. 11:25; Rom. 14:9). The final judgment will be executed by him (Mt. 25:31-46; Jn. 5:27; Acts 17:31).

d. Conclusion

Christ's mediatorship is thus exercised in all the phases of redemption from election in God's eternal counsel to the consummation of salvation. He is Mediator in humiliation and exaltation. There is, therefore, multiformity attaching to his mediatorial activity, and it cannot be defined in terms of one idea or function. His mediatorship has as many facets as his person, office and work. And as there is diversity in the offices and tasks discharged and in the relations he sustains to men as Mediator, so there is also diversity in the relations he sustains to the Father and the Holy Spirit in the economy of redemption. The faith and worship of him require that we recognize this diversity. And the unique glory that is his as Mediator demands that we accord to no other even the semblance of that prerogative that belongs to him as the one Mediator between God and man.

MEEKNESS. The high place accorded to meekness in the list of human virtues is due to the example and teaching of Jesus Christ. Pagan writers paid greater respect to the self-confident man. However, its roots lie in the OT. The adjective *'ānāw* is usually translated 'meek' in AV but by a variety of words in RSV related to its basic meaning, 'poor and afflicted', from which the spiritual quality of patient submission, humility, is derived, e.g. Pss. 22:26; 25:9; Is. 29:19. Meekness is a quality of the Messianic King (Zc. 9:9) and the theme of Ps. 37:11, 'the meek shall inherit the earth' (AV), is repeated by our Lord in the Beatitudes (Mt. 5:5). In meekness Moses, while maintaining strength of leadership, was ready to accept personal injury

without resentment or recrimination (Nu. 12:1-3).

In the NT meekness (*prautēs* and adjective *praus*) refers to an inward attitude, whereas *gentleness is expressed rather in outward action. It is part of the fruit of Christlike character produced only by the Spirit (Gal. 5:23, AV). The meek do not resent adversity because they accept everything as being the effect of God's wise and loving purpose for them, so that they accept injuries from men also (as Moses above), knowing that these are permitted by God for their ultimate good (cf. 2 Sa. 16:11). The meekness and gentleness of Christ was the source of Paul's own plea to the disloyal Corinthians (2 Cor. 10:1). He enjoined meekness as the spirit in which to rebuke an erring brother (2 Tim. 2:25, AV), and when bearing with one another (Eph. 4:2). Similarly, Peter exhorted that the inquiring or arguing heathen should be answered in meekness (1 Pet. 3:15, AV). Supremely meekness is revealed in the character of Jesus (Mt. 11:29, AV; 21:5, AV), demonstrated in superlative degree when he stood before his unjust accusers without a word of retort or self-justification.

MEGIDDO. An important OT city which lay in the Carmel range some 30 km SSE of the modern port of Haifa.

I. Biblical evidence

The city of Megiddo (Heb. *m'giddō*) is first mentioned among the cities which Joshua captured during his conquest of Palestine (Jos. 12:21) and was subsequently allotted to Manasseh in the territory of Issachar (Jos. 17:11; 1 Ch. 7:29). Manasseh, however, did not destroy the Canaanites in the city, but put them to menial labour (Jdg. 1:28). A curiously indirect reference is made to Megiddo in the Song of Deborah, where *Taanach is described as 'by the waters of Megiddo' (*'al-mē m'giddō*, Jdg. 5:19), but no mention of Megiddo as a city as opposed to the name of a watercourse is made (*KISHON). The next reference to the city comes from the time of Solomon, when it was included in his fifth administrative district under Baana (the son of Ahilud) (1 Ki. 4:12) and was selected, with Hazor and Gezer, to be one of his main fortified cities outside Jerusalem, in which he had accommodation for chariots and horses (1 Ki. 9:15-19). Megiddo is briefly mentioned as the place where Ahaziah of Judah died after being wounded in his flight from Jehu (2 Ki. 9:27), and it was later the scene of the death of Josiah when he tried to prevent *Neco of Egypt from going to the aid of Assyria (2 Ki. 23:29-30; 2 Ch. 35:22, 24). The name occurs in the form *m'giddōn* in Zechariah (12:11), and it is in this form which is used in the NT *Armageddon (Rev. 16:16), from *harm'giddōn*, 'hill of Megiddo'.

II. Extra-biblical sources

The site of ancient Megiddo has been identified with the modern deserted mound of Tell el-Mutesellim, which lies on the N side of the Carmel ridge and commands the most important pass from the coastal plain to the valley of Esdraelon. The tell stands nearly 21 m high, with an area on the summit of over 10 acres, and the earlier cities lower down in the mound were still larger than this.

MEGIDDO

The first excavations were carried out by a German expedition under G. Schumacher from 1903 to 1905. A trench was cut across the top of the mound, and a number of buildings were found, but owing to the limited knowledge of pottery at the time little was learnt. The site was not excavated again until 1925, when the Oriental Institute of the University of Chicago under the direction of J. H. Breasted selected it as the first major project in an ambitious scheme of excavations all over the Near East. The work was directed successively by C. S. Fisher (1925–7), P. L. O. Guy (1927–35), and G. Loud (1935–9). The original intention was to clear the entire mound, level by level, to the base, and to this end an area at the foot of the slope was excavated at an early stage to release it for the subsequent dumping of earth from the tell. War brought the work to an end, and though the lay-out of the entire city in Iron Age times had been revealed, the earlier levels were known only in a relatively small area. Further excavations were carried out in 1960, 1966–7 and 1971 by Y. Yadin to elucidate some problems, notably those by Yadin in the 60s. Recently Finkelstein and Ussishkin have renewed large-scale excavations.

Twenty main occupation levels were identified, dating back to Chalcolithic settlements in the early 4th millennium (levels XX, XIX). An interesting feature of level XIX is a small shrine with an altar in it. During the Early Bronze Age (3rd millennium) there was a considerable city at Megiddo (levels XVIII–XVI), one interesting feature of which was a circular platform of boulders approached by a flight of steps, which was covered with animal bones and broken pottery. It may be that this was a *bāmā* or *'high place'. This platform continued in use in the Middle Bronze Age (levels XV–X; first half of the 2nd millennium), a period of Egypt. influence the start of which was marked by widespread rebuilding, in which the circular platform became the nucleus of three megaron-shaped temples with *altars. A fine triple-piered gateway, of a type which originated in Mesopotamia, was also found in these levels, and the necessity of such strong gates was shown by the evidence of a number of major destructions in the latter part of the period, culminating in a great devastation probably to be connected with the Egypt. reconquest of Palestine following the expulsion of the Hyksos from Egypt.

The evidences of periodical violence are less frequent in the Late Bronze Age (levels VIII, VII), and though this was a period of Egypt. domination the culture of Palestine reflected the Canaanite civilization of the N to a considerable extent. It was in this period that perhaps the most fully reported battle of antiquity was fought when Tutmosis III routed an Asiatic coalition at Megiddo c. 1468 BC. Architectural remains of this period include a temple, a palace and a gate, and the N cultural influence is clearly seen in a great hoard of over 200 objects of carved ivory which was found in a subterranean treasury under the level VII palace. This is one of the earliest collections of a type of art which was well known in Iron Age times from *Samaria and from as far afield as Assyria, and though practically no examples have yet been discovered in Phoenicia it is probable that many of them were made either in Phoenician workshops or by expatriate Phoenician craftsmen. That there were contacts with Mesopotamia at this period is shown by the recent discovery on the edge of the

mound of a fragment of the Bab. Epic of Gilgamesh which can be dated by its cuneiform script to the 14th century BC.

The final Canaanite city (VIIA) was destroyed in c. 1150 BC and was replaced by a small short-lived village (VIB). It has been suggested that the Israelites destroyed VIIA and established the village of VIB. This was a period of great instability and both could be the result of a number of other forces, which is likely since Jdg. 1:27–28 indicates that the Canaanite inhabitants of Megiddo were not driven out in the Israelite conquest. Following the renewed strength of Egypt under Merenptah the flourishing city of VIA was established. As well as showing clear Egyptian influence it also contained pottery of the Philistines or one of the other Sea Peoples. Following the destruction of this city, a new town was established (VB) which was composed of houses along the perimeter of the site forming a defensive ring. This town has been dated to the reign of David. This was replaced by VA-IVB which has been attributed to Solomon. It is in this town that first major public buildings appear, including palaces and a six-chambered gate.

A fragment of a stela of Pharaoh Sheshonq (*SHISHAK) comes from the destruction of the Solomonic city (probably VA-IVB). The next city (IV) was built by Omri or Ahab and was a very substantial city with palaces, a four-chambered gate and a solid wall. In this city a large number of stables were found which clearly illustrate the large chariot force that the annals of Shalmaneser claim that Ahab had.

Another discovery, probably of this period, was the city water-supply systems. An unbuilt zone of the mound was excavated by a pit 37 m deep, the bottom section of which consisted of a shaft with a staircase round its side, cut into the rock at the base. From the foot of the shaft, the staircase entered a tunnel which, finally levelling off, led, some 50 m farther on, into a cave with a spring of water at the far end. It appeared that this spring had originally given on to a slope outside the city, but at a later period the tunnel had been cut from inside the city and the cave was blocked and masked from the outside for strategic reasons.

Tiglath Pileaser III conquered N Israel, destroying the city built by Ahab. This city was replaced by a new one (III) which became the capital of the Assyrian province of Megiddo. The excavations uncovered a number of Assyrian palaces near the gate, and show that the city was built on an entirely new plan which was very different from any known in Israel. When the Egyptians took over the city from the Assyrians, they appear to have constructed a very substantial fortress (II). There is little evidence to show that Megiddo continued to serve as a provincial capital in the Babylonian and Persian periods.

T.C.M.

MELCHIZEDEK (Heb. *malkīšedeq*, 'Sedeq is (my) king' or, as in Heb. 7:2, 'king of righteousness'). He was the king of Salem (probably Jerusalem) and priest of 'God Most High' ('*ēl 'elyôn*) who greeted Abram on his return from the rout of *Chedorlaomer and his allies, presented him with bread and wine, blessed him in the name of God Most High and received from him a tenth part of the booty which had been taken from the enemy (Gn. 14:18ff.). Abram thereupon declined the king of Sodom's offer to let him keep all the booty apart from the recovered prisoners, swearing by God Most High that he would allow no man to have the honour of making him rich (v. 22, where *MT*, but not Samaritan, LXX, or Pesh., adds *Yahweh* before '*ēl 'elyôn*, thus emphasizing that the two names denote one and the same God). The incident is probably to be dated in the Middle Bronze Age (*ABRAHAM). Melchizedek's name may be compared with that of a later king of Jerusalem, Adoni-zedek (Jos. 10:1ff.).

In Ps. 110:4 a Davidic king is acclaimed by divine oath as 'a priest for ever after the order of Melchizedek'. The background of this acclamation is provided by David's conquest of Jerusalem c. 1000 bc, by virtue of which David and his house became heirs to Melchizedek's dynasty of priest-kings. The king so acclaimed was identified by Jesus and his contemporaries as the Davidic Messiah (Mk. 12:35ff.). If Jesus is the Davidic Messiah, he must be the 'priest for ever after the order of Melchizedek'. This inevitable conclusion is drawn by the writer to the Hebrews, who develops his theme of our Lord's heavenly priesthood on the basis of Ps. 110:4, expounded in the light of Gn. 14:18ff., where Melchizedek appears and disappears suddenly, with nothing said about his birth or death, ancestry or descent, in a manner which declares his superiority to Abram and, by implication, to the Aaronic priesthood descended from Abram. The superiority of Christ and his new order to the levitical order of OT times is thus established (Heb. 5:6-11; 6:20-7:28).

A fragmentary text from Cave 11 at Qumran (11QMelch.) envisages Melchizedek as divinely appointed judge in the heavenly court, expounding Pss. 7:7ff.; 82:1ff. in this sense (cf. A. S. van der Woude, 'Melchisedech als himmlische Erlösergestalt', *OTS* 14, 1965, pp. 354ff.).

MELZAR. The subordinate official in charge of Daniel and his companions, to whom Daniel ap-

pealed for a change of diet (Dn. 1:11-16). In AV it is translated as a proper name, as in Theodotion, Lucian, and in Syr., Vulg. and Arab. vss. LXX gives 'Abiesdri', and identifies him with the chief of the eunuchs in v. 3. Most scholars now regard it as a title, probably a loan-word from the Assyr. *maššāru*, 'guardian' (see *BDB*). Probably we should read 'steward' (RSV), 'overseer' (Nowack), or 'warden' (J. A. Montgomery, *Daniel*, *ICC*, 1926). J.G.G.N.

MEMPHIS (Egyp. *Mn-nfr*; Heb. *Mōp* and *Nōp*). Situated on the Nile, at about 24 km from the apex of the Delta. It was a foundation of Menes (the White Walls), the pharaoh who united Upper and Lower Egypt. The name *Mn-nfr* is short for that of the temenos of the pyramid of Pepi (c. 2400 bc). It was the capital of Egypt during the Old Kingdom. It remained an important city up to the conquest by Alexander the Great (332 bc). Principal gods were Ptah, the demiurge, Sekhmet, Nefertem and Sokaris. The name *Hwt-k'-Pth*, 'mansion of the Ka of Ptah', is the origin of the name Egypt. Very little remains of the city of the living (Mit-Rahina); the necropolis is better known with the important ruins of Djoser at Saqqara, the pyramid of Djedefre at Abu Rawash, the pyramids of Kheops, Khephren and Mykerinos at Giza, and those of the 5th Dynasty at Abusir. Rameses II, Merenptah and Psammeticus pursued extensive building in the region. The temple is described by Herodotus (2. 153), and writers of old describe the place where the living Apis bull was kept. During the New Kingdom, as a consequence of Asiatic immigration, we find that foreign gods, such as Qadesh, Astarte and Baal, were worshipped at Memphis.

The city was taken by the Ethiopians (Piankhy 730 bc), the Assyrians (Esarhaddon 671, Ashurbanipal 666) and the Persians (Cambyses 525).

From the 7th century bc, colonies of foreigners established themselves in the place, and, after the destruction of Jerusalem, also Jews (Je. 44:1). The city is mentioned several times by the prophets (Ho. 9:6; Is. 19:13; Je. 2:16; 46:14, 19; Ezk. 30:13, 16).

MENAHEM. The son of Gadi, and military governor of Tirzah, became king of Israel (752-742, or 747-737 bc, 2 Ki. 15:17-22) after taking the throne as a usurper, having captured Samaria and ousted Shallum. He had to suppress opponents who were aware, as were the Assyrians, that he was not related to the ruling House of Omri. Menahem is named *menihimme* of Samaria in a list of states which paid tribute to the Assyrian king Tiglath-pileser III about 743 bc. The Assyrians were incorporating neighbouring states as vassals, and made Samaria the centre of an Assyrian province. The cost to Israel was her independence since she had to pay a tribute of 1,000 talents of silver, recouped by a tax of 50 shekels a head per wealthy male (i.e. total of 36,000 men); that was the equivalent of the current redemption price for each male slave. Menahem, the last Israelite king to be succeeded by his son (Pekahiah), was a primary cause

MENAHEM

for anti-Assyrian opposition which resulted in the capture of Samaria in 722 BC and the exile of its inhabitants.

BIBLIOGRAPHY. D. J. Wiseman, *DOTT*, pp. 53–58; *idem*, *1 & 2 Kings, TOTC*, 1993, pp. 254–255; L. D. Levine, *Iran*, 1972, pp. 11–24. D. J. W.

MENE, MENE, TEKEL, UPHARSIN. The writing on the wall at Belshazzar's feast (Dn. 5:25, rsv 'MENE, MENE, TEKEL, and PARSIN', since the *u* of *u-pharsin* is the conjunction 'and', after which *p* becomes the spirant *ph* [(*p̄*)]). In Daniel's interpretation (vv. 26–28) *m'nē* is derived from Aram. *m'nā*, 'to number', indicating that the days of the Chaldean empire have been *numbered* and brought to an end; *t'qēl* is derived from Aram. *t'qal*, 'to weigh' (cf. Heb. *sāqal*, whence 'shekel'), indicating that Belshazzar has been *weighed* in the divine scales and found wanting; and the plural *parsin* is replaced by the singular *p'rēs*, which is derived from Aram. *p'ras*, 'to divide', indicating that his empire is to be *divided* between the Medes and the Persians (*pārās*, with a further play on the root *prs* (RSV, AV, NIV, 'PERES')).

The mystery lay not in the decipherment of the Aram. words, but in their significance. On the surface they denoted a series of weights or monetary units, 'a mina, a mina, a shekel, and half-shekel' (Bab. *parisu*)—or, if the first word were regarded as imperative of the verb *m'nā*, 'number a mina, a shekel, and half-shekel'. But there was no context which could make these words seem relevant to the king or his wise men.

Various attempts have been made by several scholars to relate the specified units to successive rulers of Babylon, e.g. Nebuchadrezzar (a mina), Belshazzar (a shekel), Medes and Persians (divisions) (C. S. Clermont-Ganneau, A. H. Sayce); Evil-merodach and Neriglissar (two minas), Labashi-marduk (a shekel), Nabonidus and Belshazzar (two half-minas) (E. G. Kraeling); Nebuchadrezzar (a mina), Evil-merodach (a shekel), Belshazzar (one half-mina) (H. L. Ginsberg); Nebuchadrezzar (a mina), Nabonidus (a shekel), Belshazzar (one half-mina) (D. N. Freedman, who concludes from the Qumran *Prayer of Nabonidus* that the Daniel story originally knew these three Chaldean kings). These attempts are fascinating but inconclusive.

MEONENIM, OAK OF. The RV rendering of the phrase 'ēlōn *m'ōn'nim* in Jdg. 9:37, which is translated 'plain of Meonenim' in AV and 'Diviners' Oak' in RSV. The word *m'ōn'nim* is the intensive participle of the verb 'ānan, 'to practise soothsaying', used, for instance, in 2 Ki. 21:6 = 2 Ch. 33:6 (RV 'observed times') and Lv. 19:26, where the practice is forbidden. The participial form, meaning 'soothsayer' or 'diviner' (*DIVINATION), occurs also in Dt. 18:10, 14 and in Mi. 5:12 (13, Heb.) but is treated only as a proper name by AV and RV in the passage in Judges. The reference is probably to a tree where Canaanite or apostate Israelite soothsayers carried out their business. The site is unknown. T. C. M.

MEPHIBOSHETH. The original form of the name may have been Meribba'al, perhaps *'Ba'al is advocate' (1 Ch. 8:34; 9:40a), or Meribba'al, 'hero of Baal' (1 Ch. 9:40b). In the Lucianic recension of the LXX (except at 2 Sa. 21:8) the form is Memphibaal, perhaps 'one who cleaves Baal in pieces' (cf. Dt. 32:26). This transitional form was perhaps further modified by the replacement of *bā'al* with *bōšēl*, 'shame' (cf. Ishbosheth, Jerubesheth in 2 Sa. 11:21, and the LXX 'prophets of shame' for 'prophets of Baal' in 1 Ki. 18:19, 25). See *BDB*; Smith, *ICC, Samuel*, 1899, pp. 284–285; S. R. Driver, *Notes on the Hebrew Text of the Books of Samuel*², 1913, pp. 253–255 with references. On the other hand, Mephibosheth and Meribba'al may have been alternative names (*ISHBOSHETH).

There were two men of this name. 1. The son of Jonathan, Saul's son. When they were killed he was 5 years old and became lame owing to an injury sustained in flight with his nurse (2 Sa. 4:4). David spared his life, gave him an honourable place at court for Jonathan's sake, and appointed Ziba, one of Saul's slaves, to serve him (2 Sa. 9; 21:7). Ziba's treachery and Mephibosheth's reconciliation with David at the time of Absalom's revolt are related in 2 Sa. 16:1–6; 19:24–30. 2. Saul's son by his concubine Rizpah. He was among those executed by the Gibeonites to expiate Saul's massacre (2 Sa. 21:8). A. G.

'MENE, MENE, TEKEL, and PARSIN' (mn'mn'tql prs), written in the Aramaic script of the 6th–5th cent. BC, as interpreted by Daniel at Belshazzar's feast.

MERAB. Saul's elder daughter (1 Sa. 14:49). She was promised to David but given instead to Adriel, the Meholathite (1 Sa. 18:17-20), an incident the LXX omits. Many scholars substitute Merab for Michal in 2 Sa. 21:8, regarding it as an ancient scribal error, saying that after her death her sons were hanged to atone for Saul's slaughter of the Gibeonites, a breaking of Israel's covenant (Jos. 9).

M.B.

MERARI, MERARITES. Merari, third son of Levi, was founder of one of three great Levite families. His family was subdivided into the houses of Mahli and Mushi. In the wilderness the Merarites carried the tabernacle frames (boards), bars and sockets, and the court pillars, sockets, pins and cords. Four wagons and eight oxen were given them to help in the task. They encamped on the N side of the tabernacle. Their males over a month old numbered 6,200; those who actually served (age-group 30-50), 3,200 (Nu. 3:33-39; 4:42-45; 7:8). In the land they were assigned twelve cities (Jos. 21:7).

Under David's reorganization the Merarite family of Ethan (Jeduthun) shared in the Temple singing duties, while others were porters (1 Ch. 6:31-48; 25:3; 26:10-19). Merarites are mentioned as being present at the bringing up of the ark (1 Ch. 15:6), and again at the successive cleansings of the Temple under Hezekiah and Josiah (2 Ch. 29:12; 34:12). Some also are recorded as serving under Ezra (Ezr. 8:18-19) and Nehemiah (*cf.* Ne. 11:15 with 1 Ch. 9:14).

D.W.G.

MERATHAIM (Heb. *m'rālayim*). A term found in Je. 50:21, having the dual meaning of 'double bitterness' or 'double rebellion'. Some hold that the dual expresses merely intensity of rebellion against the Lord (*cf.* v. 24); other scholars now suggest an identification of the word with Bab. *nār marrātu* (Persian Gulf) = S Babylonia (so *BDB; GTT*), but this is questionable.

J.D.D.

MERCY, MERCIFUL. The tracing of the concept of mercy in the Eng. Bible is complicated by the fact that 'mercy', 'merciful' and 'have mercy upon' are translations of several different Heb. and Gk. roots, which are also variously rendered in other occurrences by other synonyms, such as 'kindness', 'grace', 'favour' and cognate verbs). To picture this concept we would require a group of overlapping linguistic circles.

I. In the Old Testament

I. *hesed*: the etymological origin of this root is possibly 'keenness, eagerness' (Snaith). Its semantic core is best expressed by 'devotion'. Used nearly 250 times, it is translated in AV predominantly by 'mercy', but also by 'kindness', *'lovingkindness', 'goodness' (LXX, *eleos*; Luther, *Gnade*). Its range of meaning is: 'solidarity, kindness, grace' (G. Lisowsky, *Konkordanz*, 1958). It denotes devotion to a covenant, and so, of God, his covenant-love (Ps. 89:28). But God's faithfulness to a graciously established relationship with Israel or an individual, despite human unworthiness and defection, readily passes over into his mercy. 'This steady, persistent refusal of God to wash his hands of

wayward Israel is the essential meaning of the Heb. word which is translated loving-kindness' (Snaith). RSV renders it often by 'loyalty', 'deal loyally', chiefly by 'steadfast love'.

2. *hānan* is translated in AV chiefly as 'have mercy upon', be 'gracious', 'merciful'; and *hēn* by 'grace' and 'favour' (LXX mostly *charis*). 'It is the gracious favour of the superior to the inferior, all undeserved' (Snaith).

3. *rāham* may share common origin with *rehem*, meaning 'womb', and hence denote 'brotherly' or 'motherly feeling' (*BDB—cf.* Is. 13:18; 49:15). AV 'have mercy' or 'compassion', and once (Ps. 18:1) 'love'. The plural *rah'mim* is rendered 'tender mercies' (LXX *splanchna, oiktirmoi, eleos*). It expresses the affective aspect of love: its compassion and pity. 'The personal God has a heart' (Barth).

II. In the New Testament

In NT the meanings of *hesed* and *hēn* are largely combined in *charis*, *'grace'. The specific notion of mercy—compassion to one in need or helpless distress, or in debt and without claim to favourable treatment—is rendered by *eleos, oiktirmos* and *splanchnon* (and cognate verbs). Grace is concerned for man, as guilty; mercy, as he is miserable (R. C. Trench, *Synonyms of the New Testament*, pp. 166ff.).

God is 'the Father of mercies' (2 Cor. 1:3; Ex. 34:6; Ne. 9:17; Pss. 86:15; 103:8-14; Joel 2:13; Jon. 4:2). 'His compassion is over all that he has made' (Ps. 145:9), and it is because of his mercy that we are saved (Eph. 2:4; Tit. 3:5). Jesus was often 'moved with compassion' and he bids us to be 'merciful, as your Father also is merciful' (Lk. 6:36; Mt. 18:21ff.). Christians are to put on 'heartfelt compassion' (Col. 3:12). The merciful are blessed, and will receive mercy (Mt. 5:7; also Jas. 2:13, on which see R. V. G. Tasker, *TNTC, ad loc.*).

MERODACH. The Heb. form of the Babylonian divine name Marduk. By the time of *Hammurapi (c. 1750 BC), on whose stela this god may be represented (*IBA*, fig. 24), the god Marduk (Sumerian *amar. utu*) had taken over many of the attributes of the god Enlil. Marduk was the primary deity of *Babylon and was later called by his epithet Bēl (Ba'al), so that his defeat was synonymous with that of his people (Je. 50:2) as was that of the earlier Canaanite *Ba'al. The Babylonian epic of creation (*enuma eliš*) commemorates the god's victory over forces of evil and his honour as 'king of the gods'. Merodach occurs as the divine element in the Heb. rendering of Babylonian names, *Evilmerodach, *Merodach-baladan and *Mordecai.

D.J.W.

MERODACH-BALADAN. Known from cuneiform texts as the name of Marduk-apla-iddina II, the king of Babylon who sent an embassy to Hezekiah (Is. 39:1). The Heb. writing reflects the consonants of the name according to the methods of transcription used in the 8th and 7th centuries BC (*mrđkblđn*; 2 Ki. 20:12, Berodach-baladan, has a phonetic variant), the vowels being added by later

The Babylonian god Marduk (Heb. Merodach) wears a royal crown and holds the rod and ring, symbols of authority. He is here depicted on his symbol, a composite creature (mušruššu) whose body was a serpent. Drawn from a curved cylinder found at Babylon (see p. 751).

tradition. His father, not named in cuneiform sources, could have been called B l-iddin, giving the same consonants as Baladan (*bldn*) when transcribed into Hebrew (Is. 39:1). See *TynB* 22, 1971, pp. 125–126.

He was a ruler of the Chaldean district of Bit-Yakin, N of the Persian Gulf, who claimed descent from Eriba-Marduk king of Babylon 782–762 bc. When Tiglath-pileser III entered Babylonia in 731 bc, Merodach-baladan brought presents to him at Sapia and supported the Assyrians against a rebellious sheikh Ukīn-z r (*Iraq* 17, 1953, pp. 44–50). On the succession of Sargon in 721 bc Merodach-baladan entered Babylon and claimed the throne. The Assyrians reacted and attacked the Elamite allies of Babylon the following year.

The outcome of the battle is obscure except in that Merodach-baladan remained on the throne until 710 bc, when Sargon, having previously neutralized the Elamites, entered Babylon unopposed. When the Assyrians moved S into Bit-Yakin, Merodach-baladan was retained as local ruler and did not openly oppose his overlord during the rest of his reign.

On Sargon's death in 705 bc, however, Merodach-baladan began to work for his independence from Assyria. It was probably at this

time that he sent an embassy to Hezekiah, which was shown the resources of Judah (2 Ki. 20:12–19; Is. 39), with the aim of encouraging action against Assyria by the W. Not only did Isaiah's opposition to this scheme thwart Merodach-baladan's plan, but the Babylonians themselves forestalled him by setting up their own nominee, Marduk-zakir-šum, in 704 bc. He deposed the newly appointed king in Babylon and ruled from nearby Borsippa. Despite the aid of Elamite troops under Imbappa sent by Šutur-Nahundu, Sennacherib defeated the rebels in battles at Kutha and Kish and entered Babylon, where he set Bel-ibni on the throne. Bit-Yakin alone was despoiled, and Merodach-baladan fled to SW Elam, where he subsequently died.

BIBLIOGRAPHY. J. A. Brinkman, in *Studies presented to A. L. Oppenheim*, 1964, pp. 6–53; *CAH* 3/2, 1991, pp. 26–36. D.J.W.

MEROM, WATERS OF (Heb. *mērôm*). Rendezvous of the Hazor confederacy against Joshua, who surprised and routed them there (Jos. 11:5, 7). It is not clear whether Merom is (a) modern Meiron, a village 5 km WNW of Safed (Safat), near springs which feed the Wadi Leimun or W Meiron (M. Noth, *Josua*², p. 67); or (b) Marouner-Ras, 15 km to the N, above a valley leading to the Huleh basin N of Hazor (*LOB*, pp. 225f., proposing Tell el-Khirbeh, 3 km to the SSW). Whether or not it is the same as *Madon, Merom appears to have been an important site (Tuthmosis III list no. 85; *ANET*, p. 283); no such remains have been found at Meiron (E. Meyers, *BASOR* 214, 1974, pp. 2f.). J.P.U.L.

MERONOTHITE. Jehdeiah (I Ch. 27:30) and Jadon (Ne. 3:7) were Meronothites. Ne. 3:7 seems to suggest that Meronoth was close to Gibeon and Mizpah, but Mizpah is a doubtful reading (*GTT*, p. 387). Grollenberg, *Atlas*, identifies it as Beitūniyeh, NW of Gibeon, following earlier studies. A.R.M.

MEROZ (Heb. *mērôz*), in Jdg. 5:23 a community (doubtfully identified with Khirbet Marus, 12 km S of Barak's home at Kedesh-naphtali) on which Deborah pronounces a curse for its failure to take part in the campaign against Sisera. The bitterness of the curse suggests that Meroz was under a sacred obligation to obey Barak's summons. F.F.B.

MESHA. I. King of Moab, succeeding his father who had reigned for 30 years and worshipped *Chemosh (Moabite Stone, 2–3). He rebelled after Ahab's death (2 Ki. 1:1; 3:5). Since an invasion of his territory by Judah, Israel and Edom failed, his breakaway may have occurred c. 853 bc while Ahab and Israel were engaging the Assyrians. The details of his reign on the *Moabite Stone record his building of towns and regulating the water-supply. His rebellion may have been an attempt to gain direct control of his considerable wool trade with Tyre (2 Ki. 3:4–5; *POTT*, pp. 235, 275).

2. Caleb's first-born son (I Ch. 2:42, rsvmg.).
3. A Benjaminite born in Moab, son of Shaha-
raim by Hodesh (I Ch. 8:9). D.J.W.

MESHA. A place mentioned as the limit of the territory of the descendants of Jotkan (Gn. 10:30), the other limit being *Sephar. Some scholars would identify it with *maššā'* in N Arabia (*MASSA), but the probable location of Sephar in S Arabia suggests a similar locality for Mesha, though no place of that name has been suggested in that region. T.C.M.

MESHACH (Heb. *mēšak*). The name given to Mishael ('who is what God is?'), one of Daniel's companions in captivity at Babylon, by Nebuchadrezzar's chief eunuch (Dn. 1:7; 2:49, etc.). The most plausible meaning of the name suggested is the Bab. *mēšāku* ('I have become weak') perhaps given as similar to the Heb. name. D.J.W.

MESHECH (MT *mešek*; LXX *Mosoch*). One of the sons of Japheth (Gn. 10:2 = 1 Ch. 1:5) here and elsewhere associated with Tubal. 1 Ch. 1:17 names him as a descendant of Shem by Aram, while the parallel passage (Gn. 10:23) gives the name as Mash. One of these is, presumably, an error, and LXX *Mosoch* in Gn. 10:23 suggests *k* has been lost there. The intermarriage implied by the presence of the same name among the children of Japheth and Shem, which such a view would involve, would not be impossible (*NATIONS, TABLE OF).

The descendants of Meshech are later mentioned as exporting slaves and copper (Ezk. 27:13), as a warlike people threatening from the N (Ezk. 32:26; 38:2-3; 39:1), and as typical of a barbarous society (Ps. 120:5). The close association of the name with Tubal renders likely their identification with the people often named together as *Tabāl* and *Musku* or *Mušku* in the Assyrian inscriptions and *Ti-barēnoi* and *Moschoi* in Herodotus. The *muš-ka-ia* are first mentioned in the annals of Tiglath-pileser I (c. 1100 BC) as mounting an army of 20,000 men in the N, and it may be that they were already in the region SE of the Black Sea a century earlier when the Hittite texts mention one *Mitas* in that area, for this name is similar to that of the king of the *Muški* in the 8th century. They are mentioned in the annals of Tukulti-Ninurta II and Ashurnasirpal II in the 9th century and of Sargon in the 8th. This king gives their ruler's name as *mi-ta-a*, which some scholars suggest is to be equated with *Midas* of Phrygia, the kingdom which succeeded the Hittites in Asia Minor, and that the *Muški* are therefore to be equated with the Phrygians. The name *Mušku* is not mentioned in the Achaemenian inscriptions, but Herodotus names the *Moschoi* as falling within the 19th Satrapy of Darius (3. 94) and as forming a contingent in the army of Xerxes (7. 78). This information leads to the conclusion that Meshech refers to a people perhaps speaking an Indo-European language who entered the Near East from the N steppe, and imposed themselves as rulers upon the indigenous population of an area in E Anatolia.

MESOPOTAMIA. The Gk. *Mesopotamia*, 'between the two rivers', is AV borrowing from LXX to

render the Heb. **aram nah*rayim* (except in the title of Ps. 60). This was the fertile land E of the river Orontes covering the upper and middle Euphrates and the lands watered by the rivers Habur and Tigris, i.e. modern E Syria-N Iraq. It includes Harran (to which Abraham moved after leaving Ur in Babylonia) and its surrounding townships, to which Eliezer was sent to find a wife for Isaac (Gn. 24:10). Mesopotamia was the original home of Balaam (Dt. 23:4; *PEOR) and was the country ruled by Cushan-rishathaim when he oppressed Israel (Jdg. 3:8-10). In David's time Mesopotamia provided charioteers and horsemen to support his Ammonite opponents (1 Ch. 19:6). This accords with the evidence for the occupation of this whole area by horse-rearing Indo-Aryan Mitanni and Hurrians (*HORITES) in the 2nd millennium.

Greek and Roman writers after the 4th century BC extended the use of 'Mesopotamia' to describe the whole Tigris-Euphrates valley, that is, the modern state of Iraq. Thus Stephen referred to Abraham's original home of Ur in Babylonia as in 'Mesopotamia, before he lived in Haran' (Acts 7:2). The inclusion of Mesopotamians with Parthians, Medes and Elamites may indicate that the Jews of the Diaspora in Babylonia were present in Jerusalem to hear Peter (Acts 2:9). Thus the NT follows the wider use of the geographical name which is still adopted by some modern scholars.

MESSIAH.

I. In the Old Testament

This word, used as the official title of the central figure of expectation, is in the main a product of later Judaism. Its use is, of course, validated by the NT, but the term is found only twice in the OT (Dn. 9:25-26).

The idea of *anointing and of the anointed person is a well-established OT usage. One particular example, which has sometimes caused difficulty to OT students, is in fact specially helpful in defining the term. In Is. 45:1 the Persian, Cyrus, is addressed as 'his (i.e. Yahweh's) anointed (*m'šihō*)'. There are here five features which, in the light of the rest of Scripture, are clearly definitive of certain main lines of OT Messianism. Cyrus is a man of God's choice (Is. 41:25), appointed to accomplish a redemptive purpose towards God's people (45:11-13), and a judgment on his foes (47). He is given dominion over the nations (45:1-3); and in all his activities the real agent is Yahweh himself (45:1-7). The anointed status of Cyrus, as such, simply shows that there is a 'secular' (so to speak) usage of the terminology of Messiahship (cf. the 'anointing' of Hazael, 1 Ki. 19:15; and the description of Nebuchadrezzar as 'my servant', Is. 25:9). There could be no better summary of the OT view of the 'anointed' person; furthermore it is quite clear that these five points are pre-eminently true of the Lord Jesus Christ, who saw himself as the fulfilment of the OT Messianic expectations. In the light of this, the best and simplest plan for our study is to apply the word 'Messianic' to all those prophecies that place a person in the limelight as the figure of salvation (so Vriezen).

MESSIAH

How old is the Messianic expectation? One major line of argument on this question (suggested by Mowinckel) is that the Messiah is an eschatological figure in the strict sense of the term: that is to say, not merely a figure of future hope, but emphatically belonging to the 'last days'. Consequently, since all properly defined eschatological passages look back upon the fall of the Davidic monarchy as a fact of past history, the Messiah must belong to post-exilic times, and is not found as a matter of prediction in pre-exilic documents. Seemingly Messianic passages belonging to monarchic times must be interpreted as simple addresses to the reigning king, and of no Messianic, that is, eschatological, significance. Later editing, it is urged, may have adapted them Messianically, and later Messianic writers may have drawn from them some of their imagery, but in themselves, and properly considered, they are not Messianic.

Against this it is urged (e.g. by Knight), with great weight, that it is hardly credible that the monarchs known to us in the books of Kings could have been seriously addressed or thought of in the terms used, for example, in the royal Psalms. We shall demonstrate this contention presently, and for the moment must be content to say that such passages point to a conception of Israelite kingship as such, and to an expectation resident in the kingly office itself. Even if Mowinckel has correctly insisted that Messiah must be an eschatological figure, by no means all OT specialists would agree that eschatology must be post-exilic (cf., e.g. Vriezen), but it may certainly be asked if he has not defined the concept of eschatology too rigidly. If, for example, he denies the description 'eschatological' to any passage which depicts the survival and life of a remnant after the divine intervention, the logical consequence of this is to deny that the Lord Jesus Christ is an eschatological figure, and thereby contradict the biblical view of the 'last days' (e.g. Heb. 1:2; 1 Jn. 2:18). It is much more satisfactory to define the Messiah as a 'teleological figure'. Unique in Israel was their apprehension of purpose in life. They possessed this awareness from the beginning (cf. Gn. 12:1-3), and this made them alone the true historians of the ancient world.

The specific attachment of this hope to a royal figure of the future is in no way dependent on the historical fall of the Monarchy, for the Davidic line was a failure from the start, and the expectation, even longing, for the royal Messiah need not be later than the time of Solomon. Our plan therefore will be to seek in the OT for a 'figure of salvation', and, by associating our search with Israelite teleology, rather than with a narrowly defined eschatology, we will find good reasons to hold that such a hope was early embraced by the chosen people, taking its rise from the famous 'protevangelium' of Gn. 3:15.

a. Messiah as the antitype of great historical figures

Israel's teleological view of life on earth, already mentioned, was rooted in the knowledge of the unique God who revealed himself to them. The faithfulness and self-consistency of their God provided them with a key to the future, in so far as it was necessary for faith to discern things to come. God had acted 'typically' and characteristically in certain great persons and events of the past, and, because God does not change, he will so act again. Three such persons of the past were specially

woven into the Messianic pattern: Adam, Moses and David.

1. *The Messiah and Adam.* There are certain features of the Messianic future which are very clearly reminiscent of the Edenic state: for convenience we group them under the two headings of prosperity (Am. 9:13; Is. 4:2; 32:15, 20; 55:13; Ps. 72:16) and peace (the harmony of the world of living creatures: Is. 11:6-9; and of the world of human relations: Is. 32:1-8). Viewing the Fall in its effects purely upon this world, these were the things lost as God's curse took effect. When the curse is reversed and God's Man restores all things the Edenic scene reappears. This is not merely wishful thinking, but a logical and proper extension of the doctrine of creation by a holy God. All the passages cited above concern the Messianic King and the nature of his rule and kingdom. Here is the real recapitulation of the first man, who had 'dominion' over the rest of created things (Gn. 1:28; 2:19-20), but fell when he allowed his dominion to be usurped (cf. Gn. 3:13). Dominion will be restored in the Messiah. It may frankly be admitted that the notion of the Messiah as a new *Adam is neither lengthily nor specifically developed, 'but it is not unlikely that we have evidence that the royal ideology was sometimes influenced by the conception of the king of paradise' (Mowinckel). The NT doctrine of the 'Second Adam' has a clear OT root in the passages quoted.

2. *The Messiah and Moses.* It is not surprising that the Exodus and its leader should have so impressed the mind of Israel that the future was seen in this mould. As it was recorded and presented to succeeding generations of the nation, the pattern of the first Exodus constituted an eternal revelation of God (Ex. 3:15). The conception of the second Exodus is not always in a specifically Messianic setting. Sometimes the fact is stressed that God will do again what he did at the Exodus, only in a surpassing way, but without mentioning any man by whom God will so work as formerly he wrought by Moses (e.g. Ho. 2:14-23; Je. 31:31-34; Ezk. 20:33-44—note 'king' (RV, RSV) in v. 33: it may be that Moses is called 'king' in Dt. 33:5). Sometimes, however, the forecast of the second Exodus is Messianic, e.g. Is. 51:9-11; 52:12; Je. 23:5-8. Once again, it is only fair to notice that the matter is, at best, inferentially expressed. However, in the case of Moses we can take the study a stage farther, for we have his own prophecy recorded in Dt. 18:15-19 that the Lord will raise up a prophet 'like me'.

In general, the exegesis of this passage has tended to the exclusive advocacy of one or other point of view: either that the Messiah is here foretold or that the reference is simply to the providential provision of a continuing line of prophets. In recent work the latter has the support of the majority, although sometimes it has been allowed that the Messianic meaning may also, though secondarily, be admitted. However, the passage itself seems to require both interpretations, for some features in it can be satisfied only by the line of prophets, and others only by the Messiah.

Thus the context is very weighty for the former view. Moses insistently warning his hearers against Canaanite abomination stresses especially divinatory practices for ascertaining the future. The warning is buttressed by this prophecy of the Mosaic Prophet. Here, says Moses, is the Israelite alternative to divination; the living are not to con-

sult the dead, for the God of Israel will speak to his people through a man raised up for that purpose. This seems to be a promise of continuous revelation; a prediction of a far-off Messiah would not meet the need for guidance of which Moses is speaking.

Again, vv. 21–22, supplying a test for prophets, may be seen as anticipating the situation which often arose in the days of the canonical prophets, and which caused such bitterness of soul to Jeremiah (23:9ff.). However, this consideration is not of equal weight with the foregoing, for it would not be at all improper that some test for the Messiah should be provided. A false Messiah is as likely as a false prophet and, indeed, to take the matter no farther, Jesus himself rested his claims on the coincidence of his words and works, and his Jewish opponents were continually pressing for an unequivocal Messianic sign.

If we take Moses' words as prophetic of a line of prophets, they were, of course, amply fulfilled. Every true prophet was 'like Moses', for he existed to teach Moses' doctrine. Both Jeremiah (23:9ff.) and Ezekiel (13:1–14:11) distinguish the true prophet from the false by the content of his message: the true prophet has a word to speak against sin, the false prophet has not. This is simply to say that the theology of true *prophecy derives from Sinai. This truth is taught also in Deuteronomy, for the question of false prophecy is raised in ch. 13, and it is precisely required that every prophet must be brought into comparison with the Exodus revelation (v. 5, 10) and with the teaching of Moses (v. 18). Moses is the normative prophet; every true prophet, as such, is a prophet 'like Moses'.

But there is another side to the exegesis of this passage. According to Dt. 34:10, Moses is unique, and his like has not yet appeared. On any view of the date of Deuteronomy, this verse points to an understanding of Dt. 18:15ff. as Messianic: for if Deuteronomy is as late as some hold, or if 34:10 represents later editorial comment, then we are here being informed that no single prophet, nor yet the prophets collectively, fulfilled the prediction of 18:15ff.

Furthermore, when we come to the passage itself, special regard ought to be paid to the very precise terms of the comparison with Moses. The passage does not say, in a large and undefined way, that there will arise a prophet 'like Moses', but specifically a prophet who, in his person and work, may be compared with Moses at Horeb (v. 16). Now this comparison was not fulfilled by any of the OT prophets. Moses at Horeb was the mediator of the covenant; the prophets were preachers of the covenant and foretellers of its successor. Moses was an originator; the prophets were propagators. With Moses, Israel's religion entered a new phase; the prophets fought for the establishment and maintenance of that phase, and prepared the way for the next, to which they looked forward. The strict requirement of vv. 15–16, therefore, can be met only by Messiah.

How, then, are these two interpretations to be reconciled? We remarked above, relative to Israel's continuing need of the voice of God, that a far-off Messiah would not meet that need. In so saying, we spoke as if 20th-century information was at the disposal of the ancient Israelite. This passage certainly foretells the prophet-Messiah, but it says nothing about his being 'far off'. Only the actual passage of time could show that. Here, then, is the

reconciliation: in respect of prophets, Israel was in exactly the same situation as in respect of kings (see further, below). The line of kings proceeded under the shadow of the promise of the coming great King, and each successive king was hailed in deliberately Messianic terms, both to remind him of his vocation to a certain type of kingship and to express the national longing that at last Messiah might have come. So too with the prophets. They likewise live under the shadow of the promise; they too have a pattern to fulfil. Each king must be, as best he can, like the king of the past (David) until the coming of the One who is able to reformulate the Davidic type and be the king of the future; so, too, each prophet must be, as best he can, like the prophet of the past (Moses) until the coming of the One who is able to reformulate the Mosaic type and be the prophet, lawgiver and mediator of the future, new covenant.

3. *The Messiah and David.* The dying Jacob is recorded (and there is no good reason for doubting the ascription) as prophesying about the future of his sons. The prophecy about Judah has deservedly attracted great attention (Gn. 49:9–10). Dispute has necessarily centred on the meaning of '*ad ki yābō' šilōh*'. Ezk. 21:27 seems to suggest the interpretation 'until he come, whose right it is', and this certainly is the most venerable approach to the problem. More recently the view has been taken that we have here an Akkadian loan-word meaning 'his (*i.e.* Judah's) ruler'. At all events, tribal rule is vested in Judah, and some pre-eminent Judahite ruler is foreseen as the consummation of the sovereignty. In an initial, and at the same time normative, sense, this came to pass in David of Judah, with whom all succeeding kings, for good or ill, were compared (*e.g.* 1 Ki. 11:4, 6; 14:8; 15:3, 11–14; 2 Ki. 18:3; 22:2). However, it is one thing to see that David, as a matter of fact, was the normative king; it is another matter altogether to say just why he should be the type of the king to come. The prophecy of Nathan (2 Sa. 7:12–16) does not precisely require a single king as its fulfilment, but rather predicts a stable house, kingdom and throne for David. We must presume that, as from Solomon's later years failure and declension set in, the days of David glowed brighter and brighter in Israel's memory, and hope crystallized into the 'David' of the future (*e.g.* Ezk. 34:23). This expectation is shown particularly by two groups of passages.

(i) The Psalms. There are certain psalms which centre on the king, and they depict a very precise character and career. Summarizing, this king meets world-opposition (2:1–3; 110:1), but, as a victor (45:3–5; 89:22–23), and by the activity of Yahweh (2:6, 8; 18:46–50; 21:1–13; 110:1–2), he establishes world-rule (2:8–12; 18:43–45; 45:17; 72:8–11; 89:25; 110:5–6), based on Zion (2:6) and marked by a primary concern for morality (45:4, 6–7; 72:2–3, 7; 101:1–8). His rule is everlasting (21:4; 45:6; 72:5); his kingdom is peaceful (72:7), prosperous (72:16) and undeviating in reverence for Yahweh (72:5). Pre-eminent among men (45:2, 7), he is the friend of the poor and the enemy of the oppressor (72:2–4, 12–14). Under him the righteous flourish (72:7). He is remembered for ever (45:17), possesses an everlasting name (72:17) and is the object of unending thanks (72:15). In relation to Yahweh, he is the recipient of his everlasting blessing (45:2). He is the heir of David's covenant (89:28–37; 132:11–12) and of Melchizedek's priesthood

MESSIAH

(110:4). He belongs to Yahweh (89:18) and is devoted to him (21:1, 7; 63:1–8, 11). He is his son (2:7; 89:27), seated at his right hand (110:1), and is himself divine (45:6).

The Messianic pattern as deduced from Cyrus above is clearly here. It is inconceivable that such notions were entertained in any directly personal way concerning the line of monarchs who followed David in Judah. We have here, therefore, either the most blatant flattery the world has ever heard, or else the expression of a great ideal. Some comment is necessary on the ascription of divinity in Ps. 45:6. Unquestionably there are ways in which the address to the king as 'God' may legitimately be avoided (see Johnson), but such interpretations are not necessary in the light of the fact so clearly taught elsewhere in the OT that a divine Messiah was expected. It is no argument against this that v. 7 of the psalm, still addressing the king, speaks of 'God, your God'. Certainly we are intended to gather that there is some distinction between God and the king, even if the king can be spoken of as 'God', but this need occasion no surprise, because exactly the same thing occurs throughout Messianic expectation, as we shall see, and also in the case, for example, of the *Angel of the Lord, who is both himself divine and also distinct from God.

(ii) Isaiah 7–12, etc. The most sustained treatment of the Davidic-Messianic theme occurs in Isaiah 1–37 and in particular in the self-contained unit, chs. 7–12. From 745 BC onwards, pressure towards the W from the awakening imperialism of Assyria forced all the Palestinian states to look to their security. Aram and Israel (Ephraim) allied themselves for mutual defence and sought the additional strength of a united Palestinian front. When, as it seems, Judah stood aloof from this Syro-Ephraimite alliance, pressure was exerted to bring the S kingdom to a better mind. It is unnecessary to review the course of the events (cf. 2 Ki. 15:37–16:20; 2 Ch. 28); rather we must concentrate on sharing Isaiah's view of the matter. It is clear that he saw the threat as transitory (7:7, 16) but the moment as decisive for the future of the people of God. If in the face of this threat there should be a refusal to find security in Yahweh alone and a seeking of security in any sort of worldly pact, then in the prophet's view not just the current king (Ahaz) but the Davidic dynasty itself would be exposed as faithless; it would have rejected the promises and pleadings of its God in a decisive and final way and doom would follow. For this reason he identifies Ahaz with the dynasty (7:2, 13, 17), calls for a policy of total reliance on Yahweh (7:4, 'Take care that you do nothing'), warns that the issue of faith will settle the fortunes of the dynasty and nation (7:9), offers in Yahweh's name the provision of a sign of such magnitude as would virtually compel faith (7:10–11) and when this is rejected speaks of another sign, Immanuel, wherein the hope of the nation is seen as overwhelmed in the triumph of Assyria (7:14ff.).

There is a logic, therefore, about 7:1–25. There comes a moment when faith is decisively offered and beyond that offer lies only the doom which comes on unbelief. But for Isaiah this creates as many problems as it solves. It is one thing to say that the unbelieving Ahaz is doomed by his faithlessness, and dooms the dynasty and nation with him. But what of the promises themselves? Does God go back on his word? Does the promise of a Davidic king itself fail simply because Ahaz faith-

lessly refuses to enter into it? Is God's Messianic plan to that extent dependent on the choice of man? It is to this problem that Isaiah addresses himself in this section of his book and his treatment of it centres on the figure of Immanuel.

Immanuel must be approached first in relation to what is said of his birth: it is described as a 'sign' and as birth of an *'almā*. On neither count is Isaiah's meaning uncontroverted. 'Sign' is used in the OT of a present persuader (as in 7:11; cf. Dt. 13:1) and of a future confirmation (e.g. Ex. 3:12). In which sense is Immanuel a 'sign'? Regarding Immanuel's mother, the majority opinion of specialists insists that the word *'almā* means a young woman of marriageable age who, in this case, in the light of her pregnant state, must be assumed to be married and that if Isaiah had meant *virgo intacta* he must needs use another word, *b'tūlā*. The issue, however, is not as settled as some commentators would suggest. 'From a survey of non-biblical evidence we may safely conclude that the word *'almā*, in so far as may be ascertained, was never used of a married woman,' says E. J. Young (*Studies in Isaiah*, 1954, p.170); and of the eight other occasions on which the word is used in the Bible, there is no reason in any case to assume married state. The sequence of Gn. 24:14, 16, 43 is specially notable: Abraham's servant prays for a 'girl' (v. 14, *na'arā*); when Rebekah comes he notes that she is marriageable but unmarried (v. 16, a *b'tūlā* whom man had not known); with this knowledge at his disposal he summarizes the whole story for Rebekah's family using *'almā* (v. 43). In passing, it is important to ask why, if *b'tūlā* is virtually a technical term for 'virgin', it needs to be qualified on a number of significant occasions, as in Gn. 24:16 (cf. Lv. 21:3; Jdg. 11:39; 21:12). There is, in fact, strong ground for urging that Isaiah used *'almā* because it is the nearest word in Hebrew which expresses *virgo intacta* and that Matthew practised no sleight of hand in accepting the rendering *parthenos* (1:23).

Secondly, Isaiah sets Immanuel in the context of the hope of Israel. Chs. 7–11 form an integrated unit of prophetic teaching in which 7:1–9:7 focuses on the S kingdom (Judah) and 9:8–11:16 on the N (Jacob, 9:8). Each section passes through the same four sub-sections: the moment of decision (7:1–17; 9:8–10:4), the judgment (7:18–8:8; 10:5–15), the remnant (8:9–22; 10:16–34) and the glorious hope (9:1–7; 11:1–16). As this sequence is followed through, the wonder-child, Immanuel (the possessor, 8:8, and security, 8:10, of his people) becomes, as the focus clarifies, the royal deliverer of 9:1–7 and the righteous king of 11:1–16. In each place he is a world-ruler (9:7; 11:10) and in each place the element of mystery regarding his person remains. In 9:6 he who sits on David's throne (v. 7) is also 'mighty God'—and in the light of the identical wording referring without equivocation to Yahweh in 10:21 it is exegetically unworthy to refuse either the translation or its clear implication here—and in 11:1, 10 he who springs out of the stock of Jesse is also the root of Jesse.

Thirdly, we must attempt to relate Immanuel and Maher-shalal-hash-baz (8:1–4). We noted above a problem whether, considered as a sign, Immanuel must be understood as a present persuader or a future confirmation. The implication of 7:15–17 that he would be born heir to the Assyrian devastations of Judah might appear to settle the point. Yet Isaiah seems, with a certain amount

of emphasis and deliberation, to transfer the task of being an immediate sign to his own son (8:1-4) and in the rest of chs. 8-9 there is a plain contrast between this immediate child with a fourfold name of doom (8:1-4) and one whose birth comes 'in the latter time' (9:1) and who has a fourfold name of glory (9:6). Did Isaiah then change his mind about Immanuel and the date of his birth? Or how are we to understand this odd tension in the evidence? We come nearest to a solution if we assume that from the start Isaiah saw Immanuel's birth as a coming confirmation of the divine rejection of Ahaz and the Davidic dynasty as represented by him: the great, expected king would be born in the line of Ahaz to inherit an empty title, a meaningless crown, and a subjugated people. Were Immanuel to have been born there and then, that would have been the case; when, as we know, Immanuel was born, it was still the case. Isaiah gently eases the birth of Immanuel out of the present and into the undated future by the substitution of the birth of his own son and the open dating of 'the latter time' (9:1).

b. Other Messianic figures

1. *The Servant*. Isaiah 40-55 is dominated by the Messianic portrayal of the Servant (42:1-4; 49:1-6; 50:4-9; 52:13-53:12). The Servant is Yahweh's anointed (42:1), exercises the royal functions of 'judgment' (*mišpāt*, 42:1, 3-4) and dominion (53:12), displays prominently the marks of a prophet (49:1-2; 50:4), extends a ministry to Gentiles (42:1, 4; 49:6b) and to Israel (49:5-6a), is the agent in a world-wide revelation (42:1, 3-4) and salvation (49:6), and, not as priest but as victim, voluntarily submits to a death interpreted in the substitutionary terms of the levitical sacrifices (53:4-6, 8, 10-12).

The link between the first Servant Song and its context may be seen in the double 'behold' of 41:29; 42:1. The former verse is the climax of Isaiah's awareness of Gentile need; the latter is the introduction of one who will bring *mišpāt* to the Gentiles ('The religion of Jehovah regarded as a system of practical ordinances', Skinner, *Isaiah*, 1905, *ad loc.*). Both in relation to creation (40:12-31) and history (41:1-29) the God of Israel is the only God. This constitutes the ground for a word of comfort to Israel (40:1-11; 41:8-20) but it also exposes the plight of the larger part of the created and historical world (40:18-20, 25; 41:5-7, 21-24, 28-29). The Servant is divinely endowed (42:1) precisely to meet this need (42:1b, 3b-4).

Between the first and second Servant Songs a significant movement of thought develops. The first Song does not raise the question of the identity of the Servant but concentrates on his task. No sooner, however, has Yahweh confirmed this task as his will for his Servant (42:5-9) and committed himself to its accomplishment (42:10-17) than the prophet turns to an exposure of the plight of Israel (42:18-25). This significant passage must be deeply pondered by all who would understand this central section of the Isaianic literature: the nation of Israel is blind, deaf (vv. 18-19), enslaved (v. 22), under judgment for sin (vv. 23-25a) and spiritually unperceptive (v. 25b). In the sequence of the chapters, we have thus been informed that the Servant cannot be the nation. But Isaiah has not our pre-occupation with the Servant's identity and proceeds (43:1-44:23) to indicate in promissory fashion that both the political (43:1-21) and spiritual

(43:22-44:23) needs of Israel will be met by Yahweh. His provision in the former category is Cyrus (44:24-48:22), before whom Babylon falls (46:1-47:15) and by whom Israel leaves captivity (48:20-22).

A major preoccupation in Is. 48 is the sinfulness of Israel (vv. 1, 4-5, 7-8, 18, 22). Two things thus lie side by side: release from Babylon and continuance in sin. V. 22 is an apt climax and an equally apt introduction to the second Song. A change of address (from Babylon to home) is not a change of heart; the people may have come back to the land but they have yet to come back to Yahweh. That which has been promised of spiritual redemption (43:22-44:23) is to be fulfilled by the Servant who inherits the name they have forfeited (49:3; cf. 48:1) and, without loss of the task of bringing salvation to the Gentiles, adds the task of bringing Jacob to Yahweh (49:5-6).

The third Song in its content displays the Servant as the totally obedient one, suffering for obedience' sake, and in its context sets the Servant apart from even the faithful among the people of God. In contrast to Zion, despondent (49:14-26), and unresponsive (50:1-3), the Servant responds to Yahweh (50:4-5) with buoyant, optimistic faith (50:6-9) and becomes the Exemplar of all who would fear Yahweh (50:10); indeed, apart from the Servant, man is left to his own powers of self-illumination and under divine disapproval (50:11).

The command to watch ('Behold', 52:13) is in effect the climax of a number of addresses to the faithful (51:1, 4, 7) seen in their own persons or typified as Jerusalem/Zion (51:17; 52:1). Thus Isaiah continues to distinguish the Servant from the remnant until he stands out in terms 'unmistakably individual' (H. H. Rowley, *The Servant of the Lord*, 1965, p.52), internationally triumphant (52:13-15), rejected (53:1-3), sin-bearing (53:4-6), voluntarily the innocent sufferer of lawlessness, consigned to have 'his grave with wicked men, but with a rich man in his death' (53:7-9), yet living to dispense the fruits of his dying, the worthy recipient of the divine accolade, 'I will give him the many as his portion and he will take the strong as spoil' (53:10-12). And in all this, the universality of the Servant's redemptive work is not forgotten. The call goes first to the barren Zion (54:1-17) to enter peace (54:10) and to inherit righteousness (54:14, 17), and then to the whole world to enter a free salvation (55:1-2) and to enjoy the mercies promised to David (55:3).

The delineation of the Servant is thus straightforward and unified, but the person of the Servant retains its proper element of mystery: a man among men (53:2-3) who is also 'the arm of the Lord' (53:1). Aptly, Mowinckel brings out the proper emphasis: 'Who could have believed what we have heard? Who could have seen here the arm of Yahweh?' (53:1). For the 'arm of Yahweh' is none other than Yahweh himself (52:10) acting again as he acted at the Exodus and the Red Sea to redeem and ransom (51:9-11).

2. *The anointed Conqueror*. The third section of the Isaianic literature completes the Messianic forecast. Isaiah has shown in chs. 1-37 a world-wide king but yet without indicating how the Gentiles will be gathered in. In his delineation of the Servant he has foretold a world-wide salvation, bringing all the redeemed under David's rule. Both these sections have included but without emphasis the exacting of vengeance on Yahweh's foes (e.g.

MESSIAH

9:3-5; 42:13, 17; 45:16, 24; 49:24-26). This topic now predominates as one who, like the King (11:2, 4) and the Servant (42:1; 49:2), is anointed with the Spirit and the Word (59:21), steps on to the scene.

The vision of the world-wide house of prayer (56:1-8) is in danger of perishing under the weight of self-seeking princes (56:9ff.), religious corruption (57:3ff.), inability to rise to the heights of truly spiritual religion (58:1ff.) and to find the way of peace (59:1ff.). Under these circumstances, and in default of there being any other Saviour, Yahweh himself dons the garments of salvation (59:16-20) bringing a Redeemer to Zion. Mysteriously, however, the covenant which ensues is addressed to one endowed with Yahweh's Spirit and speaking Yahweh's words (59:21), but plainly this Zion-orientated work is world-wide for at once the universal call is issued (60:1ff.). In a manner reminiscent of the literary method of chs. 40-55, the affirmation that Yahweh will hasten the great vision to its fulfilment (60:22) merges into the testimony of one endowed with Yahweh's Spirit and Word to comfort (61:1-2a) and avenge (v. 2b). The work of comfort occupies the prophet until the end of ch. 62 and it is now the endowed One who dons the garments of Salvation (61:10-11) as formerly (59:16f.) did Yahweh himself. The mighty 63:1-6 relates the work of redemption to its counterpart in vengeance wherein one working alone (as Yahweh was alone, 59:16) treads the winepress and exacts a full penalty.

In his person, this Messianic Conqueror hardly differs from the king and the Servant. He has the same spiritual endowment; he is a man among men. But two other sidelights are given. First, he is described as the conqueror of Edom, a task accomplished by no other Israelite king but David (cf. Nu. 24:17-19). May we not see here the identity of the anointed Conqueror with the Davidic Messiah? Secondly, in the development of the theme it is he who at the last wears the garments of salvation and vengeance which Yahweh himself was seen to don (59:16ff.). Once more the prophet introduces the Messianic motif: the identity and the distinction of Yahweh and his Anointed.

3. *The Branch.* Under this Messianic label there is a beautifully unified series of predictions. Je. 23:5ff. and 33:14ff. are virtually identical. Yahweh will raise a Branch 'for David'. He is a king in whose days Israel will be saved. His rule is marked by judgment and righteousness. His name is 'Yahweh our Righteousness'.

The second of these passages associates the Branch prophecy with the assertion that the priests shall never want a man to offer sacrifice. This might seem somewhat extraneous were it not for the subsequent use made by Zechariah of the same Messianic figure. In Zc. 3:8 Joshua and his fellow-priests are declared to be a sign of Yahweh's purpose to bring forth 'my servant the Branch', who will accomplish the priestly work of removing the iniquity of the land in one day. Again, in 6:12ff., Zechariah returns to the Branch, who shall grow up in his place, build the Temple of Yahweh, be a priest upon his throne, and enjoy perfect, covenanted peace with Yahweh. The Branch is clearly, therefore, the Messiah in his kingly and priestly offices. He is the fulfilment of Ps. 110, with its designation of the king as an eternal Melchizedek-priest.

Having reached this point, it is now fair to refer to Is. 4:2-6. The Messianic reference of v. 2 is a matter of dispute, and is often denied, but, seeing

that the following verses agree exactly with the use of the Branch in the passages already cited, the inference need not be resisted that the Messiah is found here too. He is the Branch of Yahweh, and he is associated with the priestly work of washing away the filth of the daughters of Zion (v. 4) and with the kingly reign of Yahweh in Jerusalem (vv. 5-6). The picture of the Branch summarizes in one figure what Isaiah elsewhere extended and analysed into the work of King, Servant and Conqueror. The Messianic motifs of humanity and divinity, and of identity and distinction in Deity, are present, for the Branch 'belongs to David' and yet is 'Yahweh's'—the very imagery speaking of origin and nature; he is 'my servant', and yet his name is 'Yahweh our righteousness'.

4. *The seed of the woman.* We have noticed throughout this study that the humanity of the Messiah is stressed. In particular, it is often through the mother that the human origin is described. It is easy to over-emphasize small details, but nevertheless it should be noted that both Immanuel (Is. 7:14) and the Servant (Is. 49:1) are cases in point. Likewise, Mi. 5:3 speaks of 'she who is in travail', and very likely the difficult Je. 31:22 refers to the conception and birth of a remarkable child. The most notable prophecy of the seed of the woman, and the one from which the whole notion may well have arisen, is given in Gn. 3:15. It has become almost an accepted thing to refuse any Messianic reference here, and to regard the verse as 'a quite general statement about mankind and serpents, and the struggle between them' (Mowinkel). But as a direct matter of the exegesis of these chs. in Genesis, it is unfair to isolate this verse from its context and to treat it aetiologically. In order to see the force of the promise made in 3:15, we must pay heed to the part played by the serpent in the tragedy of the Fall. Gn. 2:19 shows man's superiority over the animal creation. The Creator graciously instructs the man as to his difference from the mere animals: he can impose his order upon them, but among them is not found any 'help meet for him'. His like is not there.

But now, in Gn. 3, another phenomenon meets us: a talking animal, an animal which somehow has risen above its station, and presents itself as man's equal, able to engage him in intelligent conversation, and even as his superior, able to instruct him in matters wherein he was formerly misguided, to give him what purports to be a correct understanding of God's law and God's person. The serpent speaks as one well able to weigh God in the balances and find him wanting, to discern the inner thoughts of the Almighty and to expose his underhand motives! Even more, he displays open hostility to God; a hatred of God's character, a readiness to destroy his creation-plan, a sneering mockery of the Most High. It is simply not good enough to see in the serpent the spirit of man's irrepressible curiosity (Williams) or any such thing. The Bible knows only one who displays this ungodly arrogance, this hatred of God, and it is no wonder that the serpent in Eden becomes 'that ancient serpent, who is the Devil and Satan' (Rev. 20:2). But where sin abounds, grace superabounds, and so it is that at the very moment when Satan seems to have scored a signal triumph it is declared that the seed of the woman will crush and destroy Satan. He will be himself bruised in the process, but will be victorious. The seed of the woman will reverse the whole calamity of the Fall.

5. *The Son of man.* On Dn. 7, a passage which has aroused so much discussion and difference of opinion, it is only possible here, as throughout this article, to state one point of view. The essence of the vision is the judgment scene, wherein the Ancient of Days disposes of the worldly and hostile powers—we note in passing the reappearance of the kingly motif of Ps. 2—and there is brought to him 'with the clouds of heaven . . . one like a son of man' who receives a universal and everlasting dominion. It is clear that the general reference here must be associated in some way with the universal dominion already generally observed in the Messianic passages, but the question whether the 'one like a son of man' is the Messianic individual or is intended to be a personification of the people of God must not be thus summarily settled. It is urged that vv. 18 and 22 speak of judgment and the kingdom being given to the 'saints of the Most High', and that therefore reason demands that the same recipients must be intended by the single figure of vv. 13–14.

However, we may also notice that there is a double description of the beasts who are the enemies of the saints. V. 17 says 'these four great beasts . . . are four kings' and v. 23 says the fourth beast 'shall be a fourth kingdom'. The figures are both individual (kings) and corporate (kingdoms). We must adopt the same preliminary reference for the 'one like a son of man'. Next, we must view the king–kingdom relationship in its OT context. The king is prior, and the kingdom is derivative. It is not the kingdom which fashions the king, but the reverse. As for the beast-kings, they are the personal enemies of the kingdom of the saints, and they involve their kingdoms with them; equally the 'one like a son of man' receives universal dominion, and in this is implicated the dominion of his people (*cf.* the dominion of Israel in the dominion of the conqueror, Is. 60, *etc.*). On this ground it is urged that the 'one like a son of man' is the Messianic individual. As such, he fits into the general pattern found throughout the whole series of expectations: he is a king, opposed by the world, but achieving universal dominion by the zeal of the Lord, *i.e.* from the Ancient of Days, in Daniel's imagery; he is man, by the terms of his title, and yet he does not originate among men but comes 'with the clouds of heaven', a position characteristic of God (see, *e.g.*, Ps. 104:3; Na. 1:3; Is. 19:1). Here is the same polarity of human and divine which is found almost without exception in OT Messianism, and which ought by now to occasion us no surprise.

6. *The anointed Prince.* It is something to say of any passage of the OT that it has attracted more interpretative enquiry and suggestion than any other, yet this is probably the case with Dn. 9:24–27. There is, however, a measure of appropriateness in attempting to urge one or two generalities in connection with it for, having begun our review with a secular 'anointed prince', Cyrus, it has at least the virtue of neatness to end it with the anointed Messiah himself.

The verses themselves fall into two unequal parts: clearly vv. 25–27 indicate a programme to be worked out in history. It starts with a command to rebuild Jerusalem (v. 25), from which a period of 62 weeks stretches until the coming of 'an anointed one, a prince'. V. 26 looks to what happens 'after the sixty-two weeks', and v. 27 brings matters to a 'decreed end'. V. 24, however, stands apart as offer-

ing a total statement of the purposes which are thus to be accomplished: three are negative, to finish transgression, put an end to sin and to atone for (*kipper*, to pay the atonement price) iniquity; three are positive, to introduce everlasting righteousness, to attest the veracity of vision and prophet and to anoint a most holy place (lit., a 'holiness of holinesses', elsewhere referring to the innermost shrine of the tabernacle, Ex. 26:33, the altar of burnt offering, Ex. 29:37, the tabernacle and all its furnishings, Ex. 30:29, the incense, Ex. 30:36, the priestly portions of the cereal-offerings, sin-offering, guilt-offering, Lv. 2:3, 10; 6:17, 25; 7:1, 6, the bread of the Presence, Lv. 24:9 (Nu. 4:7), and every 'devoted thing' including persons, Lv. 27:28). While there are in this statement of purpose a few difficulties with individual words and some unique expressions, the meaning of the whole cannot be in doubt: 'that the messianic age is to be marked by the abolition and forgiveness of sin, and by perpetual righteousness' (S. R. Driver, *Daniel*, 1900, p. 136).

It is very difficult to see how any such exalted purpose is explicable in terms of those interpretations which focus the prophecy on Antiochus Epiphanes: 7 'weeks' elapse between Jeremiah's prophecy (*cf.* Dn. 9:2) and the anointed prince, Cyrus; 62 weeks cover the history of Jerusalem to the high-priesthood of Onias III in 175 BC who was 'cut off', anointed one though he was, being assassinated and replaced by his brother. The 'prince' of v. 26 is Antiochus himself. But where, one might reasonably ask, is the finishing of transgression, the paying of the atoning price, the bringing in of everlasting righteousness?

To base the passage on the Lord Jesus Christ involves no greater exercise of hindsight than does the Antiochus-theory and, on the contrary, provides a more persuasive use of individual expressions and a complete satisfaction of the purposes stated in v. 24. The period between the decree and the anointed prince is in total 69 weeks (v. 25, lit. as NASB, 'From the issuing of a decree . . . [there will be] seven weeks and sixty-two weeks.') The division into two may well mark the period between Cyrus and Ezra–Nehemiah (a noteworthy point in the city's history) and between then and the coming of 'an anointed one, a prince'. During his 'week' the anointed one 'empowers a covenant with many' (v. 27) and causes sacrifice to cease—though, as we know, the meaningless, post-Calvary ritual slaughter of animals continued till the desolator brought the old Temple itself to an end.

It is one thing to wrest words into unnatural shapes to make them fit later knowledge. It is another altogether to refuse the aid of later light in trying to elucidate obscurities. That Daniel was instructed to expect one who would mean the end of sin's long reign, the eternal establishment of righteousness, and the inauguration of true religion, cannot be controverted, nor can it be controverted even remotely, that not until Jesus, nor with any necessity after him, has such been accomplished, nor in any other has the whole range of OT Messianism found its goal, the attestation of both vision and prophet.

II. In the New Testament

Christos, 'anointed', is the Gk. equivalent of Heb. *māšiah*, Aram. *m'šihā* (transliterated as *messias* in Jn. 1:41; 4:25, in both cases glossed by *christos*). In the vast majority of NT uses, either alone or in the combination *Iēsous Christos*, it is apparently used as a name for Jesus without necessary reference to its original sense, as 'Christ' is in modern usage. Such uses (largely found in the NT letters, though some also in Acts and Rev., and a few in the Gospels) are not discussed in this article.

a. The Gospels

Particularly in the Gospel of John (1:20, 25, 41; 4:25, 29; 7:26f., 31, 41f.; 9:22; 10:24; 11:27) but also in the Synoptic Gospels (Mk. 8:29; 14:61; Lk. 2:11, 26; 3:15; 4:41) *christos* usually denotes the expected deliverer in a quite general sense. Such uses convey the impression of a widespread and eager expectation, without implying any specific figure or theme of OT hope. Sometimes, however, a nationalistic note is present when *christos* is used in connection with Jesus in the Gospels, particularly, when it is linked with the title 'king of the Jews' (Mt. 2:4; 26:68; 27:17, 22; Mk. 12:35; 15:32; Lk. 23:2). While there were many strands to Messianic expectation in 1st-century Palestine, some of which find an echo in the NT (especially the prophet like Moses (above, I.a.2) expected by Jews and Samaritans: see Jn. 6:14; cf. Mt. 21:11; Lk. 7:16; this expectation is the background also to Jn. 4:25), the dominant popular hope was of a king like David, with a role of political liberation and conquest, and it seems clear that this would be the popular understanding of *christos*.

It is against this background that we must understand Jesus' remarkable reluctance to apply the title *christos* to himself. The only time when he is recorded as doing so (apart from two passages where it seems to mean no more than 'I', and is probably an editorial addition, Mk. 9:41; Mt. 23:10) is with the Samaritan woman, to whom it would convey the idea of a prophet like Moses, not of a Jewish king (Jn. 4:25f.). His discussion of the status of the Messiah in Mark 12:35-37 does not explicitly claim the title for himself, and is aimed at dissociating it from the political connotations of 'son of David'.

Not that he denied that he was the Messiah. His constant stress on the fulfilment of OT hopes in his ministry (*JESUS CHRIST, VII. b, c) must carry this implication. John the Baptist, hearing of the works of the *christos*, asked if he was the 'coming one', and Jesus replied by pointing to his literal fulfilment of Isaiah 35:5f. and 61:1, the latter an unambiguously Messianic passage (Mt. 11:2-5). He declared at Nazareth that the same passage was fulfilled 'today' (Lk. 4:18ff.).

Yet when Peter acclaimed him as the *christos*, Jesus swore his disciples to secrecy, and went on to teach that his role was to suffer and be rejected, a role which Peter found quite incompatible with his idea of Messiahship; and the title he used to teach this was not *christos* but 'Son of man' (Mk. 8:29-33). When the high priest challenged Jesus to say whether he was the *christos*, he replied affirmatively (though the wording in Matthew and Luke suggests hesitation over the term used), but went on to speak of his role (as 'Son of man' not *christos*) as one of future vindication and authority, not present political power (Mk. 14:61f. and parallels).

All this indicates that Jesus' conception of his Messianic role was so much at variance with the popular connotations of *christos* that he preferred to avoid the title. His mission had been launched by God's declaration at his baptism (Mk. 1:11; *JESUS CHRIST, IV. b) whose words alluded to two key OT passages, the one (Ps. 2:7) marking out his role as Messianic king of the line of David, but the other (Is. 42:1) indicating that this role was to be accomplished through the obedience, suffering and death of the *Servant of the Lord. This declaration clearly moulded Jesus' understanding of his Messianic vocation, as may be seen from his careful selection of OT passages in explaining his mission, among which Is. 53, with its explicit portrayal of a Servant who would suffer and die to redeem his people, took pride of place (*JESUS CHRIST, VII. g). But he did not apply to himself the many predictions of a Davidic king (except by implication in Mk. 12:35-37, and there his intention was to play down this aspect of Messiahship), and avoided such titles as 'son of David' and 'king of Israel' which others used of him (e.g. Mk. 10:47f.; 15:2; Mt. 12:23; 21:9, 15; Jn. 12:13; 18:33ff.) as consistently as he did *christos*. The openly Messianic demonstration of the entry to Jerusalem (Mk. 11:1-10) was deliberately staged to call to mind Zechariah's prophecy of a humble king, bringer of peace not war (Zc. 9:9f.). But when the excited crowd wanted to make him a king of the more traditional nationalistic type he ran away (Jn. 6:15). It was only after his death and resurrection, when a misunderstanding of his mission as one of political liberation was no longer possible, that he referred to his mission of suffering explicitly as that of the *christos* (Lk. 24:26, 46).

On two significant occasions, as we have seen, while Jesus did not reject the suggestion that he was the *christos*, he quickly dropped the title in favour of 'Son of man'. That this was his chosen title for himself is indisputable in the light of its use in the NT (41 times, not counting parallels, in the Synoptic Gospels and 12 in John, all on the lips of Jesus; with no clear use as a title in the rest of the NT except in Acts 7:56), and is denied by radical scholarship only on the basis of large-scale excision of the relevant sayings as unauthentic. It is also clear that he applied this title to himself not only in his future glory (as its origin in Dn. 7:13f. would suggest), but in his earthly humiliation and particularly in his suffering and death. It was thus apparently his chosen term to convey the whole scope of his Messianic vocation as he conceived it, as distinct from the popular notion of the *christos*. This was because, apart from the special use of 'Son of man' in the *Similitudes of Enoch* (probably an isolated work, and possibly later than the time of Jesus; *PSEUDEPIGRAPHIA, I), it was not in current use as a Messianic title. (For this point see R.

T. France, *Jesus and the Old Testament*, 1971, pp. 187f.; Dn. 7:13f. was understood as a Messianic prophecy, but without turning the common Aram. phrase 'son of man' into a title.) Jesus could thus use it to carry his own unique conception of Messiahship without importing alien ideas already inherent in the title, as would have been the case with *christos* or 'son of David'. See further *JESUS CHRIST, TITLES OF.

b. Acts and Epistles

At the centre of the earliest Christian preaching as recorded in Acts is the declaration that Jesus, rejected and crucified by the Jewish leaders, is in fact the Messiah. This certainty is based on the resurrection, which has finally vindicated his claim: 'Let all the house of Israel therefore know assuredly that God has made him both Lord and Christ, this Jesus whom you crucified' (Acts 2:36).

This assertion was so improbable in the light of the popular conception of Messiahship that much attention was given to the scriptural ground for the rejection, death and resurrection of the Messiah (e.g. Acts 2:25-36; 3:20-26; 13:27-37; 18:28). In this apologetic and preaching activity among Jews the early Christians apparently had no inhibitions about using the actual term *christos*, and frequently in Acts it occurs in this context, not as a name of Jesus but as a title in its original sense of the expected deliverer (e.g. Acts 2:31, 36; 3:18, 20; 5:42; 9:22; 17:3; 18:5, 28). What had been during Jesus' ministry a misleading term was now, since his death and resurrection, no longer open to a political construction, and was taken up enthusiastically by his followers in presenting his claims to the Jews.

Their message was not only, or even mainly, that Jesus had been the Messiah while on earth, but that now, exalted to the right hand of God, he was enthroned as the Messianic King. Ps. 110:1, which Jesus had alluded to in this connection (Mk. 14:62), is taken up by Peter at Pentecost (Acts 2:34-36), and becomes perhaps the most quoted OT verse in the NT. Jesus is not a king on David's throne in Jerusalem, but, as David's lord, the ruler of an eternal and heavenly kingdom, waiting at God's right hand until all his enemies will be placed under his feet. The Messiah whose earthly humiliation was in such striking contrast with the political power of popular Messianic expectation now far transcends that popular hope of a merely national kingdom.

The triumphant proclamation of the first Christians that despite all appearances Jesus was indeed the *christos* seems quickly to have given way to such an unchallenged assumption of this truth within Christian circles that *Christos*, either alone or in combination with *Iêsous*, came to be used as a name of Jesus, and Jesus' followers could be known as *Christianoi* (Acts 11:26). Already by the time of the earliest letters of Paul *Christos* has ceased to be a technical term and has become a name. No doubt it was a name which continued to be full of deep meaning for a Jewish Christian, but it is remarkable that in the nearly 400 uses of *christos* in the letters of Paul (most of them written, of course, to predominantly Gentile churches) there is only one clear case of its use in its original technical sense (Rom. 9:5, significantly in a passage discussing the question of the Jews). The same is true, if less strikingly, of the other NT letters, though 1 Pet. 1:11 uses *christos* of the Messiah of

OT prophecy, and 1 Jn. 2:22; 5:1 shows that the issue of whether Jesus was the *christos* was still a live one (though now in a different sense, probably, confronting Gnostic rather than Jewish opposition).

But if the technical sense of *christos* was quickly eclipsed by its use as a personal name, this does not mean that the church lost interest in the question of Jesus' fulfilment of OT hopes. Paul stressed that the basic elements of Jesus' work were 'according to the scriptures' (1 Cor. 15:3f.). This emphasis was not only necessary for effective preaching to Jews, but was clearly of absorbing interest to the Christians themselves; building on Jesus' expounding to them 'in all the scriptures the things concerning himself' (Lk. 24:27), they searched further in the OT for passages to throw light on his Messianic role. Beginning with the sermons in Acts 2, 7 and 13, they continued to draw together collections of relevant texts (e.g. Rom. 10:5-21; 15:9-12; Heb. 1:5-13; 2:6-13, etc.), and to explore OT themes which pointed forward to the ministry of Jesus (e.g. the recurring theme of the *'stone', or the *Melchizedek priesthood of Ps. 110:4 which provides such rich material for the author of Hebrews, 5:5-10; 7:1-28). See further *QUOTATIONS.

Hebrews in particular, while it makes very sparing use of the title *christos*, consists largely of extended exposition of OT themes and their fulfilment in Jesus, who has come to bring in the new covenant and to provide the true reality of which the features of the OT dispensation were only shadows.

So if the term *christos* tended increasingly to be used simply as a name of Jesus, the fact that Jesus was the one through whom God was now working out his long-promised purpose of salvation remained of central importance in early Christian thought, as the NT writers went beyond the simple assertion of the fact of Jesus' Messiahship to explore more and more deeply the content and the meaning of that saving work.

R.T.F.

METHEG-AMMAH. Apparent textual corruption in 2 Sa. 8:1 makes this name difficult to understand. No certainty seems possible, and at least three alternative interpretations present themselves. 1. That it is a place-name, evidently near Gath in the Philistine plain (cf. 'hill of Ammah', 2 Sa. 2:24). 2. That the RV translation, 'the bride of the mother city', be preferred—i.e. regarding it as a figurative name for Gath, a chief city of the Philistines (cf. 1 Ch. 18:1). 3. That LXX be followed and the verse rendered as 'and David took the tribute out of the hand of the Philistines'. J.D.D.

METHUSELAH (Heb. *m'ûš'lah*, meaning apparently 'man of [the deity] Lach'). The eighth Patriarch listed in the genealogy of Gn. 5. He was the

METHUSELAH

son of Enoch and grandfather of Noah. He lived to the great age of 969 years according to the Heb. and the LXX (the Samaritan gives 720 years). Though they are both rendered in the LXX by *Mathousala*, there is no reason to assume that *m'tūsēlah* and *m'tūsā'ēl* (Methushael, Gn. 4:18) were the same person. T.C.M.

MEZAHAB. The grandfather of Mehetabel who was the wife of Hadar, king of Edom (Gn. 36:39 = 1 Ch. 1:50). The form is that of a place- rather than personal-name (*mē zāhāb*, 'waters of gold'), but a man may sometimes be named after a place with which he is associated. T.C.M.

MICAH, MICAIAH ('who is like Yah?'). A common Hebrew name, variously spelt in both evv and MT. Of the many men named with one of these forms, three are better known than the rest. 1. Micah of Moresheth the prophet. (See next article.) 2. Micah of Mt Ephraim, whose strange story is told in Jdg. 17-18, presumably to explain the origin of the sanctuary at Dan and incidentally relating the migration of the Danites to their new territory. 3. Micaiah the son of Imlah, a prophet in Israel in the days of Ahab (1 Ki. 22:8-28; 2 Ch. 18:3-27). Nothing is known of him except for this single interview he had with Ahab, but we may infer that he had prophesied before and that Ahab was aware of his unfavourable messages. Probably he was brought out of prison to appear before Ahab, and there may be some truth in Josephus' tradition that he was the unknown prophet of 1 Ki. 20:35-43. J.B.Tr.

MICAH, BOOK OF (Heb. *mīkā*, abbreviated form of *mīkāy'hū*, 'who is like Yahweh?').

I. Outline of contents

- a. The coming judgment upon Israel (1:1-16).
- b. Israel to be punished, then restored (2:1-13).
- c. Condemnation of the princes and prophets (3:1-12).
- d. The coming glory and peace of Jerusalem (4:1-13).
- e. The suffering and restoration of Zion (5:1-15).
- f. Prophetic and popular religion contrasted (6:1-16).
- g. Corruption of society; concluding statement of trust in God (7:1-20).

II. Authorship and date

Authorship is usually attributed to Micah of Moresheth (1:1), whose home, identified with *Moresheth-gath in the Shephelah or lowlands of Judah, was the general locale of his prophetic activity (1:14). A younger contemporary of Isaiah, he uttered his sayings during the reigns of Jotham (c. 742-735 BC), Ahaz (c. 735-715 BC) and Hezekiah of Judah (c. 715-687 BC).

Some modern scholars have maintained that only Mi. 1:2-2:10 and parts of chs. 4 and 5 are the work of the prophet himself. While the last two chapters of the book have much in them that is akin to the work of Micah, critics have urged that the difference in background and style from earlier portions of the prophecy, and the comparatively subordinate position which they occupy in the

book, require them to be assigned to a time later than the 8th century BC. In particular, 7:7-20 is held to be definitely post-exilic.

Other scholars have claimed that the forceful, descriptive style which is evident in each chapter of the prophecy, and the consistent revelation of divine judgment, compassion and hope, are powerful arguments for the unity of authorship of the prophecy. Arguments from style are never particularly strong at the best, since style can be altered so easily with a change of subject-matter. Furthermore, it is not easy to see why 7:7-20 should be assigned to a post-exilic period, since there is nothing in the content which is in the slightest degree at variance with the language or theology of the 8th-century BC prophets. The closing verses of the book are read each year by Jewish worshippers in the afternoon service on the Day of Atonement.

III. Background and message

Although he lived in rural surroundings, Micah was familiar with the corruptions of city life in Israel and Judah. His denunciations were directed particularly at Jerusalem (4:10), and like Amos and Isaiah he noted how the wealthy landowners took every advantage of the poor (2:1f.). He condemned the corruption rampant among the religious leaders of his day (2:11) and the gross miscarriages of justice perpetrated by those dedicated to the upholding of the law (3:10). The fact that all this was carried on in an atmosphere of false religiosity (3:11) proved for Micah to be the crowning insult.

Like his 8th-century BC contemporaries Amos, Hosea and Isaiah, Micah stressed the essential righteousness and morality of the divine nature. He was concerned also to point out that these qualities had pressing ethical implications for the life of the individual and the community alike. If the people of Israel and Judah were to take their covenant obligations at all seriously the justice which characterized the nature of God must be reflected in a similar state of affairs among the people of God.

Whereas Amos and Hosea had a good deal to say about the idolatry and immorality which were rampant in Israel and Judah as a result of the influence of pagan Canaanite religion, Micah confined his utterances to the problems arising from the social injustices perpetrated upon the small landowners, farmers and peasants. He warned those who wrongfully deprived others of their possessions that God was devising a drastic punishment for them. His denunciation of the rulers of Israel (3:1-4) and the false prophets (3:5-8) envisaged the ultimate destruction of Jerusalem because the corruption which they represented had permeated to the very core of national life.

Micah was in general accord with Amos, Hosea and Isaiah in his belief that God would use a pagan nation to punish his own guilty people. As a result he foretold the depredations of Shalmaneser V in the N kingdom, and the ultimate destruction of Samaria, capital of Israel (1:6-9). He did not view the collapse of the N kingdom in quite the same broad terms as did Isaiah, however. To Micah it brought the threat of invasion to the very doors of 'this family' (2:3), making the Assyrian invader Sennacherib the herald of a larger doom (5:5ff.).

There is a striking resemblance between the prophecies of devastation proclaimed for Samaria

(1:6) and Jerusalem (3:12). A century after his death the words of Micah concerning the downfall of Zion were still remembered (Je. 26:18f.). On that occasion the prophet Jeremiah might well have been put to death for prophesying destruction for the Temple and the Holy City had not certain elders of the land recalled that Micah of Moresheth had said precisely the same thing a hundred years earlier. For Micah there could be no question as to the ultimate fate of the house of Judah. So pervasive and influential was the depraved religion of Canaan, and so widespread was the resultant corruption of society that nothing short of the exercise of divine judgment upon the S kingdom could avail for the ultimate salvation of the people of God. But before the remnant of Jacob could experience this saving grace it would be necessary for all idolatry and social corruption to be rooted out (5:10–15).

This experience would be one of tribulation and sorrow, during which the voice of prophecy would cease (3:6–7), and the sin of the nation would become evident (3:8). Consequent upon this would come the destruction of Jerusalem and the shame of captivity in the midst of other peoples (5:7–8). Restoration would be marked by a new universalistic religion in a restored Jerusalem. Under divine judgment swords would be beaten into ploughshares and spears into pruning-hooks (4:3), and the people of God would honour his name only (4:5). Prominent in the thought of Micah was the expectation of a Messiah to be born in Bethlehem (5:2). This personage would come forth from the common people, delivering them from oppression and injustice and restoring the remainder of the Israelite family to fellowship with the remnant in Zion.

Micah was at pains to point out that the saving grace of God could not be earned (6:6–8), either by pretentious sacrificial offerings or by indulgence in elaborate ritual forms of worship. Humility, mercy and justice must be an everyday experience in the life of the person who was to be well-pleasing to God.

MICHAEL (Heb. *mīkā'ēl*, 'who is like God?'—synonymous with Micaiah and Micah). The name of eleven biblical characters, only one of whom gets more than a passing reference. The exception is the *angel Michael, who in pseudepigraphic literature is regarded as the patron of, and intercessor for, Israel (1 *Enoch* 20:5; 89:76). In the book of Daniel he is more particularly the guardian of the Jews from the menace of the godless power of Greece and Persia (12:1), and is styled as 'one of the chief princes' and as 'your prince' (10:13, 21). In this capacity it is peculiarly fitting that he should be the archangel represented (Jude 9) as 'contending with the devil . . . about the body of Moses', that great leader of God's people to whom an angel (perhaps Michael) spoke in Mt Sinai (Acts 7:38). Michael further appears in Rev. 12:7 as waging war in heaven against the dragon. See R. H. Charles, *Studies in the Apocalypse*, 1913, pp. 158–161. J.D.D.

MICHAL (Heb. *mīkāl*) was Saul's younger daughter (1 Sa. 14:49). Instead of her sister *Merab she was married to David, for a dowry of a hundred Philistine foreskins (1 Sa. 18:20ff.). Her prompt action and resourcefulness saved him from Saul (1 Sa. 19:11–17). During his exile she was given in marriage to Palti(ēl), son of Laish, of Gallim (1 Sa. 25:44). After Saul's death, when Abner wanted to treat with him, David demanded her restitution—a political move to strengthen his claim to the throne (2 Sa. 3:14–16). Having brought the ark to Jerusalem, he danced before it with such abandon that Michal despised him (2 Sa. 6:12ff.). For this reason she remained childless for ever (2 Sa. 6:23). Five sons are mentioned (2 Sa. 21:8), but tradition holds that they were Merab's (so LXX and two Heb. mss), and that Michal 'reared them'.

On one view David married Michal at Hebron 'to unite the tribes of Israel and the clans of Judah' (*EBI*); but the idea that she had one son, Ithream, her name being corrupted to Eglah (2 Sa. 3:5), is without foundation. M.B.

MICHMASH, MICHMAS. A city of Benjamin E of Bethel and 12 km N of Jerusalem, 600 m above sea-level, on the pass from Bethel to Jericho. In Geba, just S of this pass, Jonathan made a successful foray against the Philistine garrison (1 Sa. 13:3), whereupon the Philistines gathered a large well-equipped army and occupied Michmash, causing the scattered flight of the Hebrews (13:5ff.). Thereafter Saul's army camped at Geba (or Gibeah) with the Philistines on the other side of the pass (13:23).

Unknown to Saul, Jonathan and his armour-bearer descended from Geba and, ascending the S slope, surprised the Philistines and caused confusion in the enemy camp (for a description of this feat, see S. R. Driver, *Notes on the Hebrew Text of the Books of Samuel*², 1913, p. 106). Aided by Hebrew prisoners who had been in Philistine hands, by refugees from the previous defeat and by Saul's army, they put the Philistines to rout (1 Sa. 14:1ff.).

In his prophetic description of the coming attack on Jerusalem Isaiah (10:24, 28) represents the taking of Michmash by the Assyrians. After

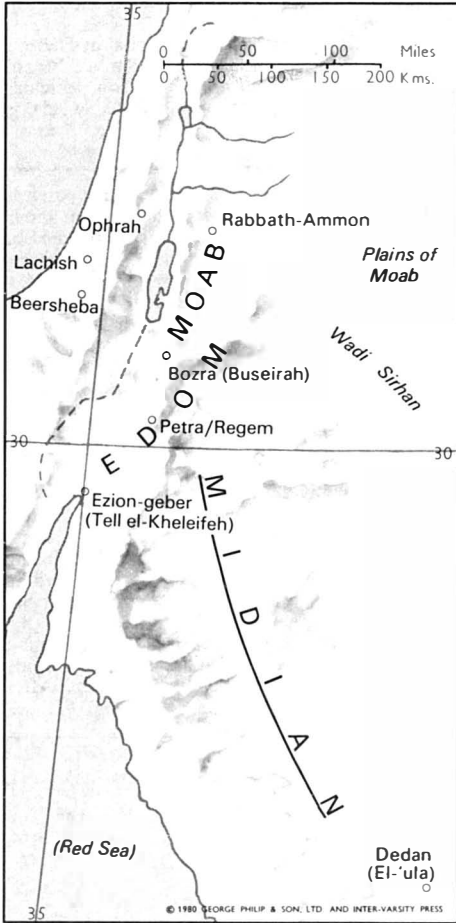

The location of Michmash.

MICHMASH, MICHMAS

the Exile members of the Jewish community lived in Michmash (Ezr. 2:27; Ne. 7:31; 11:31), and it was later the residence of Jonathan Maccabeus (1 Macc. 9:73).

It is the present Mukhmās, a ruined village on the N ridge of the Wadi Suweinit. J.D.D.

MIDIANITES. They consisted of five families, linked to Abraham through Midian, son of the concubine Keturah. Abraham sent them away, with all his other sons by concubines, into the E (Gn. 25:1-6). Thus the Midianites are found inhabiting desert borders in Transjordan from Moab down past Edom.

The territory of the Midianites.

They were desert-dwellers associated with Ishmaelites and Medanites (Gn. 37:28, 36) when Joseph was sold into Egypt; for the partial overlap of these three terms, cf. Jdg. 8:24, where the Midianites defeated by Gideon are said to have been Ishmaelites because of their use of gold ear- or nose-rings.

Moses had a Midianite wife, Zipporah, father-in-law, Jethro/Reuel (Ex. 2:21; 3:1, etc.), and

brother-in-law, Hobab (Nu. 10:29; Jdg. 4:11). As a man of the desert, Hobab was asked by Moses to guide Israel in travelling through the steppe (or 'wilderness') (Nu. 10:29-32).

Later, in the plains of Moab, the chiefs of Midian and Moab combined in hiring Balaam to curse Israel (Nu. 22ff.) and their people led Israel into idolatry and immorality (Nu. 25), and so had to be vanquished (Nu. 25:16-18; 31). The five princes of Midian were confederates of the Amorite king Sihon (Jos. 13:21). In the time of the judges, through Gideon and his puny band (Jdg. 6-8; 9:17), God delivered Israel from the scourge of camel-riding Midianites, Amalekites and other 'children of the east', an event remembered by psalmist and prophet (Ps. 83:9; Is. 9:4; 10:26). This is at present the earliest-known reference to full-scale use of camels in warfare (W. F. Albright, *Archaeology and the Religion of Israel*, 1953, pp. 132-133), but by no means the first occurrence of domesticated camels (*ANIMALS, Camel; and W. G. Lambert, *BASOR* 160, 1960, pp. 42-43, for indirect Old Babylonian evidence). The dromedaries of Midian recur in Is. 60:6. In Hab. 3:7 Midian is put in parallel with Cushan, an ancient term that probably goes back to *Kushu* mentioned in Egypt. texts of c. 1800 BC (see W. F. Albright, *BASOR* 83, 1941, p. 34, n. 8; cf. G. Posener, *Princes et Pays d'Asie et de Nubie*, 1940, p. 88, and B. Maisler, *Revue d'Histoire Juive en Egypte* 1, 1947, pp. 37-38; *ETHIOPIAN WOMAN. K.A.K.

MIDWIFE (Heb. *m'yalledet*, 'one who helps to bear'). The midwife helped at childbirth by taking the new-born child, cutting its umbilical cord, washing the babe with water, salting and wrapping it (Ezk. 16:4); news of the birth was then brought to the father (Je. 20:15).

In Hebrew tradition, midwives are first mentioned in the time of Jacob, attending on Rachel (Gn. 35:17) and Tamar (Gn. 38:28); in the latter case the midwife tied a red thread to mark the first twin born, technically the eldest.

In Mesopotamia and Egypt and among the Hebrews women very often crouched in childbirth upon a pair of bricks or stones—the *'obnayim* of Ex. 1:16—on a birthstool of similar pattern. All this can be well illustrated from ancient sources. The Egyptian Papyrus Westcar, written in the Hyksos period (c. 1700/1600 BC), records how three goddesses delivered a priest's wife of three sons: each took one child in her arms; they cut the umbilical cord, washed the children and put them on a cloth on a little brick bench, then went to announce the births to the waiting husband (M. Lichtheim, *Ancient Egyptian Literature*, 1, 1973, pp. 220-221). This text also illustrates the giving of punning names to children at birth as in Genesis and elsewhere. In Egyptian the two bricks or stones (and also birthstools) were called *db't*, 'the brick(s)', or *mshnt*, the latter word being followed in writing by the hieroglyph of a brick or of a pair of bricks, or of a birthstool (plan-view), etc. The Egyptian word *msi*, 'to give birth', was often followed by the hieroglyph of a crouching woman in the act of birth, and in one late text the figure is actually shown crouching on two bricks or stones. See W. Spiegelberg, *Agyptologische Randglossen zum Alten Testament*, 1904, pp. 19-25; H. Rand, *IEJ* 20, 1970, pp. 209-212, pl. 47. K.A.K.

MIGDOL. The name is used of a Canaanite fort. Mentioned as a place-name in Ex. 14:2; Nu. 33:7; Je. 44:1; 46:14; Ezk. 29:10; 30:6. Several Migdols were built in the neighbourhood of the Egyptian border, but none of them can be accurately located. The Migdol of the Prophets, in the N of Egypt (possibly at Tell el-Her), is different from that in the S (P. Anastasi V), which is probably the Migdol of Succoth (Old Egypt *lkw*). The Migdol in the N may be the Magdolum of *Itinerarium Antonini*, 12 Roman miles from Pelusium. See *NEAEHL*, pp. 1392–1393. (* ENCAMPMENT BY THE SEA.) C.D.W.

MIGRON. 1. A place mentioned in 1 Sa. 14:2 situated on the outskirts of Saul's home at Gibeah, where he remained during the first stage of the Philistine invasion after his election as king. It is possibly identical with 2, a locality mentioned in the march of the Assy. army in Is. 10:28, the modern Tell Miryam, N of Michmash. J.D.D.

MILCAH (Heb. *milkā*, 'counsel'). **1.** The daughter of Haran (Abraham's brother) and wife of Nahor (Gn. 11:29). Her children are named in Gn. 22:20ff. Rebekah was her granddaughter (Gn. 24:15, 24, 47). **2.** One of the five daughters of *Zelophehad of the tribe of Manasseh. Because they had no brothers, they were given an inheritance when the land was divided (Nu. 26:33; 27:1; 36:11; Jos. 17:3). J.D.D.

MILCOM. In this form of spelling we have a distortion (or alternative form) of the name of the national deity of the *Ammonites. The basic root *mlk* enables an identification of the three biblical forms of the name (*milkōm*, *malkām*, *mōlek*). Solomon is described in 1 Ki. 11:5 as marrying an Ammonite princess and going 'after Milcom the abomination of the Ammonites'. Josiah broke down the high place which Solomon had erected for this god (2 Ki. 23:13).

In some passages in the OT, however, the term *mōlek* may refer to a sacrifice as in some Phoenician (Punic) inscriptions from N Africa. Certain OT passages may be read as saying that men caused children to go through fire for (or, as) a *mōlek* sacrifice. However in other passages the reference is to a deity. (* MALCAM, * MOLECH.)

MILETUS. The most S of the great Ionian (Gk.) cities on the W coast of Asia Minor. It flourished as a commercial centre, and in the 8th, 7th and 6th centuries BC established many colonies in the Black Sea area and also had contact with Egypt. Pharaoh Neco dedicated an offering in a Milesian temple after his victory at Megiddo in 608 BC (2 Ki. 23:29; 2 Ch. 35:20ff.). The Milesians resisted the expansion of Lydia, and in 499 BC initiated the Ionian revolt against Persia, but their city was destroyed in 494 BC. In its period of great prosperity Miletus

was the home of the first Gk. philosophers Thales, Anaximander and Anaximenes, and of Hecataeus the chronicler. Its woollen goods were world famous.

After its Persian destruction the city had many vicissitudes, and when Paul called there (Acts 20:15; 2 Tim. 4:20) it was largely living on its past glories. At this time it was part of the Roman province of Asia, and due to the silting up of its harbour (nowadays an inland lake) by deposits from the river Maeander it was declining commercially. An inscription in the ruins shows the place reserved in the stone theatre for Jews and 'god-fearing' people. K.L.McK.

MILK (Heb. *hālāb*; Gk. *gala*). Milk was part of the staple diet of the Hebrews from patriarchal times, and where there was abundance of milk (Is. 7:22) it was possible to enjoy the added delicacy of cream or curdled milk (Heb. *hem'ā*, 'butter'). Hence the attraction of the land of Canaan as a land flowing with milk and honey (Ex. 3:8), for the rich supply of milk was an indication of the pasturage available. *hālāb* might be the milk of cows or sheep (Dt. 32:14; Is. 7:22), goats (Pr. 27:27), or possibly in patriarchal times of camels also (Gn. 32:15). It was contained in buckets, if *rvmg* is the correct rendering of the *hapax legomenon* in Jb. 21:24, and in skin-bottles (Jdg. 4:19), from which it could conveniently be poured out for the refreshment of strangers (Gn. 18:8) or as a drink with meals (Ezk. 25:4). It is frequently coupled with honey, and with wine (Gn. 49:12; Is. 55:1; Joel 3:18), with which it may sometimes have been mingled as a rich delicacy (Ct. 5:1). The phrase 'honey and milk are under thy tongue' (Ct. 4:11) refers to the sweet conversation of the loved one.

Its metaphorical use to describe the land of Canaan has been mentioned; Egypt was also so described by the embittered Israelites during the years of wandering (Nu. 16:13). Elsewhere it stands alone as a symbol of prosperity and abundance (Is. 60:16; Joel 3:18), and it is therefore not surprising that later Judaism compared it with the Torah. Kimchi says of Is. 55:1, 'As milk feeds and nourishes a child, so the law feeds and nourishes the soul.' This is a similar figure to that used in the NT of young converts imbibing the 'pure spiritual milk' (1 Pet. 2:2), though Paul carries the metaphor further and considers milk unworthy of mature disciples (1 Cor. 3:2; cf. Heb. 5:12f.).

The strange Mosaic prohibition of seething a kid in its mother's milk (Ex. 23:19; 34:26; Dt. 14:21) probably referred originally to a Canaanite ritual. On this verse, however, has been built the entire Jewish dietary law forbidding milk to be consumed at any meal at which meat is eaten, the cleavage between the two foods being so great that among orthodox Jews separate kitchen equipment has to be provided for the preparation and cooking of milk and meat dishes. J.B.Tr.

MILL, MILLSTONE. The oldest and most common method of grinding corn was to spread it on a flat stone slab and rub it with a round stone muller. Such stone querns have been found in the early Neolithic town at Jericho, together with stone *mortars (*PEQ* 85, 1953, pl. 38. 2; for an Egyptian model, see *ANEP*, no. 149). The rotary quern came into general use in the Iron Age. This consisted of

MILL, MILLSTONE

two circular stone slabs, each about 50 cm across, the upper one (Heb. *rekeb*, 'rider') pierced through to revolve on a pivot fixed to the lower (cf. the illustration of a potter's wheel). A wooden stick projecting from a hole near the outer edge of the upper stone was the handle. The grain was poured through the pivot-hole in the upper stone and crushed as this turned, so that the flour spilled from between the two stones (Heb. *rēhayim*) on to the ground. It was the woman's task to grind the corn (Ex. 11:5; Mt. 24:41), but it was also imposed upon prisoners as a menial service (Is. 47:2; La. 5:13). Larger types of rotary quern were turned by animals, or by prisoners (Samson, Jdg. 16:21) and were kept in a mill-house (Mt. 24:41, Gk. *mylōn*).

Since the Israelite depended on the hand-mill for his daily bread, he was forbidden to give it in pledge (Dt. 24:6). Cessation of the steady, constant sound of grinding was a sign of desolation and death (Je. 25:10; Rev. 18:22, a simile for the old man's teeth; Ec. 12:4). The upper stone was used on occasion as a missile in war (Jdg. 9:53; 2 Sa. 11:21) and as a weight (Mt. 18:6, Gk. *mylos onikos*, the largest sort of millstone, turned by an ass; Rev. 18:21).

A. R. M.

MILLO. A place-name derived from the verb *mālē*, 'to be full', 'to fill'. It is used in Jdg. 9:6, 20 of a place near Shechem, the 'house of Millo', perhaps a fortress; but its principal use is in connection with *Jerusalem, where it evidently formed part of the Jebusite city, for it was already in existence in the time of David (2 Sa. 5:9 = 1 Ch. 11:8). It was rebuilt by Solomon (1 Ki. 9:15, 24; 11:27; the 'breach' here referred to was probably a different thing) as part of his programme of strengthening the kingdom, and was again strengthened some 2½ centuries later when Hezekiah was preparing for the Assyrian invasion (2 Ch. 32:5). This verse is taken by some to indicate that Millo was another name for the whole city of David, but it can very plausibly be connected with a system of terraces, consisting of retaining walls with levelled filling, which have been discovered by Kathleen Kenyon on the E slope of Ophel Hill at Jerusalem. These terraces provided space for the construction of buildings on the slope.

Millo is otherwise mentioned as the place where Joash was murdered (2 Ki. 12:20). The LXX usually translates Millo by the name Akra, but this was a Maccabean structure. For a suggestion as to the type of construction indicated by the term *millō*, see *ARCHITECTURE.

MINAEANS. The people of the kingdom of Ma'in which flourished in SW Arabia (in the N of modern Yemen) in the 1st millennium BC. The name is that of a tribe which became dominant in a state known from inscriptions to have been established with Qarnāwu as its capital by about 400 BC. It was active in establishing trade links with the N, having colonies along the Red Sea coastal route to Palestine, the best known being *Dedan. Late in the 1st century BC Ma'in was absorbed by the expansion of its S neighbour Saba (*SHEBA, 7) and its N colonies lost their Minaean identity. The name does not occur with certainty anywhere in the Bible,

though some scholars would see it in Jdg. 10:12 (Maonites); 1 Ch. 4:41 (AV 'habitation'); 2 Ch. 20:1 (altering Ammonites); 2 Ch. 26:7 (Mehunims); or Ezr. 2:50 = Ne. 7:52 (Mehunim). (*MAON; *ARABIA.)

MINING AND METALS. The theatre of OT history is the so-called 'Fertile Crescent' (i.e. Mesopotamia, Syria, Palestine and the Nile Delta). The alluvial plains of the Tigris-Euphrates and Nile valleys provide but little stone. Much of Assyria's gypsum, indeed, comes from stone quarries near Mosul; and there is a worked vein of stone near Ur. But for the most part in those valleys clay bricks were used for building purposes in ancient times (Gn. 11:3; Ex. 1:11-14; 5:7-19).

The 'Crescent' is bounded on the N and E by high folded mountain chains consisting of rocks of many types and ages. The ranges are well mineralized and provide ores of gold, silver, copper, tin, lead and iron. On the S a complex of ancient rocks appears in which such types as granite, diorite and porphyry occur. This group extends along the E desert between the river Nile and the Red Sea, across the S half of the Sinai peninsula and E into the Arabian plateau. In some of these rocks occur gold, silver, iron, turquoise and other semi-precious stones, together with building stones of many kinds.

N of Sinai and the Arabian plateau lie the desert, Transjordan and Palestine. These are composed mainly of Cretaceous rocks (limestone, chalk and sandstone), but N and E of the upper Jordan are areas of newer volcanic basalts.

I. Non-metallic materials

a. Flint

Flint occurs abundantly in the chalk of the area and in gravels derived from the chalk. Flint is a close-grained hard rock which a steel blade will not scratch. It may be worked by percussion or pressure to produce a sharp cutting-edge. The earliest cutting tools available to man were made from flint. Stone-Age man made arrow-heads, chisels, scrapers and knives of it, and it continued to be used well into the Bronze period. Zipporah, wife of Moses, circumcised her son with a flint knife (Ex. 4:25). Flint is referred to in Scripture to denote hardness, inflexibility, steadfastness (Dt. 8:15; Ps. 114:8; Is. 50:7; Ezk. 3:9).

b. Stone

Away from the alluvial plains of Mesopotamia and Lower Egypt supplies were plentiful. In Egypt limestone and sandstone were at hand in the river cliffs, and granite, diorite and other igneous rocks are found in outcrops. In Palestine limestone and sandstone occur throughout the hill country, and basalt is found E of the upper Jordan valley. The quarrying and erection of huge standing stones in Neolithic times gave experience for future quarrying and mining. Limestone is easily worked, being fairly soft, and was used for the excavation of cisterns and tombs, and the making of such things as water-pots (Je. 2:13; Mt.

27:60; Jn. 2:6). The term 'alabaster' as used in Mt. 26:7 properly refers to calcite (calcium carbonate), a much harder stone than English alabaster (calcium sulphate).

c. Marble

This is a close-grained crystalline limestone, usually white or cream in colour. It may be pink or veined in red or green. The best statuary marble in the Near East came from Paros (Minoan), but it also occurs on the W coast of the Gulf of Suez, in S Greece and in Assyria E of the river Tigris. 'Great quantities of marble' are mentioned in 1 Ch. 29:2, and may have been polished local limestone, but, considering that trade was vigorous and far-flung in David and Solomon's time, it may have been brought by sea or from the NE.

II. Metals and mining

The order in which the principal metals came into use was gold, copper (bronze) and iron. Gold is the first metal mentioned in Scripture (Gn. 2:11), and is thereafter closely associated with silver, the other noble metal of antiquity. All the above can occur in the native state, and as such they were first used. Silver is often found alloyed with gold. After the period when native metals were used, mainly for ornament (*ARTS AND CRAFTS), copper ores were won from outcrops at the surface, but mining began at a very early date and an advanced stage of the working of the metal (not mining) had been reached at Ur more than 1,000 years before Abraham's time. According to R. J. Forbes (*Metallurgy in Antiquity*, 1950, p. 297), 'it is certain that every form of mining from open-cut mining to the driving of galleries into the mountainside to follow up the copper-bearing strata was practised in Antiquity. But the details given on ancient mines are few.'

Mining for turquoise and for copper probably began in the time of the 1st Dynasty of Egypt c. 3000 BC at Magharah and Serabit el-Khadim in W Sinai, and evidence for large-scale copper working by Egyptians in the Ramesside period (13th century BC) has been found in the Arabah at Timna. Shafts more than 35 m in depth have been found in mines in Egypt. Tunnels, ventilated by shafts, were driven into hillsides, pillars being left in broad excavations to support the roof.

At first stone tools were used, but later bronze and stone continued to be used together. Wedges and fire were used to split the rock, and the ore was separated by crushing, washing and hand-picking. Smelting was usually done by feeding a charge of finely-ground copper ores and fluxes (iron oxides, limestone or sea shells) mixed with charcoal through the open top of the furnace on to the charcoal fire. As the ore was reduced the copper globules sank to the bowl-shaped bottom of the furnace. The slag which formed above the copper was drawn off into a slag-pit while still liquid and the copper ingot removed as soon as it had solidified. The ingot would need remelting in a crucible before it could be used for casting in a mould. Crucibles and slag-heaps are found at many old sites. Baskets were used for carrying the ore, and drainage tunnels constructed to get rid of surplus water. Moffatt's translation of Jb. 28:1-11 gives a vivid picture of mining in ancient times.

a. Gold

This occurs native, usually alloyed with silver in varying amounts. It is extremely malleable and ductile and does not tarnish. This property made it a very acceptable material for ornaments, such as beads and rings, even to Stone-Age man. Gold was prescribed for use in the most important furnishings in the Mosaic tabernacle (Ex. 25) and in

Reconstruction of a copper-smelting furnace found at Timnah. Air is supplied by bellows: the removal of a plug allows the slag to run off, leaving the copper ore in the bottom of the furnace. This was retrieved by breaking open the furnace. Ramesside. c. 1250 BC.

MINING AND METALS

Solomon's Temple (1 Ki. 6). The metal was especially abundant in the alluvium of the E desert of Egypt, and the Israelites must have removed large quantities of it at the Exodus. Other sources known to the ancient world were the W coast of Arabia, the mountains of Armenia and Persia, W Asia Minor, and the Aegean islands. Gold early became a valuable article of currency.

b. Silver

This is ranked next to gold as a noble metal, with which it is often linked in Scripture. It does not tarnish in a pure atmosphere and will take a mirror-like polish. It is usually extracted from the sulphide ore of lead (galena), but may occur native. Silver was so plentiful in biblical times that the extraction and refining processes must have been known from an early date. Jeremiah (6:29–30) uses the failure of the refining process of lead and silver as an illustration of the refusal of the people to become obedient to God. Sources of the metal are the same as those for lead, namely, Asia Minor, the islands of the Aegean, Laurion in S Greece, Armenia and Persia, and 3 or 4 localities occur in the E desert of Egypt.

c. Lead

This occurs in Scripture in a few lists of metals. It was used occasionally as tablets for inscriptions (Jb. 19:24).

d. Copper (Bronze, Brass)

Heb. *n'ḥōṣeṭ* is translated 'copper' in Ezr. 8:27, AV, but elsewhere in AV is called 'brass'. Bronze is not mentioned in Scripture, but it was in common use from before patriarchal times (Abraham lived in the Middle Bronze Age). The 'brass' of Scripture may therefore be any of the three, except that true brass, an alloy of copper and zinc, came into use only at a late stage. Heb. *ḥašmal* in Ezk. 1:4 (AV, RV 'amber'; RSV 'gleaming bronze') may denote true brass. The first metal in general use was more or less pure copper, although the methods of production meant that some impurities were usually present, and eventually the alloy of copper and tin (bronze) was developed and produced deliberately. Some examples of brass (copper and zinc) are also known, but they were probably produced accidentally until the Romans began the production of brass for coinage and other uses about 20 BC. The ores of copper which appear at the surface are brightly coloured green and blue carbonates, and were used as eye paint or to produce a blue colour in glaze. Accidental heating of these ores could have led to the production of copper. There is no evidence in Egypt of the common use of native copper, although it was used at an early stage in the Palestinian copper industry. The ores were widespread around the 'Fertile Crescent' in Sinai, Midian, E Egypt, Armenia, Syria and Persia, and of course in Cyprus, which takes its name from the metal. The metal was used for a host of purposes. In addition to its use in the tabernacle and Temple, household articles, such as basins, ewers, idols, musical instruments, as well as armour, mirrors, etc., were all made of it.

e. Tin

Tin is mentioned in Scripture only in lists of metals. It was often confused with lead in ancient times. A small percentage mixed with copper produces bronze. As tin of ten occurs in association with cop-

per, the first bronze was probably made by accident. The dark heavy oxide ore, cassiterite, was taken mainly from stream-sands and was not mined, as were the other metals, until about Roman times.

f. Iron

Rare and occasional uses of iron are known in very ancient times, but only in the native form, which has its origin in fragments of 'shooting stars' or meteors. This is probably the explanation of its early mention in Gn. 4:22, which belongs to a time long before the true Iron Age begins. Experiments with iron went on for a long time before tools could be made of it, since this depends for success on producing a metal with the properties of steel. The Hittites were the first people known to have used iron consistently, although on a limited scale, and when their kingdom came to an end the knowledge spread farther. The Philistines brought the art to Palestine, and the Israelites found themselves at a disadvantage in this respect (Jdg. 1:19; 1 Sa. 13:19–22). The balance was restored in the reigns of David and Solomon (1 Ch. 29:7). Iron was abundant along with copper in the Wadi Arabah between the Dead Sea and the Gulf of Aqabah. Iron ores were plentiful around Palestine and were to be found near Mt Carmel, Mt Hermon, SW Midian and the E Egyptian desert, in Syria, Cyprus, the Pontus coast of Asia Minor and in the Aegean Islands. The fact that both copper and iron could be mined within Solomon's realm near Ezion-geber was a literal fulfilment of Dt. 8:9.

Steel is mentioned in the AV of 2 Sa. 22:35 (= Ps. 18:34; Jb. 20:24; Je. 15:12, but the Heb. word is that for copper or bronze (*n'ḥōṣeṭ*); accordingly, RV renders 'brass' and RSV, more accurately, 'bronze'.

J. R. u.

MINISTER. The Heb. term *m'šārēṭ* (LXX *leitourgos*) and its correlates normally refer to temple service, or else to the ministrations of angels (Ps. 104:4); but in a more general sense Joshua is the *m'šārēṭ* or 'minister' of Moses (Ex. 24:13; Jos. 1:1), and Solomon's ministers (1 Ki. 10:5) are his domestic servants. In the NT the characteristic word is *diakonos*, at first in a non-technical sense, and then in Phil. 1:1 and in the Pastorals as the title of a subordinate church-officer. It refers to service in general, temporary or permanent, either by bond or free; but it has the special connotation of waiting at table (the corresponding verb is used in this sense, Lk. 12:37; 17:8, and Martha's trouble was excess of *diakonia*, Lk. 10:40). Christ appears among the disciples as *ho diakonōn*, 'one who serves' (Lk. 22:27), and he can be described as a *diakonos* of the circumcision (Rom. 15:8); following the example of this lowly service, the greatest of Christians should be a minister to the rest (Mt. 20:26; Mk. 10:43).

Thus we find the apostles and their helpers designated as ministers of God (2 Cor. 6:4; 1 Thes. 3:2), of Christ (2 Cor. 11:23; Col. 1:7; 1 Tim. 4:6), of the gospel (Eph. 3:7; Col. 1:23), of the new covenant (2 Cor. 3:6), of the church (Col. 1:25), or absolutely (1 Cor. 3:5; Eph. 6:21; Col. 4:7). But it is to be noted that Satan can also have his ministers (2 Cor. 11:15), and that there might be a minister of sin (Gal. 2:17); further, the secular power can be regarded as a minister of God (Rom. 13:4). The Seven were appointed to serve tables (*diakonein trapezais*, Acts 6:2); it is unlikely that the word is here used to denote a technical office, since it is immediately afterwards (v. 4) contrasted with the apostles' *diakonia* of the word, and in fact Stephen and Philip did the work of evangelists rather than of deacons; moreover, poor-relief at Jerusalem seems to have been managed by elders, not deacons (Acts 11:30). However, the Seven may in some sense have provided a prototype for the later assistants to the bishops, mentioned in Phil. 1:1, and characterized in 1 Tim. 3:8ff. as men of serious, honest, sober and faithful disposition. Their primary work seems to have been, not that of teaching, but visiting from house to house and relieving the poor and sick; deacons were thus the chief agents through which the church expressed its mutual fellowship of service. They seem also to have assisted at corporate worship.

It is uncertain whether 1 Tim. 3:11 refers to deacons' wives or to deaconesses; Phoebe is described (Rom. 16:1) as a *diakonos* (common gender) of the church at Cenchræa, but this perhaps means that she was a helper rather than that she held an official position; the two *ministrae* mentioned by Pliny in his letter to Trajan may have been deaconesses, but this office was not really developed until the 3rd century.

The lowliness of Christian service is emphasized even more strongly by the use of the word *doulos* or slave; it was the form of such a bond-servant that Christ assumed (Phil. 2:7), and, following his example, the apostles and their fellow-labourers are designated as the slaves of God or Christ (Rom. 1:1; Gal. 1:10; Col. 4:12; Tit. 1:1; Jas. 1:1; 2 Pet. 1:1).

Another term is *hypêretēs*, properly meaning an under-rower in a galley, and then anyone in a subordinate position. This word is used for the *hazzān*, a sort of verger in the Jewish synagogue, who had custody of the sacred books (Lk. 4:20); it also describes John Mark (Acts 13:5) when he acted in the capacity of batman to Paul and Barnabas. But Paul himself was proud to claim a similar position in relationship to Christ (Acts 26:16; 1 Cor. 4:1), and Luke (1:2) employs it as a generic term for the servants of the word.

Finally, the term *leitourgos* is taken over by the NT in a Christian sense. Originally it referred to public service, such as might be offered by wealthy citizens to the State; then it acquired a distinctively religious connotation, as in the LXX usage. Thus Christ appears as a *leitourgos* of the heavenly temple (Heb. 8:2), and the angels are 'liturgical', i.e. ministering spirits (Heb. 1:14). The corresponding verb is used when prophets and teachers minister to the Lord at Antioch (Acts 13:2); similarly, Paul describes himself as the *leitourgos* of Christ Jesus, ministering (*hierourgōn*) in the priestly service of the gospel of God (Rom. 15:16). But the NT terminology remains sufficiently fluid for the same word to be used of Epaphroditus as a minis-

ter to Paul's wants (Phil. 2:25), of Gentile assistance to Jews in material things (Rom. 15:27), and of the civil power as the servant of God (Rom. 13:6). In the Christian understanding of *ministry, whether official or otherwise, the minister renders a lowly but loving service to God or man.

G.S.M.W.
R.T.B.

MINISTRY. To express the idea of professional or priestly ministrations, the OT normally employs the verb *sārat* and its correlates (LXX *leitourgein*), while *'ābad* (*latreuein*) refers rather to the religious service of the whole congregation or of an individual. In the NT the characteristic term is *diakonia*, which appears only in Esther among OT books, but is not there used of any priestly function; and the change in language implies a change also in doctrine, since ministry in the NT sense is not the exclusive privilege of a priestly caste. *leitourgia* is retained to describe the work of the Jewish priesthood (Lk. 1:23, rsv 'service'; Heb. 9:21, rsv 'used in worship'), and it is applied also to the more excellent ministry of Christ (Heb. 8:6); further, it can be applied, in a metaphorical sense, to the spiritual service rendered by prophets and preachers of the gospel (Acts 13:2; Rom. 15:16). But it remains true in general that the NT uses priestly language only in reference to the body of believers as a whole (Phil. 2:17; 1 Pet. 2:9).

I. Christ the pattern

The pattern of Christian ministry is provided by the life of Christ, who came not to receive service but to give it (Mt. 20:28; Mk. 10:45); the verb used in these texts is *diakonein*, which suggests something like waiting at table, and recalls the occasion when he washed the disciples' feet (Jn. 13:4ff.). It is significant that in the first recorded instance of ordination to the Christian ministry, the purpose of the office is stated to be that of 'serving tables' (Acts 6:2); and the same word is used in the same chapter (v. 4) to describe the service of the word exercised prior to this by the twelve apostles. The *minister of Christ, following the example of his Master, renders a humble but loving service to the needs of humanity at large, in the same spirit as that in which angels (Mt. 4:11; Mk. 1:13) and women (Mt. 27:55; Lk. 8:3) had ministered to the Lord on earth. Such service is reckoned as being done to Christ in the persons of the needy (Mt. 25:44); it is most frequently rendered to the saints (Rom. 15:25; 1 Cor. 16:15; 2 Cor. 8:4; 9:1; Heb. 6:10); but it is a mutual service within the fellowship of Christ's body (1 Pet. 4:10); and, as the ministry of the gospel (1 Pet. 1:12), it is in fact a ministry of reconciliation (2 Cor. 5:18) for the world.

The ability to perform such work is a gift of God (Acts 20:24; Col. 4:17; 1 Tim. 1:12; 1 Pet. 4:11); already in Rom. 12:7 it is being classified in a list of other spiritual gifts; and in 1 Tim. 3:8ff. the diaconate has become a recognized church office, probably open to women as well as men (cf. Rom. 16:1). But even so, the term is still being used in a wider sense; Timothy is to fulfil his ministry by doing the work of an evangelist (2 Tim. 4:5); and this work of service has as its great object the edification of the body of Christ (Eph. 4:12). In the words of Hort, Christ lifted 'every grade and pattern of service into a higher sphere . . . ministrations

MINISTRY

thus became one of the primary aims of all Christian actions'; and the generic term is applied to all forms of ministry within the church.

II. Pastoral ministry

Christ is not only the pattern of the diaconate, but also, as the good Shepherd (Jn. 10:11), he is the great *Bishop of men's souls (1 Pet. 2:25, AV). In a sense, both of these offices originate from the example of Christ himself, while that of the *presbyter is a reflection of the ministry instituted by him in the apostolate (cf. 1 Pet. 5:1). But it would be wrong to stress these distinctions, since the terms bishop and presbyter are virtually synonymous, and the diaconate embraces many forms of assistant ministry. Pastoral care of the flock is an outstanding part of ministerial duty (Jn. 21:15-17; Acts 20:28; 1 Pet. 5:2), and is closely associated with the preaching of the word (1 Cor. 3:1-2) as the bread of life (Jn. 6:35), or pure nourishing milk (1 Pet. 2:2). The parable in Lk. 12:41-48 implies that some ministry of this character is to continue in the church until Christ's return.

III. Sacramental duties

The NT has comparatively little to say on the subject of sacramental duties; Paul regarded the administration of baptism as a subordinate activity, which he was accustomed to delegate to his assistants (1 Cor. 1:17; cf. Jn. 4:1f.; Acts 10:48); and although it is natural for an apostle, if present, to preside at the breaking of bread (Acts 20:7), the celebration of the Lord's Supper is nevertheless regarded as an activity of the entire congregation (1 Cor. 10:16f.; 11:25). However, a president must have been needed from the first; and in the absence of an apostle, prophet or evangelist, this duty would naturally fall to one of the local presbyters or bishops.

IV. Spiritual gifts

In its earliest form the Christian ministry is charismatic, i.e. it is a spiritual gift or supernatural endowment, whose exercise witnesses to the presence of the Holy Spirit in the church. Thus prophecy and glossolalia occur when Paul lays his hands on some ordinary believers after baptism (Acts 19:6); and the words there used imply that the occurrence was to some extent a repetition of the Pentecostal experience (Acts 2).

Three lists are provided in the Pauline Epistles of the various forms which such ministry may take, and it is notable that in each list administrative functions are included along with others more obviously spiritual (*CHURCH GOVERNMENT). In Rom. 12:6-8 we have prophecy, *service (*diakonia*), teaching, exhortation, contributing (almsgiving), aiding and doing acts of mercy (?visitation of the sick and poor). 1 Cor. 12:28 lists apostles, prophets, teachers, together with those endowed with power to work miracles, heal the sick, help, administer, or speak with tongues. The more official catalogue in Eph. 4:11 mentions apostles, prophets, evangelists, pastors-cum-teachers, who all labour to perfect the saints in their Christian service, so that the whole church grows up in organic connection with her divine Head. Here, emphasis is laid on the ministration of the word, but the fruit of such ministry is mutual service in love. The various gifts listed in these passages are functions or ways of serving, rather than regular and stereotyped offices; one man might act in several

capacities, but his ability to fulfil any depended on the prompting of the Spirit. All Christians are in fact called to minister, in their various capacities (Rom. 15:27; Phil. 2:17; Phm. 13; 1 Pet. 2:16), and it is for this ministry that the ministers of the word equip them (Eph. 4:11f.).

Not only the Twelve were included in the apostolate, but also Paul, James the Lord's brother (Gal. 1:19), who had also seen the risen Lord, Barnabas (Acts 14:14; 1 Cor. 9:5f.), who was Paul's fellow-evangelist, and Andronicus and Junias (Rom. 16:7). The primary qualification of an *'apostle' was that he had been an eye-witness of Christ's earthly ministry, particularly of the resurrection (Acts 1:21-22), and his authority depended on the fact that he had been in some way commissioned by Christ either in the days of his flesh (Mt. 10:5; 28:19) or after he was risen from the dead (Acts 1:24; 9:15). Apostles and elders might meet in council to decide a common policy for the church (Acts 15:6ff.), and apostles could be sent as delegates from the original congregation to superintend some new development in another locality (Acts 8:14ff.). But the picture of an apostolic college in permanent session at Jerusalem is quite unhistorical, and the great work of an apostle was to act as a missionary for the propagation of the gospel, in which capacity his labours should be confirmed by signs of divine approval (2 Cor. 12:12). Thus the apostolic ministry was not confined by local ties, though a division of labour might be made, as for example between Peter and Paul (Gal. 2:7-8).

The 'evangelist' exercised a similar ministry of unrestricted mission, and his work seems to have been identical with that of the apostle, except in so far as he lacked the special qualifications for the higher function; Philip, one of the original Seven, became an evangelist (Acts 21:8), and Timothy is called by the same title (2 Tim. 4:5), though he is by implication excluded (2 Cor. 1:1) from the rank of apostle.

Prophecy was by its very nature a gift of intermittent occurrence, but some individuals were so regularly endowed with it that they formed a special class of 'prophets'. Such men were found at Jerusalem (Acts 11:27), Antioch (Acts 13:1), and Corinth (1 Cor. 14:29); those mentioned by name include Judas and Silas (Acts 15:32), and Agabus (Acts 21:10), together with Anna (Lk. 2:36) and the pretended prophetess Jezebel (Rev. 2:20). Prophecy provided edification, exhortation and comfort (1 Cor. 14:3; cf. Acts 15:32), and might therefore be described as inspired preaching. The prophet could issue a specific direction (Acts 13:1-2) or on occasion foretell the future (Acts 11:28). Being delivered in a known tongue, his messages were more profitable than mere glossolalia (1 Cor. 14:23-25). But the gift was particularly liable to the danger of imposture, and although it should be controlled only by those possessing it (1 Cor. 14:32; 1 Thes. 5:19f.), its content must agree with the fundamental teaching of the gospel (1 Cor. 12:1-3; 1 Thes. 5:20; 1 Jn. 4:1-3), or else the prophet must be dismissed as one of the false pretenders whose coming had been foretold by Christ (Mt. 7:15).

'Pastors and teachers' (Eph. 4:11) are presumably to be identified with the local ministers instituted by the apostles (Acts 14:23) or their assistants (Tit. 1:5) to serve the needs of a particular congregation, and described indifferently as presbyters or bishops. 'Administrators' (AV 'gov-

ernors') seems to be a generic name for those who administered the affairs of local congregations, while 'helpers' were engaged in works of charity, especially in attending to the sick and poor. Miraculous powers of healing and speaking with tongues were a marked feature of the apostolic age, and their renewal has been claimed at various periods from the Montanist revival onwards.

V. The origin of the ministry

There has been much debate over the precise relationship between the original and unrestricted mission of apostles and evangelists, on the one hand, and the permanent and local ministry of pastors, teachers, administrators and helpers, on the other. The latter class appears usually to have been appointed by the former; but if Acts 6 may be taken as describing a typical ordination, popular election played a part in the choice of candidates. Rom. 12 and 1 Cor. 12 might seem to imply that the church, as the Spirit-filled community, produces its own organs of ministration; on the other hand, Eph. 4:11 asserts that the ministry is given to the church by Christ. It may be suggested that, while Christ is the source of all authority and the pattern of every type of service, the church as a whole is the recipient of his divine commission. At all events, the NT is not concerned to indicate possible channels of transmission; its main preoccupation in this regard is to provide a doctrinal test for the orthodoxy of ministerial teaching.

MINNI. A people summoned by Jeremiah, with Ararat (Armenia) and Ashkenaz, to make war on Babylon (Je. 51:27). The Mannai, whose territory lay SE of Lake Urmia, are frequently named in texts of the 9th-7th centuries BC. The Assyrians dominated them until 673 BC, when they were controlled by the Medes (v. 28). In the light of Jeremiah, it is interesting to note that the Mannai were allied with the Assyrians, their former enemies, against the Babylonians in 616 BC (Bab. Chronicle). They were probably present with the Guti and other hill-folk at the capture of Babylon in 539 BC.

D.J.W.

MINNITH (Heb. *minnīṭ*). Mentioned in Jdg. 11:33 as the limit of Jephthah's invasion of Ammon. Eusebius (*Onom.* p. 132) indicates that it lay at the head of a natural route from the Jordan to the uplands between Rabbath-Ammon (Amman) and Heshbon. The exact site is unknown.

Ezk. 27:17 may refer to the same; but see W. Zimmedi, *Ezekiel*, 1983, *ad loc.*

J.P.U.L.

MIRACLES. A number of Heb., Aram. and Gk. words are used in the Bible to refer to the activity in nature and history of the living God. They are variously translated in the evv by 'miracles', 'wonders', 'signs', 'mighty acts', 'powers'. Thus, for example, the Heb. word *mōpēṭ*, which is of uncertain etymology, is translated in rsv by 'miracle' (Ex. 7:9; Ps. 78:43), 'wonder' (e.g. Ex. 7:3; Dt. 4:34) and 'sign' (e.g. 1 Ki. 13:3, 5).

The words used by the English translators preserve in general, though not always in particular instances, the three distinctive emphases of the originals. These characterize God's activity as being:

1. Distinctive, wonderful; expressed by Heb. derivatives of the root *pl'*, 'be different', particularly the participle *niplā'ōṭ* (e.g. Ex. 15:11; Jos. 3:5); by Aramaic *t'māh* (Dn. 4:2-3; 6:27), and by Gk. *teras* (e.g. Acts 4:30; Rom. 15:19).

2. Mighty, powerful; expressed by Heb. *g'burā* (Ps. 106:2; 145:4) and Gk. *dynamis* (e.g. Mt. 11:20; 1 Cor. 12:10; Gal. 3:5).

3. Meaningful, significant; expressed by Heb. *'ōṭ* (e.g. Nu. 14:11; Ne. 9:10), by Aramaic *'āṭ* (Dn. 4:2-3; 6:27), and by Gk. *sēmeion* (e.g. Jn. 2:11; 3:2; Acts 8:6).

I. Miracles and the natural order

A great deal of confusion on the subject of miracles has been caused by a failure to observe that Scripture does not sharply distinguish between God's constant sovereign providence and his particular acts. Belief in miracles is set in the context of a world-view which regards the whole of creation as continually dependent upon the sustaining activity of God and subject to his sovereign will (cf. Col. 1:16-17). All three aspects of divine activity—wonder, power, significance—are present not only in special acts but also in the whole created order (Rom. 1:20). When the psalmist celebrates the mighty acts of God he moves readily from the creation to the deliverance from Egypt (Ps. 135:6-12). In Jb. 5:9-10; 9:9-10 the word *niplā'ōṭ* refers to what we would call 'natural events' (cf. Is. 8:18; Ezk. 12:6).

Thus when the biblical writers refer to the mighty acts of God they cannot be supposed to distinguish them from 'the course of nature' by their peculiar causation, since they think of all events as caused by God's sovereign power. The particular acts of God highlight the distinctive character of God's activity, different from and superior to that of men and more particularly that of false gods, almighty in power, revealing him in nature and history.

The discovery of, say, causal connections between the different plagues of Egypt, a repetition of the blocking of the Jordan, or increased knowledge of psychosomatic medicine could not of themselves contradict the biblical assertion that the deliverance from Egypt, the entry to Canaan and the healing works of Christ were mighty acts of God. 'Natural laws' are descriptions of that universe in which God is ever at work. It is only by an unwarranted philosophical twist that they are construed as the self-sustaining working of a closed system or the rigid decrees of a God who set the universe to work like some piece of machinery.

It has been argued by some philosophers and theologians that the working of miracles is inconsistent with God's nature and purpose. He is the

MIRACLES

Alpha and Omega, he knows the end from the beginning; he is the Creator who fashioned all things unhampered by any limitation imposed by pre-existent matter; he is the unchanging One. Why, then, should he need to 'interfere' with the working of the natural order?

This objection based on the character of God arises from a failure to grasp the biblical understanding of God as living and personal. His changelessness is not that of an impersonal force but the faithfulness of a person: his creative act brought into being responsible creatures with whom he deals, not as puppets but as other persons over against himself. Miracles are events which dramatically reveal this living, personal nature of God, active in history not as mere Destiny but as a Redeemer who saves and guides his people.

A fuller knowledge of the ways of God's working may show that some supposedly unique events were part of a regular pattern. It can, however, never logically exclude the exceptional and extraordinary. While there is no such radical discontinuity between miracles and the 'natural order' as has been assumed by those who have most keenly felt the modern doubts on the subject, it is clear that Scripture speaks of many events which are extraordinary or even unique so far as our general experience of nature goes.

II. Miracles and revelation

If it be granted that *a priori* objections to miracle stories are invalid, it still remains to ask what precise function these extraordinary events perform in the total self-revelation of God in history. Orthodox theologians have been accustomed to regard them primarily as the authenticating marks of God's prophets and apostles and supremely of his Son. More recently it has been argued by liberal critics that the miracle stories of OT and NT are of the same character as the wonder-stories told of pagan deities and their prophets. Both these views fail to do justice to the integral relationship between the miracle stories and the whole self-revelation of God. Miracles are not simply an external authentication of the revelation but an essential part of it, of which the true purpose was and is to nourish faith in the saving intervention of God towards those who believe.

a. False miracles

Jesus consistently refused to give a *sign from heaven, to work useless and spectacular wonders, simply to guarantee his teaching. In any case the simple ability to work miracles would have been no such guarantee. There is frequent reference both in Scripture and elsewhere to wonder-working by those who were opposed to the purposes of God (cf. Dt. 13:2-3; Mt. 7:22; 24:24; 2 Thes. 2:9; Rev. 13:13ff.; 16:14; 19:20). The refusal to do wonders for their own sake sharply marks off the biblical miracle stories from the general run of *Wundergeschichten*.

It is noteworthy that the word *teras*, which of all the biblical terms has most nearly the overtones of the English 'portent', is always used in the NT in conjunction with *sēmeion* to stress that only significant portents are meant. The only exception is the OT quotation in Acts 2:19 (but cf. Acts 2:22).

The mere portent or the false miracle is distinguished from the true by the fact that the true miracle is congruous with the rest of the revelation. It harmonizes with the knowledge which be-

lievers already possess concerning God, even where it also carries that knowledge farther and deeper. Thus Israel is to reject any miracle-worker who denies the Lord (Dt. 13:2-3) and thus also we may rightly discern between the miracle stories of the canonical Gospels and the romantic tales or ludicrous stupidities of the apocryphal writings and mediaeval hagiography.

b. Miracles and faith

The working of miracles is directed to a deepening of men's understanding of God. It is God's way of speaking dramatically to those who have ears to hear. The miracle stories are intimately concerned with the faith of observers or participants (cf. Ex. 14:31; 1 Ki. 18:39) and with the faith of those who will hear or read them later (Jn. 20:30-31). Jesus looked for faith as the right response to his saving presence and deeds; it was faith which 'made whole', which made the difference between the mere creation of an impression and a saving communication of his revelation of God.

It is important to observe that faith on the part of human participants is not a necessary condition of a miracle in the sense that God is of himself unable to act without human faith. Mk. 6:5 is often quoted to support such a view, but Jesus could do no mighty work in Nazareth, not because the people's unbelief limited his power—Mark tells us that he healed a few sick people there—but rather because he could not proceed with his preaching or with the deeds which proclaimed his gospel in action where men were unready to accept his good news and his own person. Wonder-working for the crowds or the sceptics was inconsistent with his mission: it is in this sense that he could not do it in Nazareth.

c. Miracles and the Word

It is a notable feature—in some cases the chief feature—of miracles that even where the matter of the event is such that it can be assimilated to the ordinary pattern of natural events (e.g. some of the plagues of Egypt), its occurrence is predicted by God to or through his agent (cf. Jos. 3:7-13; 1 Ki. 13:1-5) or takes place at an agent's command or prayer (cf. Ex. 4:17; Nu. 20:8; 1 Ki. 18:37-38); sometimes both prediction and command are recorded (cf. Ex. 14). This feature emphasizes yet again the connection between miracles and revelation, and between miracles and the divine creative Word.

d. The crises of the sacred history

Another connection between miracles and revelation is that they cluster about the crises of sacred history. The pre-eminently mighty acts of God are the deliverance at the Red Sea and the resurrection of Christ, the first the climax of the conflict with Pharaoh and the gods of Egypt (Ex. 12:12; Nu. 33:4), the second the climax of God's redeeming work in Christ and the conflict with all the power of evil. Miracles are also frequently noted in the time of Elijah and Elisha, when Israel seemed most likely to sink into complete apostasy (cf. 1 Ki. 19:14); in the time of the siege of Jerusalem under Hezekiah (2 Ki. 20:11); during the Exile (Dn. *passim*); and in the early days of the Christian mission.

III. Miracles in the New Testament

Some liberal treatments of the question of mir-

acles draw a marked distinction between the miracles of the NT, particularly those of our Lord himself, and those of the OT. Both more radical and more conservative critics have pointed out that in principle the narratives stand or fall together.

The contention that the NT miracles are more credible in the light of modern psychology or psychosomatic medicine leaves out of account the nature miracles, such as that at the wedding-feast in Cana and the calming of the storm, the instantaneous cures of organic disease and malformation, and the raising of the dead. There is no *a priori* reason to suppose that Jesus did not make use of those resources of the human mind and spirit which today are employed by the psychotherapist; but other narratives take us into realms where psychotherapy makes no assertions and where the claims of spiritual healers find least support from qualified medical observers.

There is, however, evidence for regarding the miracles of Christ and those done in his name as different from those of the OT. Where before God had done mighty works in his transcendent power and revealed them to his servants or used his servants as the occasional agents of such deeds, in Jesus there confronts us God himself incarnate, freely active in sovereign authority in that world which is 'his own'. When the apostles did similar works in his name they acted in the power of the risen Lord with whom they were in intimate contact, so that Acts continues the story of the same things which Jesus began to do and teach in his earthly ministry (*cf.* Acts 1:1).

In stressing and direct presence and action of God in Christ we do not deny the continuity of his work with the previous course of God's dealing with the world. Of the list of works given by our Lord in answering the Baptist's inquiry (Mt. 11:5) it is the most wonderful, the healing of lepers and the raising of the dead, which have OT parallels, notably in the ministry of Elisha. What is remarkable is the intergal relationship between the works and words of Jesus. The blind receive their sight, the lame walk, the deaf hear, and at the same time that the gospel is preached to the poor by which spiritual sight and hearing and a power to walk in God's way are given to the spiritually needy.

Again, the frequency of healing miracles is far greater in the time of the NT than at any period of the OT. The OT records its miracles one by one and gives no indication that there were others unrecorded. The Gospels and the NT in general repeatedly claim that the miracles described in detail were but a fraction of those wrought.

Jesus' works are clearly marked off from others by their manner or mode. There is in Jesus' dealing with the sick and demon-possessed a note of inherent authority. Where prophets did their works in the name of God or after prayer to God, Jesus casts out demons and heals with that same air of rightful power as informs his pronouncement of forgiveness to the sinner; indeed, he deliberately linked the two authorities (Mk. 2:9-11). At the same time Jesus stressed that his works were done in constant dependence on the Father (*e.g.* Jn. 5:19). The balance between inherent authority and humble dependence is the very mark of the perfect unity of deity and humanity.

NT teaching on the virgin birth, the resurrection and the ascension emphasizes the newness of what God did in Christ. He was born of a woman in the genealogy of Abraham and David, but of a virgin;

others had been raised from death, only to die again; he 'always lives' and has ascended to the right hand of power. It is, moreover, true of the resurrection as of no other individual miracle that on it the NT rests the whole structure of faith (*cf.* 1 Cor. 15:17). This event was unique as the decisive triumph over sin and death.

The miracles of the apostles and other leaders of the NT church spring from the solidarity of Christ with his people. They are works done in his name, in continuation of all that Jesus began to do and teach, in the power of the Spirit he sent from the Father. There is a close link between these miracles and the work of the apostles in testifying to the person and work of their Lord; they are part of the proclamation of the kingdom of God, not an end in themselves.

The debate continues over the contention that this function of miracle was of necessity confined to the apostolic age. But we may at least say that the NT miracles were distinct from any subsequent ones by virtue of their immediate connection with the full manifestation of the incarnate Son of God, with a revelation then given in its fullness. They do not, therefore, afford grounds in themselves for expecting miracles to accompany the subsequent dissemination of the revelation of which they formed an integral part.

MIRIAM. (For derivation, see *MARY.) I. The daughter of Amram and Jochebed, and the sister of Aaron and Moses (Nu. 26:59). It is generally agreed that it was she who watched the baby Moses in the bulrushes and suggested her mother as his nurse. The term 'the prophetess' was used to describe her as she led the women in music, dancing and singing a paean of praise to celebrate the crossing of the Red Sea (Ex. 15:20f.).

Miriam and Aaron rebelled against Moses, supposedly because of his marriage to the Cushite woman, but in reality because they were jealous of his position. Divine judgment descended upon Miriam and she became leprous, whereupon Moses interceded for her and she was cleansed, but she was excluded from the camp for 7 days (Nu. 12). She died at Kadesh and was buried there (Nu. 20:1). There is no record of her marriage in the Bible, but rabbinical tradition makes her the wife of Caleb and mother of Hur.

2. In his genealogy the Chronicler lists a Miriam as one of the children of Ezrah, of the tribe of Judah (1 Ch. 4:17). M.B.

MIRROR. During the OT period mirrors were made of metal, cast and highly polished (Jb. 37:18). Several bronze examples dating from the Middle Bronze Age onwards have been found in Palestine. These are of a form common throughout the Near East; *cf.* those used by the Israelite women in Ex. 38:8 (see *ANEP*, No. 71). The meaning of Heb. *gillayôn* in Isaiah's list of finery (3:23, rendered 'tablet' in Is. 8:1) is uncertain; it

MIRROR

may mean mirrors (Targ., AV, RV); others suggest garments of gauze (LXX, RSV). Glass mirrors were probably introduced in the 1st century AD. Whether of metal or glass, these mirrors never gave a perfect reflection (1 Cor. 13:12). It is probable that in 2 Cor. 3:18 (Gk. *hēmeis . . . katoptrizomenoi*) Paul's idea is that we see merely a reflection (AV); but it may be that we reflect (RV; see Arndt, pp. 425-426; R. V. G. Tasker, 2 *Corinthians*, TNTC, 1958, pp. 67-68). James gives a simple illustration from the use of a mirror (1:23).
A.R.M.

MISHAEL (Heb. *mišā'ēl*, 'who is what God is?'). 1. A son of *Uzziel, a Levite (Ex. 6:22) who, with his brother *Elzaphan, carried the bodies of Nadab and Abihu outside the camp after they had been killed for desecrating the altar (Lv. 10:1-5). 2. A colleague of Daniel (Dn. 1:6, 11, etc.; 1 Macc. 2:59) whose name was changed to Meshach by the Babylonians (Dn. 1:7).
D.W.B.

MISREPHOTH-MAIM (Heb. *mišr'pōt-mayim*). A limit of pursuit from *Merom (Jos. 11:8); the S border of Sidon (Jos. 13:6). If it was the rocky headland of Rosh Haniqra, Khirbet el-Mushreifeh (at the N end of the Acre plain) preserved the name; the gap in Late Bronze and Early Iron occupation would not be relevant. However, there were Israelite settlements to the N, and the river Litani is a possible identification (LOB, p. 238). See *NEAEHL*, p. 1288.
J.P.U.L.

MITHREDATH ('given by Mithra', the Persian god of light. Cf. Gk.-Lat. 'Mithridates'). 1. The treasurer of Cyrus king of Persia, who in 536 BC restored to Sheshbazzar the sacred vessels confiscated by Nebuchadrezzar from Jerusalem (Ezr. 1:8). 2. A Persian officer in Samaria, one of those who wrote in Aram. to Artaxerxes ('Longimanus') protesting against the rebuilding of the walls of Jerusalem (Ezr. 4:7).
B.F.H.

MITRE (AV; Heb. *mišneḫet*). One of the high priest's holy garments. From the use of the Heb. verb in Is. 22:18 it is thought to have been a kind of turban (RSV) wound round the head. It is described in Ex. 28:4, 36-39. On it was worn 'the plate of the holy crown' engraved 'Holy to the Lord' (Ex. 39:28, 30f.). Aaron wore it for his anointing (Lv. 8:9) and on the Day of Atonement (Lv. 16:4). To be uncovered was a sign of mourning (Ezk. 24:17) and uncleanness (Lv. 13:45; cf. 10:6) and was specifically forbidden to the high priest (Lv. 21:10-12)—cf. the 'bonnets' (AV) or 'caps' (Ex. 28:40; 29:9) (*miḡbā'ōt*) of inferior priests—so that Ezekiel (21:26) prophesies of the removal of the mitre because of the profanity of Israel, and Zechariah (3:5) sees Joshua invested with it (*šānīp*) as a sign of his cleansing and acceptance by God. Israel's ultimate renewal is symbolized by calling her a royal mitre (diadem) in the hand of God (Is. 62:3).
P.A.B.

MITYLENE. An ancient republic of the Aeolian Greeks and the principal state of the island of Lesbos. Its situation at the cross-roads of Europe and Asia frequently placed its political fortunes in

jeopardy, until under the pax Romana it settled down as an honoured subordinate, highly favoured by the Romans as a holiday resort. A capacious harbour facing the mainland of Asia Minor across the straits made it a natural overnight stop for Paul's vessel on the S run to Palestine (Acts 20:14).

BIBLIOGRAPHY. R. Herbst, *RE*, 16. 2. 1411.

E.A.J.

MIZAR. A hill mentioned in Ps. 42:6, in connection with Mt Hermon. It may be presumed that Hermon was visible from it; in which case it would have been in the Galilee region—note the reference to the Jordan. The word in Heb. (*miš'ār*) means 'smallness'. Some scholars emend the text of Ps. 42:6 slightly, making *miš'ār* an adjective, 'small', referring to Mt Zion. In this case the psalmist would be stating his preference for Zion rather than Hermon's great bulk.
D.F.P.

MIZPAH, MIZPEH. The basic meaning of the word is 'watchtower', 'place for watching'. It is vocalized as *mišpā* and *mišpeh*, and is found usually with the article. It is natural to look for places so named on high vantage-points. The following may be distinguished:

1. The place where *Jacob and Laban made a covenant and set up a cairn of stones as a witness (Galeed, *gal'ēd* in Hebrew, or *y'gar šāh'qūā'* in Aramaic). God was the watcher between them (Gn. 31:44-49).

2. Either the same place as 1 or a town in Gilead, E of the Jordan. The article is used both in Gn. 31:49 (*hammišpā*), and in Jdg. 10:17; 11:11, 34. The place features in the story of Jephthah. When Ammon encroached on Gilead the Israelites assembled at Mizpah (Jdg. 10:17), the home of Jephthah, from which he commenced his attack and to which he returned to carry out his rash vow (Jdg. 11:11, 29, 34). Its identification with Ramoth-gilead is urged by some writers (J. D. Davis, *WDB*, p. 401), but is rejected by F. M. Abel and du Buit, who identify it with Ja'ūd. It is possibly the same as Ramath-mizpeh or height of Mizpeh (Jos. 13:26).

3. A place in Moab to which David took his parents for safety (1 Sa. 22:3), possibly the modern Rujm el-Meshrefeh, WSW of Madaba. 4. A place at the foot of Mt Hermon (Jos. 11:3), referred to as 'the land of Mizpeh' or 'the valley of Mizpeh' (v. 8), the home of the Hivites. Opinions differ as to its identification, but Qal'at es-Šubeibeh on a hill 3 km NE of Banias has much support. 5. A town in the Shephelah (lowlands) of Judah named along with Joktheel, Lachish and Eglon (Jos. 15:38-39). The sites of Khirbet Sāfiyeh, 4 km NE of Beit Jibrin, and Šufiyeh, 10 km N, are possible choices for this Mizpeh.

6. A town of Benjamin (Jos. 18:26), in the neighbourhood of Gibeon and Ramah (1 Ki. 15:22). In the days of the Judges, when the Benjaminites of Gibeah outraged the Levite's concubine, the men of Israel assembled here (Jdg. 20:1, 3; 21:1, 5, 8). Here Samuel assembled Israel for prayer after the ark had been restored to Kiriath-jearim (1 Sa. 7:5-6). The Philistines attacked them, but were driven back (vv. 7, 11), and Samuel erected a stone of remembrance near by at Ebenezer (v. 12). Here also Saul was presented to the people as

their king (1 Sa. 10:17). Mizpeh was one of the places visited by Samuel annually to judge Israel (1 Sa. 7:16).

King Asa fortified Mizpeh against Baasha of Israel, using materials his men took from Baasha's fort at Ramah, after Asa had asked the Syrian Benhadad to attack Israel (1 Ki. 15:22; 2 Ch. 16:6). After the destruction of Jerusalem by Nebuchadnezzar in 587 bc, Gedaliah was appointed governor of the remainder of the people, the governor's residence being fixed at Mizpeh (2 Ki. 25:23, 25). The prophet Jeremiah, released by Nebuzaradan, the captain of the guard, joined Gedaliah at Mizpeh (Je. 40:6), and refugee Jews soon returned (Je. 40:8, 10, 12–13, 15). Soon after, Ishmael of the royal seed slew Gedaliah and the garrison at the instigation of Baalis, king of Ammon. Two days later he murdered a company of pilgrims and threw their bodies into the great cistern Asa had built. He imprisoned others and sought to carry them to Ammon, but was frustrated by Johanan (Je. 41:1, 3, 6, 10, 14, 16).

Two references to a Mizpah in post-exilic times occur in Ne. 3:15, 19. It is possible that one or both of these refer to Mizpah of Benjamin, though they may represent different places.

Mizpah was the scene of an important assembly in the days when Judas Maccabaeus called the men of Judah together for counsel and prayer (1 Macc. 3:46), 'because Israel formerly had a place of prayer in Mizpah'.

Two identifications are offered today—Nebi Samwil 7 km NW of Jerusalem, 895 m above sea-level and 150 m above the surrounding country, and Tell en-Nasbeh on the top of an isolated hill about 13 km N of Jerusalem. The evidence in favour of Tell en-Nasbeh is stronger than for Nebi Samwil, because it can be seen how the consonants *mzph* could become *nzbh* phonetically and the archaeological evidence supports the identification.

The site itself is ancient and was occupied in the Early Bronze Age, to judge from tombs in the area. It seems to have been deserted in the Middle and Late Bronze periods but was re-occupied in the Iron I period and continued during the years c. 1100–400 bc, so that it belongs to the period of Israelite settlement. In the days of the kings and during the Persian period the town was prosperous, as the relatively rich tombs suggest. Prosperity is also suggested by architectural remains, the massive gate, a large number of cisterns and silos, some dye-plants, numerous spinning-whorls, loom-weights, wine and oil presses, pottery, beads of semi-precious stones, pins, bangles and metal jewellery. The city expanded beyond its walls during the Iron II period, but began to decline in the 5th century bc. Fragments of Gk. pottery in the later city suggest trade with the Aegean areas. Numerous epigraphic discoveries, scarabs, stamped jar handles bearing the letters *MŠH* and *MŠP* (i.e. Mišpah), a cuneiform inscription bearing the words *šar kiššati*, 'king of the universe', dating to the period c. 800–650 bc, and a beautiful seal bearing the inscription *ly'znyhw 'bd hmlk*, 'belonging to Jaazaniah, slave of the king', all attest the importance of the town.

J.A.T.

MIZRAIM. I. Second son of Ham and progenitor of Ludim, Anamim, Lehabim, Naphtuhim, Casluhim and Caphtorim (Gn. 10:6, 13; 1 Ch. 1:8, 11). See *NATIONS, TABLE OF, and individual articles.

2. *mišrayim* is also the regular Heb. (and common Semitic) term for Egypt. For details on this name, see *EGYPT (Name).

3. In 1 Ki. 10:28–29, it is possible to argue that the first *mišrayim* is not Egypt but a land Mušur in SE Asia Minor, and to render (modifying rsv) 'Solomon's import of horses was from Mušur and from Que' (Cilicia), but this would require the *mišrayim* of 2 Ch. 9:28 to be taken also as Mušur and not Egypt. It is perhaps better to render *mišrayim* as Egypt in these two passages as in all other OT references. See also P. Garelli, *Mušur*, in *DBS*, 5, fasc. 29, 1957, cols. 1468–1474; H. Tadmor, 'Que and Mušri', *IEJ* 11, 1961, pp. 143–150. K.A.K.

MNASON. 'An early (original) disciple'—i.e. at least from Pentecost—and Paul's host (Acts 21:16). Like Barnabas, he was a Jewish Cypriot. The name is Greek, and common.

Vulg., AV, RV, NEB understand the passage 'Caesarean disciples brought Mnason' (but why should they bring the prospective host?); rsv, TEV translate 'bringing us to the house of Mnason'. Neither is easy; probably *Mnasōni* has been attracted into the case of its relative (cf. A. T. Robertson, *Gram.*, p. 719). One would infer Mnason's residence in Jerusalem: a Hellenist host might not embarrass Paul's Gentile friends. The Western reading, valueless in itself, has 'reaching a village, we were with Mnason': perhaps a guess—the journey would require a night-stop—but perhaps correctly interpreting Luke. Mnason's house would then lie between Caesarea and Jerusalem: hence the escort, and the reference to Jerusalem in v. 17.

Luke's allusion may indicate Mnason provided source-material (cf. Ramsay, *BRD*, p. 309n.).

A.F.W.

MOAB, MOABITES. Moab (Heb. *mō'āb*) was the son of Lot by incestuous union with his eldest daughter (Gn. 19:37). Both the descendants and the land were known as Moab, and the people also as Moabites (*mō'ābi*). The core of Moab was the plateau E of the Dead Sea between the wadis Arnon and Zered, though for considerable periods Moab extended well to the N of the Arnon. The average height of the plateau is 100 m, but it is cut by deep gorges. The Arnon itself divides about 21 km from the Dead Sea and several times more farther E into valleys of diminishing depth, the 'valleys of the Arnon' (Nu. 21:14). The Bible has preserved the names of many Moabite towns (Nu. 21:15, 20; 32:3; Jos. 13:17–20; Is. 15–16; Je. 48:20ff.).

In pre-Exodus times Moab was occupied and had settled villages until about 1850 bc. Lot's descendants found a population already there, and must have intermarried with them to emerge at length as the dominant group who gave their name to the whole population. The four kings from the E invaded Moab and overthrew the people of Shaveh-kiriathaim (Gn. 14:5). Either as a result of this campaign, or due to some cause unknown,

MOAB, MOABITES

Moab and possible sites of the 'city of Moab'.

Transjordan entered on a period of non-sedentary occupation till just before 1300 BC, when several of the Iron Age kingdoms appeared simultaneously. Moab, like the others, was a highly organized kingdom with good agricultural and pastoral pursuits, splendid buildings, distinctive pottery, and strong fortifications in the shape of small fortresses strategically placed around her boundaries. The Moabites overflowed their main plateau and occupied areas N of the Arnon, destroying the former inhabitants (Dt. 2:10-11, 19-21; cf. Gn. 14:5). These lands were shared with the closely related Ammonites.

Just prior to the Exodus, these lands N of the

Arnon were wrested from Moab by Sihon, king of the Amorites. When Israel sought permission to travel along 'the King's Highway' which crossed the plateau, Moab refused (Jdg. 11:17). They may have had commercial contact (Dt. 2:28-29). Moses was forbidden to attack Moab despite their unfriendliness (Dt. 2:9), although Moabites were henceforth to be excluded from Israel (Dt. 23:3-6; Ne. 13:1).

Balak, king of Moab, distressed by the Israelite successes, called for the prophet Balaam to curse Israel now settled across the Arnon (Nu. 22-24; Jos. 24:9).

As Israel prepared to cross the Jordan, they camped in the 'plains of Moab' (Nu. 22:1; Jos. 3:1) and were seduced by Moabite and Midianite women to participate in idolatrous practices (Nu. 25; Ho. 9:10).

In the days of the Judges, Eglon, king of Moab, invaded Israelite lands as far as Jericho and oppressed Israel for 18 years. Ehud the Benjaminite assassinated him (Jdg. 3:12-30). Elimelech of Bethlehem migrated to Moab and his sons married Moabite women, Orpah and Ruth. Ruth later married Boaz and became the ancestress of David (Ru. 4:18-22; Mt. 1:5-16). Saul warred with the Moabites (1 Sa. 14:47) and David lodged his parents there while he was a fugitive (1 Sa. 22:3-4). Later David subdued Moab and set apart many Moabites for death (2 Sa. 8:2, 12; 1 Ch. 18:2, 11). After Solomon's death, Moab broke free, but was subdued by Omri of Israel. (*MESHA, *MOABITE STONE.) Towards the close of Ahab's life Moab began to break free again. Jehoram of Israel sought the help of Jehoshaphat, king of Judah, and the king of Edom to regain Moab, but the campaign was abortive (2 Ki. 1:1; 3:4-27). Later, Jehoshaphat's own land was invaded by a confederacy of Moabites, Ammonites and Edomites, but confusion broke out and the allies attacked one another so that Judah was delivered (2 Ch. 20:1-30).

In the year of Elisha's death, bands of Moabites raided Israel (2 Ki. 13:20). During the latter part of the 8th century BC Moab was subdued by Assyria and compelled to pay tribute (Is. 15-16), but after Assyria fell Moab was free again. Moabites entered Judah in the days of Jehoiakim (2 Ki. 24:2). At the fall of Jerusalem in 587 BC some Jews found refuge in Moab, but returned when Gedaliah became governor (Je. 40:11ff.). Moab was finally subdued by Nebuchadrezzar (Jos., *Ant.* 10. 181) and fell successively under the control of the Persians and various Arab groups. The Moabites ceased to have independent existence as a nation, though in post-exilic times they were known as a race (Ezr. 9:1; Ne. 13:1, 23). Alexander Jannaeus subdued them in the 2nd century BC (Jos., *Ant.* 13. 374).

In the prophets they are often mentioned and divine judgment pronounced on them (Is. 15-16; 25:10; Je. 9:26; 25:21; 27:3; Ezk. 25:8-11; Am. 2:1-3; Zp. 2:8-11).

The archaeological story of Moab is slowly being unravelled. Excavation in Jordan has not proceeded as rapidly as it has in areas to the W of the Jordan, although in recent decades the programme has been increased. Important sites which have yielded significant results are Dibon, Aroer, Bab edh-Dhra and several sites in the area of the Lisan.

Our knowledge of Moab in early archaeological periods has been greatly expanded with new in-

formation about the transition between the Chalcolithic and the Early Bronze Age and the later transition between the Early and Middle Bronze Ages. At Bab edh-Dhra a vast cemetery of the Early Bronze Age has provided material from EB I to EB IV. The excavations at Aroer have given support to the theory that much of Moab was unoccupied during the greater part of the 2nd millennium. This site and the site of Dibon were typical of important Iron Age walled settlements contemporary with the period of the kings of Israel. At Dibon the important *Moabite (or Mesha) Stone was discovered. Sedentary life in these sites declined from the end of the 6th century BC down to the end of the 4th century.

MOABITE STONE. A black basalt inscription left by *Mesha, king of *Moab, at Dhiban (biblical *Dibon) to commemorate his revolt against Israel and his subsequent rebuilding of many important towns (2 Ki. 3:4–5).

The stone was found on 19 August 1868, by the Rev. F. Klein, a German missionary working with the Church Missionary Society. An Arab sheikh named Zattam showed him an inscribed slab some 120 cm high, 60 cm broad and 6 cm thick, rounded at the top and containing thirty-four lines of writing. Klein copied a few words and reported his find to Dr Petermann the German consul, who began negotiations to obtain the inscription for the Berlin Museum. Unfortunately, C. S. Clermont-Ganneau of the French Consulate sought to obtain it for the Paris Museum. He sent independent messengers to obtain a squeeze of the inscription, but a dispute arose and the messengers fled with the squeeze in several pieces. The Arabs, sensing the value of the stone, had forced the price up. When Turkish officials interfered the local Arabs kindled a fire under the stone and poured water over it to break it into fragments, which were carried away as charms to bless their grain. Clermont-Ganneau subsequently recovered several fragments, made fresh squeezes, and finally reconstructed the stone in the Louvre in Paris (see *IBA*, p. 54). Out of an estimated 1,100 letters, 669 were recovered, rather less than two-thirds, but the original squeeze, though somewhat marred, preserved the greater part of the story.

The inscription refers to the triumph of 'Mesha, ben *Chemosh, king of Moab', whose father reigned over Moab 30 years. He tells how he threw off the yoke of Israel and honoured his god Chemosh by building a high place at Qarhoh (QRI:Ḥ) in gratitude. The account continues as follows—'As for Omri king of Israel, he humbled Moab many years [lit. days] for Chemosh was angry at his land. And his son followed him and he also said "I will humble Moab". In my time he spoke (thus) but I have triumphed over him and over his house, while Israel hath perished for ever!

(Now) Omri had occupied the land of Medeba and (Israel) had dwelt there in his time and half the time of his son (Ahab), forty years; but Chemosh dwelt there in my time.'

This account seems to imply that Mesha broke free from Israel before Ahab's death and thus appears to clash with 2 Ki. 1:1. There need not be any contradiction, however, for during the last years of Ahab's life he was sore pressed by the Syrian wars and probably lost his control over Moab. From Mesha's angle, his freedom dated from then, but from Israel's viewpoint Moab could not be regarded as free till after the abortive campaign conducted by Ahab's son Joram (2 Ki. 3).

The stone continues with an account of the building of Baal-meon, Qaryaten, Qarhoh, Aroer, Beth-bamoth, Bezer, Medeba, Beth-diblahen, Beth-baal-meon. Ataroth, built by the king of Israel for the men of Gad, was captured, its people slain and its chieftain Arel (or Oriël) dragged before Chemosh in Kerioth. Nebo was taken and 7,000 devoted to Ashtar-Chemosh. Yahaz, built by the king of Israel, and his centre during the fighting, was taken and attached to Dibon.

Mesha referred to the reservoirs and cisterns, the walls, gates, towers and the king's palace he constructed in Qarhoh with Israelite slave labour. He also made a highway in the Arnon valley.

The great importance of this inscription linguistically, religiously and historically lies in its close relation to the OT. The language is closely akin to Hebrew. Both Chemosh the god of Moab and Yahweh the God of Israel are mentioned, and we have an interesting insight into Moabite beliefs, akin in some ways to those of Israel. Chemosh may be angry with his people, forsake them, deliver them to their enemies and finally save them. He might command Mesha in words like those that Yahweh used for his servants. The rite of *herem* and the existence of sanctuaries in high places occur here as well as in the OT. Although the authenticity of the stone has been disputed, there are no adequate grounds for this. It must be dated towards the end of Mesha's reign, c. 830 BC.

MOLADAH. A town of Simeon in the Negeb near Beersheba (Jos. 15:26; 19:2; 1 Ch. 4:28). Occupied by returning Judahite exiles (Ne. 11:26), it was later turned into an Idumean fortress. The site is not clearly identified. Tell el-Milḥ, SE of Beersheba, has regularly been identified with Moladah, but this mound is now thought to be Canaanite Arad. The more likely location is Khreibet el-Waṭen, E of Beersheba, which is possibly the Arabic equivalent of the Hebrew name.

MOLECH. The name of a deity, usually written

MOLECH

Molech (Heb. *mōlek*, 2 Ki. 23:10; Je. 32:35), Melech ('king', *melek*, Is. 57:9), Malcham ('their king', Je. 49:1, 3) or once Moloch (Am. 5:26 quoted Acts 7:43, Gk. *moloch*, Av).

Molech was worshipped in the ancient Near East in the second millennium BC (Mari and Ugarit) and associated with death and the underworld. He may be attested in the element *malik*

found in personal names. His cult was practised by the Ammonites (1 Ki. 11:7, 33) and probably by the Canaanites (Dt. 12:31). It was considered the equivalent of Baal worship, hence the definite article before the name in Lv. 18:21; 20:2-5; 2 Ki. 23:10; Je. 22:35. Weinfeld links it especially with death and the worship of the god Baal-Hadad as 'king'. Solomon built a high place for Molech on

The Moabite Stone commemorates the revolt of Mesha, king of Moab, against Israel (see 2 Ki. 3:5ff.) and his rebuilding of several towns, e.g. Aroer, Medeba, Qarhoh, using Israelite slave labour: Black basalt. Height 1.0 m, breadth 0.60 m. c. 830 BC (see p. 777).

the Mount of Olives, probably to please his foreign wives (1 Ki. 11:7).

The type and extent of the ritual associated with this deity is the subject of debate. The phrase 'to pass (*h'br*) the son/daughter through the fire to Molech' (2 Ki. 16:3; 17:17; 23:10) could refer to a dedication or votive ceremony, possibly fire-walking. King Ahaz was condemned for this (2 Ch. 28:3) as were Manasseh (2 Ki. 21:6) and Samaria (2 Ki. 17:17). Eissfeldt compared this with *molk*, a dedicatory offering found from the 6th century onwards. However, no extant Phoenician inscription has *mlk* in connection with child-sacrifice (except later Sanchuniathon). Nor is child sacrifice common in OT or surrounding cultures. It was a rare and detested practice to the true Israelite, as shown in 2 Ki. 3:27; Ps. 106:37–38. This is also shown by the use of 'sacrifice' (*zbt*) or immolation (*srp*) on occasions (Lv. 21:9; Dt. 12:31; 18:10). The majority of scholars, however, interpret all references to Molech as child sacrifice and compare it with later Phoenician-Carthaginian (Punic) practice in N Africa where *mlk* denotes the sacrifice. Whether death by child sacrifice or dedication through fire, both are abhorrent to God. They are associated with Topheth (2 Ki. 23:10; Je. 7:31–32; 19:11–12) and the smouldering rubbish dumps in the Hinnom valley outside Jerusalem. The reforms of Josiah in Judah were marked by the destruction of the high places dedicated to Molech (2 Ki. 23:10, 13) yet the ritual did not die out until after Ezekiel (16:20ff.; 20:26, 31; 23:27).

