In the earlier tradition his scientific wisdom is prominent, acquired on journeys through the heavens with angelic guides, and including astronomical, cosmographical and meteorological lore, as well as the solar calendar used at Qumran. He was also God's prophet against the fallen angels. Later tradition (2nd century BC) emphasizes his ethical teaching and especially his apocalyptic revelations of the course of world history down to the last judgment. In the Similitudes (1 *Enoch* 37–71) he is identified with the Messianic Son of man (71:14–17), and some later Jewish traditions identified him with the nearly divine figure Metatron (*Targum of Pseudo-Jonathan*, Gn. 5:24; 3 *Enoch*). Early Christian apocalyptic writings frequently expect his return to earth with Elijah before the End.

1 *Enoch* (*Ethiopic Enoch*) is among the most important intertestamental works. The complete text survives only in Ethiopic, but sections are extant in Greek and important fragments of the original Aramaic are now available from Qumran. 1 *Enoch* comprises five books: the Book of Watchers (1–36), the Similitudes (37–71), the Astronomical Book (72–82), the Book of Dreams (83–90) and the Epistle of Enoch (91–105). The Qumran MSS include fragments of all these except the Similitudes, which are therefore now generally dated no earlier than the 1st century AD. Also from Qumran there are fragments of a hitherto almost unknown Book of Giants, which was probably the original fifth book of the Enoch Pentateuch, for which the Similitudes were later substituted.

The Qumran MSS help clarify the dates of these works. The oldest sections are the Astronomical Book and 6–19: these date from no later than the beginning of the 2nd century BC and may be as early as the 5th century. The Book of Watchers (incorporating 6–19) cannot be later than the mid-1st and is probably from the mid-3rd century BC. The Book of Dreams is from 165 or 164 BC. The Epistle of Enoch and Book of Giants may date from the end of the 2nd century BC.

Other works under the name of Enoch are from the Christian era. The Similitudes (1 *Enoch* 37–71) (important as perhaps illustrating the background to the use of 'Son of man' in the Gospels) seem to be a Jewish work, though some argue for Christian origin. 3 *Enoch* (*Hebrew Enoch*) is a Jewish work of disputed date. 2 *Enoch* (*Slavonic Enoch*) is a late Christian work which may incorporate Jewish material.

ENOSH. Son of Seth and father of Kenan (Gn. 4:26; 5:6–11; 1 Ch. 1:1; Lk. 3:38). His life-span is recorded as 905 years. In his lifetime began to call upon the covenant name of Yahweh. The Heb. word 'nōš, 'man', occurs some 42 times in OT, and often suggests the aspect of frailty and mortality (Jb. 4:17); the corresponding verb 'ānaš means 'to be weak' (cf. *ADAM). N. H.

EN-RIMMON (Heb. 'ēn-rimmōn, 'spring of the pomegranate'). A village in Judah reoccupied after the Exile (Ne. 11:29). Either it was formed by the coalescing of two separate villages Ain and Rimmon, or more probably, reading Jos. 15:32; 19:7; 1 Ch. 4:32 all as En-rimmon, it was always a single town, originally in Judah's inheritance (Jos. 15:32), but soon transferred to Simeon (Jos. 19:7). It has been identified with Umm er-Ramāmin, 15 km N of Beersheba. M. A. M.

EN-ROGEL (Heb. 'ēn-rōgēl, 'well of the fuller'). A water source just outside Jerusalem, some 200 m S of the confluence of the Valley of Hinnom and the Kidron valley. It is known today as Job's well. The well marked a point on the N boundary of Judah (Jos. 15:7) before David captured Jerusalem (2 Sa. 5:6ff.).

The narrative of Adonijah's abortive attempt to gain the throne in David's old age suggests the site had cultic associations (1 Ki. 1:9ff.). R. J. W.

EN-SHEMESH (Heb. 'ēn-šemeš, 'spring of the sun'). A point on the Judah–Benjamin border 4 km E of Jerusalem, below Olivet, and just S of the Jericho road, and now sometimes called the 'Spring of the Apostles'; modern 'Ain Haud. J. D. D.