MONEY.

I. In the Old Testament

Before the introduction of coinage in the late 8th century BC (see *c*, below) the medium of exchange in commercial transactions was a modified form of barter. Throughout the ancient Near East staple commodities, both those which were perishable, such as wool, barley, wheat and dates, and those which were non-perishable, including metals, timber, wine, honey and livestock, served as 'exchangeable goods'. The texts show that from the earliest times periodic attempts were made to stabilize the values of these commodities with respect to each other. Thus wealth was measured by possession of cattle (Jb. 1:3) and precious metals. Abraham was 'very rich in cattle, in silver, and in gold' (Gn. 13:2).

a. Metal as an exchange commodity

Since silver (Heb. *keseṣ*) was the commonest precious metal available in Palestine (as in Assyria and Babylonia), it appears as the most frequently used

(AV, RSV often translate *keseṣ* as 'money', e.g. Gn. 17:13). Thus in ordinary transactions the term silver is often omitted, as understood; Solomon purchased chariots at 600 (shekels weight of silver) and horses at 150 (1 Ki. 10:29; cf. Lv. 5:15). His revenue was reckoned in silver by talents (1 Ki. 10:14; *WEIGHTS AND MEASURES), for silver was as common in Jerusalem as stones (1 Ki. 10:27). Until post-exilic times the 'shekel' bears its literal meaning of a certain *weight rather than denoting a coin.

Silver was used for the purchase of real estate, such as the field purchased by Jeremiah at Anathoth for 17 shekels of silver (Je. 32:9), the cave at Machpelah bought by Abraham for 400 shekels of silver (Gn. 23:15–16), the village and hill of Samaria by Omri for 2 talents of silver (1 Ki. 16:24), or the threshing-floor of Araunah by David for 50 shekels (2 Sa. 24:24). Silver was also the basis of a dowry (Ex. 22:17) or a bride purchase-price (Ho. 3:2).

Gold, being more rarely obtained, often figures after silver in the payment of tribute. Thus Hezekiah paid Sennacherib in 701 BC 300 talents of silver and 30 talents of gold (2 Ki. 18:14), while Menahem had bought off the Assyrians for 1,000 talents of silver (2 Ki. 15:19). Gold played a prominent part in inter-state border transactions, and Hiram paid 120 talents of gold to Solomon for the villages ceded to him (1 Ki. 9:10–14).

In many transactions payment in goods might be agreed as a supplement or substitute for precious metal. Meshah of Moab offered sheep and wool (2 Ki. 3:4); Sennacherib was given precious stones, in addition to gold and silver, by Hezekiah according to the Assyrian annals, and the tribute of *Jehu to Shalmaneser III included blocks of antimony, lead, golden vessels and rare fruits. Barley (Ho. 3:2), spices (2 Ki. 20:13) or clothing might be part of the agreed price or gift (2 Ki. 5:23). Copper (AV 'brass') was another metal in use as currency (Ex. 35:5; 2 Sa. 21:16) of less value than gold (Is. 60:17).

To control the use of metals as currency they had to be weighed out (Heb. *ṣgl*, hence 'shekel') by the purchaser and checked by the vendor in the presence of witnesses (Gn. 23:16; Je. 32:9–10). The standard of weight agreed was that in force by local standards called the 'silver of city X' or 'the silver (current with) the merchant' (Gn. 23:16; Bab. *kaspum ša tamqarim*). This agreed standard is also implied by payment 'in full weight' (Gn. 43:21). Thus merchants were 'weighers of silver'. Another check was made on the quality of the metal by marking it with its place of origin. Gold of Ophir (1 Ki. 10:11) or Parvaim (2 Ch. 3:6) was highly prized, while gold and silver were sometimes classified as 'refined' (AV 'pure, purified').

b. Forms of currency

To enable metal used as currency to be transportable it was kept either in the form of jewellery (often as arm-rings), of objects in daily use or in characteristic shapes. Thus Abraham gave Rebekah a gold ring (weighing) half a shekel and bracelets of 10 shekels (Gn. 24:22). Gold was often carried as thin bars or wedges (Heb. 'tongue'), like that weighing 50 shekels found by Achan at Jericho (Jos. 7:21) or the 'golden wedge of Ophir' (Is. 13:12). Gold and silver were also held as ingots, vessels, dust (Jb. 28:6) or small fragments, and could be melted and used immediately for many

MONEY

purposes. In these forms Joseph increased the revenue of Egypt (Gn. 47:14).

On a journey the small pieces of metal were carried in a pouch or bag of leather or cloth ('bundles of money', Gn. 42:35; Pr. 7:20) which, if holed, would easily lead to loss (Hg. 1:6). A talent of silver seemed to require two bags (2 Ki. 5:23). To guard against loss the money bags were often placed inside other sacks or receptacles (Gn. 42:35). Silver was also moulded into small drops or beads (1 Sa. 2:36, "gōrā) or lumps. It is probable that the half-shekel used for payment into the sanctuary was an unminted lump of silver (Ex. 30:13; 2 Ki. 12:9-16), though normally such temple dues as taxes could be paid either in silver or in kind (Dt. 26; Ne. 5:10).

Copper, being of less value than gold and silver, was transported as flat circular discs, hence the term *kikkār* ('around', 'flat round of bread', Assy. *kakkāru*) was used for the 'talent', the heaviest weight.

c. The introduction of coinage

Coinage, a piece of metal struck with a seal authenticating its title and weight so that it would be accepted on sight, first appears in Asia Minor in the mid-7th century bc. Though Sennacherib (c. 701 bc) refers to the 'minting of half-shekel pieces', there is no evidence that this refers to anything more than a bronze-casting technique, for no coins of this early period have been found as yet in Assyria, Syria or Palestine. The first known coins were struck in electrum (a natural alloy of gold and silver) in Lydia. Herodotus (l. 94) attributes the introduction of coinage to Croesus of Lydia (561-546 bc), his gold coins being called 'Croesides'. It would seem that coinage was introduced into Persia by Darius I (521-486 bc), whose name was used to denote the thick gold coin, or *daric*, which portrays the king, half-length or kneeling, with bow and arrow; with the die-punch mark in reverse (see Herodotus 4. 166). This daric weighed 130 gr., the silver *siglos* or shekel 86½ gr. It has been suggested (*PEQ* 87, 1955, p. 141) that Hg. 1:6 (520 bc) is the earliest biblical allusion to coined money.

The daric (AV 'dram') was known to the Jews in exile (Ezr. 2:69; 8:27; Ne. 7:70-71) and the reference to a daric in the time of David (1 Ch. 29:7) shows that the text at this point was giving the equivalent term at the time of compilation of this history. The change to payment of workmen in coin instead of in kind is attested by the Persepolis Treasury texts (c. 450 bc), confirming a ratio of 13:1 gold to silver. The spread of coinage to Judah seems to have been slow, perhaps because of the images they bore. It is therefore uncertain whether the silver shekels of Ne. 5:15; 10:32 were weights, as in the earlier period, or money in coin.

Phoenician traders quickly took up the use of coins, and mints were active by the 5th-4th centuries bc at Aradus, Byblos, Tyre and Sidon. The coinage of cities in Asia Minor and Greece, and of the kings of Ptolemaic Egypt and Seleucid Syria entered Judah and circulated there alongside coins of Persian kings. The Persian-approved Jewish governors were evidently allowed to issue small silver coins from about 400 bc. The designs of the half-dozen or so found follow Athenian patterns, but include the word *yhd*, 'Judah'. One also bears the name Hezekiah, perhaps the High Priest at the time of Alexander the Great.

After the independent Jewish state was established, Simon Maccabaeus was given the right to strike coins (1 Macc. 15:6), but does not seem to have used it (coins once attributed to him have been shown to belong to the First and Second Revolts, AD 67-70, 132-5). Alexander Jannaeus (103-76 bc) was probably the first Jewish ruler to strike coins. They are small bronze pieces bearing various designs, his name in Greek and Hebrew, and sometimes the words 'Yehonathan the high priest and the community of the Jews'. Following kings continued to strike small bronze coins, the Roman overlords retaining the prerogative to strike silver ones. Only in the Jewish Revolts were local silver coins issued.

II. In the New Testament

During NT times money from three different sources was in circulation in Palestine. There was the official imperial money coined on the Roman standard; provincial coins minted at Antioch and Tyre, which held mainly to the old Gk. standard, and circulated chiefly among the inhabitants of Asia Minor; and the local Jewish money, coined perhaps at Caesarea. Certain cities and client-kings were also granted the right to strike their own bronze coins. With coins of so many different scales in circulation it is obvious that there was need of money-changers at Jerusalem, especially at feasts when Jews came from all parts to pay their poll-tax to the Temple treasury. On these occasions the money-changers moved their stalls into the Court of the Gentiles, whence Jesus expelled them (Jn. 2:15; Mt. 21:12; Mk. 11:15; Lk. 19:45f.) because of their avaricious practices.

Mt. 10:9 serves as a useful reminder that in those days, as now, money was coined in three principal metals, gold, silver and copper, bronze or brass. Bronze (Gk. *chalkos*) is used as a general word for money in Mk. 6:8 and 12:41, but as only the coins of smaller value, the Roman *as* (Gk. *assarion*) and Jewish *lepton* were minted in bronze, the more common general term for money in the NT is silver (Gk. *argyriōn*; see Lk. 9:3; Acts 8:20; etc.). The most common silver coins mentioned in the NT are the Attic tetradrachm and the Roman *denarius*. Gk. *chrysos*, gold, is most frequently used to refer to the metal itself, except in Mt. 10:9; Acts 3:6, possibly also Acts 20:33; 1 Pet. 1:18; Jas. 5:3; Mt. 23:16f., though these instances might equally well refer to gold vessels and ornaments.

Other general terms used for money in the NT are the common Gk. word *chrēma*, meaning property or wealth, as well as money (Acts 4:37; 8:18, 20; 24:26); *kerma*, or small change (from Gk. *keirō*, 'I cut up'), used in Jn. 2:15, and nearly always denoting copper coins; and *nomisma*, or money introduced into common use by law (*nomos*). This last is found only in Mt. 22:19, where the phrase *nomisma tou kēnsou* means the legal coin for paying the tax.

a. Jewish coins

In 141-140 bc Antiochus VII granted permission to Simon Maccabaeus 'priest and ethnarch of the Jews . . . to mint your own coinage as money for your country' (1 Macc. 15:6), and from that time

Jewish coins were minted, mainly in bronze, as neighbouring cities produced an abundance of silver coins. Early Jewish coins heeded the second commandment, and so their devices adhered strictly to horticultural designs and inanimate objects. Coins minted under the Herods show one or two breaches of this rule, as they displayed sometimes the reigning emperor's head, sometimes their own, on the obverse (see Wiseman, *IBA*, p. 86). During the time of the First Revolt (AD 66–70) the Jews proudly coined their own silver for the first time, issuing silver shekels and quarter- and half-shekel pieces as well as their own bronzes. Following this revolt, the Temple treasures were seized, and so the Jews had no further supplies of metal to coin their own silver during the Second Revolt (AD 132–135). They therefore celebrated their independence by overstriking old foreign coins with Jewish dies containing the inscription 'deliverance of Jerusalem'.

The only Jewish coin mentioned in the NT is the bronze *lepton* (from Gk. *leptos*—'small, fine'). This is the widow's 'mite' (AV) of Mk. 12:42; Lk. 21:2, also called a 'farthing' in Lk. 12:59 (AV), where it stands for the smallest coin imaginable. It was equivalent to half the Roman *quadrans*, and so one-eighth of the *assarion* (see below). Such coins were minted locally by the procurator or tetrarch, and *Pilate appears to have introduced designs on his coins calculated to affront the Jews.

b. Greek coins

The basic Greek coin was the silver *drachmē*, of which there were 100 to the *mina*, or mina, and 6,000 to the talent. About 300 BC the drachm was the price of a sheep: an ox cost 5 *drachmai* (Demetrius Phalereus).

The *drachmē* is mentioned only in Lk. 15:8f., rsv 'silver coins', AV 'pieces of silver', which the woman in the parable may have worn as an ornament. It was regarded as approximately equivalent to the Roman *denarius* (see below).

The *didrachmon* or 2-drachm piece was used among the Jews for the half-shekel required for the annual Temple tax (Mt. 17:24). This regulation derived from the atonement-money prescribed in Ex. 30:11–16, which, according to Maimonides, later developed into a regular annual poll-tax (see Jos., *Ant.* 16. 160). After the fall of Jerusalem and the destruction of the Temple this tax had to be paid into the Roman treasury (Jos., *BJ* 7. 217). It seems most likely that the coins used for this tax would be those of Tyre, for the Talmudic law forbade the use of Antiochene money for the Temple treasury, not for any religious reasons, but because it did not contain enough silver.

The *statiēr*, *tetradrachmon*, or 4-drachm piece, is found only in Mt. 17:27, where it is the coin which would pay the Temple tax for Jesus and Peter. As it was a more common coin than the didrachm, it would appear that Jews frequently united to pay the Temple tax in pairs by means of the tetradrachm. It was minted at Antioch, Caesarea in Cappadocia and in Tyre. Pompey fixed the rate of exchange of tetradrachms from Antioch and Tyre at 4 *denarii* (c. 65 BC), and Josephus refers to the same rate for the Tyrian tetradrachm in his day (*BJ* 2. 592). Antiochene tetradrachms were, however, tariffed by the imperial government at 3 *denarii* only. Most numismatists agree that this was the coin in which Judas received his thirty pieces of silver (Mt. 26:15). The use of the term *argyria hikana*, 'large silver-money', in Mt. 28:12–13 has

been thought by some to suggest that the coins with which the Sanhedrin bribed the guards of the tomb were the large silver staters and not the smaller *drachmai* or *denarii*, though it is possible that the adjective here refers to quantity rather than size.

The *mina*, translated 'pound', occurs in the parable of Lk. 19:11–27.

The 'talent' was not a coin, but a unit of monetary reckoning. Its value was always high, though it varied with the different metals involved and the different monetary standards. The Roman-Attic was equivalent to 240 *aurei* (see below). It was mentioned by Jesus in two parables: in Mt. 18:24 'ten thousand talents' is figurative for a very large sum of money, and in the parable of the talents in Mt. 25:15–28 it is referred to in v. 18 as *argyriōn*, which may suggest that our Lord had the silver talent in mind.

c. Roman coins

The basic Roman coin, mentioned above, was the silver *denarius*. There were 25 *denarii* to the golden *aureus*, the weight of which was fixed by Julius Caesar in 49 BC at 126.3 grs., though subsequent debasing of the coinage under Augustus and his successors brought the weight down to 115 grs. by Nero's time.

The *quadrans* (Gk. *kodrantēs*) was one-quarter of the copper *as* (see below). It is referred to by both Horace (*Satires* 2. 3. 93) and Juvenal (7. 8) as the smallest Roman coin: Mk. 12:42 states that the widow's 2 *lepta* (see *a*, above) were equivalent to a *quadrans*. Mt. 5:26 uses *quadrans* for the smallest coin, which must be paid to clear a debt in full, while the Lucan parallel (12:59) has *lepton*, except in the Western Text, which agrees with Matthew.

The copper *as* (Gk. *assarion*) was a quarter of the bronze *sestertius* and one-sixteenth of the silver *denarius*. It occurs in Mt. 10:29 and Lk. 12:6, where it is translated by the AV as 'farthing' and RV, rsv as 'penny', the price at which two sparrows are sold (Lk. has five sparrows for 2 farthings).

The *denarius* (Gk. *dēnariōn*) gained its name (*deni* = ten at a time) from the fact that at first it was the equivalent in silver of 10 copper *asses*. From 217 BC it was worth 16 *asses*, when the weight of the latter coin was fixed at 28 gr. It was rendered consistently as 'penny' by the translators of the AV and RV (but see the note on Mt. 18:28 in the rvmg.), owing to the fact that British currency, modelled on that of Rome, used *d.* for *denarius* as the abbreviation for penny.

It would appear from the parable of Mt. 20:1–16 to have been the daily wage of a labourer, and 2 *denarii* was the sum paid by the good Samaritan to the innkeeper (Lk. 10:35): that should give some idea of its purchasing power. In Rev. 6:6 'a quart of wheat for a *denarius*, and three quarts of barley for a *denarius*' is an indication of famine prices (*WEIGHTS AND MEASURES).

From Mt. 22:19; Mk. 12:15; Lk. 20:24 we learn that it was the coin used to trick Jesus in the question concerning the payment of tribute-money. Silver *denarii* of the time have been discovered which carry the laureate head of the emperor Tiberius on the obverse, with his mother, Livia, in the role of Pax, holding a branch and sceptre, on the reverse (see *IBA*, p. 87, fig. 90).

The *aureus*, or *denarius aureus* (golden *denarius*), was a gold coin introduced by Julius Caesar in his financial reforms of 49 BC. It finds no

MONEY

mention in the Bible, but is referred to in Jos., *Ant.* 14: 147: it may be the 'gold' of Mt. 10:9.

BIBLIOGRAPHY. K. A. Jacob, *Coins and Christianity*, 1959; R. G. Bratcher, 'Weights, Money, Measures and Time', *The Bible Translator* 10, No. 4, Oct. 1959, pp. 165ff.; Garnet R. MONEY-CHANGERS. The 'exchangers' of Mt. 25:27 (AV) were regular bankers (*trapezitai*); cf. the saying commonly ascribed to our Lord, 'Be expert bankers'—i.e. trustworthy and skilled in detecting counterfeits. A specialized class of money-changers officiated in the Temple precincts, probably in the Court of the Gentiles—*kollybistai* (Mt. 21:12; Mk. 11:15; Jn. 2:15) or *kermatistai* (Jn. 2:14). The former title derived from a word of Semitic origin denoting exchange-rate or commission; the latter would, strictly speaking, relate to a dealer in small change. The trade arose from the fact that money for the Temple, including the obligatory half-shekel (Ex. 30:13; cf. Mt. 17:24, and see E. Schürer, *HJP*, 2, 1978) had to be in Tyrian standard coin, with its high level of silver purity, and not in the current Roman standard. A surcharge was made (Mishnah tractate *Sheqalim*, *passim*) and the way opened for various malpractices (add passages in *HHT* on Mt. 21:12 to those in *SB*). The Lord's cleansing of the Temple included the overthrow of the counters of these dealers at the Passover season. A.F.W.

MOON. The creation of the moon is recorded in Gn. 1:16, where it is referred to as 'the lesser light' in contrast to the sun. It was placed in the heavens to rule the night, and with the other luminaries to be 'for signs and for seasons and for days and years' (1:14). Its appearance in regular phases in the night sky afforded a basis for early *calendars, and the word most commonly used for it (*yārēah*) is closely related to *yerah*, 'month'. The same word occurs in Akkad. (*(w)arhu*), Ugaritic (*yrh*), Phoen. (*yrh*) and other Semitic languages. Another word, used less often for it, is *l'ḥānā*, 'white one' (Ct. 6:10; Is. 24:23; 30:26).

The first day of each new month was considered holy. Hence the association in the OT of the monthly 'new moon' with the weekly sabbath (e.g. Is. 1:13). This fresh beginning was marked by special sacrifices (Nu. 28:11-15) over which the trumpets were blown (Nu. 10:10; Ps. 81:3). Amos depicts the merchants of his day anxiously awaiting the end of the new moon and of the sabbath so that they could resume their fraudulent trading. It seems therefore to have been regarded, like the sabbath, as a day on which normal work was not done. The reference may be, however, to the new moon of the 7th month, regarding which the law stated specifically that no servile work was to be done on it (Lv. 23:24-25; Nu. 29:1-6). 2 Ki. 4:23

suggests that both new moon and sabbath were regarded as providing opportunity for consulting the prophets, and Ezekiel marks out the new moon as a special day for worship (Ezk. 46:1, 3).

The moon is mentioned with the sun as a symbol of permanence (Ps. 72:5). It is quoted as a wonder of creation (Ps. 8:3), and as marking by its behaviour the coming of the Messiah (Mk. 13:24; Lk. 21:25). Ps. 121:6 suggests that it was recognized as capable of affecting the mind, and in the NT Gk. words meaning literally 'moon-struck' are used in Mt. 4:24 and 17:15.

The moon is named as an object of idolatrous worship in Jb. 31:26, and archaeology has shown that it was deified in ancient W Asia from early Sumerian to Islamic times. In Mesopotamia the Sumerian god Nanna, named *Sin by the Akkadians, was worshipped in particular at Ur, where he was the chief god of the city, and also in the city of Harran in Syria, which had close religious links with Ur. The Ugaritic texts have shown that there a moon deity was worshipped under the name *yrh*. On the monuments the god is represented by the symbol of a crescent moon (*AMULETS). At Hazor in Palestine a small Canaanite shrine of the late Bronze Age was discovered which contained a basalt stela depicting two hands lifted as if in prayer to a crescent moon, perhaps indicating that the shrine was dedicated to the moon god (see *IBA*, fig. 112). T.C.M.

MORDECAI (Heb. *mord'kay*; *mord^okay*; Ezr. 2:2).

1. A leader of the exiles who returned with Zerubbabel (Ezr. 2:2; Ne. 7:7; 1 Esdras 5:8).

2. A Jewish exile who had moved to the Persian capital *Susa, where he was employed in the palace. He was a Benjaminite son of Jair and descendant of Kish, taken prisoner to Babylon by Nebuchadnezzar (Est. 2:5-6). He brought up his orphaned cousin Hadassah (*ESTHER) and was rewarded, by being mentioned in the royal chronicles, for revealing a plot against King Xerxes (Est. 2:7, 21-23). (Mordecai has been identified by some with a finance officer at Susa under Xerxes.)

He opposed the vizier Haman who plotted to kill all Jews (Est. 3). When this evil deed was turned against Haman, Mordecai succeeded him in office, being then next in rank to the king (chs. 5-6; 10). He used this position to encourage the Jews to defend themselves against the massacre inspired by Haman. In respect for Mordecai the Persian provincial officials to whom he wrote assisted in protecting the Jews. The celebration of this event by the annual feast of *Purim was later connected with the 'day of Mordecai' (2 Macc. 15:36).

Mordecai is probably the Heb. rendering of a common Bab. personal name *Mardukaya*. This is found in texts, including one c. 485 BC (*AFO* 19, 1959-60, pp. 79-81) and another concerning an official of Ushatannu, satrap of Babylon.

BIBLIOGRAPHY. E. Yamauchi, *Persia and the Bible*, 1990, pp. 234-236. D.J.W.

MOREH (Heb. *mōreh*, 'teacher', 'diviner'). I. The name of a place near Shechem mentioned in Gn. 12:6, where 'ēlōn *mōreh* may be translated 'the teacher's oak' (or 'terebinth'). Dt. 11:30 makes reference to the 'oak of Moreh' in the district of Gilgal (i.e. the Shechemite Gilgal). It is recorded that Abraham pitched his camp there on arriving

in Canaan from Harran, and it was there that God revealed himself to Abraham, promising to give the land of Canaan to his descendants (*MAMRE). This tree may also be the one mentioned in Gn. 35:4 where Jacob hid foreign gods, and a reference to the place also occurs in the story of Abimelech (Jdg. 9:37).

2. The hill of Moreh at the head of the N side of the valley of Jezreel, S of Mt Tabor, 2 km S of Nain, and c. 13 km NW of Mt Gilboa, is the modern Jebel Dahi; it features in Jdg. 7:1, where, in the encounter between Gideon and the Midianites, the Midianites encamped in the valley, by the hill of Moreh, to the N of Gideon's camp by the spring of Harod.

3. Moreh has a quasi-technical sense in the Qumran phrase *mōrēh sēdeq*, commonly translated 'teacher of righteousness' and used as a designation of the first organizer of the Qumran community and possibly of each succeeding leader. There may be an allusion to Joel 2:23, where *mōrēh lis' dāqāh* is rendered '(he hath given you) a teacher of righteousness' in AVMG., or to Ho. 10:12, where *yōrēh sēdeq* is rendered '(he will) teach (you) righteousness' in RVMG., as though the coming of the Qumran teacher were greeted as a fulfilment of these promises. Cf. F. F. Bruce, *The Teacher of Righteousness in the Qumran Texts*, 1957; J. Weirgreen, *From Bible to Mishna*, 1976, pp. 100ff.

R. A. H. G.
F. F. B.

MORESHETH-GATH. Home-town of the prophet Micah (Mi. 1:1; Je. 26:18) near the Philistine territory of Gath (Mi. 1:14); probably the modern Tell ej-Judeih, 32 km SW of Jerusalem and 10 km NE of Lachish. Moresheth-gath (Mi. 1:14) is one of twelve cities listed by the prophet Micah, whose names are by word-play associated with the form of their imminent judgment through invasion. Lachish, so to speak, will have to give a parting bridal-gift or dowry (cf. 1 Ki. 9:16) to Moresheth (*mōrēšet*, which sounds like *m'ōrēšet*, betrothed), as that city is lost to the enemy. See *NEAEHL*, pp. 837–838.

N. H.

MORIAH. In Gn. 22:2 God commanded Abraham to take Isaac to 'the land of Moriah' (*'ereš hammōriyyā*) and there to offer him as a burnt offering upon one of the mountains (*har*). The mountain chosen was 3 days' journey (22:4) from the land of the Philistines (21:34; the region of *Gerar), and was visible from a distance (22:4).

The only other mention of the name occurs in 2 Ch. 3:1, where the site of Solomon's Temple is said to be 'on mount Moriah (*b'har hammōriyyā*), on the threshing-floor of Ornan the Jebusite where God appeared to David (3:2). It should be noted that no reference is made here to Abraham in connection with this site. It has been objected that Jerusalem is not sufficiently distant from S Philistia to have required a 3 days' journey to get there, and that one of the characteristics of Jerusalem is that the Temple hill is not visible until the traveller is quite close, so that the correctness of the biblical identification is called in question. The Samaritan tradition identifies the site with Mt Gerizim (as though Moriah = Moreh; cf. Gn. 12:6), and this is claimed to fulfil the conditions of Gn. 22:4 adequately. However, the distance from S Philistia to

Jerusalem is c. 80 km, which might well have required 3 days to traverse, and in Genesis the place in question is not a 'mount Moriah' but one of several mountains in a land of that name, and the hills on which Jerusalem stands are visible at a distance. There is no need to doubt therefore that Abraham's sacrifice took place on the site of later Jerusalem, if not on the Temple hill.

BIBLIOGRAPHY. F. M. Abel, *Géographie de la Palestine*, 1, 1933, pp. 374–375. T. C. M.

MORTAR AND PESTLE. This formed an alternative to the stone *mill. While in the wilderness the Israelites ground the *manna either in mills or in a mortar (Nu. 11:8; Heb. *m'dōkâ*), and olive oil was produced in the same way ('beaten oil', Ex. 27:20). Pr. 27:22 shows that evil cannot be removed from a wicked man even if he were to be crushed small (Heb. *maqtēš*, 'mortar'; 'flī, 'pestle'). For Egyptians using mortar and pestle, see *ANEP*, no. 153, upper right, and 154, lower part. The mortar was either a hollowed stone or a deep wooden bowl, the pestle a stout wooden pole. A small hollow in the land could also be called 'mortar' from its form, so Jdg. 15:19; Zp. 1:11. (*MAKTESH.) A. R. M.

MOSERAH, MOSEROTH. A camp-site of the Israelites in the wilderness (Nu. 33:30f.), where Aaron died (Dt. 10:6). The name could mean 'chastisement(s)', with reference to the trespass at Meribah (cf. Nu. 20:24; Dt. 32:51). The site is unidentified, but may have been close to Mt *Hor, which also figures as the place of Aaron's death and burial. See J. A. Thompson, *Deuteronomy*, *TOTC*, 1974, p. 145. D. F. P.

MOSES. The great leader and lawgiver through whom God brought the Hebrews out of Egypt, constituted them a nation for his service, and brought them within reach of the land promised to their forefathers.

I. Name

In Ex. 2:10 it is said that 'she called his name *Mōšeh*: and she said, Because I drew him (*m'sūtî-hū*) out of the water'. Most interpreters identify the 'she' as Pharaoh's daughter, and this has led many to assume an Egypt. origin for the name *Mōšeh*, Egypt. *ms*, 'child' or '(one) born' being the best possibility. However, the antecedent of 'she' could as easily be 'the woman', i.e. Moses' own mother and nurse, who 'had called his name . . .' (so W. J. Martin). Ex. 2:10 clearly links the name of *Mōšeh* with his being taken from the waterside (*māsā*, 'to draw forth'). This pun would come naturally to a Hebrew speaker but not to an Egyptian: which fact would favour the view just mentioned that it was Moses' own mother who first named him, rather than Pharaoh's daughter.

Mōšeh as it stands is an active participle meaning 'one who draws forth', and may be an ellipsis for some longer phrase. In the 14th/13th centuries BC Egypt. *ms*, 'child' (and the related grammatical form in such names as Ramose, 'Rē, is born') was pronounced approximately *māsē*, and there is no philological or other reason why Moses' Egypt. adoptive mother should not have assimilated a

MOSES

Semitic *māši* or *Mōseh* to the common name-word *Māsē*, *Mōseh* in her own tongue. Compare assimilations such as German Löwe to English Lowe in our own day. Hence Moses' name may simply be Semitic assimilated to Egypt. while in Egypt. The majority view, however, is that the daughter of Pharaoh called him *Mōse*, 'child' (or—less suitably—a theophoric name in *-mose*), which passed into Heb. speech as *Mōseh*. This view, however, fails to account adequately for the Semitic pun, which there is no objective reason to reject as unhistorical, as it is a common practice in Egypt and elsewhere (including the OT) long before Moses; such a view, moreover, runs into real phonetic difficulties over Egypt. *s* appearing as *š* in *Mōseh* but as *s* in Ra'amses and Phinehas in Hebrew, as was pointed out long ago by A. H. Gardiner, *JAOS* 56, 1936, pp. 192–194—a problem in no way solved by J. G. Griffiths, *JNES* 12, 1953, pp. 225–231, the best statement of this view.

II. Life and background

a. Ancestry

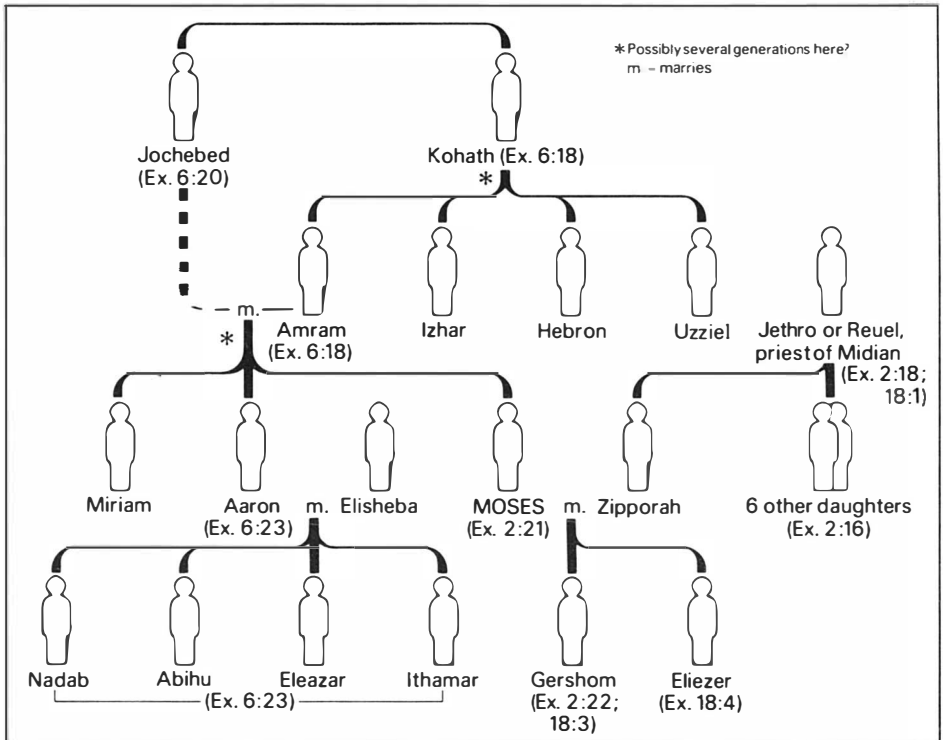

Moses belonged to the tribe of Levi, to the clan of Kohath, and to the house or family of Amram (Ex. 6:16ff.). That he was the distant descendant, not the son, of Amram by Jochebed is hinted at inasmuch as his parents are not named in the detailed account of his infancy (Ex. 2), and is made almost certain by the fact that Amram and his three brothers had numerous descendants within a year of the Exodus (Nu. 3:27f.). (*CHRONOLOGY OF THE OT, III. b.)

b. Egyptian upbringing

To save her baby son from the pharaonic edict ordering the destruction of Hebrew male infants, Moses' mother put him into a little basket of pitch-caulked reeds or papyrus among the rushes by the stream bank and bade his sister Miriam keep watch. Soon a daughter of Pharaoh came with her maidservants to bathe in the river, found the child, and took pity on him. Miriam discreetly offered to find a nurse for the child (in fact, his mother), and so Moses' life was saved. When weaned, he was handed over to his adoptive 'mother', the Egyptian princess (Ex. 2:1–10). Of Moses' growth to adult maturity in Egyptian court society no detail is given, but a boy in his position in New Kingdom period court circles could not avoid undergoing a substantial basic training in that 'wisdom of the Egyptians' with which Stephen credits him (Acts 7:22).

Modern knowledge of ancient Egypt yields a rich background for the early life of Moses in Egypt. The pharaohs of the New Kingdom period (c. 1550–1070 BC) maintained residences and *harims* not only in the great capitals of Thebes, Memphis and Pi-Ramesse (Ra'amses) but also in other parts of Egypt. Typical is the long-established *harim* in the Fayum, where the royal ladies supervised a hive of domestic industry (A. H. Gardiner, *JNES* 12, 1953, pp. 145–149, especially p. 149). One such *harim* must have been Moses' first Egyptian home.

Anciently, children of *harim*-women could be educated by the Overseer of the *harim* ('a teacher of the children of the king', F. Ll. Griffith and P. E.

The family of Moses

Newberry, *El Bersheh*, 2, 1894, p. 40). In due course princes were given a tutor, usually a high official at court or a retired military officer close to the king (H. Brunner, *Altägyptische Erziehung*, 1957, pp. 32–33); Moses doubtless fared similarly.

Moreover, as a Semite in Egypt, Moses would have had no difficulty whatever in learning and using the twenty or so letters of the proto-Canaanite linear alphabet, especially if he had been submitted to the much more exacting discipline of a training in the scores of characters and sign-groups of the Egyptian scripts (though even these require only application, not genius, to learn them). The fact that Egypt, not Palestine, was his home would be no barrier to familiarity with this simple linear script. The 'proto-Sinaitic' inscriptions of the early 15th century BC are certainly just informal dedications, work-notes and brief epigraphs (for offerings) by Semitic captives from the Egypt E Delta (or Memphis settlements) employed in the turquoise-mines (cf. W. F. Albright, *BASOR* 110, 1948, pp. 12–13, 22), and illustrate free use of that script by Semites under Egyptian rule nearly two centuries before Moses. Still more eloquent of the ready use of the linear script by Semites in Egypt is an ostracon from the Valley of the Queens at Thebes, some 560 km S of Palestine, Sinai, or the Delta (J. Leibovitch, *Annales du Service des Antiquités de l'Égypte* 40, 1940, p. 119, fig. 26, and pl. 16, 19:50); the one word fully preserved can be reasonably read 'mht, 'maid-servants' (Albright, *op. cit.*, p. 12, n. 33).

c. Foreigners at the Egyptian court

Semites and other Asiatics could be found at every level of Egyptian society in the New Kingdom. Besides thousands of prisoners brought from Canaan to be slaves (cf. *ANET*, pp. 246b, 247b), foreign artisans, Syrian warriors in Egyptian service (e.g. *ANEP*, fig. 157), Asian youths as attendants, fan-bearers, etc., at court (R. A. Caminos, *Late-Egyptian Miscellanies*, 1954, pp. 117, 200–201), Semites in Egypt could rise to the highest levels of the social pyramid. They were courtiers between Egypt and Syria (*ANET*, p. 258b), charioteers who themselves owned servants (J. Černý, *JEA* 23, 1937, p. 186), and merchants (Caminos, *op. cit.*, p. 26: 'Aper-Ba'al); the daughter of a Syrian sea-captain Ben-'Anath could marry a royal prince (W. Spiegelberg, *Recueil de Travaux*, 16, 1894, p. 64).

Under the Ramesside kings Asiatics were still more prominent. Thus, one of King Merenptah's trusted cupbearers was the Syrian Ben-'Ozen of Šūr-Bashan ('Rock-of-Bashan'), who accompanied the vizier in overseeing work on that pharaoh's tomb in the Valley of the Kings (*JEA* 34, 1948, p. 74). Further, at the very end of the 19th Dynasty, a Syrian very briefly took over control of Egypt itself: he was very possibly the immensely powerful Chancellor Bay (Černý in Gardiner, *JEA* 44, 1958, pp. 21–22).

In New Kingdom Egypt, Canaanite and other Asiatic deities were accepted (Baal, Resheph, 'Ash-taroht, 'Anath, etc.; cf. *ANET*, pp. 249–250); and as well as innumerable loan-words, Canaanite literary themes were current, either borrowed or assimilated to Egypt. ones (W. F. Albright, *Archaeology and the Religion of Israel*, 1953, pp. 197–198 (rape of 'Anath); T. H. Gaster, *BO* 9, 1952, pp. 82–85, 232; and G. Posener, *Mélanges Isidore Lévý*, 1955, pp. 461–478 (the greed of the Sea); and reference to a story of Qazardi, *ANET*, p. 477b). Some

Egypt. officials prided themselves on being able to speak the lip of Canaan as well as know its geography (*ANET*, p. 477b), not to mention those who had to learn Babylonian cuneiform for diplomatic purposes (cf. Albright, *Vocalization of the Egyptian Syllabic Orthography*, 1934, p. 13, n. 50, and *JEA* 23, 1937, pp. 191, 196–202).

d. In Midian and Sinai

Moses felt for his labouring brethren (cf. Acts 7:24) and slew an Egypt. overseer whom he found beating a Hebrew (Ex. 2:11f.); but the deed reached Pharaoh's ears, so Moses fled E over the border to Midian for safety (Ex. 2:15ff.). Flight over the E border was the escape chosen also by Sinuhe 600 years earlier (*ANET*, p. 19) and by runaway slaves later in the 13th century BC (*ANET*, p. 259b). Moses helped the daughters of a Midianite shepherd-priest Reuel/Jethro to water their flocks, and married one of them, Zipporah, who bore him a son, Gershom (Ex. 2:16–22).

Through the wonder of the burning bush that was not consumed came Moses' call from God, the God of ancestral Abraham, Isaac and Jacob (Ex. 3:6) and not just of his Midianite/Kenite in-laws, except in so far as they too were descendants of Abraham (cf. Gn. 25:1–6) and may have retained the worship of Abraham's God. After some procrastination, Moses obeyed the call (Ex. 3–4). Apparently Moses had omitted to circumcise one of his sons, perhaps under Zipporah's influence. At any rate, under threat of Moses' death by God's agency, she circumcised the boy, calling her husband 'a bridegroom of blood' (Ex. 4:24–26) because circumcision was binding on him and his people (but perhaps not on her people?). Moses may have gone on alone from this point, as later on Zipporah returns to Moses from Jethro's care (Ex. 18:1–6).

e. On the eve of the Exodus

After meeting his brother and the elders of Israel (Ex. 4:27–31), Moses with Aaron went before the pharaoh to request that he release the people to hold a feast to the Lord in the wilderness. But Pharaoh contemptuously dismissed them—there were already enough religious holidays and festivals on which no work was done, and this was just an excuse to be idle (Ex. 5:8, 17).

That Moses should be able to gain ready access to the pharaoh is not very surprising, especially if the pharaoh of the Exodus was Rameses II. P. Montet (*L'Égypte et la Bible*, 1959, p. 71) appositely refers to Papyrus Anastasi III, which describes how the 'young people of (Pi-Ramesse) Great of Victories . . . stand by their doors . . . on the day of the entry of Wosermaet're-'Setepenre' (i.e. Rameses II) . . . every man being like his fellow in voicing his petitions' (i.e. to the king), cf. *ANET*, p. 471b. For the brickmaking of the Israelites and use of straw, see *Brick. The organization of labour into gangs of workmen under foremen responsible to taskmasters is at once authentic and natural.

As for absence from work, Egypt. ostraca (*ΠΑΡΥΡΙ) include journals of work that give a day-to-day record of absenteeism, names of absentees and reasons. One ostrakon shows that the workmen of the royal tomb were idle at one period for 30 days out of 48. One journal of absences takes note of several workmen, 'offering to his god' (A. Erman, *Life in Ancient Egypt*, 1894, pp. 124–125),

MOSES

and the laconic entry *wšf*, 'idle', is not infrequent in such journals. That the Hebrews should go 3 days' journey into the wilderness to celebrate their feast and not arouse Egyp. religious antagonism (Ex. 8:26f.; 10:9, 25f.) is, again, thoroughly realistic, as is pointed out by Montet (*op. cit.*, pp. 99–101 with references), in connection with sacred animals, especially the bull-cults in the Egyp. Delta provinces (*CALF, GOLDEN).

After the rebuff from Pharaoh, Moses was reassured by God that he would fulfil his covenant to their descendants, bringing them from Egypt to Palestine (Ex. 6:2–9). It should be noted that Ex. 6:3 does *not* deny knowledge of the name of YHWH to the Patriarchs, though it may possibly deny real knowledge of the significance of the name: see on this, W. J. Martin, *Stylistic Criteria and the Analysis of the Pentateuch*, 1955, pp. 16–19, and J. A. Motyer, *The Revelation of the Divine Name*, 1959, pp. 11–17. Successive *plagues demonstrated the God of Israel's power to Pharaoh in judgment (Ex. 7:14–12:36). On the eve of the last plague, the smiting of the first-born, the families of Israel had to kill a spotless lamb and mark the jambs and lintels of their house-doors with the blood, so that God should not destroy their first-born: 'the sacrifice of the Lord's passover' (Ex. 12:27). It has been suggested by B. Couroyer (*RB* 62, 1955, pp. 481–496) that the Hebrew *ps̄h* is derived from the Egyptian *p(-)sh̄*, 'the stroke, blow' (*i.e.* of God), but this meaning does not fit all the Hebrew evidence, and so remains doubtful.

f. From Succoth to Sinai

On the date of the Exodus, see *Chronology of the OT; also J. J. Bimson, *Redating the Exodus and Conquest*, 1978; for its route from Ra'amases and Succoth out of Egypt, see *Encampment by the Sea, *Pithom; for travels in Sinai, see *Wilderness of Wandering. When Israel encamped by the *yam s̄ip̄*, 'sea of reeds', the pharaoh and his people imagined that the Hebrews were trapped (Ex. 14:1–9). For the figure of over 600 chariots (Ex. 14:7), compare the figures of 730 and 1,092 (*i.e.* 60 [+] 1032) Syr. chariots captured in Canaan on two campaigns by Amenophis II (*ANET*, pp. 246–247); on the role of chariots in the Egyptian army, cf. R. O. Faulkner, *JEA* 39, 1953, p. 43. But God divided the waters, led his people to safety and turned the waters upon the Egyp. forces. Then Moses and the Hebrews raised their song of God's triumph (Ex. 15).

Israel encamped at the foot of Mt Sinai and Moses went up to commune with God and receive the terms of the covenant (the 'ten commandments' of Ex. 20), which were the foundation of Israel's subsequent role as the people of God (he being their great King), and also the series of statutes carrying the commandments into effect (Ex. 21–23).

After the idolatrous lapse over the golden *calf and the restoration of the covenant so quickly violated (Ex. 32:1–35:3), the tabernacle, ark and furnishings were duly made and inaugurated for the worship of God (Ex. 35:4–40:33). The techniques used for the portable tabernacle reflect Moses' Egyp. training in so far as such techniques had been used in Egypt for portable structures (religious and otherwise) for over 1,000 years before his time (cf. K. A. Kitchen, *THB* 5/6, 1960, pp. 7–13). However, the representational and didactic nature of the tabernacle sacrifices stands out in

marked contrast to Egyp. ritual. The Heb. sacrifices speak in picture-language of the offensiveness of sin in God's sight, and of the need of atonement for its cancellation, and were not merely a magically efficacious re-enactment of daily life needed to keep the god fed and flourishing as in Egyp. ritual.

At Sinai a census was taken, the manner of Israel's camp and marching order laid down. Levitical care for the tabernacle and its contents was arranged (Nu. 1–4) among other things on the eve of leaving Sinai (Nu. 5:1–10:10). The arrangement of the tribes by their standards in a 'hollow rectangle' round the tabernacle is also probably a mark of God's use of Moses' Egyp. training (cf. Kitchen, *op. cit.*, p. 11). The long, silver trumpets and their use for civil assembly and military and religious purposes (Nu. 10:1–10) is illustrated by contemporary Egyp. use of such trumpets (cf. H. Hickmann, *La Trompette dans l'Égypte Ancienne*, 1946, especially pp. 46–50). Ox-wagons were regularly used on campaigns in Syria by the pharaohs from Tuthmosis III (c. 1470 BC) onwards (*ANET*, p. 204a, 'chariot'), *e.g.* by Rameses II, c. 1270 BC, at Qadesh (C. Kuentz, *La Bataille de Qadesh*, 1928/34, pl. 39, left centre). With Moses' wagons each drawn by a span of (two) oxen in Sinai, compare the ten wagons (Egyp. 'grt from Heb. 'glt, same word, in Nu. 7:3, 6–7) each drawn by six spans of oxen that carried supplies for 8,000 quartermen of Rameses IV (c. 1160 BC) from the Nile valley into the deserts of Wadi Hammamat between the Nile and the Red Sea, in very similar conditions to Sinai (*ARE*, 4, §467).

g. From Sinai to Jordan

In their 2nd year out from Egypt (Nu. 10:11), Israel left Sinai and reached Kadesh-barnea. Moses thence sent spies into Canaan. The land was a goodly one, but its inhabitants were powerful (Nu. 13:17–33). At this report, faithless Israel rebelled, but Moses pleaded with God to spare Israel (Nu. 14:5–19). Therefore the Lord decreed instead that Israel's travels in the wilderness should last 40 years until the rebellious generation had died and given place to a new one (Nu. 14:20–35).

It is very easy to forget that, prior to this tragic episode, Israel was intended to have crossed from Egypt—*via* Sinai—directly to the Promised Land within a few years; the 40 years in the wilderness was purely a commuted sentence (Nu. 14:12, 20–30, 33) and *not* part of God's 'first and best' plan for Israel. This should be remembered when reading the laws in Ex. 22–23, relating to agriculture, vineyards, *etc.*; Israel at Sinai had had 4 centuries living in Egypt amid a pastoral and agricultural environment (cf. Dt. 11:10), neither they nor their patriarchal forefathers were ever true desert nomads (cf. Gn. 26:12 and 37:6–8), and at Sinai they might well count themselves within striking distance of the land where these laws would find a speedy application. Israel had no need to settle in Canaan before such laws could be given, as is so often asserted (cf. Kitchen, *op. cit.*, pp. 13–14).

On the twin rebellion of Korah against the ecclesiastical role (Nu. 16:3), and Dathan and Abiram against the civil authority (Nu. 16:13), of Moses and Aaron, see *Wilderness of Wandering. This double revolt was followed by the threat of general revolt (Nu. 16:41–50). Back at Kadesh-barnea, where Miriam died, Moses himself and Aaron sinned blasphemously casting themselves in God's role: 'Hear now, you rebels: shall we [not

God] bring forth water for you out of this rock?' (Nu. 20:10); their punishment was that neither should enter the Promised Land, and was one which Moses later felt very keenly (Dt. 3:24-27). The Edomites (Nu. 20:14-21; also Moab, *cf.* Jdg. 11:17) refused Israel passage through their territories so that Israel must go round their borders. At this time Aaron died and was buried in Mt Hor (Nu. 20:22-29). Yet again Israel rebelled. God punished them by sending serpents among them, and again Moses interceded for them. God commanded him to set up a bronze *serpent on a pole (Nu. 21:4-9), to which those bitten might look and live, through faith in the Healer. Thereafter Israel reached the Amorite kingdom of Sihon. Sihon marched—unprovoked—to attack Israel, into whose hand God then delivered him and his land; Og of Bashan, likewise hostile, met a similar fate (Nu. 21:21-35).

At last, Israel encamped in the plains of Moab (Nu. 22:1; 25:1). A second census was carried out, and preparations for apportioning the Promised Land were begun. A punitive war was conducted against Midian, and the tribes of Reuben, Gad and half-Manasseh were allowed to take Transjordan as their portion on condition that they would help their brethren beyond Jordan after Moses' death.

*Deuteronomy gives Moses' farewell addresses to his people; the covenant between God and Israel was renewed and placed under sanctions of blessing and cursing in a manner calculated to be widely understood in the 14th/13th centuries BC (as shown by *covenants or treaties from the contemporary Hittite state archives, *cf.* G. E. Mendenhall, *BA* 17, 1954, pp. 53-60 and *passim*). Finally, Moses saw to it that Israel had her covenant-law in written form, appropriately placed alongside the ark of the covenant (Dt. 31:24), left them a song to enjoin on them obedience to that law (Dt. 32, especially vv. 44-47), and laid upon them his dying blessing (Dt. 33) before ascending Mt Nebo to view the land he was not destined to enter, and being laid to rest in the land of Moab (Dt. 32:48-52; 34:1-8).

III. The work of Moses

a. Leader

As a leader of his people, Moses was not only equipped technically through his Egypt upbringing and training (Acts 7:22), but was also, on a much more fundamental level, a supreme leader by being a close follower of his God by faith (Heb. 11:23-29; *cf.* Acts 7:23-37). Israel repeatedly failed to have faith in their God in all circumstances, broke the commandments, and rejected God's leadership in rebelling against Moses (sometimes Moses and Aaron) through whom that leadership was manifested (*e.g.* Nu. 14:4, 10; 16:41f.). Moses' own family let him down (Ex. 32:1ff.; 21; Nu. 12:1f.). Great indeed was Moses' forbearance (Nu. 12:3); he was constantly interceding with God for sinning Israel (*e.g.* Nu. 14:13ff.; 16:46, *etc.*) and pleading with Israel to be faithful to their delivering God (*e.g.* Nu. 14:5-9). That he was a man of enduring faith in the invisible God (Heb. 11:27b) and so jealous for God's name (*cf.* Nu. 14:13ff.) can alone explain his achievement (*cf.* Phil. 4:13).

b. Prophet and lawgiver

As one especially prominent in declaring and

teaching the will, commandments and nature of God, Moses was characteristically the model of all later true prophets until the coming of that One of whom he was forerunner (Dt. 18:18; Acts 3:22f.), to whom all the prophets bear witness (Acts 10:43). He was called by God (Ex. 3:1-4:17) not only to lead the people out of bondage but to make known God's will. Typical is Ex. 19:3, 7: God speaks to Moses, and he to the people.

Moses communed with God long (Ex. 24:18) and often (*e.g.* Ex. 33:7-11), as did later prophets (*cf.* Samuel's life of prayer, 1 Sa. 7:5; 8:6; 12:23; 15:11). Just as the covenant was declared and renewed (Dt. 29:1) through Moses, so the later prophets in turn repeatedly reproved Israel for breaking the covenant and its conditions (*e.g.* 1 Ki. 18:18; 2 Ki. 17:15, 35-40; 2 Ch. 15:1f., 12; Je. 6:16, 19; 8:7f., 11:1-5, 6-10; Ho. 6:7; Am. 2:4; Hg. 2:5; Mal. 2:4ff.), though Jeremiah (31:31-34) could also look forward to a new covenant.

The term 'code' often given to various parts of the Pentateuch is misleading: Moses was not simply the promulgator of some kind of ideal, civil 'code Napoléon' for Israel. Contemporary Near Eastern treaty-documents of the 13th century BC show that Moses was moved by God to express Israel's relationship to God in the form of a 'suzerainty' treaty or *covenant, by which a great king (in this case, God, the King of kings) bound to himself a vassal-people (here, Israel), the form in question being uniquely transmuted to the religious and spiritual plane. This was a kind of formulation that would be universally understood at the time. For Israel, the basic stipulations of their covenant were the Ten Commandments, in effect moral law as the expression of God's will; and the detailed covenant-obligations took the form of 'civil' statute rooted in the moral law of the Ten Commandments (*e.g.* Ex. 21-23; Dt. 12-26, *etc.*), and even of prescriptions governing the forms of permissible and authorized religious practice (*e.g.* Ex. 25:1ff.; 35:10ff.; Lv.); Israel's life in every way was to be marked by righteousness and holiness as issuing from obedience to the covenant, or, in other words, fulfilling the law. Attainment, however, waited upon further divine provision; *cf.* Gal. 3:23ff. (also 15-22, especially 21f.).

Because Israel's covenant was not merely a treaty of political obligations but regulated their daily life before God, its ordinances served also as a minimum basis of 'civil' law for the people. The existence of long series of laws promoted by individual heads of state from the end of the 3rd millennium BC onwards makes it superfluous to date the giving of the pentateuchal laws any later than Moses (13th century BC).

The number or quantity of 'civil' laws in the Pentateuch is in no way excessive or exceptional when compared with other collections. In Ex. 21-23 may be discerned about 40 'paragraphs', in Lv. 18-20 more than 20 'paragraphs', and in Dt. 12-26 nearly 90 'paragraphs', of very variable length from a chapter or half-chapter of the present-day text-divisions down to one short sentence; say, about 150 'paragraphs' in these sections altogether, leaving aside the more obviously religious prescriptions. This figure compares very reasonably with the 282 paragraphs of Hammurapi's laws, the 115 surviving paragraphs of the Middle Assyrian laws (many more being lost) or the 200 paragraphs of the Hittite laws.

MOSES

c. Author

In modern times estimates of Moses' role as an author have varied over the whole range of conceivable opinion between the two extremes of either attributing to him every syllable of the present Pentateuch, or denying his very existence.

That Moses' name was attached to parts of the Pentateuch right from the start is clearly shown by the biblical text itself. Thus, at an utter minimum, Moses as a writer is undeniably credited with the following: a brief document on God's judgment against Amalek (Ex. 17:14); the 'book of the covenant' (Ex. 24:4-8; on the external parallels, this must include Ex. 20 and 21-23, the commandments and attendant laws); the restoration of the covenant (Ex. 34:27, referring to 34:10-26); an itinerary (Nu. 33:1f, referring to the document that furnished 33:3-40); the major part of Dt. 10 to 31 (Dt. 31:9-13, 24ff., referring to renewal of the covenant and re-enforcement of its laws that precede ch. 31); and two poems (Dt. 32; cf. 31:22; and Ps. 90 by title, which there is no objective evidence to doubt). Later OT and NT references to Moses in this connection are collected by various scholars, e.g. by E. J. Young, *IOT*, 1949, pp. 50f.

The ability to write historical narrative, record laws and compose poetry in one man is not unique. An Egypt. example of this kind of ability 7 centuries before Moses is probably furnished by Khety (or Akhtoy), son of Duauf, a writer under the pharaoh Amenemhat I (c. 1991-1962 bc), who was apparently educator, political propagandist and poet. He wrote the *Satire of the Trades* for use in scribal schools, was probably commissioned to give literary form to the 'Teaching of Amenemhat I', a political pamphlet, and may have been author of a well-known Hymn to the Nile often copied out by scribes along with the other two works (cf. Gardiner, *Hieratic Papyri in the British Museum. Third Series*, 1935, 1, pp. 40, 43-44, and Posener, *Littérature et Politique dans l'Égypte de la XIIe Dynastie*, 1956, pp. 4-7, 19, n. 7, 72-73). However, beyond the 'utter minimum' already mentioned above, there is no objective reason why Moses should not have written, or have caused to be written (at dictation—hence third person pronouns), considerably more of the contents of the present Pentateuch, though just how much more must remain a matter of opinion.

d. Later fame

From Joshua (8:31; cf. 1 Ki. 2:3; 2 Ki. 14:6; Ezr. 6:18, etc.) to NT times (Mk. 12:26; Lk. 2:22; Jn. 7:23), the name of Moses was associated with the OT, especially the Pentateuch; note 2 Cor. 3:15, where 'Moses' stands *pars pro toto* for the OT. And it was Moses and Elijah, the representatives of OT law and prophecy, who stood with Christ on the Mount of Transfiguration (Mt. 17:3f.).

BIBLIOGRAPHY. O. T. Allis, *God Spoke by Moses*, 1951; G. von Rad, *Moses*, 1960; H. H. Rowley, *Men of God*, 1963, pp. 1-36; *idem*, *From Moses to Qumran*, 1963, pp. 35-63; R. Smend, *Das Mosebild von Heinrich Ewald bis Martin Noth*, 1959; H. Schmid, *Mose. Überlieferung und Geschichte*, 1968. K.A.K.

MOUNT, MOUNTAIN. The topographical terms *gib'ā* and *hār* in Heb., and *bounos* and *oros* in Gk., are best translated by the Eng. 'hill' and 'mountain' respectively. The term *gib'ā*, 'hill', is specific,

referring to an elevated site, slope or ascent. Its root meaning, 'bowl' or 'hump-backed', refers accurately to the rounded hills which form the backbone of central Palestine, carved out of the hard and folded arches of Cenomanian limestone. Their eroded form is distinct from the deep dissection of the soft Senonian limestones which flank the Judaean highlands, which are graphically described in AV as 'slippery places' (Dt. 32:35; Pr. 3:23; Je. 23:12; 31:9). Specific sites of the hills and mountains are personified in Scripture with descriptive titles. Such are: head (Gn. 8:5; Ex. 19:20; Dt. 34:1; 1 Ki. 18:42), ears (Jos. 19:34), shoulder (Jos. 15:8; 18:16), side (1 Sa. 23:26; 2 Sa. 13:34), loins (Jos. 19:12), rib (2 Sa. 16:13), back—possible derivation of Shechem, backed by Mt Gerizim—and thigh (Jdg. 19:1, 18; 2 Ki. 19:23; Is. 37:24).

The term *hār*, generally translated 'mountain' in modern vss, is more general, used indiscriminately of a single mount, a mountain range, or a tract of mountainous terrain. In Eng. mountain and hill are relative terms associated with altitudinal differences, but AV regards the Heb. OT terms *gib'ā* and *hār* as almost interchangeable. Similarly, in NT, Jesus, e.g., is described as coming down the 'hill' (Lk. 9:37) which he ascended the previous day as the 'Mount' of Transfiguration. In the following passages AV would be better rendered 'mountain', as RSV: Gn. 7:19; Ex. 24:4; Nu. 14:44-45; Dt. 1:41, 43; 8:7; 11:11; Jos. 15:9; 18:13-14; Jdg. 2:9; 16:3; 1 Sa. 25:20; 26:13; 2 Sa. 13:34; 16:13; 21:9; 1 Ki. 11:7; 16:24; 20:23; 22:17; 2 Ki. 1:9; 4:27; Pss. 18:7; 68:15-16; 80:10; 95:4; 97:5; 98:8; 104:10, 13, 18, 32; 121:1; Lk. 9:37. On the other hand, Heb. *hār* is correctly termed 'hill country' (Jos. 13:6; 21:11; cf. Gk. *oreinē*, Lk. 1:39, 65, when applied to a regional tract of land such as Ephraim and Judah. It is also used of the land of the Amorites (Dt. 1:7, 19-20), of Naphtali (Jos. 20:7), of the Ammonites (Dt. 2:37) and Gilead (Dt. 3:12).

The identification of specific sites is therefore not always possible, as in the cases of the high mountain of temptation (Lk. 4:5), the mount of the Beatitudes (Mt. 5:1), and the Mount of Transfiguration (Mt. 17:1; Mk. 9:2; Lk. 9:28). Mt *Sinai cannot be identified if, as some have suggested, it was a previously active volcano (Ex. 19:16; Pss. 104:32; 144:5). The traditional location in the Sinai Peninsula (Jebel Mūsa) would in that case be impossible geologically, as the ancient rocks of the district show no evidence of recent volcanicity. Two pleistocene volcanic cones, perhaps active in historic times, occur on the E side of the Gulf of Aqabah, but some authorities cannot see how this fits with the route of the *Exodus described.

The mount of assembly mentioned in Is. 14:13 occurs in the boast of the king of Babylon, and may be an allusion to a probable Bab. legend relating to the dwelling of the gods (cf. Jb. 37:22; Ezk. 28:13f.).

Armageddon, Hebraicized Har-magedon in AV (Rev. 16:16), may refer to the mountain district of *Megiddo, i.e. Mt Gerizim, which overlooks the plain of Megiddo, the location of other apocalyptic scenes (cf. Zc. 12:11).

Mountains have great significance in the geography and history of *Palestine. Consequently they are frequently referred to in the Scriptures. They provide vistas—'go up to the top of Pisgah and lift up your eyes' (Dt. 3:27; cf. Lk. 4:5). Their influence on higher rainfall makes them a symbol of fertility (Dt. 33:15; Je. 50:19; Mi. 7:14), grazing-

places (Ps. 50:10) and hunting-grounds (1 Sa. 26:20). They are associated with pagan sanctuaries (1 Ki. 18:17-46; Is. 14:13; 65:7; Ezk. 6:13). Their inaccessibility makes them places of refuge (Jdg. 6:2; 1 Sa. 14:21-22; Ps. 68:15, 22; Mt. 24:16).

Mountains are a symbol of eternal continuance (Dt. 33:15; Hab. 3:6) and stability (Is. 54:10). They are considered as the earliest created things (Jb. 15:7; Pr. 8:25), of ancient origin (Ps. 90:2) and objects of the Creator's might (Ps. 65:6) and majesty (Ps. 68:16). They are the scenes of theophanies, melting at Yahweh's presence (Jdg. 5:5; Ps. 97:5; Is. 64:1; Mi. 1:4) and shuddering at his judgments (Ps. 18:7; Mi. 6:1f.). They are called to cover the guilty from his face (Ho. 10:8; Lk. 23:30). When God touches them they bring forth smoke (Pss. 104:32; 144:5). They also rejoice at the advent of Israel's redemption (Ps. 98:8; Is. 44:23; 49:13; 55:12), leap at the praise of the Lord (Ps. 114:4, 6) and are called to witness his dealings with his people (Mi. 6:2).

Mountains are also symbols of difficult paths in life (Je. 13:16), obstacles (Mt. 21:21), and other difficulties (Zc. 4:7), the removal of which is possible to those of strong faith (Mt. 17:20).

J. M. H.

MOUTH. Heb. *peh* with several other words occasionally translated mouth, and Gk. *stoma*. Both are used not only of the mouth of man or beast, or anthropomorphically of God, but are often translated 'edge', in the phrase 'edge of the sword'. *peh* is used also of the mouth of a well (Gn. 29:2), a sack (Gn. 42:27), or a cave (Jos. 10:22).

The general usage is very close to and almost interchangeable with *lip or *tongue. The hand laid upon the mouth, like the lip, was a sign of shame (Mi. 7:16). The mouth can sin (Ps. 59:12) or utter good. The tendency to speak of the mouth as acting independently, by synecdoche or ignorance of physiology, is not as marked as in the case of lip. This may be because the Heb. did not distinguish clearly between the supposed functions of the internal organs, and the mouth, being partly internal, was obviously connected with them (see *HEART and cf. Pr. 16:23 where *peh* is translated in RSV as 'speech').

Frequently the mouth is said to be filled with words of one kind or another, or a spirit which causes certain words to be spoken (1 Ki. 22:22; Ps. 40:3). By extension the word *peh* came to mean words or commandments (Ex. 17:1). B. O. B.

MUSIC AND MUSICAL INSTRUMENTS.

I. Music

It is evident from the frequent references in the OT that music played an important part in Heb. culture. According to tradition Jubal, the son of Lamech, who 'was the father of all those who play the lyre and pipe' (Gn. 4:21), was the inventor of music. The close relation between the pastoral and the musical arts is shown in that Jubal had an elder brother Jabal who was 'father of those who dwell in tents, and have cattle' (Gn. 4:20).

At a later stage music was consecrated to the service of the Temple worship, but found secular use also, from early times. Thus Laban reproached Jacob for stealing away without allowing him to

cheer his departure 'with mirth and songs, with tambourine (AV tabret) and lyre' (Gn. 31:27). It was frequently used on occasions of rejoicing, when it was regularly linked with the *dance. There were songs of triumph after victory in battle (Ex. 15:1ff.; Jdg. 5:1ff.). Miriam and the women celebrated the downfall of Pharaoh and his horsemen 'with timbrels and dancing' (Ex. 15:20ff.), and Jehoshaphat returned victorious to Jerusalem 'with harps (AV psalteries) and lyres and trumpets' (2 Ch. 20:28). Music, singing and dancing were common at feasts (Is. 5:12; Am. 6:5). In particular, they were features of the vintage festivals (Is. 16:10) and of marriage celebrations (1 Macc. 9:37, 39). Kings had their singers and instrumentalists (2 Sa. 19:35; Ec. 2:8). The shepherd boy also had his lyre (1 Sa. 16:18). The young men at the gates enjoyed their music (La. 5:14). Even the harlot increased her seductive powers with song (Is. 23:16).

Music was used at times of mourning as well as at times of gladness. The dirge (*qinā*) which constitutes the book of Lamentations and David's lament over Saul and Jonathan (2 Sa. 1:18-27) are notable examples. It became the custom to hire professional mourners to assist at funerals. These regularly included flautists (Mt. 9:23). According to Maimonides, the poorest husband was expected to provide at least two flautists and one mourning woman for the funeral of his wife (*Mišnāyōt* 4).

As music formed an integral part of Heb. social life, so it had its place in their religious life. 1 Ch. 15:16-24 contains a detailed account of the organization by David of the levitical choir and orchestra. Apart from this passage there are only scattered and indirect references to the use of music in religious worship, and there is little evidence on which to form any clear impression of the character of the musical service of the Temple.

Of the nature of the music performed by the Heb. musicians we have no knowledge whatever. It is uncertain whether they had any system of notation. No identifiable system has survived. Attempts have been made to interpret the accents of the Heb. text as a form of notation, but without success. These accents were a guide to recitation rather than music and were, in any case, of late origin. Although we have no evidence regarding the instrumental music of the Temple, we can discover from the form of the psalms that they were intended to be sung antiphonally either by two choirs (Pss. 13; 20; 38), or by a choir and the congregation (Pss. 136; 118:1-4). It appears that after the captivity the choirs were formed of an equal number of male and female voices (Ezr. 2:65). But it is not clear whether each choir was of mixed voices or whether one was of male and the other of female voices. They probably chanted rather than sang, although the manner of their chanting is obscure and was certainly very different from modern ecclesiastical chanting.

From Mesopotamia comes written evidence (early 2nd millennium BC) on the stringing and tuning of harps, and musical instruments with a lityny (6th century BC); cf. D. Wulstan, O. R. Gurney, *Iraq* 30, 1968, pp. 215-233; W. G. Lambert, in H. Goedicke (ed.), *Near Eastern Studies* . . . W. F. Albright, 1971, pp. 335-353. At Ugarit (from c. 1400 BC) was found a group of cuneiform tablets bearing hymns in the Hurrian language, accompanied by a form of musical notation; cf. A. D. Kilmer, *RA* 68, 1974, pp. 69-82; *ibid.* (with D. Wulstan), pp. 125-128, with earlier references.

Table showing musical instruments mentioned in the Bible, with names used in three current translations.

MUSIC AND MUSICAL INSTRUMENTS

An attempt has been made to reproduce the harp-tuning and hymnology in musical form on a gramophone record; cf. A. D. Kilmer, R. L. Crocker, R. R. Brown, *Sounds of Silence*, 1977.

II. Musical instruments

We have a little more knowledge of the musical instruments of the Bible, although there is no definite information regarding their form or construction. Instruments have, however, been found belonging to other ancient nations of the Middle East, notably the Egyptians. The etymology of the Heb. words helps a little, and also the ancient vss, but still our knowledge is very slight. The instruments mentioned in the Bible can be divided into the three main groups: strings, wind and percussion.

a. Strings

(i) *Lyre*. The *kinnôr*, which is regularly rendered 'harp' by AV, is the first musical instrument mentioned in the Bible (Gn. 4:21) and is the only stringed instrument referred to in the Pentateuch. It is one of the instruments with which Laban the Syrian would have wished to send Jacob on his way, had he not departed so suddenly (Gn. 31:27). This allusion suggests that the instrument may have been of Syrian origin. There has been difference of opinion whether it was truly a harp or a lyre. The balance of opinion is in favour of the lyre, which word is used in rsv. That it was portable and therefore small is evidenced by the fact that it was one of the four musical instruments borne before the young prophets (1 Sa. 10:5). Ancient Egypt. tomb-paintings represent foreigners, Semites from Shutu (Transjordan), bearing lyres played with a plectrum in their hands. Nor is it clear whether the *kinnôr* was played with a plectrum or by hand. In 1 Sa. 16:23 'David took the lyre and played it with his hand'; but the absence of mention of a plectrum is no proof that the strings were plucked by the fingers alone. There is no certainty about the number of strings on the *kinnôr*. Josephus thought it had ten. Another suggestion, based on the association of the instrument with Heb. *š'minîl* ('eighth', LXX *hyper iēs ogdoēs*) in 1 Ch. 15:21, is that it had eight strings; but the allusion in the passage is far from certain.

The *kinnôr* was a wooden instrument, David's being made probably of cypress (2 Sa. 6:5). Those which Solomon had made for the Temple were constructed of almug (1 Ki. 10:12), and were evidently very valuable. Josephus (*Ant.* 8. 94) records that their framework was fitted with electrum, i.e. either a mixed metal or amber.

The word 'harp' is used also by AV in translating Aram. *qītrōs* (rsv 'lyre'), which occurs only among the instruments of Nebuchadrezzar's orchestra in Dn. 3. It is the same root from which the European word 'guitar' has sprung.

(ii) *Psaltery*. This word is derived from Gk. *psaltērion*, which denotes an instrument plucked with the fingers instead of with a plectrum. The Gk. verb *psallō* means to touch sharply or pluck. It is the word most often used to translate Heb. *nēbel*, although occasionally the rendering 'viol' is found, and in the Prayer Book version of the Psalms the word 'lute' is used. In LXX *nēbel* is variously rendered (*psaltērion*, *psalmos*, *kithara*, *nablion*, *nabla*, *nablē*, *naula* and *nablas*). It is generally accepted that it was a kind of harp, as it is rendered in rsv, although its exact description is uncertain. It is first

mentioned in 1 Sa. 10:5, and this seems to confirm the opinion that it was of Phoenician origin, since there was little close contact between Israel and Phoenicia before this date. Attempts have been made to reconstruct the shape of the *nēbel* by identifying it with a root meaning a skin-bottle, jar or pitcher. It has been suggested that it had a bulging resonant body at its lower end. This identification of the root has even led to the supposition that the instrument was a form of bagpipe. But these suggestions are mere conjecture.

Like the *kinnôr*, the *nēbel* was made of cypress wood, and later of almug. It is clear that David was able to play the *nēbel* as well as the *kinnôr*. As it is commonly linked in the Bible with other musical instruments, it is generally thought to have supplied the bass.

Heb. *āsōr* is frequently linked with *nēbel*. This word is from the root meaning 'ten', and is generally thought to indicate that the instrument had ten strings. This interpretation is found also in LXX and Vulg. (*psaltērion decachordon* and *psalterium decem chordarum*). In all probability the *nēbel* *āsōr* was simply a variety of *nēbel*.

The word 'psaltery' appears also in AV as a translation of Aram. *psantērīn* (Dn. 3:5ff.), another of the instruments in Nebuchadrezzar's orchestra. The Aram. word appears to be a rendering of Gk. *psaltērion*, and is translated in rsv 'harp'. J. Stainer (*The Music of the Bible*, pp. 40–55) argues at some length that the instrument referred to is in fact the dulcimer. It is, however, impossible to say more with confidence than that it was a stringed instrument.

(iii) *Sackbut*. This word occurs in AV only in Dn. 3 as a translation of Aram. *sabb'kā*. It was one of the instruments of Nebuchadrezzar's orchestra, and was therefore not a Heb. instrument. The AV translation is clearly wrong, as the sackbut was a wind instrument, being in fact a kind of bass trumpet with a slide rather like a modern trombone. The *sabb'kā* is usually identified with Gk. *sambykē*, by which it is translated in Dn. 3, LXX. This has been described as either a small triangular harp of four or more strings and high pitch, or a large, many-stringed harp. Whichever description is correct, it was a stringed and not a wind instrument. According to Strabo (10. 471) it was of barbaric origin. rsv more correctly renders 'trigon'.

(iv) *Dulcimer*. This is the AV translation of Aram. *sūmpōnyā*, which is generally regarded as a Gk. loan-word. It occurs in the Bible only in the orchestra of Dn. 3. The AV rendering is incorrect, as it is not a stringed instrument. It is now generally supposed to have been a form of bagpipe (as rendered in rv, rsv). The modern Italian rendering of the word is *sampogna*, a kind of bagpipe in current use in that country. Alternatively, it may derive from Gk. *ty(m)panon*, a kind of drum.

b. Wind instruments

(i) *Pipe*. This is Heb. *hālil*, rendered 'pipe' in AV, 'flute' in rsv. The word occurs only six times in the OT. In the NT the pipe is Gk. *aulos*, used in LXX for the *hālil*. Vulg. uses *tibia*. Both *aulos* and *tibia* are general terms covering both reed instruments, such as the oboe and the clarinet, and instruments played by blowing across or through a hole, such as with the flute.

The word *hālil* derives from a root meaning to bore or pierce. The word *aulos* is from a root meaning to blow. But neither the derivation of *hālil*, nor

its rendering in LXX, gives any indication of the nature of the instrument. The balance of opinion seems to be in favour of the oboe rather than the flute, but there is no certainty on the matter. Just as today, it was apparently customary in ancient times for the player of a reed instrument to carry with him a supply of reeds in a box (Gk. *glōssokomon*). It was in fact a reed-box and not a 'bag', as AV renders it, which Judas used as a money-box (Jn. 12:6; 13:29).

The pipe was used in festival processions (Is. 30:29), at times of national rejoicing (1 Ki. 1:40), and also in mourning at funerals (Mt. 9:23). That it could produce a plaintive note is evidenced by the allusion to it in Je. 48:36.

(ii) *Flute*. This is the AV translation of Aram. *mašrōqītā*. It occurs only in Dn. 3, and is derived from the root *šārag*, an onomatopoeic word meaning 'to whistle' or 'hiss'. The playing of most types of pipe or flute is usually accompanied by a hissing sound. It is therefore a reasonable supposition that the instrument referred to is of that class.

(iii) *Organ*. This word (Heb. *ūgāb*) occurs only four times in the OT. In Gn. 4:21 it is evidently a generic term covering all wind instruments, just as the parallel word in the verse, *kinnōr*, is the general term for all stringed instruments. In Jb. 30:31 it again occurs in association with the *kinnōr*, and in Jb. 21:12 it represents the wind section in parallel with members of the stringed and percussion families. We find it again in Ps. 150:4 among numerous other instruments. LXX gives no guide as to the nature of the instrument, for it uses three different words. (In Gn. 4:21 *kithara*, 'guitar'; in the two passages in Job *psalmos*, 'psalter'; and in Ps. 150:4 *organon*, 'organ'.) The derivation of the Heb. word is uncertain. Some have linked it with a root meaning 'to lust', 'have inordinate affection', thus alluding to its sensuous or appealing tones; but this is no more than conjecture. The instrument must be some form of pipe or possibly a group of pipes.

(iv) *Horn*. This word (Heb. *qeren*) occurs frequently in the OT. Cognate with it are Gk. *keras* and Lat. *cornu*. It appears to have been used in biblical times for two purposes: as a flask for carrying oil and as a kind of trumpet. In this latter sense it occurs in only three passages. In Jos. 6 it is used synonymously with *šōpār* ('trumpet', see (v) below) in the account of the capture of Jericho. In 1 Ch. 25:5 are listed those who were appointed by David to play it, and in Dn. 3 it is one of the instruments of Nebuchadnezzar's orchestra. The earliest trumpets were evidently made out of the horns of animals and later imitated in metal.

(v) *Trumpet*. There is frequent mention of the trumpet in the Bible. In AV it is used chiefly as a translation of two different Heb. words, *šōpār* and *h'šōš'rā*. It is used once also for Heb. *yōbēl*, which means literally a ram's horn. LXX renders uniformly *salpinx*, which is used also in the NT.

The *šōpār*, a long horn with a turned-up end, was the national trumpet of the Israelites. It was used on military and religious occasions to summon the people. The *šōpār* is still used in Jewish synagogues today.

The *h'šōš'rā* was a trumpet made of beaten silver. Moses was commanded by God to make two of them for summoning the congregation and for breaking camp. Nu. 10:1-10 contains God's instructions to Moses regarding the occasions for the blowing of the trumpet. It was principally a sacred and not a martial instrument.

(vi) *Cornet*. The word appears in AV as the translation of three different words. In Dn. 3 it is used for *qeren*, elsewhere translated 'horn' (see (iv) above). In four passages the Heb. word is *šōpār*, which occurs frequently in the OT and is in all other instances translated 'trumpet' (see (v) above).

In 2 Sa. 6:5 the Heb. word is *m'na'an'im*, which occurs only in this passage. It is used in conjunction with the cymbals (see c (ii) below) among other instruments on which David and the children of Israel played before the Lord. The root from which it is derived means 'to quiver', 'vibrate', and it is probable that the instrument was a kind of rattle. LXX renders *kymbala*, 'cymbals', and is therefore less accurate than Vulg. *sistra*, 'rattles' (Gk. *seistron* from *seidō*, 'shake', 'move to and fro'). RSV renders 'castanets'. Illustrations have been preserved of ancient Egypt. rattles consisting of an oval hoop on a handle, to which were affixed rods carrying loose rings which jangled together when shaken.

c. Percussion

(i) *Bells*. Two Heb. words are rendered 'bells' in AV: *pa'mōn*, from a root meaning 'strike', occurs four times in Exodus, referring to the bells of gold on Aaron's high-priestly robes; the other word, *m'sillā*, is found only in Zc. 14:20. AVmg. follows LXX (*chalinot*), reading 'bridles'. The Heb. word is from the same root as that rendered 'cymbals' in AV, and probably refers to the metal discs or cups fixed to the bridles of horses either as an ornament or in order to produce a jingling sound of bells.

(ii) *Cymbals*. This word comes from Gk. *kymbalon*, which occurs once in the NT (1 Cor. 13:1) and also in LXX as a translation of Heb. *m'siltayim* and *šels'lim*. *kymbalon* is derived from *kymbē*, which means a bowl or hollowed plate. The two Heb. words are derived from the same root, an onomatopoeic word meaning to whirr or quiver. *m'siltayim* seems to be a later form of the word occurring about twelve times in the books of Chronicles and once each in Ezra and Nehemiah. The earlier form *šels'lim* is found in the Psalms and once in 2 Samuel. In Ps. 150 the word is used twice in one verse with different adjectives. Two kinds of cymbals are known to have existed in ancient times. One kind consisted of two shallow metal plates held one in each hand and struck together. The others were cup-like in shape, one being held stationary while the other was brought down sharply against it. It has been suggested that in Ps. 150 these two kinds of cymbals are alluded to, but this is merely conjecture.

In all the passages where cymbals are mentioned they are used in religious ceremonies. Gk. *kymbalon* is used in 1 Sa. 18:6 LXX to translate Heb. *šālīs*, which is from the root meaning 'three'. The Vulg. renders *sistrum*, 'rattle'. Suggestions have been made that it was a triangle or a three-stringed instrument, but there is no certainty as to what is denoted.

(iii) *Timbrel* and *tabret*. These are each used eight times in AV, translating Heb. *tōp* (LXX *tympanon*). The instrument was a kind of tambourine held and struck with the hand. It was used as an accompaniment to singing and dancing (Ex. 15:20). It is always associated in the OT with joy and gladness, and is found accompanying the merriment of feasts (Is. 5:12) and the rejoicing of triumphal processions (1 Sa. 18:6).

D.G.S.
K.A.K.

MYRA. With its port, about 4 km away, Myra was one of the chief cities of Lycia, a province on the SW tip of Asia Minor. There Paul and his centurion escort boarded an Alexandrian corn ship bound for Italy (Acts 27:5–6). Called Dembre by the Turks, Myra displays some impressive ruins, including a well-preserved theatre.

J.D.D.

MYSIA. The homeland of one of the pre-hellenic peoples of Asia Minor, never a political unit in classical times, and therefore never precisely defined. It centred on the heavily forested hill country on either side of the main N road from Pergamum to Cyzicus on the Sea of Marmora, a tract which stretched from the border of Phrygia W to the promontory of the Troad. Troas itself, together with Assos and a number of other Gk. coastal states, and even Pergamum may be regarded as part of Mysia. It was the N portion of the Rom. province of Asia. Paul had reached its E limits on his way through Phrygia to Bithynia (Acts 16:7) when he was diverted through Mysia (v. 8) to Troas, probably following a route through the S of the region.

E.A.J.

MYSTERY.

I. In the Old Testament

The only OT appearance of the word is in the Aram. section of Dn. (2:18–19, 27–30, 47; 4:9), where LXX renders Aram. *rāz* by *mystērion* (AV, NEB 'secret'; RSV 'mystery'). In this context the word carries a specialized reference, and, as in the phrase 'there is a God in heaven who reveals mysteries' (2:28), it means primarily that which is hidden and still needs to be made known. Yet even here the meaning of the term is not unrelated to its NT use and significance, since the mysteries of which Daniel speaks in this chapter are contained within the eternal plan of God, and also made known by him in advance to his servants ('thoughts of what would be hereafter', 2:29).

Daniel's use of *rāz*, 'mystery', with the correlative *p'sar*, 'solution', 'interpretation', was taken over by the Qumran sect, whose use of this terminology has provided an illuminating background for understanding the NT occurrences of the term *mystērion*.

II. In the New Testament

a. Meaning

The meaning of the term *mystērion* in classical Gk. is 'anything hidden or secret' (*HDB*, 3, p. 465), and it was used in the plural particularly (*ta mystēria*) to refer to the sacred rites of the Gk. mystery religions in which only the initiated shared. The root verb is *myō*, which means primarily 'to close the

lips (or eyes)' (Lat. *mutus*). But whereas 'mystery' may mean, and in contemporary usage often does mean, a secret for which no answer can be found, this is not the connotation of the term *mystērion* in classical and biblical Gk. In the NT *mystērion* signifies a secret which is being, or even has been, revealed, which is also divine in scope, and needs to be made known by God to men through his Spirit. In this way the term comes very close to the NT word *apokalypsis*, 'revelation'. *mystērion* is a temporary secret, which once revealed is known and understood—a secret no longer; *apokalypsis* is a temporarily hidden eventuality, which simply awaits its revelation to make it actual and apprehended (cf. I Cor. 1:7, for example, where *apokalypsis* is used, as so often, in reference to Christ himself; and Rom. 8:19, where Paul describes the creation as waiting with eager longing for its *apokatastasis* in the coming age of glory, which is to be revealed (*apokalyphthēnai*) at the *apokalypsis* of the sons of God themselves).

b. Usage

(i) *In the Gospels.* The single occurrence of the word *mystērion* in the Gospels is in Mk. 4:11 = Mt. 13:11 (plural) = Lk. 8:10 (AV 'mystery', RSV, NEB 'secret'). Here the term is used to refer to the kingdom of God, the knowledge of which, just because it is God's kingdom, is reserved for those to whom it is 'given'. As a result the unrevealed mystery is, for those 'outside' (*exō*), hidden in *'parables'.

(ii) *In the Pauline Letters.* Paul uses the word frequently, and indeed, apart from four occurrences of the word in Rev. and the three just noted in the Synoptic Gospels, the appearance of *mystērion* in the NT is confined to the Pauline Letters (21 times). The character of *to mystērion* in Paul's theology is fourfold.

1. It is eternal in its scope, in so far as it relates to the divine plan of salvation, the *Heilsgeschichte* itself. The 'mystery' is the good news which forms the content of God's revelation (cf. Eph. 6:19); it is the mystery of God himself, the focus of which is in Christ (Col. 2:2, reading *to mystērion tou theou*, *Christou*, with P⁶, B, et al.; cf. I Cor. 2:1, where B, D, and other MSS read *martyrion* for *mystērion*). As such it is contained within God's everlasting counsels and hidden in him (Eph. 3:9, decreed 'before the ages' (I Cor. 2:7) and declared as God's *sophia*, and veiled to human understanding, but awaiting its disclosure, throughout the ages (I Cor. 2:8; Rom. 16:25, where the adjectival participle is *sesigēmenon*).

2. It is historical in its announcement. This mystery is also the 'mystery of Christ', announced historically and definitively by God in Christ himself (Eph. 1:9; 3:3f., where the *mystērion* is described as revealed to Paul *kata apokalypsin*; cf. Col. 4:3) when 'the time had fully come' (Gal. 4:4). It is precisely this mystery, centred and declared in the person of the Lord Jesus Christ, through whose death God reconciles us to himself (2 Cor. 5:18f.; cf. I Cor. 2:2), that Paul was commissioned to proclaim (Eph. 3:8f.; cf. I Cor. 4:1). In his letter to the Ephesians Paul considers particularly, against the background of a general and gradual movement towards a Christ-centred inclusiveness (see J. A. Robinson, *Ephesians*, 1903, pp. 238f.), the dominant and related notions of 'hope' and 'mystery'. Christ is the hope of men (1:12) and of the universe (1:10), and we possess as a result a hope which is both glorious (1:18) and real; already the

Christian is saved, and raised with him (2:4-6, where the verbs are in the aorist). Not only so, but also—and this is the particular character of the *mysterion* which Paul has been sent to preach, and which in Eph. he is chiefly concerned to outline—the new hope, and thus also the new *life* in Christ, are available for Jew and Gentile alike (3:8; cf. Col. 1:27, where the content of the mystery is qualified as 'Christ in you, the hope of glory').

3. It is spiritual in its perception. We have seen already from the Synoptic Gospels that the mystery of the kingdom is spiritually perceived. Paul retains this idea when he regards the mystery of Christ (the focus of which is particularly 'the Gentiles as fellow-heirs') as revealed to apostles and prophets by the Spirit (*en pneumatē*, Eph. 3:5; cf. also 1 Cor. 13:2; 14:2). In line with this must be understood the term as it is used derivatively by Paul in connection with Christian marriage (Eph. 5:32), and the 'man of lawlessness (or sin)' (2 Thes. 2:7). The divine significance of these 'mysteries' is apprehended by a conjunction of revelation and spiritual understanding (cf. also Rev. 17:3-7).

4. It is eschatological in its outcome. The mystery which has been revealed in time still awaits its divine consummation and fulfilment in eternity. This is the sense in which the term must be understood in Rev. 10:7: the 'mystery of God' already announced will be corporately fulfilled without delay, 'in the days of the trumpet call to be sounded by the seventh angel'. And this is equally true in terms of personal salvation—the 'mystery' of 'being changed' when the trumpet sounds, of mortality's being finally replaced by immortality (1 Cor. 15:51ff.). Such a mystery, even when it is made known, overwhelms us still with the depth of nothing less than the wisdom and the knowledge of God himself (Col. 2:2).

The use of the word 'mystery' with reference to the sacraments (Vulg. translates *mysterion* as *sacramentum*) is entirely post-biblical.

BIBLIOGRAPHY. E. Hatch, *Essays in Biblical Greek*, 1889, pp. 57-62; G. Bornkamm, *TDNT* 4, pp. 802-828; G. Finkenrath, *NIDNTT* 3, pp. 501-506. s.s.s.

MYTH, MYTHOLOGY. Gk. *mythos*, 'story'; *mythologia*, 'story-telling'. In LXX the word-group appears rarely, and never in books translated from the Hebrew Bible. In Ecclus. 20:19 an ungracious man is compared to 'a story told at the wrong time (*mythos akairos*)'; in Baruch 3:23 the 'story-tellers (*mythologoi*) ... have not learned the way to wisdom'. In NT *mythos* occurs only in the Pastoral Epistles and 2 Peter, and always in a disparaging sense. Timothy is told to discourage interest in 'myths and endless genealogies which promote speculations' (1 Tim. 1:4). There are similar references to 'godless and silly myths' (1 Tim. 4:7), 'myths' into which false teachers beguile hearers who have 'itching ears' (2 Tim. 4:4), and 'Jewish myths' to which Christians must lend no credence (Tit. 1:14). A mixture of Judaizing and gnosticizing speculation is perhaps implied. Such 'myths' are set in contrast to gospel truth: 'we did not follow cleverly devised myths when we made known to you the power and coming of our Lord Jesus Christ, but we were eyewitnesses' (2 Pet. 1:16).

In modern usage the word-group has a wide variety of meaning.

1. *The 'myth and ritual' school.* The 'myth' is the story of which the ritual is the dramatic enactment. T. H. Gaster (*Thespis*, 1950) interprets the Ugaritic religious texts as 'myths' of seasonal rites of emptying and filling which he tries to reconstruct. The *Akitu* or New Year festival of Babylon has been thought to be an instance of a Near Eastern ritual pattern in which the king played the part of the dying and rising god, being regarded as his embodiment or as his mediatorial representative with the people. In this sense a historical event, or series of historical events, could serve as the 'myth', as when the narrative of Ex. 1-15 is regarded as the *mythos* of the annually re-enacted Passover meal, or the passion narrative as the *mythos* of the even more frequently repeated Lord's Supper (cf. 1 Cor. 11:26).

2. *The 'demythologizing' programme.* This programme was launched in an essay by R. Bultmann (*New Testament and Mythology*, 1941) which maintained that, if the genuine 'offence' of the cross is to be presented effectively today, the gospel must be relieved ('de-mythologized') of features belonging to the world-view of those to whom it was first preached—not only the 'three-decker' universe but the concept of this world as being open to invasion by transcendent powers. Part of this mythological apparatus detected in the NT has been thought (on inadequate grounds) to belong to a redeemer-myth of Iranian origin developed in various gnostic schools, especially in Mandaeism.

3. *'Myth' in Theology.* This is the title of an essay by M. F. Wiles (*BJRL* 59, 1976-7, pp. 226ff.) which refers to another modern usage—that implied, e.g., in the title of the symposium *The Myth of God Incarnate*, 1977 (to which Wiles is a contributor), in which a myth seems to be the pictorial and imaginative presentation of an ontological reality (such as the union of the divine and human at the heart of the human personality). The theological use of the word-group goes back to D. F. Strauss (*Life of Jesus*, 1835) but in wider parlance remains unacceptable because the dominant popular understanding of myth is something that is not simply factually untrue but positively misleading, like a mirage.

Quite different and much more adequate is the approach of C. S. Lewis and others, according to whom 'Myth became Fact' when God became man, so that the aspirations and insights of the human soul which formerly found mythological expression have been given a satisfying response in the historical events of the gospel, not least in the incarnation and redemption which it announces.

N

NAAMAH ('pleasant'). 1. A daughter of Zillah and sister of Tubal-cain (GN. 4:22). 2. 'The Ammonitess', the mother of Rehoboam (1 Ki. 14:21). 3. A city in lowland Judah (Jos. 15:41), probably identical to modern Nā'neh, 10 km S of Lydda. Zophar, one of Job's 'comforters', was a Naamathite, but it is unlikely that he originated from the same Naamah.

G.W.G.

NAAMAN (Heb. *na'āmān*, 'pleasant'). A common N Syrian name during the mid-2nd millennium as shown by texts from *Ugarit.

1. A dependant of Benjamin; forefather of the Naamite clan (Gn. 46:21; Nu. 26:40; 1 Ch. 8:4, 7).

2. A military commander of the Syrian army during the reign of *Ben-hadad I (2 Ki. 5). Although afflicted with leprosy, he still held his high position (v. 1). At the suggestion of an Israelite prisoner of war, he took a letter from his king, along with gifts, to the king of Israel, probably *Jehoram. He was referred to *Elisha who offered him a cure by bathing in the River Jordan, which Naaman indignantly refused until prevailed upon by his servants (vv. 8-14). Upon being cleansed, he took two mule-loads of earth, which he saw as a necessity for worshipping Yahweh, the one true god (vv. 15-17). Although a Yahwist, Naaman still needed to worship at the temple of *Rimmon, probably because of social obligation.

Jewish legend, recorded in Josephus (*Ant.* 8. 414) but unsubstantiated, identifies Naaman as the one who killed *Ahab by drawing 'his bow at a venture' (1 Ki. 22:34). He is also briefly mentioned in Lk. 4:27.

D.W.B.

NABAL ('fool'). A wealthy inhabitant of Maon, SE of Hebron, of the tribe of Caleb, who pastured sheep and goats on adjacent *Carmel (2). During his exile in the reign of Saul, David heard that Nabal was shearing his sheep, a traditional time of hospitality, and sent ten of his men with the request that Nabal should provide David's force with hospitality on a feast-day in return for the protection from brigands David had given his flocks.

Nabal, whose aggressive *folly matched his name (1 Sa. 25:25), replied with insults, whereupon David with 400 men marched up. When Abigail, the beautiful and intelligent wife of Nabal, heard of the messengers' visit she arranged for food and wine to be sent on ahead and went to meet David. This prevented David from committing the crime of blood guilt upon Nabal.

On her return Abigail found her husband drunk. The following day Nabal suffered a paralytic stroke on hearing of his wife's action, and he died about 10 days later (1 Sa. 25).

R.A.H.G.

NABATAEANS. Nebaioth, son of Ishmael and brother-in-law of Edom (Gn. 25:13; 28:9), is possibly to be considered the ancestor of the Nabataeans, who may also be the Nabaiate of inscriptions of Ashurbanipal of Assyria (c. 650 BC, *ANET*, pp. 298-299). A difference in spelling between these two names (with *tāw*) and the native *nbtw* (with *tēth*) precludes certain identification. Diodorus Siculus (c. 50 BC) brings the Nabataeans into recorded history in his account of the end of the Persian empire and the career of Alexander. Quoting from an earlier source, he describes them as a nomadic Arab tribe who neither built houses nor tilled the soil. Their territory, the area S and E of the river Jordan, straddled the trade routes from the Orient to the Mediterranean, and their capital, Petra, 80 km S of the Dead Sea, formed a base from which caravans could be attacked. Antigonos, who gained power in Syria after Alexander's death, sent two expeditions to Petra to subdue the Nabataeans and gain control of the trade (312 BC). Both were unsuccessful. It is clear that at this time Petra was at least a stronghold, and Gk. potsherds of c. 300 BC found there suggest a permanent settlement.

Contact with the settled communities of Palestine during the 2nd and 3rd centuries BC resulted in the development of Nabataean villages and towns and in intensive cultivation of formerly barren desert areas. This was aided by well-organized lines of frontier posts to guard against Arab marauders and by the skill of Nabataean engineers in constructing irrigation systems to conserve the scanty rainfall. Many of their dams and reservoirs are still usable. Petra is surrounded by high cliffs, pierced by narrow ravines, which form an almost impregnable defence.

When a Nabataean ruler arose (the earliest known king is Aretas I, c. 170 BC, 2 Macc. 5:8) who was able to safeguard the caravans, Nabataean merchants led trade from S Arabia and from the Persian Gulf to Petra, whence it was forwarded to the coast, particularly Gaza. Increased demands by the Rom. world for spices, silks and other luxuries from India and China swelled enormously the revenues of a power which could levy tolls on all goods passing through its territory. The redirection of the trade routes across the Red Sea to Egypt after Augustus' failure to conquer Arabia (25 BC) was an important factor in the decline of Nabataean prosperity.

Native records (coins and dedicatory inscriptions) are written in Aram. in a curiously heightened form of the 'square' script (*WRITING). Papyri from the Judaeen desert and ostraca from Petra exhibit a cursive form of this writing from which the Arab. scripts are derived. Use of Aram. indicates a wide assimilation to the culture of

Caravan routes of Nabataean times.

neighbouring settled peoples. This is evidenced by Nabataean sculptures which contain features found in Syrian work and traceable in early Islamic ornamentation. It may be seen also in the acceptance of Syrian deities, Hadad and Atargatis (Astarte-Anat) into the Nabataean pantheon. These two may have been identified with Dushara and his consort Allat, the national deities. Many open-air shrines (e.g. the high place at Petra) and temples (e.g. Khirbet et-Tannur) have been discovered on isolated hill-tops. The gods worshipped were especially associated with weather and fertility. Nabataean *potters developed a distinctive ware of their own unsurpassed in Palestine.

Nabataean history, as reconstructed from incidental references by Jewish and Gk. authors, consists mainly of struggles to gain control of the Negeb in the S and of Damascus in the N. Aretas III (c. 70 BC) and Aretas IV (c. 9 BC-AD 40) succeeded in holding both these areas for a few years, so obtaining complete control of E-W trade. It was an officer (Gk. *ethnarchēs*) of Aretas IV who attempted to detain Paul in Damascus (2 Cor. 11:32). Malichus III and Rabbel II, the last Nabataean kings, moved the capital from Petra to Bosra, 112 km E of Gallie. This became the capital of the Rom. province of Arabia following Trajan's conquests in AD 106. Petra enjoyed considerable prosperity during the 2nd century AD when many of the rock-cut façades were made. The rise of Palmyra diverted the trade which formerly went to

Petra from the E, and that city gradually declined. The Nabataean people, subject to Arab raids, became absorbed in the surrounding population, although the script continued in use into the 4th century.

NABOTH. This Israelite commoner had the misfortune of owning a vineyard close to the palace of King Ahab in Jezreel, who wanted to extend his gardens (1 Ki. 21). Though the king offered fair terms for the land, Naboth exercised his right to keep intact his ancestral inheritance. Ahab felt aggrieved and sulked, but Queen Jezebel, who owed no allegiance to Israel's ideals of kingship (Dt. 17:14-20), plotted Naboth's murder. In the king's name she ordered the proclamation of a fast, implying some calamity. This would be seen as God's punishment for some crime. Naboth was accused by fellow members of the judiciary of cursing both God and the king (Ex. 22:28); for this the sentence was death by stoning (*cf.* Dt. 13:10). Elijah pronounced the Lord's judgment on Ahab and his dynasty for the crime of murder. Jezebel's punishment would be a gory death and no burial.

This incident demonstrates that, in Israel at least, the king was subject to God's laws, and could not ride roughshod over the rights of his citizens.

NABOTH

with impunity. Ahab died in battle (1 Ki. 22:34–38) as did his sons (1 Ki. 9:24; 10:11). Jezebel died by treachery in Jezreel, where she had conspired against Naboth (2 Ki. 9:30–37).

BIBLIOGRAPHY. D. J. Wiseman, *1–2 Kings, TOTC*, 1993, pp. 180–183. J.G.B.

NADAB (Heb. *nādāb*, 'generous', 'noble'). 1. Aaron's eldest son (Nu. 3:2). Intimately present at Sinai (Ex. 24:1) and later a priest (Ex. 28:1), he transgressed the law (Ex. 30:9) with his brother Abihu in offering 'unholy fire' to God, for which they both died (Lv. 10:1–7; cf. Nu. 26:61). 'Unholy fire' may mean either fire or incense kindled elsewhere than at the altar (Lv. 16:12) or incense offered at the wrong time ('such as he had not commanded them'). Lv. 10:8–9 hints at the possibility that drunkenness was an element in the sin.

2. A son of Shammai, of the house of Jerahmeel, of the tribe of Judah (1 Ch. 2:28). 3. A son of Gibeon, of the tribe of Benjamin (1 Ch. 8:30). 4. A king of Israel, successor to his father, Jeroboam I. He reigned c. 915–914 BC, being assassinated and succeeded by Baasha while besieging Gibbethon (1 Ki. 14:20; 15:25–28). T.H.J.

NAHALAL, NAHALOL (Heb. *nah^llol*). A town in Zebulun, but held by Canaanites (Jos. 19:15; 21:35; Jdg. 1:30). Probably not far from modern Nahalal, 9 km W of Nazareth. Simons (*GTT*, p. 182) favours Tell el-Beida to the S; Ma'ul to the NE ('Mahalul', Talmud *Megillah* 1. 1) is not old enough to be the actual site. Albright (*AASOR* 2–3, 1923, p. 26) suggested Tell en-Nahl near Haifa (cf. Gn. 49:13), but this is outside the tribal area. J.P.U.L.

NAHALIEL (Heb. *nah^ll'ēl*, 'valley of God'). N of the Arnon (Nu. 21:19); now Wadi Zerka Ma'in; famous in Rom. times for its warm springs, which flow into the Dead Sea 16 km from the Jordan (Josephus, *BJ* 1. 657; 7. 185). J.P.U.L.

NAHASH (Heb. *nāhāš*). 1. An Ammonite king who attacked Jabesh-gilead in Saul's reign (1 Sa. 11–12). His relations with David were friendly (2 Sa. 10:2; 1 Ch. 19:1). 2. Father of Abigail and Zeruiah, David's sisters (2 Sa. 17:25). LXX(B) and Origen support this reading against other Gk. MSS which give 'Jesse' (Driver, *Samuel*), perhaps assimilating to 1 Ch. 2:13–16. The Chronicler may mean that Abigail and Zeruiah were Jesse's step-daughters; their sons appear to have been of about David's age. J.P.U.L.

NAHOR. 1. Son of Serug, and grandfather of Abraham (Gn. 11:22–25; 1 Ch. 1:26).

2. Son of Terah, and brother of Abraham and Haran. He married his niece Milcah, Haran's daughter (Gn. 11:26–27, 29). Nahor probably journeyed to Harran with Terah, Abram and Lot despite the silence of Gn. 11:31 to this effect, for Harran became known as 'the city of Nahor' (Gn. 24:10; cf. 27:43). He was the progenitor of twelve Aramaean tribes which are listed in Gn. 22:20–24. This reflects the close relationship of the Hebrews and the Aramaeans. A place Nahur in the vicinity

of Harran is named in the Mari tablets (18th century BC).

The two other passages where Nahor is mentioned need to be compared to reveal that Nahor was a devotee of the false god of his father Terah (Gn. 31:53; cf. Jos. 24:2). This implies that the consecration at Mizpah (Gn. 31:43ff.) took place in the presence of Yahweh and Terah's god.

See *BASOR* 67, 1937, p. 27.

R. J. W.

NAHSHON (Heb. *nahšōn*, possibly from *nāhāš*, 'serpent'; Gk. *Naassōn*). Aaron's brother-in-law (Ex. 6:23; AV gives 'Naashon'), son of Amminadab and prince of Judah (Nu. 1:7; 2:3; 7:12, 17; 10:14; 1 Ch. 2:10). He is mentioned as an ancestor of David in Ru. 4:20, and of our Lord in Mt. 1:4 and Lk. 3:32. J.G.G.N.

NAHUM, BOOK OF.

I. Authorship and date

Nahum was a prophet from Elkosh, possibly in Judah. It is difficult to date his prophecy precisely, but we may note that the capture of Thebes (*i.e.* No-ammon) is regarded as already having taken place. This event occurred under Ashurbanipal in the years 664–663 BC. At the same time, Nineveh, the object of Nahum's preaching, is still standing. Nineveh fell in 612 BC, and so we may place the prophecy roughly between these two dates. More precise than this, however, it is impossible to be.

II. Summary of contents

Each of the three chapters is a unit in itself, and we may best understand the prophecy by considering these chapters one after another.

a. An acrostic poem and declaration of judgment, 1:1–15

Chapter 1 falls into three principal sections: the superscription (v. 1), the description of God's majesty (vv. 2–8), and the declaration of judgment to come (vv. 9–15). The superscription describes the message as a *masšā*, *i.e.* 'burden', a word which often denotes a message involving threatening. It also declares that the work is a 'book of the vision of Nahum', *i.e.* a book in which the vision received by Nahum is written down. The supernatural character of the message is thus early acknowledged.

The prophet immediately plunges into a statement of the jealousy of God. The zeal of the Lord is his determination to carry out his purposes both in the bringing in of his own kingdom and in the punishment of his adversaries. It is this latter aspect of God's jealousy which is here prominent. God is slow to anger, says the prophet (v. 3); nevertheless, he will take vengeance on his enemies. When these terms are applied to God we must understand that they are used anthropomorphically; they do not contain the sinister connotations that adhere to them when they are used of men. That God is able so to carry out his purposes is a matter that admits of no doubt. He can control the forces of nature, the storm, the rivers, the sea, Bashan, *etc.* For those who trust in him he is a stronghold, but for the wicked he is darkness.

The enemies of the Lord refuse to believe that he will smite them. Hence, God announces that in a

time when they expect it not the enemy will be devoured as stubble that is wholly dry. Yet there is also to be an announcement of salvation, and Judah is commanded to keep her solemn feasts and to perform her vows.

b. The siege and sack of Nineveh, 2:1-13

In 2:1-6 Nahum describes the enemy who lay siege to Nineveh. These are the Medes who came from the plain of Persia and were turning their attention against the Assyrians of the Mesopotamian plain. They are described as those that dash in pieces (v. 1). In attacking the city they open the sluices so that the waters of the river may overflow and then they enter the city to destroy her palace.

Huzzab, a word which possibly designates the queen (cf. RSV 'its mistress'), is taken away into captivity, and her female attendants follow her. (NEB renders the word 'train of captives'; J. D. W. Watts suggests the pedestal of a temple image.) Nineveh, the object of attack, has become like a pool of water. Into her much trade has poured and many goods have been brought, so that she is now filled. Nevertheless, men will flee from her, and those who cry 'Stand!' will not be able to stay those who would take refuge in flight. Plunder then begins in earnest, and the few survivors who remain behind look on in grief and terror as the city is despoiled.

Nineveh had once been a lion, a veritable den of lions. She had engaged in search for prey. Now, however, she is herself the object of such search and herself becomes a prey. What has become of Nineveh? The answer is that the Lord of hosts is against her, and he has determined to act in such a way as to remove her strength and power from her.

c. A description of the city and a comparison with Thebes, 3:1-19

Chapter 3 consists of a description of the wicked character of the city of Nineveh. She was a bloody city and full of cruelty. She was a warring city, and there were many that were slain. Through her whoredoms she sold nations and dealt in witchcrafts. Hence, the Lord had set himself against her and would expose her so that she would become a laughing-stock to all who looked upon her.

Nahum then makes a brief comparison with Thebes (3:8-15). Thebes, as the capital of Upper Egypt, had become strong, had revelled in her strength and acted as had Nineveh, yet her ruin had surely come. So also would it be with Nineveh. There could be no escape. Thus the prophet works up to a mighty climax, and announces that there is no healing for the bruise of Assyria, 'Your wound is grievous' (3:19a).

In this small prophecy of doom we learn that the God of Israel, the nation whom Assyria had despised, is truly the God who controls the destinies and the actions of all nations.

E. J. Y.

NAIL. 1. Finger-nail (Heb. *šippōren*; Aram. *ī'pār*). Captive women were commanded to shave the head and pare the nails (Dt. 21:12). Nebuchadrezzar had 'nails like birds' claws' (Dn. 4:33; cf. 7:19).

2. A wooden tent peg (Jdg. 4:21, Heb. *yātēd*),

used by Jael to slay Sisera. It was sometimes used for suspending objects as in Ezk. 15:3. Isaiah (22:25 AV; RSV 'peg') likened Eliakim to 'a nail in a sure place' on which the 'whole weight of his father's house' might hang. Such a nail was driven into a wall.

3. A metal nail or pin (*yātēd*) for driving into wood or other material to hold objects together, or left projecting to suspend objects. In the tabernacle the nails were of bronze (Ex. 27:19; 35:18; 38:20, 31; 39:40; Nu. 3:37; 4:32). Delilah used such a nail (pin) to bind Samson (Jdg. 16:14). The word *masmēr* refers to nails of iron (1 Ch. 22:3) or of gold (2 Ch. 3:9), driven into a wall (Ec. 12:11), or used to secure idols in their place (Is. 41:7; Je. 10:4). Nails have been found at many Palestinian sites including Tell Abu Hawam, an ancient harbour city near Mt Carmel.

4. In NT times victims were affixed to a *cross by nails driven through hands and feet (Gk. *hēlos*, Jn. 20:25).

J. A. T.

NAIN. Mentioned only in Lk. 7:11. There is a small village still bearing this name in the Plain of Jezreel, a few miles S of Nazareth, at the edge of Little Hermon, and it is generally accepted as the scene of the Gospel narrative. It is certainly to be distinguished from the Nain of Jos., *BJ* 4. 511, which was E of the Jordan. The name is perhaps a corruption of the Heb. word *nā'im*, 'pleasant', which adjective well describes the area and the views, if not the village itself. A problem is raised, however, by the reference to the city gate (Lk. 7:12); for the village today called Nain was never fortified, and so would never have had a gate in the proper sense of the word. But the word 'gate' may be used loosely, to indicate the place where the road entered between the houses of Nain. An ingenious suggestion solves the difficulty by proposing that the site was Shunem (as in the similar story of 2 Ki. 4), an original *synēm* becoming accidentally reduced to *nēm*, and then confused with Nain. Shunem, in any case, is in the same general area.

D. F. P.

NAIOTH. A place or quarter in Ramah where Samuel supervised a community of prophets and to which David fled from Saul (1 Sa. 19:18-19, 22-23). When Saul sent messengers there to seek David, each in turn 'prophesied'. Later, when Saul came in person he too 'prophesied' (v. 24), giving rise to a proverb: 'Is Saul also among the prophets?' The Heb. word *nāyōt* is related to *nāweh*, 'pasture ground' or 'abode', and is commonly translated 'habitation'.

J. A. T.

NAME. The Bible is no stranger to the custom, now virtually normative, of giving a name simply because it appeals to the parents. What else is likely to lie behind calling a little girl Deborah (meaning 'bee', Jdg. 4:4) or Esther (Heb. *h'dassā*, 'myrtle')? Even in cases where it offers some high-sounding, moralistic or religious sentiment, it would run beyond the evidence to assume without question that the name was conferred with that thought in mind rather than that the parents were indulging a preference for that rather than any other label. One can, for example, weave sad fancies round a name like Ahikam ('my brother has risen') as indicating a

NAME

tragic earlier bereavement in the family which the subsequent birth of another son was seen to rectify, but Ahikam is a pleasant-sounding name and in default of evidence to the contrary may well have been chosen for no better reason.

Nevertheless, while we can be too high-minded in our approach to names and naming in the Bible, there is no question but that there is, throughout, a conceptual background which was often given full play in the conferring of a name and which, even if it seemed to have no part (or none that we know) in the original naming yet in later life asserted its claim on the person concerned. Thus, for example, whereas Isaiah named his two sons with deliberation so that they would embody certain aspects of the word of God to his people (Is. 7:4; 8:1-4) his own name ('Yahweh saves'), as we should have to say, 'by coincidence', could not have been bettered as the name for this prophet above all. The Bible's view of names and naming would be offended by the idea of a mere coincidence or accident of parental choice: the link it sees between name and person is both too close and also too dynamic for that.

I. Significant naming

The general evidence dispersed throughout the Bible would insist that it is no coincidence that the great prophet of salvation is called by a theophoric name on the salvation theme. It would see the directive providence of God determining beforehand the whole course of the life; it would probably more typically see the name as embodying a word of God which would henceforth mould its recipient into the man whose life would express what the word declared. This, at any rate, is the dynamic view of names and naming which runs throughout Scripture and which differs so dramatically from our static view of a name as a differentiating label.

The following seven categories cover most of the dynamic name-giving situations:

a. The status-name. Of his new-found wife, the man said that she would be called 'Woman', thus according to her a co-equal (or, better, counterpart) status with her husband: he is 'îš; she is 'îššā. In general in the Bible name-giving is an authority function: the imposition of the name 'Man' on the couple by their Creator (Gn. 5:2), the giving of animal names by the man, in his capacity as creation's lord (Gn. 2:19f.), the naming of children by parents (by the mother on 28 and by the father on 18 occasions), the naming of a conquered king (2 Ki. 23:34), etc. But in Gn. 2:23 the 'man' acknowledges his complementary equal, the one who, with him, shares the God-given dominion of the world (Gn. 1: 28ff.).

b. The occasion-name. The birth of her first-born is to Eve the significant moment of the fulfilling of the promise of a victorious seed; therefore 'along with Yahweh' as she said (Gn. 4:1)—he, fulfilling his promise, she bringing forth a child—she 'gained possession' (verb *qānā*) of a child whom she therefore called 'Cain' (*qayin*).

c. The event-name. Sometimes names encapsulate a whole situation: e.g. Babel (Gn. 11:9) or Peleg (Gn. 10:25). Both these namings have the same quality, but we can see what was afoot more clearly in the fully-documented case of Babel: the name was in effect a word of God. Men had already discerned in themselves a tendency to separate or scatter

(11:4) and they purposed by their technological advance (v. 3) to be their own saviours in this regard. The divine edict goes forth against man's confidence that his own cleverness can save him, and the word which imposes judicially on the human race the disability which it feared (v. 8) is succinctly built into the fabric of earthly things by the place-name 'Babel' ('confusion') which is to be henceforth the evil genius of the Bible story until the end (cf., e.g., Is. 13:1; 21:1-10; 24:10; Rev. 18:2; etc.; *BABYLON).

d. The circumstance-name. Isaac was named because of the attendant laughter of his parents (Gn. 17:17; 18:12; 21:3-7); Samuel, because of the prayer of his mother (1 Sa. 1:20); Moses, because his princess-mother drew him from the water (Ex. 2:10); Ichabod, because of the loss of the ark, seen as significant of the withdrawal of divine favour (1 Sa. 4:21); Jacob, because of the position of the twins at birth (Gn. 25:26). In many of such cases the Bible provides the evidence to show that such 'accidents' were truly symbolic: the victory at the Red Sea makes Moses pre-eminently the man who came up out of the water; the story of Samuel is precisely the story of the man who knew that prayer is answered, and so on. In other words, there is a continuing link between the idea of giving a name and the dynamism of the ever-potent word of God effecting that which it declares.

e. The transformation- or alteration-name. Names were bestowed in order to show that something new had entered the life of the person concerned, one chapter was complete and a new chapter was opening. Though this giving of a new name is usually hopeful and promissory, the category opens with the sad re-naming of 'îššā (Gn. 2:23) as Eve (Gn. 3:20), the name expressive of co-equality of status and complementarity of relationship becoming the name of function; the former name expressed what her husband saw in her (and was glad), the latter expressed what he would use her for, giving her domination in return for her longing (Gn. 3:16). But to the same category belongs the re-naming of Abram as Abraham, signifying the beginning of the new man with new powers: the childless Abram (whose name 'high father' was only a sour joke) becoming Abraham, which, though it does not grammatically mean 'father of many nations', has sufficient assonance with the words which would (at greater length) express that thought. Many significant names operate on just such a basis of assonance. Thus also on one and the same day Benoni became Benjamin (Gn. 35:18), the circumstance-name of pain and loss becoming the status-name of 'right-hand man'. The dominical bestowal of the name Peter (Jn. 1:42) has the same significance, cf. Mt. 16:18; as indeed does the (presumably) self-chosen change from Saul to Paul (Acts 13:9).

f. The predictiveladmonitory-name. Isaiah's two sons are pre-eminent in this class. It is significant of the prophet's certainty of the word of God through him that he was willing to embody it in his sons who thus were, within their own time, 'the word become flesh', the greatest of the acted oracles (*PROPHECY) of the OT. Cf. Is. 7:3; 8:1-4, 18. See also 2 Ki. 24:17, where the name Zedekiah embodies the righteousness element (*sedeq*, 'right-

eousness') which Pharaoh thus warns the new king to practise. The Lord's naming of James and John as 'Boanerges' was equally a warning against the unacceptable element of fire in their zeal (Mk. 3:17; cf. Lk. 9:54) and once again the name proved itself to be an effective word of God.

g. Precative- and theophoric-names. A name like Nabal (*nābāl*, 'fool') (1 Sa. 25:25) can only have been given on the basis of a mother's prayer—'Let him not grow up to be a fool'—a prayer for which a cogent background could be provided without too much stretch of the imagination. It is likely that many theophoric names had this same element of prayer in them—or at the very least, most of those which are based on an imperfect tense of the verb: thus Ezekiel ('May God strengthen!'); Isaiah ('May Yah[weh] save!'). Even those which in direct translation make an affirmation (e.g. Jehoahaz, 'Yahweh has grasped') are most likely the product of pious parental aspirations—not always realized, as the sad case of Nabal (1 Sa. 25) may show, or the case of King Ahaz whose name is probably an abbreviation of 'Jehoahaz': it is fully in accord with the story of that politically astute, spiritually inept king to think that he deliberately dropped the theophoric element in his name.

The naming of the Lord Jesus Christ does not fit any single one of the foregoing categories. In its relation to OT prophecies (Mt. 1:23 with Is. 7:14; Lk. 1:31–33 with Is. 9:6f.) the name Jesus is a status-name, declaring the recipient to be God, born of a virgin and the promised king of David's line. It is a significant thing that the first person named in the NT receives (not a prediction-name but) a fulfilment-name: the purposes of God are being rounded out to completion. The name Jesus itself is a prediction-name looking forward to what he will himself do, and this is itself significant, for the prediction-names of the OT looked forward to what Yahweh would do and stood in relation to that act as external heralds or pointers. But Jesus is himself the fulfilment of what his name declares.

II. The name of God

Any and all evidence which helps to show that on the human level a name is a significant and indeed potent thing, not only labelling but moulding its recipient, finds its focus in the concept of the 'name of God' (*GOD, NAMES OF) which lies at the centre of the Bible. A 'divine name' is not, of course, a distinctively biblical notion. Amongst the ancient Greeks, for instance, Hesiod tried to enter more deeply into an understanding of the gods by a study of their names, an exercise which, *mutatis mutandis*, might well be seen as central to biblical theology.

There is a real sense in which the Bible is poised upon the revelation of the divine name. In the OT, the Patriarchs knew their God by titles (e.g. Gn. 14:22; 16:13; 17:1), among which was the so far unexplained 'Yahweh'. The significance of Moses and the Exodus is that at that point what had hitherto been no more than a label was revealed to be not a title, however exalted, but a personal name. The revelation enshrined in the name was opened up and confirmed in the Exodus events, the redemption of the people of God, the Passover and the Red Sea. In the NT the balancing event was the ministry and redemptive work of Jesus: the definitive 'name' of God as the Holy Trinity, Father, Son and Holy Spirit, coinciding with the public com-

mencement of Jesus' ministry when at his baptism he began deliberately to be numbered with the transgressors (cf. Mk. 1:9–11). John sees the significance of this in his deliberate association of Jesus at his baptism with the Lamb of God (Jn. 1:29ff.). This comparison should warn against identifying the God of the OT ('Yahweh') with the NT revelation of God the Father. Yahweh is rather the Holy Trinity *incognito*.

In form the divine name *Yahweh* is either a simple indicative or a causative indicative of the verb 'to be', meaning 'he is (alive, present, active)' or 'he brings into being', and the formula in which the name is disclosed (Ex. 3:14, *I am who I am*) means either 'I reveal my active presence as and when I will' or 'I bring to pass what I choose to bring to pass'. In the setting of Ex. 3–20 this refers both to the events of the Exodus as those in which Yahweh is actively present (and which indeed he has deliberately brought to pass) and also to the preceding theological interpretation (Ex. 3:1–4:17; 5:22–6:8) of those events vouchsafed to Moses. Yahweh is thus the God of revelation and history and in particular reveals himself as the God who saves his people (according to covenant promise) and overthrows those who oppose his word.

Abundant though this revealed knowledge of God is, yet in the divine name there is a clear element of secrecy. The formula *I am who I am* in itself expresses no more than that God knows his own nature: it is a formula of the sovereignty of God in the revelation of himself. If anything is to be told, he must tell it; he will tell only what he pleases. Cf. Gn. 32:29; Jdg. 13:17. This is not in any way to be related to the concepts of magic. In the surrounding pagan world to know a god's name was supposed to confer some power over that god—a logical extension (as so much false religion is a logical embroidering upon a truth) of the idea that 'naming' is the act of a superior. Yahweh did not withhold any revelation of himself in fear lest man should gain power over him. Rather the revelation of himself belongs in a programme of privilege which he has designed for his people, whereby the somewhat 'external' relationship expressed in titles becomes the highly personal relationship to a God who has given his people the liberty to call him by name, and what is at that point held back is concealed only because the moment of supreme revelation is yet to come. Nevertheless what is already known is not a falsehood later to be set aside nor a partial truth (for *this is my name for ever*, Ex. 3:15) awaiting completion, but one way of expressing the whole truth which will yet achieve greater and fuller expression. The 'name' of God lies at the heart of progressive revelation.

But though the name does not confer 'power' in any magical sense (cf. Acts 19:13ff.), the knowledge of the name brings people into a wholly new relationship with God. They are his intimates, for this is the significance of 'knowing by name' (cf. Ex. 33:12, 18–19; Jn. 17:6). The initiation of the relationship thus described lies on the divine side: collectively and individually the people of God are 'called by his name' (cf. 2 Ch. 7:14; Is. 43:7; Je. 14:9; 15:16; Am. 9:12). Furthermore the motive which lies behind this divine outreach is often described as the Lord acting 'for the sake of his name' (cf. especially Ezk. 20:9, 14, 22, 44) by means of works through which he 'made for himself a name' (e.g. 2 Sa. 7:23; Ne. 9:10). The name is thus a summary way of stating what God is in

NAME

himself (his name is all that is known to be true about him and his motives of action) and also what God is to others, allowing them to know his name (letting them into his truth) and sharing his name with them (letting them into his fellowship).

There are five aspects of this basic situation strongly enough attested in Scripture to warrant a brief statement of each, even though not all are evenly spread through the Bible.

a. It is a particularly Johannine emphasis to express the human side of the experience of God as 'believing in the name' (e.g. Jn. 3:18; 1 Jn. 3:23), i.e. personal commitment to the Lord Jesus as thus revealed in the essence of his Person and work.

b. Those who are of the people of God are 'kept' in his name (e.g. Jn. 17:11), taking up the distinctive OT picture of the name as a strong tower (e.g. Pr. 18:10) to which they may run for safety, and also the name given as a husband's name to a wife whereby provision and protection are guaranteed (cf. 'called by the name' above). When Christians are said to be 'justified in the name' (1 Cor. 6:11) the implication is the same: the name, as the unchangeable nature of Jesus and as the summary of all that he is and has done, is the ground of secure possession of all the implied blessings.

c. God's presence among his people is secured by 'making his name dwell' among them. Cf. Dt. 12:5, 11, 21; 14:23f.; 16:2, 6; 2 Sa. 7:13; etc. It has sometimes been foolishly pressed that there is a distinction if not a rift between a 'name-theology' and a 'glory-theology' in the OT, but these are two ways of expressing the same thing: e.g. when Moses sought to see Yahweh's glory, he found that the glory had to be verbalized by means of the name (Ex. 33:18-34:8). There is no sense in which the Deuteronomist is replacing a crude notion of indwelling glory by a refined notion of the indwelling name: it is rather that the 'glory' tends to express the 'sense' of God's real presence, including much that is rightly unapproachable and ineffable; 'name' explains why this is so, verbalizes the numinous, for nowhere does the God of the Bible deal in dumb sacraments but always with intelligible declarations.

d. The name of God is described as his 'holy name' more often than all other adjectival qualifications taken together. It was this sense of the sacredness of the name that finally led to the obtuse refusal to use 'Yahweh', leading as it has done to a deep loss of the sense of the divine name in evv (with the notable exception of יְהוָה). The 'holiness' of the name, however, does not remove it from use but from abuse: this is the reason why the revelation of the divine name must never be confused with any thought of magical 'power with the divine'. Far from man being able to use the name to control God, it is the name which controls man, both in worship Godward (e.g. Lv. 18:21) and in service manward (e.g. Rom. 1:5). The 'name' is thus the motive of service; it is also the message (e.g. Acts 9:15) and the means of power (e.g. Acts 3:16; 4:12).

e. Throughout the Bible the name of God is the ground of prayer: e.g. Ps. 25:11; Jn. 16:23-24.

Distinctively the NT associates baptism with the name, either of the Holy Trinity (Mt. 28:19) or of the Lord Jesus (e.g. Acts 2:38): the distinction is that the former stresses the total reality of the divine nature and purpose and the totality of blessedness designed for the recipient, whereas the

latter stresses the effective means of entry into these things through the sole mediation of Jesus.

NAOMI (Heb. *no'mi*, 'my delight'). During the period of the Judges there was a famine in Bethlehem of Judah, which caused Elimelech, a citizen of that place, to take his wife Naomi, and their two sons, Mahlon and Chilion, to Moab. There she was widowed, and her sons married Moabite girls, Orpah and *Ruth, who were widowed in their turn.

Naomi decided to return to her own people alone, while her daughters-in-law remarried, but Ruth insisted on accompanying her. She told them that her name was now Mara (Heb. *mārā*, 'bitter') (Ru. 1:20f.). At Bethlehem she planned a levirate marriage for Ruth with her near kinsman, Boaz. Their first child, Obed, was reckoned as hers, and he was the grandfather of David (Ru. 4:16f.).

M.B.

NAPHISH. The eleventh son of Ishmael (Gn. 25:15; 1 Ch. 1:31). His descendants have not been definitely identified, but may be the 'Naphish' of 1 Ch. 5:19; 'the sons of Nephisim' of Ezr. 2:50; and the 'Nephushesim' of Ne. 7:52. J.D.D.

NAPTALI (Heb. *nāp̄tālī*, 'wrestler'). The sixth son of Jacob, and the second son of Bilhah, Rachel's maidservant; the younger brother of Dan, with whom he is usually associated (Gn. 30:5-8). In the Blessing of Jacob he is described as 'a hind let loose' which may allude to either his agility or his impetuosity.

In most of the administrative lists the tribe of Naphtali comes last (e.g. Nu. 1:15, 42f.; 2:29ff.; 7:78; 10:27). The Blessing of Moses commands Naphtali to 'possess the lake and the south' (Dt. 33:23) and following the settlement its tribal portion comprised a broad strip W of the Sea of Galilee and the upper Jordan, including the greater portion of E and central Galilee. This territory is roughly delineated in Jos. 19:32-39, including nineteen fortified cities. But the N boundary is undefined and since two of the cities mentioned, Beth-anath and Beth-shemesh, parts of a chain of Canaanite fortresses extending from the coast across upper Galilee, are noted in Jdg. 1:33 as not completely subjugated, it is probable that it varied considerably in the earlier period. Naphtali included also the largest Canaanite city, Hazor, covering about 80 hectares and dominating a vital trade route. Hazor, although destroyed by the Israelites under Joshua (Jos. 11:10f.), reasserted itself and, whilst never regaining its former prestige, it

was not finally vanquished until well into the Judges' period (Jdg. 4:2, 23f.). Another important city was Kedesh, a levitical city and one of the cities of refuge (Jos. 20:7; 21:32).

The strong Canaanite element is reflected in Jdg. 1:33, 'Naphtali . . . dwelt among the Canaanites'. This would encourage syncretism and partly accounts for the relative insignificance, historically, of this tribe. But there were moments of glory. Barak, Deborah's partner in delivering Israel from Canaanite domination, was a Naphtalite (Jdg. 4:6) and his tribe was conspicuous in the same campaign (Jdg. 5:18). A later generation served valiantly under Gideon (Jdg. 6:35; 7:23), and the Chronicler records their support for David (1 Ch. 12:34, 40). Thereafter, Naphtali, vulnerable because of its frontier situation, suffered from attacks from the N. During the reign of Baasha its territory was ravaged by Ben-hadad I of Syria (1 Ki. 15:20). Approximately 150 years later (734 bc) the tribe of Naphtali was the first W of the Jordan to be deported (2 Ki. 15:29). A probable reconstruction of Tiglath-pileser III's account of this campaign notes his annexation of the region, ' . . . the wide land of Naphtali, in its entire extent, I united with Assyria'. Is. 9:1 alludes to the same event.

The territory of Naphtali included some of the most fertile areas of the entire land. During David's reign its 'chief officer' was Jeremoth (1 Ch. 27:19). It was one of the districts from which Solomon provisioned his court; at this time its governor was one of Solomon's sons-in-law, Ahimaaz (1 Ki. 4:15). Hiram, the principal architect of Solomon's Temple, was the son of 'a widow of the tribe of Naphtali' (1 Ki. 7:14). In Ezekiel's redistribution of the tribal allotments, Dan, Asher and Naphtali are assigned portions in the N, but the other N tribes, Issachar and Zebulun, are included further S (Ezk. 48:1-7, 23-29).

Jesus spent the greatest part of his public life in this area which, because of its chequered history of deportations and infusion of new settlers, was greatly despised by the Jews of Jerusalem, an attitude which partly explains why Galilee became the headquarters of the reactionary Zealots, bitterly opposed to Roman rule.

NAPHTUHIM. Classed with Mizraim (Egypt), Gn. 10:13; 1 Ch. 1:11. Its identity is uncertain, but Lower Egypt, specifically the Nile Delta, would be appropriate alongside Pathrusim (*PATHROS) for Upper Egypt. Hence Brugsch and Erman emended the Heb. to fit Egypt. *p' t'-m/nw*, 'Lower Egypt'. Another Egypt, equivalent, without emendation, might be *n'(-n-)/n'(y-w-)* *p' idhw*, 'they of the Delta (lit. marshland)', Lower Egypt(ians). Alternatively, *naḫūhīm* may be an Egypt. *n'(-n-)/n'(y-w-)* *p' t' wh'(t)*, 'they of the Oasis-land', i.e. the oases (and inhabitants) W of the Nile valley. K.A.K.

NARCISSUS. Paul salutes those 'who belong to the family of Narcissus' (Rom. 16:11). The phrase suggests the slaves of a prominent household. The rich freedman Narcissus, who brought about the fall of Messalina (Tacitus, *Annals* 11, *passim*), had committed suicide some little time before Rom.

was written (*ibid.*, 13. 1); but his slaves ('Narcissiani' are mentioned in *CIL*, 3, 3973; 6, 15640) would pass to Nero and still be a recognizable entity. Though the name is also common outside Rome, it is tempting to see in Rom. 16:11 a Christian group within this body. A.F.W.

NATHAN (Heb. *nāṭān*, 'he [*i.e.* God] has given'). Of some eleven men of this name in the OT the following at least can be identified as separate individuals:

1. A prophet (Heb. *nāḫī*) involved in the story of King David. He appears without introduction when David expresses his wish to build a temple (2 Sa. 7 = 1 Ch. 17). Nathan approves at first, but after speaking with God informs David that this task is for David's descendant, though David apparently arranges, at Nathan's instigation, the music for Temple worship (2 Ch. 29:25). When Adonijah plans to seize his father's throne, Nathan advises Bathsheba to remind David of his promise to name Solomon his successor. Supporting this reminder, Nathan is instructed to proclaim Solomon (1 Ki. 1:11-45). Nathan is best known for his fearless denunciation of David's double sin against Uriah the Hittite, and the parable in which it was couched (2 Sa. 12).

2. Relative of two of David's warriors (2 Sa. 23:36; 1 Ch. 11:38). 3. Son of David, born in Jerusalem (2 Sa. 5:14). This line of descent is cited in Zc. 12:12 and in our Lord's genealogy in Lk. 3:31. Either this Nathan or the prophet is referred to in 1 Ki. 4:5. 4. A man of Judah (1 Ch. 2:36). 5. One of Ezra's companions to Jerusalem (Ezr. 8:16). 6. Son of Bani, who put away his foreign wife at Ezra's instigation (Ezr. 10:39). T.H.J.

NATHANAEL. The name means 'gift of God', and it occurs only in Jn. 1:45-51; 21:2. He seems to be one of the Twelve and he has been variously identified, especially with Bartholomew. The name Bartholomew is a patronymic, and its bearer would have another name too. Bartholomew is next to Philip in the lists of the Twelve in the Synoptics (Mt. 10:3; Mk. 3:18; Lk. 6:14). Some, with but little justification, have identified Nathanael with Matthew, Matthias, John, Simon the Cananaean or Stephen. Others, with even less justification, have denied his real existence.

He was from Cana in Galilee and he was brought by Philip to Jesus, sceptical about the possibility of a Messiah from Nazareth. He was astonished that Jesus knew him already, having seen him under the fig tree. (This means a display of supernatural power, though the 'fig tree' may be symbolic of the study of the Law or of prosperity.) He confessed that Jesus was Son of God and King of Israel. This was the confession of an 'Israelite indeed, in whom is no guile', but it seems to limit the Messiahship to Israel. Christ promised him a greater vision, that of the Son of man as the link between heaven and all mankind (Jn. 1:45-51). He was one of those who saw Christ on his resurrection appearance by the Sea of Tiberias (Jn. 21:2).

NATIONS, TABLE OF. An account, recorded in Gn. 10, and with a few minor variations in 1 Ch.

NATIONS, TABLE OF

1:5–23, of the descendants of Noah by his three sons, *Shem, *Ham and *Japheth.

I. The Table

The table on p. 816 represents the relationships by placing the names of the descendants of an individual below and to the right of the ancestor's name.

II. Position in Genesis

If Genesis is divided into sections by means of the recurring formula 'these are the *generations (Heb. *tôl'âdôl*) of . . .', the Table of Nations falls within the section Gn. 10:2–11:9, the formula occurring in Gn. 10:1 and 11:10. Different views are held as to whether these formulae constitute headings or colophons, but it does not affect the issue in the present case whether the Table of the Nations, together with the account of the tower of Babel, be regarded as part of the *tôl'âdôl* of the sons of Noah (if 10:1 is the heading) or of Shem (if 11:10 is the colophon).

III. Arrangement

V. 32 summarizes the Table, stating that it gives the families (*mišp'hôl*; *FAMILY, OT) of the sons or descendants (*b'ne*) of Noah, according to their ge-

nealogies (*l'tôl'âdôl*; *GENERATION) in their nations (*b'gôyim*), and from these (*mē'ëlleh*, i.e. either the 'families' or the 'nations' making these up) the nations (*gôyim*) spread abroad on the earth ('*eres*') after the Flood. While this verse forms a colophon to the Table as a whole, vv. 5, 20 and 31 form colophons to the subsections vv. 2–4, 6–19 and 21–30 which give the descendants of Japheth, Ham and Shem respectively. Their general tendency is the same as v. 32, but they further state that their lists give the names 'with reference to' their families (*mišp'hôl*) and their languages (אב 'tongues', *l'sônôl*; Japheth's colophon varies with 'each with his own language'), and in their lands and their nations (*gôyim*). In Japheth's colophon these are presented in a different order, and it is further stated that 'from these the coastland peoples spread'. Many commentators consider that this phrase applies to the descendants of Javan alone, since the designation 'coastland peoples' (אב 'isles') is not appropriate to the other members of the group. It is further suggested on the basis of the analogous statements in vv. 20 and 31 that the phrase 'these are the sons of Japheth' originally stood before 'in their lands . . .' in v. 5, and inadvertently dropped out in transmission. This view is adopted in the rsv and may be correct.

Japheth	Ham	Shem
Gomer Ashkenaz Riphath Togarmah Magog Madai Javan Elishah Tarshish Kittim Dodanim Tubal Meshech Tiras Descendants of an individual are placed below and to the right of the ancestor's name	Cush Seba Havilah Sabtah Raamah Sheba Dedan Sabteca Nimrod Mizraim Ludim Anamin Lehabim Naphtuhim Pathrusim Casluhim Philistines Caphtorim Put (Phut) Canaan Zidon Heth Jebusite Amorite Girschite Hivite Archite Sinite Arvadite Zemorite Hamathite	Elam Asshur Arpachshad Shelah Eber Peleg Joktan Almodad Sheleph Hazarmaveth Jerah Hadoram Uzal Diklah Obal Abimael Sheba Ophir Havilah Jobab Lud Aram Uz Hul Gether Mash

The Table of Nations, according to Gn. 10, showing the descendants of Noah's sons, Shem, Ham and Japheth.

Within the three lineages the names are related to each other, either by the formula 'these are the sons of (*b'né*) . . . ' or . . . became the father of (AV 'begat') (*yālad*) . . . ' (*GENEALOGY). The latter is not found in the list of Japheth's descendants, but under Ham is used of Nimrod, and the descendants of Mizraim and of Canaan, and under Shem is used of the section from Shelah to Jobab, that is, all the descendants of Arpachshad. One exception to these two formulae is found in the Philistines who 'came' or 'were begotten' (*yāšā*) from Casluhim (v. 14). The regular arrangement into three lists of names is modified by the insertion of other verses which give additional information, either in relating the names to each other, or in giving further information about individuals. The arrangement of the chapter may be summarized as follows:

- Heading (or colophon to previous section) (1)
- Japheth's descendants (2-4)
 - Details concerning Javan (5a)
 - Colophon (5b)
- Ham's descendants (6-7, 13-18a)
 - Details concerning Nimrod (8-12) and Canaan (18b-19)
 - Colophon (20)
- Shem's descendants (22-29a)
 - Details concerning Shem (21), and Joktan (29b-30)
 - Colophon (31)
 - Colophon to whole (32)

The order, in which Shem is given last, follows the usage of Genesis whereby the chosen line is treated after the collateral lines have been discussed. The genealogy in Gn. 11 carries on the line through Peleg to Abraham.

IV. Contents

Many of the names in the Table have been connected with names of peoples or regions known in the ancient inscriptions, and there is sufficient agreement on a number of these to make possible a general idea of the scope of the three lists.

a. Preliminary consideration

The names in the Table were probably the names of individuals, which came to be applied to the people descended from them, and in some cases to the territory inhabited by these people. It is important to note that such names could have different meanings at different points in history, so that the morphological identification of a name in Gn. 10 with one in the extra-biblical sources can be completely valid only if the two occurrences are exactly contemporary. The changes in significance of names of this kind are due largely to movements of peoples, in drift, infiltration, conquest or migration.

There are three principal characteristics of a people which are sufficiently distinctive to form some nuance of their name. These are race or physical type; language, which is one constituent of culture; and the geographical area in which they live or the political unit in which they are organized. Racial features cannot change, but they can become so mixed or dominated through intermarriage as to be indistinguishable. Language can change completely, that of a subordinate group being replaced by that of its rulers, in many cases permanently. Geographical habitat can be completely changed by migration. Since at times one, and at other times another, of these characteristics

is uppermost in the significance of a name, lists in Gn. 10 are unlikely to have been drawn up on one system alone. Thus, for instance, the descendants of Shem cannot be expected all to have spoken one language, or even to have lived all in one area, or even to have belonged to one racial type, since intermarriage may have obscured this. That this could have taken place may be indicated by the presence of apparently duplicate names in more than one list, Asshur (*ASSYRIA), Sheba, Havilah and Lud(im) under both Shem and Ham, and probably Meshek (Mash in Shem's list; *MESHECH) under Shem and Japheth. Though these may indicate names that are entirely distinct, it is possible that they represent points where a strong people has absorbed a weaker.

It is necessary to observe that names have been adopted from this chapter for certain specific uses in modern times. Thus in language study the terms 'Semitic' and 'Hamitic' are applied, the former to the group of languages including Heb., Aram., Akkad., Arab., etc., and the latter to the group of which (ancient) Egypt is the chief. This is a usage of convenience, however, and does not mean that all the descendants of Shem spoke Semitic languages or all those of Ham Hamitic. Thus the entry of Elam under Shem, and Canaan under Ham, is not necessarily erroneous, even though Elamite was a non-Semitic and Canaanite was a Semitic tongue. In short, the names in Gn. 10 probably indicate now geographical, now linguistic, and now political entities, but not consistently any one alone.

b. Japheth

In this list the following identifications receive general, though not universal, agreement: Gomer = Cimmerians; Ashkenaz = Scythians; Madai = Medes; Meshek = Muški, peoples who entered the ancient Near East from the N steppe. Javan = Ionians, and his descendants, including Elishah = Alasia (in Cyprus) and Dodanim [probably a corruption for Rodanin; cf. I. Ch. 1:7, rsv] = Rhodes, were probably a W group of the N peoples who passed through Ionia to the islands and coastlands (*iyyē*, v. 5) of the Aegean and Mediterranean. Thus it appears that the descendants of Japheth were people who in the 2nd millennium were found in the regions to the N and NW of the Near East.

c. Ham

Here the following identifications are accepted in general: Cush = Ethiopia; Sheba = Saba (in S Arabia); Dedan = Dedan (in N Arabia); Mizraim = Egypt; Ludim = Lydia (?); Philistines = Philistines; Caphtorim = Cretans; Put = Libya; Canaan = Canaan; Zidon = Sidon; Heth = Hittites; Amorite = Amorites; *Hivites = Hurrians; Hamathites = Hamathites.

Under *Nimrod an additional note is provided to the effect that the beginning of his kingdom was in *Shinar = Babylonia where he ruled in Babel = Babylon, Erech = Uruk, Accad = Agade, and *Calneh (possibly to be vocalized *kullānā*, 'all of them'), the first three being important cities in S Mesopotamia, though the site of Agade is as yet unknown. From there he went to Asshur = Assyria (or 'Asshur went forth'; cf. AV) and built Nineveh, Rehoboth-ir, Calah = Kalhu, and Resen. Nineveh and Kalhu were Assyrian royal cities, but the other two names are unknown.

NATIONS, TABLE OF

According to the situation revealed in the extra-biblical inscriptions, the statements that the inhabitants of Mesopotamia (Nimrod) came from Ethiopia, and that the Philistines and Cretans came from Egypt might appear to be erroneous, but the nature and origins of all the elements in the early population of Mesopotamia are still obscure, and Egypt's early connections with Crete and the Aegean area show the possibility of earlier unrecorded contacts. In general, the peoples to the S of the Near East are indicated in this list.

d. *Shem*

In Shem's list a few identifications are generally accepted: Elam = Elam (the SE part of the Mesopotamian plain); Asshur = Aššur (or Assyria); Hazarmaveth = Fīladramaut (in S Arabia); Sheba = Saba; Lud = Lydia (?); Aram = Aramaeans. These names suggest that the general area settled by the group stretched from Syria in the N, through Mesopotamia to Arabia.

V. Sources

The study of the ancient Near East gives some idea of the horizons of geographical knowledge of the 2nd millennium BC and earlier.

a. *Mesopotamia*

In the 4th millennium BC the evidence of pre-historic archaeology shows that at times a common culture flourished over an area stretching from the Persian Gulf to the Mediterranean. By about 3000 BC contacts through trade are attested with the Arabian peninsula, Anatolia, Iran and India. The cuneiform records take up the tale in the late 3rd and the 2nd millennia. Early rulers had business relations and other contacts with Iran, the Lebanon ('Cedar Forest'), the Mediterranean ('Upper Sea'), the Taurus ('Silver Mountain') and Anatolia (Burušatum) in the N, and in the S with Bahrain (Dilmun), where excavations have revealed a centre trading with Arabia and India. In the 18th century BC a colony of Assyrian merchants maintained themselves in Cappadocia (Kültepe), and from about this period a merchant's itinerary from S Mesopotamia to this station is known (*JCS* 7, 1953, pp. 51-72).

Movements in the 3rd millennium on the N steppe resulted in the arrival in the Near East during the early 2nd millennium of such peoples as the Kassites and later the rulers of Mitanni, who probably brought with them a knowledge of the N lands.

b. *Egypt*

In pre-historic times the inhabitants of the lower Nile had trading contacts with the Red Sea, Nubia, Libya and perhaps other places in the Sahara, and during the early Dynasties in the 3rd millennium regular expeditions were made to Sinai, and to Byblos on the Syrian coast. In the early 2nd millennium trade contacts with Cyprus, Cilicia and particularly Crete are attested by finds of objects at both ends. The Egyptians were given to listing names, and the Execration Texts of the 18th century and the lists of 'subject' cities and peoples of the pharaohs of the 15th show a geographical knowledge of Palestine and Syria. In the 14th century the archive of cuneiform tablets found at el-Amarna shows that one language (Akkadian) was used for diplomacy over the whole Near East and that a good knowledge of other areas was possible.

c. *Literary criticism*

It is believed by many scholars that the distinction between the *b'ne* and *yalaq* formulae in the arrangement of the Table betrays composite authorship. According to this, the main framework, making use of the *b'ne* formula, is to be ascribed to the Priestly Code (P), and the parts introduced by *yalaq*, together with other matter which gives additional information on some names in the lists, is derived from the earlier less scientific Yahwistic document (J) which was woven into their framework by the more methodical Priestly writers. The resulting division is: P = 1a, 2-7, 20, 22-23, 31-32; J = 1b, 8-19, 21, 24-30. This variation can be just as well understood, however, as the licence of style, and in the light of the geographical knowledge of the 2nd millennium BC it is no longer necessary to assume a date of composition as late as the early monarchy (J) and the post-exilic period (P). Indeed, the absence of Persia from the list would be difficult to explain if the Table was largely compiled and put into its final form by priests who owed their very return from exile to the tolerant policy of the Persians.

VI. Scope

Apart from those theories which would set the Table down as late and unreliable, there are two main views as to its scope. Some maintain that this Table names the peoples of the whole world, others that it mentions only those peoples of the Near East with whom the Israelites were likely to come in contact. This depends largely upon the word *'eres* in v. 32. This is taken in EVV in the sense of '*earth', but it is a term whose significance could vary from 'the whole earth' through 'the known world' to a limited 'country' according to the context. The general view which can be obtained from the commonly accepted identifications of names in the Table supports the opinion that *'eres* here means 'the known world'; but the fact that many of the names in the Table are as yet unidentified shows that the other view cannot be completely ruled out. To accept the former view does not imply that others besides Noah survived the flood, for, while the implication of Gn. 9:19 is that the earth was peopled by the descendants of Noah's three sons (*NOAH, *d*), the Table does not claim to name all of them.

VII. Authorship and date

The facts mentioned above show that the contents of the Table would not necessarily have been beyond the knowledge of a person educated in the Egypt. schools of the 15th or 14th century. Those who argue for a post-Mosaic date do so largely on the basis of the fact that such peoples as the Cimmerians, Scythians, Medes and perhaps Muški do not appear in the written documents until the 1st millennium and on the basis of this a date in the early 1st millennium is postulated. These peoples must, however, have existed as tribes or larger groups before they are mentioned in the extant records, and it is possible that such earlier invaders as the Kassites and the rulers of Mitanni, who had had contacts with the more N tribes, might have preserved a knowledge of them. It is also commonly held that the *Philistines (v. 14) did not appear in the biblical world until the 12th century, but various considerations point to the possibility of earlier contacts with these people. Likewise the

S Arabian peoples mentioned in the Table, who do not appear in the written records until the 1st millennium, must have existed as tribes before then.

In brief, therefore, though there are some difficulties in the view, it is not impossible that the Table of Nations could have been compiled in the 13th century BC, perhaps by Moses.

Skinner, *Genesis*², 1930, pp. 196–207.

T.C.M.

NATURE. There are few words more dangerously ambiguous than 'nature'. It is impossible here to distinguish carefully all its various uses; the following analysis deals only with the words translated 'nature', 'natural', 'naturally' in AV and RSV. It is significant that even these spring from four distinct roots, one Heb. and three Gk.

1. The Heb. word *lēah*, rendered 'natural force' at Dt. 34:7, has the root idea of 'freshness', 'moistness', and so of the vigour usually associated with the suppleness of youth.

2. The Gk. adverb *gnēsīōs* and the noun *genesis* stem from a root indicating 'birth', 'coming into being'. The former, although rendered 'naturally' in AV, Phil. 2:20, had lost its etymological sense in Hellenistic Greek and is better translated 'genuinely' (as RSV), 'sincerely' (cf. *MM* s.v. for the history of this change in meaning). The noun *genesis* occurs in the genitive case in Jas. 1:23; 3:6. In the first case RSV renders the genitive by 'natural', in the second 'of nature'. The idea is that of the successive birth, decay and new birth characteristic of the world around us. A man sees in a mirror the face which has come to be what it is through this process (1:23); 3:6 further brings out the sense of continuous process with the phrase 'the wheel' or 'course' of the changing world. There is abundant evidence in Philo for the contrast between *genesis*, the changing scene around us, and the eternity of God.

3. The word translated 'natural' in I Cor. 2:14; 15:44, 46 (AV) is the Greek *psychikos*. This adjective is used in the NT to refer to that which belongs to *psychē*, not in the most general sense of 'life', 'soul', but as it is distinguished from *pneuma*. *psychē* in this sense is the life of sensation, emotion, intellect apart from all conscious contact with God. The natural body of I Cor. 15 is a body which answers to the needs of this lower *psychē*; similarly, the spiritual body, otherwise undefined, will be a body not necessarily 'composed of spirit' but a fit 'vehicle', as it were, for the functioning of the spirit.

4. The words most frequently translated 'nature', 'natural', are *physis* and *physikos*. The basic meaning of *physis* is 'the process of growth' and hence that which comes into being by such a process; cf. Rom. 11:21, 24 for the distinction be-

tween *physis*, the normal growth of a plant, and the results of grafting. Every order of beings has its own *physis*, Jas. 3:7 (cf. RV mg.); it is even possible to speak of the distinctive *physis* of God (2 Pet. 1:4), though no process of growth is conceivable within the divine Being itself.

The precise meaning of *physis*, *physikos*, is often determined by that with which *physis* is contrasted. Thus it may be regarded as characteristic of brute beasts as opposed to humanity (2 Pet. 2:12; Jude 10) or to be contrasted with that which is commonly but falsely believed (Gal. 4:8, Moffatt—'gods who are really', *physei*, 'no gods at all'; cf. I Cor. 8:5).

Of special importance are the Pauline uses of *physis* in contrast with (i) the perversions of Gentile society, (ii) the free grace of God in Christ and its consequences in man's life.

The former use is found in Rom. 1:26–27; sexual perversion is there viewed as a departure from the norm recognized by 'natural' man. The same idea is probably present in I Cor. 11:14, though here *physis* could have a reference to its primary sense 'the process of growth' and physiological facts about the length of uncut hair.

physis as distinguished from grace gives the Jew a place of comparative privilege (Gal. 2:15); it marks him off from the Gentile outside the covenant (Rom. 11:21, 24), though it does not of itself save. On the other hand, the Gentile, despite his not having the sign of the covenant and being, *ek physeōs*, uncircumcised, is sometimes able *physei* to do the works demanded by the law (Rom. 2:14, 27). Over against all privilege or good works, however, stands the fact that all men are *physei* children of wrath (Eph. 2:3). Thus *physis*, *physikos*, in these passages refer to all that belongs to the state of the world, Jewish and Gentile, apart from God's gracious act in Christ.

M.H.C.

NAZARENE. According to Mk., the designation *Nazarēnos* was applied to our Lord by demons (1:24), the crowd (10:47), a domestic (14:67), and the messenger of the resurrection (16:6). It is used also in Lk. 4:34 (= Mk. 1:24) and Lk. 24:19 (the Emmaus disciples). But Mt., Lk. and Jn. normally employ *Nazōraios* (Mt. 26:71; Lk. 18:37; Jn. 18:5ff.; 19:19; Acts 2:22; 3:6; 4:10; 6:14; 22:8; 26:9). Both terms are translated in AV and RSV as 'of Nazareth'. *Nazōraios*, 'Nazarene', is applied also to Jesus in Mt. 2:23, and occurs as a popular designation of the Christian 'sect' in Acts 24:5. This is maintained in Jewish use (cf. the oldest Palestinian form of the *Shemoneh 'Esreh*, where at about AD 100 execration is pronounced on the *nošrim*) and in Arabic, apparently as a general designation for Christians (cf. R. Bell, *The Origin of Islam in its Christian Environment*, 1926, pp. 147ff.). The Christian Fathers knew of Jewish-Christian groups who called themselves 'Nazarenes' (Jerome, *De vir. ill.* 2–3, *Epist.* 20. 2) or 'Nazorenes' (Epiphanius, *Haer.* 29. 7, 9), and Epiphanius—never too reliable on such matters—mentions an aberrant Jewish sect, the Nasarenes (*Haer.* 1. 18).

In the NT the title is never applied to our Lord without the name 'Jesus', and to identify a man by his place of origin (e.g. John of Gischala) was a common Jewish practice. Linguistic objections have been raised, however, against deriving *Nazarēnos*, still more *Nazōraios*, from 'Nazareth', even issuing in a suggestion that Nazareth was

NAZARENE

created out of a misunderstanding of the title Nazorean (cf. E. Nestle, *ExpT* 19, 1907-8, pp. 523f.). These objections have been faithfully dealt with by G. F. Moore, but are still sometimes raised.

The allusion to *Nazōraios* as a title given to the Messiah in prophecy (Mt. 2:23) has been frequently taken as a reference to the 'Branch' (*nēšer*) of Is. 11:1 and similar passages, or to the Nazirite (*nāzīr*, cf. Jdg. 13:7) in his character as God's holy one (*nāzīr* is used non-technically, and was perhaps interpreted Messianically, in Gn. 49:26; Dt. 33:16; see H. Smith, *JTS* 28, 1926, p. 60). Another ancient suggestion (Jerome, *in loc.*) is that Mt. alludes to the passages which speak of the Messiah as despised (cf. Jn. 1:46). At all events the different quotation formula in Mt. 2:23 from that in, e.g., Mt. 1:22; 2:15, 17, suggests that a prophetic *theme*, not a specific prediction, is in mind.

The fact that the Mandaean Manichaean-Gnostic sect call themselves *Naṣorayya* has attracted attention. Moore has sufficiently disposed of the 'evidence' for a pre-Christian 'Nazarene' cult adapted to a Jewish *milieu*, but M. Black accepts Lidzbarski's derivation of *Naṣorayya* from *nāsar*, 'to guard' (sc. the tradition), and points to the Mandaean claim to preserve the rites of John the Baptist. Rejecting on linguistic grounds any connection of *Nazōraios* with either *nēšer* or *nāzīr*, he suggests the suitability of 'Nazarenes' as a title for the followers of John, that it is preserved by the Mandaeans and perhaps Epiphanius, and became applied to the 'Jesus-movement' which arose in the wake of John's. Ingenious as this is, it is perhaps over-subtle. It may be that word-play between *nēšer* or *nāzīr* or both and the name 'Nazareth' is all that is involved; and it is noteworthy that the Syriac versions, doubtless reflecting Aram. speech, spell Nazareth with *š* not *z*. A different paronymasia is used in the Qur'an (*Sura* 3. 45; 11. 14), and yet another derivation has appeared in the Chénoboskion *Gospel of Philip*, Log. 47.

Pritz, *Nazarene Jewish Christianity from the end of the New Testament period until its disappearance in the fourth century*, 1988. For the modern Mandaeans, see the works of Lady E. S. Drower, and especially *The Secret Adam*, 1960. A.F.W.

NAZARETH. A town of Galilee where Joseph and Mary lived, and the home of Jesus for about 30 years until he was rejected (Lk. 2:39; 4:16, 28-31). He was therefore called Jesus of Nazareth. It is not mentioned in the OT, the Apocrypha, by Josephus, or in the Talmud. (The earliest Jewish reference to it is in a Hebrew inscription excavated at Caesarea in 1962, which mentions it as one of the places in Galilee to which members of the twenty-four priestly courses emigrated after the foundation of Aelia Capitolina in AD 135.) The reason for this was first geographical and later theological. Lower Galilee remained outside the main stream of Israelite life until NT times, when Rom. rule first brought security. Even then Sepphoris was the chief town of the area, a little to the N of Nazareth. But Nazareth lay close enough to several main trade-routes for easy contact with the outside world, while at the same time her position as a frontier-town on the S border of Zebulun overlooking the Esdraelon plain produced a

certain aloofness. It was this independence of outlook in Lower Galilee which led to the scorn in which Nazareth was held by strict Jews (Jn. 1:46).

Nazareth is situated in a high valley among the most S limestone hills of the Lebanon range; it runs approximately from SSW to NNE. To the S there is a sharp drop down to the plain of Esdraelon. The base of the valley is 370 m above sea-level. Steep hills rise up on the N and E sides, while on the W side they reach up to 500 m and command an impressive view. Major roads from Jerusalem and Egypt debouched into the Esdraelon plain in the S; caravans from Gilead crossed the Jordan fords and passed below; the main road from Ptolemais to the Decapolis and the N, along which the Rom. legions travelled, passed a few kms above Nazareth. Such a location may have given rise to the name, which is possibly derived from the Aramaic *nāšrat*, 'watch-tower'. Another suggested derivation is from the Heb. *nēšer*, 'shoot', advocated in Eusebius' *Onomasticon* and by Jerome (*Epist.* 46, *Ad Marcellam*). The mild climate in the valley causes wild flowers and fruit to flourish.

To judge by the rock-tombs, the early town was higher up the W hill than the present Nazareth. There are two possible water-supplies. The first, which is the larger, lies in the valley and has been called 'Mary's Well' since AD 1100, but there is no trace of early dwellings near by. The second is a very small fountain, called 'the New Well', in an gale formed by a projection of the W hill; the Byzantine church and town lay closer to this. The steep scarp of Jebel Qafsa, overlooking the plain, is traditionally but erroneously called 'the Mount of Precipitation', since this was not the hill 'on which their city was built' (Lk. 4:29).

J.W.C.

NAZIRITE (Heb. *nāzīr*, from *nāzar*, 'to separate, consecrate, abstain'; cf. *nēzer*, 'a diadem', the 'crown of God', sometimes identified with the Nazirite's uncut hair). In Israel the Nazirite was one who separated himself from others by consecration to Yahweh with a special vow.

The origin of the practice is pre-Mosaic and obscure. Semites and other primitive peoples often left the hair uncut during some undertaking calling for divine help, and thereafter consecrated the hair (cf. modern echoes of this among Arab tribes in A. Lods, *Israel*, 1932, p. 305; see also Jdg. 5:2).

I. Legislation in Numbers 6

Although chronologically not the first biblical reference to the subject, the rules for the Nazirite outlined in Nu. 6 provide the fullest and most convenient basis for discussion. The legislation has three sections.

a. Prohibitions

(i) The Nazirite had to abstain from wine and intoxicating drinks, vinegar and raisins. This may have been aimed at safeguarding the integrity and holiness of the Nazirite from possession by a spirit other than that of Yahweh (cf. Pr. 20:1). Like an officiating priest, the Nazirite renounced wine so as the more worthily to approach God. R. Kittel, however, sees in the abstention a protest against Canaanite culture, and a desire to return to

nomadic customs (*Geschichte des Volkes Israel*⁶, 2, 1925, p. 250).

(ii) He must not cut his hair during the time of consecration (cf. *nāzīr* = 'unpruned vine', Lv. 25:5, 11). The hair was regarded as the seat of life, 'the favourite abode of spirits and magical influences', to be kept in its natural state until its burning ensured its disappearance without fear of profanation.

(iii) He must not go near a dead body, even that of his nearest relation, a prohibition which applied also in the case of the high priest.

b. Violation

If the last-named rule were inadvertently broken, the Nazirite had to undergo closely-detailed purificatory rites, and to begin all over again. It is notable, however, that the terms of the Nazirite vow did not preclude the carrying out of other domestic and social duties.

c. Completion

At the end of his vow the Nazirite had to offer various prescribed sacrifices, and thereafter cut his hair and burn it on the altar. After certain ritual acts by the priest, the Nazirite was freed from his vow.

The distinctive features of the original Nazirite were a complete consecration to Yahweh, in which the body, not regarded merely as something to be restrained, was enlisted into holy service; an extension to the layman of a holiness usually associated only with the priest; and an individualistic character in contrast to groups such as *Rechabites.

II. Problems concerning the Nazirite

It is clear from the provisions in c. above that the Nazirite was for a fixed term only. But against that, and pre-dating the above legislation (for the dating of which, *NUMBERS, BOOK OF), there are instances during the pre-exilic era of parents dedicating children to be Nazirites all their lives. There is, for example, the consecration of Samuel (1 Sa. 1:11), who is not called a Nazirite in *MT* (but in a Qumran text, 4Q Sam^a, 1 Sa. 1:22 ends with the words, 'a Nazirite for ever all the days of his life'). There is also the express Nazirite of Samson (Jdg. 13), elements of whose story may date from the 10th century BC. That Samuel and Samson were Nazirites has been questioned (see G. B. Gray, *Numbers*, ICC, 1903, pp. 59-60). The Samson narrative conspicuously does not give the impression that he abstained from wine! It may be that the term 'Nazirite' was loosely applied to one devoted to Yahweh.

Absalom, moreover, has often been regarded as a type of perpetual Nazirite (for the cutting of the hair of such, see G. B. Gray, 'The Nazirite', *JTS* 1, 1900, p. 206). Amos, in whose day Nazirites appear to have been numerous, clearly speaks of Nazirites whom the people seek to defect from their abstinence (2:11-12). During the whole pre-exilic period it is difficult to find direct evidence of temporary Nazirites.

III. Later developments

From the time of the Exile the Nazirite seems to have been for a fixed term only. Extraneous elements crept in, and no longer was the motive for taking the vow exclusively one of penitence and devotion. On occasion it was practised in order to gain certain favours from Yahweh (cf. Jos., *BJ* 2. 313, where Bernice undertakes a 30 days' vow), as a

meritorious ritual activity, or even for a bet (Mishnah, *Nazir* 5. 5ff.). Wealthy Jews often financed the final sacrifice; Herod Agrippa I is said to have done so (Jos., *Ant.* 19. 293), and Paul was persuaded to perform this service for four members of the church of Jerusalem (Acts 21:23ff.; cf. 18:18 for Paul's personal undertaking of a Nazirite vow). Casuistry was inevitably introduced, and a special tractate of the Mishnah (*Nazir*) fixed the minimum duration of the Nazirite at 30 days.

From the references in Josephus it appears that Nazirites were a common feature of the contemporary scene. For the suggestion that John the Baptist and James the Lord's brother were Nazirites, and for the whole subject, see G. B. Gray, *JTS*, art. cit. J.D.D.

NEAPOLIS (the 'new city'). A town, mod. Kavalla, in Macedonia which served as the port of Philippi, 16 km inland. Originally thought to have been called Daton, it occupied a position on a neck of land between two bays, which gave it a useful harbour on both. Paul arrived here from Troas on his second missionary journey (Acts 16:11), after receiving his call to Macedonia. He may have visited it on his third journey also. J.H.P.

NEBAIOTH. The eldest son of Ishmael (Gn. 25:13; 28:9; 36:3; 1 Ch. 1:29). His descendants, an Arabian tribe mentioned in conjunction with Kedar in Is. 60:7 (the two are also named together in Assy. records), are possibly to be identified with the later *Nabataeans (see *JSS* 18, 1973, pp. 1-16). J.D.D.

NEBAT. A name which occurs only in the phrase 'Jeroboam the son of Nebat' (1 Ki. 11:26, etc.), apparently to distinguish Jeroboam I from the later son of Joash. J.D.D.

NEBO (Heb. *n'ô*). 1. The Bab. deity Nabû, son of Bêl (Marduk), and thus descriptive of the power of Babylon itself (Is. 46:1). The name occurs as part of such appellatives as Nebuchadrezzar and perhaps *Abednego. Nabû was considered the god of learning and thus of writing, astronomy and all science. His symbol was a wedge upon a pole, signifying either the cuneiform script or a sighting instrument used in astronomy. He was the principal deity of Borsippa (12 km SSW of Babylon), but a temple Ezida ('the House of Knowledge') was dedicated to him in each of the larger cities of Babylonia and Assyria.

2. The (abbreviated?) name of the ancestor of Jews who married foreign women and thus incurred Ezra's displeasure (Ezr. 10:43). D.J.W.

NEBO. 1. Mt Nebo, from which Moses viewed the Promised Land, a prominent headland of the Transjordan plateau range, *Abarim, with which it is sometimes equated (Dt. 32:49; 34:1). Usually identified with Jebel en Neba, some 16 km E of the N end of the Dead Sea. It commands extensive views from Mt Hermon to the Dead Sea. Jebel Osha, about 45 km further N, is preferred by local Muslim tradition and some scholars (see G. T. Manley, *The Book of the Law*, 1957, pp. 163f.), but

is outside the land of Moab. The original border was near Wadi Hesban (Nu. 21:26ff.; the *Moabite Stone also implies Jebel en Neba). (*ABARIM, *PISGAH.)

2. A town in Moab (Nu. 32:3, 38; Is. 15:2), possibly Khirbet Ayn Musa or Khirbet el Mukkayet near Jebel en Musa. Taken by Mesha of Moab c. 830 bc.

3. A town in Judah (Ezr. 2:29; Ne. 7:33).

G.G.G.

NEBUCHADREZZAR, NEBUCHADNEZZAR.

The king of Babylon (605–562 bc) frequently named by the prophets Jeremiah, Ezekiel and Daniel, and in the history of the last days of Judah. His name in Heb. (*n' būkādre ššar*) transliterates the Bab. *Nabū-kudurri-usur*, meaning perhaps 'Nabū has protected the succession-rights'. The alternative Heb. rendering (*n' būkādne ššar*; cf. Gk. *Nabochodonosor*) is a not improper form of the name (ZA 65, 1975, pp. 227–230).

According to the Bab. Chronicle this son of the founder of the Chaldean dynasty, Nabopolassar, first commanded the Bab. army as 'crown-prince' in the fighting in N Assyria in 606 bc. In the following year he defeated Neco II and the Egyptians at Carchemish and Hamath (2 Ki. 23:29f.; 2 Ch. 35:20ff.; Je. 46:2). 'At this time he conquered the whole of Hatti' (i.e. Syria and Palestine, so Bab. Chronicle; 2 Ki. 24:7; Jos., *Ant.* 10. 86). Daniel was among hostages taken from Judah (Dn. 1:1), where Jehoiakim was in his 4th regnal year (Je. 36:1). While in the field Nebuchadrezzar heard of his father's death and rode across the desert to claim the Bab. throne, which he ascended on 6 September 605 bc.

In the following year, the first of his reign, Nebuchadrezzar received tribute in Syria from the kings of Damascus, Tyre and Sidon and others, including Jehoiakim, who was to remain his faithful vassal for only 3 years (2 Ki. 24:1; Je. 25:1). Ashkelon refused and was sacked. In the campaign of 601 bc the Babylonians were defeated by Egypt, whereupon Jehoiakim transferred his loyalty, despite the warnings of Jeremiah (27:9–11), to the victors. When his army had been re-equipped Nebuchadrezzar raided the Arab tribes of Qedar and E Jordan in 599/8 bc, as predicted by the same prophet (Je. 49:28–33), in preparation for subsequent reprisals on Jehoiakim and Judah (2 Ch. 36:6). Thus in his 7th year Nebuchadrezzar 'marched to Palestine and besieged the city of Judah which he captured on the second day of the month Adar' (= 16 March 597 bc). He then 'seized its king and appointed a king of his own choice, having received heavy tribute which he sent back to Babylon' (Bab. Chronicle B.M. 21946). This capture of Jerusalem and its king Jehoiachin (Jehoiakim's son and successor), the choice of Mattaniah-Zedekiah as his successor, and the taking of booty and prisoners, form the subject of the history recorded in 2 Ki. 24:10–17. Nebuchadrezzar removed the temple vessels to the temple of Bel-Marduk in Babylon (2 Ch. 36:7; 2 Ki. 24:13; Ezr. 6:5). The Judean captives were marched off about April 597, 'in the spring of the year' (2 Ch. 36:10), which marked the beginning of his 8th regnal year (2 Ki. 24:12). Jehoiachin and other Jewish captives are named in inscriptions from Babylon dated in the years of this Bab. king (*ANET*, p. 308; *DOTT*, pp. 83–86).

In 596 bc Nebuchadrezzar fought with Elam (so also Je. 49:34), and in the next year mastered a rebellion in his own country. Thereafter Bab. historical texts are wanting, but in his 17th–19th years he campaigned again in the W. From his headquarters at Riblah he directed the operations which led to the sack of Jerusalem in 587 bc and the capture of the rebel Zedekiah (Je. 39:5–6; ch. 52). For a time the siege was raised when Apries, the successor of Neco II of Egypt, invaded Phoenicia and Gaza (Je. 47:1). In Nebuchadrezzar's 23rd year (582) a further deportation of Judaeans to Babylon was ordered (Je. 52:30). About this time also the 13-year siege of *Tyre was undertaken (Ezk. 26:7).

A fragmentary Bab. text tells of Nebuchadrezzar's invasion of Egypt in 568/7 bc (cf. Je. 43:8–13). Since little is yet known of the last 30 years of his reign, there is no corroboration of his madness which occurred for 7 months (or 'times') as recorded in Dn. 4:23–33. With the aid of his wife Amytis, he undertook the rebuilding and embellishment of his capital Babylon. A religious man, he rebuilt the temples of Marduk and Nabū with many shrines in *Babylon and provided regular offerings and garments for the divine statues (cf. the golden image of Dn. 3:1). He also restored temples in Sippar, Marad and Borsippa and boasted of his achievements, especially in the two defence walls, the gateway of Išhtar, the ziggurat and the sacred processional way through his own city, which he provided with new canals (Dn. 4:30). Some of his architectural works were classed among the seven wonders of the world. Herodotus calls both Nebuchadrezzar and Nabonidus (556–539) by the name of Labynetus. Nebuchadrezzar died in August–September 562 bc and was succeeded by his son Amēl-Marduk (*EVIL-MERODACH).

BIBLIOGRAPHY. D. J. Wiseman, *Chronicles of Chaldaean Kings*, 1956; *Nebuchadrezzar and Babylon*, 1985. D.J.W.

NECK. 1. Heb. *ōreṗ* is used of the neck, or back of the neck; it is also translated 'back', when used of enemies turning their back in flight (e.g. Ex. 23:27). It is used of similar ideas in respect of conflict (Gn. 49:8; Jb. 16:12), and also in the descriptive metaphor of the hardened or stiff-necked, meaning obstinate or rebellious (Dt. 31:27; 2 Ki. 17:14; Is. 48:4).

2. Heb. *gārōn* is also used, meaning the front of the neck (Is. 3:16; Ezk. 16:11), or throat (Ps. 5:9; Je. 2:25), and so voice (Is. 58:1, 'cry aloud', lit. 'with your throat').

3. The commonest Heb. word is *šawwār*, used of the neck generally; bearing a yoke, symbolizing servitude (Gn. 27:40; Je. 30:8); wearing a necklace (Gn. 41:42); of falling on a person's neck in embrace (Gn. 33:4), or of the neck placed under the *foot of a conqueror (Jos. 10:24).