ENVY. A grudging regard for the advantages seen to be enjoyed by others—cf. Lat. *invidia* from *in-vidéo*, 'to look closely at', then 'to look with malicious intent' (see 1 Sa. 18:9). The Heb. *qin'ā* means originally a burning, then the colour produced in the face by a deep emotion, thus ardour, zeal, jealousy. RSV substitutes 'jealousy' for 'envy' in Jb. 5:2; Pr. 27:4; Acts 7:9; 1 Cor. 3:3, etc. But they are not synonymous. Jealousy makes us fear to lose what we possess; envy creates sorrow that others have what we have not. The word *qin'ā* is used to express Rachel's envy for her sister (Gn. 30:1, cf. Gn. 37:11; Nu. 25:11, etc.). Its evils are depicted especially in the book of Proverbs: thus the question in 27:4: 'Who can stand before jealousy?' The NT *zēlos* is usually translated in a good sense as 'zeal' as well as in a bad sense as 'envy' (Jn. 2:17; cf. Col. 4:13 where it is translated 'worked hard' [AV 'great zeal']; note also its reference to God, 2 Ki. 19:31; Is. 9:7; 37:32, etc.). The word *phthonos* always appears in a bad sense except in the difficult verse Jas. 4:5, which should be translated as in RVMG. (A comparable sentiment is expressed in the Qumran *Manual of Discipline*, 4. 16–18.) *phthonos* is characteristic of the unredeemed life (Rom. 1:29; Gal. 5:21; 1 Tim. 6:4; Tit. 3:3). It was the spirit which crucified our Lord (Mt. 27:18; Mk. 15:10). Envy, *zēlos*, as inconsiderate zeal, is to be avoided by Christians (Rom. 13:13; 2 Cor. 12:20; Jas. 3:14, 16). See NIDNTT 1, pp. 557f.; TDNT 2, pp. 877–882. H. D. McD.

EPAPHRAS. In Col. 1:7; 4:12; Phm. 23, one of Paul's friends and associates, called by him his 'fellow slave' and 'fellow prisoner'. The name is abbreviated from Epaphroditus, but Epaphras is probably not to be identified with the Epaphroditus of Phil. 2:25; 4:18 (as he is by T. R. Glover, *Paul*

EPAPHRAS

of Tarsus, 1925, p. 179). We gather that Epaphras evangelized the cities of the Lycus valley in Phrygia under Paul's direction during the latter's Ephesian ministry, and founded the churches of Colossae, Hierapolis and Laodicea. Later he visited Paul during his Roman captivity, and it was his news of conditions in the churches of the Lycus valley that moved Paul to write the Epistle to the Colossians.

BIBLIOGRAPHY. P. T. O'Brien, *Colossians, Philemon, WBC*, 1982. F.F.B.

EPAPHRODITUS. A Macedonian Christian from Philippi. There are no grounds for identifying him with Epaphras of Col. 1:7; 4:12, or Phm. 23. His name means 'comely' or 'charming'. Paul calls him 'your messenger' (*hymōn apostolon*, Phil. 2:25), where the word used is one more frequently translated elsewhere as 'apostle'. This does not mean that Epaphroditus held any office in the Philippian church; he was simply a messenger (cf. 2 Cor. 8:23) who brought the gift from the church to Paul in prison at Rome. He became seriously ill, possibly as a result of over-exerting himself in journeying from Philippi to Rome, or in serving Paul at Rome. The AV says 'he regarded not his life' (see Phil. 2:30), but RSV more correctly 'risking his life'. The word used is *paraboleusamenos*, 'having gambled with his life', from *paraboleuesthai* 'to throw down a stake, to make a venture'.

EPHESIANS, EPISTLE TO THE.

I. Outline of contents

This letter, in its form less restricted by particular controversial or pastoral needs than any other NT letter, stands as a wonderful declaration of the eternal purpose of God in Christ wrought out in his church (chs. 1-3), and of the practical consequences of that purpose (4-6).

a. God's eternal purposes for man in Christ, 1:1-3:21

1:1-2. Greeting.

1:3-14. Praise for all the spiritual blessings that come to men in Christ.

1:15-23. Thanksgiving for the readers' faith, and prayer for their experience of the wisdom and power of God.

2:1-10. God's purpose to raise men from the death of sin to new life in Christ.