4. Gk. *trachēlos* is used of embrace (Lk. 15:20), of being under a yoke (Acts 15:10), or of wearing a millstone, a large flat stone with a hole in the centre, to weigh the body down (Mt. 18:6). Paul also speaks of risking the neck in respect of the custom of beheading (Rom. 16:4). From *trachēlos* comes the verb *trachēlizō*, 'to expose the neck or throat', used in the perfect participle passive in Heb. 4:13 in the sense of 'laid bare'.

B.O.B.

NECO, NECHO. *Egypt. Ni-k'w, Gk. Nechao.* Pharaoh of Egypt c. 610–595 BC, and son and successor of Psammetichus I, the founder of the 26th Dynasty. In 609 BC, following his father's policy of maintaining a balance of power in W Asia (*EGYPT. HISTORY), Neco II marched into Syria to assist Aššur-uballit II, last king of Assyria, against Babylon. But Josiah of Judah forced a battle with Neco at Megiddo; this delay of Egypt. help for the Assyrians sealed their fate at the cost of Josiah's own life (2 Ki. 23:29; 2 Ch. 35:20–24). On his return S, Neco deposed and deported Josiah's son Jehoahaz and appointed instead another son, Jehoiakim, as vassal-king in Jerusalem, which was obliged to pay tribute to Egypt (2 Ki. 23:31–35; 2 Ch. 36:1–4). Egypt claimed Palestine as her share of the former Assyrian empire, but in the battle of Carchemish, in May/June 605 BC, Nebuchadrezzar stormed that Egypt. outpost and pursued the remnants of the Egypt. forces through Syria as they scurried home to Egypt; Judah thus exchanged an Egypt. for a Bab. master (2 Ki. 24:1, 7).

Neco wisely desisted from any further Palestinian adventures. But the Bab. Chronicle shows that in 601 BC Nebuchadrezzar marched against Egypt; Neco met him in open battle, and both sides suffered heavy losses. Nebuchadrezzar therefore had to spend the next year at home in Babylon to refit his army. This Egypt. rebuff for the Babylonians perhaps tempted Jehoiakim to revolt against Babylon as recorded in 2 Ki. 24:1, but no help came from neutral Egypt.

At home, Neco II followed his father's policy of fostering Egypt's internal unity and prosperity, granting trading-concessions to Gk. merchants to this end. He undertook the cutting of a canal from the Nile to the Red Sea, completed by Darius the Persian, and sent out a Phoenician fleet that circumnavigated Africa as recorded by Herodotus (4.42), whose scepticism of this achievement is refuted by its cause, namely, that the voyagers reported that the sun eventually rose on their right hand.

BIBLIOGRAPHY. For Neco, see Drioton and Vandier, *L'Égypte*, Coll. Cléo, 1952; H. De Meulenaere, *Herodotos over de 26ste Dynastie*, 1951. For his conflicts with Babylon, see D. J. Wiseman, *Chronicles of Chaldaean Kings (626–556 BC)*, 1956. C. D. W.

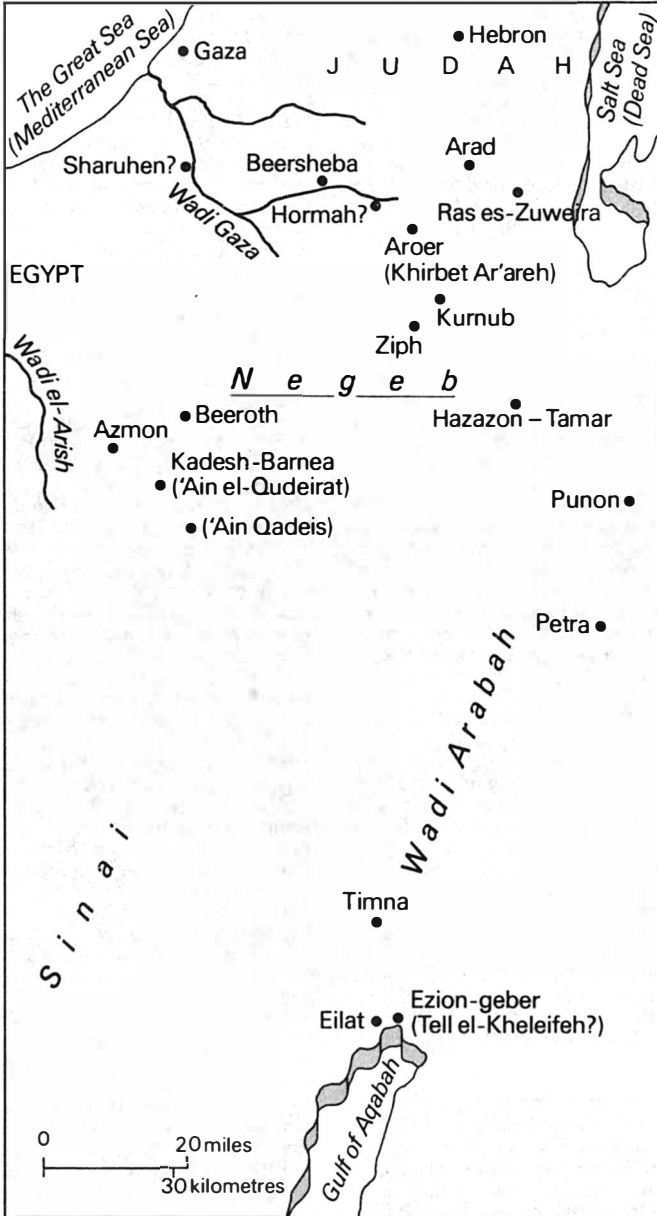

NEGEB. Heb. *negeb*, 'the dry', refers to the S lands of Palestine. Misconceptions arise from its translation as 'the South' in both AV and RV, where some forty passages have described it inaccurately in this way. An indefinite region, it covers c. 1,200,000 hectares (4,520 sq. mls) or nearly half the area of modern Israel. The N boundary may be drawn conveniently S of the Gaza–Beersheba road, roughly the 20 cm-mean annual isohyet, then due E of Beersheba to the Dead Sea through Ras ez-Zuweira. The S boundary which merged traditionally into the highlands of the Sinai Peninsula is now drawn politically S of the Wadi el-Arish to the head of the Gulf of Aqabah at Eilat. The Wadi Arabah, now the political frontier with Jordan, is overlooked to the E by the Arabah escarpment, the traditional boundary. For the description of the geographical features to the Negeb, see *PALESTINE.

Mention of the Negeb is almost entirely confined to pre-exilic times, apart from allusions in Zc. 7:7 and Ob. 20. Five districts in the N Negeb are referred to: the Negeb of Judah, of the Jerahmeelites, of the Kenites (1 Sa. 27:10), of the Cherethites and of Caleb (1 Sa. 30:14). These occupied the grazing and agricultural lands between Beersheba and Bir Rikhmeh and the W slopes of the central highlands of Khurashke-Kurnub. This district was settled by the Amalekites (Nu. 13:29), the ruins of whose fortified sites are still seen between Tell Arad (Nu. 21:1; 33:40), 32 km E of Beersheba and Tell Jemmeh or Penon (Gn. 20:1; 26:1). At the Exodus the spies had been awed by their defences (Nu. 13:17–20, 27–29), which lasted until the early 6th century BC, when they were probably destroyed finally by the Babylonians (Je. 13:19; 33:13). The sites of the twenty-nine cities and their villages in the Negeb (Jos. 15:21–32) are unknown, only Beersheba ('well of seven', or 'well of oath', Gn. 21:30), Arad, Khirbet Ar'areh or Aroer (1 Sa. 30:28). Fein or Penon (Nu. 33:42), and Tell el-Kheleifeh or Ezion-geber, having been identified.

The strategic and economic importance of the Negeb has been significant. The 'Way of Shur' crossed it from central Sinai NE to Judaea (Gn. 16:7; 20:1; 25:18; Ex. 15:22; Nu. 33:8), a route followed by the Patriarchs (Gn. 24:62; 26:22), by Hadad the Edomite (1 Ki. 11:14, 17, 21–22), and probably the escape route used by Jeremiah (43:6–12) and later by Joseph and Mary (Mt. 2:13–15). The route was dictated by the zone of settled land where well-water is significant, hence the frequent references to its wells (e.g. Gn. 24:15–20; Jos. 15:18–19; Jdg. 1:14–15). Uziah reinforced the defence of Jerusalem by establishing cultivation and defensive settlements in his exposed S flank of the N Negeb (2 Ch. 26:10). It seems clear from the history of the Near East that the Negeb was a convenient vacuum for resettlement whenever population pressure forced out migrants from the Fertile Crescent. Also significant was the location of copper ores in the E Negeb and its trade in the Arabah. Control of this industry explains the Amalekite and Edomite wars of Saul (1 Sa. 14:47f.) and the subsequent victories of David over the Edomites (1 Ki. 11:15f.). It also explains the creation by Solomon of the port of Ezion-geber, and, when it was silted up, the creation of a new port at Elath by Uziah (1 Ki. 9:26; 22:48; 2 Ki. 14:22). The abiding hatred of the Edomites is explained by the struggles to control this trade (cf. Ezk. 25:12 and the book of Obadiah).

Between the 4th century BC and the beginning of the 2nd century AD, when the Nabataeans finally disappeared, these Semitic people of S Arabian origin created a brilliant civilization of small hydraulic works in the Negeb. Deployed across the strategic trade routes between Arabia and the Fertile Crescent, they waxed rich on the spice and incense trade of Arabia, and other exotic goods from Somaliland and India. Later, in the Christian era, the Negeb became a stronghold of Christianity. Glueck has identified some 300 early Christian Byzantine sites in the Negeb, dating from the 5th and 6th centuries AD.

NEHELAM. Family name or place of origin of Shemaiah, a false prophet who withstood Jeremiah (Je. 29:24, 31f.). The name is otherwise unknown. V. 24 *avmg.* renders the word as 'dreamer', thus implying some connection with Heb. *hālam*, 'to

dream'. M. F. Unger suggests a punning allusion to the dreams of the false prophets. J.D.D.

NEHEMIAH. Our only knowledge of Nehemiah comes from the book that bears his name. He was cupbearer to the Persian king, Artaxerxes I (465-424 BC). This was a privileged position. Since there is no mention of his wife, it is likely that he was a eunuch. On receiving news of the desolate state of Jerusalem (probably the result of the events of Ezr. 4:7-23), he obtained permission to go to his own

country, and was appointed governor. In spite of intense opposition (*SANBALLAT, *TOBIAH), he and the Jews rebuilt the walls of Jerusalem in 52 days. He and the other Jews then called on Ezra to read the Law, and pledged themselves to observe its commands. During his absence in Persia, some of the abuses that he had put down reappeared, and on his return he had to carry out fresh reforms. His personal memoirs occupy a large part of the book of Nehemiah, and they reveal him as a man of prayer, action and devotion to duty.

For dating his movements we have the following references:

- 2:1. His appointment as governor in 445 bc.
- 5:14; 13:6. His return to Persia in 433 bc.
- 13:7. His return to Jerusalem 'after certain days' (AV).

The suggestion in 2:6 is that his first appointment was short, and he may have returned to Persia for a brief time between 445 and 433 bc. Since his absence from Jerusalem in 13:6 was long enough for considerable abuses to arise, and for the Levites to be driven out to work in the fields, we must conclude that the 'certain days' were at least 18 months, and possibly more. J.S.W.

NEHEMIAH, BOOK OF.

I. Outline of contents

a. Nehemiah's mission (1:1-7:73a)

- i. Nehemiah hears news from Jerusalem (1:1-11).
- ii. He receives permission to visit Jerusalem (2:1-8).
- iii. He arrives in Jerusalem, and makes plans to rebuild the walls (2:9-20).
- iv. The list of wall-builders, with their allotted sections of wall (3:1-22).
- v. Opposition from the Samaritans (4:1-23).
- vi. Economic difficulties and Nehemiah's solution (5:1-13).
- vii. Nehemiah's behaviour as governor (5:14-19).
- viii. The wall is completed, in spite of plots against Nehemiah (6:1-19).
- ix. Preparations for the re-peopling of Jerusalem (7:1-73a).

b. Ezra's work (continued from Ezr. 7-10) (7:73b-9:37)

- i. Ezra's reading of the law (7:73b-8:12).
- ii. Celebration of the festival of booths (8:13-18).
- iii. A day of repentance and its penitential psalm (9:1-37).

c. Nehemiah's community (9:38-13:31)

- i. The pledge of reform (9:38-10:39)
- ii. The population of Jerusalem and Judaea (11:1-36).
- iii. The clergy of the post-exilic community (12:1-26).
- iv. The dedication of the wall (12:27-43).
- v. An ideal community (12:44-13:3).
- vi. Reforms during Nehemiah's second governorship (13:4-31).

II. Composition

It is commonly thought that the book of Nehemiah originally formed part of the Chronicler's work, which included also the books of 1 and 2 *Chronicles and *Ezra. Very little, however, of the book of Nehemiah was especially composed by the Chron-

icler (12:44-47 is probably one such passage), since he had ample source materials at his disposal.

Chief among these were the 'memoirs' of Nehemiah (Ne. 1:1-7:73a; 11:1-2; 12:31-43; 13:4-31), which may more properly be regarded as Nehemiah's formal record of his activities presented to God for his approval (note the places where Nehemiah appeals to God to 'remember' him: 5:19; 13:14, 22, 31). This first-person narrative is unique in the OT as a record made by a leading Jewish statesman about affairs he was personally involved in; though Nehemiah obviously looks at matters from his own point of view, there can be little serious doubt about the authenticity of this record. It has been subject to practically no editorial revision, and its simple and direct style marks it off quite clearly from the work of the Chronicler.

The other main source of the book is a section of the Ezra narrative (Ne. 8-9) which is inserted within the story of Nehemiah either because the activity of Ezra and Nehemiah overlapped or because the Chronicler has arranged his material thematically. The first explanation, though the most natural, creates the difficulty that though Ezra had been sent by the Persian emperor in 458 bc to proclaim the Pentateuchal law to the Jews, it was not until Nehemiah's arrival in 444 bc that he read it publicly to the people. The second explanation would imply that the Chronicler regarded the work of Ezra and Nehemiah as an integral whole; he then showed in his account that the community that came to live within the walls of rebuilt Jerusalem (Ne. 11:1-2) was united in its allegiance to the law of Moses (Ne. 8), penitent for its disobedience to that law (Ne. 9), and resolved to maintain its fidelity to the smallest detail of the law (Ne. 10).

Other sources used by the compiler of the book were lists of various kinds:

- a. Wall-builders (Ne. 3). This may have been included in Nehemiah's 'memoirs'.
- b. Returned exiles (7:6-73a). The same list, with minor variations, is found in Ezr. 2. It was apparently used by Nehemiah to prove the pure Jewish ancestry of the intended inhabitants of Jerusalem.
- c. Signatories of the pledge to observe the Mosaic law (9:38-10:27), together with various particular interpretations of the law which the community bound itself to obey (10:28-39). This pledge seems to reflect reforms undertaken by Nehemiah during his second governorship (Ne. 13).
- d. Family heads resident in Jerusalem (11:3-19).
- e. Country towns with Jewish population (11:25-36).
- f. Priests, Levites and high priests (12:1-26).

III. Message of the book

If, as most believe, Nehemiah formed part of the Chronicler's history (*CHRONICLES, BOOKS OF), its significance must be assessed within the context of the whole work. The Chronicler's purpose, broadly speaking, was to show that the Judean community of his own time, probably the 4th century bc, was the legitimate heir of the promises made by God to Israel and to the Davidic dynasty. Although there was no longer a Davidic king, in the Chronicler's view the chief function of the Davidic kingship had been the establishment of the Temple and its worship; now that the Temple is restored, the worship of God can be carried on effectively by the community itself without the presence of a king. Characteristically, the Chronicler concludes his history proper with an almost idyllic picture of

NEHEMIAH, BOOK OF

pure and joyful worship in the restored Temple, its clergy being willingly maintained by the tithes of the people (12:44–47). After his long story of Israel's disappointments, failures and grim periods of judgment, the finale to his history must have brought reassurance to his own community. Though they were only a tiny enclave in a vast Gentile empire, they could at least have the satisfaction of knowing that they were under the immediate leadership of men of God's choice and that they were fulfilling the purpose for which Israel had been created: the worship of God. Such a message can of course lead to self-congratulation and laxity. We have no way of knowing how the Chronicler's readers reacted to his encouragement, but it is worth while knowing that the people of God does not have to be always castigating itself, but is sometimes entitled to rejoice in what it has achieved.

As for the 'memoirs' of Nehemiah, which, apart from the lists, form the bulk of the book, their original purpose may well have been a kind of report such as a civil servant might make to his superior, in this case God. When Nehemiah's 'report' was read by others, they would have seen in it a revealing picture of a man of spirit, haughty and quick-tempered, and over-suspicious, no doubt, but passionately concerned for the well-being of his people (chs. 1–2), quick to respond to the appeals of brotherhood (ch. 5) and zealous for the purity of Jewish worship (13:4–9); above all, a leader who was the opposite of a self-made man, one who was always conscious of the 'good hand' and the 'fear' of his God upon him (2:8; 5:15; cf. 2:12, 18; 4:9, 14–15, 20; 6:9).

D.J.A.C.

NEHUSHTA (Heb. *n'huštā*). The wife of Jehoiakim and mother of Jehoiachin, a native of Jerusalem (2 Ki. 24:8) who was taken prisoner with her son when the Babylonians captured the city in 597 BC (v. 12; also Jos., *Ant.* 10. 84ff.). Her name may allude to her complexion (cf. Jb. 6:12) or to bronze (Heb. *n'hušā*) or even to the *serpent. Heb. personal names relating to colours, metals (*BARZIL-**LA**) or to animals are typical of this period.

D.J.W.

NEIGHBOUR. In the OT 'neighbour' translates the Heb. *šākēn*, *āmīl*, *qārōb* and *rēa*. In Lv. 19:18 LXX has *ho plēsion*. In the NT (in which this commandment is quoted eight times) Luke and John alone use the words *geitōn* and *periokos*; elsewhere (and also Lk. 10:27–36; Acts 7:27) the LXX expression appears.

The Heb. *rēa* is of more general application than English 'neighbour'. It is used, even of inanimate objects (Gn. 15:10), in the expression 'one another'; but it is also used in the sense of 'bosom friend' (Pr. 27:10), 'lover' (Ct. 5:16), even 'husband' (Je. 3:20). Like *āmīl*, *rēa* is almost exclusively used in contexts where moral principles are in question (*qārōb* and *šākēn* expressing mere geographical or physical proximity). Of passages where *rēa* is defined in the context (*i.e.* refers to

particular people) there are only three (I Sa. 15:28; 28:17; 2 Sa. 12:11) which do not admit the translation 'friend', and these are all susceptible of ironical interpretation. Thus it is either used definitely, in which case it means one who has acted—*or surprisingly* has not acted (Ps. 38:11)—in the appropriate manner, hence a 'friend'; or indefinitely of those towards whom appropriate behaviour is due. *rēa* is often found in parallel with *āh*, 'brother', and the Bible uses this dichotomy of other people in a developing series of senses. Thus a relative is contrasted with another within the clan, a fellow Hebrew with a Gentile, and finally a fellow Christian with an unbeliever.

It is important to love those to whom one has a natural or covenanted obligation, but it is as important to love those with whom one's only contact is through circumstances: the distinct ideas *hesed* and *ah'bhā* ('covenant' and 'elective' love—cf. N. H. Snaith, *Distinctive Ideas of the Old Testament*, 1944, pp. 94–95) merge in the NT into the one *agapē* required of a Christian both to those within and without the church. The Bible teaches this in the following ways:

1. It praises those who were exemplary neighbours to those whom they might have been expected to hate: particularly cf. Rahab's treatment of the spies (Jos. 2:1); Ruth's refusal to desert her mother-in-law, though in a sense free from obligation after the death of her husband (the whole story is most instructive in this connection, and it is perhaps no accident that 'Ruth' is the abstract noun from the same root as *rēa*); the widow's entertainment of Elijah (implicitly compared with the unclean birds [I Ki. 17:6] who fed him: Zarephath was in the territory of Sidon from which Jezebel came).

2. It rebukes the proud independence of the Jew (cf. Am. 2:6ff.; Is. 1:17; Jonah *passim*; Jb. 12:2).

3. In the parable of the Good Samaritan an explicit epitome of biblical teaching is given which combines 1 and 2. To the question, 'Who is my neighbour?' Jesus replies, 'Who proved neighbour to the man who fell among the robbers?' (Lk. 10:36).

BIBLIOGRAPHY. U. Falkenroth, *NIDNTT* 1, pp. 258f.

J.B.J.

NEPHTOAH. Mentioned only in the expression 'the spring of the Waters of Nephtoah' (Jos. 15:9; 18:15). The context shows that it was on the borders of Judah and Benjamin. It is usually identified with Lifta, a village 4 km NW of Jerusalem. The linguistic equation Nephtoah = Lifta is very doubtful, but no other site seems to have strong claims.

L.M.

NEREUS. A Christian greeted with his sister (not named, but conceivably Nereis) in Rom. 16:15. He is grouped with three others and 'the saints which are with them', perhaps because they belonged to the same house-church. The name (a Greek sea-god) is found in many areas, usually of freedmen and the lower orders (including slaves of 'Caesar's household'). Strangely, Paul's friend seems not to have been assimilated to the early Roman martyr commemorated in the Acts of SS. Nereus and Achilles (*Acta Sanctorum*, 3, Maii, pp. 4f.; cf. Lightfoot, *Clement*, 1, pp. 42f., especially p. 51n.).

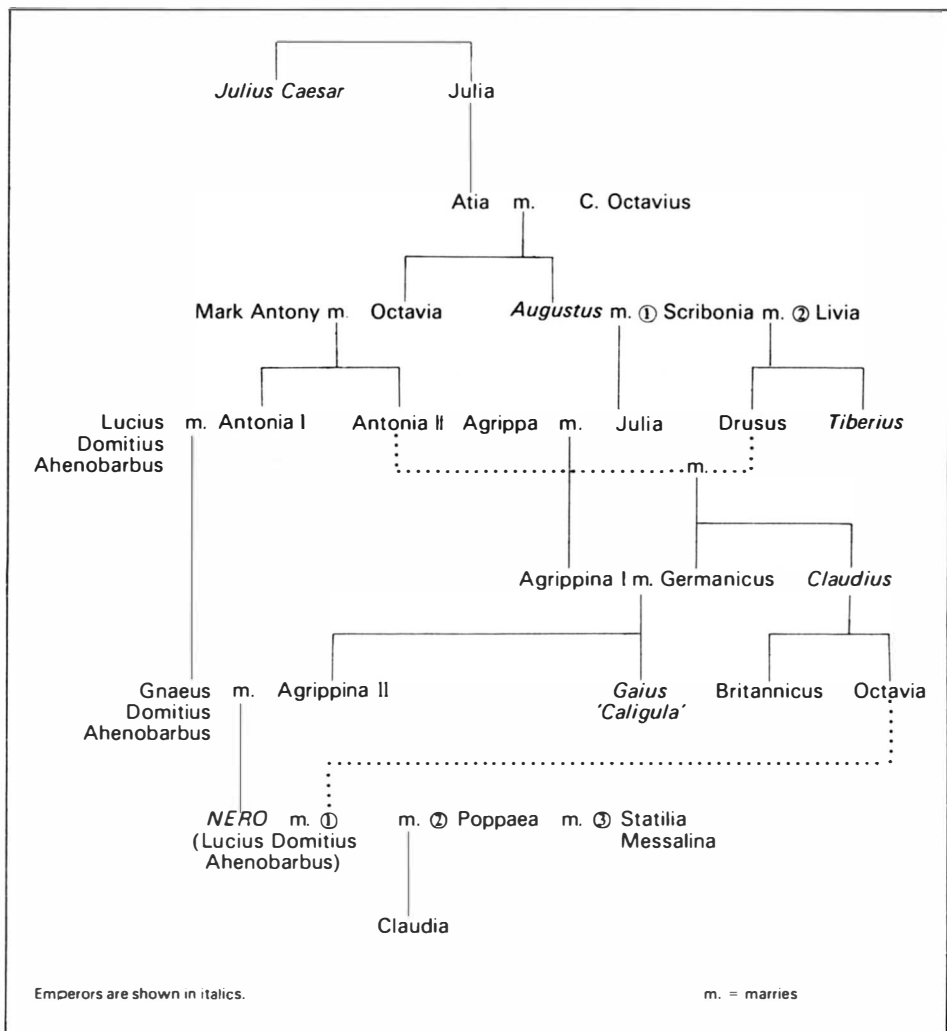

A.F.W.

NERGAL (Heb. *nēr-gal*; Sumerian U.GUR; Bab. *ner(i)gal*, 'Lord of the great city', i.e. the underworld). This Bab. deity had his cult-centre at Cuthah (modern Tell Ibrahim, NE of Babylon), where he was worshipped with his consort Ereshkigal, as lord of the underworld. Men from Cuthah continued to worship him as exiles in Samaria (2 Ki. 17:30), but, though he was the god of hunting, they feared the lion (his cult animal) sent by Yahweh (v. 26). Nergal was worshipped throughout Assyria and Babylonia as a deity having the sinister aspects of the sun, bringing plague, war, flood and havoc. He has been identified with Mekal, the god of *Bethshan and later with Mars. Temples at Larsa, Isin and Assur were dedicated to him. His name is commonly found as the divine element in personal names, as *Nergal-sharezer (Je. 39:3, 13).

BIBLIOGRAPHY: E. von Weiher, *Der babylonische Gott Nergal*, 1971.

NERGAL-SHAREZER. Heb. equivalent of Bab. *Nergal-šar-ušur* (Gk. Neriglissar) meaning 'O Nergal, protect the king'. The name of a senior official with Nebuchadrezzar's army at Jerusalem in 587 bc (Je. 39:3, 13). It is possible that two persons of the same name are listed in v. 3; if so, the first may be the Neriglissar who was one of the Bab. army commanders, son of Bel-šum-iškun and married to Nebuchadrezzar's daughter. He succeeded to the throne at Babylon in 560 bc. The Nergal-sharezer qualified as *Rabmag seems to have held a position of lower rank. D.J.W.

NERO. Son of a distinguished family of the old Roman aristocracy, the Domitii, and on his mother's side the great-great-grandson of Augustus, he was adopted by Claudius as his heir and duly took his place in the Caesarian succession in AD 54. His atrocities and feebleness finally

Simplified family tree of the Roman imperial house, showing the position of Nero in it.

NERO

destroyed the credit of his house, whose long ascendancy he finally brought to an end with his suicide in the face of the revolts of AD 68. A youth of exquisite taste, he fascinated and scandalized his contemporaries with his artistic pursuits. To the Greeks in particular he endeared himself; they never tired of flattering his longing for prizes in literary festivals; and he reciprocated this whimsy by abolishing Rom. control over the states of Achaia. After his premature death his legend flourished in the E, and his reincarnation was fervently expected, and even announced. On the other hand, within his domestic circle and among his aristocratic peers, his behaviour was monstrously sinister. The belief that his mother had murdered Claudius after marrying him to ensure her son's succession scarcely mitigated the horror when Nero himself had her done to death. Although there seems to have been a period of stable government while he remained under the influence of the senators Burrus and Seneca, he eventually freed himself from their restraints as well and was driven by his bloodthirsty suspicions to the inevitable end.

Nero is indirectly concerned with the NT at three points.

1. It was Nero to whose superior justice Paul appealed against the vacillations of his deputy, Festus (Acts 25:10-11), and Nero whose God-given authority he had studiously supported in writing to the Romans (Rom. 13:1-7). There is a horrible and tragic irony in this: 'he does not bear the sword in vain' (v. 4). We do not know the outcome of Paul's appeal, but the Christians of Rome were treated for their loyalty to one of the most barbaric pogroms in history.

2. In AD 64 much of the city of Rome was destroyed by fire. To divert the suspicion that he had started it for his own entertainment, Nero accused another party about whom the public were also prepared to believe the worst. Having forced a conviction for arson against certain Christians he conducted mass arrests, and among other tortures burnt his victims alive in public (Tacitus, *Ann.* 15. 44). The important things about this were that Christians were clearly distinguished from Jews (Nero's wife Poppaea was pro-Jewish), and that it was plausible to accuse them of such crimes. Although Tacitus makes it clear that the charges were a fabrication, and that they even attracted some sympathy to the Christians, he equally reveals that the public was profoundly suspicious of the morals of the Christians. Suetonius (*Nero* 16. 2), without mentioning the fire, lists the attack on the Christians with a number of other reforms that are put down to Nero's credit. What was disastrous for the Christians was that Nero's action had left a legal precedent for translating this popular odium into official action. The First Epistle of Peter reflects this kind of situation. Christians are in the agonizing position of being committed to honour the authorities, while knowing that any moral lapse may lead to legal proceedings against them, and that they may even be prosecuted on grounds of their membership in the Christian society alone.

3. In the closing years of Nero's régime his commanders in Palestine were drawn into the war that ended with the destruction of Jerusalem in AD 70, an event that finally set the Christian churches free from their Zionist orientation. Nero played no part in the campaigns, and was apparently oblivious of the issues involved: the critical year AD 67

found him engrossed in literary triumphs on the stages of Greece.

E.A.J.

NEST (Heb. *qēn* from *qinnēn*, 'make a nest'; Gk. *kataskēnōsis*, 'place for roosting in'). The word is employed in its customary sense in Dt. 22:6; 32:11 (speaking of 'nestlings'); Jb. 39:27; Ps. 104:17; Pr. 27:8; Is. 16:2. It is found metaphorically (notably of a lofty fortress) in Nu. 24:21; Jc. 49:16; Ob. 4; with reference to the secure home of Israel in Ps. 84:3-4; and of the Chaldeans' strong abode in Hab. 2:9. Job (29:18) speaks of his lost home as a 'nest'. In Gn. 6:14 'nests' (*qinnim*, 'rooms') is used to describe the subdivisions within the ark. In Mt. 8:20; Lk. 9:58 Jesus contrasts his homeless situation with that of the *birds who have their nests (*rvmg*, 'lodging-places').
J.D.D.

NETHANIAH (Heb. *n'tanyāhū*, 'Yahweh has given'; LXX *Nathanias*; cf. *NATHANIEL). 1. The father of Ishmael, the murderer of Gedaliah (Je. 40:8, 14-15; 41:9). In 2 Ki. 25:23 the LXX reads *Matthanias*. 2. An Asaphite, leader of the fifth group of the Temple choir (1 Ch. 25:2, 12). 3. Father of Jehudi (Je. 36:14). 4. A Levite accompanying the teaching mission sent by Jehoshaphat to Judah (2 Ch. 17:8).
D.J.W.

NETHINIM (Heb. *n'tinim*, rsv 'temple servants'). Apart from 1 Ch. 9:2 (parallel to Ne. 11:3) these people are mentioned only in Ezra and Nehemiah (av). They are listed among the returned exiles in Ezr. 2:43-58, where they are grouped with 'the sons of Solomon's servants'. When Ezra brings back a fresh party he sends to a place named Casiphia to obtain Levites and Nethinim (Ezr. 8:17, 20). In Jerusalem they had special quarters in the Ophel district near the Temple (Ne. 3:26, 31; 11:21). This may have been where they lived when they were on duty, since Ezr. 2:70; Ne. 7:73 refer to cities in which they lived; it is possible, however, that the reference here is to the period before the rebuilding of the Temple.

The name means 'those who are given', and Ezr. 8:20 says that David and the princes had given them for the service of the Levites. It has been held that they and the children of Solomon's servants were the descendants of Canaanite or foreign prisoners, like the Gibeonites of Jos. 9:27. The foreign names in Ezr. 2:43-58 would support this. In 1 Esdras 5:29 and Josephus (*Ant.* 11. 128) they are called 'temple slaves', *hierodouloi*. It has been supposed that Ezekiel protests against them in 44:6-8, but it is hardly likely that the Nethinim would have remained uncircumcised as Ezekiel here says, and their inclusion in the Ezra list, and the position given to them in Ezra-Nehemiah show that the rigoristic Chronicler had no objection to them. Similarly, the reference to the Canaanite in the house of the Lord in Zc. 14:21 is more likely to refer to Canaanite traders, as in Pr. 31:24.

J.S.W.

NETOPHAH ('a dropping'). A city, or group of villages (1 Ch. 9:16; Ne. 12:28), near Bethlehem (Ne. 7:26). The inhabitants are called Netophathites in evv. 'Netophathi' in Ne. 12:28, AV, should be 'the Netophathites' as RSV. It was the home of some of David's mighty men (2 Sa. 23:28–29). It is mentioned as a place to which returning exiles came (Ezr. 2:22). That it was near Bethlehem is clear, but it cannot be identified conclusively with any modern site. G.W.G.

NETS. Nets in the Bible are instruments of meshed strings for fishing or hunting, or reticulate designs or gratings.

a. Nets for fishing and hunting

Words from four Heb. roots are translated 'net' in the OT. 1. From *yrš*, 'take', *rešet* is a net to catch birds (Pr. 1:17) or water creatures (Ezk. 32:3), and is often used figuratively of the plots of evil men (e.g. Ps. 9:15, laid to catch the feet), or of God's judgments (e.g. Ezk. 12:13, cast over the prey). 2. *herem*, 'something perforated', is a large net which may be spread out on the shore to dry (Ezk. 26:5) and is used figuratively of an evil woman's heart (Ec. 7:26), of God's judgment of Pharaoh (Ezk. 32:3), of predatory individuals (Mi. 7:2), and of the Chaldeans' military power (Hab. 1:15). 3. From the root *šqd*, 'hunt', *m'sōdā* is a fish-net (Ec. 9:12), *māšūd* and *m'sūdā* are used of God's judgments (Jb. 19:6, surrounding the prey; Ps. 66:11), and *māšōd* in Pr. 12:12 is perhaps a snare for evil men. 4. From the root *kmr*, which in Arabic means 'overcome' or 'cover', Heb. *mikmōret* is the net which Egyptian fishermen spread over the water (Is. 19:8), *mikmēret*, AV 'drag', RSV 'seine', is a symbol of the Chaldeans' army (Hab. 1:15), *mikmōr* is used to catch an antelope (Is. 51:20), and *mikmār* is figurative of the plots of the wicked (Ps. 141:10).

In the NT three Gk. words are translated 'net'. 5. From *diktūō*, 'to net', *diktūon*, the most common and general word for net. This type of net was used by Jesus' disciples (Mt. 4:20–21); it was let down (Lk. 5:4) or cast (Jn. 21:6) in the water, and emptied into a boat (Lk. 5:7) or dragged to shore (Jn. 21:8). 6. From *amphiballō*, 'cast around', *amphiblēstron*, 'a casting net', also used by the disciples of Jesus (Mt. 4:18). 7. From *sassō*, 'fill', *sagēnē* (related to English 'seine'), a drag-net to which our Lord compared the kingdom of heaven (Mt. 13:47). It required several men to draw this large net to shore (Mt. 13:48).

The care of nets included washing (Lk. 5:2), drying (Ezk. 47:10) and mending (Mt. 4:21).

BIBLIOGRAPHY. G. Dalman, *Arbeit und Sitte*, 6, 1939, pp. 335–337, 343–363.

b. Nets as designs or gratings

Around the base of the brazen altar of burnt offering of the tabernacle was grating of silver (rešet, Ex. 27:4–5) or net work (*mā'asēh rešet*, Ex. 38:4). This grating may have had both artistic and practical purposes, since it would be lighter to carry than solid metal and allow draught for burning.

The capitals of the two pillars before Solomon's Temple were decorated with a net design (Heb. *š'bākā* from a root meaning 'interweave', 1 Ki. 7:17; Je. 52:22). Those who think these pillars were

cressets point out that open net work would give air for burning inside the capital, but this feature is not mentioned in the Bible.

NEW TESTAMENT APOCRYPHA. The extent of the NT apocrypha is more difficult to determine than that of the OT. The term will here be confined to non-canonical works attributed to, or purporting to give extra-canonical information about, Christ or the apostles. Works written without such pretensions are thus excluded, even where they enjoyed quasi-canonical status in some churches for a time (*PATRISTIC LITERATURE); so are Christian attributions to (or Christianized versions of works attributed to) OT characters (*PSEUDEPIGRAPHY), and the interpolation or rehandling of NT texts with alien material (*TEXTS AND VERSIONS, NT section).

A huge literature remains, preserved partly in Gk. and Lat., but still more in Coptic, Ethiopic, Syriac, Arabic, Slavonic, and even in Anglo-Saxon and contemporary W European languages. Some works that we know to have been very influential have been almost lost, and many of the most important exist only in fragmentary state. New discoveries, however, often of much importance for early Christian history, are constantly being made. Complex literary problems are frequently met, for many of the apocryphal works lent themselves to re-telling, interpolation and plagiarism.

I. Forms

A large proportion of the apocryphal literature falls into one of the NT literary forms: Gospel, Acts, Epistle, Apocalypse. But this formal similarity is often accompanied by a huge difference in conception. This is particularly noticeable with the Gospels: we have Infancy Gospels, Passion Gospels, sayings documents and theological meditations; but (if we exclude the early fragmentary Gospels on which we are in any case ill-informed), it is hard to find works which, like the canonical Gospels, have any interest in the words and works of the incarnate Lord. Acts form a numerous and probably the most popular class, doubtless through the wide and non-sectarian appeal of many of the stories. Epistles are not common: despite the fact that nearly all the works in the NT sometimes said to be pseudepigraphic are Epistles. For apocalypses, there was Jewish precedent for attributing them to a celebrity of the past.

Another class of literature developed which took over some features of apocryphal literature: the Church Orders of Syria and Egypt. These collections of canons on church discipline and liturgy, of which the *Apostolic Constitutions* is the most popular, claiming to represent apostolic practice, came by convention to claim apostolic origin: and the most daring, the *Testament of our Lord*, purports to be a post-resurrection discourse of Christ. The custom was perhaps stimulated by its success in the 3rd-century *Didascalia*, and misunderstanding of the claim to apostolicity of the *Apostolic Tradition* of Hippolytus—two works which they plundered heavily—together with, in some cases, the popularity of the Clementine romance. (Cf. *Studia Patristica*, eds. K. Aland and F. L. Cross, 2, 1957, pp. 83ff.)

II. Motives

The creation of apocryphal literature had begun in apostolic times: Paul has apparently to authenticate his signature because of forgeries circulating (cf. 2 Thes. 3:17). In the 2nd century the literature comes into its own, and gathers momentum thenceforth, particularly in Egypt and Syria. It continues into the Middle Ages (where the older legends were still loved), and, occasionally, through sentiment, *parti pris* or sheer eccentricity, in our own day. The various motives behind it are thus related to the whole trend of Christian and sub-Christian history; but some of the motives operative at the beginning are particularly important.

a. Romance and the literary impulse

This shows itself in various forms. There is the desire to satisfy curiosity on matters of which the NT says nothing. A flood of worthless Infancy Gospels covers the silent years from Bethlehem to the baptism. As the Virgin Mary becomes more prominent in theology and devotion, pseudo-apostolic works describe her birth, life and, eventually, her assumption into heaven. A reader of Col. 4:16 felt it incumbent upon him to supply the apparently missing letter to the Laodiceans. It appears above all in the novelistic Acts and romances and some of the Gospels—bizarre, fetid, but packed with wonders and anecdotes, and many of them, with all their faults, having a certain animation. We best understand this movement as a branch of popular Christian literature, and, studied in this light, the earliest books reveal some of the issues which occupied congregations in the 2nd and 3rd centuries: relationships with the state, controversies with the Jews, debates on marriage and celibacy: and, by their belligerent insistence on miracles, reveal that the real age of miracles had passed. The productions are crude, even vulgar; but their authors knew their public. For many they must have replaced erotic pagan popular literature, and in many cases, with a real desire to edify. The authors would doubtless be hard put to it to differentiate their motives from those of the 20th-century author of *The Robe* or *The Big Fisherman*. There is no need to question the sincerity of the Asian presbyter who was unfrocked for publishing the *Acts of Paul* when he said that he did so 'for love of Paul', who had died 100 years before the presbyter wrote. This helps to explain how stories and whole books originating in heretical circles retained and increased their currency in orthodox quarters. It was heretical teachers who made the earliest effective use of this form of literature; and so successful was it that others transmitted, expurgated and imitated the forms designed as vehicles for their propaganda.

b. The inculcation of principles not, to the author's mind, sufficiently clearly enunciated in the New Testament books

Naturally, even in a work 'for love of Paul' any doctrinal disproportion or aberration of the author passed into his work; indeed part of his edificatory aim might well be to inculcate the aberration: the Asian presbyter, for instance, had an obsession with virginity which makes his work, otherwise more or less orthodox, remote from evangelic spirit. But there are many works the aim of which is deliberately sectarian: to promulgate a body of doctrine to supplement or supersede that

of the undisputed books. These were mainly the fruit of the two great reactionary movements of the 2nd century, *Gnosticism and Montanism. The Montanist 'Scriptures' arose almost by accident, and were not in our sense strictly apocryphal, for, though they claimed to preserve the living testimony of the Holy Spirit, they were not pseudonymous; they have virtually disappeared (but cf. those collected in R. M. Grant, *Second Century Christianity*, pp. 95ff.). Writings from the multi-form expressions of Gnosticism, however, have survived in quantity. Such works as the *Gospel of Truth*, a meditation in Gnostic terms reflecting the language of the undisputed Scriptures, are less common than works which select, modify and interpret those Scriptures in a sectarian direction (cf. the Nag Hammadi *Gospel of Thomas*), those which blatantly profess to contain secret doctrine not available elsewhere (cf. the *Apocryphon of John*), and those which simply attribute to the Lord or the apostles the commonplaces of Gnostic teaching. And for all these purposes the apocryphal form became conventional.

The reason is not far to seek. In the sub-apostolic age and after, with the immense expansion of the church, the intensifying of the danger of persecution and the proliferation of false teaching, apostolicity became the norm of faith and practice: and, as the living memory of the apostles receded, apostolicity was increasingly centred in the Scriptures of our NT, over the majority of which there was unanimity in the church. If, therefore, a new form of teaching was to spread, it had to establish its apostolicity. This was commonly done by claiming a secret tradition from an apostle, or from the Lord through an apostle, either as a supplement to the open tradition of the Gospels or as a corrective. The favoured apostle varies: many sects had Judaic leanings, and James the Just and, curiously, Salome, are frequent sources of tradition; Thomas, Philip, Bartholomew and Matthias also appear constantly. In the *Gospel of Thomas*, for instance, it is Thomas who shows fullest understanding of the Lord's person (Matthew and Peter—perhaps as the apostles behind the church's first two Gospels—appear to their disadvantage). The still more weird *Pistis Sophia* envisages a sort of congress of the apostles and the women with the Lord, but indicates that Philip, Thomas and Matthias are to write the mysteries (*Pistis Sophia*, ch. 42, Schmidt). Local factors probably contribute something to the choice of apostle—all those named were associated with Syria and the East, some of the most fertile soil for literature of this type; and speculations about Thomas as the Lord's twin exercised an additional fascination. The process brought about a new emphasis on the post-resurrection period, in which discourses of the Lord were usually set; significantly, for little is said of this period in the undisputed Gospels, and it was a constant Gnostic feature to undervalue the humanity of the incarnate Lord. It is worth noticing that, while those syncretistic sects who adopted some Christian elements could get their revelations whence they would, Christian Gnosticism had to show that its knowledge was derived from an apostolic source.

c. The preservation of tradition

Inevitably in early days words of the Lord were handed down outside the canonical Gospels. Some were probably transformed out of recognition in

the process, others tendentiously twisted. The celebrated preface of Papias (Eusebius, *EH* 3. 39), showing him collecting oracles of the Lord for his Expositions, reveals how conscious orthodox Christians in the early 2nd century were of this floating material and the problems of collecting it. Papias, whatever his shortcomings, was conscientious in scrutinizing his material: yet the results were not always happy, and perhaps not all his contemporaries had his compunction. Genuine material may thus sometimes have been preserved amid undisputed rubbish.

Similarly, memories of the lives and deaths of apostles would be likely to linger, and the apocryphal Acts, even when dubious theologically, may sometimes preserve genuine traditions, or reflect appropriate situations.

The desire to transmit such memories undoubtedly played its part in the production of the apocryphal literature; but it could not defeat the tendency to invent, elaborate, improve, or redirect. Any winnowing process is thus hazardous: and, as scholars like Origen knew, was already hazardous in patristic times. In consequence, the necessity of building squarely upon what was undisputed was universally recognized.

III. The apocryphal literature in the early church

The presence of such various writings under apostolic names when apostolicity was the norm made it urgent to be assured which the truly apostolic writings were, and the early Christian scholars were not deficient in insight and critical acumen (*CANON OF THE NEW TESTAMENT). But it is striking how little the generally received list of canonical books is affected by discussions over apocryphal literature. Some churches were slow in receiving books now regarded as canonical. Some gave high place to such works as *1 Clement* and the *Shepherd of Hermas*. But hardly any books in, say, M. R. James' *Apocryphal New Testament* were ever in any sense 'Excluded books of the NT'. They were beyond consideration. The Petrine literature caused more heart-searching than any other (*cf.* R. M. Grant and G. Quispel, *VC* 6, 1952, pp. 31ff.). By Eusebius' time the discussion, save on 2 Peter, is closed (*EH* 3. 3), but there is positive evidence that at least the *Apocalypse of Peter* was for a time employed in some areas (see below).

In this connection the letter of Serapion, bishop of Antioch, to the congregation at Rhossus about AD 190, is of interest (*cf.* Eusebius, *EH* 6. 12). The church had begun to use the *Gospel of Peter*. There had evidently been opposition to it, but Serapion, satisfied of the stability of the congregation, had, after a cursory glance, sanctioned its public reading. Trouble followed. Serapion read the Gospel more carefully and found not only that it was accepted by churches whose tendencies were suspect, but that it reflected at some points the Docetic heresy (denying the reality of Christ's manhood). He sums it up 'most is of the Saviour's true teaching', but some things (of which he appended a list) were added. He says, 'We accept Peter and the other apostles as Christ, but as men of experience we test writings falsely ascribed to them, knowing that such things were not handed down to us.'

In other words, the list of apostolic books was already traditional. Other books might be read, provided they were orthodox. The *Gospel of Peter* was not traditional: its use at Rhossus was the result of a specific request, and was not un-

opposed. At first Serapion had seen nothing to require prolonged controversy: if spurious, it was at least harmless. When closer examination revealed its tendencies its use in any form in church was forbidden.

The course of events seems best understood if, following the hint of Serapion's action, we recognize that the acknowledgment of a book as spurious did not necessarily involve complete refusal to allow its public reading, providing it had some devotional value and no heretical tendency: a sort of intermediate status analogous to that of the Apocrypha in the sixth Anglican Article. But even a heretical book, if it had other appeal, might still be read privately and laid under tribute. By these means the apocryphal literature came to have a lasting effect on mediaeval devotion and Christian art and story.

There is, however, nothing to suggest that it was an accepted part of catholic practice in the 1st or 2nd century to compile works in the name of an apostle, a process implied in some theories of the authorship of certain NT books (*cf.* D. Guthrie, *ExpT* 67, 1955-6, pp. 341f.), and the case of the author of the *Acts of Paul* is one example of drastic action against such publication.

Passing from any NT writings to the best NT apocrypha—the true creation of the early Christian community—one moves into a different world. If 2 Peter—to take the NT writing most commonly assigned to the 2nd century—be an apocryphon, it is unique among the apocrypha.

IV. Some representative works

A few representatives of different apocryphal forms may be given. They are, generally speaking, some of the more important older works. Few have a complete text: for some we are dependent on quotations from early writers.

a. Early apocryphal Gospels

A number of fragments from early Gospels are quoted by 3rd- and 4th-century writers. Debate continues on the nature and inter-relationships of these Gospels. The *Gospel according to the Hebrews* was known to Clement of Alexandria, Origen, Hegeppus, Eusebius, and Jerome, who says (though he is not always believed) that he translated it into Gk. and Lat. (*De Viris Illustribus* 2) from Aramaic in Heb. characters, and that it was used by the Nazarenes, a Jewish-Christian group. Most people, he says, mistakenly thought it was the Heb. original of the Gospel of *Matthew mentioned by Papias, which recalls that Irenaeus knew of sects which used only Matthew (*Adv. Haer.* 1. 26. 2; 3. 11. 7). Some of the extracts we possess have certainly points of contact with Matthew; others reappear in other works, most recently the *Gospel of Thomas*. There is a strong Jewish-Christian tone, and a resurrection appearance to James the Just is recorded. Eusebius refers to a story, found both in Papias and in the *Gospel of the Hebrews*, of a woman accused before Jesus of many sins. This has been often identified with the story of the adulteress found in many mss of Jn. 8.

The Gospel probably reflects the activity of Syrian Jewish Christians using Matthean (the 'local' Gospel) and other local tradition, some of it doubtless valid. The Nazarenes called it 'The Gospel according to the Apostles' (Jerome, *Contra Pelag.* 3. 2)—a suspiciously belligerent title. (See V. Burch, *JTS* 21, 1920, pp. 310ff.; M. J. Lagrange, *RB*

NEW TESTAMENT APOCRYPHA

31, 1922, pp. 161ff., 321ff.; and for its defence as a primary source, H. J. Schonfield, *According to the Hebrews*, 1937.)

Epiphanius, ever a confused writer, mentions a mutilated version of Matthew used by the Jewish-Christian sect he calls 'Ebionites'. This has been identified with the Hebrews Gospel, but the extracts given show a different view of the nativity and baptism, and the work is clearly sectarian and tendentious. It may be the same as the *Gospel of the Twelve Apostles* mentioned by Origen (*Lk. Hom. 1*; cf. J. R. Harris, *The Gospel of the Twelve Apostles*, 1900, pp. 11f.).

The *Gospel of the Egyptians* is known mainly through a series of quotations in the *Stromateis* of Clement of Alexandria. Some Gnostics used it (Hippolytus, *Philosophoumena* 5. 7), and it doubtless arose in an Egyptian sect. Extant portions relate to a dialogue of Christ and Salome on the repudiation of sexual relations. A document with the same title is included in the Nag Hammadi library, but is not related to the work known to Clement. It is an esoteric Gnostic tractate.

The papyri have yielded a number of fragments of uncanonical Gospels. The most celebrated, P. Oxy. 1. 654-655, will be considered later under the *Gospel of Thomas*. Next in interest comes the so-called *Unknown Gospel* (P. Egerton 2) published by H. I. Bell and T. C. Skeat in 1935, describing incidents after the Synoptic manner but with a Johannine dialogue and vocabulary. The ms, dated c. AD 100, is one of the oldest known Christian Gk. mss. It has been held by some to draw on the Fourth Gospel and perhaps one of the Synoptics also, and by others to be an early example of Christian popular literature independent of these (cf. *Lk. 1:1*). (See H. I. Bell and T. C. Skeat, *The New Gospel Fragments*, 1935; C. H. Dodd, *BJRL* 20, 1936, pp. 56ff. = *New Testament Studies*, 1953, pp. 12ff.; G. Mayeda, *Das Leben-Jesu-Fragment Egerton 2*, 1946; H. I. Bell, *HTR* 42, 1949, pp. 53ff.)

b. Passion Gospels

The most important Gospel of which we have any substantial part is the (mid?) 2nd-century *Gospel of Peter*, of which a large Coptic fragment, covering from the judgment to the resurrection, exists (The Akhmim Fragment). It has been identified with the 'memoirs of Peter', perhaps mentioned by Justin (*Trypho* 106), but this is inappropriate. (Cf. V. H. Stanton, *JTS* 2, 1900, pp. 1ff.)

The miraculous element is heightened. The watch see three men come out from the tomb, two whose heads reach the sky and one who overpasses it. A cross follows them. A voice from heaven cries, 'Hast thou preached to them that sleep?' and a voice from the cross says, 'Yes' (cf. 1 Pet. 3:19). Pilate's share of blame is reduced, and that of Herod and the Jews emphasized: perhaps reflecting both an apologetic towards the state and controversy with the Jews.

Serapion's judgment (see above) did not err; most of it is lurid, but not dangerous. But there are tell-tale phrases: 'He kept silence as one feeling no pain', and the rendering of the cry of dereliction, 'My power, thou hast forsaken me', followed by the pregnant 'he was taken up', show that the author did not properly value the Lord's humanity. (See L. Vaganay, *L'Évangile de Pierre*, 1930.)

The *Gospel of Nicodemus* is the name given to a composite work existing in various recensions in Gk., Lat. and Coptic, of which the principal elements

are 'The Acts of Pilate', supposedly an official report of the trial, crucifixion and burial, an abstract of the subsequent debates and investigations of the Sanhedrin, and a highly-coloured account of the 'Descent into Hell'. There are various appendices in the different versions; one, a letter of Pilate to the emperor Claudius, may give the earliest example of 'Acts of Pilate'. Apologists like Justin (*Apol.* 35. 48) appeal confidently to the trial records, assuming they exist. Tertullian knew stories of Pilate's favourable reports to Tiberius about Jesus (*Apol.* 5. 21). Such 'records' would be constructed in time: especially when a persecuting government, c. AD 312, used forged and blasphemous reports of the trial for propaganda purposes (Eusebius, *EH* 9. 5). Our present 'Acts' may be a counter to these. The 'Descent into Hell' may be from rather later in the century, but both parts of the work probably draw on older material. The striking feature is the virtual vindication of Pilate, doubtless for reasons of policy. As the stories passed into Byzantine legend, Pilate became a saint, and his martyrdom is still celebrated in the Coptic Church.

There is no proper critical text. See J. Quasten, *Patrology*, 1, pp. 115ff. for versions.

c. Infancy Gospels

The *Protevangelium of James* had a huge popularity; many mss exist in many languages (though none in Lat.), and it has deeply influenced much subsequent Mariology. It was known to Origen, so must be 2nd century. It gives the birth and presentation of Mary, her espousal to Joseph (an old man with children) and the Lord's miraculous birth (a midwife attesting the virginity *in partu*). It is clearly written in the interests of certain theories about the perpetual virginity. The supposed author is James the Just, though at one point Joseph becomes the narrator. (See M. Testuz, *Papyrus Bodmer 5*, 1958; E. de Strycker, *La forme plus ancienne du Protévangile de Jacques*, 1961.)

The other influential infancy Gospel of antiquity was the *Gospel of Thomas*, which tells some rather repulsive stories of the silent years. Our version seems to have been shorn of its Gnostic speeches. It is distinct from the Nag Hammadi work of the same name (see below); it is sometimes difficult to know to which work patristic writers refer.

d. The Nag Hammadi Gospels

In the Nag Hammadi library there are several Gospels in Coptic which were not previously known, besides new versions of others (*CHENOBOSKION).

One text opens 'The Gospel of Truth is a joy' (an *incipit*, not a title), and proceeds to a verbose and often obscure meditation on the scheme of redemption. Gnostic terminology of the type of the Valentinian school is evident, but not in the developed form we meet in Irenaeus. It alludes to most of the NT books in a way which suggests recognition of their authority. It has been commonly identified with the 'Gospel of Truth' ascribed to Valentinus by Irenaeus, though this has been denied (cf. H. M. Schenke, *ThL* 83, 1958, pp. 497ff.). Van Unnik has attractively proposed that it was written before Valentinus' break with the Roman church (where he was once a candidate for an episcopal chair), when he was seeking to establish his orthodoxy. It would thus be an important

witness to the list of authoritative books (and substantially similar to our own) in Rome c. AD 140. (See G. Quispel and W. C. van Unnik in *The Jung Codex*, ed. by F. L. Cross, 1955; text by M. Malinine *et al.*, *Evangelium Veritatis*, 1956 and 1961; commentary by K. Grobel, *The Gospel of Truth*, 1960.) The most recent English translation is by G. W. MacRae in *The Nag Hammadi Library*, 1977.

The now famous *Gospel of Thomas* is a collection of sayings of Jesus, numbered at about 114, with little obvious arrangement. A high proportion resemble sayings in the Synoptic Gospels (with a bias towards Luke) but almost always with significant differences. These often take a Gnostic direction, and among other Gnostic themes the OT is minimized and the necessity for obliterating consciousness of sex is stressed. It has been identified with the Gospel used by the Naassene Gnostics (*cf.* R. M. Grant with D. N. Freedman, *The Secret Sayings of Jesus*, 1959; W. R. Schoedel, *VC* 14, 1960, pp. 225ff.), but its originally Gnostic character has been doubted (R. McL. Wilson, *Studies in the Gospel of Thomas*, 1961), and some are prepared to see independent traditions of some value in it. G. Quispel has found the variants similar in type to those in the Bezan ('Western') Text (*VC* 14, 1960, pp. 204ff.) as well as in Tatian's *Diatessaron* and the Pseudo-Clementines (see below). In a more recent article Quispel connects the *Gospel of Thomas* with the Encratites rather than the Gnostics (*VC* 28, 1974, pp. 29f.) The Oxyrhynchus Logia P. Oxy. I. 654-655, including the celebrated 'Raise the stone and thou shalt find me', recur in a form which suggests that they were part of an earlier Gk. version of the book. Thomas (probably thought of as the twin of Jesus) plays the central role in the tradition (see above), but James the Just is said to become chief of the disciples—one of several indications that a Jewish-Christian source is under tribute.

Many problems beset this curious and inconsistent book, but so far it seems safe to place its origin in Syria (which may explain the Semitisms of the language), where there was always a freer attitude to the Gospel text and more contamination than elsewhere. (See text and translation by A. Guillaumont *et al.*, 1959; H. Koester and T. O. Lambdin in *The Nag Hammadi Library in English*, pp. 117-130; B. Gärtner, *The Theology of the Gospel of Thomas*, 1961; bibliography to 1960 in J. Leipoldt and H. M. Schenke, *Koptisch-Gnostische Schriften aus den Papyrus-Codices von Nag-Hamadi*, 1960, pp. 79f.)

The chief interest of the *Gospel of Philip* (Gnostic, though the sect is hard to identify) lies in its unusually developed sacramental doctrine, in which there are greater mysteries in Christ and the 'bridechamber' than in baptism (see E. Segelberg, *Numen* 7, 1960, pp. 189ff.; R. McL. Wilson, *The Gospel of Philip*, 1962, provides a translation and commentary. *Cf.* also *The Nag Hammadi Library in English*, pp. 131-151 [tr. by W. W. Isenberg]). The language is repulsive: interest in sexual repudiation amounts to an obsession.

e. The 'Leucian' Acts

The five major apocryphal Acts must serve as representatives of a large number. They were gathered into a corpus by Manicheans, who would inherit them from Gnostic sources. The 9th-century bibliophile Photius found the whole attributed to one 'Leucius Charinus' (*Bibliotheca*, 114), but it is

probable that Leucius was simply the fictitious name of the author of the *Acts of John*, the earliest (and most unorthodox) of the corpus.

It belongs to about AD 150-160 and describes miracles and sermons (definitely Gnostic) by John in Asia Minor. It reflects ascetic ideals, but has some pleasant anecdotes amid more disreputable matter. It affects also to relate John's own accounts of some incidents with the Lord, and his farewell and death. Liturgically it is of some interest, and includes the first known eucharist for the dead.

The *Acts of Paul* is also early, for Tertullian knew people who justified female preaching and baptizing therefrom (*De Baptismo* 17). He says it was written ostensibly 'for love of Paul' by an Asian presbyter, who was deposed for the action. This must have happened before AD 190, probably nearer AD 160. The Acts reflect a time of persecution. There are three main sections:

(i) The Acts of Paul and Thecla, an Iconian girl who breaks off her engagement at Paul's preaching, is miraculously protected from martyrdom (winning the interest of 'Queen Tryphaena'—*TRYPHAENA AND TRYPHOSA), and assists Paul's missionary travels. There may have been some historical nucleus even if not a written Thecla source (so Ramsay, *CRE*, pp. 375ff.).

(ii) Further correspondence with the Corinthian church.

(iii) The martyrdom of Paul (legendary).

The tone is intensely ascetic (*cf.* Paul's Beatitudes for the celibate, ch. 5), but otherwise orthodox. There are many incomplete mss, including a sizeable section of the original Gk. See L. Vouaux, *Les Actes de Paul*, 1913; E. Peterson, *VC* 3, 1949, pp. 142ff.

The *Acts of Peter* is somewhat later, but still well within the 2nd century. The main ms, in Latin (often called the Vercelli Acts), opens with Paul's farewell to the Roman Christians (perhaps from another source). Through the machinations of *Simon Magus the Roman church falls into heresy, but, in response to prayer, Peter arrives, and defeats Simon in a series of public encounters. There follows a plot against Peter initiated by pagans whose wives have left them as a result of his preaching, Peter's flight including the *Quo Vadis?* story, and his return to crucifixion, which was head downwards. A Coptic fragment and allusions to a lost portion suggest that other stories dealt with questions raised in the community about suffering and death. Like other Acts, it sees Peter's work and Paul's as supplementing each other: and the Roman church is a *Pauline* foundation. The ascetic tone is as intense as ever, but otherwise the Gnostic element is not often obtruded; we may, however, have expurgated editions. The place of origin is disputed, but it was almost certainly Eastern. See L. Vouaux, *Les Actes de Pierre*, 1922. It is worth noting that in the Nag Hammadi library the only two documents described as Acts are related to Peter. The Coptic *Acts of Peter* has some affinity with the Lat. *Acts of Peter*, but the latter is more extreme in its ascetic emphasis.

The *Acts of (Judas) Thomas* stand apart from the other Acts. They are a product of Syriac Christianity, and were almost certainly written in Syriac in Edessa in the early 3rd century. They describe how the apostles divided the world by lot, and Judas Thomas the Twin was appointed to India. He went as a slave, but became the means of the conversion of King 'Gundaphar' and many other

notable Indians. Everywhere he preaches virginity and is frequently imprisoned in consequence of his success. Finally, he is martyred.

The Acts have certain Gnostic features: the famous 'Hymn of the Soul' which appears in them has the familiar Gnostic theme of the redemption of the soul from the corruption of matter—the king's son is sent to slay the dragon and bring back the pearl from the far country. There is clearly some relation, as yet unascertained, to the *Gospel of Thomas*: and the title of Thomas, 'Twin of the Messiah', is eloquent. The appeal for virginity is louder, shriller, than in any of the other Acts, but this was a characteristic of Syriac Christianity. Of Gnosticism in the sense of the possession of hidden mysteries there is little trace: the author is too much in earnest in preaching and recommending his Gospel.

There are complete versions in Syriac and Gk. The Acts seem to show some real knowledge of the history and topography of *India. (See A. A. Bevan, *The Hymn of the Soul*, 1897; F. C. Burkitt, *Early Christianity outside the Roman Empire*, 1899; A. F. J. Klijn, *VC* 14, 1960, pp. 154ff.; *idem*, *The Acts of Thomas*, 1962.)

The *Acts of Andrew* is the latest (c. AD 260?) and, in our MSS, the most fragmentary of the 'Leucian' Acts. It is closely related to the *Acts of John*, and its Gnostic character is mentioned by Eusebius (*EH* 3. 25). It describes preachings among the cannibals, miracles, exhortations to virginity, and, perhaps added from another source, martyrdom in Greece. An abstract is given by Gregory of Tours. (See P. M. Peterson, *Andrew, Brother of Simon Peter*, 1958; F. Dvornik, *The Idea of Apostolicity in Byzantium and the Legend of the Apostle Andrew*, 1958, pp. 181ff.; G. Quispel, *VC* 10, 1956, pp. 129ff.; cf. D. Guthrie, 'Acts and Epistles in Apocryphal Writings', in W. W. Gasque and R. P. Martin (eds.), *Apostolic History and the Gospel*, 1970.

f. Apocryphal Epistles

The most important are the *Third Epistle to the Corinthians* (see *Acts of Paul*, above); the *Epistle of the Apostles*, really a series of early 2nd-century apocalyptic visions cast in the form of an address in the name of all the apostles, to convey post-resurrection teaching of Christ (important as one of the earliest examples of this form); the *Correspondence of Christ and Abgar*, in which the king of Edessa invites the Lord to his state, and of which Eusebius affords an early translation from the Syriac (*EH* 1. 13); the Latin *Correspondence of Paul and Seneca* (see Jerome, *De Viris Illustribus* 12), a 3rd-century apology for Paul's diction, evidently intended to gain a reading of the genuine Epistles in polite circles; and the *Epistle to the Laodiceans*, in Latin, a cento of Pauline language evoked by Col. 4:16. The Muratorian Fragment mentions Epistles to the Laodiceans, and to the Alexandrians, of Marcionite origin: of these there is no trace. The commonly quoted *Letter of Lentulus* describing Jesus and allegedly addressed to the Senate is mediaeval. (See H. Duensing, *Epistula Apostolorum*, 1925; J. de Zwaan in *Amicitiae Corolla* edited by H. G. Wood, 1933, pp. 344ff.; for all the pseudo-Pauline letters, L. Vouaux, *Les Actes de Paul*, 1913, pp. 315ff.)

g. Apocalypses

The *Apocalypse of Peter* is the only strictly apoc-

ryphal work of which there is positive evidence that it held quasi-canonical status for any length of time. It occurs in the Muratorian Fragment, but with the accompanying note that some will not have it read in church. Clement of Alexandria seems to have commented on it as if it were canonical in a lost work (Eusebius, *EH* 6. 14), and in the 5th century it was read on Good Friday in some Palestinian churches (Sozomen, *Eccles. Hist.* 7. 19). But it was never universally accepted, and its canonicity was not a live issue in Eusebius' day (*EH* 3. 3). Its substantial orthodoxy seems certain. An old stichometry gives it 300 lines: about half of this appears in the main copy of the *Gospel of Peter* (see above). It contains visions of the transfigured Lord, and lurid accounts of the torments of the damned: with perhaps a confused reference to future probation. (See M. R. James, *JTS* 12, 1911, pp. 36ff., 362ff., 573ff.; 32, 1931, pp. 270ff.)

There were several Gnostic *Apocalypses of Paul*, one known to Origen, inspired by 2 Cor. 12:2ff. A version of one (which influenced Dante) has survived (see R. P. Casey, *JTS* 24, 1933, pp. 1ff.).

In the Nag Hammadi library Book V consists of four apocalypses, one of *Paul*, two of *James* and one of *Adam*. The *Apocalypse of Paul* in this collection is distinct from those previously known. All these works are Gnostic in their teaching. Cf. A. Böhlig and P. Labib, *Koptisch-gnostische Apocalypsen aus Codex V von Nag Hammadi*, 1963.

h. Other apocryphal works

The *Kerygmata Petrou*, or *Preachings of Peter*, is known to us only in fragments, mostly preserved by Clement of Alexandria. Origen had to deal with Gnostic scholars who employed it, and challenged them to prove its genuineness (in Jn. 13:17, *De Principiis* Pref. 8). It has been postulated as a source of the original Clementine romance (see below). The fragments we have claim to preserve words of the Lord and of Peter, and at least one accords with the *Gospel of the Hebrews*.

The *Clementine Homilies* and the *Clementine Recognitions* are the two chief forms of a romance in which Clement of Rome, seeking for ultimate truth, travels in the apostle Peter's footsteps and is eventually converted. It is probable that both derive from an immensely popular 2nd-century Christian novel, which may have used the *Preachings of Peter*. The literary and theological problems involved are very complex. The Homilies in particular command a Judaized sectarian form of Christianity. (See O. Cullmann, *Le Problème Littéraire et Historique du Roman Pseudo-Clémentin*, 1930; H. J. Schoeps, *Theologie und Geschichte des Judentums*, 1949; E. T. of Homilies and Recognitions in Ante-Nicene Christian Library.)

The *Apocryphon of John* was popular in Gnostic circles, and has reappeared at Nag Hammadi. The Saviour appears to John on the Mount of Olives, bids him write secret doctrine, deposit it safely and impart it only to those whose spirit can understand it and whose way of life is worthy. There is a curse on anyone imparting the doctrine for reward to an unworthy person. It is to be dated before AD 180, probably in Egypt. (See W. C. Till, *Die Gnostischen Schriften des koptischen Papyrus Berol. 8502*, 1955; cf. *JEH* 3, 1952, pp. 14ff.) In the Nag Hammadi documents, an account is given of the creation, the Fall and the redemption of humanity.

The *Apocryphon of James* has also been dis-

covered at Nag Hammadi. It is an exhortation to seek the kingdom, cast in the form of a post-resurrection discourse to Peter and James, who ascend with the Lord but are unable to penetrate the third heaven. Its interest lies in its early date (AD 125–150?), the prominence of James (the Just?), who sends the apostles to their work after the ascension, and, in van Unnik's opinion, its freedom from Gnostic influence. (See W. C. van Unnik, *VC* 10, 1956, pp. 149ff.) F. E. Williams in his introductory remarks to his translation of the Nag Hammadi text in *The Nag Hammadi Library in English*, p. 29, finds some evidence of Gnostic themes and suggests Christian Gnosticism as its source.

The *Pistis Sophia* and the *Books of Jeï* are obscure and bizarre Gnostic works of the 2nd or 3rd century. (See C. Schmidt, *Koptisch-gnostische Schriften*³, edited by W. Till, 1959; G. R. S. Mead, *Pistis Sophia*³, 1947, E.T.—cf. F. C. Burkitt, *JTS* 23, 1922, pp. 271ff.; C. A. Baynes, *A Coptic Gnostic Treatise*, 1933.)

GENERAL BIBLIOGRAPHY. Critical editions of many of these works are still needed. Gk. and Lat. texts of the earlier Gospel discoveries are provided by C. Tischendorf, *Evangelia Apocrypha*, 1886, to be supplemented by A. de Santos, *Los Evangelios Apocrifos*, 1956 (with Spanish translations). The best collection of texts of the Acts is R. A. Lipsius and M. Bonnet, *Acta Apostolorum Apocrypha*, 1891–1903. Some newer texts and studies are provided in M. R. James, *Apocrypha Anecdota*, 1, 1893; 2, 1897. M. R. James, *ANT* (a splendid collection of English translations up to 1924); E. Hennecke–W. Schneemelcher (E.T. by R. M. Wilson), *New Testament Apocrypha*, 1, 1963; 2, 1965 (indispensable for serious study). Non-canonical sayings: J. Jeremias, *Unknown Sayings of Jesus*, 1957; J. Finegan, *Hidden Records of the Life of Jesus*, 1969; F. F. Bruce, *Jesus and Christian Origins outside the New Testament*, 1974; C. Hendrick (ed.), *The Historical Jesus and the Rejected Gospels*, 1988. Church orders: J. Cooper and A. J. Maclean, *The Testament of our Lord*, 1902; R. H. Connolly, *The So-Called Egyptian Church Order and its Derivatives*, 1917. A. F. W.

NICODEMUS. The name is Gk. and means 'conqueror of the people'. He is mentioned only in the Fourth Gospel, where he is described as a Pharisee and ruler of the Jews (*i.e.* a member of the Sanhedrin) who visited Jesus by night (Jn. 3:1–21). He seems to have been an earnest man attracted by the character and teaching of Jesus but afraid to allow this interest to be known by his fellow Pharisees. He could not understand the spiritual metaphors used by Christ. Nicodemus fades from the scene and we are left with Christ's word to a Judaism wrapped in darkness.

Nicodemus is mentioned again in Jn. 7:50–52, where he showed more courage in protesting against the condemnation of Christ without giving him a hearing. The final reference is in Jn. 19:40, where he is said to have brought a lavish gift of spices to anoint the body of Christ. Nothing more is known of him despite a large number of legends (*e.g.* in the apocryphal *Gospel of Nicodemus*). His identification with the wealthy and generous Naqdimon ben-Gorion of the Talmud is uncertain.

BIBLIOGRAPHY. M. Pamment, *ExpT* 97, 1985,

pp. 71–75; J. S. King, *ExpT* 98, 1986, p. 45; D. D. Sylva, *NTS* 34, 1988, pp. 148–151. R. E. N.

NICOLAUS, NICOLAITANS. Nicolaus of Antioch (Acts 6:5) is supposed to have given his name to a group in the early church who sought to work out a compromise with paganism, to enable Christians to take part without embarrassment in some of the social and religious activities of the close-knit society in which they found themselves. It is possible that the term Nicolaitan is a Graecized form of Heb. Balaam, and therefore allegorical, the policy of the sect being likened to that of the OT corrupter of Israel (Nu. 22). In that case the Nicolaitans are to be identified with groups attacked by Peter (2 Pet. 2:15), Jude (11) and John (Rev. 2:6, 15 and possibly 2:20–23), for their advocacy within the church of pagan sexual laxity. References in Irenaeus, Clement and Tertullian suggest that the group hardened into a Gnostic sect. E. M. B.

NICOPOLIS ('city of victory'). A town built as the capital of Epirus by Augustus on a peninsula of the Ambraciot Gulf, where he had camped before his victory at Actium in 31 BC. It was a Rom. colony, and derived some of its importance from the Actian games, also established by Augustus.

Although there were other towns named Nicopolis, this was the only one of sufficient standing to warrant Paul's spending a whole winter in it (Tit. 3:12), and its geographical position would suit its selection as a rendezvous with Titus. Paul may have planned to use it as a base for evangelizing Epirus. There is no ancient authority for the AV subscription to the Epistle to Titus. K. L. McK.

NILE.

I. Terminology

The origin of Gk. *Neilos* and Lat. *Nilus*, our 'Nile', is uncertain. In the OT, with a few rare exceptions, the word *y'ôr*, 'river, stream, channel', is used whenever the Egyp. Nile is meant. This Heb. word is itself directly derived from Egyp. *itrw* in the form *i'r(w)* current from the 18th Dynasty onwards, meaning 'Nile-river, stream, canal', *i.e.* the Nile and its various subsidiary branches and channels. (A. Erman and H. Grapow, *Wörterbuch der Aegyptischen Sprache*, 1, 1926, p. 146; T. O. Lambdin, *JAOS* 73, 1953, p. 151). In AV the word *y'ôr* is hidden under various common nouns, 'river, flood', etc. Just once the word *nāhār*, 'river', is used of the Nile as the river of Egypt in parallel with the Euphrates, the *nāhār*, 'river' *par excellence*, the promised land lying between these two broad limits (Gn. 15:18). *nahal*, 'wadi', is apparently never used of the Nile, but of the Wadi el-'Arish or 'river of Egypt', while the Shihor is the seaward end of the E Delta branch of the Nile (*EGYPT, RIVER OF).

II. Course of the river

The ultimate origin of the Nile is the streams such as the Kagera that flow into Lake Victoria in Tanzania; from the latter, a river emerges N, *via* Lake Albert Nyanza and the vast Sudd swamps of the S Sudan, to become the White Nile. At Khartoum

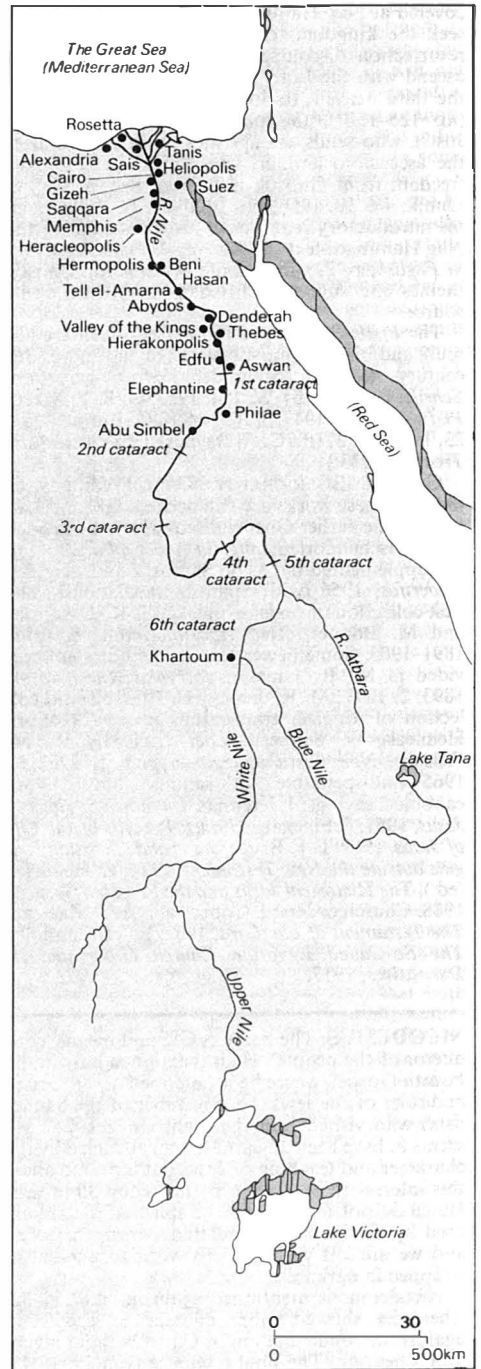

NILE

this is joined by the Blue Nile flowing down from Lake Tana in the Ethiopian (Abyssinian) highlands, and their united stream is the Nile proper. After being joined by the Atbara river some 320 km NE of Khartoum, the Nile flows for 2,700 km through the Sudan and Egypt N to the Mediterranean without receiving any other tributary; the total length of the river from Lake Victoria to the Mediterranean is roughly 5,600 km. Between Khartoum and Aswan, six 'sills' of hard granite rocks across the river's course give rise to the six cataracts that impede navigation on that part of its course.

Within Nubia and Upper Egypt, the Nile stream flows in a narrow valley which in Egypt is never much more than 20 km wide and often much less, bounded by hills or cliffs, beyond which stretch rocky deserts to E and W (*EGYPT, II). Some 20 km N of Cairo, the river divides into two main branches that reach the sea at Rosetta in the W and Damietta in the E respectively; between and beyond these two great channels extend the flat, swampy lands of the Egyptian Delta. In Pharaonic Egypt three main branches of the Delta Nile seem to have been recognized ('Western river', Canopic branch?; 'the Great river', very roughly the present Damietta branch; 'the Waters of Rē', or Eastern, Pelusiac branch, Heb. Shihor), besides various smaller branches, streams and canals. Gk. travellers and geographers reckoned from five to seven branches and mouths of the Nile. See A. H. Gardiner, *Ancient Egyptian Onomastica*, 2, 1947, pp. 153*-170*, with map between pp. 131* and 134*, on this tricky question; also J. Ball, *Egypt in the Classical Geographers*, 1942; M. Bietak, *Tell El-Dab'a*, 2, 1975.

III. The inundation and agriculture

The most remarkable feature of the Nile is its annual rise and flooding over its banks, or inundation. In spring and early summer in Ethiopia and S Sudan the heavy rains and melting highland snows turn the Upper Nile—specifically the Blue Nile—into a vast torrent bringing down in its waters masses of fine, reddish earth in suspension which it used to deposit on the lands flooded on either side of its banks in Egypt and Nubia. Thus, until the perennial irrigation-system of dams at Aswan and elsewhere was instituted last century, those areas of the Egyptian valley and Delta within reach of the floods received every year a thin, new deposit of fresh, fertile mud. The muddy flood-waters used to be held within basins bounded by earthen banks, to be released when the level of the Nile waters sank again. In Egypt the Nile is lowest in May; its rise there begins in June, the main flood-waters reach Egypt in July/August, reach their peak there in September and slowly decline again thereafter. But for the Nile and its inundation, Egypt would be as desolate as the deserts on either hand; wherever the Nile waters reach, vegetation can grow, life can exist. So sharp is the change from watered land to desert that one can stand with a foot in each. Egypt's agriculture depended wholly on the inundation, whose level was checked off against river-level gauges or Nilometers. A high flood produced the splendid crops that made Egypt's agricultural wealth proverbial. A low Nile, like drought in other lands, spelt famine; too high a Nile that swept away irrigation-works and brought destruction in its wake was no better. The regular rhythm of Egypt's Nile was familiar to the He-

The course of the river Nile.

brews (*cf.* Is. 23:10; Am. 8:8; 9:5), and likewise the dependence of Egypt's cultivators, fisherfolk and marshes on those waters (Is. 19:5-8; 23:3). More than one prophet proclaimed judgment on Egypt in terms of drying up the Nile (Ezk. 30:12; *cf.*

29:10; Zc. 10:11), as other lands might be chastised by lack of rain (cf. *FAMINE). Jeremiah (46:7–9) compares the advance of Egypt's army with the surge of the rising Nile. On the inundation of the Nile, see G. Hort, *ZAW* 69, 1957, pp. 88–95; J. Ball, *Contributions to the Geography of Egypt*, 1939, *passim*; D. Bonneau, *La crue du Nil*, 1964.

IV. Other aspects

The Nile in dominating Egypt's agriculture also affected the form of her calendar, divided into three seasons (each of four 30-day months and excluding 5 additional days) called 'Akhet, 'Inundation'; Peret, 'Coming Forth' (i.e. of the land from the receding waters); and Shomu, 'Dry(?)' or Summer season. The waters of the Nile not only supported crops but formed also the marshes for pasture (cf. Gn. 41:1–3, 17–18) and papyrus (*PAPYRI AND OSTRACA), and contained a wealth of fish caught by both line and net (Is. 19:8), cf. R. A. Caminos, *Late-Egyptian Miscellanies*, 1954, pp. 74, 200 (many sorts), and G. Posener *et al.*, *Dictionnaire de la Civilisation Égyptienne*, 1959, figures on pp. 214–215. On the plagues of a blood-red Nile, dead fish and frogs, etc., *PLAGUES OF EGYPT. For Na. 3:8, *THEBES. The Assyrian's boast of drying up Egypt's streams (2 Ki. 19:24 = Is. 37:25) may refer to moats and similar river-defence works. For Moses in the rushes by the Nile, *MOSES. The Nile was also Egypt's main arterial highway; boats could sail N by merely going with the stream, and could as readily sail S with the aid of the cool N wind from the Mediterranean. In the religious beliefs of the Egyptians the spirit of the Nile-flood was the god Ha'pi, bringer of fertility and abundance.

K.A.K.

NIMRIM, WATERS OF. The waters of Nimrim are mentioned twice (Is. 15:6; Je. 48:34). In substantially identical terms the prophets tell of the overthrow of Moab; cries of anguish go up from the cities of Moab, and 'the waters of Nimrim are a desolation'. Both in Isaiah and (especially) in Jeremiah the sequence of place-names suggests a site in S Moab, the now-customary identification with Wadi en-Numeirah, 16 km S of the Dead Sea. This is to be distinguished from Nimrah (Nu. 32:3) or Beth-nimrah (Nu. 32:36) about 16 km N of the Dead Sea.

J.A.M.

NIMROD. The name of the son of Cush, an early warrior, or hero (*gibbōr*), who lived in Babylonia, where his kingdom included Babylon, Erech and Akkad (Gn. 10:8–10; 1 Ch. 1:10). He was father or founder of Nineveh and Calah in Assyria (Gn. 10:11) and was famous as a hunter (v. 9). The land adjacent to Assyria was later referred to as the 'land of Nimrod' (Mi. 5:6).

His name is perpetuated in several place-names, including Birs Nimrud, SW of Babylon, and Nimrud in Assyria (*CALAH). This, with the legends concerning him preserved in Sumerian, Assyrian and later literature, implies a wider basis in the tradition than is provided in Genesis. Many scholars therefore compare him with Sargon of Agade, c. 2300 BC, who was a great warrior and huntsman and ruler of Assyria. He led expeditions to the Mediterranean coast and into S Anatolia and Persia, and the splendour of his age and achievements led to its being recalled as a 'golden

age'. Since only the throne-name of Sargon is known, it is possible that he bore other names. Others see in Nimrod exploits attributed to such early rulers as Naram-Sin of Agade, Tukulti-Ninurta I of Assyria (*Eretz Israel* 5, 1958, pp. 32*–36*); or deities as Ninurta (Nimurda), the Bab. and Assyrian god of war, and the hunter, or Amarutu, the Sumerian name of the god Marduk. No certain identification is yet possible.

D.J.W.

NINEVEH. A principal city, and last capital, of Assyria. The ruins are marked by the mounds called Kuyunjik and Nabi Yunus ('Prophet Jonah') on the river Tigris opposite Mosul, N Iraq.

I. Name

The Heb. *nin'wēh* (Gk. *Nineuē*; classical *Ninos*) represents the Assyrian *Ninūā* (Old Bab. *Ninuwa*), a rendering of the earlier Sumerian name *Nina*, a name of the goddess Ishtar written with a sign depicting a fish inside an enclosure. Despite the comparison with the history of Jonah, there is probably no connection with the Heb. *nūn*, 'fish'.

According to Gn. 10:11 Nineveh was one of the N cities founded by *Nimrod or Ashur after leaving Babylonia. Excavation 25 m down to virgin soil shows that the site was occupied from prehistoric times (c. 4500 BC). 'Ubaid (and Samarra) type pottery and pisée-buildings may indicate a S influence. Although first mentioned in the inscriptions of Gudea of Lagash who campaigned in the area c. 2200 BC, the texts of Tukulti-Ninurta I (c. 1230 BC) tell how he restored the temple of the goddess Ishtar of Nineveh founded by Manishtusu, son of Sargon, c. 2300 BC.

By the early 2nd millennium the city was in contact with the Assyrian colony of Kanish in Cappadocia, and when Assyria became independent under Shamshi-Adad I (c. 1800 BC) the same temple of Ishtar (called E-mash-mash) was again restored. Hammurabi of Babylon (c. 1750 BC) adorned the temple, but the expansion of the town followed the revival of Assyrian fortunes under Shalmaneser I (c. 1260 BC), and by the reign of Tiglath-pileser I (1114–1076 BC) it was established as an alternative royal residence to Assur and Calah. Both Ashurnasirpal II (883–859 BC) and Sargon II (722–705 BC) had palaces there. It was, therefore, likely that it was to Nineveh itself that the tribute of Menahem in 744 BC (2 Ki. 15:20) and of Samaria in 722 BC (Is. 8:4) was brought.

Sennacherib, with the aid of his W Semitic queen Naqi'a-Zakutu, extensively rebuilt the city, its defensive walls, gates and water-supply. He built a canal leading 48 km from a dam on the river Gomel to the N, and controlled the flow of the river Khazr, which flowed through the city, by the erection of another dam at Ajeila to the E. He also provided new administrative buildings and parks. The walls of his new palace were decorated with reliefs depicting his victories, including the successful siege of *Lachish. The tribute received from Hezekiah of Judah (2 Ki. 18:14) was sent to Nineveh, to which *Sennacherib himself had returned after the campaign (2 Ki. 19:36; Is. 37:37). It is possible that the temple of *Nisroch, where he was murdered, was in Nineveh. His account of his attack on Hezekiah in Jerusalem is recorded on clay prisms used as foundation inscriptions in Nineveh.

Ashurbanipal (669–c. 627 BC) again made

NINEVEH

Nineveh his main residence, having lived there as crown prince. The bas-reliefs depicting a lion hunt (British Museum), which were made for his palace, are the best examples of this form of Assyrian art. The fall of the great city of Nineveh, as predicted by the prophets Nahum and Zephaniah, occurred in August 612 BC. The Bab. Chronicle tells how a combined force of Medes, Babylonians and Scythians laid siege to the city, which fell as a result of the breaches made in the defences by the flooding rivers (Na. 2:6–8). The city was plundered by the Medes, and the king Sin-shar-ishkun perished in the flames, though his family escaped. The city was left to fall into the heap of desolate ruin which it is today (Na. 2:10; 3:7), a pasturing-place for the flocks (Zp. 2:13–15), which gives the citadel mound its modern name of Tell Kuyunjik ('mound of many sheep'). When Xenophon and the retreating Gk. army passed in 401 BC it was already an unrecognizable mass of debris.

At the height of its prosperity Nineveh was enclosed by an inner wall of c. 12 km circuit within which, according to Felix Jones' survey of 1834, more than 175,000 persons could have lived. The population of 'this great city' of Jonah's history (1:2; 3:2) is given as 120,000, who did not know right from wrong. This has been compared with the 69,574 persons in *Calah (Nimrud) in 865 BC, then a city of about half the size of Nineveh. The 'three days' journey' may not necessarily designate the size of Nineveh (Jon. 3:3) whether by its circumference or total administrative district. It could refer to a day's journey in from the suburbs (cf. 3:4), a day for business and then return. The Heb. translation by using *ninwēh* in each case could not differentiate between the district (Assyr. *nīnuā[kī]*) and metropolis ([a]nīnuā). There is no external evidence for the repentance of the people of Nineveh (Jon. 3:4–5), unless this is reflected in a text from Guzanu (*GOZAN) of the reign of Ashur-dān III when a total solar eclipse in 763 BC was followed by flooding and famine. Such signs would be interpreted by the Assyrians as affecting the king who would temporarily step down from the throne (Jon. 3:6). Such portents, including an earthquake about the time of Jonah ben Amittai (2 Ki. 14:25), could well have made the Ninevites take the step commended by Jesus (Lk. 11:30; Mt. 12:41).

II. Exploration

Following reports made by such early travellers as John Cartwright (17th century) and plans drawn by C. J. Rich in 1820, interest was reawakened in the discovery of the OT city. Excavation was at first undertaken by P. E. Botta (1842–3), but with little success, and he abandoned the site, believing Khorsabad (16 km to the N) to be the biblical Nineveh. However, the diggings of Layard and Rassam (1845–54), which resulted in the discovery of the reliefs from the palaces of Sennacherib and Ashurbanipal together with many inscriptions, placed the identification beyond question. Following the discovery, among the 25,000 inscribed tablets from the libraries of Ashurbanipal and of the temple of Nabu (*ASSYRIA), of a Bab. account of the Flood (Epic of Gilgamesh) in 1872, the British Museum reopened the excavations under G. Smith (1873–6); E. A. W. Budge (1882–91); L. W. King (1903–5) and R. Campbell Thompson (1927–32). The Iraqi Government has continued work at the site (1963, 1966–74). The mound of Nabi Yunus

covering a palace of Esarhaddon has been as yet little explored because it is still inhabited.

Nineveh, with its many reliefs and inscriptions, has done more than any other Assyrian site to elucidate the ancient history of *Assyria and *Babylonia, while the epics, histories, grammatical and scientific texts and letters have made Assyrian literature better known than that of any ancient Semitic peoples except the Hebrews (*ARCHAEOLOGY, *WRITING).

The exploration of Nineveh is described in full by A. H. Layard, *Nineveh and its Remains, 1849*; G. Smith, *Assyrian Discoveries, 1875*; R. Campbell Thompson (and others), *Liverpool Annals of Archaeology and Anthropology 18–20, 1931–3*; *Iraq 1–52, 1934–90*; *BA 55, 1992*, pp. 227–233. D.J.W.

NISROCH (Heb. *nīsrōk*). The deity in whose temple Sennacherib was murdered by his sons as he worshipped (2 Ki. 19:37; Is. 37:38). The place of this assassination, which is mentioned also in Assyrian records (*DOTT*, pp. 70–73), is variously identified with one of the major cities, Nineveh, Assur or Calah. Nisroch may then be a rendering of the name of the Assyrian national god, Ashur (cf. *LXX Esdrach, Asorach*; *JRAS*, 1899, p. 459). A form of the god Nusku (assuming an original *nswk*) of Marduk, or a connection with the eagle-shaped army standards has also been suggested.

D.J.W.

NITRE (Heb. *netēr*). The modern name denotes saltpetre (sodium or potassium nitrate), but the biblical name refers to natron (carbonate of soda), which came chiefly from the 'soda lakes' of Lower Egypt. In Pr. 25:20 the effect of songs on a heavy heart is compared to the action of vinegar on nitre (RVmg. 'soda')—i.e. producing strong effervescence. RSV follows LXX: 'it is like pouring vinegar on a wound'. In Je. 2:22 nitre ('lye') is used in a purificatory sense: mixed with oil it formed a kind of *soap. (*ARTS AND CRAFTS, III. h.)

NOAH. The last of the ten antediluvian Patriarchs and hero of the *Flood. He was the son of Lamech, who was 182 (Samaritan Pentateuch, 53; LXX, 188) years old when Noah was born (Gn. 5:28–29; Lk. 3:36).

a. Name

The etymology of the name, *nōah*, is uncertain, though many commentators connect it with the root *nwʾh*, 'to rest'. In Genesis (5:29) it is associated with the verb *nḥm* (translated 'comfort' in AV and RV; 'bring relief' in RSV), with which it is perhaps etymologically connected; though this is not necessarily required by the text. The element *nḥm* occurs in Amorite personal names and in the name Naḥmizuli which figures in a Hurrian fragment of the Gilgamesh epic found at Boğazköy, the Hittite capital in Asia Minor. The LXX gives the name as *Nōe*, in which form it appears in the NT (AV).

b. Life and character

Noah was a righteous man (Gn. 6:9; *šaddiq*), having the righteousness that comes of faith (Heb. 11:7, *hē kata pistin dikaiosynē*, lit. 'the according to faith righteousness'), and had close communion with God, as is indicated by the expression he 'walked with God' (Gn. 6:9). He is also described as without fault among his contemporaries (Gn. 6:9; אַׁׁ 'perfect in his generations') who had all sunk to a very low moral level (Gn. 6:1–5, 11–13; Mt. 24:37–38; Lk. 17:26–27), and to them he preached righteousness (2 Pet. 2:5), though without success, as subsequent events showed. Like the other early Patriarchs, Noah was blessed with great length of years. He was 500 years old when his first son was born (Gn. 5:32), 600 when the *Flood came (Gn. 7:11) and died at the age of 950 (Gn. 9:28–29). According to the most likely interpretation of Gn. 6:3, together with 1 Pet. 3:20, when Noah was 480 years old God informed him that he was going to destroy man from the earth but would allow a period of grace for 120 years, during which time Noah was to build an *ark, in which he would save his immediate family and a representative selection of animals (Gn. 6:13–22). It was probably during this period that Noah preached, but there was no repentance, and the *Flood came and destroyed all but Noah, his three sons and their four wives (Gn. 7:7; 1 Pet. 3:20).

After the Flood Noah, who had probably been a farmer before it, planted a vineyard (Gn. 9:20; 'And Noah, the husbandman, began and planted a vineyard . . .', which is to be preferred to the *εὖν*) and, becoming drunk, behaved in an unseemly way in his tent. *Ham, seeing his father naked, informed his two brothers, who covered him, but it is probable that Canaan, Ham's son, did something disrespectful to his grandfather, for Noah placed a curse on him when he awoke (Gn. 9:20–27).

c. God's covenant with Noah

The covenant implied in Gn. 6:18 might be interpreted as salvation for Noah conditional upon his building and entering the ark, which obligations he fulfilled (v. 22). On the other hand, it may be that this passage simply makes reference to the covenant which God made with Noah after the Flood, and which he sealed by conferring a new significance on the rainbow (Gn. 9:9–17; cf. Is. 54:9). The main features of this covenant were that it was entirely instituted by God, that it was universal in scope, applying not only to Noah and his seed after him but to every living creature, that it was unconditional, and that it was everlasting. In it God undertook from his own free lovingkindness never again to destroy all flesh with a flood.

d. Descendants

Noah had three sons, *Shem, *Ham and *Japheth (Gn. 5:32; 9:18–19; 10:1), who were born before the Flood, and accompanied him in the ark. We are told that after the Flood, from them 'was the whole earth ('eres) overspread', or 'the whole (population of) the earth dispersed' (Gn. 9:19). Their descendants later spread out over a wide area, and an account is given of some of them in the Table of the *Nations in Gn. 10.

e. Cuneiform parallels

In the *flood accounts which have been preserved

in Akkadian the name of the hero is Utanapishtim, which corresponds to the name Ziusuddu in a Sumerian account of the early 2nd millennium BC, which probably lies behind the Akkadian versions. Though in the principal version of the Sumerian king list only eight rulers are named before the Flood, of whom Ziusuddu is not one, other texts list ten rulers, the tenth being Ziusuddu, who is credited with a reign of 36,000 years. The same is found in a late account in Gk. by the Babylonian priest Berossos, whose flood hero Xisouthros is the tenth of his pre-flood rulers.

NOB. A locality mentioned in three passages of the OT, all of which may refer to the same place.

In 1 Sa. 22:19 it is referred to as a city of priests; presumably Yahweh's priests had fled there with the ephod after the capture of the ark and the destruction of Shiloh (1 Sa. 4:11). David visited Nob after he had escaped from Saul when Ahimelech was priest there and ate holy bread (1 Sa. 21:6). When Saul heard that the priest of Nob had assisted the fugitive David he raided the shrine and had Ahimelech, along with eighty-five other priests, put to death (1 Sa. 22:9, 11, 18–19).

Isaiah prophesied that the Assyrian invaders would reach Nob, between Anathoth, 4 km NE of Jerusalem, and the capital (Is. 10:32), and the city is also mentioned in Ne. 11:32 as a village which was reinhabited after the return from exile.

The latter two references indicate a locality near Jerusalem, probably the modern Rās Umm et-Tala on the E slopes of Mt Scopus, NE of Jerusalem (Grollenberg, *Atlas of the Bible*, 1956). S. R. Driver (*Notes on the Hebrew Text of the Books of Samuel*², 1913, p. 172) suggests perhaps a spot on the Rās el-Meshārif, under 2 km N of Jerusalem, a ridge from the brow of which (818 m) the pilgrim along the N road still catches his first view of the holy city (790 m). R.A.H.G.

NOBAH (Heb. *nōbah*). 1. An Amorite locality settled and renamed by Nobah (see 2) and his clan (Nu. 32:42). If the Amorite name Kenath indicates modern Kanawat (Eusebius' *Kanatha*), 96 km E of lake Tiberias, this can hardly be the Nobah of Jdg. 8:11, which must be in Mt Gilead.

2. A Manassite leader (Nu. 32:42). J.P.U.L.

NOD. A land E of, or in front of, Eden (*qidmaṭ-ēden*, Gn. 4:16), to which Cain was banished by God after he had murdered Abel. The name (*nōd*) is the same in form as the infinitive of the verb *nūd* (*nwd*), 'to move to and fro, wander', the participle of which is used in Gn. 4:14 when Cain bemoans the fact that he will become a 'vagabond' (RSV 'wanderer'). The name is unknown outside the Bible, but its form and the context suggest that it was a region where a nomadic existence was necessary, such as is today found in several parts of the Middle East. T.C.M.

NODAB

NODAB. A tribe which, among others, is mentioned in 1 Ch. 5:19 as having been conquered by Reuben, Gad and half-Manasseh, and about whom nothing more is definitely known. (*HAGARITES.) J.D.D.

NOMADS. A human group which changes its area of residence seasonally within a larger domain which is its home territory.

I. In the Bible

The word 'nomad' does not occur in EVV of the Bible, the nomadic groups being called by other names.

The first was *Cain, who was banished from his kindred to be a wanderer (Gn. 4). A number of nomadic groups are mentioned in the Table of the Nations in Gn. 10 (*NATIONS, TABLE OF). Among the descendants of *Japheth are *Gomer (Cimmerians), Madai (*MEDES), Meshek (perhaps Phrygians) and *Ashkenaz (Scythians), all peoples who probably came originally from the N steppe. Heth, among the children of Ham, may be the *Hittites of Asia Minor, though it is perhaps more probable that the reference is to the later Neo-Hittite states of N Syria. Among the descendants of Shem are listed *Aram (Aramaeans), and a number of Arabian tribes, some of them still nomadic in historical times, who stemmed from the Arabian peninsula.

The patriarchal period was largely a time of nomadism for God's chosen remnant. It is uncertain whether Abraham was actually living a sedentary life within the city of Ur when he was called by God. He is later called 'the Hebrew' (Gn. 14:13), and this may indicate that he was one of the Habiru (*HEBREWS) living outside the city in perhaps a client status. In such a situation he could still be a man of substance, as he undoubtedly was. How long he and his fathers had been at Ur is not stated, but when he left he began a nomadic life which was continued by Isaac and Jacob for two long generations, before the children of Israel settled to the sedentary life of Egypt (cf. Heb. 11:9). This was not the regular seasonal movement of nomads within a set territory, but a wandering from place to place; and, though Abraham had camels (e.g. Gn. 24; for the view of some scholars that patriarchal camels are anachronistic, see *CAMEL), his herds were largely of sheep and goats, and included asses (Gn. 22:3), so that some would class him as a semi-nomad or an 'ass-nomad'. Such a life would fit in well with the times as illuminated by the *Mari archives. Terah and his sons Nahor and Haran by remaining at Haran established affiliations with another nomadic group, the Aramaeans, as is shown by the reference to a 'wandering Aramaean' as the ancestor of the Israelites (Dt. 26:5).

After experiencing the luxuries of a sedentary life in Egypt, even though oppressed, the Israelites at the Exodus were reluctant to return to the rigours of wandering. The 40 years in the wilderness was a unique episode, for without the miraculous supply of food provided by God the numbers of the people would have been far too great to be supported by the natural resources of the area.

After the settlement in the Promised Land the true nomadic life ceased for the Israelites, but various reminiscences of it survive in the OT. For in-

stance, in many cases a man's house is referred to as his 'tent' (e.g. Jdg. 20:8; 1 Sa. 13:2; 2 Sa. 20:1; 1 Ki. 12:16). To express the idea of rising early the verb *sākam* (in the Hiph'il stem), which properly means 'to load the backs (of beasts)', is used (e.g. Jdg. 19:9; 1 Sa. 17:20). Certain metaphors used in poetry suggest a nomadic background: in Jb. 4:21 (RSV) the plucking up of a tent-cord signifies death; in Je. 10:20 the breaking of tent-cords indicates desolation, and conversely, a sound tent speaks of security (Is. 33:20); in Is. 54:2 a prosperous people is signified by an enlarged tent space.

The Israelites came in contact with various nomadic groups after they had settled in the land. The Aramaeans had by the 1st millennium largely settled in the city states of Syria, so that the nomadic threat came mostly from the E and S, where the *b'nē qedem*, 'the Children of the East' (cf. Ezk. 25:4) and such associated peoples as the *Midianites, *Amalekites, *Moabites, *Edomites, *Ammonites and *Kedarites would always take advantage of weakness in the settled territories. Solomon's commercial expansion in the 10th century brought contacts with *Arabia and the caravan traders of that area. In the 9th century Jehoshaphat was able to exact tribute from the Arabs (2 Ch. 17:11), but the family of Jehoram were carried off by this people in a raid (2 Ch. 21:16-17). Throughout the Monarchy, the Arabs are mentioned in various capacities (e.g. Is. 13:20; 21:13; Je. 3:2; 25:23-24; Ezk. 27:21).

After the return from the Exile the nomadic traders who were settling on the E fringes of Syria-Palestine are exemplified by *Geshem the Arab, who tried to hinder the rebuilding of Jerusalem (Ne. 2:19; 6:6). These people were followed in NT times by the *Nabataeans.

With the moral corruption which accompanied the settlement in the land, the prophets used the ideal of the nomadic life as a figure of spiritual health. They condemned the luxuries of city life (Am. 3:15; 6:8) and spoke of a return to the simplicity of the early days of Israel in the wilderness (Ho. 2:14-15; 12:9). It is probable that this call to the desert was put into practice from time to time, as is evidenced by the Qumran Community (*DEAD SEA SCROLLS) in the intertestamental period, and by John the Baptist, and Jesus Christ and his disciples in NT times. Though this was not nomadism in the strict sense, it was a manifestation of that value of nomadism which has always been held forth as an aim for God's people; to be pilgrims in this world, and to avoid the laying up of treasure upon earth. (*RECHABITES; *KENITES.)

II. Way of life

A nomadic group depends for its livelihood upon herds of animals such as the horse, camel, sheep, goat or ox, and the pasturing needs of the herds determine the movements of the community. This way of life is required by the terrain inhabited, which usually consists mainly of an area of steppe or plain which provides temporary pasture in the wet or cool season, and either oases or uplands to which a retreat is made in the dry season. Under normal conditions a nomadic tribe will have a recognized home territory, visiting different parts regularly in a seasonal cycle. Thus each tribe or, in more barren areas, smaller group visits annually its recognized tract of pasture, and returns annually to the same oasis or upland territory. Mobile dwellings are provided by tents of skins, felt or wool,

and all equipment is strictly limited. There are variations from area to area. Some groups, mainly camel herders, abandon the plain for an oasis or upland only when compelled by drought; others, particularly shepherds, have semi-permanent dwellings at the oasis, even planting and raising crops, and go out on the plain only when the animals' needs for pasture compel it. Peoples of this latter type are sometimes called semi-nomads.

Such an economy is finely adjusted, and the natural increase of population disturbs the balance. In consequence, a growing group may encroach on a neighbour's traditional territory, and the weaker group be displaced, perhaps setting up a chain effect which may cause the fringe groups to look abroad. Sedentary farming communities fall an easy prey to the overspilling nomads who may set themselves as a military aristocracy over the less-vigorous population. A few generations, however, usually suffice for the interlopers to be absorbed by the dominant though less-aggressive culture of the settled peoples.

The most advantageous situation for a nomadic group is in a mixed country where city-states and their surrounding tilled territory are interspersed by less-intensively settled areas where the nomad can make his encampments and exploit the vulnerable settlements. This may be done either by mobile raids or by taking service either as mercenary troops or as labourers.

Certain values arise from the demands of the nomadic life. The mutual dependence of the members of a tribe, together with the consciousness of common descent, lead to great solidarity (*FAMILY) and to such concomitant practices as blood revenge (*AVENGER OF BLOOD) for murder or manslaughter. The need for mobility results in the reduction of property to that which is movable, wealth being accumulated in livestock. The rigours of life lead also to hospitality to the traveller and to chivalry, sometimes of a kind strange to the sedentary farmer.

III. The ancient Near East

There were two main areas supporting nomadic populations in ancient times, from which the more settled regions of the Near East suffered the influx of marauders. These were the peninsula of Arabia and the steppe of S Russia. Access from Arabia was easier than from the N, since the latter area lay across a mountain barrier, and for the nomads of N Arabia some of the oases visited seasonally lay on the very margins of the settled areas of Palestine and Syria.

a. The southern nomads

It is probable that Arabia was the immediate homeland of the Semites (Semitic speakers), and since from the earliest historical times in Mesopotamia the Semitic Akkadians formed part of the population, a continual influx of nomads from the Arabian peninsula may be inferred. Knowledge of the arrival of nomads from Arabia is very much conditioned by the surviving evidence. Written records are meagre from Palestine, intermittent from Syria, but more extensive from Mesopotamia. In Mesopotamia, however, the fullest records come from periods of political strength, when encroaching nomads could be most effectively resisted, and indeed, according to the records, the best-attested route of overt entry to Mesopotamia was from the N, though a peaceful infiltration into Babylonia

from the W may be assumed. The early part of the 2nd millennium BC, following the fall of the 3rd Dynasty of Ur, was a period of weakness in Babylonia, and of consequent nomadic invasions from the N, the invaders, particularly the *'Amorites', finally establishing themselves as ruling dynasties in the cities of Babylonia. During the time of the greatest of these dynasties, the 1st of Babylon, the diplomatic archives discovered at the city of *Mari on the Middle Euphrates give a glimpse of the situation in N Mesopotamia-Syria, where the city-states were interspersed by territory occupied by nomadic groups. One group known as the Hanaeans (*Hanū*) provided the king of Mari with mercenary troops, and, though they lived in encampments, some of them were beginning to settle in permanent dwellings. A more troublesome group were the Yaminites (sometimes read Bini-Yamin; the writing is more likely to have been read *māri yamin*; *BENJAMIN, TUR [pl]-*ya-mi-in*), who spread through the steppe area between the Habur river and the Euphrates and farther W, particularly in the vicinity of Harran, being frequently mentioned as raiding settlements and even attacking towns. The Suteaeans (*Sutu*) likewise raided farther S, particularly on the trade routes connecting the Euphrates with Syria. Another group of people, the Habiru (*HEBREWS), who are mentioned in the second half of the 2nd millennium in documents from Nuzi, Alalakh, Hattusas, Ugarit, el-Amarna and in native Egyptian documents, are already mentioned earlier (18th century BC) in the Mari letters and in documents of the same general period from Alalakh, Cappadocia and S Mesopotamia. These people seem to have been nomads or semi-nomads who are found now as raiders, now as settlers in the towns, serving sometimes as mercenary troops, and sometimes as labourers or even slaves.

These are the principal nomadic groups mentioned in the Mari archives from this period, but they were no doubt typical of peoples at other periods who menaced the isolated city-states, particularly of N Mesopotamia and Syria-Palestine. Some were probably more in the nature of travelling craftsmen than raiders, and such a group is depicted on a 19th-century BC wall painting at Beni Hasan in Egypt (see *IBA*, fig. 25).

In the succeeding centuries another nomadic group which spread through Syria-Palestine and into *Egypt was the Hyksos, and again mainly during the 2nd millennium yet another body of nomads, the *Arameans, and a related group, the Ahlamu, began to come into prominence. During the centuries around the turn of the 2nd to the 1st millennium, these people and their congeners flooded W Asia, putting a halt to the growing dominion of Assyria, and founding many city-states in the area of Syria and N Mesopotamia.

These groups of nomads are the principal ones known from the written documents, who probably came ultimately from the Arabian peninsula. More directly from the peninsula were groups of Arabs (*ARABIA), who are mentioned in the Assyrian inscriptions and depicted in the bas-reliefs as riding camels and living in tents. Later in the 1st millennium such posts as Petra and Palmyra were settled by Arab tribes who were able to profit from the caravan traffic.

b. The northern nomads

Access to the Near East was more difficult for the N nomads who inhabited the S Russian steppe; the

NOMADS

principal route of entry was between the Caspian and the Black Seas and into Asia Minor and Iran. Signs of the influx of the N nomads are found already in the middle of the 3rd millennium at the 'Royal Tombs' of Alaca Hüyük in central Asia Minor, where a warrior aristocracy had imposed itself on the peasant population. These were predecessors of the Indo-European-speaking Hittites who established an empire in Asia Minor in the 2nd millennium. It is clear that, like the Hittites, many of the invaders from the N were Indo-European-speaking. In the 2nd millennium the Kassites in Babylonia and the rulers of Mitanni in N Mesopotamia betray, in their names and certain elements of vocabulary, their Indo-European origins. These people were among the first to introduce the *horse and *chariot to W Asia, and it is probable that this was a combination developed on the steppe. In the late 2nd millennium the Phrygians in Asia Minor repeated the pattern of a dominating warrior aristocracy, and later the Cimmerians are encountered as warlike raiders. In the 1st millennium the Medes and Persians came to prominence in Iran, the latter finally founding an empire which dominated the entire Near East. In the Assyrian inscriptions the earlier groups of the raiding warriors are known as Ummanmanda (*ASSYRIA).

NOSE, NOSTRILS (Heb. 'ap, 'nose' or 'nostril'). The organ of breathing, used also of the face, perhaps by synecdoche, especially in the expression 'face to the ground' in worship or homage. The Hebrews apparently thought no further into the respiratory process, and no word for lung occurs in the Bible. The presence of breath in the nostrils was connected with *life (Gn. 2:7; Jb. 27:3), and the temporary nature thereof (Is. 2:22). The word also denotes the nose as the organ of smelling (Ps. 115:6; Am. 4:10). When breath was emitted visibly (called 'smoke', Ps. 18:8) it was connected with the expression of inner emotion, principally anger. By metonymy the word 'ap often comes to mean 'anger' (Gn. 27:45; Jb. 4:9), and is used figuratively thus in the OT far more frequently than in the literal sense. It is apparent from cognate languages (e.g. Akkad. *appu*, 'face') that the physical designation is the original. The word is not found in the NT. B.O.B.

NUMBER.

I. General usage

Israel shared with most of her Mediterranean and Near Eastern neighbours, e.g. Assyria, Egypt, Greece, Rome and Phoenicia, the decimal system

of counting. The numbers recorded in the Heb. text of the OT are written in words, as in the main are the figures in the Gk. text of the NT. Numbers are also written in word form on the Moabite Stone and the Siloam Inscription.

In Heb. the number one is an adjective. A series of nouns denote the numbers 2 to 10. Combinations of these numbers with 10 give 11 to 19. After 20 the tens are formed in a pattern similar to that used in Eng., i.e. 3, 30. A separate word denotes 100; 200 is the dual form of this, and from 300 to 900 there is again a pattern similar to that found in the Eng. numeral system. The highest number expressed by one word is 20,000, the dual form of 10,000.

Aram. papyri from Egypt from the 6th to the 4th centuries BC, Aramaic endorsements on cuneiform tablets from Mesopotamia and Heb. ostraca and weights provide evidence of an early system of numerical notation within the OT period. Vertical strokes were used for digits and horizontal strokes for tens, written one above the other for multiples of ten, often with a downward stroke on the right. A stylized *mem* represented 100 with vertical strokes for additional hundreds. An abbreviation of the word 'a thousand' was used to indicate this figure. It is considered that the Heb. material shows that a sign resembling a Gk. *lambda* represented 5 and a sign similar to an early *gimel* stood for 4. See Y. Yadin, *Scripta Hierosolymitana*, 8, 1961, pp. 9–25. (*WEIGHTS AND MEASURES.)

H. L. Allrick (*BASOR* 136, 1954, pp. 21–27) proposes that originally the lists in Ne. 7 and Ezr. 2 were written in the early Heb.-Aram. numeral notation, and he suggests that an explanation of certain differences between the lists may be found in this fact. See A. R. Millard, *TynB* 11, 1962, pp. 6–7, for evidence of Heb. numerical signs.

The idea of using letters of the alphabet for numerals originated from Gk. influence or at least during the period of Gk. influence, and, as far as is known, first appeared on Maccabean coins. See however G. R. Driver, *Textus* 1, 1960, pp. 126f.; 4, 1964, p. 83, for indication of earlier origin. The first nine letters were used for the figures 1 to 9, the tens from 10 to 90 were represented by the next nine and the hundreds from 100 to 400 by the remaining four letters. The number 15, however, was denoted by a combination of *teth* (9) and *waw* (6), as the two letters *yod* (10) and *he* (5) were the consonants of Yah, a form of the sacred name Yahweh. Further numbers were denoted by a combination of letters. There are ordinal numbers in biblical Heb. from 1 to 10, after which the cardinal numbers are used. There are also words for fractions from a half to a fifth. Numbers in biblical Gk. follow the pattern used in Hellenistic Gk.

An indication of the mathematical concept of infinity may be found in the statement in Rev. 7:9 where the redeemed are 'a great multitude, which no man could number'. In a concrete image this concept is expressed in the OT as, e.g., Gn. 13:16. Cf. also Gn. 15:5.

The elementary processes of arithmetic are recorded in the OT, e.g. addition, Nu. 1:17ff. and Nu. 1:45; subtraction, Lv. 27:18; multiplication, Lv. 25:8.

In certain passages it is evident that numbers are being used in an approximate sense. The numbers '2', '2 or 3', '3 or 4', '4 or 5' are sometimes used with the meaning of 'a few', e.g. I Ki. 17:12, where

the widow of Zarephath says, 'I am gathering a couple of sticks', and also Lv. 26:8 'five of you shall chase a hundred'. Similar usages are found in 2 Ki. 6:10; Is. 17:6; for 'three or four', see Am. 1:3ff. and Pr. 30:15ff. From the NT we may quote the use of round numbers by Paul in 1 Cor. 14:19. 'Nevertheless in the church I would rather speak five words with my mind, in order to instruct others, than ten thousand words in a tongue.' Cf. also Mt. 18:22.

It would seem that '10' was used as the equivalent of 'quite a number of times', and we may instance Jacob's words in Gn. 31:7, where it is recorded that Laban changed his wages '10 times'; cf. also Nu. 14:22. That Saul, David and Solomon are recorded as having reigned for 40 years, and the recurring statement in the book of Judges that the land had rest 40 years (Jdg. 3:11; 5:31; 8:28) seem to indicate that 40 was used to stand for a generation, or quite a considerable number, or length of time. 100, e.g. Ec. 6:3, would equal a large number, and 1,000, 10,000 (Dt. 32:30; Lv. 26:8), and 40,000 (Jdg. 5:8) provide instances of round numbers which indicate an indefinitely large number. In the case of large numbers for the strength of armies, e.g. 2 Ch. 14:9, these are in all probability approximate estimates, as also seems to be the case with the number of David's census (2 Sa. 24:9; cf. 1 Ch. 21:5), and perhaps the 7,000 sheep sacrificed in Jerusalem (2 Ch. 15:11).

II. Large numbers in the Old Testament

The large numbers recorded in certain parts of the OT have occasioned considerable difficulties. These are concerned chiefly with the chronology of the early periods of OT history, where the problem is further complicated by the presence of differing figures in the various texts and versions, with the numbers of the Israelites at the time of the Exodus, and the numbers of warriors in various armies, and especially of the numbers of the slain of enemy forces. With regard to the first problem one may instance that the Heb. text gives 1,656 years as the time between the creation and the Flood, the LXX 2,262 years and the Samaritan 1,307. Or for the age of Methuselah the Heb. text gives 969 years and the Samaritan 720. (*GENEALOGY; *CHRONOLOGY OF THE OLD TESTAMENT.) A similar problem exists in the NT regarding the number of persons on board the ship on which Paul travelled to Rome. Some mss give 276 and others 76 (Acts 27:37). Again the number of the beast (Rev. 13:18) is given variously as 666 and 616.

An indication that numbers might suffer textual corruption in transmission is provided by differing numbers in parallel texts, e.g. the age of Jehoiachin at the beginning of his reign is given as 18 in 2 Ki. 24:8 and 8 in 2 Ch. 36:9.

Archaeological discoveries have contributed considerable background information to the age of the Exodus and the conquest of Palestine, and the contemporary population. Given that the Israelites were less in number than the Canaanites, as may be inferred from Ex. 23:29 and Dt. 7:7, 17, 22, the census numbers of Nu. 1 and 26 which imply a population of 2-3 million require investigation.

Divergent interpretations of the figures have been proposed, from acceptance at face value, e.g. NBC, 1953, p. 165, to J. Bright, *A History of Israel*, 1972, p. 130: 'these lists . . . represent a later period of Israel's history'. Attempts have been made to retranslate the figures and so reduce them.

The Heb. word '*elep*', 'a thousand', can be translated 'family', 'tent group', or 'clan': e.g. Jdg. 6:15, 'my clan (*'alpi*) is the weakest in Manasseh'. The following may also be consulted: F. Petrie, *Egypt and Israel*, 1911, pp. 42ff.; G. E. Mendenhall, 'The Census Lists of Numbers 1 and 26', *JBL* 77, 1958, pp. 52ff.; C. S. Jarvis, *Yesterday and Today in Sinai*, 1936; R. E. D. Clark, 'The Large Numbers of the OT', *JTV* 187, 1955, pp. 82ff.

J. W. Wenham (*TynB* 18, 1967, pp. 19-53), following R. E. D. Clark's repointing of '*elep*' 'thousand' to '*allup*', translated 'officer' or 'trained warrior', and interpreting *mē'ōt* 'hundreds' as 'contingents', suggests that the individual large numbers consist of a coalescence of these two terms in a specific ratio. The number of fighting men would then be reduced to 18,000 and, allowing for Levites and those too old to fight, an estimated male population would total 36,000, consistent with the figure for first-born males (22,273) in Nu. 3:43. This figure, doubled to include women, gives a calculated Israelite population of 72,000.

Revocalization of '*elep*' to '*allup*' 'officer', 'captain', provides a possible solution to the enormous numbers of fallen in battle, recorded in thousands, and is consistent with practice in ancient battles where mighty men did most of the fighting, e.g. David and Goliath.

III. Significant numbers

Numbers are also used with a symbolical or theological significance.

One is used to convey the concept of the unity and uniqueness of God, e.g. Dt. 6:4, 'The Lord our God is one Lord'. The human race stems from one (Acts 17:26). The entry of sin into the world is through one man (Rom. 5:12). The gift of grace is by one man, Jesus Christ (Rom. 5:15). His sacrifice in death is a once-for-all offering (Heb. 7:27), and he is the first-born from the dead (Col. 1:18), the firstfruits of the dead (1 Cor. 15:20). 'One' also expresses the unity between Christ and the Father (Jn. 10:30), the union between believers and the Godhead, and the unity which exists among Christians (Jn. 17:21; Gal. 3:28). 'One' further expresses singleness of purpose (Lk. 10:42). The concept of union is also found in the saying of Jesus concerning marriage, 'and the two shall become one' (Mt. 19:6).

Two can be a figure both of unity and of division. Man and woman form the basic family unit (Gn. 1:27; 2:20, 24). Animals associate in pairs and enter the ark in twos (Gn. 7:9). Two people often work together in companionship, e.g. Joshua's spies (Jos. 2:1), and the Twelve and Seventy disciples were sent out in pairs (Mk. 6:7; Lk. 10:1). In addition, at Sinai there were two stone tablets, and animals were often offered for sacrifice in pairs. By contrast two is used with separating force in 1 Ki. 18:21, as it is also implied in the two 'ways' of Mt. 7:13-14.

Three. It is natural to associate the number 3 with the Trinity of Persons in the Godhead, and the following references among others may be instanced: Mt. 28:19; Jn. 14:26; 15:26; 2 Cor. 13:14; 1 Pet. 1:2, where this teaching is implied. The number 3 is also associated with certain of God's mighty acts. At Mt Sinai the Lord was to come down to give his Law on 'the third day' (Ex. 19:11). In Hosea's prophecy the Lord would raise up his people 'on the third day', probably meaning a short time (Ho. 6:2). There is a similar usage of

	AKKADIAN	EGYPTIAN		EARLY HEBREW	PHOENICIAN	POST-EXILIC HEBREW	GREEK

Table of numerals in use during the biblical period.

'three' in Lk. 13:32, where 'third day' is 'poetical for the moment when something is finished, completed, and perfected' (N. Geldenhuys, *Commentary on the Gospel of Luke*, 1950, p. 384, n. 4). Jonah was delivered (Jon. 1:17; Mt. 12:40), and God raised Christ from the dead, on the third day (1 Cor. 15:4). There were three disciples admitted to special terms of intimacy with Christ (Mk. 9:2; Mt. 26:37), and at Calvary there were three crosses. Paul emphasizes three Christian virtues (1 Cor. 13:13). A further instance of three being used in connection with periods of time is the choice offered to David of 3 days' pestilence, 3 months' defeat or 3 years' famine (1 Ch. 21:12). The deployment of Gideon's army furnishes an example of division into three (Jdg. 7:16), and the fraction, a third, is employed in Rev. 8:7-12.

Four, the number of the sides of a square, is one of symbols of completion in the Bible. The divine name Yahweh has 4 letters in Heb. (יְהוָה). There were 4 rivers flowing out of the garden of Eden (Gn. 2:10) and there are 4 corners of the earth (Rev. 7:1; 20:8), from whence blow the 4 winds (Je. 49:36; Ezk. 37:9; Dn. 7:2). In his vision of the glory of God, Ezekiel saw 4 living creatures (ch. 1), and with these we may compare the 4 living creatures of Rev. 4:6.

The history of the world from the time of the Babylonian empire is spanned by 4 kingdoms (Dn. 2: 7). Four is a prominent number in prophetic symbolism and apocalyptic literature, as the following additional references show: 4 smiths and 4 horns (Zc. 1:18-21), 4 chariots (Zc. 6:1-8), 4 horns of the altar (Rev. 9:13), 4 angels of destruction (Rev. 9:14). In addition, there are 4 Gospels, and at the time when the gospel was extended to the Gentiles Peter saw in a vision a sheet let down by its 4 corners.

Five and ten, and their multiples, occur frequently on account of the decimal system used in Palestine. In the OT 10 Patriarchs are mentioned before the Flood. The Egyptians were visited with 10 plagues and there were Ten Commandments. The fraction one-tenth formed the tithe (Gn. 14:20; 28:22; Lv. 27:30; 2 Ch. 31:5; Mal. 3:10). In the parable of Lk. 15:8 the woman possessed 10 coins, and in the parable of the pounds mention is made of 10 pounds, 10 servants and 10 cities (Lk. 19:11-27). Of the 10 virgins, 5 were wise and 5 foolish (Mt. 25:2). 5 sparrows were sold for 2 farthings (Lk. 12:6). Dives had 5 brothers (Lk. 16:28); the woman by the well had had 5 husbands (Jn. 4:18), and at the feeding of the 5,000 the lad had 5 loaves. There are 10 powers which cannot separate the believer from the love of God (Rom. 8:38f.) and 10 sins which exclude from the kingdom of God (1 Cor. 6:10). The number 10, therefore, also signifies completeness; 10 elders form a company (Ru. 4:2).

Six. In the creation narrative God created man and woman on the 6th day (Gn. 1:27). 6 days were allotted to man for labour (Ex. 20:9; 23:12; 31:15; cf. Lk. 13:14). A Heb. servant had to serve for 6 years before he was freed. The number 6 is therefore closely associated with man.

Seven has an eminent place among sacred numbers in the Scriptures, and is associated with completion, fulfilment and perfection. In the creation narrative God rested from his work on the 7th day, and sanctified it. This gave a pattern to the Jewish sabbath on which man was to refrain from work (Ex. 20:10), to the sabbatic year (Lv. 25:2-6), and

also to the year of jubilee, which followed 7 times 7 years (Lv. 25:8). The Feast of Unleavened Bread and the Feast of Tabernacles lasted 7 days (Ex. 12:15, 19; Nu. 29:12). The Day of Atonement was in the 7th month (Lv. 16:29), and 7 occurs frequently in connection with OT ritual, e.g. the sprinkling of bullock's blood 7 times (Lv. 4:6) and the burnt-offering of 7 lambs (Nu. 28:11); the cleansed leper was sprinkled 7 times (Lv. 14:7), and Naaman had to dip 7 times in Jordan (2 Ki. 5:10). In the tabernacle the candlestick had 7 branches (Ex. 25:32).

Other references to be noted are: the mother of 7 sons (Je. 15:9; 2 Macc. 7:1ff.); 7 women for one man (Is. 4:1); a loving daughter-in-law preferable to 7 sons (Ru. 4:15). The Sadducees proposed a case of levirate marriage with 7 brothers (Mt. 22:25). The priests encompassed Jericho 7 times (Jos. 6:4). Elijah's servant looked for rain 7 times (1 Ki. 18:43). The psalmist praised God 7 times a day (Ps. 119:164), and Gn. 29:18; 41:29, 54 and Dn. 4:23 mention 7 years (times). The early church had 7 deacons (Acts 6:3) and John addresses 7 churches in the book of Revelation, where there is mention of 7 golden candlesticks (1:12) and 7 stars (1:16). At the miraculous feeding of 4,000 from 7 loaves and a few fishes (Mk. 8:1-9), the 7 basketsful collected afterwards may indicate that Jesus can satisfy completely. The complete possession of Mary Magdalene is effected by 7 demons (Lk. 8:2), while the dragon of Rev. 12:3 and the beast of Rev. 13:1; 17:7 have 7 heads.

Eight. 1 Pet. 3:20 records that 8 people were saved in the ark of Noah. Circumcision of a Jewish boy took place on the 8th day (Gn. 17:12; Phil. 3:5). In Ezekiel's vision of the new Temple the priests make their offering on the 8th day (43:27).

Ten. See *Five*.

Twelve. The Heb. year was divided into 12 months, the day into 12 hours (Jn. 11:9). Israel had 12 sons (Gn. 35:22-27; 42:13, 32) and there were 12 tribes of Israel, the people of God (Gn. 49:28). Christ chose 12 apostles (Mt. 10:1ff.). Twelve is therefore linked with the elective purposes of God.

Forty is associated with almost each new development in the history of God's mighty acts, especially of salvation, e.g. the Flood, redemption from Egypt, Elijah and the prophetic era, the advent of Christ and the birth of the church. The following periods of 40 days may be listed: the downpour of rain during the Flood (Gn. 7:17); the despatch of the raven (Gn. 8:6); Moses' fasts on the mount (Ex. 24:18; 34:28; Dt. 9:9); the spies' exploration of the land of Canaan (Nu. 13:25); Moses' prayer for Israel (Dt. 9:25); Goliath's defiance (1 Sa. 17:16); Elijah's journey to Horeb (1 Ki. 19:8); Ezekiel's lying on his right side (Ezk. 4:6); Jonah's warning to Nineveh (Jon. 3:4); Christ's stay in the wilderness prior to his temptation (Mt. 4:2), his appearances after his resurrection (Acts 1:3).

For 40 years, the general designation of a generation, the following may be quoted: the main divisions of Moses' life (Acts 7:23, 30, 36; Dt. 31:2); Israel's wandering in the wilderness (Ex. 16:35; Nu. 14:33; Jos. 5:6; Ps. 95:10); the recurring pattern of servitude and deliverance in the era of the judges (e.g. Jdg. 3:11; 13:1); the reigns of Saul, David and Solomon (Acts 13:21; 2 Sa. 5:4; 1 Ki. 11:42); the desolation of Egypt (Ezk. 29:11).

Seventy is often connected with God's administration of the world. After the Flood the world was

repopulated through 70 descendants of Noah (Gn. 10); 70 persons went down to Egypt (Gn. 46:27); 70 elders were appointed to help Moses administer Israel in the wilderness (Nu. 11:16); the people of Judah spent 70 years of exile in Babylon (Je. 25:11; 29:10); 70 weeks, 'sevens', were decreed by God as the period in which Messianic redemption was to be accomplished (Dn. 9:24); Jesus sent forth the Seventy (Lk. 10:1); he enjoined forgiveness 'until seventy times seven' (Mt. 18:22).

666 (or 616) is the number of the beast in Rev. 13:18. Many interpretations of this number have been proposed, and by *gematria*, in which figures are given the value of corresponding letters, the number 666 has been identified with the numerical values of the names of a variety of personalities from Caligula and Nero Caesar onwards, and with such concepts as the chaos monster.

For a full discussion, and of 'thousand', see commentaries on the book of Revelation, especially *NBCR*; H. B. Swete, *The Apocalypse of St. John*, 1906, pp. 175-176; J.-J. von Allmen, art. 'Number' in *Vocabulary of the Bible*, 1958; D. R. Hillers, *BASOR* 170, 1963, p. 65.

Rev. 7:4; 14:1 records the number 144,000 'which were sealed'. It is the number 12, the number of election, squared, and multiplied by 1,000, an indefinitely large number, and symbolizes the full number of saints of both covenants who are preserved by God.

NUMBERS, BOOK OF. The synagogue named this book after its first word or after one of the first words (*way'dabbēr*, 'and he spoke'; or *b'midbar*, 'in the desert'). The Gk. translators called it *arithmoi*, 'numbers'. Where the four other parts of the Pentateuch are concerned, the Gk. names are commonly used; in this fifth part, in some countries the Gk. has been translated into the native language: 'Numbers', *etc.*; in other countries the Lat. translation of the Gk. name is used: *Numeri*. The title is given because the book's first few chapters (and ch. 26) contain many numbers, especially census-numbers.

I. Outline of contents

a. The numbering of the Israelites. The marshalling of the tribes (1:1-4:49).

b. The law regarding jealousy, legislation for the Nazirites and other laws (5:1-6:27).

c. The offerings for the consecration of the tabernacle (7:1-8:9).

d. The candlestick. The consecration of the Levites; their time of service (8:1-26).

e. The second Passover; the cloud; the two silver trumpets (9:1-10:10).

f. The departure from Sinai (10:11-36).

g. Taberah. The quails. The 70 elders (11:1-35).

h. Miriam and Aaron against Moses (12:1-16).

i. The twelve spies (13:1-14:45).

j. Miscellaneous commandments regarding, *inter alia*, meat and drink offerings, offerings where a person has sinned through ignorance, and commandments about sabbath-breaking (15:1-41).

k. Korah, Dathan and Abiram. The blossoming rod of Aaron (16:1-17:13).

l. The position of the priests and Levites (18:1-32).

m. The water of separation for purification of sins (19:1-22).

n. The death of Miriam. Meribah (20:1-13).

o. Edom refuses to give Israel passage. Death of Aaron (20:14-29).

p. The struggle at Hormah. The serpent of bronze. To the plains of Moab. The fight against Sihon and Og (21:1-35).

q. Balaam (22:1-24:25).

r. Baal-peor (25:1-18).

s. The second numbering of the Israelites (26:1-65).

t. The right of inheritance of daughters. The successor of Moses (27:1-23).

u. Commandments regarding offerings. Vows of the women (28:1-30:16).

v. Vengeance taken against the Midianites (31:1-54).

w. The allotment of the land on the E side of Jordan (32:1-42).

x. The places where Israel camped during their journeys through the desert (33:1-49).

y. Directions concerning the conquest of Canaan. The borders of Canaan. Regulations concerning the division of the land. The cities of the Levites. Cities of refuge (33:50-35:34).

z. The marriage of daughters having an inheritance (36:1-13).

II. Authorship and date

Many scholars today consider that the tradition according to which Moses is the author of the entire book must be seriously questioned. They draw attention to the following considerations. Only for ch. 33 is a literary activity of Moses mentioned (v. 2, *cf.* 5:23; 11:26); this is not mentioned for any other part of Nu.; for the contrary case, see *e.g.* Dt. 31:9. Various data point to a later time than that of Moses, or at least to another author than Moses; *cf.* 12:3; 15:22f. (Moses in the third person); 15:32; 21:14 (perhaps the 'book of the wars of the Lord' originates from the post-Mosaic time); 32:34ff. Nevertheless, the book repeatedly states that the regulations and the laws have been given through the agency of Moses (and Aaron), 1:1, *etc.*; it is also clear that the laws and regulations give the impression that they were enacted during the wanderings through the desert (5:17; 15:32ff., *etc.*). For that matter it is possible that the laws have gone through a process of growth: afterwards there may have been alterations made in them, *e.g.* for the purpose of adapting them to altered circumstances. Sometimes there are definite marks of these processes; thus there are differences between Nu. 15:22-31 and Lv. 4:1f.; in addition, we note the fact that Nu. 15:22f. speaks about Moses in the third person, and it is not unlikely that Nu. 15:22-31 is a later version of Lv. 4.

We shall have to assume that the laws substantially originate from the Mosaic time. We can also assume that the noting down of both the laws and the stories was already begun during the Mosaic time. The time when the book received its final form is unknown to us. In the opinion of the present writer, it is a plausible view that the major points were already recorded in writing, *e.g.* in the early days of the Monarchy. It is significant that there are no *post-Mosaic* pointing unmistakably to a time much later than that of Moses.

Since the critical activity of Wellhausen and others, many scholars have adopted the view that

NUMBERS, BOOK OF

Nu. belongs for the greater part to the so-called Priestly Code, which is said to have its origin in the post-exilic age. At present, however, scholars are inclined, more than Wellhausen was, to accept the view that Nu. contains material dating from old, even very remote, times, admitting that in Nu. 5:11ff. and ch. 19, ancient rites are described, and that other material points to a similar conclusion. Many scholars are willing to accept that the cult, as it is described in Nu., was in use, so far as concerns the main points, in pre-exilic Jerusalem. See also the articles on *PENTATEUCH, *MOSES, *WILDERNESS OF THE WANDERING, *etc.*, and articles under particular subjects such as *BALAAM, *CITIES OF REFUGE, *etc.*

III. Further summary of contents

1. The division of the Pentateuch into five books is not original. Thus, even though it is not without meaning that with Nu. 1:1 a new book begins (in which the first four chapters form the preparation for the departure from Sinai), this book nevertheless forms a unity with the preceding books. In the same way it may be said that Dt. is the continuation of Nu., but the separation between Nu. and Dt. is more fundamental than the separation of Lv. and Nu.

2. The history narrated in Nu. covers 38 years—the period between the 2nd year and the 40th year after the Exodus (see the definitions of the time in 1:1; 7:1; 9:1, 15; 10:11; 33:38; *cf.* Ex. 40:2; Dt. 1:3).

In the first part Israel is still staying near Mt Sinai (Ex. 19:1 tells of their arrival at Sinai). Nu. 10:11–12:16 deals with the departure from Sinai and the journey to Kadesh (*cf.* 13:26); in the 2nd year after the Exodus Israel had already arrived at Kadesh (*cf.* Dt. 2:14). Because Israel put faith in the defeatist words of the spies, there ensued a prolonged wandering in the desert (chs. 13–14). Little is known to us of the fortunes of Israel during the 38 years of their wanderings (15:1–20:13). We should reckon with the possibility that Kadesh was for a long time a sort of centre for Israel, while various groups of Israelites were wandering about the Sinai Peninsula. After these 38 years Israel leaves Kadesh for Canaan, marches round Edom, comes into the plains of Moab, and defeats Sihon and Og (20:14–21:35). The last part of the book describes the actions of Balaam, Israel's idol-worship of Baal-peor and the punishment of the Midianites.

3. Besides dealing with history, this book contains all kinds of regulations and laws. The relation between laws and history and between one law and another is often not very clear to us. Nevertheless, the author will, at least in many cases, have intended a connection. The simplest solution is to suppose that there is a chronological connection. Sometimes there is also a material connection; see, *e.g.*, how well 5:1–4 and ch. 18 correspond with what precedes, and 10:1–10 with what follows; after a survey of the journey through the desert has been given (33:1–49), the narrative continues (33:50–35:34) with regulations concerning the conquest of Canaan and laws for when they are dwelling in it. Finally, we should bear in mind that the construction of many OT books raises similar questions to those we have referred to here (*PSALMS, *PROVERBS, *ISAIAH, *etc.*).

Many laws (but not all of them) concern ritual matters. The Israelites did not distinguish between cultic, moral, juridical and social laws in the same

way as we usually do. All the laws and regulations have as their object that Israel should be prepared to live in Canaan in the sight of the Lord, as an independent and well-conducted nation.

4. In Nu. Moses is again the dominant figure, depicted in all his greatness and weakness, and guiding the people in every respect. Through his mediation the Lord gives Israel a variety of laws and regulations, speaking to his servant 'mouth to mouth' (12:6–8). Over and over again Moses acts as intercessor for the people (11:2; 12:13; 14:13ff.; 16:22; 21:7). He was 'very meek, more than all men that were on the face of the earth' (12:3; *cf.* 14:5; 16:4ff.), yet he had his share of human failings. Contrary to the Lord's order he strikes the rock (20:10f.), and on occasion he makes temperamental complaints (11:10ff.; *cf.* 16:15). Next to Moses in prominence is Aaron (1:3, 17, 44; 2:1, *etc.*, especially chs. 12; 16–17).

IV. The message of the book

In Nu., as in the case of the whole Bible, the almighty and faithful God of the covenant reveals himself; it is this revelation that joins the different parts of Nu. into a unity. In the regulations and laws he imposes, God shows his care of his people. Israel frequently revolts against him. As a result the anger of the Lord is kindled: he does not allow the sin to go unpunished (11:1–3, 33f.; 12:10ff.; 14, *etc.*); Moses and Aaron are not allowed to enter Canaan (20:12f.). But the Lord does not repudiate his people; he remains faithful to his covenant. He guides Israel through the desert, so that the land promised to their fathers is reached. This is prevented neither by Israel's unfaithfulness nor by the power of the nations that turn against Israel.

Special attention should be paid to certain aspects of the revelation of God in Numbers.

1. The Lord is, indeed, unchangeable in his faithfulness (*cf.* 23:19), but this does not imply that he is an unmovable being (see especially the touching story in 14:11ff.). In this connection we should note the strong anthropomorphisms (see, *e.g.* 10:35f.; 15:3, 'a pleasing odour to the Lord'; 28:2, 'my food', *etc.*); expressions which, while we must not take them in a strictly literal sense, show at the same time how deeply the Lord is involved in the doings of Israel.

2. God's holiness is specially emphasized. The stories do this (see, *e.g.* 20:12f.), and so also, in a different way, do the laws and regulations: when a man approaches God he has to fulfil all kinds of prescribed rules, he has to be free from every uncleanness (*cf.* also 1:50ff., *etc.*).

3. Very detailed prescriptions are given in this book: God exercises his sovereign dominion over everything, even over the smallest details.

4. As soon as the children of Israel have arrived at the borders of the promised country they yield to the temptation to serve the gods of the new land. But the Lord is not only the Lord of the desert: he engages a heathen fortune-teller (22–24), and punishes Israel for their idol-worship (25), together with those who had seduced his people (31).

In what is said above, the Christological character of this book has already been mainly indicated. In Nu., as elsewhere, God reveals himself as the faithful God of the covenant. In other words, he reveals himself in the face of Christ. In addition, there is much in this book which has a typological meaning: in persons (especially Moses and Aaron), in occurrences, and in laws, the coming

Christ casts his shadow before him (*cf.* Jn. 3:14; 1 Cor. 10:1ff.; Heb. 3:7ff.; 9:13; *etc.*).

NUNC DIMITTIS. The prophecies accompanying Christ's advent occur not (as with John the Baptist) at circumcision but at the rites of purification a month later. According to an ancient custom babies were brought to an old doctor or rabbi in the Temple for a blessing. Perhaps in this setting Simeon, taking the Lord Jesus, uttered his *nunc dimittis* (Lk. 2:29–35). Simeon is characterized as receiving a 'spirit which was holy', which in Jewish tradition is equated with the 'spirit of prophecy'. According to the rabbis the Spirit departed from Israel after the prophet Malachi, and his return was indicative of the Messianic age (*cf. SB, in loc.*). In the case of Simeon three specific 'acts of the Spirit' occur: (1) he receives by divine revelation assurance that he shall see the Lord's Messiah; (2) under the influence of the Spirit (*cf. Rev. 1:10*) he is led to encounter and recognize Jesus as Messiah (*cf. 1 Sa. 16:6ff.*); (3) he utters a prayer and prediction which, in Luke's context, is clearly to be regarded as prophetic.

Nunc Dimittis is divided into two parts, the first a prayer to God (liturgically, this alone came to be designated the 'Nunc Dimittis') and the second a prophecy spoken to Mary. Their mood and theme stand in stark contrast to each other. The prayer is joyful, expressing the Messianic hope of Judaism in its most exalted tone: in Messiah the Gentiles will receive the truth of God and thus, in him, Israel's glory as God's instrument of revelation and redemption will be fully manifest (*cf. Is. 49:6; Acts 1:8; Rom. 15:8ff.*). But, in the second section, as if to counterbalance the impression of the prayer, praise gives way to warning. The Messiah shall cause division and shall be rejected by many (*cf. Rom. 9:33*).

In Simeon's prophecy to Mary the concept of a suffering Messiah appears. Israel's destiny is glorious, but it is one of conflict. As a sign or pointer to the redemption of Israel Jesus shall be attacked and rejected (*cf. Lk. 11:30*), for the kind of redemption he represents will not be welcomed by all. Although this will bring anguish to Mary, through it men will be brought to decision and thus their real selves, their hidden selves, be uncovered. (*BENEDICTUS.) E.E.E.

NURSE. 'Nurse' in the *EVV* may mean a wet-nurse, translating Heb. *mēneqet*, used of Deborah (Gn. 24:59), of Moses' mother (Ex. 2:7), and of the nurse of the infant Joash (2 Ki. 11:2; 2 Ch. 22:11). Suckling is usually continued in the Near East for 2 years, and the nurse often remains with the family as a trusted servant, as in the case of Deborah (Gn. 35:8). The same word is used in a figurative sense of queens who will care for God's people in the glorious future (Is. 49:23). Paul compares his care

for believers to that of a nurse (Gk. *trophos*) for her own children (1 Thes. 2:7).

In the more general sense of one who cares for children, 'nurse' translates Heb. *ōmenet*; for example, Naomi (Ru. 4:16) and the governess of 5-year-old Mephibosheth (2 Sa. 4:4) are so described. The masculine form of this Heb. word, *ōmēn*, translated 'nursing father' אב, 'nurse' רsv, is used figuratively of Moses' care for the Israelites (Nu 11:12) and of kings who will serve the people of God (Is. 49:23). *Cf.* Acts 13:18, *rvmg.*

NUZI. The excavations at Nuzi (Yorghana Tepe) and adjacent mounds near Kirkuk, Iraq, were carried out by E. Chiera and others between 1925 and 1931 through the co-operation of the American Schools of Oriental Research, the Iraq Museum and the Semitic Museum, Harvard. The earliest level of occupation was dated to the Ubaid period, while the latest traces came from Roman times. The two main periods of occupation were in the 3rd millennium BC when the site was known as Gasur, and in the 15th–14th centuries BC when the town was under Hurrian influence and known as Nuzi. In the palace and private homes more than 4,000 clay tablets were found, written in a local Hurrian dialect of Akkadian. These included several archives, among which those of Tehiptilla (c. 1,000 tablets), prince Shilwateshub and a successful business woman, Tulpunnaya, are the best known. The texts cover approximately five generations, thus providing a detailed picture of life in an ancient Mesopotamian community in a comparatively short period.

The tablets from Nuzi contain mainly private contracts and public records. Apart from lists of various kinds of goods and equipment, a wide range of topics is covered, including land, prices, family law, women, law and order, and slaves. Of particular importance are documents relating to various kinds of adoption, wills, marriage, lawsuits, antichretic security and exchange of persons, goods and land. Until comparatively recently several of the Nuzi text types were scarcely represented elsewhere, but excavation at Tell al-Fikhar (Kurruhani), c. 30 km SW of Nuzi, has revealed similar material of comparable date, though it remains largely unpublished.

By contrast, the political history and religious life is poorly understood. Nuzi appears to have been situated within the Hurrian kingdom of Mitanni, though the extant texts make little reference to this or to the rising power of Assyria. Literature, including myths, epics, wisdom texts and scholarly documents, is also sparsely represented.

The Nuzi texts contain a significant number of points of contact with the OT, notably with the patriarchal narratives. These links between the customs and social conditions of the people of Nuzi and the biblical Patriarchs have led some scholars to argue for a similar 15th-century date for Abraham and his descendants, though there is evidence that many of these customs had already been observed for centuries. More recently attempts have been made to reduce considerably any connection between Nuzi and the Patriarchs (Thompson, van Seters). The examples listed below, however, indicate the existence of several significant parallels,

and some of the customs concerned are also found elsewhere in Mesopotamia. Nuzi practice, in fact, followed mainly a Mesopotamian rather than a Hurrian pattern.

A large group of documents deals with *inheritance*. Throughout the ancient Near East an eldest son received a larger inheritance share than his brothers, though the exact proportion varied. The double share, which is most prominent at Nuzi and which also appears in other 2nd-millennium cuneiform texts, is closely paralleled in Dt. 21:17, though the Patriarchs seem to have followed a different practice (Gn. 25:5-6). The most frequent description of the eldest son at Nuzi (*rabû*, 'eldest'), also found at Ugarit, Alalab and in Middle Assyrian texts, occurs in Hebrew (*rab*) in Gn. 25:23 instead of the usual *b'kôgôr*.

It remains uncertain whether or not one's birthright could be exchanged at Nuzi, as in the case of Jacob and Esau (Gn. 25:29-34). Although several examples are known where at least part of an inheritance changed hands between brothers, in no instance can an eldest son be definitely identified in such transactions. In any case similar examples of the transfer of an inheritance occur in Assyria and Babylonia and are not confined to Nuzi.

However, any heir could be disinherited. Such drastic action was permitted only for offences against the family and the references to 'disrespect' and 'disobedience' towards parents provides a useful background to Reuben's demotion (Gn. 35:22; 49:3-4), though again similar examples can be found elsewhere.

The suggestion has been made that possession of the household gods in Nuzi formed an effective entitlement to an inheritance and that Rachel's theft of Laban's images, perhaps on Jacob's behalf, could be similarly explained (Gn. 31:19ff.). It is more probable, however, that the family deities could only be bequeathed by the father, normally to the first-born son, and that their theft did not improve an heir's claim.

Adoption also occupies an important place in the Nuzi texts. A man without an heir could adopt an outsider who would carry out certain responsibilities towards his adoptive parents, though of course similar customs are known from other Mesopotamian texts. The duties included the provision of food and clothing, particularly in old age, and ensuring proper burial and mourning rites, while in return the adoptee received an inheritance. It is quite possible that Abram adopted Eliezer in this manner prior to Isaac's birth (Gn. 15:2-4), especially since at Nuzi a son born subsequently usually gained a larger inheritance share than any adoptee and that the adoption of slaves is occasionally mentioned. The process of adoption at Nuzi was also extended to become a fiction whereby property, apparently legally inalienable, could be sold. Tehiptilla, for example, was 'adopted' in this way some 150 times!

Apart from adoption, the Nuzi texts mention three further solutions for a childless marriage. The husband could remarry or take a concubine or the wife could present her own slave-girl to her husband. The latter custom, which afforded the barren wife some protection, parallels that of Sarah, Rachel and Leah (Gn. 16:1-4; 30:1-13), and though only one example occurs at Nuzi (*HSS* 5. 67), others are known from Babylonia and Assyria. A son born to a slave-girl in this way would normally have to be adopted or legitim-

ated by the father according to Mesopotamian custom, though the Nuzi text is not specific on this point. *HSS* 5. 67 does indicate, however, that the wife maintained authority over her slave-girl's children and there are indications that Sarah, Rachel and Leah took responsibility for their slave-girls' offspring right from the naming of the children.

Although the Nuzi texts do not refer to a paternal blessing such as in Gn. 27:29, 33; 48:1ff., they do occasionally contain oral statements which were clearly regarded as having legal validity. One of these was made by a father to his son while the former lay ill in bed (*cf.* Isaac). In both Nuzi and Genesis such oral statements were supported by legal or customary safeguards, and symbolic actions involving the hands were frequently used.

Women are often mentioned in the Nuzi documents. The right of daughters to inherit property is attested, usually in the absence of sons, as in Babylonian contracts (*cf.* Nu. 27:8). Sometimes a marriage contract included a clause prohibiting the husband from marrying a second wife, a safeguard sought for Rachel by Laban (Gn. 31:50). Not every bride was so fortunate, however. A girl could be acquired by a man for optional marriage to himself or to his son (*cf.* Ex. 21:7-11), while the complaint of Laban's daughters that their father had held back their dowry (Gn. 31:15) is paralleled by an identical phrase (*kaspa akâlu*) in five Nuzi texts.

Several Nuzi references to business transactions have some relevance to the OT. Land was sometimes apportioned by lot (Nu. 26:55f.; Jos. 18:2-10) and there was a periodic 'release' from debt (Dt. 15). Sale of land was sometimes confirmed by the seller lifting his foot and placing the buyer's on the soil, while shoes functioned as legal symbols in some transactions (*cf.* Ru. 4:7-8; 1 Sa. 12:3, LXX; Am. 2:6; 8:6). 1 Sa. 1:24 has been reinterpreted in the light of Nuzi evidence to read 'a bullock, three years old'.

Finally, the Nuzi references to '*apiru* (*habiru*), indicating various persons, many apparently foreigners who had accepted voluntary servitude, recalls the phrase 'Hebrew slave' and the derogatory use of 'Hebrews' by Egyptians and Philistines when referring to Israelites (Gn. 39:14; Ex. 1:15; 21:1-6; 1 Sa. 14:21).

NYMPHA, NYMPHAS. Owner of a house in Laodicea (or possibly somewhere else near Colossae) in which a church met (Col. 4:15). Though many MSS read 'his house', as AV, most of the best read either 'her house' (*cf.* RSV, NEB) or 'their house' (*cf.* RV). The name is in the accusative and, unaccented, could represent a masculine Nymphas (pet-form for Nymphodorus?) or a feminine Nympha (*cf.* J. H. Moulton, *Grammar*, 1, p. 48, for

alleviation of the cause of Lightfoot's reserve). On either rendering the reading 'their house' is so hard to explain that it may well be correct. Perhaps it refers back to 'the brethren which are in Laodicea' (Lightfoot proposes a Colossian family there, or,

alternatively, that *autōn* stands for 'Nymphas and his friends').

Nympha(s), like *Philemon and *Archippus, displays Paul's friendships (made in Ephesus?) in an area he had not visited (*cf.* Col. 2:1). A.F.W.

OATHS. In ancient Israel: 1. Oaths were attributed to God (Num. 14:21) in relation to his covenant with Israel (Dt. 31:7f.), his promises (Gn. 22:16–18; 26:3), his judgments (Am. 4:2) and his word (Ezk. 20:3; 33:11). 2. It followed that oaths ensured a norm of morality (Gn. 34:1–7; Je. 29:20–23). Oaths in God's name were sacrosanct (Dt. 10:20), maintaining family honour and tribal loyalty. To ratify one's oath by invoking Yahweh's name, while knowingly perjuring oneself, was to profane the name (Lv. 19:12; Ex. 20:7). 3. In ancient Israel the absence of jurisprudence made the oath obligatory in administering justice at the town gate.

Of the two Heb. words translated oath, *šbū'ā* and *'ālā*, the second is stronger, meaning a curse (Is. 14:24). The first more commonly conveys the weaker sense of solemn promise. When one reinforced his oath by invoking Yahweh to witness it, the swearer placed himself under a curse if proved to 'have sworn deceitfully'. Prof. de Vaux reconstructs the various contexts in which this judicial oath applied (e.g. Ex. 22:1–11; Dt. 2:1–8). Nu. 5:21 describes how the judicial oath became an imprecatory or adjuratory oath.

Oaths applied when making covenants (Gn. 26:28), promises (Gn. 24:2–4), decisions (1 Sa. 25:22), when emphasizing the veracity of statements (Jdg. 8:19; 1 Sa. 20:3), the certainty of prophetic predictions (1 Ki. 17:1), guaranteeing against perjury (Jdg. 11:10; Je. 42:5), reinforcing a command (Gn. 24:41), in legal proceedings (1 Ki. 8:31; 2 Ch. 6:22f.) and concerning property (Lv. 5:1ff.; 6:1ff.). Perjury outraged the prophets (Ezk. 17:13–19; Je. 5:2; 6:2; Ho. 4:2; Zc. 5:23f.; Mal. 3:5).

God swore by himself: to confirm his covenant with Abraham (Gn. 22:16–18; Ps. 105:9f.; Lk. 1:73), his promise to David relative to Christ's resurrection (Ps. 89:3f.; 132:11f.; Acts 2:29–32) and Christ's unchangeable high priesthood (Ps. 110:4; Heb. 7:17–28).

Christ prohibited oaths absolutely (Mt. 5:34). The reasoning behind this was: the old covenant was ending (Mk. 1:14f.; Mt. 5:33); Jesus is 'the truth' (Jn. 14:6); the Christian is in 'him that is true' (1 Jn. 5:20); therefore an unambiguous 'yes' or 'no' suffices (Mt. 5:37; Jas. 5:12). Jesus condemned scribal casuistry (Mt. 23:16–22) but implied the value of oaths (Mt. 26:63f.). Christians follow his example (Lk. 22:70; 23:3), remembering Peter's bitter experience (Mk. 14:72; Mt. 26:70, 72, 74).

The Apostle Paul condemns 'perjured persons' (1 Tim. 1:10), but calls God to witness to his blameless life (1 Thes. 2:5; 2 Cor. 1:23), his sincerity (Gal. 1:20) and his affection for fellow-believers (2 Cor. 11:11; Phil. 1:8; Rom. 1:9).

OBADIAH (*'ōbadyāhū*, *'ōbadyā*). A Heb. name meaning 'servant of Yahweh' or 'worshipper of Yahweh'. At least twelve men in the OT bear this name.

1. The steward, or major-domo, in charge of the palace of King Ahab of Israel (1 Ki. 18:3–16). From his youth he was a devout worshipper of Yahweh. When Jezebel was persecuting the prophets of Yahweh, Obadiah hid 100 of them in two caves. During a drought while Obadiah was seeking grass for the royal horses and mules, Elijah met him and persuaded him to arrange a meeting with Ahab, which led to the contest between Elijah and the prophets of Baal. The TB (*Sanhedrin* 39b) mistakenly identifies him with the prophet Obadiah. An ancient Hebrew seal reading 'To Obadiah servant of the King' may have belonged to this man.

2. A descendant of David (1 Ch. 3:21). 3. A chief of Issachar (1 Ch. 7:3). 4. A descendant of Saul (1 Ch. 8:38; 9:44). 5. A Levite (1 Ch. 9:16), identical with Abda (Ne. 11:17) and probably with Obadiah, a gate-keeper of the Temple (Ne. 12:25). 6. A Gadite captain who joined David at Ziklag (1 Ch. 12:9).

7. A Zebulonite in the time of David (1 Ch. 27:19). 8. One of the princes sent out by King Jehoshaphat to teach the law in the cities of Judah (2 Ch. 17:7). 9. A Levite overseer of the repair of the Temple in the time of Josiah (2 Ch. 34:12). 10. An Israelite leader who returned from Babylonia to Jerusalem with Ezra (Ezr. 8:9). 11. A priest who sealed the covenant with Nehemiah (Ne. 10:5).

12. A prophet, presumably of Judah (Ob. 1). The Bible gives nothing directly about his life. Though some locate him before the Exile, it is more likely that he lived in the 5th century BC (see below, *OBADIAH, BOOK OF). If the latter view is correct it is chronologically impossible to identify him with Ahab's steward, as does the TB (*Sanhedrin* 39b), or with Ahaziah's captain (2 Ki. 1:13–15) as Pseudo-Epiphanius does in *The Lives of the Prophets*. The talmudic tradition that he was a proselyte of Edomite origin is improbable in view of his strong denunciation of Edom. J.T.

OBADIAH, BOOK OF. The fourth of the Minor Prophets in the Heb. Bible and the fifth in the order of the LXX. For a note on the author, see the previous article (12).

I. Outline of contents

- a. *The judgment of Edom* (vv. 1–14).
 - (i) Title (v. 1a).
 - (ii) Warning of Edom's doom (vv. 1b–4).
 - (iii) Completeness of Edom's destruction (vv. 5–9).
 - (iv) Reasons for Edom's judgment (vv. 10–14).
- b. *Universal judgment* (vv. 15–16).
- c. *Restoration of Israel* (vv. 17–21).

II. Historical background

a. Before the Exile

Jewish tradition in the Talmud (*Sanhedrin* 39b) placed Obadiah in the reign of Ahab in the 9th century BC, and the order of the Minor Prophets in the Heb. Bible includes Obadiah among the pre-exilic prophets. Some scholars have suggested that the background for the whole of Obadiah is the attack of the Arabians and Philistines on Judah in the reign of Jehoram mentioned in 2 Ch. 21:16–17 (so Keil), or the Edomite attack on Judah in the reign of Ahaz described in 2 Ch. 28:17 (so J. D. Davis). Many think that only the older oracle against Edom, which Obadiah embodies in vv. 1–6, 8–9, has a pre-exilic background. Arab raids on Palestine, and presumably on Edom, are recorded in the 9th century BC (2 Ch. 21:16–17) and in the 7th century BC (Assyr. Annals).

b. After 587 BC

Most scholars consider that the calamity to Jerusalem described in Ob. 11–14 is its capture by the Chaldeans in 587 BC. This is the only capture of Jerusalem in which it is recorded that Edomites participated (Ps. 137:7; 1 Esdras 4:45). The references to the sufferings caused by the fall of Jerusalem are so vivid that G. A. Smith would place Obadiah soon afterwards during the exilic period. Many, however, feel that the latter part of Obadiah reflects a post-exilic background. V. 7 states that the Edomites have been driven out of their old land (*cf.* Mal. 1:3–4). After the fall of Jerusalem Edomites under Arab pressure began moving into the Negeb (1 Esdras 4:50), which came to be called Idumaea, and by the late 6th century BC Arabs had largely pushed them out of the area of Petra, once the Edomite capital. Vv. 8–10 announce the future wiping out of the Edomites as a nation, and this prophecy must have been made before the fulfilment which took place in the Maccabean period (Jos., *Ant.* 13. 257). The territory occupied by the Jews according to vv. 19–20 is the area around Jerusalem, as in the days of Nehemiah (Ne. 11:25–36). Thus the latest clear indication of date in the prophecy is in the mid-5th century BC, about the time of Malachi.

III. Parallels in other prophecies

Other prophetic denunciations of Edom include: Is. 34:5–17; 63:1–6; Je. 49:7–22; La. 4:21–22; Ezk. 26:12–14; Joel 3:19; Am. 1:11–12.

The many identical phrases in Ob. 1–9 and Je. 49:7–22 suggest some literary relationship between the two passages. The different order of the phrases in the two prophecies makes it probable that they are both quoting some earlier divine oracle against Edom. Since some of the additional material in Jeremiah is characteristic of that prophet, and since the order is more natural in

Obadiah, it is likely that the latter is closer in form to the original prophecy. Some scholars, however, hold that either Jeremiah (so Keil) or Obadiah (so Hitzig) made use of the other.

Several phrases are found in both Obadiah and Joel: Ob. 10 = Joel 3:19; Ob. 11 = Joel 3:3; Ob. 15 = Joel 1:15; 2:1; 3:4, 7, 14; Ob. 18 = Joel 3:8. In 2:32 Joel indicates by the words 'as the Lord has said' that he is quoting, probably from Ob. 17. Therefore Obadiah preceded Joel and doubtless influenced him in some of the other phrases common to the two prophets.

IV. Style

Obadiah, the shortest book of the OT, is marked by vigorous poetic language. The prevailing poetic metre is the pentameter (3 + 2), but other metres are used for variety (*e.g.* 3 + 3 and 3 + 3 + 3). Much of the prophecy consists of God's own words to personified Edom (vv. 2–15), and this feature gives a direct and personal quality to the book. Vividness is enhanced by the use of the prophetic perfect tense (v. 2) to describe a judgment yet to be fulfilled, and by the use of prohibitions (vv. 12–14) forbidding atrocities which had actually been perpetrated. Various striking comparisons and metaphors are used: the mountain fastness of Edom is like an eagle's eyrie (v. 4); the plunderers of Edom are compared to night thieves and gleaners of grapes (v. 5); the judgment of the nations is a bitter drink which they must swallow (v. 16); the avenging Israelites are called a fire, and the Edomites are called stubble (v. 18). Edom's crimes are listed in climactic order (vv. 10–14). The completeness of Israel's restoration is expressed by the specification of its expansion in the four cardinal directions (vv. 19–20). Sin and doom in vv. 1–16 are sharply contrasted with hope and victory in vv. 17–21. Obadiah proceeds from the particular to the general, from the judgment of Edom to the universal judgment, from the restoration of Israel to the establishment of the kingdom of God.

V. Literary analyses

Some hold that Obadiah was the original author of the whole prophecy (so Keil). Most scholars believe that he adapted an older oracle in vv. 1–6, 8–9. Some have found various other fragments, but the uniform historical background supports the literary unity of the remainder of the prophecy.

VI. Leading messages

1. *Divine inspiration.* Four times (vv. 1, 4, 8, 18) the prophet claims a divine origin for his words.

2. *Divine judgment.* The main message of this prophecy is God's moral judgment of nations. Edom is judged because of inhumanity to Israel, who also has been punished. Ultimately all nations will be judged in the Day of the Lord.

3. *The divine kingdom.* The final goal, according to Obadiah, is that 'the kingdom shall be the Lord's' (*cf.* Rev. 11:15). His hope for the restoration of his own people rises above mere nationalism, for in their victory he sees the establishment of the kingdom of God (v. 21). That kingdom will be characterized by 'deliverance' and 'holiness' (v. 17), ideas which are amplified in the NT.

OBED (Heb. 'ōbēd, 'servant'). 1. The son of Ruth and Boaz (Ru. 4:17), and grandfather of David (Ru. 4:21f.; 1 Ch. 2:12; Mt. 1:5; Lk. 3:32). Obed's birth brought comfort to Naomi's old age. 2. A Jerahmeelite (1 Ch. 2:37f.). 3. One of David's mighty men (1 Ch. 11:47). 4. A son of Shemaiah and grandson of Obed-edom, of the Korahite family (1 Ch. 26:7). 5. The father of Azariah, a captain who served under Jehoiaida (2 Ch. 23:1). J.D.D.

OBED-EDOM (Heb. 'ōbēd 'dōm, 'servant of [god?] Edom'). 1. A Philistine of Gath living in the neighbourhood of Jerusalem. Before taking it to Jerusalem David left the ark in his house for 3 months after the death of Uzzah, during which time its presence brought blessing to the household (2 Sa. 6:10ff. = 1 Ch. 13:13f.; 15:25).

2. The ancestor of a family of doorkeepers (1 Ch. 15:18ff.; 16:38; 26:4ff.; 2 Ch. 25:24). 3. A family of singers in pre-exilic times (1 Ch. 15:21; 16:5). J.D.D.

OBEDIENCE. The Heb. verb translated 'obey' in LXX and the NT is *hypakouō* (noun, *hypakoē*; adjective, *hypēkoos*), a compound of *akouē*, which also means 'hear'. *hypakouō* means literally 'hear under'. The NT also uses *eisakouō* (1 Cor. 14:21), lit. 'hear into', *peithomai*, and *peitharcheō* (Tit. 3:1). The two latter words express respectively the ideas of yielding to persuasion and submitting to authority. The idea of obedience which this vocabulary suggests is of a hearing that takes place under the authority or influence of the speaker, and that leads into compliance with his requests.

For obedience to be due to a person, he must: (a) have a right to command, and (b) be able to make known his requirements. Man's duty to obey his Maker thus presupposes: (a) God's Lordship, and (b) his revelation. The OT habitually describes obedience to God as obeying (hearing) either his voice (accentuating (b)) or his *commandments* (assuming (b)), and accentuating (a). Disobedience it describes as not hearing God's voice when he speaks (Ps. 81:11; Je. 7:24–28).

According to Scripture, God demands that his revelation be taken as a rule for man's whole life. Thus obedience to God is a concept broad enough to include the whole of biblical religion and morality. The Bible is insistent that isolated external acts of homage to God cannot make up for a lack of consistent obedience in heart and conduct (1 Sa. 15:22; cf. Je. 7:22f.).

The disobedience of Adam, the first representative man, and the perfect obedience of the second, Jesus Christ, are decisive factors in the destiny of everyone. Adam's lapse from obedience plunged

mankind into guilt, condemnation and death (Rom. 5:19; 1 Cor. 15:22). Christ's unfailing obedience 'unto death' (Phil. 2:8; cf. Heb. 5:8; 10:5–10) won righteousness (acceptance with God) and life (fellowship with God) for all who believe on him (Rom. 5:15–19).

In God's promulgation of the old covenant the emphasis was on obedience as his requirement if his people were to enjoy his favour (Ex. 19:5, etc.). In his promise of the new covenant, however, the emphasis was on obedience as his gift to them, in order that they might enjoy his favour (Je. 31:33; 32:40; cf. Ezk. 36:26f.; 37:23–26).

Faith in the gospel, and in Jesus Christ, is obedience (Acts 6:7; Rom. 6:17; Heb. 5:9; 1 Pet. 1:22), for God commands it (cf. Jn. 6:29; 1 Jn. 3:23). Unbelief is disobedience (Rom. 10:16; 2 Thes. 1:8; 1 Pet. 2:8; 3:1; 4:17). A life of obedience to God is the fruit of faith (cf. what is said of Abraham, Gn. 22:18; Heb. 11:8, 17ff.; Jas. 2:21ff.).

Christian obedience means imitating God in holiness (1 Pet. 1:15f.) and Christ in humility and love (Jn. 13:14f., 34f.; Phil. 2:5ff.; Eph. 4:32–5:2). It springs from gratitude for grace received (Rom. 12:1f.), not from the desire to gain merit and to justify oneself in God's sight. Indeed, law-keeping from the latter motive is not obedience to God, but its opposite (Rom. 9:31–10:3).

Obedience to divinely-established authority in the family (Eph. 5:22; 6:1ff.; cf. 2 Tim. 3:2), in the church (Phil. 2:12; Heb. 13:17), and in the state (Mt. 22:21; Rom. 13:1ff.; 1 Pet. 2:13ff.; Tit. 3:1), is part of the Christian's obedience to God. When claims clash, however, he must be ready to disobey men in order not to disobey God (cf. Acts 5:29).

BIBLIOGRAPHY. W. Mundle, *NIDNTT* 2, pp. 172–180. J.I.P.

ODED. 1. Father of Azariah the prophet (2 Ch. 15:1) in the reign of Asa. V. 8 has either included a marginal gloss or omitted 'Azariah the son of'. 2. A prophet of Samaria (2 Ch. 28:9–15) who met the victorious army of the N kingdom returning with a number of enslaved captives from Judah, and remonstrated with them to return the slaves. His pleadings, joined by those of some Samaritan leaders, were successful. M.A.M.

OFFICERS. A term used of various subordinate officials whether civil, judicial or military. The status of these officers as assisting and recording on behalf of their superiors originally may imply the ability to write (Heb. *sōtēr*; cf. Akkad. *saṭāru* 'to write'). The Egyptians used 'officers' to record the work of Hebrew slaves there (Ex. 5:6, 14), a practice attested in Egyp. records. Moses developed this in his employment of such officers as clerks to assist him and *judges by recording legal decisions (Nu. 11:16) and this became the later custom (Dt. 16:18; 1 Ch. 23:4; 2 Ch. 19:8; cf. Josephus, *Ant.* 4. 214; *EQ* 28, 1951, pp. 149–157). These men had responsibilities also relating to call-up for war-service (Dt. 20:5; Jos. 1:10) and as military aides (Jos. 3:2). Their duties related them to the local governors and elders (Jos. 8:33; 23:2; 24:1). By the time of the Monarchy these were numerous (1,700) both in the Temple and civilian administration as well as in royal service (1 Ch. 26:29; 27:1) and as such were clearly distinguished

in the time of Jehoshaphat (2 Ch. 19:11; 26:11; 34:13).

Officers were sometimes 'princes' (*sarim*; Ezr. 7:28) with military duties (2 Ch. 32:3; Ne. 2:9) or were designated 'third man' or officer-in-charge of a *chariot crew (Ex. 14:7; 15:4, *šlš*; cf. Assy. *šalšu*; J. V. Kinnier Wilson, *The Nimrud Wine Lists*, 1972). 'Officer' is also sometimes used to translate 'chief' (*rōš, rāb*) as in Est. 1:8; Je. 41:1; Ezk. 23:15 or even 'eunuch' (*saris*; 2 Ki. 24:12).

An officer was an appointee (*pqd*) set to oversee all work on behalf of the king, whether in one region (Jdg. 9:28; Is. 60:17) or in a specific sphere (Ezk. 2:3). The term is also used of subordinates within the Temple organization (2 Ch. 21:11; Je. 20:1) including those on guard duties (2 Ki. 11:18). Sometimes the use of the Heb. term *nšb* stresses that the official owed his appointment to the king (1 Ki. 4:5; 22:47; 2 Ch. 8:10).

In the NT an officer may denote the 'prison guard' (Lk. 12:58; cf. Mt. 5:25), the deputies (*hypēretēs*, lit. 'under oarsmen') who acted for the chief priests and Sanhedrin as bailiffs (Jn. 7:32, 45-46; cf. v. 36; cf. Acts 5:22, 26). Such officials served in Herod's court (Mk. 6:21) and Paul considered himself in similar relationship to God (1 Cor. 4:1).

D.J.W.

OG (Heb. *ōg*). An Amorite king of Bashan, of the giant race of Rephaim at the time of the Conquest of Palestine (Nu. 21:33; Jos. 13:12). His kingdom was a powerful one, having sixty cities 'fortified with high walls, gates and bars' (Dt. 3:4-5), extending from Mt Hermon to the Jabbok. These included two royal cities, Ashtaroth and Edrei, at the latter of which the Israelites defeated and slew him. His territory was given to the half tribe of Manasseh (Dt. 3:13), which remained E of the Jordan. His defeat was one of the signal victories of Israel (cf. Jos. 9:10; Ne. 9:22; Pss. 135:11; 136:20).

His bed (*ereš*) was renowned as made of black basalt. Some have conjectured that it was in reality a sarcophagus, although the word nowhere else bears this meaning; but many such sarcophagi have been found in the region. It appears to have fallen into the hands of the Ammonites and was kept in Rabbah (Dt. 3:11).

M.A.M.

OHOLIAB (אֲב אְהוֹלִיָּאֵב), a Danite, son of Ahihamach, specially gifted by God and appointed to assist *Bezalel in the design and construction of the tabernacle, its furniture and furnishings, and in teaching other craftsmen (Ex. 31:6; 35:34-35).

D.W.G.

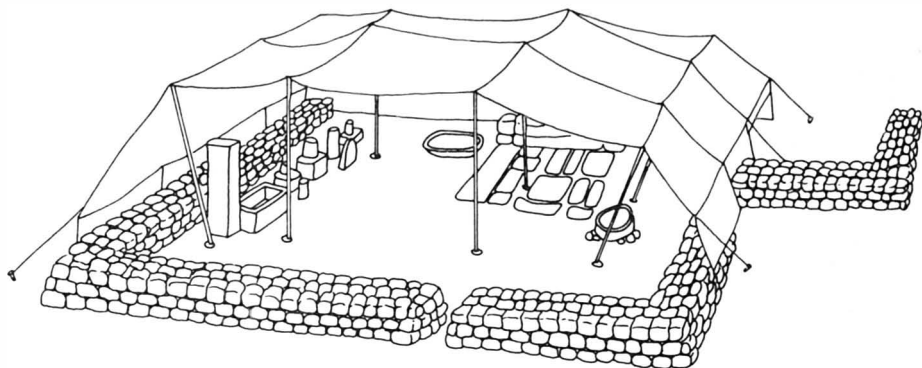

OHOLIBAMAH, OHOLAH, OHOLIBAH.

Oholibamah was an Edomite name used for both men and women. It was the name of *Esau's second wife, a Canaanite woman, daughter of Anah and mother of Jeush, Jalam and Korah (Gn. 36:1-28). There was also an Edomite chief of this name (Gn. 36:41; 1 Ch. 1:52) which means 'tent of the high place'. In Gn. 36:34 and 1 Ch. 1:52 the name appears alongside Timnah and it is interesting to note that a tent shrine has been discovered at Timnah in the Negeb, the region of ancient Edom. The shrine is dated to the Midianite period and is a parallel to the desert *tabernacle. The name suggests that some early *'high places' may have been tents (cf. Ezk. 16:16).

Oholah and Oholibah (אֲב אְהוֹלִיָּאֵב and אֲב אְהוֹלִיָּאֵב) are allegorical names given to the N and S kingdoms in Ezk. 23. Both names mean 'tent worshipper' and were inspired by the term Oholibamah. They imply criticism of Israel's unfaithfulness to God. The two kingdoms are portrayed as sisters married to Yahweh but who have persisted in adultery by their entanglements with other nations. Oholibah is warned against following her sister's example and judgment is predicted. The sexuality of the imagery (cf. Ezk. 16; Ho. 1-3; Am. 5:1-2) is particularly appropriate as many of the neighbouring nations' religions involved fertility rites.

J.T.W.

OIL. Unless cosmetic ointments (Ru. 3:3; 2 Sa. 14:2; Ps. 104:15) or oil of myrrh (Est. 2:12) are indicated, all other biblical references to oil are to the expressed product of the *olive fruit. The abundance of olive-trees (*Olea europaea*) in ancient Palestine enabled a flourishing trade in oil to be carried on with Tyre and Egypt. Solomon supplied large quantities of oil to Hiram as part-payment for the construction of the Temple (1 Ki. 5:11; Ezk. 27:17), while Egypt imported substantial quantities of Palestinian oil (cf. Ho.

Reconstruction of the Midianite tent-shrine discovered at Timnah. This was probably similar in concept to the Hebrew tabernacle and furnishes archaeological evidence for Oholibamah, 'tent of the high place'. Mid-12th cent. BC.

OIL

12:1), because the Egypt. climate is not conducive to successful cultivation.

As an important element of religious observances, oil was prominent among the firstfruit offerings (Ex. 22:29) and was also an object of tithing (Dt. 12:17). The meal-offerings were frequently mixed with oil (Lv. 8:26; Nu. 7:19), while the sanctuary lamp (Ex. 25:6) was replenished from a supply of freshly processed oil (Lv. 24:2). Oil was employed ceremonially at the consecration of priests (Ex. 29:2), at the purification of lepers (Lv. 14:10-18), during the daily sacrifice (Ex. 29:40), and at the completion of the Nazirite's vow (Nu. 6:15). But certain ceremonies were devoid of oil, such as the jealousy-offering (Nu. 5:15) and the sin-offering (Lv. 5:11).

Olive oil was widely employed in the preparation of food, replacing butter in cooking (1 Ki. 17:12-16). An equally popular usage in the domestic sphere was that of a fuel for the small lamps found in abundance from an early period in Palestine. Both portable and other types of lamps generally had an indentation in the brim into which the wick of flax (Is. 42:3) or hemp was put. When the lamp was filled with olive oil the wick maintained a steady flame until the supply of fuel was depleted. When such lamps were being carried about it was customary in NT times for the bearer to attach a small container of olive oil to one finger by means of a string. Then if the lamp needed to be replenished at any time an adequate supply of oil was readily available (cf. Mt. 25:1-13).

Apart from the use of oil at the consecration of the priests (Ex. 29:2), it was an important ritual element in the ceremonial recognition of the kingly office (1 Sa. 10:1; 1 Ki. 1:39).

As a medicine olive oil was used both internally and externally. Its soothing protective qualities made it a valuable remedy for gastric disorders, while its properties as a mild laxative were also recognized in antiquity. Externally it formed a popular unguent application for bruises and wounds (Is. 1:6; Mk. 6:13; Lk. 10:34).

In OT times olive oil was produced either by means of a pestle and mortar (Ex. 27:20) or by grinding the olives in a stone press. Excavations at Taanach, Megiddo and Jerusalem have uncovered presses hewn out of the solid rock. A large stone roller manipulated by two people crushed the olives to a pulp, which was then either trodden out (Dt. 33:24) or subjected to further pressing. After impurities had been removed the oil was ready for use. The Garden of Gethsemane (*gat-šemen*, 'oil press') received its name from the stone presses set up to extract oil from the berries gathered on the Mount of Olives.

Oil was commonly used for anointing the body after a bath (Ru. 3:3; 2 Sa. 12:20), or as part of some festive occasion (cf. Ps. 23:5). In ancient Egypt a servant generally anointed the head of each guest as he took his place at the feast. The anointing of the sick (Jas. 5:14) in NT times had become a quasi-sacramental rite. Josephus records as a peculiarity of the Essenes that they did not anoint themselves with oil, since they considered it 'defiling' (*BJ* 2. 123).

The presence of oil symbolized gladness (Is. 61:3) while its absence indicated sorrow or humiliation (Joel 1:10). Similarly oil was used as an image of comfort, spiritual nourishment, or prosperity (Dt. 33:24; Jb. 29:6; Ps. 45:7).

OINTMENT (Heb. *mirqahat*, *šemen*; Gk. *myron*). Unguent preparations of various kinds were widely used throughout the whole of the ancient Near East. Their primary use was cosmetic in nature, and they probably originated in Egypt. Toilet boxes, of which alabaster ointment containers formed a part, have been recovered in considerable numbers from Palestinian sites.

The Egyptians apparently found that the application of unguents was soothing and refreshing. It was their custom at feasts to place small cones of perfumed ointment upon the foreheads of guests. Bodily heat gradually melted the ointment, which trickled down the face on to the clothing, producing a pleasant perfume. This practice was adopted by the Semites (Ps. 133:2), and continued into NT times (Mt. 6:17; Lk. 7:46).

Other ancient peoples followed the Egyptians in using ointments to reduce chafing and irritation caused by the heat. In localities where water was frequently at a premium, aromatic unguents were employed to mask the odour of perspiration. At other times they were used along with cosmetics in personal toilet procedures. Ointments were compounded either by apothecaries (2 Ch. 16:14), perfumers (Ex. 30:35), priests or by private individuals, using a wide variety of aromatic substances.

The holy anointing oil (Ex. 30:23-25) prescribed for use in tabernacle rituals was required to be compounded according to the art of the perfumer. It consisted of olive oil, myrrh, cinnamon, calamus and cassia, the solid ingredients probably being pulverized and boiled in the olive oil (cf. Jb. 41:31). The manufacture of this preparation by unauthorized persons was strictly prohibited (Ex. 30:37-38).

According to Pliny, unguents were preserved most successfully in alabaster containers. Under such conditions they improved with age, and became very valuable after a number of years. Thus the alabaster flask of ointment mentioned in the Gospels (Mt. 26:7; Mk. 14:3; Lk. 7:37) was a very costly one containing spikenard (*Nardostachys jatamansi*). This herb, related to valerian, was imported from N India and used widely by Hebrews and Romans alike in the anointing of the dead. The qualifying adjective *pistikē* in Mk. 14:3 and Jn. 12:3 may perhaps mean either 'liquid' or 'genuine'.

Ointments were employed in a quasi-sacramental sense when new kings were consecrated for their office. Thus Samuel anointed Saul (1 Sa. 10:1), Elijah anointed Jehu (2 Ki. 9:3), and Jehoiada anointed Joash (2 Ki. 11:12). Palestinian shepherds compounded an ointment of olive oil which they rubbed on to the bruised faces of sheep (cf. Ps. 23:5). In NT times the sick were often anointed during a religious rite (Jas. 5:14). Unguents perfumed with myrrh were used to anoint the dead (Lk. 23:56; Mk. 14:8).

R. K. H.

OLIVE (Heb. *zayit*; Gk. *elaia*). One of the most valuable *trees of the ancient Hebrews, the olive

is first mentioned in Gn. 8:11, when the dove returned to the ark with an olive branch. When the Israelites took possession of Canaan it was a conspicuous feature of the flora (cf. Dt. 6:11). At a later time the olive was esteemed with the vine as a profitable source of revenue (1 Sa. 8:14; 2 Ki. 5:26).

Although the botanical name of the olive is *Olea europaea*, the tree is thought to be a native of W. Asia, being introduced subsequently into the Mediterranean region. Oriental peoples regarded the olive as a symbol of beauty, strength, divine blessing and prosperity. In harmony with the Noachic tradition, the olive and the dove have been venerated ever since as symbols of friendship and of peace (cf. Ps. 52:8).

In many parts of Palestine the olive, of which there are many varieties in the Near East, is still very often the only tree of any size in the immediate locality. The cultivated olive grows to about 6 m in height, with a contorted trunk and numerous branches. The tree develops slowly, but often attains an age of several centuries if left undisturbed. If cut down, new shoots spring up from the root, so that as many as five new trunks could thus come into being. Moribund olives usually sprout in this manner also (cf. Ps. 128:3). Olive groves were chiefly valued for their potential *oil resources, although they were also highly esteemed as a shelter from the burning sun and as a place where one could meditate (Lk. 22:39).

In antiquity olive-trees were distributed profusely across Palestine. The groves on the edge of the Phoenician plain were particularly impressive, as were those in the plain of Esdraelon and the valley of Shechem. Bethlehem, Hebron, Gilead, Lachish and Bashan were all renowned in Bible times for their wealth of olive groves.

The berries borne by the olive ripened in the early autumn, and were harvested towards the end of November. The primitive and rather injurious method of gathering the olive berries described in Dt. 24:20, whereby the trees were either shaken or beaten with poles, is still widely employed. In antiquity a few berries were left on the tree or on the ground beneath it for the benefit of the poor. The olive harvest was normally transported to the presses in baskets on the backs of donkeys. The oil was usually extracted from the berries by placing them in a shallow rock cistern and crushing them with a large upright millstone. Occasionally the berries were pounded by the feet of the harvesters (Dt. 33:24; Mi. 6:15), but this was a rather inefficient procedure. After being allowed to stand for a time the oil separated itself from foreign matter, and was then stored in jars or rock cisterns.

The cherubim of the Solomonic Temple were fashioned from olive wood (1 Ki. 6:23), and since they were some 4.5 m high with the same wingspread, it has been conjectured that they were composed of several pieces of wood joined together. While olive-wood is still used in Palestine for fine cabinet-work, the short gnarled trunks do not provide very lengthy pieces of timber. After it has been seasoned for a number of years the rich amber-grained wood can be polished to a high gloss.

So prolific a tree as the olive was naturally turned to a wide variety of usages. It was deemed worthy of being called the king of the trees (Jdg. 9:8), and at coronations its oil was employed as an

emblem of sovereignty. Olive boughs were used to construct booths during the Feast of Tabernacles (Ne. 8:15). Fresh or pickled olives eaten with bread formed an important part of ancient Palestinian diet. The oil constituted the base of many unguent preparations, and was also used as a dressing for the hair. In addition it did duty as a fuel (Mt. 25:3), a medicine (Lk. 10:34; Jas. 5:14) and a food (2 Ch. 2:10).

The olive-tree enjoyed wide symbolic usage among the Hebrews. The virility and fruitfulness of the tree suggested the ideal righteous man (Ps. 52:8; Ho. 14:6), whose offspring was described as 'olive branches' (Ps. 128:3). An allusion to the facility with which the olive sometimes sheds its blossoms is found in Jb. 15:33, where Eliphaz states that the wicked will 'cast off his blossom, like the olive-tree.' In Zc. 4:3 the two olive-trees were emblems of fruitfulness, indicating the abundance with which God had provided for human needs.

The olive mentioned in Is. 41:19 (Heb. *'ēs šāmen*; AV 'oil-tree') has been equated with the botanically unrelated *Elaeagnus angustifolia*, which yields an inferior oil; but the context favours the true olive.

The fruit of the olive in its wild state is small and worthless. To become prolific the olive must be grafted, a process by which good stock is made to grow upon the wild shrub. Paul uses this fact as a powerful allegory (Rom. 11:17) in showing how the Gentiles are under obligation to the true Israel, indicating that it is contrary to nature for the wild olive slip to be grafted on to good stock.

OLIVES, MOUNT OF. Olivet, or the Mount of Olives, is a small range of four summits, the highest being 830 m, which overlooks Jerusalem and the Temple Mount from the E across the Kidron Valley and the Pool of Siloam. Thickly wooded in Jesus' day, rich in the olives which occasioned its name, the mount was denuded of trees in the time of Titus. All the ground is holy, for Christ unquestionably walked there, though particularized sites, with their commemorative churches, may be questioned. From the traditional place of Jesus' baptism, on Jordan's bank, far below sea level, Olivet's distant summit 1,200 m higher, a traditional site of the ascension, is clearly visible, for Palestine is a small land of long perspectives.

The OT references to Olivet at 2 Sa. 15:30; Ne. 8:15; Ezk. 11:23 are slight. 1 Ki. 11:7 and 2 Ki. 23:13 refer to Solomon's idolatry, the erection of high places to Chemosh and Molech, which probably caused one summit to be dubbed the Mount of Offence. In the eschatological future the Lord will part the Mount in two as he stands on it (Zc. 14:4).

Jews resident in Jerusalem used to announce the new moon to their compatriots in Babylonia by a chain of beacons starting on Olivet, each signalling the lighting of the next. But since Samaritans lit false flares, eventually human messengers had to replace the old beacons. G. H. Dalman considers the Mishnaic claim that this beacon service stretched as far afield as Mesopotamia perfectly

OLIVES, MOUNT OF

feasible (*Sacred Sites and Ways*, 1935, p. 263, n. 7). The Mount has close connections with the red heifer (*CLEAN AND UNCLEAN) and its ashes of purification (Nu. 19; *Parah* 3. 6–7, 11), as with other ceremonies of levitical Judaism. According to one legend, the dove sent forth from the ark by Noah plucked her leaf from Olivet (Gn. 8:11; Midrash *Genesis Rabba* 33. 6). Some believed that the faithful Jewish dead must be resurrected in Israel, that those who died abroad would eventually be rolled back through underground cavities (*Ketuboth* 111a), emerging at the sundered Mount of Olives (H. Loewe and C. G. Montefiore, *A Rabbinic Anthology*, 1938, pp. 660ff.). When the Shekinah, or radiance of God's presence, departed from the Temple through sin, it was said to linger for 3½ years on Olivet, vainly awaiting repentance (*Lamentations Rabba*, Proem 25; cf. Ezk. 10:18). The name 'Mountain of Three Lights' comes from the glow of the flaming Temple altar reflected on the hillside by night, the first beams of sunrise gilding the summit, and the oil from the olives which fed the Temple lamps.

Near the Church of All Nations, at the base of Olivet, are some venerable olive-trees, not demonstrably 2,000 years old. This is the area of Gethsemane, and the precise spot of the Agony, though undetermined, is close by. Half-way up the hill is the Church of Dominus Flevit. But why should our Lord weep there, half-way down? *HDB* cogently argues that he really approached Jerusalem by Bethany, round the S shoulder of Olivet, weeping when the city suddenly burst into view. A succession of churches of the ascension have long crowned the reputed summit of our Lord's assumption, and his supposed footprints are carefully preserved there as a tangible fulfilment of Zc. 14:4. Yet Luke's Gospel favours the Bethany area as the real scene of the Ascension. The visitor to Palestine learns the futility of pondering insolubles.

R.A.S.

OLIVET DISCOURSE. Sometimes known as the Synoptic Apocalypse, this is the last major discourse of Jesus recorded by Matthew, Mark and Luke (Mt. 24:3–25:46; Mk. 13:3–37; Lk. 21:5–36), and is the longest and most important section of teaching about the future in the Synoptics. The core is similar in each Gospel, but Matthew has the fullest form, adding at the end some parables and other teaching about the coming judgment. (References in this article will be to Mark's version, unless otherwise stated.)

I. Structure

The discourse is introduced by the disciples asking about (a) when Jesus' prediction of the destruction of the Temple will be fulfilled; (b) 'when these things are all to be accomplished' (v. 4). The wording in Matthew and the subsequent context in Mark suggest that 'all these things' include the end of the age and Jesus' second coming.

Jesus replies: 1. Do not be misled by the appearance of false Christs, wars, earthquakes and famines: these are the beginning of sufferings, not an indication of the end (vv. 5–8). 2. Be ready to endure bitter persecution as you witness to me (vv. 9–13). 3. There will be a period of great distress when the 'desolating sacrilege' is set up (vv. 14–20). 4. Do not be misled by the activities of false Christs (vv. 21–23). 5. In those days after the

distress the heavenly bodies will be shaken, and you will see the Son of man coming in power and gathering his elect (vv. 24–27). 6. 'These things' are signs of the Lord's nearness and will happen in this generation (vv. 28–31). 7. 'That day and hour' are unknown; so keep awake (vv. 32–37).

II. Problems of interpretation

The following are some of the most important points of interpretation on which there is dispute.

a. Particular exegetical problems

1. The phrase 'desolating sacrilege' (v. 14), one of the many OT allusions in the discourse, echoes Dn. 11:31; 12:11. In Daniel the primary reference is to the setting up of a pagan altar in the Jerusalem Temple in 168 BC by *Antiochus Epiphanes; but the intended meaning in the Synoptic Apocalypse is difficult to determine. The injunction 'let the reader understand' (probably to be taken as addressed to the reader of the Gospel, or possibly to the reader of Daniel) suggests that the phrase is deliberately cryptic. Some modern scholars associate it with the abortive attempt of the Roman emperor Gaius to have his statue set up in the Temple in AD 40. They argue that the prophecy derives from that time (so not from Jesus), and that it was unfulfilled. Others take the phrase to refer to the still future appearance of the *Antichrist in the last day, pointing to the similar description of the 'lawless one' in 2 Thes. 2. Others again see the fulfilment of the prophecy in the events leading up to the fall of Jerusalem in AD 70, a view apparently supported by Luke's slightly different version in 21:20. This last view seems the simplest, though it is possible to maintain that the prophecy has a double reference, both to the period of the Roman attack on Jerusalem in AD 66–70 and to the last days.

2. The reference in vv. 24–27 to the disturbances in the heavens and to the coming of the Son of man has been taken in at least two different ways. Some scholars argue that it is figurative language taken from the OT with a historical reference to the fall of Jerusalem: the coming of the Son of man is a coming in victory, not his return to earth, and the gathering of the elect by God's 'messengers' is the missionary outreach of the church. The more usual view is that the verses refer to the second coming, and this is supported by other similarly worded passages in the NT which undoubtedly refer to the parousia (e.g. Mt. 13:41ff.; 1 Thes. 4:14ff.).

3. The assertion 'this generation will not pass away before all these things take place' (v. 30) raises particularly difficult questions. Does it mean that the coming of the Son of man and everything else described in the discourse will take place within the lifetime of Jesus' contemporaries? If so—and if the coming referred to is the second coming (see point 2 above)—then this is evidently a mistaken prediction. Some scholars accept it as such and maintain that the error was a reflection of Jesus' humanity. Many others have been unhappy about this view and have looked for alternative explanations. Some argue that the saying was not Jesus' at all but the teaching of the early church; this explanation probably creates as many difficulties as it solves. Others suggest that the word *genea* does not here mean 'generation' (so RSV and other versions) but 'race' or 'kind of people'. These proposed alternatives do not fit

well into the context. A more satisfactory explanation based on the text is that 'these things' in v. 29 are the *signs* of the end, not the end itself; so 'all these things' in v. 30 may also be taken as a reference to the signs of the end. This view can claim support from v. 32; although this verse may simply be saying that Jesus is ignorant of the precise moment in 'this generation' when the Son of man will return, it may also be taken as a general disavowal of knowledge of the timing of 'that day' (= the last day in biblical terminology). Thus Jesus does know that the signs will take place within a generation, but he does not know when the end itself will come.

Even on this view the strong impression is still that the coming is near. Perhaps the best explanation of this strong sense of imminence, which pervades the whole NT, is to say that it is a theological awareness of the fact that, once Jesus has come, the parousia is near in God's plan, rather than a particular chronological conviction. The end began in Jesus, and ever afterwards we live in eager anticipation of the consummation.

b. More general questions

I. Many scholars have doubts about ascribing some or all of the discourse to Jesus. Many have felt, e.g., that the apocalyptic teaching in the discourse is unlike Jesus' teaching elsewhere in the Gospels. T. Colani's famous *Little Apocalypse Theory*, propounded in 1864 and taken up with modification by many since, was that vv. 5–31 were a Jewish-Christian apocalyptic tract incorporated into the Gospel by the Evangelist. This theory was founded on a mistaken view of Jesus as one who taught eternal ethical truths and not an eschatological gospel. But although scholars today reject Colani's view of Jesus, some still argue that the teaching on signs contradicts Jesus' teaching elsewhere on the unexpectedness of the parousia (e.g. Lk. 17:20ff.). This view fails to take seriously the fact that in biblical apocalyptic teaching about suddenness and signs is regularly found together. Other objections to regarding the teaching as deriving from Jesus, e.g. that the OT quotations are based on the LXX and not on the Hebrew text, are equally indecisive.

2. There are important literary critical questions about the discourse. The differences between the Gospels force the critic to try to explain the relationship between the accounts; many scholars argue that two or more of the Evangelists had independent accounts of this discourse, and not simply that Matthew and Luke used Mark. Many also believe that one or more of the Evangelists has included in his version material that originally belonged in a different context; thus Matthew is thought to have imported 'Q' material into his account.

3. More important than the simply literary questions are questions about the theological teaching of the discourse in the three Gospels. One debated question is whether the prime intention is to give apocalyptic teaching about the signs of the end, or to exhort hearers and readers. The probability is that both purposes are present: Jesus taught his disciples that the rule (or * kingdom) of God had come with his ministry, but that it would be fully established in the future. Here he does give information about what will occur before the end, but his purpose is not so that anyone may draw up a timetable of future events but to prepare people

practically for the future; thus the note of exhortation is very strong. Jesus' disciples are (a) not to get excited by false teachers and rumours before the end; (b) to endure hardship until the end; (c) to be awake for the return of Christ.

Ford, *The Abomination of Desolation in Biblical Eschatology*, 1979; D. Wenham, *The Rediscovery of Jesus' Eschatological Discourse*, 1984; T. J. Gedert, *Watchwords: Mark 13 in Biblical Eschatology*, 1989. D.W.

OLYMPAS. An otherwise unknown but influential Christian greeted by Paul in Rom. 16:15. As the name, probably an abbreviation of Olympiodorus, was common throughout the empire, its presence in this verse throws no light on the problem of the destination of Rom. 16. R.V.G.T.

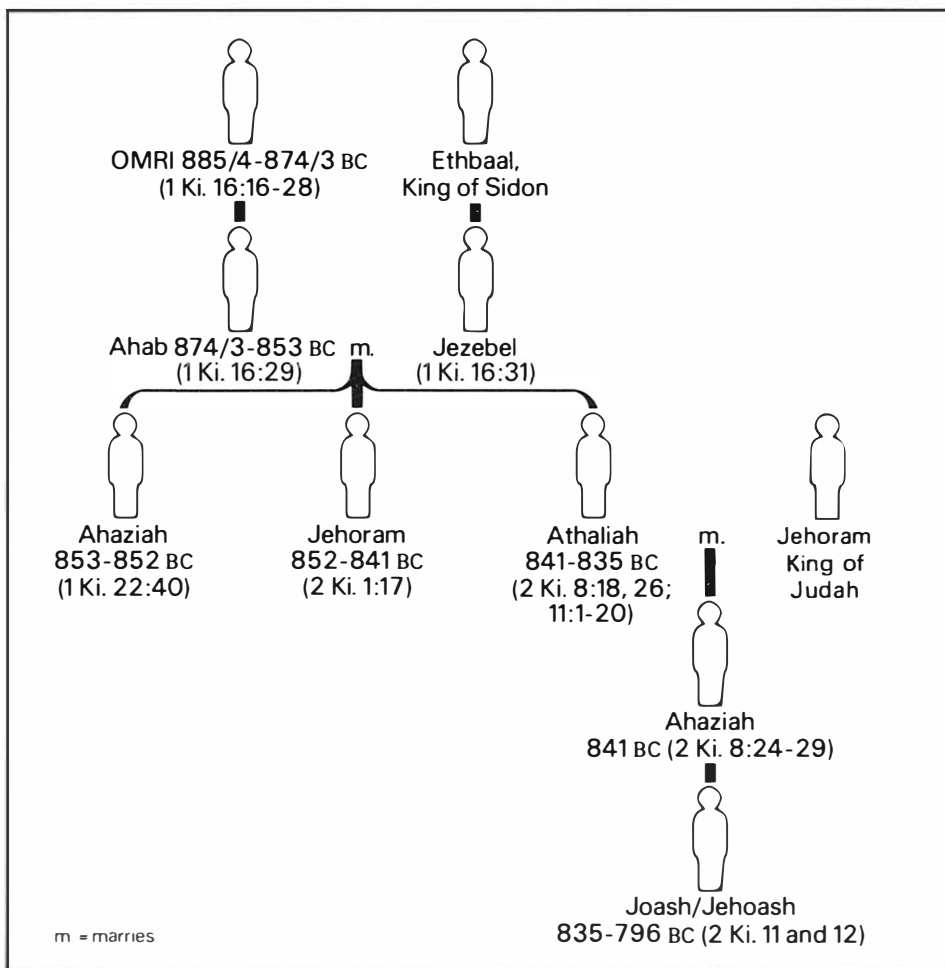

OMRI (Heb. 'omri). I. An officer from Issachar during David's reign (1 Ch. 27:18). 2. Sixth king of the N kingdom of Israel and founder of a new dynasty after the death of *Elah. During the period of anarchy following the death of *Baashah, the army, besieging Gibbethon, proclaimed their leader Omri as king upon hearing of the coup by Zimri (c. 885 BC; 1 Ki. 16:15–17). He thereupon marched to the capital, *Tirzah, and besieged the town until Zimri committed suicide (v. 18). Tibni, another claimant to the throne, resisted Omri for 4 years but was finally defeated. Omri then reigned for 7 years, from the 31st to the 38th year of *Asa (vv. 23, 29), a total of 12 years (v. 23).

Aram, which under *Ben-hadad I had been strong enough to annex part of Israel during Baasha's reign, still threatened Omri (cf. 1 Ki. 20:34). He allied himself with Ethbaal, king of Sidon, by taking his daughter *Jezebel for *Ahab, his son (16:31), thus averting some of the danger. He was strong enough to make Moab his vassal, as recorded by Mesha in the *Moabite Stone (11:4–5) (*ANET*, p. 320; *DOTT*, p. 196; cf. 2 Ki. 3:4).

Omri is also remembered for his building activities. The most important of these was the new Israelite capital at *Samaria on a site purchased from Shemer, its previous owner (1 Ki. 16:24). The city had an excellent strategic position, and served as capital until the fall of Israel in 722 BC. Archaeological excavations at Megiddo and Hazor have also revealed buildings attributed to him.

Details of Omri's reign are sparse, but Assyrian sources show that until the reign of *Sargon II, Israel was also known as *māt bīt Ḥumri*, 'the land/house of Omri' (*ANET*, p. 281–285). Because he condoned pagan worship he was remembered as a bad king (1 Ki. 16:25–26). D.W.B.

ON. I. A venerable city, Egypt. 'Iwnw ('city of the pillar'), Gk. Heliopolis, now represented by scattered or buried remains at Tell Iḥḥiṣn and Maṭariyeh, 16 km NE of Cairo. From antiquity it was the great centre of Egypt. sun-worship, where the solar deities Rē and Atum were especially honoured, and the home of one of Egypt's several theological 'systems'. The pharaohs embellished the temple of Rē with many obelisks—tall, tapering, monolithic shafts of square or rectangular section, each

The dynasty of Omri, king of Israel (c. 885–874 BC) (see p. 847).

ending at the top in a pyramidally shaped point; such a 'pyramidion' represented the *benben* or sacred stone of Rē, as first to catch the rays of the rising sun. Each pharaoh from the 5th Dynasty onward (25th century BC) was styled 'son of Rē', and the priestly corporations of On/Heliopolis were equalled in wealth only by that of the god Ptah of Memphis and exceeded only by that of the god Amūn of Thebes, during c. 1600–1100 BC.

The prominence of On is reflected in Gn. 41:45, 50; 46:20, where Joseph as Pharaoh's new chief minister is married to Asenath, daughter of *Potiphera, 'priest of On'. This title might mean that Potiphera was high priest there. His name, very fittingly, is compounded with that of the sun-god Rē. Cf. A. Rowe, *PEQ* 94, 1962, pp. 133–142.

On next recurs in Heb. history under the appropriate pseudonym Beth-shemesh, 'House of the Sun', when Jeremiah (43:13) threatens that Nebuchadrezzar will smash 'the pillars of Beth-shemesh', i.e. the obelisks of On/Heliopolis. Whether Isaiah's 'city of the sun' (19:18) is On is less clear. Aven (Heb. 'awen) of Ezk. 30:17 is a

variant pointing of 'ōn, 'On', perhaps as a pun on 'awen, 'trouble, wickedness', in Ezekiel's judgment on Egypt's cities.

2. On, son of Peleth, a Reubenite chief, rebelled with Korah against Moses in the wilderness (Nu. 16:1). K.A.K.

ONAN (Heb 'ōnān, 'vigorous'). The second son of Judah (Gn. 38:4; 46:12; Nu. 26:19; 1 Ch 2:3). On the death of his elder brother Er, Onan was commanded by Judah to contract a levirate marriage with Tamar, Er's widow. Onan, unwilling to follow this traditional practice, took steps to avoid a full consummation of the union, thus displeasing the Lord, who slew him (Gn. 38:8–10). Judah evidently attached some blame for his sons' deaths to Tamar herself (v. 11). For levirate marriage see *MARRIAGE, IV. J.D.D.

ONESIMUS. A runaway slave belonging to Philemon, an influential Christian at Colossae. He

made the acquaintance of Paul, while the latter was a prisoner, either at Rome or Ephesus (according to the view which is taken of the provenance of Colossians). He was converted by the apostle (Phm. 10), and became a trustworthy and dear brother (Col. 4:9). His name, which means 'useful', was a common name for slaves, though not confined to them; and he lived up to it by making himself so helpful to Paul that the latter would have liked to have kept him to look after him as, Pauls feels, Philemon would have wished (Phm. 13). But the apostle felt constrained to do nothing without Philemon's willing consent; so he returned the slave to his former owner, with a covering note—the canonical *Philemon. In this the apostle plays on the slave's name by describing him as 'once so little use to you, but now useful indeed, both to you and me'; and hints, tactfully but clearly, that he expects Philemon to take Onesimus 'back for good, no longer as a slave, but as more than a slave—as a dear brother, very dear indeed to me and how much dearer to you, both as man and as Christian' (Phm. 15–16, NEB). Nevertheless, Paul admits that sending him back is like being deprived of a part of himself (Phm. 12).

The mention of Onesimus is one of the links which bind together Colossians and Philemon, and shows that they were sent from the same place at the same time. Some scholars believe that the Onesimus known to Ignatius and described by him in his Epistle to the Ephesians as 'a man of inexpressible love and your bishop' was none other than the runaway slave. This hypothesis, though not impossible, would seem improbable on chronological considerations. It is urged in its support that it supplies a reason why Philemon was preserved as a canonical book. On the other hand, its close connection with Colossians, and its importance for the light it throws on the Christian treatment of slaves, would seem to provide adequate reasons for its canonicity.

BIBLIOGRAPHY. Onesimus' later career has been made the subject of an elaborate theory by E. J. Goodspeed, *JNT*, 1937, pp. 109–124, and J. Knox, *Philemon among the Letters of Paul*², 1959. For a criticism (with bibliography), see R. P. Martin, *Colossians and Philemon*, *NCB*², 1982, introduction. See also R. P. Martin, *Ephesians, Colossians and Philemon, Interpretation*, 1992; S. S. Bartchy, *ABD* 5, pp. 305–310.

R. V. G. T.
R. P. M.

ONESIPHORUS. In the Second Epistle to Timothy, written by Paul to Timothy at Ephesus, the apostle sends greetings to the household of Onesiphorus (4:19), and prays that the Lord's mercy may rest upon it, and that Onesiphorus himself may find mercy from the Lord on the great day of judgment. This true Christian friend had often brought relief to the apostle in his troubles, and had taken pains to search out and find him in Rome, where Paul was now in prison. His conduct in this respect, Paul notices, stood out in marked contrast to other Asian Christians who had deserted Paul in his hour of need. Like Onesimus, Onesiphorus had lived up to his name, which means 'profit-bringer'. The apostle reminds Timothy that he knew better than Paul himself about the many services rendered by Onesiphorus to the Christians who lived at Ephesus (1:16–18).

BIBLIOGRAPHY. E. E. Ellis, *NTS* 17, 1970–71, pp. 437–452, 'Paul and his Co-Workers'; and for the view that Onesiphorus played a significant role regarding the collection in Galatia, and that the setting of 2 Tim. 1:16–18 is Pisidian Antioch, not Rome, see F. J. Badcock, *The Pauline Epistles*, 1937, especially pp. 150–158.

Problems to do with Paul's remembrance of Onesiphorus, who may or may not have been deceased when 2 Tim. 1:18 was written, are considered by D. Guthrie (*TNTC*, 1957) and J. N. D. Kelly (Harper-Black, 1963) *ad loc.*

R. V. G. T.
R. P. M.

ONO. A town first mentioned in the lists of Thothmes III (1490–1436 BC). The Benjaminites rebuilt it after the conquest of Canaan (1 Ch. 8:12) and reoccupied it after the Exile (Ne. 11:31–35). Identified with Kafr 'Anâ, it lay near Lydda. The area was called the Plain of Ono (Ne. 6:2).

D. F. P.

ONYCHA. Pungent component of holy incense made by Moses at God's command, by burning claw-shaped valves closing shell apertures of certain molluscs—Heb. *š'hēlet*, Ex. 30:34 only. This is the Gk. accusative of *onyx*, meaning talon, claw, anything so shaped, the precious stone. The accusative form, misunderstood as nominative in Vulg., passed into EVV usage, thus conveniently distinguishing the specialized meaning in Ex. 30:34.

R. A. S.

OPHIR (Heb. *ōpīr*, Gn. 10:29; *ōpīr*, 1 Ki. 10:11).

I. The name of the son of Yoqtān in the genealogy of Shem (Gn. 10:29 = 1 Ch. 1:23). This tribe is known from pre-islamic inscriptions (G. Ryckmans, *Les noms propres sud-sémitiques*, 1934, pp. 298, 339f.). Their area lies between Saba in the Yemen and Ḥawilah (Ḥawlān) as described in Gn. 10:29. Islamic tradition equates Yoqtān with Qaḥṭān, a son of Ishmael and 'father of all Arabs'.

2. The country from which fine gold was imported to Judah (2 Ch. 8:18; Jb. 22:24; 28:16; Ps. 45:9; Is. 13:12), sometimes in large quantities (1 Ch. 29:4), and with valuable almug(sandal?)-wood (1 Ki. 10:11), silver, ivories, apes and peacocks (1 Ki. 10:22), and precious stones (2 Ch. 9:10). It was reached by Solomon's fleet from Ezion-geber on the Gulf of Aqabah (1 Ki. 9:28) employing 'ships of Tarshish', which might be *ships normally used for carrying ore (1 Ki. 22:48). These voyages took 'three years', that is perhaps one entire year and parts of two others. The trade was sufficiently well known for Ophir to be synonymous with the fine gold which was its principal product (Jb. 22:24). In Is. 13:12 Ophir is paralleled with *ōqīr*, 'I will make precious' (*HUCA* 12–13, 1937–8, p. 61). A confirmation of this trade is found in an ostrakon, found at Tell Qasileh NE of Tel Aviv in 1946, inscribed *zḥ ḫr lbyṯ ḫrn š=*, 'gold from Ophir for Beth Horon 30 shekels' (*JNES* 10, 1951, pp. 265–267).

Various theories have been put forward for the site of Ophir.

a. S Arabia (as in **I** above). R. North links (Š)ōpha(i)r(a) (= Ophir) with Parvaim (= Farwa) in Yemen as the source of Sheba gold (*cf.* Ps. 72:15; Is. 60:6).

OPHIR

b. SE Arabia: Oman. These are not far from Ezion-geber, and it is necessary to assume both that the 3-year voyage included laying up during the hot summer and that some commodities (e.g. apes) not commonly found in S Arabia were brought to Ophir as an entrepôt from more distant places.

c. E African coast: Somalia, i.e. the Egp. *Punt*, a source of the frankincense and myrrh and those items described as from Ophir (W. F. Albright, *Archaeology and the Religion of Israel*, 1953, pp. 133–135, 212; van Beek, *JAOS* 78, 1958, p. 146).

d. (S)upāra, 75 km N of Bombay, India. Josephus (*Ant.* 8. 164), LXX and Vulg. (Jb. 28:16) interpreted Ophir as India. In favour of this interpretation are the facts that all the commodities named are familiar in ancient India, and it is known that from the 2nd millennium BC there was a lively sea-trade between the Persian Gulf and India.

e. Other, more doubtful, suggestions include Apir, Baluchistan (possibly ancient Meluhha, cf. *BSOAS* 36, 1973, pp. 554–587) and Zimbabwe, S Rhodesia.

BIBLIOGRAPHY. V. Christides, *RB* 77, 1970, pp. 240–247; R. North, *Fourth World Congress of Jewish Studies*, Papers, 1, 1967, pp. 197–202.

D.J.W.

OPHRAH. (Heb. *ʾōp̄rāh*). 1. A town in Benjamin (Jos. 18:23; 1 Sa. 13:17, called Ephron (*Q̄rēʾēp̄raim*); 2 Ch. 13:19); modern et-Tayibeh, on a commanding height 9 km N of Michmash. Arabs often substituted *tayibeh* ('fortunate') where a place-name *ʾofra* persisted in the Middle Ages, as it suggested black magic (Abel, *JPOS* 17, 1937, p. 38). It is doubtful whether *ʾōp̄rāh* developed into *Ephraim* (= Heb. *ʾēp̄raim*) of Jn. 11:54; see K.-D. Schunck, *VT* 11, 1961, pp. 188–200, and J. Heller, *VT* 12, 1962, pp. 339ff.

2. Ophrah of Abiezer in Manasseh, Gideon's home, where his altar of Jehovah-shalom (Jdg. 6:24, AV) was shown in later times. Possible sites are: (a) Fer'ata, W of Mt Gerizim (Conder), near Shechem but rather remote from the area of conflict, and probably *Pirathon of Jdg. 12:15; (b) et-Tayibeh, half-way between Beth-shan and Tabor (Abel), but well inside Issachar, and perhaps the Hapharaim of Jos. 19:19; (c) Afula in the Jezreel plain (*LOB*, p. 263). Tell el-Far'a, 10 km NE of Shechem, is now known to be *Tirzah.

3. A town or family in Judah (1 Ch. 4:14).

J.P.U.L.

ORACLE. The translation 'oracle' occurs 17 times in the AV of the OT. Sixteen times it is the consistent mistranslation of the Heb. *d'ḥīr*, used exclusively of the inner shrine of Solomon's *Temple. The faulty derivation from *dibber*, 'speak', rather than from *dāḥar* in the sense of 'to be behind' stems from the translations of Aquila and Symmachus (who used *chrēmatisērion*, 'oracle') and the Vulgate (*oraculum*). That in heathen temples the chambers where the gods delivered their utterances (the oracular shrine of Apollo at Delphi is the most famous of these) were designated 'oracles' undoubtedly influenced the change as well.

In 2 Sa. 16:23 'oracle' translates the Heb. *dāḥār* and refers simply to the *word* or *utterance* of God without any specific indication of how this would be elicited; although some have here inferred a reference to the *Urim and Thummim (1 Sa. 28:6). In

the RVmg. 'oracle' is sometimes used in place of 'burden' in the title of certain prophecies as a translation of the Heb. *masšā*.

In the NT 'oracles' translates the Gk. *logia*, meaning divine utterances and generally referring to the entire OT or some specific part of it. In Acts 7:38 the reference is either to the Decalogue or to the entire content of the Mosaic law. These oracles are said to be 'living', *zōnta*, that is, 'enduring' or 'abiding'. In Rom. 3:2 the reference is to all the written utterances of God through the OT writers, but with special regard to the divine promises made to Israel. The 'oracles of God' in Heb. 5:12, AV ('word', RSV) represent the body of Christian doctrine as it relates both to its OT foundation and to God's final utterance through his Son (Heb. 1:1). 1 Pet. 4:11 teaches that the NT preacher must speak as one who speaks the oracles of God, treating his words as carefully as if they were inspired Scripture.

The theological significance of the oracle is emphasized by B. B. Warfield who concludes that *ta logia*, as employed in the NT, are 'divinely authoritative communications before which men stand in awe and to which they bow in humility' (*The Inspiration and Authority of the Bible*, 1948, p. 403).

R.H.M.

ORCHARD. Well known in various Bible lands throughout antiquity, these were plantations of fruit trees, specifically including pomegranates (Ec. 2:5, AV and Ct. 4:13 where 'orchard' renders Heb. *pardēs*). The *pardēs* of Ne. 2:8 furnished timber, and so is there rendered *'forest'. K.A.K.

ORDINATION. Considering the role played by the ministry throughout the history of the church, references to ordination are surprisingly few in the NT. Indeed, the word 'ordination' does not occur, and the verb 'to ordain' in the technical sense does not occur either. A number of verbs are translated 'ordain' in AV, but these all have meanings like 'appoint'. For example, *cheirotoneō* is used of the institution of elders in certain Galatian churches (Acts 14:23), but before we think of this as denoting 'ordination' in our sense of the term we must note its use in passages such as 2 Cor. 8:19, where it refers to the brother who was 'appointed by the churches to travel with us ...'

The Twelve were chosen by Christ to be very near to himself and to be sent forth to minister (Mk. 3:14). But there is no word of any ceremony of ordination. Mark says that Jesus 'made (*poieō*)' twelve, and Luke that he 'chose (*eklegō*)' them (Mk. 3:14; Lk. 6:13). This was a very solemn occasion (Luke tells us that Jesus prayed all night before making his selection). But there is no 'ordination' mentioned. John speaks of the risen Lord as breathing on the ten, saying, 'Receive the Holy Spirit' (Jn. 20:22); but it is difficult to see an ordination in this. It is probably significant that when Matthias took the place of Judas there is again no mention of any ordination. Lots were cast, and when the choice of Matthias was known he was simply 'enrolled' or 'numbered' with the others (Acts 1:26). Similarly, prophets and others are called directly by God, though some at least are said to be 'for the work of ministry' (Eph. 4:12; the word 'ministry' here is, of course, used of service in a wide sense).

Luke tells us of the appointment of the Seven (Acts 6), and this is often understood as the institution of the diaconate. This may indeed be the case, but it is far from certain. Some think that the presbyterate is meant, and others deny that there is ordination to any ecclesiastical office. They think that Luke is describing nothing more than a temporary measure to meet a difficult situation. If the traditional view is accepted, then the essential thing about ordination is the laying on of hands with prayer. But in view of the uncertainties, and the wide use in antiquity of the laying on of hands, it is not possible to build much on this passage. Nor are we any better off when we read of elders as being appointed in the Galatian churches (Acts 14:23), for, while we may be tolerably sure that they were ordained in some way, nothing at all is told us of how this was done or what was expected of it.

Our most important information comes from the Pastoral Epistles. Paul counsels Timothy, 'Do not neglect the gift you have, which was given you by prophetic utterance when the council of elders laid their hands upon you' (1 Tim. 4:14). This passage yields us three items of information about Timothy's ordination. First, it meant the giving to him of a *charisma*, the spiritual *gift needed for the work of ministering. Secondly, this came to him 'by (*dia*) prophecy'. Thirdly, it came with (*meta*) the laying on of hands by the elders. The essential thing about ordination is the divine gift. Nothing can compensate for its lack. But there is also an outward act, the laying on of hands. It is possible that Paul refers to the same rite when he speaks of his own laying on of hands on Timothy (2 Tim. 1:6), though it should not be overlooked that some other rite may be in mind, perhaps something more akin to Anglican confirmation than to ordination. We might be able to make a better judgment if we knew when this took place, whether at the beginning of Paul's association with Timothy, or not long before the writing of the letter. If with most commentators we take this to refer to ordination, the meaning will be that Paul joined with the elders in the *laying on of hands, which in any case would be antecedently likely. It is probable that we have another reference to the same ordination in the words about 'the prophetic utterances which pointed to you' (1 Tim. 1:18).

Ordination is always a solemn affair, and it may be that the words 'Do not be hasty in the laying on of hands' (1 Tim. 5:22) emphasize this. But in view of the context it is perhaps more likely that they refer to the reception of penitents back into fellowship.

All this makes for a somewhat meagre harvest, which is all the more disappointing, since the Pastors show us how important the *ministry was, especially the offices of presbyter and deacon. Titus, for example, is bidden 'appoint (*kathistēmi*) elders in every town' (Tit. 1:5), and much attention is paid to the qualifications for ministers. It is possible to suggest that the Christians took over the ordination of elders from the similar Jewish institution, but this does not get us far. All that we can say for certain is that the important thing for ministering is the divine gift, and that the essential rite in the earliest time appears to have been that of the laying on of hands with prayer. (*SPIRITUAL GIFTS.)

L.M.

named after this prince, and remembered for the great defeat of Midian (Jdg. 7:25; Is. 10:26). The Ephraimites cut off the enemy's retreat at the Jordan fords, presumably opposite Jezreel; Beth-barah might be a ford (*'āḥar*, 'cross') some 20 km S of the Sea of Galilee.

J.P.U.L.

ORNAMENTS. From Palaeolithic times ornament has been used by man to adorn the objects which surround him in his daily life. When the intention is right, the skill of the craftsman is a thing pleasing to God, and indeed for the building of the tabernacle Bezalel was filled with the spirit (*rūah*) of God (Ex. 31:1-5), as were those who were to make the garments for the high priest (Ex. 28:3).

Archaeological discoveries have shown that in biblical times the carving of wood and ivory was done with great skill; weaving and embroidery reached a high standard; and the techniques involved in fine metalwork were well understood (*ARTS AND CRAFTS). Three main divisions of ornamented objects may be distinguished.

I. Personal

There is no evidence for the practice of ornamental tattooing in the ancient Near East, but clothing was often elaborately decorated, and jewellery was widely used. Though few examples of textiles have been recovered outside Egypt, the Assyrian and Persian sculptured reliefs and mural paintings at Mari on the Euphrates give, sometimes in great detail, representations of garments with fine embroidery. The Egypt. tomb-paintings likewise depict clothing in detail, and in one tomb at Beni-hasan a group of Asiatic nomads with brightly-coloured costumes (see *IBA*, fig. 25) gives an idea of the sort of ornamental clothing perhaps worn by the Patriarchs (*DRESS).

Many examples of jewellery (*JEWELS AND PRECIOUS STONES) have been found in excavations, perhaps the most outstanding being those from the 'Royal Tombs' at *Ur.

Various terms referring to objects of personal adornment are translated 'ornament', but their precise significance is in many cases uncertain. Among these are the following: 1. *h'ali* (Pr. 25:12), perhaps from a Semitic root *hllh*, 'to adorn'; all EVV translate 'ornament'. The word also occurs in Ct. 7:1 where EVV translate it 'jewel'. 2. *liwyā* (Pr. 1:9; 4:9; lit. 'twisted thing'); RV renders 'chaplet' and RSV 'garland'. 3. *'dī* (Ex. 33:4-6; 2 Sa. 1:24; Is. 49:18; Je. 2:32; 4:30; Ezk. 7:20; 16:7, 11; 23:40), derived from *'ādā*, 'to ornament', 'to deck oneself'; all EVV translate 'ornament'. 4. *p'ēr* (Is. 61:10), from *pār* in the Pi'el, meaning 'to beautify'; RV and RSV translate 'garland'. 5. *s'ādā* (Is. 3:20), of unknown etymology. It probably signifies an 'armlet' (so RSV); RV gives 'ankle chain'. 6. *'ekes* (Is. 3:18), perhaps connected with Arab. *ikāsu*, 'to hobble (a camel)', from *'akasa*, 'to reverse, tie backwards', whence RV, RSV 'anklet'. The root occurs as a verb in Is. 3:16, where it is translated 'making a tinkling'.

Though on an occasion such as a wedding the putting on of ornaments and jewels by the participants is treated as right and proper (Is. 61:10), the immoderate use of personal ornament is roundly condemned (Is. 3:18-23; 1 Tim. 2:9). Is. 3 provides a catalogue of different kinds of ornaments which are translated variously in EVV. Some of these are *hapax legomena*, and little can be added to the RSV

OREB (Heb. *'ōrēb*, 'raven'). 1. A Midianite prince in the army routed by Gideon. 2. The rock of Oreb.

ORNAMENTS

interpretation. The 'bracelet' (*šērā*) of v. 19 is supported by the probable Akkad. cognate *šemēru* (*šewēru*) with this meaning. Likewise in v. 21, 'ring' (*tabba'at*, RSV 'signet ring') is supported by Akkad. *timbu'u*, *timbūtu*, 'seal ring' (*SEAL). AV renderings which have been radically altered in the later versions are v. 20 'earring' (*lahāš*; RV, RSV * 'amulet'), v. 22 'wimple' (*mitpaḥat*; RV 'shawl', RSV 'cloak') and 'crispin pin' (*hārīt*; RV 'satchel', RSV 'handbag').

Among other articles of personal adornment were: 1. *hāh*, usually a hook or ring for holding a man (2 Ki. 19:28) or animal (Ezk. 29:4) captive, but in Ex. 35:22 an ornament (AV 'bracelet', RV, RSV 'brooch'); 2. *šah'rôn*, probably a crescent-shaped object which was used on camels (Jdg. 8:21; AV 'ornament', RV 'crescent') and humans (Jdg. 8:26; Is. 3:18, AV 'round tire like the moon', RV 'crescent'); and many different kinds of chain ornaments, including 3. *rābīd*, probably a twisted circlet for the neck (Gn. 41:42; Ezk. 16:11); 4. **nāq*, a more elaborate form made of plaited wire which might have pendants attached (Jdg. 8:26; Pr. 1:9; Ct. 4:9); 5. *šars'rá*, probably a more flexible chain of the link type (Ex. 28:14, 22; 39:15; 1 Ki. 7:17; 2 Ch. 3:5, 16); 6. *hārūz*, a necklace of beads strung on a thread (Ct. 1:10; RV 'string of jewels'). Another type of ornament, mentioned in 1 Macc. 10:89; 11:58; 14:44, is the 'buckle' (Gk. *porpē*, 'buckle pin', 'buckle brooch').

A special case of personal ornament is found in the garments of the high priest (*DRESS). The linen coat was of an ornamental weave (Ex. 28:39, RV, RSV), the ephod and the girdle were decorative (Ex. 28:6, 8) and round the hem of the robe of the ephod were alternate bells and pomegranates (Ex. 28:31–35). In addition to these the breastplate (see *BREASTPIECE OF THE HIGH PRIEST) contained ornamental elements.

The ancient Hebrews, like their neighbours, probably wore *amulets and personal *seals for ornamentation.

In Ex. 13:16 and Dt. 6:8; 11:18 the word 'frontlets' (*tōtāpōt*) may refer to some ornament of the head. A connection with Akkad. *taṭāpu*, 'to encircle', has been suggested, but this remains uncertain.

II. Movable objects

From very early times painted or incised decoration was used on *pottery, and though in historical times the abundance of other possessions resulted in absence of decoration, certain wares such as Mycenaean and that called 'Philistine' are easily distinguishable and provide useful criteria for dating to the archaeologist. *Archaeology has shown that tools and weapons had, on occasion, appropriate decorations, but the class of small object which often called forth the most elaborate and delicate ornamentation was that of cosmetic equipment. Boxes, jars for unguents, palettes for mixing pigments and mirror handles of elaborately carved bone and ivory have been excavated in Syria, Palestine, Mesopotamia and Egypt. Furniture, especially in royal palaces, was sometimes richly ornamented with carved ivory panels (cf. 1 Ki. 10:18; 2 Ch. 9:17; Am. 6:4 and *IVORY). That ornamental carpets were used is shown by stone paving slabs carved in replica of carpets from the Assyrian royal palaces. Elaborately ornamented horse harnesses are portrayed on the Assyrian palace reliefs and camel harness was also evidently decorated (Jdg. 8:21, 26).

The *tabernacle and its contents were ornamented, under the skill of *Bezalel, with cunning workmanship. This was also a pagan practice, as is shown by discoveries of temple furniture from Megiddo, Beth-shan and other sites, where incense and offering stands are decorated with birds, animals, serpents (symbol of fertility) and human figures. These were the common trappings of the pagan cults of the Israelites' neighbours, and often the most elaborate ornament was reserved for the casket of the deceased. Elaborately carved stone sarcophagi are known from Phoenicia and Egypt, and the discoveries in the 'Royal Tombs' at *Ur and in the tomb of Tutankhamūn show the wealth of ornamental riches that accompanied the dead to the grave.

III. Architectural

Buildings in antiquity, particularly palaces, were decorated both inside and out. The inside walls of important rooms in the palaces of the Assyrian kings at Nineveh and Khorsabad were adorned by carved bas-reliefs and the doorways guarded by great composite beasts (*IBA*, fig. 44). These reliefs were probably partially coloured in antiquity, being in fact glorified murals, examples of which from the Assyrian period were discovered at Til Barsip. In the early 2nd-millennium palace at Mari remains of several mural paintings were recovered suggesting that such decoration has not been discovered more often only on account of its perishable nature.

In Egypt, while the best-known mural paintings are found in rock-cut tombs, palaces with murals have been excavated at Malkata (Amenophis III) and el-Amarna (Amenophis IV). The great temples at Karnak and Luxor were decorated with carved and painted murals and hieroglyphic inscriptions, the hieroglyphs forming ornamental elements. *Ivory was probably used not only for the decoration of furniture but also for application to suitable parts of important rooms, as is suggested by caches of carved ivories found at Nimrud, Arslan Tash, Megiddo and Samaria (cf. 1 Ki. 22:39; Ps. 45:8; Am. 3:15).

Outside decoration, while in earlier periods it might consist of revetted walls, or in Assyria guardian beasts at gateways, reached a sumptuous level in Nebuchadrezzar's Babylon, where excavation has revealed great façades of coloured glazed bricks with animals and rosettes at intervals.

The Persians in the latter part of the 1st millennium BC recruited craftsmen from all over the Middle East to build and decorate the great ceremonial city of Persepolis, even employing men from as far afield as the Aegean. Aegean influences had already been felt in the 2nd millennium (Alalah, Ugarit), and it is probable that the term *kaṭīṭōr* in Ex. 25:31–36; 37:17–22 (AV 'knop') and Am. 9:1; Zp. 2:14 (AV 'lintel') refers to some decorative architectural feature, perhaps a column capital, derived from Crete or the Aegean (*CAPTOR).

There is reason to believe that under the Monarchy the kings and the wealthy would have followed the customs of the surrounding peoples, particularly the Phoenicians, in the decoration of their palaces and houses.

T.C.M.

ORPAH. A Moabitess, the daughter-in-law of Naomi, and Ruth's sister-in-law (Ru. 1:4). After their husbands died they came from Moab to Judah, but Orpah, following Naomi's advice, remained, to return to her former home and the worship of Chemosh (Ru. 1:15; 1 Ki. 11:33). Even so, Naomi commended her to Yahweh's protection.

M.B.

ORPHAN, FATHERLESS (Heb. *yāṭôm*; Gk. *orphanos*). The care of the fatherless was from earliest times a concern of the Israelites, as of the surrounding nations. The Covenant Code (Ex. 22:22), and the Deuteronomic Code particularly, were most solicitous for the welfare of such (Dt. 16:11, 14; 24:17), protecting their rights of inheritance and enabling them to share in the great annual feasts and to have a portion of the tithe crops (Dt. 26:12). It is specifically stated, moreover, that God works on their behalf (Dt. 10:18), and that condemnation awaits those who oppress them (Dt. 27:19; cf. Mal. 3:5).

Though many orphans would be aided by kindred and friends (Jb. 29:12; 31:17), there was a general failure to fulfil the provisions of the Codes,

testified by the accusations and laments found in the prophets, in the Psalms, and in the book of Job. 'In you,' says Ezekiel (22:7), speaking of Jerusalem, 'the fatherless and the widow are wronged'. Justice, it is averred, is withheld from orphans; their plight is pitiable, for they are robbed and killed (Jb. 24:3, 9; Ps. 94:6; Is. 1:23; 10:2; Je. 5:28), making even more vivid the Psalmist's words against the wicked: 'May his children be fatherless . . .' (109:9).

God, however, is specially concerned for the fatherless (Pss. 10:18; 68:5; 146:9; Ho. 14:3; cf. Jn. 14:18), especially when they look in vain to men for help (cf. Ps. 27:10).

The only NT occurrence of the word makes an integral part of true religion the visiting of 'orphans and widows in their affliction . . .' (Jas. 1:27).

OTHNIEL (Heb. *'otni'ēl*). 1. A *Kenizzite, brother (or perhaps nephew) of Caleb ben Jephunneh (Jdg. 1:13; cf. Jos. 15:17); if 'son of Kenaz' is a patronymic, he and Caleb may have been brothers or half-brothers. Distinguishing himself in the sack of *Kiriath-sepher, he married Achsah, Caleb's daughter. Later he saw the beginnings of apostasy and the domination by *Cushan-rishathaim, against whom he led a successful revolt, becoming the first of the *judges. Jdg. 3:10 indicates that he was a charismatic leader, who restored order and authority ('judged' means this as well as deliverance; cf. 1 Sa. 7:15; 8:20).

2. A *Netophathite, whose descendant Heldai was one of David's officers (1 Ch. 27:15).

J.P.U.L.

P

PADDAN, PADDAN-ARAM. The 'field' or 'plain' of Aram (rsv '*Mesopotamia') is the name given in the area around Harran in Upper Mesopotamia, N of the junction of the rivers Habur and Euphrates in Gn. 25:20; 28:2; 31:18, *etc.*, and is identical with Aram-naharaim, 'Aram of the rivers', of Gn. 24:10; Dt. 23:4; Jdg. 3:8. Abraham dwelt in this area before emigrating to Canaan. He sent his servant there to obtain a bride for Isaac, and thither Jacob fled from Esau. For a suggested identification of Paddan-aram, near Harran, see *AS 2*, 1952, p. 40; *POTT*, pp. 134f., 140. R. A. H. G.

The location of Paddan-aram.

PAHATH-MOAB (lit. 'Governor of Moab'). Perhaps an ancestor had been a governor of Moab when Moab was subject to Israel. The name of a Jewish clan consisting of two families, Jeshua and Joab, 2,812 of whom returned to Judah with Zerubbabel (Ezr. 2:6. Ne. 7:11 gives the figure 2,818) and 201 with Ezra (Ezr. 8:4). Of this clan certain members are listed in Ezr. 10:30 as having married foreign women. Ne. 10:14 records that Pahath-moab among princes, priests and Levites set his seal to the covenant made on the return of the exiles to Jerusalem. R. A. H. G.

PALACE. The word designates a large residential building or group of buildings which accommodate a ruler and his administration. During the Israelite Monarchy, the administrative centre was called 'armôn, av 'palace', rsv 'citadel, palace, stronghold or castle'. A large portion of the nation's wealth was safeguarded in the citadel. Its capture was therefore the aim of a conquest and so substantial fortifications were constructed around

the citadel so that the king and the loyal remnants of his army would be able to resist capture even when the remainder of the capital city had fallen. When predicting the overthrow of nations, the prophets specifically refer to the citadels of *Babylon (Is. 25:2), *Jerusalem (Is. 32:14; Je. 6:5; 9:21; 17:27; Am. 2:5), Damascus (Je. 49:27; Am. 1:4) and Edom (Is. 34:14; Am. 1:12). Amos also speaks about the destruction of the citadels of Gaza (1:7), Tyre (1:10), Rabbah (1:14), Moab (2:2) and *Samaria (3:11).

One of the most complete citadels in Syria/Palestine was excavated at Zinjirli (ancient Sam'al) used between c. 900 and 600 BC. Here three palaces and many storehouses were surrounded by walls and towers and the complex could be entered only after passing through two gates. In Palestine, only meagre remains of the citadel at *Samaria have been found. A similar but smaller citadel was built by King *Jehoiakim at Ramat Rahel and is most probably referred to by Jeremiah (22:13-14). As at Samaria, the citadel was fortified with a casemate wall constructed with rectangular masonry and within the wall was a large courtyard, a storehouse and a palace.

Excavation has revealed that at the time of Solomon both *Hazor and *Megiddo had administrative buildings enclosed within citadel areas. Solomon chose a similar system at Jerusalem where the citadel embraced the *Temple, the king's palace (I Ki. 3:1), the 'House of the Forest of Lebanon' (I Ki. 7:2-5), halls and porches (7:6-7), a palace for Pharaoh's daughter (7:8; 9:24) and courts (7:12). One of the large buildings at Megiddo for which Solomon was probably responsible has been reconstructed as a *bît-hilāni* (*PORCH), a style of palace which seems to have been adopted in the Hall of Pillars and the Hall of the Throne at Jerusalem (I Ki. 7:6-7). The 'House of the Forest of Lebanon' was a hypostyle hall of 100 × 50 cubits. Its purpose was, at least in part, to display the kingdom's wealth (I Ki. 10:17), but whether it was a banqueting-hall, as would be suggested by some of its contents (10:21), a magazine (Is. 22:8) or an entrance-hall is not clear. The royal residence (*bēt hammelek*) would have been a number of storeys high, providing sufficient accommodation for the king, his wives and family and their advisers and servants.

Although the term 'great house' (Heb. *hēkāl*) normally refers to a temple, it is also used of a palace (so Akkad. *ekallu*) when it is the principal building in a city. The palace of *Ahab at Jezreel (I Ki. 21:1), the Assyrian king's palace at Nineveh (Na. 2:6) and the palaces at *Babylon (2 Ki. 20:18; Dn. 4:4, 29, *etc.*) and Susa (Ezr. 4:14) are described in this way. The palaces of Assyria, Babylon and Persia accommodated the administration for large empires and also considerable quantities of tribute.

In addition to offices and magazines, temples were included in the palace complex, thus enabling the king to fulfil his religious duties to ensure the favour of the gods. Senior officials each possessed their own residences and other parts of the palace housed schools (Dn. 1:4) for the princes, future civil servants and priests. The wealth of the king was suitably displayed to visitors and so public courtyards and the state rooms were richly decorated and lavishly furnished. Sometimes gardens of exotic plants were grown within the palace area (Est. 7:7-8).

After the Exile palaces are sometimes referred to as fortresses (Aram. *birā*); palaces at Jerusalem (1 Ch. 29:1, 19; Ne. 2:8; 7:2), Susa (Dn. 8:2; Ne. 1:1, Est. 1:2, 5, etc.) and Ecbatana (Ezr. 6:2) are so described. Daniel (11:45) mentions the residence of the king of the N as 'appeden' (av 'palace', rsv 'palatial tents') which is similar to the Old Persian word (*apadāna*) meaning columned hall and may in this case indicate large tents with many supports.

The palace (*aulē*) of the high priest (Mt. 26:3; Jn. 18:15) was probably a large hellenistic residence built around colonnaded courtyards. Jesus speaks about the need to guard such a palace which contains wealth (Lk. 11:21). *Herod the Great built palaces at Jerusalem, *Machaerus, *Jericho, the Herodium near Bethlehem, and Masada. In Jerusalem he built a strongly fortified palace with three towers, named Hippicus, Phasael and Mariamne, by the corner gate. This building forms the foundations of the present-day Citadel. There were two palaces at Masada and both have been excavated and partially restored. The N palace is amazingly positioned on the cliff face of the flat-topped mountain which was fortified by Herod.

Palaces or citadels often represent the fortunes of a nation in the OT. The palace of the faithful nation possesses peace (Ps. 122:7), while that of a sinful nation is destroyed (Je. 17:27; Am. 2:5) and becomes deserted (Is. 34:13-14).

PALESTINE. The term 'Palestine', originally applied to the territory of Israel's foes, the Philistines, was first used by Herodotus as a designation of S Syria. In the form of *Palaestina*, it was also used by the Romans. The older term 'Canaan' has a similar history. In the el-*Amarna letters (14th century BC) Canaan was limited to the coastal plains, then with the Canaanite conquests of the interior it was applied to all the lands W of the Jordan valley. The terms 'land of Israel' (1 Sa. 13:19) and 'the land of promise' (Heb. 11:9) are associated with the Israelites in the same area, the latter usually connected with the area from Dan to Beersheba, N of the Negeb. The Israelite settlement of two-and-a-half tribes E of the Jordan seems to have resulted from unforeseen circumstances and the hold on that side of the valley appears to have been generally precarious. After the division of the kingdom, the name Israel was usually given to the N realm. In the Middle Ages, the term 'the Holy Land' was often adopted (*cf.* Zc. 2:12).

I. The position and highways of Palestine

The mediaeval perspective of Jerusalem as the centre of the earth is not so absurd as might be thought, for on the tiny Syrian corridor that unites

the world island of Europe, Asia and Africa, the five seas of the Mediterranean, Black Sea, Caspian, Red Sea and the Persian Gulf narrow the greatest land mass of our planet into a single isthmus. All the important continental routes must go across this corridor, and the great sea-routes of antiquity between the Indies and the Mediterranean must in turn be linked by land communications across the Sinai Peninsula. The high mountain chains which run E from Asia Minor to Kurdistan and the deserts to the S and E further help to concentrate the routeways of 'the Fertile Crescent', which, sickle-shaped, runs from Palestine and S Syria to the alluvial valley basins of the Tigris and Euphrates. It is, of course, 'fertile' only in comparison with the surrounding desert and mountainous terrain, since most of it is either Mediterranean scrub or steppe. At either end of the Fertile Crescent a great locus of civilization developed in the lower basin of Mesopotamia and the lower Nile valley respectively, whose fortunes dominated the history of the Near East for almost two millennia.

Three great trade routes have always traversed Palestine. The great Trunk Road, perhaps described in Is. 9:1 as 'the way of the sea', runs along the low coast from Egypt to the Vale of Esdraelon. Then it is diverted inland by the Syrian mountains to skirt the W side of the Lake of Galilee, then through the Syrian Gate and central depression to Damascus, where it joins the desert caravan trails across to Mesopotamia. Two other routes are of great antiquity although of lesser importance. The *King's Highway follows the edge of the Transjordan plateau from the Gulf of Aqabah towards Damascus. It marks a zone of increased rainfall and was followed in part by the Israelites during the Exodus (Nu. 21-22), and all the towns enumerated in Nu. 21; 27-30 lie along it. The watershed of central Palestine is followed by another route, the shortest between Sinai and Canaan. In the N *Negeb it links an important series of wells, keeping W of the forbidding, barren depressions of the E Negeb that are still difficult to traverse. It links all the important historic centres from Kadesh-barnea and Beersheba to Hebron, Jerusalem, Shechem and Megiddo. Heavily travelled from the Abramic (Middle Bronze I) period onwards, it was also made famous by the journey of Joshua and his fellow-spies. All these routes emphasized the N-S alignment of Palestine, which benefited from their fertilizing contacts of trade and culture. But Israel was rarely able to control these highways without upsetting the strategic interests of the great powers that dominated their terminals. Even in Solomon's day the coastal highway was too tightly controlled by the sea-powers to warrant interference there (1 Ki. 9:11; 10:22; Ezk. 27:17), while Edom was for long Israel's deadly enemy because it dominated the routes from the Gulf of Aqabah where Israel obtained its copper (Ob. 3).

A number of minor transverse routes have joined these parallel highways. Of these the most important have been: (1) Gaza-Beersheba-Petra; (2) Ashkelon-Gath-Helvan; (3) Joppa-Bethel-Jericho (*cf.* Jos. 10:6-14) and Joppa-Shechem-Adam-Gilead (Jos. 3:16); (4) Vale of Esdraelon-Megiddo-Gilead. Exposed to coastal sedimentation from the Nile, the coast of Palestine as far as Carmel has been unfavourable for port development, so the chief towns have been route centres at important road junctions, either in the strategic

PALESTINE

plain of Esdraelon or along the hilly dorsal of Judaea and Samaria. The sea was an unfamiliar medium of communication to the Hebrews (*cf.* Ps. 107), while the desert was also feared as 'a land of trouble and anguish' (Is. 30:6; *cf.* Dt. 8:15). Perched precariously between them, the Hebrew highlanders sought a protracted aloofness from both environments and their peoples. Thus autonomy of spirit became a major characteristic of the Israelites, despite their nodal position at the hub of the ancient world's trade routes.

II. The geological structure and relief

For some 675 km from the borders of Egypt to Asia Minor, the Levant consists of five major zones: (1) the littoral; (2) the W mountain chain (the Judaeo-Galilean highlands, Lebanon and Ansariya mountains); (3) the rift valleys (Arabah, Jordan valley, Biqa' and Ghôr); (4) the E mountains (highlands of Transjordan, Hermon and Anti-Lebanon); and (5) the deserts of Negeb, Arabia and Syria. But the contrasts between the N and S sections of these zones explain the individuality of Palestine. N of Acre, the mountains rise abruptly from the sea, limiting the narrow coastal plains to discontinuous stretches but providing the famous harbours of Sidon, Tyre, Beirut, Tripoli and Ras Shamra. The limited hinterlands of each unit have encouraged independent maritime city-states where 'the families of the Canaanites spread abroad' (Gn. 10:18). S of Mt Carmel, however, the coast opens into a broad continuous plain, harbourless except for artificial ports erected by the Philistines and later sea-peoples.

A second contrast is to be found in the Rift Valley sectors. In Syria the Biqa' depression is a broad, fertile plain between the lofty ranges of Lebanon and Anti-Lebanon, with wide access to other rolling plains, and studded with historic centres such as Kadesh, Homs and Hamath. To the S, the depression blocked by recent basaltic lavas narrows into deep gorges before opening into the swamp of Lake Huleh, making N-S communication difficult. These features have tended to isolate Palestine from the N territory.

The rocks of Palestine are notably limestone, volcanics and recent deposits such as marls, gravels and sands. The Rift Valley represents an ancient planetary lineament that is traceable as far as the E African Lakes. Broadly speaking, it has operated like a hinge, so that the areas to the W of it have been mostly under the sea, whereas the Arabian block has been generally continental. Thus, W of the Rift the rocks are predominantly limestone laid down specially during the Cretaceous and Eocene eras. Some of these are hard and dolomitic (Cenomanian and Eocene), explaining the steep headland of Mt Carmel, the twin mountains of Ebal and Gerizim above Shechem, and generally all the rugged, higher relief of the Judaeo-Galilean dorsal. But the Senonian is a soft chalk, easily eroded into gaps and valleys that breach the highlands, notably at Megiddo, the valley of Ajjalon and the moat of Beth-shemesh which separates the Eocene foothills of the Shephelah from the Judaeo-Galilean plateau. These limestones have been up-worked along the central dorsal and gently folded in a series of arches which become more complicated farther N in Samaria and Galilee. They occur, however, horizontal in Transjordan, resting upon the continental block beneath them. The ancient block is exposed in the SE in the high cliffs of

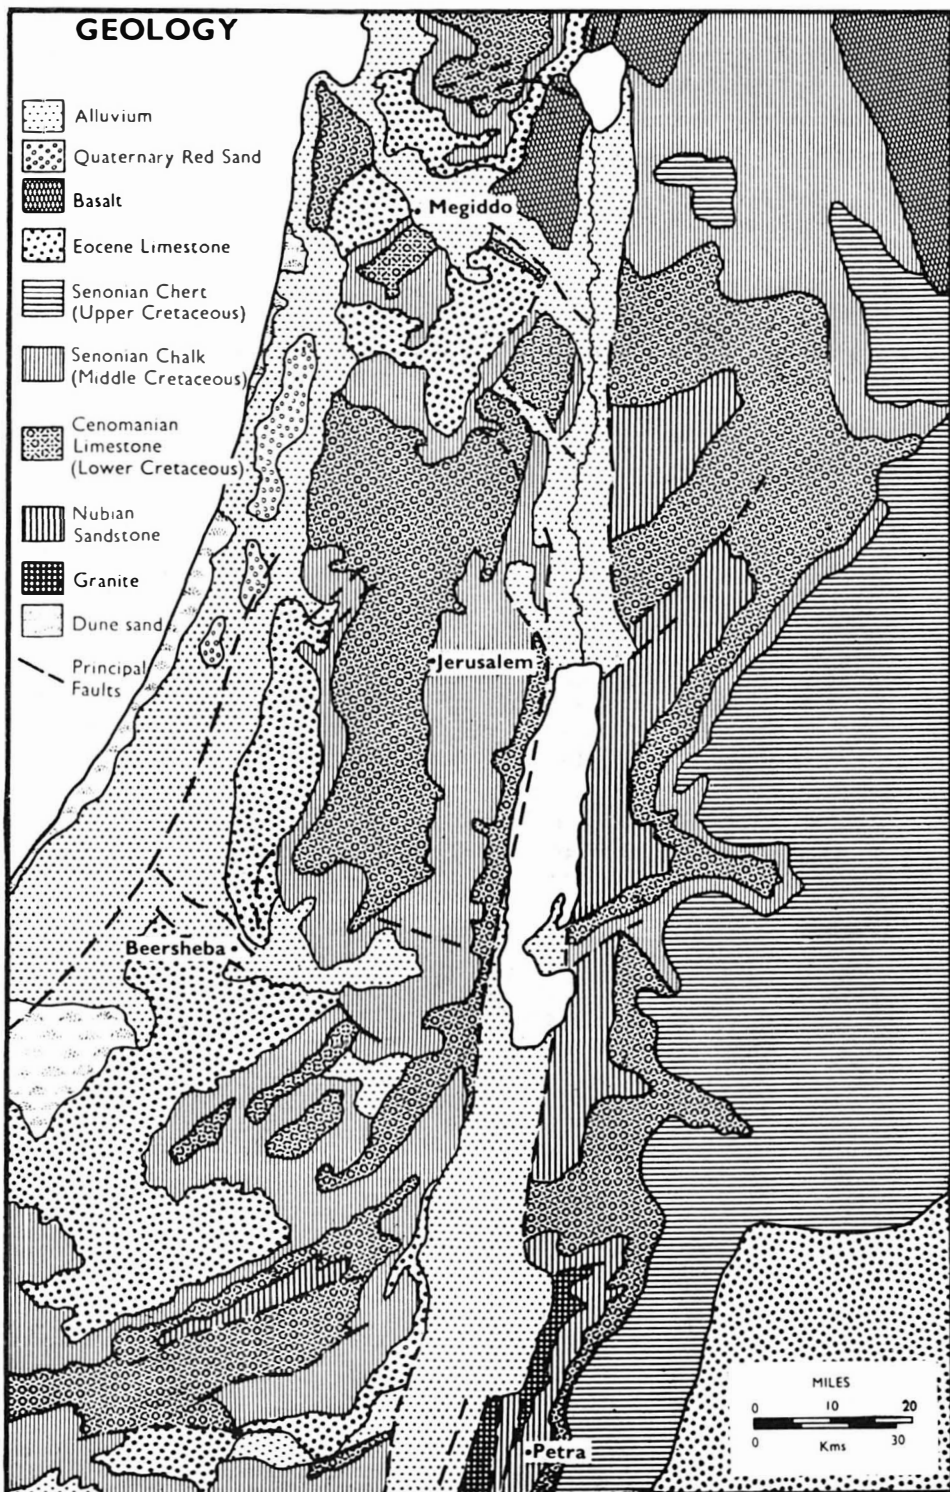

the Wadi Arabah and in the Sinai Peninsula. Overlapping them are the so-called Nubian sandstones, whose desert origin prolonged over vast geological periods explains the red colour from which Edom probably derives its name ('the red'). In the NE, recent basaltic lavas cap the limestones in the broad, undulating plateaux in the land of Bashan, and extending into the Jordan trough around the Lake of Galilee. These weather into the rich soils which attracted to the Galilean shores a high density of population from early times.

Palestine suffers from crustal instability. Volcanic eruptions have continued into historic times, notably in the cases of Harrat en-Nar, SE of the Gulf of Aqabah, which were active as late as the 8th and 13th centuries AD. It is tempting to equate the descriptions of Ex. 19:18 and Ps. 68:8 with volcanic manifestations, but the traditional site of Sinai is in an area of ancient, crystalline rocks where no recent volcanic action has occurred. The fate of Sodom and Gomorrah (Gn. 14:10; 19:23-28) is a memory of some kind of volcanic phenomena, associated probably with the intrusion of sulphurous gas and liquid asphalt. There are also the biblical records of earthquakes (Gn. 19:25; 1 Sa. 14:15; Am. 1:1) and geological faulting (Nu. 16:31-35). All these are associated with the Great Rift Valley of the Jordan and Dead Sea, or with the series of transverse faults that form the Vale of Esdraelon and divide Samaria and Galilee into a complicated series of highland blocks and depressions floored with sediments.

Under the semi-arid conditions, badland relief is typical, especially around the E and S rims of the Judaeo-Galilean highlands and the W edge of the Transjordan plateau. Within the deep Jordan valley, soft marls deposited by a lake more extensive than the present Dead Sea have been dissected to form the Ghôr in the middle of the trough, lying at more than 365 m below sea-level. The seasonal wadis that drain into the Arabah trough have also deeply dissected their slopes. Thus the AV references to the 'slippery places' are a characteristic feature of many parts of the Negeb and the Jordan (Dt. 32:35; Pr. 3:23; Je. 23:12; 31:9). Much of the Negeb is a rock waste of hammadas, and direct reference to the wind-borne loessial deposits is made (Ex. 10:20-23; Dt. 28:24; Na. 1:3).

III. The climate and vegetation

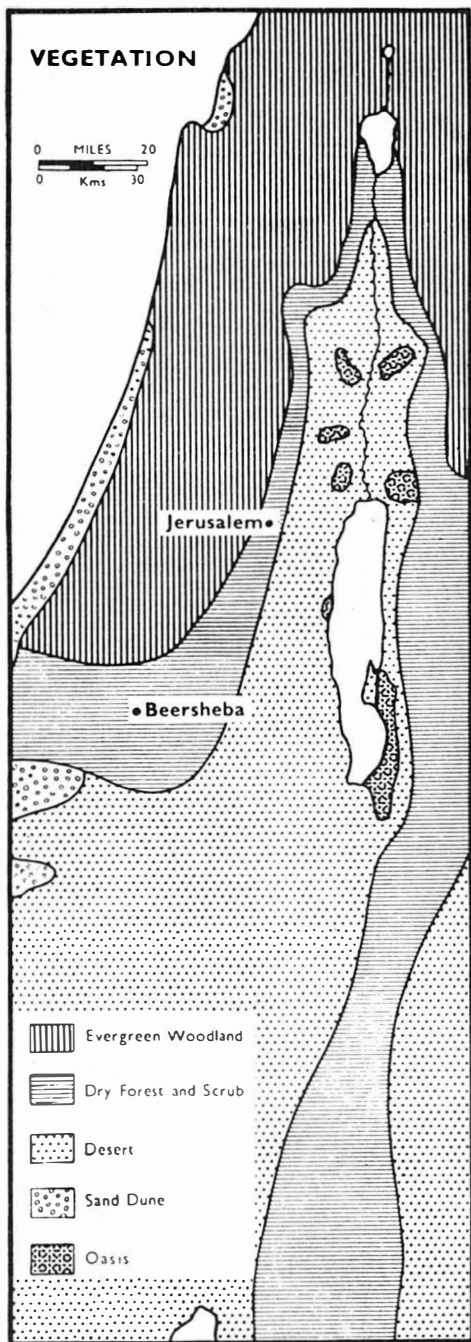

In the Levant three climatic zones may be distinguished: a Mediterranean, a steppe and a desert zone, each with its distinct type of vegetation. Along the coast as far S as Gaza, the Mediterranean zone has mild winters (53.6°F, 12°C, mean monthly average for January at Gaza) compared with the severer conditions of the interior hills (Jerusalem 44.6°F, 7°C, in January). But summers are everywhere hot (Gaza 78.8°F, 26°C, in July, Jerusalem 73.4°F, 23°C). The prolonged snow cover of the high Lebanon mountains (Je. 18:14) is exceptional, though snow is not infrequent in the Hauran. Elsewhere it is a rare phenomenon (2 Sa. 23:20). Less than one-fiftieth part of the annual rainfall occurs in the summer months from June to October; nearly all of it is concentrated in winter to reach a maximum in mid-winter. The total amount varies from about 35-40 cm on the coast to about 75 cm on Mt Carmel and the Judaeo-Galilean and Transjordan mountains. In the Beersheba area to the S, and in parts of the Jordan valley and of the Transjordan plateau the climate is steppe, with

Palestine: geological structure

PALESTINE

only 20–30 cm of rain, though temperature conditions are comparable to those of the Judean hills. The deep trough of the Jordan has sub-tropical conditions with stifling summer heat; at Jericho mean daily maxima remain above 100°F (38°C) from June to September, with frequent records of

Palestine: vegetation.

110–120°F (43–49°C). The winter, however, has enjoyable conditions of 65–68°F (18–20°C) (January mean daily maximum). In the Negeb, the S part of the Jordan valley, and the country E and S of the Transjordan steppe the climate is desert, with less than 20 cm of rain a year.

There is no archaeological evidence that climate has changed since biblical times. Near the Gulf of Aqabah, a number of recently excavated Roman gutters still fit the springs for which they were constructed, and wherever the Byzantine wells of the Negeb have been kept clean and in constant use, the water still rises to the ancient levels. Thus the biblical narrative gives a convincing picture of the present climate. Distinction is made between the hot and cold seasons (Gn. 8:22; Am. 3:15), and the inception of the autumn rains is clearly described (Dt. 11:14; Ho. 6:3; Joel 2:23). Variability in the amount and distribution of rainfall is common (Am. 4:7), and the incidence of prolonged drought is recorded on a number of occasions (1 Ki. 17:7; Je. 17:8; Joel 1:10–12, 17–20).

Because of the contrasts of relief, from 1,020 m above sea-level near Hebron, to 390 m below sea-level at the Dead Sea, the flora of Palestine is very rich (about 3,000 vascular * plants) for such a small area. A large proportion of them are annuals. Few districts have ever had dense forests (* TREES), though remnants have been preserved in Mts * Hermon and * Lebanon with their cedars, firs, oaks and pines, and in the biblical Golan (Jaulan), where forests of pine and oak still exist. Lebanon has always been noted for its cedars. The Israelites had their share in deforestation of the Mediterranean woodland that once covered the central dorsal (Jos. 17:18), and today there are no traces of the woodlands that once existed at Bethel (2 Ki. 2:24), Ephraim (Jos. 17:15) and Gilead near the Jordan valley.

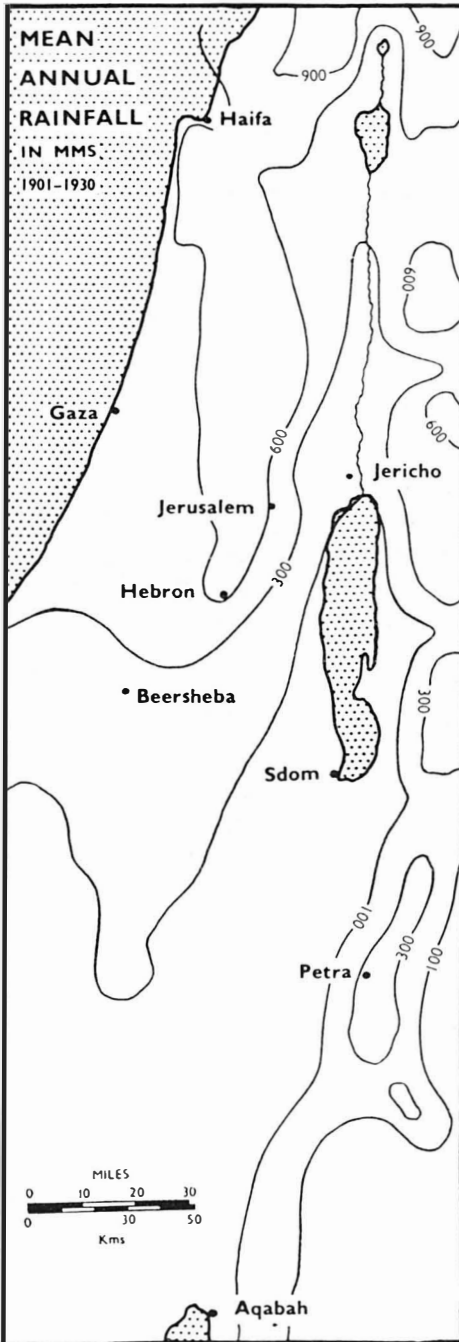

Oak forests long existed in Sharon, whose name means forest, but biblical prophecy states that three forested regions were to be turned into sheep pastures, the coastal Sharon, N Gilead and SE Galilee (see Is. 65:10). The development of pastoralism must be blamed for much of this forest clearance in Palestine (cf. 2 Ki. 3:4). But under Mediterranean conditions 'the pastures of the wilderness' are seasonally short-lived, so Rabbi Akiba (c. AD 100) observed shrewdly that 'those who rear small cattle and cut down good trees . . . will see no sign of blessing'. Deterioration of the woodland scrub had gone so far in Palestine before the establishment of the modern state of Israel in AD 1948 that most of the uncultivated land was a dreary expanse of *batha*, low scrub with open, rock outcrops. Towards the steppe and the desert, the colour of the landscape is governed more by the rocks than the plant cover, with only a few shrubby elements, such as wormwood, broom, saltwort and tufts of xerophytic grasses. Only along the banks of the Jordan is there a dense and wide gallery forest of various willows, poplar, tamarisk, oleander, etc.

But many of the Palestinian hill lands, eroded of their productive *terra vessa* soils, have been the graveyard of former civilizations, especially with the decay of terrace-cultivation. One estimate is that since Roman times 2,000–4,000 million cubic metres of soil have been worked off the E side of the Judean hills, sufficient to make 4,000–8,000 sq. km of good farmland. This threat of soil erosion is possibly alluded to in Jb. 14:18–19, and the easy spread of fire during the summer

drought is described (Ps. 83:13-14). These features of Mediterranean instability are recognized in the need for balance and restraint, in a land which lies so precariously between the desert and the sown (Ex. 23:29-30; Pr. 24:30-34). (*Dew, *RAIN, *WIND.)

IV. Water-supply and agriculture

It is not by chance that the names of over seventy ancient sites in Palestine contain the word 'ain, 'spring', and another sixty such sites the word 'bir, 'well'. Apart from the Jordan, a few of its tributaries and four or five small coastal streams that

Left and to right: Palestine: rainfall.

Palestine: dewfall.

PALESTINE

are fed from springs, all the remaining rivers of Palestine are seasonal. Snow-fed streams account for their maximum volume in May–June (Jos. 3:15), but the majority dry up in the hot summer (I Ki. 17:7; Jb. 24:19; Joel 1:20), notably in the Negeb (Ps. 126:4). With the autumn rains the sudden spate is graphically described (Jdg. 5:21; Mt. 7:27). Thus 'the fountain of living waters' was the ideal of the Israelite settler. The invention of a mortar which could be used in the construction of rain-collecting *cisterns (c. 1300 BC) may well have been a decisive factor in the rapid colonization of the highlands of Judaea by the Israelite settlers. *Wells dug for watering the stock are early alluded to (Gn. 26, etc.) and irrigation was well known (Gn. 13:10). Reservoirs too for the needs of the urban population are frequently mentioned (Ct. 7:4), some fed through imposing rock-cut tunnels (2 Ki. 20:20). The need for water in fact pointed a moral lesson to the Israelites (Dt. 8:7–10; 11:10–17; 1 Ki. 18; Je. 2:13; 14:22).

Before the rise of the Monarchy at least, the agricultural population of central Palestine consisted of small land-owners, and the typical produce of the land is described in the presents given by Abigail to David (1 Sa. 25:18). The importance in Judaea of the barley crop rather than wheat because of its low rainfall, and the fame of Carmel for its vines and Ephraim and Galilee for olives, have been justified since biblical times. But droughts tend to introduce debt and servitude, so that despite the ideological democracy envisaged in the jubilee year (Lv. 25), crownlands, large estates and forced labour already appear in the time of Saul (1 Sa. 8:16; 22:7; 25:2). In Transjordan and the Negeb it seems that the pastoral life has been traditionally supplemented by settled agricultural practices wherever wells and oases permitted. But the decline of agriculture has been constantly threatened by over-grazing by sheep and goats, apart from the more catastrophic incursions from the desert.

V. The settlements

A major problem in the historical geography of Palestine has been the identification of place-names. There are approximately 622 place-names W of Jordan recorded in the Bible. The lists of Tuthmosis III, Sethos I, Rameses II and *Shishak I at Karnak throw some light on Palestinian topography. The *Onomasticon* of Eusebius and Jerome is another valuable source. The work of R. Reland (1714) paved the way for the modern topographical work of Edward Robinson when he visited Palestine in 1838. He identified 177 place-names, few of which have been subsequently changed. In 1865 the Palestine Exploration Fund was established, and by 1927 about 434 place-names had been located; Conder in particular added 147 new names. A number of these are still disputed, and modern scholarship continues to debate a few of them.

The startling discoveries of Kathleen Kenyon at *Jericho show that there has been a semblance of urban life there since 6000–8000 BC with an 8-acre site occupied by some 3,000 inhabitants (*ARCHAEOLOGY). Indeed, the Jordan valley seems to have been from early times an area of dense settlement. N. Glueck notes some seventy sites there, many founded over 5,000 years ago, and over thirty-five of them still inhabited by Israelite times. It was only later that this valley which Lot found so

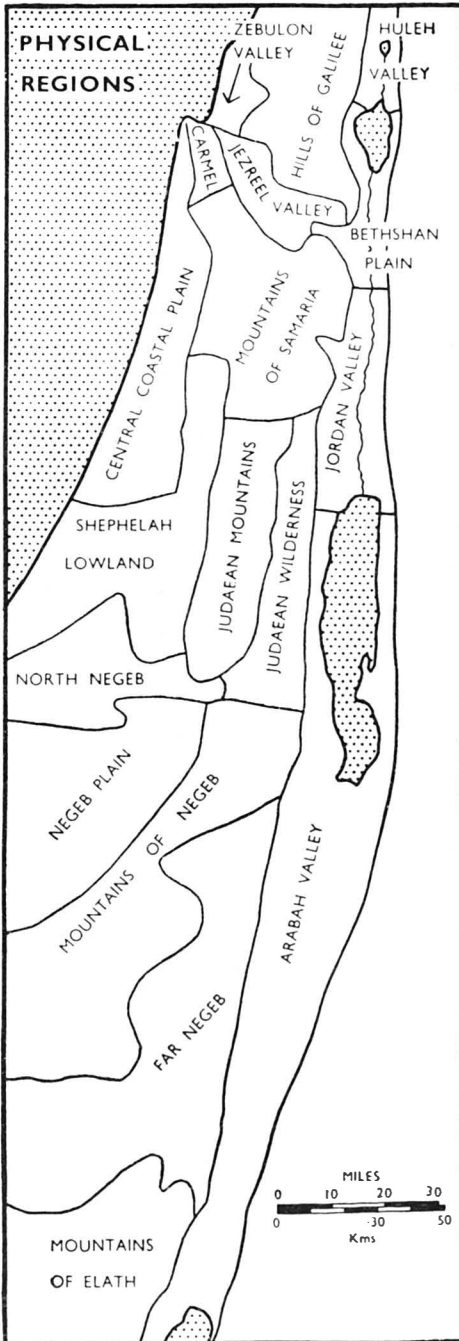

attractive (Gn. 13:10) became more desolate, probably with the advent of malaria. It has been suggested that some of the Tells were artificial mounds built deliberately above the swampy ground, though added to by subsequent settlement. But everywhere water-supply has been the decisive factor of settlement. Fortified towns and castles were built at important perennial springs such as Jericho, Beth-shan and Aphek (famous from the wars of the Israelites with the Philistines). Indeed, it is a corollary that sites with abundant springs have usually had the most continuous settlement from remote times.

Along the coastal plain S of Carmel settlement has been relatively dense since antiquity, favoured by the ease with which wells could be dug through the sandy soils to the lenticular beds of clay that hold suspended water-tables. But farther N in the Vale of Sharon and Upper Galilee, where the water-supply is abundant, relatively dense woodland made human occupancy difficult until more recent centuries. In the basins of lower Galilee and Samaria population has for long been dense, scattered in numerous villages, but S of Jerusalem village sites become fewer and more nucleated, until around Beersheba settlement has been limited to strategic fortified well-sites. In Transjordan the edge of the plateau is marked by a number of fortresses such as Petra, Bozrah (Buseira) and Tophel (Tafleth). Beyond them to the E is the narrow stretch of agricultural land with its scattered villages along which ran the King's Highway. Within these patterns of settlement dictated largely by water conditions, the strategic and most important towns have grown up at cross-roads where the proximity of some defile enabled the transverse roads to link with the main N–S highways. Such were in biblical times Beersheba, Hebron, Jerusalem, Bethel, Shechem, Samaria, Megiddo, Beth-shan and Hazor. Hence the psalmist could exclaim: 'He led them by a straight way, till they reached a city to dwell in' (Ps. 107:7).

VI. The regions of Palestine

The geographer can create as many regions as there are problems worth studying, so it is absurd to suggest that the delimitation of areas within Palestine has a permanent validity. But certain regional units have appeared again and again in the history of Palestine, and should be recognized. The broad divisions already noted are distinct: the coastal plains, the central hill lands, the Rift Valley, the plateaux of Transjordan and the desert.

The coastal plains stretch for a distance of about 200 km from the borders of Lebanon to Gaza, interrupted by Mt Carmel in the N. To the N of it, the plain of Asher runs for 40 km to the ancient Ladder of Tyre, where the Galilean hills crowd close to the coast. It played no part in the life of Israel, but to the SE of it the valley of Jezreel and plain of Esdraelon have been of major significance. Stretching for 50 km into the interior and some 20 km at its widest, this formed the main road from Egypt to Damascus and the N. Along it were situated the strategic centres of Megiddo, Jezreel and Beth-shan, famous in many of Israel's wars (Jdg. 5; 7:1; 1 Sa. 29:1; 31:12) and the apocalyptic site of the future (Rev. 16:16). S of Carmel, which shelters the small plain of Dor, is the plain of Sharon with its five great Philistine strongholds of Ekron, Ashdod, Ashkelon, Gath and Gaza.

Palestine: physical regions.

merging E into the hill lands of the Shephelah, a buffer between Israel and Philistia. These hills were once heavily wooded with sycamores (1 Ki. 10:27; 2 Ch. 1:15; 9:27) and crossed transversely by narrow valleys which witnessed the early struggles

of Israel from the times of the Judges to David, notably Aijalon (Jos. 10:10-15; 1 Sa. 14:31); Sorek (Jdg. 16), and Elah (1 Sa. 17:1-2).

The Central Hills run some 300 km from N Galilee to Sinai, made up of interlocking hills and plateaux. In the S, Judah has gently undulating folds except in the E, where the deeply dissected chalky relief of the Wilderness of Judah, or Jeshimon, descends steeply to the Rift Valley. This Judaeian plateau runs N into the hill country of Ephraim with its easy transverse passages, but to the N the hills of Samaria decrease gently from the Judaeian heights of over 1,000 m to an average of just over 300 m in the central basin, in which are situated the biblical sites of Gibeah, Shalem, Shechem and Sychar. Above it tower the heights of Ebal (945 m) and Gerizim (890 m). Together with other fertile basins, Samaria was exposed to outside influences, and its faith early corrupted. N of the plain of Esdraelon lies Galilee, divided into S or lower Galilee, which has a similar landscape to the lands of Samaria, and N or upper Galilee, where the mountains reach over 900 m. A number of basins, notably Nazareth, provide easy passage and rich cultivation between the coast and the Lake area, densely settled in our Lord's day.

Slicing across Palestine for over 100 km, the Jordan follows the great Rift Valley. Its N sector is occupied also by the lakes Huleh and Galilee, surrounded by high mountains, notably Hermon, the source of the Jordan (Dt. 3:9; 4:48). Below the basin of Huleh, the Jordan has cut through the basaltic dam that once blocked the depression in a gorge to enter the lake Tiberias or Sea of Galilee 200 m below sea-level. Beyond it the river Yarmuk adds its waters to the Jordan and the valley gradually widens S towards the Dead Sea trough. S of the cliffs of 'Ain Khaneizer commences the Arabah, stretching 160 km to the Gulf of Aqabah, a desert dominated by the great wall of the Transjordan tableland. W stretches the desolate hilly relief of the central Negeb and its steppe plains, towards Beersheba. E over the edge of the Transjordan plateaux extend a series of regions well known in Bible times: the tableland of Bashan dominated E by the great volcanic caves of Jebel Druze; Gilead situated in a huge oval dome 55 km by 40 km wide and famed for its forests (Je. 22:6; Zc. 10:10); the level steppes of Ammon and Moab; and S of the Zered valley (Dt. 2:13; Is. 15:7) the faulted and tilted block of Edom with its impregnable strongholds. Beyond to the E and the S are the deserts, tablelands of rock and sand, blasted by the hot winds. See also *JORDAN, *NEGEB, *SHARON, *ZIN. J.M.H.

PALTITE, THE

PALTITE, THE. The name given to the inhabitants of Beth-pelet, situated in the Judaean Negeb (Jos. 15:27; Ne. 11:26). Helez, one of David's 30 heroes, was a native of this town (2 Sa. 23:26). In 1 Ch. 11:27 and 27:10 he is called 'the *Pelonite'.
R.A.H.G.

PAMPHYLIA. A coastal region of S Asia Minor on the great bay of the Mare Lycium, lying between *Lycia and *Cilicia. It is mentioned in Acts 13:13; 14:24 and 15:38 in connection with Paul's first journey, a visit which Ramsay believed was cut short through illness and the enervating climate (*SPT*, pp. 89ff.). According to tradition, the area was colonized by Amphilocheus and Calchas (or Mopsus, his rival and successor) after the Trojan War. Linguistic evidence confirms a mixed settlement. The chief towns were Attaleia, Paul's probable landing-place, founded by Attalus II of Pergamum after 189 bc with Athenian colonists; Aspendus, a Persian naval base which claimed Argive foundation; Side, founded by Aeolian colonists; and *Perga. The region was under Persian rule until Alexander, after which, apart from brief occupations by Ptolemy I and Ptolemy III, it passed to the possession of the Seleucids of Syria. After the defeat of Antiochus III, C. Manlius took the region over for Rome and the main cities were associated in alliance. The Attalids at this time (189 bc) received the coastal strip, where they founded Attaleia. Many readjustments followed. From 102 bc Pamphylia was a part of the province of Cilicia, but about 44 bc was included in Asia. In 36 bc Antony made the territory over to his ally Amyntas, king of Galatia. Thanks to his timely desertion to Octavian before Actium, Amyntas retained possession until his death in battle against a highland tribe in 25 bc. From this date until AD 43 Pamphylia was part of the province of Galatia. In that year Claudius formed the province of Lycia-Pamphylia. There were later reorganizations under Galba and Vespasian. The church founded at Perga is the only one mentioned in the 1st century, but there were at least twelve foundations at the time of Diocletian's persecution in AD 304.

BIBLIOGRAPHY. A. H. M. Jones, *Cities of the Eastern Roman Provinces*², 1971, pp. 123ff.

E.M.B.

PANNAG. A Heb. word, found only in Ezk. 27:17, denoting some type of merchandise, presumably edible. AV and RV transliterated, since the meaning was unknown. Scholars and EVV have often emended the Heb., either to *dōnaḡ*, 'wax' (JB) or to *paggaḡ*, 'early figs' (RSV); but recent evidence from Hittite and Akkad. texts supports MT. 'Meal' (NEB), or some baked product, seems to be meant.

D.F.F.

PAPHOS. The name of two settlements in SW Cyprus in NT times, distinguished by scholars as Old and New Paphos. The former was a Phoenician foundation of great antiquity lying slightly inland from the coast. New Paphos grew up, after the Romans annexed the island in 58 bc, as the centre of Rom. rule, and it was here that Paul met the proconsul Sergius (Acts 13:6-7, 12) on his first missionary journey. Here, too, he had his en-

counter with Elymas the sorcerer (Acts 13:6-11). Old Paphos was the site of a famous shrine, probably of Phoenician or Syrian origin, but later devoted to the worship of Aphrodite.

PAPYRI AND OSTRACA.

I. Egyptian

a. Papyrus

(i) *Name.* The term papyrus applies to a large aquatic plant of the sedge family, to the writing material prepared from its pith, and to individual manuscripts made from this material. The origin of Gk. *papyrus* (from which come 'papyrus', 'paper') is still uncertain. Some think that it derives from an assumed *papūro* in Coptic (last stage of the ancient Egyptian language), which would mean 'belonging to the king', reflecting the fact that production of papyrus was a royal monopoly in the Graeco-Roman epoch.

(ii) *The plant and its uses.* In antiquity, the *plant *Cyperus papyrus* L. grew throughout Egypt, especially in the Delta, in marshes and lakes; but the plant is not now found in the wild state N of the Sudan, although it still grows in the marshes of Lake Huleh in Palestine and is found in Sicily. From roots in the mud, the great stems, triangular in section, grew to heights of 3 to 6 m, ending in large, open, bell-shaped flowers. (See H. Frankfort, *Birth of Civilization in the Near East*, 1951, pl. 2, and for a representation in antiquity, W. Stevenson Smith, *Art and Architecture of Ancient Egypt*, 1958, plate 129A.) The graceful form of the papyrus was a favourite motif in Egypt. art and architecture. Heb. *gōme*' (av 'bulrushes', 'rush', 'rushes') appears to signify the papyrus-plant. The biblical references to it tally well with the known nature and uses of papyrus. It indeed grew in the mire (Jb. 8:11) and fittingly symbolized luxuriant, swampy growth by contrast with the desert sands (Is. 35:7). The little basket or 'ark' in which the infant Moses was placed was of papyrus (Ex. 2:3); and in Egypt and Ethiopia papyrus vessels and skiffs were to be seen on the Nile and its marshes (Is. 18:2) as ancient pictures show (see, e.g. M. Murray, *The Splendour that was Egypt*, 1949, p. 83, pl. 19). Besides the manufacture of reed boats and baskets, papyrus was used for making ropes, sandals and some clothing, and its roots were even used as food for the poor.

(iii) *Papyrus 'paper'.* To make this, the plant-stems were stripped of their outer rinds, cut up into lengths of about 40-45 cm, and the fresh, pithy inner stem was cut into thin strips. These were laid out side by side, overlapping each other, on a hard wooden surface; more strips were similarly laid across these at right-angles; and the two layers were then welded into a whole simply by hard beating, e.g. with mallets. Trimmed and smoothed, the result was a sheet of whitish paper that was durable but yellowed with age. The side showing horizontal fibres was usually written on first (except for letters) and is called the recto; the 'back' with the vertical fibres is termed the verso. These sheets were pasted end to end, with slight overlaps, to form a papyrus roll. The standard length was twenty sheets, but this could be shortened by cutting or lengthened by pasting on more, as need arose. The longest known papyrus is the great *Papyrus Harris I*, c. 1160 bc, in the British

Museum; it is some 40 m long. The height of a papyrus varied according to the use to which it was to be put: the larger sizes (maximum, 47 cm; usually 35.5 cm and 42 cm in Dynasties 18 and 19–20) for official and business papers and accounts (with long columns of figures); and the smaller ones (about 18 cm and 21 cm, but often less) for literary compositions.

(iv) *The use of papyrus.* This was governed by definite conventions. As Egyp. script usually runs from right to left, the scribes always began at the right-hand end of a papyrus and wrote to the left—at first in vertical lines (usual until c. 1800 BC), thereafter in horizontal lines of modest length, grouped in successive ‘columns’ or ‘pages’. For scripts used, punctuation, writing equipment, manuscripts, etc., see *WRITING; *TEXTS AND VERSIONS.

Papyrus was used from the beginning of Egyp. history (c. 3000 BC) down into the early Islamic period (7th century AD and later). The oldest (blank) rolls are of Dynasty 1, the first written ones are of Dynasty 5, c. 2500 BC. Large quantities were made and used in Egypt in the 2nd and 1st millennia BC for every kind of written record; but papyrus was not cheap, and the backs and blank spaces of old rolls were often used up, or an old text washed off to make room for a new one.

Before the end of the 2nd millennium BC, papyrus was being exported extensively to Syria-Palestine and doubtless beyond. About 1075 BC Zakarbaal, the prince of Phoen. Byblos, quoted timber-prices to the Egyp. envoy Wenamun from the rolls of accounts kept by his predecessors, and in Wenamun’s part-payment for timber were included ‘500 (rolls of) finished papyrus’ (*ANET*, pp. 27a, 28a). For the use of papyrus for Heb. and Aram., and in NT times, see separate sections below. On all aspects of papyrus as a writing-medium in Egypt, see J. Černý, *Paper and Books in Ancient Egypt*, 1952. For pictures of funerary and administrative papyri respectively, see *IBA*, pp. 36–37, figs. 30–31.

b. Ostraca

The plural of *ostrakon*, a Gk. word originally meaning ‘oyster-shell’, but applied by the Greeks to the potsherds on which they recorded their votes (hence English ‘ostracize’). In Egypt this term is applied to slips of limestone or potsherds bearing ink-written inscriptions and drawings. Although such ostraca are known from most periods in Egyp. history and from various sites, the vast majority are of New Kingdom date (c. 1550–1070 BC) and come from Thebes in Upper Egypt, specifically from the Valleys of the Tombs of the Kings and the Queens and the village for the workers at these tombs (modern Deir el-Medineh). Most Egyp. ostraca are written in the cursive hieratic script; those in the more formal, pictorial hieroglyphic script are much rarer. The ostraca with drawings are often delightful, sketched by artists in their spare time. The inscribed ostraca fall into two classes: literary and non-literary. The former contain portions of Egyp. literary works (stories, poems, wisdom, hymns, etc.), written out as school exercises, test of memory, or for pleasure; these ostraca often preserve literary works (or parts of them) still unknown from any other source. Much more varied are the non-literary ostraca. These were the Egyptians’ equivalent of memo-pads, jot-

ters and scrap paper, and reflect every conceivable aspect of daily life: rosters of workmen with note of absentees, reports on work done (cf. Ex. 5:18–19), distribution of food-allowances and oil, innumerable accounts of bricks, straw, vegetables, vessels, etc., lawsuits, marriage-contracts, bills of sale and demand-notes for debts, many letters and memoranda, and much else besides. The total of this material gives a vivid insight into Egyp. daily life during and after the time of Israel’s sojourn and exodus and can provide useful background for the Exodus narratives. (*LACHISH, *SAMARIA.)

Sauneron, *Catalogue des Ostraca Hiératiques Non Littéraires de Deir el Medineh*, 1959, Introduction, pp. vi–xviii, who gives ample reference to other publications. In English, see W. C. Hayes, *The Scepter of Egypt*, 2, 1959, pp. 176–178, 390–394, 432. For pictures of typical ostraca, see Hayes, *op. cit.*, p. 177, fig. 98.

K. A. K.

II. Hebrew, Aramaic and Greek

a. Hebrew papyri

The oldest known Heb. papyrus (Mur 17) was discovered at Wadi Murabba’at by the Dead Sea in 1952. Mur 17 is a palimpsest written in palaeo-Hebrew script and dates from the late 8th or early 7th century BC. The original letter, of which a few words may still be read, was erased and a list of personal names superimposed. Most of the scrolls found at Qumran are of parchment but there are a few papyri worthy of mention. Cave 4 yielded papyrus fragments of *The Rule of the Community* and *The Thanksgiving Hymns*. Hundreds of papyrus pieces were found in Cave 6, among them fragments of the biblical books of Kings and Daniel written in a semi-cursive script. Before the Qumran discoveries the Nash Papyrus, containing parts of Dt. 5 and 6, had occupied a unique position as the oldest biblical Heb. MS extant; it is possibly to be dated as early as the 2nd century BC. Wadi Murabba’at has also produced assorted Heb. papyri from the time of the Bar Kokhba rebellion (AD 132–135). The most noteworthy finds were a couple of letters written by Bar Kokhba himself and containing his real name—Simeon Ben Kosebah.

b. Hebrew ostraca

Ostraca, being cheap and of limited use, tended to have only information of secondary importance inscribed on them. Nevertheless, ostraca bearing Heb. inscriptions have shed valuable light on the language and literature of the OT. The Samaria ostraca, discovered in the main during the Harvard excavations of 1908–10, are among the most important. They date from the time of the Jehu dynasty, possibly from the reign of Jehoahaz at the end of the 9th century. Discovered in a royal storehouse, they record information concerning the payment of oil and wine; it is possible that they refer to the produce from crown property in the vicinity of Samaria. In each case the regnal year is given and, though not uniformly, they contain many personal and place-names, the former including compounds of Yahweh, El and Baal. See *LOB*, pp. 315–327. Many ostraca inscribed in Aramaic, and some in Hebrew, have been discovered at

PAPYRI AND OSTRACA

Arad. The Hebrew-inscribed date from the late 7th century BC and concern supplies of wine, flour and bread which an official had to provide for travellers (troops?). Some smaller ostraca found in the temple ruins record names of priestly families, among them the Korahites (*bn y qrh*). The Yavneh-Yam ostraca are dated to the same era. Special interest attaches to one of this collection which preserves an agricultural worker's plea for the return of his cloak which had been removed by an overseer who wrongly accused him of laziness (*cf.* Ex. 22:26–27). Of roughly similar date is the Ophel ostrakon found in Jerusalem in the 1923–5 excavations. It contains a list of names and provenances in palaeo-Hebrew script. Probably best known of all are the Lachish ostraca, twenty-one of which were discovered on the site of the ancient city (mod. Tell ed-Duweir) in 1935 and 1938. These have a particular merit in that many of them can be dated with certainty to the year 587 BC. They are mostly letters and the name of Yaosh, military governor of Lachish, occurs as that of the addressee in some of them. The letters reflect the desperate situation in Judah as the Babylonians took city after city; there are some points of contact with the book of Jeremiah. Features of interest include the free use of the tetragrammaton and a reference to a prophet acting as postman. Some Heb.-inscribed sherds have also been discovered at Qumran, Wadi Murabba'at and Masada (where one with the name Ben Yair inscribed on it has aroused particular interest because of its probable connection with the Zealot leader Eleazar Ben Yair).

c. Aramaic papyri

Possibly the earliest extant papyrus written in Aramaic is that which was found in 1942 at Saqqarah in Egypt. It represents part of a letter from a king Adon to the pharaoh and would seem to have been written from somewhere on the Philistine or Phoenician coast. Thus the use of Aramaic in international diplomacy before the Persian era is illustrated, for the letter cannot have been written after the time of Nebuchadrezzar (d. 562 BC). But by far the most significant corpus of Aram. papyri is that which comes from the island of Elephantine in Egypt. Here and at Memphis and Hermopolis a large number of papyri written by Jews in the late 6th and 5th centuries BC have been preserved. Legal documents and private letters are well represented, and there is also a fragment of the oldest known version of the *Sayings of Ahikar*. The type of Aramaic is, as we should expect, rather like that in the biblical Ezra. These Jewish colonists had their own temple (despite Dt. 12:5–7) and went so far as to compound the name of the God of Israel with Canaanite divine names (*e.g.* Anath-Yahu, Anath-Bethel). Representing the 4th century are the papyri from Wadi Daliyeh, 19 km NW of Jericho. These were discovered in a cave and it is surmised that they were hidden there by refugees from Samaria where they were actually written. They are legal and administrative documents which were drawn up c. 375–365 BC; they may have been abandoned by people who had fled before Alexander the Great. Some Aram. papyri are included in the finds at Qumran (*e.g.* one containing OT genealogies, from Cave 4) and at Wadi Murabba'at (*e.g.* deeds of sale). Some Nabataean fragments have also been recovered in the vicinity of Wadi Murabba'at.

d. Aramaic ostraca

An early example is the letter on a potsherd found at Asshur and probably written in the 7th century BC. Aram. ostraca at Elephantine (*vid. sup.*) are mainly tax receipts. Fragments from the Persian period found at Tell al-Khalayfa evidently served as receipts for wine. Scores of Aram. sherds are among the finds at Arad. A few have turned up at Qumran and Wadi Murabba'at but they are of little significance. A fragment of a letter(?) at Wadi Murabba'at is dated to the early 1st century BC.

e. Greek Old Testament papyri

A considerable number are extant, though invariably they are in fragmentary condition. Perhaps the oldest is the John Rylands Pap. Gk. 458 containing parts of Dt. 23–28 and dating from the 2nd century BC. Pap. Fouad 266 is almost as old and preserves fragments of Gn. 7 and 38 and Dt. 17–33. The Chester Beatty Gk. OT papyri include parts of various OT books and range in date from the 2nd to the 4th centuries AD. From the 3rd century AD comes the Freer Gk. ms V, a papyrus codex of the Minor Prophets. Qumran Cave 4 has yielded fragments of Lv. 2–5, while in Cave 7 fragments containing Ex. 28:4–7 and the *Epistle of Jeremiah* 43–44 have been found. The Qumran finds may be given approx. dates in the 1st century BC.

III. New Testament

a. Introduction

The discovery of the Gk. papyri in Egypt during the last century has had important results for NT studies. In the initial finds biblical papyri were rare, but with the commencement of systematic excavations by Grenfell and Hunt in 1896 large quantities of papyri came to light, including either portions of the NT books themselves or documents of the early centuries which helped our understanding of them. The most fruitful sites were in the Fayyûm and to the S, particularly at Oxyrhynchus, Hermopolis, Tebnyis, Aphroditopolis and Panopolis.

It had long been assumed by many scholars that NT Greek was *sui generis*, 'a language of the Holy Ghost', but there were some, such as Masson, Lightfoot and Farrar, who anticipated the fact soon to be proved, that the NT writers used the common tongue of the Gk. world in the 1st century AD, approximating more often to the spoken than to the literary form of *koinē* Greek. Thanks to the papyri, we now have illustrations of the contemporary 'secular' use of the vast majority of NT words. It is still true, in a restricted sense, that the language is *sui generis*, because of the frequent substratum of Hebrew and Aramaic. 'The tension between the Jewish heritage and the Greek world vitally affects the language of the New Testament' (Hoskyns and Davey, *The Riddle of the New Tes-*

tament, 1931, p. 20). Another tendency corrected by the study of the papyri was the inclination of scholars to judge the NT by Attic standards of grammar and syntax, and also of literary taste. It was now made doubly clear that the *koïnē* of the first Christian centuries was in a comparatively rapid state of evolution, which culminated in Byzantine and finally in modern Greek, and must therefore be evaluated in the light of this. It would be wrong to claim too much for these advances, but they have provided an indispensable aid to the study of the NT text, language and literature, and thus for its theological interpretation. In his Schweich Lecture of 1946 (published in 1953 as *The Text of the Epistles*) G. Zuntz makes a plea for the active conjunction of these two fields of study. 'The theologian who studies the New Testament must assume the quality also of the philologist' (p. 3). Perhaps the finest work exemplifying this is *TDNT*.

The original documents of the NT were all written on papyrus rolls (apart from one or two of the shortest Epistles, which may have been written on individual sheets of papyrus), and it may here be mentioned that the transmission of the text played an important part in the development of new techniques. In the rest of the Roman world papyrus codices did not begin to replace rolls until the 3rd century AD, but from Egypt we have evidence that the Christian communities developed the codex form considerably earlier. Ten Bible fragments have been found dated to the 2nd and early 3rd centuries, and of 111 fragments of the 3rd and 4th only twelve were in the form of papyrus rolls. The text of Romans would have required a roll of 4 m, Mark 6 m, Acts about 10 m (cf. 2 Tim. 4:13 referring to rolls and the parchment wrappings which protected them). But as the need arose for copies of the Gospels and Epistles in larger bulk, the use of codices naturally developed, i.e. leaves of papyrus folded and arranged in quires, much as in modern books. A single codex could now contain the four Gospels and Acts, or the whole of Paul's Epistles.

b. List of the most notable papyri

The latest tabulation, edited by K. Aland (1976), contains more than 241 entries, of which 68 are listed in the critical editions of the NT text. Many are comparatively small, but the importance of the more substantial texts is great.

P¹ (3rd or 4th cent.) contains Mt. 1:1-9, 12-20; P⁴ (4th cent.) Lk. 1:74-80; 6:1-4; P⁵ (3rd cent.) Jn. 1:23-31, 33-41 and 20:11-17, 19-25; it comprises the two leaves of a single quire, and illustrates the family from which the Codices Sinaiticus and Vaticanus later derived. P⁸ (4th cent.) contains Acts 4:31-37; 5:2-9; 6:1-6, 8-15; P¹¹ (3rd cent.), written on the back of an Epitome of Livy) Heb. 2:14-5:5; 10:8-22; 10:29-11:13; 11:28-12:17; P²⁰ (3rd cent.) Jas. 2:19-3:9; P²² (3rd cent.) Jn. 15:25-16:2, 21-32; P²⁷ (3rd cent.) Rom. 8:12-22, 24-27, 33-9:3; 9:5-9; P¹⁷ (3rd cent.) contains Mt. 26:19-52; P¹⁸ (4th cent.) Acts 18:27-19:6; 19:12-16.

Of the Chester Beatty Papyri (P⁴⁵, 46, 47), Nos. 1 and 2 are of particular interest. P⁴⁵ (early 3rd cent.) contains portions of 30 leaves out of a codex of 220 including the Gospels and Acts; it has parts of Matthew, Mark, Luke, John (17 leaves) and Acts (13 leaves). P⁴⁶ (also early 3rd cent.) contains 86 leaves, found over a period in three groups, and has Romans, Hebrews, 1, 2 Corinthians, Galatians, Ephesians, Philippians, Colossians, 1, 2 Thes-

salonians, except for small gaps. It is notable that the concluding doxology of Romans here occurs at the end of ch. 15. P⁴⁷ (3rd cent., 10 leaves) has Rev. 9:10-17:2; P⁴⁸ (3rd cent., similar to P³⁸) has Acts 23:11-16, 24-29. P⁵² (the famous 'John Rylands' fragment, 9 cm by 6 cm) was identified by C. H. Roberts in 1935 as Jn. 18:31-33, 37-38 and belonging to the early 2nd cent. P⁶⁴ (2nd cent.) contains portions of Mt. 26; P⁶⁶ (c. AD 200), the 'Bodmer papyrus II', has 108 leaves in 5 quires, each 16 cm by 14 cm, and contains Jn. 1:1-14:26.

The textual relation of these and many lesser papyri to the most important vellum codices and early versions of the NT has been the subject of close study.

c. Effect on the textual study of the New Testament

To describe this, a brief sketch of the history of the Gk. text up to the papyrus discoveries is necessary. The AV of 1611 was based on the Gk. NT edition prepared by Stephanus (Robert Etienne) in 1550, the 'Textus Receptus', which itself drew largely on the edition of Erasmus published in 1516. Stephanus had made use of only fifteen mss, all of them of late date, and representing the Byzantine or Eastern tradition of the text. The event which stimulated a serious search for all available mss was the appearance in England in 1627 of the Codex Alexandrinus, a vellum codex of the 5th century AD. But it was not until the discovery of Codex Sinaiticus and the appearance of Tischendorf's edition of Vaticanus, in 1859 and 1867 respectively, that any great advance in textual study was possible. This came just as scholars began to realize the potential wealth of Egypt in papyri. Westcott and Hort published a revised Gk. text in 1881, which was used extensively in the Eng. RV of that year. These scholars postulated four main families of texts, Syrian, Neutral, Alexandrian and Western, and themselves gave most weight to the Neutral family, consisting of the Codices Vaticanus and Sinaiticus, the Coptic Versions and kindred mss.

NT papyri have played a prominent part in the extension and modification of their results. Further study convinced scholars that Westcott and Hort's groups had been distinguished too sharply from each other; and B. H. Streeter, using the minuscule groups of mss isolated by Ferrar and Abbott, and by K. Lake, together with the Koridethi ms (9th cent.) demonstrated the close relation these all bore to Origen's text of the NT, and postulated at any rate for the Gospel of Mark the 'Caesarean' family (Origen having spent his latter years at Caesarea). The text of the Gospels in the Freer mss (the 'Washington Gospels') and the Chester Beatty papyri further showed that the 'Caesarean' family of texts probably originated in Egypt, and went from Alexandria to Caesarea with Origen. The Chester Beatty group, especially P⁴⁶, have been of immense value. They prove that the codex was early in use for collections of the Gospels and Pauline Epistles, the circulation of which greatly assisted towards the formation of the canon of the NT. Their firm dating to the 3rd century AD means that we now possess a line of textual evidence going beyond the great vellum codices of the 4th and 5th centuries, upon which scholars had depended so heavily, and earlier than the NT collections which Eusebius was ordered to produce for use in the churches, following the Edict of Milan in AD 313. Further valuable help has been provided by the Bodmer papyri, especially P⁶⁶, a late 2nd-

PAPYRI AND OSTRACA

century codex of John. Still earlier fragments, in particular the 'John Rylands' fragment of John's Gospel, take us into the first half of the 2nd century, *i.e.* to within a single generation of the last writings of the NT, the Johannine Corpus.

The general picture of the transmission of the text which emerges is that of many groups or families arising, as copies were made for public and private use, sometimes by trained scribes, but more often by untrained Christians. The need for a standard text had not yet arisen, and local attempts at the collation of different texts were never very widely used. We must also assume that in the persecutions, *e.g.* that of Decius in AD 250, many copies of the NT perished. The papyri have helped to reveal the complexity of this early stage of transmission; if we are still far from fulfilling Bentley's aim to make the text so undoubtedly true 'ut e manibus apostolorum vix purior et sincerior evaserit' ('that it could scarcely have come from the hands of the apostles themselves in a form purer or more free from corruption'), at least the story is one of continuous advance. (*TEXTS AND VERSIONS (NT).)

d. Effect on the study of New Testament language and literature

As noted above, the Gk. of the NT has affinities with both the literary and the non-literary forms of the *koinē*, principally the latter, which is now known so fully from papyrus documents of every type from Graeco-Roman Egypt—Imperial rescripts, judicial proceedings, tax and census papers, marriage contracts, birth, death and divorce notices, private letters, business accounts, and a host of others. There are without doubt many Semitisms in the NT, all the writers except one being Jewish, but their estimated number has been greatly reduced by the discovery of parallel expressions in the papyri. 'Even Mark's Semitisms are hardly ever barbarous Greek, though his extremely vernacular language makes us think so, until we read the less educated papyri' (Howard). An example is the expression *blepein apo* at Mk. 8:15. Many new word formations of NT Greek have been paralleled, *e.g.* substantives ending in *-mos*, *-ma*, *-sis*, *-ia*; adjectives ending in *-ios*, new compound adjectives and adverbs, new words with the privative *a-* prefix; foreign words, technical words used of the Roman army and administration. Problems of orthography have been settled, *e.g.* *genēma* (Mt. 26:29), *tameion* (Lk. 12:3), *sphyris* (Mt. 15:37); and of morphology, *e.g.* *gegonan* (Rom. 16:7), *elthātō* (Mt. 10:13), *ēlthan* (Mk. 3:8); and of syntax, *e.g.* the consecutive use of *hina* clauses (as in Jn. 17:3), the interchangeability of *eis* and *en* (as in Jn. 1:18; Mt. 18:19).

NT vocabulary was abundantly illustrated. Instead of the numerous *voces biblicae* of the older scholars, it became possible to show, as did Deissmann and Bauer, that only about 1 per cent of the vocabulary, about fifty words, was in fact peculiar to it. A better sense could be given to words like *hēlikia* (*e.g.* Lk. 2:52 = 'age'), *meris* (Acts 16:12 = 'district'), *anastatoō* (lit. 'drive out of hearth and home', used metaphorically in Acts 17:6 and Gal. 5:12), *hypostasis* (Heb. 11:1 = 'title-deeds', *rsv* 'assurance'), *parousia* (*passim*; = visit of royalty or other notable person), *arrhabōn* (*e.g.* Eph. 1:14 = 'deposit paid', *rsv* 'guarantee'), *leitourgia* (2 Cor. 9:12; of both private and public service). The common terms *adelphoi* and *presbyteroi* were

frequently illustrated, from social and religious fraternities and from village and temple officials.

At the time the NT was written a revised Atticism was popular, an essentially artificial movement which affected to recognize only 5th-century Attic Greek as the norm. But there were notable secular writers, such as Plutarch, Strabo, Diodorus Siculus and Epictetus, who shunned Atticism, and the NT itself represents a revolt against it by its use of the vernacular tongue. '*Koinē* is not, as it were, pure gold accidentally contaminated, but something more like a new and serviceable alloy' (Moule). The LXX had already set a precedent for such a use of popular Greek, and the writers, all of whom might have written in Aramaic, wrote in Greek from deliberate choice. The literary standard of their work of course varies enormously. 2 Peter most nearly approaches a fully literary level, and Luke and the author of Hebrews are also conscious stylists. But Luke and Paul, though obviously capable of speaking and writing Greek in its classical form (*cf.* the prefaces to Luke and Acts, and Acts 17:22ff.) did not hesitate to use highly colloquial forms. The extreme case is the Revelation, written in laboured and sometimes barbarous Greek, which clearly reflects the influence of Semitic terms and modes of thought. But it still remains true that 'the Greek in which the author expresses himself was more like the Greek of the Egyptian papyri' (A. Robinson). (*LANGUAGE OF THE NEW TESTAMENT.)

e. Ostraca

We have noted already that ostraca or 'potsherds' were used extensively in antiquity as the cheapest possible writing material. Their seeming insignificance (*cf.* Is. 45:9) caused them to be neglected as being of any value for the study of *koinē* Greek. As we might expect, among the large numbers found in Egypt, covering a period of nearly 1,000 years, the vast majority are documents, or fragments of them, belonging to the life of the lower classes. A few have been found bearing short literary texts, no doubt for use in schools, and we have ostraca with short passages of the NT inscribed on them (verses from Mk. 9 and Lk. 22) and one of the 6th century AD with a hymn to Mary influenced by Lk. 1. But more comprise brief letters, contracts, and, above all, tax receipts. Many languages are used, including Greek, Latin, Aramaic, Coptic and Old Egyptian.

Occasionally a NT expression is illuminated. Several ostraca give details of receipts dated to the day called *Sebastē*, meaning 'Emperor's Day', and perhaps parallel to the use by Christians of *kyriakē* as 'the *Lord's day'. The title *Kyrios*, 'Lord', appears on ostraca referring to the emperors Nero and Vespasian (*cf.* Jude 4). Receipts from Thebes dated to the 1st century have thrown light on the NT use of *logeia* (*e.g.* 1 Cor. 16:1–2 = 'collections') and also on the verb *apechō* signifying the receipt of a payment (*cf.* Mt. 6:2 = 'they have received their reward in full'). The common phrase *eis to onoma* ('in the name') is shown by ostraca to have been a regular legal formula, of the authority under which something is done. Ostraca thus supplement, on a comparatively minor scale, the evidence of the papyri as to NT language and idiom.

f. Apocryphal and non-canonical papyri

These deserve mention because of the assistance they have given to the understanding of the form

and content of NT writings. Most notable are the *Logia* or Sayings of Jesus. The first of these (found at Oxyrhynchus in 1896 and 1897) was the leaf of a codex dated to the 3rd century, containing sayings some of which were familiar, others of a more mystical type; the second, of the late 2nd century, had the sayings written on the back of a roll about land surveys. A third contained fragments of a non-canonical Gospel, and another of this type was discovered in 1934; it comprises fragments of three leaves of a codex, assigned to c. AD 150, and narrates four incidents from Christ's life, similar to those in the Gospels. Then, among thirteen papyrus rolls found near Nag Hammadi in 1946 was the *Gospel of Thomas*, an important collection of Sayings in which Gnostic influence mingles with the Synoptic, Johannine and other traditions, evidently a Coptic version of the work of which the Oxyrhynchus *Logia* are fragments.

Several apocryphal works have been recovered in whole or in part. The Chester Beatty collection includes fourteen leaves of the *Book of Enoch*, from a 4th-century codex, and part of a homily by Melito of Sardis on the passion. One papyrus leaf of Gnostic origin has come to light (early 3rd century), out of the *Gospel of Mary*. At Akhmim fragments were found of the *Gospel* and *Apocalypse of Peter* (probably written in the 2nd century). The former has Docetic tendencies, and the latter is much inferior to the Revelation of John. In the Amherst collection is the major portion of the *Ascension of Isaiah*, and in the Hamburg State Library are eleven leaves of the *Acts of Paul*, a late 2nd-century 'religious romance'. Finally, the Oxyrhynchus papyri have provided some of the Gk. text of the well-known *Shepherd of Hermas*. This work later appears in full in the Codex Sinaiticus. (*CANON OF THE NEW TESTAMENT.)

B.F.H.

PARABLE.

I. Parables and allegories

'Parable' is ultimately derived from Gk. *parabolē*, literally 'putting things side by side'. Etymologically it is thus close to 'allegory', which by derivation means 'saying things in a different way'. Both parables and allegories have usually been regarded as forms of teaching which present the listener with interesting illustrations from which can be drawn moral and religious truths; 'parable' is the somewhat protracted simile or short descriptive story, usually designed to inculcate a single truth or answer a single question, while 'allegory' denotes the more elaborate tale in which all or most of the details have their counterparts in the application. Since 'truth embodied in a tale shall enter in at lowly doors', the value of this method of instruction is obvious.

The line between parables and allegories is obviously a fluid one, and both forms are found in the Gospels. There is, however, a more basic difference than that of amount of detail present. While the developed allegory is essentially illustrative, so that one might almost say that the details of the story have been derived from the application, many of the parables of Jesus are not merely illustrations of general principles; rather they embody messages which cannot be conveyed in any other way. The parables are the appropriate form of communication for bringing to men the message of the kingdom, since their function is to jolt them into seeing things in a new way. They are means of enlightenment and persuasion, intended to bring the hearers to the point of decision. Jesus, as it were, stands where his hearers stand, and uses imagery familiar to them to bring new and unfamiliar insights to them. Just as a lover finds himself restricted by the language of prose and must resort to poetry to express his feelings, so Jesus expresses the message of the kingdom in the appropriate forms of language.

II. The interpretation of the parables

In the NT the actual word 'parable' is used with the same broad variety of meaning as Heb. *māsāl* to refer to almost any kind of non-literal utterance. What we should normally call a *proverb can be termed a parable (Lk. 4:23, Gk.; rsv has 'proverb'). The 'parable' in Mt. 15:15 has almost the nature of a conundrum. The simple illustration, that leaves on a tree are signs of the approach of summer, is a 'parable' (Mk. 13:28). The more elaborate comparison between children at play and the reaction of Jesus' contemporaries to John the Baptist and himself is usually spoken of as 'the parable of the children's game' (Lk. 7:31f.). On the other hand, the parables of the sower and the tares are both given detailed allegorical interpretations (Mt. 13:18–23, 36–43), and the parables of the drag-net (Mt. 13:47–50), the wicked husbandmen (Mk. 12:1–12), the marriage feast (Mt. 22:1–14) and the great supper (Lk. 14:16–24) obviously contain details with allegorical significance.

Christian preachers in all ages have striven, for homiletic purposes, to express their message afresh for their own audiences. This is obviously an entirely legitimate procedure; it is justified by the nature of the parables themselves as art-forms and it is already to be seen in the NT itself (cf. perhaps Paul's use of the 'sower' motif in Col. 1:6). Unfortunately a tendency developed to allegorize

PARABLE

small details in the parables so as to teach truths not in the least obvious in the stories themselves, and irrelevant to the context in which they are found. As a result, the inevitable critical reaction set in. Scholars, such as A. Jülicher, asserted that the parables were intended to illustrate one truth only; and they regarded the allegorical interpretations of the parables of the sower and the tares as early examples of the dangerous process of allegorization which had done so much harm in the Christian church. But it is in reality impossible to draw a clear-cut distinction between parable and allegory in the stories told by Jesus; some of his stories were clearly intended to illustrate *several* lessons, as in the parable of the prodigal son, where stress is laid on the joy which God as Father has in forgiving his children, the nature of repentance, and the sin of jealousy and self-righteousness (Lk. 15:11–32).

It was the mistake of Jülicher to reduce the messages of the parables to moral platitudes. More recent scholars have rightly recognized that they formed part of Jesus' proclamation of the kingdom of God. In an effort to define more precisely their meaning, J. Jeremias and other scholars have insisted that the parables must be understood in their original historical settings within the ministry and teaching of Jesus. In some cases, according to Jeremias, the parables have been re-worded by those who transmitted them in the early church in order to bring out their abiding significance for fresh generations of hearers; in order to hear them again in their pristine freshness as they fell from the lips of Jesus we must attempt to remove any secondary elements which they have acquired and free the original, comparatively simple lessons taught by Jesus from the more elaborate meanings added by early Christian teachers. While some valuable light can be shed on the parables in this way, such analysis of primary and secondary elements tends to be subjective. It is certainly the case that the Evangelists did not always know the occasion on which particular parable was first spoken or the persons to whom it was originally addressed. In the case of the parables of the good Samaritan (Lk. 10:25), the two debtors (Lk. 7:41), the children's game (Lk. 7:31f.) and the pounds (Lk. 19:11), the context is given and provides a clue to the interpretation. Often, however, it would seem that the stories of Jesus were remembered long after the circumstances that gave rise to them were forgotten; and the Evangelists have fitted them into their narratives in suitable places, sometimes suggesting the original motive for their utterance (Lk. 18:9). On occasion collections of parables, detached from their original contexts, were made (Mt. 13).

Recent scholars have claimed that the parables constitute an art-form whose interpretation is not entirely dependent on a reconstruction of their original content and form; as parables, the stories told by Jesus are capable of showing fresh facets of meaning. It is clear, however, that exposition of the parables for today must be based on as careful an understanding of what Jesus meant by the parables as is possible; otherwise we fall back into the error of regarding them as illustrations of general truths.

The study of the parables with the aid of insights from modern linguistics and semantics has shown that they are not simply ways of conveying information in an attractive form. They have a variety of logical forms and functions. Very often their aim is to jolt the audience into seeing things from a new point of view and to be the actual means of

bringing them into a new situation. The parables were meant to force people to *decide* about their attitude to Jesus and his message and thus to bring them into a new relationship with him. They have been described (by E. Fuchs) as 'language-events': *i.e.* they are the form which the kingdom of God takes in the sphere of language. Through the parables the kingly rule of God comes to men with its promises, judgments, demands and gifts.

It is on these points that interpretation of the parables must concentrate. We should not expect to find the whole of the gospel in any given parable: 'It is, for example, misleading to say that the parable of the prodigal son contains "the gospel within the Gospels" and to deduce from it that no doctrine of atonement is vital to Christianity; or to suppose from the story of the good Samaritan that practical service to our fellow men is the be-all and end-all of Christianity' (R. V. G. Tasker, *The Nature and Purpose of the Gospels*, 1957, pp. 57f.). Nor should we attempt to bring ethical and economic considerations to bear upon the interpretation of the parables when these are in fact irrelevant. The parable of the unjust steward (Lk. 16:1–9) teaches that men must prepare themselves for the future; but the morality of the steward (if he was in fact acting immorally—see J. D. M. Derrett, cited below) has no bearing on this lesson. It is futile to suggest that the parable of the labourers in the vineyard (Mt. 20:1–16) is meant to throw light on the problem of wages; it illustrates the goodness of God, who deals with men generously and not strictly in accordance with their merits.

III. Characteristics of the parables

Jesus took the illustrations for his parables sometimes from nature, as in the various parables about seeds and their growth (Mt. 13:24–30; Mk. 4:1–9, 26–29, 30–32); sometimes from familiar customs and incidents of everyday life, as in the parables of the leaven (Mt. 13:33), the lost sheep and the lost coin (Lk. 15:3–10), the importunate man (Lk. 11:5–8) and the ten virgins (Mt. 25:1–13); sometimes from recent events (Lk. 19:14); and sometimes from what might be regarded as occasional happenings or not improbable contingencies, as in the parables of the unjust judge (Lk. 18:2–8), the unjust steward (Lk. 16:1–9) and the prodigal son (Lk. 15:11–32). The style varies from the brief simile or metaphor (Mk. 2:21f.; 3:23) to the description of a typical event or a full-scale short story of a particular happening.

Sometimes the lesson of a parable is quite obvious from the story itself, as in the story of the rich fool, where the rich man dies at the very moment when he has completed his preparations to retire in security and comfort (Lk. 12:16–21), but even here the story is 'capped' with the dictum: 'So is he who lays up treasure for himself, and is not rich toward God'. On other occasions the point is elicited by means of a question, *e.g.* 'Now which of them will love him more?' (Lk. 7:42). A parable itself may be told in the form of a question which invites the hearer to think how he would act, and then to make the application (Lk. 11:5–8; 14:28–32). Jesus may draw out the point himself, either at the conclusion of a story (*e.g.* Mt. 18:23) or in response to a subsequent request for elucidation (*e.g.* Mt. 15:15). But more often the story is told without additions, and the hearers are left to draw their own deductions from it. Thus in Mk. 12:12 it is clear that the religious leaders knew that Jesus had

spoken the parable of the wicked husbandmen against them.

IV. The kingdom of God

Many of the parables of Jesus are specifically related to the *kingdom of God (e.g. Mk. 4:26, 30), and in general the parables are related to its nature, its coming, its value, its growth, the sacrifices it calls for, and so on. Very naturally the interpretation of the parables is dependent on the view of the kingdom held by individual interpreters, and vice versa. Theologians of the 'thoroughgoing' school of eschatology, such as A. Schweitzer, who believed that Jesus envisaged the coming of the kingdom of God as a supernatural event which would take place suddenly and catastrophically in the near future, found here the clue to the meaning of the parables of the kingdom. They referred to the imminent crisis prophesied by Jesus. Even parables which implied growth or progress were regarded in this way. It was, for example, in the suddenness of the rising of leaven, not in its slow working, that the meaning of the parable was to be found (Mt. 13:33). Theologians of the school of 'realised' eschatology, such as C. H. Dodd, who argued that the kingdom had fully arrived in the ministry of Jesus, interpreted the parables in terms of fulfilment. The harvest prepared for in past ages had already come; the mustard seed planted long ago had now become a tree (Mk. 4:26-32).

Both of these interpretations are one-sided and fail to do justice to the undoubted elements of future hope (Mk. 13:28-37) and present fulfilment (Mt. 9:37f.; Jn. 4:35) in the teaching of Jesus. While Jesus regarded the kingdom or kingship of God as present indeed in his own words and actions, he also anticipated a period, the length of which he did not know (Mk. 13:32), during which that kingship would be a reality in the society of his followers who would constitute his world-wide church, and he predicted that the kingdom would not come in its fullness until he himself came as the Son of man in glory. The contrast between the apparent lack of response with which his teaching was at first received and the final outcome of it is suggested in the parables recorded in Mk. 4. Many of the parables are concerned with the grace shown by God through Jesus in the present time and indicate that the new age has dawned. Others are concerned with how men are to live in the light of the kingdom until its final consummation: they are to be persistent in prayer, to forgive others, to serve their neighbours, to use the gifts God has given them, to be free from covetousness, to remain alert, to be faithful stewards, and to remember that their final judgment is being determined by their present conduct.

V. The purpose of the parables

Some have found Mk. 4:10-12 very difficult to understand, for it seems to suggest that Jesus' purpose in the parables was not to enlighten the unenlightened, but that the unbeliever might become hardened in his unbelief. It is possible, however, that what seems to be a clause of purpose in Mk. 4:12 is in fact a clause of consequence (so Mt. 13:13). The parables of Jesus may have the effect of hardening the unbeliever, just as Isaiah prophesied with regard to the effects of preaching the Word of God. The truth is that Jesus' parables are unique. The parables of other teachers can to some extent be separated from the teachers themselves, but

Jesus and his parables are inseparable. To fail to understand *him* is to fail to understand his parables. 'For those outside everything is in parables' (Mk. 4:11); the *whole* of Jesus' ministry, not merely the parables, remains on the level of earthly stories and portents devoid of any deeper significance. Here 'parables' has virtually come to mean 'riddles'. It is, therefore, possible for men to decline the invitation to understanding and commitment found in the parables, and in them Isaiah's prophecy (Is. 6:9f.) is fulfilled (cf. Jn. 12:40 where the same prophecy is cited with reference to the disbelief of the Jews in the face of Jesus' mighty works).

VI. Parables in John's Gospel

In Jn. 10:6 the word *paroimia* (a variant translation of *māsāl*, usually rendered 'proverb', e.g. Pr. 1:1) is used to describe the allegory of the true and false shepherds. In Jn. 16:25 the same word is closer to its OT sense of a difficult saying which needs further explanation. The Gospel of John is apparently lacking in parables of the kind found in the other Gospels, but C. H. Dodd and A. M. Hunter have drawn attention to a number of brief parables which lie almost hidden in this Gospel (Jn. 3:8, 29; 4:35-38; 5:19f.; 8:35; 10:1-5; 11:9f.; 12:24, 35f.; 16:21). Nor should we overlook the many 'figurative' descriptions which Jesus uses of himself in this Gospel, e.g. 'the good shepherd', 'the true vine', 'the door', 'the light of the world', and 'the way, and the truth, and the life'.

R. V. G. T.

I. H. M.

PARADISE. Paradise is a loan-word from ancient Iranian (*pairidaēza*-) and means a garden with a wall. The Gk. word *paradeisos* is used for the first time by Xenophon for the gardens of the Persian kings. LXX translates *gan 'ēden* of Gn. 2:8 by *paradeisos*.

a. In the Old Testament

The word paradise (Heb. *pardēs*) appears in Ne. 2:8; Ec. 2:5; Ct. 4:13. rsv renders it by 'king's forest' in Ne., 'park' in Ec. and 'orchard' in Ct. The actual word is thus nowhere used in the OT in an eschatological sense, which meaning developed in the later Jewish world. The following trends can be discerned. The word paradise (Aram. *pardēsā*) was used to give expression to the meaning of primeval times (German *Urzeit*) and then expanded to include fantastic speculations on the glory and bliss of those times. This was connected with the

PARADISE

expectations of a wonderful Messianic time in the future. This coming age of glory would be identical with the garden of Eden of ancient times. The Jews believed also that paradise was present in their own time, but concealed. This concealed paradise was the place to which the souls of the Patriarchs, the chosen and the righteous people, were taken. The ancient, future and present paradise were regarded as being identical.

b. In the New Testament

The word *paradise* (Gk. *paradeisos*) occurs in only three instances in the NT (Lk. 23:43; 2 Cor. 12:3; Rev. 2:7). The context shows that the predominating sense is that of the later development of the word. In Lk. 23:43 the word 'paradise' is used by Jesus for the place where souls go immediately after death, cf. the concealed paradise in later Jewish thought. The same idea is also present in the parable of the rich man and Lazarus (Lk. 16:19-31).

In 2 Cor. 12:2-4 Paul wrote in the third person of his experience of being caught up into paradise where he heard unspeakable words (Gk. *arrhēta rhēmata*). In this case paradise is the 'third *heaven' with its glory, perhaps the same as in Lk. 23. The only place where paradise is used in an eschatological sense is in Rev. 2:7. The promise is made by Christ that he will give paradise as a gift to the one who overcomes. The present paradise will come in its full glory with the final consummation. The idea of a garden of God in the world to come is strongly emphasized in the last chapters of Revelation. The symbols of the tree of life, of life-giving water, and of the twelve kinds of fruit are all witnesses to the glory of the coming paradise (Rev. 22).

F.C.F.

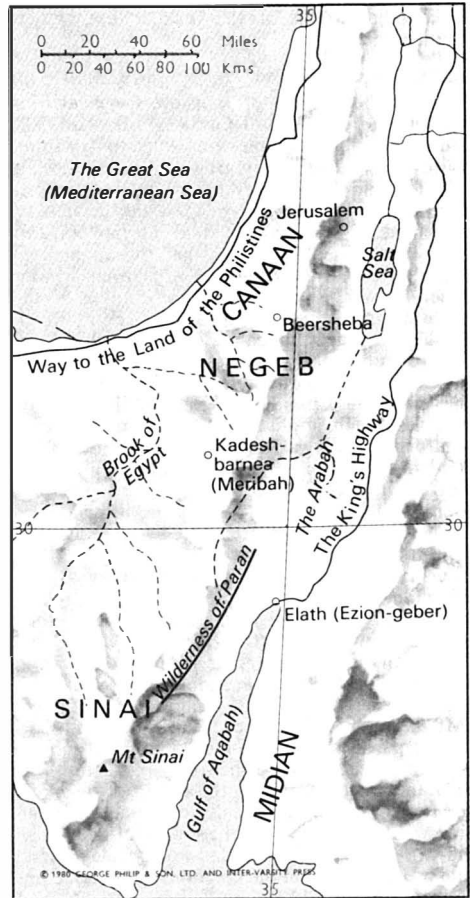

PARAN. A wilderness situated in the E central region of the Sinai peninsula, NE from the traditional Sinai and SSE of Kadesh, with the Arabah and the Gulf of Aqabah as its E border. It was to this wilderness that Hagar and Ishmael went after their expulsion from Abraham's household (Gn. 21:21) It was crossed by the Israelites following their Exodus from Egypt (Nu. 10:12; 12:16), and from here Moses despatched men to spy out the land of Canaan (Nu. 13:3, 26). The wilderness was also traversed by Hadad the Edomite on his flight to Egypt (1 Ki. 11:18).

1 Sa. 25:1 records that David went to the wilderness of Paran on the death of the prophet Samuel, but in this instance we may read with the Greek 'wilderness of Maon'.

El-paran, mentioned in Gn. 14:6 as on the border of the wilderness, may have been an ancient name for Elath. Mt Paran of the Song of Moses (Dt. 33:2) and of Hab. 3:3 was possibly a prominent peak in the mountain range on the W shore of the Gulf of Aqabah. (*ZIN.)

R.A.H.G.

PARBAR. A room or partly-roofed gateway or courtyard building to W of the Temple where gatekeepers were stationed (1 Ch. 26:18), perhaps used for disposal of sacrificial waste. It may correspond with the 'building' seen by Ezekiel (41:12) and with the word in 2 Ki. 23:11 which has been associated with Pers. *parwār* ('having light'; LXX *pharoureim*). The location of Nathan-melek's house is given as 'in *parwārim*'. RV 'precincts', AV

The location of the wilderness of Paran.

'suburbs', follow Targ. and Mishnah, for the city suburbs contained 'summer' or veranda-houses.

The precise meaning of the non-Heb. word is uncertain. It has been associated with an Aram.-Lydian *parbar* which describes an open anteroom of a tomb at Sardis. The suggested emendation to *p'rādīm* ('who was over the mules') and any link with Iranian *frabada* remain unsupported.

D.J.W.

PARTHIANS. Parthia, a district SE of the Caspian Sea, was part of the Persian empire conquered by Alexander the Great. In the middle of the 3rd century BC Arsaces led the Parthians in revolt against their Seleucid (Macedonian) rulers, and his successors eventually extended their empire from the Euphrates to the Indus. Their exclusive use of cavalry-bowmen made them a formidable enemy, as the Romans discovered to their cost. In the 1st century AD the Parthians changed their capital from Ecbatana to Ctesiphon and sought to revive the Iranian elements of their civilization at the expense of the Greek.

The Parthians were governed by a land-owning aristocracy, and controlled the lucrative trade with the Far East. Their own religion was Iranian Maz-

daism, but they were generally tolerant of other peoples' religions.

Parthia was one of the districts in which the deported Israelites had been settled, and according to Josephus their descendants continued to speak an Aram. dialect and to worship the true God, sending tribute to the Temple at Jerusalem. Consequently the Parthians in Jerusalem on the Day of Pentecost (Acts 2:9) may have been only Israelites from that district ('language' in v. 8 could equally well be 'dialect'), but there may have been Parthian proselytes with them.

(K. L. MCK.)

PARVAIM. The place which produced the gold used for ornamenting Solomon's Temple (2 Ch. 3:6). The location is obscure. Some suggest Farwa in Yemen. Gesenius, identifying it with Sanskrit *parvam*, understands it to be a general term for the E regions. (*OPHIR.) J. D. D.

PASHHUR. This name is probably of Egyptian origin: Heb. *pas-hūr* from Egyp. *p(ʿ)š(ri n) Hr*, 'the son (of) (the god) Horus'; cf. S. Ahituv, *IEJ* 20, 1970, pp. 95-96.

1. Pashhur son of Immer. A priest, the chief officer of the house of the Lord, in the reign of Zedekiah or earlier, who put Jeremiah in the stocks and whose fate Jeremiah prophesied as exile in Babylon (Je. 20:1-6).

2. Pashhur son of Malchijah. Sent by King Zedekiah to inquire of Jeremiah (Je. 21:1), he was among those who incarcerated the prophet in the slimy pit-dungeon of the king's son Malchijah (the father of this Pashhur?) (Je. 38:1-13). He is possibly identical with the head of a priestly family of which some members were exiled to Babylonia. Some later members of this family returned to Jerusalem with Zerubbabel (Ezr. 2:38 = Ne. 7:41), six of them having to put away foreign wives there (Ezr. 10:22). Others volunteered for the fuller re-occupation of Jerusalem under Nehemiah (Ne. 11:12; probably the same Adaiah as in 1 Ch. 9:12).

3. Pashhur father of Gedaliah. His son Gedaliah was among those who imprisoned Jeremiah in Malchijah's dungeon (Je. 38:1-13); see 2 above. This Pashhur may possibly be identical with 1 or 2 above.

4. Pashhur, a priest, was among those who set their seal to the covenant under Nehemiah which followed Ezra's reading of the law (Ne. 10:3).

K. A. K.

PASSION. I. In Acts 1:3 'passion' translates *pathēin* and refers to Christ's suffering and death. This use of the term is still current. Elsewhere the same word is translated 'suffer' (e.g. Lk. 17:25; 24:26; Acts 17:3; Heb. 13:12, etc.).

2. In Acts 14:15 and Jas. 5:17 AV uses 'passion' to translate *homoioopathēs*. RSV 'of like nature' gives the sense of the Greek.

3. In its bad sense 'passion' translates *pathos* in Rom. 1:26; Col. 3:5; 1 Thes. 4:5 (in the NT this word always has the meaning 'evil desire'), and *pathēmata* in Rom. 7:5 and Gal. 5:24 (a word which usually has the sense of 'sufferings'). RSV also uses it 15 times to translate *epithymia*, 'desire'

(usually in the plural) in the bad sense of that word. (*LUST.) P. E.

PASSOVER. The Passover of Ex. 12 concerns (1) the original historic event of Israel's deliverance from Egyp. bondage; (2) the later recurrent institutional commemoration of that event (*Mishnah Pesahim* 9:5). Closely conjoined, though separate, are (3) the prohibition of *leaven, symbolizing the haste of that unforgettable night of exodus, and (4) the later dedication of the *first-born, with statutory offerings, commemorating those first-born divinely spared in the blood-sprinkled houses. Moses quite possibly adapted more ancient ceremonials, Unleavened Bread being an agricultural festival, Passover nomadic and pastoral (*EBr*, 1974, Makropaedia, vol. 10, pp. 219f.). Passover may have had original links with circumcision, demonism, fertility cult or the first-born oblation (cf. H. H. Rowley, *Worship in Ancient Israel*, 1967, pp. 47ff.). Until AD 70, Passover was celebrated in Jerusalem, in any house within the city bounds, and in small companies; the lamb was ritually slaughtered in the Temple precincts. When Temple and Palestinian nation were both destroyed by war, Passover inevitably became a domestic ceremony.

The *Samaritans still meticulously observe their ancient N Israelite Passover ritual annually on Mt *Gerizim, in close conformity to the Pentateuch, keeping Passover and Unleavened Bread entirely separate entities. Unlike the Jews, they still employ a lamb. The slopes of Gerizim are now used, as the summit is ritually defiled by a Muslim cemetery (*EBr*, Mikropaedia, vol. 4, p. 494). They buttress their claims by the variant reading 'Gerizim' in place of 'Ebal' in Dt. 27:4, also by referring Dt. 12:5, 14; 16:16 to Gerizim, not Zion. There was for some time a rival Samaritan temple on Gerizim (cf. R. de Vaux, *Ancient Israel*, E.T. 1961, pp. 342f.), though its precise dates of functioning are disputed (cf. also John Macdonald, *The Theology of the Samaritans*, 1964, *passim*).

I. In the Old Testament

Ex. 12, the natural starting-point of study, suggests the following principal considerations.

1. Passover (Heb. *pesah*) comes from a verb meaning 'to pass over', in the sense of 'to spare' (Ex. 12:13, 27, etc.). This affords excellent sense; there is no need to jettison the time-honoured view that God literally passed over the blood-sprinkled Israelite houses, whilst smiting the Egyptian ones. The term is used both for the ordinance and for the sacrificial victim. *BDB* note another verb with the same radicals, meaning 'to limp', which has suggested alternative theories (cf. T. H. Gaster, *Passover: Its History and Traditions*, 1949, pp. 23-25); but *KB* modify this conclusion.

2. Abib, later called Nisan, the month of the ripening ears and of the first Passover, was made in honour the first month of the Jewish year (Ex. 12:2; Dt. 16:1; cf. Lv. 23:5; Nu. 9:1-5; 28:16).

3. Was the Paschal victim customarily a lamb, as popularly conceived? In Dt. 16:2 the choice of animal is unquestionably wider; in Ex. 12 it depends on exegesis. The Heb. word *seh* (v. 3) is restricted by *BDB* to the sheep and goat categories, irrespective of age; *KB* restrict it further to lamb or kid. There is some controversy as to the meaning of the phrase *ben-šānā* (v. 5), lit. 'son of a year'. Some take this to signify a yearling, 12-24 months

PASSOVER

in age, *i.e.* a full-grown animal (*cf.* Gesenius-Kautzsch-Cowley, *Hebrew Grammar*, section 128 v; G. B. Gray, *Sacrifice in the OT*, 1925, pp. 345-351). But the traditional exegesis, which takes 12 months as the upper, not the lower, age-limit, is by no means disproved. Talmudic evidence seems to limit the legitimacy of the Passover victim to the sheep and goat families, following Exodus rather than Deuteronomy (*cf.* *Menahoth* 7:6, with Gemara). The choice of lamb or kid, lamb or goat, is several times asserted (*Pesahim* 8:2; 55b; 66a), yet the over-all evidence does suggest a certain preference for the lamb (*Shabbath* 23:1; *Kelim* 19:2; *Pesahim* 69b; *etc.*). One ruling excludes a female animal, or a male which has passed the age of 2 years—which would lend tacit support to the yearling interpretation (*Pesahim* 9:7). Yet a contradictory passage declares categorically that a Passover offering is valid from the eighth day of its life (*Parah* 1:4). If the universal use of a lamb cannot be certainly demonstrated from Scripture or Talmud, it is at least clear that this acquired strong consuetudinary sanction. It is of interest and significance that the Samaritans, following age-old precedents, sacrifice a lamb on the slopes of Mt Gerizim to this very day.

4. On the Passover night in Egypt, the lintels and side-posts of all Israelite doors were smeared (apotropaically, some suggest) with the victim's blood. This was carried in a basin, Heb. *saḥ*, v. 22 (which could also, with slight change of exegesis, mean 'threshold'), applied therefrom with hyssop, the foliage of the marjoram plant, a common emblem of purity. See further N. H. Snaith, *The Jewish New Year Festival*, 1947, pp. 21ff.

5. The phrase 'between the two evenings' in Ex. 12:6 (also Ex. 16:12; Lv. 23:5; Nu. 9:3, 5, 11) has been accorded two variant interpretations, according to variant community practice—either between 3 p.m. and sunset, as the Pharisees maintained and practised (*cf.* *Pesahim* 61a; Josephus, *BJ* 6. 423); or, as the Samaritans and others argued, between sunset and dark. The earlier time, as Edersheim points out, allows more leeway for the slaughtering of the innumerable lambs, and is probably to be preferred.

6. Ex. 12:43-49 excludes Gentiles from participating in the Passover, but not of course proselytes, who were expected, even obliged, to conform fully.

The whole drama and inner meaning of Ex. 12 is concentrated into seventeen pregnant Gk. words in Heb. 11:28.

The Passover of Dt. 16 differs in important minor respects from that of Ex. 12. The blood emphasis has disappeared; an essentially domestic ceremony has become a more formal sacrifice at a central sanctuary with a wider choice of victim; v. 7 stipulates boiling, not roasting, the animal; Passover and Unleavened Bread, here termed the bread of affliction, are integrated more thoroughly than in Exodus. This is development, event changing to institution, not contradiction; moreover it approximates better to the NT evidence concerning Passover. It is not necessary to assume a great time-gap between the passages; the changed circumstances could have been prophetically foreseen in the wilderness period. It is further recorded that a second Passover, celebrated a month later, was instituted for the benefit of those who had been levitically unclean at the time of the first (Nu. 9:1-14).

Passover was celebrated in the plains of Jericho during the Conquest (Jos. 5:10f.). In the observ-

ances of Hezekiah (2 Ch. 30:1-27) and Josiah (2 Ch. 35:1-19), the proper place is considered to be the Jerusalem Temple. Hezekiah's ceremony takes advantage of the legitimate second Passover mentioned above, because the people are not gathered in Jerusalem, and the priests are not in a state of levitical purity, at the earlier date. The brief reference of Ezekiel (45:21-24) deals with Passover in the ideal Temple of his conceiving. The three points of interest are the fuller participation of the secular leader, the fact of a sin-offering, and the complete change-over from family celebration to public ceremony. The victims specified include bullocks, rams and kids. The prescriptions of Deuteronomy are considerably extended, though not in any new thought-pattern.

Jewish usage in the last days of the Herodian Temple is reflected in the Mishnah tractate *Pesahim*. The people gathered in the outer Temple court in companies to slaughter the Passover victims. The priests stood in two rows; in one row each man had a golden, in the other each man a silver, basin. The basin which caught the blood of the expiring victim was passed from hand to hand in continuous exchange to the end of the line, where the last priest tossed the blood in ritual manner on the altar. All this was done to the singing of the *Hallel* (Pss. 113-118). The celebrating companies were generally family units, but other common ties were possible, such as that which bound our Lord to his disciples.

II. In the New Testament

In NT times, all Israelite males were expected to appear in Jerusalem thrice annually, for the Feasts of Passover, of Weeks or Pentecost and of Tabernacles. Even Dispersion Jews sometimes conformed; the temporary population of the Holy City (*cf.* the Pentecost gathering of Acts 2) could swell to almost 3,000,000 according to Josephus (*BJ* 6. 425)—a figure reduced to the more realistic 180,000 by J. Jeremias (*Jerusalem in the Time of Jesus*, 1969, pp. 83f.). After candlelight search for the forbidden leaven, and other careful preparations (*cf.* Mk. 14:12-16 and parallels), the Paschal supper proper was taken reclining. It included the symbolic elements of roasted lamb, unleavened bread, bitter herbs, some minor condiments and four cups of wine at specified points. The stipulated ritual hand-washings were carefully observed. The table (more probably the floor) was cleared before the second cup of wine, the story of the Egypt. Passover and Exodus recounted in a dialogue between father and son (or some suitable substitutes). The dishes of food were then brought back, part of the *Hallel* was sung, the second cup of wine followed. Then came the breaking of bread. In the Last Supper, it was probably at this point that Judas received the sop, and departed into the night to betray his Master (Jn. 13:30). On that fateful night, it may be assumed that the institution of the Lord's Supper or Eucharist was associated with the third cup of wine. The singing of the *Hallel* was completed with the fourth cup—doubtless the hymn of Mt. 26:30. It is assumed here that the Last Supper did coincide with the statutory Passover, despite the denials of certain expositors. A. Plummer, *e.g.* (*Luke, ICC*, 1896, pp. 491f.), postulates an ante-dated Passover, 20 hours before the lambs were slaughtered, maintaining that at the proper time Jesus was dying or dead. Others suggest a Passover Qiddush, or ritual puri-

fiction meal in anticipation. J. N. Geldenhuyus argues at length that the Last Supper was itself the Passover, that it was held on the 14th of Nisan, the day before the crucifixion, that there is no contradiction whatever between Synoptics and Fourth Gospel, when the relevant passages are correctly expounded. The Passion, he says, is to be dated on or about 6 April, AD 30. Variant views will be found in other standard commentaries.

The symbolism, 'Christ our Passover', 'Lamb of God', is familiar from NT usage. We have seen that the traditional lamb, if not provable in all instances, has widespread precedent. It is laid down in Ex. 12:46 and Nu. 9:12 that no bone of the Passover victim is to be broken. This small detail is typologically fulfilled when it is reverently applied to the crucified One (Jn. 19:36).

After the destruction of the Jerusalem Temple in AD 70, any possibility of slaughtering a victim in ritual manner utterly ceased, and the Jewish Passover reverted to the family festival it had been in the earliest days—the wheel had turned full circle. Whilst church and synagogue eventually went their separate ways, the habit of celebrating Passover would continue for some time among certain Christians, particularly those of Jewish or proselyte background. But the Lord's Supper came to replace the Jewish ordinance, just as baptism came to replace circumcision.

PASTORAL EPISTLES. The three Epistles, 1 and 2 Timothy and Titus, were first called the Pastoral Epistles in the 18th century, and the name has become generally used to denote them as a group. The title is only partially an accurate description of their contents, for they are not strictly pastoral in the sense of giving instruction on the care of souls.

D.G.

PATARA. A seaport of SW *Lycia, in the Xanthus valley. Besides local trade it was important as being a suitable starting-point for a sea passage direct to Phoenicia (*SHIPS AND BOATS). According to the commonly accepted Alexandrian text of Acts 21:1, Paul trans-shipped at Patara on his way to Jerusalem. The Western Text, possibly influenced by Acts 27:5–6, adds 'and *Myra', which would imply that he coasted farther E before trans-shipment. There is reason to believe that the prevailing winds made Patara the most suitable starting-point for the crossing, and Myra the regular terminal for the return journey.

Patara was also celebrated for its oracle of Apollo. K.L.McK.

PATHROS, PATHRUSIM. Classed under Mizraim (Egypt), Gn. 10:14; 1 Ch. 1:12. Pathros is

Egypt. *p' t'-rs(y)*, 'the Southland', i.e. Upper Egypt, the long Nile valley extending N–S between Cairo and Aswan; the name is attested in Assyrian inscriptions as Paturisi. Thus, the terms Mizraim for Egypt, especially Lower Egypt, Pathros for Upper Egypt and *Cush for 'Ethiopia' (N Sudan) occur in this significantly geographical order both in a prophecy of Isaiah (11:11) and in a subsequent inscription of Esarhaddon, king of Assyria, who also boasts himself 'king of Musur, Paturisi and Cush'. Jeremiah similarly identifies Pathros with Egypt (Je. 44:15) and specifically Upper Egypt as distinct from the cities (and land) of Lower Egypt (Je. 44:1). Pathros also appears as Upper Egypt and as the homeland of the Egypt. people in Ezk. 29:14; 30:14. K.A.K.

PATIENCE. Biblical patience is a God-exercised, or God-given, restraint in face of opposition or oppression. It is not passivity. The initiative lies with God's love, or the Christian's, in meeting wrong in this way. In the OT, the concept is denoted by Heb. *āreḳ*, meaning 'long'. God is said to be 'long' or 'slow' to anger, *ereḳ 'appayim* (see Ex. 34:6; Nu. 14:18; Ne. 9:17; Pss. 86:15; 103:8; 145:8; Joel 2:13; Jon. 4:2). This idea is exactly represented in the Gk. *makrothymia*, often translated in AV as 'longsuffering', and defined by Trench as 'a long holding out of the mind' before it gives room to anger.

Such patience is characteristic of God's dealings with sinful men, who are fully deserving of his wrath (Is. 48:9; Ho. 11:8). His protecting mark on the murderer Cain (Gn. 4:15), his providential rainbow sign to a world that had forfeited its existence (Gn. 9:11–17; cf. 1 Pet. 3:20), his many restorations of disobedient Israel (Ho. 11:8–9), his sparing of Nineveh (Jonah), his repeated pleadings with Jerusalem (Mk. 12:1–11; Lk. 13:1–9, 34; Rom. 9:22), his deferment of Christ's second coming (2 Pet. 3:9)—these are all expressions of his patience. Christians are to show a like character (Mt. 18:26, 29; 1 Cor. 13:4; Gal. 5:22; Eph. 4:2; 1 Thes. 5:14). In Proverbs the practical value of patience is stressed; it avoids strife, and promotes the wise ordering of human affairs especially where provocation is involved.

The patience of God is a 'purposeful concession of space and time' (Barth). It is opportunity given for repentance (Rom. 2:4; 9:22; 2 Pet. 3:9). God's forbearance has been a 'truce with the sinner' (Trench, on *anochē*, Rom. 2:4; 3:25), awaiting the final revelation and redemption in Christ (Acts 17:30). Prayer may prolong the opportunity for repentance (Gn. 18:22ff.; Ex. 32:30; 1 Jn. 5:16).

The Christian's patience in respect of persons (*makrothymia*) must be matched by an equal patience in respect of things (*hypomonē*), that is, in face of the afflictions and trials of the present age (Rom. 5:3; 1 Cor. 13:7; Jas. 1:3; 5:7–11; Rev. 13:10). God is the God who gives such Christlike patience (Rom. 15:5; 2 Thes. 3:5), and Jesus is the great Exemplar of it (Heb. 12:1–3). He who thus endures to the end, by his patience will gain his soul (Mk. 13:13; Lk. 21:19; Rev. 3:10).

PATMOS

PATMOS. An island of the Dodecanese, lying some 55 km off the SW coast of Asia Minor, at 37° 20' N, 26° 34' E. To this island the apostle John was banished from Ephesus, evidently for some months about the year AD 95, and here he wrote his Revelation (Rev. 1:9). The island is about 12 km long, with a breadth of up to 7 km, and it has been suggested that the scenery of its rugged volcanic hills and surrounding seas find their reflection in the imagery of the Apocalypse. See Pliny, *Nat. Hist.* 4. 69. The island now belongs to Greece.

J.H.P.

PATRIARCHAL AGE.

I. The biblical picture

The patriarchal age covering the life-spans of Abraham, Isaac and Jacob is described in Gn. 12–50, although chs. 39–50 are concerned more with Joseph. It is extremely difficult to give a date for the patriarchal period and scholars hold widely differing views within a range of about 1900 BC to 1500 BC. Biblical data is insufficient to settle the matter and we are forced to propose tentative dates by comparing data within the patriarchal stories in Gn. with extra-biblical data from the first part of the 2nd millennium BC. There is a further difficulty in drawing a general picture of the patriarchal

age because Gn. concentrates on only a few individuals. The total group which made up the kinspeople of this narrowly defined family was probably quite extensive, all of them having originated in lands to the NE of Palestine. Further, the biblical writers must have selected their own material from a wide range of traditions which were available to them in order to stress important religious and theological points. Hence, if we restrict ourselves to the biblical narratives alone there are severe limitations for the historian.

The Patriarchs are depicted in Gn. as moving across a wide canvas from Mesopotamia to Egypt. Among the towns referred to in the biblical narratives which modern archaeology has shown to have been occupied from early in the 2nd millennium are Ur (Gn. 11:28, 31; 15:7), Harran (Gn. 11:31–32; 12:4–5; 27:43; 28:10; 29:4), Shechem (Gn. 12:6; 33:18), Salem (Jerusalem, Gn. 14:18), Gerar (Gn. 20:1; 26:1, 6, *etc.*), Dothan (Gn. 37:17), and probably Hebron (Gn. 13:18; 23:2, 19; 35:27) and Bethel (Gn. 12:8). The *Ebla documents (c. 2300 BC) attest the existence of Sodom, Gomorrah, Admah, Zeboiim, Bela (Gn. 14:2) at an early date. Significant towns not referred to in the Bible which were flourishing in the patriarchal era were Megiddo, Hazor, Lachish, Gezer and Jericho. The Mesopotamian town of Ur at this period was not the city of great political importance that it had been at the end of the 3rd millennium BC, although

'Asiatic' soldiers of the 'patriarchal age' depicted on an Egyptian tomb-painting at Beni Hasan. Sesostris I. c. 1950 BC

it retained a considerable influence in religion and literature. The town of *Mari on the Euphrates also flourished in this period and, although not mentioned in the Bible, has produced some 20,000 tablets which throw considerable light on the age.