2:11-22. His purpose to reconcile men not only to himself, but to one another—in particular to bring Jews and Gentiles together into the one people of God.

3:1-13. The privilege of the apostle's calling to preach the gospel to the Gentiles.

3:14-21. A second prayer, for the knowledge of the love of Christ, and his indwelling fullness; and a doxology.

b. Practical consequences, 4:1-6:24

4:1-16. Exhortation to walk worthily, and to work to build up the one body of Christ.

4:17-32. The old life of ignorance, lust and

unrighteousness must be put off, and the new life of holiness put on.

5:1-21. A further call to live in love and purity, as children of light, full of praise and usefulness.

5:22-33. Instructions to wives and husbands, based on the analogy of the relationship between Christ and his church.

6:1-9. Instructions to children and parents, servants and masters.

6:10-20. Summons to Christian conflict in the armour of God and in his strength.

6:21-24. Concluding personal message.

II. Destination

Although the great majority of mss and all the early vss have the words 'at Ephesus' in 1:1, the 4th-century codices Vaticanus and Sinaiticus, the important codices of the cursive 424, the cursive 1739, the papyrus 46 (dated AD 200) omit these words. Tertullian probably, Origen certainly, did not have them. Basil said they were lacking in the oldest mss known to him. The heretic Marcion called this letter 'to the Laodiceans'. This small but very weighty evidence is supported by the evidence of the contents of the letter. It is difficult to explain such verses as 1:15; 3:2; 4:21, and the complete absence of personal greetings, if this were a letter addressed by Paul to Christians among whom he had laboured for 3 years (Acts 19:1-20 and 20:31). Yet it seems to have been addressed to a specific circle of Christians (1:15ff.; 6:21). The most likely interpretation of all the evidence is that the letter, if genuinely Paul's, was sent to a group of churches in Asia Minor (of which Ephesus was the greatest). Either one copy was sent to each in turn, the place-name being inserted in reading; or there may have been several copies with different addresses.

III. Authorship

There is abundant early evidence (perhaps going back to AD 95) of the use of this letter and from the end of the 2nd century we read of its unquestioned acceptance as the letter of Paul that it claims to be (1:1; 3:1). Since the end of the 18th century, however, the traditional authorship has been questioned. It is impossible here to do justice to the arguments for and against it. (They are set forward very fully, with opposite conclusions, in C. L. Mitton, *The Epistle to the Ephesians*, 1951, and A. van Roon, *The Authenticity of Ephesians*, 1974.) Very briefly the most important arguments against the genuineness of Ephesians are as follows:

1. Ephesians is not a real letter addressed to a particular situation like all the others we know as Paul's. It is more lyrical in style, full of participles and relatives, distinctive in its piling up of similar or related expressions. For the Pauline authorship it is argued that the absence of controversy accounts for the difference. We have here not the reasoned argument necessary in the other letters, but a 'prophetic declaration of incontrovertible, patent facts' (Dodd).

2. There are 42 words not otherwise used in the NT, and 44 more not used elsewhere by Paul. This argument can be assessed only by comparison with other Epistles, and by examining the words themselves. In the view of many the nature of the subject-matter sufficiently accounts for them.

3. It is urged that nowhere in Paul's writings have we such stress on the church and so little eschatology. Yet satisfying reasons can be given for the difference of emphasis, and in particular for

the great exposition here of the part of the church in the eternal purpose of God.

4. Certain features and expressions are taken as indicative of a later date or another hand than that of the apostle, e.g. the reference to the 'holy apostles and prophets' (3:5; cf. 2:20), the treatment of the Gentile question and the self-abasement of 3:8. Each individual objection may be answered, though those who oppose the Pauline authorship urge the cumulative force of all the objections.

5. Other arguments are based on a comparison of Ephesians with other NT writings. This letter has more in common with non-Pauline writings (especially Luke and Acts, 1 Peter and the Johannine writings) than any other letter of the Pauline Corpus. Sometimes the resemblances in thought and expression are very striking, but rarely such as make literary dependence probable. They witness rather to a large common vocabulary, and perhaps also to a similar formalizing of teaching and belief in the early church in different places. (See E. G. Selwyn, *The First Epistle of St Peter*, 1946, pp. 363-466.) Most significant, however, is the extensive similarity in content, expression and even order of subject-matter between this letter and Colossians. It is almost universally accepted that Colossians is prior to Ephesians. Ephesians has the doctrine and exhortation of Colossians, only developed further. With the exception of 6:21f. and Col. 4:7f., there is no evidence of direct copying, but in Ephesians the same expressions are often used with a slightly different connotation; one passage in one letter resembles two in the other; one passage in Ephesians has a parallel in Colossians and also in another Pauline letter. To some these phenomena are the strongest arguments for the work of an imitator; in the view of others they make the apostolic authorship more sure.