In some passages in Gn. lists of towns are given, e.g. Ashteroth-karnaim, Ham and Shaveh-kiriathaim, towns along the road traversed by the invading kings of the E (Gn. 14:5); the 'cities of the valley' (Gn. 13:12; 19:25, 29); the towns which Jacob passed through on his way back to Bethel (Gn. 35:5), and towns in Egypt (Gn. 41:35, 48; 47:21 mg.). It is clear that from Mesopotamia to Egypt there were centres of settlement, either open villages or walled towns, both small and large. In Palestine proper most of the towns were to be found in the lowlands or along the highways.

Outside the settled areas the semi-nomads moved about with their flocks forming one part of a dimorphic society in which urban dwellers and semi-nomadic pastoralists lived side by side. The latter group frequently camped in the vicinity of the towns (Gn. 12:6-9; 13:12-18; 33:18-20; 35:16-21; 37:12-17), occasionally practised agriculture (Gn. 26:12f.), were able to engage in social and economic exchange with townspeople (Gn. 21:25-34; 23:1-20; 26:17-33; 33:18-20) and even dwelt in towns as 'resident aliens' for various periods of time (Gn. 12:10; 15:13; 17:8; 20:1; 21:23, 34; 26:3; 28:4; 32:4; 35:27; 36:7; 37:1; 47:4-5). Thus when Lot and Abraham separated, Lot took up residence in the town of Sodom and pitched his tent 'toward Sodom' and 'was sitting in the gate'. The two figures of Jacob and Esau present contrasting yet complementary ways of life (Gn. 25:27-34) and Jacob and his sons at Shechem settled for a time and entered into the society of the town-dwellers (Gn. 33:18-34:31).

We gain glimpses of the semi-nomadic life of shepherds living in tents, moving with their flocks, sometimes over considerable distances, seeking pasture-lands and wells and sometimes clashing with other people (Gn. 13:5-11; 18:1-8; 21:25-31; 24:62-67; 26:1-33; 29-31; 33:12-17; 36:6-8). The valued possessions of the Patriarchs were sheep, asses, oxen, flocks and herds, and even *camels (Gn. 12:16; 13:5, 7; 20:14; 21:27-30; 30:29; 31:1-10, 38; 32:13-16; 34:28; 46:32; 47:16-18). The term *'cattle' (*b'hēmā*) in some passages is a comprehensive one for small beasts, although the Patriarchs did have cattle in one sense of the word, 'oxen', *bāqār* (Gn. 12:16; 20:14; 21:27; 34:28).

*Travel seems to have been common. Abraham moved from Ur in Mesopotamia to Egypt in the course of his life; Jacob travelled from Palestine to Harran and back (Gn. 28; 35) and later to Egypt. Probably there were well-trodden trade-routes used by merchants, a group of whom took Joseph to Egypt (Gn. 37:28-36).

The patriarchal narratives make references to contemporary rulers, the pharaoh of Egypt (12:15, 17, 20), certain 'kings' (Heb. *melek*) from the E, Amraphel of Shinar, Arioch of Ellasar, Chedorlaomer of Elam and Tidal king of the Goyim (14:1), petty rulers of the Sodom and Gomorrah region (14:2), *Melchizedek king of Salem (14:18), Abimelech king of Gerar (20:2; 26:1, etc.), certain 'chiefs' of Edom (Heb. *'allūp*) and later kings of Edom (Gn. 36:19, 31), 'chiefs' of the Horites (Gn. 36:29) and the chiefs of Esau (Gn. 36:40-43).

None of these personalities can be identified in any historical records to date. Some of them must have been very insignificant rulers indeed and the semi-nomadic patriarchal families paid attention to them only as they were required for reasons of pasture or watering places. In some cases they entered into a covenant with them (Gn. 14:13; 21:27; 26:28f.), but for the most part they moved about freely in the dimorphic society of the day.

The daily life of the Patriarchs was governed by a variety of customs of long standing and widespread usage. The Patriarchs and their kinspeople were tribally organized into inter-related social units comprising extended families or clans (Gn. 12:1-5; 24:1-9; 28:1-5). The system was patriarchal. We read of the 'paternal house' (*bē'it āb*) in Gn. 12:1; 24:38-40, or simply the 'house of the patriarch' (Gn. 24:2; 31:14, 43; 36:6; 46:26-27, 31; 47:12; 50:8). In such a society the father, as head of the family, had wide powers. Normally the eldest son succeeded him as heir to his position and his property. In the absence of a natural heir a slave might become heir (Gn. 15:2f.) or the son of a slave-girl who had become a subsidiary wife (Gn. 16:1ff.). In the latter case if a son was born he was regarded as the son of the true wife who had presented the slave-girl to her husband. The arrangement arose out of the wife's consent and not when the husband took a secondary wife of his own accord. The marriages of Abraham with Hagar (Gn. 16:1-4) and Keturah (Gn. 25:1-6) provide examples of these two types of union (cf. Gn. 30:3, 9). Problems arose if the true wife gave birth to a son after the birth of a son to the secondary wife. In patriarchal society the true son seems to have become heir (Gn. 15:4; 17:19), although Gn. 21:10 suggests that this may not have been automatic. Sarah had to insist that Ishmael should not be heir along with her own son Isaac.

Marriage was a complex affair. In the society of the times the rich and the powerful could take more than one wife but mostly marriage was monogamous. In practice, however, a husband could take a concubine or secondary wife relatively easily either through his own initiative or, if the couple could not produce the desired heir, the wife might provide a slave-girl. In patriarchal society Jacob and Esau had more than one wife of equal status (Gn. 26:34f.; 29). Abraham remarried after Sarah's death (Gn. 25:1f.) and Nahor had children by a concubine (Gn. 22:20ff.).

It would seem that there was a preference for endogamous marriage, that is, within the family, e.g. Abraham and Sarah, Nahor and Milcah (Gn. 11:27-30), Jacob and Rachel, Jacob and Leah, Isaac and Rebekah, Esau and Ishmael's daughter.

It is clear also that some of the patriarchal customs were forbidden in later Mosaic law, e.g. marriage to two sisters (cf. Lv. 18:18), and marriage to one's half-sister (Gn. 20:12; cf. Lv. 18:9, 11; Dt. 27:22).

In the case of Jacob we learn that he was required to render service to his prospective father-in-law in return for his wife (Gn. 29:18f., 27f.). We have no means of knowing whether this practice was common or not. It may have been an Aramaean custom or have been confined to an area in N Mesopotamia. Probably the practice was more widespread than our evidence allows us to say.

In at least one case further marriage was forbidden to a man (Gn. 31:50).

PATRIARCHAL AGE

The patriarchal blessing was important and once given could not be revoked (Gn. 27; 48–49). In Gn. 27 the eldest son surrendered the birthright and the younger son received the blessing (vv. 22–29). It would have been normal, however, for the eldest son to receive the blessing, though not automatic.

We shall discuss below possible comparisons with other ancient Near Eastern documents. There are certain parallels between the patriarchal customs and contemporary practices, but there are also a number of features not paralleled elsewhere which seem to be specific to the patriarchal customs portrayed in the Gn. records.

In matters of religion few details are given. It is clear that the Patriarchs knew the need for a personal faith in God who guided them through life and who encouraged them with his promises (Gn. 12:1–3; 15:4f.; 17; 28:11–22, *etc.*). In the matter of guidance God was not restricted to a particular place but was active in Ur, Harran, Canaan or Egypt (*cf.* Gn. 35:3). Once God's will became known to the Patriarchs the only course was to believe and obey (Gn. 22). Prayer and the offering of sacrifices were part of the regular worship of the Patriarchs (Gn. 12:8; 13:4, 18; 26:25; 35:1, 3, 7). Circumcision was a religious rite to mark those who were in the covenant family. An intense awareness of God's activity among them caused the Patriarchs to name places and children according to some evidence of God's dealings with them (Gn. 16:11, 14, all the names of Jacob's children in Gn. 29:31ff.; *cf.* Gn. 32:30; 35:15, *etc.*). Each Patriarch seems to have had his own special name for God, which suggests a sense of special personal relationship, the 'Fear', or as W. F. Albright suggested, the 'Kinsman' (*pahad*) of Isaac (Gn. 31:42, 53) the 'Mighty One' (*'bir*) of Jacob (Gn. 49:24). This sense of personal relationship, the knowledge of God's promises and the awareness that obedience to the will of God is of the essence of true faith, may be said to form the heart of patriarchal religion.

Two features of patriarchal society should be stressed, namely the concepts of covenant and election. Either directly (Gn. 15:18; 27:7, 10–11, 13, 19) or indirectly, God's covenant with Abraham, Isaac and Jacob is deeply significant in patriarchal religion. In the covenant God bound himself to Abraham and his descendants and bound them to himself in a most solemn engagement which involved the divine promise to, and the divine election of, Abraham and his descendants (Gn. 12:1–3; 13:14–17; 15:18–21; 17:5–8, *etc.*). Through Abraham and his descendants God would reach out to all mankind (Gn. 12:3; 18:18; 22:17–18; 26:4; 28:14). And it was specifically through this elect family that God would act in this way (Gn. 17:18–19; 21:12). The twin concepts of covenant and election are powerful motifs in the Gn. picture of patriarchal religion.

II. Modern discovery and the patriarchal age

The precise date of the patriarchal age is difficult to determine, but there are strong reasons for placing it in the Middle Bronze Age, c. 1850–1570 BC (*ABRAHAM). This is based on the assumption that archaeological and epigraphic knowledge can give us contemporary information. This view is widely held today, although some writers like T. L. Thompson and J. van Seters assign the patriarchal traditions in their entirety to the Iron Age on the assumption that they are late literary inventions.

For such writers archaeology cannot reconstruct a 'historical' background for the contents of the patriarchal age, since by their definition there is none. We shall return to the point below. The following outline will give an idea of the more important of the discoveries of recent years. It should be recognized that the great collections of ancient documents recovered represent only a tiny proportion of all that was written in ancient times, and are largely accidental survivors.

a. Peoples

There is a variety of peoples mentioned in the patriarchal narratives—Egyptians, Amorites, Elamites, Canaanites, Horites, Edomites, Hittites. Gn. 14 appears to refer to four specific groups. It is not possible to identify all the groups mentioned. Thus the Horites may not be the same as the Hurrians. Indeed they are connected with Edom and S Palestine in Gn. 36:20f. Nor need the Hittites of Gn. 23 be the Hittites of Anatolia. They are rather a group of indigenous people related to Canaanites (Gn. 10:15). It is true that in the early part of the 2nd millennium there were considerable movements of peoples in the ancient Near East and one might expect to find all kinds of people in Canaan. To that extent the patriarchal narratives reflect the circumstances of the period in a general way.

Two groups of people may be of particular interest, the Hapiru and the Binyaminites of Mari. The Hapiru were widely known both geographically and over a long period of time. Abraham is called a Hebrew in Gn. 14:13. This may mean that he was recognizable as being like one of the ubiquitous Hapiru people. The Binyaminites were seminomadic elements in the dimorphic society in the region of Mari and there is much to be gained by studying what may be known about this group from the Mari documents. There are numerous parallels on the sociological level with patriarchal society.

b. Cities

Excavation has shown that in the first part of the 2nd millennium BC the ancient Near East was heir to an ancient civilization and that several of the towns in the patriarchal records were already in existence (see I, above). Details of the life lived in these towns may be learnt from the ruins of the houses, the pottery and art work, the tools and weapons, and in some cases from the written records left behind in the ruins. The town of Harran (Gn. 11:31–32), for example, is known on clay tablets found in *Mari. The *Ebla tablets refer to a number of towns in Canaan which were within the ambit of its trading interest. The important Egypt. records known as the Execration Texts, dating to the 19th century BC, refer to several which were in existence in Canaan at the time, including Jerusalem (Gn. 14:18). Certainly it could be claimed that a number of the towns of the patriarchal narratives were in existence in the early part of the 2nd millennium. In Canaan itself the great Middle Bronze Age cities like Megiddo, Hazor, Lachish, Gezer, Jericho and Shechem, among others, had already been established. Outside Canaan were great towns like Mari on the Euphrates, whose written records are of considerable significance in depicting the society of the region. Despite this wealth of material we are no nearer to determining the exact date of the Patriarchs, since these cities

were in existence over many centuries. Probably all we can claim with certainty is that the patriarchal stories could not refer to a period earlier than when the cities referred to came into existence.

c. Personal names

The numerous names in the patriarchal records enable a comparison with name systems which are known from the tablet records. Numerous comparisons can be made. Thus the name Abram is known in a number of variant forms, such as *A-ba-am-ra-am*, *A-ba-am-ra-ma*, *A-ba-ra-ma*, on a variety of texts in W Semitic areas over a long period of time, so that the name is of little use for specific dating. Names like *Ya'qub-ilu* (Jacob-el) occur both early and late in the 2nd millennium. Some of the names of the twelve tribes such as Simeon, Ashur, Benjamin, may also be attested. The names Ishmael and Israel consist of a verbal element plus the name for deity, El. Other names like Isaac are probably hypocoristic (a special or pet name) formed from verbal elements only, e.g. Isaac (*yishāq*), 'he laughs', 'mocks', 'plays' or 'fondles' (Gn. 17:17; 18:12; 21:6). Extensive studies of W Semitic names, Amorite names, Mari names, etc., have been undertaken and it may be claimed that the patriarchal name system has many parallels, certainly in the early part of the 2nd millennium, but also over a longer period, so that while we gain valuable insight into the patriarchal name system as such, we are not assisted in dating the Patriarchs.

d. Travel, trade and commerce

There was a good deal of *trade and *travel all over the Near East at this time. Clay tablets from Cappadocia indicate that as early as 2000 BC there was trade in copper and wool between Asia Minor and Assyria. Other records tell of movements of armies and the transport of booty, etc., all over the Near East. Great routes crossed from Mesopotamia to Asia Minor and Palestine, and others down into Egypt. That a great road traversed Transjordan (the *King's Highway, Nu. 20:17) is clear from the line of ancient towns strung out along the route not far from the modern highway. Pictures from Beni-hasan in Egypt dating to about 1900 BC depict travelling nomads, possibly metal-workers, from the general area of Palestine. From these we gain a good idea of the dress and the possessions of these people in Abraham's time. Their main beasts of burden seem to have been asses and donkeys. Finally, the *Ebla tablets of c. 2300 BC introduce us to the vast trading area over which the Ebla merchants ranged and point to wide activities in travel, trade and commerce well before the period we are proposing for the patriarchal age.

e. The customs of the age

These have come to light from the tens of thousands of clay tablets which represent the documents of everyday life, legal, commercial, religious and private. There are in addition some important lists of laws, such as the Laws of Hammurapi (about 1750 BC), the Code of the town of Eshnunna (19th or 18th century BC), and the fragmentary Sumerian Codes of the kings of Lipit-Ishtar and Ur-nammu (21st–19th centuries BC). Of the private and personal documents, those of *Nuzi (15th and 14th centuries BC), *Mari (18th century BC), Ras Shamra (*Ugarit, 14th century BC) and *Alalah (17th and 15th centuries BC) should be

mentioned. These combine to give a picture of the life in N Mesopotamia in the period 2000–1500 BC and form a body of information against which we can study the patriarchal customs. Clearly documents from the 15th and 14th centuries take us beyond what we are proposing as the patriarchal age, so that they have to be used with some caution. Customs change in the course of time, but they often reflect earlier practices and it would not be impossible to find helpful clues to life in the 18th century BC by reading documents from the 15th century BC. In general, however, documents from the same age are the most reliable source of data.

Shortly after the discovery of the Nuzi documents in the years 1925 to 1931 scholars proposed many parallels between the customs at Nuzi and the patriarchal customs. With the discovery of an increasing number of documents from other sites and from earlier centuries the Nuzi texts can now be seen to be not quite so relevant to the patriarchal narratives as was once thought. Parallels in the areas of adoption, marriage, inheritance, wife-sister marriages, sistership adoption, the 'dying words' of a patriarch, the performance of a period of service before a man could claim a wife, the giving of a slave-girl as a marriage gift and several other customs, were all sought for and found in Nuzi. Writers like C. H. Gordon and E. A. Speiser were strong proponents of the view that the Nuzi documents provided a kind of quarry for patriarchal parallels. It has now become clear that of the 4,000 cuneiform tablets from Nuzi no more than a dozen have been quoted. A concomitant of this view is that the patriarchal age was sought in the 14th century BC on the basis of links with the customs portrayed in the Ugarit, the el-Amarna and the Nuzi documents.

In fact, with a growing volume of tablet evidence parallels are more easily discovered in earlier material. Thus the most suitable example of adoption is found on an old Babylonian letter from Larsa where it is stated that a childless man could adopt his own slave, an aspect of adoption not found at Nuzi. The adoption of the son of the wife's slave-girl is found in only one Nuzi text. It was more common for the husband to marry a second wife or take his own slave-girl as a concubine. But most of the practices concerning secondary wives are known in texts from other ancient Near Eastern sites. The dying words of a patriarch are not paralleled in Nuzi and the wife-sister marriage proposed by E. A. Speiser lacks any real foundation either in Nuzi or in Gn. 12–50. It would seem that no special relationship exists between the Nuzi tablets and the patriarchal narratives. Yet such a search for parallels is not without value. One senses in a general way that the customs of the patriarchal narratives belong to a society not unlike the one we know from the tablet records of the early part of the 2nd millennium BC. However, many of the customs were current for several centuries and are not sufficiently precise for chronological purposes, though they may be useful for sociological purposes. One of the most fruitful lines of investigation is a study of nomadism and sedentarization in the ancient Near Eastern dimorphic societies such as that at Mari. If such a study is combined with a continued search for parallels in customs we may be able to gain a better idea both of patriarchal society and of the period of the patriarchal age. It is also important to realize that there may not be a

PATRIARCHAL AGE

specific parallel in extra-biblical material to a particular patriarchal custom, since it was peculiar to the patriarchal group.

III. The historical value of the patriarchal records

It may be claimed that in general a notable change has come over scholarship since the days of J. Wellhausen at the end of the 19th century. His view was that we can attain to no historical knowledge of the Patriarchs from the biblical records, but that these are rather a reflection of the times of those men who wrote the stories in a much later day. The view is not quite forgotten and has been brought forward again by Thomas L. Thompson (1974) and J. van Seters (1975). Van Seters has raised questions about the degree to which oral tradition lies behind the stories in Gn. and is inclined to minimize its influence. He argues that it is impossible to identify specifically the personal names, places, peoples and customs of the patriarchal narratives. He can find no specific place for the Patriarchs in world events and holds that archaeology contributes very little, if anything, in elucidating their background. He also makes much of the so-called anachronisms like camels and Philistines. Hence he calls into question the whole scholarly search for parallels with the 2nd millennium and suggests instead that the traditions were largely moulded by and for the social and religious community of a later date, including the period of the Exile. This later literary activity must take priority in discussing the Gn. records. The themes of the divine promise to Abraham and the covenant were used by writers to support the dynastic ideology of the Monarchy, but they were late inventions. Thompson follows a somewhat similar line, although there are differences in detail between his approach and that of van Seters. There have been severe criticisms of these two writers. Other modern writers who have questioned the historical value of the patriarchal records are A. Alt and M. Noth, although both appear to admit that there may well be important elements of tradition which are of historical value, carried over from earlier times.

It may be agreed that a generation of scholars in recent years has made some excessive claims about several aspects of the patriarchal narratives. But it is an over-reaction to deny to these narratives any historical value. Even if we recognize them as literary-theological documents woven together from the traditions which were handed down from past centuries, there is no good reason to deny that they contain a good deal of archaic and historical material. The very strength of the theological ideas of promise and covenant required that the Patriarchs were more than mere literary inventions.

Many historical issues remain unsolved. Exact dating is impossible and precise definition of the patriarchal society and its customs in terms of a related contemporary society is not possible at present. But most present-day scholars show a disposition to treat the patriarchal records with far more respect from the point of view of their historical value than did some earlier scholars. The wisest course to follow at present is to await further evidence from all the sources. More research should enable the scholars to synthesize more accurately the biblical and the non-biblical material. In the meantime great theological doctrines like covenant, election, faith, obedience, promise, remain unobscured. Such doctrines have been the

foundation of Israel's faith over the centuries and have also played a significant role in the faith of Christians. Few writers would disagree with this latter statement, whatever their view about the historicity of the Gn. narratives.

PATRISTIC LITERATURE. The importance for many branches of NT study of the extra-canonical early Christian literature, both the fragments from unorthodox writings and *NT Apocrypha, on the one hand, and the patristic writings (*i.e.* the non-apocryphal and non-sectarian ancient Christian writings), on the other, is widely recognized. For the history of the *Canon of the NT and the establishment of its text (*TEXTS AND VERSIONS, IV) the patristic allusions and quotations from biblical books are obviously indispensable. In exegesis, also, the Gk. Fathers in particular have to be taken into account and what writers such as Irenaeus, Clement of Alexandria and, above all, Origen say about unwritten traditions demands attention. But, in a wider aspect, the 2nd-century Gk. and Lat.-speaking church, with all its differences in ethos from the apostolic age, is the outcome of the Jerusalem Pentecost assembly, and any illumination of the path between them is likely to cast its light backwards as well as forwards.

Unfortunately, at present a very ill-lit tunnel extends from the later apostolic age to the great apologists of the middle and later 2nd century. It is a period of intensified persecution and pernicious propaganda (as predicted in 2 Tim. 3 and elsewhere); the church is widely spread through and (in the E) beyond the Roman empire; Israel has been repudiated in AD 70, and with it any effective primacy of the Jerusalem church has ended. The name 'Apostolic Fathers', originally meant to designate men in contact with, or appointed by, the apostles, has long been given to writings associated with this period; but lists of the Apostolic Fathers vary considerably. To three—Clement of Rome,

Ignatius, Polycarp—this title is regularly applied, though only for Polycarp is there unmistakable evidence of direct contact with the apostles. All these early writings are practical, not scholarly or speculative. If one senses the immediate drop from the NT, the contrast of their directness with the tortuous intellectualism of, say, the *Gospel of Truth*, their contemporary, or with the fetid atmosphere of the apocrypha is also marked.

The works listed below represent some earlier patristic writings.

I. Clement of Rome

A long Gk. letter addressed from the church of God sojourning in Rome to that in Corinth has come down under the name of Clement (*I Clement*). There is no ground for identifying him with the Clement of Phil. 4:3, or with Flavius Clemens, Domitian's cousin. He is doubtless the person who appears third in Roman episcopal succession lists, but the term 'bishop of Rome' in the usual sense would be an anachronism, for in the letter 'bishop' is equivalent to 'presbyter'.

The occasion is a disturbance in the church at Corinth in which legitimately appointed presbyters have been ejected. Clement, on behalf of his church, appeals for peace and order, and asks them to remember the analogy of the ordered worship of old Israel and the apostolic principle of appointing a continuance of reputable men.

The date is almost certainly about the time of Domitian's persecution, AD 95–96, *i.e.* within the NT period.

The so-called second Epistle of Clement (2 *Clement*) is a homily of unknown (though 2nd-century) date and authorship. Cf. K. P. Donfried, *The Setting of Second Clement in Early Christianity*, 1974.

II. Ignatius

Ignatius, bishop of Antioch, was on his way to martyrdom in Rome in Trajan's reign (AD 98–117, probably late in that period) when he wrote seven letters which were gathered into a corpus: to the Asian churches at Ephesus, Magnesia, Tralles, Philadelphia and Smyrna, to his friend Polycarp, bishop of Smyrna, and to the Roman church, asking them not to intervene to prevent his martyrdom.

Ignatius approaches nearer than any other 2nd-century writer to sublimity as he speaks of the mysteries of incarnation and salvation. But he writes hurriedly and often obscurely: and he is consumed with the desire for martyrdom and obsessed with the necessity for close adhesion to the bishop. Some have taken this to imply that government by a single bishop, as distinct from presbyters, was still fairly new in Asia. Ignatius mentions no bishop when writing to Rome.

The letters were heavily interpolated and others added by forgers, usually dated in the 4th-century (but see J. W. Hannah, *JBL* 79, 1960, pp. 221ff.). On the setting see V. Corwin, *St. Ignatius and Christianity in Antioch*, 1960.

III. Polycarp

Polycarp was one of the most revered figures of Christian antiquity. He was bishop of Smyrna when Ignatius wrote: at a great age he was martyred. The date of his martyrdom, of which a moving early account survives, is disputed: AD 155/6 and AD 168 are canvassed (see W. Telfer, *JTS*

n.s. 3, 1952, pp. 79ff.). He had known the apostles, and John in particular, and he taught Irenaeus (Irenaeus, *Adv. Haer.* 3. 3. 4; Eusebius, *EH* 5. 20). He thus links the apostolic age and the late 2nd-century church. A letter to the Philippians survives, earnest and gracious. Ch. 13 is written without news of Ignatius' fate. P. N. Harrison (*Polycarp's Two Epistles to the Philippians*, 1936) argues that it is a separate early letter, and that chs. 1–12 were written c. AD 135–7 and conflated with it.

IV. The Didache

The *Didache* is a problematical work, consisting of teaching (which appears in other works) on the ways of life and of death, a brief church order, dealing with baptism, fasting, prayer, eucharist, ministers and prophets, and closing with an apocalypse. It has many peculiar features, according exactly neither with church order in the NT nor with what we know of the 2nd-century church. It has been argued that it is a genuine early work (*e.g.* J. P. Audet, *La Didachè*, 1958, dates it AD 60), that it is a late-2nd-century reconstruction, or that it represents a church out of the main stream. It seems to be Syrian.

V. Papias

Papias was bishop of Hierapolis in the early 2nd century and devoted much care to a five volume 'Exposition of the Oracles of the Lord', which survives only in tantalizing fragments in Irenaeus and Eusebius. Its date is uncertain: nothing later than AD 130 is likely. At all events he was in contact with hearers of the apostles (*MARK, GOSPEL OF; *MATTHEW).

VI. Barnabas

The *Epistle of Barnabas* is probably Alexandrine, from the early 2nd century. It is strongly anti-Jewish in tone, and marked by forced allegorical exegesis. It includes a form of the 'Two Ways'. The work is anonymous; its attribution to Barnabas (if the apostle is meant) is doubtless an early guess. It may, however, have led to its being read for a time in some churches (*cf.* Eusebius, *EH* 3. 25). See further P. Prigent, *L'Épître de Barnabé 1–16*, 1962.

VII. Hermas

The *Shepherd* of Hermas is a symbolic work intended to rouse a lax church and call to repentance Christians who had sinned: making clear—obviously a disputed point—that post-baptismal sin was not necessarily unforgivable. It is divided, rather artificially, into Visions, Tractates and Mandates.

Critical and historical problems abound. The Muratorian Fragment says it was written recently, by the brother of bishop Pius of Rome (c. AD 140), but there are some marks of earlier date, and, inferior work as it seems now, it had a period of reception as Scripture in some churches. It appears in Codex Sinaiticus of the NT. See H. Chadwick, *JTS* n.s. 8, 1957, pp. 274ff. Cf. also J. Reiling, *Hermas and Christian Prophecy*, 1973, for a study of the eleventh Mandate.

PAUL.

I. Life

a. Background

From Paul's birth until his appearance in Jerusalem as a persecutor of Christians there is little information concerning his life. Although of the tribe of Benjamin and a zealous member of the Pharisee party (Rom. 11:1; Phil. 3:5; Acts 23:6), he was born in Tarsus a Roman citizen (Acts 16:37; 21:39; 22:25ff.). Jerome cites a tradition that Paul's forbears were from Galilee. It is not certain whether they migrated to Tarsus for commercial reasons or were settled there as colonists by a Syrian ruler. That they were citizens suggests that they had resided there for some time.

Sir William Ramsay and others have shown that Tarsus truly was 'no mean city'. It was a centre of learning, and scholars generally have assumed that Paul became acquainted with various Gk. philosophies and religious cults during his youth there. Van Unnik has challenged this assumption. He argues that the relevant texts (Acts 22:3; 26:4f.) place Paul in Jerusalem as a very small child; Acts 22:3 is to be read in sequence: (i) born in Tarsus; (ii) brought up at my mother's knee (*anathrammenos*) in this city; (iii) educated at the feet of Rabban *Gamaliel the elder. As a 'young man' (Acts 7:58; Gal. 1:13f.; 1 Cor. 15:9) Paul was given official authority to direct the persecution of Christians and as a member of a synagogue or Sanhedrin council 'cast my vote against them' (Acts 26:10). In the light of Paul's education and early prominence we may presume that his family was of some means and of prominent status; his nephew's access to the Jerusalem leaders accords with this impression (Acts 23:16, 20).

Of Paul's personal appearance the canonical account suggests only that it was not impressive (1 Cor. 2:3f.; 2 Cor. 10:10). A more vivid picture, which Deissmann (p. 58) and Ramsay (*CRE*, pp. 31f.) incline to credit, occurs in the apocryphal *Acts of Paul and Thecla*: 'And he saw Paul coming, a man little of stature, thin-haired upon the head, crooked in the legs, of good state of body, with eyebrows joining, and nose somewhat hooked, full of grace: for sometimes he appeared like a man, and sometimes he had the face of an angel.'

b. Conversion and early ministry

While there is no evidence that Paul was acquainted with Jesus during his earthly ministry (2 Cor. 5:16 means only to 'regard from a human point of view'), his Christian kinsmen (*cf.* Rom. 16:7) and his experience of the martyrdom of Stephen (Acts 8:1) must have made an impact upon him. The glorified Jesus' question in Acts 26:14 implies as much. The result of Paul's encounter with the risen Christ gives ample assurance that it was an experience of a healthy mind; and it

can be adequately interpreted, as indeed Luke does interpret it, only as a miraculous act, which transformed Christ's enemy into his apostle. The three accounts in Acts (chs. 9, 22, 26) attest not only the significance of Paul's conversion for Luke's theme (*cf.* *CBQ* 15, 1953, pp. 315–338), but also, as J. Dupont and M. E. Thrall have suggested in the Bruce *Festschrift*, its essential importance for Paul's Christology and his interpretation of his ministry to the Gentiles. *Cf.* Kim, *Origin*, pp. 135–138, 170ff., 338.

Apart from an interval in the Transjordan desert, Paul spent the 3 years following his baptism preaching in Damascus (Gal. 1:17; Acts 9:19ff.). Under pressure from the Jews he fled to Jerusalem, where Barnabas ventured to introduce him to leaders of the understandably suspicious Christians. His ministry in Jerusalem lasted scarcely 2 weeks, for again certain Hellenistic Jews sought to kill him. To avoid them, Paul returned to the city of his birth, spending there a 'silent period' of some 10 years. No doubt it is silent only to us. Barnabas, hearing of his work and remembering their first meeting, requested Paul to come to Antioch to help in a flourishing Gentile mission (Gal. 1:7ff.; Acts 9:26ff.; 11:20ff.). These newly named 'Christians' soon began their own missionary work. After a year of notable blessing Paul and Barnabas were sent on a 'famine visit' to help stricken colleagues in Judaea.

c. Mission to Galatia—the Council of Jerusalem—mission to Greece

Upon their return from Jerusalem—about AD 46—Paul and Barnabas, commissioned by the church in Antioch, embarked on an evangelistic tour. It took them across the island of Cyprus and through 'S Galatia' (Acts 13–14). Their strategy, which became a pattern for the Pauline missions, was to preach first in the synagogue. Some Jews and Gentile 'Godfearers' accepted the message and became the nucleus for a local assembly. When the mass of Jews rejected the gospel, sometimes with violence, the focus of the preaching shifted to the Gentiles (*cf.* Acts 13:46f.). Despite these perils and the defection at Perga of their helper, John Mark, the mission succeeded in establishing a Christian witness in Pisidian Antioch, Iconium, Lystra, Derbe and possibly Perga.

Meanwhile the influx of Gentiles into the church raised serious questions concerning their relations to Jewish laws and customs. A number of Jewish Christians were insisting that Gentiles must be circumcised and observe the Mosaic law if they were to be received 'at par' in the Christian community. Upon his return to Antioch (c. AD 49), Paul, seeing in this Judaizing movement a threat to the very nature of the gospel, expressed his opposition in no uncertain terms. First, he rebuked Peter publicly (Gal. 2:14), after the latter, to avoid a breach with certain Judaizers, had separated himself from Gentile Christians. Secondly, hearing that the Judaizing heresy was infecting his recently established churches, Paul wrote a stinging letter of warning to the Galatians in which the Pauline *credo*, 'Salvation by grace through faith', was forcefully presented.

These events in Antioch gave rise to the first great theological crisis in the church. To resolve the problems which it raised, the church in Antioch sent Paul and Barnabas to confer with the 'apostles and elders' in Jerusalem (c. AD 50, Acts 15). The

ensuing council gave the judgment that Gentiles should have 'no greater burden' than to abstain from food offered to idols, blood-meat, meat from strangled animals and unchastity (or incest marriage). The effect of this decision was to sustain Paul's contention that Gentiles were under no obligation to keep the Mosaic law. The restrictions mentioned seem to have been principally for local application (*cf.* 1 Cor. 8) and as an aid to Jewish-Gentile relations.

Because of differences with Barnabas (over taking John Mark with them again) Paul took a new companion, Silas, on his 2nd missionary tour (Acts 15:40-18:22). From Antioch they travelled overland to the churches of 'S Galatia' and at Lystra added young Timothy to the party. Forbidden by the Holy Spirit to evangelize W, they journeyed N through 'N Galatia', where some converts may have been made (*cf.* Acts 16:6; 18:23). At Troas Paul in a vision saw a 'man of Macedonia' beckoning to him. Thus his evangelization of Greece began. In Macedonia missions were established in Philippi, Thessalonica and Beroea; in Achaia, or S Greece, Athens and Corinth were visited. In the latter city Paul remained almost 2 years founding a Christian fellowship that was to be the source of both joy and trial in the future. Through his co-workers (Luke the physician joined the party in Troas) and by correspondence (the Epistles to the Thessalonians) he kept in touch also with the struggling young churches in Macedonia. The Holy Spirit now moved Paul to turn his eyes once more upon the earlier forbidden province of Asia. Departing from Corinth, he stopped briefly at Ephesus, the commercial metropolis of Asia, and left as an advance party his Corinthian colleagues Priscilla and Aquila. In a quick trip back to Antioch—*via* Jerusalem—Paul completed his 'second missionary journey' and, after a final sojourn in Antioch, prepared to move his base of operation W to Ephesus.

d. The Aegean ministry

In many ways the Aegean period (*c.* AD 53-58; Acts 18:23-20:38) was the most important of Paul's life. The province of Asia, so important for the later church, was evangelized; and the Christian outposts in Greece secured. During these years he wrote the Corinthian letters, Rom, and perhaps one or more of the Prison Epistles (Eph., Phil., Col., Phm.), which in the providence of God were to constitute a holy and authoritative Scripture for all generations. For the apostle this was a time of triumph and defeat, of gospel proclamation and threatening heresies, of joy and frustration, of activity and prison meditation. The risen Christ used all these things to mould Paul into his image and to speak through Paul his word to the church.

From Antioch Paul travelled overland through the familiar Galatian region to Ephesus. There he met certain 'disciples', including Apollos, who had known John the Baptist and, presumably, Jesus (Acts 18:24ff.). On this foundation the church grew, and God performed such extraordinary miracles that certain Jewish exorcists began, without success, to use the name of 'Jesus whom Paul preaches'. Opposition from devotees of the city's patron goddess, Artemis (Diana), was soon aroused; and Demetrius, a prosperous idol-maker, succeeded (from motives other than piety) in inciting the people to riot. Paul doubtless had made a number of short trips from Ephesus; he took this

occasion, some 3 years after his arrival, to make a final visit to the churches in the Aegean area. Through Troas he came to Macedonia, where he wrote 2 Cor. and, after a time, travelled S to Corinth. There he spent the winter and wrote a letter to the 'Romans' before retracing his steps to Miletus, a port near Ephesus. After a touching farewell Paul, 'bound in the Spirit' and under threatening clouds, sailed towards Jerusalem and almost certain arrest. This did not deter him, for Asia had been conquered and he had visions of Rome.

e. The Caesarean and Roman imprisonment—Paul's death

Paul disembarked at Caesarea and, with a collection for the poor, arrived at Jerusalem at Pentecost (Acts 21:23f.; *cf.* 1 Cor. 16:3f.; 2 Cor. 9; Rom. 15:25ff.). Although he was careful to observe the Temple rituals, Jewish pilgrims from Ephesus, remembering 'the apostle to the Gentiles', accused him of violating the Temple and incited the crowds to riot. He was placed under arrest but was permitted to address the crowd and later the Sanhedrin.

To prevent his being lynched, Paul was removed to Caesarea, where *Felix, the Roman governor, imprisoned him for 2 years (*c.* AD 58-60, Acts 23-26). At that time Festus, Felix's successor, indicated that he might give Paul to the Jews for trial. Knowing the outcome of such a 'trial', Paul, as a Roman citizen, appealed to Caesar. After a moving interview before the governor and his guests, King Agrippa and Bernice, he was sent under guard to Rome. Thus, under circumstances hardly anticipated, the risen Christ fulfilled the apostle's dream and his own word to Paul: 'You must bear witness also at Rome' (Acts 23:11). Paul had a stormy sea-voyage and, after being wrecked, spent the winter on Malta (*c.* AD 61). He reached Rome in the spring and spent the next 2 years under house-arrest 'teaching about the Lord Jesus Christ quite openly' (Acts 28:31). Here the story of Acts ends, and the rest of Paul's life must be pieced together from other sources. (A helpful survey of the apostolic age, and Paul's place in it, is F. F. Bruce, *New Testament History*, 1969.)

Most probably Paul was released in AD 63 and visited Spain and the Aegean area before his re-arrest and death at the hands of Nero (*c.* AD 67). *1 Clement* (5. 5-7; ?AD 95), the Muratorian Canon (*c.* AD 170), and the apocryphal (Vercelli) *Acts of Peter* (1. 3; *c.* AD 200) witness to a journey to Spain; and the Pastoral Epistles appear to involve a post-Acts ministry in the East. To the end Paul fought the good fight, finished the course and kept the faith. His crown awaits him (*cf.* 2 Tim. 4:7f.).

II. Chronology

a. General reconstruction

The book of Acts, augmented with data from the Epistles and from Jewish and secular sources, continues to serve as the chronological framework of most scholars. Its essential compatibility with the sequence of Paul's mission, detectable (in part) in his letters, is evident (*cf.* T. H. Campbell, *JBL* 74, 1955, pp. 80-87). However, its sketchiness and chronological vagueness, even in those periods treated, is increasingly conceded; and there is a growing willingness to interpolate (*e.g.* an Ephesian imprisonment) into the framework from other data or reconstructions. Fixed dates with secular history are not numerous. The most certain

is the proconsulship of Gallio (*cf.* Acts 18:12), which may be fixed in AD 51–2 (Deissmann) or AD 52–3 (Jackson and Lake; *cf.* K. Haacker, *BZ* 16, 1972, pp. 252–255). If in Acts 18:12 Gallio had only recently assumed office (Deissmann), Paul's sojourn in Corinth may be dated between the end of AD 50 and the autumn AD 52. This accords with the 'recent' expulsion of Priscilla and Aquila from Rome (Acts 18:2), which may be dated c. AD 50 (Ramsay, *SPT*, p. 254). The accession of Festus (Acts 24:27) is often placed in AD 59 or 60. But the lack of any clear evidence leaves the matter uncertain (*cf.* C. E. B. Cranfield, *Romans*, ICC, 1975, pp. 14f.; Robinson, pp. 43–46).

Besides the three dates above, the mention of King Aretas of Nabatea (2 Cor. 11:32), the famine in Judaea (Acts 11:28) and Paul's trip to Spain and martyrdom in Rome under Nero (Rom. 15:28; *1 Clement* 5; Eus., *EH* 2. 25–3. 1) provide some less specific chronological data as follows. First, Damascus coins showing Roman occupation are present until AD 33, but from AD 34 to 62 they are lacking; this places a *terminus a quo* for Paul's conversion at AD 31 (*i.e.* AD 34 minus 3; *cf.* Gal. 1:18; ICC on 2 Cor. 11:32). (But the Nabateans apparently took control at the accession of Caligula in AD 37; *cf.* A. H. M. Jones, *The Cities of the Eastern Roman Provinces*², 1971.) Secondly, Josephus (*Ant.* 20. 101) notes a severe famine c. AD 44–48, probably to be located in AD 46. Thirdly, from tradition Paul's death may be dated with some probability in the latter years of Nero, c. AD 67.

b. The relation of Acts and Galatians

The only fully satisfying chronology is one in which there is a consensus of Acts, the Epistles and extra-biblical sources. One continuing problem for such a synthesis has been the relation between Acts and Galatians. The identification of Paul's visit to Jerusalem in Gal. 1:18 with Acts 9:26ff. is seldom questioned: the second visit in Gal. 2:1ff. poses the basic problem. Three views are current: Gal. 2 equals Acts 15, or Acts 11: 27–30, or Acts 11 and 15. In the past the first view has commanded the largest advocacy (*cf.* E. de W. Burton, *The Epistle to the Galatians*, 1921, pp. 115ff.), and it continues to attract some commentators (*cf.* H. Schlier, *An die Galater*, 1951, pp. 66ff.; H. Ridderbos, *Galatians*, 1953, pp. 34f.). The following objections, among others, have combined to undermine it: Gal. 2 pictures a second visit and a private meeting without reference to any document; Acts 15 is a third visit involving a public council and culminating in an official decree. Many scholars regard it as incredible that Gal. would, in a highly relevant context, omit mention of the Apostolic Council and decree.

The second view, often associated with the S Galatian theory, revives an interpretation of Calvin and removes a number of these objections. Acts 11 is a second visit, by revelation, and concerned with the poor (*cf.* Gal. 2:1–2, 10); the Apostolic Council in Acts 15 occurs after the writing of Gal. and, therefore, is not germane to the problem. Advanced in modern times by Ramsay (*SPT*, pp. 54ff.) and recently advocated by Bruce (*BJRL* 51, 1968–9, pp. 305ff.; 54, 1971–2, pp. 266f.), it is probably the prevailing view among British scholars (*cf.* C. S. C. Williams, *The Acts of the Apostles*, 1957, pp. 22ff.).

Dissatisfied with both alternatives, most Continental writers (*e.g.* Goguel, Jeremias), followed by

a number in Britain and America (*e.g.* K. Lake, A. D. Nock), regard Acts 11 and Acts 15 as duplicate accounts of Gal. 2, which Luke, using both sources, failed to merge (*cf.* Haenchen, pp. 64f., 377). Against Ramsay, Lake urges that if the Judaizing problem is settled in Acts 11 (= Gal. 2), Acts 15 is superfluous. Gal. 2:9, however, pictures not a settlement but only a private, tacit approval of Paul's gospel and is incidental to the purpose of the visit which, as Lake admits, is the 'care of the poor' (*BC*, 5, pp. 201f.). Haenchen (p. 377) rejects Ramsay's 'crucial' application of Gal. 2:10 to the famine visit. He may be correct in identifying the 'poor' with the Gentile mission (Gal. 2:9), but it scarcely has the vital significance which he attributes to it. Ramsay's reconstruction, even with some exegetical gnats, remains the more probable alternative. Basically the view identifying Acts 11 and Acts 15 arises from the traditional equation of Gal. 2 and Acts 15, and also from an excessively negative estimate of Luke's acquaintance with and interpretation of the primary sources. Since Gal. 2 = Acts 11 provides 'a perfectly clear historical development' (W. L. Knox, *The Acts of the Apostles*, 1948, p. 49), the other is unnecessarily complex. Other views of the problem are expressed by T. W. Manson (*BJRL* 24, 1940, pp. 58–80), who identifies Gal. 2 with a visit prior to Acts 11, and M. Dibelius (*Studies in Acts*, 1956, p. 100), whose excessive *tendenz* criticism denies to both Acts 11 and Acts 15 any claim to historicity.

c. A new reconstruction

Convinced that the Acts framework is unreliable, John Knox (*Chapters in a Life of Paul*, 1950, pp. 74–88) offers an imaginative chronological reconstruction from the evidence of the letters. A 14-year 'silent period' (AD 33–47) is impossible; therefore, the apostle's missionary activities and some letters are largely to be placed between his first (AD 38; Gal. 1:18) and second (AD 51; Gal. 2 = Acts 15) visits to Jerusalem. The final tour ends with his 'collection visit' and arrest (AD 51–3; Rom. 15:25; I Cor. 16:3f.). Why a silent period (which means simply that it yields no extant letters and did not fit Luke's theme) is so impossible is not readily apparent; and the traditional equation of Acts 15 and Gal. 2 also is open to question. Knox's fertile mind has found here more admirers than followers, for 'it is difficult to exchange tradition with imagination (as we find it in Acts) for imagination (however reasonable) without tradition' (Davies, *TCERK*, p. 854). Nevertheless, further attempts have been made to reconstruct the Pauline mission solely from the letters. *Cf.* Kümmel, *INT*, pp. 253f.; G. Lüdemann, *Paulus der Heidenapostel*, 1979.

III. History of criticism

a. Early developments

In a brilliant historical survey Albert Schweitzer (*Paul and his Interpreters*; *cf.* also Feine, *Paulus*, pp. 11–206; Ridderbos, *Paul*, 1976, pp. 13–43) traces the development of critical studies in Germany following the Reformation. For the orthodox, Scripture sometimes was little more than a mine of credal proof texts; exegesis became the servant of dogma. The 18th century witnessed a reaction by pietists and rationalists, who, each for his own purpose, sought to distinguish exegesis from credal conclusions. Philological exegesis and the inter-

pretation of Scripture by Scripture became normative for scientific interpretation.

This development perhaps finds its most important expression in J. S. Semler, who, with J. D. Michaelis, pioneered the development of literary-historical criticism. His 'Prolegomena' to theological hermeneutics, 'Paraphrases' of Rom. and Cor., and other writings emphasize that the NT is a temporally conditioned document in which the purely cultural references are to be distinguished and/or eliminated. Philology exists to serve historical criticism. Our copies of Paul's letters have a 'church liturgy' format and we must, then, face the possibility that they originally had a different form. Specifically, Semler suggests that Rom. 15 and 16; 2 Cor. 9; 12:14-13:14 were separate documents, later incorporated into the larger Epistles. Foreshadowing the conclusions of F. C. Baur, Semler contrasts Paul's non-Jewish ideas with the Jewish-Christian party whom the apostle opposed; the General Epistles reflect an effort to mediate in this conflict. On questions of authorship a trend appeared in J. E. C. Schmidt (1805), who, on literary grounds, doubted the authenticity of 1 Tim. and 2 Thes. Schleiermacher (1807), Eichhorn (1812), and De Wette (1826) brought 2 Tim., Tit. and Eph. under question.

b. The Tübingen School

In 19th-century Germany exegesis was fully transformed from the 'servant of dogma' to the 'servant of scientific philosophy' (cf. Kümmel, *Problems*, pp. 130-143; S. Neill, *The Interpretation of the New Testament, 1861-1961*, 1964, pp. 10-28). Most significant in this regard for Pauline studies was F. C. Baur of Tübingen. He was not content merely to test the authenticity of ancient documents, a popular practice since the Renaissance. His was a 'positive criticism' which sought to find the documents' true historical setting and meaning. In *Symbolik und Mythologie*, the book which brought about his faculty appointment, he revealed the set of his mind and of his future work with the declaration that 'without philosophy history seems to me for ever dead and mute' (I. xi). In this matter Baur found in Hegelian dialectic—which viewed all historical movement as a series of theses (advance), antitheses (reaction) and syntheses (= a new thesis)—an appropriate key to interpret the history of the apostolic age (cf. Ellis, *Prophecy*¹, pp. 86-89; Haenchen, pp. 15-24). He had argued earlier (1831) that 1 Cor. 1:12 depicted a conflict between Pauline-Gentile and Petrine-Jewish Christianity. He later saw in Acts and the smaller Pauline Epistles and in the 'Gnostic' opponents of 'the so-called Pastoral letters' (1835) a more developed stage of the conflict in which, in the fight against Gnosticism, the original Pauline 'thesis' and Petrine 'antithesis' were finally resolved by the late 2nd century into an early Catholic 'synthesis'. In this 'tendency criticism' all NT writings which 'tended' towards compromise between Paul and the original apostles were viewed as later attempts to read back a subsequent unity into the apostolic period. After Baur's thoroughgoing scything only five NT documents remained uncontested witnesses from the apostolic period. Apart from Rev. all were Paul's: Rom., Cor. and Gal. The then current literary analysis of Paul's letters favoured Baur's reconstruction and, in turn, the latter accentuated and confirmed the suspicions of the more extreme literary critics. The Tübingen

school rapidly became the dominant factor in NT criticism.

Using Baur's logic and sparked by Bruno Bauer's commentary on Acts (1850), an ultra-radical school questioned the genuineness of all Pauline literature. First, Acts knows no Pauline letters, and its simple picture of the apostle may be more primitive than the letters; disagreements even within Rom. and Gal. suggest several hands and a later time. Secondly, if Pauline thought (Paulinism) is the Hellenization of Christianity, as Baur thought, is it possible that this was accomplished so quickly and by one man? Could anti-Jewish feeling or Paul's high Christology have developed in a Palestinian-based church so soon after Jesus' death? No; the conflict itself is the climax of a long development, and Paulinism is to be identified with a 2nd-century Gnostic party who used the apostle's 'letters' as an authoritative vehicle for their own ideas. Why letters? Because apostolic letters already had a position of authority. Why Paul? This is impossible to say.

For all their logic the radicals succeeded only in convincing themselves. The citation of Paul in *I Clement* (?AD 95) and Ignatius (AD 110), and the neglect of Paulinism and lack of any anti-Jewish conflict in the post-apostolic literature were fatal to their argument. The omission in Acts of Pauline literary activity was a (not very strong) argument from silence. The net result of the 'ultra-Tübingen school' was to undermine Tübingen itself. For, within their common assumption that Paul was the Hellenizer of Christianity and that Hegel supplied the key to history, the radicals had the better argument.

Baur's views came under attack from the conservatives (e.g. J. C. K. von Hofmann) and the followers of Schleiermacher (e.g. Ewald); perhaps the cruelest and most telling blow was from A. Ritschl, a former disciple. Both Ritschl and von Hofmann rejected the alleged hostility between Paul and the original disciples. The latter's emphasis upon the unity of apostolic teaching was in the next century to find renewed expression in the writings of P. Feine and A. Schlatter and in the kerygmatic theology of C. H. Dodd. A moderating literary criticism, even among Baur's disciples (e.g. Pfeiderer), revised the estimate of genuine Pauline Epistles sharply upward. Apart from the Pastorals, the majority excluded only 2 Thes. and Eph., and their acceptance (e.g. by Harnack, Jülicher) was no longer a mark of conservatism.

With its literary and philosophical presuppositions undermined, the influence of Tübingen waned. Nevertheless, by tying literary analysis to an imaginative philosophical synthesis Baur, whom Godet called Semler *redivivus*, dominated NT criticism (as Semler never did) for half a century. Again, although his own exegesis proved to have a philosophical bias unacceptable to later historians (and to all committed to a theistic interpretation of history), Baur brought into prominence an inductive historical approach to earliest Christianity and freed research from a tradition which came to much of the data with its conclusions already assumed. For this, all students can appreciate his labours. Finally, because Baur's reconstruction placed in bold relief the problems facing historians of the apostolic age, he largely set the course of future studies. What was the relationship between Paul and Jesus? What was the influence of Jewish and Hellenistic thought in

the apostolic church? What are the proper philosophical presuppositions for a study of Christian origins? The Tübingen school died, and there is no apparent sign of an early resurrection. (Its airing in S. G. F. Brandon's *The Fall of Jerusalem and the Christian Church*, 1951, does not appear to have imparted life.) But the forces which gave it birth continued fecund and, for a corpse, Tübingen retained a remarkable familiarity with the following generations.

c. British contributions in the 19th century

British (and American) scholars interacted with the Tübingen reconstruction; but, with one or two exceptions (e.g. S. Davidson), they did not find it persuasive. Likewise, the Pauline Corpus (minus Heb.) continued to find acceptance. In America some rejected the Pastorals (e.g. B. W. Bacon, A. C. McGiffert); Britain, following J. B. Lightfoot (*Biblical Essays*, 1904, pp. 397-410), generally accepted them in a post-Acts setting. Nevertheless, with characteristic caution, British scholars influenced future criticism more than is generally realized by solid historical exegesis (e.g. Lightfoot, Ramsay) and by relating Paul to contemporary Jewish thought (e.g. F. W. Farrar, H. St J. Thackeray). W. M. Ramsay's espousal of the Lucan authorship of Acts after thoroughgoing archaeological and historical research was particularly influential for the critical reconstruction of Paul's life (cf. *SPT*, pp. 20ff.; W. K. Hobart's conclusions regarding *The Medical Language of St Luke*, 1882, also remain, with qualifications, a valid contribution in this area). With the advocacy of the German scholars Harnack and Deissmann this conclusion has been strengthened, although some recent students, as Haenchen, have argued anew against the tradition.

d. Trends in the 20th century

Literary criticism in the present century has focused upon: (i) a continuing effort towards a general historical reconstruction (cf. IV, below); (ii) the publication of the Pauline corpus; (iii) the provenance and date of the Prison Epistles; (iv) authorship; and (v) other questions concerning individual Epistles.

(i) *Historical reconstructions.* In spite of the demise of the Tübingen school its historical reconstruction, and some of its literary foibles, have continued to be assumed in much contemporary critical study. Johannes Munck (pp. 70-77) has rightly objected that when the literary conjectures failed, the dependent historical conjectures ought to have been revised ('It was not enough merely to transfer the problem from the two centuries to the three decades'; p. 70). Munck himself proposes such a revision. (1) The Jerusalem church, i.e. the original disciples, even as Paul, had no interest in excluding or 'Judaizing' Gentiles. (2) It was Paul's conviction, and his sole difference with the Jerusalem church, that Gentiles must *first* be won. Thus, as the apostle to the Gentiles (Gal. 2:7) he restrains antichrist (2 Thes. 2:7), by evangelism brings in (representatively) the 'fullness of the Gentiles' (Rom. 11:25; 15:19) and, as a decisive eschatological act, initiates Israel's redemption by making her jealous (Rom. 11:11) in taking the 'Gentile' collection to Jerusalem (Acts 20:4; 1 Cor. 16:3). Israel's 'No' issues in Paul's arrest and death, but Paul dies, as did Jesus, knowing God will yet save 'all Israel' in the fullness of time. In interpreting

Paul's ministry within the framework of his initial call and of his eschatology, Munck gives due heed to critical emphases; on balance, his work marks a constructive advance.

Like F. C. Baur and W. Schmithals, E. E. Ellis (*Prophecy*, pp. 69ff., 78f., 104-128) also interprets Paul's mission in terms of his conflict with opponents: (1) Because the Hebraists (= 'the circumcision party', Acts 11:2f.; Gal. 2:12) and the Hellenists of Acts 6:1 had respectively a strict and a loose attitude towards the ritual law, they pursued somewhat separate missions in the Diaspora. (2) There a faction of the Hebraists, the Judaizers, sought to impose circumcision on Gentile believers. After the Council of Jerusalem they apparently subordinated their Judaizing interests to a boastful triumphalism, licentious tendencies and a claim to mediate divine *gnōsis* through visions of angels. (3) Seeking to maintain the unity of the church, Paul counselled with Hebraist leaders (Gal. 2), worked with Hebraist colleagues (Col. 4:11) and took offerings to the Hebraist church of Jerusalem. (4) Against the opponents and their sympathizers he emphasized justification apart from works together with judgment according to one's works (Gal., Rom., Pastorals), the cruciform model of Christian ministry (Cor., Phil.), the Christocentric character of divine *gnōsis* and of all the charisms (Cor., Col.) and, at length, a church order that would protect the congregations from the false teachers (Pastorals).

(ii) *The Pauline corpus.* E. J. Goodspeed, departing from Harnack and earlier authorities, drew fresh attention to the formation of the Pauline corpus. He conjectured that about AD 90 an admirer of Paul in Ephesus published the apostle's letters (excepting the Pastorals) and wrote Eph. himself as an 'Introduction'. J. Knox (*Philemon among the Letters of Paul*, 1959, pp. 98ff.) took the hypothesis a step further and identified that admirer with Onesimus the slave, and later bishop of Ephesus. While receiving considerable acceptance (cf. C. L. Mitton, *The Formation of the Pauline Corpus of Letters*, 1955), the theory has been unpersuasive to many. (1) The text demands some addressee, and the primitive omission of such points to a circular letter, hardly suitable for a corpus introduction. (2) Eph. never introduces or ends the Pauline corpus in any ancient ms. (3) It is very doubtful that the content of Eph. can be properly described as a non-Pauline summation of Pauline thought. (4) G. Zuntz (pp. 14ff., 276-279), while recognizing the possibility of an earlier pre-corpus collection in Ephesus, finds that the textual and other evidence points to c. AD 100 and to 'the scholarly Alexandrian methods of editorship'. C. F. D. Moule suggests that Luke may be the collector of Paul's letters (*BJRL* 47, 1964-5, pp. 451f.).

(iii) *The provenance and date of the Prison Epistles.* The provenance of Paul's prison letters (Eph., Phil., Col., Phm.), traditionally assigned to Rome, has been a matter of increasing interest since G. S. Duncan, following Lisco and Deissmann, located them in *St Paul's Ephesian Ministry* (1929). Although Acts mentions no Ephesian imprisonment, Paul's letters imply it (e.g. 1 Cor. 15:32; 2 Cor. 1:8; 6:5; 11:23); also the setting, journeys and personages of the prison letters fit Ephesus better than distant Rome (cf. Phm. 22; Phil. 2:24 with Rom. 15:24ff.; *NTS* 3, 1956-7, pp. 211-218). J. Knox (*Philemon*, p. 33), Michaelis (pp. 205ff., 220), and

as to Phil., Bruce (*Acts*¹, English text, p. 341) and T. W. Manson (*BJRL* 22, 1939, pp. 182ff.) are sympathetic to Duncan. C. H. Dodd (*Studies*, pp. 85–108) and Percy (pp. 473f.) object. (1) The tradition apart from Marcion's Prologue is unanimous for Rome, and such probably (though not certainly) is the meaning of Phil. 4:22. (2) Such references as 1 Cor. 15:32 are to be taken metaphorically. (3) The 'developed theology' of the captivity Epistles suggests the later Roman date. On balance, the Ephesian provenance is inviting and, at least in the case of Phil., may prove to be a permanent advance. However, a Caesarean provenance is advocated by Reicke (in the Bruce *Festschrift*) and by J. A. T. Robinson (*Redating the New Testament*, 1976, pp. 60f.).

(iv) The *authorship* of Paul's letters has been regarded traditionally as the individual enterprise of the apostle. On this assumption it is thought that the 'authentic' letters can be identified in terms of vocabulary, style, idiom and subject-matter and, on the same basis, that they can be divided into Pauline and 'interpolated' sections (cf. Schweitzer, *Interpreters*, pp. 141–150; Schmithals, *Gnosticism*, pp. 302–325; J. C. O'Neill, *Galatians*, 1972; *Romans*, 1975).

However, the effort to determine authorship on the basis of literary criteria has now been brought into question by several factors. (1) As Otto Roller showed, *the role of the amanuensis* in ancient letter-writing included an influence on the vocabulary and style of the letter. The hand of such secretaries is clearly present in the Pauline letters—even in the brief note to Philemon (Rom. 16:22; Gal. 6:11; 2 Thes. 3:17; Phm. 19). (2) *The role of the co-senders* of some letters is not entirely clear but, as H. Conzelmann (*NTS* 12, 1965–6, p. 234n.; cf. Roller, pp. 153–187) has observed, it probably involved some influence on their composition. (3) Paul worked within a circle of prophets and teachers (cf. Acts 13:1; Rom. 16:21f.; Col. 4:10–14), and the work of these colleagues is sometimes incorporated into his letters (cf. Ellis, *Prophecy*¹, pp. 25f., 213). It is reflected in the *many pre-formed pieces* that are timed by the apostle — hymns (e.g. Phil. 2:5–11; 1 Tim. 3:16), expositions (e.g. 1 Cor. 2:6–16; 2 Cor. 6:14–7:1) and creeds (e.g. Rom. 1:3f.; 1 Cor. 15:3–7)—a phenomenon widely recognized today, and shows that even the undisputed Pauline letters are not a literary unity.

Paul is the author of the letters under his name in the sense that they were written under his supervision and in part by his hand or dictation, and they were sent out under his authority. But they are not, as a whole, solely his *de novo* compositions. Consequently, the literary criteria traditionally used to determine Pauline authorship can be given little weight in their present form, for they were devised under mistaken assumptions about the Pauline mission praxis and about the process by which the letters were composed.

(v) *Individual Epistles*. Critical emphases within the individual letters have shifted, except in the case of Eph. and the Pastorals, from authorship to other matters. (See separate articles on the various Epistles.) Many British and American scholars favour an early date for *Galatians* (c. AD 49 from Antioch) and a S Galatia destination, i.e. to the churches founded on Paul's first mission tour. On the Continent, N Galatia, i.e. the ethnic region (Acts 16:6; 18:23), and a post-Acts 15 chronology remain popular. The order of 1 and 2 *Thes-*

salonians is reversed by T. W. Manson. Differences of style and subject-matter caused Harnack to suppose that 2 Thes. was written to the Jewish Christians but, more likely, it was directed to Paul's Thessalonian co-workers (Ellis, *Prophecy*¹, pp. 19ff.). Munck (pp. 36ff.; contrast *NIC*), following Cullmann, identifies the restraining power in 2 Thes. 2:6f. with Paul himself.

The *Corinthians correspondence* includes, in addition to the canonical Epistles, a letter prior to 1 Cor. (5:9) and a 'painful letter' (cf. 2 Cor. 2:4; 7:8) which are identified by some scholars with 2 Cor. 6:14–7:1 and 2 Cor. 10–13 respectively. C. K. Barrett (*Second . . . Corinthians*, 1973) and R. V. G. Tasker (*TNTC*) argue for the unity of our second Epistle. A more plausible case for the combination of two letters occurs in *Romans*, where the concluding doxology occurs after 14:23 and 15:33 in a number of mss, and the addressees in Rom. 1:7, 15 are missing in a few. Of several explanations the one given by T. W. Manson (pp. 225–241), among others, is quite attractive: Rom. 1–15 was a circular letter to which ch. 16, an introduction of Phoebe to the Ephesians, was attached in the Ephesus copy. Nevertheless, the traditional view continues to find wide support (e.g. C. E. B. Cranfield, *ICC*, 1975; K. P. Donfried, *The Romans Debate*, 1977).

A 'circular letter' appears to be indicated in the case of *Ephesians* by: (1) the currency of the practice in the 1st century (cf. Zuntz, p. 228), and (2) the necessity for, and yet manuscript omission of, an addressee. Such a view would militate against Goodspeed's corpus introduction theory, but it would leave open Sanders' view (cf. F. L. Cross, below) that Ephesians is not an Epistle but Paul's 'spiritual testament'. It might also explain the title 'to the Laodiceans', which, according to Tertullian, Marcion gave the letter (cf. Col. 4:16). E. Percy, M. Barth and A. van Roon have given the most recent arguments for Pauline authorship; C. L. Mitton in *Epistle to the Ephesians* (1951) argues against it. A more popular 'pro and con' is found in F. L. Cross's symposium, *Studies in Ephesians* (1956). 'Which is more likely,' asks H. J. Cadbury (*NTS* 5, 1958–9, p. 101), 'that an imitator of Paul in the 1st century composed a writing 90 or 95% in accordance with Paul's style or that Paul himself wrote a letter diverging 5 or 10% from his usual style?' With the increased tendency to allow for variation in Pauline literary and theological expression and a different perception of the nature of authorship (above) the arguments against genuineness become less convincing; they are weakened even further by the Dead Sea Scrolls parallels (cf. Murphy-O'Connor, pp. 115–131, 159–178).

Outside Germany most students consider the 19th-century 'non-Pauline' verdicts valid only for the Pastorals. (In recent years Pauline authorship of the Epistle to the Hebrews has been seriously argued only by the Roman Catholic scholar William Leonard.) Anglo-American opinion (and also Schmithals, *Gnostics*) has tended to agree with P. N. Harrison's 'fragment hypothesis' i.e. Pauline fragments supplemented and edited; most Continentals who reject the Pastorals favour, with Kümmel (*JNT*, a later Paulinist author. The case for genuineness has found support in Roller's 'secretary hypothesis', i.e. that stylistic variations stem from Paul's amanuensis, whom some suggest to be Luke (e.g. C. F. D. Moule, *BJRL* 47, 1965, pp. 430–452); the traditional view has been argued anew by Spicq and Michaelis. The growing dissatisfaction

PAUL

with Harrison's hypothesis expressed, e.g. in Guthrie (*TNTC*), Kelly and Metzger (*ExpT* 70, 1958-9, pp. 91ff.) may represent a general reappraisal of the prevailing view (cf. *EQ* 32, pp. 151-161). But see M. Dibelius and H. Conzelmann, *The Pastoral Epistles*, 1972. See also * Timothy and Titus, Epistles to (IV).

IV. Pauline thought

a. Background

The Reformation emphasis upon righteousness or justification by faith (Rom. 1:17) continued in the following centuries to be the controlling factor in the interpretation of Paul's doctrine. With the rise of literary criticism the absence of this motif became sufficient reason to suspect or even reject a 'Pauline' letter; and in the incipient development of Paulinism, i.e. the system of Pauline thought, 'righteousness' was regarded as the key to the apostle's mind. (In the following sketch compare especially Schweitzer, *Interpreters*.)

(i) *Paul's doctrine of redemption.* L. Usteri (1824) and A. F. Daehne (1835) sought to explain the whole of Pauline thought in terms of the imputed righteousness of Romans (e.g. 3:21ff.). In contrast, the rationalist H. E. G. Paulus, starting from texts stressing the 'new creation' and sanctification (e.g. 2 Cor. 5:17; Rom. 8:29), insisted that Pauline righteousness was an ethical, moral concept; faith in Jesus meant ultimately the faith of Jesus. These two ideas and their relationship had a continuing significance through the 19th century.

F. C. Baur, within the framework of Hegelian idealism, sought at first (1845) to explain Paul in terms of the Spirit given through union with Christ by faith. Later, however, Baur reverted to the Reformation pattern, a compartmentalized presentation of the various Pauline doctrines without any attempt to view them from a unified concept. This *loci* approach was followed by succeeding writers who gave minute descriptions of Pauline doctrine, innocently supposing 'that in the description they possessed at the same time an explanation' (Schweitzer, *Interpreters*, p. 36).

Nevertheless, some writers pressed towards the discovery of a unifying concept for Pauline thought. R. A. Lipsius (1853) had recognized two views of redemption in Paul, the juridical (justification) and the ethical ('new creation'). Hermann Luedemann, in his book *The Anthropology of the Apostle Paul* (1872), concluded that the two views of redemption actually rested on two views of the nature of man. In Paul's earlier 'Jewish' view (Gal.; Rom. 1-4) redemption was a juridical verdict of acquittal; for the mature Paul (Rom. 5-8) it was an ethical-physical transformation from 'flesh' to 'spirit' through communion with the Holy Spirit. The source of the first idea was Christ's death; the second, his resurrection. On the other hand, Richard Kabisch concluded that Pauline redemption essentially meant deliverance from coming judgment, and its significance, therefore, was to be found in the eschatology of the apostle. The Christian must walk in newness of life to show that he actually shared Christ's resurrection. 'Spiritual' life and death in the modern religious sense are unknown to Paul; both concepts are, e.g. in Rom. 6, always physical; and the new life is a mystical union with Christ. Thus, future deliverance from satanic powers is anticipated by the possession of the Holy Spirit, who manifests the new age in the

present and inseminates our corporal being with a super-earthly substance.

For both Luedemann and Kabisch: (1) Paul's doctrine of redemption emanates from one fundamental concept. (2) It is a physical redemption to be understood in terms of Pauline anthropology. (3) To be redeemed means to share Christ's death and resurrection, which involves union with Christ and the abolition of the 'flesh'. (4) Although future, this redemption is mediated in the present by the Holy Spirit.

But questions remained. In what sense can Christ's death and resurrection be repeated in the believer? In what sense can the Christian be 'a new creation' and yet outwardly appear unchanged? Albert Schweitzer, building upon the interpretations of Luedemann and Kabisch, sought an answer in the following synthesis. (1) Paul, as did Jesus, interpreted Jesus' death and resurrection to be eschatological, i.e. an end of the world event, bringing the kingdom of God and the resurrection life to all the elect. (2) But the world did not end, and believers did not in fact enter into resurrection life; in time the temporal separation between Christ's resurrection and the (anticipated) resurrection of believers became the chief problem for Paul's teaching. (3) To answer it Paul posits a 'physical mysticism': through the sacraments the Holy Spirit mediates in the present time Christ's resurrection to the 'last generation' believers. (4) This present union with Christ in the Spirit ensures to the believer a share in the 'Messianic resurrection' at the parousia.

(ii) *Pauline eschatology.* Thus, Schweitzer set the stage for 20th-century discussions of Pauline eschatology. It was his great merit that he sought to understand Paul's thought in terms of one fundamental concept, that he recognized the central importance of eschatology and (Jewish) anthropology in the apostle's doctrine of redemption, and that he recognized the Holy Spirit and the *en Christō* union as the realization of the new age in the present. But Schweitzer's interpretation of Paul's eschatology as a makeshift expedient (and as a sacramental mysticism) is questionable, to say the least. For, as N. Q. Hamilton's critique has pointed out (*The Holy Spirit and Eschatology in Paul*, 1957, pp. 50ff.), the exalted Christ, not the 'delay' in the parousia, determines Paul's eschatology. Also, if Paul's thought patterns are Jewish (as Schweitzer rightly recognized), sacramental mysticism is a rather awkward explanation of the realism of the 'new creation' in Christ.

(iii) *Paul's thought patterns.* In addition to eschatology as the key to Paulinism, a closely related question important for the future also had its rise in the 19th century. Are Paul's thought patterns Jewish or Hellenistic? Kabisch and Schweitzer insisted that Pauline thought was Jewish to the core. Others, following F. C. Baur's reconstruction of Paul as the 'Hellenizer of Christianity', interpreted Pauline anthropology and eschatology from the standpoint of a modified Platonic dualism. The antithesis between 'flesh' and 'spirit' in Rom. 6-8 was an ethical dualism, and 'dying' and 'rising' a spiritual transformation. This has its roots in an anthropological dualism; thus, in the future, redemption involves the deliverance of the 'soul' from its house of clay. But Paul also speaks of the resurrection of the whole man from death (I Thes. 4; I Cor. 15). Otto Pfeiderer (*Paulinism*, 1877, I, p. 264) concluded that Paul held Jewish

and Gk. views simultaneously, 'side by side, without any thought of their essential inconsistency'. In interpreting Pauline eschatology elsewhere (cf. Schweitzer, *Interpreters*, p. 70) he posits a development from 1 Thes. 4 through 1 Cor. 15 to 2 Cor. 5. The first is simply Jewish resurrection eschatology; in 2 Cor. 5 the believer goes to the heavenly realms at death.

b. The origin of Paul's religion: Hellenism

20th-century studies of Pauline thought have devoted themselves primarily to three questions. What is the relation between Paul and Jesus? What are the sources for Pauline thought? What is the role of eschatology in the mind of Paul?

(i) *Paul's relation to Jesus*. The distinction raised a half century earlier between 'juridical' (Rom. 1-4) and 'ethical' (Rom. 5-8) righteousness had borne much fruit, and the latter came to be regarded as the more central and decisive Pauline concept. A. Deissmann (pp. 148ff.) viewed 'in Christ' as an intimate spiritual communion with Christ, a Christ mysticism; more often the 'mysticism' was interpreted as a sacramental reality based upon Jewish eschatology (Schweitzer) or the pagan mysteries (J. Weiss, *Earliest Christianity*, 1959 (1937), 2, pp. 463f.). Somewhat later J. S. Stewart (*A Man in Christ*, 1935, pp. 150ff.) reflected this trend in British scholarship, regarding union with Christ as the central element in Paul's thought. This emphasis had important consequences for the course of Pauline studies in the 20th century.

The contrast between the 'liberal Jesus' and Paul's indwelling and yet transcendent Christ called forth at the turn of the century a spate of books on the relationship of Jesus and Paul (cf. P. Feine, *Paulus*, pp. 158ff.). W. Wrede's influential *Paulus* (1905) put the matter in the starkest terms: Paul was not truly a disciple of Jesus; he was actually the second founder of Christianity. The individual piety and future salvation of the Rabbi Jesus had been transformed by the theologian Paul into a present redemption through the death and resurrection of a christ-god. Paul's ideas could not, of course, be accepted at face value. To do so would, as Weinel (*St Paul*, 1906, p. 11) remarked, 'stifle the claims of reason for the sake of Christianity, for reason is ever-repeating . . . that the modern conception of the world is the right one'. Nevertheless, the historian's task remained. If Paul's doctrines did not arise from and build upon Jesus' mind, what was their origin?

(ii) *Sources of Pauline thought*. F. C. Baur sought to explain the mind of Paul in the context of church controversy: Paul was the champion of Gentile freedom. For Schweitzer the origin of Paul's thought was his peculiar eschatological problem forged in the mental cauldron of late Judaism. However, the rising 'History of Religion' (*Religionsgeschichte*) school found no evidence to ground Paul's sacramental mysticism in Judaism. While recognizing the eschatological problem, it built upon Baur's 'Gentile' Paul and developed still another elaborate reconstruction of the apostolic age. Represented most notably by R. Reitzenstein and W. Bousset, it interpreted Paulinism in the framework of Oriental-Hellenistic mystery religions. The Mysteries spoke, as did Paul, of a dying-rising god, of 'Lord', of sacramental redemption, of 'mysteries', *gnōsis* and 'spirit'. As a boy in Tarsus and later as a missionary the apostle

came under the influence of these ideas, and they exerted a profound influence on his theology. Schweitzer (*Interpreters*, pp. 179-236), H. A. A. Kennedy, G. Wagner and J. G. Machen (pp. 255-290) subjected this reconstruction to a thorough critique, pointing out that, in ignoring the OT-Judaism background of the parallels (which Kennedy showed to be quite plausible) and the late date of its sources, the theory reflected a weakness in method. (Cf. also R. E. Brown, *The Semitic Background of the Term 'Mystery'* . . . , 1968). The principal contribution of the History of Religion school was to raise the important question of Paul's theological relation to the Gentile religious world. The 'mystery religion' reconstruction did not win general approval, but in a more recent gnostic dress its general outlines continue to be strongly advocated.

The mystery religion parallels paled; nevertheless, the conviction remained strong that Paul's thought was substantially influenced by the Greek world of ideas. R. Bultmann (1910) had shown the affinity of Paul's literary style with the Stoic diatribe. Others regarded Paul's doctrine of the 'corporate body' (cf. W. L. Knox, *Gentiles*, pp. 160ff.), his natural theology in Rom. 1 (cf. Acts 17) and his concept of conscience (E. Norden, *Agnostos Theos*, 1913) as rooted in Stoicism. The inadequacy of these conclusions was pointed out, respectively, by E. Best (pp. 83ff.), B. Gaertner (pp. 133-169) and C. A. Pierce (pp. 16ff.). Gaertner argues that Paul's 'natural theology' is thoroughly OT-Jewish; however, Pierce (pp. 22ff., 57ff.) concludes that the NT adopts in the case of 'conscience' a general usage of popular Gk. thought.

To determine the relationship of Paul to pagan religious thought, the area currently receiving most attention is Gnosticism. This religious-philosophical movement stressed a metaphysical dualism, deliverance from 'matter' through a divine gift and power of *gnōsis*, i.e. a special knowledge of God, and mediating angels to assist one to salvation. Long ago J. B. Lightfoot (*Colossians and Philemon*, 1886, pp. 71-111) detected elements of Gnosticism in the Colossian heresy. Early in the 20th century Bousset and J. Weiss (*op. cit.*, 2, pp. 650f.) urged that aspects of Paul's own thought lay in this direction. R. Bultmann and his pupil W. Schmithals became the chief representatives and developers of Bousset's reconstruction today. From existentialist considerations Bultmann again made 'justification' a central Pauline motif, although it was far from a return to Baur or to the Reformers; for the same reasons Paul's anthropology was given a thorough exposition (*Theology* 1, pp. 190-227). But the real clue to Bultmann's understanding of Paulinism is his grounding of Pauline thought in a syncretistic Judaism and Christianity. From this background Paul obtained a number of concepts, e.g. sacramental redemption and ethical dualism, which were Gnostic or gnosticized in some degree (*Theology* 1, pp. 63ff., 124ff., 151-188). While Paul opposed the Gnostics, e.g. at Colossae, in the process he modified not only his terminology but also his concepts, particularly his Christology (Messiah Jesus becomes a heavenly Lord; cf. Bousset) and cosmogony (the demon-controlled world is redeemed by a heavenly man; cf. W. L. Knox, *Gentiles*, pp. 220ff.; but see G. B. Caird, *Principalities and Powers*, 1956; W. Foerster, *TDNT* 2, pp. 566-574).

Schweitzer (*Interpreters*, p. 231) predicted that a

'Hellenized' Paulinism was a half-way house which must carry its conclusions even to the genesis of Christianity. His prediction was more than fulfilled by the discovery in 1947 of the Dead Sea Scrolls with their ethical dualism and emphasis on 'knowledge'. The Scrolls were an embarrassment for Bultmann's reconstruction, for 'pre-Gnostic' was about the closest identification most scholars cared to make for them. Also, there is little reason to believe that Paul reflects, e.g., 'an earlier Gnostic doctrine about the descent of a redeemer, especially since there is no evidence that such a doctrine existed' (R. M. Grant, *Gnosticism*, p. 69; cf. pp. 39–69; R. McL. Wilson, pp. 27f., 57f.). Almost all else Bultmann chose to refer to Gnostic influences likewise suffered from the same chronological strictures. Grant, looking back to Schweitzer, interprets Gnosticism as arising from a failure of the apocalyptic hope; unlike Schweitzer, Grant views Paul as a man whose spiritual world lies somewhere between Jewish apocalyptic and the fully developed Gnosticism of the 2nd century (p. 158). Grant sees the latter tendency in Paul's interpretation of Christ's resurrection as a realized (eschatological) victory over the cosmic powers. More cautiously R. McL. Wilson, in a valuable assessment (*The Gnostic Problem*, 1958, pp. 75–80, 108, 261), concludes that Paul adopts a contemporary cosmogony and terminology only to oppose Gnosticism and to interpret Jesus' authority over the (Gnostic) 'powers'; the apostle rejects the gnosticizing interpretation. However, J. Dupont (*Gnosis: La Connaissance Religieuse dans les Épîtres de Saint Paul*², 1960) and Ellis (*Prophecy*¹, pp. 45–62) argue that Pauline *gnōsis* is strictly OT–Jewish.

All the 'Greek' reconstructions of Paul have their root in Baur's interpretation of Paul as the exponent of Gentile Christianity. When W. Wrede and others recognized the redemptive–eschatological character of Pauline thought, the apostle was set in opposition not only to Jewish Christianity but to the 'liberal' Jesus himself. But, as Schweitzer had shown, the 'liberal' Jesus was not the Jesus of the Gospels. Bultmann (*Theology* I, pp. 23, 30ff.) accepted Schweitzer's 'apocalyptic' Jesus but insisted that God's demand for man's decision, not the apocalyptic window-dressing, was the essence of Jesus' eschatology. The suffering, resurrected and returning Son of man was a 'mythologized' picture of the later 'Hellenized' Christology. The mind of Paul remained far distant from the mind of the earthly Jesus or of his earliest disciples. One's estimate of Paulinism is closely tied, therefore, to one's estimate of the Gospels' picture of Jesus.

A number of mediating scholars, taking their cue from B. Weiss, see 'development' as the key to Paul's thought. In view of fading parousia hopes Paul's anthropology and eschatology move towards a Platonic dualism (Dodd) and his cosmogony towards Gnosticism (R. M. Grant).

In its present *religionsgeschichtliche* format the interpretation of Paul in terms of pagan religious ideas is subject to a number of criticisms. There is a tendency to convert parallels into influences and influences into sources. Some of its 'sources' for Pauline thought come from a period considerably later than the apostle's lifetime. (Bultmann's Paul may have more than a casual relation to the Gnostic 'Paul' of the ultra-Tübingen school.) Also, its historical inquiry has sometimes been compromised by an inadequate world-view. For example,

Bultmann, like Weinel, views the natural world as a 'self-subsistent unity immune from the interference of supernatural powers' (*Kerygma and Myth*, ed. H. W. Bartsch, 1953, p. 7; cf. pp. 5–8, 216, 222).

Perhaps the most basic questions are these: Is Paulinism best understood as an amalgam, gathered here and there, or as the expansion and application of a central tradition rooted in the mind of Jesus Christ and the earliest church? Is Paul's mind most adequately explained within a religious syncretism or within the context of apocalyptic Judaism and the primitive church? Does the 'gnosticizing' of Christian thought begin in Paul and pre-Pauline Christianity (Bultmann) or in Paul's opponents and wayward converts; and does it arise from a failure of the primitive eschatology in Paul (Grant) or from a misunderstanding of it (and of Paul) in his churches? Cf. Ellis, *Prophecy*¹, pp. 45–62, 101–115.

c. The origin of Paul's religion: Judaism

(i) *Paul's link with the earliest church.* Both Ritschl and von Hofmann had argued, *contra* Baur, for the unity of Paul's teaching with that of the earliest church. A. Resch, in the 'Jesus or Paul' debate, upheld this view. His thorough investigation of *Der Paulinismus und die Logia Jesu* (1904) concluded that the words of Jesus were a primary source of Pauline thought. But could not rather Paul be the source of the Synoptic Jesus? The research of several writers (e.g. Dungan; F. F. Bruce, *BJRL* 56, 1973–4, pp. 317–335) has substantiated the priority argued by Resch.

C. H. Dodd (*Preaching*, p. 56) established that a *kerygma*, i.e. a gospel-core proclamation, underlay both the Gospels and Paul, 'a tradition coeval with the Church itself'. The same writer (*Accord-ing to the Scriptures*, 1952, pp. 108ff.), building upon Rendel Harris' *Testimonies* (1916, 1920), found a 'substructure of NT theology' to which Paul was indebted and whose origin pointed to Christ himself. E. E. Ellis, examining the hermeneutical principles of *Paul's Use of the Old Testament*¹ (pp. 97f., 107–112; *idem*, *Prophecy*¹, *passim*), suggested that some common (pre-Pauline) exegetical tradition originated with 'prophets' of the earliest church. E. Lohmeyer (*Kyrios Jesus*, 1928) interprets Phil. 2:5ff. as a primitive Christian hymn probably arising in Aram. circles (cf. L. Cerfaux, pp. 283ff.; R. P. Martin, *Carmen Christi*², 1983; E. G. Selwyn, *First Epistle of St Peter*, 1946, pp. 365–369, 458–466). Similarly, the pre-Pauline character of the *Primitive Christian Catechism* (1940) was demonstrated by P. Carrington.

O. Cullmann ('Tradition', pp. 69–99), K. H. Rengstorf (*IDNT* I, pp. 413–443), H. Riesenfeld (*The Gospel Tradition*, 1969, pp. 1–29) and B. Gerhardsson point to a rationale for this understanding of Christian origins. The NT concept of apostle has a similar origin to that of the rabbinic *šāliah*, an authorized agent equivalent to the sender himself. The apostles witnessed to a tradition or *paradosis*, given to them by Christ. 'But since everything has not been revealed to each individual apostle, each one must first pass on his testimony to another (Gal. 1:18; 1 Cor. 15:11), and only the entire *paradosis*, to which all the apostles contribute, constitutes the *paradosis* of Christ' (Cullmann, 'Tradition', p. 73). Thus, as an 'apostle' Paul's message is defined in terms of what he has received: his catechesis, *kerygma*, and the wider 'tradition' should be, and critical study finds them

to be, rooted in the earliest church and ultimately in the teaching of Jesus. This teaching of Jesus seems to have included not merely moral instruction or apocalyptic warning, but also biblical exposition (Ellis, *Prophecy*¹, pp. 240–253) and a creative, theological synthesis which envisaged a post-resurrection ministry by his disciples (cf. J. Jeremias, *Jesus' Promise to the Nations*, 1958). If these writers are correct, the dichotomy between Paul and the primitive Jewish church, which has been urged from Baur to Bultmann, is an assumption which must be abandoned.

(ii) *Paul's background.* To understand a writer it would seem to be proper to give priority to that milieu to which he appeals and to which he presumably belongs. In interpreting Pauline concepts it is not the categories of a 2nd-century Gnosticism (however easily they may be 'read back') but the categories of 1st-century rabbinic/apocalyptic Judaism which demand first claim upon the critical historian's mind.

The nature of 1st-century Judaism is complex, and it is easy to overdraw or wrongly define the contrast between the 'syncretistic' and 'orthodox', terms not to be equated with 'Hellenist' and 'Hebraist' or with 'diaspora' and 'Palestinian' (cf. Acts 6:1; Ellis, *Prophecy*, pp. 106f., 125f., 245ff.; Davies, pp. 1–8). Nevertheless, considerable research relates the thought of Paul, the Pharisee and 'Hebrew of the Hebrews' (Phil. 3:5), with Palestinian rabbinism and apocalypticism rather than with a syncretistic Judaism. Van Unnik has raised at least the probability that Paul's early youth was passed not in Tarsus but in Jerusalem. Certainly Paul used the Septuagint, but this translation has now been found among the DSS. He preached among the *diaspora*, and he may have been acquainted with the syncretistic Judaism exemplified by Philo. But with the doubtful exception of the Wisdom of Solomon, his relationship to the *diaspora* literature is not direct and probably reflects only traditions which both had in common. His more significant relationships lie in another direction. W. D. Davies and others have shown that Qumran and Rabbinic Judaism form the background of many Pauline concepts formerly labelled 'Hellenistic'. Likewise, the literary form of Paul's biblical exposition agrees with rabbinic models. The Dead Sea Scrolls have confirmed in remarkable fashion the Jewishness of Pauline and NT backgrounds. (Cf. Bruce, *Qumran Texts*, pp. 66–77; Flusser; M. Black, *The Scrolls and Christian Origins*, 1961; Ellis, *Prophecy*¹, pp. 35, 57ff., 213–220; Murphy-O'Connor.)

(iii) *Specific Pauline concepts.* Passing to specific Pauline concepts, anthropology and the nature of the 'in Christ' relationship have had a central importance since the days of F. C. Baur. It is widely recognized today that Paul views man in an OT–Jewish framework and not in the Platonic dualism of the Hellenistic world (cf. *LIFE; Bultmann, *Theology* 1, pp. 209f.; Cullmann, *Immortality*, pp. 28–39; J. A. T. Robinson, *The Body*, 1952). The corporate 'body of Christ' also is best understood not in terms of a Gnostic mythology (Käsemann) nor a Stoic metaphor (W. L. Knox) but as the OT–Jewish concept of corporate solidarity. Davies (*Judaism*, pp. 53ff.) has related Paul's thought here to the rabbinic speculations on the body of Adam. R. P. Shedd's *Man in Community* (1958) correctly finds Paul's ultimate rationale in the realism of Semitic thought patterns, as they are applied to

Messiah and his people (cf. J. A. T. Robinson, *The Body*, 1953, pp. 56ff.; Kümmel, *Man*; J. deFraine, *Adam and the Family of Man*, 1965, pp. 245–270; Ellis, *Prophecy*¹, pp. 170ff.). R. Gundry (pp. 228–241) falls short of this realism in viewing the concept metaphorically. D. R. G. Owen, in *Body and Soul* (1956), offers an illuminating comparison of biblical anthropology with the modern scientific view of man. The study of D. Cox (*Jung and St Paul*, 1959) seeks to define in other areas the relevance of Paul for current faith and practice.

Whether Paul's eschatology is rooted in Jewish or Greek concepts is a matter of continuing debate. The importance of this question for Paulinism requires that some detailed attention now be given to it.

d. The eschatological essence of Pauline thought

C. A. A. Scott's well-written *Christianity according to Saint Paul* (1927), over against Albert Schweitzer's eschatological interpretation, identifies salvation as the fundamental concept of Paulinism. But what is the factor determining the character of Paul's 'already but not yet' redemption theology? Not grasping Schweitzer's real question, Scott did not really pose an alternative: he found a motif to describe Paul, not a key to explain him. (Cf. also Christological approaches, e.g. L. Cerfaux, *Christ in the Theology of St Paul*, 1959.) Schweitzer may not have stated the problem, or the solution, satisfactorily; but his identification of the key concept remains valid.

(i) *The views of Schweitzer and Dodd.* Until recently discussion of NT eschatology has revolved about the views of Schweitzer and C. H. Dodd. (For Bultmann, eschatology has nothing to do with the future or with history; it is the realm of existential living. Like F. C. Baur, Bultmann uses NT language to clothe an imposing philosophy of religion; exegesis becomes the servant of existentialism. Cf. Hamilton, pp. 41–90, for a lucid summation and critique of the eschatology of Schweitzer, Dodd and Bultmann.) Schweitzer argued that Paul's '*en Christo*' concept arose from the failure of the kingdom of God, i.e. the end of the world, to arrive at Christ's death and resurrection. Against Schweitzer, Dodd contended that in Christ's death the 'age to come' did arrive; eschatology was 'realized' as much as it ever would be in history. The believer already participates in the kingdom (e.g. Col. 1:13), and at death he fully enters the eternal, i.e. eschatological, realm. Eschatology, therefore, does not refer to an end-of-the-world event; in Platonic fashion it is to be understood 'spatially' rather than temporally, eternity over against time. How, then, is Paul's anticipation of a future parousia to be accounted for? Believing it to be a hangover from apocalyptic Judaism (and quite alien to the central message of Jesus), Dodd goes back to Pfeiderer for an answer: in 1 Thes. 4 Paul has a strictly Jewish eschatology but in 1 Cor. 15 modifies it with the concept of a 'spiritual' body; 2 Cor. 5, which then places the believer in heaven at death, expresses the view of the mature (and 'Greek') Paul. J. A. T. Robinson's *Jesus and His Coming* (1958, pp. 160ff.) is essentially an elaboration of Dodd's thesis.

It is Dodd's great merit that he saw, as Schweitzer did not, the essential meaning for NT thought (and for the relevance of the gospel in the present world) of the 'realized' aspect of the kingdom of God. But in adopting an unbiblical

Platonic view of time Dodd failed to do justice to the futurist and temporal character of eschatological redemption. Also, his development of Pauline eschatology involved an un-Pauline anthropological dualism and, in part, reflected a misunderstanding of the texts. Both Schweitzer and Dodd made admirable attempts to achieve a comprehensive interpretation of NT eschatology. Although 'futurist or realized' has now been recognized as an improper either/or, the contributions of Schweitzer and Dodd remain fundamental landmarks in the progress of the research.

The important monographs of W. G. Kümmel (*Promise and Fulfilment*, 1957, pp. 141–155; and *NTS* 5, 1958–9, pp. 113–126) argued convincingly that both 'present' and 'future' eschatology are equally and permanently rooted in the teaching of Jesus and of Paul. Oscar Cullmann's most significant publications, *Christ and Time* (1951) and *Salvation in History* (1967), contrasted the Platonic idea of redemption, i.e. to escape the time 'circle' at death, with the biblical concept that redemption is tied to resurrection in future 'linear' time, i.e. at the parousia. These works, plus a proper appreciation of Paul's OT–Jewish anthropology and of the Semitic concept of corporate solidarity, form a proper foundation for understanding Paul's eschatology—and thus his total doctrine of redemption.

(ii) *The pre-eminence of a theology of redemption.* Historical research since the Reformation has recognized that Pauline theology is above all a theology of redemption. The 19th century witnessed a growing emphasis upon the present 'union with Christ' (rather than imputed righteousness) as the central aspect of this redemption. Since Albert Schweitzer two eschatological foci, Christ's death and resurrection and the parousia, have been recognized as the key to the meaning of 'union with Christ'.

Jesus Christ in his death and resurrection defeated for all time the 'powers' of the old aeon—sin, death and the demonic 'rulers of this darkness' (Eph. 6:12; Col. 2:15). Now Christians were crucified, resurrected, glorified and placed at God's right hand with Christ (Gal. 2:20; Eph. 2:5f.). 'In Christ' Christians have entered the resurrection age; the solidarity with the first Adam in sin and death has been replaced by the solidarity with the eschatological Adam in righteousness and immortal life. (* LIFE.)

This corporate redemption in and with Jesus Christ, this 'new age' reality, which the believer enters at conversion (cf. Rom. 6), finds an individual actualization in the present and the future (cf. Ellis, *NTS* 6, 1959–60, pp. 211–216). In the present life it means a transformation through the indwelling Spirit, the firstfruits of the new resurrection life (Rom. 8:23; 2 Cor. 5:5), of one's ethic (Col. 2:20; 3:1, 9f., 12) and of one's total world view (Rom. 12:1ff.). However, in the midst of moral–psychological renewal the Christian remains, in his mortality, under the death claims of the old age. But this too is to be understood no longer in terms of 'in Adam', but as a part of the 'in Christ' reality; for 'the sufferings of Christ abound to us' (2 Cor. 1:5; cf. Phil. 3:10; Col. 1:24), and the Christian dead have fallen asleep 'in Jesus' (1 Thes. 4:14; cf. Phil. 2:17; 2 Tim. 4:6). The individual actualization of Christ's sufferings is, of course, in no way a self-redemption process; rather, it means to be identified with Christ 'in the likeness

of his death' (Rom. 6:5). The 'likeness of his resurrection' awaits its actualization at the parousia, when the individual Christian, raised to immortal life, shall be 'conformed to the image of his Son, that he might be the firstborn among many brethren' (Rom. 8:29; cf. 1 Cor. 15:53ff.).

Thus, Pauline redemption is not a 'spiritual' deliverance culminating in the escape of the 'soul' at death (Dodd); it is a physical redemption culminating in the deliverance of the whole man at the parousia (Cullmann). It is to be understood not in terms of a Platonic dualism but in the framework of an OT–Jewish view of man as a unified being and as one who lives not only as an individual but in 'corporate solidarities'. The future that has become present in the resurrection of Jesus Christ is a future which the Christian realizes now only corporately, as the 'body of Christ'. However, at the parousia faith shall become sight, 'away' shall become 'at home', and the solidarities of the new age shall become individually actualized in all their glory, both in man and in the whole created order (Rom. 8:19–21). This is the living hope of Paul's heart; it is also the meaning of his theology.

E.E.E.

PAULUS, SERGIUS, more correctly **PAULLUS**, was the proconsul (Gk. *anthypatos*) of * Cyprus in AD 47/8 when the apostle Paul visited that island (Acts 13:7). His name suggests that he was a member of an old Roman senatorial family: if he was the L. Sergius Paullus mentioned in *CIL*, 6. 31545, he was one of the Curators of the Banks of the Tiber under Claudius. Another inscription (*IGRR*, 3. 930; cf. *EGT*, 2. 1900, p. 286) found in Cyprus refers to the proconsul *Paulos*, while an inscription discovered at Pisidian Antioch in honour of a L. Sergius Paullus, propraetor of Galatia in AD 72-4, is possibly a commemoration of his son.

B. van Elderen (in W. W. Gasque and R. P. Martin (eds.), *Apostolic History and the Gospel*, 1970, pp. 151-156) considers that the inscription *IGRR*, 3. 935 is more likely to refer to this proconsul. Commentators disagree over the reality of Paullus' profession of Christian faith. D.H.W.

PAVILION (Heb. *sōk*, *sukkâ*). A covered place, tent, booth or shelter, where a person or beast may hide or be sheltered. The same word is translated in AV as den (Ps. 10:9), tabernacle (Ps. 76:2), covert (Je. 25:38), booth (Jon. 4:5) and lodge (Is. 1:8), and thus represents something used by beasts, worshippers, travellers and soldiers. It is translated only six times in the AV as pavilion. In I Ki. 20:12, 16 it refers to the army tents in which Ben-hadad and his soldiers were resting and drinking when they were campaigning against Ahab. Such tents are illustrated on the sculptured reliefs of the Assyrian kings Shalmaneser III and Sennacherib

(BM). The other uses of the word are metaphorical. It represents the place of divine protection in the day of trouble (Pss. 27:5; 31:20), or the place where God is hidden with dark waters and thick clouds for his pavilion (Ps. 18:11; 2 Sa. 22:12).

RSV translates a difficult phrase in Jb. 36:29 as 'the thunderings of his pavilion' (*sukkâ*, AV 'tabernacle'). NEB takes it differently: as the sky is sometimes described as God's tent, clouds, viewed from the earth, might appear as carpeting on the tent floor.

The term is also used for the bough shelters erected at the Feast of Booths (Tabernacles) commemorating the shelters in which Israel dwelt in the wilderness. In Ps. 19:5 the reference is to the canopy (RSV 'tent') under which a bridegroom stands with his bride on their wedding day.

For Egypt. data, cf. K. A. Kitchen, *THB* 5-6, 1960, pp. 7-11. J.A.T.

PEACE. Basically the OT word for peace, *šālôm*, means 'completeness', 'soundness', 'well-being'. (See *BDB*.) It is used when one asks of or prays for the welfare of another (Gn. 43:27; Ex. 4:18; Jdg. 19:20), when one is in harmony or concord with another (Jos. 9:15; I Ki. 5:12), when one seeks the good of a city or country (Ps. 122:6; Je. 29:7). It may mean material prosperity (Ps. 73:3) or physical safety (Ps. 4:8). But also it may mean spiritual well-being. Such peace is the associate of righteousness and truth, but not of wickedness (Ps. 85:10; Is. 48:18, 22; 57:19-21).

Because of the world's chaos through man's sin, and because peace comes only as God's gift, the Messianic hope was of an age of peace (Is. 2:2-4; 11:1-9; Hg. 2:7-9), or of the advent of the Prince of peace (Is. 9:6f.; cf. Je. 33:15f.; Ezk. 34:23ff.; Mi. 5:5; Zc. 9:9f.). The NT shows the fulfilment of this hope. In Christ peace has come (Lk. 1:79; 2:14, 29f.). By him it is bestowed (Mk. 5:34; Lk. 7:50; Jn. 20:19, 21, 26), and his disciples are its messengers (Lk. 10:5f.; Acts 10:36).

In classical Greek *eirēnē* had a primarily negative force; but by way of the LXX, the word in the NT has the full content of the OT *šālôm*, and nearly always carries a spiritual connotation. The breadth of its meaning is especially apparent from its linking with such keywords as grace (Rom. 1:7, etc.), life (Rom. 8:6), righteousness (Rom. 14:17), and from its use in benedictions such as I Thes. 5:23 and Heb. 13:20f. (cf. 2 Pet. 3:14).

For sinful man there must first be peace with God, the removal of sin's enmity through the sacrifice of Christ (Rom. 5:1; Col. 1:20). Then inward peace can follow (Phil. 4:7), unhindered by the world's strife (Jn. 14:27; 16:33). Peace between man and man is part of the purpose for which Christ died (Eph. 2) and of the Spirit's work (Gal. 5:22); but man must also be active to promote it (Eph. 4:3; Heb. 12:14), not merely as the elimination of discord, but as the harmony and true functioning of the body of Christ (Rom. 14:19; I Cor. 14:33).

F.F.

PEDAIAH ('Yahweh has redeemed'). I. Father of Joel, ruler (under David) of Manasseh, W of the

PEDIAIAH

Jordan (1 Ch. 27:20). 2. Grandfather of King Jehoiakim (2 Ki. 23:36). 3. Third son of King Jehoiachin (1 Ch. 3:18). According to 1 Ch. 3:19, he was called the father of Zerubbabel, who elsewhere is named as the son of Shealtiel, brother of Pedaiah. 4. A son of Parosh, who helped to repair the wall of Jerusalem (Ne. 3:25). 5. One who stood on Ezra's left when he read the law to the people (Ne. 8:4); perhaps identical with 4 above. 6. A Levite appointed by Nehemiah to assist in distributing the tithes (Ne. 13:13). 7. A Benjaminite (Ne. 11:7).

J.D.D.

PEKAH (Heb. *peqah*, 'opening'). Pekah, the son of Remaliah, was the 'third man' (Heb. *šālīšā*) in Pekahiah's war chariot. With the help of Gileadites he murdered Pekahiah, successor of Menahem, at Samaria (2 Ki. 15:21ff.). He then seized the throne and reigned as king of Israel from c. 737 to 732 bc. His accession was in the 52nd year of Uzziah of Judah (v. 27), and in his 2nd year Jotham succeeded Uzziah (v. 32).

This Hebrew inscription from a fragment of a storage jar from Hazor reads 'For Peqah, Semader', probably a reference to Pekah, king of Israel, and to a type of oil. *Stratum V A. 740-732 bc.*

Pekah adopted an anti-Assyrian policy and allied himself to *Rezin of Syria. Together they brought pressure on Jotham of Judah, probably to join them (v. 37). Isaiah, however, advised him and his successor Ahaz to be neutral. Pekah moved in force against Jerusalem, which was unsuccessfully besieged (2 Ki. 16:5; Is. 7:1). His Syrian allies took Elath, while Pekah fought the Judaeans, slaying many and taking many prisoners from the Jericho district back to Samaria (2 Ch. 28:7-8). These were later released on the intercession of the prophet Oded (vv. 8-15).

Faced with this invasion Ahaz appealed for help to Tiglath-pileser III of Assyria, who was campaigning in Syria. In 732 bc the Assyrians captured Damascus and invaded N Israel. A list of the places invaded, as far S as Galilee, is given in 2 Ki. 15:25-29 and is partly paralleled by Tiglath-pileser's own Annals. Excavation at Hazor confirms the Assyrian destruction there at this time. A wine-jar inscribed *lpqh*, 'belonging to Pekah', was found among the objects from the period of Pekah's occupation.

Following the swift Assyrian invasion of more than half of Israel, Hoshea, son of Elah, conspired against Pekah, whom he slew. Since Tiglath-pileser claims in his Annals to have replaced Pekah (*Paqaha*) by Hoshea (*'Ausi*), it is clear that this act

was approved, if not instigated, by the Assyrians. Pekah's reign was considered to have followed the evil tradition of Jeroboam (2 Ki. 15:28).

D.J.W.

PEKAHIAH (Heb. *p'qahyā*, 'Yahweh has opened [his eyes]'). Son of *Menahem, king of Israel, whom he succeeded c. 742/1 bc (2 Ki. 15:23-26; *CHRONOLOGY OF THE OT). His assassination in the 2nd year of his reign suggests that he continued his father's policy of submission to Assyria. The revolutionaries, led by *Pekah son of Remaliah, may have been in league with *Rezin, king of Damascus, for they came from Gilead, adjacent to his territory. The king was killed while in the keep (Heb. *'armān*) of the palace at *Samaria. The words 'with *Argob and Arieih' (2 Ki. 15:25) seem to have been transposed from v. 29.

A.R.M.

PEKOD. A small *Aramaean tribe E of the lower Tigris. Akkadian sources record the temporary subjugation of *Puqudu* under *Tiglath-pileser III (747-727 bc), *Sargon II (722-705 bc) and *Sennacherib (705-681 bc). Mentioned in Jeremiah's oracle against Babylon (50:21), Pekod is also among other Mesopotamian peoples who, though formerly lovers of Israel, will rise against Jerusalem (Ezk. 23:23). Eponymous for a city and irrigation system mentioned in TB (*Bešah* 29a, *Kethuboth* 27b, *Hullin* 127a).

BIBLIOGRAPHY. S. Parpola, *Neo-Assyrian Toponyms*, 1970, pp. 280-281; M. Dietrich, *Die Aramäer Südbabyloniens*, 1970.

D.W.B.

PELATIAH (Heb. *p'latyāh(ū)*, 'Yahweh delivers'; Gk. *Phaltias, Phalettia*). I. A witness to the covenant in Ne. 10:22. This may well be the same man as the grandson of Zerubbabel, a descendant of Solomon (1 Ch. 3:21). 2. A Simeonite captain who occupied ex-Amalekite territory (1 Ch. 4:42). 3. A leader whom Ezekiel pictured as devising mischief and giving wicked counsel in Jerusalem. He fell dead while Ezekiel prophesied (Ezk. 11:1-13).

Names composed with element *plṭ* are attested from the Amorite period and were common at Ugarit (*RAS SHAMRA) in the 13th century bc as well as in later Aramaic (e.g. F. Gröndahl, *Person-namen der Texte aus Ugarit*, 1967, p. 173).

D.J.W.

PELEG (Heb. *peleḡ*, 'water-course, division'). The son of Eber, brother of Yoqtan (*JOKTAN), and grandson of Shem (Gn. 10:25). In his time the earth was 'divided', the word used (*nipl' gā*) being a play on, or explanation of, his name. This is commonly held to refer to the splitting up of the world's population into various geographical and linguistic groups (Gn. 11:1-9). It may equally well mark the development by the semi-nomad sons of *Ebel of cultivation, using artificial irrigation canals (Assy. *plagu*); *peleḡ* is used in this sense in Is. 30:25, 32:2; Jb. 29:6; 38:25. Alternatively it may be a reference to division of territory by borders (Akk. *pulukkū*; JCS 18, 1964, p. 69; *palāku*, 'to divide at borders'). Peleg was father of Reu (Gn. 11:19).

D.J.W.

PELONITE. The name given to two of David's mighty men, Helez and Ahijah (1 Ch. 11:27, 36; 27:10). The former is described as the *Paltite in the parallel text, 2 Sa. 23:26, and the Syriac has this reading in 1 Ch. 11:27. In view of 2 Sa. 23:34 some commentators prefer to emend 1 Ch. 11:36b to 'Eliam the son of Ahithophel the Gilonite'.

R. A. H. G.

PENTATEUCH. The first five books of the OT (Gn., Ex., Lv., Nu., Dt.) constitute the first and most important section of the threefold Jewish *Canon. Usually called by the Jews *sēper hattōrā*, 'the book of the law', or *hattōrā*, 'the law' (see *KB*, p. 403, for suggested derivations of the word, which seems to mean basically 'teaching' or 'instruction'), the Pentateuch (Gk. *pentateuchos*, 'five-volumed [sc. book]') is also known as the 'five-fifths of the law'. For the past century or so, many higher critics, following the lead of Alexander Geddes (c. 1800), have tended to disregard the traditional five-book division in favour of a Hexateuch comprising the Pentateuch and Joshua (cf. J. Wellhausen, *Die Composition des Hexateuchs*, 1876-7). On the other hand, I. Engnell has suggested the word 'Tetrateuch' to separate Deuteronomy from the first four books (*Gamla Testamentet*, 1, 1945). The critical presuppositions which underlie these suggestions are evaluated below.

The antiquity of the fivefold division is attested by the Samaritan Pentateuch and the LXX, which gave the books their traditional names; the Jews identify them by the first word or phrase. The divisions between the books were determined both by topical and practical considerations: papyrus scrolls could contain only about one-fifth of the *tōrā*. Jewish tradition prescribes that a section of the Law be read weekly in the synagogue. Three years were required for the completion of the Pentateuch in Palestine; the modern lectionary, in which the Pentateuch is read through in one year, is derived from that used in Babylonia. It may well be that a psalm was read along with the traditional reading from the prophetic writings (*haḥtārā*). The five books of the Psalter are probably patterned after the Pentateuch (cf. N. H. Snaith, *Hymns of the Temple*, 1951, pp. 18-20).

References to the Pentateuch in the OT are largely restricted to the writings of the Chronicler, who uses several designations: the law (Ezr. 10:3; Ne. 8:2, 7, 14; 10:34, 36; 12:44; 13:3; 2 Ch. 14:4; 31:21; 33:8); the book of the law (Ne. 8:3); the book of the law of Moses (Ne. 8:1); the book of Moses (Ne. 13:1; 2 Ch. 25:4; 35:12); the law of the Lord (Ezr. 7:10; 1 Ch. 16:40; 2 Ch. 31:3; 35:26); the law of God (Ne. 10:28-29); the book of the law of God (Ne. 8:18); the book of the law of the Lord (2 Ch. 17:9; 34:14); the book of the law of the Lord their God (Ne. 9:3); the law of Moses the servant of God (Dn. 9:11; cf. Mal. 4:4). One cannot say for certain whether references to the law in the historical writings refer to the Pentateuch as a whole or to parts of the Mosaic legislation, e.g. the law (Jos. 8:34); the book of the law (Jos. 1:8; 8:34; 2 Ki. 22:8); the book of the law of Moses (Jos. 8:31; 23:6; 2 Ki. 14:6); the book of the law of God (Jos. 24:26).

The NT uses similar designations: the book of the law (Gal. 3:10); the book of Moses (Mk. 12:26); the law (Mt. 12:5; Lk. 16:16; Jn. 7:19); the

law of Moses (Lk. 2:22; Jn. 7:23); the law of the Lord (Lk. 2:23-24). The descriptions of the Pentateuch in both Testaments serve to emphasize its divine and human authorship, its binding authority as *the law*, and its inscripturated form in *the book*.

I. Contents

The Pentateuch narrates God's dealings with the world, and especially the family of Abraham, from creation to the death of Moses. There are six main divisions. First, the origin of the world and of the nations (Gn. 1-11). This section describes the *creation, the Fall of man, the beginnings of civilization, the Flood, the Table of the Nations and the tower of Babel. Secondly, the patriarchal period (Gn. 12-50) depicts the call of Abraham, the initiation of the Abrahamic covenant, the lives of Isaac, Jacob and Joseph, and the settling of the covenant-clan in Egypt. Thirdly, Moses and the Exodus from Egypt (Ex. 1-18). Fourthly, legislation at Sinai (Ex. 19:1-Nu. 10:10), which includes the giving of the law, the building of the tabernacle, the establishment of the levitical system and the final preparations for the journey from Sinai to Canaan. Fifthly, the wilderness wanderings (Nu. 10:11-36:13). This section describes the departure from Sinai, the acceptance of the majority report of the spies, God's consequent judgment, the encounter with Balaam, the appointment of Joshua as Moses' successor and the apportionment of the land to the twelve tribes. Sixthly, the final speeches of Moses (Dt. 1-34) recapitulate the Exodus events, repeat and expand the Sinaitic commandments, clarify the issues involved in obedience and disobedience, and bless the tribes, who are poised to enter Canaan. This section ends with the cryptic description of Moses' death and burial.

II. Authorship and unity

For centuries both Judaism and Christianity accepted without question the biblical tradition that Moses wrote the Pentateuch. Ben-Sira (Eccles. 24:23), Philo (*Life of Moses* 3. 39), Josephus (*Ant.* 4. 326), the Mishnah (*Pirgē Abōth* 1. 1), and the Talmud (*Baba Bathra* 14b) are unanimous in their acceptance of the Mosaic authorship. The only debate centred in the account of Moses' death in Dt. 34:5ff. Philo and Josephus affirm that Moses described his own death, while the Talmud (*loc. cit.*) credits Joshua with eight verses of the *tōrā*, presumably the last eight.

a. Pentateuchal criticism before AD 1700

The tradition expressed in 2 Esdras 14:21-22, that the scrolls of the Pentateuch, burned in Nebuchadrezzar's siege of Jerusalem, were rewritten by Ezra, was apparently accepted by a number of the early church Fathers, e.g. Irenaeus, Tertullian, Clement of Alexandria, Jerome. They did not, however, reject the Mosaic authorship of the original law. The first recorded instance of such a rejection is the statement of John of Damascus concerning the Nasaraeans, a sect of Jewish Christians (cf. *PG* 94. 688-689). The *Clementine Homilies* teach that diabolical interpolations were made in the Pentateuch to try to put Adam, Noah and the Patriarchs in a bad light. Any passage out of harmony with the Ebionite assumptions of the author was suspected in this early attempt at higher criticism. Among the stumbling-blocks to the faith which Anastasius the Sinaite, patriarch of Antioch (7th century AD),

PENTATEUCH

attempted to remove were questions dealing with the Mosaic authorship of, and alleged discrepancies in, Genesis (*cf.* PG 89, 284–285).

During the mediaeval era, Jewish and Muslim scholars began to point out supposed contradictions and anachronisms in the Pentateuch. For instance, Ibn Ezra (d. 1167), following a suggestion of Rabbi Isaac ben Jasos (d. 1057) that Gn. 36 was written not earlier than Jehoshaphat's reign because of the mention of Hadad (*cf.* Gn. 36:35; 1 Ki. 11:14), maintained that such passages as Gn. 12:6; 22:14; Dt. 1:1; 3:11 were interpolations.

The Reformer A. B. Carlstadt (1480–1541), observing no change in the literary style of Deuteronomy before and after Moses' death, denied that Moses wrote the Pentateuch. A Belgian Roman Catholic, Andreas Masius, produced a commentary on Joshua (1574) in which he credited Ezra with certain pentateuchal interpolations. Similar positions were maintained by two Jesuit scholars, Jacques Bonfrère and Benedict Pereira. Two famous philosophers helped to pave the way for modern higher critics by voicing in their widely circulated writings some of the contemporary criticisms of the unity of the law: Thomas Hobbes (*Leviathan*, 1651) credited Moses with everything attributed to him in the Pentateuch, but suggested that other parts were written more about Moses than by him; Benedict Spinoza (*Tractatus Theologico-politicus*, 1670) carried the observations of Ibn Ezra farther by noting doublets and alleged contradictions, and concluding that Ezra, who himself wrote Deuteronomy, compiled the Pentateuch from a number of documents (some Mosaic). 17th-century criticism of the Pentateuch was climaxed in the works of the Roman Catholic Richard Simon and the Arminian Jean LeClerc in 1685. LeClerc replied to Simon's view that the Pentateuch was a compilation based on many documents, both of divine and human origin, by asserting that the author must have lived in Babylonia between 722 BC and Ezra's time.

b. Pentateuchal criticism from AD 1700 to 1900

(i) *The question of Mosaic authorship.* Despite the questions raised by Catholics, Protestants and Jews in the period discussed above, the vast multitude of scholars and laymen clung firmly to belief in the Mosaic authorship. A milestone in pentateuchal criticism was reached in 1753, when the French physician Jean Astruc published his theory that Moses had composed Genesis from two main ancient *mémoires* and a number of shorter documents. The clue to the identification of the two *mémoires* was the use of the divine names: one employed *Elohim*; the other, *Yahweh*. Astruc maintained the Mosaic authorship of Genesis, but posited his theory of multiple sources to account for some of the repetitions and alleged discrepancies which critics had noted. J. G. Eichhorn (*Einleitung*, 1780–83) expanded Astruc's views into what is called 'the early documentary theory'. Abandoning the Mosaic authorship, he credited the final editing of the Elohist and Yahwistic documents of Genesis and Ex. 1–2 to an unknown redactor. K. D. Ilgen (*Die Urkunden des Jerusalemischen Tempelarchivs in ihrer Urgestalt*, 1798) carried the documentary theory a step farther when he discovered in Gn. 17 independent sources traceable to three authors, two of whom use *Elohim* and the other *Yahweh*.

A Scottish Roman Catholic priest, Alexander

Geddes, pursued Astruc's identification of several *mémoires* and developed (between 1792 and 1800) the *fragmentary theory* which holds that the Pentateuch was composed by an unknown redactor from a number of fragments which had originated in two different circles—one Elohist, the other Yahwistic. Two German scholars embraced and expanded the fragmentary theory: J. S. Vater (*Commentar über den Pentateuch*, 3 vols., 1802–5) tried to trace the growth of the Pentateuch from over thirty fragments; W. M. L. De Wette (*Beiträge zur Einleitung in das Alte Testament*, 1807) stressed the comparatively late nature of much of the legal material and, significantly for later research, identified Josiah's book of the law as Deuteronomy (in this identification he had been anticipated by Jerome 1,400 years earlier).

De Wette's emphasis on one basic document augmented by numerous fragments was developed by H. Ewald, who in 1831 suggested that the chief document was the Elohist source which carried the narrative from the creation into the book of Joshua and was supplemented by the account of the Yahwist, who was also the final redactor. Though Ewald later retreated from this 'supplementary theory', it survived in the writings of F. Bleek (*de libri Geneseos origine*, 1836) and F. Tuch (*Genesis*, 1838).

The 'new documentary theory' was fathered by H. Hupfeld (*Die Quellen der Genesis und die Art ihrer Zusammensetzung*, 1853), who, like Ilgen, found three separate sources in Genesis—the original Elohist (E¹), the later Elohist (E²), and the Yahwist (J). A year later, when E. Riehm published his *Die Gesetzgebung Moses im Lande Moab* in 1854, which purported to demonstrate the independent character of Deuteronomy, the four major documents had been isolated and dated in the order E¹, E², J, D.

K. H. Graf (in 1866) developed the suggestion of E. G. Reuss, J. F. L. George and W. Vatke and affirmed that E¹ (called P for Priestly Code by modern scholars), rather than being the earliest of the documents, was the latest. The debate then centred in the question as to whether E²(E)JDP(E¹) or JEDP was the proper chronological order. A. Kuenen's work, *The Religion of Israel* (1869–70), assured the triumph of the latter order and set the stage for the appearance of the star actor in the drama of pentateuchal criticism, Julius Wellhausen.

(ii) *Wellhausen's views.* Wellhausen's important publications from 1876 to 1884 gave the documentary theory its most cogent and popular setting. Stated simply, this theory holds that J (c. 850 BC) and E (c. 750 BC) were combined by a redactor (R^{JE}) about 650 BC. When D (the Deuteronomistic laws, c. 621) was added by R^D (c. 550) and P (c. 500–450) by R^P (c. 400 BC), the Pentateuch was basically complete. In Wellhausen's presentation more was involved than mere documentary analysis. He linked his critical studies to an evolutionary approach to Israel's history which minimized the historicity of the patriarchal period and tended to detract from Moses' prominence. The religion of Israel advanced from the simple sacrifices on family altars in the days of the settlement to the intricately legalistic structure of Leviticus (P), which stemmed from Ezra's era (*PRIESTS AND LEVITES). Similarly, Israel's concept of God evolved from the animism and polytheism of the patriarchal days, through the henotheism of

Moses' time and the ethical monotheism of the 8th-century prophets to the sovereign Lord of Is. 40ff.

So fundamental for later scholarship were Wellhausen's ideas that his influence in biblical studies has frequently been likened to Darwin's in the natural sciences. Largely through the writings of W. Robertson Smith and S. R. Driver, Wellhausen's documentary analysis gained a widespread acceptance throughout the English-speaking world. The following summary (somewhat oversimplified) outlines the basic characteristics of the pentateuchal documents according to the Wellhausenian school.

The *Yahwist's narrative* (J) is said to date from early in the Monarchy (c. 950–850 bc). Allusions to territorial expansion (Gn. 15:18; 27:40) and the ascendancy of Judah (Gn. 49:8–12) allegedly point to a Solomonic date. The J document tells the story of God's dealings with man from the creation of the universe to Israel's entry of Canaan. The combination of majesty and simplicity found in J marks it as an outstanding example of epic literature worthy of comparison with Homer's *Iliad*. Originating in Judah, the Yahwist document has some distinctive literary traits in addition to the preference for the name Yahweh: *šiphāh*, 'maid-servant', is preferred to *āmā* (E); Sinai is used instead of Horeb (E); popular etymologies occur frequently, e.g. Gn. 3:20; 11:9; 25:30; 32:27.

Intensely nationalistic, the J narrative records in detail the exploits of the patriarchal families, even those that are not particularly praiseworthy. Theologically J is noted for its anthropopathisms and anthropomorphisms. God in quasi-human form walks and talks with men, although his transcendence is never doubted. The transparent biographies of the Patriarchs, deftly and simply narrated, are an outstanding feature of J.

The *Elohists narrative* (E) is usually dated about a century after J, i.e. 850–750 bc. A N (Ephraimite) origin for E has been suggested on the basis of the omission of the stories of Abraham and Lot, which centre in Hebron and the Cities of the Plain, and the special emphasis given to Bethel and Shechem (Gn. 28:17; 31:13; 33:19–20). Joseph, the ancestor of the N tribes Ephraim and Manasseh, plays a prominent role. More fragmentary than J, E nevertheless has its own stylistic peculiarities: 'the River' is the Euphrates; repetition is used in direct address (cf. Gn. 22:11; Ex. 3:4); 'Here am I' (*hinnēnī*) is used in replies to the Deity.

Though less noteworthy as a literary composition than J, the E document is noted for its moralistic and religious emphases. Sensitive to the sins of the Patriarchs, E attempts to rationalize them, while the anthropomorphisms of J are replaced by divine revelations through dreams and angelic mediation. An outstanding contribution of E is the story of God's testing of Abraham in the command to sacrifice Isaac (Gn. 22:1–14). With powerful simplicity the picture of conflict between love of family and obedience to God is painted, and with prophetic force the lesson concerning the inwardness of true sacrifice is conveyed.

The *Deuteronomist document* (D), in Pentateuchal studies, corresponds roughly with the book of *Deuteronomy. Essential to the documentary hypothesis is the view that Josiah's book of the law (2 Ki. 22:3–23:25) was part, at least, of Dt. The correspondences between D and the terms of Josiah's reformation are noteworthy: the worship is centralized at Jerusalem (2 Ki. 23:4ff.; Dt. 12:1–7); acts of false worship are specifically forbidden (2

Ki. 23:4–11, 24; Dt. 16:21, 22; 17:3; 18:10, 11). D lays great stress on God's love for Israel and her obligation to respond, a philosophy of history which spells out the terms of God's blessing and judgment, and the necessity for a vigorous sense of social justice under the terms of the covenant. A collection of sermons rather than narratives, D is a collection of legal and hortatory materials compiled during the exigencies of Manasseh's reign and combined with JE after the time of Josiah.

The *Priestly document* (P) draws together laws and customs from various periods of Israel's history and codifies them in such a way as to organize the legal structure of post-exilic Judaism. P contains some narratives, but is more concerned with genealogies and the patriarchal origins of ritual or legal practices. Formal divisions such as the ten 'generations' of *Genesis and the covenants with Adam, Noah, Abraham and Moses are generally credited to P. The complexity of the legal and ritual structure of P is usually interpreted as the sign of a post-exilic date, especially when P (e.g. Ex. 25–31; 35–40; Lv.; the laws in Nu.) is compared with the simple ritualism of Jdg. and 1 Sa. As a literary document P cannot be compared with the earlier sources, because the penchant for laborious details (e.g. the genealogies and detailed descriptions of the tabernacle) tends to discourage literary creativity. The concern of the priestly movement for the holiness and transcendence of God reveals itself in P, where the entire legislation is viewed as a means of grace whereby God bridges the gap between himself and Israel.

c. Pentateuchal criticism after AD 1900

Documentary analysis did not stop with Wellhausen's researches. Rudolf Smend, expanding a suggestion made in 1883 by Karl Budde, attempted to divide the Yahwistic document into J¹ and J² throughout the Hexateuch (*Die Erzählung des Hexateuch auf ihre Quellen untersucht*, 1912). What Smend had called J¹, Otto Eissfeldt identified as a Lay-source (L), because it contrasts directly with the Priestly document and emphasizes the nomadic ideal in opposition to the Canaanite mode of life. Julian Morgenstern's *Kenite document (K), purportedly dealing with Moses' biography and the relations between Israel and the Kenites (*HUCA* 4, 1927, pp. 1–138), R. H. Pfeiffer's S (South or Seir) document in Genesis, corresponding somewhat to Eissfeldt's L (*ZAW* 48, 1930, pp. 66–73), and Gerhard von Rad's division of the priestly document into P^A and P^B (*Die Priesterschrift im Hexateuch*, 1934) are further refinements of a documentary criticism which had reached its extreme in the detailed dissections of P in B. Baentsch's work on Leviticus (1900), where seven main sources of P are further modified by the discovery of one or more redactors. This atomizing tendency is represented in the works of C. A. Simpson (notably *The Early Traditions of Israel: a Critical Analysis of the Pre-Deuteronomiac Narrative of the Hexateuch*, 1948).

d. Reactions to the Graf-Wellhausen theory

Conservatives, convinced that their view of inspiration and the whole structure of theology built on it were at stake, joined battle almost immediately with pentateuchal critics. In the van of this reaction were E. W. Hengstenberg (*Dissertations on the Genuineness of the Pentateuch*, 1847) and C. F. Keil. After the appearance of Wellhausen's

monumental synthesis the battle was continued by W. H. Green (*The Higher Criticism of the Pentateuch*, 1895) and James Orr (*The Problem of the Old Testament*, 1906), whose careful scrutiny of the documentary analyses found them wanting in terms of both literary evidence and theological presuppositions. The pattern set by these scholars was continued in the researches of R. D. Wilson (*A Scientific Investigation of the Old Testament*, 1926, reprinted 1959), G. Ch. Aalders (*A Short Introduction to the Pentateuch*, 1949), O. T. Allis (*The Five Books of Moses*, 1943) and E. J. Young (*IOT*, 1949).

(i) *The use of the divine names.* Conservative attacks on the Wellhausenian theory have generally taken shape along the following lines. The use of the divine names as a criterion for separating documents has been questioned at four points: (1) The evidence of textual criticism, especially from the Pentateuch of the LXX, suggests that there was less uniformity and more variety in early manuscripts of the Pentateuch than in the MT, which has traditionally been used as the basis of documentary analysis (although J. Skinner's *The Divine Names in Genesis*, 1914, has weakened the force of this argument).

(2) R. D. Wilson's study of the divine names in the Qur'an (*PT* 17, 1919, pp. 644-650) brought to light the fact that certain suras of the Qur'an prefer *Allah* (4; 9; 24; 33; 48, etc.), while others prefer *Rab* (18; 23; 25-26; 34, etc.), just as certain sections of Genesis use *Elohim* (e.g. Gn. 1:1-2:3; 6:9-22; 17:2ff., 20, etc.) and others *Yahweh* (e.g. Gn. 4; 7:1-5; 11:1-9; 15; 18:1-19:28, etc.), although there is no support among scholars for a documentary approach to Qur'anic studies based on the divine names.

(3) The use of *Yahweh Elohim* (Gn. 2:4-3:24; cf. also Ex. 9:30) presents a special problem for the Wellhausen theory, since it involves a combining of the names which are supposed to be clues to separate documents; the LXX contains many more instances of this combination (e.g. Gn. 4:6, 9; 5:29; 6:3, 5), while there is ample evidence of compound names for deities in Ugaritic, Egypt. and Gk. literature (cf. C. H. Gordon in *Christianity Today*, 23 Nov. 1959).

(4) It is likely that the interchange of *Yahweh* and *Elohim* in the Pentateuch reflects an attempt on the part of the author to stress the ideas associated with each name (cf. I. Engnell, *Gamla Testamentet*, 1, 1945, pp. 194ff.). These and similar problems pertaining to the divine names have long since caused documentary critics to minimize what was once the starting-point of the whole process of documentary analysis.

(ii) *Diction and style.* Differences in diction and style, an important link in the chain of evidence for the Wellhausen theory, have been called into question by a number of conservatives. Stress has been laid on the fact that the pentateuchal stories are too fragmentary to give an adequate sampling of an author's vocabulary and that insufficient attention has sometimes been given to the fact that different types of literature call for differing vocabularies. Words supposedly peculiar to one document are sometimes credited to a redactor when they occur in another source. This use of a redactor when the facts call in question critical theories seems a somewhat too convenient method of dealing with difficulties. As for matters of style, conservatives and others have frequently pointed out the subjectivity in such judgments and the very

great difficulty involved in subjecting such opinions to scientific examination. What seems to be a graphic, vibrant narrative to one critic may seem dull or turgid to another. W. J. Martin has highlighted some of the difficulties encountered by literary critics in his *Stylistic Criteria and the Analysis of the Pentateuch*, 1955, although caution is imperative in the use of analogies from western literary criticism for the study of oriental literature.

(iii) *Double narratives.* The occurrence of double narratives (sometimes called doublets) has been considered key evidence for a diversity of sources. Aalders (*op. cit.*, pp. 43-53) and Allis (*op. cit.*, pp. 94-110, 118-123) have examined a number of these repetitions (e.g. Gn. 1:1-2:4a; 2:4b-25; 6:1-8, 9-13; 12:10-20; 20; 26:6-11) and have sought to show that their presence in the text need not be interpreted as evidence for multiplicity of sources. On the contrary, repetition within Heb. prose may be connected with the characteristically Heb. (and indeed Semitic) use of repetition for emphasis. Ideas are underscored in Heb. literature not by the logical connection with other ideas but by a creative kind of repetition which seeks to influence the reader's will. (Cf. J. Muilenburg, 'A Study in Hebrew Rhetoric: Repetition and Style' in *VT Supp* 1, 1953, pp. 97-111; J. Pedersen, *Israel*, 1-2, 1926, p. 123.) Liturgical use may also help to account for repetition in both narrative and legislative portions of the Pentateuch.

So far as Gn. is concerned, a conservative contribution was made by P. J. Wiseman in *New Discoveries in Babylonia about Genesis*, 1936; rev. ed., *Clues to Creation in Genesis*, 1977. He suggested that the *tôlēdôt* passages (those beginning or ending with some such phrase as 'These are the generations . . .') mark the various sources available to Moses for compiling earlier narratives. This approach was popularized by J. Stafford Wright in *How Moses Compiled Genesis: A Suggestion*, 1946. For replies to the Wellhausenian theory of the development of the levitical system, see *Priests and Levites.

Conservatives have been quick to draw upon the conclusions of non-conservatives when these conclusions tended to question the validity of the documentary hypothesis. The sustained attack on the theories of Wellhausensians by B. D. Eerdmans is a case in point. Though denying the Mosaic authorship of the Pentateuch, Eerdmans staunchly defended the basic authenticity of the patriarchal narratives and affirmed his confidence in the antiquity of the ritual institutions of P. Further, T. Oestreicher and A. C. Welch endeavoured to tumble the documentary theory by removing the keystone — the identification of *D* with Josiah's book of the law. E. Robertson (*The Old Testament Problem*, 1950) regards *Dt.* as having been compiled under Samuel's influence as a law-book for 'all Israel', as having fallen into disuse when the disruption of the nation made its application impossible, and as having been opportunely rediscovered in Josiah's reign at a time when it was possible to treat 'all Israel' as a religious unit once more. The Decalogue and the Book of the Covenant, with which the Hebrews entered Canaan, were preserved in the early days of the settlement at various local sanctuaries, where they gathered around themselves bodies of divergent though related laws and traditions; the beginnings of national reunion in Samuel's day necessitated the compilation, on the basis of this material, of a law-book for the central ad-

ministration. R. Brinker, a pupil of E. Robertson, elaborated certain aspects of this theory in *The Influence of Sanctuaries in Early Israel*, 1946. Using linguistic and stylistic criteria, U. Cassuto (*La Questione della Genesi*, 1934) argued for the unity of Gn., while F. Dornseiff (*ZAW* 52–53, 1934–5) defended the literary unity of the whole Pentateuch; cf. his *Antike und Alter Orient*, 1956.

From another angle A. R. Johnson warns us against what 'seems to be a real danger in OT study as a whole of misinterpreting what may be different but contemporary *strata* in terms of corresponding *stages* of thought, which can be arranged chronologically so as to fit into an over-simplified evolutionary scheme or similar theory of progressive revelation' (*The Vitality of the Individual in the Thought of Ancient Israel*, 1949, p. 3).

(iv) *Form criticism*. While not abandoning the documentary hypothesis, the pioneer form critics, H. Gunkel and H. Gressmann, laid stress both on the literary qualities and on the lengthy process of oral tradition which had shaped the various narratives into aesthetic masterpieces. This welcome relief from the coldly analytical approach of the documentary critics, who in their detailed dissection of the Pentateuch tended to neglect the power and beauty of the stories, paved the way for the researches of a group of Scandinavian scholars who have discarded the documentary approach in favour of an emphasis on oral tradition. Following the lead of J. Pedersen who in 1931 formally rejected the documentary theory (*ZAW* 49, 1931, pp. 161–181), I. Engnell (*Gamla Testamentet*, 1, 1945) affirmed that, far from being the result of the compilation of written documents, the Pentateuch is a combination of reliable oral traditions collected and shaped in two main traditionist circles: a 'P-circle' responsible for the Tetrateuch and a 'D-circle' which formulated Dt., Jos., Jdg., Sa. and Ki. The actual writing of the books is relegated to exilic or post-exilic times. Key factors in the development of this traditio-historical school are the advanced knowledge of Heb. psychology and the growing understanding of ancient oriental literature. According to Engnell, the devotees of the Wellhausenian approach tend to interpret the OT in terms of European literary methods and western logic. See Eduard Nielsen, *Oral Tradition*, 1954, for a concise presentation of the views of the Scandinavian School.

As H. Gunkel's preoccupation with the various literary units (identifiable by literary *form* within the Pentateuch) represented a kind of return to the *fragmentary* approach of Geddes, Vater and De Wette, so P. Volz (and to some extent W. Rudolph) called for a revival of a *supplementary* hypothesis by minimizing the importance of the Elohist, who is at the most, in Volz's view, a later editor of the great author of Gn., the Yahwist. In somewhat similar fashion G. von Rad (*The Problem of the Hexateuch and Other Essays*, E.T. 1966) has stressed the dominant role played by the Yahwist as both collector and author of the pentateuchal materials which took shape over a lengthy period of time and have a rich history of tradition behind them. The generally accepted dates for the documents are highly tentative, according to von Rad, and represent the final stages in compiling the materials.

The theological application of von Rad's theories of the Pentateuch is to be found in his *Old Testament Theology*, 1, E.T. 1962. His theory that the

Pentateuch developed around Israelite creeds like Dt. 26:5ff. has recently been turned around with the suggestion that the creeds are not the source of the pentateuchal narrative but its summary (J. A. Soggin, *IOT*, E.T. 1976, p. 93).

M. Noth (*The Laws in the Pentateuch, and Other Essays*, E.T. 1966) has approximated some of the results of the Uppsala school of Engnell *et al.* without abandoning a documentary approach. Rather, he has paid close attention to the history of the oral traditions which lie behind the documents, while maintaining an approach to J, E and P which is quite conventional. Perhaps his divergence from the Wellhausenian tradition is best seen in his refusal to recognize a 'Hexateuch' and his removal of most of Dt. from the province of pentateuchal criticism.

In general, contemporary scholars are paying more attention to the forms of narrative, liturgical, contractual or legislative material than they are to the alleged sources of the documentary hypothesis, as recent introductions to the OT indicate. Cf. O. Kaiser, *IOT*, E.T. 1975, who lists the following chapter titles: Literary Types of Israelite Narrative, Literary Types of Israelite Law, The Growth of the Pentateuchal Narrative at the Pre-Literary Stage; also J. A. Soggin, *op. cit.* The precise relationship of form criticism to the more traditional source criticism is still under debate. What is clear is that much more attention must be paid to redaction criticism, the study of the import and thrust of the five individual books and the Pentateuch as a whole, whatever their process of composition may have been.

(v) *The evidence of archaeology*. The march of modern archaeology has contributed to the re-evaluation of the documentary hypothesis. The basic reliability of the historical narratives has been confirmed time and again, especially in the patriarchal period. (See H. H. Rowley, 'Recent Discovery and the Patriarchal Age' in *The Servant of the Lord*², 1965.) The evolutionary reconstruction of Israel's history and religion has been questioned more than once by outstanding archaeologists such as W. F. Albright (*e.g. From the Stone Age to Christianity*, 1957, pp. 88ff., 282) and C. H. Gordon (*e.g. Ugaritic Literature*, 1949, pp. 5–7; 'Higher Critics and Forbidden Fruit', *Christianity Today*, 23 Nov. 1959). A drastic re-appraisal of the documentary hypothesis from the standpoint of Israel's religion is found in the researches of Yehezkel Kaufmann, who affirms the antiquity of P and its priority to D. Furthermore, he separates Gn. from the rest of the Pentateuch, maintaining that it is 'a stratum in itself whose material is on the whole most ancient' (*The Religion of Israel*, 1960, p. 208).

e. *The position today*

The insights gained from these criticisms of the Graf-Wellhausen hypothesis, together with the continuing researches of its exponents, have resulted in considerable modification of the old theory. The simple evolutionary views of Israel's history and religion have been cast aside. The basic authenticity of the patriarchal stories is recognized by many scholars, since the light of archaeology has illuminated the setting of these stories. The *Egypt. milieu* of the Joseph cycle and the Exodus account has been established by archaeological, literary and linguistic considerations (cf. A. S. Yahuda, *The Language of the Pentateuch in its Re-*

lation to Egyptian, 1931; C. H. Gordon, *The World of the Old Testament*, 1958, p. 139). The role of *Moses as the great lawgiver and the dominant figure in Israel's religion has been reaffirmed.

Though not discarded, the documentary theory has been modified by contemporary scholars. The development of each document is exceedingly complex and is generally considered to represent a whole 'school' rather than a single author. The growth of the various documents is not consecutive but parallel, since there are ancient elements found in each, as the use of pentateuchal elements by the prophets indicates (*cf.* Aalders, *op. cit.*, pp. 111–138). Minute dissections of verses and positive assignment of their parts to diverse sources have generally been abandoned. These modifications in the documentary hypothesis should be viewed by conservatives as a medical chart, not as an obituary. The Wellhausenian theory is still very much alive and remains a constant challenge to conservative scholarship, which has sometimes been content to take comfort in the reactions against the documentary hypothesis without producing a thorough introduction to the Pentateuch, which states positively the evidence for the basic unity of the law while taking into full consideration the indications of diversity on which the documentary theory is based. Our increased knowledge of Middle Eastern literature—thanks to discoveries in *Mari, *Nuzi, *Ugarit, Hatti, *Sumer and *Egypt—should be of use as a helpful aid in this task. Since the texts from *Ebla (Tell Mardikh) seem to be contemporary with the earlier chapters of biblical history, they are likely to illuminate both the literature of the Pentateuch and its cultural background.

Aalders' studies have broken fresh ground and point the way for further advance. Of particular interest are his recognition of post-Mosaic and non-Mosaic elements in the Pentateuch (*e.g.* Gn. 14:14; 36:31; Ex. 11:3; 16:35; Nu. 12:3; 21:14–15; 32:34ff.; Dt. 2:12; 34:1–12) and his awareness of the fact that neither Testament ascribes the entire work to Moses, although both attribute substantial parts of it to him. The great legal codes, for instance, are credited specifically to Moses (*e.g.* Ex. 20:2–23:33; 34:11–26; Dt. 5–26; *cf.* Dt. 31:9, 24), as is the Israelites' itinerary mentioned in Nu. 33:2. As far as the Gn. stories are concerned, Moses may or may not have been the one who compiled them from their written and oral forms. The evidences of post-Mosaic editing of the Pentateuch are found in the references cited above, and especially in the mention of such ancient documents as 'the Book of the Wars of the Lord' (Nu. 21:14). It is difficult to date the final redaction of the Pentateuch. Aalders' suggestion that it took place some time within the reigns of Saul and David is credible, although some further allowance should probably be made for the modernizing of vocabulary and style.

III. The religious message of the Pentateuch

'The Pentateuch must be defined as a document which gives Israel its understanding, its aetiology of life. Here, through narrative, poetry, prophecy, law, God's will concerning Israel's task in the world is revealed' (A. Bentzen, *IOT*², 1952, 2, p. 77). A record of revelation and response, the Pentateuch testifies to the saving acts of God who is sovereign Lord of history and nature. The central act of God in the Pentateuch (and indeed the OT) is the *Exodus from Egypt. Here God broke in upon the

consciousness of the Israelites and revealed himself as the redeeming God. Insights gained from this revelation enabled them under Moses' leadership to re-evaluate the traditions of their ancestors and see in them the budding of God's dealings which had bloomed so brilliantly in the liberation from Egypt.

Having powerfully and openly proved himself as Lord in the Exodus, God led the Israelites into the realization that he was the Creator and Sustainer of the universe as well as the Ruler of history. The order is important: a knowledge of the *Redeemer* led to a knowledge of the *Creator*; an understanding of the God of *grace* prompted an understanding of the God of *nature*. The display of control over nature apparent in the plagues, the crossing of the sea, and the sustenance in the wilderness may well have influenced the Israelites to view God as Lord of nature as well as of history.

God's grace is revealed not only in his deliverance and guidance, but in the giving of the law and the initiation of the covenant. Israel's pledge of obedience, her oath of loyalty to God and his will is her response; but even her response is a gift of God's grace, for it is he who, though free from obligation, has fixed the terms of the covenant and provided the sacrificial system as a means of spanning the gap between himself and his people. God's grace demands a total recognition of his Lordship, a complete obedience to his will in every sphere of life. This demand is gracious because it involves what is good for Israel, what will help her to realize her true potential, and what she could not discover without divine revelation.

Whatever the origin of the Pentateuch, it stands now as a document possessing a rich inner unity. It is the record of God's revelation in history and his Lordship over history. It testifies both to Israel's response and to her failure to respond. It witnesses to God's holiness, which separates him from men, and his gracious love, which binds him to them on his terms. (*GENESIS, *EXODUS, *LEVITICUS, *NUMBERS, *DEUTERONOMY.)

PENTECOST, FEAST OF. In Lv. 23:16 LXX reads *pentēkonta hēmeras* for the Heb. *l'p'miššim yōm*, 'fifty days', referring to the number of days from the offering of the barley sheaf at the beginning of

the Passover. On the 50th day was the Feast of Pentecost. Since the time elapsed was 7 weeks, it was called *ḥaḡ s̄ābū'ōt*, 'feast of weeks' (Ex. 34:22; Dt. 16:10). It marks the completion of the barley harvest, which began when the sickle was first put to the grain (Dt. 16:9), and when the sheaf was waved 'the morrow after the sabbath' (Lv. 23:11). It is also called *ḥaḡ ḥaqqāšir*, 'feast of harvest', and *yōm ḥabbikkūrīm*, 'day of the first fruits' (Ex. 23:16; Nu. 28:26). The feast is not limited to the times of the Pentateuch, but its observance is indicated in the days of Solomon (2 Ch. 8:13), as the second of the three annual festivals (cf. Dt. 16:16).

The feast was proclaimed as a 'holy convocation' on which no servile work was to be done, and at which every male Israelite was required to appear at the sanctuary (Lv. 23:21). Two baked loaves of new, fine, leavened flour were brought out of the dwellings and waved by the priest before the Lord, together with the offerings of animal sacrifice for sin-and-peace-offerings (Lv. 23:17-20). As a day of joy (Dt. 16:16) it is evident that on it the devout Israelite expressed gratitude for the blessings of the grain harvest and experienced heartfelt fear of the Lord (Je. 5:24). But it was the thanksgiving and fear of a redeemed people, for the service was not without sin-and-peace-offerings, and was, moreover, a reminder of their deliverance from Egypt (Dt. 16:12) as God's covenant people (Lv. 23:22). The ground of acceptance of the offering presupposes the removal of sin and reconciliation with God.

In the intertestamental period and later, Pentecost was regarded as the anniversary of the law-giving at Sinai (Jubilees 1:1 with 6:17; TB, *Pesahim* 68b; Midrash, *Tanhuma* 26c). The Sadducees celebrated it on the 50th day (inclusive reckoning) from the first Sunday after Passover (taking the 'sabbath' of Lv. 23:15 to be the weekly sabbath); their reckoning regulated the public observance so long as the Temple stood, and the church is therefore justified in commemorating the first Christian Pentecost on a Sunday (Whit Sunday). The Pharisees, however, interpreted the 'sabbath' of Lv. 23:15 as the Festival of Unleavened Bread (cf. Lv. 23:7), and their reckoning became normative in Judaism after AD 70, so that in the Jewish calendar Pentecost now falls on various days of the week.

In the NT there are three references to Pentecost: (1) Acts 2:1 (Gk. *tēn hēmeran tēs pentēkostēs*). On this day, after the resurrection and ascension of Christ (c. AD 30), the disciples were gathered in a house in Jerusalem, and were visited with signs from heaven. The Holy Spirit descended upon them, and new life, power and blessing was evident, which Peter explained was in fulfilment of the prophecy of Joel. (2) Acts 20:16. Paul was determined not to spend time in Asia and made speed to be in Jerusalem by the day of Pentecost (AD 57). (3) 1 Cor. 16:8. Paul purposed to stay at Ephesus until Pentecost (AD 54 or 55), because an effectual door was opened to him for his ministry.

PENUEL. 'The face of God' was the name that Jacob gave to the place where he crossed the Jabbok on his way back to meet Esau. It is possible that it had been called Penuel before, perhaps after a peculiarly shaped rock, and that Jacob endorsed the name as a result of his experience with the

angel. The blessing which he sought (Gn. 32:26) materialized in Esau's conciliatory attitude (cf. 33:10: 'Truly to see your face is like seeing the face of God').

That Penuel was the site of an important pass is shown by the fact that a tower was built there, which Gideon destroyed after defeating the Midianites (Jdg. 8:8ff.), and Jeroboam rebuilt the city there, presumably to defend the invader's route from the E to his new capital at Shechem. The exact site is unknown, but S. Merrill, *East of Jordan*, 1881, pp. 390-392, makes a good case for the ancient ruins 6 km E of Succoth on two hills called Tulul ed-Dahab. J.B.J.

PEOPLE. 1. Heb. *l'ōm*, occasionally sing., more frequently plur. *l'ummim*, may mean: (i) a race or ethnic aggregate (Gn. 25:23, sing. and plur.); (ii) the sum total of the populace subject to a ruler, the same concept from a different viewpoint (Pr. 14:28, sing.); (iii) the totality or a large section of an ethnic community considered as the vehicle of judgment and feeling (Pr. 11:26, sing.); (iv) exceptionally, the Jewish people (Is. 51:4, sing.); (v) frequently, in the plur., the non-Jewish nations (e.g. Is. 55:4).

2. Heb. *gōy*, 'nation', 'people', came by association rather than etymology to mean specifically the Gentiles; or, when applied to Israelites, to imply backsliding and religious unfaithfulness (Jdg. 2:20; Is. 1:4; etc.) The term is used in a vivid metaphor for a swarm of locusts in Joel 1:6. LXX regularly uses *ethnos* for *gōy*, yet NT sometimes uses *ethnos* for Israel, showing that these acquired associations cannot be pressed too rigidly.

3. With trifling exceptions (cf. Gn. 26:11, 'Philistines'; Ex. 9:15, 'Egyptians') Heb. 'am, 'people', came to be applied fairly exclusively to Israel as the chosen race, but this meaning is acquired, not intrinsic. The LXX equivalent is *laos*. Further exceptions to Israelite reference are the metaphorical descriptions of ants and conies in community (Pr. 30:25f.). The unusual negative of Dt. 32:21, directly attached to the noun, denies to a flesh-and-blood people those spiritual characteristics which would justify their title (cf. 'Loammī', Ho. 1:9, AV). The biblical phrase 'am ḥā'āreš means in the earlier books the common people of the land, as distinct from the rulers and aristocracy. In the Ezra-Nehemiah period, the phrase sharpened to focus those Palestinians whose Judaism was mixed or suspect, with whom scrupulous Jews could not intermarry; cf. Ezr. 9:1-2, etc. In the rabbinic literature the term—now used in the sing. of an individual, in the plur. ('ammē ḥā'āreš) of a class—came to mean specifically all those who failed to observe the whole traditional law in all its details. A clear premonition of the rabbinic contempt for such persons is seen in Jn. 7:49.

4. The common NT equivalent to 'am is *laos* or *dēmos*, as opposed to *ochlos*, which means merely a crowd. R.A.S.

PEOR. I. A mountain somewhere to the N of the Dead Sea and opposite Jericho, described as looking towards the desert, but its location is not certainly identified. It was the last place from which Balaam blessed Israel (Nu. 23:28). See J. A. Jausen-R. Savignac, *Mission en Arabie*, 1909, pp. 2, 650f.

PEOR

2. The name of a deity, more fully Baal-peor, to which the Israelites were attracted (Nu. 25:3) and for the worship of which they were severely punished. Their punishment left a vivid impression and was recalled as a warning and example (Nu. 31:16; Dt. 4:3; Jos. 22:17).

M.A.M.

PERAEA. A district in Transjordan, corresponding roughly to the *Gilead of the OT. It is never mentioned by name in the NT—that is left to Josephus—but is the district referred to several times (e.g. Mt. 19:1) as the land ‘beyond Jordan’. The name Peraea came into use after the Exile, to denote an area E of the Jordan c. 16 km wide, stretching from the river Arnon in the S to some point between the Jabbok and the Yarmuk in the N. It comprised essentially the edge of the 1,000 m scarp overlooking the Jordan, with its towns, and was thus a highland region, with adequate (750 mm [30 in.]) per annum rainfall and tree cover in its higher parts. At intermediate elevations there were olives and vines, and cultivation tailed off E through the wheatfields and then the steppe pastures of lower lands. It was evidently an attractive region in OT times, for after seeing it and adjacent areas the tribes of Gad and Reuben (Nu. 32:1–5) lost interest in crossing Jordan with their cattle.

In the time of Christ Peraea was occupied by Jews and ruled by Herod Antipas, and by Jews it was regarded as possessing equality of status with Judaea and Galilee. As it adjoined both of these across the Jordan, it was possible by traversing its length to follow an all-Jewish route from Galilee to Judaea, thus by-passing the territory of the Samaritans.

J.H.P.

PERDITION (Gk. *apōleia*, ‘loss’, ‘destruction’). A word employed in the NT, in the sense of ‘destruction’ and with special reference to the fate of the wicked and their loss of eternal life (Rev. 17:8, 11). (*HELL, *ESCHATOLOGY.)

In addition, the phrase ‘son of perdition’ occurs, a form of speech in which the Jews of often expressed a man’s destiny (e.g. ‘sons of light’, ‘children of disobedience’; cf. Mt. 23:15; Lk. 10:6). It is applied to Judas Iscariot (Jn. 17:12) in a vivid sense which the Eng. does not fully convey as meaning literally ‘not one perished but the son of perishing’. The term is used also by Paul to describe the ‘man of lawlessness’ (2 Thes. 2:3), for which see *Anti-christ. The phrase ‘sons of perdition’ is found in *Jubilees* 10:3, with reference to those who perished in the Flood.

The Gk. word stands in direct antithesis to full and complete blessedness (*sōtēria*).

J.D.D.

PEREZ, PEREZITES. Perez (Heb. *peres*), one of the sons of Judah by Tamar his daughter-in-law (1 Ch. 2:4; 4:1), was so named because though his twin Zarah put out his hand first, Perez was the first delivered, and it was said that he had ‘made a breach’ (RSV) or ‘broken forth’ (AV) (*pāras*; Gn. 38:29). He was the father of Hezron and Hamul (Gn. 46:12; Nu. 26:21; 1 Ch. 2:5), whose descendants were called Perezites (*parsī*; Nu. 26:20; AV ‘Pharzitites’; see also Ne. 11:4, 6). Through him and Hezron passed the genealogy of the Messiah (1 Ch. 9:4; Ru. 4:18; Mt. 1:3; Lk. 3:33; cf. Ru. 4:12). The name occurs in LXX and NT as *Phares*, and

this name is taken over unchanged into the AV NT. In the OT the AV gives ‘Pharez’ in all occurrences except 1 Ch. 27:3, and Ne. 11:4–6. In the later EVV the form Perez is used throughout. It may be compared with the Assyr. personal name *Parši* found in documents of the 8th century BC. See K. Tallqvist, *Assyrian Personal Names*, 1914, p. 180.

T.C.M.

PERFECTION. The biblical idea of perfection is of a state of ideal wholeness or completion, in which any disabilities, shortcomings or defects that may have existed before have been eliminated or left behind.

In the OT, two Heb. roots express this idea: *šlm* and *tm*. (For the literal sense of the adjective *šālēm*, see Dt. 25:15; rsv ‘full’, AV ‘perfect’; 27:6, ‘whole’; for that of *tāmim*, see Lv. 3:9; 23:15.) In the NT the usual adjective (19 times) is *teleios* (noun *teleiōtēs*, Col. 3:14; Heb. 6:1), which expresses the thought of having reached the appropriate or appointed *telos* (‘end’ in the sense of ‘goal’, ‘purpose’). The corresponding verb, *teleiōō* (16 times in this sense), means to bring into such a condition. In secular Greek *teleios* means also: (i) adult, full-grown, as opposed to immature and infantile, and (ii), in connection with mystery-cults, fully initiated. The former sense shines through in 1 Cor. 14:20; Eph. 4:13; Heb. 5:14; cf. 6:1; the latter in 1 Cor. 2:6 and perhaps Phil. 3:15; Col. 1:28. Two adjectives of similar meaning are: (i) *artios* (2 Tim. 3:17; AV ‘perfect’, RSV ‘complete’), denoting ability and readiness to meet all demands made upon one, and (ii) *holoklēros* (Jas. 1:4, with *teleios*; 1 Thes. 5:23, RV ‘entire’, RSV ‘sound’), for which Arndt gives ‘whole, complete, undamaged, intact, blameless’. The NT also uses (7 times) the verb *katartizō*, translated ‘perfect’ in AV, meaning ‘put in order’, or ‘bring to a fit state’, by training, or supplying some lack, or correcting some fault.

Perfection is a relative term, meaning simply the attainment of a due end, or the enjoyment of an ideal state. What that end and state is varies in different cases. The Bible speaks of perfection in three distinct connections.

I. The perfection of God

Scripture speaks of God (Mt. 5:48), his ‘work’ (Dt. 32:4), his ‘way’ (2 Sa. 22:31 = Ps. 18:30), and his ‘law’ (Ps. 19:7; Jas. 1:25) as perfect. In each context some feature of his manifested moral glory is in view, and the thought is that what God says and does is wholly free from faults and worthy of all praise. In Mt. 5:48, Christ holds up the ideal conduct of the heavenly Father (particularly, in the context, his kindness to those who oppose him) as a pattern which his children must imitate.

II. The perfection of Christ

The writer to the Hebrews speaks of the incarnate Son of God as having been made ‘perfect through sufferings’ (Heb. 2:10). The reference here is not to any personal probation of Jesus as man, but to his being fitted by his experience of the power of temptation and the costliness of obedience for the high-priestly ministry to which God had called him (Heb. 5:7–10; cf. 7:28, RV). As high priest, having ‘offered for all time a single sacrifice for sins’ (Heb. 10:12), he became ‘the source of eternal salvation to all who obey him’ (Heb. 5:9), securing for them by his intercession constant access to God (Heb.

7:25; 10:19ff.) and giving them the constant sympathy and help that they need in their constant temptations (Heb. 4:14ff.). It was his own firsthand experience of temptation that fitted him to fulfil this latter ministry (Heb. 2:17f.; 5:2, 7ff.).

III. The perfection of man

This is spoken of with reference (a) to God's covenant relationship with man and (b) to his work of grace in man.

a. God's covenant relationship with man

The Bible speaks of man's perfection in the covenant with God. This is the perfection which the OT demands of God's people (Gn. 17:1; Dt. 18:13) and ascribes to individual saints (Noah, Gn. 6:9; Asa, 1 Ki. 15:14; Job, Jb. 1:1): loyal, sincere, whole-hearted obedience to the known will of their gracious God. It is faith at work, maintaining a right relationship with God by reverent worship and service. This perfection is essentially a matter of the heart (1 Ki. 8:61; 2 Ki. 20:3; 1 Ch. 29:9); outward conformity to God's commands is not enough if the heart is not perfect (2 Ch. 25:2). Perfection is regularly linked with uprightness, as its natural outward expression (Jb. 1:1, 8; 2:3; Ps. 37:37; Pr. 2:21). In Mt. 19:21 *teleios*, as well as expressing the negative thought, 'lacking nothing', would seem to carry the positive meaning, 'sincerely and truly in covenant with God'.

The Bible also speaks of God's perfecting of his covenant relation with man. This is the perfecting of men through Christ with which the writer to the Hebrews deals. 'The perfecting of men refers to their covenant condition. . . . To perfect . . . is to put the People into the true covenant relation of worshippers of the Lord, to bring them into His full fellowship' (A. B. Davidson, *Hebrews*, p. 208). God did this by replacing the old covenant, priesthood, tabernacle and sacrifices by something better. The 'old covenant' in Hebrews means the Mosaic system for establishing living fellowship between God and his people; but, says the writer, it could never 'perfect' them in this relationship, for it could not give full assurance of the remission of all sins (Heb. 7:11, 18; 9:9; 10:1-4). Under the new covenant, however, on the ground of Christ's single sacrifice of himself, believers receive God's assurance that he will remember their sins no more (10:11-18). Thus they are 'perfected for ever' (v. 14). This perfection of fellowship with God is something that OT saints did not know on earth (11:40)—though, through Christ, they enjoy it now, in the heavenly Jerusalem (12:23f.).

b. God's work of grace in man

The Bible speaks of God's perfecting of his people in the image of Christ. God means those who through faith enjoy fellowship with him to grow from spiritual infancy to a maturity (perfection) in which they will lack nothing of the full stature of Christ, in whose likeness they are being renewed (Col. 3:10). They are to grow till they are, in this sense, complete (cf. 1 Pet. 2:2; Heb. 5:14; 6:1; Gal. 3:14; Eph. 4:13; Col. 4:12). This thought has both a corporate and an individual aspect: the church corporately is to become 'a perfect man' (Eph. 4:13; cf. 2:15; Gal. 3:28), and the individual Christian will 'be perfect' (Phil. 3:12). In either case the conception is Christological and eschatological. The realm of perfection is 'in Christ' (Col. 1:28), and perfection of fellowship with Christ, and like-

ness to Christ, is a divine gift that will not be enjoyed till the day of his coming, the church's completing, and the Christian's resurrection (cf. Eph. 4:12-16; Phil. 3:10-14; Col. 3:4; 1 Jn. 3:2). Meanwhile, however, mature and vigorous Christians may be said to have attained a relative perfection in the realms of spiritual insight (Phil. 3:15, cf. v. 12), tempered Christian character (Jas. 1:4) and confident love towards God and men (1 Jn. 4:12, 17f.).

The Bible nowhere relates the idea of perfection directly to law, nor equates it directly with sinlessness. Absolute sinlessness is a goal which Christians must seek (cf. Mt. 5:48; 2 Cor. 7:1; Rom. 6:19) but which they do not as yet find (Jas. 3:2; 1 Jn. 1:8-2:2). No doubt when the Christian is perfected in glory he will be sinless, but to equate the biblical idea of perfection with sinlessness and then to argue that, because the Bible calls some men perfect, therefore sinlessness on earth must be a practical possibility, would be to darken counsel. The present perfection which, according to Scripture, some Christians attain is a matter, not of sinlessness, but of strong faith, joyful patience, and overflowing love. (*SANCTIFICATION.)

PERGA. An ancient city of unknown foundation in *Pamphylia; well sited in an extensive valley, watered by the Cestrus. It was the religious capital of Pamphylia, like Ephesus, a 'cathedral city' of Artemis, whose temple stood on a nearby hill. Like most cities on that pirate-ridden coast, Perga stands a little inland, and was served by a river-harbour. Attaleia, founded in the 2nd century BC, later served as Perga's port, but also absorbed her prosperity. Some ruins remain giving a pleasant impression of the ancient Perga, but Attaleia survives as an active port, the modern Adalia, one of the beauty-spots of Anatolia, so completely did Attalus' foundation overwhelm the more ancient towns. E.M.B.

PERGAMUM. A city of the Roman province of Asia, in the W of what is now Asiatic Turkey. It occupied a commanding position near the seaward end of the broad valley of the Caicus, and was probably the site of a settlement from a very early date. It became important only after 282 BC, when Philetaerus revolted against Lysimachus of Thrace and made it the capital of what became the Attalid kingdom, which in 133 BC was bequeathed by Attalus III to the Romans, who formed the province of *Asia from it. The first temple of the imperial cult was built in Pergamum (c. 29 BC) in honour of Rome and Augustus. The city thus boasted a religious primacy in the province, though *Ephesus became its main commercial centre.

Pergamum is listed third of the 'seven churches of Asia' (Rev. 1:11): the order suits its position in geographical sequence. This was the place 'where Satan's throne is' (Rev. 2:13). The phrase has been referred to the complex of pagan cults, of Zeus,

PERGAMUM

Pergamum, one of the 'seven churches of Asia' (Rev. 1-3).

Athena, Dionysus and Asclepius, established by the Attalid kings, that of Asclepius Soter (the 'saviour', 'healer') being of special importance. These cults are illustrative of the religious history of Pergamum, but the main allusion is probably to emperor worship. This was where the worship of the divine emperor had been made the touchstone of civic loyalty under Domitian. It marked a crisis for the church in Asia. Antipas (v. 13) is probably cited as a representative (perhaps the first) of those who were brought to judgment and execution here for their faith.

This letter is the primary source for the *Nicolaitans, who are emphatically equated with Balaam, and seem to be a party which advocated compromise under pagan pressures.

Here Christ possesses the real and ultimate authority, symbolized by the 'sharp two-edged sword' (v. 12), in the place where the Roman proconsul exercised the 'power of the sword' in judgment. The church is blamed for tolerating a party whose teaching would subvert it into idolatry and immorality like that of Balaam. But the 'conqueror' receives a pledge of Christ's inward relationship with him. The meaning of the 'white stone' (v. 17) is uncertain: it is properly a 'pebble' or *tessera* (tablet; Gk. *psēphos*). These had many uses, more than one of which may be apposite here. They represented acquittal, or served as a token or ticket of many kinds. The written name here is of the individual, and marks Christ's individual acceptance of the believer.

A small town (Bergama) still stands on the plain below the acropolis of the ancient city.

9:20; 2 Ch. 8:7; Ezr. 9:1; Ne. 9:8; (2) with the Jebusites, etc., in the hills (Jos. 11:3); (3) with the Canaanites near Bethel (Gn. 13:7), near Shechem (Gn. 34:30), and in the Judaeian hills (Jdg. 1:4f.); (4) with the Rephaim (Jos. 17:15). They were apparently hill-dwellers; this suits the interpretation of 'Perizzites', favoured by most commentators, as 'villagers' (from Heb. *p'rāzā*, 'hamlet'). The fact that Gn. 10:15ff. does not name Perizzites among Canaan's 'sons' supports this possibility. See POTT, p. 101. J.P.U.L.

PERSECUTION. As encountered by Christians, this was nothing new. It was part of their Jewish heritage. The association of witness and suffering, begun as early as the second part of Isaiah, was crystallized in the Seleucid struggle. A theory of martyrdom rewarded by personal immortality grew up till it dominated the outlook of the Jews towards the Roman government (4 Macc. 17:8ff.). The possibility of death for Torah became accepted as a demand of Judaism. Thus the Jews were not averse to martyrdom; despite official Roman toleration of their religion, their cohesiveness, non-co-operation and uncanny financial success won them widespread hatred and spasmodic persecution, especially outside Palestine: pogroms were common in Alexandria. This legacy was taken over by the Christians. Their willingness to face suffering was intensified by the example of Jesus and by the association of persecution with the longed-for end of the age (Mk. 13:7-13). Even so, we must ask what aroused such animosity towards them among both the Jews and the Romans.

a. Opposition from the Jews

This gradually grew in intensity. The preaching of a crucified Messiah whose death was publicly blamed on the Jewish leaders was highly provocative. Even so, the people were favourable (Acts 2:46f.; 5:14) and the Pharisees moderate (Acts 5:34ff.; 23:6ff.), while opposition arose, naturally enough, among the Sadducees (Acts 4:1, 6; 5:17). Stephen's preaching of the transitoriness of the law (Acts 6:14) turned public opinion and brought about the first persecution in Jerusalem and elsewhere, e.g. Damascus. In AD 44 James was executed by Herod Agrippa, and throughout the Acts the Jews appear as Paul's most vehement enemies. This attitude could only have been made worse by the Apostolic Council which repudiated the need for circumcision, and it culminated in the excommunication of Christians at Jamnia, c. AD 80.

b. Opposition from the Romans

Rome's attitude underwent a marked change. At first, as we see in Acts, she gave Christians toleration and even encouragement. This soon gave way to fierce opposition. In Rome (Tacitus, *Ann.* 15.44) such was their unpopularity by AD 64 that Nero could make them scapegoats for the fire. In Bithynia (Pliny, *Ep.* 10. 96-97) by c. AD 112 persistence in Christianity was a capital offence, though Trajan would not allow anonymous delation and he deprecated 'witch hunting'. Three explanations of this changed attitude are suggested:

(i) That Christians were persecuted only for specific offences, such as cannibalism, incendiarism, incest, magic, illicit assembly and *majestas* (in their case, refusal to sacrifice to the *numen* of the em-

PERIZZITES. These are mentioned: (1) among the occupants of Canaan generally (Gn. 15:20; Ex. 3:8; Dt. 7:1; 20:17; Jos. 3:10; 9:1; Jdg. 3:5; 1 Ki.

peror). There is, indeed, evidence that they were accused on all these counts, but 1 Pet. 2:12; 4:14-17; Pliny, *Ep.* 10. 97; and Suetonius, *Nero* 16, all make clear that at an early date the *nomen ipsium* of Christian, irrespective of the *cohaerentia flagitia* associated with it in the popular mind, was punishable.

(ii) That there was a general law throughout the empire, the *institutum Neronianum*, which proscribed Christianity. Tertullian makes this claim, and says that this was the only one of Nero's *acta* not rescinded later (*Ad. Nat.* 50. 7, see also *Apol.* 5), and the evidence of Suetonius, 1 Pet. and Rev. is patient of this interpretation. However, Christianity was probably not important enough to evoke such a general law, and if there was one it is hard to explain Pliny's ignorance of it, Trajan's failure to mention it, the property rights enjoyed by the church prior to the Decian persecution, and the remarkable lack of uniformity in its execution.

(iii) That persecution was at the discretion of the governor, who acted only in response to private accusation: there was no public prosecutor in Roman society. Whatever the formal charge, it is clear that by Pliny's time active membership of an organization believed to be criminal, and therefore, like the Bacchanals and the Druids, banned because in all three cult and *scelera* appeared indistinguishable, constituted an actionable offence, and *contumacia*, persistent refusal to recant, met with death. The competence of proconsuls and city prefects in *crimina extra ordinem* has been shown in recent years to have been very great. If a governor wished to take action against Christians he had the Neronian precedent to guide him and his coercive *imperium* to support him. Alternatively, it lay within his discretion, like Gallio (Acts 18:14-16), to refuse jurisdiction. If in doubt he could refer to the emperor, whose rescript would be binding on him as long as he remained in the province, though not necessarily upon his successors.

It is because the governors enjoyed such discretion that Tertullian addressed his Apology not to the emperor but to the governor: for it was in his hands that the remedy lay. This accounts for the spasmodic nature of persecution until the days of Decius. It depended so much on the policy of the governor and whether the extent of the unpopularity of Christians in the province was such as to drive private individuals to prosecute them. There is no satisfactory evidence (despite Orosius, 7. 7) for believing that there was any general action against Christians throughout the empire under Nero, though the sect seems to have become *illicita* in Rome itself (Suetonius, *Nero* 16). The actual evidence for a Domitianic persecution of the church is precarious despite the invective heaped on that emperor by the Fathers. A broad generalization in Dio (67. 14), concerning the death of Flavius Clemens, who was possibly, and Acilius Glabrio, who was probably, a Christian, and the banishment of Domitilla, is about all that can be summoned. But it is quite possible that Domitian, who minutely inspected and vigorously exacted the Jewish revenue (Suetonius, *Domit.* 12), discovered uncircumcised Christians sheltering under the religious privileges of the Jews and instituted against them a general persecution of which we have vivid traces in the Apocalypse, if this is to be dated under Domitian rather than Nero.

Persecution was therefore restricted by three factors: (i) that the Roman governors were reluctant

to admit charges concerning private religious opinions (*superstitiones*) and tried to confine their attention to real offences; (ii) that accusations had to be made personally and publicly—and to bring a capital charge was both dangerous and difficult; (iii) that in each province only one man, the governor, could pass the death sentence.

These three factors combined to protect the majority of Christians long enough for the church to become firmly established throughout the empire.

PERSEVERANCE. The strictly biblical, as distinct from the later theological, significance of this term is indicated by the context of its sole occurrence in AV as a rendering of *proskarterēsis* in Eph. 6:18. The implication of steadfastness, patience, persistence is confirmed by the use of the verb *proskartereō*, to attend constantly, continue unswervingly, adhere firmly, hold fast to (*MM*, p. 548). It is used in Mk. 3:9 to describe a skiff quietly waiting to carry Jesus from the surging crowd, and in Acts 10:7 of the soldiers in Cornelius' bodyguard who were in uninterrupted attendance upon him. In its spiritual application it always has to do with continuance in the Christian way, particularly in relation to prayer (*cf.* Acts 1:14; 2:42, 46; 6:4; 8:13; Rom. 12:12; 13:6; Col. 4:2). rsv translates *hypomonē* as 'perseverance' in Heb. 12:1.

No doctrinal undertones attach to the term in the NT. It relates simply to the continual and patient dependence of the Christian upon Christ. Our Lord's parable of the importunate widow is the most relevant commentary (*cf.* Lk. 18:1-8). Christian perseverance is only a quality in the believer because initially it is a gift of God. It is by his power that those who trust in him are 'guarded through faith for a salvation ready to be revealed in the last time' (1 Pet. 1:5).

PERSIA, PERSIANS. The Indo-European Persians, nomadic pastoralists from S Russia, probably entered the Iranian plateau late in the 2nd millennium BC. In 836 BC Shalmaneser III of Assyria received tribute from rulers of a Persia near Lake Urmia. His successor found the land of Parsuash in the S where several tribes finally settled. This area, E of the Persian Gulf, is still called Farsistan. Persepolis and Parsagarda were the chief towns. Heb. *pāras*, 'Persia', refers to this land.

I. Persian and Jewish history

The early traditions of the Persian people are recorded in the sacred book, the *Zend-Avesta*. The earliest recorded kings ruled from Anshan, NW of Susa. The Achaemenes who was claimed as founder of the dynasty by later kings probably reigned

PERSIA, PERSIANS

Persian rulers of the Achaemenid dynasty, with selected biblical references.

c. 680 bc. His grandson, Cyrus I, opposed Ashurbanipal of Assyria, but later submitted. Cyrus II, grandson of Cyrus I, rebelled against his Median suzerain, Astyages, killing him and taking over his capital, *Ecbatana, in 550 bc. Thereafter Median language and customs had strong influence on the Persians. This success was followed by the subjugation of Anatolia and the conquest of Croesus of

Lydia (547 bc). Cyrus then turned E to extend his realm into NW India. By 540 bc he was sufficiently strong to attack Babylonia. After several battles he entered Babylon in triumph on 29 October 539 bc, 17 days after the city had fallen to his army (Dn. 5:30f.; *CYRUS). The king soon returned to Susa, but his son Cambyses remained in Babylon to represent him in religious ceremonies. The whole

empire was divided into large regions ruled by *satraps, chosen from Persian or Median nobles but with native officers under them (cf. Dn. 6). Various statues of gods which had been collected into Babylon by the last native king, Nabonidus (perhaps reflected in Is. 46:1f.), were returned to their own shrines. As there was no image of Yahweh to return to Jerusalem, Cyrus gave to back the Jews the precious vessels looted from the Temple by Nebuchadrezzar (Ezr. 1:7ff.; cf. DOTT, pp. 92-94). More important, he gave royal authorization for the rebuilding of the Temple to any Jew who wished to return to Judah (Ezr. 1:1-4). One Sheshbazzar was appointed governor (Ezr. 5:14). He was evidently a special officer responsible to the king. The governor of the province of 'Across the River' (the country W of the Euphrates) was clearly unaware of Cyrus' edict when in 520 bc he attempted to delay the work. His letter went to his superior, the satrap who had charge of Babylon and the W. No record was found among the archives kept at Babylon, but a memorandum was found at Ecbatana, where Cyrus had resided during his first regnal year. Darius I (522-486 bc) confirmed the decree and ordered his officials to help the Jews.