IV. Purpose

Many scholars have opposed the Pauline authorship without giving any positive suggestion as to how the letter came to be written. Others have been more specific.

1. Some have seen it as 'an attempt to sum up and to recommend to a later generation the apostle's teaching' (M. Barth, *AB*, p. 57). E. J. Goodspeed, for example, sees it as written to introduce the collection of Paul's letters, the quintessence of Paul presented by one (Onesimus, he suggests) who was saturated in Paul's writings and Colossians most of all.

2. Others have seen a historical crisis in the life of the early church—the threat of Gnosticism, the threat to Christian unity, or the danger of a turning aside from the great Pauline doctrines—as calling forth this work, written in the name of the great apostle.

3. J. C. Kirby (*Ephesians: Baptism and Pentecost*, 1968) partly follows the views of others in drawing attention to a great deal of liturgical and didactic material in the Epistle, but goes further and gives reasons for thinking of Ephesians as the transformation into a letter of what basically was an annual covenant renewal service, held at the time of Pentecost, recalling to Christians the meaning of their baptism.

To many the arguments against the Pauline authorship appear strong. To some, one or another of the views of the suggested purposes seems attractive. Yet, as E. F. Scott puts it, the Epistle 'is everywhere marked by a grandeur and originality

of thought which seems utterly beyond the reach of any mere imitator' (*MNTC*, p. 136). It is not easy to imagine a writer trying in Paul's name to present the essence of his theology and then turning to Colossians and quoting exactly the words of 4:7f. to give the impression that Ephesians was written at the same time as the letter to Colossae. It seems better to return to the Pauline authorship and reconstruct the situation that called forth Ephesians as follows.

Paul was a prisoner in Rome c. the year AD 61 (see *COLOSSIANS for other possibilities of the place of Paul's imprisonment at the time of writing). Onesimus, Philemon's runaway slave, had come to the apostle, been brought to faith in Christ and, with a letter from Paul, was being sent back to his master 'no longer as a slave, but more than a slave, as a beloved brother' (Phm. 16). At the same time the apostle had heard from Epaphras of the difficulties being faced, especially through false teaching, by the Colossian church. Thus when Onesimus was returning to Colossae, Paul also sent Tychicus with a letter to that church, answering their problems and giving practical instructions concerning Christian living to Christians whom he had never met or taught personally. Writing thus to the Colossians, the apostle's mind was filled with the theme of the glory of Christ and his perfect provision for the life of men. Paul's thoughts turned to the other churches in the whole neighbourhood of Colossae, and, no longer having to deal with particular pastoral problems or doctrinal difficulties, he fulfilled his desire to express, in teaching and exhortation, in praise and prayer, the glory of the purpose of God in Christ and the responsibility of the church to make known that purpose by proclamation and by living in unity, love and purity. This letter was despatched with Philemon and Colossians, but sent to the various churches of the Roman province of Asia, of which Ephesus was one and indeed the most significant. In all probability this is the very letter that Paul in Col. 4:16 says that the Colossian Christians should receive 'from Laodicea'.

F.F.

EPHESUS. The most important city in the Roman province of Asia, on the W coast of what is now Asiatic Turkey. It was situated at the mouth of the Caÿster River between the mountain range of Coressus and the sea. A magnificent road 11 m wide and lined with columns ran down through the city to the fine harbour, which served both as a great export centre at the end of the Asiatic caravan-route and also as a natural landing-point from Rome. The city, now uninhabited, has been undergoing excavation for many years, and is probably the most extensive and impressive ruined site of Asia Minor. The sea is now some 10 km away, owing to the silting process which has been at work for centuries. The harbour had to undergo extensive clearing operations at various times from

EPHESUS

the 2nd century BC; is that, perhaps, why Paul had to stop at Miletus (Acts 20:15–16)? The main part of the city, with its theatre, baths, library, agora and paved streets, lay between the Coressus ridge and the Caÿster, but the temple for which it was famed lay over 2 km to the NE. This site was originally sacred to the worship of the Anatolian fertility goddess, later identified with Greek Artemis and Latin Diana. Justinian built a church to St John on the hill nearby (hence the later name Ayasoluk—a corruption of *hagios theologos*), which was itself succeeded by a Seljuk mosque. The neighbouring settlement is now called Selçuk.

Ephesus, one of the 'seven churches of Asia' (Rev. 1–3).

The original Anatolian settlement was augmented before the 10th century BC by Ionian colonists, and a joint city was set up. The goddess of Ephesus took a Greek name, but clearly retained her earlier characteristics, for she was repeatedly represented at later periods as a many-breasted figure. Ephesus was conquered by Croesus shortly after his accession in c. 560 BC, and owed some of its artistic glories to his munificence. After his fall in 546 it came under Persian rule. Croesus shifted the site of the archaic city to focus upon the temple of *Artemis: Lysimachus, one of the successors of Alexander, forcibly replanted it about the harbour early in the 3rd century BC. Ephesus later formed part of the kingdom of Pergamum, which Attalus III bequeathed to Rome in 133 BC. It became the greatest commercial city of the Roman province of Asia. It then occupied a vast area, and its population may have numbered a third of a million. It is estimated that the great theatre built into Mt Pion in the centre of the city had a capacity of about 25,000.

Ephesus also maintained its religious importance under Roman rule. It became a centre of the emperor cult, and eventually possessed three official temples, thus qualifying thrice over for the proud title *neōkoros* ('temple-warden') of the emperors, as well as being *neōkoros* of Artemis (Acts 19:35). It is remarkable that Paul had friends among the *Asiarchs (*Asiarchai*, Acts 19:31), who were officers of the 'commune' of Asia, whose primary function was actually to foster the imperial cult.

The temple of Artemis itself had been rebuilt after a great fire in 356 BC, and ranked as one of the seven wonders of the world until its destruction by the Goths in AD 263. After years of patient search J. T. Wood in 1870 uncovered its remains in the marsh at the foot of Mt Ayasoluk. It had been the largest building in the Greek world. It contained an image of the goddess which, it was claimed, had fallen from heaven (*cf.* Acts 19:35). Indeed, it may well have been a meteorite originally. Silver coins from many places show the validity of the claim that the goddess of Ephesus was revered all over the world (Acts 19:27). They bear the inscription *Diana Ephesia* (*cf.* Acts 19:34).

There was a large colony of Jews at Ephesus, and they had long enjoyed a privileged position under Roman rule (Jos. *Ant.* 14, 225ff.; 14, 262ff.). The earliest reference to the coming of Christianity there is in c. AD 52, when Paul made a short visit and left Aquila and Priscilla there (Acts 18:18–21). Paul's third missionary journey had Ephesus as its goal, and he stayed there for over 2 years (Acts 19:8, 10), attracted, no doubt, by its strategic importance as a commercial, political and religious centre. His work was at first based on the synagogue: later he debated in the lecture-hall of Tyrannus, making of Ephesus a base for the evangelization of the whole province of Asia. The spread of Christianity, which refused syncretism, began to incur the hostility of vested religious interests. It affected not only the magic cults which flourished there (Acts 19:13ff.—one kind of magic formula was actually called *Ephesia grammata*) but also the worship of Artemis (Acts 19:27), causing damage to the trade in cult objects which was one source of the prosperity of Ephesus. There followed the celebrated riot described in Acts 19. Inscriptions show that the *grammateus* ('town clerk') who gained control of the assembly on this occasion was the leading civic official, directly responsible to the Romans for such breaches of the peace as illicit assembly (Acts 19:40). It has been suggested that his assertion 'there are proconsuls' (19:38), if it is not a generalizing plural, may fix the date with some precision. On Nero's accession in AD 54, M. Junius Silvanus, the proconsul of Asia, was poisoned by his subordinates Helius and Celer, who acted as proconsuls until the arrival of a regular successor.

Christianity evidently spread to *