Darius and his successor Xerxes I (486-465 bc) expended considerable energy in an attempt to conquer the Greeks of the Peloponnese, almost the only area remaining outside the Persian empire in the known world, for Cambyses II (530-522 bc) had annexed Egypt in 525 bc. The defeat at Marathon (490 bc) by a small Gk. army was the only rebuff suffered by Darius. His reorganization of the satrapies, his system of military commanders, and his introduction of coinage, legal and postal systems lasted as long as the empire. These facilities coupled with the considerable degree of autonomy allowed to subject peoples contributed greatly to the stability of the empire and allowed such a small community as Judah to survive, Jewish officers acting as governors (*phh*) there.

Under Artaxerxes I (465-424 bc) Jewish affairs had official representation at court. *Ezra, it seems, was 'Secretary of State for Jewish Affairs' (Ezr. 7:12). He was accredited as special envoy to reorganize the Temple services at Jerusalem (458 bc). The eager Jews were led on by the encouragement they received to exceed the terms of Ezra's commission and rebuild the city wall. This was reported to the king by the governor of Samaria, who evidently had some responsibility for Judah. The royal reply (Ezr. 4:17-23) ordered the cessation of the work, for search of the records had shown that the city had revolted against earlier kings. Artaxerxes was faced with rebellion in Egypt (c. 460-454 bc), so he could not allow the construction of a fortress so near to that country. However, the royal cupbearer was a Jew, *Nehemiah, who was able to reverse the effects of this decree by having himself appointed *governor of Judah (Heb. *tiršāṭā*, a Persian word, Ne. 8:9) with permission to rebuild the walls (445 bc). No record remains of relations between the Persian rulers and the Jews after this period. When the Persian empire was in the power of Alexander (331 bc) the Jews simply transferred their allegiance from one monarch to another.

II. Persian culture

The Indo-European Persian language was written in a cuneiform script composed of 51 simple syl-

labic signs (*WRITING) but this was restricted to imperial monuments almost exclusively. The imperial chancery used *Aramaic language and characters for official communications (e.g. the letters in Ezra, cf. DOTT, pp. 256-269). Translations were made into local tongues (cf. Est. 3:12; 8:9).

The luxury of the Persian court as described in the book of *Esther is attested by objects found at several sites. A number of stone bas-reliefs depict the king and his courtiers and the tribute of the vanquished. Portraits of the different racial groups are especially fine examples of Persian stone carving. The Oxus treasure (now mostly in the British Museum) and other chance finds show the skill of goldsmiths and jewellers. Solid gold and silver bowls and vases illustrate the wealth of the kings. Gk. influences may be seen in some Persian works and Gk. craftsmen appear among lists of palace dependants.

III. Persian religion

The early Persians revered gods of nature, fertility and the heavens. The tribe of the Magi were nearly exclusively the priests. Some time after 1000 bc Zoroaster proclaimed a religion of lofty moral ideals based on the principle 'Do good, hate evil'. For him there was one god, Ahura-mazda, the Good, represented by purifying fire and water. Opposed to the good was a dark power of Evil. This creed was adopted by Darius I, but soon became lost among the more ancient cults. Zoroaster's doctrines survived and were spread abroad. Their influence has been traced in the writings of early Judaism (*DEAD SEA SCROLLS) and, by some scholars, in the NT.

PETER.

I. Early background

Peter's original name was apparently the Heb. Simeon (Acts 15:14; 2 Pet. 1:1): perhaps, like many Jews, he adopted also 'Simon', usual in the NT, as a Gk. name of similar sound. His father's name was Jonah (Mt. 16:17); he himself was married (Mk. 1:30), and in his missionary days his wife accompanied him (1 Cor. 9:5). The Fourth Gospel gives *Beth-saida, just inside Gaulanitis, and a largely Gk. city, as his place of origin (Jn. 1:44), but he had also a home in Capernaum in Galilee (Mk. 1:21ff.). Both places were at the lakeside, where he worked as a fisherman, and in both there would be abundant contact with Gentiles. (His brother's name is Gk.) Simon spoke Aramaic with a strong N-country accent (Mk. 14:70), and maintained the piety and outlook of his people (cf. Acts 10:14), though not trained in the law (Acts 4:13; literacy is not in question). It is likely that he was affected by John the Baptist's movement (cf. Acts 1:22): his brother Andrew was a disciple of John (Jn. 1:39f.).

II. Call

The Fourth Gospel describes a period of Christ's activity before the commencement of the Galilean ministry, and to this may be referred Peter's first introduction to him, by Andrew's agency (Jn.

PETER

1:41). This makes the response to the subsequent call by the lakeside (Mk. 1:16f.) more intelligible. The call to the intimate band of the Twelve followed (Mk. 3:16ff.).

It was as a disciple that Simon received his new title, the Aramaic *Kepha* ('Cephas'), 'rock' or 'stone' (1 Cor. 1:12; 15:5; Gal. 2:9), usually appearing in NT in the Gk. form *Petros*. According to Jn. 1:42, Jesus conferred this title (not known as a personal name previously) at their first encounter. John's usual designation is 'Simon Peter'. Mark calls him Simon up to 3:16, and Peter almost invariably thereafter. There is nothing in any case to suggest that the solemn words of Mt. 16:18 represented the first bestowal of the name.

III. Peter in the ministry of Jesus

Peter was one of the first disciples called; he always stands first in the lists of disciples; he was also one of the three who formed an inner circle round the Master (Mk. 5:37; 9:2; 14:33; cf. 13:3). His impulsive devotion is frequently portrayed (cf. Mt. 14:28; Mk. 14:29; Lk. 5:8; Jn. 21:7), and he acts as spokesman of the Twelve (Mt. 15:15; 18:21; Mk. 1:36f.; 8:29; 9:5; 10:28; 11:21; 14:29ff.; Lk. 5:5; 12:41). At the crisis near Caesarea Philippi he is the representative of the whole band: for the question is directed to them all (Mk. 8:27, 29), and all are included in the look that accompanies the subsequent reprimand (8:33).

On any satisfactory interpretation of Mk. 9:1 the transfiguration is intimately related to the apostolic confession which precedes it. The experience made a lasting impression on Peter: 1 Pet. 5:1; 2 Pet. 1:16ff. are most naturally interpreted of the transfiguration, and, for what they are worth, the *Apocalypse* and *Acts of Peter* (*NEW TESTAMENT APOCRYPHA) show that their authors associated the preaching of this subject with Peter.

In a measure, the disastrous boast of Mk. 14:29ff. is also representative of the disciples; and, as Peter's protestations of loyalty are the loudest, so his rejection of the Lord is the most explicit (Mk. 14:66ff.). He is, however, specially marked out by the message of the resurrection (Mk. 16:7), and personally receives a visitation of the risen Lord (Lk. 24:34; 1 Cor. 15:5).

IV. The commission of Peter

Mt. 16:18ff. is one of the most discussed passages of the NT. Rejection of the genuineness of the saying is arbitrary, and generally based on dogmatic assumptions (sometimes the assumption that Jesus never meant to found the church). Others have argued that the saying is genuine but displaced. Stauffer would see it as a resurrection commission, like Jn. 21:15; Cullmann would set it in a passion context, like Lk. 22:31f. Such reconstructions hardly do justice to the distinctiveness of Mt. 16:18ff. It is a benediction and a promise: the other passages are commands. We need not undervalue Mark's vivid account of the Caesarea Philippi incident, which concentrates attention on the disciples' failure to understand the nature of the Messiahship they have just confessed, to acknowledge that the 'rock' saying belongs to the occasion of the confession.

There is still no unanimity in interpreting the passage. The suggestion that 'rock' is simply a misunderstanding of a vocative 'Peter' in the underlying Aramaic (*SB*, 1, p. 732) is too facile: the passage has obviously something to do with

the significance of Peter's name, which various Gospel sources show as having been solemnly bestowed by Jesus. From early times two main interpretations have been held, with many variants.

1. That the rock is substantially what Peter has said: either Peter's faith or the confession of the Messiahship of Jesus. This is a very early interpretation (cf. Origen, *in loc.*, 'Rock means every disciple of Christ'). It has the great merit of taking seriously the Matthean context, and emphasizing, as Mk. 8 does in a different way, the immense significance of the Caesarea Philippi confession. In historical perspective we should probably see the rock as, not simply faith in Christ, but the apostolic confession of Christ, spoken of elsewhere as the foundation of the church (cf. Eph. 2:20). The 'rock' saying touches the core of the apostolic function, and Peter, first among the *apostles, has a name which proclaims it. That his own faith and understanding are as yet anything but exemplary is irrelevant: the church is to be built on the confession of the apostles.

2. That the rock is Peter himself. This is found almost as early as the other, for Tertullian and the bishop, whether Roman or Carthaginian, against whom he thundered in *De Pudicitia*, assume this, though with different inferences. Its strength lies in the fact that Mt. 16:19 is in the singular, and must be addressed directly to Peter even if, like Origen, we go on to say that to have Peter's faith and virtues is to have Peter's keys. Comparison might also be made with the Midrash on Is. 51:1. When God looked on Abraham who was to appear, he said, 'Behold, I have found a rock on which I can build and base the world. Therefore he called Abraham a rock' (*SB*, 1, p. 733).

Many Protestant interpreters, including notably Cullmann, take the latter view; but it is perhaps significant that he cuts the saying from the Matthean setting. To read it where Matthew places it is surer than to treat it as an isolated logion.

It must be stressed, however, that the exegesis of this point has nothing to do with the claims for the primacy of the Roman Church or its bishop with which it has through historical circumstances become involved. Even if it could be shown that Roman bishops are in any meaningful sense the successors of Peter (which it cannot), the passage does not allow for the transfer of its provisions to any successors whatever. It refers to the foundation of the church, which cannot be repeated.

The words that follow about the keys of the kingdom should be contrasted with Mt. 23:13. The Pharisees, for all their missionary propaganda, shut up the kingdom: Peter, recognizing the Son who is over the house and who holds the keys (cf. Rev. 1:18; 3:7; 21:25), finds them delivered to him (cf. Is. 22:22) to open the kingdom. (*POWER OF THE KEYS.) The 'binding and loosing', a phrase for which there are illuminating rabbinic parallels, is here addressed to Peter, but elsewhere is assigned to all the apostles (cf. Mt. 18:18). 'The apostle would, in the coming Kingdom, be like a great scribe or Rabbi, who would deliver decisions on the basis, not of the Jewish law, but of the teaching of Jesus which "fulfilled" it' (A. H. McNeile, *in loc.*).

But that here and elsewhere a primacy among the apostles is ascribed to Peter is not in doubt. Lk. 22:31ff. shows the strategic position of Peter as seen by both the Lord and the devil and, in full knowledge of the approaching desertion, marks out his future pastoral function. The risen Lord

reinforces this commission (Jn. 21:15ff.), and it is the Fourth Gospel, which demonstrates the peculiar relationship of the apostle John to Christ, that records it.

V. Peter in the apostolic church

The Acts shows the commission in exercise. Before Pentecost it is Peter who takes the lead in the community (Acts 1:15ff.); afterwards, he is the principal preacher (2:14ff.; 3:12ff.) the spokesman before the Jewish authorities (4:8ff.), the president in the administration of discipline (5:3ff.). Though the church as a whole made a deep impression on the community, it was to Peter in particular that supernatural powers were attributed (5:15). In Samaria, the church's first mission field, the same leadership is exercised (8:14ff.).

Significantly also, he is the first apostle to be associated with the Gentile mission, and that by unmistakably providential means (10:1ff.; cf. 15:7ff.). This immediately brings criticism upon him (11:2ff.); and not for the last time. Gal. 2:11ff. gives us a glimpse of Peter at Antioch, the first church with a significant ex-pagan element, sharing table-fellowship with the Gentile converts, and then meeting a barrage of Jewish-Christian opposition, in the face of which he withdraws. This defection was roundly denounced by Paul; but there is no hint of any theological difference between them, and Paul's complaint is rather the incompatibility of Peter's practice with his theory. The old theory (revived by S. G. F. Brandon, *The Fall of Jerusalem and the Christian Church*, 1951), of persistent rivalry between Paul and Peter, has little basis in the documents.

Despite this lapse, the Gentile mission had no truer friend than Peter. Paul's gospel and his had the same content, though a somewhat different expression: the Petrine speeches in Acts, Mark's Gospel and 1 Peter have the same theology of the cross, rooted in the concept of Christ as the suffering Servant. He was ready with the right hand of fellowship, recognizing his mission to Jews and Paul's to Gentiles as part of the same ministry (Gal. 2:7ff.); and at the Jerusalem Council is recorded as the first to urge the full acceptance of the Gentiles on faith alone (Acts 15:7ff.).

Peter's career after the death of Stephen is hard to trace. The references to him in Joppa, Caesarea and elsewhere suggest that he undertook missionary work in Palestine (James no doubt now assuming leadership in Jerusalem). He was imprisoned in Jerusalem, and on his miraculous escape he left for 'another place' (Acts 12:17). Attempts to identify this place are fruitless. We know that he went to Antioch (Gal. 2:11ff.); he may have gone to Corinth, though probably not for long (1 Cor. 1:12). He is closely associated with Christians in N Asia Minor (1 Pet. 1:1), and possibly the prohibition on Paul's entry into Bithynia (Acts 16:7) was due to the fact that Peter was at work there.

Peter's residence in Rome has been disputed, but on insufficient grounds. 1 Peter was almost certainly written from there (1 Pet. 5:13; *PETER, FIRST EPISTLE OF). That book shows signs of being written just before or during the Neronian persecution, and 1 Clement 5 implies that, like Paul, he died in this outburst. Doubts cast on the interpretation of 1 Clement (cf. M. Smith, *NTS* 9, 1960, pp. 86ff.) have little foundation. On the other hand, Cullmann's suggestion, based on the context in 1

Clement and Paul's hints in Philippians of tensions in the church in Rome, that Peter, perhaps at Paul's request, came specifically to heal the breach, and that bitterness among Christians led to the death of both, is worth serious consideration. The story in the *Acts of Peter* of his martyrdom by crucifixion (cf. Jn. 21:18ff.) head downwards cannot be accepted as reliable, but this work (*NEW TESTAMENT APOCRYPHA) may preserve some valid traditions. Certainly these Acts, like other 2nd-century witnesses, emphasize the co-operation of the apostles in Rome.

Excavations in Rome have revealed an early cultus of Peter under St Peter's (cf. Eusebius, *EH* 2. 25); it is not safe to claim more for them. (*PETER, FIRST and SECOND EPISTLES OF.)

A.F.W.

PETER, FIRST EPISTLE OF. The letter is sent in the name of the apostle, to whose status and experience there is a modest allusion in 5:1. A certain function is ascribed to Silvanus (5:12)—almost certainly the *Silas of Acts. The address is the widest in the NT (1:1); to the Christians of five provinces (of which Bithynia and Pontus were for administrative purposes merged).

I. Outline of contents

a. Address and greeting (1:1–2)

Trinitarian in form and concerned with the work of salvation.

b. Thanksgiving (1:3–12)

In form a *berakhah*, or blessing of God, for the privileges of salvation (contrast Paul's thanksgivings), making reference to present suffering.

c. The implications of salvation (1:13–2:10)

God's purpose for his people: the nature of redemption and the call of the redeemed to fear God and love one another: the privileges of belonging to the people of God. The section includes the call to 'put off' the characteristics of the old life.

d. Christian relationships (2:11–3:12)

The appeal to good behaviour among the Gentiles: careful subjection to lawfully constituted authority; the duties of slaves, under good and bad masters, with the example of Christ; the duties for wives and husbands; the call to unity; love, gentleness and humility, swelling into Ps. 34.

e. Suffering and the will of God (3:13–22)

Preparedness to suffer injustice: Christ's suffering and its triumphant consequences.

f. Holy living (4:1–11)

Includes a call to watch: culminates in a benediction.

PETER, FIRST EPISTLE OF

g. *The fiery trial* (4:12–19)

A sudden resumption of the theme of imminent suffering: its inherent blessing; the glory of suffering for the Name: the coming judgment.

h. *Address to elders* (5:1–4)

i. *General address and benediction* (5:5–11)

Including a renewal of the call to vigilance and to resistance to the evil one.

j. *Personalia and greetings* (5:12–14)

II. External attestation

The use of 1 Peter in the primitive church is at least as well attested as most other Epistles. Eusebius says that 'the ancient elders' made free use of it (EH 3. 3); some have found echoes of it in Clement of Rome (c. AD 96), and rather more in Ignatius, Hermas and Barnabas, belonging to different parts of the world, but all to the early 2nd century. Beyond question is its use by Polycarp (who may have been baptized as early as AD 69) and Papias, also of the sub-apostolic generation (Eusebius, EH 3. 39). It is reflected in the *Gospel of Truth*, which seems to use the books regarded as authoritative in Rome c. AD 140 (*NEW TESTAMENT APOCRYPHA). From the second half of the century onwards it seems universally known and read, at least in the Gk.-speaking church. There are fewer signs of it in Lat. writers. It is not mentioned—possibly by accident (cf. T. Zahn, *Geschichte des Neutestamentlichen Kanons*, 2. 1, 1890, pp. 105ff., 142)—in the Muratorian Fragment. By Eusebius' time, no question was raised about its authenticity, though other writings bearing Peter's name had long caused discussion (EH 3. 3).

Obviously the Epistle had considerable influence on the thought and expression of early Christians, and nothing suggests that it was ever attributed to anyone but Peter. Some who have on other grounds questioned its authenticity have been driven by its evident early attestation to the desperate conclusion that it must have circulated anonymously.

A date about AD 100–111 has often been urged for the passages about persecution. But this is tenable only if the traditional authorship is denied, and in any case is a dubious understanding of these passages (see section V, below). It is also worth remembering that Polycarp and Papias, both Asians, were, the one certainly, the other almost certainly, mature men at that time.

III. Place of writing

The letter conveys greetings from the church in 'Babylon' (5:13). Mesopotamian Babylon is unlikely: it is too much of a coincidence that Mark and Silvanus, old colleagues of Paul, should be there too. Still less can be said for Babylon on the Nile, a military depot. It is far more likely that, as in Rev. 14:8; 17:5, etc., Babylon stands for Rome. The OT had compared it as a symbol of godless prosperity (cf. Is. 14); theories that it is a general allegory for 'the world' or a cryptogram for security purposes are needless. There are grounds for believing Peter worked in Rome, and the presence of Mark and Silvanus would be explained.

IV. Style and language

The Gk. of the Epistle is good and rhythmic, the style not pretentious but with a certain delicacy. Simple rhetorical devices are effectively used, but there are

also some grammatical features best explained by Semitic influence. The quotations from and allusions to the OT almost invariably follow the LXX in a way which suggests thorough familiarity with it.

Some of these facts, reinforced by an exaggeration of the classical character of the Gk., have seemed at once to overthrow any claim to authorship by an Aramaic-speaking Galilean. A number of assumptions here, however, require testing. Gk. was widely understood and spoken, and was a vital cultural force, throughout 1st-century Palestine, and especially Galilee. Peter's own brother has a Gk. name, and Peter would doubtless be quite at home in the language. Further, the LXX was the 'Authorized Version' of most early Christians, and everyone connected with the Gentile mission would be familiar with it, and especially with the key passages most frequently in use.

These factors, however, would not themselves justify an easy assumption that Peter could write Gk. prose of the type of 1 Peter. But we must here ask, in what sense is the letter 'by' Silvanus (5:12)? Were he simply the messenger, one would expect the expression 'sent by' (cf. Acts 15:27). Contemporary literature attests that in the ancient world secretaries were often entrusted with considerable powers (cf. J. A. Eschlimann, *RB* 53, 1946, pp. 185ff.). Probably, therefore, 1 Pet. 5:12 indicates, and the diction and style evidence, the assistance of Silvanus in drafting the letter.

Silvanus, we learn from Acts, was a Jew, a Roman citizen, acceptable for the delicate task of explaining the resolutions of the Jerusalem Council (Acts 15:22ff.) and a devoted worker in the Gentile mission. He had been associated with Paul in the sending of 1 and 2 Thes. (1 Thes. 1:1; 2 Thes. 1:1). Selwyn has pointed to verbal parallels and connections of thought between those Epistles and 1 Peter (pp. 369ff., 439ff.) which, after due weight has been given to the criticisms of B. Rigaux (*Les Épîtres aux Thessaloniens*, 1956, pp. 105ff.) and others, will repay careful study. An interesting light may be cast, for instance, on 1 Pet. 3:7 and 1 Thes. 4:3–5 if the one is read in the light of the other.

Those who deny the Petrine authorship usually write off the reference to Silvanus as part of the pseudepigraphic machinery. If, however, the hypothesis of a secretary introduces factors beyond proof it is also true that this method was used in antiquity, and must be allowed for.

V. The historical background

The principal data come from the references to persecution (1:6f.; 3:13–17; 4:12–19; 5:9). In the first two passages trials exist, unjust suffering is a possibility; in the second two a fierce ordeal is imminent: so much so that some have even urged that 4:12ff. comes from a later period. The vocabulary, however, is very similar: in each case *peirasmos*, 'trial', is used (1:6 and 4:12); persecution is a ground of rejoicing (1:6; 4:13); the same beatitude is applied (3:14; 4:14); the glory of suffering for doing good, or as a Christian, is proclaimed (3:17; 4:16); the undeserved suffering of Christians is linked with the will of God (3:17; 4:19); obedience to the civil power in things lawful and honest is enjoined (2:13ff.; 4:15), and the example of Christ's sufferings is set forth (1:11; 3:18; 4:13). The readers are also told that their fiery trial should be no surprise (4:12): and suffering they already know (cf. 1:6ff.). All this suggests that if the peril in 4:12ff. is new, it is in degree, not kind.

The antithesis in 4:12ff. between suffering for wrong committed and suffering for the name of Christ has attracted comparison with a letter from Pliny, appointed governor of Bithynia-Pontus in AD 110/111 to the usually liberal-minded emperor Trajan (Pliny, *Ep.* 10. 96).

Pliny, faced with vast numbers of Christians in his province, asks whether age, sex or recantation is to be allowed for in prescribing punishment: and, further, if the name of Christian (*nomen ipsum*) is sufficient reason for punishment, or only the crimes (putatively) congruent therewith (*flagitia cohaerentia*).

His own line of conduct had been to inquire whether people were Christians and to give them free pardon if they sacrificed to the emperor's genius; and, if they refused, to execute them for contumacy (*contumacia*). Some of those who sacrificed said they had ceased to be Christians 20 years back; but neither from them nor from two Christian girls (*DEACONESS), whom he tortured, could he find anything very reprehensible save a rather disgusting superstition. His vigorous action was having effect, and disused heathen rites were recommending.

Trajan's reply (*Ep.* 10. 97) generally approves these actions but lays down that Christians are not to be sought out: if they are regularly accused and fail to recant they must suffer.

Pliny also says that Christians took an oath of abstinence from crime (*cf.* 1 Pet. 4:15). And this all takes place in part of the area to which 1 Peter is addressed.

There is no evidence of widespread state-sponsored persecution in the provinces before this date: the savage pogroms of Nero and Domitian were directed at Roman Christians. Accordingly, many have seen in 1 Peter a tract designed for Pliny's time (*cf.*, e.g. J. Knox, *JBL* 72, 1953, pp. 187ff.).

To this thesis there are four strong objections.

1. 'The name' is used in 1 Peter in a primitive Christian, not a juristic Roman, sense. The 'name' of Jesus was immensely significant for Christians of the apostolic age, and in particular the accounts which we have of Peter's Jerusalem preaching (*cf.* Mk. 9:37, 41; 13:13; Lk. 21:12; Acts 2:21, 38; 3:6, 16; 4:12, 17f., 30; 5:28). Even in Jerusalem days persecution was for 'the name' (Acts 5:41; 9:16; *cf.* 9:4f.). The background of 'the name' in 1 Pet. 4 surely lies in these passages.

2. When Pliny talks of *flagitia cohaerentia* he is doubtless thinking of the common slander that Christians were guilty of cannibalism, incest and other horrors in their rites—he is looking for evidence. But the warnings in 1 Pet. 4:15f. have no such undertones: and 'a mischief-maker' does not denote a criminal offence at all.

3. The language of 1 Peter does not necessarily indicate legislative action. It is implied in 2:14; 3:15ff. that, in the ordinary administration of justice, Christians would have nothing to fear: though the same passages make clear that they might on occasions be subjected to flagrant injustice. In 3:15ff. the danger seems to be primarily from ill-disposed neighbours; in 4:14 reproach is specifically mentioned; and the readers' sufferings are the same as other Christians know elsewhere (5:9). Jewish jealousy, private spite, enraged commercial interests, mob violence and ill-judged actions by local magistrates could have dire effects (Acts *passim*; 2 Cor. 11:22ff.; 1 Thes. 2:14f.; 2 Tim. 3:11f.; Heb. 12:4ff.).

4. Pliny's jurisdiction extended over Bithynia-Pontus only: nothing suggests an enforcement of his policy in the other areas to which 1 Peter is addressed.

Pliny's action must have had its roots well in the past (*cf.* Ramsay, *CRE*, pp. 245ff.). Though not sure of the technicalities, he takes for granted that Christians must be punished for *something*: and even he does not execute for the *nomen ipsum* but for *contumacia*. Nor does Trajan give him a straight answer: it is still not clear whether Christianity is a crime or not. The law, kept deliberately vague, puts Christians at the mercy of gossip.

There is no need, however, to look to Vespasian's or Domitian's time: nothing in the *language* of 1 Peter requires a date later than the 60s. If a note of particular urgency appears at 4:12ff. the outbreak of the Neronian persecution would afford ample justification for this.

It seems certain that *Peter suffered in Rome under Nero, and 'Babylon' (5:13) almost certainly indicates that city. The E provinces tended to copy imperial actions on their own initiative. Rev. 2-3 suggests that this happened in Domitian's persecution in the 90s. From Rome, in the first rumblings of Nero's anti-Christian movement that became literally a fiery trial, Peter would have reason to predict an intensification of the suffering of his brethren in the East.

A suitable date for 1 Peter would thus be just before the outbreak of Nero's persecution: AD 63 or early 64; perhaps after Paul had died and left his colleagues Silvanus and Mark.

VI. The author's background

A rewarding study can be made of the connection between 1 Peter and the other parts of the NT with which Peter is associated: Mark's Gospel and the early speeches in Acts. It is not simply a matter of verbal links between 1 Pet. 2:20ff. and Mark's passion narrative (*cf.* Selwyn, p. 30). Mark, the Petrine speeches and 1 Peter all set forth Christ in terms of the suffering Servant of Isaiah 53; 1 Peter and Mk. both expound the Lord's death as a ransom (*cf.* Mk. 10:45 with 1 Pet. 1:18). Other NT writings, of course, are indebted to Is. 53, but it is remarkable that these three have this prophetic passage so deeply impressed that it may be regarded as their central thought about Christ. 1 Pet. 2, like Is. 53, describes both the Servant's conduct and sufferings and the significance of them. Much has been said of the call to the imitation of Christ in 1 Peter; but there is far more than a description of the passion and an appeal to imitation: the thought moves on to what is for ever inimitable, the redemption which only his suffering could effect.

The Petrine speeches in Acts share with 1 Peter the same sense of prophetic fulfilment (Acts 2:16ff.; 3:18; 1 Pet. 1:10ff., 20), the insistence on the cross as the foreordained action of God (Acts 2:23; 1 Pet. 1:20), the same connection of the resurrection and exaltation (Acts 2:32ff.; 1 Pet. 1:21); the call to repentance and faith-baptism (Acts 2:38, 40; 1 Pet. 3:20ff.); the certainty of Christ's judgment of the living and dead (Acts 10:42; 1 Pet. 4:5); joyous recognition of the Gentile mission and its blessings (Acts 10:9ff.; 11:17; 15:7ff.; 1 Pet. 1:1, 4-12; 2:3-10), expressed from a Jewish standpoint. It would take a Jew of Peter's views to speak of Gentile Christians as 'elect . . . sojourners of the Dispersion' (1:1, rv), and to describe them as entering Israel (2:9f.—note the modification of Hosea: the

PETER, FIRST EPISTLE OF

readers had *never been* God's people before). A Jew, too, could describe their background as 'what the Gentiles like to do' (4:3).

Again, in both 1 Peter and the Petrine speeches we are, as we have seen, in an atmosphere where the 'name' of Jesus means much (see V, above). Even details may be significant: the use of the oracle about the stone (Acts 4:10ff.; 1 Pet. 2:7) and the use of *xylon*, properly 'wood', for the cross (Acts 5:30; 10:39; 1 Pet. 2:24).

1 Peter contains an unusual number of apparent reminiscences of the Lord's words: generally not as formal quotations, but woven into the framework of the discourse (e.g. 1 Pet. 1:16 = Mt. 5:48; 1:17 = Mt. 22:16; 1:18 = Mk. 10:45; 1:22 = Jn. 15:12; 2:19 = Lk. 6:32 and Mt. 5:39; 3:9 = Mt. 5:39; 3:14 = Mt. 5:10; 4:11 = Mt. 5:16; 4:13 = Mt. 5:10ff.; 4:18 = Mt. 24:22; 5:3 = Mt. 20:25f.; 5:7 = Mt. 6:25ff.), and other passages take on a richer meaning if Peter were in fact the author. These connections are not exclusively from the Marcan tradition: but 1 Peter and Mk. alike display the theme of the suffering and the glory.

Some have sought the author's background in the Asian mystery cults (see R. Perdelwitz, *Die Mysterienreligionen und das Problem des 1 Petrusbriefes*, 1911, and cf. Beare) and found the letter too colourless in its treatment of the Lord's life for the work of one of the Twelve. The proponents of the mystery religion theory have, however, not made their case in a matter where dating is notoriously uncertain; and the parallels with the Galilean Gospel tradition are far more impressive. Eloquent is the judgment of Cullmann, who, while not discussing the authorship of 1 Peter, can be assured that it was written with knowledge of Peter's dominant theological themes (*Peter*, p. 68).

VII. 1 Peter and the rest of the New Testament

The theology of 1 Peter is essentially Pauline. This is not, as some think, an argument against authenticity: there is reason to hold that *Peter stood close to Paul in theology and none to think that he was an original theologian. Silvanus, too, had long worked with Paul. Moreover, though the agreement is close, the setting and expression of the theology in terms of the Servant is quite independent of Paul. It is worth remarking that K. Lake, drawn to a late date by the persecution passages, could say, 'The simplicity of the theology is marked, and affords an argument for an early date' (*EBr*¹¹, 21, p. 296) and that F. L. Cross can point to 'that remarkable co-presence of the end as future and yet as already here from which second century writings depart' (pp. 42f.).

More remarkable are the literary resemblances between 1 Peter and other NT writings, especially Rom., Eph., Heb. and Jas. Not all can be fortuitous: for instance, the unusual divergence from the LXX in the quotation in 1 Pet. 2:4-8 appears also in Rom. 9:32f. Problems of priority in literary relationships are always difficult and can rarely command certainty. C. L. Mitton claims to have proved the dependence of 1 Pet. on Eph. (*JTS* n.s. 1, 1950, pp. 67ff.)—the significance of this, if ascertained, will depend on the date given to Eph. Beare claims, with less demonstration, that the author of 1 Peter must have had access to the published Pauline Corpus (*The First Epistle of Peter*³, p. 219).

A fruitful development in recent literary criticism has been the attention given to the common patterns of Christian teaching which appear in di-

verse NT writings (see P. Carrington, *The Primitive Christian Catechism*, 1946). A pattern of instruction for converts has been recovered, associated by many scholars, perhaps too categorically, with baptism. Jas. and 1 Peter, as well as Eph. and Col., reflect this pattern, which had among its components:

1. The call to put away sins and desires of the old pagan life (1 Pet. 2:1, 11).

2. The call to Christian humility, subjection and the subordination of self-interest—addressed to particular classes of society (1 Pet. 2:11-3:9—these are parentheses).

3. The call to watch and pray: twice in 1 Peter (1 Pet. 4:7; 5:8).

4. The call to resist the devil (1 Pet. 5:8f.).

Many of the strongest resemblances between 1 Peter and other Epistles occur in just these sections, and it seems probable that the explanation lies in the common forms of catechetical training, not in direct literary dependence.

Selwyn has gone further and seen other common patterns reflected in 1 Peter, more especially a body of teaching on persecution which declared it to be a ground of rejoicing, a test of character, a necessary visitation and a sign of the imminence of divine judgment and vindication: and which was anchored in the words of the Lord. Selwyn finds this same pattern in 1 and 2 Thes., also associated with Silvanus. In common with other writers, he sees various hymns and liturgical fragments (e.g. 1 Pet. 2:6-10; 3:18-22; and use of Ps. 34 in 3:10f.).

VIII. The nature and purpose of 1 Peter

1 Peter has long been treated as a sermon cast into epistolary form, dealing with baptism. This was given a new form by H. Preisker in 1951, who saw in the section 1:3-4:11 indications of a rite in progress and references to baptismal practice, and declared the work to be a baptismal liturgy with the rubrics omitted. Preisker's hypothesis was marred by stylistic hypercriticism, but this feature has been removed by F. L. Cross, who urges, with a wealth of illustration from patristic sources and especially from the *Apostolic Tradition* of Hippolytus, that 1 Peter is the president's part for an Easter baptismal eucharist: 1:3-12 is the president's opening solemn prayer; 1:13-21 his formal charge to the candidates. The baptism takes place at this point, and 1:22-25 gives the welcome to the newly baptized: passing to a discourse on the fundamentals of sacramental life (2:1-10), an address on Christian duties (2:11-4:6), and closing with admonitions and a doxology (4:7-11). It is a weakness of the theory that no explanation is given of 4:12ff.

This thesis rests on a vast amount of detailed study which cannot be discussed here. Many of the details have been called in question. (See the examination by T. C. G. Thornton, *JTS* n.s. 12, 1961, pp. 14ff.). A few general points, however, suggest the need for reserve.

First, baptism is far less prominent in the Epistle than the discussions of recent years suggest. There is only one explicit reference to it, and that is a parenthesis (3:21). Other allusions to baptism which some find are highly dubious: the 'born anew' (1:3; cf. 1:23) is already realized, and its result enjoyed; it cannot refer to an event to take place after 1:21. Its corresponding member in the catechetical form in Jas. 1:18 makes it clear that the begetting relates to the gospel, not baptism, and this is confirmed by 1:23, where the 'word of God'

is defined as the enduring gospel preached to the readers. The repeated 'now' need not relate to a rite in progress; it is due rather to an exultant sense of the last times: and the 'now' in 3:21 in the context of baptism surely only points to a contrast with the ancient Flood.

Second, many of the allusions can be readily understood without the theory. The emphasis on Exodus typology is valuable, but this typology is not restricted to baptism. Van Unnik, for example, points to a rabbinic saying that proselytes entered Israel in the same way as Israel entered the covenant and infers that 1 Peter stresses the transition that the readers have made. They know God's election and covenant sprinkling (1:2ff.); they are now Israel (1:18f.); those who had never been God's people have become that people (2:10); the work of Christ is to bring us (*prosa*gein) to God: and *prosa*gein represents a technical term for becoming a proselyte.

On a reading like this, while conversion and the radical break with the old life are much to the fore, baptism in itself is not. The question of authorship is not, of course, directly affected by the formal nature of the work. Peter might preach a sermon and send it as a letter (though it is very hard to see a motive for converting a liturgical text into a letter). But 1 Peter as we have it *is* a letter, and on the sound critical principle of making sense of what we have, we must so read it. (*DESCENT INTO HADES; *PERSECUTION.)

suffering of a God who is outside time (3:8–9), but, though delayed, it is none the less certain (3:10). It is the duty of the faithful not to be led away by the libertinism and scepticism of the false teachers, but to live an upright life in anticipation of Christ's return (3:11–end).

II. Occasion

The recipients are not defined, though their having 'a faith of equal standing *with ours*' (1:1) and their having escaped 'the corruption that is in the world' (1:4) suggests a predominantly Gentile audience. The writer has had a long and intimate acquaintance with them (1:12–13; 3:1) and writes to warn them against a false teaching both antinomian in practice and radical in belief. The immorality (2:12ff.), insubordination to church leaders (2:10), scepticism (3:3), twisting of Scripture (they exploited in particular, no doubt, the Pauline doctrine of justification, 3:16), and greed of these false teachers (2:3, 15) evoke his most stringent denunciation. He writes to warn the church members of their moral and intellectual danger, to assure them of the basis for their belief, to explain their main problem—the *parousia*—and to encourage holy living and growth in grace. If the author was Peter the date would be around the mid-60s (he is anticipating death, 1:14). If not, the letter may have been written in the late 1st or early 2nd century. No mention is made of its provenance or destination: it may well have been written, like 1 Peter, from Rome to Asia Minor.

III. Authorship and date

The authorship of this Epistle is hotly contested on both external and internal grounds.

a. The external evidence

This is inconclusive. While no book in the Canon is so poorly attested in the Fathers, no book excluded from the Canon can claim comparable support. Origen, early in the 3rd century, is the first to cite it by name; he records the doubts which surrounded it, but himself accepts it. So does Jerome, while Eusebius is uncertain. After its inclusion in the Festal Letter of Athanasius in AD 367 and its ratification by the Council of Carthage in AD 397, its position in the Canon was unquestioned until the Reformation, when Luther accepted it, Erasmus rejected it and Calvin was dubious. Though not quoted by name until Origen, it was used much earlier; Clement of Alexandria had it in his Bible; Valentinus in the *Gospel of Truth*, Aristides in his *Apology* (AD 129) and Clement of Rome (c. AD 95) appear to allude to it. More probable still is its use by the author of the *Apocalypse of Peter*, whose existence is attested by the end of the 2nd century AD. For this reason many of the scholars who on other grounds reject the Epistle nevertheless regard its external attestation as sufficient.

b. The internal evidence

Many scholars are inclined to adjudge it a pseud-epigraph, on the following grounds:

(i) *Its relationship with Jude*. There is an undeniable literary relationship between the two letters; which way it lies has not been fully established, although the majority today think 2 Peter borrowed from Jude. This, it is argued, would in itself rule out the possibility of apostolic authorship. No such conclusion is warranted. If, as is certain, Paul borrowed from a variety of sources, and if, as is

PETER, SECONDEPISTLE OF.

I. Outline of contents

After the salutation (1:1–2) the author speaks of the reliability of the Christian faith, attested as it is by growing personal experience (1:3–11), the testimony of eyewitnesses (1:12–18) and inspired ancient prophecy (1:19–21). Mention of true prophecy leads him on to condemn false prophecy (2:1–3:10). Current false teachers are the successors of the OT false prophets, and will incur the same judgment (2:1–9). Their depravity is shown by throwing off God's restraints in unbridled licence (2:10–18), which brings not liberty but bondage (2:19–22). Therefore judgment awaits them, despite their scepticism about the *parousia*. They should recall that a catastrophic end of the world had been foretold (3:1–4), and the certainty of this prophecy is substantiated by the Flood (3:5–7). The second coming is delayed because of the long-

PETER, SECOND EPISTLE OF

possible, 1 Peter borrowed from James, it would not be surprising to find the same thing in 2 Peter. On the other hand, both 2 Peter and Jude may have incorporated a common document denouncing false teaching, just as Matthew and Luke appear to have drawn from 'Q' their common sayings-material. In neither case need the priority of Jude affect the authenticity of 2 Peter, whereas if Jude drew from 2 Peter (as Bigg and Zahn maintain), the apostolic authorship of the Epistle could hardly be denied.

(ii) *Its relationship with 1 Peter.* The marked difference of diction and style between the two letters led to the doubts of the early church about 2 Peter. Jerome thought that Peter used two different amanuenses (a possibility enhanced by the researches of E. G. Selwyn into the probable influence of Silvanus on 1 Peter), and this suggestion must be taken seriously, for despite the wide differences no book in the NT is so like 2 Peter as 1 Peter. They have been shown (by A. E. Simms, *The Expositor*, 5th series, 8, 1898, pp. 460ff.) to have as close an affinity on a purely linguistic basis as 1 Timothy and Titus, where unity of authorship is universally admitted.

Modern writers concentrate less on the linguistic than on the doctrinal differences between the Epistles, and they are very different in this respect. The subject-matter of 1 Peter is hope, of 2 Peter knowledge. 1 Peter is written to Christians facing persecution, and therefore stresses the great events of the life of Christ for emulation and comfort; 2 Peter is written to Christians facing false doctrine and practice and therefore stresses the great hope of the return of Christ for warning and challenge. The best safeguard against the false teaching is full knowledge (*gnōsis, epignōsis*) of Christ, and it is this, accordingly, which is stressed in 2 Peter. The teaching of both letters is conditioned by the pastoral needs which evoked them. The differences can, in fact, easily be exaggerated; both letters draw attention to the warnings of the Flood, the small number saved, the longsuffering of God. Both emphasize prophecy, the inspiration of the OT, the solidarity of the old and the new Israel, and the value of eyewitness testimony. Both emphasize the primitive eschatological tension derived from the Christian's dual membership of this age and the age to come, with its consequences in holy living, in sharp contrast with the 2nd-century neglect of this doctrine. In short, the divergence of doctrinal emphasis in the two letters is great, but not impossible.

(iii) *Its anachronisms.* I. Such concepts as 'partakers of the divine nature' (1:4), escaping 'the corruption that is in the world' (1:4), and the repeated emphasis on knowledge and eyewitness (*epoptai*, 1:16, is a favourite word of the mystery-religions) suggest to some scholars a 2nd-century origin for the letter. There is no need to postulate so late a date, since the discovery of the Carian Inscription of AD 22 and parallel passages in Philo and Josephus show that this was the common cultural language of the day in the 1st century.

2. The destruction of the world by fire (3:7) was a common topic in the 2nd century, and may thus be an indication of a late date for 2 Peter. On the other hand, there is some reason to believe that the distinctly Christian belief in the destruction of the world by fire (as seen in Barnabas and Justin) may ultimately derive from this Epistle (see J. Chaîne, *RB* 46, 1937, pp. 207ff.).

3. The phrase 'since the fathers fell asleep' (3:4) is held to favour a late date when the first Christian generation had almost disappeared. Even if these words did apply to the Christian 'fathers', it would not necessitate a late date. As early as 1 Thes. 4:15-17 or 1 Cor. 15:6, the state of those who had died before the parousia was a burning topic that had to be faced. However, here the context suggests that 'the fathers' refers to the OT fathers ('from the beginning of *creation*') as elsewhere in the NT (e.g. Heb. 1:1; Rom. 9:5).

4. The inclusion of Paul's letters among the 'other scriptures' favours the hypothesis of a late date, and suggests the formation of the Pauline Corpus of letters. If this is the case, to make Peter call Paul a 'beloved brother' was a stroke of genius in the *falsarius* unparalleled in the 2nd century, when divergencies between Peter and Paul were constantly exacerbated. No mention is made here of a corpus of letters, and the only real difficulty lies in one apostle's regarding the letters of another as Scripture. In view, however, of the apostolic assertion that the same Holy Spirit who inspired the OT writings was active in their own (1 Cor. 2:13), and the claims of Paul to have the mind of Christ (1 Cor. 2:16) and to lay down rules for all the churches (1 Cor. 7:17) which are equated with the commandment of Christ (1 Cor. 14:37) and rejection of which will bring rejection by God (1 Cor. 14:38), this possibility cannot be excluded.

IV. Conclusion

The evidence does not suffice to justify a dogmatic answer one way or the other to the question of authorship. There is nothing that forbids us to entertain the possibility of Petrine authorship, though many regard it as unlikely in view of the cumulative effect of the difficulties outlined above. However, no alternative solution is free from difficulty. The doctrine of the letter and the character of the false teaching do not readily fit into the 2nd-century scene. 2 Peter as a pseudepigraph has no satisfactory *raison d'être*; it adds nothing to our knowledge of Peter, has no unorthodox tendency, is no romance, makes no reference to burning 2nd-century problems, such as chiliasm, gnosticism or church leadership; in fact, it bears no resemblances to the undoubted pseudepigrapha of the Petrine circle. At all events, it is certain that the early church which deposited the author of the *Acts of Paul* for forgery (Tertullian, *de Baptismo* 17) and forbade the use of the *Gospel of Peter* because it was Petrine neither in authorship nor doctrine (Eus., *EH* 6. 12) thoroughly investigated 2 Peter's claims to authenticity. It passed the test before that same Council of Carthage which excluded from the Canon *Barnabas* and *Clement of Rome*, which had long been read in the churches. It cannot be shown that they were right; but it has still to be shown that they were wrong.

PETHOR. A city of N Mesopotamia, S of Carchemish, mentioned in Nu. 22:5 as by the river (*i.e.* the Euphrates) and in Dt. 23:4 as in Mesopotamia, it was the home of Balaam. Thither Balak sent messengers to call him to curse Israel. Pethor in 'Amaw is the Pitru of Assy. texts (*cf.* *ANET*, p. 278), described as on the river Sägür (modern Säjür), near its junction with the Euphrates. On 'Amaw, see Albright, *BASOR* 118, 1950, pp. 15-16, n. 13, and for 'the eastern mountains (or hills)' note that in a 15th-century bc Egyp. text, chariot-wood from 'Amaw is said to come from 'god's land (= the E) in the hill-country of Naharen—*i.e.* hills overlooking 'Amaw on the Säjür river flowing into the Euphrates on its W bank; this W extension of (Aram-) Naharaim is attested by both Heb. and Egyp. references. R.A.H.G.

PHARAOH.

I. The term

The common title in Scripture for the kings of Egypt. It derives from Egyp. *pr-*, 'great house'. This term was by origin simply a name for the royal palace and the Egyp. court, and is so used in the Old and Middle Kingdoms in the 3rd and first half of the 2nd millennium bc. But in the mid-18th Dynasty (c. 1450 bc) the term came to be applied to the person of the king himself, as a synonym for 'His Majesty'. The first examples of this usage apparently date from the reigns of Tuthmosis III(?) and IV, then under Amenophis IV/Akhenaten. From the 19th Dynasty onward, the simple term 'pharaoh' is constantly used in documents, just as it is particularly in Gn. and Ex. From the 22nd Dynasty onward (945 bc), the term 'pharaoh' could also be coupled with the king's name: thus, 'Pharaoh Sheshonq' occurs on a stele then, just like the slightly later OT references to Pharaoh Neco and Pharaoh Hophra. See Sir A. H. Gardiner, *Egyptian Grammar*³, 1957, p. 75; J. Vergote, *Joseph en Egypte*, 1959, pp. 45-48, and the references cited.

II. Specific pharaohs

I. A contemporary of Abraham (Gn. 12:15-20). As Abraham lived c. 1900 bc, his pharaoh was most likely one of the several kings Amenemhat and Sesostris of the 12th Dynasty (c. 1991-1778 bc).

2. A contemporary of *Joseph (Gn. 37-50). Joseph lived c. 1700 bc; his pharaoh therefore would most likely be one of the Hyksos kings of the 15th Dynasty.

3. The pharaoh(s) of the oppression. The number of individual rulers covered by the terms 'king of Egypt' and 'pharaoh' in Ex. 1-2 is a matter of interpretation—one, or two. In any case, he/they would directly precede the pharaoh of the Exodus.

4. The pharaoh of the Exodus (Ex. 5-12). If the Exodus occurred in the first half of the 13th century bc, as seems likeliest on the evidence available, the pharaoh of the Exodus and last oppressor would be Rameses II.

5. The father of Bithiah, wife of Mered of the tribe of Judah (1 Ch. 4:18). The date of Bithiah and so of her royal father is uncertain, and therefore he has not yet been identified.

6. The pharaoh who received the young prince Hadad of Edom as a refugee from David and Joab's devastation of the Edomites (1 Ki. 11:18-22), and married him off to his sister-in-law. The pharaoh in question would be late in the 21st Dynasty, *i.e.* Amenemope or Siamün. The obscurities of 21st Dynasty chronology forbid any closer dating.

7. The pharaoh who reduced Gezer and bestowed it as dowry on that daughter of his whom he gave in marriage to Solomon (1 Ki. 9:16; *cf.* also 3:1; 7:8; 9:24; 11:1). Shishak's raid into Palestine in 925 bc, the 5th year of Rehoboam, was not later than his own 21st year, and he acceded c. 945 bc. Solomon died in 931/30 bc after a 40-year reign which began c. 970 bc; hence Shishak acceded in Solomon's 25th year. Therefore Solomon's Egyp. contemporaries for his first 25 years of reign would be the last two kings of the 21st Dynasty, Siamün and Psusennes II. Of these two, Siamün is perhaps the pharaoh who took Gezer and bestowed it with his daughter upon Solomon; a triumphal scene of his from Tanis (Zoan) may provide evidence for warlike activity of Siamün in Philistia. On this period of Egypto-Israelite relations, *cf.* K. A. Kitchen, *Third Intermediate Period in Egypt*, 1972, pp. 273ff., 280ff.

8. *Shishak, who is Sheshonq I, founder of the 22nd (Libyan) Dynasty. 9. *So, contemporary of Hoshea. 10. *Tirhakah, of the 25th (Ethiopian) Dynasty. 11. *Neco, second king of the 26th Dynasty, is the pharaoh of Je. 25:19. 12. *Hophra, fourth king of the 26th Dynasty, is apparently the pharaoh of Je. 37:5, 7, 11; Ezk. 17:17; 29:2-3; and possibly of Je. 47:1. *Zerah was almost certainly *not* a pharaoh.

III. Other references

These are found mainly in the prophets. Is. 19:11 is part of a passage reflecting disruption in Egypt. Such internal fragmentation first became chronic early in Isaiah's time, in the late 22nd-24th

This address on a 14th-century bc letter reads: 'Pharaoh, life, prosperity, health, the Master.'

PHAROAH

Dynasties (c. 750–715 BC), and continued under the overlordship of the Ethiopian kings of the 25th Dynasty (c. 715–664 BC). Pride in the long and exalted continuity of pharaonic tradition in accordance with v. 11 was reflected in the deliberate archaisms fostered by the 25th and 26th Dynasty kings, who sought thus to recall the glories of earlier epochs. The deceptive outward repute of the Ethiopian kings and their actual inability to help Israel against Assyria's armies are epitomized in Is. 30:2–3. Shebitku ('Shabataka') was on the throne in 701 BC when the Assyrian Rabshakeh dismissed pharaoh as a 'broken reed' (Is. 36:6 = 2 Ki. 18:21). For 'Pharaoh's house in Tahpanhes' (Je. 43:9), *TAHPANHES.

Both Jeremiah (46:25–26) and Ezekiel (30:21–25; 31:2, 18; 32:31–32) from 587 BC onward prophesied that Egypt would be worsted by *Nebuchadrezzar II of Babylon. In 568 BC Nebuchadrezzar did actually war against Egypt, as indicated by a fragmentary Babylonian text, though the extent of his success against Ahmose II (Amasis) is still unknown because of the lack of relevant documents. Lastly, Ct. 1:9 merely reflects the great fame of the chariot-horses of the pharaohs of the New Kingdom (c. 1550–1070 BC) and later. (*EGYPT, History; *CHRONOLOGY OF THE OLD TESTAMENT.)

PHARISEES.

I. History

Reconstructing any Jewish sects (including *Saducees, *Essenes, *Zealots, *Samaritans, and probably many others) is very difficult. Apart from the Jewish historian, Josephus, all the sources we have are 'travellers' tales' (e.g. Pliny, *NH* 5.73) and passing references, with the later rabbinic traditions which are of questionable value and strongly influenced by the destruction of the *Temple. All authors are biased, and most modern reconstructions use these sources far too uncritically.

While not presuming his readers to be familiar with the Pharisees, Josephus says nothing about aspects we would find most significant: their origins, doctrines, self-understanding and social structures.

His discussion of Jewish sects is part of his overall purpose to explain the downfall of God's chosen people. He therefore focuses on divine providence, predestination and free will. Josephus' Pharisees appear to occupy a mediating position between the rigid predestinarianism of the *Essenes and the human freedom asserted by the *Saducees. He regards them as an attractive, popular and powerful faction, ascetic in lifestyle, concerned to present themselves as rigorists for the Torah. They have a body of additional interpretations and traditions, and religious practises are performed according to their interpretation (see especially *Ant.* 18:12–17). But he sees their major role as political, claiming they effectively controlled the state from Alexandra Salome (76–67 BCE) to Herod. Yet his narratives of this period hardly mention them, and certainly fail to demonstrate their political power. Hence many scholars see Josephus' claims as exaggerated, if not mere propaganda.

Rabbinic traditions say nothing about politics: the concerns are exclusively religious. We cannot assume the terms 'Pharisees', 'sages' or 'rabbis'

refer to the group we know as Pharisees. The majority of the earliest traditions focus on purity laws; particularly washing, eating, tithing and festival Sabbath observance. Neusner therefore suggested that the Pharisees saw themselves, though laymen, as the 'kingdom of priests' of Ex. 19:6, observing the legislation relevant to a priest on Temple duty. (Similar motivation and concerns, interestingly, appear in the *Dead Sea Scrolls.) In the NT, too, cultic purity seems to be a major Pharisaic concern.

II. Relationship to other groups

All four gospels link *scribes and Pharisees (Mt. 5:20; 12:38; 15:1; 23; Mk. 2:16; 7:1; Lk. 5:21, 30; 6:7; 7:30; 11:53; 15:2; Jn. 8:3; cf. Acts 23.9). This only indicates that some scribes were Pharisees, and likely from their learning to take leading roles within the movement.

Matthew alone links Pharisees with *Saducees (3:7; 16:1, 6, 11, 12). They might thus represent the leaders of the people, but generally the evangelists see various combinations of chief priests, elders and scribes in that role. Perhaps these two were seen as most doctrinally distinctive from other strands of Judaism. The opposition between them is important to Josephus and the rabbis; cf. also Acts 23:6–10.

Matthew once links Pharisees with the chief priests (21:45), and in John this combination is the moving force behind the formal opposition to Jesus (7:32, 45; 11:47, 57; 18:3). This might support Josephus' claims that they wielded political power. Although Matthew appears to intend two separate groups, Josephus notes that some priests were themselves Pharisees.

III. Teaching

The problems discussed above make it hard to be certain what was distinctively Pharisaic. Josephus' statements about the Pharisees being 'accurate interpreters of the Law' (e.g. *BJ* 2.162) must be tempered by his other comments attributing such accuracy to *all* Jewish sects, especially the priesthood. That they were conservative on some parts of the Law and liberal on others, adding also their own traditions, is neither surprising nor unique to their group. Any claim to be the definitive exponents of the Law would, however, give a cutting edge to Jesus' fierce denunciations.

The only point on which all sources agree is the Pharisees' belief in an afterlife. Josephus appears to contrast their position with Essene dualism: unrighteous souls are punished while the righteous pass into 'other bodies' (*BJ* 2.163), perhaps at a general resurrection.

IV. Influence

The traditional image of the all-powerful legalistic Pharisee is manifestly incorrect. Claims that they controlled cultic practice are incredible and contradicted by the evidence. However, our sources do suggest a disproportionate influence on society. There is, though, no reason to suppose that they exercised any direct influence in the synagogues or other parts of everyday Jewish life. Josephus, the rabbinic materials and the Gospel of John would also suggest their influence was limited to the environs of Jerusalem, though Mark and Luke locate Pharisees in Galilee (see Lk. 5:17).

An important factor in assessing their influence is the impression given by the synoptic writers that

it was the Pharisees who took it upon themselves to vet Jesus' credentials and to seek to destroy his subversive new teaching. Hence they are portrayed as natural authorities in the community of faith, or at least in that part of most interest to the early Christian community. This coheres with both Josephus' report of their claims to 'accuracy' in interpretation, and with what we know of the early life of the erstwhile Pharisee, Paul (Gal. 1:13-14; Phil. 3.5f.). In Luke, in particular, they appear to regard Jesus as an equal, even while suffering his biting criticisms. In Acts they appear as a voice of moderation in the *Sanhedrin. But in general 'the Pharisees' quickly became a stereotype for the opponents of Jesus.

PHARPAR ('swift'). One of the two 'rivers of Damascus' of which Naaman boasted (2 Ki. 5:12). 64 km long, it is one of the tributaries of the *Abana or Barada, flows E from Hermon a little S of Damascus, and is now called the 'Awaj'. J.D.D.

PHILADELPHIA. A city in the Rom. province of Asia, in the W of what is now Asiatic Turkey. It was perhaps founded by Eumenes, king of Pergamum, in the 2nd century BC, and certainly named after his brother Attalus, whose loyalty had earned him the name Philadelphus. It was situated near the upper end of a broad valley leading down through Sardis to the sea near Smyrna; and it lay at the threshold of a very fertile tract of plateau country, from which much of its commercial prosperity derived. The area was subject to frequent earthquakes. A severe one in AD 17 destroyed the city; and as the shocks continued intermittently the people took to living outside the city (Strabo, *Geography* 12.8.18 (579); 13.4.10 (628)). After an imperial bounty had helped it to recover, the city voluntarily assumed the new name of Neocaesarea. Later, under Vespasian, it took another imperial name, Flavia. The city was remarkable for the number of its temples and religious festivals. The site is now occupied by the town of Alaşehir.

The letter to 'the angel of the church in Philadelphia' (Rev. 3:7-13) probably alludes to some of

Philadelphia, one of the 'seven churches of Asia' (Rev. 1-3).

the circumstances of the city. As Philadelphus was renowned for his loyalty to his brother, so the church, the true Philadelphia, inherits and fulfils his character by its steadfast loyalty to Christ (vv. 8, 10). As the city stands by the 'open door' of a region from which its wealth derives, so the church is given an 'open door' of opportunity to exploit (v. 8; cf. 2 Cor. 2:12). The symbols of the 'crown' and the 'temple' (vv. 11-12) point to a contrast with the games and religious festivals of the city. In contrast with the impermanence of life in a city prone to earthquakes, those who 'overcome' are promised the ultimate stability of being built into the temple of God. As at Smyrna, this church had met rejection from the Jews in the city (v. 9), but the conqueror shall enjoy final acceptance by the Lord whose name he had confessed (v. 8), signified again by the conferring on him of the divine names (v. 12), which recall the new names taken by the city from the divine emperors. Ignatius later visited the city on his way from Antioch to martyrdom in Rome, and sent a letter to the church there.

C.J.H.

PHILEMON. The owner of the slave *Onesimus and almost certainly a resident of Colossae (*PHILEMON, EPISTLE TO, for other views). Though Paul had not himself visited Colossae (Col. 2:1), Philemon was apparently converted through him (Phm. 19) and had been a colleague (the normal meaning of 'fellow-worker', Phm. 1, rsv)—both, perhaps, in Ephesus, the provincial capital (cf. Acts 19:31). The argument of J. Knox (who applies Phm. 19 to Archippus), that Paul would regard the work of any of his associates as his own, is hardly borne out by Col. 1:7f., which he cites, nor is Phm. 5 ('hear of your love') incompatible with past acquaintance. A.F.W.

PHILEMON, EPISTLE TO.

I. Outline of contents

- a. Address and greeting (vv. 1–3).
- b. Thanksgiving: introducing themes, to be developed later, of love, fellowship (*koinōnia*; cf. *koinōnos*, 'partner' in v. 17) and refreshment (cf. v. 20) (vv. 4–7).
- c. The request for Onesimus (vv. 8–21).
- d. A request for hospitality (v. 22).
- e. Greetings from Paul's friends (vv. 23–24).
- f. Blessing (v. 25).

II. Significance

The earliest extant lists of the Pauline Corpus (Marcion's 'canon' and the Muratorian Fragment) contain Philemon, even though they omit the Pastoral Epistles. In the 4th century complaints appear not so much against its authenticity as of its alleged triviality (cf. Jerome, *Preface to Philemon*): most generations, however, have better valued the grace, tact, affection and delicacy of feeling which mark this little letter. Tertullian remarked that it was the only Epistle which Marcion left uncontaminated by 'editing' (*Adv. Marc.* 5, 21), and its authenticity has never been responsibly questioned. In recent years it has become a bastion of the theory of the Pauline Corpus associated with E. J. Goodspeed and John Knox (*PAUL, III. d. ii); gratitude for the fresh interest they have stimulated in Philemon, and the adoption of some of their suggestions, does not, however, demand acceptance of this highly dubious reconstruction.

III. Form

The personal and informal nature of Philemon (cf. Deissmann, *LAE*, pp. 234f., and *EPISTLE) may distract attention from its extremely careful composition and observance of literary forms (cf. Knox, pp. 18f.). It should also be noted that a house-church is in mind as well as the people named in the address (v. 2). Goodspeed and Knox over-emphasize the part the church is expected to play in swaying the slave-owner to 'do the Christian thing' (Goodspeed, p. 118): the second person singular is used throughout, even for the greetings: the only exceptions are in vv. 22 (the hoped-for visit) and 25 (the benediction). This affords a contrast with Ignatius' letter to Polycarp, which is addressed to an individual but with frequent passages in the second person plural which show that the church is being harangued. Philemon is addressed to the slave-owner, with his family and church presumably linked with him after the manner of Rom. 16:5; Col. 4:15. Comparison has often been invited with Pliny's letter (*Ep.* 9. 21) on behalf of an errant but repentant freedman.

IV. Purpose and occasion

The core of the Epistle is an appeal by Paul on behalf of one Onesimus, a slave from Colossae (Col. 4:9) whose conduct had contrasted with his name ('useful'—a pun is involved in Phm. 10–11). It seems that Onesimus had robbed his master (18) and run away (15—not quite explicit). By some means unstated—perhaps his fellow-townsmen Epaphras (Col. 4:12) was instrumental—he was brought into contact with the imprisoned Paul and radically converted. Not only so, but strong affection developed between Paul and his new 'son', in whom the veteran saw rich potential.

Under contemporary law, almost limitless vengeance could be wreaked on Onesimus by his owner: Graeco-Roman society was never free from the phobia of a servile war, and even an otherwise good master might think it his duty to society to make an example of the runaway. Frightful penalties also awaited those who harboured runaways (cf. P. Oxy. 1422). It is at this point that Paul interposes with his brother (7, 20), not commanding, but begging (8–9) that his owner will receive Onesimus as he would Paul himself (17), and solemnly undertaking all the slave's debts (18–19).

But probably Paul is asking more than mercy. Knox points out that *parakaleō* followed by *peri* (as in v. 10) usually means in late Gk. 'to ask for' rather than 'on behalf of'. Paul highly valued Onesimus; his departure caused him great sorrow; and but for the necessity of obtaining his owner's permission would have liked to keep him with him (11–14). The fullness of Paul's request would be that Onesimus might be released to Paul for Christian service. He would thenceforth stand in an unspeakably closer and more permanent relationship than the old domestic one (15–16). In any case, to Paul's ministry this correspondent owes his own conversion (19).

Paul is in prison (9–10): the occasion is the same as that indicated in Colossians, for Onesimus is to accompany Tychicus, the bearer of that letter (Col. 4:9). Paul's party in Phm. 23f. is the same as that in Col. 4:10–14, with the exception of Jesus Justus (unless this is a scribal omission; cf. E. Amling, *ZNW* 10, 1909–10, p. 261). The place of imprisonment will be decided mainly on grounds external to the letter: the real alternatives are Rome, in the first imprisonment (c. AD 62) or Ephesus about AD 55 (*PAUL; *CHRONOLOGY OF THE NEW TESTAMENT). Either city might have attracted Onesimus. Ephesus was near home, but large enough to be lost in; Rome was a haven for displaced persons of every kind. In either case there is some expectation of release and a journey to Philemon's area in the foreseeable future.

There are other links with Colossians. Col. 3:22f. (cf. Eph. 6:5–9) could hardly have been written without Onesimus, and the possible effect on his career, in mind. Knox and Goodspeed have, however, little reason to associate the charge to Archippus and the 'Epistle from Laodicea' (Col. 4:16–17) with the Onesimus case. Knox himself has disposed of Goodspeed's suggestion that Onesimus' owner lived at Laodicea (pp. 40ff.), but his own suggestion that Philemon received the letter first as the (Laodicean) superintendent of the Lycus churches and that Archippus in Colossae was the slave-owner and principal addressee, fares no better. It requires an unnatural reading of the address, and a heavy burden on a few words (e.g. 'fellow worker' and 'fellow soldier' in vv. 1 and 2). Whether the epistle of Col. 4:16 was *Ephesians or some unknown letter is uncertain, but nothing suggests that it was Philemon. (*APPHIA; *ARCHIPPUS; *ONESIMUS; *PHILEMON.)

PHILETUS. A teacher representative of those undermining the Christian doctrine of the resurrection (2 Tim. 2:17). (*HYMENAEUS.) J.D.D.

PHILIP (Gk. *philippos*, 'horse-lover'). There are 4 characters of this name known to the NT writers.

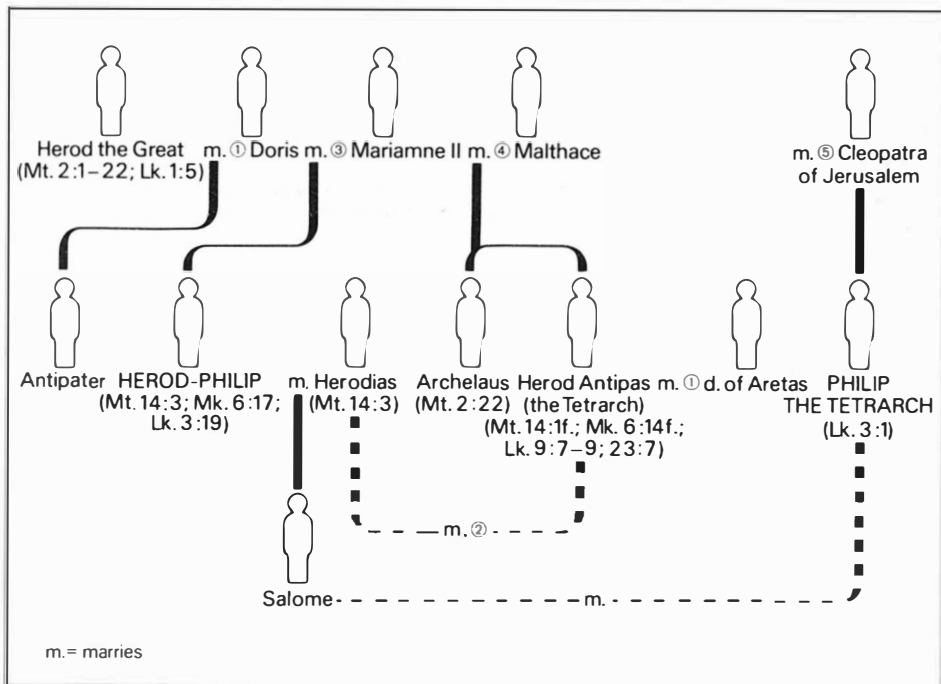

1. A son of Herod the Great and Mariamne, the daughter of Simon the high priest. For a time he was next in succession to Antipater (Jos., *Ant.* 17. 53), but this arrangement was revoked by later wills, and he lived as a private citizen. A. H. M. Jones (*The Herods of Judaea*, 1938, p. 176n.) claims that his name was Herod, not Philip. (Jos., *Ant.* 18. 137, calls him Herod, but so many members of the *Herod family bore this name that an additional name was almost obligatory.) His wife *Herodias, the mother of Salome, left him in order to live with Herod Antipas, his half-brother (Mt. 14:3; Mk. 6:17; Lk. 3:19).

2. A son of Herod the Great by his fifth wife, Cleopatra of Jerusalem; Jos., *Ant.* 17. 21 states that he was brought up at Rome. By Augustus' settlement of Herod's will Philip was granted the tetrarchy of Gaulanitis, Trachonitis, Auranitis, Batanaea (Jos.), and Ituraea (Lk. 3:1). He ruled for 37 years until his death in the winter of AD 33/34, and differed from his kinsfolk in the moderation and justice of his rule (Jos., *Ant.* 18. 106). At his death the territory was incorporated into the province of Syria until AD 37, when the emperor Gaius Caligula granted it to Agrippa (the Herod of Acts 12:1, 19-23), son of Aristobulus and grandson of Herod and Mariamne. Philip rebuilt Pania (modern Banyas) as Caesarea Philippi (Mt. 16:13;

Mk. 8:27) and Beth-saida Julias (Jos., *Ant.* 18. 28; *BJJ* 2. 168), both names reflecting his pro-Roman sympathies. He was the first Jewish prince to impress the heads of Roman emperors on his coins. He married Salome, the daughter of *Herodias, and had no children (Jos., *Ant.* 18. 137).

3. Philip the apostle was called to follow Jesus on the day following the call of Andrew and Simon, and was instrumental in bringing Nathanael to follow him (Jn. 1:43-46). His home was *Beth-saida (Jn. 1:44): this was the Beth-saida of Galilee (Jn. 12:21), the home town of Andrew and Simon, and is thought to have been a fishing-village on the W shore of the lake. In the lists of the apostles in Mt. 10:3; Mk. 3:14; Lk. 6:14 he is placed fifth in order, with Bartholomew sixth: Acts 1:13 places him fifth, but puts Thomas in the sixth place. The only other references to him in the NT tell of his inability to suggest to Jesus how to supply the food for the 5,000 (Jn. 6:5), his bringing the Greeks to Jesus (Jn. 12:21f.), and his request of Jesus to see the Father (Jn. 14:8). Papias 2. 4 refers to him as one of the *presbyteroi* (see further below).

4. Philip was one of the 'Seven' who were chosen as officials (the first *deacons) of the church at Jerusalem (Acts 6:5). On the persecution of the church following the martyrdom of Stephen he took the gospel to Samaria, where his ministry was much blessed (Acts 8:5-13), and subsequently he was sent S to the Jerusalem-Gaza road to lead the Ethiopian eunuch to Christ (Acts 8:26-38). After this incident he was 'Spirited' away to Azotus, the Philistine Ashdod, and from there conducted an itinerant ministry until he reached the port of Caesarea (Acts 8:39-40), where he appears to have settled (Acts 21:8). He was known as 'the evangelist',

Two of the members of Herod's family, according to the NT, were named Philip. Simplified family tree.

PHILIP

presumably to distinguish him from the apostle (3. above), and had four daughters who were prophetesses (Acts 21:9). Luke is here at great pains to distinguish the evangelist from the apostle. Eusebius twice (*EH* 3. 31; 5. 24) quotes Polycrates as referring to Philip, 'one of the twelve apostles', and his two aged virgin daughters as being buried at Hierapolis, while another daughter was buried at Ephesus. Perhaps this last was the one mentioned in 3. 30 (quoting Clement of Alexandria, who may use the plural here loosely) as having been given in marriage. Papias is also cited (*EH* 3. 39) as stating that 'the apostle Philip' and his daughters lived at Hierapolis and the daughters supplied him with information. A quotation from the *Dialogue of Gaius and Proclus* in Eus., *EH* 3. 31 that the tomb of Philip and his four prophesying daughters may be seen at Hierapolis, followed by a reference to Acts 21:8–9, shows that the historian had confused the apostle and the evangelist. It would seem most likely that both the apostle and the evangelist had daughters, which would lead to their confusion. Lightfoot (*Colossians*, pp. 45ff.) is probably right in maintaining that it was the apostle who died in Hierapolis.

The papyrus finds at Nag Hammadi (*CHENOBOSKION) have revealed an apocryphal *Gospel according to Philip*: see R. McL. Wilson, *The Gospel of Philip*, 1962. D.H.W.

PHILIPPI. In the course of his apostolic travels Paul received in a vision an invitation from a man of Macedonia who implored, 'Come over to Macedonia, and help us' (Acts 16:9). Interpreting this plea as a summons from God, Paul and his party sailed for Neapolis, the port of Philippi, 13 km S of the city and the terminus of the Egnatian Way, a military road which joined Rome and the East as a much valued line of communication.

The arrival at Philippi is marked in Acts 16:12 by a description of the city: 'the leading city of Macedonia and a Roman colony'. The stages by which the city attained the rank of this noble description may be traced.

The town derives its name from Philip of Macedon, who took it from the Thasians about 360 bc. He enlarged the settlement, and fortified it to defend his frontiers against the Thasians. At this time the gold-mining industry was developed, and gold coins were struck in the name of Philip and became commonly recognized. After the battle of Pydna in 168 bc it was annexed by the Romans; and when Macedonia was divided into four parts for administrative purposes Philippi was included in the first of the four districts. This fact supports a proposal of *prōtēs* in place of the TR's *prōtē* in Acts 16:12, suggested by F. Field and accepted by F. Blass, who explained it by this reference to the division of Macedonia into four districts by Aemilius Paulus in 167 bc (Livy, 45. 17–18, 29); cf. commentaries on Acts by H. Conzelmann and E. Haenchen, *ad loc.* On this emended reading the verse runs: 'a city of the first division of Macedonia'. If the text is not changed, Philippi's claim to be 'chief city of the district' can be accepted only in a general sense, as A. N. Sherwin-White observes (*Roman Society and Roman Law in the New Testament*, 1963, pp. 93ff.). The comment possibly reflects Luke's special interest in the city, which may have been his birth-place.

In 42 bc the famous battle of Philippi was

fought with Antony and Octavian ranged against Brutus and Cassius. After this date the town was enlarged, probably by the coming of colonists; the title *Colonia Iulia* is attested at this time. This prominence was enhanced further when, after the battle of Actium in 31 bc, in which Octavian defeated the forces of Antony and Cleopatra, the town 'received a settlement of Italian colonists who had favoured Antony and had been obliged to surrender their land to the veterans of Octavian' (Lake and Cadbury, p. 187). Octavian gave the town its notable title, *Col(onia) Iul(ia) Aug(usta) Phil(ip)ensis*, which has appeared on coins. Of all the privileges which this title conferred, the possession of the 'Italic right' (*ius Italicum*) was the most valuable. It meant that the colonists enjoyed the same rights and privileges as if their land were part of Italian soil.

The civic pride of the Philippians (who are given the equivalent of their Latin name *Philippenses* in Paul's letter, 4:15) is a feature of the Acts narrative, and reappears in allusions the apostle makes in the Epistle. See Acts 16:21; cf. 16:37. Official names are used (*duoviri* in 16:20, 22, and 'lictors' in 16:35). The Gk. word translated 'uncondemned' in 16:37 probably reflects the Latin *re incognita* or *indicta causa*, i.e. 'without examination'. In the letter to the Philippian church two passages, 1:27 and 3:20, speak of 'citizenship', a term which would have special appeal to the readers; and the virtues listed in 4:8 are those which the Roman mind would particularly appreciate.

After the apostle's first visit with his preaching, imprisonment and release, his further contact with the city is inferred from references in Acts 20:1, 6; 1 Tim. 1:3.

BIBLIOGRAPHY. Historical details are supplied in *BC*, 1, 4, 1933, *ad loc.*; R. P. Martin, *Philippians*, *NCB*, 1976, Introduction, section 1, which describes the religious *milieu* of the city at the time of Paul's arrival there; while for archaeological information the work of P. Collart, *Philippes, ville de Macédoine*, 2 vols., containing plates and text, 1937, may be mentioned, along with H. L. Hendrix, *ABD* 5, pp. 313–317. R.P.M.

PHILIPPIANS, EPISTLE TO THE. The church at *Philippi was brought into being during the apostle's second missionary journey, recorded in Acts 16:12–40. Paul's letter to this Christian community has always been looked upon as a most personal and tender communication, although there is a noticeable change at the introduction to ch. 3.

I. Outline of contents

- a. Address and greeting (1:1–2).
- b. Paul's thanksgiving and confidence (1:3–7).
- c. An apostolic prayer (1:8–11).
- d. Paul's great ambition and joy (1:12–26).
- e. Exhortation and example (1:27–2:18).
- f. Future plans (2:19–30).
- g. The great digression (3:1–21).
- h. Encouragements, appreciations and greetings (4:1–23).

II. Date and provenance

From the record of Paul's life in the Acts of the Apostles we know of only three imprisonments (16:23–40; 21:32–23:30; 28:30), during one of

which this letter was written (Phil. 1:7, 13–14, 16). It obviously cannot have been written during the first; and it seems at first sight that the choice is a simple one between his captivity at Caesarea and the 2 years' detention at Rome.

a. The Caesarean hypothesis

This view goes back to 1799, when it was propounded by H. E. G. Paulus. Rather surprising support came later from E. Lohmeyer in the Meyer commentary, and there have been several suggestive studies (see Martin, *Philippians, NCB*, 1976, pp. 45–48) in support of this setting of the letter. The suggestion of the letter's composition during the imprisonment at Caesarea contains some difficulties, which may be enumerated as follows:

1. The custody of Acts 23:35 does not suggest the imminent martyrdom which Lohmeyer takes as the controlling theme of the entire letter (*cf.* his analysis of the letter in these terms, pp. 5f.).

2. The size and type of the Christian community at the place of his captivity do not tally with what we know of the church at Caesarea (1:14ff.), as Moffatt indicates (*An Introduction to the Literature of the New Testament*, 1918, p. 169).

3. The apostle's outlook at the time of Acts 23–24 was bound up with a visit to Rome, but of this desire there is no hint in Philippians; rather he looks forward to a return visit to Philippi (2:24ff.).

b. The Roman hypothesis

The alternative proposal is that the letter was written and despatched during the apostle's Roman captivity; and this remains the traditional view, with many adherents. It has considerable evidence in its favour:

1. The allusions to the *praetorium* (1:13) and to 'Caesar's household' (4:22) correspond to the historical detail of the Roman detention, whatever the precise meaning of the terms may be.

2. The gravity of the charge and of the impending verdict (1:20ff.; 2:17; 3:11) suggests that Paul is on trial for his life in the highest judicial court, from which there can be no appeal. It is submitted that this piece of evidence shows that it cannot have been a provincial court whose judgment Paul awaits, for even if the verdict there were unfavourable, he would still have a 'trump card' (in C. H. Dodd's phrase) to play which would quash this local sentence and transfer his case to Rome. That he does not appear to have recourse to this is presumptive evidence that he has in fact so appealed, and that the appeal has brought him to the imperial city.

3. The church at Rome would correspond, in size and influence, to the references in 1:12ff., which point to a Christian fellowship of considerable importance.

4. The length of the imprisonment is sufficient, according to the proponents of this view, to allow for the journeys mentioned or implied by the letter. But this is a matter of debate.

5. There is indirect witness to the Roman provenance of the Epistle in the Marcionite prologue to the letter, which says, 'The apostle praises them from Rome in prison by Epaphroditus.'

There are, however, certain difficulties about this time-honoured view which have made scholars hesitate before accepting it. A. Deissmann was apparently the first to formulate these doubts, which we may state thus:

1. Deissmann drew attention to the fact that journeys to and from the place of captivity imply that the place cannot have been far from Philippi. It was argued that on the Roman hypothesis it is difficult to fit 'those enormous journeys', as he called them, into the 2 years mentioned as the duration of the Roman imprisonment.

2. Moreover, the situation reflected in the letter, with its foreboding of imminent martyrdom, hardly corresponds with the comparative freedom and relaxed atmosphere of Acts 28:30–31. If the letter came out of that detention it is clearly necessary to postulate an unfavourable development in the apostle's relations with the authorities which led to a change for the worse in his conditions and prospects.

3. A telling criticism of the traditional theory is the witness of 2:24, which expresses the hope that, if the apostle is set free, he intends to revisit the Philippians, and also to take up his missionary and pastoral work in their midst once again. This is an important *datum* from the internal evidence of the letter itself, for we know from Rom. 15:23–24, 28 that at that time he considered his missionary work in the E as completed, and was setting his face to the W, notably to Spain. If the letter emanates from Rome (*i.e.* if it is later than the writing of Rom. 15) it is necessary to believe that a new situation had arisen which led him to revise his plans. This possibility, indeed, is not unthinkable, as we know from his movements at Corinth; but it does show that the Roman view is not entirely free from weaknesses.

c. The Ephesian hypothesis

In place of the Roman dating it is proposed to place the letter in a putative Ephesian captivity. The evidence for this imprisonment is inferential and therefore lacking in complete cogency; but the scholars who support it find that the locating of the letter in this period of Paul's life eases the difficulties which the Roman theory encounters. For example, the intended re-visit to Philippi is then fulfilled in Acts 20:1–6, with Timothy's movements also tallying with the record of Acts. W. Michaelis, who has consistently championed the Ephesian origin, shows persuasively how, on this view, the movements mentioned both in Acts and in Philippians dovetail like the pieces of a jig-saw puzzle. The shorter distance between Philippi and Ephesus makes the journeys more within the bounds of likelihood, while there is inscriptional evidence that satisfies the requirement of 1:13 and 4:22. Ephesus was the centre of the imperial administration in Asia, and there would be a *praetorium* there.

The main difficulties which stand in the way of accepting this novel theory are:

1. Its speculative character. The Ephesian imprisonment cannot be proved from a direct source, although there is much indirect attestation of it, especially in 1 and 2 Cor.

2. The absence of any mention of a matter which (so it is argued) must have filled the apostle's mind at the time of this suggested dating, *viz.* the collection for the churches in Judaea.

3. Perhaps the strongest counter-objection is the failure to explain why it was that, if Paul were in jeopardy at Ephesus, he did not use his right as a Roman citizen and extricate himself by an appeal to the emperor to be tried in Rome. Of this possibility there is no mention in the letter.

Our conclusion, then, must be a disappointing

PHILIPPIANS, EPISTLE TO THE

one to those who expect a firm answer. The evidence, we feel, is finely balanced, and a final decision is not possible. The Roman dating may still be accepted with caution and one or two lingering doubts. The Ephesian hypothesis would have to be sufficiently strong to reverse the judgment of centuries, and this it fails to do, although it has many points in its favour; and were it more securely anchored in direct evidence it would command wider support. The tide of critical opinion is, however, running in favour of a dating in the Ephesian period (see Martin, *op. cit.*, pp. 36-57). (*PAUL.)

III. The unity of the letter

In the textual history the letter is known only as a complete whole; but there are many suggestions which contest its unity, mainly on the ground of an abrupt change in tone, style and content at the beginning of ch. 3. Explanations of this sudden change are given under the headings of 'Interpolation' and 'Interruption'.

a. Interpolation

On this view the reason for the abrupt change at 3:1b is that this verse introduces an interpolated fragment from another Pauline letter which has somehow become interwoven into the canonical Epistle. There is little agreement as to where the interpolation ends, whether 4:3 (so K. Lake), 4:1 (A. H. McNeile-C. S. C. Williams, F. W. Beare), or 3:19 (J. H. Michael). Beare envisages the letter as a composite document made up of three elements: a letter of thanks, acknowledging the Philippians' gift by Epaphroditus (4:10-20); an interpolated fragment which denounces the false teaching of the Jewish missionaries and the antinomianism of Gentile Christians (3:2-4:1), and may be directed to some church other than Philippi, as J. H. Michael earlier proposed; and the framework of the Epistle (1:1-3:1; 4:2-9, 21-23), regarded as being the last of Paul's extant letters and, in a sense, his farewell message to the church militant on earth. This analysis has several variations (see Martin, *op. cit.*, pp. 14-21 for details), but in the main the partition into three fragments is widely held. For a convincing defence of the letter's unity, see R. Jewett, *NovT* 12, 1970, pp. 40-53.

b. Interruption

The sudden change in style and outlook may more plausibly be accounted for by the interruption of the apostle as he dictated his letter, as Lightfoot suggested. See also E. Stange, 'Diktierpausen in den Paulusbriefen', in *ZNW* 18, 1917-18, pp. 115f.

On this interpretation, 3:1a is the intended conclusion of the letter. Paul is disturbed by stirring news which has just reached him, and quickly turns aside to dictate a vehement warning. 'The same things' is a prospective term, looking forward to the serious admonitions to watchfulness against the Judaizers which are to follow. See V. P. Furnish, *N.T.S.* 10, 1963-4, pp. 80-88.

The integrity of the letter is, therefore, to be accepted, with a possible reservation only in the case of 2:5-11, which some regard as a pre-Pauline or post-Pauline composition, while F. W. Beare breaks new ground with the submission that this section owes its origin to an unknown Gentile writer who came under Pauline influence during the apostle's lifetime. Paul accepts his writing with his *imprimatur* by including it in his Epistle. There is a full discussion of the authorship and proven-

ance of the Christological hymn in 2:5-11 in the writer's monograph; see below.

IV. The occasion and purpose of the letter

The most obvious reason why the letter came to be written is to be found in Paul's situation as a prisoner, and his desire to commend his colleagues Timothy and Epaphroditus to the church. Paul writes as though he wanted to prepare the way for the coming of these men, and particularly to disarm any criticism which might be raised against Epaphroditus (*cf.* 2:23ff.).

There is also the note of appreciation for the Philippians' gift, to which he alludes in several places (1:5; 4:10, 14ff.). This gift had evidently come through Epaphroditus, and Paul gratefully acknowledges both the gift and the presence of their messenger (2:25).

Epaphroditus had, it is clear, also brought news of the outbreak of various troubles at Philippi, especially the disturbing news of disunity within the ranks of the church members. This is clear from 2:2-4, 14; 4:2, where the disputants are named, and perhaps 1:27. Paul gently reproaches them for this, and recalls them to agreement in the Lord.

Another source of confusion in the fellowship seems to have been the existence and influence of a 'perfectionist' group within the church. There are grounds—known by inference from Paul's counter-arguments—for believing that the Philippians' confidence in being 'perfect' was based on a gnosticized eschatology that eliminated the future hope of the Christians and transferred it to a present experience. Paul's response in ch. 3 is directed to a rebuttal of this. (For details, see Martin, *op. cit.*, pp. 22-34.)

The Christian cause at Philippi seems to have been the object of persecution and attack from the outside world. There is definite allusion to the church's 'enemies' (1:28), and a description of the type of society in which the church was called upon to live and bear witness to Christ is given (2:15). Hence the oft-repeated call to stand fast (1:27; 4:1). We may detect in a ministry of encouragement a further reason for the letter, although Lohmeyer's interpretation of the entire Epistle as a 'tract for martyrs' is somewhat extreme.

V. The value of the letter

Two outstanding features of the letter may be mentioned. First, the Philippian letter will always remain as a tribute to the apostle's attitude to his sufferings. By the grace of God he is able to rejoice under the most trying circumstances of his captivity and impending fate. His constant call to rejoicing (the word 'joy' and its cognate forms is found 16 times) is a distinguishing characteristic, as Bengel noted in his famous phrase: '*summa epistolae; gaudeo, gaudete*'. And the secret of that joy is fellowship with the Lord who is the centre of his life, whatever the future may hold (1:20-21).

Secondly, no introduction to the letter would be complete without a reference to the great passage in 2:5-11. Here we find the *locus classicus* of Paul's doctrine of the person of Christ and the nature and scope of Christian salvation, and for that reason the Philippian Epistle will ever remain in the forefront of Pauline studies so long as the great apostle's writings continue to engage the attention of Christian students.

PHILISTINES, PHILISTIA.

I. Name

In the OT the name Philistine is written *p'lišti*, usually with the article, and more commonly in its plural form *p'lištim* (rarely *p'lištiyim*) generally without the article. The territory which they inhabited was known as 'the land of the Philistines' (*eres p'lištim*) or Philistia (*p'leşet*). The modern name 'Palestine' is derived from this through Assy. *Palastu*, Gk. *Palaestine* and Lat. *Palaestina*. In the Septuagint the word is variously rendered *Phylistieim* (mainly in the Pentateuch, Joshua and Judges), *Hellenas* (Is. 9:12 [11, Heb.]), and *allophylos*, -oi, 'stranger, foreigner' (but not in the Pentateuch or Joshua). It is probable that the name is to be identified with *prst* in the Egyp. texts (the sounds *l* and *r* are not separately represented in the hieroglyphic script) and *palaštu* in the Assy. cuneiform inscriptions.

II. In the Bible

a. Origin of the Philistines

According to the *Table of Nations (Gn. 10:14; 1 Ch. 1:12), the Philistines derived from Casluhim, the son of Mizraim (Egypt) the son of Ham (Gn. 10:14; 1 Ch. 1:12). When they later appeared and confronted the Israelites they came from *Capthor (Am. 9:7).

b. In the time of the Patriarchs

Abraham and Isaac had dealings with a Philistine, Abimelech, the king of Gerar, and his general Phicol (Gn. 20-21; 26). In the time of the Monarchy the Philistines were almost proverbially aggressive, but Abimelech was a reasonable man. He had adopted many of the customs of the country, had a Semitic name, and engaged with Isaac in a covenant.

c. At the time of the Exodus and the Judges

When the Israelites left Egypt the Philistines were extensively settled along the coastal strip between Egypt and Gaza, and they were obliged to detour inland to avoid 'the way of' the land of the Philistines' (Ex. 13:17). The adjacent section of the Mediterranean was in fact referred to as the sea of the Philistines (Ex. 23:31). The Philistines probably did not settle in the area until after the time of the exodus, so in these references the name is presumably used retrospectively. It is presumably the Philistines in this area who are referred to as Capthorim in Dt. 2:23.

The Israelites did not encounter the Philistines in Canaan during the Conquest, but by the time Joshua was an old man they were established in the five cities of Gaza, Ashkelon, Ashdod, Ekron and Gath (Jos. 13:2-3). From this time for many generations these people were used by God to chastise the Israelites (Jdg. 3:2-3). Shamgar ben Anath repulsed them temporarily (Jdg. 3:31), but they constantly pressed inland from the coast plain, and the

Israelites even adopted their gods (Jdg. 10:6-7). The great Israelite hero of the period of the Judges was Samson (Jdg. 13-16). In his time there were social links between Philistines and Israelites, for he married a Philistine wife, and later had relations with Delilah, who, if not a Philistine herself, was in close contact with them. The hill-country was not under Philistine control, and Samson took refuge there after his raids. When he was finally taken by them he was bound with bronze fetters (16:21) and forced to make sport for them while they watched from inside and on the roof of a pillared building (16:25-27).

d. In the reigns of Saul and David

Continuing Philistine pressure was probably one reason Israel felt the need for a strong military leader. The Philistines captured the Ark and destroyed Shiloh (1 Sa. 4), and had control of Esdraelon, the coastal plain, the Negeb and much of the hill-country. By restricting the distribution of iron, they prevented the Israelites from having new-style weapons (1 Sa. 13:19-22). It was probably largely due to the continuing pressure of the Philistines that the need for a strong military leader was felt in Israel. The ark was captured by the Philistines in a disastrous battle at Aphek and the shrine at Shiloh was destroyed (1 Sa. 4), and at this time they probably controlled Esdraelon, the coast plain, the Negeb, and much of the hill-country. They also controlled the distribution of iron, and thus prevented the Israelites from having useful weapons (1 Sa. 13:19-22). Saul was anointed king by Samuel, and after a victory over the Philistines at Michmash, drove them from the hill-country (1 Sa. 14). His erratic rule, however, allowed the Philistines to continue to assert themselves, as when they challenged Israel at Ephes-dammim, and David killed Goliath (1 Sa. 17-18). Saul turned against David, who became an outlaw and finally a feudatory vassal of Achish king of Gath (1 Sa. 27). He was not called upon to fight against Israel at the battle of Mt Gilboa when Saul and his sons were killed, and when he took over the kingship of Israel he must have remained on peaceful terms with Gath at least, and in fact maintained a personal Philistine bodyguard throughout his reign (*CHERETHITES). A final conflict had to come, however. David drove the Philistines out of the hill-country and struck a heavy blow in Philistia itself (2 Sa. 5:25), putting an end to the power of the Philistines as a serious menace.

e. During the divided Monarchy

The Philistines continued to cause trouble throughout the Monarchy. With the weakening of the kingdom at the death of David the Philistine cities (except for Gath, 2 Ch. 11:8) were independent and there was fighting on the frontier (1 Ki. 15:27; 16:15). Jehoshaphat received tribute from some of the Philistines (2 Ch. 17:11), but under Jehoram the border town of Libnah was lost to Israel (2 Ki. 8:22). They were still aggressive in the time of Ahaz (Is. 9:8-12), and the last time they are mentioned in the Bible is in the prophecy of Zechariah, after the return from the Exile.

III. Philistia

The area which took its name from the Philistines was that of the nucleus of their settlement. This centred on the five main Philistine cities of Gaza, Ashkelon, Ashdod, Ekron and Gath, and largely

PHILISTINES, PHILISTIA

comprised the coastal strip S of Carmel, extending inland to the foot of the Judaeen hills. There is still uncertainty concerning the identification of the sites of some of the five principal cities of the Philistines (see under separate city names). Other cities particularly associated with the Philistines in the Bible are *Bethshean and *Gerar.

IV. In the inscriptions

The Philistines are first mentioned by name (*prst*) in the annals of Rameses III for his 5th (1185 BC) and subsequent years, inscribed in his temple to Ammon at Medinet Habu near Thebes. This describes his campaign against an invasion of Libyans and various other peoples generally known as the 'Sea Peoples', of whom the *prst* were one. Other members of the 'Sea Peoples' had already been mentioned in the inscriptions of Merenptah, Rameses II and in the 14th-century Amarna Letters (Lukku, S'zerdanu, Danuna). The carved reliefs in the temple at Medinet Habu show the Sea Peoples arriving with their families and chattels by wagon and ship, and the *prst* and another group closely associated with them, the *ṭkr* (Tjekker), are depicted wearing head-dresses of feathers rising vertically from a horizontal band. However, not all *prst* are depicted in this way; one at Medinet Habu is shown wearing a beard and tight-fitting cap. A head wearing a similar head-dress is one of the pictographic signs on a clay disk found at Phaistos in Crete, and usually dated to the 17th century BC.

The Assyr. inscriptions mention Philistia as an area often in revolt. The first occurrence is in an inscription of Adad-nirari III (810–782 BC), where Philistia is mentioned among other tribute-paying states, including Israel. Philistia is subsequently named by Tiglath-pileser III, Sargon and Sennacherib, usually as a defeated rebel area. Philistines are later listed in an archive of cuneiform documents of the time of the exile found at Babylon as expatriates receiving rations.

In a group of cuneiform documents of the time of the Exile found at Babylon, the issue of rations to expatriates is recorded. Among these are mentioned men from Philistia.

V. Archaeology

a. Pottery

A type of pottery has been found in a number of sites centring on Philistia and from levels of the late 2nd millennium BC. Since this was the area and period of the Philistines, this pottery is usually attributed to them. This type of pottery is found at Ekron and Ashdod after what seems to have been a sequence from about 1200 BC, of locally made pottery decorated in a style derived from the Aegean and known in Cyprus (classified as Mycenaean III.c. 1.b) first with simple, then with elaborate decoration, the latter perhaps being the prototype in the early 12th century of distinctively Philistine pottery. Excavations at other sites (e.g. Tell Batash, Tell Mor and Tell Qasile) suggest a gradual expansion during the 12th and 11th centuries BC.

It is clear also that there were Philistine enclaves at a number of other sites, notably Tell Beit Mirsim, Gezer, Beth-shemesh and Deir el-Balah.

b. Clay coffins

Clay coffins, each with a face moulded in relief at the head end, have been discovered at *Bethshean, Tell el-Far'a, Lachish and in Transjordan, which

are probably to be connected with similar coffins found in Egypt, notably at Tell el-Yehudiyeh in the Delta. The date and distribution of these suggest that they may be attributed to the Philistines, a view supported by the fact that some of the faces are surmounted by a row of vertical strokes, perhaps indicating the feathered head-dress.

c. Weapons

The Egypt. reliefs show the *prst*, with the Tjekker and Serdanu, armed with lances, round shields, long broadswords and triangular daggers. They arrived in Palestine at the period of transition from the Bronze to Iron Age, so that the biblical statements that they bound Samson with fetters of bronze but, by the time of Saul, controlled the iron industry of the area are quite consistent.

VI. Culture

The Philistines, while retaining a few cultural features bespeaking their foreign origin, were largely assimilated to the Canaanite culture that surrounded them.

a. Government

The five Philistine cities were each ruled by a *seren* (Jos. 13:3; Jdg. 3:3; 16:5, 8, 18, 27, 30; 1 Sa. 5:8, 11; 6:4, 12, 16, 18; 7:7; 29:2, 6–7; 1 Ch. 12:19). The term is probably cognate with Luwian (Hieroglyphic Hittite) *tarwana*, 'judge' or the like, and pre-Hellenic (probably Indo-European) Gk. *turanos*, 'absolute ruler'. The precise meaning of *seren* is uncertain, but 'ruler' (RSV) is a reasonable rendering.

b. Language

No Philistine inscriptions have been recovered, and the language is largely unknown. Claims that semi-pictographic inscriptions on clay tablets from Deir 'Alla are Philistine are unsubstantiated. The Mycenaean associations of the Philistines, together with the probable Indo-European affiliations of *seren* (above), as well as the word *kôba'l qôba'*, 'helmet' (first of Goliath), probably cognate with Hittite *kupahi*, 'helmet, hat', and probably 'argâz', 'box', perhaps cognate with Hittite *ark-*, 'to put, shut in' and Gk. *arkeô*, 'to keep off, defend', together with personal names (below), suggest the possibility that the Philistine language was Indo-European. This can be no more than a hypothesis, however. The name, Achish ('*ākîš*) is probably the same as *k'š*, which is listed as a *kštyw* (*CAPHTOR) name in an Egypt. inscription of about the 18th Dynasty and Goliath (*golyat*) is perhaps linked by its *-yat* termination with Luwian (Hieroglyphic Hittite) and Lydian names ending respectively in *-wattaš* and *-uattes*. Aside from these few words, it is clear that once they had settled in Palestine, the Philistines adopted the Semitic tongue of the peoples they dispossessed.

c. Religion

Knowledge of the Philistine religion depends greatly upon the Bible. The three gods mentioned, *Dagon, *Ashtoreth and *Baalzebub, were all Near Eastern, and it is perhaps to be assumed that they identified their own gods with those they found in Palestine, and accommodated their own religion to that already there. Three successive temples were found at Tell Qasile (strata XII–X), which have similarities with temples found in the Aegean and Cyprus. A circular hearth, uncovered

in a public building near the temple, belongs to a type known in cult contexts at Mycenae, Pylos and other sites in the Aegean, while a similar 'hearth sanctuary' was found at Ekron. At the latter site also, wheels from a bronze laver stand (Heb. *m'kônâh*; אב 'base') were part of the cult equipment.

VII. Origin and role

The cumulative evidence leaves little doubt that the Philistines came immediately, though probably not ultimately, from the Aegean. Some scholars would equate the name with that of the *Pelasgoi*, the pre-Greek inhabitants of the Aegean, a view which is weighted by the occurrence of the name twice in Gk. literature, spelt with a *t* rather than a *g*. This view is still debated, and even granting it, the classical references to the *Pelasgoi* are too inconsistent to be helpful.

It seems that the Philistines were one of the Sea Peoples who, in the later 2nd millennium, moved out of the Aegean, probably as a result of other folk movements, and migrated by land and sea, some *via* Crete and Cyprus, to the Near East, where they forced a foothold, first as mercenary troops of the pharaohs, the Hittite kings and the Canaanite rulers, and finally as settlers who were absorbed in the basic population. Though they retained their name for many centuries, the biblical Philistines, the Tjekker who occupied an adjacent coastal region, and doubtless others of the Sea Peoples, became for all practical purposes Canaanites.

VIII. Philistines in the patriarchal narratives

Since the Philistines are not named in extra-biblical inscriptions until the 12th century BC, and the archaeological remains associated with them do not appear before this time, many commentators reject references to them in the patriarchal period as anachronistic. Two considerations must be entertained, however. There is evidence of a major expansion of Aegean trade in the Middle Minoan II period (c. 1900–1700 BC; *CRETE) and objects of Aegean manufacture or influence have been found from this period at Ras Shamra in Syria, Hazor and perhaps Megiddo in Palestine, and Tôd, Harageh, Lahun and Abydos in Egypt. It is likely that a large part of this trade consisted in perishable goods such as textiles. A new type of spiral design which appears in Egypt and Asia (Mari) at this time may support this. Further evidence of contacts is afforded by a tablet from Mari (18th century) recording the sending of gifts by the king of Hazor to Kaptara (*CAPHTOR). Secondly, ethnic names in antiquity were not used with particular precision. The members of a mixed group such as the Sea Peoples were unlikely to be carefully distinguished by name, so that the absence of one name from the inscriptions may simply mean that the particular group was not sufficiently prominent to find special mention. The Sea Peoples, and their predecessors who traded with the Near East, arrived in waves, the Luka being known already in the 14th century (Amarna Letters), and dominant in a 12th-century wave were the Philistines, who consequently figured in the records. In this context the term 'Philistine' could have been applied retrospectively to early Aegean migrants, rather as today reference is made to 'American Indians'. There is no reason why small groups of Philistines could not have been among the early Aegean

traders, not prominent enough to be noticed by the larger states.

PHILO. Among the many bearers of the name Philo in antiquity, the most important for the student of the Bible is Philo of Alexandria, a member of a rich and influential Jewish family in that city in the 1st century. His brother Alexander was one of the richest men of his day, while his nephew Tiberius Alexander became in due time Procurator of Judaea and Prefect of Egypt, having apostatized from the Jewish faith.

Little is known of the life of Philo himself; neither his birth nor his death may be dated, the one sure date in his career being his membership in the embassy to Gaius (Caligula) in AD 39. From this it is evident that he was quite old at that time, and conjecturally we may place his dates as approximately 20 BC to AD 45. From his writings it may be deduced that, as a leader of the Jewish community, he spent much of his life in the duties of public service. His natural bent, however, was to the life of contemplation and the pursuit of philosophy, in which, as he asserts, he spent his youth (*Concerning the Special Laws*, 3. 1), perhaps in such a community as the Therapeutae, described by him in *Concerning the Contemplative Life*. Although he was obliged to leave this to take up his duties, he found opportunity to produce a body of writings on philosophical and theological topics.

His early work was on philosophical themes, in which he shows little originality, but provides valuable source material for the study of a little-known period of Hellenistic philosophy. His main work, however, was the production of expositions of the Pentateuch; he was motivated by the desire to demonstrate that the philosophical and religious quests of the Gentile world of the day found their true goal in the God of Abraham. Three large works remain, none of them complete nor in exact order, their several sections having been transmitted often as separate treatises in the MS tradition: *The Allegory of the Laws* (a commentary on Genesis); *Questions and Answers on Genesis and Exodus* (a shorter work of the same kind); and *The Exposition of the Laws* (a review of the history in the Pentateuch). By means of allegorical exegesis he is able to extract moral and mystical teaching from all parts of these books. His method of allegory is derived from that already applied to the Homeric books by philosophers. It may be analysed as: (i) 'cosmological' ('physiological' in his own terminology) in which allegory concerning the nature (*physis*) of things is perceived (e.g. the high priest and his vestments seen as the Logos and the universe, *Life of Moses*, 2. 117ff.), and (ii) 'ethical', in which reference to human psychology and moral struggle is seen (e.g. etymological interpretations of such figures as Isaac (= joy)). The basis of both the cosmology and psychology is the Stoic system, although it is evident that Pythagorean and Platonist are also laid under contribution in some details,

PHILO

a feature which probably reflects the eclecticism of the period.

Philo's greatest contribution to thought, according to recent students, is his use of philosophy in this way to provide a rationale of religion; he is in fact the 'first theologian', and philosophy is significant to him primarily as the handmaid of theology. The motivation of his work may be seen not simply in his missionary zeal, common to many Jews of that era, but also in the mystical experiences of the reality of his God of which he writes movingly in several places (e.g. *Special Laws*, *loc. cit.*). Central to his understanding both of the universe and of religious experience is the concept of the Logos, a term of Stoic origin which, in Philo, linked with such a concept as the Platonic World of Ideas, signifies the mode whereby the transcendent God creates and sustains the world, and further, reveals himself to his creatures. Moses is expounded as a type of the Logos by whom men are led to knowledge of God; the Patriarchs as instances of those who have freed themselves from the bondage of material things and are united with the divine Wisdom.

The definitive edition of the Gk. text of Philo is the six volumes by L. Cohn and P. Wendland, published 1896–1914, with a seventh volume of Indexes (1926–30) by H. Leisegang. A number of works, extant only in Armenian, were edited by the Mechitarist J. B. Aucherian in 1822 and 1826; the version dates from the 5th century. There is also an Old Lat. version of Philo, of some value for the construction of his text. The most recent translation of Philo's extant works, both Gk. and Armenian, is that in the Loeb Classical Library by F. H. Colson, G. H. Whittaker and R. Marcus (10 vols. plus 2 supplementary vols., 1929–62).

As the best preserved and most extensive of Hellenistic Jewish writings, Philo's works are of value in illuminating the thought world of the NT. Certain of his OT citations bear upon the problem of the origin of the LXX (see P. Katz, *Philo's Bible*, 1950). Two writings at least of the NT may not be adequately understood without reference to his thought and method. The Epistle to the Hebrews in its treatment of the tabernacle and the figure of Melchizedek shows close affinity to his allegory, while its doctrine of the Son is related in several particulars to his Logos-teaching. The Gospel of John bears no resemblance to Philonic allegory (as has sometimes been asserted), but in the cosmology explicit in the Prologue and elsewhere implicit there is evidently close kinship to the Philonic allegory. This need not imply that these writers were directly dependent on Philo. A plausible explanation might be that they come from a like background of thought. Both possibilities have been pursued and demand still further investigation.

PHINEHAS. A name of Egypt. origin, *P'-nhwy*, 'the Nubian'; popular in Egypt during the New Kingdom (16th to 12th centuries BC). It is borne in the OT by three individuals.

1. Son of Eleazar, and grandson of Aaron (Ex. 6:25; 1 Ch. 6:4, 50; Ezr. 7:5), with priestly descendants (Ezr. 8:2). He slew an Israelite and the (pagan) Midianite woman he had taken, after Israel became involved in paganism at Shittim (Nu. 25; Ps. 106:30), and shared in the subsequent war against Midian (Nu. 31:6). Under Joshua, Phinehas helped settle the dispute with the Transjordanian tribes over their memorial altar (Jos. 22:9ff.). After burying his father in his own hill (Jos. 24:33) Phinehas was officiating priest early in the Judges' period (Jdg. 20:28; perhaps 1 Ch. 9:20).

2. Younger of the high priest Eli's two disreputable sons, late in the Judges' period (1 Sa. 1:3; cf. 2:12–17, 34). He was slain in the battle of Aphek when the Philistines captured the ark (1 Sa. 4). A grandson of this Phinehas was a priest in Saul's reign (1 Sa. 14:3).

3. The father of a priest Eleazar in Ezra's time (Ezr. 8:33). K.A.K.

PHOEBE (AV 'Phebe'). Lady Bountiful of Cenchrae (E port of Corinth, where hospitality would be important); *'deaconess' (AV 'servant') of the church and 'patroness' (AV 'succourer') of many, including Paul (Rom. 16:1–2; the terms are probably semi-technical). She apparently carried Paul's letter, and he asks worthy hospitality for her. E. J. Goodspeed (*HTR* 44, 1951, pp. 55ff.) holds that Rom. 16 is a separate letter to Ephesus to secure her a reception with those named. But would such oblique personal references be necessary?

The name (meaning 'radiant') is a surname of Artemis. A striking epitaph to 'The second Phoebe', a later deaconess, is cited in *MM* (s.v. *koimaomai*). See further M. D. Gibson, *ExpT* 23, 1911–12, p. 281. A.F.W.

PHOENICIA, PHOENICIANS. The territory on the E Mediterranean coast covering c. 240 km between the rivers Litani and Arvad (mod. Lebanon–S Latakia) and its inhabitants.

Phoenicia (AV Phenice) as such is named only in the NT as the place of refuge for Christians fleeing from persecution following the death of Stephen (Acts 11:19); through this land Paul and Silas journeyed on their way from Samaria to Antioch (Acts 15:3). Later Paul landed on the Phoenician coast near Tyre on his way to Jerusalem (Acts 21:2–3). In the time of Christ Phoenicia was referred to as 'the sea-coast and district of Tyre and Sidon' (Mt. 15:21; Lk. 6:17), and the inhabitants, including Greeks, were considered 'Syro-Phoenicians' (Mk. 7:26).

In OT times the territory occupied by the Phoenicians was called by the Hebrews 'Canaan' (Is. 23:11), 'Canaanite' (i.e. 'merchant') being probably the name applied by the inhabitants to themselves (Gn. 10:15). It was, however, the common practice in all periods to refer to Phoenicia by the name of its principal cities (*TYRE, *SIDON), since there was little political cohesion between them except for periods such as the reign of Hiram I. Other major settlements were Arvad, Simyra, Gebal/Byblos, Be(i)rut and Zarephath (*ZAREPTA).

1. History

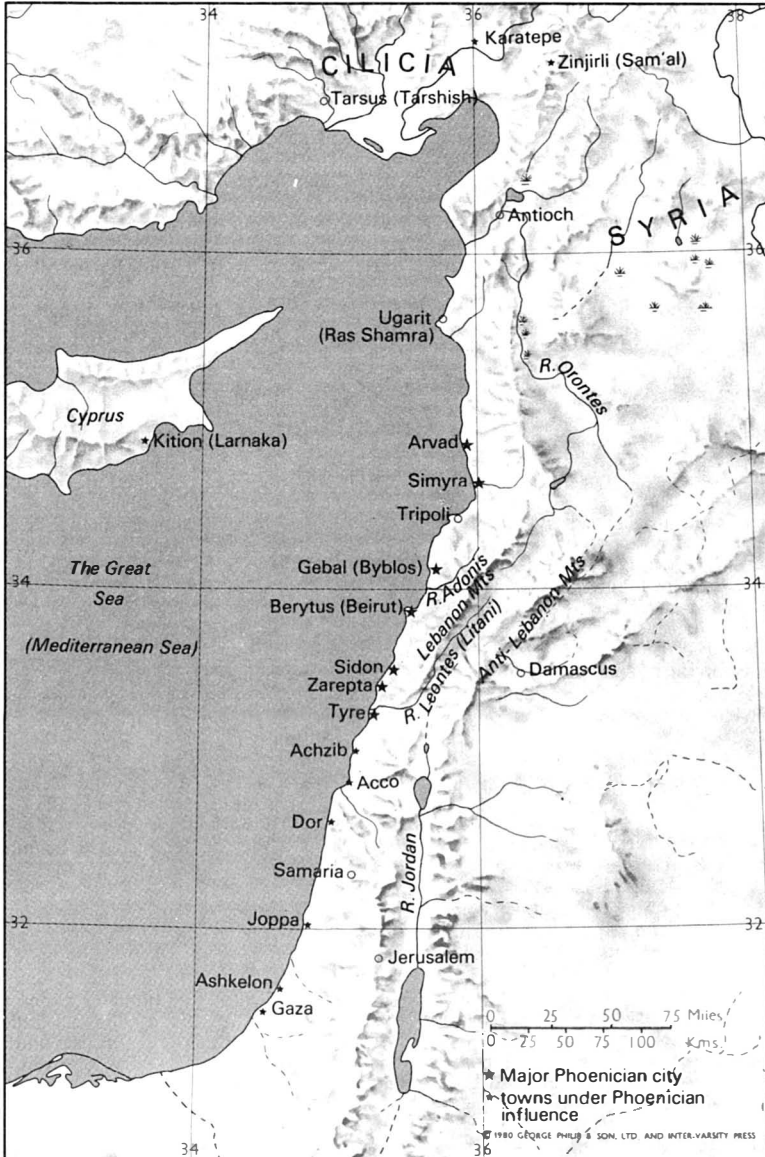

The origin of the sea-faring Phoenicians is obscure, though according to Herodotus (1. 1; 7. 89)

PHOENICIA, PHOENICIANS

they arrived overland from the Persian Gulf area, via the Red Sea, and first founded Sidon. The earliest archaeological evidence of their presence may come from the 'proto-Phoenician' finds at Byblos (ancient Gubla or Gebal, Ezk. 27:9, modern Gebail) dated c. 3000 BC. This important site has been excavated since 1924 by the French under Montet and Dunand. Byblian ships are depicted on Egyp. reliefs of the time of Sahure in the 5th Dynasty (c. 2500 BC) and there can be no doubt that by the 18th century there was an extensive trade in timber and artistic commodities between Phoenicia and Egypt (* SHIPS). The Phoenicians by this time had settled in their first colonies

along the coast at Joppa, Dor (Jdg. 1:27-31), Acre and Ugarit (Ras Shamra). They chose easily defensible natural harbours and gradually dominated the local population as at Ras Shamra (level IV).

For some centuries Phoenicia was under the economic and quasi-military control of the Egyptian 18th and 19th Dynasties, and Arvad was among the places claimed to have been captured by Tuthmosis III (c. 1485 BC). Nevertheless, the letters written by Rib-Addi of Byblos and Abi-milki of Tyre to Amenophis III at Amarna in Egypt show that, by c. 1400 BC, Sumur and Berut had disaffected and with Sidon, which appears to have maintained its independence, were blockading

The major cities of Phoenicia.

PHOENICIA, PHOENICIANS

Phoenician cities (*AMARNA). When the 'sea-peoples' invaded the coast c. 1200 BC, Byblos, Arvad and Ugarit were destroyed and the Sidonians fled to Tyre, which now became the principal port, or, as Isaiah claims, the 'daughter of Sidon' (23:12).

By the time of David, Tyre was ruled by Hiram I son of Abi-Baal and his reign began a golden age. Phoenicia was allied commercially with David (2 Sa. 5:11; 1 Ki. 5:1) and Hiram by treaty supplied Solomon with wood, stone and craftsmen for the construction of the Temple and palace (1 Ki. 5:1-12; 2 Ch. 2:3-16), and ships and navigators to assist the Judaean fleet and to develop the port of Ezion-geber as a base for long voyages (1 Ki. 9:27). This aid resulted in territorial advantages, for Tyre was given twenty villages on her border in part payment (vv. 10-14). Phoenicia, herself long influenced by Egypt. art, motifs and methods, was now in a position to influence Heb. thought. Hiram was a conqueror and builder of several temples at Tyre, and a successful administrator who settled colonial revolts (W. F. Albright, in the *Leland Volume*, 1942, pp. 43f.). It was probably due to his initiative that by the 9th century Phoenician colonies were founded in Sardinia (Nova, Tharros), Cyprus (Kition) and Karatepe (N Taurus). Utica had been settled in the 12th century and Carthage, Sicily (Motya) and Tunisia by the 8th.

Hiram's successor, a high priest named Ethbaal, furthered the alliance with Israel by the marriage of his daughter Jezebel to Ahab (1 Ki. 16:31), with the consequence that the worship of the Phoenician Baals was increased (1 Ki. 18:19). Elijah fled for a while to Zarephath, which was part of the coast controlled by Sidon, and therefore at this time independent of Tyre (1 Ki. 17:9).

The Assyrian advances brought pressure on the Phoenician cities. Ashurnasirpal II (884-859 BC) counted among the tribute he received from Tyre, Sidon, Gebal and Arvad garments and dyed cloth, precious metals and carved ivory and wood. This tribute was renewed when Shalmaneser III besieged Damascus and marched to the Mediterranean coast at the Dog river in 841 BC. The act of submission to him and the gifts sent by Tyre and Sidon are pictured on the bronze gates set up in the Assyrian temple at Balawat (see *ANEP*, pp. 356-357). Adad-nirari III claimed Tyre and Sidon among his vassals in 803 BC (*DOTT*, p. 51). Hirammu of Tyre, Sibitti-Bi'ili of Gubla (Byblos) sent tribute to Tiglath-pileser III during his siege of Arpad (c. 741 BC) about the same time as Menahem of Israel submitted to him.

A few years later the Assyrian sent his *rab šaqe*-official (*RABCHAKEH) to collect taxes from Metenna of Tyre. Letters addressed to the Assyrian king show that Tyre and Sidon were under direct supervision of an Assyrian official, who forwarded the taxes, mostly paid in timber and goods, direct to Calah (*Iraq* 17, 1955, pp. 126-154). In 734 BC Tiglath-pileser captured the fortress of Kashpuna, which guarded the approaches to Tyre and Sidon, who were now allied in defence.

Sargon continued to raid the Phoenician coastlands, and Sennacherib (c. 701 BC) captured Ušše near Tyre and carried Phoenician prisoners off to Nineveh to build his new palace (as shown on reliefs) and to Opis to build the fleet planned to pursue the rebel *Merodach-baladan across the Persian Gulf. Nevertheless, the larger cities clung to their independence until Esarhaddon sacked

Sidon and settled the survivors from it in a new town called 'Walled City of Esarhaddon' and in 15 adjacent villages. Other towns were placed under Ba'ali of Tyre, who was bound by treaty to Esarhaddon. This named Arvad, Acre, Dor, Gebal and Mt Lebanon and regulated trade and shipping. However, Ba'ali, incited by Tirhakah of Egypt, revolted. Tyre was besieged and Phoenicia subordinated to a province. The rulers of the cities, including Milki-asapa of Gebal, and Matan-Ba'al of Arvad, were made to 'bear the corvée basket', that is, to act as labourers at the foundation of Esarhaddon's new palace at Calah, as Manasseh did in Babylon (2 Ch. 33:11).

Ashurbanipal continued the war against Phoenicia, containing Ba'ali by an attack in 665 BC prior to his advance on Egypt. He took Ba'ali's daughters as concubines and also received a heavy tribute. On the death of Ba'ali Azi-Ba'al was made king and Yakinlu appointed to rule Arvad.

With the decline of Assyria the cities regained their independence and traded with new ports opened in Egypt. Their Punic kinsfolk founded colonies in Algeria, Spain and Morocco in the 7th-5th centuries and by a naval victory over the Etruscans in 535 BC finally closed the W Mediterranean to the Phoenician traders.

Nebuchadrezzar II of Babylon in his advance towards Egypt besieged Tyre for 13 years c. 585-573 BC (Ezk. 26:1-29:1ff.), but, though Ithobaal was carried off prisoner to Babylon, the city retained a measure of autonomy, which it held throughout the Neo-Babylonian and Persian rule, trading with Egypt (Zp. 1:11) and supplying fish and other commodities to Jerusalem (Ne. 13:16) and in return probably receiving wood and home-spun textiles (Pr. 31:24; *ARTS AND CRAFTS).

Alexander the Great captured the island city of Tyre by means of an artificially constructed causeway. The slaughter and destruction was heavy, but the city recovered and, like Sidon, was prosperous in Hellenistic and Roman times (e.g. Mt. 15:21).

II. Religion

The idolatrous religion of Phoenicia was condemned by Elijah (1 Ki. 18-19) and later Heb. prophets (Is. 65:11). The early period, seen in the Ras Shamra texts, reveals a polytheistic and natural mythology centred on Baal, also called Melek, 'king', the sun-god Saps, and Reshep (Mikkal) an underworld deity. Fertility cults honoured 'Anat (Astarte, Ashtart) and the popular blend of Semitic and Egypt. ideas resulted in the cult of Adonis and *Tammuz, in which the former was identified with Osiris. Other deities included Eshmun, the god of healing (Gk. Asklepios), and Melqart.

III. Art

The syncretistic tendencies of Phoenician religions are to be seen in the art which combines Semitic, Egypt. and Hurrian elements. This is due to the geographical location and the interchange of materials and influence which followed trade. The Phoenicians were primarily sea-traders and artists. They exported silk, linen and wool, dyed, woven and embroidered locally, hence the name Phoenicia may be derived from Gk. *phoinikoi*, 'red-purple folk' (the Akkadian *kinahhilkina'ain*, i.e. Canaan) (*ARTS AND CRAFTS; *POTT*, p. 34) and from their unbounded supplies in the hinterland of the Lebanon shipped wood and its products. The craftsmen worked stone (e.g. Ahiiram sarcophagus c. 900 BC;

BASOR 134, 1954, p. 9; Syria 11, 1930, pp. 180ff.), *ivory, and *glass, and though the Hebrews did not themselves allow images or the portrayal of the human figure (*ART), Phoenician silver and bronze coins are found inland in numbers from the 4th century BC onwards. The requirements of their trade led to the development of *writing (the so-called Phoenician, Byblian and Ugaritic alphabets), the *abacus* for counting, and *papyrus books. It is much to be regretted that the Phoenician literature, including the mythology of Sanchuniathon of Byblos and the history of Menander of Tyre, has survived only in a few quotations in later authors, for it was probably through their literature that much of the learning of the East reached Greece.

PHOENIX. I. A mythical bird, anciently thought to be born directly from its parent's corpse. Some early Christians (Tertullian, *De Resurr.* 13. 6; cf. *I Clement* 25), seeing an analogy of resurrection, warranted it by Ps. 92:12 (LXX 91:13), but *phoenix* there clearly means 'palm-tree'. Phoenix-and-palm was frequent in Christian art.

2. The harbour (AV 'Phenice') the nautical experts, despite Paul's entreaties, made for in winter (Acts 27:12). Data given by Strabo, Ptolemy and other writers seem to indicate the Cape Mourous area, where modern Loutro is the only safe harbour in S Crete (James Smith, *Voyage and Shipwreck of St. Paul*⁴, 1880, p. 90n.). But Luke (AV) says Phoenix 'lieth toward the south-west and north-west (sc. 'winds')', i.e. faces W, while Loutro faces E. A narrow peninsula separates it from a W-facing bay, but one offering little shelter. Smith, urging the danger of W winter gales, suggested that Luke meant the direction towards which the winds blew, i.e. looking NE and SE (cf. RV, RSV); but this is unsubstantiated unless we assume some lost nautical idiom. Ramsay thought that Luke might have excusably misunderstood Paul's account of the discussion, but left open the possibility of a change in coastline (cf. HDB). Ogilvie's recent examination strongly suggests this occurred. The W bay was once better protected, and earthquake disturbance has apparently covered an inlet facing NW in classical times. A SW-facing inlet remains, and the disused W bay is still called Phinika. Ogilvie also found that locally the winter winds are N and E: in Acts 27 it was an ENE wind (*EURAQUILO) which caused the disaster.

PHRYGIA. A tract of land centred on the W watershed of the great Anatolian plateau, and reaching N into the valley of the upper Sangarius, SW down the valley of the Maeander, and SE across the plateau, perhaps as far as Iconium. The Phrygians formed the (legendary?) kingdom of Midas. They fell under direct Hellenic influence during the era of the Attalid kings of Pergamum, and in 116 BC most of Phrygia was incorporated by the Romans into their province of Asia. The E extremity (Phrygia Galatica) was included in the new

province of Galatia in 25 BC. The Romans were deeply impressed by the ecstatic Phrygian cult of Cybele, and the national fanaticism apparently lies behind the defiant tombstones, presumably Monastanist, of the 2nd century AD, which represent the earliest extant public manifesto of Christianity. There is no evidence of any indigenous Christian church in NT times, however. Such churches as fall technically within Phrygia (Laodicea, Hierapolis, Colossae, Pisidian Antioch and probably Iconium) were established in Gk. communities. It was most probably Jewish members of these Gk. states who visited Jerusalem (Acts 2:10). If Col. 2:1, as is just possible, is not taken to exclude a visit by Paul, it would be natural to assume that it is the first three of these cities, on the upper Maeander, that are referred to in Acts 16:6; 18:23. Failing that, we may resort to the view that 'the region of Phrygia and *Galatia' is a composite technical term for Phrygia Galatica and refers in particular to the churches at Iconium and Pisidian Antioch. Otherwise we cannot identify the disciples Paul left in 'Phrygia'.

PHYLACTERIES. The name is a transliteration of Gk. *phylaktērion*, meaning 'a means of protection' or '*amulet'. Though some Jews have regarded them superstitiously, this attitude has always been marginal, so the Gk. name probably derives from heathen misinterpretation. The Jew speaks of *t'pīllā* (lit. 'prayer'), pl. *t'pīllin*. They represent the interpretation by the pious of Ex. 13:9, 16; Dt. 6:8; 11:18. Their present form became standardized by the early years of the 2nd century AD and consists of two hollow cubes made of the skin of clean animals. They vary between 1.25 cm and 4 cm a side. That for the head is divided into four equal compartments; that for the hand has no divisions. In them are placed the four passages Ex. 13:1-10; 13:11-16; Dt. 6:4-9; 11:13-21 written by hand on parchment (on four pieces for the head, on one for the hand). The phylacteries are attached to leather straps by which they are fastened to the left hand and the centre of the forehead by the men before morning prayers, whether in the home or the synagogue, except on the sabbath and high festivals. They are put on after the praying shawl (*tallit*), that for the hand coming first. Both they and the straps are always coloured black. The phylactery for the head can be recognized by a three- and four-armed *šin* on its right and left sides.

In the *Qumran discoveries portions of phylacteries have been found, which show they were not absolutely standardized before the destruction of the Temple. The main difference, however, was the inclusion of the Ten Commandments on the parchment in them. Their exclusion later, just like their exclusion from the daily services, was a reaction against the Jewish Christians.

Though Christian exegesis has always understood the above-mentioned passages as metaphorical, our increasing knowledge of the ancient Near East would not rule out their possible literal intent (or for that matter of Dt. 6:9; 11:20, which the Jew fulfils by enclosing a parchment containing

PHYLACTERIES

Dt. 6:4-9; 11:13-21 in a box called a *m'zūzā* and affixing it to his door-post). All available evidence suggests, however, that they were a late innovation brought in by the *h'sidim* (*HASIDAEANS), being intended as a counterblast to increasing Hellenistic influence. There is no mention of them in the OT, and they seem always to have been unknown to the Samaritans. LXX clearly takes the passages on which the custom is based as metaphorical. The *Letter of Aristeus* mentions apparently only that for the arm and Philo that for the head.

Both the somewhat later Talmudic acknowledgment that they were not worn by the common people (*am hā-āreš*) and the failure of pagan writers to mention them indicate that in the time of Christ they were still worn only by a minority of the people. We may be sure that all Pharisees wore them, not merely during morning prayer but throughout the hours of daylight. Their later restriction to the time of prayer was due to their providing an all too easy mark of recognition of the Jew in times of persecution. We have no reason for thinking that they were worn either by Christ or his disciples. Even the condemnation in Mt. 23:5 suggests the temptation to the ultra-pious of stressing their adherence to a custom that was only slowly winning its way. Their use became universal before the end of the 2nd century AD.

The orthodox Jew interprets their use in a highly spiritual way. This is shown by the meditation to be used while putting them on, which is given early in the morning service in any standard Jewish Prayer Book.

PI-BESETH. Bubastis (Egypt. *Pr-B'stt*, 'mansion of the goddess Ubastet'), today Tell Basta, is situated on the Nile (Tanitic branch) SE of Zagazig. It is mentioned in Ezk. 30:17 with the more important city of Heliopolis (On or Aven). Of the main temple described by Herodotus (2. 138), little remains. Ubastet was a lioness or cat-goddess. Bubastis existed already in the time of Kheops and Khephren (4th Dynasty, c. 2600 BC) and Pepi I (6th Dynasty, c. 2400 BC). There are a few remains of the 18th Dynasty (14th century BC). The town was important under the Ramesside kings (19th Dynasty, 13th century BC) and gave its name to the 22nd Dynasty—that of Shishak, c. 945 BC—for whom it served as a residence like Tanis or Qantir.

PIETY. AV used this word in 1 Tim. 5:4, of dutiful care for a widowed mother or grandmother (cf. the Lat. *pietas*, and the Eng. 'filial piety'). The verb is *eusebeō*, the regular Hellenistic word for performing acts of religious worship (so in Acts 17:23), which indicates that, to Paul, care for these widowed relatives was part of a Christian's religious duty. This is understandable in the light both of the fifth commandment and of the fact that hereby the Christian relieves the church of responsibility for supporting the widows concerned.

The corresponding noun, *eusebeia*, usually translated *'godliness' in EVV, appears 14 times in the Pastorals and 2 Peter (elsewhere only in Acts

3:12, where RSV renders 'piety') as a comprehensive term for the practice of Christian personal religion, the worship and service of God and the rendering of reverent obedience to his laws. In the plural the word denotes specific acts of piety (2 Pet. 3:11). Christian *eusebeia* springs from the divine gift of an inner principle of life and power (2 Pet. 1:3; 2 Tim. 3:5), which in its turn is bestowed with and through the sinner's believing response to the prior gift of saving truth (1 Tim. 3:16: the 'mystery'—revealed secret—from which 'godliness' springs is the gospel message of the incarnate and reigning Christ). It is characteristic of gospel truth that it is 'according to godliness' (1 Tim. 6:3; Tit. 1:1), i.e. godliness is the natural and necessary outcome of receiving it, so that ungodliness in those who profess it is presumptive evidence that they have not truly and heartily received it at all (cf. 2 Tim. 3:2-8; Tit. 1:16; 2 Pet. 2:19-22). All allegedly evangelical teaching should be tested by asking whether it makes for godliness—i.e. whether it enforces God's demands adequately, and whether it exhibits correctly the gift of renewal in Christ from which alone godliness can spring (2 Tim. 3:5-8).

The Bible views the piety that it inculcates from several complementary standpoints. The OT calls it 'the *fear of God', or 'the Lord' (over 30 times), thus showing that true piety is rooted in an attitude of reverence, submission and obedience towards God. The NT calls it 'obeying the gospel' or 'the truth' (Rom. 10:16; Gal. 5:7; 2 Thes. 1:8; 1 Pet. 1:22; cf. Rom. 6:16), thus characterizing piety as a response to revelation. From another standpoint, as the maintaining of a state of separation from the world and consecratedness to God, the NT calls it simply *'holiness' (*hagiasmos*, *hagiōsynē*: see 1 Thes. 4:3; Heb. 12:14; 2 Cor. 7:1; 1 Thes. 3:13; etc.). Christ taught that the 'work of God', the single comprehensive divine requirement in which all the individual 'works of God' are embraced, is faith in himself (Jn. 6:28f.); and Christian piety means simply living by this faith, and living it out. Accordingly, John characterizes the piety that God commands and accepts by singling out the two features that are most essential to it, and most distinctive of it—faith in Christ, and love to Christians (1 Jn. 3:22-24).

A full analysis of NT piety would include the practical expression of faith in a life of repentance, resisting temptation and mortifying sin; in habits of prayer, thanksgiving and reverent observance of the Lord's Supper; in the cultivation of hope, love, generosity, joy, self-control, patient endurance and contentment; in the quest for honesty, uprightness and the good of others in all human relations; in respect for divinely constituted authority in church, State, family and household. All these attitudes and practices are commanded by God, and glorify him.

K. A. K.

PILATE. Pontius Pilatus was a Roman of the equestrian, or upper middle-class, order: his *praenomen* is not known, but his *nomen*, Pontius, suggests that he was of Samnite extraction and his *cognomen*, Pilatus, may have been handed down by military forbears. Little is known of his career before AD 26, but in that year (see P. L. Hedley in *JTS* 35, 1934, pp. 56–58) the emperor Tiberius appointed him to be the fifth *praefectus* (*hēgemōn*, Mt. 27:2, etc.; the same title is used of Felix in Acts 23 and Festus in Acts 26) of Judaea. Evidence of this title was discovered in 1961 on an inscription at Caesarea, and E. J. Vardaman (*JBL* 88, 1962, p. 70) suggests that this title was used in Pilate's earlier years, being replaced by *procurator* (the title used by Tacitus and Josephus) later. In accordance with a recent reversal in the policy of the Senate (in AD 21—Tacitus, *Annals* 3. 33–34) Pilate took his wife with him (Mt. 27:19). As procurator he had full control in the province, being in charge of the army of occupation (1 ala—c. 120 men—of cavalry, and 4 or 5 cohorts—c. 2,500–5,000 men—of infantry), which was stationed at Caesarea, with a detachment on garrison duty at Jerusalem in the fortress of Antonia. The procurator had full powers of life and death, and could reverse capital sentences passed by the Sanhedrin, which had to be submitted to him for ratification. He also appointed the high priests and controlled the Temple and its funds: the very vestments of the high priest were in his custody and were released only for festivals, when the procurator took up residence in Jerusalem and brought additional troops to patrol the city.

Even pagan historians mention Pilate only in connection with his authorization of the death of Jesus (Tacitus, *Annals* 15. 44): his only appearance on the stage of history is as procurator of Judaea.

Josephus relates (*Ant.* 18. 55; *BJ* 2. 169) that Pilate's first action on taking up his appointment was to antagonize the Jews by setting up the Roman standards, bearing images of the emperor, at Jerusalem: previous procurators had avoided using such standards in the holy city. Because of the determined resistance of their leaders in spite of threats of death, he yielded to their wishes after 6 days and removed the images back to Caesarea. Philo (*De Legatione ad Gaium* 299ff.) tells how Pilate dedicated a set of golden shields in his own residence at Jerusalem. These bore no image, only an inscription with the names of the procurator and the emperor, but representations were made to Tiberius, who sensibly ordered them to be set up in the temple of *Roma et Augustus* at Caesarea (cf. P. L. Maier, 'The Episode of the Golden Roman Shields at Jerusalem', *HTR* 62, 1969, pp. 109ff.).

Josephus (*Ant.* 18. 60; *BJ* 2. 175) and Eusebius (*EH* 2. 7) allege a further grievance of the Jews against Pilate, in that he used money from the Temple treasury to build an aqueduct to convey water to the city from a spring some 40 km away. Tens of thousands of Jews demonstrated against this project when Pilate came up to Jerusalem, presumably at the time of a festival, and he in return sent his troops in disguise against them, so that a large number were slain. It is generally considered that this riot was caused by the Galileans mentioned in Lk. 13:1–2 (whose blood Pilate had

mingled with their sacrifices), and C. Noldius (*De Vita et Gestis Herodum*, 1660, 249) claimed that Herod's enmity against Pilate (Lk. 23:12) arose from the fact that Pilate had slain some of Herod's subjects. This explains Pilate's subsequent care (Lk. 23:6–7) to send Jesus to be tried before Herod. It is not known whether the tower at Siloam which collapsed (Lk. 13:4) was part of this aqueduct.

Pilate finally over-reached himself by the slaughter of a number of Samaritans who had assembled at Mt Gerizim in response to the call of a deceiver who had promised to show them that Moses had hidden the sacred vessels there. In spite of the obvious falsehood of this claim (Moses had never crossed Jordan: some consider that there is a textual error, *Mōyσεός* for *Όσεός*, and Josephus is referring to the Samaritan tradition that Uzzi the high priest (1 Ch. 6:6) had hidden the ark and other sacred vessels in Mt Gerizim), a great multitude came armed to the mountain, and Pilate surrounded and routed them, capturing many and executing their ringleaders. A Samaritan delegation went with a protest to Vitellius, who was then governor of Syria, and he ordered Pilate to answer this accusation of the Jews before the emperor, ordering Marcellus to Judaea in Pilate's place (*Jos., Ant.* 18. 85–89). Pilate was on his journey to Rome when Tiberius died (AD 37). (Cf. E. M. Smallwood, 'The Date of the Dismissal of Pontius Pilate from Judaea', *JJS* 5, 1954, p. 12ff.) We know nothing of the outcome of the trial, but Eusebius (*EH* 2. 7) preserves a report of otherwise unknown Gk. annalists that Pilate was forced to commit suicide during the reign of Gaius (AD 37–41).

The above incidents are all related by Josephus or Philo. E. Stauffer (*Christ and the Caesars*, E.T. 1955, pp. 119f.) draws attention to a further instance of provocation of the Jews by Pilate. According to G. F. Hill (*Catalogue of the Greek Coins of Palestine*, 1914), the procurators minted small copper coins to meet local needs in Palestine. Normally these bore symbolic designs of natural features, such as trees and ears of corn, in deference to the second commandment. In AD 29–31 Pilate issued coins bearing imperial religious insignia, the *lituus*, or augur's staff, and the *patera*, or pagan libation bowl. Such issues ceased after AD 31, and the British Museum has a coin of Pilate on which his successor Felix appears to have over-stamped the staff with a palmbranch, though Y. Meshorer (*Jewish Coins of the Second Temple Period*, 1967) states that Felix also produced coins with symbols of a provocative nature, such as Roman weapons, which underlined the Roman subjugation of Judaea.

Philo can find no good thing to say of Pilate: in *De Legatione ad Gaium* 301 he describes him as 'by nature rigid and stubbornly harsh' and 'of spiteful disposition and an exceeding wrathful man', and speaks of 'the bribes, the acts of pride, the acts of violence, the outrages, the cases of spiteful treatment, the constant murders without trial, the ceaseless and most grievous brutality' of which the Jews might accuse him. The verdict of the NT is that he was a weak man, ready to serve expediency rather than principle, whose authorization of the judicial murder of the Saviour was due less to a desire to please the Jewish authorities than to fear of imperial displeasure if Tiberius heard of further unrest in Judaea. This is made abundantly evident by his mockery of the Jews in the wording of the superscription (Jn. 19:19–22). It is most un-

PILATE

fortunate that we do not know anything of his record apart from his government of the Jews, towards whom he would appear to have shown little understanding and even less liking.

For an interesting discussion of the significance of the inclusion of 'suffered under Pontius Pilate' in Christian creeds see S. Liberty, *JTS* 45, 1944, pp. 38–56.

There are a number of *Acta Pilati* in existence: none of which is considered to be genuine.

D. H. W.

PILGRIMAGE. Sojourners in foreign lands may return home; sojourners in the flesh, with a fore-shortened view of heavenly things, may enter the eternal realm by the portal of death. By established metaphor, the mortal life-span is called a pilgrimage, which simply means a sojourning. Biblical terminology is a little flexible.

The common Heb. phrase *'eres m'gūrim* means literally 'land of sojournings' (the latter term is grammatically rather than numerically plural, and should be singular in idiomatic English). In the typical passages Gn. 17:8; 28:4; 36:7; 37:1; Ex. 6:4, LXX generally uses the verb *paroikeō* or a cognate; AV has 'land wherein thou art a stranger', or some variant; RV and RSV have, correctly if rather woodenly, 'land of sojournings', but the singular would be preferable. Cf. Ezk. 20:38; also Ps. 55:15; Jb. 18:19, where a cognate Heb. term means 'dwellings' or 'habitations', the singular being again preferable in English. The AV and RV text perceptively render the same word twice as 'pilgrimage' in Gn. 47:9—this may be upheld against RVmg. and RSV, because the meaning here is life's total span and experience. The LXX underlines this by using *zōē*, 'life'. There is a close parallel in Ps. 119:54, where 'the house of my pilgrimage' means simply 'my mortal body throughout its earthly existence'.

There are two technical terms for a resident alien—usually a Gentile dweller in Palestine—*gēr*, from the same Heb. root as *m'gūrim*, and *tōsāb*. The first word usually implies a longer, the second a shorter, association, so that the difference is chiefly one of intensity. The coupling of the two lays a heavy emphasis on transitoriness. The second then follows climactically. The LXX translates the first term by *paroikos*, the second in its happier moments by *parepidēmos*. The four words may be found literally used in Gn. 22:4, MT and LXX. The metaphorical usages, stressing the brevity of life, are Ps. 39:12; 1 Ch. 29:15. The LXX spoils the sense in the second passage by substituting *katoikountes* for *parepidēmoi*, for the change of word would suggest settled dwelling, whereas the entire emphasis is the reverse. In both contexts 'pilgrim(s)' would afford a good translation.

The 'weary pilgrimage' of the oft-sung paraphrase has a similar ring about it, though strictly speaking it is a mistranslation. Jacob in his vow (Gn. 28:20) actually uses the word *derek*, 'road' or 'way'. Metaphorically, this signifies manner of life, human or animal—even the behaviour of inanimate but propelled objects. (Pr. 30:19 aptly illustrates all three pictorial usages.) Jacob's reference is personal, practical, specific and contemporary. The 'weary pilgrimage', generalized in reference, is not strict translation, but good

poetic licence, true to the spirit of the original prayer.

paroikos and *parepidēmos* or their cognates are used in the NT independently (1 Pet. 1:1, 17) and in OT quotation (Heb. 11:13; 1 Pet. 2:11). By NT times it is probably true to say that the *paroikos* not only resided longer in a place than the *parepidēmos*, but also that he was more fully incorporated into the civic life and fiscal obligations of his adopted community. The *eklektoi parepidēmoi* of 1 Pet. 1:1 are more than 'elect sojourners'. Their political status is strong metaphor for the fact that they are God's pilgrims, persons now in time and flesh, yet chosen for eternal life through Christ Jesus, therefore fundamentally different from the worldling. The *paroikia* of 1 Pet. 1:17 reverts by stylistic variation to the *gēr* emphasis, but still means essentially 'pilgrimage'. The *'strangers and pilgrims' of Heb. 11:13 AV, 'strangers and exiles' RSV, translates the Greek beautifully. There is a verbal echo of Ps. 39:12 and 1 Ch. 29:15, with perhaps a sidelong glance at Gn. 47:9. The phrase is more telling in view of the writer's 'idealist epistemology'—the Temple and all earthly things are but copies and shadows of heavenly things; the real world is the unseen one. Cf. 1 Pet. 2:11.

The concept of pilgrimage as a journey of religious volition or obligation to a sacred spot, such as Abraham's visit to Mt Moriah, is known from remote antiquity, though the Bible lacks a technical term for it. Any place held in veneration was liable to attract pilgrims, as even the earliest OT records show. Journeys to the statutory feasts at Jerusalem, where the Temple enjoyed exclusive prestige, were well established by NT times (cf. notably Lk. 2:41ff.). Each of them was a 'pilgrimage-festival' (Heb. *ḥajj*; cf. Arabic *ḥajj*). Before the Arab-Israeli partition of Jerusalem in 1948, and since the Six Days' War of 1967, Jews have regularly prayed at the Western Wall (formerly the Wailing Wall), which is all that remains of the Herodian Temple.

PILLAR.

a. Structural

Pillars of wood, stone or mud-brick were used from the earliest times to support the roofs of large rooms or to provide monumental decoration (as at Erech in S Mesopotamia; H. Frankfort, *Art and Architecture of the Ancient Orient*, 1954, pl. 2). From the latter part of the 2nd millennium onwards rectangular stone pillars or wooden posts on stone bases were used in larger Palestinian houses for carrying upper storeys or balconies on one or all sides of the central courtyard (*House). The evidence of Philistine sites suggests that the pillars held by Samson were of wood, set on stone bases (Jdg. 16:23–30; cf. R. A. S. Macalister, *Bible Side-lights from the Mound of Gezer*, 1906, pp. 135–138).

From the early Monarchy have survived several examples of official storehouses with rows of pillars (cf. the seven pillars of Wisdom's house, Pr. 9:1). At Megiddo these pillars also served as

hitching-posts (see *ANEP*, nos. 741–742, and for official buildings, Z. Herzog in Y. Aharoni, *Beer-Sheba*, 1, 1973, pp. 23–30). Of finer quality are the carved capitals, imitating the top of a palm-tree (called proto-Aeolic or Ionic), found at several sites. While the majority were made for rectangular attached pillars (e.g. those from the palace at Samaria, cf. W. F. Albright, *Archaeology of Palestine*, 1960, p. 127, fig. 35), a few belonged to free-standing columns. Solomon's Temple may have been enhanced with similar capitals, Heb. *timorā*, 1 Ki. 6:29ff.; 7:36; cf. Ezk. 40:22ff.; 41:18ff.; 2 Ch. 3:5; see Y. Shiloh, *PEQ* 109, 1977, pp. 39–52. This simple design was elaborated, producing finally the complicated capitals at the Persian palaces of Persepolis and Susa (Est. 1:6; see R. Ghirshman, *Iran*, 1954, pl. 17b). Simple cylindrical pillars of this period have been found at Lachish (*PEQ* 69, 1937, p. 239) and possibly Bethel (*BASOR* 137, 1955, fig. 3).

During the Hellenistic and Roman periods pillars were widely employed as decorative features, e.g. lining the main streets of towns, as at Jerash (G. L. Harding, *Antiquities of Jordan*, 1959, pl. 10). The entrance to Solomon's Temple was flanked by two gigantic bronze pillars of uncertain significance (1 Ki. 7:15–22; see *JACHIN AND BOAZ). It was apparently by one of these that the king stood on ceremonial occasions (2 Ki. 11:14; 23:3; 2 Ch. 23:13; cf. the coronation of Abimelech, Jdg. 9:6, rv).

'Pillar' is also used to describe: Lot's wife smothered by salt (Gn. 19:26); the smoke and fire which protected the camp of Israel (Ex. 13:21); a palm-like column of smoke spreading at the top (Ct. 3:6; Joel 2:30, Heb. *tīmārā*; cf. *timorā*, above). The supporting function is used figuratively of: (i) the pillars of heaven and earth over which God alone has power (1 Sa. 2:8; Jb. 9:6; 26:11; Ps. 75:3); (ii) the legs of the beloved and the feet of an angel (Ct. 5:15; Rev. 10:1); (iii) the church as upholding the truth (1 Tim. 3:15); (iv) the position of James, Cephas and John in the church of Jerusalem (Gal. 2:9).

b. Monumental

Stones set up on end are found throughout the ancient world, often associated with a shrine or temple (e.g. an early Neolithic shrine at Jericho contained a niche in which was a stone cylinder, see *PEQ* 84, 1952, p. 72, pl. XIX. 1) or standing alone (the Celtic *menhir*). A consideration of all the OT passages in which such a pillar (Heb. *masšēbā*, something erected) is mentioned shows that the basic significance was that of a memorial. Rachel's grave was thus marked (Gn. 35:20), and Absalom, being childless, set up a pillar, to which he gave his own name, as his own memorial (2 Sa. 18:18). The name conferred on the stone identified it with the bearer of that *name (*WORD). Important events were likewise commemorated. Jacob set up the stone he had used as a pillow, clearly a small slab, after the first theophany at Bethel and another stone after the second theophany. Libations were poured on both of these, marking them out from other stones. By naming the stones 'House of God' (Heb. *bēt-ēd*), Jacob recorded their significance to him (Gn. 28:18–22; 35:13–15). The covenants between Jacob and Laban and between Yahweh and Israel were also visibly indicated in this way (Gn. 31:45–54; Ex. 24:4; Jos. 24:26–27). So too were the crossing of the Jordan (Jos. 4:1–9) and the victory

over the Philistines at Mizpah (1 Sa. 7:12, named 'stone of help', Heb. *'eben hā'ēzer*). This is the import of the victorious Christian who will be a pillar in the temple of God, bearing the names of God, the new Jerusalem and the Son of man's new name (Rev. 3:12).

In Canaanite religion the pillar had so far become identified with deity (particularly male deity) as to be an object of veneration. It was therefore forbidden to the Israelites, who were to destroy all they found (Ex. 23:24; Dt. 16:22; cf. /ASHERAH). Of the many standing stones found in and around Palestine (e.g. at Gezer, Lejjun, Byblos, Ras Shamra) the best examples are those at Hazor. An upright stone, with the top broken off, was found standing by the entrance to an important building in the Canaanite citadel, an offering before it (*BA* 22, 1959, p. 14, fig. 12). In the lower city lay a small shrine containing a row of several slabs about 45 cm high and many more stacked in a side room (*BA* 19, 1956, p. 10, fig. 7). These may well be ancestral monuments destroyed by the Israelites (cf. *ANEP*, nos. 630, 635). The practice continued in neighbouring countries and Isaiah foretold that the Egyptians would set up a pillar to Yahweh on their border when they turned to him (Is. 19:19). See C. F. Graesser, 'Standing Stones in Ancient Palestine', *BA* 35, 1972, pp. 34–63. A.R.M.

PINNACLE (Gk. *pterygion*, 'a little wing'; Vulg. *pinnaculum*; NEB 'highest ledge'). A part of the buildings of the Temple (Mt. 4:5; Lk. 4:9) mentioned in connection with the temptation of Jesus. Its precise location is uncertain, but two relevant factors should be noted. (i) Despite the AV's use of the indefinite article, we should follow other EVV in reading 'the pinnacle of the temple' (i.e. suggesting that there was only one). (ii) The context calls for a position from which there was both a fearful drop and an impressive view of the surrounding countryside. These latter conditions are met if we locate the pinnacle in the SE corner of the Temple area, overlooking the Kidron Valley (cf. Jos., *Ant.* 15. 410f.). Different opinions have, however, been expressed. See, e.g., *HHT*, 4, pp. 85–86. J.D.D.

PIRATHON. Fer'ata, 9 km WSW of Shechem, home of the Ephraimite judge Abdon ben Hillel (Jdg. 12:13, 15) and of David's captain Benaiah (2 Sa. 23:30; 1 Ch. 11:31; 27:14); probably not the Pharathon in Benjamin (1 Macc. 9:50) as Moore suggested (*ICC*, Jdg. 12:13); *Sellem* in LXX (A) is a corruption of 'Hillel' rather than a pointer to Shaalim or *Shalisha; cf. J. Soggin, *Judges*, 1987, p. 224. The district was known as the Amalekite hills (*MT* and LXX B; LXX A, 'hill of Anak'); cf. Jdg. 5:14, though here also LXX A ('in the valley') disagrees. J.P.U.L.

PISGAH, ASHDOTH-PISGAH. Always accompanied by the definite article, Pisgah is associated with the ascent and either 'top' (head) or 'slope' (Ashdath). From these facts it may be deduced that Pisgah is a common noun denoting a ridge crowning a mountain or hill. 'The Pisgah' would then be one or more of the ridges common on the Transjordan plateau. 'The slopes of Pisgah' (Ashdath-pisgah) may refer to the entire edge of the Moabite plateau E of the Dead Sea (Dt. 3:17,

PISGAH, ASHDOTH-PISGAH

av; 4:49; Jos. 12:3; 13:20). These references relate to the territorial borders of the Amorites and later of the Reubenites.

Apart from the general plateau, Pisgah refers to a specific ridge or peak associated with Mt *Nebo. Nu. 21:20, a location on the route of the Israelites, and Nu. 23:14, one peak from which Balaam tried to curse God's people, are both close to the wilderness N and E of the Dead Sea (*JESHIMON), so also probably refer to the same ridge.

It was from 'the top of Pisgah, Mt Nebo' that Moses viewed the promised land before his death (Dt. 3:27; 34:1). This plateau headland is probably to be identified with Ras es Sijyaghah, the second and slightly lower N ridge of Mt Nebo. As this ridge protrudes further W, it provides a wider and less obstructed view over the land, and so is more likely to be the place of Moses' vision.

PISIDIA. A highland area in Asia Minor bounded by Lycaonia to the E and N, Pamphylia to the S, and the province of Asia to the N and W. The district lay at the W end of the Taurus range, and was the home of lawless mountain tribes who defied the efforts of the Persians and their Hellenistic successors to subdue them. The Seleucids founded Antioch (called 'the Pisidian' to distinguish it rather from the Phrygian Antioch on the Maeander than from the Seleucid capital of Syria) in order to control the Pisidian highlanders, and Amyntas with like aim founded a colony there about 25 bc, and linked the city with similar strong-points by a system of military roads. Paul's 'perils of robbers . . . perils in the wilderness' (2 Cor. 11:26) may have reference to this area, and it is a fair guess that, even in his day, the tradition of predatory independence was not yet dead among the mountaineers. Pisidia was part of the kingdom of Galatia assigned by Antony to Amyntas in 36 bc, and it was in warfare against the Pisidian hill tribes that Amyntas perished in 25 bc. Sulpicius Quirinius finally imposed some sort of order, and incorporated the region in the province of Galatia. The Roman Peace brought prosperity to the district and in the 2nd century several prosperous towns sprang up together with at least six strong churches. E.M.B.

PIT. Basically a deep hole, either natural or artificial, in the ground.

1. Heb. *bôr*, 'a deep hole', used to describe the place where Joseph was cast by his brethren (Gn. 37:20, 22, 24, *etc.*), a place to hide (1 Sa. 13:6), a place where lions lurked (2 Sa. 23:20; 1 Ch. 11:22), a place where prisoners were shut up (Is. 24:22; Zc. 9:11; *cf.* Je. 38:6), and where the rebel Ishmael cast the bodies of the men of Shechem, Shiloh and Samaria (Je. 41:7, 9).

The laws of Ex. 21:33-34 were directed to Israelites who opened up holes and left them uncovered (*cf.* Ec. 10:8, where the word is *gümmās*).

Metaphorically the word is used to describe the underworld, the place of departed spirits (Pss. 28:1; 30:3; 88:4, 6; 143:7; Pr. 1:12; Is. 14:15, 19; 38:18; Ezk. 26:20; 31:14, 16; 32:18, 24, *etc.*). A second metaphorical use describes the place from which God brings up his saints (Ps. 40:2; Is. 51:1).

2. Heb. *b'ēr*, a well. The vale of Siddim was full

of slime (bitumen) pits (Gn. 14:10). Used metaphorically, it is the pit of destruction (Pss. 55:23; 69:15). A harlot is described in Pr. 23:27 as a narrow pit.

3. Heb. *gēb* or *gebe*, a place where water is collected (Is. 30:14; Je. 14:3). 4. Heb. *paḥal*, 'a hole for trapping animals' (2 Sa. 17:9; 18:17; Is. 24:17-18; Je. 48:43-44). 5. Heb. *š'ōl*, Sheol, the underworld (Nu. 16:30, 33; Jb. 17:16). The same Heb. word is translated elsewhere in other ways. (*HELL.)

6. Three words from the Heb. root *šwh*: (i) *šihā*, 'a pit in the desert' (Je. 2:6), a place where Jeremiah was trapped by wicked men (Je. 18:20, 22), and the mouth of a strange woman (Pr. 22:14). (ii) *šahaq*, a trap in the ground for wild animals (Ps. 35:7; Ezk. 19:4, 8), or, more usually, the underworld (Jb. 33:18, 24, 28, 30; Pss. 9:15; 30:9; 94:13; Is. 38:17; 51:14; Ezk. 28:8). (iii) *šihā*, a trap (Pss. 57:6; 119:85; Je. 18:22).

7. Two words from the Heb. root *šhh*. *š'huṭ*, the pit which the wicked prepare for the righteous, into which they fall themselves (Pr. 28:10), and *š'hiṭ*, the lot of Zedekiah in 587 bc when he was taken in the pits of the enemy (La. 4:20).

8. In the NT the pit into which an ass falls is *bothynos* in Mt. 12:11 and *phrear* in Lk. 14:5. The bottomless pit of Rev. 9:1-2 is also *phrear*. (*ABYSS.)

Some idea of pits is to be obtained from archaeological discoveries. Quite regularly the cistern which served as a pit had a neck about the width of a man about 1 m in depth, and then opened out into a large bulbous cavity of varying size. Broken pottery and other remains in these pits are useful aids to dating the period when they were in use. (*POOL, *ARCHAEOLOGY.) The use of pits for trapping animals and men is also attested in extra-biblical texts. J.A.T

PITHOM (Old Egypt. *Pr-fim*, 'mansion of the god Atum'). A city of Egypt where the Israelites were afflicted with heavy building burdens (Ex. 1:11). Most accept that it was situated in Wadi Tumilat, at Tell el-Maskhuta or Tell er-Retaba. Not far away from this place was the migdol of Tjeku, which may be the biblical Succoth (Ex. 12:37; 13:20; Nu. 33:5-6). In Papyrus Anastasi, V, 19. 5-20. 6 we read that the chief of the archers went to Tjeku to prevent slaves from running away, but he came too late. Somebody had seen them crossing the N wall of the migdol of Seti-Merenptah. A second report, in Papyr. Anas., V, 18. 6-19. 1, refers to Libyan mercenaries who tried to flee and were taken back to Tjeku. A third mention, in Papyr. Anas., VI, 5. 1, emanates from a civil servant who had finished passing Shasu-nomads from Edom, S of the Dead Sea, into Egypt, at the fort of Tjeku, towards the marshes of Pithom of Merenptah of Tjeku. (*ENCAMPMENT BY THE SEA.)

PLAGUES OF EGYPT. In commissioning Moses to lead Israel out of Egypt, God had warned him that this would come about only through God's supreme power overcoming all the might of Pharaoh, whereby Egypt would be smitten with wonders or signs from God (*cf.* Ex. 3:19-20). After the sign of the rod that became a serpent and swal-

lowed up those of the Egyptian magicians, which left Pharaoh unmoved, God's power was demonstrated to him and his people in a series of ten judgments. They were so applied as to portray clearly the reality and power of Israel's God, and thus by contrast the impotence of Egypt's gods. The first nine of these plagues bear a direct relation to natural phenomena in the Nile valley, but the tenth, the death of the first-born, belongs wholly to the realm of the supernatural.

These first nine plagues demonstrate the divine vine use of the created order to achieve his ends, and recent studies tend to confirm both the reality of what is described in Ex. 7-12 and the powers of accurate, first-hand observation of the narrator of this part of Exodus. The element of miracle in these plagues is usually bound up with their intensity, timing and duration. By far the most painstaking study of the plague phenomena is that by G. Hort in *ZAW* 69, 1957, pp. 84-103, and *ZAW* 70, 1958, pp. 48-59. While her treatment of the first nine seems excellent, her attempt to explain the tenth as 'firstfruits' instead of first-born is decidedly artificial and unlikely.

Hort has pointed out that the first nine plagues form a logical and connected sequence, beginning with an abnormally high Nile-inundation occurring in the usual months of July and August and the series of plagues ending about March (Heb. *Abib*). In Egypt too high an inundation of the Nile was just as disastrous as too low a flood.

The first plague (Ex. 7:14-25)

Moses was commanded to stretch his rod over the Nile waters, that they should be 'turned to blood'; the fish in the river would die, the river stink, and its water be unpalatable; no immediate ending of these conditions is recorded. This would correspond with the conditions brought about by an unusually high Nile. The higher the Nile-flood, the more earth it carries in suspension, especially of the finely-divided 'red earth' from the basins of the Blue Nile and Atbara. And the more earth carried, the redder became the Nile waters. Such an excessive inundation could further bring down with it microcosms known as *flagellates* and associated bacteria: besides heightening the blood-red colour of the water, these would create conditions so unfavourable for the fish that they would die in large numbers as recorded. Their decomposition would foul the water and cause a stench. The rise of the Nile begins in July/August, reaches its maximum about September, and then falls again; this plague would therefore affect Egypt from July/August to October/November.

The second plague (Ex. 8:1-15)

Seven days later (7:25) Egypt was afflicted by swarms of frogs which, in accordance with God's promise, died *en masse* the following day and quickly decayed. That the frogs should swarm out of the river in August was most unusual. The numerous decomposing fish washed along the banks and backwaters of the Nile would pollute and infect the river-shore haunts of the frogs and the frogs themselves, which then came ashore in numbers, heading for the shelter of houses and fields. The sudden death and malodorous and rapid putrefaction of the frogs would indicate internal anthrax (from *Bacillus anthracis*) as the infection and cause.

The third plague (Ex. 8:16-19)

Hort suggests that this was an abnormal plague of mosquitoes (AV 'lice', RSV 'gnats'), whose already high rate of reproduction would be further encouraged by the specially-favourable breeding-conditions provided by an unusually high Nile.

The fourth plague (Ex. 8:20-32)

The particular 'fly' in question here was probably *Stomoxys calcitrans*. See below on the sixth plague, for which this insect is the likeliest agent.

The fifth plague (Ex. 9:1-7)

A 'very severe plague' upon all the Egyptians' cattle actually in the fields (not all livestock). A cattle pest that affected only the animals out in the fields might indicate that they had contracted anthrax from the infection carried into their fields by the frogs. If the Israelites' cattle were in their stalls they would not have been affected.

The sixth plague (Ex. 9:8-12)

The *boils 'breaking out in sores' were probably skin anthrax passed on by the bites of the carrier-fly *Stomoxys calcitrans*, which breeds in decaying vegetation and would have become a carrier of the disease from the infected haunts of the frogs and cattle. The boils may have affected particularly the hands and feet (Ex. 9:11: the magicians could not stand before Moses; cf. Dt. 28:27, 35), which would be a further clue in favour of the proposed identifications of the disease and its carrier, which would strike by about December/January.

The seventh plague (Ex. 9:13-35)

Heavy hail with thunder, lightning and rain. This ruined the barley and flax, but not the wheat and spelt, which were not yet grown up. This would fit early February. The concentration at this season of this sudden plague in Upper Egypt, but not in Goshen nearer the Mediterranean seaboard, fits the climatic phenomena of these areas.

The eighth plague (Ex. 10:1-20)

The heavy precipitation in Ethiopia and the Sudan which led to the extraordinarily high Nile would also provide favourable conditions for a dense plague of locusts by about March. These, following the usual route, would in due course be blown into N Egypt by the E wind; the 'west wind', *rūah-yām*, is literally 'sea-wind'; i.e. really a N (or NW) wind, and this would blow the locusts right up the Nile valley. Hort would then emend 'Red Sea' (*yām sūp̄*) to 'South' (*yāmīn*), but this is not strictly necessary.

The ninth plague (Ex. 10:21-29)

The 'thick darkness' which could be felt. This was a *khamisin* dust-storm, but no ordinary one. The heavy inundation had brought down and deposited masses of 'red earth', now dried out as a fine dust over the land. The effect of this when whirled up by a *khamisin* wind would be to make the air extraordinarily thick and dark, blotting out the light of the sun. The 'three days' of Ex. 10:23 is the known length of a *khamisin*. The intensity of the *khamisin* may suggest that it was early in the season, and would thus come in March. If the Israelites were dwelling in the region of Wadi Tumilat, they would miss the worst effects of this plague.

PLAGUES OF EGYPT

The tenth plague (Ex. 11:1–12:36)

So far God had demonstrated his full control over the natural creation. He had caused his servant Moses to announce the successive plagues and brought them to pass in invincible sequence and growing severity when the pharaoh ever more persistently refused to acknowledge Israel's God in face of the clearest credentials of his authority and power. In this final plague came the most explicit sign of God's precise and full control: the death of the first-born only. Nor did it come without adequate warning (Ex. 4:23); the pharaoh had had every opportunity to acknowledge God and obey his behest, and so had to take the consequences of refusal.

Other aspects

In later days Joshua reminded Israel in Canaan of their mighty deliverance from Egypt through the plagues (Jos. 24:5). The Philistines also knew of them and feared their Author (I Sa. 4:8). Later still, the psalmist sang of these awe-inspiring events (Ps. 78:43–51).

In Ex. 12:12 God speaks of executing judgments against all the gods of Egypt. In some measure he had already done so in the plagues, as Egypt's gods were much bound up with the forces of nature. Ha'pi, the Nile-god of inundation, had brought not prosperity but ruin; the frogs, symbol of Heqit, a goddess of fruitfulness, had brought only disease and wasting; the hail, rain and storm were the heralds of awesome events (as in the Pyramid Texts); and the light of the sun-god Rē was blotted out, to mention but a few of the deities affected.

The account of the plagues is emphatically a literary unity: it is only the *total* details of the whole and unitary narrative that correspond so strikingly with observable physical phenomena. The mere fragments of plagues that would feature in supposed documentary sources (J, E, P, etc.) and the schematic uniformity of features postulated for these correspond to no known phenomena. Arbitrary adaptation of such partial and stylized accounts into a new and conflated narrative that somehow then happens to correspond exactly to observable phenomena long past and in a distant land is surely beyond serious belief (so Hort). The plainer explanation and the unity of the narrative is to be preferred to a theory which involves unattested phenomena.

K. A. K.

PLAIN, CITIES OF THE. The cities of the plain were, chiefly, Sodom, Gomorrah, Admah, Zeboiim and Bela or Zoar (Gn. 14:2). It has been held that these were located N of the Dead Sea, where the Jordan Valley broadens into the 'Circle' or 'Plain' of the Jordan (cf. Dt. 34:3), the evidence being 'that Abraham and Lot looked upon the cities from near Bethel (Gn. 13:10), that *Circle of Jordan* is not applicable to the S of the Dead Sea, that the presence of five cities there is impossible and that the expedition of the Four Kings (Gn. 14:7), as it swept N from Kadesh-barnea, attacked Hazazon-tamar, probably Engedi, before it reached the Vale of Siddim and encountered the king of Sodom and his allies' (G. A. Smith, *Historical Geography of the Holy Land*²⁵, 1931, pp. 505f.).

On the other hand the view that the cities lie buried beneath the shallow waters of the S tip of

the Dead Sea (G. E. Wright, *Westminster Historical Atlas*, 1945, pp. 26, 65–66; *idem*, *Biblical Archaeology*, 1957, p. 50) can be maintained. First, Gn. 13:10 says that Lot saw, not the cities of the plain, but the 'Circle' of Jordan. He was attracted not by urban facilities but by good pasturage. Secondly, refusal to give the name 'Circle of Jordan' to, and denial of the possibility of five cities at, the S of the Dead Sea depends on present-day configuration, and disregards any alterations made by the overthrow. Thirdly, there is the identification of Hazazon-tamar with En-gedi. This depends on 2 Ch. 20:2, where the advancing Moabites and Ammonites are said to be 'in Hazazon-tamar (that is, En-gedi)'. The qualifying phrase ought not to be taken in this case as identifying the two places (as, e.g., in Gn. 14:3), unless we make the absurd assumption that after the time of Jehoshaphat the name En-gedi replaced Hazazon-tamar, thus necessitating an explanation of the archaism. The qualification 'that is, En-gedi' must, therefore, state more precisely where the enemy was in the general district designated by the first place-name. This suits the usage in Gn. 14:7 where, in a chapter full of parenthetic explanations of archaic place-names, Hazazon-tamar is left unexplained. We may therefore picture the cities of the plain as sited in the now-flooded area which once formed the S extension of the Circle of the Jordan.

As Lot saw it, the Circle was supremely attractive from every material viewpoint (Gn. 13:10), but it was to become desolate. The efficient cause of this destruction of the cities was probably an earthquake, with an accompanying release and explosion of gaseous deposits. Biblically and fundamentally it was God's judgment, remembered again and again throughout the Bible (Dt. 29:23; Is. 1:9; Je. 49:18; La. 4:6; Am. 4:11; Lk. 17:29; 2 Pet. 2:6); and Sodom became synonymous with brazen sin (Is. 3:9; La. 4:6; Jude 7). Whereas Ezk. 16:49–51 lists the sins of Sodom as pride, prosperous complacency and 'abominations', Gn. 19:4–5 concentrates on sexual perversion, particularly homosexuality. Lot's vicious offer of his daughters (v. 8) indicates the life and demoralizing influence of Sodom. The report that a cuneiform tablet from *Ebla lists the five cities rests on a misidentification.

The story of Sodom does not merely warn, but provides a theologically documented account of divine judgment implemented by 'natural' disaster. The history is faith's guarantee that the Judge of all the earth does right (Gn. 18:25). Being personally persuaded of its justice and necessity (Gn. 18:20–21), God acts; but in wrath he remembers mercy, and in judgment discrimination (Gn. 19:16, 29). (Cf. *ARCHAEOLOGY for bibliography.)

J. A. M.

PLANTS. Any attempt to pronounce upon the nature and identity of the various biblical plants must avoid a number of pitfalls. One of these is the tacit assumption that they are identical with those designated by the same names in different parts of the world today. Another is the assumption that plants found in Palestine today were also native to that area in biblical times. In addition, different versions of Scripture frequently reflect wrong identifications and there is confusion of botanical nomenclature and the like by the translators. This is partly due to the fact that for the original writers

present-day standards of accuracy in botanical matters were not pressing considerations, and, in addition, their terminology was by no means as comprehensive as that of the modern botanist. The AV, made at a time when little was known of the natural history of the Holy Land and before scientific classification had begun, contributed materially to the degree of confusion already existing regarding the identification of plants. The RSV and other modern versions correct obvious errors, but there remain differences of opinion as to the identity of some plant names, including that of * trees.

The following represent some wild biblical plants and those not included in single or composite entries.

Broom (Heb. *rōṭem* and variants; AV 'juniper'). A common Palestinian shrub (*Retama raetama*) of sandy places, 2–4 m high, with numerous white pea flowers in the spring. Elijah in despair sat under one (1 Ki. 19:4–5). Its roots produce excellent charcoal which was used for incendiary arrows (Ps. 120:4) and for warmth (Jb. 30:4), although some authors consider the latter verse refers to the parasitic plant *Cynomorium coccineum*, which grows upon broom roots and may be edible (cf. AV).

Castor-oil. The correct rendering of the Heb. *qīqāyōn* (Jon. 4:6) has been disputed by many scholars. Pliny and Herodotus assumed it to be the castor-oil plant (*Ricinus communis*, the *kroton* of the Greeks) and they are followed by many versions (RSVmg.). It is a rapidly-growing shrub which could have afforded shade to Jonah and is said to wither even after only slight handling, as Jonah's did. Others, starting from LXX (Gk. *kolokynta*, but not the ground-trailing colocynth) suggest the bottle-gourd (*Cucurbita lagenaria*, Arab. *qar'ah*, AV 'gourd') which is more adequate botanically, since the biblical context requires a vine rather than a small tree like the castor-oil. The reference may therefore be to such a 'lodge' as sheltered watchers over cucumbers (see Is. 1:8), and which would also be subject to rapid withering, although there may not be a satisfactory natural explanation to an event that was clearly under the control of the Lord.

Crocus. In Is. 35:1 the Heb. *h'basdseleṭ* means bulb, hence the RSV rendering 'crocus' (although strictly a corm). There are many species of *crocus* in Palestine flowering during the winter. The LXX rendered it as *krinon* ('lily'), AV 'rose', and NEB 'asphodel', which has root tubers. The polyanthus narcissus (*Narcissus tazetta*) would be an even better suggestion since it is a truly bulbous plant. Crocus may also be intended in the reference to the 'rose of Sharon', Ct. 2:1. See **Rose**, below.

Hyssop (Heb. *'ēzōḅ*; Gk. *hyssōpos*). Several distinct species of plant are evidently referred to by this name in the Bible, but there is considerable discussion as to their identity. It is certain, however, that the present-day herb known as hyssop (*Hyssopus officinalis*) was not one of them, since it is native to S Europe.

In the OT 'hyssop' was used in the Passover rites (Ex. 12:22) for the purification of lepers (Lv. 14:4, 6), for plague (Lv. 14:49–52) and at the red heifer sacrifice (Nu. 19:2–6; cf. Heb. 9:19). The purifying qualities of 'hyssop' are referred to in Ps. 51:7. This plant is generally considered to be the Syrian marjoram (*Origanum syriacum*) which is a fragrant

grey-leaved wiry-stemmed perennial herb, 20–30 cm high, with white flowers in small heads, growing in dry rocky places. A different plant is considered to be mentioned in 1 Ki. 4:33, probably the caper (*Capparis spinosa*) which is commonly seen in walls of old buildings: it has very prickly woody stems and large whitish flowers.

In the NT the 'hyssop' employed at the crucifixion (Jn. 19:29, where NEB reads *hyssō*, 'on a javelin') was probably a reed or stick, but the reed-like cereal durra (*Sorghum vulgare*) has been considered the most likely suggestion.

Lily (Heb. *sōṣān*, and variants; Gk. *krinon*). As with the 'rose' of the Bible there has been considerable speculation as to the botanical identity of the 'lily'. In common usage the word may be applied to several decorative plants. Most of the references in Ct. are thought to be to the hyacinth (*Hyacinthus orientalis*), a bulbous plant with blue flowers, although the lily-like lips of Ct. 5:13 may allude to the scarlet tulip (*Tulipa sharonensis*) or red poppy anemone (*Anemone coronaria*), myrrh resin also mentioned, being red. Although the white madonna lily (*Lilium candidum*) is wild in Palestine, it inhabits rocky places and it is unlikely to be the plant referred to in Ct. 6:2–3, as has been suggested. The 'lily' of Ho. 14:5 is by implication of a moist habitat likely to be the yellow flag (*Iris pseudacorus*), the 'fleur de lis' of the French.

The references to 'lily-work' on the columns of Solomon's Temple in 1 Ki. 7:19, 22, 26 and 2 Ch. 4:5 are probably to carved representations of the water-lily. The Egyptian lotus (the blue flowered *Nymphaea caerulea* and white *N. lotus*) exercised a wide influence over ancient Near Eastern art, as evidenced by the presence of the lotus motif in many Egyptian and Palestinian archaeological objects d'art.

The 'lilies of the field' (Mt. 6:28; Lk. 12:27) could refer to any of the spectacular and beautiful flowers of the Palestinian countryside. Many have been suggested, including the poppy anemone *Anemone coronaria* and the white daisy *Anthemis palaestina* or the crown marguerite *Chrysanthemum coronarium*.

Mallow (Heb. *maliūah*, AV 'mallows', Jb. 30:4). The term implies 'saltiness', whether referring to the taste of the plant or to its habitat. The most likely species is the shrubby orache (*Atriplex halimus*), of salty places by the Dead Sea or Mediterranean. The mallow (*Malva rotundifolia*) may be used like spinach, but it is not salty to the taste and it is a common weed of waste but not saline places.

Mandrake (Heb. *dūdā'im*; *Mandragora officinarum*). A perennial herb of the nightshade family with a rosette of large leaves, mauve flowers during the winter and fragrant round yellow fruits in the spring (Ct. 7:13). It is reputed to have emetic, purgative and narcotic qualities. The forked, torso-like shape of the tap-root gave rise to many superstitions. Aphrodisiac properties have been ascribed to it since an early period, which explains the argument between Rachel and Leah (Gn. 30:14). It grows in fields and rough ground in Palestine and the Mediterranean region.

Mildew (Heb. *yērāqōn*, 'paleness', 'greenness'; cf. LXX *ikteros*, 'jaundice'). A common species of fungus (*Puccinia graminis*) which, in moist conditions,

PLANTS

attacks the crops in Palestine. In biblical times it was regarded as God's punishment on the disobedient (Dt. 28:22; Am. 4:9; Hg. 2:17), and Solomon prayed for deliverance from it (1 Ki. 8:37; 2 Ch. 6:28). The Bible always mentions mildew in conjunction with the opposite conditions, 'blight' or 'blasting' (Heb. *šiddāpōn*, lit. 'scorching'), a drying up of plants by the hot sirocco or *ḥamsin* wind from the S.

Mustard. Much controversy surrounds the identification of the plant (Gk. *sinapi*) whose seed was used by Christ as an illustration of something which develops rapidly from small beginnings, such as the kingdom of heaven (Mt. 13:31; Mk. 4:31; Lk. 13:19), or the faith of an individual (Mt. 17:20; Lk. 17:6). Some scholars consider that the black mustard (*Brassica nigra*) is indicated, since in NT times its seeds were cultivated for their oil as well as for culinary purposes. It can grow to a height of 5 m, although it is usually much smaller. One interpretation sees the 'mustard' as a monstrous plant foretelling the worldly expression of Christendom, with evil, as exemplified by the birds, in its branches.

Myrtle (Heb. *h^adas*; *Myrtus communis*). A shrub of Palestinian hillsides, usually 2–3 m high, with fragrant evergreen leaves and scented white flowers used as perfumes. Scriptural references envisage the myrtle as symbolizing divine generosity. Isaiah foresaw the myrtle as replacing the brier in the wilderness (Is. 41:19; 55:13). Zechariah in a vision symbolizing peace saw a grove of myrtle trees (Zc. 1:8–11), while in Ne. 8:15 the Jews brought myrtle branches from Olivet to construct shelters at the Feast of Booths (Tabernacles) of Lv. 23:40; Dt. 16:16. The name Hadassah (Esther) was derived from the Heb. term.

Nettles. There is some uncertainty about the precise plants referred to in the above translation of the two Heb. words. I. *hārūl*, perhaps from the obsolete root *hāral*, 'to be sharp', 'to sting'. Found in Jb. 30:7 (LXX 'wild brushwood'); Pr. 24:31; Zp. 2:9; RVmg. in each case renders 'wild vetches' and NEB as 'scrub' or 'weeds'. 2. *qimmōs* (Is. 34:13; Ho. 9:6). Probably the true nettle, of which the most common Palestine species is *Urtica pilulifera*, which occurs in waste places. (See also **Thistles**, below.)

Nuts. Two Heb. words are thus translated. I. '*gōz* (Arab. *gawz*), in Ct. 6:11 only, probably referring to the walnut (*Juglans regia*), an introduction from Persia. 2. *botnim* (Gn. 43:11 only) is usually considered to be the pistachio nut (*Pistachia vera*), the fruits of which must have been imported from further E where it grew before it was cultivated in the E Mediterranean area. However, the native terebinths (*P. atlantica* and *P. terebinthus* var. *palaestina*) also yield edible nuts of a small size. Some Jewish authors identify this Heb. word with the carob. (See **Pods**.)

Pods (Gk. *keratia*). A sweet dry fruit eaten by animals and by the poor. The prodigal son in his hunger would gladly have done so (Lk. 15:16, AV 'husks'). It is the seed-pod of the carob tree (*Ceratonia siliqua*), common in the Mediterranean region, where it is also called the locust bean and St John's bread from a tradition that they were the

'locusts' which John the Baptist ate, although these are more likely to have been the actual locust insect (* ANIMALS).

Reed. I. Heb. '*āhū* (Jb. 8:11, AV 'flag'; Gn. 41:2, 18, AV 'meadow'). This is a general word for water-loving plants found in swamps and by riverbanks—hence Bildad's rhetorical question ('Can the reed grow without water?').

2. Heb. *sūp*, 'reed' (Ex. 2:3, 5; Is. 19:6). Evidently specifically applied to the moisture-loving cat-tail or reed-mace (*Typha angustata*) still common around the Nile and its canals. The Red Sea (*yam sūp*) is literally the 'sea of Reeds' (cf. Egyp. *p'-twf*).

3. Heb. *qāneh*; Gk. *kalamos*. Tall grasses growing in wet places (marshes, river-banks, etc.), often the haunts of large aquatic animals (cf. Jb. 40:21; Is. 19:6–7; 35:7). The Heb. and Gk. words are both quite general terms, although some think that the *Arundo donax* of Palestine and Egypt, growing to 3 m high or more, and the smaller common reed (*Phragmites communis*) are the plant usually intended. Israel under God's judgment is like a reed shaken in the water (1 Ki. 14:15); and in Christ's words, wind-blown reeds and richly dressed courtiers will not be found in a dry wilderness (Mt. 11:7–8; Lk. 7:24). If undue weight be rested on a reed-stalk it will break irregularly, and the snags will pierce the hand. Just so did Egypt fail Israel in the days of Isaiah (Is. 36:6; 2 Ki. 18:21), Jeremiah and Ezekiel (Ezk. 29:6–7). The 'bruised reed' could be symbolic of the weak whom the Messiah would not break off (Is. 42:3; Mt. 12:20).

Before the crucifixion, the soldiers gave Christ a reed as a mock sceptre, and then struck him with it (Mt. 27:29–30; Mk. 15:19). On the cross he was offered a spongy of vinegar on the end of a reed (Mt. 27:48; Mk. 15:36; or 'hyssop', Jn. 19:29). A reed could serve as a measuring-rod, and gave its name to a measure of 6 cubits (Ezk. 40:3–8; 41:8 (the 6 cubits); 42:16–19; Rev. 11:1; 21:15–16), as did the same term *qanu* in Mesopotamia. (* WEIGHTS AND MEASURES.)

Rose. The true rose, e.g. *Rosa phoenicia*, is uncommon in Palestine and the 'rose of Sharon' (Ct. 2:1) is unlikely to be this plant. *Anemone*, *Cistus*, *Narcissus*, *Tulipa* and *Crocus* have been mentioned as possibilities.

In the Apocrypha the 'rose' of Ecclus 1:8 bloomed in spring and may be either a tulip, narcissus or crocus. In Ecclus 24:14 and 39:13 the references are probably to oleander (*Nerium oleander*) which is a tall, pink-flowered shrub with poisonous leaves that inhabits rocky streams. The 'roses' of 2 Esdras 2:19 and 'rosebuds' of Wisdom 2:8 have been variously regarded as species of rock-rose (*Cistus*), rose (*Rosa*) or oleander.

Rush. The word rush should apply to species of *Juncus*, but the term is loosely applied to other water-loving plants (except marsh grasses, which are reeds), such as reed-mace also called cat-tail (*Typha*), and sedges such as papyrus (*Cyperus papyrus*) and corresponds to the Heb. '*aḡmōn* and *gōme*'. The former is a general word, 'rushes', 'reed'. For her unfaithfulness to God, Israel is stripped even of such ordinary basic raw materials as 'palm branch and reed' (Is. 9:14), while these, for all their utility, will not avail Egypt in her troubles (Is. 19:15). Rushes could be woven into rope, or used as fuel (Jb. 41:2, 20). The head bowed in out-

ward penitence is like the bent-over tip of the rush (Is. 58:5); here the papyrus plant is probably intended since it does not snap off but is easily bent by the wind and hangs down.

The term *gōme* may signify the papyrus-plant (for which see *PAPYRI AND OSTRACA, I), or else reeds generally; either meaning suits the biblical references to *gōme*, which is depicted growing in the marsh (Jb. 8:11), symbolizing swampy growth (Is. 35:7), used for papyrus skiffs in Egypt and Ethiopia (Is. 18:2) and Moses' basket of bulrushes (Ex. 2:3). Heb. *gōme* is probably the same as Egypt. *gmy* and *kmy*, 'reeds', 'rushes', attested from the 13th century BC onwards, and *kam* in Coptic. (See R. A. Caminos, *Late-Egyptian Miscellanies*, 1954, pp. 167-168. 412; cf. W. Spiegelberg, *Koptische Etymologien*, 1920, pp. 4-6; T. O. Lambdin, *JAOS* 73, 1953, p. 149.)

Shrub (Heb. *'ar'ār*, Je. 17:6). The Heb. word, rendered 'shrub' in RSV (AV 'heath'), is considered by Jewish scholars to be the Phoenician juniper (*Juniperus phoenicea*). The tamarisk (*Tamarix* sp.) has also been suggested. A similar word *'rō'ēr* in Je. 48:6 appears as 'wild ass' in RSV and 'heath' in AV.

Thistles, Thorns. Botanists have difficulty identifying the thistles, thorns, briars, bramble and other prickly plants mentioned in Scripture, owing to the fact that over twenty different words are employed to describe such plants, of which there are many in the dry Palestinian countryside. These prickly *weeds fall into genera such as *Centaurea*, *Ononis*, *Silybum*, *Notobasis* and *Poterium*. In many instances the Heb. and Gk. words for them are as imprecise as Eng. ones.

In general, thorns expressed the concept of fruitlessness or vexatious endeavour (Gn. 3:18; Nu. 33:55; Jos. 23:13). They were evidence of divine judgment on the ungodly (Na. 1:10), or of sheer misfortune (Ezk. 2:6). If allowed to grow unchecked in orchards or vineyards they made serious inroads on the productivity of the trees and vines (Pr. 24:31; Is. 5:6; Je. 12:13), but when kept in control and arranged in the form of hedges they served as effective barriers to wild animals (Ho. 2:6; Mt. 21:33). Thorns were popular quick-burning fuel in OT times, as among the modern bedouin Arabs (Ps. 58:9; Is. 9:18; 10:17). The destructive nature of thistles and thorns was expressed graphically in the Gospel parables (Mt. 13:7; Mk. 4:7; Lk. 8:7), as was their essential fruitlessness (Mt. 7:16). Thistles are herbaceous plants, whereas thorns are woody. In the parable of the sower (Mt. 13:7, etc.) the 'thorns' among which the grain fell were likely to have been the milk thistle (*Silybum marianum*) which infests field margins and grows rapidly.

Some of the biblical references to 'thorns' are to the holy bramble (*Rubus sanguineus*). Those of Pr. 15:19 and Ho. 2:6 may be the latter, while 'thorns of the wilderness' (Jdg. 8:7) may be an acacia, or *Ziziphus lotus*, and the 'briars' boxthorn (*Lycium* sp.), which is the 'bramble' of Jotham's parable (Jdg. 9:14). The crown of *thorns (Mt. 27:29; Mk. 15:17; Jn. 19:5) plaited for Jesus before his crucifixion would have been made of some locally available material. Although the 'Christ thorn' shrub (*Paliurus spina-christi*), which has long thorny branches, is not now found around Jerusalem, it is known to have grown near there in ancient times. However, some authors consider that the small

spiny burnet (*Poterium spinosum*) or tree *Ziziphus spina-christi* was used; others have suggested the thorns of the *Phoenix dactylifera*, in mock imitation of the radiate crown (cf. H. St. J. Hart, *JTS* n.s. 3, 1952, pp. 66ff.). (See also Nettles, above.)

Tumbleweed. Heb. *galgal* is rendered in EVV 'wheel', 'rolling thing', 'thistle down' and 'whirling dust' (Is. 17:13; Ps. 83:13, RSV 'tumble weed'). It implies one of the wind-distributed fruiting bodies of certain plants growing in open dry habitats. Such Palestinian plants are *Grundelia tournefortii* and *Cachrys goniocarpa*, as well as the hairy grains of some grasses that collect as rolling balls. *Anastatica hierochuntica* is not one of these, as has of ten been suggested, since it remains firmly anchored by its root even when dead.

Vine of Sodom. A variety of opinion exists regarding the nature of the allusions in the Song of Moses (Dt. 32:32). There is a distinct possibility that the expression may be figurative, describing the bitterness of Israel's enemies. If a real plant, one which conceals a powdery substance underneath an attractive rind is indicated. *Solanum sodomium*, or *Calotropis procera*, with feathery seeds in an inflated fruit, has been suggested. More probably the phrase arose from association with the colocynt, a wild *gourd, *Citrullus colocynthis*, which trails on sandy ground near the Dead Sea and has bitter, light-weight fruits.

Weeds. Usually applied to wild plants of cultivated and waste ground. In the Bible represented as a scourge of useless, troublesome plants as indeed they were to the farmer. RSV renders several words as 'weeds', especially Gk. *zizania*, Arab. *zuwān*, which AV calls 'tares', and is probably more correctly considered (as in NEB) to be the darnel grass (*Lolium temulentum*). In the leafy stage this grass resembles wheat, but if the biblical counsel be followed and both are allowed to grow together till harvest (Mt. 13:30) the small ear is clearly distinguished, and usually to women and children falls the tedious manual task of separation. If the wheat grain is contaminated with the bitter darnel grains subsequent poisoning causes illness and vomiting. Sowing darnel in a field for purposes of revenge (cf. Mt. 13:25f.) was a crime under Roman legislation. The necessity for a law on the subject suggests that the action was not infrequent.

NEB renders other words as 'weeds' which appear in RSV as *nettles or *thorns.

The cockle (*Agrostemma githago*) was a curse of English wheat fields at the time the AV was being translated, but there is no evidence that it occurred in Palestine. Later translations are probably correct in rendering the Heb. *bo'sā*, referred to by Job while defending his integrity (31:38-40), by some general term such as 'stinking weeds', AVmg.: 'noisome weeds', RVmg.: 'foul weeds'. RSV: 'weeds', NEB. Evidently this weed was prickly and it has been identified with the oyster thistle (*Scolymus maculatus*) and the rest-harrow (*Ononis antiquorum*).

Wild vine, wild gourds (Heb. *paqqū'āl*, 'bursters'). Mentioned in 2 Ki. 4:39 these gourds were the colocynt (*Citrullus colocynthis*). Like small melons in appearance, the fruits are a violent purge which may be dangerous. The colocynt trails along the ground in sandy places by the Dead Sea.

Wormwood (Heb. *la'nā*, Gk. *apsinthos*). Many species of wormwood grow in Palestine, but the

PLANTS

biblical references are either to *Artemisia herba-alba* or *A. judaica*. All species have a strong, bitter taste, leading to the use of the plant as a symbol of bitterness, sorrow and calamity (Pr. 5:4; La. 3:15, 19; Am. 5:7; 6:12 (AV 'hemlock')). Moses used it to show the perils of secret idolatry (Dt. 29:18, rsv 'bitter root'), as did Jeremiah in warning of the punishment awaiting disobedient Israel (Je. 9:15; 23:15).

BIBLIOGRAPHY. N. Feinbrun-Dothan and A. Danin, *Analytical Flora of Eretz-Israel*, 1991 (Heb.); A. Goor and M. Nurock, *Fruits of the Holy Land*, 1968; F. N. Hepper, *IEBP*; I Löw, *Die Flora der Juden*, 1-4, 1924-34; H. N. and A. L. Moldenke, *Plants of the Bible*, 1952; U. Pitman *et al.*, *Pictorial Flora of Israel*, 1983 (Heb.); D. Zohary and M. Hopf, *Domestication of Plants in the Old World*, 1988; M. Zohary, *Plant-life of Palestine*, 1962; *idem*, *Plants of the Bible*, 1982; *idem* and N. Feinbrun-Dothan, *Flora Palaestina*, 1-4, 1966-86. F.N.H. *et al.*

PLASTER. I. The inner, and sometimes outer, walls of buildings were covered with a plaster commonly made of clay (Lv. 14:42-43; Heb. *tūah*, 'to coat, overlay'; Arab. *tāḥa*). Such plaster is attested from prehistoric times (*JERICHO). A better plaster was made by heating crushed limestone or gypsum (Heb. *šid*, 'to boil'). This enabled rough stones or brickwork to be covered with a fine surface which could be painted or inscribed, as was done on the altar at Ebal (Dt. 27:2, 4). (An example has been found at Deir 'Alla in the Jordan Valley.) It was used for basins, cisterns and walls. A glazed surface on brickwork was obtained by firing in a kiln (Is. 27:9; Heb. *gir*). Such a 'plaster' (AV) was broken by the handwriting on the palace wall in Babylon (Dn. 5:5; Aram. *girā*). (*GLASS.)

2. The 'plaster' used to cure Hezekiah (Is. 38:21, AV; Heb. *mārah*) was a poultice made of crushed figs. A similar medical term is used in the Ras Shamra texts and Egyp. Ebers Papyrus. D.J.W.

PLOUGHMAN. In the OT there are three Heb. expressions which are rendered 'ploughman'.

1. *'ikkār*. The cognate Akkadian ideogram describes the *'ikkār* as 'man of the plough'. The exact social position and function of the *'ikkār* is uncertain, but the code of Hammurapi suggests that he was a hired agricultural foreman. The OT contrasts the shepherd with the *'ikkār* (Is. 61:5).

2. *yōḡēḇ* (2 Ki. 25:12; Je. 52:16). Consideration of the related Heb. *gūḇ* and Arab. *ḡāba*, 'to bore', 'hollow out', may suggest that the *yōḡēḇ* was a spade labourer.

3. *'is* "dāmā means literally 'man of soil', but a comparison of Gn. 9:20 and Zc. 13:5 shows that it refers indifferently to an arable or cattle farmer.

LXX and NT employ *geōrgos*, 'farmer, tenant farmer', throughout. God is pictured as the husbandman of the true vine (Jn. 15:1) and of the church (I Cor. 3:9). R.J.W.

POETRY.

I. In the Old Testament

Although poetry occurs very frequently in the OT, the division between prose and poetry in ancient

Heb. is not precise. No single literary trait occurs only in what we call poetry to the exclusion of prose. Nonetheless, certain literary devices in poetry allow us to identify poems with a high level of confidence. These traits may be discussed under four headings: terseness, parallelism, imagery, and secondary literary devices.

Ancient Heb. poetry is terse. The lines are short, usually containing only three or four Heb. words. Economy of expression is further achieved by a relative lack of conjunctions. The result is something noticed by even casual readers of English Bibles: wider margins.

The poems of the Bible are comprised of cola, which are grouped into lines, which in turn are grouped into stanzas. Prose narrative, on the other hand, is built with sentences which are grouped into paragraphs. The typical poetic line is a bicolon: *i.e.*, two cola which are united by parallelism into a single line. An example is Psalm 78:1:

Oh my people, hear my teaching:
listen to the words of my mouth.

Parallelism is a major element in biblical poetry and was named by Bishop Robert Lowth (*Lectures on the Sacred Poetry of the Hebrews*) in 1753. Lowth borrowed the term from mathematics and thus implied symmetry, *i.e.* the first colon (A) and the second (B) are equal. Hence the popular understanding that a parallel line 'says the same thing twice'.

The above example best illustrates what Lowth called 'synonymous parallelism'. He also described 'antithetical parallelism' in which the same truth is seen from two different perspectives:

The tongue of the wise commends knowledge,
but the mouth of the fool gushes folly.
(Pr. 15:2)

A third category, into which all anomalous cases fell, he called 'synthetic parallelism':

'I have installed my King
on Zion, my holy hill.' (Ps. 2:6)

More recently James Kugel, Robert Alter and Adele Berlin have redefined parallelism in a subtle but far-reaching manner. Rather than continuing Lowth's approach, which saw the A and B cola as essentially restatements of the same proposition, they observe that the second colon always specifies, and carries forward the thought expressed in the first colon. In Kugel's formulation 'A, what's more B'. Berlin applied this formula to grammatical parallelism. An illustration of parallelism is Psalm 131:1:

My heart is not proud, O Lord,
my eyes are not haughty;
I do not concern myself with great matters . . .

As we read these three cola, we take them as a unit because of their similarity of content and intent. In all three the psalmist distances himself from pride. But there is also progress as we move from A to B to C. In A, the psalmist denies pride in his heart, the very core of his personality. In B, he denies pride in his demeanor. In C, he denies pride in his actions.

Besides terseness and parallelism, biblical poetry contains intense imagery. Imagery stimulates the imagination by embodying multiple meanings in a concise form. An image not only triggers a train of

thinking about a subject but also evokes an emotional response.

Imagery is often the result of comparison, the two most common types being metaphor and simile. Simile, on one level, is not even figurative language; it is capable of being understood on a literal level. A simile is a comparison between two things and is marked by the use of 'like' or 'as'. Song of Songs 4:1b is a clear example:

Your hair is like a flock of goats
descending from Mount Gilead.

Metaphor presents a stronger connection between the two objects of comparison and is truly figurative language, as in Song. 4:1a:

Your eyes behind your veil are doves.

A well-known example comes from the first line of Psalm 23:

The Lord is my shepherd.
I shall not be in want.

What does it mean to compare the Lord to a shepherd? To read the image in context, we would immediately suggest that the poem speaks of God's protection, his guidance, and his care. We would stop short, however, if we did not remember that the shepherd image was a well-used royal image in the ancient Near East. Reading the text sympathetically, we would experience assurance and feel comfort even in the midst of danger.

Terseness, parallelism and imagery are the three main primary traits of biblical poetry. The acrostic form is a striking example of a secondary poetic device. These devices are secondary because they occur only occasionally.

An acrostic is a poem in which the first letters of successive lines form a recognizable pattern. The examples found in the OT all follow the order of the Heb. alphabet. The two most famous are perhaps the so-called Giant Psalm (119), which is broken up into eight-verse stanzas by the acrostic, and the book of Lamentations. One of the more interesting acrostic patterns is found in the first chapter of Nahum. The acrostic covers only half the alphabet and even skips an occasional letter. Other acrostics in Heb. occur as Pss. 9, 10, 25, 34, 37, 111, 112, 145; Pr. 31:10-31; La. 1-4.

The purpose of acrostic form may only be guessed. It may help in the process of memorization. It may also communicate a sense of wholeness. As Watson points out, 'By using every letter of the alphabet the poet was trying to ensure that his treatment of a particular topic was complete' (Watson 198).

A neglected secondary convention of Heb. poetry is the use of stanzas and strophes. Most studies of biblical poetry have concentrated on the level of the parallel line. Little has been done to describe rhetorical patterns that encompass the whole poem.

There is no doubt that most poems are unified wholes, but the relationship between the parts is almost always described in terms of content. For instance, grief psalms share a similar structure, e.g. Psalm 69: invocation and initial plea to God for help (v. 1a); complaints (vv. 1b-4, 7-12, 19-21); confession of sin (vv. 5-6); further pleas for help (vv. 13-18); imprecation (vv. 22-28); hymn of praise (vv. 30-36).

Each of these sections is composed of at least

one and usually more than one parallel line. Are these broader groupings stanzas and/or strophes? Watson (160-200) argues that they are, as long as these terms are understood in the broad sense as 'units within the poem'.

Biblical poems then, may have a structure (in content and in style) that goes beyond the individual line and encompasses the whole poem.

The question of the existence of meter in biblical poetry has been widely discussed since the church fathers. In recent years a consensus has grown that either the meter of biblical poetry is undetectable or else, as seems more likely, it is non-existent.

Old Testament poetic types

Four principal types of poems can be discerned in the OT: lyric, epic, prophetic and dramatic. These four types often overlap.

The psalms are clear examples of biblical lyric, as is the Song of Songs, as both are personal expressions of deeply-held emotions. Indeed, the psalms explore the whole emotional spectrum, from the brightest joy to the darkest anger and grief, just as the love poems in the Song of Songs portray the full range of romantic sentiments.

Historical poems differ from lyric in that they recall past events, in particular the great acts of God. They are usually expressions of thanks to God for these events. Exodus 15 is a prime example, as it recalls in loving detail the miraculous deliverance of Israel from the Egyptians at the Red Sea.

The poetry of the prophets has a lyrical and a historical dimension. But the prophets use poetry with a more intense appeal to the wills of their hearers. They seek to persuade and to convict, and to achieve this they use the heightened language of poetry.

Conclusion

The extensive occurrence of poetry throughout the OT and its continued use in the NT remind us that the Bible is not simply an informative book. The biblical authors stimulate our imaginations as they fill our minds with images that give us an adequate, but partial, glimpse of the nature of God and of his relationship with his creatures.

T.L.

II. In the New Testament

a. Psalms

Three, perhaps four, typical Heb. hymns are preserved in Luke's Gospel: the **Magnificat* (Lk. 1:46-55), the **Benedictus* (Lk. 1:68-79), the **Nunc Dimittis* (Lk. 2:29-32) and the *Gloria* (Lk. 2:14). All of these passages are in the style and spirit of OT psalms, majestic in language, and

POETRY

constructed on the pattern of verbal parallelism proper to Heb. poetry.

b. Hymns

Early Christian hymns may have been poems of mixed tradition (Eph. 5:19), reflecting both the form of the Heb. psalm and that of the Gk. lyric. It has been suggested that numerous passages in the NT are direct and indirect quotations from this corpus of sacred poetry: e.g. Eph. 5:14 and I Tim. 3:16, where the Hebraic structure is especially striking. Perhaps Col. 1:13–20 and 2 Cor. 5:14–18 are of the same order.

c. Poetic language

This may be discussed under three heads:

(i) It is impossible decisively to distinguish between what may have been direct quotation of rhythmical and poetic utterance, and exalted prose couched in poetic language. In the warm, emotive style of Heb. writing it is always difficult to distinguish sharply poetry from prose, and in passages of deep emotion the NT often adopts such a style. Consider brief ascriptions of praise such as Jude 24–25, and Rev. 5:12–14; rhythmic constructions such as Jn. 14:27; Rom. 11:2, 33 and I Cor. 15:54–57; or parallelisms strong in their antitheses such as Jn. 3:20–21, or Rom. 2:6–10; and parallelism of chiasmic form and pattern such as Phil. 3:3–10, and Jn. 10:14–15. All these passages, and many others, reveal the influence of the poetry of the OT on the language of the NT, both in form and colouring. Less in debt to Heb. speech, but still of the nature of poetry, are such lofty passages as Rom. 12; I Cor. 13 and Phil. 2.

(ii) Tropes and figures are part of the language and tradition of poetry, and have found some mention under *c* (i), above. Paronomasia and alliteration may, however, be separately considered. In several passages the Greek of the NT reveals an artificial assonance, accompanied sometimes by alliteration: e.g. Lk. 21:11 (*loimoi, limoi*); Rom. 1:29 (*phthonou, phonou*); Acts 17:25 (*zōēn, pnoēn*); Heb. 5:8 (*emathen, epathen*); Rom. 12:3 (*hyperphronein, phronein, sōphronein*). Mt. 16:18 (*Petros, petra*) and Phm. 10 and 20 (*Onēsimum, onaimēn*) involve puns. Acts 8:30 (*ginōskeis, anaginōskeis*) is probably accidental.

(iii) Mt. 24 and the parallel Synoptic passages, together with the whole of the Apocalypse, are couched in the traditional language of Heb. apocalyptic poetry or prophecy, a type of literature found in Daniel, Ezekiel and Zechariah. It is based on imagery of an allusive nature, and is sometimes designed for private interpretation. It is not unlike certain forms of modern poetry, first brought into fashion by G. M. Hopkins, and practised with some skill by T. S. Eliot. It follows that the 'poetic' interpretation is one legitimate approach to the Apocalypse, and certainly a rewarding one. It may also be remarked that some of the imagery of the book may lack interpretation because of the loss of the key to the allusion, once doubtless possessed.

d. Quotation

The NT is uncommonly full of quotation from the poetic literature of the OT. Parts of the Epistle to the Hebrews are composed almost entirely of such references. So are parts of the Epistle to the Romans. More elusive and less frequent are some direct quotations from Gk. literature. Acts 17:28, 'for we are indeed his offspring', is the former half of an hexameter by Aratus of Soli in Cilicia (315–240 BC). The same phrase occurs in a surviving

fragment of Cleanthes, who was the head of the Stoic school from 263 to 232 BC. There is some evidence that the passage contains a more remote quotation from Epimenides, the half-legendary Cretan poet from whom Paul quotes a complete hexameter at Tit. 1:12. Then, in I Cor. 15:33 an iambic trimeter of Menander (342–291 BC), the Athenian comic poet, is quoted ('evil communications corrupt good manners'). Again, the Greek of Jas. 1:17 contains a pure hexameter. So do Acts 27:34b (omitting the conjunction *gar*, 'for'), Heb. 12:13 (reading the aorist imperative) and there is an iambic measure at Acts 23:5. It is impossible to say whether quotation is involved in these cases. Metrical writing can be accidental, e.g. 'Husbands love your wives and be not bitter against them.'

BIBLIOGRAPHY. C. F. Burney, *The Poetry of our Lord*, 1925; J. T. Sanders, *The New Testament Christological Hymns*, 1971. E. M. B.

POISON. In Israelite thinking poison came either from plants, water or food, or from adders, vipers, serpents, etc. The commonest Heb. word for poison, *hēmā*, basically means heat, and may derive from the burning sensation which followed the taking of poison or from the sting of a reptile.

There were poisonous *plants in Palestine like hemlock (Ho. 10:4), and the poisonous gourd (2 Ki. 4:39), and, although the word is not used, the waters of Marah (Ex. 15:23) and Jericho (2 Ki. 2:19) were clearly regarded as poisonous (2 Ki. 2:21). (*GALL, *WORMWOOD.)

Several passages refer to the poison of reptiles, serpents (Dt. 32:24; Ps. 58:4), dragons (Dt. 32:33) and adders (Ps. 140:3). Zophar, in the story of Job, told how the wicked would suck the poison (*rōš*) of asps (Jb. 20:16).

Metaphorically, the Almighty is said to send forth his arrows which give forth poison to distress one's spirit (Jb. 6:4). Again, the poison of the wicked is as the poison of serpents (Ps. 58:4), and the poison of adders is under their lips (Ps. 140:3). With this latter verse compare Rom. 3:13 (Gk. *ios*). Jas. 3:8 describes the tongue as full of poison (*ios*).

J. A. T.

POLICE. A Roman magistrate was attended by a staff of lictors (the number depending on his rank) who carried bundles of rods (hence Gk. *rhabdouchoi*, 'rod-bearers', Acts 16:35) and axes symbolizing his capital powers. There being no regular police force, these lictors (av 'serjeants') carried out police duties as well as escorting the magistrate. They occur at Philippi because it was a Roman colony. E. A. J.

PONTUS. The coastal strip of N Asia Minor, reaching from Bithynia in the W into the highlands of Armenia to the E. The region was politically a complex of Greek republics, temple estates and Iranian baronies in the interior. One of these houses established a kingdom whose greatest ruler, Mithridates, temporarily ejected the Romans from Asia Minor early in the 1st century BC. After his defeat the western part of Pontus was administered with Bithynia as a Roman province, the E part being left under a Greek dynasty. The Jews from Pontus (Acts 2:9; 18:2) presumably came from the Greek coastal states. We know nothing of the

origin of Christianity there, but it was represented by the time of 1 Pet. 1:1.

E. A. J.

POOL. During the summer, water which had collected in pools during the winter and spring formed an important source of supply. The ability to collect and keep water in artificial pools enabled the Israelites to settle uninhabited parts of Palestine (*CISTERN). Artificial pools were dug inside walled cities (the *MOABITE STONE records one) often fed through a tunnel leading from a spring outside, ensuring a supply in time of siege. Examples have been found at Gezer, *Hazor, Megiddo, Gibeon (*cf.* 2 Sa. 2:13) and elsewhere (see J. B. Pritchard, 'The Water System at Gibeon', *BA* 19, 1956, pp. 65–75). 'Hezekiah's tunnel' and the pool of *Siloam in Jerusalem are perhaps the best-known examples (Jn. 9:7, 11; Ne. 3:15). Lack of evidence precludes the certain location of the other pools named in Jerusalem (the lower and old pools, Is. 22:9, 11; the king's pool and the artificial pool, Ne. 2:14; 3:16; see also *SAMARIA, *BETHSDA.)

A. R. M.

PORCH. Heb. 'ūlām, 'ēlām (*cf.* Assy. *ellamu*, 'front') is used of the vestibule of Solomon's Temple (1 Ki. 6:3) and of the gateways of Ezekiel's Temple (Ezk. 40). Solomon's palace included a porch of pillars with a porch in front and another porch for the judgment throne (1 Ki. 7:6–7). These buildings may well be derived from the Syrian *bit hilāni*, a suite of rooms, consisting of a portico entered by a flight of steps and leading to an audience chamber, various other rooms and a stairway to an upper floor or roof. The unique Heb. *mis-d'rōn* (Jdg. 3:23, from root *sdr*, 'to set in order, arrange') is perhaps a portico of this nature in an upper storey, the word describing the row of pillars (see H. Frankfort, *Art and the Architecture of the Ancient Orient*, 1954, pp. 167–175, and the reconstruction in Sir Leonard Woolley's *A Forgotten Kingdom*, 1953, p. 113). Five porches (Gk. *stoa*) surrounded the pool of Bethesda to give shelter (Jn. 5:2). Peter denied his Lord in the entrance to the courtyard of the high priest's house (Mt. 26:71, *pylōn*; Mk. 14:68, *proaulion*). Solomon's Porch was a covered walk 30 cubits wide with two rows of pillars 25 cubits high along the E side of the Court of the Gentiles in Herod's Temple (Jn. 10:23; Acts 3:11; 5:12; Jos., *Ant.* 15. 380–425). (*TEMPLE.)

A. R. M.

POTIPHAR. A high officer of Pharaoh, to whom the Midianites sold Joseph (Gn. 37:36; 39:1), and in whose household Joseph became chief steward (Gn. 39). His name is Egyptian, of the type *P'-di-X*, X being a deity. The simplest, but not wholly satisfactory, explanation of Potiphar is that it is an abbreviated variant of *Potiphera with loss of final 'ayin. Two high officials at court with the same or similar names is not without parallel in Egp. history.

K. A. K.

POTIPHERA (Potipherah, AV). The 'priest of On', whose daughter, Asenath, Joseph received in

marriage from Pharaoh (Gn. 41:45, 50; 46:20). He was possibly high priest of the sun-god Re' in *On (Gk. Heliopolis). Potiphera (Heb. *pōtīpera*) is universally admitted to be Egp. *P'-di-P'R*, 'he whom P'RE' (= sun-god) has given', on pattern *P'-di-X*, X being a deity. The exact form *P'-di-P'R* is inscriptionally attested only late (c. 1000–300 BC), but is merely a full Late-Egyptian form of this name-type which is known from the Empire period, especially the 19th Dynasty (13th century BC), the age of Moses. Potiphera/*P'-di-P'R* may be simply a modernization in Moses' time of the older form *Didi-R'*, with the same meaning, of a name-pattern (*Didi-X*) which is particularly common in the Middle Kingdom and Hyksos periods, *i.e.* the patriarchal and Joseph's age (c. 2100–1600 BC).

K. A. K.

POTTER, POTTERY. A reasonable explanation of the introduction of pottery is that a clay-lined basket was accidentally burnt, baking the lining and rendering it usable (see S. Cole, *The Neolithic Revolution*, 1959, p. 41). Pottery first appears in Neolithic times in the Near East. Until the invention of the potter's *wheel late in the 4th millennium BC, all pots were built up by hand, by the same methods which continue to be used for making large vessels in Palestine (G. M. Crowfoot, 'Pots Ancient and Modern', *PEQ* 64, 1932, pp. 179–187). Examples of the professional potter's workshop discovered in Palestine (*e.g.* at Lachish (*PEQ* 70, 1938, p. 249, pl. XXV) and Khirbet Qumran (*RB* 63, 1956, p. 543, pl. XI)) show that the potter sat on the edge of a small pit in which stood the wheels (Heb. 'oḥnayim), usually two stones, one pivoted upon the other, which he turned with his feet. Pebbles, shells, bone implements and broken shards were used to smooth and burnish the surface, to shape and to decorate. The power of the potter (Heb. *yōšēr*; Gk. *kerameus*) over the clay (Heb. *hōmer*; Gk. *pēlos*) is used as a simile in Je. 18:1–12 and by Paul (Rom. 9:21). See R. H. Johnston, *BA* 37, 1974, pp. 86–106.

I. Ancient pottery

Simply because it is common, but fragile, pottery in large quantities lies strewn on every ancient tell (*cf.* Jb. 2:8). Careful observation of the stratigraphical relationship of fragments found on one site enables a distinction to be made between the earliest pieces and the latest (usually those found at the bottom and the top of the mound respectively). Comparison with similar shards from other sites shows the contemporaneity or otherwise of the various levels (*ARCHAEOLOGY). Records of pottery finds from several sites in Palestine have enabled a sequence of forms to be drawn up which can be dated by other evidence. As a result, it is now possible to date pottery found on one site—and thus the site—by comparison with recognized dated forms. It is dangerous, however, to give a date more precisely than approximately 50 years either way solely on the evidence of pottery. Plotting the distribution of pottery types over a wide area can reveal trade routes and cultural boundaries.

The following brief description of some features of pottery found in Palestine should be read in conjunction with the chart. The superior figures refer to the numbers of the various objects included in it.

POTTER, POTTERY

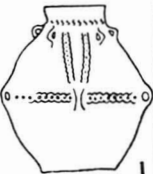

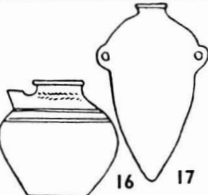

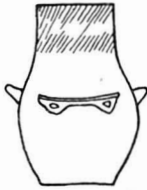

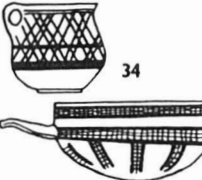

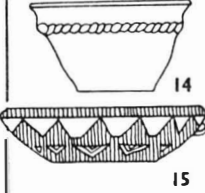

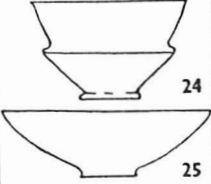

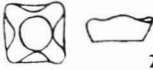

Archaeological Period	Neolithic and Chalcolithic	Early Bronze Age	Middle Bronze Age	Late Bronze Age
LARGE VESSELS approximately $\frac{1}{18}$ of actual size except 62 ($\frac{1}{15}$), 17 and 39 ($\frac{1}{17}$), and 52 ($\frac{1}{16}$)				
JUGS AND PITCHERS approximately $\frac{1}{4}$ of actual size except 63 ($\frac{1}{3}$), 28 and 29 ($\frac{1}{4}$)				
JARS AND POTS approximately $\frac{1}{5}$ of actual size except 9, 10 and 19 ($\frac{1}{8}$)				
FLASKS approximately $\frac{1}{6}$ of actual size				
JUGLETS approximately $\frac{1}{8}$ of actual size				
CUPS approximately $\frac{1}{8}$ of actual size				
BOWLS AND PLATES approximately $\frac{1}{4}$ of actual size except 6, 35, 36, 48, 49, 50 and 70 ($\frac{1}{6}$)				
LAMPS approximately $\frac{1}{8}$ of actual size				

Chart showing the development of pottery in Palestine from Neolithic to Roman times. For a discussion of the objects in this chart.

special features see article POTTER, POTTERY, where reference is made by means of superior figures of some of

POTTER, POTTERY

Neolithic pots are of simple but diverse form, with burnishing and incised or painted decoration, perhaps imitating basket and leatherwork. The ware is mostly coarse, tempered with chopped straw. Some contact with Syria and Mesopotamia is suggested by the painted decoration of the next period (Chalcolithic). Definite rim-forms and ledge-handled jars now occur. Unique to it are cornet cups⁴, and barrel-like vessels with a loop handle either end and a neck in the middle which are probably churns, imitating skin originals⁵. Use of kaolin in the Negeb seems to have given vessels made there a distinctive colour ('Cream Ware').

The Early Bronze Age may be divided into three phases on the basis of pottery types. Globular jars with criss-cross lines of reddish paint covering the whole body are typical of the earliest phase in S Palestine, while broad strokes of thick and thin paint appear in the N⁹. A grey-burnished ware may have imitated stone vessels⁴. Another typical form is the spouted jar ('teapot'). Ledge-handled jars, common at this time, were exported to Egypt. Several pieces of Early Bronze II ware have been found in Egypt. tombs of the 1st Dynasty. Especially noticeable are single-handled pitchers⁹ and red-burnished dishes. Migrations from Anatolia via Syria brought a distinctive red-or black-burnished pottery with plastic decoration (Khirbet Kerak ware, Early Bronze III^{10, 15}). This was used alongside local styles which are also found in Egypt. tombs of the Pyramid Age.

The different civilization of the Middle Bronze Age is apparent in the new pottery forms. Jars with short, narrow necks, and broad, flat bases are typical of the first phase, as are spouted pots¹⁶ and combed decoration¹³. It may be that these forms were associated with the spread of the Amorites. Certainly the very fine pottery of the second phase can be linked with the movements which culminated in the Hyksos. General use of the wheel and careful burnishing produced wares that rivalled, but did not oust, expensive vessels of metal and stone. Jars and pitchers have small round or pointed bases^{17, 21}. The lamp first came into use at this period¹⁶. Juglets of black ware with incised decoration filled with white paste found widely on sites of this period may be associated with the Hyksos²².

II. Later styles

Towards the end of the Middle Bronze Age and during the first part of Late Bronze I, jugs and bowls with red and black geometric designs and animals appear¹⁸. This ware was exported to Cyprus and possibly to Cilicia. Mycenaean pottery³⁰ (F. H. Stubbings, *Mycenaean Pottery from the Levant*, 1951) was imported in large quantities in the second phase together with Cypriot wares (the metallic 'base-ring' and 'milk-bowl' types)^{33, 37}. The 'pilgrim flask' is an innovation of this phase³¹. The break in culture between the Bronze and Iron Ages (*ARCHAEOLOGY) is clearly recognizable in the pottery. From the coastal plain, known to have been occupied by the Philistines, come large two-handled bowls and beer-jugs of cream ware, decorated with red and black geometric designs and stylized birds^{36, 29}. This is a local imitation of the later forms of Mycenaean wares. Pottery from the highlands is, in some cases, a degenerate continuation of Late Bronze Age styles, but new forms of coarse ware and crude shape also appear. Heavy storage jars with short 'collar rims' and handles are reckoned typical of the Settlement period.

During the Monarchy there is a greater regularity of form and gradual improvement in ware. A tendency to angular shapes may be noticed⁴⁴. Many dishes were burnished while turning on the wheel, but the finest are very thin and decorated with bands of red slip ('Samaritan ware')⁴⁴. Large storage jars³⁹ were often stamped on the handles with a royal seal bearing the name of one of four towns, possibly factories (Hebron, Ziph, Socoh and one unidentified, *mmšr*, cf. 1 Ch. 4:23; *DOTT*, p. 219). The mining communities of the Negeb used crude, hand-made pots.

Persian and Hellenistic pottery shows development of some forms (e.g. the amphora⁵²) under Greek influence. Athenian black-and-red-figured wares were imported. Narrow, elongated flasks were often placed in tombs at this time. A ribbed appearance is common on coarse pottery of the Roman period^{74, 75}; most of the finer wares in use were imported (e.g. Italian and Gallic *terra sigillata*). The Nabataean centres in Transjordan produced very delicate buff dishes with floral designs in red. Glazed ware (faience) was imported from Egypt in the Bronze Age but was never very common.

III. Hebrew names

It is not possible to identify the Heb. names for pottery vessels with certainty; these suggestions follow J. L. Kelso, *Ceramic Vocabulary of the Old Testament*, BASOR Supplementary Studies 5-6, 1948 (cf. *PEQ* 71, 1939, pp. 76-90). Heb. *'aggān*, a large bowl (*CUP); *'āsūk*, a large, spouted oil-jar (2 Ki. 4:2); *baqbiq*, the distinctive narrow-necked jug of the Iron II period (1 Ki. 14:3; Je. 19:1, 10); *gabīa*, Je. 35:5, evidently a ewer, cf. *CUP; *did*, a spherical cooking-pot (1 Sa. 2:14; Jb. 41:20) (*BASKET); *kaḏ*, pitcher, probably both the large handled jar and the crock-like, hole-mouth jar (Gn. 24:14ff.; Jdg. 7:16ff.); *kōs* (*CUP); *kiyyōr*, a bowl of pottery (Zc. 12:6) or metal (Ex. 30:18; 1 Ki. 7:20; 1 Sa. 2:14; on 2 Ch. 6:13, see W. F. Albright, *Archaeology and the Religion of Israel*, 1956); *kirayim*, clay rings on which round-based jars stood (Lv. 11:35); *mah'baṭf*, a pottery or metal disc or griddle on which pancakes were baked (Lv. 2:5; Ezk. 4:3); *marḥešet*, a cooking-pot (Lv. 2:7; 7:9); *mašrēt*, a cooking-pot or handled pan (2 Sa. 13:9); *miš'eret*, kneading-trough; *nēbel*, large wine jar (Is. 30:14; Je. 48:12; La. 4:2) (*BOTTLE); *sir*, any large cooking-pot (2 Ki. 4:38; Jb. 41:31) (*FLESHPOTS); cf. *WASHBASIN; *saḏ*, a bowl (*CUP); *sēpel*, a large, valuable bowl (Jdg. 5:25; 6:38); *paḳ*, juglet (*BOX); *pārūr*, a pot with a handle for heating liquids (Jdg. 6:19); *š'lohīt*, a deep handle-less bowl (2 Ki. 2:20; 21:13); *sāmīd*, a shallow bowl serving as a lid (Nu. 19:15); *sappahat*, a flask or juglet (1 Sa. 26:11ff.; 1 Ki. 17:12ff.; 19:6); *qallahat*, a cooking-pot (1 Sa. 2:14; Mi. 3:3); *gk. modios*, a vessel holding c. 9 litres (Mt. 5:15); *niptēr*, a wash-basin, defined as foot-wash-basin in papyrus Bodmer II (Jn. 13:5); *potērion* (*CUP); *tryblion*, a fairly large bowl (Mt. 26:23); *phialē*, a broad dish for holding unguents (Rev. 5:8).

POVERTY.
I. In the Old Testament

The impression is sometimes given that God prospered the righteous with material possessions (Ps. 112:1-3). While it is true that the benefits of industry and thrift to individuals and to the nation are clearly seen, and that God promises to bless those who keep his commandments (Dt. 28:1-14), there were numbers of poor people in Israel at every stage of the nation's history. Their poverty might have been caused through natural disasters leading to bad harvests, through enemy invasion, through oppression by powerful neighbours or through extortionate usury. There was an obligation on the wealthier members of the community to support their poorer brethren (Dt. 15:1-11). Those who were most likely to suffer poverty were the fatherless and the widows and the landless aliens (*gērim*). They were often the victims of oppression (Je. 7:6; Am. 2:6-7a), but Yahweh was their vindicator (Dt. 10:17-19; Ps. 68:5-6). The law commanded that provision should be made for them (Dt. 24:19-22), and with them were numbered the Levites (Dt. 14:28-29) because they had no holding of land. A man could sell himself into slavery, but if he were a Hebrew he had to be treated differently from a foreigner (Lv. 25:39-46).

It was a problem to some of the psalmists to understand how in so many cases wealth had come into the wrong hands. On purely material grounds it might seem vain to serve Yahweh (Ps. 73:12-14), but in the end the wicked would come to destruction while the righteous enjoyed the richest possession—the knowledge of Yahweh himself (Ps. 73:16-28). But so often were the rich oppressors that 'the poor' became almost a synonym for 'the pious' (Ps. 14:5-6).

II. In the New Testament

There were heavy taxes of various kinds imposed on the Jews in NT times. Probably many were in severe economic straits, while others made considerable profits from collaborating with the Romans. The worldly-minded Sadducees were generally wealthy, as were the tax-collectors.

Jesus was the son of poor parents (Lk. 2:24), but there is no reason to suppose he lived in abject poverty. As the eldest son, he would probably have inherited something from Joseph, and it appears that he used to pay the Temple tax (Mt. 17:24). Some of his disciples were reasonably well-to-do (Mk. 1:20) and he had some fairly wealthy friends (Jn. 12:3). He and the Twelve, however, shared a common purse (Jn. 12:6). They were content to go without the comforts of home life (Lk. 9:58), and yet found occasion for giving to the poor (Jn. 13:29).

In the teaching of Jesus material possessions are not regarded as evil, but as dangerous. The poor are often shown to be happier than the rich, because it is easier for them to have an attitude of dependence upon God. It was to them that he came to preach the gospel (Lk. 4:18; 7:22). It is they who are the first to be blessed and to be assured of the possession of the kingdom of God (Lk. 6:20), if their poverty is the acknowledgment of spiritual bankruptcy (Mt. 5:3). A poor person's offering may be of much greater value than a rich man's (Mk. 12:41-44). The poor must be shown

hospitality (Lk. 14:12-14), and given alms (Lk. 18:22), though charity was to be secondary to worship (Jn. 12:1-8).

The early church made an experiment in the communal holding of wealth (Acts 2:41-42; 4:32). This led at first to the elimination of poverty (Acts 4:34-35), but it has often been held that it was responsible for the later economic collapse of the church at Jerusalem. Much of the ministry of Paul was concerned with raising money in the Gentile churches to assist the poor Christians in Jerusalem (Rom. 15:25-29; Gal. 2:10). These churches were also taught to provide for their own poor members (Rom. 12:13, *etc.*). James is especially vehement against those who allowed distinctions of wealth in the Christian community (Jas. 2:1-7). The poor were called by God and their salvation brought glory to him (1 Cor. 1:26-31). The material wealth of the church of Laodicea was in sad contrast with her spiritual poverty (Rev. 3:17).

The most systematic exposition about poverty and wealth in the Epistles is found in 2 Cor. 8-9, where Paul sets the idea of Christian charity in the context of the gifts of God and especially that of his Son who, 'though he was rich, yet for your sake he became poor, so that by his poverty you might become rich'. In the light of that, running the risk of material poverty will lead to spiritual blessing, just as the apostles were poor but made many rich (2 Cor. 6:10). (*ALMS; *ORPHAN.)

POWER.
I. In the Old Testament

Various Heb. words are rendered 'power', the principal ones being *hayil*, *kōah* and 'ōz. True power, the ability to exercise authority effectively, belongs to God alone (Ps. 62:11). The power of God is shown in the creation (Ps. 148:5) and the sustaining of the world (Ps. 65:5-8). Some of his authority is delegated to mankind (Gn. 1:26-28; Pss. 8:5-8; 115:16), but God actively intervenes on many occasions, showing his power in miraculous deeds of deliverance. It was 'with mighty hand and outstretched arm' that he brought his people out of Egypt (Ex. 15:6; Dt. 5:15, *etc.*), and he demonstrated his power in giving them the promised land (Ps. 111:6).

II. In the New Testament

'Power' in EVV represents chiefly Gk. *dynamis* and *exousia*. *exousia* means derived or conferred 'authority', the warrant or right to do something (Mt. 21:23-27); from this it comes to denote concretely the bearer of authority on earth (Rom. 13:1-3), or in the spirit world (Col. 1:16). *dynamis* is ability (2 Cor. 8:3) or strength (Eph. 3:16), or it may mean a powerful act (Acts 2:22) or a powerful spirit (Rom. 8:38). Christ had all authority given him by his Father (Mt. 28:18) and he used it to forgive sins (Mt. 9:6) and to cast out evil spirits (Mt. 10:1). He gave authority to his disciples to become sons of God (Jn. 1:12) and to share in his work (Mk. 3:15).

Jesus came to his ministry in the power (*dynamis*) of the Spirit (Lk. 4:14), and his power was operative in healing miracles (Lk. 5:17) and he did many mighty works (Mt. 11:20). This was evidence

POWER

of the power of the kingdom of God as a prelude to the new Exodus (Lk. 11:20; cf. Ex. 8:19). But the kingdom had not yet come in its full power. That would happen at Pentecost (Lk. 24:49; Acts 1:8; ?Mk. 9:1) and there would be the consummation at the parousia (Mt. 24:30, etc.).

In the Acts we see the power of the Spirit operative in the life of the church (4:7, 33; 6:8; cf. 10:38). Paul looks back to the resurrection as the chief evidence of God's power (Rom. 1:4; Eph. 1:19-20; Phil. 3:10) and sees the gospel as the means by which that power comes to work in men's lives (Rom. 1:16; 1 Cor. 1:18). (*AUTHORITY.)

Powell, *The Biblical Concept of Power*, 1963; O. Betz in *NIDNTT* 2, pp. 601-611; J. P. M. Walsh, *The Mighty from their Thrones*, 1987; W. Wink, *The Powers*, vol. 1, 1984; D. Prior, *Jesus and Power*, 1987.

R.E.N.

POWER OF THE KEYS. This is the phrase used to describe the authority given by our Lord to his disciples as described in Mt. 16:19; 18:18; Jn. 20:22-23. It is a power which may be said to operate in two ways. First, by preaching the gospel the kingdom of God is opened to believers and shut to the impenitent, and secondly, by discipline, serious offenders are excluded from the church until they repent, whereupon they are readmitted. In either case, forgiveness is mediated through the church, acting in the Spirit and through the Word.

'Since it is the doctrine of the gospel that opens heaven to us, it is beautifully expressed by the metaphorical appellation of "keys"'. 'Binding and loosing are simply nothing other than the preaching and application of the gospel' (Luther). That keys and doctrine are so connected is seen from the fact that the delivery of a key was part of a scribe's ordination (Mt. 13:52; Lk. 11:52). Through the preaching of the gospel some men are reconciled to God by faith, others are more firmly bound by unbelief. The church, acting as Christ's representative (Lk. 10:16), pronounces absolution to the penitent. This is a real transaction only in so far as the church is filled with the Spirit of God, so that then it gives the actual judgment of God himself. *Binding and loosing mean not merely the authoritative announcement of the conditions of entrance into the kingdom; a stronger sense is necessary—determining which individuals have accepted the conditions.

This power was given in a special sense to Peter, for he, at Pentecost, opened the door of faith to the Jews, and later to the Gentiles and Samaritans. But it was given to all the apostles (Jn. 20:23) and to men of like faith and spirit ever since.

In the further exercise of the power of the keys, in ecclesiastical discipline, the thought is of administrative authority (Is. 22:22) with regard to the requirements of the household of faith. The use of censures, excommunication and absolution is committed to the church in every age, to be used under the guidance of the Spirit. 'Whoever, after committing a crime, humbly confesses his fault and entreats the church to forgive him, is absolved not only by men, but by God himself; and, on the other hand, whoever treats with ridicule the reproofs and threatenings of the church, if he is condemned by her, the decision which men have

given will be ratified in heaven' (Calvin on 1 Cor. 5).

Since the Reformers it has been accepted that 'the power of the keys' represented this *duplex ministerium*, a real power of spiritual binding and loosing. But this judicial sense has been sharply challenged in favour of a legislative sense whereby 'loose' means 'permitted', and 'bind' means 'forbidden'. This is in agreement with rabbinic usage: the school of Shammai was said to *bind* when it declared that there was only one ground for divorce; the school of Hillel *loosed* when it allowed more laxity in this and other questions. For this use, see also Mt. 23:4; Rom. 7:2; 1 Cor. 7:27, 39. So Peter, in T. W. Manson's words, is to be 'God's vicegerent... The authority of Peter is an authority to declare what is right and wrong for the Christian community. His decisions will be confirmed by God' (*The Sayings of Jesus*, 1954, p. 205). But note that this special rabbinical application of the words was based on the juristic character of the rabbinic literature, and that it was originally used of the full power of the judge (cf. *TDNT* 3, p. 751). Even granting a late origin for Mt. 18:18, we are left with the question as to why a context of church discipline should early seem suitable for the words 'bind' and 'loose'. A. H. McNeile questions the authenticity of this passage altogether, but J. Jeremias has argued ingeniously for its trustworthiness (*TDNT* 3, pp. 752f.).

In any case, it is hardly right to make Peter, as this view does, a scribe in the kingdom of God. 'The apostle would, in the coming kingdom, be like a great scribe or Rabbi, who would deliver decisions on the basis... of the teaching of Jesus' (A. H. McNeile). But there is a great difference between the pronouncements of the apostles on ethical matters and the encyclopaedic casuistry of the scribes. Mt. 23:8 made it impossible for Peter to aspire to such a function. The principle of Christian ethics is to look after the big things (mercy, love, truth) and the little things will then look after themselves; not detailed prescribed legislation, but the guidance of the Spirit.

BIBLIOGRAPHY. Calvin's Commentaries on the Matthaean passages and on 1 Cor. 5 present a fair representation of the views of all the Reformers. In addition to the modern writers cited, R. N. Flew discusses these questions in *Jesus and His Church*, 1938, pp. 131f. See also *DCG* (s.v. 'Absolution'); *ERE* (s.v. 'Discipline'); Calvin, *Institutes*, 4. 12; J. Jeremias, *TDNT* 3, pp. 744-753; D. Müller, C. Brown, *NIDNTT* 2, pp. 731-733.

R.N.C.

PRÆTORIUM. Originally the tent of the commander, or praetor, and, in consequence, the army headquarters (Livy, 7. 12; Caesar, *Bellum Civile* 1. 76). By extension the word came to mean the residence of a provincial governor (Mt. 27:27; Mk. 15:16; Jn. 18:28, 33; 19:9; Acts 23:35). If Paul was writing from Rome, Phil. 1:13 may refer to the emperor's residence on the Palatine. The word seems not to have been used for the permanent camp of the praetorian guards by the Porta Viminalis. It does, however, sometimes mean the forces of the praetorian guards (*CIL*, 5. 2837; 8. 9391), and, whether the letter was written at Ephesus or Rome, this gives good sense to Paul's phrase. Detachments of *praetoriani* were sent to the provinces, and in Rome they would have charge of prisoners in imperial custody.

E.M.B.

PRAISE. In the OT the words for praise mainly used are *hālal*, the root meaning of which is connected with making a noise; *yādā*, which was originally associated with the bodily actions and gestures which accompany praising; and *zāmar*, which is associated with the playing or singing of music. In the NT *eucharistein* (lit. 'to give thanks') is the favourite word, implying on the part of the person who praises the attitude of one more intimate with the person praised than in the more formal *eulogein*, 'to bless'.

The whole of the Bible is punctuated with outbursts of praise. They rise spontaneously from the 'basic mood' of joy which marks the life of the people of God. God takes pleasure and delight in his works of creation (Gn. 1; Ps. 104:31; Pr. 8:30-31), and all creation, including the angels, expresses its joy in praise (Jb. 38:4-7; Rev. 4:6-11). Man also was created to rejoice in God's works (Ps. 90:14-16) and fulfils this purpose by accepting God's gifts (Ec. 8:15; 9:7; 11:9; Phil. 4:4, 8; cf. also W. Eichrodt, *Man in the Old Testament*, 1951, p. 35).

The coming of the kingdom of God into the midst of this world is marked by the restoration of joy and praise to the people of God and the whole creation (Is. 9:2; Ps. 96:11-13; Rev. 5:9-14; Lk. 2:13-14), a foretaste of which is already given in the ritual and worship of the Temple where praise arises from sheer joy in the redeeming presence of God (Dt. 27:7; Nu. 10:10; Lv. 23:40). The praise of God is rendered on earth for the works both of creation and redemption (Pss. 24; 136), this being an echo on earth of the praise of heaven (Rev. 4:11; 5:9-10). Praise, therefore, is a mark of the people of God (1 Pet. 2:9; Eph. 1:3-14; Phil. 1:11). It is the mark of the heathen that they refuse to render it (Rom. 1:21; Rev. 16:9). The act of praising implies the closest fellowship with the One who is being praised. 'Therefore praise not merely expresses but completes the enjoyment; it is its appointed consummation. . . . In commanding us to glorify Him, God is inviting us to enjoy Him' (C. S. Lewis, *Reflections on the Psalms*, 1958, p. 95).

Yet praise to God is frequently commanded from men as a duty and is obviously not meant to depend on mood or feeling or circumstances (cf. Jb. 1:21). To 'rejoice before the Lord' is part of the ordered ritual of the common life of his people (Dt. 12:7; 16:11-12), in which men encourage and exhort one another to praise. Though there are psalms which express the praise of the individual, it was always felt that praise could best be rendered within the congregation (Pss. 22:25; 34:3; 35:18), where praise not only gives honour and pleasure to God (Ps. 50:23) but also bears testimony to God's people (Ps. 51:12-15).

Elaborate arrangements were made for the conduct of praise in the Temple by the Levites. The Psalms were used in the liturgy and in sacred processions with 'glad shouts and songs' (Ps. 42:4). The singing was probably antiphonal, involving two choirs, or soloist and choir. Dancing, from earliest times a means of expressing praise (Ex. 15:20; 2 Sa. 6:14), was also used in the Temple to this end (Pss. 149:3; 150:4). Ps. 150 gives a list of musical instruments used in the praise. (* MUSIC AND MUSICAL INSTRUMENTS.)

The early Christians continued to express their gladness by attending worship in the Temple (Lk. 24:53; Acts 3:1). But their experience of new life in

Christ was bound to express itself in new forms of praise (Mk. 2:22). Joy was the dominant mood of the Christian life, and though the formal worship and praise which it inspired is not explicitly described or prescribed, this was because it was so much taken for granted. As those who experienced and witnessed the healing and cleansing power of Jesus broke out spontaneously into praise (Lk. 18:43; Mk. 2:12), so also in the apostolic church there are frequent examples of such spontaneous outbursts, as men began to see and understand the power and goodness of God in Christ (Acts 2:46; 3:8; 11:18; 16:25; Eph. 1:1-14).

The Psalms were undoubtedly used to express the praise of the early church (Col. 3:16; cf. Mt. 26:30). There were also new Christian hymns (cf. Rev. 5:8-14), referred to in Col. 3:16; 1 Cor. 14:26. We have examples of such inspiration to new forms of praise in the *Magnificat, *Benedictus and *Nunc Dimittis (Lk. 1:46-55, 68-79; 2:29-32). Elsewhere in the text of the NT there are examples of the formal praise of the early church. It seems likely from its literary form and content that Phil. 2:6-11 was composed and used as a hymn of praise to Christ. Probably there are echoes of, or quotations from, early hymns in such passages as Eph. 5:14 and 1 Tim. 3:16. The doxologies in the book of Revelation (cf. Rev. 1:4-7; 5:9-14; 15:3-4) must have been used in public worship to express the praise of the congregation (cf. A. B. Macdonald, *Christian Worship in the Primitive Church*, 1934).

The close connection between praise and sacrifice should be noted. In the sacrificial ritual of the OT a place was found for the sacrifice of thanksgiving as well as of expiation (cf. Lv. 7:11-21). Gratitude was to be the fundamental motive behind the bringing of the first-fruits to the altar (Dt. 26:1-11). In the sincere offering of praise itself there is a sacrifice which pleases God (Heb. 13:15; Ho. 14:2; Ps. 119:108). In the priestly self-offering of Jesus this aspect of thanksgiving finds its place (Mk. 14:22-23, 26; Jn. 17:1-2; Mt. 11:25-26). The life of the Christian should, correspondingly, be a self-offering of gratitude (Rom. 12:1) in fulfilment of his royal priesthood (Rev. 1:5-6; 1 Pet. 2:9), and the fact that such a sacrificial self-offering can be made in a real way in the midst of suffering, links suffering and praise together in the Christian life (Phil. 2:17). Thanksgiving sanctifies not only suffering but all aspects of the life of the Christian (1 Tim. 4:4-5; 1 Cor. 10:30-31; 1 Thes. 5:16-18). Whatever else be the burden of prayer, it must include praise (Phil. 4:6).

R.S.W.

PRAYER.

I. Introduction

In the Bible prayer is worship that includes all the attitudes of the human spirit in its approach to God. The Christian worships God when he adores, confesses, praises and supplicates him in prayer. This highest activity of which the human spirit is capable may also be thought of as communion with God, so long as due emphasis is laid upon

PRAYER

divine initiative. A man prays because God has already touched his spirit. Prayer in the Bible is not a 'natural response' (see Jn. 4:24). 'That which is born of the flesh is flesh.' Consequently, the Lord does not 'hear' every prayer (Is. 1:15; 29:13). The biblical doctrine of prayer emphasizes the character of God, the necessity of a man's being in saving or covenant relation with him, and his entering fully into all the privileges and obligations of that relation with God.

II. In the Old Testament

Köhler (*Old Testament Theology*, 1957, p. 251, n. 153) finds 'about eighty-five original prayers in the OT. In addition there are about sixty whole psalms and fourteen parts of psalms which may be called prayers.'

a. The patriarchal period

In the patriarchal period prayer is calling upon the name of the Lord (Gn. 4:26; 12:8; 21:33); *i.e.* the sacred name is used in invocation or appeal. There is, consequently, an unmistakable directness and familiarity in prayer (Gn. 15:2ff.; 18:23ff.; 24:12-14, 26f.). Prayer is also closely connected with sacrifice (Gn. 13:4; 26:25; 28:20-22), although this association appears in later periods too. This offering of prayer in a context of sacrifice suggests a union of man's will with God's will, an abandonment and submission of the self to God. This is especially so in Jacob's conjoining prayer with a vow to the Lord. The vow, itself a prayer, promises service and faithfulness if the blessing sought is granted (Gn. 28:20ff.).

b. The pre-exilic period

1. In this period one of the main emphases in prayer is intercession; although this was also a factor in patriarchal times (Gn. 18:22ff.). Intercession was especially prominent in the prayers of Moses (Ex. 32:11-13, 31f.; 33:12-16; 34:9; Nu. 11:11-15; 14:13-19; 21:7; Dt. 9:18-21; 10:10). Dt. 30 is also largely a prayer of intercession, as are also the prayers of Aaron (Nu. 6:22-27), Samuel (1 Sa. 7:5-13; 12:19, 23), Solomon (1 Ki. 8:22-53), and Hezekiah (2 Ki. 19:14-19). The inference seems to be that intercession was confined to outstanding personalities who, by virtue of their position assigned to them by God as prophets, priests and kings, had peculiar power in prayer as mediators between God and men. But the Lord always remained free to execute his will; hence we hear of unsuccessful intercession (Gn. 18:17ff.; Ex. 32:30-35). In Am. 7:1-6 'the Lord repented' concerning a certain course of action in answer to the prophet's intercession, and in the next verses (7:7-8:2) Israel is to be led away captive after all. Jeremiah is even forbidden to intercede with God (Je. 7:16; 11:14; 14:11). On the other hand, success attended the intercession of Lot (Gn. 19:17-23), Abraham (Gn. 20:17), Moses (Ex. 9:27-33; Nu. 12:9ff.), and Job (Jb. 42:8, 10). It is the strongly personal relation with God in which those mediators stood that underlies these intercessory prayers.

2. It is surprising that among all the legal enactments of the Pentateuch there is nothing about prayer apart from Dt. 26:1-15. Even here it is formulae for worship rather than prayer that are being emphasized. In vv. 5-11 there is thanksgiving, and in vv. 13-14 there is a profession of past obedience, but only in v. 15 is there supplication. However, we are probably right in assuming that sacrifice would

often be offered with prayer (Ps. 55:14), and where it was not it might be reprov'd (Ps. 50:7-15). On the other hand, the almost total absence of prayer in those parts of the Pentateuch where sacrifice is regulated suggests that sacrifice without prayer was fairly common.

3. Prayer must have been indispensable in the ministry of the prophets. The very reception of the revelatory Word from God involved the prophet in a prayerful relation with Yahweh. Indeed, it might well have been that prayer was essential to the prophet's receiving the Word (Is. 6:5ff.; 37:1-4; Je. 11:20-23; 12:1-6; 42:1ff.). The prophetic vision came to Daniel while he was at prayer (Dn. 9:20ff.). On occasion the Lord kept the prophet waiting for a considerable time in prayer (Hab. 2:1-3). We know from Jeremiah's writings that while prayer was the essential condition of, and reality in, the prophet's experience and ministry, it was often a tempestuous exercise of the spirit (18:19-23; 20:7-18), as well as a sweet fellowship with God (1:4ff.; 4:10; 10:23-25; 12:1-4; 14:7-9, 19-22; 15:15-18; 16:19; 17:12ff.).

4. In the Psalms there is a blending of pattern and spontaneity in prayer. Alongside the more formal 'sanctuary' prayers (*e.g.* 24:7-10; 100; 150) there are personal prayers for pardon (51), communion (63), protection (57), healing (6), vindication (109) and prayers that are full of praise (103). Sacrifice and prayer also blend in the psalms (54:6; 66:13ff.).

c. The exilic period

During the Exile the important factor in religion for the Jews was the emergence of the synagogue. The Jerusalem Temple was in ruins, and altar rites and sacrifices could not be performed in unclean Babylon. A Jew was now no longer one who had been born into the community, and was residing in it, but rather one who *chose* to be a Jew. The centre of the religious community was the synagogue, and among the accepted religious obligations such as circumcision, fasting and sabbath observance, prayer was important. This was inevitable because each little community in exile now depended upon the synagogue service where the Word was read and expounded, and prayers were offered. And after the return to Jerusalem, just as the Temple was not allowed to displace the synagogue, nor the priest the scribe, nor sacrifice the living Word, so ritual did not displace prayer. Both in Temple and synagogue, in priestly ritual and scribal exposition, the devout worshipper now sought the face of Yahweh, his personal presence (Pss. 100:2; 63:1ff.), and received his blessing in terms of the light of his countenance shining upon him (Ps. 80:3, 7, 19).

d. The post-exilic period

After the Exile there was undoubtedly a framework of devotion, but within it freedom was secured for the individual. This is exemplified in Ezra and Nehemiah, who, while insisting upon cult and law, and upon ritual and sacrifice and, therefore, upon the social aspects of worship, yet emphasized also the spiritual factor in devotion (Ezr. 7:27; 8:22f.; Ne. 2:4; 4:4, 9). Their prayers are also instructive (Ezr. 9:6-15; Ne. 1:5-11; 9:5-38; *cf.* also Dn. 9:4-19). We may also note here that concerning posture in prayer there were no fixed rules (Ps. 28:2; 1 Sa. 1:26; 1 Ki. 8:54; Ezr. 9:5; 1 Ki. 18:42; La. 3:41; Dn. 9:3 and v. 20 where we should read 'towards' instead of 'for'). So also in the matter of

hours for prayer: prayer was effective at any time, as well as at the stated hours (Ps. 55:17; Dn. 6:10). In the post-exilic period, then, we find a blending of orderliness of Temple ritual, the simplicity of the synagogue meeting, and the spontaneity of personal devotion.

Prayer being what it is, it would be manifestly impossible to systematize it completely. Within the OT there are certainly patterns for prayer but no binding regulations governing either its contents or its ritual. Mechanical prayer, prayer hemmed in by coercive prescriptions, did not come until towards the close of the intertestamental period, as the Gospels make clear. Then, alas, both through Temple sacrifice in Jerusalem, and in the *diaspora* through the praise, prayer and exposition of the synagogue service, and through circumcision, sabbath observance, tithes, fasting and supererogatory deeds, worshippers in both Temple and synagogue sought to merit acceptance with God.

III. In the New Testament

There are certain clearly-defined areas where the NT teaching on prayer is set forth, but the fountain-head from which all its instruction in prayer flows is Christ's own doctrine and practice.

a. *The Gospels*

1. As to Jesus' doctrine of prayer, this is set out principally in certain of his parables. In the parable of the friend who borrowed three loaves at midnight (Lk. 11:5-8) the Lord inculcates importunity in prayer; and the ground on which the confidence in importunate prayer is built is the Father's generosity (Mt. 7:7-11). The parable of the unjust judge (Lk. 18:1-8) calls for tenacity in prayer, which includes persistence as well as continuity. God's delays in answering prayer are due not to indifference but to love that desires to develop and deepen faith which is finally vindicated. In the parable of the tax collector and the Pharisee (Lk. 18:10-14) Christ insists on humility and penitence in prayer, and warns against a sense of self-superiority. Self-humiliation in prayer means acceptance with God, self-exaltation in prayer hides God's face. Christ calls for charity in prayer in the parable of the unjust servant (Mt. 18:21-35). It is prayer offered by a forgiving spirit that God answers. Simplicity in prayer is taught in Mt. 6:5f.; 23:14; Mk. 12:38-40; Lk. 20:47. Prayer must be purged of all pretence. It should spring from simplicity of heart and motive, and express itself in simplicity of speech and petition. The Lord also urged intensity in prayer (*cf.* Mk. 13:33; 14:38; Mt. 26:41). Here watchfulness and faith combine in sleepless vigilance. Again, in Mt. 18:19f. unity in prayer is emphasized. If a group of Christians who have the mind of Christ pray in the Holy Spirit their prayers will be effectual. But prayer must also be expectant (Mk. 11:24). Prayer that is an experiment achieves little; prayer which is the sphere where faith operates in surrender to God's will achieves much (Mk. 9:23).

2. On objectives in prayer Jesus had singularly little to say. Doubtless he was content to let the Holy Spirit prompt his disciples in prayer. What aims he referred to in prayer are to be found in Mk. 9:28f.; Mt. 5:44; 6:11, 13; 9:36f.; Lk. 11:13.

3. As to method in prayer, the Lord had two important things to teach. First, prayer is now to be offered to him, as it was offered to him when he was on earth (*e.g.* Mt. 8:2; 9:18). As he insisted on

faith then (Mk. 9:23), and tested sincerity (Mt. 9:27-31), and uncovered ignorance (Mt. 20:20-22) and sinful presumption (Mt. 14:27-31), in those who petitioned him, so he does today in the experience of those who offer prayer to him. Secondly, prayer is now also to be offered in the name of Christ (Jn. 14:13; 15:16; 16:23f.), through whom we have access to the Father. To pray in the name of Christ is to pray as Christ himself prayed, and to pray to the Father as the Son has made him known to us: and for Jesus the true focus in prayer was the Father's will. Here is the basic characteristic of Christian prayer: a new access to the Father which Christ secures for the Christian, and prayer in harmony with the Father's will because offered in Christ's name.

4. As to the Lord's practice of prayer, it is well known that he prayed in secret (Lk. 5:15f.; 6:12); in times of spiritual conflict (Jn. 12:20-28; Lk. 22:39-46); and on the cross (Mt. 27:46; Lk. 23:46). In his prayers he offered thanksgiving (Lk. 10:21; Jn. 6:11; 11:41; Mt. 26:27), sought guidance (Lk. 6:12ff.), interceded (Jn. 17:6-19, 20-26; Lk. 22:31-34; Mk. 10:16; Lk. 23:34) and communed with the Father (Lk. 9:28ff.). The burden of his high-priestly prayer in Jn. 17 is the unity of the church.

5. Since the *Lord's Prayer is treated more fully elsewhere, it will suffice to point out that after the invocation (Mt. 6:9b) there follow six petitions (9c-13b), of which the first three have reference to God's name, kingdom and will, and the last three to man's need of bread, forgiveness and victory: the Prayer then closes with a doxology (13c) which contains a threefold declaration concerning God's kingdom, power and glory. It is 'like this' that Christians are bidden to pray.

b. *The Acts of the Apostles*

The Acts is an excellent link between the Gospels and the Epistles, because in Acts the apostolic church puts into effect our Lord's teaching on prayer. The church was born in the atmosphere of prayer (1:4). In answer to prayer the Spirit was poured out upon her (1:4; 2:4). Prayer continued to be the church's native air (2:42; 6:4, 6). There remained in the church's thinking a close connection between prayer and the Spirit's presence and power (4:31). In times of crisis the church had recourse to prayer (4:23ff.; 12:5, 12). Throughout the Acts the church leaders emerge as men of prayer (9:40; 10:9; 16:25; 28:8) who urge the Christians to pray with them (20:28, 36; 21:5).

c. *The Pauline Epistles*

It is significant that immediately after Christ revealed himself to Paul on the Damascus road it is said of Paul, 'Behold, he is praying' (Acts 9:11). Probably for the first time Paul discovered what prayer really was, so profound was the change in his heart which conversion had effected. From that moment he was a man of prayer. In prayer the Lord spoke to him (Acts 22:17f.). Prayer was thanksgiving, intercession, the realization of God's presence (*cf.* 1 Thes. 1:2f.; Eph. 1:16ff.). He found that the Holy Spirit assisted him in prayer as he sought to know and do God's will (Rom. 8:14, 26). In his experience there was a close connection between prayer and the Christian's intelligence (1 Cor. 14:14-19). Prayer was absolutely essential for the Christian (Rom. 12:12). The Christian's armour (Eph. 6:13-17) included prayer which Paul describes as 'all prayer', to be offered at 'all

PRAYER

seasons', with 'all perseverance', for 'all saints' (v. 18). And Paul practised what he preached (Rom. 1:9; Eph. 1:16; 1 Thes. 1:2); hence his insistence upon prayer when writing to his fellow-believers (Phil. 4:6; Col. 4:2).

In his Epistles Paul is constantly breaking out into prayer, and it is instructive to glance at some of his prayers because of their content.

1. In Rom. 1:8–12 he pours out his heart to God in thanksgiving (v. 8), insists upon serving Christ with his spirit (v. 9a), intercedes for his friends in Rome (v. 9b), expresses his desire to impart to them a spiritual gift (vv. 10f.), and declares that he too is depending upon them for spiritual uplift (v. 12).

2. In Eph. 1:15–19 Paul again thanks God for his converts (vv. 15f.), and prays that they may receive the Spirit through whom comes knowledge of God and illumination of heart (vv. 17–18a), in order that they may know the hope of God's calling, the wealth of God's inheritance, and the greatness of God's power which had been demonstrated in Christ's resurrection (vv. 18b–19).

3. Again, in Eph. 3:14–18 the apostle pleads with the Father (vv. 14f.) for his fellow-Christians that they might be increasingly conscious of God's power (v. 16), to the end that Christ might indwell them, and that they might be rooted in love (v. 17), that each together, being perfected, might be filled with the fullness of God (vv. 18f.). Both of these 'Ephesian' prayers are well summed up in Paul's threefold desire that Christians should receive knowledge and power issuing in the love of Christ, through which as individuals and a group they should achieve perfection.

4. In Col. 1:9ff. Paul again prays that the believers should know God's will through spiritual wisdom and understanding (v. 9), that practice might agree with profession (v. 10), that they might have power for their practice (v. 11), and be thankful for their immense privilege and position in the Lord Jesus (vv. 12f.).

But perhaps Paul's greatest contribution to our understanding of Christian prayer is in establishing its connection with the Holy Spirit. Prayer is in fact a gift of the Spirit (1 Cor. 14:14–16). The believer prays 'in the Spirit' (Eph. 6:18; Jude 20); hence prayer is a co-operation between God and the believer in that it is presented to the Father, in the name of the Son, through the inspiration of the indwelling Holy Spirit.

d. Hebrews, James and 1 John

The Epistle to the Hebrews makes a significant contribution to an understanding of Christian prayer. 4:14–16 shows why prayer is possible: it is possible because we have a great High Priest who is both human and divine, because he is now in the heavenly place and because of what he is now doing there. When we pray it is to receive mercy and find grace. The reference to the Lord's prayer life in 5:7–10 really teaches what prayer is: Christ's 'prayers' and 'supplications' were 'offered up' to God, and in this spiritual service he 'learned obedience' and therefore 'was heard'. In 10:19–25 the emphasis is upon corporate prayer, and the demands and motives which it involves. The place of prayer is described in 6:19.

The Epistle of James has three significant passages on prayer. Prayer in perplexity is dealt with in 1:5–8; correct motives in prayer are underlined in 4:1–3; and the significance of prayer in time of sickness is made clear in 5:13–18.

In his first Epistle, John points the way to boldness and efficacy in prayer (3:21f.), while in 5:14–16 he establishes the relation between prayer and the will of God, and shows that efficacy in prayer is especially relevant to intercession, but that situations do arise where prayer is powerless.

IV. Conclusion

The heart of the biblical doctrine of prayer is well expressed by B. F. Westcott: 'True prayer—the prayer that must be answered—is the personal recognition and acceptance of the divine will (Jn. 14:7; cf. Mk. 11:24). It follows that the hearing of prayer which teaches obedience is not so much the granting of a specific petition, which is assumed by the petitioner to be the way to the end desired, but the assurance that what is granted does most effectively lead to the end. Thus we are taught that Christ learned that every detail of His life and passion contributed to the accomplishment of the work which He came to fulfil, and so He was most perfectly "heard". In this sense He was "heard for his godly fear".'

PREACHING. In the NT, preaching is 'the public proclamation of Christianity to the non-Christian world' (C. H. Dodd, *The Apostolic Preaching and its Development*, 1944, p. 7). It is not religious discourse to a closed group of initiates, but open and public proclamation of God's redemptive activity in and through Jesus Christ. The current popular understanding of preaching as biblical exposition and exhortation has tended to obscure its basic meaning.

I. The biblical terms

The choice of verbs in the Gk. NT for the activity of preaching points us back to its original meaning. The most characteristic (occurring over 60 times) is *kēryssō*, 'to proclaim as a herald'. In the ancient world the herald was a figure of considerable importance (cf. G. Friedrich, *TDNT* 3, pp. 697–714). A man of integrity and character, he was employed by the king or State to make all public proclamations. Preaching is heralding; the message proclaimed is the glad tidings of salvation. While *kēryssō* tells us something about the activity of preaching, *euangelizomai*, 'to bring good news' (from the primitive *eus*, 'good', and the verb *angellō*, 'to announce'), a common verb, used over 50 times in the NT, emphasizes the quality of the message itself. It is worthy of note that the rsv has not followed the *av* in those places where it translates the verbs *diangellō*, *laleō*, *katangellō* and *dialogomai* by 'to preach'. This helps to bring into sharper focus the basic meaning of preaching.

It is not unusual to distinguish between preaching and teaching—between *kērygma* (public proclamation) and *didachē* (ethical instruction). An appeal is made to such verses as Matthew's summary of Jesus' Galilean ministry, 'He went about all Galilee, *teaching . . . preaching . . . and healing*'

(Mt. 4:23), and Paul's words in Rom. 12:6-8 and 1 Cor. 12:28 on the gifts of the Spirit. While the two activities ideally conceived are distinct, both are based upon the same foundation. The *kérygma* proclaims what God has done: the *didachē* teaches the implications of this for Christian conduct.

While we have defined preaching within narrow limits in order to emphasize its essential NT meaning, this is not to suggest that it is without precedent in the OT. Certainly the Heb. prophets as they proclaimed the message of God under divine impulse were forerunners of the apostolic herald. Jonah was told to 'preach' (LXX *kēryssō*; Heb. *qārā*, 'to call out'), and even Noah is designated a 'preacher (*kēryx*) of righteousness' (2 Pet. 2:5). The LXX uses *kēryssō* more than 30 times, both in the secular sense of official proclamation for the king and the more religious sense of prophetic utterance (cf. Joel 1:14; Zc. 9:9; Is. 61:1).

II. New Testament features

Perhaps the most prominent feature in NT preaching is the sense of divine compulsion. In Mk. 1:38 it is reported that Jesus did not return to those who sought his healing power but pressed on to other towns *in order that he might preach there also*—'for that is why I came out'. Peter and John reply to the restrictions of the Sanhedrin with the declaration, 'We cannot but speak the things which we have seen and heard' (Acts 4:20). 'Woe to me if I do not preach the gospel', cries the apostle Paul (1 Cor. 9:16). This sense of compulsion is the *sine qua non* of true preaching. Preaching is not the relaxed recital of morally neutral truths: it is God himself breaking in and confronting man with a demand for decision. This sort of preaching meets with opposition. In 2 Cor. 11:23-28 Paul lists his sufferings for the sake of the gospel.

Another feature of apostolic preaching was its transparency of message and motive. Since preaching calls for faith, it is vitally important that its issues not be obscured with eloquent wisdom and lofty words (1 Cor. 1:17; 2:1-4). Paul refused to practise cunning or to tamper with God's Word, but sought to commend himself to every man's conscience by the open statement of the truth (2 Cor. 4:2). The radical upheaval within the heart and consciousness of man which is the new birth does not come about by the persuasive influence of rhetoric but by the straightforward presentation of the gospel in all its simplicity and power.

III. The essential nature of preaching

In the Gospels Jesus is characteristically portrayed as One who came 'heralding the kingdom of God'. In Lk. 4:16-21 Jesus interprets his ministry as the fulfilment of Isaiah's prophecy of a coming Servant-Messiah through whom the kingdom of God would at last be realized. This kingdom is best understood as God's 'kingly rule' or 'sovereign action'. Only secondarily does it refer to a realm or people within that realm. That God's eternal sovereignty was now invading the realm of evil powers and winning the decisive victory was the basic content of Jesus' *kérygma*.

When we move from the Synoptics into the rest of the NT we note a significant change in terminology. Instead of the 'kingdom of God' we find 'Christ' as the content of the preached message. This is variously expressed as 'Christ crucified' (1 Cor. 1:23), 'Christ . . . raised' (1 Cor. 15:12), 'the Son of God, Jesus Christ' (2 Cor. 1:19), or 'Christ

Jesus as Lord' (2 Cor. 4:5). This change of emphasis is accounted for by the fact that Christ *is* the kingdom. The Jews anticipated the universal establishment of the sovereign reign of God, viz. his *kingdom*: the death and resurrection of Jesus Christ was the decisive act of God whereby his eternal sovereignty was realized in human history. With the advance of redemptive history the apostolic church could proclaim the kingdom in the more clear-cut terms of decision concerning the King. To preach Christ *is* to preach the kingdom.

One of the most important advances of NT scholarship in recent years has been C. H. Dodd's crystallization of the primitive *kérygma*. Following his approach (comparing the early speeches in Acts with the pre-Pauline credal fragments in Paul's Epistles) but interpreting the data with a slightly different emphasis, we find that the apostolic message was 'a proclamation of the death, resurrection and exaltation of Jesus that led to an evaluation of His person as both Lord and Christ, confronted man with the necessity of repentance, and promised the forgiveness of sins' (R. H. Mounce, *The Essential Nature of New Testament Preaching*, 1960, p. 84).

True preaching is best understood in terms of its relation to the wider theme of revelation. Revelation is essentially God's self-disclosure apprehended by the response of faith. Since Calvary is God's supreme self-revelation, the problem is, How can God reveal himself in the present through an act of the past? The answer is, through preaching—for preaching is the timeless link between God's redemptive act and man's apprehension of it. It is the medium through which God contemporizes his historic self-disclosure in Christ and offers man the opportunity to respond in faith.

Stott, *The Preacher's Portrait*, 1961. R.H.M.

PREDESTINATION.

I. Biblical vocabulary

The English 'predestinate' comes from Lat. *praedestino*, which the Vulgate uses to translate the Gk. *prohorizō*. RSV renders *prohorizō* as 'predestine' in Acts 4:28; Rom. 8:29-30; and 'destine' in Eph. 1:5, 12; though as 'decree' in 1 Cor. 2:7. RV has 'foreordain' in all six places.

prohorizō, which the NT uses only with God as subject, expresses the thought of appointing a situation for a person, or a person for a situation, in advance (*pro-*). The NT uses this *pro-* compounds in a similar sense: (1) *protassō*, 'arrange beforehand' (Acts 17:26); (2) *protithēmai*, 'propose' (Eph. 1:9; of a human proposal, Rom. 1:13; cf. use of the cognate noun *prothesis*, 'purpose', 'plan', Rom. 8:28; 9:11; Eph. 1:11; 3:11; 2 Tim. 1:9); (3) *prohetoimazō*, 'prepare beforehand' (Rom. 9:23; Eph. 2:10); (4) *procheirizō*, 'appoint beforehand' (Acts 3:20; 22:14); (5) *procheirotoneō*, 'choose beforehand' (Acts 10:41). *problepō*, 'foresee', carries the thought of God's effective

PREDESTINATION

pre-ordaining in Gal. 3:8; Heb. 11:40; as the context shows. So does *proginōskō*, 'foreknow' (Rom. 8:29; 11:2; 1 Pet. 1:20), and its cognate noun *prognōsis* (1 Pet. 1:2; Acts 2:23). The same sense is sometimes conveyed by the uncompounded verbs *tassō* (Acts 13:48; 22:10) and *horizō* (Lk. 22:22; Acts 2:23), the former implying a precise setting in order, the latter an exact marking out. This varied vocabulary well suggests the different facets of the idea expressed.

The NT formulates the thought of divine fore-ordination in another way, by telling us that what motivates and determines God's actions in his world, and among them the fortunes and destiny which he brings upon men, is his own will (nouns, *boulē*, Acts 2:23; 4:28; Eph. 1:11; Heb. 6:17; *boulēma*, Rom. 9:19; *thelēma*, Eph. 1:5, 9, 11; *thelēsis*, Heb. 2:4; verbs, *boulomai*, Heb. 6:17; Jas. 1:18; 2 Pet. 3:9; *thelō*, Rom. 9:18, 22; Col. 1:27), or his 'good pleasure' (noun, *eudokia*, Eph. 1:5, 9; Mt. 11:26; verb, *eudokeō*, Lk. 12:32; 1 Cor. 1:21; Gal. 1:15; Col. 1:19), i.e. his own deliberate, prior resolve. This is not, indeed, the only sense in which the NT speaks of the will of God. The Bible conceives of God's purpose for men as expressed both by his revealed commands to them and by his ordering of their circumstances. His 'will' in Scripture thus covers both his law and his plan; hence some of the above terms are also used with reference to particular divine demands (e.g. *boulē*, Lk. 7:30; *thelēma*, 1 Thes. 4:3; 5:18). But in the texts referred to above it is God's plan of events that is in view, and it is this that predestination concerns.

The OT lacks words for expressing the idea of predestination in an abstract and generalized form, but it often speaks of God purposing, ordaining or determining particular things, in contexts which call attention to the absolute priority and independence of his purposing in relation to the existence or occurrence of the thing purposed (cf. Ps. 139:16; Is. 14:24–27; 19:17; 46:10f.; Je. 49:20; Dn. 4:24f.).

The usage of the NT word-group is in favour of the traditional practice of defining predestination in terms of God's purpose regarding the circumstances and destinies of men. The wider aspects of his cosmic plan and government are most conveniently subsumed under the general head of *providence. To grasp the meaning of predestination as Scripture presents it, however, it must be set in its place in God's plan as a whole.

II. Biblical presentation

a. In the Old Testament

The OT presents God the Creator as personal, powerful and purposeful, and assures us that as his power is unlimited, so his purposes are certain of fulfilment (Ps. 33:10f.; Is. 14:27; 43:13; Jb. 9:12; 23:13; Dn. 4:35). He is Lord of every situation, ordering and directing everything towards the end for which he made it (Pr. 16:4), and determining every event, great or small, from the thoughts of kings (Pr. 21:1) and the premeditated words and deeds of all men (Pr. 16:1, 9) to the seemingly random fall of a lot (Pr. 16:33). Nothing that God sets before himself is too hard for him (Gn. 18:14; Je. 32:17); the idea that the organized opposition of man could in any way thwart him is simply absurd (Ps. 2:1–4). Isaiah's prophecy expands the thought of God's plan as the decisive factor in history more fully than does any other OT book.

Isaiah stresses that God's purposes are everlasting, that Yahweh planned present and future happenings 'long ago', 'from the beginning' (cf. Is. 22:11; 37:26; 44:6–8; 46:10f.), and that, just because it is he, and no-one else, who orders all events (Is. 44:7), nothing can prevent the occurrence of the events that he has predicted (Is. 14:24–27; 44:24–45:25; cf. 1 Ki. 22:17–38; Ps. 33:10f.; Pr. 19:21; 21:30). Yahweh's ability to predict the seemingly incredible things that are going to happen proves his control of history, whereas the inability of the idols to foretell these things shows that they do not control it (Is. 44:6–8; 45:21; 48:12–14).

Sometimes Yahweh is pictured as reacting to developing situations in a way that might seem to imply that he had not anticipated them (e.g. when he repents, and reverses his prior action, Gn. 6:5; Je. 18:8, 10; 26:3, 13; Joel 2:13; Jon. 4:2). But in their biblical context it is clear that the purpose and point of these anthropomorphisms is simply to emphasize that Israel's God is really personal, and not to throw doubt on whether he really fore-ordains and controls human affairs.

That Yahweh governs human history teleologically, to bring about his own predestined purpose for human welfare, is made clear in the Bible story as early as the protevangeliūm (Gn. 3:15) and the promise to Abraham (Gn. 12:3). The theme develops through the wilderness promises of prosperity and protection in Canaan (cf. Dt. 28:1–14), and the prophetic pictures of the Messianic glory which would succeed God's work of judgment (Is. 9:1ff.; 11:1ff.; Je. 23:5ff.; Ezk. 34:20ff.; 37:21ff.; Ho. 3:4f., etc.); and it reaches its climax in Daniel's vision of God overruling the rise and fall of pagan world-empires in order to set up the rule of the Son of man (Dn. 7; cf. 2:31–45). A global eschatology of this order could not be seriously put forward save on the presupposition that God is the absolute Lord of history, foreseeing and foreordaining its whole course.

It is in terms of this view of God's relation to human history that the OT describes God's choice of Israel to be his covenant people, the object and instrument of his saving work. This choice was *unmerited* (Dt. 7:6f.; Ezk. 16:1ff.) and wholly gracious. It was *purposeful*; Israel was appointed a destiny, to be blessed and so to become a blessing to other nations (cf. Ps. 67; Is. 2:2–4; 11:9f.; 60; Zc. 8:20ff.; 14:16ff.). It was, however, for the time being *exclusive*; the selection of Israel meant the deliberate passing-by of the rest of the nations (Dt. 7:6; Ps. 147:19f.; Am. 3:2; cf. Rom. 9:4; Eph. 2:11f.). For more than a millennium God left them outside the covenant, objects only of his judgment for their national crimes (Am. 1:3–2:3) and for their malice against the chosen people (cf. Is. 13–19, etc.).

b. In the New Testament

The NT writers take for granted the OT faith that God is the sovereign Lord of events, and rules history for the fulfilling of his purposes. Their uniform insistence that Christ's ministry and the Christian dispensation represented the fulfilment of biblical prophecies, given centuries before (Mt. 1:22; 2:15, 23; 4:14; 8:17; 12:17ff.; Jn. 12:38ff.; 19:24, 28, 36; Acts 2:17ff.; 3:22ff.; 4:25ff.; 8:30ff.; 10:43; 13:27ff.; 15:15ff.; Gal. 3:8; Heb. 5:6; 8:8ff.; 1 Pet. 1:10ff., etc.), and that God's ultimate aim in inspiring the Heb. Scriptures was to instruct Christian believers (Rom. 15:4; 1 Cor. 10:11; 2 Tim. 3:15ff.), is proof enough of this. (Both convictions,

be it noted, derive from our Lord himself: cf. Lk. 18:31ff.; 24:25ff., 44ff.; Jn. 5:39.) A new development, however, is that the idea of election, now applied, not to national Israel, but to Christian believers, is consistently individualized (cf. Ps. 65:4) and given a pre-temporal reference. The OT assimilates election to God's historical 'calling' (cf. Ne. 9:7), but the NT distinguishes the two things sharply, by representing election as God's act of predestinating sinners to salvation in Christ 'before the foundation of the world' (Eph. 1:4; cf. Mt. 25:34; 2 Tim. 1:9); an act correlative to his foreknowing Christ 'before the foundation of the world' (1 Pet. 1:20). The uniform NT conception is that all saving grace given to men in time (knowledge of the gospel, understanding of it and power to respond to it, preservation and final glory) flows from divine election in eternity.

Luke's language in the narrative of Acts bears striking witness to his belief, not merely that Christ was foreordained to die, rise and reign (Acts 2:23, 30f.; 3:20; 4:27f.), but that salvation is the fruit of prevenient grace (2:47; 11:18, 21-23; 14:27; 15:7ff.; 16:14; 18:27) given in accordance with divine foreordination (13:48; 18:10).

In John's Gospel Christ says that he has been sent to save a number of particular individuals whom his Father has 'given' him (Jn. 6:37ff.; 17:2, 6, 9, 24; 18:9). These are his 'sheep', his 'own' (10:14ff., 26ff.; 13:1). It was for them specifically that he prayed (17:20). He undertakes to 'draw' them to himself by his Spirit (12:32; cf. 6:44; 10:16, 27; 16:8ff.); to give them eternal life, in fellowship with himself and the Father (10:28; cf. 5:21; 6:40; 17:2; Mt. 11:27); to keep them, losing none (6:39; 10:28f.; cf. 17:11, 15; 18:9); to bring them to his glory (14:2f.; cf. 17:24), and to raise their bodies at the last day (6:39f.; cf. 5:28f.). The principle that those who enjoy salvation do so by reason of divine predestination is here made explicit.

The fullest elucidation of this principle is found in the writings of Paul. From all eternity, Paul declares, God has had a plan (*prothesis*) to save a church, though in earlier times it was not fully made known (Eph. 3:3-11). The aim of the plan is that men should be made God's adopted sons and be renewed in the image of Christ (Rom. 8:29), and that the church, the company of those so renewed, should grow to the fullness of Christ (Eph. 4:13). Believers may rejoice in the certainty that as part of his plan God predestinated them personally to share in this destiny (Rom. 8:28ff.; Eph. 1:3ff.; 2 Thes. 2:13; 2 Tim. 1:9; cf. 1 Pet. 1:1f.). The choice was wholly of grace (2 Tim. 1:9), having no regard to desert—being made, indeed, in defiance of foreseen ill-desert (cf. Jn. 15:19; Eph. 2:1ff.). Because God is sovereign, his predestinating choice guarantees salvation. From it flows an effectual 'calling', which elicits the response of faith which it commands (Rom. 8:28ff.; cf. 9:23f.; 1 Cor. 1:26ff.; Eph. 1:13; 2 Thes. 2:14); justification (Rom. 8:30); sanctification (1 Thes. 2:13); and glorification (Rom. 8:30, where the past tense implies certainty of accomplishment; 2 Thes. 2:14). Paul gives this teaching to Christians, persons who were themselves 'called', in order to assure them of their present security and final salvation, and to make them realize the extent of their debt to God's mercy. The 'elect' to whom, and of whom, he speaks in each Epistle are himself and/or the believers to whom he addresses it ('you', 'us').

It has been argued that God's foreknowledge is

not foreordination, and that personal *election in the NT is grounded upon God's foresight that the persons chosen will respond to the gospel of themselves. The difficulties in this view seem to be: (1) this asserts in effect election according to works and desert, whereas Scripture asserts election to be of grace (Rom. 9:11; 2 Tim. 1:9), and grace excludes all regard to what a man does for himself (Rom. 4:4; 11:6; Eph. 2:8f.; Tit. 3:5); (2) if election is *unto* faith (2 Thes. 2:13) and good works (Eph. 2:10, AV) it cannot rest upon foresight of these things; (3) on this view, Paul ought to be pointing, not to God's election, but to the Christian's own faith, as the ground of his assurance of final salvation; (4) Scripture does appear to equate foreknowledge with foreordination (cf. Acts 2:23).

III. Election and reprobation

*'Reprobate' appears first in Je. 6:30 (cf. Is. 1:22), in a metaphor taken from metal refining. The thought is of something that, by reason of its corrupt condition, does not pass God's test, and which he therefore rejects. The metaphor reappears in the NT. It is used of the Gentile world (Rom. 1:28) and of professing Christians (1 Cor. 9:27; 2 Cor. 13:5f.; cf. 2 Tim. 3:8; Tit. 1:16). Christian theology since Augustine has, however, spoken of reprobation, not as God's rejection of particular sinners in history, but as that which (it is held) lies behind it—God's resolve, from all eternity, to pass them by, and not to give them his saving grace (cf. 1 Pet. 2:8; Jude 4). It has thus become common to define predestination as consisting of election and reprobation together.

It is disputed whether reprobation ought to be thus included in God's eternal *prothesis*. Some justify the inclusion by appeal to Rom. 9:17f., 21f.; 11:7f. It seems hard to deny, in face of 9:22, that the hardening and non-salvation of some, which in vv. 19-21 Paul proved to be within God's right, is actually part of his predestinating purpose; though it should be noticed that Paul is concerned to stress, not God's implacability towards the reprobate, but his long restraint of his wrath against persons who have become ripe for destruction (cf. 2:4). But to determine the exact scope of these verses in their context is not easy; see the commentaries.

PREPARATION. The Gk. word *paraskeuē* is found in the NT with a twofold connotation. In its meaning of a definite day of preparation, it is used of the day preceding the weekly sabbath and the day which prepares for the annual Jewish Passover festival (cf. Jos., *Ant.* 16. 163), see Mt. 27:62; Mk. 15:42; Lk. 23:54; and especially Jn. 19, which mentions both types of preparation day. The reference in Jn. 19:14 is to *ereb ha-pesah*, i.e. the eve of the Passover (cf. *Pesachim* 10. 1 in the Mishnah). In Jn. 19:31, 42 there is no accompanying genitive, so the word must mean *ereb šabbāt*, i.e. the day before the sabbath (as clearly in Mk. 15:42). This would

PREPARATION

be the 24 hours from 6 p.m. Thursday to 6 p.m. Friday. The second meaning is extended, in later Christian literature, to designate the sixth day of the week, *i.e.* Friday (*cf. Martyrdom of Polycarp* 7. 1; *Didache*, 8. 1); and this is the sense of *paraskeuē* in modern Greek.

For the controverted meaning of the phrase in Jn. 19:14, see J. Jeremias, *The Eucharistic Words of Jesus*, E.T.² 1966, pp. 80–82 (biblio.). R. P. M.

PRESBYTER, PRESBYTERY. These terms, in evv usually rendered 'elder', 'eldership', *etc.*, are derived from the Gk. words *presbyteros*, *presbyterion* (as is also the contracted Eng. term 'priest'). The Heb. equivalent of *presbyteros* is *zāqēn*, and the Aram. equivalent is *šīb*, and all three words have the basic meaning 'old(er) man', in which sense *zāqēn* is used in Gn. 25:8; 1 Ki. 12:8; Ps. 148:12; Pr. 17:6; Je. 31:13, *etc.*, and *presbyteros* in Acts 2:17; 1 Tim. 5:1. This suggests that originally elders were men of advancing years; and that such still tended to be the case in NT times is indicated by 1 Pet. 5:1, 5; *Mishnah Aboth* 5. 21. *presbyteroi* can also mean 'men of old time', as in Mk. 7:3, 5; Heb. 11:2, and perhaps Rev. 4:4, 10, *etc.*, where the twenty-four elders may symbolize the authors of the books of the OT, which the Jews reckon as twenty-four in number (*CANON OF THE OT).

Throughout the Bible, seniority entitles people to respect (Lv. 19:32; 1 Tim. 5:1) and *age is thought of as bringing experience and therefore wisdom (1 Ki. 12:6–15; Pr. 4:1; 5:1). Consequently, the leading men of Israel, right through its OT history, are the elders of the nation (Ex. 3:16, 18; Lv. 4:15; Jdg. 21:16; 1 Sa. 4:3; 2 Sa. 3:17; 1 Ki. 8:1, 3; 2 Ki. 23:1; 1 Ch. 11:3; Ezr. 5:5, 9; Je. 26:17; Ezk. 8:1, *etc.*). Seventy of them are chosen to share the burden of ruling with Moses (Nu. 11:16–30), and the elders later do something similar for the king. Along with the priests, they are entrusted with the written Law, and charged to read it to the people (Dt. 31:9–13). When the people settle in the promised land, and are dispersed throughout its cities, the elders of the cities act as judges there (Dt. 19:12; 21:19f.; 22:15–18; Jos. 20:4; Ru. 4:2, 4, 9, 11; 1 Ki. 21:8, 11; 2 Ki. 10:1, 5), thus continuing the practice of having lay judges for lesser questions, which began in the wilderness (Ex. 18:13–26; Dt. 1:9–18). The appeal judges at Jerusalem, however, are partly lay, partly priestly (Dt. 17:8–13; 2 Ch. 19:8–11).

The lay judges of Ex. 18 and Dt. 1 are selected for their wisdom, piety and integrity. Similarly, the choice made among the elders in Nu. 11 probably reflects a recognition that age does not bring wisdom invariably. Indeed, a wise youth is better than a foolish old king (Ec. 4:13). This recognition continues in the intertestamental literature. Wisdom befits the aged, and elders ought to be wise (Ecclus. 6:34; 8:8f.; 25:3f.), but even the young are honoured if wise (Wisdom 8:10) and are treated as elders (Susanna 45, 50). Judges are men specially selected from among the elders (Susanna 5f., 41). The elders said to have been chosen from each tribe to translate the Pentateuch into Greek are marked not so much by age (*Letter of Aristeas* 122, 318) as by virtuous life and by knowledge and understanding of the Mosaic Law (32, 121f., 321). In conformity with Dt. 31, they include both laymen and priests (184, 310), but now with a large lay majority.

At Jerusalem also, the ancient link between elders and priests continues (La. 1:19; 4:16; 1 Macc. 7:33; 11:23) and is prominent in the NT (Mt. 21:23; 26:3, 47; 27:1, 3, 12, 20; 28:11f.; Acts 4:23; 23:14; 25:15). Out of it has now grown the Sanhedrin, which is the ruling council of the nation and its supreme court of justice, presided over by the high priest. The elders and chief priests are included among its seventy-one members (Mt. 27:1; Mk. 8:31; 14:53; 15:1; Lk. 22:66; Acts 4:5, 8, 23; 22:5), along with 'scribes' and 'rulers', terms which probably have very similar meanings to the other two. The elders also appear as rulers in the intertestamental literature, at Jerusalem and elsewhere (Judith 8:10f.; 1 Macc. 12:35).

For their duty of judging the people according to God's law, the priests and elders need a knowledge of God's law, and this is why the priests are given the further duty of teaching it (Lv. 10:10f.; Dt. 33:10; Mal. 2:6f.). In 1st-century Alexandria we still find the priests as well as the elders performing this duty, by expounding the Scriptures to the people in the synagogue on the sabbath (Philo, *Hypothetica* 7. 13), but in Palestine the task of teaching seems to have passed over almost entirely to the elders, who are called by this name in Lk. 7:3, in a Jerusalem synagogue inscription from before AD 70, and in the rabbinical literature, but in the NT are usually called 'scribes' (Scripture-experts), 'teachers of the law', 'lawyers' or 'rabbis'. They teach on occasion in the Temple (Lk. 2:46) but have their great centre of influence in the synagogue (Mt. 23:6; Mk. 1:21f.; Lk. 5:17; 6:6f.; 7:3–5). In the rabbinical literature, their primary duty is still to be judges, and this is why we read in the NT of excommunications from the synagogue (Jn. 9:22; 12:42; 16:2), and of punishments being inflicted in the synagogue (Mt. 23:34; Mk. 13:9; Acts 22:19; 26:11). The synagogue also has one or more 'synagogue-rulers', responsible for keeping order there (Lk. 13:14) and for choosing who should preach (Acts 13:15), read the lessons or lead the prayers; and an 'attendant' (Lk. 4:20). The non-biblical evidence suggests that these are local appointments attached to the synagogue building. The elder, on the other hand, is ordained by his teacher and thus has a wider scope for his ministry, though he usually settles and earns his living by a trade. He in turn ordains his own pupils, often with the co-operation of two other elders, and usually by the laying on of hands and thus a succession of teachers and judges, and a tradition of teaching and legal interpretation, is established and continued. Then, in the 2nd century AD, the right to ordain or authorize ordinations is concentrated in the national patriarch. *Cf. esp. Tosefta Sanhedrin* 1. 1; *Jerusalem Sanhedrin* 1. 2–4.

It is against this background that the Christian eldership is established, and the Jewish-Christian institution of eldership helps to unify the diversities of NT ministry, more than is often realized. Christ is the one great teacher or rabbi (Mt. 23:8). His disciples call themselves elders (1 Pet. 5:1; 2 Jn. 1; 3 Jn. 1). They pass on the teaching they have received and commit it to others, who are to commit it to others again (1 Cor. 11:23; 15:1, 3; 2 Thes. 2:15; 3:6; 2 Tim. 2:2). Those to whom it is committed are likewise called elders (Acts 14:23; Tit. 1:5). They are apparently appointed by the laying on of hands (Acts 6:6; *cf.* 11:30; 1 Tim. 4:14; 5:22; 2 Tim. 1:6). They must be ready to earn their own living if necessary (Acts 20:17, 33–35). They

have the tasks of teaching (1 Tim. 5:17; Tit. 1:5, 9) and of acting as judges (Acts 15:2, 6, 22–29; 16:4). It is an open question whether a parallel is to be seen between the Jerusalem council or appeal court, consisting of apostles and elders, presided over by James the Lord's brother, and the Sanhedrin, consisting of chief priests and elders, presided over by the high priest. In addition to the tasks of teaching and judging, the task of ruling is re-emphasized in the Christian eldership, and given a pastoral rather than a political character (Acts 20:17, 28; 1 Tim. 5:17; Jas. 5:14; 1 Pet. 5:1–4; cf. Mt. 9:36–38; Eph. 4:11); hence the elder's other title of *bishop, and hence the disappearance of the separate office of 'synagogue-ruler' in Christianity, his task being partly absorbed by the elder, and partly, no doubt, by the owner of the house-church. The 'attendant', on the other hand, survives as the Christian deacon, though his office is still local to the extent that deacons appear in the NT only occasionally.

The Christian eldership is thus primarily an office of teaching, of adjudicating questions of right and wrong, and of providing pastoral oversight. Though elders are specially ordained, their office is not a priestly or a ceremonial one. The sacraments are under the supervision of the ordained ministry, but are not their personal prerogative. When the office of bishop becomes separated from that of elder in the 2nd century, the tasks of teaching, pastoral oversight and supervision of the sacraments are shared between the two offices; the task of acting as judge, in matters of excommunication and reconciliation, adheres primarily to the bishop; so too, for a time, does the assistance of the deacon; and so does the duty of ordination, the practice of having two others to co-operate in the bishop's own ordination, and the concept of a succession of teachers, each committing to his successor, through instruction and ordination, the message with which he has himself been entrusted. Elders, however, continue to have certain judicial duties, in the repelling of impenitent offenders from the Lord's table, and certain ordaining duties, in assisting with the ordination of other elders. (*CHURCH GOVERNMENT, *MINISTRY.)

PRESS, WINEFAT. A rectangular cavity hollowed out of rock or constructed artificially within which grapes were trampled underfoot, and from which the resultant juice drained into a lower receptacle. The term is applied to the whole apparatus. Its fullness was a sign of prosperity, while its emptiness represented famine.

It is used metaphorically in Is. 63:3 and in Joel 3:13, where the full press and overflowing vats indicate the greatness of the threatened carnage. It serves as a striking simile in La. 1:15, and in Rev. 14:18–20 forms part of the apocalyptic language following on the predicted fall of Babylon.

PRIDE. The emphasis placed on pride, and its converse humility, is a distinctive feature of biblical religion, unparalleled in other religious or ethical systems. Rebellious pride, which refuses to depend

on God and be subject to him, but attributes to self the honour due to him, figures as the very root and essence of sin.

We may say with Aquinas that pride was first revealed when Lucifer attempted to set his throne on high in proud independence of God (Is. 14:12–14). The fallen devil (Lk. 10:18) instilled the craving to be as gods into Adam and Eve (Gn. 3:5), with the result that man's entire nature was infected with pride through the Fall (cf. Rom. 1:21–23). The 'condemnation of the devil' is associated with pride in 1 Tim. 3:6 (cf. 'the snare of the devil' in 1 Tim. 3:7; 2 Tim. 2:26); pride was his undoing and remains the prime means by which he brings about the undoing of men and women. Hence we find a sustained condemnation of human arrogance throughout the OT, especially in the Psalms and Wisdom Literature. In Pr. 8:13 both *g'ā*, 'arrogance', and *gā'wā*, 'insolence', are hateful to the divine wisdom: their manifestation in the form of national pride in Moab (Is. 16:6), Judah (Je. 13:9) and Israel (Ho. 5:5) are especially denounced by the prophets. The notorious 'pride which goes before a fall' is called *gā'ōn*, 'swelling excellence', in Pr. 16:18, and is rejected in favour of the lowly spirit. 'Haughtiness', *gōbah*, appears as a root cause of atheism in Ps. 10:4. It is the downfall of Nebuchadrezzar in Dn. 4:30, 37. A milder word, *zādōn*, 'presumption', is applied to David's youthful enthusiasm in 1 Sa. 17:28, but in Ob. 3 even this is regarded as a deceitful evil. Further warnings against pride occur in the later Wisdom Literature, e.g. Eccles. 10:6–26.

Greek teaching during the four last centuries BC was at variance with Judaism in regarding pride as a virtue and humility as despicable. Aristotle's 'great-souled man' had a profound regard for his own excellence; to underestimate it would have stamped him as mean-spirited. Similarly, the Stoic sage asserted his own moral independence and equality with Zeus. Insolence (*hybris*), however, is a deep source of moral evil in the Greek tragedy (cf., e.g., the *Antigone* of Sophocles).

The Christian ethic consciously rejected Greek thought in favour of the OT outlook. Humility was accorded supreme excellence when Christ pronounced himself 'gentle and lowly in heart' (Mt. 11:29). Conversely, pride (*hyperēphania*) was placed on a list of defiling vices proceeding from the evil heart of man (Mk. 7:22). In the Magnificat (Lk. 1:51f.) God is said to scatter the proud and exalt the meek. In both Jas. 4:6 and 1 Pet. 5:5, Pr. 3:34 is quoted to emphasize the contrast between the meek (*tapeinois*), whom God favours, and the proud (*hyperēphanois*), whom God resists. Paul couples the insolent (*hybristas*) and the boastful (*alazonas*) with the proud sinners in his sketch of depraved pagan society in Rom. 1:30; cf. 2 Tim. 3:2. Arrogant display or ostentation (*alazoneia*) are disparaged in Jas. 4:16 and 1 Jn. 2:16. Love, in 1 Cor. 13:4, is stated to be free from both the arrogance and the self-conceit which mar the heretical teachers of 1 Tim. 6:4.

Paul saw pride ('boasting' in knowledge of the law and in works/righteousness) as the characteristic spirit of Judaism and a direct cause of Jewish unbelief. He insisted that the gospel is designed to exclude boasting (Rom. 3:27) by teaching men that they are sinners, that self-righteousness is therefore out of the question, and that they must look to Christ for their righteousness and take it as a free gift by faith in him. Salvation is 'not because of

PRIDE

works, lest any man should boast'; it is all of grace. No man, therefore, not even Abraham, may glory in the achievement of his own salvation (see Eph. 2:9; 1 Cor. 1:26-31; Rom. 4:1-2). The gospel message of righteousness through Christ sounds the death-knell of self-righteousness in religion; that is why it was a stumbling-block to the proud Jews (Rom. 9:30-10:4).

This NT emphasis made a deep impact on early and mediaeval ethics. Augustine, Aquinas and Dante all characterized pride as the ultimate sin, while Milton and Goethe dramatized it.

PRIESTS AND LEVITES. The relationship between the priests, who are the descendants of Aaron, and the Levites, the other members of Levi's tribe, is one of the thorny problems of OT religion. Any treatment of the Levites must deal with the biblical evidence, Julius Wellhausen's reconstruction of it and the numerous ways in which contemporary scholars have reacted to his evolutionary approach.

I. The biblical data

a. *The Pentateuch*

The Levites come into prominence in the Pentateuch in connection with Moses and Aaron (Ex. 2:1-10; 4:14; 6:16-27). After Aaron led the people into apostasy with the golden calf (Ex. 32:25ff.), the sons of Levi avenged the Lord's honour by punishing many of the miscreants. This display of fidelity to God may partially account for the signal responsibilities given the tribe in the pentateuchal legislation.

The role of the Levites as ministers in the tabernacle, clearly detailed in Numbers, is anticipated in Ex. 38:21, where they co-operate in the construction of the tabernacle under the supervision of Aaron's son, Ithamar. In the laws preparatory to the wilderness march, Levi was separated by God from the other tribes and placed in charge of the dismantling, carrying and erecting of the tabernacle (Nu. 1:47-54). The sons of Levi camped around the tabernacle and apparently served as buffers to protect their fellow-tribes from God's wrath, which threatened them if they unwittingly came in contact with the holy tent or its furnishings (Nu. 1:51, 53; 2:17).

Forbidden to serve as priests, a privilege reserved, on penalty of death, for Aaron's sons (Nu. 3:10), the Levites were dedicated to an auxiliary ministry for the priests, especially in regard to the manual labour of caring for the tabernacle (Nu. 3:5ff.). In addition, they performed an important service for the other tribes by substituting for each family's first-born, to whom God was entitled in view of the fact that he spared Israel's first-born at the Passover in Egypt (cf. Ex. 13:2ff., 13). As representatives of the tribes' first-born (Nu. 3:40ff.) the Levites were part of 'the far-reaching principle of representation' by which the concept of a people utterly dependent upon and totally surrendered to God was put across (cf. H. W. Robinson, *Inspiration and Revelation in the Old Testament*, 1953, pp. 219-221).

Each of the three families of Levi had specific

duties. The sons of *Kohath* (numbering 2,750 in the age-group from 30 to 50 according to Nu. 4:36) were in charge of carrying the furniture after it had been carefully covered by the priests, who alone could touch it (Nu. 3:29-32; 4:1ff.). The *Kohathites* were supervised by Aaron's son, Eleazar. The sons of *Gershon* (2,630; Nu. 4:40) cared for the coverings, screens and hangings under the supervision of Aaron's son Ithamar (Nu. 3:21-26; 4:21ff.). *Merari's* sons (3,200; Nu. 4:44) had the task of carrying and erecting the frame of the tabernacle and its court (Nu. 3:35-37; 4:29ff.).

The representative function of the Levites is symbolized in the rituals of cleansing and dedication (Nu. 8:5ff.). For instance, both the fact that the Israelites (probably through their tribal leaders) laid hands on the Levites (8:10), acknowledging them as substitutes (cf. Lv. 4:24, etc.), and the fact that the priests offered the Levites as a wave-offering (probably by leading them to and then from the altar) from the people (8:11), suggest that the Levites were given by the Israelites to serve Aaron's sons in their stead. This is made explicit in 8:16ff., where Levi's sons are called *n'túnim*, 'gifts'.

Their service began at 25 years of age and continued until the 50th year, when the Levite went into a kind of semi-retirement with limited duties (Nu. 8:24-26). There may have been a 5-year apprenticeship, because apparently the full responsibility of carrying the tabernacle and its furnishings fell on the shoulders of the men from 30 years to 50 (Nu. 4:3ff.). When David established a permanent site for the ark, the age was lowered to 20 years because there was no longer a need for mature Levites as porters (1 Ch. 23:24ff.).

The levitical responsibility of representing the people carried with it certain privileges. Although they had no inheritance in the land (i.e. no portion of it was appointed for their exclusive use: Nu. 18:23-24; Dt. 12:12ff.), the Levites were supported by the tithes of the people, while the priests received the parts of the offerings not consumed by sacrifice, the firstlings of flock and herd, and a tithe of the levitical tithes (Nu. 18:8ff., 21ff.; cf. Dt. 18:1-4). Occasionally both priests and Levites shared in the spoils of battle (e.g. Nu. 31:25ff.). In addition, the Levites had permission to reside in forty-eight cities set aside for their use (Nu. 35:1ff.; Jos. 21:1ff.). Surrounding each city an area of pasture-land was marked off for them. Six of the cities, three on each side of the Jordan, served as *cities of refuge.

The transition from the wilderness marches to settled life in Canaan (anticipated in Nu. 35 in the establishing of levitical cities) brought with it both an increased concern for the welfare of the Levites and an expansion of their duties in order to cope with the needs of the decentralized pattern of life. In Deuteronomy great stress is laid on the Israelites' responsibilities towards the sons of Levi, who were to share in the rejoicing of the tribes (12:12), in their tithes and certain offerings (12:18-19; 14:28-29), and in their chief festivals, especially Weeks and Tabernacles (16:11-14). The Levites dispersed throughout the land were to share equally both the ministry and the offerings with their brethren who resided at the central shrine (18:6-8).

Whereas Numbers characteristically calls the priests the *sons of Aaron* (e.g. 10:8), Deuteronomy frequently uses the expression 'the *Levitical priests*' (e.g. 18:1). Though some scholars (see below) have

held that no distinction is made between priest and Levite in Deuteronomy, the fact that different portions are ascribed to priests in Dt. 18:3ff. and to Levites in 18:6ff. suggests that the distinction is maintained. The phrase 'the Levitical priests' (e.g. Dt. 17:9, 18; 18:1; 24:8; 27:9; cf. Jos. 3:3; 8:33) seems to mean 'the priests of the tribe of Levi'. To them the Deuteronomic code assigns numerous duties in addition to the care of the sanctuary: they serve as judges in cases involving difficult decisions (17:8-9), regulate the control of lepers (24:8), guard the book of the law (17:18) and assist Moses in the ceremony of covenant renewal (27:9).

Within the family of Kohath the office of high priest (Heb. *hakkōhēn*, 'the priest' (Ex. 31:10, etc.); *hakkōhēn hammāšiah*, 'the anointed priest' (Lv. 4:3, etc.); *hakkōhēn haggādōl*, 'the high priest' (Lv. 21:10, etc.) was exercised by the eldest representative of Eleazar's family, unless the sanctions of Lv. 21:16-23 were applicable. He was consecrated in the same manner as the other priests and shared in their routine duties. He alone wore the special vestments (Ex. 28; *BREASTPIECE OF THE HIGH PRIEST, *MITRE, *DRESS) and interpreted the oracles (*URIM AND THUMMIM). On the Day of *Atonement he represented the chosen people before Yahweh, sprinkling the blood of the sacrificial goat on the mercy-seat (*SACRIFICE AND OFFERING).

b. The Former Prophets

The priests play a more prominent role than the Levites in the book of Joshua, especially in the story of the crossing of Jordan and the conquest of Jericho. Sometimes called 'the priests the Levites' (e.g. Jos. 3:3; 8:33) and more often simply 'the priests' (e.g. Jos. 3:6ff.; 4:9ff.), they had the crucial task of bearing the ark of the Lord. The tabernacle, however, carried by the Levites is not mentioned (with the possible exception of 6:24) until it was pitched at Shiloh (18:1; 19:51) after the conquest of Canaan. Apparently the carrying of the ark was entrusted to the priests rather than the Kohathites (cf. Nu. 4:15) because of the supreme importance of these journeys: God, whose presence the ark symbolized, was marching forth conquering and to conquer. The Levites came into the forefront only when the time for dividing the land was at hand (cf. Jos. 14:3ff.). The distinction between priests and Levites is clearly maintained: the Levites remind Eleazar, the priest, and Joshua of Moses' command concerning levitical cities (Jos. 21:1-3); the Kohathites are divided into two groups—those who have descended from Aaron (i.e. the priests) and the rest (Jos. 21:4-5).

The general laxness of worship during the days between the conquest of Canaan and the establishment of the Monarchy is illustrated in the two levitical stories in Judges. Micah's Levite (Jdg. 17-18) is said to hail from Bethlehem and to be a member of the family of Judah (17:7). How was he both Levite and Judahite? The answer hangs on whether the Levite is to be identified with *Jonathan, the son of Gershom (18:30). If they are identical (as seems likely), then the Levite's relationship to Judah must be geographical, not genealogical, in spite of the phrase 'family of Judah' (17:7). If the two men are not identical, then the Levite may be an example of the possibility that men of other tribes could, in this period, join themselves to the priestly tribe. This may have been the case with *Samuel, an Ephraimite (cf. 1 Sa. 1:1; 1 Ch. 6:28).

There is some evidence that the term *Levite* may have been a functional title meaning 'one pledged by vow' as well as a tribal designation (cf. W. F. Albright, *Archaeology and the Religion of Israel*³, 1953, pp. 109, 204ff.); however, T. J. Meek (*Hebrew Origins*³, 1960, pp. 121ff.) maintains that the Levites were originally a secular tribe who assumed a priestly function not only in Israel but perhaps in Arabia as well. The macabre story of the Levite and his concubine (Jdg. 19) is further testimony to the itinerations of the Levites and to the general laxness of the era. Lack of central authority curtailed the control which the central sanctuary at Shiloh should have enjoyed (Jdg. 18:31) and allowed numerous shrines to exist which paid little heed to the Mosaic regulations.

Levites appear only rarely in the rest of the Former Prophets, usually in connection with their role in carrying the ark (1 Sa. 6:15; 2 Sa. 15:24; 1 Ki. 8:4). When *Jeroboam I set up rival shrines at Dan and Bethel, he staffed them with non-levitical priests, probably in order to sever relationships with the Jerusalem Temple as completely as possible (1 Ki. 12:31; cf. 2 Ch. 11:13-14; 13:9-10). Royal control of the centre of worship in both kingdoms was an important feature of the Monarchy.

c. The Chronicles

The priestly perspective of the writer of the books of *Chronicles tends to accentuate the role of the Levites and fills in numerous details of their ministry which the authors of Kings have omitted. In the genealogies of 1 Ch. 6, which also describe the role of Aaron's sons (6:49-53) and the distribution of levitical cities (6:54-81), special attention is focused on the levitical singers, Heman, Asaph, Ethan and their sons, who were put in charge of the Temple music by David (6:31ff.; cf. 1 Ch. 15:16ff.). The list of Levites in 1 Ch. 9 bristles with problems. The similarities between it and Ne. 11 have led some (e.g. ASV, RSV) to treat it as the roll of Levites who returned to Jerusalem from the captivity (cf. 1 Ch. 9:1). Others (e.g. C. F. Keil) view it as a list of early inhabitants of Jerusalem. Both the carefully organized assignments of duty and the numbers of Levites involved (cf. the 212 gatekeepers of 1 Ch. 9:22 with the 93 of 1 Ch. 26:8-11) suggest a period subsequent to that of David. The close co-operation between Levites and sons of priests (cf. 1 Ch. 9:28ff.) and the fact that Levites cared for some of the holy vessels and helped to prepare the showbread may indicate that the rigid division of duties suggested in Nu. 4 and 18 broke down during the Monarchy, perhaps because the sons of Aaron were not numerous enough (the 1,760 in 1 Ch. 9:13 probably refers to the number of kinsmen, not to the number of heads of houses) to cope with the demands of their office. Therefore, in addition to their regular tasks as singers and musicians, gatekeepers, porters, etc., the Levites had to help in the actual preparation of the sacrifices, as well as in the care of the courts and chambers, the cleansing of the holy things and the preparation of the showbread, the cereal offering, the unleavened bread, the baked offering, etc. (23:14).

David's orders in 1 Ch. 23 illustrate the two dominant factors which produced substantial changes in the levitical offices: the permanent location of the ark in Jerusalem, which automatically made obsolete all the regulations concerning the Levites' function as porters; and the centralization

PRIESTS AND LEVITES

of responsibility for the official religion (as for all other affairs of life) in the king. The Heb. view of corporate personality saw the king as the great father of the nation whose essential character was derived from him. As David brought the central shrine to Jerusalem (1 Ch. 13:2ff.) and established the patterns of its function (1 Ch. 15:1ff.; 23:1ff.) in accordance with the principles of the Mosaic legislation, so Solomon built, dedicated and supervised the Temple and its cult according to his father's plan (1 Ch. 28:11–13, 21; 2 Ch. 5–8, note especially 8:15: 'And they did not turn aside from what the king had commanded the priests and Levites . . .').

Similarly, Jehoshaphat commissioned princes, Levites and priests to teach the law throughout Judah (2 Ch. 17:7ff.) and appointed certain Levites, priests and family heads as judges in Jerusalem (2 Ch. 19:8ff.) under the supervision of the chief priest. Joash (2 Ch. 24:5ff.), Hezekiah (2 Ch. 29:3ff.) and Josiah (2 Ch. 35:2ff.) supervised the priests and Levites and re-established them in their functions according to the Davidic pattern.

The relationship between the levitical office and the prophetic is a moot question. Were some Levites cult-prophets? No firm answer is possible, but there is some evidence that Levites sometimes exercised prophetic activity: Jahaziel, a Levite of the sons of Asaph, prophesied Jehoshaphat's victory over the Moabite–Ammonite coalition (2 Ch. 20:14ff.) and Jeduthun, the Levite, is called the king's *seer* (2 Ch. 35:15).

d. The Latter Prophets

Isaiah, Jeremiah and Ezekiel touch briefly upon the role of the Levites after the Exile. Is. 66:21 speaks of God's gathering of dispersed Israelites (or perhaps converted heathen) to serve him as priests and Levites. Jeremiah (33:17ff.) envisages a covenant with the levitical priests (or perhaps priests and Levites; cf. Syr. and Vulg.) which is as binding as God's covenant with David's family (cf. 2 Sa. 7). Ezekiel forces a sharp cleavage between the levitical priests, whom he calls the sons of Zadok (e.g. 40:46; 43:19), and the Levites. The former are deemed to have remained faithful to God (44:15; 48:11), while the latter went astray after idols and therefore could not approach the altar or handle the most sacred things (44:10–14). Actually Ezekiel's suggestion seems to be a return to the careful distinction between priest and Levite found in Numbers from the somewhat more lax view which prevailed during the Monarchy.

e. The post-exilic writings

Under Joshua and Zerubbabel 341 Levites returned (Ezr. 2:36ff.) with the 4,289 members of priestly families, and the 392 Temple servants (*n'ṭinim*, i.e. 'given', 'appointed', who were apparently descendants of prisoners of war pressed into Temple service; cf. Jos. 9:23, 27; Ezr. 8:20). The difference between the large number of priests and the comparatively small number of Levites may be due to the fact that many Levites took on priestly status during the Exile. The other Levites responsible for menial tasks in the Temple seem to have been reluctant to return (Ezr. 8:15–20). The Levites played a prominent part at the laying of the foundation (Ezr. 3:8ff.) and at the dedication of the Temple (Ezr. 6:16ff.). Ezra, after recruiting Levites for his party (Ezr. 8:15ff.), instituted a reform to ban foreign marriages in which even priests and Levites had become involved (Ezr. 9:1ff.; 10:5ff.).

Similarly in Nehemiah, the Levites and priests engaged in their full range of duties. After repairing a section of the wall (Ne. 3:17), the Levites were busily occupied with instruction in the law (Ne. 8:7–9) and participation in the religious life of the nation (Ne. 11:3ff.; 12:27ff.). They were to receive tithes from the people and in turn to give a tithe of the tithes to Aaron's sons (Ne. 10:37ff.; 12:47). The need for a central authority to enforce the levitical regulations was shown by the deterioration of the cult during Nehemiah's absence from Jerusalem: Tobiah, the Ammonite, was allowed to occupy the room in the Temple which should have served as a storeroom for the levitical tithes (Ne. 13:4ff.); deprived of their support, the Levites had forsaken the Temple and fled to their fields in order to sustain themselves (Ne. 13:10ff.).

It may have been during this period that the priests put personal gain above their covenanted responsibility to teach the law and accepted corrupt sacrifices (Mal. 1:6ff.; 2:4ff.). For Malachi, the purification of the sons of Levi was one of God's central eschatological missions (3:1–4).

The high priesthood remained in the family of Eleazar until the time of *Eli, a descendant of Ithamar. The conspiracy of *Abiathar led Solomon to depose him (1 Ki. 2:26f.). The office thus returned to the house of Eleazar in *Zadok and remained in that family until political intrigues resulted in the deposition of Onias III by the Seleucid king Antiochus Epiphanes (c. 174 BC). Thereafter it became the patronage of the ruling power.

II. Wellhausen's reconstruction

The development of the documentary hypothesis with its emphasis on the post-exilic date for the completion of the priestly code (*PENTATEUCH) brought with it a drastic re-evaluation of the development of Israel's religion. The classical form of this re-evaluation was stated by Julius Wellhausen (1844–1918) in his *Prolegomena to the History of Israel* (1878; E.T. 1885).

The crux of the relationship between priest and Levite for Wellhausen was Ezekiel's banning of Levites from priestly duties (44:6–16). From Ezekiel's statement Wellhausen drew two inferences: the separation of the holy from the profane was not part of the temple procedure, as the use of heathen temple servants (see above) indicates; Ezekiel reduced the Levites, who had hitherto performed priestly functions, to the status of temple-slaves. The sons of Zadok were exempt from Ezekiel's indictment because they served at the central sanctuary in Jerusalem and, unlike the Levites, had not defiled themselves by service at the high places throughout the land. When the sons of Zadok objected to relinquishing their exclusive control, Ezekiel devised 'moral' grounds for maintaining their exclusiveness, although actually the distinction between priests and Levites was accidental not moral (the priests *happened* to be at Jerusalem, the Levites at the high places). Wellhausen concluded that the priestly law of Numbers did not exist in Ezekiel's time.

Since the Aaronic priesthood is stressed only in the priestly code, it was viewed by Wellhausen as a fiction in order to give the priesthood an anchor in the Mosaic period. The genealogies in Chronicles are artificial attempts to link the sons of Zadok with Aaron and Eleazar.

Central in Wellhausen's reconstruction was the

striking contrast between the 'elaborate machinery' of the wilderness cult and the decentralization of the period of the Judges, when worship played apparently only a minor role according to Jdg. 3-16. The latter period he took to be the authentic time of origin of Israelite worship, which began simply as various family heads offered their own sacrifices, and developed as certain families (e.g. Eli's at Shiloh) gained prominence at special sanctuaries. A startling example of the contrast between the complexity of the wilderness religion and the simplicity during the settlement was the fact that Samuel, an Ephraimite, slept nightly beside the ark (1 Sa. 3:3) in the place where, according to Lv. 16, only the high priest could enter annually.

When Solomon built the permanent shrine for the ark, the prominence of the Jerusalem priests (under Zadok, whom David had appointed) was assured. Like Judah, like Israel: Jeroboam's shrines were royal shrines and the priests were directly responsible to him (Am. 7:10ff.). In Judah the process of centralization reached its acme when Josiah's reform abolished the high places, reduced their priests to subsidiary status in the central sanctuary and set the stage for Ezekiel's crucial declaration.

Against this evolutionary schematization, Wellhausen set the various strata of the Pentateuch and found a remarkable degree of correspondence. In the laws of J (Ex. 20-23; 34) the priesthood is not mentioned, while the other parts of J mark Aaron (Ex. 4:14; 32:1ff.) and Moses (Ex. 33:7-11) as founders of the clergy. The mention of other priests (e.g. Ex. 19:22; 32:29) was disregarded by Wellhausen, who considered these passages as interpolations. It was in D (Dt. 16:18-18:22) that he saw the beginning of the use of the name *Levites* for the priests. The hereditary character of the priesthood began not with Aaron (who, according to Wellhausen, 'was not originally present in J, but owed his introduction to the redactor who combined J and E') but during the Monarchy with the sons of Zadok. Recognizing the basic authenticity of the inclusion of Levi in the tribal blessings of Gn. 49, Wellhausen believed that this tribe 'succumbed at an early date' and that the supposed tie between the official use of the term *Levite* and the tribe of Levi was artificial.

The priestly code (P) not only strengthened the hand of the clergy but introduced the basic division into the ranks of the clergy—the separation of priests (Aaron's sons) from Levites (the rest of the tribe). Therefore, while the Deuteronomist spoke of levitical priests (i.e. the priests the Levites) the priestly writers, especially the Chronicler, spoke of priests and Levites.

Another priestly innovation was the figure of the high priest, who loomed larger in Exodus, Leviticus and Numbers than anywhere else in the pre-exilic writings. Whereas in the historical books the king dominated the cult, in the priestly code it was the high priest, whose regal status, according to Wellhausen, could only reflect a period when the civil government of Judah was in the hands of foreigners and Israel was not so much a people as a church—the post-exilic period.

One need only consult such representative works as Max Loehr's *A History of Religion in the Old Testament*, 1936, e.g. pp. 136-137; W. O. E. Oesterley and T. H. Robinson's *Hebrew Religion*, 1930, e.g. p. 255; and R. H. Pfeiffer's *IOT*, 1948, e.g. pp.

556-557, to see the stubbornness with which Wellhausen's reconstruction has persisted.

III. Some reactions to Wellhausen's reconstruction

Among the conservatives who have set out to tumble Wellhausen's structure, three names are noteworthy: James Orr (*The Problem of the Old Testament*, 1906), O. T. Allis (*The Five Books of Moses*², 1949, pp. 185-196), G. Ch. Aalders (*A Short Introduction to the Pentateuch*, 1949, pp. 66-71).

Basic to Wellhausen's reconstruction is the assumption that the Levites who were invited in Dt. 18:6-7 to serve at the central shrine were the priests who had been disfranchised by the abolition of their high places during Josiah's reform. But solid evidence for this assumption is lacking. In fact, 2 Ki. 23:9 affirms the opposite: the priests of the high places did not come up to the altar of the Lord in Jerusalem. The critical view that priests and Levites are not clearly distinguished in Deuteronomy has been discussed above, where it was seen that a clear distinction was made between them in regard to the people's responsibility towards them (Dt. 18:3-5, 6-8). Nor can the view that the phrase 'the priests the Levites' (Dt. 17:9, 18; 18:1; 24:8; 27:9), not found elsewhere in the Pentateuch, argues for the identity of the two offices in Deuteronomy be maintained. The phrase serves merely to link the priests with their tribe. Confirmation for this seems to be found in 2 Ch. 23:18 and 30:27, where the 'Levitical priests' are distinguished from other Levites (30:25), gatekeepers, etc. (23:19).

Attention has frequently been directed by Wellhausen and others to the apparent discrepancy between the law of *tithes in Nu. 18:21ff. (cf. Lv. 27:30ff.), which earmarks the tithes for the Levites, and the counterpart in Dt. 14:22ff., which allows Israelites to eat of the tithes in a sacrificial meal while enjoining them to share it with the Levites. Judaism has traditionally reconciled these passages by calling the tithe of Deuteronomy 'a second tithe', e.g. in the Talmudic tractate *Ma'aser Sheni*. This explanation may not be so acceptable as James Orr's (*op. cit.*, pp. 188-189): the laws of Deuteronomy, he held, apply to a time when the tithe-laws (and those relating to levitical cities) could not be fully enforced, since the conquest was not complete and there was no central agency to enforce them. In other words, Nu. 18:21ff. deals with Israel's ideal while Dt. 14:22ff. is an interim programme for the conquest and settlement.

Pivotal in Wellhausen's reconstruction is his interpretation of Ezekiel's denunciation of the Levites (44:4ff.), in which he finds the origin of the cleavage between priests (the sons of Zadok) and Levites (priests who had previously engaged in idolatry at the high places). But James Orr (*op. cit.*, pp. 315-319, 520) calls attention to the deplorable condition of the priesthood just prior to Ezekiel's time and points out that Ezekiel did not establish the law but rather re-established it by depriving Levites of privileges not rightly theirs, which they had usurped during the Monarchy and by demoting idolatrous priests to the already well-established lower rank of Levite. Furthermore, the ideal context of Ezekiel's pronouncement suggests that the degradation in view may never have been carried out, at least not literally. The tone of Ezekiel stands in contradiction to that of the priestly code in that the latter knows nothing of priestly degradation but stresses divine appointment. In

PRIESTS AND LEVITES

addition, the priests in P are not Zadok's sons but Aaron's sons.

The office of high priest has been largely relegated to the post-exilic period by the Wellhausen school. Though the title itself occurs only in 2 Ki. 12:10; 22:4, 8; 23:4 in pre-exilic writings (usually considered by documentary critics to be post-exilic interpolations), the existence of the office seems to be indicated by the title 'the priest' (e.g. Ahimelech, 1 Sa. 21:2; Jehoiada, 2 Ki. 11:9-10, 15; Urijah, 2 Ki. 16:10ff.) and by the fact that a priesthood of any size at all involves an administrative chief, even if the king is the head of the cult. (Cf. J. Pedersen, *Israel*, 3-4, p. 189.)

In *The Religion of Israel*, 1960, Yehezkel Kaufmann examines a number of Wellhausen's key conclusions and finds them wanting. The high priest, for instance, far from being a royal figure reflecting the post-exilic religious leaders, faithfully mirrors the conditions of the military camp which is subject to the authority of Moses, not Aaron (*op. cit.*, pp. 184-187).

Kaufmann turns his attention to 'the one pillar of Wellhausen's structure that has not been shaken by later criticism'—the reconstruction of the relationship between priests and Levites. Noting the absence of evidence for the demotion of the rural priests, he then calls attention to a basic weakness in the documentary view: 'Nothing can make plausible a theory that the very priests who demoted their colleagues saw fit to endow them with the amplest clerical due, a theory the more improbable when the great number of priests and paucity of Levites at the Restoration (4,289 priests, *Ezr.* 2:36ff.; 341 Levites plus 392 temple servants, *Ezr.* 2:43ff.) is borne in mind' (p. 194).

Why did the priests preserve the story of the Levites' faithfulness during Aaron's defection (*Ex.* 32:26-29), while glossing over the idolatry, which, for Wellhausen, was responsible for their degradation, and according the Levites the honour of divine appointment rather than punishment? After affirming that the Levites are clearly a distinct class in the Exile, Kaufmann points out that they could not have developed as a distinct class in the brief period between Josiah's reform (to say nothing of Ezekiel's denunciation) and the return, and that on foreign soil.

Kaufmann's own reconstruction may not prove entirely satisfactory. He denies a hereditary connection between the sons of Aaron and the Levites, since he deems the Aaronids to be 'the ancient, pagan priesthood of Israel' (p. 197), and thus rejects the firm biblical tradition connecting Moses, Aaron and the Levites (cf. *Ex.* 4:14). In the golden calf incident the old secular tribe of Levi rallied with Moses against Aaron, but was forced to yield the privilege of altar service to the Aaronids (p. 198), while they themselves had to be content as *hierodules*. This raises the question as to how, apart from a connection with Moses, the Aaronids survived the catastrophe of the golden calf and continued as priests. Kaufmann's opinion that the Deuteronomic legislation was compiled during the latter part of the Monarchy and thus is considerably later than the priestly writings may be more of a return to an old critical position (*i.e.* that of Th. Noeldke and others) than a fresh thrust at Wellhausen.

Rejecting the linear view of institutional evolution which was a main plank in Wellhausen's platform, W. F. Albright notes that Israel would be

unique among her neighbours had she not enjoyed during the period of the Judges and afterwards a high priest, usually called (in accordance with Semitic practice) *the priest* (*Archaeology and the Religion of Israel*³, 1953, pp. 107-108). The lack of emphasis on the high-priestly office during the Monarchy represents a decline, while, after the Monarchy's collapse, the priesthood again rose to a position of prestige. Albright accepts the historicity of Aaron and finds no reason for not considering Zadok an Aaronid. Concluding that the Levite had first a functional (see above) and then a tribal significance, Albright points out that Levites may sometimes have been promoted to priests and that 'we are not justified either in throwing overboard the standard Israelite tradition regarding priests and Levites, or in considering these classes as hard and fast genealogical groups' (*op. cit.*, p. 110).

The assumption that the tabernacle in the wilderness was the idealization of the Temple and had no historical existence, so basic to Wellhausen's reconstruction, has now largely been abandoned (although cf. R. H. Pfeiffer's *Religion in the Old Testament*, 1961, pp. 77-78). Both arks and portable tent-shrines are attested among Israel's neighbours, as archaeology has revealed. Far from being figments of a later period, these, as John Bright notes, are 'heritages of Israel's primitive desert faith' (*A History of Israel*, 1960, pp. 146-147).

Obviously the last word has not been said on this puzzling problem of the relationship between priests and Levites. The data from the period of the conquest and settlement are meagre. It is hazardous to assume that the pentateuchal legislation, representing the ideal as it often does, was ever carried out literally. Even such stalwart kings as David, Jehoshaphat, Hezekiah and Josiah were not able to enforce complete conformity to the Mosaic pattern. But it is even more tenuous to hold that because laws were not enforced they did not exist. The combination of argumentation from silence, straight-line evolutionary reconstruction, and a resort to textual emendations and literary excisions when passages prove troublesome, has resulted more than once in interpretations of biblical history which have proved to be too facile to stand permanently in the face of the complexities of biblical data and Semitic culture. Wellhausen's ingenious reconstruction of the history of the Levites may prove to be a case in point.

IV. Priesthood in the New Testament

a. Continuity with the Old Testament

With the single exception of the priest of Zeus, who wrongly seeks to venerate Paul and Barnabas in Lystra (*Acts* 14:13), references to priest and high priest in the Gospels and Acts assume an historical and religious continuity with the OT: no explanation is needed of the priest's function in the story of the good Samaritan (*Lk.* 10:31) or of the duties of the 'priest named Zechariah', father of John the Baptist (*Lk.* 1:5); Jesus recognized the lawful function of the priests in declaring lepers clean (*Mt.*

8:4; Mk. 1:44; Lk. 5:14; 17:14; see Lv. 14:3). Jesus also pitted the freer practice of some OT priests against the legalism of his opponents (Mt. 12:4–5). He had no basic quarrel with the prescribed functions of the Temple and priesthood.

b. Conflict with Judaism

The lion's share of references to priests, especially high priests (or chief priests as RSV usually has them) are found, however, in contexts of conflict. Matthew depicts the high priests as actively involved in the gospel events from beginning (Mt. 2:4) to end (Mt. 28:11). Their opposition mounts as the claims and mission of Jesus become clear, e.g. in his challenge to the Sabbath legislation (Mt. 12:1–7; Mk. 2:23–27; Lk. 6:1–5) and in his parables that censured the religious leaders (Mt. 21:45–46). This conflict to the death was anticipated immediately after Peter's confession at Caesarea Philippi (Mt. 16:21; Mk. 8:31; Lk. 9:22), was intensified at the Palm Sunday reception and the subsequent Temple cleansing (Mt. 21:15, 23, 45–46; Mk. 11:27; Lk. 19:47–48; 20:1), and reached its bitter climax in the arrest and trial (Mt. 26–27). The Fourth Gospel also bears witness to the conflict (Jn. 7:32, 45; 11:47, where Pharisees are the partners in crime; 12:10, where the hostility focuses on Lazarus; 18:19, 22, 24, 35, where Caiaphas' role in Jesus' trial is stressed; cf. 19:15).

The chief priests (*archiereus*) rarely acted alone in their desire to crush Jesus' influence. Depending on the issue and circumstances, they were joined by other officials of the Sanhedrin (*archontes*, Lk. 23:13; 24:20), by scribes (*grammateis*, Mt. 2:4; 20:18; 21:15), by scribes and elders (*grammateis, presbyteroi*, Mt. 16:21; 27:41; Mk. 8:31; 11:27; 14:43, 53; Lk. 9:22), by elders (Mt. 21:23; 26:3). The singular 'high priest' usually refers to the president of the Sanhedrin (e.g. Caiaphas, Mt. 26:57; Jn. 18:13; Annas, Lk. 3:2; Jn. 18:24; Acts 4:6; Ananias, Acts 23:2; 24:1). The plural 'chief priests' describes members of the high-priestly families who serve in the Sanhedrin, ruling and former high priests together with members of the prominent priestly families (Acts 4:6). J. Jeremias has argued that 'chief priests' include Temple officers like treasurer and captain of police (*Jerusalem in the Time of Jesus*, E.T. 1969, pp. 160ff.).

The death and resurrection of Jesus did not quell the conflict, as Acts amply documents. The apostolic witness to the resurrection drew the Sadducees into the struggle alongside the chief priests and other Temple officials (Acts 4:1; 5:17). Priestly involvement in the story of Saul of Tarsus is noteworthy. The proposed persecution of Christians in Damascus apparently had the official sanction of the high priest (Acts 9:1–2, 14); the 'itinerant Jewish exorcists' who sought to duplicate Paul's miracles in Ephesus were described as 'seven sons of a Jewish high priest named Sceva' (Acts 19:13–14); like his Master, Paul stood trial before a high priest, Ananias, who also pressed charges against him before the Roman governors Felix and Festus (Acts 24:1ff.; 25:1–3). Almost nothing in the apostle's life illustrates so clearly the radical change wrought by his conversion than the dramatic reversal in his relationships to the priestly establishment: the beginning of his story found him riding with the hounds; the end, running with the foxes.

c. Consummation in Christ

At root this conflict sprang from the Christian

conviction and the Jewish suspicion that Jesus' life, death, resurrection and ascension spelt the eclipse if not the destruction of the old priestly structures. Jesus' own teaching had placed him at the heart of a new sacerdotal structure: 'something greater than the temple is here' (Mt. 12:6); 'destroy this temple, and in three days I will raise it up' (Jn. 2:19); 'for the Son of man also came not to be served but to serve, and to give his life as a ransom for many' (Mk. 10:45).

Of the NT writers, it is the author of Hebrews who picks up these threads and weaves them into a many-coloured fabric. In its passion to prove that the Christian faith is superior to, indeed has replaced, the OT patterns of worship, Hebrews presses persistently its claim that Jesus has been appointed by God (5:5–10) to be the new, the true high priest who can finally deal with human sin. His priesthood, surpassing Aaron's (7:11) and reaching back to Melchizedek's (7:15–17), contains the perfection missing in the older sacrificial system (7:18): 1. It is based on God's own oath (7:20–22); 2. It is permanent because it is centred in the eternal Christ (7:23–25); 3. It partakes of the perfection of Christ who had no need to be purged of sin, as did the sons of Aaron (7:26–28); 4. It continues in the heavens where God himself has erected the true sanctuary of which Moses' tent was but 'a copy and shadow' (8:1–7); 5. It is the fulfilment of God's promise of a new covenant (8:8–13); 6. Its sacrifice needs no repeating but was rendered 'once for all' (7:27; 9:12); 7. Its offering was not 'the blood of bulls and goats', unable to take away sins, but 'the body of Jesus Christ', through which believers are sanctified (10:4, 10); 8. Its result is full and regular access to God for all Christians not just a priestly order (10:11–22); 9. Its promises and hopes are assured by the faithfulness of God and the assurance of Christ's second coming (9:28; 10:23); 10. Its full forgiveness provides the highest motivation for our works of love and righteousness (10:19–25); 11. Its effectiveness in the lives of God's people is guaranteed by Christ's constant intercession (7:25). Though Paul did not choose to make Christ's priesthood a dominant theme in his writings (probably because his ministry was largely to Gentiles, for whom a knowledge of their freedom from law and their new place in God's purpose was the pre-eminent need), we can be grateful that the rich insights of Hebrews are among God's gifts in the canon of Scripture. See G. E. Ladd, *A Theology of the New Testament*, 1974, pp. 578–584.

d. Commission of the church

As Christ's body and as his new Israel (cf. Ex. 19:6), the church is anointed to a priesthood in the world—a mediatorial service that declares the will of God to humankind and bears human needs before God's throne in prayer. Two related duties of this priesthood are mentioned by Peter: 1. 'to offer spiritual sacrifices acceptable to God through Jesus Christ' (1 Pet. 2:5), i.e. to worship God and do his loving will; 2. 'to declare the wonderful deeds of him who called you out of darkness into his marvellous light', i.e. to bear witness to his saving work in the world (1 Pet. 2:9).

Peter's 'royal priesthood' is echoed and amplified in Rev. where the beloved and forgiven church is called 'a kingdom, priests to his God and Father' (Rev. 1:6; cf. 5:10; 20:6). This royal role not only entails obedience to Christ 'the ruler of kings on

PRIESTS AND LEVITES

earth' (Rev. 1:5) but also participation in his rule over others: 'and they shall reign on earth' (Rev. 5:10; cf. 20:6). Here the circle of conflict has taken a full turn: the people of Christ, afflicted by a priesthood that opposed their Master, will share in his victory as triumphant high priest and demonstrate his loving sovereignty in a hostile world.

The church's priesthood in the NT is corporate: no individual minister or leader is called 'priest'. The post-apostolic writings, however, move quickly in that direction: Clement (AD 95-96) describes Christian ministry in terms of high priest, priests and Levites (*I Clem.* 40-44); the *Didache* (13:3) likens prophets to high priests. Tertullian (*On Baptism* 17) and Hippolytus (*Refutation of All Heresies*, preface) seemed to have pioneered the use of the titles 'priest' and 'high priest' for Christian ministers (c. AD 200).

PRINCE. A variety of Heb. words are translated 'prince', but are not always so rendered. 'Ruler', 'leader', 'captain', etc., are also used. The frequency of the use of the word is an effect (still discernible in rsv) of the AV translators' so rendering, though not with entire consistency, the LXX *archōn*, which itself represents no less than 20 Heb. words, the most important being the word for 'head', *rōš*.

The Heb. words fall into two categories. First, loan-words from other languages, usually referring to foreign dignitaries. For example, *xšaQ-rapavan*, 'satrap', and *fratama*, 'foremost', are Persian words transliterated in Dn. 3:2, etc. (Aram. *'ahašdarpan*), 1:3 (Heb. plur. *part'mim*). The *satrapies of the Persian empire were originally coextensive with the conquered kingdoms. But Darius reduced the number to twenty (Herodotus 3. 89-94). The power of the satrap was checked by certain officials responsible directly to the Great King, but otherwise approximated to that of a vassal king.

Secondly, words of indigenous origin representing the following salient ideas: (1) *šar*, 'exercising dominion', whether as supreme or subordinate to an overlord; (2) *nāgīd*, 'being in front', especially of military leader; (3) *nāšī*, 'being exalted'; (4) *nāḏīb*, 'a volunteer', perhaps signifying a contrast with those whom a king might compel to fight on his behalf; (5) *qāšīn*, 'a judge'.

Ezekiel often uses *nāšī* of the Messiah: it corresponds with his conception of the true David (Ezk. 37:24-25). In Daniel, *šar* and *nāgīd* are used of him, corresponding to the military imagery with which the cosmic struggle is depicted. *šar* is also used of the guardian angels of countries, and particularly of Michael (Dn. 10:13, 21).

In the NT *archōn* is used of Satan, 'ruler of this world', and in the plural, of the Roman and Jewish authorities ('rulers'). It is once used of Christ (Rev. 1:5), 'ruler of the kings of the earth', but elsewhere where 'prince' is used in AV. The LXX *archēgos* (for Heb. *nāšī* and *qāšīn*) is used of Christ (cf. Acts 5:31), gathering from its Greek connections the additional idea of 'author' (Acts 3:15) and 'pioneer' (Heb. 2:10; 12:2).

J.B.J.

PRISON.

I. In the Old Testament

The first mention of a prison in Scripture is that of *Joseph in Egypt (Gn. 39:20-23). For this the Hebrew text uses a special term *bēṭ-sōhar*; *sōhar* is usually compared with other Semitic words for 'round' or 'enclosure', and Joseph's prison is therefore commonly considered to be, or be in, a fortress. The comparison of Heb. *sōhar* with Egyp. *T'rw*, 'Silē' (mod. Qantara), is false, as this word is really *Ṭl* (J. Vergote, *Joseph en Égypte*, 1959, pp. 25-28). However, there is an Egyp. word *l'rt*, occurring as early as c. 1900 BC as well as later, which means 'enclosed building', 'store', '(ship's) cabin', and this might just conceivably be connected with *sōhar*. Egyp. prisons served as forced-labour compounds, as 'lock-ups' and as places of remand for people like Joseph awaiting trial. The butler and baker were put in *mišmār*, detention, virtually house-arrest, in Joseph's prison (Gn. 40:2-3) until their case was decided. Joseph's brothers were likewise detained for 3 days (Gn. 42:17, 19). After capture by the Philistines, Samson was kept in prison, the 'house of the prisoners' (Jdg. 16:21, 25; lit. 'those bound'); a very similar term is used in Ec. 4:14.

In Judah the guardrooms of the palace guards served as a temporary prison for Jeremiah (32:2, 8, 12; 33:1; 37:21; 38:28; cf. also Ne. 3:25; 12:39). Both there and in a private residence, a cistern could be used as a dungeon, which would often be very unpleasant (Je. 37:16, 20; 38:6, 13) and dark (Is. 42:7), a symbol of bondage from which the Lord's servant should deliver his people (Acts 26:15-18; Lk. 1:79). Nor was Jeremiah the only prophet imprisoned for his faithfulness in declaring God's message: Asa of Judah put Hanani the seer into the stocks (2 Ch. 16:10), and Ahab had Micaiah put in prison on rations of bread and water (1 Ki. 22:27; 2 Ch. 18:26). Defeated kings were sometimes imprisoned by their conquerors: so Hoshea of Israel by the Assyrians (2 Ki. 17:4), Jehoiachin of Judah by Nebuchadnezzar (cf. Je. 24:1, 5; D. J. Wiseman, *Chronicles of Chaldaean Kings*, pp. 33-35, 73), and Zedekiah of Judah likewise (Je. 52:11). At Babylon Jehoiachin was but one of many noble captives and artisans detained under 'house-arrest' at the royal palace and environs. Ration-tablets for him, his five sons and many other foreigners were found at Babylon (*ANET*, 308b; *DÖTT*, pp. 84-86; E. F. Weidner, *Mélanges R. Dussaud*, 2, 1939, pp. 923-935; Albright, *BA* 5, 1942, pp. 49-55). Eventually Evil-merodach granted him a greater measure of freedom (2 Ki. 25:27, 29; Je. 52:31, 33). Ezekiel (19:9) pictures Jehoiachin being brought to Babylon in a cage; for a much earlier Egyp. picture of a Semitic prince as a prisoner in a cage, see P. Montet, *L'Égypte et la Bible*, 1959, p. 73, fig. 12.

K.A.K.

II. In the New Testament

Four Greek words are translated by 'prison' in the evv. John the Baptist was imprisoned in a *desmōtērion*, a 'place of bonds'. This was at Herod's fortress at Machaerus in Peraea, E of the Dead Sea (Jos., *Ant.* 18. 119), where two dungeons have been discovered, one still showing traces of fetters. *phylakē*, a 'place of guarding', is the most general and frequently used term. It suggests a place where

the prisoners were closely watched. The chief priests imprisoned the apostles (Acts 5:19) in what is also called a *tērēsis dēmosia*, a 'public place of watching' (cf. Acts 4:3).

When Herod put Peter in prison, probably in the fortress of Antonia, where Paul was later lodged (Acts 21:34; 23:30) and referred to here as an *oikēma*, 'house', the apostle was guarded continually by four soldiers, two chained to him and two outside the door (Acts 12:3-6). Beyond this there would appear to have been another guard and then the iron outer gate (Acts 12:10). At Philippi Paul was in custody in the town jail, under the charge of a keeper, where there was an inner, perhaps underground, chamber containing stocks (Acts 16:24). These would have several holes, allowing the legs to be forced wide apart to ensure greater security and greater pain. In Caesarea Paul was imprisoned (Acts 23:35) in Herod's castle, but when a prisoner at Rome he was allowed to stay in his own lodging, with a soldier always chained to him (Acts 28:16, 30).

D.H.W.

PROCONSUL (Gk. *anthypatos*, av 'deputy'). In the Roman empire as organized by Augustus this was the title of governors of provinces which were administered by the Senate because they did not require a standing army. Proconsuls mentioned in the NT are L. Sergius *Paulus, proconsul of Cyprus when Paul and Barnabas visited that island c. AD 47 (Acts 13:7), and L. Junius *Gallio, whose proconsulship of Achaia (AD 51-2) overlapped Paul's 18-month stay in Corinth (Acts 18:12). In Acts 19:38 'proconsuls' may be a generalizing plural; the proconsul of Asia had recently been assassinated (October AD 54) and his successor had not yet arrived.

F.F.B.

PROCURATOR. In Roman imperial administration the word indicated the financial officer of a province, but was also used as the title of the governor of a Roman province of the third class, such as Judaea (Gk. *epitropos*); but in the NT the procurator of Judaea is regularly described as the 'governor', Gk. *hēgemōn*). *Judaea was governed by imperial procurators or prefects from AD 6 to 41 and from 44 to 66. Three are mentioned in the NT: Pontius *Pilate, AD 26-36 (Mt. 27:2, etc.), Antonius *Felix, 52-59 (Acts 23:24ff.) and Porcius *Festus, 59-62 (Acts 24:27ff.). The procurators were generally drawn from the equestrian order (Felix, a freedman, was an exception). They had auxiliary troops at their disposal and were generally responsible for military and financial administration, but were subject to the superior authority of the imperial legate (propraetor) of Syria. Their seat of government was Caesarea. From the Pilate inscription found at Caesarea in 1961, where he is called 'prefect' of Judaea, it has been inferred that before AD 41 the governors of Judaea were officially called 'prefects', but Tacitus gives Pilate the title 'procurator' (Ann. 15. 44).

F.F.B.

PROMISE. There is in the Heb. OT no special term for the concept or act of promising. Where our English translations say that someone promised something, the Hebrew simply states that someone said or spoke (*āmar, dāḅar*) some word with future reference. In the NT the technical term,

epangelia, appears—chiefly in Acts, Galatians, Romans and Hebrews.

A promise is a word that goes forth into unfulfilled time. It reaches ahead of its speaker and its recipient, to mark an appointment between them in the future. A promise may be an assurance of continuing or future action on behalf of someone: 'I will be with you', 'They that mourn shall be comforted', 'If we confess our sins, God will forgive us our sins.' It may be a solemn agreement of lasting, mutual (if unequal) relationship: as in the covenants. It may be the announcement of a future event: 'When you have brought the people from Egypt, you will serve God on this mountain.' The study of biblical promises must therefore take in far more than the actual occurrences of the word in the EVV. (See also *WORD, *PROPHECY, *COVENANT and *OATHS.) An oath of heaven accompanied the word of promise (Ex. 6:8; Dt. 9:5; Heb. 6:13ff.).

That what he has spoken with his mouth he can and will perform with his hand is the biblical sign manual of God, for his word does not return void. Unlike men and heathen gods, he knows and commands the future (1 Ki. 8:15, 24; Is. 41:4, 26; 43:12, 19, etc.; Rom. 4:21; cf. Pascal, *Pensées*, 693). Through the historical books, a pattern of divine promise and historical fulfilment is traced (G. von Rad, *Studies in Deuteronomy*, 1953, pp. 74ff.), expressive of this truth.

The point of convergence of the OT promises (to Abraham, Moses, David and the Fathers through the prophets) is Jesus Christ. All the promises of God are confirmed in him, and through him affirmed by the church in the 'Amen' of its worship (2 Cor. 1:20). The OT quotations and allusions in the Gospel narratives indicate this fulfilment. The Magnificat and the Benedictus rejoice that God has kept his word. The promised Word has become flesh. The new covenant has been inaugurated—upon the 'better promises' prophesied by Jeremiah (Je. 31; Heb. 8:6-13). Jesus is its guarantee (Heb. 7:22), and the Holy Spirit of promise its first instalment (Eph. 1:13-14).

Awaiting the promise of Christ's coming again and of the new heavens and a new earth (2 Pet. 3:4, 9, 13), the church sets forth on her missionary task with the assurance of his presence (Mt. 28:20) and with the news that 'the promise of the Father'—the Holy Spirit (after Joel 2:28)—is given to Jew and pagan in Jesus Christ, fulfilling the promise to Abraham of universal blessing through his posterity. The promise is correlated to faith and open to all who, by imitating Abraham's faith, become 'children of the promise' (Gal. 3; Rom. 4; 9). (*ESCHATOLOGY, *SCRIPTURE.)

J.H.

PROMISED LAND. 'The land of promise' (Heb. 11:9) refers to Canaan before the Israelites entered it under Joshua. By his covenant with Abraham, God promised to make him 'into a great nation', to be a 'blessing to all the peoples on earth' and have

PROMISED LAND

an inheritance of land (Gn. 12:1-2; cf. 12:7; 13:15; 24:7). The patriarchs lived in the land as 'sojourners' (Gn. 17:8; 24:4, etc.) but the promise was often repeated (Gn. 26:3-4; 13; 35:12; 48:4; 50:24) and provided sustaining hope for the Israelites after the Exodus (Ex. 3:8, 17; Nu. 10:29, etc.). The promise became reality under Joshua and reached greatest fulfilment under David and Solomon (2 Sa. 3:10; 1 Ki. 4:21; 8:65; cf. Ezk. 47:15-20). The Assyrian and Babylonian invasions led to exile in a 'strange land' (Ps. 137:4), yet prophets predicted a 'restoration' (Is. 27:12-13; 43:19-21; 60:18; Je. 16:15; 23:8; 30-33; Ezk. 36-37; 47-48; Zp. 3:10) which partially occurred under Zerubbabel, Ezra and Nehemiah.

The land 'flowing with milk and honey' (Nu. 13:27; Dt. 6:3) was Yahweh's gracious gift, yet it still had to be conquered (Dt. 1:25; 5:31; 9:6; 11:17). Yahweh remained its owner (Lv. 25:23) and received the first fruits of the land (Dt. 26:9-15) so ownership was not transferred (see Lv. 25:8-10, 13-16). Israel would possess the land 'forever' but the gift was conditional (Dt. 28:63-64; Jos. 23:13, 15; 1 Ki. 9:7; 2 Ki. 17:23; Je. 12:10-12).

The NT says little about the land, despite many references to the divine promises being fulfilled in Jesus (e.g. 2 Cor. 1:20; cf. Rom. 15:8). Some argue that the land is not a NT concern (it is mentioned but passed over in Acts 7:3-7; 13:17-19), but it is more likely that 'the land' is now reinterpreted in the light of Christ. The promise of 'the land' is now seen as an advanced metaphor for the world (Rom. 4:13). It is also understood eschatologically as a symbol of the heavenly 'rest' (Heb. 4:9). Abraham was looking towards a 'better country - a heavenly one' (11:16). Gentile believers who previously had been 'far away' were now 'brought near as fellow-citizens' (Eph. 2:12-13, 19). So the NT discourages interest in the literal land, as it does in the Temple and the city of Jerusalem (e.g. Gal. 4:25-26; Heb. 8:13; 12:22; Rev. 3:12; 11:9; 21:2-22:5). This has implications regarding modern Zionism which denies that the promises of the land were fulfilled in Christ (cf. also Lk. 21:24; Rom. 11:26).

Yet we must be wary of over-spiritualizing. In a society with keen ecological concern and often marked by a sense of alienation, the promise of a 'land' for God's people is a continual reminder of the divine concern, both for the earth and for those who feel rootless. Still more, the socio-political background of the 'land' (such that 'land' should be understood as a Hebraic 'concretization' standing for political, social and economic relationships) alerts us to the OT's concern that God's holiness be exemplified and practised in society ('in the land'). Some of the NT references to the 'earth' (a normal translation of *gē*; see e.g. Matt. 5:5) need to be seen against this specific Hebraic concern with 'the land'. Thus Wright argues that, whilst emphasizing the typological and 'universalizing' understanding of the 'land' in the NT, we must also understand the 'land' as a paradigm which gives us important principles for society.

P. W. L. W.

PROPHECY, PROPHETS.

I. The prophetic office

a. *The normative prophet*

The first person whom the Bible calls a prophet (Heb. *nābî*) was Abraham (Gn. 20:7; cf. Ps. 105:15), but OT prophecy received its normative form in the life and person of Moses, who constituted a standard of comparison for all future prophets (Dt. 18:15-19; 34:10; *MESSIAH). Every feature which characterized the true prophet of Yahweh in the classical tradition of OT prophecy was first found in Moses.

He received a specific and personal call from God. The initiative in making a prophet rests with God (Ex. 3:1-4:17; cf. Is. 6; Je. 1:4-19; Ezk. 1-3; Ho. 1:2; Am. 7:14-15; Jon. 1:1), and it is only the false prophet who dares to take the office upon himself (Je. 14:14; 23:21). The primary object and effect of the call was an introduction into God's presence, as the passages noted above show. This was the 'secret' or 'counsel' of the Lord (1 Ki. 22:19; Je. 23:22; Am. 3:7). The prophet stood before men, as a man who had been made to stand before God (1 Ki. 17:1; 18:15).

Again, the prophetic awareness of history stemmed from Moses. When Isaiah makes his tremendous polemic against idolatry, one of his most potent contentions, that Yahweh alone is the Author of prophecy and that the idols are at best wise after the event (e.g. 45:20-22), stems directly from Moses and the Exodus. Yahweh sent Moses into Egypt possessed of the clues necessary to interpret the great events which were to follow. History became revelation because there was added to the historical situation a man prepared beforehand to say what it meant. Moses was not left to struggle for the meaning of events as or after they happened; he was forewarned of events and of their significance by the verbal communications of God. So it was with all the prophets. Alone of the nations of antiquity, Israel had a true awareness of history. They owed it to the prophets, and, under the Lord of history, the prophets owed it to Moses.

Likewise they owed to him their ethical and social concern. Even before his call Moses concerned himself with the social welfare of his people (Ex. 2:11ff.; cf. v. 17), and afterwards, as the prophetic lawgiver, he outlined the most humane and philanthropic code of the ancient world, concerned for the helpless (Dt. 24:19-22, etc.) and the enemy of the oppressor (e.g. Lv. 19:9ff.).

Many of the prophets were found confronting their kings and playing an active, statesman's part in national affairs. This was a function of the prophet which found its prototype in Moses, who legislated for the nation, and was even called 'king' (Dt. 33:5). It is interesting that the first two kings of Israel were also prophets, but this union of offices did not continue, and the Mosaic-theocratic rule was prolonged by the association of the anointed king and the anointed prophet.

We also see in Moses that combination of proclamation and prediction which is found in all the prophets. This will concern us in greater detail presently, as a feature of prophecy at large. We will pause only to show that Moses established the norm here also, namely, that in the interests of speaking to the present situation the prophet often undertakes to enlarge upon events yet to come. It is this interlocking of proclamation and prediction which distinguishes the true prophet from the mere prognosticator. Even when Moses uttered his great prophecy of the coming Prophet (Dt. 18:15ff.) he was dealing with the very pressing problems of the relation of the people of God to the practices and allurements of pagan cults.

Two other features characteristic of the prophets who were to succeed him are found in Moses. Many of the prophets used symbols in the delivery of their message (e.g. Je. 19:1ff.; Ezk. 4:1ff.). Moses used the uplifted hand (Ex. 17:8ff.) and the uplifted serpent (Nu. 21:8), not to mention the highly symbolic cultus which he mediated to the nation. And finally, the intercessory aspect of the prophetic task was also displayed in him. He was 'for the people to Godward' (Ex. 18:19, av; Nu. 27:5) and on at least one notable occasion literally stood in the breach as a man of prayer (Ex. 32:30ff.; Dt. 9:18ff.; cf. 1 Ki. 13:6; 2 Ki. 19:4; Je. 7:16; 11:14).

b. The titles of the prophets

Two general descriptions appear to have been used for prophets: the first, 'man of God', describes how they appeared to their fellow-men. This title was first used of Moses (Dt. 33:1) and continued in use till the end of the Monarchy (e.g. 1 Sa. 2:27; 9:6; 1 Ki. 13:1, etc.). That it was intended to express the difference of character between the prophet and other men is made perfectly clear by the Shunammite: 'I perceive that this is a holy man of God . . .' (2 Ki. 4:9). The other general title was 'his, your or my servant'. It does not appear that any ever addressed the prophet as 'servant of God', but God often described the prophets as 'my servants' and consequently the other pronouns, 'his' and 'your', were also used (e.g. 2 Ki. 17:13, 23; 21:10; 24:2; Ezer. 9:11; Je. 7:25). Here the other relationship of the prophet, that towards God, is expressed, and this also was first a title of Moses (e.g. Jos. 1:1-2).

There are three Hebrew words used of the prophet: *nāḥī*, *rō'eh* and *hōzeh*. The first of these is always translated 'prophet'; the second, which is, in form, an active participle of the verb 'to see', is translated 'seer'; the third, also an active participle of another verb 'to see', is unfortunately without distinctive English equivalent and is translated either 'prophet' (e.g. Is. 30:10) or 'seer' (e.g. 1 Ch. 29:29).

The derivation of *nāḥī* has been the subject of long debate. The word can be traced to an Akkadian root, and the choice is between the prophet as one who is called, or one who calls, i.e. to men in the name of God. Either of these will admirably suit the nature of the prophet as found in the OT. The possibility that the prophet is one who calls to God, in prayer, has not been canvassed, but that too, and apparently from the start (Gn. 20:7), was a mark of a prophetic man.

Equally extensive discussion has centred on the relation of the three words *nāḥī*, *rō'eh* and *hōzeh* to each other. Verses such as 1 Ch. 29:29, which appear to use the words with great discrimination

(Gad is described in the Heb. as *hōzeh*), suggest that we ought to find a precise shade of meaning in each word. This, however, is not borne out by an examination of OT usage as a whole. The use of the words falls into two periods, marked out by 1 Sa. 9:9: first, there was the period when *nāḥī* and *rō'eh* meant something different, the early period; then came the period, in which the author of 1 Sa. 9:9 lived, when *nāḥī* had taken on the force of a synonym of *rō'eh*, with or without losing its own earlier meaning. The source document for the early period is 1 Sa. 9-10, and it certainly seems that we can decide the force of the two words as far as those chapters are concerned: the *nāḥī* is a member of a group, given to corporate and infectious ecstasy (1 Sa. 10:5-6, 10-13; 19:20-24), whereas the *rō'eh* is solitary, and altogether a more important and impressive person. Out of a total of ten occurrences of the title, it is used six times of Samuel (1 Sa. 9:11, 18-19; 1 Ch. 9:22; 26:28; 29:29). He, therefore, demonstrates the *rō'eh par excellence*.

However, when we move to the later period indicated in 1 Sa. 9:9 it is impossible to be so precise. While it is noticeable that throughout Chronicles the *hōzeh* is always (except in 2 Ch. 29:30) mentioned in association with the king, the attractive suggestion that he was employed as a resident clairvoyant is not in accordance with the evidence. Even in Chronicles he often acts precisely as a *nāḥī* would have done (e.g. 2 Ch. 19:2; 33:18), and the task most frequently attributed to him was that of court historian — a task equally found in the *nāḥī* and the *rō'eh* (2 Ch. 9:29; 12:15; cf. 1 Ch. 29:29).

In general OT usage every shade of meaning in the verb *hāzā* can be paralleled in the verb *rā'ā*: both are used in connection with divination (Zc. 10:2; Ezk. 21:21), a connection which they share also with the *nāḥī* (Mi. 3:11); both are used for the perception of the meaning of events (Ps. 46:8; Is. 5:12), and of the assessment of character (Ps. 11:4, 7; 1 Sa. 16:1); both are used of the vision of God (Ps. 27:4; Is. 6:5), and of prophetic activity (Is. 1:1; Ezk. 13:3); both are used of seeing vengeance carried out (Pss. 58:10; 54:7). In Is. 29:10 *nāḥī* and *hōzeh* are parallel; in Is. 30:10, *rō'eh* and *hōzeh* are parallel; in Am. 7:12ff. Amaziah addresses Amos as *hōzeh*, urging him to prophesy (*nibbā'*) in Judah, and Amos replies that he is not a *nāḥī*: in Ezk. 13:9 the reverse procedure is found: the noun *nāḥī* is the subject of the verb *hāzā*. These references could be prolonged extensively, and we conclude that the words are synonymous.

c. Foretelling and forthtelling

Too often in studies of the phenomenon of prophecy lip-service has been paid to the uniqueness of this movement in Israel, and at the same time it has been brought under judgment and criticism as though it were not unique, and as though the evidence could be explained on purely rationalistic grounds. We have only one mine of information about the OT prophet, however, and that is the OT itself, which must therefore be treated as a primary source document.

The prophet was first a man of the word of God. Even when he seemed to undertake other functions, such as the elaborate 'miming' of Ezekiel, it was subordinated to the interests of bringing the word of God to his fellow men. This word was not, so to speak, a mere passive opinion, as though

PROPHECY, PROPHETS

God were anxious simply that men should be aware how he saw matters before they decided for themselves. It was rather the prophets' conviction that the proclamation of God's word radically changed the whole situation. For example, Is. 28–29 shows us a picture of a people struggling for a satisfactory solution to a pressing problem of political expediency, and, in the process, rejecting God's word; chs. 30 onwards reveal the situation which then transpires: the problem is no longer one of political balance of power as between Judah, Assyria and Egypt, but one of spiritual relationship between Judah, Assyria and Egypt, on the one hand, and the word of God, on the other. The word is an active ingredient added to the situation, which is henceforth impelled forward in terms of the word spoken (Is. 40:8; 55:11; see, e.g., * CURSE).

Clearly, however, the prophets spoke to their situation primarily by means of warnings and encouragements concerning the future. Almost every prophet first appears as a foreteller, e.g. Am. 1:2. There are three grounds of this practice of foretelling: in the first place, it is clearly necessary, if people are to exercise due moral responsibility in the present, that they should be aware of the future. This at once lifts OT prediction out of the realm of mere prognostication and carnal curiosity. Calls to repentance (e.g. Is. 30:6–9) and calls to practical holiness (e.g. Is. 2:5) are equally based on a word concerning the future; the vision of wrath to come is made the basis of a present seeking of the mercy of God; the vision of bliss to come calls to a walking in the light now.

Secondly, prediction arises from the fact that the prophets speak in the name of the holy Ruler of history. We have already mentioned that the prophets' call was primarily to a knowledge of God. Out of this knowledge sprang the awareness of what he would do, as he guided history according to the unchangeable principles of his holy nature. This is to say, that, as prophets, they possessed all the basic information, for by Moses and the Exodus God had declared his name for ever (Ex. 3:15). They were 'in the know' (Am. 3:7).

Thirdly, prediction seems to belong to the very idea of the prophetic office. We may see this in Dt. 18:9ff.: Israel, entering the land of Canaan, is not only warned about the abominations of the Canaanite cults, such as infant sacrifice, but also about Canaanite religious practitioners, such as diviners. Certainly these men were concerned with what we call 'fortune-telling'; they offered to probe the future by one means or another. For Israel, instead of all these, there will be a prophet whom the Lord will raise up from among their brethren. This prophet, speaking in the name of the Lord, is to be judged by the accuracy of his forecasts (v. 22)—a clear proof that Israel expected prophetic prediction, and that it belonged to the notion of prophecy.

We may note here the extraordinarily detailed telepathic and clairvoyant gifts of the prophets. Elisha had the reputation of knowing what was said in secret afar off (2 Ki. 6:12) and gave evidence that it was not an inaccurate assessment of his powers. Ezekiel is justly famed for his detailed knowledge of Jerusalem at the time of his residence in Babylon (Ezk. 8–11). While it would be unrealistic to rule out direct communication between Ezekiel and Jerusalem, it is equally needless to try to evade this part of the biblical testimony. The prophets were men of remarkable psychic

powers. It is, for example, unnecessary to question foreknowledge of personal names, such as is exemplified in 1 Ki. 13:2; Is. 44:28 (cf. Acts 9:12). Since there is no textual uncertainty at these points, the question is simply one of whether we accept the OT evidence as to what constitutes OT prophecy or not. The occurrence of such detailed prediction is perfectly 'at home' in the general picture of prophecy as the Bible reveals it. We should remember that it is illegitimate to pose the problem in terms of our knowledge of the lapse of time between prediction and fulfilment: 'How could the prophet know the name of someone not born till hundreds of years after his time?' There is nothing about 'hundreds of years' in the passages mentioned. This is our contribution to the question, because we know of the time-lapse. The real question is much simpler in statement: 'From what we know of the OT prophet, is there anything against his foreknowledge of personal names?' In the light of the OT, the negative reply may justly be made.

II. Prophetic inspiration and methods

a. Modes of inspiration

How did the prophet receive the message which he was commissioned to convey to his fellows? The answer given in the vast majority of cases is perfectly clear and yet tantalizingly vague: 'The word of the Lord came . . .', literally, the verb being the verb 'to be', 'the word of the Lord became actively present to . . .'. It is a statement of a direct, personal awareness. This is the basic experience of the prophet. It is stated for the first time in Ex. 7:1–2 (cf. 4:15–16). God is the author of the words which he conveys to the prophet, and through him to the people. It is this same experience which Jeremiah had when the Lord's hand touched his mouth (Je. 1:9), and this passage tells us as much as we are permitted to know: that in the context of personal fellowship which God has brought about the prophet receives a donation of words. Jeremiah later expressed this experience as 'standing in the counsel of the Lord' (23:22), whereby he was then able to make the people hear God's words. This, however, adds nothing in the way of psychological explanation.

Dreams and visions also had their place in the inspiration of the prophet. It is sometimes urged that Je. 23:28 teaches the invalidity of dreams as a method of ascertaining the word of the Lord. However, in the light of Nu. 12:6–7 and 1 Sa. 28:6, 15, which teach the validity of the dream, we see that Je. 23:28 is to be understood as 'a mere dream' or 'a dream of his own fancy'. Indeed, Jeremiah himself appears to have enjoyed the word of God through a dream (31:26). The experience of visions is best exemplified in the prophet Zechariah, but, like dreams, it adds nothing to our knowledge—or rather our ignorance—of the mechanics of inspiration. Exactly the same may be said of the cases where the word is perceived through a symbol (Je. 18; Am. 7:7ff.; 8:1–3). Inspiration is a miracle; we do not know in what way God makes the mind of a man aware of his word.

This raises the question of the activity of the Spirit of God in prophetic inspiration. There are 18 passages which associate prophetic inspiration with the activity of the Spirit: in Nu. 24:2 the reference is to Balaam; Nu. 11:29; 1 Sa. 10:6, 10; 19:20, 23 deal with the prophetic ecstasy; the plain assumption that prophecy arises from the Spirit of

God is found in 1 Ki. 22:24; Joel 2:28–29; Ho. 9:7; Ne. 9:30; Zc. 7:12; a direct claim to the inspiration of the Spirit is made in Mi. 3:8; the Spirit's inspiration of the prophetic word is claimed by 1 Ch. 12:18; 2 Ch. 15:1; 20:14; 24:20; Ne. 9:20; and Ezk. 11:5. It is clear that this evidence is not evenly spread through the OT, and in particular that the pre-exilic prophets are sparsely represented. Indeed, Jeremiah does not mention the Spirit of God in any context whatever. This has been taken as showing a distinction between the 'man of the word' and the 'man of the Spirit' (see L. Koehler, *Old Testament Theology*, 1957; E. Jacob, *Theology of the Old Testament*, 1958; T. C. Vriezen, *An Outline of Old Testament Theology*, 1958), suggesting that the early prophets were anxious to dissociate themselves from the group inspiration of the so-called spirit-possessed men. This is not a necessary, nor even a probable, conclusion. For one thing, a straightforward identification of the earlier group-ecstasies with the later false prophets is not possible; and, for another, as E. Jacob points out, 'the word presupposes the spirit, the creative breath of life, and for the prophets there was such evidence of this that they thought it unnecessary to state it explicitly'.

b. Modes of communication

The prophets came before their contemporaries as men with a word to say. The spoken oracle is the form in which the word of God is expressed. Each prophet stamped the marks of his own personality and experience on this word: the oracles of Amos and Jeremiah are as unlike as are the personalities of the two prophets. There is, therefore, a double awareness in the books of the prophets: on the one hand, these words are the words which God gave to the prophet. God took this man to be his mouth-piece; they are the words of God. On the other hand, these words are the words of a certain man, spoken at a certain time, under certain circumstances. It is customary among modern writers (e.g. H. H. Rowley, *The Servant of the Lord*, 1952, p. 126) to draw the conclusion that the word thus became to an extent imperfect and fallible, because it was the word of imperfect and fallible men. We ought to be clear that such a conclusion must rest on grounds other than the testimony of the prophets themselves in so far as we have it in the books. This is not the place to discuss the relation between the words of inspired men and the words of the God who inspired them (*INSPIRATION), but it is the place to say that the books of the prophets may be searched without discovering any trace of suggestion that the prophets thought the word through them was in any way less than the word of God. We shall note presently that most of the prophets seemed totally unaware of the existence of voices other than, or contradictory to, their own. They possessed an overwhelming certainty concerning their words, such as is proper either to lunatics or to men who have stood in the counsel of God and received there what they are to say on earth.

Sometimes the prophets couched their oracles in the form of parable or allegory (e.g. Is. 5:1–7; 2 Sa. 12:1–7; and especially Ezk. 16 and 23), but the most dramatic presentation of their message was by means of the 'acted oracle'. If we start by thinking of the acted oracle as a 'visual aid' we will undoubtedly end with the wrong conception of its nature and function. Of course, it was a visual aid,

but, in association with the Heb. notion of the efficacy of the word, it served to make the discharge of the word into the contemporary situation rather more powerful. This is best seen in the interview between King Joash and the dying Elisha (2 Ki. 13:14ff.). In v. 17 the arrow of the Lord's victory is shot against Syria. The prophet has introduced the king into a sphere of symbolic action. He now inquires how far the king has faith to embrace that word of promise: the king smites three times, and that is the extent to which the effective word of God will achieve accomplishment and not return void. Here we see very vividly the exact relation in which the symbol stood to the word, and in which both stood to the course of events. The word embodied in the symbol is exceedingly effective; it cannot fail to come to pass; it will accomplish exactly what the symbol declared. Thus, Isaiah walked naked and barefoot (Is. 20), Jeremiah smashed a potter's vessel in the place of potsherd (Je. 19), Ahijah tore his new coat into twelve pieces and gave Jeroboam ten (1 Ki. 11:29ff.), Ezekiel besieged a model city (Ezk. 4:1–3), dug through the house wall (12:1ff.), did not mourn for his dead wife (24:15ff.). We need to distinguish sharply between the acted oracle of the Israelite prophet and the sympathetic magic of the Canaanite cults. Essentially the latter is a movement from man to God: the performance of a certain action by man is an attempt to coerce Baal, or whatever god was in mind, to function correspondingly. The acted oracle was a movement from God to man: the word of God, the activity on which God had already decided, was thus declared and promoted on earth. In this, as in every other aspect of biblical religion, the initiative rests solely with God.

c. The books of the prophets

The question of the formation of the * Canon does not concern us here, but we cannot evade the question of the compilation of the writings of each prophet. It ought to be taken for granted that each of the prophetic books contains only a selection of the utterances of that prophet, but who did the selecting, editing and arranging? For example, the Judean references in the book of Hosea are probably correctly seen as editorial work after the fall of Samaria, when the prophet's oracles were carried S. But who was the editor? Or, again, the series of questions and answers in Malachi are clearly a deliberate arrangement to convey a total message. Who arranged them? Or, on a larger scale, the book of Isaiah is manifestly a well-edited book; we have only to think of the way in which the series of six 'woes' (chs. 28–37) fall into two groups of three within which the first three respectively are exactly matched by the second three, or of the way chs. 38–39 have been taken out of chronological order so that they may become a historical preface to chs. 40–55. But who was the careful editor?

If we consult the books themselves we find three hints as to their written composition. First, that the prophets themselves wrote at least some of their oracles (e.g. Is. 30:8; Je. 29:1ff.; cf. 2 Ch. 21:12; Je. 29:25; cf. the use of the first person in Ho. 3:1–5); secondly, that in the case of Jeremiah, at least, a lengthy statement of his prophecies so far was made out with the help of a secretary (Je. 36), and that the command is both given and received without any sign that it was at all out of the way; and thirdly, that the prophets are sometimes associated with a group which was, presumably, the recipient

PROPHECY, PROPHETS

Name of prophet	Approximate dates of ministry	Contemporary rulers of			Historical setting
		Judah	Israel	Babylon/Persia	
Joel	c. ?810 – 750 BC	Joash (= Jehoash), Amaziah, Uzziah (= Azariah)			2 Ki. 11:1 – 15:7
Amos	c. 760 BC	Uzziah (= Azariah)	Jeroboam II		2 Ki. 14:23; 15:7
Jonah	c. 760 BC		Jeroboam II		2 Ki. 14:23 – 29
Hosea	760 – 722 BC		Jeroboam II, Zechariah, Shallum, Menahem, Pekahiah, Pekah, Hoshea		2 Ki. 14:23 – 18:37
Micah	742 – 687 BC	Jotham, Ahaz, Hezekiah			2 Ki. 15:32 – 20:21; 2 Ch. 27:1 – 32:33; Is. 7:1 – 8:22; Je. 26:17 – 19
Isaiah	740 – 700 BC	Uzziah (= Azariah), Jotham, Ahaz, Hezekiah			2 Ki. 15:1 – 20:21; 2 Ch. 26:1 – 32:33
Nahum	somewhere between 664 and 612 BC	Josiah			2 Ki. 22:1 – 23:30; 2 Ch. 34:1 – 36:1; Zp. 2:13 – 15
Zephaniah	c. 640 BC onwards	Josiah			2 Ki. 22:1 – 23:34; 2 Ch. 34:1 – 36:4
Jeremiah	626 – 587 BC	Josiah, Jehoahaz, Jehoiakim, Jehoiachin, Zedekiah			2 Ki. 22:1 – 25:30; 2 Ch. 34:1 – 36:21
Habakkuk	c. 605 BC	Jehoiakim			2 Ki. 23:31 – 24:7
Daniel	605 – 535 BC	Jehoiakim, Jehoiachin, Zedekiah		Nebuchadnezzar, Belshazzar, Darius, Cyrus	2 Ki. 24:1 – 25:30; 2 Ch. 36:5 – 23

Obadiah	c. ?587 BC onwards			Nebuchadnezzar	2 Ki. 25; 2 Ch. 36:11 – 21
Haggai	520 BC			Darius	Ezr. 5:1 – 6:22
Zechariah	c. 520 BC onwards			Darius onwards	Ezr. 5:1 – 6:22
Malachi	c. 433 BC			Artaxerxes I	Ne. 13

The approximate dates of the ministries of the OT prophets (see also CHRONOLOGY OF THE OT).

of the teaching of the master-prophet, and may have been the repository of his oracles. Such a group is mentioned as 'my disciples' in Is. 8:16. These slender pieces of evidence suggest that the prophet himself was behind the recording of his words, whether by personal act, or by dictation, or by teaching. It could easily have been that the oracles of Isaiah took their present form as a manual of instruction for the prophet's disciples.

The name 'sons of the prophets' is used of these groups of disciples. It is actually found in the times of Elijah and Elisha, though Am. 7:14 shows that it survived as a technical term long after. We would gather from 2 Ki. 2:3, 5 that there were known groups of men settled here and there in the land under the general superintendence of the 'authorized' prophet. Elijah, in his effort to spare Elisha the strain of parting, appears to make a customary journey. Elisha in his turn had the management of the prophetic groups (2 Ki. 4:38; 6:1ff.), and availed himself of their services (2 Ki. 9:1). Clearly the members of these groups were men of prophetic gift (2 Ki. 2:3, 5), but whether they joined the group by divine call or attached themselves to the prophet, attracted by his teaching, or were called by him, we are not in a position to say.

There is no need to see in Am. 7:14 a slur on the prophetic groups, as though Amos were indignantly distinguishing himself from them. Amos could hardly be denying prophetic status to himself, seeing he is about to assert that the Lord commanded him to 'prophesy' (Heb. *hinnābē*), to perform the part of a *nābī*, 7:15). We may therefore take the words either as an indignant rhetorical question: 'Am I not a prophet, and a prophet's son? Indeed, I was a herdsman . . . and the Lord took me', or, preferably, 'I am no prophet . . . I am a herdsman, . . . and the Lord took me.' Amos is making no sinister accusation against the sons of the prophets as necessarily professional time-servers, but is alleging the authority of a spiritual call as against the accusation of lack of official status and authorization.

Very likely, at any rate, it is to such men, grouped round the great prophets, that we owe the safeguarding and transmission of their oracles, while at the same time it is going far beyond any information we possess regarding the groups of the 'sons of the prophets', their continuance and their work, to ascribe to them wholesale modifications, adaptations and additions to the inherited work of the 'master' prophet, as is becoming increasingly fashionable in specialist study.

III. True and false prophets

When Micaiah the son of Imlah and Zedekiah the son of Chenaanah confronted each other before King Ahab, the one warning of defeat and the other promising victory, and both appealing to the authority of the Lord (1 Ki. 22), how could they have been distinguished, the true from the false? When Jeremiah faced Hananiah, the former bowing under a yoke symbolizing servitude and the latter breaking the yoke symbolizing liberation (Je. 28), how could they have been distinguished? Or, a more extreme case, when the 'old prophet in Bethel' brought back the 'man of God' out of Judah with a lying message, and then rounded upon him with the true word of God (1 Ki. 13:18-22), was it possible to tell when he spoke with truth and when he spoke with deceit? The question of the discrimination of prophets is by no means ac-

ademic but thoroughly practical and of the highest spiritual importance.

Certain external characteristics of a general kind have been alleged as distinguishing the true from the false. It has been urged that the prophetic ecstasy was the mark of the false prophet. We have already noted that group-ecstasy was the common mark of the *nābī* in the time of Samuel (1 Sa. 9-10; etc.). This ecstasy was apparently spontaneous, or it could be induced, notably by music (1 Sa. 10:5; 2 Ki. 3:15) and by the ritual dance (1 Ki. 18:28). The ecstatic person apparently became very forgetful and quite insensible to pain (1 Sa. 19:24; 1 Ki. 18:28). It is easy, and indeed almost inevitable, that we should look with suspicion on a phenomenon such as this: it is so alien to our taste, and it is known as a feature of Baalism, and of Canaan in general. But these are not sufficient grounds for a plain identification between ecstatic and false. For one thing, there is no indication that the ecstasy was in any way frowned upon either by the people at large or by the best of their religious leaders. Samuel foretold with apparent approbation that Saul would join the ecstatic prophets and that this would signify his becoming a new man (1 Sa. 10:6). Also, the emissary of Elisha is called by Jehu's fellow captains 'this mad fellow' (2 Ki. 9:11), probably indicating that the ecstasy was still a feature of the prophetic group. Furthermore, Isaiah's Temple experience was certainly an ecstasy, and Ezekiel was without doubt an ecstatic.

Another suggested identification of false prophecy is professionalism: they were the paid servants of some king or other and it was to their interest to say what would please the king. But, again, this will hardly serve as a criterion. Samuel was clearly a professional prophet but was not a false prophet; Nathan was very likely a court official of David, but yet professionalism was by no means equivalent to sycophancy. Even Amos may have been professional, but Amaziah urges upon him that the living is better in Judah for a prophet like him (Am. 7:10ff.). Like the ecstasies, the court prophets are found in groups (1 Ki. 22), and no doubt their professional status could have been a corrupting influence, but to say that it was so is to run beyond the evidence. Jeremiah made no such accusation against Pashhur (Je. 20), though it would have been greatly to his advantage to have had a ready-made proof of his adversary's error.

There are three notable discussions of the whole question of false prophecy in the OT. The first is in Dt. 13 and 18. Dealing with the latter chapter first, it states a negative test: what does not come to pass was not spoken by the Lord. The wording here ought to be strictly observed: it is not a simple statement that fulfilment is the hall-mark of genuineness, for, as 13:1ff. indicates, a sign may be given and come to pass and yet the prophet be false. Inevitably, fulfilment was looked for as proof of genuine, godly utterance: Moses complained when what was spoken 'in the name' failed to have the desired effect (Ex. 5:23); Jeremiah saw in the visit of Hanamel a proof that the word was from the Lord (Je. 32:8). But Deuteronomy states only the negative, because that alone is safe and correct. What the Lord says will always find fulfilment, but sometimes the word of the false is fulfilled also, as a test for God's people.

Thus, we turn to Dt. 13, and the answer to the problem of discerning the false prophet: the test is a theological one, the revelation of God at the

PROPHECY, PROPHETS

Exodus. The essence of the false prophet is that he calls the people 'after other gods, which you have not known' (v. 2), thus teaching 'rebellion against the Lord your God, who brought you out of the land of Egypt' (vv. 5, 10). Here we see the final feature of Moses, the normative prophet: he also fixed the theological norm by which all subsequent teaching could be judged. A prophet might allege that he spoke in the name of Yahweh, but if he did not acknowledge the authority of Moses and subscribe to the doctrines of the Exodus he was a false prophet.

This is substantially the answer, also, of Jeremiah. This sensitive prophet could not carry off the contest with the robust assurance which seemed so natural to Isaiah and Amos. The question of personal certainty was one which he could not evade, and yet he could not answer it except by the tautologous 'certainty is certainty'. We find him in the heat of the struggle in 23:9ff. It is clear from a reading of these verses that Jeremiah can find no external tests of the prophet: there is here no allegation of ecstasy or professionalism. Nor does he find the essence of the false prophet to consist in the acquisition of his oracles by dreams: that is, there is no test based upon prophetic technique. This, rather, is what Jeremiah alleges: the false prophet is a man of immoral life (vv. 10-14) and he places no barrier to immorality in others (v. 17); whereas the true prophet seeks to stem the tide of sin and to call people to holiness (v. 22). Again, the message of the false prophet is one of peace, without regard to the moral and spiritual conditions which are basic to peace (v. 17); whereas the true prophet has a message of judgment upon sin (v. 29).

We might interject here that Jeremiah ought not to be understood to say that the true prophet cannot have a message of peace. This is one of the most damaging notions that has ever entered the study of the prophets. There is a time when peace is the message of God; but it will always be in Exodus terms, that peace can come only when holiness is satisfied concerning sin. And this is exactly what Jeremiah is urging: the voice of the true prophet is always the voice of the law of God, once for all declared through Moses. Thus Jeremiah is bold to say that the false prophets are men of borrowed testimony, feigned authority and self-appointed ministry (vv. 30-32), whereas the true prophet has stood in the counsel of Yahweh and heard his voice, and has been sent by him (vv. 18, 21-22, 28, 32). Jeremiah's final position is in fact that 'certainty is certainty', but he is rescued from tautology by the positive revelation of God. He knows he is right because his experience is the Mosaic experience of standing before God (cf. Nu. 12:6-8; Dt. 34:10), and his message accords, as that of the false prophets does not, with the 'Exodus Quadrilateral' of Holiness (obedience), Peace, Sin, Judgment.

The answer of Ezekiel is substantially that of Jeremiah, and is found in Ezk. 12:21-14:11. Ezekiel tells us that there are prophets who are guided by their own wisdom and have no word from Yahweh (13:2-3). Thus they make people trust in lies and leave them without resource in the day of trial (13:4-7). The mark of these prophets is their message: it is one of peace and shallow optimism (13:10-16), and it is devoid of moral content, grieving the righteous and encouraging the wicked (v. 22). By contrast, there is a prophet who insists

on piercing to the core of the matter, answering folk not according to their ostensible queries but according to their sinful hearts (14:4-5), for the word of Yahweh is always a word against sin (14:7-8). We see again that the true prophet is the Mosaic prophet. It is not just that in a vague sense he has a direct experience of God, but that he has been commissioned by the God of the Exodus to reiterate once again to Israel the moral requirements of the covenant.

IV. The prophets in the religion of Israel

a. Cultic prophets

Prophecy in a cultic setting is found in 2 Ch. 20:14. In a time of national anxiety King Jehoshaphat has led his people in public prayer in the court of the Lord's house. Immediately upon the conclusion of the prayer, a Levite, inspired by the Spirit of God, brings a word from the Lord promising victory. Here, then, is a Levite, that is, a cultic official, with a prophetic capacity. A further indication of the same happening may occur in some psalms (e.g. 60; 75; 82; etc.). In all these psalms there is a section in which a first person singular voice speaks: this is the oracular response, the prophet associated with the cult, bringing the contemporary utterance of God to his people. The suggestion made is that the guilds of levitical singers in the post-exilic period are the survival of groups of cultic prophets attached to the various sanctuaries in pre-exilic times. At every sanctuary, working alongside the priests, who had charge of the sacrificial aspect of the worship, there were prophets who declared the word of God publicly for the nation or privately for individual guidance.

The evidence for this practice, known, of course, in Canaanite circles, is largely inferential: we first meet a prophetic guild at the high place at Gibeah (1 Sa. 10:5); Samuel the prophet was an official at Shiloh (1 Sa. 3:19), and presided at a cultic meal at Ramah (1 Sa. 9:12ff.); the prophet Gad commanded David to erect the altar in Araunah's threshing-floor (2 Sa. 24:11, 18), and revealed God's will concerning the guilds of temple singers (2 Ch. 29:25); the prophet Nathan was consulted about the building of the Temple (2 Sa. 7:1ff.); Elijah staged a cultic scene at an ancient shrine (1 Ki. 18:30ff.); it was customary to visit the prophet on cultic occasions (2 Ki. 4:23); there are numerous references in which prophet and priest are coupled together in a way suggesting professional association (2 Ki. 23:2; Is. 28:7; Je. 2:26; 8:10; 13:13, etc.); there were prophetic quarters within the Temple (Je. 35:4).

It is difficult to see how any theory could be stable when it rests on such slight foundation. For example, the apparently strong connection established between prophet and Temple by the allocation of quarters, in Je. 35:4, is utterly negated by the fact that the same verse speaks of chambers allocated to the princes. Again, the fact that prophets and guilds are found at cultic centres need mean nothing more than that they too were religious people! Amos was found at the sanctuary of Bethel (7:13), but this does not prove that he was paid to be there. David's consultation of his prophets tells us more about David's good sense than about his prophets' cultic associations. The theory of the cultic prophet remains a theory.

b. *The prophets and the cultus*

Even if the theory of the cultic prophet could be proved, it would still leave unsettled the relation of the canonical, or writing, prophet to the cultus. Their view of the cultus is somewhat of a crux of interpretation, and centres round six brief passages which are supposed by some to contain an outright condemnation of all cultic worship and a denial that it was ever the will of God (Am. 5:21–25; Ho. 6:6; Is. 1:11–15; 43:22–24; Mi. 6:6–8; Je. 7:21–23).

We may remark at once on the small number of verses involved. If the prophets were so opposed to the cultus, as some commentators have urged, it is extraordinary that their opposition was so rarely voiced, and then in such a manner as to leave it open to doubt whether they intended to condemn the cultus as such or the cultus as then abused. Furthermore, in other parts of their writings some of these prophets do not seem to take such a strong line about ceremonial and sacrifice. Isaiah, in his inaugural vision, certainly met with God and with peace of heart in a cultic setting. Are we to believe that he thought the cultus was worth nothing? Or again, Jeremiah, in ch. 7, the chapter from which the proof-text is drawn, does not condemn people for offering cultic worship (vv. 9–10) because Yahweh has forbidden it but because they couple it with moral indifference and iniquity; in v. 11 the Temple is 'this house, which is called by my name' and in v. 12, Shiloh is 'my place', which was destroyed, not to manifest divine rejection of the cultus but because of the iniquity of the worshippers. This all suggests, what detailed study of the verses will also indicate, that the anger of the prophets is directed against the cultus abused.

The heart of the exegetical problem in Am. 5:21–25 is in the last verse: 'Did you bring to me sacrifices and offerings the forty years in the wilderness . . . ?' In order to support the theory that Amos is a root-and-branch opponent of sacrifice, we must see him confidently expecting the answer 'No' to this question. But this is exactly what he could not have done. On any view of the origin of the Pentateuch, the traditions current in Amos' day would have spoken of sacrifice in the time of Moses, and of the Patriarchs before him. Vv. 21–23 tell of God's spurning of their current cultic practice. V. 24 tells us what is missing: a moral concern, a holy life. V. 25 is intended to enforce the truth that these things are not an 'either/or' but are the inseparable sides of religion according to the will of God. It should be stressed that the form of the question in the Hebrew does not suggest, let alone require, a negative answer, and if we translate v. 25 so as to bring out the emphasis of the prophet, we read: 'Was it sacrifices and offerings you brought to me in the wilderness forty years . . . ?' If they trace their religion back to its root in revelation, what do they find but a divine requirement of sacrifice in the context of a life obedient to the law of God? Because of their failure to follow this pattern (vv. 26f.) they will go into captivity. Mere *opus operatum* ritual is not worship of the God of the Bible.

According to Pr. 8:10, we are to 'Take my instruction instead of silver, and knowledge rather than choice gold.' Clearly this is a statement of priorities, not an exclusion of one thing in favour of the other. The importance of this verse is that its Hebrew is exactly parallel in construction to that of Ho. 6:6. In the light therefore of Hosea's failure

to maintain an attitude of rejection towards the cultus throughout the rest of his prophecy, we may hold that he intends here a statement of priorities such as was given classical expression by Samuel: 'To obey is better than sacrifice' (1 Sa. 15:22).

The difficulty with the passage in Is. 1 is that it proves a great deal too much if it is taken simply as outright condemnation. Certainly vv. 11–12 appear to be a very strong attack on sacrifice, but no stronger than the attack upon the sabbath in v. 13, and upon prayer in v. 15. It cannot be that the prophet is utterly repudiating the sabbath and prayer. It must be that the final clause of v. 15, while referring directly to the earlier part of the verse, refers also to all the preceding condemnations. The prophet is simply urging that no religious activity avails in the context of a blatantly sinful life. This interpretation is proved to be correct by the initial verbs of v. 16, the first of which is constantly used throughout the leitical code for ceremonial purification, a very unlikely verb for the prophet to use if he considered all such things contrary to God's will; the second verb applies to moral purification. The prophet's message is thus the Bible's message: the message of the joint requirement of the moral and ceremonial law.

We notice next Mi. 6:6–8. We have a somewhat analogous situation in the words of our Lord to the rich young ruler (Mk. 10:17ff.). By his exclusive reply in terms of the moral law does he intend to deny the divine authority of the ceremonial law of atoning sacrifice? In view of his constant regard for the Mosaic legislation (e.g. Mt. 8:4), not to mention his authentication of the terms of OT sacrifice by his teaching concerning his own death (Mk. 14:24), this is an unlikely interpretation of the words. Or again, we might ask if Lv. 18:5, presenting the moral law as a way of life, intends to invalidate the ceremonial law. Likewise, in the case of Micah, we must not understand him to reject whatever he does not specifically approve.

We have already noted certain background facts relative to the study of Je. 7:21–23. If Jeremiah, in the immediate context, seems, at the least, not to condemn sacrifice as *per se* unacceptable, may we so interpret 7:22? The difficulty is that, on the face of it, the words seem to require us to do so. However, closer examination of the Hebrew suggests that the difficulty belongs more to the English translation than to the original. The preposition which the English gives as 'concerning'—the vital word in the whole verse—is the Hebrew *'al-dibrê*, which can only mean 'concerning'—a weakening of its real significance 'because of' or 'for the sake of' (cf. Gn. 20:11; 43:18; Ps. 7, title; Je. 14:1, etc.). According to this, the verse says that Yahweh did not address Israel either 'because of' sacrifices: that is to say, the performance of sacrifice is not a means whereby pressure may be applied to God; nor did he address them 'for the sake of' sacrifices, for the living God stands in no need of anything man can supply. The nation has missed the divine priority by its concentration on the mere operation of a cult, for the cult is not a thing which exists on its own but rather for the sake of the spiritual needs of a people committed to obedience to the moral law of God.

We may allude finally to Is. 43:22ff., which is, in many ways, the most difficult verse of all. The emphasis in v. 22 requires the translation, 'Not me have you called . . .' On the supposition that this sets the tone of address throughout the verses, we

PROPHECY, PROPHETS

are clearly within the same circle of possibilities: either, there is an indignant repudiation of the whole idea of divine authorization of sacrifice: 'whoever you may think you appeal to in your cultus, it is not to me, for I did not burden you with offerings'; or the accusation is that they abused the divine intention: 'in all your cultic labour you have not really called upon me, for it was never my plan that the cultus should turn you into slave-labour of ritual'. These alternatives of interpretation are so clear in the text that we may simply ask whether there are any other evidences whereby we might decide between them. The general consent of Scripture points to the second suggestion. Since there is no need to interpret the other crucial verses as an outright denial of sacrifice, we ought to reject that meaning here also. Moreover, within Isaiah, we have to reckon with 44:28, clearly approving the rebuilding of the Temple: for Isaiah to repudiate sacrifice and yet rejoice in the Temple would involve a complete contradiction in terms. There is also the inescapably sacrificial language of Is. 53.

c. The unity of Israel's religion

The religion of Israel began, as to its normative form, with the prophet-priest Moses, and it continued as a religion jointly of prophet and priest. This is declared in the covenant ceremony in Ex. 24:4-8. Yahweh has redeemed his people according to promise and they have acquiesced in the law he has imposed upon them as his redeemed people. Moses expressed the relationship symbolically: twelve pillars grouped round an altar (24:4). Here is the visual expression of the fulfilment of the covenant promise: 'I will take you for my people, and I will be your God' (Ex. 6:7). Notably, God is represented as an altar, for the holy God—the primary revelation of God to Moses (Ex. 3:5)—can dwell among sinners only by virtue of the atoning blood. Hence, the first thing Moses does with the blood is to sprinkle it upon the altar. As at the Passover, the initial movement of the blood is towards God in propitiation (Ex. 12:13).

The ceremony proceeds with the people's self-dedication to obedience to the law, and then the blood is sprinkled upon them. It is thus declared that while the people are brought to God by means of the blood of propitiation, the people themselves need the blood also in the context of their obligation to keep God's holy law. This, then, is the unity of prophet and priest: the former calls continually to obedience; the latter reminds constantly of the efficacy of the blood. If we drive them asunder the former becomes a moralist and the latter a ritualist; if we keep them together, as the religion of Israel does, and as the Bible does, we see the whole wonder of the God whom prophet and priest—and apostle too—proclaimed: a just God, and a Saviour, who will never relax his demand that his people walk in the light and be holy as he is holy, and who sets alongside that inflexible demand the blood which cleanses from all sin.

V. Prophecy in the New Testament

a. Continuity with the Old Testament

Prophecy and the prophets form the greatest line of continuity between the OT and NT. This is evident from the attitude of Christ and the apostles to OT prophecy, from the continuance of the phenomenon of prophecy both up to and after the ministry of Jesus, from the prophetic character of his own ministry, from the placing of the inspiration of NT apostles and prophets alongside that of OT prophets, and from the general outpouring of the Holy Spirit—the spirit of prophecy—upon the church, leading to a continuing acceptance of prophets and prophesying in NT churches.

The OT prophetic line did not end with Malachi, but with John the Baptist, as our Lord expressly declares (Mt. 11:13). Prophetic utterances of John's father Zechariah, and of Anna, Simeon and Mary at the beginning of Luke's Gospel all bear witness to the continuance of prophetic inspiration (Lk. 1:46-55, 67-79; 2:26-38). The customary division into two 'Testaments' unfortunately obscures this marvellous unity of God's programme of revelation, but the line is continuous from Moses to John—and indeed beyond him, as we shall see.

Furthermore the NT stands in a relation of fulfilment to the actual message of the OT prophets. Time and again this is the burden of the NT: what God said of old he has now brought to pass (e.g. Mt. 1:22; 13:17; 26:56; Lk. 1:70; 18:31; Acts 3:21; 10:43, etc.). They all bore witness ultimately to Christ and his saving work (Lk. 24:25, 27, 44; Jn. 1:45; 5:39; 11:51). He came not to abolish the law and the prophets but to fulfil them (Mt. 5:17), and indeed based his understanding of his own mission and destiny principally upon their predictions.

The importance of this feature of the NT in authentication of the OT can scarcely be over-emphasized. Though a persecuted minority (Mt. 5:12; 23:29-37; Lk. 6:23, etc.), the OT prophets are no mere idle speculative dreamers, but the most important voice coming to us from the ancient past, confirmed as proclaimers of eternal truth by the fulfilment of their greatest words in the greatest event of all time, the person and work of Jesus Christ. He himself points us back to them and their message as a permanent revelation of God, sufficient to lead to repentance and therefore to render culpable those who fail to listen to them (Lk. 16:29-31). They are authorized teachers of the Christian church, men whose words are still to be heeded as the word of God (cf. 2 Pet. 1:19-21).

b. The greatest prophet and more

One of his commonest assessments of the person of Jesus of Nazareth by his contemporaries in Palestine was that he was a prophet from God, or a teacher from God, or both (Mt. 14:5; 21:11, 46; Lk. 7:16; Jn. 3:2; 4:19; 6:14; 7:40; 9:17, etc.). Their basic concept of a prophet was clearly based upon the OT prophetic ministry, and included declaring God's word, having supernatural knowledge, and evidencing the power of God (cf. Jn. 3:2; 4:19 *in loc.*; Mt. 26:68; Lk. 7:39).

Jesus accepted this title among others, and used it of himself (Mt. 13:57; Lk. 13:33), as well as accepting the title of teacher (Jn. 13:13), and even of scribe by implication (Mt. 13:51–52). The apostles came to realize that the ultimate fulfilment of Moses' prophecy (Dt. 18:15ff.) of the prophet like him whom God would raise up was found in Christ himself (Acts 3:22–26; 7:37; *MESSIAH). Only, in the case of Jesus we do not merely have a prophet, but the Son to whom the Spirit is not given by measure, in whose teaching ministry therefore the ministry of prophet and teacher are perfectly combined, and with whom the acme of prophetic revelation is reached (Mt. 21:33–43; Lk. 4:14–15; Jn. 3:34). However, more than the greatest prophet, we see in Jesus the one who sent the prophets (Mt. 23:34, 37), and one who not merely speaks the words of God, but is himself the Word made flesh (Jn. 1:1–14; Rev. 19:13; *LOGOS).

c. The Spirit of prophecy and the Christian church

Christ promised his disciples that after his ascension he would send them his Holy Spirit who would empower them to bear witness to him in the world, and would bear witness with them (Lk. 24:48–49; Jn. 14:26; 15:26–27; Acts 1:8). That this includes prophetic inspiration is clear from Mt. 10:19–20; Jn. 16:12–15, etc. The apostles and those who preached the gospel at the first did so in the power of the same 'Holy Spirit sent from heaven' who inspired the predictions of the OT prophets as they looked forward to the coming sufferings and glory of Christ (1 Pet. 1:10–12). Hence it is no surprise that when the Holy Spirit is poured out at Pentecost, the immediate result includes manifestations in speech (Acts 2:1–12), and Peter's explanation cites Joel 2:28–32, where a major result of the effusion of the Spirit on all flesh is that 'they shall prophesy', including not only prophetic words but also visions and dreams (Acts 2:18). Every Christian is potentially a prophet (thus realizing Moses' wish expressed in Nu. 11:29), for the Spirit given generally to the church for its testimony to Jesus is the Spirit of prophecy (1 Cor. 14:31; Rev. 19:10). Therefore Paul tells the Corinthian Christians, 'Earnestly desire the spiritual gifts, especially that you may prophesy' (1 Cor. 14:1).

When Christians initially received the power of the Holy Spirit, the commonest manifestations resulting at the time seem to have been speaking in another language (of praise and prayer) and prophesying (Acts 2:4, 17–18; 10:44–46; 19:6; 1 Cor. 1:5–7). It is not clear whether those who so spoke under the inspiration of the Spirit retained this faculty in all cases, or whether it was simply an initial confirmatory evidence of their reception of the Spirit, as in the case of the seventy elders, the nearest OT parallel in Nu. 11:25, where they prophesied only when the Spirit came upon them initially, 'but they did so no more'.

Jesus predicted that people would prophesy in

his name (Mt. 7:22; though attention should be paid to his warning against reliance on this or any other work for one's spiritual standing), so prophecy is repeatedly mentioned as one of the gifts of the Holy Spirit with which Christ equips his members to function as his body in each place (Rom. 12:4–7; 1 Cor. 12:10–13; 1 Thes. 5:19–20; 1 Pet. 4:10–11; Rev. *passim*). This gift is differentiated both from tongues and interpretation and also from teaching. It differs from the former in being Spirit-inspired speech from God to man, whereas tongues and interpretations are addressed from man to God (Acts 2:11; 10:46; 1 Cor. 14:2–3); it differs from the latter (as in the OT) in being an utterance (frequently in the Lord's name) immediately inspired by direct revelation from the Holy Spirit, whereas teaching is mediated through patient study and exposition of truth already revealed. (Prophecy under the Spirit's inspiration will also often partly take the form, as in the OT, of a reiteration of truths already revealed in Scripture.)

The fullest guidance on the use of this gift in a church is given by Paul in 1 Cor. 14, along with instruction on the use of 'tongues'. From this and other references the following picture emerges. The exercise of this gift is in principle open to any Christian, under the sovereign distribution of the Spirit of Christ, including to women on occasion (vv. 5, 31; 11:5; 12:11; cf. Acts 21:9), although whether such feminine ministry was generally welcomed in the churches of the time is doubtful in view of 1 Cor. 14:33–36. Prophetic utterances are an intelligible word of revelation from God to the hearts and minds of those present, 'for their upbuilding and encouragement and consolation' (vv. 3–5, 26, 30–31). The reaction of the unbeliever to this prophetic ministry (vv. 24–25) shows that it could proclaim the whole message, of sin and judgment, as well as of grace and salvation.

The spirits of prophets are subject to prophets' (v. 32), so that prophecy is neither to be abused by people succumbing to any supposedly uncontrollable ecstatic frenzy, nor to be exercised without the check of other members of the body, notably the elders and prophets weighing or discerning the accuracy and reliability of utterances purporting to issue from the Holy Spirit (vv. 29–33). It was doubtless just such abuses which led the apostle to write to another young church, 'Do not quench the Spirit, do not despise prophesying, but test everything; hold fast what is good' (1 Thes. 5:19–21)—a similar balance to that shown by him towards tongues in 1 Cor. 14:39–40.

Testing or weighing prophetic utterances is all the more necessary in view of the warnings of the NT (following the OT) against false prophets and false prophecy, by which Satan seeks to lead the unwary astray (Mt. 7:15; 24:11, 24; 2 Pet. 2:1; 1 Jn. 4:1ff.), and an example of which appears in Bar-Jesus at Paphos (Acts 13:5ff.). In the latter case occult sources are specified, although in other cases selfish human desires are blamed; but in either case the devil's anti-Christian cause is being served, as the symbolic figure of the false prophet serving the dragon in Rev. 13:11 and 19:20 makes plain. False prophets will on occasion work miracles (Mk. 13:22), but as in the OT (Dt. 13:1–5) are not to be given undiscerning credence merely on that account. The testing of any prophetic utterance will be in accordance with our Lord's warning, 'You will know them by their fruits' (Mt. 7:20 *in loc.*), and will include these criteria: *i.* their

PROPHECY, PROPHETS

conformity to the teachings of Scripture, of Christ and of his apostles in both content and character (similar to OT, Dt. 18; but notice that a test of any man claiming spirituality or prophetic gifts is that 'he should acknowledge that what I am writing to you is a command of the Lord', 1 Cor. 14:37-38; 1 Jn. 4:6); *ii.* their over-all tendency and result or fruits (e.g., do they glorify Christ and edify the church, as *per* Jn. 16:14 and 1 Cor. 14:3ff.); *iii.* the consensus of the recognized prophets, and presumably elders and teachers, in that place weighing or discerning what is said (1 Cor. 14:29, 32); *iv.* the consistency of this utterance with other prophetic utterances in the body of Christ in that place (vv. 30-31); and *v.* the reverent confession of Jesus as the incarnate Lord by the Spirit speaking through the prophet (1 Cor. 12:2-3; 1 Jn. 4:1-3). In common with other spiritual gifts, Paul stresses that this gift is unprofitable and jarring in its exercise unless it proceeds from a loving heart and is ministered in a loving way in the church (1 Cor. 12:31-13:3).

Besides the possibility of any believer exercising this gift on occasions, there were also in the NT church those particularly recognized and set apart as 'prophets' for a more regular ministry of this nature. They are mentioned next after apostles in 1 Cor. 12:28-29 and Eph. 4:11, and they appear alongside teachers there and in the church at Syrian Antioch (Acts 13:1). Probably the best known in Acts is Agabus (11:28; 21:10-11), but others are also named (15:32), and the whole of the book of Revelation is an extended prophecy revealed to John (1:3; 10:11; 22:7, 10, 18-19). The ministry of prophets appears to have operated along with that of elders when Timothy was set apart for his ministry as an evangelist (1 Tim. 1:18; 4:14).

d. The character and form of New Testament prophecy

All the evidence from the examples of prophetic ministry in the NT shows that it was entirely of a piece with OT prophecy in its character and form. The ministries of John the Baptist, Agabus and the John who wrote the Apocalypse alike comprise the classic unity of prediction and proclamation, of foretelling and forth-telling, and the same is true of Zechariah, Simeon and others. Similarly they combined prediction of wrath to come or trouble in store and of coming grace (Lk. 3:7, 16ff.; Jn. 1:29ff.; Acts 11:28; Rev. 19-21). Equally we find prophecy and revelation by vision and occasionally by dream, as well as by the word of the Lord (Lk. 3:2; Rev. 1:10, 12, etc.; Acts 10:9-16; Mt. 1:20). The use of parable and symbol are well attested, including the acted oracle (Acts 21:11). It should be noted that in the last-named instance, Agabus' word was accepted by Paul as descriptively accurate, but not personally directive (vv. 12-14), although it agreed with the words he had received in other cities (Acts 20:23). However, both here and in 1 Tim. 4:14 and Acts 13:9ff. we see the power of the prophetic word still fully able to effect and convey that of which it speaks (*cf.* also Rev. 11:6).

e. Prophecy in the apostolic and later ages

It has often been assumed or argued that there can be no prophecy or prophets in the NT sense of the word in the church today, or in any other post-apostolic age, and many of those who use the term 'prophecy' to describe any current ministry have often diluted its meaning as equivalent to relevant

preaching. But while evangelistic proclamation or a teaching ministry may on occasion approximate to prophecy, they are not the same. The biblical arguments for denying the possibility of prophets today (as summarized by J. R. W. Stott, in *Baptism and Fullness*, 1975, pp. 100-102) are twofold: first, besides being mentioned immediately after apostles in Eph. 4:11 and 1 Cor. 12:28, the two are bracketed together as constituting the foundation of the NT church in Eph. 2:20 and 3:5; and secondly, the formation of a completed or closed canon of the NT precludes the possibility of any fresh revelation of divine truth (Heb. 1:1-2). Others have sometimes sought to identify this completion of the NT canon with the time when prophecy will pass away according to 1 Cor. 13:8ff.; but this does violence to the context, which clearly shows that these gifts will pass away 'when the perfect comes', which is defined as when we 'see face to face' (*i.e.* beyond this life and age altogether). Nor will the Ephesian texts bear the weight thus placed on them, since the association of prophets with the founding of the church does not automatically rule out their ministry in its continuance. (There are other reasons for asserting the uniqueness of the original apostolate, which do not apply equally to prophets.) Some would maintain that the prophets referred to are OT prophets, but this is very doubtful. The argument appears to rest in fact upon an equation of prophecy with 'fresh revelation', that is, some material addition to God's saving revelation of himself to mankind as a whole in Christ. But there does not seem to be any solid ground for making such an inevitable equation in either the OT or NT. All may agree that there is no new revelation to be expected concerning God in Christ, the way of salvation, the principles of the Christian life, etc. But there appears to be no good reason why the living God, who both speaks and acts (in contrast to the dead idols), cannot use the gift of prophecy to give particular local guidance to a church, nation or individual, or to warn or encourage by way of prediction as well as by reminders, in full accord with the written word of Scripture, by which all such utterances must be tested. Certainly the NT does not see it as the job of the prophet to be a doctrinal innovator, but to deliver the word the Spirit gives him in line with the truth once for all delivered to the saints (Jude 3), to challenge and encourage our faith.

Always in the NT the prophets of both Testaments are regarded as the pioneers of faith, who stand in the front line in every age and reap the full blast of the wind of persecution stirred up in the world by the devil against the people of God, whether through Jewish or Gentile opposition (Mt. 23:37; Lk. 11:47-50; Acts 7:52; 1 Thes. 2:15; Rev. 11:3-8; 16:6; 18:20, 24). Sometimes they are bracketed with our Lord, sometimes with the apostles and sometimes with the saints, but the treatment they receive as God's spokesmen is typical of what all his servants and children who are faithful in their testimony may expect in a fallen world, together with their victory, resurrection and inheritance beyond it by God's grace (Mt. 5:10-12; Heb. 11:39-12:2). For 'the testimony of Jesus is the spirit of prophecy', and all his people are called to bear that testimony faithfully in various ways by the power of the same Spirit.

PROPHETESS (Heb. *n'bi'ā*; Gk. *prophētis*). Throughout both Testaments 'prophetess' is used in as wide a sense of women as 'prophet' is of men.

Prophetesses specifically named are Miriam, sister of Moses, who led a choral dance in celebration of Israel's deliverance from Egypt (Ex. 15:20); Deborah, wife of Lappidoth, 'a mother in Israel' (Jdg. 5:7), who was consulted as an inter-tribal judge (Jdg. 4:4); Huldah, wife of the keeper of the royal wardrobe, who declared the divine will to Josiah after the discovery of the law-book (2 Ki. 22:14); Noadiah, who joined other prophets in attempting to intimidate Nehemiah (Ne. 6:14); and Anna, who praised God in the Temple at the appearance of the infant Jesus (Lk. 2:36ff.).

Isaiah's wife is called 'the prophetess' (Is. 8:3), perhaps because she was a prophet's wife. Philip's 4 unnamed daughters prophesied in Caesarea (Acts 21:9). In the early church, as Paul's Corinthian correspondence indicates, the gift of *prophecy was exercised by various Christians irrespective of sex (*cf.* 1 Cor. 11:4f.). This was in accordance with the prediction of Joel 2:28 ('your sons and your daughters shall prophesy'), fulfilled on the day of Pentecost (Acts 2:16ff.).

There were false prophetesses as well as false prophets in Israel (*cf.* Ezk. 13:17). In the NT unenviable notoriety is attained by 'the woman Jezebel, who calls herself a prophetess' (Rev. 2:20).

M.B.

PROPITIATION. Propitiation properly signifies the removal of wrath by the offering of a gift. In the OT it is expressed by the verb *kipper* (*ATONEMENT). In the NT the *hilaskomai* word group is the important one. In modern times the whole idea of propitiation has been strongly criticized as savouring of unworthy ideas of God. Many suggest that the term 'propitiation' should be abandoned in favour of *expiation, and this is done, for example, in RSV.

The objection to propitiation arises largely from an objection to the whole idea of the wrath of God, which many exponents of this view relegate to the status of an archaism. They feel that modern men cannot hold such an idea. But the men of the OT had no such inhibitions. For them 'God is angry with the wicked every day' (Ps. 7:11, AV). They had no doubt that sin inevitably arouses the strongest reaction from God. God is not to be accused of moral flabbiness. He is vigorously op-

posed to evil in every shape and form. While he may be 'slow to anger' (Ne. 9:17, *etc.*), his anger is yet certain in the face of sin. We may even read 'The Lord is slow to anger, and abounding in steadfast love, forgiving iniquity and transgression, but he will by no means clear the guilty' (Nu. 14:18). Even in a passage dealing with the long-suffering of God his refusal to condone guilt finds mention. The thought that God is slow to anger is to men of the OT far from being a truism. It is something wonderful and surprising. It is awe-inspiring and totally unexpected.

But if they were sure of the wrath of God against all sin, they were equally sure that this wrath might be put away, usually by the offering of the appropriate sacrifice. This was ultimately due, not to any efficacy in the sacrifice, but to God himself. God says, 'I have given it for you upon the altar to make atonement for your souls' (Lv. 17:11). Pardon is not something wrung from an unwilling deity. It is the gracious gift of a God who is eager to forgive. So the psalmist can say, 'He, being compassionate, forgave their iniquity, and did not destroy them; he restrained his anger often, and did not stir up all his wrath' (Ps. 78:38). The averting of the wrath of God is not something which men bring about. It is due to none less than God himself, who 'turned his anger away' (AV).

In the NT there are several passages where the expression 'the wrath of God' occurs, but the relevant evidence is not limited to these alone. Everywhere in the NT there is the thought that God is vigorously opposed to evil. The sinner is in no good case. He has put himself in the wrong with God. He can look for nothing other than the severity of the divine judgment. Whether we choose to call this 'the wrath of God' or not, it is there. And, while wrath is a term to which some objections may legitimately be raised, it is the biblical term and no satisfactory substitute has been suggested.

We see the force of the NT idea of propitiation from the occurrence of the term in Rom. 3:24f. We are 'justified freely by his grace through the redemption that is in Christ Jesus: whom God hath set forth to be a propitiation through faith in his blood' (AV). The force of Paul's argument up to this point is that all, Jew and Gentile alike, are under the condemnation of God. 'The wrath of God is revealed from heaven against all ungodliness and wickedness of men' (Rom. 1:18). Paul shows first that the Gentile world stands under God's condemnation and then that the Jewish world is in the same plight. It is against this background that he sees the work of Christ. Christ did not save men from nothing at all. He delivered them from a very real peril. The sentence of judgment had been passed against them. The wrath of God hung over them. Paul has strongly emphasized the wrath of God throughout these opening chapters, and therefore Christ's saving work must include deliverance from this wrath. This deliverance is described by the word 'propitiation'. There is nothing else to express this thought in the critical passage Rom. 3:21ff., which sets out the way in which God has dealt with this aspect of man's plight. *hilastērion* must be held here to signify something very like 'propitiation'. (See further *NTS* 2, 1955–6, pp. 33–43.)

In 1 Jn. 2:2 Jesus is described as 'the propitiation for our sins'. In the previous verse he is our 'advocate with the Father'. If we need an advocate with God, then our position is indeed a dangerous one.

PROPITIATION

We are in dire peril. All this helps us to see that 'propitiation' is to be taken here in its usual sense. Jesus' activity for men is described as turning away the divine wrath.

But the Bible view of propitiation does not depend on this or that specific passage. It is a reflection of the general import of its teaching. 'Propitiation' is a reminder that God is implacably opposed to everything that is evil, that his opposition may properly be described as 'wrath', and that this wrath is put away only by the atoning work of Christ.

PROSELYTE. A proselyte was a Gentile who, through conversion, committed himself/herself to the practice of the Jewish law, exclusive devotion to Yahweh and integration into the Jewish community.

The Heb. term *gēr* first meant a resident alien, not necessarily with religious affiliations – indeed the same word is used for Jews on foreign soil (Gn. 15:13; Ex. 23:9). Within the OT canon, or possibly later, it came to designate full proselytes. The LXX renders *gēr* by *proselutos* seventy-seven times, with other terms being used occasionally. There is both in Heb. and in Gk. an advance in significance of meaning with these terms, although we cannot always define precisely where one phase shades into another.

Several OT passages show a warmth of welcome to proselytes. Note the willingness in Ex. 12:48 to receive foreigners into religious fellowship on condition of circumcision. The prayer of 1 Ki. 8:41-43, and the glowing potential universalism of Is. 2:2-4; 19:18-25; 49:6; 56:3-8; Je. 3:17; Zp. 2:11; 3:9 are striking. The short book of Ruth is the story of a particular woman proselyte whose memory later Judaism greatly honoured. Political and geographical circumstances doubtless kept the number of proselytes relatively small in OT times. Such persons would normally be aliens, resident in Palestine, voluntarily accepting circumcision, and with it the whole of the law.

We have evidence for a number of proselytes in the Graeco-Roman period which shows that Jewish morality and monotheism appealed to a number of Gentiles who accordingly became converts. Their existence is clear in literary works of the period and in a number of inscriptions. Notable examples are the members of the royal family from Adiabene (see Josephus, *AJ* 20.17-95) and Nicolaus the proselyte from Antioch (Acts 6:5; see also Acts 2:10; 13:43; Tobit 1:8; Judith 14:10). Josephus also writes of forced conversion to Judaism in the Hasmonaean period (see *AJ* 13.257-258, 319).

Another group of Gentiles, who have been called 'Godfearers', were attracted to Judaism and worshipped in the synagogue without becoming converts. A recently discovered inscription from Aphrodisias in Asia Minor, probably from the early 3rd century AD, gives the names of seventy-one Jews but also lists fifty-four people, none of whom have distinctly Jewish names, who are described as 'Godfearers' (*theosebis*). This is clear

evidence that the Jews in Aphrodisias at this time used the term 'Godfearers' as a semi-technical term for a group of Gentiles who revered the Jewish God, adopted some Jewish customs and were connected with the Jewish community in some definite way, but had not become proselytes. We have further evidence for Godfearers in other areas in Asia Minor and elsewhere. Although only one of these inscriptions (from Panticapaeum) is to be dated in the 1st century AD, texts in Josephus, Juvenal and Acts also suggest that there were Godfearers in some synagogues in this earlier period, although at this stage no one term seems to have been used to describe them, and Godfearers probably varied in their degree of adherence to Judaism. According to Acts, a number of these Godfearers (called *phoboumenoi* or *sebomenoi tōn theōn*) became Christians (Acts 10:1-2; 17:4).

In the rabbinic literature, the term *gēr* unquestionably means a full proselyte. According to the rabbis, proselytes were instructed and then underwent circumcision and baptism, followed by offering a sacrifice in the temple while this was possible. The elements of conversion in the 1st century are debated. Although the duties and rights of proselytes were in some respects more limited than those of born Jews, in essentials proselytes were probably regarded by the rabbis as of equal status with born Jews and many rabbinic texts evince a positive attitude towards proselytes. However, some rabbis viewed proselytes unfavourably. In deprecating the admission of proselytes to Judaism, the Babylonian Talmud likens them to a sore on the skin of Israel (*b. Yebamoth* 109b) and one rabbi argued that proselytes delayed the coming of the Messiah, and so were presumably, therefore, not to be actively sought (*b. Niddah* 13b).

Many scholars have held the view that Jews had an active proselytizing mission in the 1st century AD. However, it has recently been argued that Jews in this period did not engage in an active mission to convert outsiders. Although Jews welcomed non-Jews, who elected to join them and their religion, Jews in this period did not undertake a mission to win converts whenever the opportunity offered itself. The initiative for conversion seems to have generally come from the would-be Gentile convert. The proselytizing impulse within the early church was therefore something which arose within Christianity itself, and was not something taken over from the Judaism of the 1st century. However, by the 3rd century AD, some Jews do seem to have regarded winning proselytes as a religious duty.

There has been much controversy about the meaning of the words of Jesus given in Mt. 23:15. It seems likely that here Jesus attacked Pharisees for their eagerness to try and persuade other Jews to become Pharisees. 'To make a proselyte' in this verse therefore probably involves persuading someone to become a Pharisee, and shows that the term 'proselyte' was still in the process of becoming a technical term for converted Gentile at this time. Alternatively, the verse may refer to Pharisees seeking to convert Godfearers into full proselytes, who then came under the law as the Pharisees understood it.

P.T.
R.A.S.

PROSTITUTION. The OT speaks of both common prostitutes, *zōnōt*, and sacred prostitutes of both sexes, *q'dēšōt* and *q'dēšim*, who were votaries of fertility cults. The NT term for a prostitute is *pornē* (cf. the word 'pornography').

Tamar is described as both a harlot (Gn. 38:15) and a cult prostitute (Gn. 38:21, rsvmg.). The two Heb. words are used as parallels in Ho. 4:14. Rahab the harlot (Jos. 2) hid the two spies in her home at Jericho. She was acclaimed for her faith (Heb. 11:31; Jas. 2:25) and became an ancestress of Christ (Mt. 1:5). The two mothers who claimed the same baby before Solomon were prostitutes (1 Ki. 3:16).

In the NT period prostitutes were among those who repented at the preaching of John the Baptist (Mt. 21:31-32).

In Dt. 23:17-18 the contemptuous phrase 'dog' evidently refers to a male cult prostitute. In Rehoboam's time the presence of such male prostitutes became widespread (1 Ki. 14:24). Asa, Jehoshaphat and Josiah attempted to root out this abomination (1 Ki. 15:12; 22:46; 2 Ki. 23:7).

Other passages which may contain possible allusions to sacred prostitution include Nu. 25:1-3; 1 Sa. 2:22; Je. 13:27; Ezk. 16; 23:37-41; Am. 2:7-8; 2 Macc. 6:4.

Numerous nude female figurines found throughout the Near East depict the goddesses who were venerated in sacred prostitution. Their votaries believed that they could stimulate the fertility of their crops by sympathetic magic when they engaged in intercourse.

We may assume that the worship of the major Canaanite goddesses — Ashera, Astarte, Anath — involved sacred prostitution, though there are no explicit texts which can prove this. In the Ugaritic texts of temple personnel we find the *qdšm*, who were probably male cult prostitutes. Explicit references to sacred prostitution in Syria and Phoenicia are found in the late texts of Lucian's *De Dea Syria* (2nd century AD). The prostitution of women in the service of Venus at Heliopolis (Baalbek) is attested as late as the 4th century AD.

There is good reason to believe that Phoenician influence was responsible for the importation of cultic prostitution as part of the Greek worship of Aphrodite by way of Cyprus and Cythera (cf. Homer's *Odyssey* 8. 288, 362).

Aphrodite was the goddess of Corinth and the patroness of prostitutes. Strabo 8. 6. 20 asserted that her temple on the Acrocorinthus had more than 1,000 hierodoules. When Paul warned the congregation at Corinth against immorality (1 Cor. 6:15-16), he was no doubt warning them in part against these cult prostitutes.

Prostitution is condemned as defiling our bodies which are the temples of the Holy Spirit (1 Cor. 6:18-20). Those who do not repent of such practices will be excluded from heaven (Rev. 21:8; 22:15).

The Scriptures often use the imagery of harlotry to depict the evil of idolatry and apostasy (Is. 57:3-5; Je. 2:23-25; Rev. 17:1ff.). Hosea was commanded to marry Gomer the harlot to illustrate Israel's infidelity (Ho. 1:2).

PROVERB. In rsv the word 'proverb' has a wider range of meanings than in normal English usage, due especially to the many meanings of *māšāl* (probably related to *mšl*, 'to be like', 'to be compared with', although some relate it to *mšl*, 'to rule'; hence a word spoken by a ruler). In addition to denoting 'a pithy saying, especially one condensing the wisdom of experience' (cf. 1 Sa. 10:12; 24:13; 1 Ki. 4:32; Pr. 1:1, 6; 10:1; 25:1; Ec. 12:9; Ezk. 12:22-23; 16:44; 18:2-3), 'proverb' may also serve as a synonym for 'byword' (e.g. Dt. 28:37; 1 Ki. 9:7; 2 Ch. 7:20; Ps. 69:11; Je. 24:9; Ezk. 14:8). The point seems to be that the sufferer becomes an object-lesson from which others may learn appropriate lessons. Similarly, 'proverb' may mean 'taunt-song' as in Is. 14:4ff., where the disastrous effects of the king of Babylon's presumptuous pride are paraded. In Hab. 2:6 (AV) 'proverb' translates *hīdā*, 'riddle', 'perplexing question'.

Two words are rendered 'proverb' in the NT: *parabolē* (Lk. 4:23) and *paroimia* (Jn. 16:25, 29, AV; 2 Pet. 2:22). In the Johannine passages *paroimia* apparently denotes a 'dark saying' or 'figure of speech in which . . . lofty ideas are concealed' (Arndt). The didactic role of proverbs in both Testaments should not be underestimated. Along with * parables, proverbs played a major part in the teaching ministry of Christ (e.g. Mt. 6:21; Lk. 4:23; Jn. 12:24). (* WISDOM LITERATURE.)

PROVERBS, BOOK OF. The Heb. title *mišlē*, 'proverbs of', is an abbreviation of *mišlē š'ōmōh*, 'the proverbs of Solomon' (1:1). The English name is derived from the Vulg. *Liber Proverborum*. A collection of collections, Proverbs is a guidebook for successful living. Without overtly stressing the great prophetic themes (e.g. the covenant), the proverbs show how Israel's distinctive faith affected her common life.

I. Outline of contents

a. *The importance of wisdom* (1:1-9:18)

Following an introductory statement of purpose (1:1-6), the writer instructs his son or pupil concerning the worth and nature of wisdom. In contrast to the proverbs of 10:1ff., each idea is discussed at some length in a didactic poem. These poetic essays are a highly polished development of the *māšāl* (* PROVERB, * WISDOM LITERATURE).

The author's aim is to paint the strongest possible contrast between the results of seeking wisdom and living a life of folly. He sets the stage for the several hundred specific proverbs which follow. Certain temptations loom large in the sage's mind: crimes of violence (1:10-19; 4:14-19); the binding of oneself by a rash pledge (6:1-5); sloth

PROVERBS, BOOK OF

(6:6–11); duplicity (6:12–15); and especially sexual impurity (2:16–19; 5:3–20; 6:23–35; 7:4–27; 9:13–18). To the one who avoids these snares, *Wisdom offers happiness, long life, wealth and honour (3:13–18). The deeply religious nature of this section (e.g. 1:7; 3:5–12), its sensitive moral tone and its hortatory, didactic style are reminiscent of Deuteronomy.

Apparently the writer of these chapters is anonymous, since 1:1–6 probably refers to the entire book and 10:1 introduces a collection of proverbs which purport to be Solomonic. This section is customarily dated among the latest in the collection. Though its final editing may be relatively late (c. 600 BC), much of the material may be considerably earlier. W. F. Albright has drawn attention to the number of parallels in thought and structure between this section, especially chs. 8–9, and Ugaritic or Phoenician literature (*Wisdom in Israel*, pp. 7–9). He also suggests that 'it is entirely possible that aphorisms and even longer sections go back into the Bronze Age in substantially their present form' (p. 5). For the personification of Wisdom in 8:22ff., see *WISDOM.

b. *The proverbs of Solomon* (10:1–22:16)

This section is probably the oldest in the book, and there is a growing tendency among scholars to accept the accuracy of the tradition reflected in 1 Ki. 4:29ff.; Pr. 1:1; 10:1; 25:1 honouring *Solomon as the sage *par excellence*. His contacts with the court of Egypt, the far-reaching network of his empire and the combination of wealth and respite from war enabled him to devote himself to cultural pursuits on a scale denied his successors.

About 375 proverbs occur in this collection. Their structure is largely *antithetic* in chs. 10–15 and *synthetic* or *synonymous* in chs. 16–22. Most of the proverbs are unrelated; no system of grouping is discernible.

Though a religious note is by no means absent (cf. 15:3, 8–9, 11; 16:1–9, etc.), the bulk of the proverbs contain no specific reference to Israel's faith but are based on practical observations of everyday life. The extremely practical nature of the instruction which stresses the *profits* of wisdom has drawn the criticism of those who hold that pure religion should be disinterested. But how would a practical sage to whom God had not yet revealed the mystery of life after death make the issues clear without pointing out the blessings of the wise and the pitfalls of the fool?

c. *The words of the wise* (22:17–24:22)

The title is obscured in *MT* and *EVV*, being incorporated in 22:17. However, the obvious title 'These also are sayings of the wise' (24:23) suggests that 22:17–24:22 should be considered a separate collection. These maxims are more closely related and sustained in theme than those of the previous section. The topics are manifold: regard for the poor (22:22, 27), respect for the king (23:1–3; 24:21–22), discipline of children (23:13–14), temperance (23:19–21, 29–35), honour of parents (23:22–25), chastity (23:26–28), etc. Religious emphasis, though not dominant, is not lacking (e.g. 22:19, 23; 24:18, 21).

A formal relationship between the Egyp. proverbs of Amenemope and 22:17–23:11 is widely recognized. The debate centres in the question, Which influenced which? W. Baumgartner (*The Old Testament and Modern Study*, ed. by H. H.

Rowley, 1951, p. 212) notes that 'the . . . theory that Amenemope is the original . . . has now been generally accepted'. This view, however, has now been challenged from within Egyptology itself, by E[ua]. Drioton, who has put up weighty reasons for a view that the Egyp. Amenemope is, in fact, merely a translation (sometimes too literal) from a Heb. original into Egyp.; this Heb. original would then be the 'words of the wise' from which Proverbs independently drew. See E[ua]. Drioton, *Mélanges André Robert*, 1957, pp. 254–280, and *Sacra Pagina*, 1, 1959, pp. 229–241. Against this, however, see R. J. Williams, *JEA* 47, 1961, pp. 100–106. The passage has been so refined by Israel's faith that, whatever its origin, it belongs to the OT revelation.

d. *Additional sayings of the wise* (24:23–34)

This brief collection exhibits the same irregularity of form as the one above. There are brief proverbs (e.g. v. 26) and extended maxims (e.g. vv. 30–34; cf. 6:6–11). The religious element is not prominent, but there is a keen sense of social responsibility (e.g. vv. 28–29). These two collections are apparently not Solomonic but are part of the legacy of Israel's sages, who created or collected and polished a vast body of wisdom sayings (cf. Ec. 12:9–11).

e. *Additional proverbs of Solomon* (25:1–29:27)

In content this section is not unlike 10:1–22:16 (e.g. 25:24 = 21:9; 26:13 = 22:13; 26:15 = 19:24, etc.). However, the proverbs here are less uniform in length; antithetic parallelism, the backbone of the earlier section, is less common, although chs. 28–29 contain numerous examples; comparison, rare in 10:1ff., occurs frequently (e.g. 25:3, 11–14, 18–20, etc.).

The statement in 25:1 has influenced the Talmudic opinion (*Baba Bathra* 15a) that Hezekiah and his company wrote the Proverbs. The role of Hezekiah's men in the editing of the book is not clear, but there is no reason to question the accuracy of 25:1, which relates to the sayings in chs. 25–29. Hezekiah's interest in Israel's literature is attested in 2 Ch. 29:25–30, where he restores the Davidic order of worship, including the singing of the psalms of David and Asaph. A. Bentzen suggests that these proverbs were preserved *orally* until Hezekiah's time, when they were transcribed (*JOT*, 2, p. 173). S. R. Driver (*An Introduction to the Literature of the Old Testament*, p. 401) lists those proverbs which reflect a restiveness concerning the Monarchy (28:2, 12, 15f., 28; 29:2, 4, 16). In the selection of these proverbs, is there a reflection of the turbulence of the 8th century BC?

f. *The words of Agur* (30:1–33)

Agur, his father Jakeh, Ithiel and Ucal (30:1) defy identification. See *ITHIEL for an adjustment in the word divisions which eliminates the last two names completely. *Oracle* (30:1, RSVmg.) should probably be read as a proper name *Massa.

The first few verses are difficult to interpret, but seem to be agnostic in tone. This agnosticism is answered (5–6) with a statement about the unchangeable word of God. Following a brief but moving prayer (7–9), the chapter concludes with a series of extended proverbs describing some commendable or culpable quality. In many of these the number *four* is prominent. Several exhibit the x, x + 1 pattern well attested in the OT (e.g. Am. 1–

2; Mi. 5:5) and common in Ugaritic (*cf.* C. H. Gordon, *Ugaritic Handbook*, 1947, pp. 34, 201).

*g. The words of *Lemuel* (31:1–9)

This king of *Massa is unknown. His mother's advice includes warnings against sexual excess and drunkenness and encouragement to judge even the poor with rectitude. The influence of Aramaic on this section is noteworthy (*e.g.* *bar*, 'son'; *m'läkîn*, 'kings').

h. In praise of a virtuous wife (31:10–31)

This well-wrought acrostic poem has no title, but is so different from the preceding section that it must be considered separately. Its stylized form suggests that it should be viewed among the latest sections of the book. The description of an industrious, conscientious and pious woman is a fitting conclusion to a book which discusses the practical workings of a God-directed life.

II. Date

Proverbs could not have been completed before Hezekiah's time (*c.* 715–686 BC). However, the acrostic poem (31:10–31) and the sayings of the Masaites (30:1–33; 31:1–9) may well have been added in the exilic or post-exilic period. A reasonable date for the final editing is the 5th century BC. The individual proverbs date in most cases from well before the Exile. W. F. Albright notes (*op. cit.*, p. 6) that the contents of Proverbs must, on literary grounds, be dated before the Aramaic sayings of Ahiqar (7th century BC).

III. Proverbs and the New Testament

Proverbs has left its stamp on the NT by several quotations (*e.g.* 3:7a = Rom. 12:16; 3:11–12 = Heb. 12:5–6; 3:34 = Jas. 4:6 and 1 Pet. 5:5; 4:26 = Heb. 12:13a; 10:12 = Jas. 5:20 and 1 Pet. 4:8; 25:21–22 = Rom. 12:20; 26:11 = 2 Pet. 2:22) and allusions (*e.g.* 2:4 and Col. 2:3; 3:1–4 and Lk. 2:52; 12:7 and Mt. 7:24–27). As Christ fulfilled the Law and the Prophets (Mt. 5:17), so he fulfilled the wisdom writings by revealing the fullness of God's wisdom (Mt. 12:42; 1 Cor. 1:24, 30; Col. 2:3). If Proverbs is an extended commentary on the law of love, then it helps to pave the way for the One in whom true love became incarnate. See C. T. Fritsch, 'The Gospel in the Book of Proverbs', *Theology Today* 7, 1950, pp. 169–183.

PROVIDENCE. No single word in biblical Hebrew or Greek expresses the idea of God's providence. *pronoia* is used for God's purposive foresight by Plato, Stoic writers, Philo, who wrote a book *On Providence (Peri pronoias)*, Josephus, and the authors of *Wisdom (cf.* 14:3; 17:2) and 3, 4 Macc.; but in the NT *pronoia* occurs only twice (Acts 24:2; Rom. 13:14), both times denoting, not God's care and forethought, but man's. The cognate verb *pronoëō*, too, is used only of man (Rom. 12:17; 2 Cor. 8:21; 1 Tim. 5:8).

Providence is normally defined in Christian the-

ology as the unceasing activity of the Creator whereby, in overflowing bounty and goodwill (Ps. 145:9 *cf.* Mt. 5:45–48), he upholds his creatures in ordered existence (Acts 17:28; Col. 1:17; Heb. 1:3), guides and governs all events, circumstances and free acts of angels and men (*cf.* Ps. 107; Jb. 1:12; 2:6; Gn. 45:5–8), and directs everything to its appointed goal, for his own glory (*cf.* Eph. 1:9–12). This view of God's relation to the world must be distinguished from: (a) *pantheism*, which absorbs the world into God; (b) *deism*, which cuts it off from him; (c) *dualism*, which divides control of it between God and another power; (d) *indeterminism*, which holds that it is under no control at all; (e) *determinism*, which posits a control of a kind that destroys man's moral responsibility; (f) the doctrine of *chance*, which denies the controlling power to be rational; and (g) the doctrine of *Jate*, which denies it to be benevolent.

Providence is presented in Scripture as a function of divine sovereignty. God is King over all, doing just what he wills (Pss. 103:19; 135:6; Dn. 4:35; *cf.* Eph. 1:11). This conviction, robustly held, pervades the whole Bible. The main strands in it may be analysed as follows.

a. Providence and the natural order

God rules all natural forces (Ps. 147:8f.), all wild animals (Jb. 38–41), and all happenings in the world, great and small, from thunderstorms (Jb. 37; Ps. 29) and plagues (Ex. 7:3–11; 10; 12:29ff.; Joel 2:25) to the death of a sparrow (Mt. 10:29) or the fall of a lot (Pr. 16:33). Physical life, in men and animals, is his to give and to take away (Gn. 2:17; 1 Sa. 1:27; 2 Sa. 12:19; Jb. 1:21; Pss. 102:23; 104:29–30; 127:3; Ezk. 24:16ff.; Dn. 5:23, *etc.*); so are health and sickness (Dt. 7:15; 28:27, 60), prosperity and adversity ('evil', Am. 3:6; *cf.* Is. 45:7), *etc.*

Since the regularity of the natural order is thought of as depending directly upon the divine will (*cf.* Gn. 8:22), the Bible finds no difficulty in the idea of an occasional miraculous irregularity; God does what he wills in his world, and nothing is too hard for him (*cf.* Gn. 18:14).

God's providential government of the created order proclaims his wisdom, power, glory and goodness (Pss. 8:1, rv; 19:1–6; Acts 14:17; Rom. 1:19f.). The man who in face of this revelation does not acknowledge God is without excuse (Rom. 1:20).

The Bible presents God's constant fulfilling of his kindly purposes in nature both as matter for praise in itself (*cf.* Pss. 104; 147) and as a guarantee that he is lord of human history, and will fulfil his gracious promises in that realm also (*cf.* Je. 31:35ff.; 33:19–26).

b. Providence and world history

Since the Fall, God has been executing a plan of redemption. This plan pivots upon Christ's first coming and culminates in his return. Its goal is the creation of a world-wide church in which Jew and non-Jew share God's grace on equal terms (Eph. 3:3–11), and through this the reintegration of the disordered cosmos (Rom. 8:19ff.), under the rule of Christ at his second coming (Eph. 1:9–12; Phil. 2:9ff.; Col. 1:20; 1 Cor. 15:24ff.). Through Christ's present reign and future triumph, the OT prophecies of God's Messianic kingdom (*cf.* Is. 11:1–9; Dn. 2:44; 7:13–27) are fulfilled. The unifying theme of the Bible is God's exercise of his kingship in setting up this kingdom. No foe can thwart him; he

PROVIDENCE

laughs at opposition to his plan (Ps. 2:4), and uses it to his own ends (cf. Acts 4:25–28, quoting Ps. 2:1f.). The climax of history will be the overthrow of those who fight against God and his kingdom, as the book of Revelation shows (Rev. 19, etc.).

Paul analyses the steps in God's plan in terms of the Jew–Gentile and law–grace relationships in Gal. 3; Rom. 9–11; cf. Eph. 2:12–3:11.

c. Providence and personal circumstances

God told Israel as a nation that he would prosper them while they were faithful but bring disaster on them if they sinned (Lv. 26:14ff.; Dt. 28:15ff.). The attempt to understand the fortunes of individual Israelites in the light of this principle raised problems. Why does God allow the wicked to prosper, even when they are victimizing the just? And why is disaster so often the lot of the godly?

The first question is always answered by affirming that the wicked prosper only for a moment; God will soon visit them and take vengeance (Pss. 37 *passim*; 50:16–21; 73:17ff.), though for the present he may forbear, in order to give them further opportunity for repentance (Rom. 2:4f.; 2 Pet. 3:9; Rev. 2:21). The NT identifies the day of God's visitation with the final judgment (cf. Rom. 2:3ff.; 12:19; Jas. 5:1–8).

This second question is tackled in several ways. It is asserted: (i) that the righteous will be vindicated when the day of visitation for the wicked comes (Ps. 37; Mal. 3:13–4:3); (ii) that meanwhile suffering is valuable as a God-given discipline (Pr. 3:11f.; Ps. 119:67, 71); (iii) that suffering, faithfully borne, even if not understood, glorifies God and leads to blessing in the end (Jb. 1–2; 42); (iv) that communion with God is the supreme good, and to those who enjoy it outward impoverishments are of no ultimate importance (Ps. 73:14, 23ff.; Hab. 3:17f.).

In the NT the fact that believers suffer ill-treatment and adverse circumstances is no longer a problem, since it is recognized that fellowship in Christ's sufferings is fundamental to the Christian vocation (cf. Mt. 10:24f.; Jn. 15:18ff.; 16:33; Acts 9:16; 14:22; Phil. 3:10ff.; 1 Pet. 4:12–19). This recognition, in conjunction with the OT principles mentioned above, completely disposed of the 'problem of suffering' for the first Christians. Knowing something of their glorious hope (1 Pet. 1:3ff.), and of the strengthening and sustaining power of Christ (2 Cor. 1:3ff.; 12:9f.), they could contentedly face all situations (Phil. 4:11) and rejoice in all troubles (Rom. 8:35ff.), confident that through adversity their loving Father was disciplining them in sanctity (Heb. 12:5–11), developing their Christian character (Jas. 1:2ff.; 1 Pet. 5:10; cf. Rom. 5:2ff.), proving the reality of their faith (1 Pet. 1:7), and so ripening them for glory (1 Pet. 4:13). In all things God works for the spiritual welfare of his people (Rom. 8:28); and he supplies them with whatever material things they need throughout their earthly pilgrimage (Mt. 6:25–33; Phil. 4:19).

Belief in providence determines many of the basic attitudes of biblical piety. The knowledge that God determines their circumstances teaches the faithful to wait on him in humility and patience for vindication and deliverance (Pss. 37; 40:13ff.; Jas. 5:7ff.; 1 Pet. 5:6f.). It forbids them to grow despondent or despairing (Pss. 42–43), and brings them courage and hope when harassed (Pss. 60; 62). It inspires all prayers for help, and praise for every good thing that is enjoyed.

d. Providence and human freedom

God rules the hearts and actions of all men (cf. Pr. 21:1; Ezr. 6:22), often for purposes of his own which they do not suspect (cf. Gn. 45:5–8; 50:20; Is. 10:5ff.; 44:28–45:4; Jn. 11:49ff.; Acts 13:27ff.). God's control is absolute in the sense that men do only that which he has ordained that they should do; yet they are truly free agents, in the sense that their decisions are their own, and they are morally responsible for them (cf. Dt. 30:15ff.). A distinction, however, must be drawn between God's allowing (or 'giving up') sinners to practise the evil that they have preferred (Ps. 81:12f.; Acts 14:16; Rom. 1:24–28), and his gracious work of prompting his people to will and do what he commands (Phil. 2:13); for in the former case, according to the biblical rule of judgment, the blame for the evil done belongs entirely to the sinner (cf. Lk. 22:22; Acts 2:23; 3:13–19), whereas in the latter case the praise for the good done must be given to God (cf. 1 Cor. 15:10).

PROVINCE. Originally the word denoted a sphere of duty or administration. The *praetor urbanus*, e.g., held an *urbana provincia*, and this was defined as the administration of justice within the city (Livy, 6. 42; 31. 6). Tacitus speaks of the suppression of a slave revolt at Brundisium in AD 24 by a quaestor 'whose province was the hill-country pastures', *calles* (*Annals* 4. 27). The reading is confirmed by Suetonius (*Jul.* 19), who speaks of 'provinces' covering the supervision of 'woods and pasture-lands'. The reference shows that, long after the term developed territorial and geographical significance, it retained its ancient meaning. The intermediate use is seen in the employment of the term of a military command. 'To Sicinius,' says Livy, 'the Volsci were assigned as his province, to Aquilius the Hernici' (2. 40). That is, the task of pacification in these two Italian tribal areas was allotted respectively to these two consuls. It was an easy step from, e.g., Spain as a military command to Spain as a conquered territory and defined area of administration. In this later, commoner and wider sense of the word, there were no provinces until Rome extended her conquests beyond the Italian peninsula. Sicily was the first country to be made thus into 'a Roman province' (Cicero, *In Verr.* 2. 2). This was in 241 bc. Sardinia followed in 235 bc. In 121 bc Rome annexed a piece of territory in S Gaul between the Alps and the Cèvennes to secure communications with Spain, and this area, Gallia Narbonensis, became known as 'the Province' above all others, and its inhabitants *provinciales*. (Hence Provence today.) Similarly the rest of the provinces were acquired piecemeal, the list being closed by the annexation of Britain by Claudius and Dacia by Trajan.

The earliest provinces were administered by magistrates elected for the purpose. E.g., two ad-

ditional praetors were elected from 227 BC for Sicily and Sardinia, and two more 20 years later, to govern the two Spanish provinces. The scheme was then discontinued for over a century, Macedonia (148 BC), Achaea and Africa (146 BC) and Asia (133 BC), e.g., being ruled by *magistrates already in office, their *imperium* being extended for the purpose. The term *proconsul signified a consul whose *imperium* was thus 'prorogued' after his year of office, for the purpose of a provincial governorship. A proconsulship could, however, be held without preceding tenure of the consulship. This was the case with Pompey in 77, 66 and 65 BC.

Under the principate the provinces were divided into senatorial and imperial. The former were governed by ex-consuls and ex-praetors with the title of *proconsul, normally in yearly tenure; the latter were administered by legates of the emperor (*legati Augusti pro praetore*), men of senatorial rank or selected equestrian officials. Tenure of office was at the emperor's pleasure. Imperial provinces were usually those involving legionary garrisons. Transference from one list to another was not uncommon. Tacitus mentions the transfer of Achaea and Macedonia from the senate to the emperor in AD 15 (*leuari proconsulari imperio tradique Caesar* . . .) (*Ann.* I. 76). Cyprus is a similar example. Annexed in 57 BC, it was incorporated in Cilicia in 55 BC and made an imperial province in 27 BC. In 22 BC Augustus transferred it and Gallia Narbonensis to the senate in exchange for Dalmatia. Hence there was a proconsul in command, as Luke, with his usual accuracy, indicates (Acts 13:7). (*ROMAN EMPIRE.)

PSALMS, BOOK OF.

I. The importance of the Psalter

It would be difficult to overestimate the significance, for Jew and Gentile, of the book of Psalms. Here are mirrored the ideals of religious piety and communion with God, of sorrow for sin and the search for perfection, of walking in darkness, unafraid, by the lamp of faith; of obedience to the law of God, delight in the worship of God, fellowship with the friends of God, reverence for the Word of God; of humility under the chastening rod, trust when evil triumphs and wickedness prospers, serenity in the midst of storm.

The Hebrew poets were inspired to take these spiritual insights and experiences and make them the themes of their songs. But it should be remembered that 'the Psalms are poems, and poems intended to be sung, not doctrinal treatises, nor even sermons' (C. S. Lewis, *Reflections on the Psalms*, 1958, p. 2)—hence the Hebrew title of the Psalms, *h'hillim*, 'songs of praise'—also that they were giving expression to the religion of Israel to which the psalmists were heirs, not merely to their personal religious experiences. So the Psalms belong to all believers, Jew and Gentile.

II. The formation of the Psalter

It has been customary to describe the book of Psalms as 'the hymn-book of the second Temple', and such it undoubtedly was. The title is mislead-

ing, however, if it is interpreted to mean that all the psalms were written in the exilic or post-exilic periods. It is important to notice that this type of literature is not only confined to the Psalter in the OT but is found in many different periods in Hebrew history. It is found among the Hebrews as early as the Exodus period (Ex. 15), and another example comes from a time subsequent to, but relatively close to, the invasion of Canaan under Joshua (Jdg. 5). Hannah's psalm (1 Sa. 2:1-10) comes at the close of the Judges period.

The pre-exilic prophetic literature also contains examples of psalm composition (*cf.*, e.g., Ho. 6:1-3; Is. 2:2-4; 38:10-20; Je. 14:7-9; Hab. 3:1ff., etc.). And from the post-exilic period come such passages as Ezr. 9:5-15 and Ne. 9:6-39, which are strongly reminiscent of many of the psalms. Clearly, then, the Psalter is not an isolated literary phenomenon. Indeed, the same type of *poetry is found among the Babylonians and the citizens of Ugarit as the Ras Shamra tablets testify. The OT Psalter is a collection of poems which are typical of a literary form which the Hebrews, in common with other cultures, used from at least the Exodus right up until the post-exilic or second Temple period. And, of course, if one reckons with the non-canonical psalms it is clear that this literary form persisted among the Jews until quite a long way into the Christian era.

a. Authorship

No fewer than 73 psalms are attributed to David. Other authors named in the titles are Asaph (50; 73-83), the sons of Korah (42-49, 84-85, 87-88), Solomon (72; 127), and Heman (88), Ethan (89), both Ezrahites, and Moses (90), who have one psalm each attributed to them. Davidic authorship of many of the psalms has often been denied, principally on the ground that David the psalmist of popular belief bears no resemblance to David the warrior of the books of Samuel and Kings. It can also be argued that the ascription *l'david* ('of David') need not be a note of authorship, but only a rubric appointing certain psalms to be used in a royal ritual for the 'David' (the Davidic king) of the time. We do know, however, that David was a musician (1 Sa. 16:14ff.) and a poet (2 Sa. 1:17ff.; 3:33f.). The attempts of some scholars to disprove the Davidic authorship assigned to 2 Sa. 22:1ff.; 23:1-7, and to excise the words 'like David' from Am. 6:5 (where the tradition of David and his music and songs is referred to 300 years after his death) have the air of special pleading. Moreover the NT not only accepts but bases arguments upon Davidic authorship of this material. On this, see also section IV, below.

This hymn-book of the second Temple contains very ancient material. This is not at all surprising when it is recalled that the Ras Shamra tablets show that, when Israel invaded Canaan, the type of poetry represented in the Psalms was already a long-established tradition among the inhabitants of Ugarit. The Song of Moses, then, in Ex. 15, and the Song of Deborah (Jdg. 5), were neither isolated nor unprecedented examples of Semitic poetry. The Mosaic and Solomonic authorships referred to in the titles of three psalms suggest that the ancient religion of the tabernacle and the first Temple would require its sacred music. Religion in the days of Amos (5:21-23) and Isaiah (30:29), during the Exile (Ps. 137:1ff.) and the period following the return, and also the building of the second Temple,

PSALMS, BOOK OF

would also require its solemn chants. But it is the prominence of the king in the Psalter (see section IV) which has done most to convince recent scholars that the classical period of psalm composition was the Monarchy, *i.e.* from David to the beginning of the Exile.

b. Organization

The OT Psalter as we now have it consists of five books. This division goes back to the LXX version, which was begun as early as the 3rd century BC. Every section is easily recognizable because a doxology closes each book. These doxologies are short except the one that ends Book V; there an entire psalm is given over to the closing doxology. The five divisions of the Psalter are as follows: Book I, Pss. 1–41; Book II, Pss. 42–72; Book III, Pss. 73–89; Book IV, Pss. 90–106; Book V, Pss. 107–150. Many have seen in this fivefold division an attempt to imitate the division of the Torah into five books, the Pentateuch. (See N. H. Snaith, *Hymns of the Temple*, 1951, pp. 18–20, where the significance of this is discussed.)

Various features suggest that there were separate collections of psalms in use before the final compilation. *E.g.* certain psalms, in whole or in part (notably Pss. 14 and 53; Ps. 40:13–17 and Ps. 70; Pss. 57:7–11 plus 60:6–13 to make Ps. 108), occur in more than one part of the Psalter. Further, a large group (42–83) speaks predominantly of 'God' rather than 'the LORD', whereas other blocks (1–41; 84–89; 90–150) have the opposite preference, even in psalms attributed to some of the authors of the former group (42–83). Again, Ps. 72:20 evidently marks the close of a particular set of Davidic psalms, but not of David's whole output, as the rest of the Psalter demonstrates.

It seems likely, as various scholars have suggested, that the penultimate stage in compiling the Psalter was the gathering of groups of psalms into three main psalters, perhaps used at different centres or periods, as follows: *a.* the Davidic Pss. 3–41 or 2–41, which prefer the divine name Yahweh (the LORD); *b.* the Korahite, Asaphite and Davidic Pss. 42–83 (the 'Elohistic psalter'), where the term 'lōhīm (God) predominates (to which group was added an appendix, 84–89, in which 'Yahweh' prevails); *c.* a collection of mostly anonymous psalms, 90–150 (with 'Yahweh' again), containing certain clusters marked by particular themes or uses (*e.g.* God's kingship, 93–100; the 'Egyptian Hallel', 113–118, traditionally associated with the Passover; the Songs of Ascents, 120–134; the closing Hallelujah psalms, 146–150). Finally, on this view, to match the books of Moses the three collections were further divided to make five, and Ps. 1 (or 1 and 2) placed at the beginning to introduce the whole.

III. Technical terms in the Psalter

The title of the book in Hebrew is *t'hillim*, 'Songs of Praise', or 'Praises'. In English the title *Psalter* comes from LXX A *Psaltērion*, while *The Psalms* comes from LXX B *Psalmoi* or the Vulg. *Liber Psalmorum*. In addition to the title given to the book, the majority of individual psalms have separate headings. Since, however, many of the technical terms in the titles and elsewhere were already obscure to the Jewish translators of the LXX (3rd to 2nd centuries BC), any comments must be tentative.

1. *Technical designations of psalms.* The most frequent term is *mizmôr*, 'a psalm', a word which

suggests the use of an instrumental accompaniment. 'A song' (*šir*) is a more general term, not confined to worship. In the Psalter it is often coupled with *mizmôr* (*e.g.* 48, title), and there are 15 consecutive 'Songs of Ascents' (120–134), probably pilgrim songs or else processional songs for the festivals. Thirteen psalms have the heading *maskil*, which would seem to mean 'making wise or skillful'. The psalms in question (32; 42; 44–45; 52–55; 74; 78; 88–89; 142) reflect extremely chastening experiences—with one striking exception (45). The title may, however, refer not to the content or context of the psalm but to its literary style. We have to confess ignorance. Six psalms are called *miktām*, which LXX interprets as 'an inscription', and AV mg. (hardly less improbably) as 'a golden psalm' (from *keṭem*, 'gold'). Mowinckel, however, draws attention to Akkad. *katamu*, to cover, and infers a psalm for atonement, since he classifies all these psalms (16; 56–60) as laments. But the 'cover' which they seek is not atonement but defence, and the most likely meaning is 'a plea for protection'; almost, in our terms, 'an SOS'. Other titles are 'a prayer' (17; 86; 90; 102; 142), 'a praise' or 'doxology' (145) and 'a shiggaion' (*šiggayōn*, Ps. 7; *cf.* Hab. 3:1, plur.). This last term is not clear to us; it has been linked with *šgh*, to wander or reel, and (Mowinckel) with Akkad. *šegu*, to howl or lament. But both Ps. 7 and Hab. 3, while they face desperate situations, react to them with notable faith and hope.

2. *Musical directions.* Many directions which appear to be of this kind occur in conjunction with the heading *lam'naššēahd*, 'to (or 'of') the choir-master' (*cf.* RSV of Pss. 4ff., *etc.*), which may indicate a special collection of psalms (there are 55, scattered through all five books) more elaborately performed than the rest. But that is a guess, and various other meanings have been suggested for this Heb. term derived from a root meaning to excel, endure or shine: *e.g.* LXX has 'to the end'; Mowinckel, 'to dispose Yahweh to mercy' (making his face shine)—to mention only two.

* Musical instruments prescribed in the titles include *n'gînōl* (strings) and *n'hilōl* ('flutes', RSV), and the pitch of instruments or voices may perhaps be indicated by '*lāmōt* (Ps. 46), 'trebles(?)—lit. 'girls'—and *s'minūt* (Pss. 6 and 12), 'an octave below(?)—lit. 'eighth'—on the admittedly enigmatic basis of I Ch. 15:20f.

Some terms, usually coupled with the preposition 'al (RSV 'according to'), have been interpreted as either liturgical directions (see 3, below) or tune-names. The chief examples are *a.* *Gittith* (*gittit*, 8; 81; 84), a word derived from Gath or from the wine or olive press; *b.* *Muth-labben* ('*al-mūt labbēn*, 9), 'death of the son' (but revocalized as '*lāmōt lābīn*, as L. Delekat suggests, it could perhaps be construed as 'trebles for clarity'); *c.* 'The Hind of the Dawn' ('*ayyeleṯ ha-šahar*, 22); but LXX has 'the help at dawn' (*cf.* '*yālūtī*, 'my help', in v. 19 (20, Heb.), as B. D. Eerdmans points out). See, however, 3, below. *d.* 'Lilies' (*sōšannīm*, 45; 69; 80), 'Lily of testimony or covenant' (*šūšan 'eḏūt*, 60); but instead of 'lilies', LXX has 'those who make changes' (*šēšōnīm?*). *e.* 'The Dove on Far-off Terebinths', or, 'The Silent Dove of Far-off Places' (*yōnaṯ 'ēlem r'hōqīm*, 56): is this, however, a concluding note to Ps. 55, in view of 55:6f. (7f., Heb.)? On a cultic interpretation, see 3, below. *f.* 'Do Not Destroy' ('*al-tašhēl*, 57–59; 75) is a phrase from the vineyards in Is. 65:8, and conceivably the name

of a vintage-song and its tune. But the same words occur more significantly in Dt. 9:26, which may underlie both Is. 65:8b and this title. *g* 'Mahalath' (*mah^hlat*, 53; 88) appears to be derived from *h/h*, either 'be ill' or 'propitiate'. It could be 'a catchword in a song, giving the name to a tune' (*BDB*), and the additional word *l'* *annôt* in the title of Ps. 88 could mean either 'to sing antiphonally' (*cf.* *Vulg.*) or 'to afflict or humble'. But see the next paragraph, against the notion of tune-names.

3. *Liturgical directions.* The preposition '*al* (*rsv* 'according to'), which introduces most of the terms in the above paragraph, means basically 'on'. Mowinckel therefore relates the above titles, *a* to *g*, to cultic acts, 'over' which the psalms would be sung. So, *e.g.*, *e*. would refer to a ritual such as that of Lv. 14:5-7, where one bird was sacrificed and one released to fly away, and *g*. would indicate a ritual for the sick. Likewise '*al-y'dûtûn* (62; 77; *cf.* 39) would refer not to the singer Jeduthun (2 Ch. 5:12) but to an act of confession over which the psalms were to be sung. Mowinckel's suggestions are speculative; but so, admittedly, are most others. Perhaps his most dubious example is the title of Ps. 22, taken to refer to the sacrifice of a hart, a non-sacrificial animal (Dt. 12:15, *etc.*).

Selah (*selâ*) occurs 71 times, and is still obscure to us. Since it often seems to mark a division in a psalm, it may be an instruction to the worshippers to 'lift up' (*slf*) their voices or instruments in a refrain or interlude.

Higgaion (*higgâyôn*, 9:16 [17, Heb.]) like *Selah*, evidently calls for music. It is a term in Ps. 92:3 (4, Heb.) for the sound of a stringed instrument.

IV. The liturgical approach to the Psalter

A landmark in the modern study of the Psalter was the work of H. Gunkel in the early decades of this century. To him it was all-important to start by distinguishing the different classes (*Gattungen*) of psalms by attending to *a*. the worship-situations from which they had sprung ('some definite divine service', rather than some event in the history of the nation or the writer); *b*. the thoughts and moods which different psalms were found to have in common; and *c*. the recurrent features of style, form and imagery which served these various ends. He found the following main types: Hymns of Praise, Personal Thanksgivings, Communal Laments and Personal Laments. In addition there were smaller categories such as Entrance Liturgies, Blessings and Cursings, Wisdom Psalms, Royal Psalms; and there were also mixed types. His classification has been widely adopted, and his insistence on the importance of such an approach seldom questioned.

While Gunkel regarded most of the canonical psalms as literary descendants of Israel's original psalmody, S. Mowinckel saw them as products of the living cultus. He set himself to reconstruct the rites and festivals of Israel from the clues which he confidently detected there, independently of any confirmation from the Pentateuch. His early psalm studies, in the 1920s, made much of a postulated festival of Yahweh's accession as King, supposedly celebrated at the New Year somewhat after the fashion of the Babylonian *akitu* festival, leaving its traces in about 40 of the psalms and in the development of OT eschatology. This lead was quickly followed, sometimes to excess, by other scholars, notably the so-called Myth and Ritual School of British and Scandinavian scholars in the 1930s,

who drew heavily upon comparative religion to construct in detail a cultic drama of divine combat and nuptials and the fixing of destinies, which accounted for many of the cries of anguish or triumph in the Psalter and most of its allusions to seas and springs, enemies and monsters, defeat and victory, and the attributes and activities of the king.

Not all scholars, however, who acknowledge a debt to Mowinckel have agreed in detail with him or (still less) with those who carried his methods to extremes. Mowinckel himself makes less of the Accession motif in his later writings than in his early studies, and other scholars who emphasize the influence of the new year festival on the Psalter would see its main aspect as covenant-renewal (A. Weiser) or the reaffirming of God's choice of Zion and the house of David (H. J. Kraus). But the legacy of Gunkel and Mowinckel remains, in the preoccupation of most commentators with the task of assigning each psalm to its proper class, and in the viewing of almost all the material as ecclesiastical.

This is distinct from the view, with which there can be no quarrel, that the psalms were collected and used for worship, and in many cases written expressly for such use. Instead, it assumes that even those psalms which profess to have sprung from episodes in the life of David (*e.g.* the bulk of Pss. 51-60), or which are attested as his writings by the NT (*e.g.* Ps. 16; 69; 109-110), arose on the contrary out of the cult-drama or were anonymously composed as set pieces for worship situations that might arise for the individual, the Davidic king or the congregation. Thus Ps. 51, despite the introductory statement which is part of the Hebrew text, is allegedly not David's prayer after his sin with Bathsheba, and Ps. 110, despite our Lord's account of it, is not allowed to be the work of (as he himself put it in Mk. 12:36) 'David himself, inspired by the Holy Spirit'. Within this dominant school of thought, however, there are varieties of opinion as to the right classification of individual psalms, and there is more confidence in saying who did not write the psalms than in deciding who did.

The attempt to place the psalms within their setting, we suggest, should be governed by the evidence in each separate case. This will include the internal characteristics to which Gunkel and his successors have drawn attention, but it will be controlled by the statements, where there are such, in the titles and other scriptures. It will also bear in mind the fact that a psalmist could speak (as Peter pointed out in Acts 2:30f) as 'a prophet', aware of God's promises and foreseeing what was far beyond his own horizon.

V. The theology of the Psalter

1. The marrow of the religious life of the psalmists was undoubtedly their *knowledge of God*. They never tire of singing his majesty in creation. In all his works in the heavens, the earth and the sea he has made himself known as the all-powerful, the all-knowing, the everywhere-present God. He is also the God of all history who guides everything towards the final goal which he has purposed to fulfil. But this Ruler of the world, this King of kings, is also Lawgiver and Judge, the Vindicator of all who are oppressed and their Saviour. He is therefore merciful and faithful, just and righteous, the Holy One whom men and angels adore. But the God of the psalmists is also, and uniquely, the God

PSALMS, BOOK OF

of Israel. The God who revealed himself to Abraham, Isaac and Jacob, who through Moses delivered Israel from Egypt, entered into covenant with them and gave them the promised land, is the God of Israel still, the Lord and Defender of the chosen people.

With such a high conception of God it is not surprising that the psalmists found their chief delight and privilege in prayer to God. There is a directness, a spontaneity and an immediacy in the prayers of the psalmists that convince us of the reality of prayer for them. They believe in his providence, trust in his presence, rejoice in his righteousness, rest in his faithfulness, confide in his nearness. In their prayers they praise, petition and commune with their God, and find refuge from sickness, want, pestilence and slander, and humble themselves under his mighty hand. In the progressive life of the community their behaviour is marked by fidelity to God, reverent obedience to the law, kindness to the oppressed and joy in the worship of God's people.

2. Set against such a background of faith and obedience the *imprecatory psalms* (see especially 35:1-8; 59; 69; 109) may be felt to constitute a moral difficulty. Similar prayers for vengeance are found in Jeremiah 11:18ff.; 15:15ff.; 18:19ff.; 20:11ff. The underlying idea in these passages in the Psalter, where curses and revengeful punishments are invoked upon the enemy, is expressed in 139:21f., 'Do I not hate them that hate thee, O Lord? . . . I count them my enemies.' That is to say, the psalmists are motivated by zeal for the Holy One of Israel who must exercise retribution in the present moral order in the world. Behind the imprecations is a recognition of a divine moral governance in the world, a belief that right and wrong are meaningful for God, and that therefore judgment must operate in the moral world order as well as grace. It was natural, then, for men living under the dispensation of the law to pray for the destruction of God's enemies through judgment, although Christians now living in the dispensation of grace pray for all men that they may be saved, while still believing in the reality of a here-and-now judgment as well as judgment that is a future event.

It should be remembered too that while the psalmists were aware of the tensions between righteousness and unrighteousness, between the people of God and the enemies of God, they had as yet no conception of judgment in an eschatological sense, nor had they any doctrine of a future state in which the ungodly would be punished and the godly rewarded. Therefore if righteousness is to be vindicated it has to be vindicated now, if wickedness is to be punished it has to be punished now. For when the righteous man prayed for the destruction of wickedness he did not distinguish in his mind between the ungodly and his ungodliness. The destruction of the one without the other was unthinkable to the pious Hebrew. It was even difficult if not impossible for some psalmists to distinguish between the ungodly man and his family. All that belonged to the wicked man was involved with him in his wickedness. The Christian therefore must have these things in mind when he reads these imprecatory psalms. He must not empty them of all significance. They are at least a powerful reminder of the reality of judgment in this moral world, and they testify to a burning zeal for the cause of righteousness which flamed in the hearts

of some of the psalmists, and to their refusal to condone sin.

3. Has the Psalter a theology of a *future life*? The answer here is, No. There is a hope but no assured belief concerning the future. There is no *certain* reference to resurrection in the Psalter. Flashes of revelation or insight concerning the future life there may be, but there is no doctrine, no such article of religious faith. The germ of such a hope may be found in Pss. 16-17; 49; 73, but simply a hope it remains. Nowhere does a psalmist attain to an assured belief in resurrection.

4. The *Messianic psalms*. One of the most important factors in the national survival of Israel has been the Messianic hope. This hope centres on the return of the age of David whose reign in the past marked the golden age in Israel's history; and it is against this background that the Messianic hope in the Psalter should be viewed. The picture of the Messiah that emerges from the Psalter is a twofold one.

First, since Messiah is to be a scion of the Davidic dynasty, he is to be the *King* of the Messianic age. The Psalter envisages a divine Messianic King against whom nations will rebel in vain (Ps. 2). The Messianic age is depicted in Ps. 72, while in Ps. 2 the kingdom is described as a universal kingdom which belongs to God but over which Messiah rules in association with the Lord. In Ps. 110 Messiah is King, Priest and Victor who sits in glory at God's right hand. Ps. 45 speaks of eternal dominion, while Ps. 72 emphasizes the universality of Messiah's rule.

But secondly, the Psalter also prepares men's minds for a suffering Messiah. Is. 53 has its counterpart in the Psalter. The anointed Son of Yahweh, the Priest-King whose throne will stand for ever and whose reign of peace and righteousness will cause all nations to be blessed in him, is to submit himself to dreadful suffering (Pss. 22; 69, etc.). However, not until Christ interpreted the Psalter to the apostles were these and similar psalms considered to be Messianic (Lk. 24:27-46). Only as the Lord enlightened the disciples' minds did the church understand the meaning of these passages in the Psalter and make it the hymn-book and the prayer-book of the church.

VI. The Christian and the Psalter

Apart from the inherent religious and devotional qualities of the psalms two factors have compelled the Christian church to make the Psalter her prayer-book.

1. There is the fact that the Psalter occupied such a large place in the life and teaching of our Lord. It was the prayer-book which he would use in the synagogue service, and his hymn-book in the Temple festival. He used it in his teaching, met temptation with it, sang the Hallel from it after the Last Supper, quoted it from the cross and died with it on his lips.

2. Moreover, from earliest times the Psalter has been both the hymn-book and the prayer-book of the Christian church. Some of her great hymns of praise are modelled on the psalms (Lk. 1:46ff., 68ff.; 2:29ff.). The Psalter was the inspiration of the apostles in persecution (Acts 4:25f.), it was embedded in their message (Acts 2:25ff.; 13:33), it was used to set forth their profoundest beliefs concerning the Lord (Heb. 1:6, 10-13; 2:6-8; 5:6; 10:5-7). In all ages the church has found in the Psalter 'a Bible in miniature' (Luther), or 'the Bible within

the Bible'. And while this 'Bible in miniature' originated in the Jewish church, and is intimately related to the OT, yet, because it is illuminated by the light that breaks from the Gospels, the Christian church claims it and uses it too in all her access to God whom she evermore worships and adores.

F.D.K.

PSEUDEPIGRAPHA. The term is used to describe those Jewish writings which were excluded from the OT Canon and which find no place in the Apocrypha. For the purpose of this article the term will also exclude the sectarian documents of the Qumran library (*DEAD SEA SCROLLS). Unlike the Apocrypha, which were included in the Greek Scriptures, these pseudepigrapha never approached canonical status. They nevertheless played an important role during the intertestamental period and are valuable for the light they shed on the Jewish background of the NT. While not all the writings included in this group are pseudepigraphic in the strict sense of writings published under assumed names (*PSEUDONIMITY), the majority of them are and the name is therefore generally appropriate. It will be convenient to divide them roughly between Palestinian and Jewish-Hellenistic groups, as their place of origin strongly affected their form and purpose. Because of a dominant thread which runs through the majority of these writings they have aptly been described as the literature of the apocalyptic movement.

I. The Palestinian group

The Palestinian group contains three different literary types, poetry, legend and apocalypse, the *Psalms of Solomon* almost certainly belongs to the second half of the 1st century BC and is an example of the anti-Sadducean polemic of the Pharisees at that period. In the majority of these 18 psalms, which are modelled on the Davidic Psalms, there is no reference to the Messiah (*Ps. Sol.* 17 is the main exception), but much about the Messianic kingdom. The overthrow of the Hasmonaean dynasty by the Roman Pompey is regarded as a divine act, although Pompey himself is condemned for his profanation of the Temple. There were other psalm collections during the intertestamental period, an example of which is the *Psalms of Joshua* found in the Qumran library.

There were many books which were legendary expansions of biblical history, based mainly on the law, although including some legends about the prophets. Among the earliest of these is the *Testaments of the Twelve Patriarchs*, based on Gn. 49. Each of Jacob's sons gives his instructions to his

descendants and much of this teaching is of a high moral order. They are represented as reviewing their own failings to serve as a warning to others, but two of the Patriarchs, Joseph and Issachar, are able to commend their own virtues. The original work was a Pharisaic production written towards the end of the 2nd century BC, but this was later expanded by additions. The library at Qumran contained certain parts of an earlier recension of the *Testaments of Levi and Naphtali*, in Aramaic and Hebrew, but does not appear to have possessed the whole. This new evidence has confirmed Charles' opinion that the *Testaments* contained some late Jewish and Christian additions. Some have supposed that the final editing was completed by a Christian, c. AD 200. There are in these writings some similarities to the teachings of Jesus, as, for example, exhortations to humility, brotherly love and almsgiving. These parts represent some of the best moral injunctions of pre-Christian Judaism.

Another book based on Genesis is the *Book of Jubilees*, so styled from its system of dating. The author advocated a 364-day year in order to assist the Jews to keep the feasts on the proper day. This is typical of his legalistic approach. The whole book, in fact, purports to be a revelation to Moses on Mt Sinai and is clearly intended to uphold the eternal validity of the law. The Pharisaic author was intent on combating the encroachments of Hellenism during the latter part of the 2nd century BC. In the course of the revelations there are many legendary accretions to the biblical history, as for example the attribution to Satan and not to God of the suggestion that Abraham should sacrifice Isaac (17:16; 18:9, 12). The author insisted on the strict observance of Jewish rites, particularly circumcision and sabbath observance (15:33f; 2:25-31; 50:6-13). The book was well known at Qumran and possesses many points of contact with the Damascus Document.

In a similar vein to the *Testaments of the Twelve Patriarchs* is the *Testament of Job*, in which Job delivers to the children of his second wife a parting address. He is represented as reviewing his past life, and the book concludes with an account of the special ability granted to his three daughters to sing heavenly songs while his soul is transported by chariot to heaven. The book appears to have been the work of an author belonging to one of the stricter Jewish sects (possibly the *hasidim*) and may be dated possibly about 100 BC.

Several legendary works of a similar character, but which at least in their extant texts appear to have been subjected to Christian influence, must be included among this group of writings. The *Life of Adam and Eve*, which exists only in a Latin text, although it runs parallel in parts to the *Apocalypse of Moses* (in Greek), is an imaginative reconstruction of the history subsequent to the Fall, and in the course of it Adam has a vision in which he sees a picture of the developments of Jewish history to post-exilic times. It can confidently be dated before AD 70, since it supposes that Herod's Temple is still standing (29:6f.).

The *Martyrdom of Isaiah* is a partly Jewish and partly Christian book, extant only in Ethiopic. It tells how Isaiah came to be 'sawn asunder' (cf. Heb. 11:37) with a wood saw (1-5). A *Vision of Isaiah*, which has been interpolated into the original work, is clearly a Christian addition because it records the devil's indignation over Isaiah's fore-

PSEUDEPIGRAPHA

telling of redemption through Christ and mentions Christian history up to the time of the Neronian persecutions (3:13-4:18). The part of the book known as the *Ascension of Isaiah* is also Jewish-Christian, for Isaiah is not only told by God of the coming of Jesus but witnesses the birth, death and resurrection of the Coming One. It is thought that the Jewish part may date from the 2nd century BC, but no trace of it has so far been found at Qumran.

In addition to these there was some pre-Christian pseudo-Jeremianic and pseudo-Danielic literature which has only recently come to light from the Qumran library and which has not been sufficiently investigated at the time of writing for an account of it to be included in this survey. But a previously extant work known as the *Paralipomena of Jeremiah the Prophet*, which shows marked Christian influences, may well look back to some earlier Jeremianic cycle. It is aimed particularly against mixed marriages.

By far the most important group of Jewish pseudepigrapha is the apocalypses, among which the *Book of Enoch* takes pride of place. It is a composite work, of which the various parts were composed at different times during the last two centuries BC. The oldest sections belong to the Maccabean period, according to Rowley and Torrey, although Charles had earlier maintained a pre-Maccabean date. There are five main divisions in the book as it now exists. The first describes a vision given to Enoch of future judgment, especially of the fallen angels. The second, known as *The Similitudes of Enoch*, consists of three parables dealing mainly with the theme of judgment upon the world, but with assurances to the righteous through the Messianic hope. The third is an astronomical book. The fourth consists of two visions, one about the flood and the other recounting the history of the world down to the Messianic age. The fifth is a miscellaneous collection of exhortations and other material, of which the most notable is an *Apocalypse of Weeks* which divides world-history into 10 weeks, the last 3 being apocalyptic. This book is of great importance for studies in the intertestamental period and furnishes valuable data for pre-Christian Jewish theology. It is also of interest in being cited in the NT Epistle of Jude. The *Apocalypse of Weeks* has been thought to be connected with the Qumran sect, but because there is no trace of the *Similitudes* at Qumran it is possible that this part should be dated in the Christian era (cf. J. C. Hindley).

There was another book which circulated under the name of Enoch, commonly known as the *Book of the Secrets of Enoch* or *2 Enoch*. It is also sometimes described as the *Slavonic Enoch* because it is extant only in some Slavonic MSS. Unlike *1 Enoch* it comes from a Hellenistic background and parts of the work are believed to belong to the Christian period. Since it was cited in the later parts of the *Testaments of the Twelve Patriarchs*, at least a section of *2 Enoch* must have preceded those parts. The whole is generally dated during the 1st century AD. It consists of an account of Enoch's journey through the seven heavens, together with certain revelations given to Enoch about creation and the history of mankind and includes Enoch's admonitions to his children. Much of the ethical instruction is noble in character and is reminiscent of the type of teaching in Ecclesiasticus.

The *Assumption of Moses* may have consisted of two distinct works known as the *Testament*, and

Assumption of Moses respectively (according to Charles, but Pfeiffer is reserved about this). In any case no MS is extant which gives the dispute over the body of Moses, which formed the basis of the *Assumption* (it is alluded to in the Epistle of Jude), but in the *Testament of Moses* gives to Joshua an apocalyptic review of Israel's history from the occupation of Canaan until the end of time. There is a marked absence of any Messianic hope in the book. Because of close parallels with the Qumran War Scroll and the Damascus Document, it has recently been concluded that the author was probably an Essene.

Another work belonging to the Christian period is the *Apocalypse of Ezra* (or 2 [or 4] *Esdras*). In this book various visions are ascribed to Ezra in Babylon which deal with the problem of Israel's sufferings and bring the issue down to the author's own day (i.e. to the period after AD 70 when the problem became acute). The sense of hopelessness pervading the account is finally relieved only by the vague belief in a coming golden age. The book is a sincere but unsuccessful attempt to solve a pressing problem. It is generally dated towards the end of the 1st century AD.

About the same time appeared the *Apocalypse of Baruch* (or *Syriac Baruch*), which has many similarities of thought with the last-mentioned book. It is in fact regarded by some scholars as an imitation of the more brilliant *2 Esdras*. Through the pessimism resulting from the overthrow of the city of Jerusalem there is faint hope until the Messianic reign of peace begins. The present is unrelieved despair, typified by very dark waters, but the coming of Messiah, represented by lightning, brings consolation.

II. The Jewish-Hellenistic group

Among the more notable Jewish-Hellenistic pseudepigrapha are propaganda works (the *Letter of Aristeas* and parts of the *Sibylline Oracles*), legendary history (3 *Maccabees*), philosophy (4 *Maccabees*) and apocalyptic (part of the *Slavonic Enoch* already mentioned and part of the *Greek Baruch*, *APOCRYPHA).

The *Letter of Aristeas* purports to come from the time of the production of the LXX said to have been proposed by Ptolemy II, Philadelphus, of Egypt (285-245 BC). The narrative itself is legendary and was written in fact by a Jew (c. 100 BC) who wished to commend the Jewish law and religion to his Hellenistic contemporaries. It is an apology for Judaism against its Gentile detractors.

About 140 BC an Alexandrian Jew produced some *Sibylline Oracles* in imitation of the ancient Greek oracles attributed to the Sibyl, a pagan prophetess held in high regard not only by contemporary Greeks but also among many Jews and even Christians at a later period. Numerous additions were subsequently made to these oracles. Of the twelve extant books the majority appear to be Christian in origin, but books 3-5 are generally regarded as Jewish. These are specifically devoted to propaganda and consist particularly of judgments on Gentile nations. In book 3 occurs a review of Israelitish history from Solomon's time down to Antiochus Epiphanes and his successors, but the Jews are to benefit by the coming Messiah. There is a special appeal to Greece to cease its pagan worship, and this strong apologetic purpose is further seen in the claim that the Sibyl is in reality a descendant of Noah.

3 Maccabees, like *2 Maccabees*, is a legendary embellishment designed for the glorification of the Jews in Egypt under Ptolemy Physcon. *4 Maccabees* is a philosophical homily in which a Hellenistic Jewish author, of a definitely legalistic persuasion, discourses on the main theme of the control of the passions by reason, and in this he betrays his Stoic leanings. But his real admiration is nevertheless for the Mosaic law, and he seeks unsuccessfully to achieve a synthesis between the two.

As a whole this pseudepigraphic literature throws interesting light on the preparation period for the gospel. It belongs to times when prophetic declarations had ceased and when there was an increasing reverence for the law. They were times of perplexity, and apocalyptic emerged to attempt to reconcile the prophetic promises with the disastrous course of current history and to project the fulfilment of these promises into an age yet to come. These books had wide circulation among the Jews, and many of the NT writers may have known them.

The literary device used seems strange to modern ideas, but the great preponderance of pseudonymous ascriptions in these books is evidence of its contemporary effectiveness. It may have been adopted by reason both of security and of the need to ensure the maximum authority for the writings (*PSEUDONYMITY).

There are many theological differences and developments in this literature as compared with the earlier prophetic period. The future age differs essentially from the present. It has a supernatural origin and will displace the present age, which is conceived of as under the domination of evil influences. This doctrine of the two ages is characteristic of the intertestamental period and finds some echoes in NT thought. It is significant that owing to this apocalyptic approach to future history the Messianic hope was not as dominant during this period as it had been earlier. The clearest picture is in the *Book of Enoch*, where the Messianic conception has become more transcendental, parallel with the increasing transcendentalism of the conception of God. The Son of man as a heavenly pre-existent Being is conceived as sharing with God in judgment. Another striking feature of this literature is the receding interest in pure nationalism and in the development of individualism, on the one hand, and universalism, on the other. But perhaps the greatest service rendered by the literature was its antidote to the increasing legalism of Judaism, particularly among the Pharisees, in spite of the fact that this legalism is not entirely lacking from many of these books. (*APOCALYPTIC; *APOCRYPHA.)

D.G.

PSEUDONYMITY. Pseudonymity is the practice of attributing literary works to assumed names, a device widely used in the ancient world. Numerous examples are known from the Graeco-Roman world, but in studying the Christian attitude towards such a device the Jewish pseudepigrapha are very much more significant (*PSEUDEPIGRAPHA, I). The former were not, as the latter were, expressions of a religious approach, and because of the wide differences in content between secular and religious writings the Jewish writings naturally form a closer parallel with the numerous Christian pseudepigrapha circulating during the first 3 centuries AD.

There is no doubt that these writings enjoyed considerable popularity, and for this reason demand some explanation of their character and method. It is difficult for modern minds accustomed to the literary condemnation of plagiarism (the use of another's material) to appreciate this ancient practice of using another's name. But it is often assumed that the ancient approach was essentially different from the modern and implied nothing reprehensible. Undoubtedly many of the authors who resorted to this practice were men of sincerity, and herein lies the problem. Are there any ascertainable principles which throw any light on the apparent contradiction?

I. The Greek approach

There are many causes which are thought to account for the abundance of pseudonymous writings among the Greeks. There was a tendency to ascribe anonymous works to some well-known author of works of the same kind, for instance, epics to Homer or Virgil. Many writings by scholars were attributed to their masters, from whom they had learnt their wisdom, as, for example, among the followers of Plato. Moreover, rhetorical exercises were frequently attributed to famous persons (*cf.* the forgery known as the *Epistle of Phalaris*). A more deliberate type of forgery prevalent in the Greek world was the practice of publishing MSS under the names of popular authors as a method of selling them. A later motive was the desire to produce documents in support of certain doctrines by attributing them to some ancient and honoured teacher (*e.g.* among the Neopythagoreans, and in a Christian context the Clementine literature and the works attributed to Dionysius the Areopagite).

II. The Jewish approach

This seems to have inherited little directly from Greek practices, since the majority of the pseudonymous writings were the products of Palestinian Judaism. The widespread Greek secular usage may have had some small impact, although the *Letter of Aristeas* and the *Slavonic Enoch* are almost the only clear instances of the practice even among the Hellenistic Jews (*PSEUDEPIGRAPHA, II). The main causes for pseudonymity must clearly be sought elsewhere. Undoubtedly the most significant factor was the rigidity of the law and the cessation of prophecy. An authoritative message for the contemporary Jews of the 2 centuries before Christ could be established, it was thought, only by attributing such a message to some hero of the past whose authority was unquestioned. This accounts for the prominence of the patriarchal names among the pseudepigrapha. Indeed, all

PSEUDONYMITY

the assumed authors except Aristeas are mentioned either in the Law or the Prophets. This illustrates clearly the fundamental difference between Greek and Jewish pseudonymous practice. The latter possessed what the former lacked, an authoritative body of writings which formed the basis of their religious beliefs, and their pseudonymous productions were therefore extensions of canonical material (the nearest Greek parallel is the *Sibylline Oracles*). It is this phenomenon which raises problems for Jewish pseudonymity which were almost entirely absent from the Greek world. The Jewish authors were religious men, and it is not easy to see how they could resort to a literary method which to us seems morally questionable. There are a number of possible explanations.

The false ascription may have been occasioned by the use of materials traditionally handed down in association with some famous name. Some scholars, for instance, have virtually maintained this viewpoint when suggesting that Jude cites not the *Book of Enoch* but an earlier oral ascription believed to have been a true saying of Enoch which was later incorporated into the pseudonymous book (cf. Jude 14). But unfortunately data for verifying this procedure are practically non-existent. Another suggestion arises from the nature of apocalyptic. This mode of thought frequently made use of symbolic figures of speech, which the readers were clearly not expected to take literally, and the same tacit assumption may have been made over the pseudonym. Sometimes the device may have been used in self-defence when the author was not anxious to parade his identity for fear of arousing the suspicions of the tyrannical occupying power. In this case the readers would readily appreciate the reason for the pseudonym and would absolve the writer from any moral censure. Yet in few cases is this explanation clearly applicable. It is possible that the Jews paid little attention to literary property and were far more concerned with contents than authorship, and if this were generally so it might explain the readiness with which the writings circulated.

III. The Christian approach

There is no doubt that the prevalence of pseudonymous early Christian writings owed more to Jewish than to Greek influences. By the 2nd century AD a canon of Christian writings had come into existence which, although lacking formal codification (except in the case of Marcion), was nevertheless real and authoritative. There were pseudonymous counterparts to all 4 types of NT literature—Gospels, Acts, Epistles and Apocalypses. The majority of these sprang from heretical sources, and in these cases the use of the pseudonymous device is transparent. Esoteric doctrines outside the theology of orthodoxy sought support by the theory that secret teachings had been handed down to the initiates of a particular sect but had been hidden from others. The production of pseudonymous apostolic writings was thus made easy. Since the interval separating the assumed author from the real author was not as great as in the majority of Jewish writings of this character, it did not stretch the credulity of the readers too much to be told that some new writing was in fact an apostolic production, assuming that they were ignorant of its true source.

In spite of the fact that pseudonymity was a widespread practice, it must not be assumed that it would have been regarded as a harmless literary device among the orthodox Christians. What external evidence there is suggests rather that the church took a firm stand against the practice (e.g. the Muratorian Canon, Serapion, Tertullian). Tertullian in fact records the unfrocking of the Asian presbyter who confessed to writing the *Acts of Paul* out of his love for Paul, which does not suggest it was an acknowledged practice to produce such literature. For this reason the assumption by some scholars that certain NT books are really pseudonymous raises an acute psychological and moral problem, which few of the supporters of these hypotheses are willing to admit. There is a presumption against NT canonical pseudepigrapha which can be nullified only by overwhelming and conclusive evidence to the contrary, and even here each case must be judged entirely on its own merits.

On the question of pseudonymity in OT literature, see * DANIEL, BOOK OF; * DEUTERONOMY; * ECCLESIASTES; * PENTATEUCH.

PTOLEMAIS.

I. In the Old Testament

The name given in the late 3rd or early 2nd century BC by Ptolemy I or II of Egypt to the seaport of Accho, on the N point of the Bay of Acre (named from Accho), about 13 km N of Carmel headland which faces it across the bay. Accho was the only natural harbour on the coast S of Phoenicia in OT times, and various routes connected it with Galilee and its lake, the Jordan valley and beyond. The only reference to Accho in the OT is in Jdg. 1:31, where it is assigned to Asher, but the tribe failed to capture it, and it probably remained Phoenician throughout the OT period. Some would emend Ummah in Jos. 19:30 to read Accho (e.g. *GTT*, p. 139), though this is but a conjecture.

Accho is more frequently mentioned in non-biblical texts. A prince of Accho (Egyp. 'ky) is apparently already mentioned in the Egyp. Execration Texts of the 18th century BC (G. Posener, *Princes et Pays d'Asie et de Nubie*, 1940, p. 87, E49; *ANET*, p. 329, n. 9). Accho later appears in topographical lists of the 15th and 13th centuries BC, in the Amarna tablets of the 14th century BC (e.g. *ANET*, pp. 484–485, 487), and in an Egyp. satirical letter of c. 1240 BC (*ANET*, p. 477b). In later days Sennacherib of Assyria mentions Accho as part of the realm of Tyre and Sidon on his Palestinian campaign of 701 BC (*ANET*, p. 287b), and Ashurbanipal attacked it in the 7th century BC (*ANET*, p. 300b). On the relation of Accho to Asher and Galilee inland, see D. Baly, *Geography of the Bible*, 1974, pp. 121–124. K. A. K.

II. In the New Testament

During the intertestamental period the name Accho was changed to Ptolemais, presumably in honour of Ptolemy Philadelphus (285–246 BC). Under this name it played an important role in the Jews' struggle for freedom under the Maccabees (cf. 1 Macc. 5:15; 12:45–48), but is only once noticed in the NT (Acts 21:7). Paul, sailing from Tyre to Caesarea towards the end of his missionary journey, put in at Ptolemais, and while his ship lay at anchor in the harbour he spent a day with the Christians of the place. This was probably not the only time he passed through the city, since he came along the Phoenician coast several times.

In Paul's day Ptolemais was a *colonia*, the emperor Claudius having settled a group of veterans there. After the Roman period it assumed its original name 'Akka and has maintained it to the present day. During the Crusades Ptolemais rose to importance under the Gallicized name Acre or St Jean d'Acre. Today it is overshadowed by the prominence of the city of Haifa, which lies directly across the bay. (See *NEAEHL*, pp. 16–31.)
w.w.w.

PTOLEMY. The name borne by the 14 kings of the purely Macedonian Greek dynasty that ruled Egypt c. 323 to 30 BC.

I. The early Ptolemies

After the death of Alexander the Great at Babylon in 323 BC one of his marshals, Ptolemy son of Lagus, had himself appointed as satrap of Egypt, recognizing the nominal reigns of Alexander's half-brother Philip Arrhidaeus and infant son Alexander the younger, as did the great conqueror's other marshals in Babylon, Syria, Asia Minor and Greece. But in 310 BC the boy Alexander had been murdered, and each marshal tried unsuccessfully to take the whole empire from his rivals, so that it was carved up between them. Ptolemy therefore took the title king of Egypt in 304 BC, reigning till 285. Under him, his son Ptolemy II Philadelphus (285–246 BC), and his grandson Ptolemy III Euergetes I (246–222 BC), Egypt became once more a power in the Near East, no longer as a pharaonic but as a Hellenistic monarchy. Ptolemy IV Philopator (222–204 BC) was a dissolute ruler, echoes of whose Syrian wars occur in 3 Macc. 1:1–5.

Like the Ptolemaic kings themselves, all their chief ministers, all the upper ranks of the vast, centralized bureaucracy now instituted to govern Egypt, the main armed forces, the official language of administration—all were Greek. Egypt was the king's personal estate and run on strictly business lines to extract the maximum profit for the crown. *Alexandria was the capital, famous for its buildings, institutions ('Museum', Library, Serapeum, etc.), and its exports of grain, papyrus, perfumes, glass, etc. There was early a large community of Greek-speaking Jews in Alexandria; in the 3rd century BC the law was rendered into Greek for their use, and the rest of the OT followed, and thus was born the Septuagint version (*TEXTS AND VERSIONS).

The Ptolemies endeavoured to retain the loyalty of the native population of Egypt by gifts of money, lands and new temple buildings to the great, traditional Egyptian priesthoods. Large new temples arose (e.g. at Edfu, Dendera, Kom Ombo)

in the old pharaonic style, but the 'pharaohs' sculptured on their walls bear in hieroglyphs the names of the Ptolemies.

The long hieroglyphic texts in these temples were written in a specially intricate way by the nationalistic priests so that no foreigners should penetrate their secret traditions; they contain a vast deposit of information on Egyptian religion and mythology, much of it handed down from, and valuable for the study of, pharaonic Egypt.

At first, Palestine—including the Jewish community—and *Coele-Syria formed part of the Ptolemaic kingdom along with Cyprus and Cyrenaica. But after a series of battles in 202–198 BC Antiochus III of Syria finally drove the forces of young Ptolemy V Epiphanes (204–180 BC) out of Syria–Palestine; this area, with its Jewish inhabitants, thus passed under Syrian (Seleucid) rule.

The Rosetta Stone is a decree of Ptolemy V, c. 196 BC, inscribed in both Egyptian (hieroglyphs and demotic) and Greek; its discovery in 1799 provided the key for the decipherment of the Egyptian hieroglyphs and the founding of modern Egyptology (*WRITING).

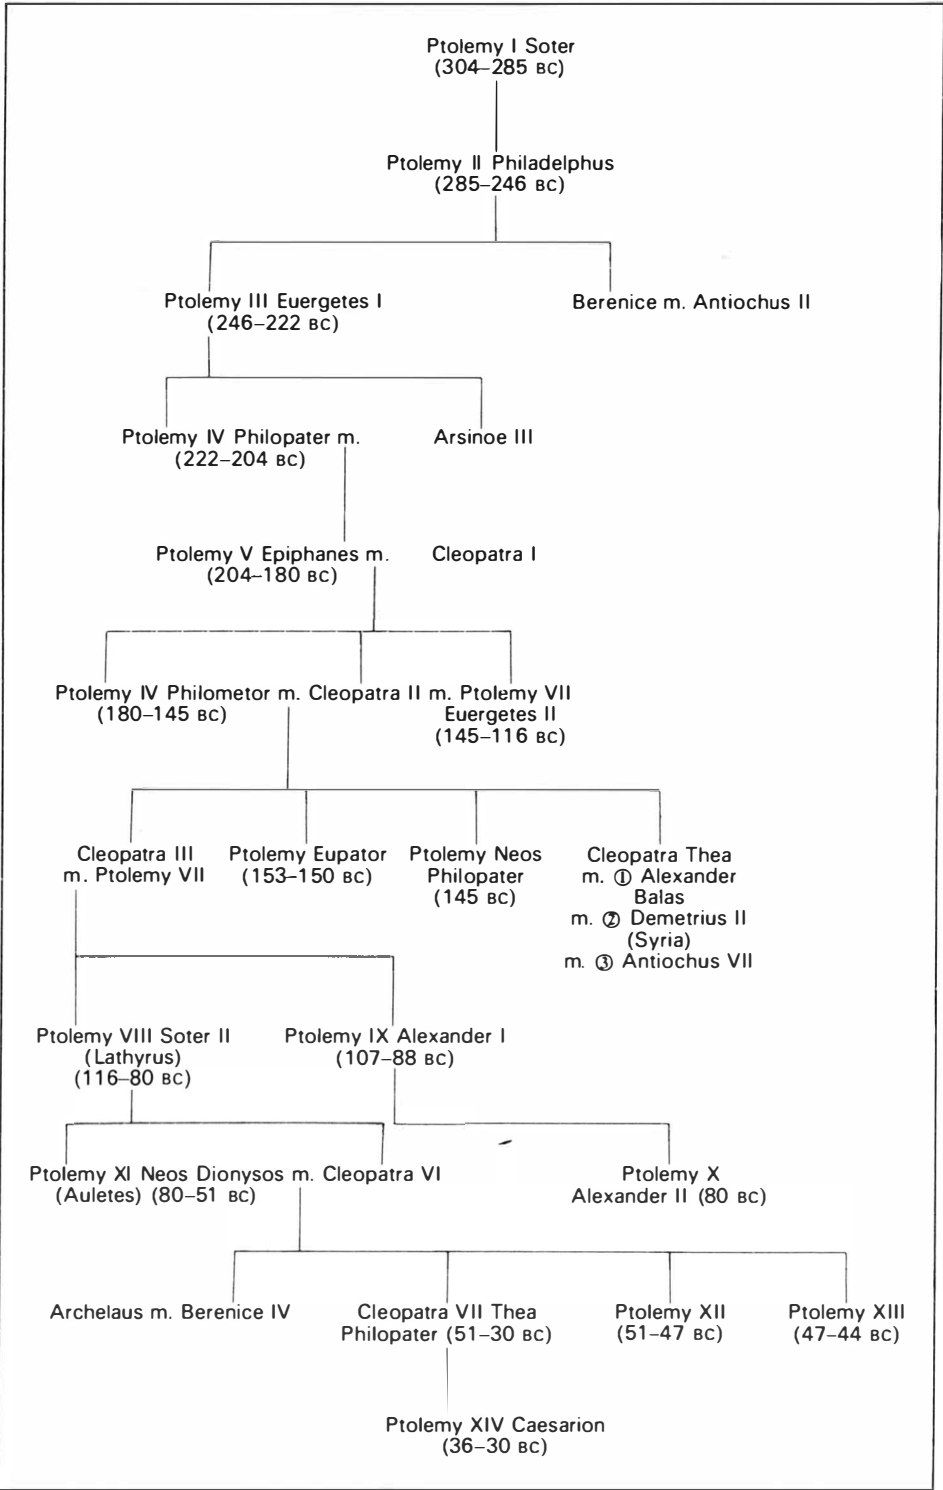

II. The later Ptolemies

The change from an Egyptian to a Syrian overlord was to have drastic consequences for the Jews some 30 years later, under *Antiochus IV. Down to this period, some of the clashes between the kingdoms of Egypt and Syria (of the 'South' and 'North') are foreshadowed in Dn. 11:4ff. (*DANIEL, BOOK OF). Under Ptolemy VI Philometor (180–145 BC) dynastic strife first divided the royal family; his ruthless brother Ptolemy VII Euergetes II was for a time joint king and eventually succeeded him. Ptolemy VI favoured the Jews in Egypt and permitted the son of the dispossessed high priest, Onias III of Jerusalem, to establish a rival temple in Egypt at Leontopolis, about 16½ km N of Heliopolis. Ptolemy VI's activities in Syria are mentioned in 1 Macc. 10:51–57; 11:1–18; those of Ptolemy VII (145–116 BC) in 1 Macc. 1:18 and 15:16 (links with Rome). Other, non-royal, Ptolemies who are named in the Apocrypha are a general of Antiochus IV Epiphanes (1 Macc. 3:38; 2 Macc. 4:45; 6:8; 8:8; and perhaps 10:12) and a son-in-law of Simon Maccabaeus who murdered Simon and two brothers-in-law at Dok near Jericho in 135 BC (1 Macc. 16:11ff.).

Under the later Ptolemies the Egyptian state steadily declined. Native revolts were more frequent; the kings and their ruthless queens (Cleopatra and Berenices) were dissolute (family murders being common), while the power of Rome grew apace. Last of the line were the brilliant but unscrupulous Cleopatra VII and her son by Julius Caesar, Ptolemy XIV Caesarion. She captivated both Caesar and Antony, but made no impression on Octavian (Augustus), and so committed suicide to avoid the humiliation of appearing in a Roman triumphal procession. So Egypt passed under the heel of Rome in 30 BC.

Samuel, *Ptolemaic Chronology*, 1962.
K.A.K.

PTOLEMY

Simplified family tree of the Ptolemies, the Hellenistic rulers of Egypt.

PUBLIUS. *Poplios* is the Greek version of the Latin name, probably *praenomen*, of the 'chief man of the island' of Malta in Acts 28:7. The title 'chief man' appears to be correct local usage (*JG*, 14. 601; *CIL*, 10. 7495), and may refer either to a native officer or to the chief Roman official. In the latter case the use of *praenomen* alone may perhaps be explained as the familiar usage of the local inhabitants.

BIBLIOGRAPHY. W. M. Ramsay, *SPT*, p. 343; *BC*, 4, in *loc.*; *BAGD*. J.H.H.

PUDENS. A Roman Christian who joined *Claudia and others in greeting Timothy (2 Tim. 4:21). Martial (4. 13) salutes Aulus Pudens and his bride Claudia, and another Pudens ('modest') and Claudia are linked in an inscription (*CIL*, 6. 15066); but identification with Timothy's friends is improbable. Tradition called Pudens a senator, locating his house-church at the church of S Pudentiana (*cf. Liber Pontificalis*, ed. Duchesne, 1, pp. 132f.); for excavations, *cf.* R. Lanciani, *Pagan and Christian Rome*, 1895, pp. 110ff. A.F.W.

PURIM. A Jewish festival celebrated during the 13–15th days of the month Adar. On this occasion the book of Esther is read, and traditionally the congregation in the synagogue shouts and boos whenever the name of Haman is mentioned. The book of Esther gives the origin of the festival. In the reign of Ahasuerus, probably Xerxes (486–465 BC) but possibly Artaxerxes II (404–359 BC), *Haman, the vizier, determined to massacre all the Jews. Since he was a superstitious man, he cast lots to find an auspicious day. The word *pur*, which in Est. 3:7; 9:24, 26, is said to mean 'lot', is not a Hebrew word, but is almost certainly the Assyrian *puru*, which means a pebble, or small stone, which would be used for casting lots.

The earliest reference to the festival outside the OT is 2 Macc. 15:36, where a decree is made in 161 BC to celebrate annually the defeat of Nicanor by Judas Maccabaeus on 'the thirteenth day of the twelfth month, which is called Adar in the Syrian language—the day before Mordecai's day'. If 2 Maccabees is dated somewhere in the middle of the 1st century BC, this shows that by 50 BC Purim was celebrated on the 14th of Adar. The parallel passage in 1 Macc. 7:49 speaks of the institution of what was later called Nicanor's Day on the 13th of Adar, but makes no reference to Purim on the 14th. No conclusions can be drawn from this silence.

Josephus, at the end of the 1st century AD, says that Nicanor's Day was kept on Adar 13 (*Ant.* 12. 412) and Purim on Adar 14 and 15 (*Ant.* 11. 295). Curiously enough, Josephus does not use the term *Purim*, but says that the Jews call the 2 days *phroureas* (other readings are *phrouraias*, *phroureous*, *phrouraios*). This Gk. word seems to be based on the verb *phroureō*, meaning 'guard', 'protect'.

Nicanor's Day was not observed after the 7th century AD, but Adar 13 was gradually made part of Purim. As opposed to Adar 14 and 15, which were days of celebration, Adar 13 was a day of fasting.

Suggestions (*e.g.* J. C. Rylaarsdam, *IB*, 3, pp. 968f.) that the festival is a Jewish adaptation of a

myth of a struggle between Babylonian or Persian deities have little to commend them. It is unlikely that for a supremely national celebration the Jews would have adapted a drama of pagan polytheism.

BIBLIOGRAPHY. J. H. Greenstone, *Jewish Feasts and Fasts*, 1946; W. Hallo, *BA* 46, 1983, pp. 19–29. J.S.W.

PURITY. The original biblical significance was ceremonial. It was to be obtained by certain ablutions and purifications which were enjoined upon the worshipper in the performance of his religious duties. Purifications were common to many other religions, but there they were merely ceremonial and had no ethical significance. In the case of Israel most of the ceremonial purifications had both sanitary and ethical significance. Though Gn. 35:2 and Ex. 19:14 indicated that the general idea did not originate with the Mosaic law, it is clear that only with the giving of the ceremonial law under Moses were these regulations codified and detailed. In the teaching of the prophets the significance largely passed from the merely ceremonial to the ethical. In the NT the teaching of Christ and the descent of the Spirit lifted the meaning of purity into the moral and spiritual sphere.

In the general sense common to the NT, and to the devotional literature of the OT, purity indicates a state of heart where there is complete devotion to God. As unadulterated water is said to be pure, and gold without alloy is pure gold, so the pure heart is the undivided heart where there is no conflict of loyalties, no cleavage of interests, no mixture of motives, no hypocrisy and no insecurity. It is whole-heartedness God-wards. This is probably the sense in which our Lord used it in the Beatitudes (Mt. 5:8). The reward of the undivided heart is the vision of God. No vision of God can come to the heart that is unclean because it is out of harmony with the nature and character of God. In the further teaching of Christ (see Mk. 7:14–28) he transfers the state of defilement, and so of purity, entirely from the outer to the inner man. Purity in this sense may be said to be a state of heart reserved completely for God and freed from all worldly distractions.

In the specialized sense purity came to mean freedom from sensual pollution, particularly in the sexual life, though the NT does not teach that sexual activity is polluting in itself and, indeed, makes it clear that rightly ordered sexual behaviour is not (*cf.* Heb. 13:4). Nevertheless, the NT teaches the sanctity of the body as the temple of the Holy Spirit (*cf.* 1 Cor. 6:19f.) and inculcates the duty of self-restraint and self-denial even to the extent of personal loss. Purity is thus the spirit of renunciation and of the obedience which brings every thought and feeling and action into subjection to Christ. It begins within and extends outwards to the entire life, cleansing all the centres of living and controlling all the movements of body and spirit.

R.A.F.

PUT, PHUT. I. Third son of Ham (Gn. 10:6; 1 Ch. 1:8). 2. Warriors alongside *Lubim, Egyptians and Ethiopians unable to save No-Amon (Thebes) from Assyria (Na. 3:9). Elsewhere the word is

PUT, PHUT

found only in Je. 46:9; Ezk. 30:5 (as Egyp. allies), in Ezk. 38:5 (in Gog's armies; אַב 'Libya[ns]') and in Ezk. 27:10 (warriors of Tyre). Put is certainly African, but its location is disputed. Claiming that Lubim (Libyans) and Put are distinct in Na. 3:9, some wish to equate Put with *Pw(n)t* (E Sudan?) of Egyp. texts. But Old Persian *putiya* and Bab. *puṭa* (= Heb. *puṭ*) become *T' Ṭmḥw*, 'Libya', in Egyp. thus making Put Libya (G. Posener, *La Première Domination Perse en É[ua]gypte*, 1936, pp. 186–187). Lubim and Put in Na. 3:9 are like Lubim and *Sukkiim in 2 Ch. 12:3. Also, Tyre would employ Libyan rather than Somali auxiliaries. *puṭ* may derive from Egyp. *puṭy*, 'foreign bowman', or similar; T. C. Mitchell, *Proceedings, Seminar for Arabian Studies* 22, 1992, pp. 69–80. K.A.K.

PUTEOLI. Mod. Pozzuoli, near Naples, a Samian colony from Cumae founded in the 6th century BC. Puteoli probably fell into Roman hands with Capua in 338 BC, and rapidly became an important arsenal and trading port. Livy mentions a garrison of 6,000 during the Hannibalian invasion (24. 13), and the embarkation of large reinforcements for Spain (26. 17). Rome's E traffic, notably the Egyp.

grain, passed through Puteoli. Seneca describes the arrival of the Alexandrian corn-fleet (Ep. 77), and Paul arrived on an Alexandrian freighter (Acts 28:13). The recently discovered chapel in Herculaneum probably marks the home of some who met Paul at nearby Puteoli. The Via Domitiana linked Puteoli with the Via Appia. E.M.B.

PYTHON. This is the Greek name given to the mythological serpent or dragon which lived at Pytho beneath Mt Parnassus, and guarded the Delphic oracle. Apollo slew it, but the name was then applied to anyone who prophesied under the inspiration of Apollo. Such persons generally spoke with the mouth closed, uttering words quite beyond their own control, and so were also known as *engastrimythoi* or ventriloquists (Plutarch, *De Defectu Oraculorum*, 9, p. 414E).

Acts 16:16 records how Paul met and subsequently exorcized a young woman with such a spirit of *divination at Philippi: it is significant that Luke uses a word with pagan connections, *manteuomenē*, not elsewhere employed in the NT, to describe her oracular speech, obviously inspired by a demonic power. D.H.W.

Q

QUARRY. 1. Heb. *š'barim*, a place from which stone is dug. In Jos. 7: 5 'Shebarim' is better understood as 'quarries' (so RVMG.) in describing the place to which the Israelites fled after their abortive attack on Ai. Stone was quarried through the centuries in Palestine. Good limestone lies close to the surface in most places and is broken out of its bed by cracking the stone along lines of cleavage. The so-called stables of Solomon in Jerusalem near to the Temple area are almost certainly ancient quarries. (*MINING.)

2. The word *p'silim* refers to a carved stone, and should be so translated in Jdg. 3:19, 26 (as in Dt. 7:5; Ps. 78:58; Is. 10:10; Mi. 5:13), rather than AV 'quarries'. J.A.T.

QUARTUS. The Latin name, meaning 'fourth', of a Christian at Corinth whose greetings Paul conveys (Rom. 16:23). He is called 'the brother'. This may mean either 'brother of Erastus', mentioned with him (several Corinthian Christians have Latin names); or 'our brother', i.e. our 'fellow-Christian', the title balancing the appellations of the others in vv. 21-23; or 'your brother', i.e. 'fellow-Roman Christian' (cf. 1 Cor. 1:1; *SOSTHENES). If Tertius and he were not separated by two other names, one might conjecture that they were third and fourth sons in the same family. Later, menologies allocated him to the Seventy (*Acta Sanctorum*, Nov. 1, p. 585). A.F.W.

QUEEN (Heb. *malkâ*, Gk. *basilissa*). The word 'queen' is not widely used in the Bible. It is used to describe women from countries outside Palestine who were reigning monarchs in their own right. Examples of this are the queen of *Sheba (1 Ki. 10:1; cf. Mt. 12:42; Lk. 11:31), and *Candace, queen of *Ethiopia (Acts 8:27).

In this same sense the word is used once in Israelite history with reference to Athaliah, who usurped the throne of Judah and reigned for 6 years (2 Ki. 11:3). In post-biblical Jewish history Salome Alexandra, widow of Alexander Jannaeus, succeeded her husband as queen regnant for 9 years (76-67 BC).

As consort the wife of the reigning monarch did not as a rule concern herself with affairs of state. Among the most noteworthy exceptions to this are Bathsheba (1 Ki. 1:15-31) and Jezebel (1 Ki. 21). The most important woman in the royal household, in Israel and Judah as in neighbouring lands, was the queen-mother. She was pre-eminent among the ladies of the court, and sat at the monarch's right hand (Bathsheba, 1 Ki. 2:19), crowned (Nehushta, Je. 13:18). In the history of Judah the queen-mothers were always named. A king might have many wives, but he had only one mother, and

he was under obligation to honour her (Ex. 20:12). That her position was more than an honorary one is evident from the record of Maacah, who was queen-mother not only during the reign of her son Abijam but also during the reign of her grandson Asa, until the latter deposed her for idolatry (1 Ki. 15:2, 10, 13; 2 Ch. 15:16). The Chaldean queen of Dn. 5:10 was probably the queen-mother; the same may be true of the Persian queen of Ne. 2:6.

M.B.

QUEEN OF HEAVEN. Cakes, possibly in the shape of figurines or crescent moons, were made for the *m'leket* of the heavens by the inhabitants of Jerusalem (Je. 7:18) and incense burnt as to a deity (Je. 44:17-19, 25). The unusual word is rendered as 'queen' (*malkat*), and may be Phoen., a title of Ashtarte, Assy. Ishtar. It may refer to *Ashtaroah or to the Canaanite Anat (so Egypt. 19th century *BETHSHEAN); cf. the female personal name (*Ham*)*môleket* (1 Ch. 7:18). Alternatively, this may be a rare writing of *m'leket*, 'heavenly handiwork' (i.e. stars), also denoting an idolatrous practice. D.J.W.

QUICKSANDS. (Gk. *syrtis*, 'a sandbank', RSV 'Syrtis', Acts 27:17). The ship in which Paul was travelling found it necessary to take precautions against being driven on to the Greater Syrtis, quicksands W of Cyrene on the N African coast. Now called the Gulf of Sidra, its treacherous sands and waters were greatly feared by sailors.

J.D.D.

QUIRINIUS (Lk. 2:2, RV, RSV, NEB; AV 'Cyrenius' corresponds closely to Gk. *Kyrēnios*). Publius Sulpicius Quirinius was consul at Rome in 12 BC, and not long afterwards conducted a campaign against the unruly Homanadensians of central Asia Minor. In 3 BC he became proconsul of Asia; in AD 3-4 he was adviser to the imperial heir-apparent, Gaius Caesar, during the latter's Armenian expedition; from AD 6 to 9 he was imperial legate (*legatus pro praetore*) of Syria-Cilicia. This appears to have concluded his public career; thereafter he lived at Rome, where he died in AD 21. At the beginning of his governorship of Syria-Cilicia he organized the census in Judaea when that territory became a Roman province on the deposition of Archelaus (*HEROD, 2). This census, recorded by Josephus (*Ant.* 18. 1-3, 26), is that referred to in Acts 5:37. From the *Lapis Venetus* (*CIL.* 3. 6687) we gather that it was not only in Judaea that a census was held under Quirinius' auspices; this inscription records the career of an officer who served under Quirinius during his legateship of

QUIRINIUS

Syria-Cilicia and held a census on his behalf in the Syrian city of Apamea. The *census of Lk. 2:1ff., however, must be at least 9 years earlier.

The statement in Lk. 2:2 about this earlier census has for the most part been understood in two alternative ways: 'This was the first registration of its kind; it took place when Quirinius was governor of Syria' (NEB), or 'This was the first registration carried out while Quirinius was governor of Syria' (NEBmg.). The possibility that Quirinius may have been governor of Syria on an earlier occasion (*CHRONOLOGY OF THE NT) has found confirmation in the eyes of a number of scholars (especially W. M. Ramsay) from the testimony of the *Lapis Tiburtinus* (CIL, 14. 3613). This inscription, recording the career of a distinguished Roman officer, is unfortunately mutilated, so that the officer's name is missing, but from the details that survive he could very well be Quirinius. It contains a statement that when he became imperial legate of Syria he entered upon that office 'for the second time' (Lat. *iterum*). The question is: did he become imperial legate of Syria for the second time, or did he simply receive an imperial legateship for the second time, having governed another province in that capacity on the earlier occasion?

The wording is ambiguous. Ramsay held that he was appointed an additional legate of Syria between 10 and 7 bc, for the purpose of conducting the Homanadensian war, while the civil administration of the province was in the hands of other governors, including Sentius Saturninus (8-6 bc), under whom, according to Tertullian (*Adv. Marc.* 4. 19), the census of Lk. 2:1ff. was held. A strong case, however, has been made out (especially by R. Syme) for the view that Quirinius's earlier legateship was not over Syria but over Galatia, where the Homanadensians would have been on his doorstep. It has been suggested that 'Saturninus', which Tertullian appears to have read in his copy of Lk. 2:2, was the original reading rather than 'Quirinius' (so B. S. Easton, *The Gospel according to St Luke*, 1926, p. 20; J. W. Jack, 'The Census of Quirinius', *ExpT* 40, 1928-9, pp. 496ff.); another possibility is that the verse should be rendered: 'This enrolment was earlier than that held when Quirinius was governor of Syria' (so M. J. Lagrange, *RB* n.s. 8, 1911, pp. 60ff.; F. M. Heichelheim in T. Frank (ed.), *An Economic History of Ancient Rome*, 4, 1938, pp. 160ff.; N. Turner, *Grammatical Insights into the NT*, 1965, pp. 23f.).

BIBLIOGRAPHY. W. M. Ramsay, *Was Christ Born in Bethlehem?*, 1905; L. R. Taylor, 'Quirinius and the Census of Judaea', *American Journal of Philology* 54, 1933, pp. 120ff.; R. Syme, 'Galatia and Pamphylia under Augustus', *Klio* 27, 1934, pp. 122ff.; and other literature listed in *TCERK*, 1, 1955, p. 222 (s.v. 'Census'). F.F.B.

QUMRAN, the name of a wadi near the NW shore of the Dead Sea, but also applied to ruins on its N bank and, more generally, to caves in the surrounding cliffs.

R. de Vaux excavated the ruins in 1951 and 1953-6 in the hope of throwing light on the origin of some scrolls which had recently been discovered in a nearby cave. During the period of excavation ten further scroll-bearing caves were found. Ceramic remains, and the proximity of the caves to the settlement, indicate that the *Dead Sea Scrolls belonged to the group (probably *ESSENES) which

inhabited the site from the latter half of the 2nd century BC to AD 68.

De Vaux proposed that sometime in the latter half of the 2nd century BC (period 1a), a small community of Essenes resettled a modest Israelite stronghold from the 8th century BC. Extensive building in the following period (1b), beginning in the reign of Alexander Jannaeus (103-76 BC) or perhaps John Hyrcanus I (135-104 BC), attests a greatly enlarged population. A layer of ash betrays a destruction no earlier than the reign of Antigonus Mattathias (40-37 BC; see *MACCABEES, V). De Vaux interpreted several cracks in cisterns and walls as testimony to the earthquake of 31 BC which he believed caused the fire. Accumulated sediment in the decantation basin and beyond betrays a period of abandonment, which de Vaux believed lasted until near the turn of the era because of the scarcity of Herodian coins in the ruins. Apparently the same group resettled the site (period 2), as suggested by the similarity in pottery types and burials of animal bones under pottery sherds in both periods 1b and 2. The end of period 2 is again marked by a black powdery destruction layer. Roman arrowheads and Jewish coins from the second and third years of the Jewish Revolt (but none from the fourth) suggest that Jewish (Essene) occupation of Khirbet Qumran came to a violent end in AD 68/69.

De Vaux suggested that Essenes lived in nearby caves and/or temporary shelters and that the buildings at Qumran were for public functions. They farmed and worked on the Bugeia plain above the cliffs and at Ain Feshka, an agricultural and industrial installation 3 km to the S. On the evidence of 1,200 graves in a cemetery to the E, he estimated a population of approximately 200. He believed most of them were celibate men, because skeletons of women and children seemed to be confined to two small 'secondary' cemeteries, with only one exception in the 'main cemetery' set apart by orientation and type.

Other theories, interpreting the remains at Qumran as a Hasmonean fortress, a villa or a trading post, have not proved to be more plausible. Nevertheless, a number of serious questions have been raised about various details in de Vaux's reconstruction. All the dates which he assigned can be questioned, in particular his early date for the beginning of period 1, his association of the destruction layer with the earthquake of 31 BC, the long abandonment and the Roman destruction in AD 68. Newer data indicates substantial commercial trade at Qumran and reveals his interpretation of numismatic and ceramic evidence to be problematic. There is no justification for distinguishing a 'main cemetery' from 'secondary cemeteries', and the remains of women and children need to be more adequately explained. Despite these problems, the main lines of the proposed history of the site have enjoyed the acceptance of most scholars.

QUOTATIONS (IN THE NEW TESTAMENT).

There are some 250 express citations of OT in NT. If indirect or partial quotations and allusions are added, the total exceeds 1,000. The book of Rev., e.g., has no quotations, but is virtually interlaced with allusions to OT texts. The importance of the OT, which is indicated by this usage, is further defined by the introductory formulas: to say 'the Scripture says' is equivalent to saying 'God says' (e.g. Mt. 19:4); 'that it might be fulfilled' (e.g. Mt. 2:15) points to the essential connection between the message of God in the old covenant and in the new (cf. Ellis, *Prophecy*, pp. 148ff., 165-169; *idem*, *Paul*¹, pp. 22-25).

Some citations are taken from an OT Targum (Rom. 12:19) or from the Heb. text itself (Rom. 11:35; 1 Cor. 3:19). However, as one would expect in a Gk. document written for Gk. readers, the large majority of quotations are derived from the LXX, but with varying degrees of exactness. (Although textually dated, Turpie's manual is still helpful for classification and comparison of the Gk. and Heb. texts.) The inaccuracies which occur show the lack of concern (more than memory lapse) of the biblical writers for verbal exactness: it is the meaning rather than the words in themselves that are important.

In a considerable number of cases variant renderings are deliberately chosen, *ad hoc* or from other known versions, in order to bring out the 'fulfilment' as seen by the NT writer (e.g. 1 Cor. 15:54f.). In this process, known from its use at Qumran as *midrash pesher*, the commentary is merged into the quotation to give it a present-time, eschatological application. K. Stendahl has shown the affinity of this hermeneutical method in Mt. with the practices of the Qumran community; it is also present elsewhere in the NT (see Ellis, *Prophecy*¹). Interpretative renderings may not have originated with the NT writer himself. Rendel Harris suggested that behind some NT quotations lay a pre-canonical 'testimony book', a collection of selected, combined (e.g. Mk. 1:2f.), and interpreted OT passages, worked out in the early Christian community for apologetic purposes. While C. H. Dodd has suggested some modifications to this theory, the presence of *testimonia* in the Dead Sea Scrolls shows that the practice was not unknown and substantiates, in some measure, Harris's conjecture. It also appears probable that some of these paraphrases originated in the teachings of primitive Christian prophets (Ellis, *Paul*¹, pp. 107-112; *idem*, *Prophecy*¹, pp. 130-138, 182-187, 224-229). Thus the problem of textual variation points

beyond itself to the larger question of interpretation and application of OT by NT.

Often OT passages are applied quite at variance with the original historical meaning. Hosea's reference to the Exodus of Israel is 'fulfilled' in the baby Jesus' return from Egypt (Mt. 2:15). A number of passages having historical reference to Israel are referred by the NT to the church (e.g. Rom. 8:36; Eph. 4:8). A passage referring to Solomon, king of Israel, is applied both to Jesus Christ (Heb. 1:5) and to the church (2 Cor. 6:18). The rationale for this usage seems to lie (1) in a typological correspondence between OT *Heilsgeschichte* and the 'new age' fulfilment in Jesus Christ; (2) in the Semitic idea of corporate solidarity in which the king of Israel and Israel, Christ (Israel's true king) and the 'body of Christ', stand in realistic relationship to one another; and (3) in the conviction that the church is the true Israel and, therefore, the heir to the promises and the object of the prophecies. While the subject-matter of NT quotations covers virtually all doctrinal issues, the emphasis throughout is on the Messiah and Messianic-age fulfilments. Sometimes the application of the quotations is dependent upon the wider context of the OT (e.g. Acts 8:29f.); such 'pointer' quotations also may have been designed to call the reader's attention to a wider theme or topic (Dodd, p. 126).

A number of quotations occur in expository patterns similar, in varying degree, to those found in Philo (cf. Borgen), Qumran and the rabbinic literature (cf. Ellis, *Prophecy*¹, pp. 147-236). One such pattern opens with an OT quotation (or summary) followed by commentary, sometimes including a parable and/or supporting citations, and ends with a final quotation (Mt. 21:33-46; 1 Cor. 1:18-31; Gal. 4:21-5:1; Heb. 10:5-39; 2 Pet. 3:5-13; cf. Acts 13:17-41). It may be that some *testimonia* represent excerpts from such expositions. Quotations other than from the OT also appear. Eph. 5:14 (cf. 1 Cor. 15:45b; 1 Tim. 5:18b) may be an excerpt from an early Christian hymn or oracle; Jude 14 is taken from the pseudepigraphical book of *Enoch*; and Acts 17:28 is a quotation from a pagan writer.

R

RAAMAH (Heb. *ra'mā, ra'mā*, 'trembling'). A 'son' of Cush (Gn. 10:7; 1 Ch. 1:9). The tribe of Raamah has not been identified, but inscriptions found in Sheba suggest a location N of Marib in Yemen. With Sheba, Raamah sold spices, precious stones and gold to Tyre (Ezk. 27:22). A.R.M.

RA'AMSES, RAMESES (Egyp. *Pr-R'mssw*, Pi-Ramessē, 'Domain of Ramesses'). A city of Egypt mentioned with Pithom, where the Hebrews were afflicted with heavy burdens (Ex. 1:11; 12:37; Nu. 33:3). This was the famous E-Delta residence of Ramesses II (c. 1290–1224 BC). The kings of the 18th Dynasty did no building here. Scholars once located Pi-Ramessē at Pelusium, then at Tanis (*ZOAN), following Montet's excavations there. But all the Ramesside stonework at Tanis is re-used material from elsewhere. Remains of a palace, a glaze-factory and of houses of princes and high officials (with trace of a temple) at and near Qantir, 30 km S of Tanis, almost certainly mark the real site of Ra'amses/ Pi-Ramessē. The Exodus began from Ra'amses (Ex. 12:37) (*ENCAMPMENT BY THE SEA). Centuries before, Jacob had settled in the district (Gn.47:11).

K.A.K.

RABBAH. I. A town with associated villages in the hill country of Judah (Jos. 15:60), possibly Rubute of the Amarna letters and Tuthmosis III, which lay in the region of Gezer.

2. The capital of Ammon, now Amman, capital of Jordan, 35 km E of the river Jordan. Its full name occurs in Dt. 3:11; 2 Sa. 12:26; 17:27; Je. 49:2; Ezk. 21:20 as 'Rabbah of the Ammonites' (*rabbat b'nē ammōn*), and is shortened to Rabbah (*rabbā*) in 2 Sa. 11:11; 12:27; Je. 49:3, etc. The name evidently means 'Main-town' (LXX has *akra*, 'citadel', at Dt. 3:11). The iron coffin of Og, king of Bashan, rested there (Dt. 3:11; AV 'iron bedstead').

Ammonite power grew simultaneously with Israelite, so that David faced a rival in Hanun, son of Nahash. After defeating Hanun's Aramaean allies and the Ammonite army, David and Joab were able to overrun Ammon, Joab besieging Rabbah, but leaving David the honour of taking the citadel. The inhabitants were put to forced labour (2 Sa. 10; 12:26–31; 1 Ch. 20:3). After Solomon's death, Ammon reasserted her independence and troubled Israel. The prophets spoke against Rabbah as rep-

resenting the people of Ammon (Je. 49:2–3; Ezk. 21:20; 25:5; Am. 1:14).

Rabbah, rebuilt and renamed Philadelphia by Ptolemy Philadelphus (285–246 BC), became one of the cities of the Decapolis and an important trading centre.

Considerable archaeological remains exist in the vicinity of Amman today. At the airport a building of the 13th century BC (Late Bronze Age) has been unearthed. It was used as a depository for cremated human remains, many of them of young children, perhaps sacrificed to *Molech. On the citadel itself are extensive ruins of the mediaeval, Byzantine, Roman and Hellenistic cities, and among them sculptures and inscriptions of the 8th and 7th centuries BC have been found. Traces of Middle Bronze and Iron Age fortifications have been discovered.
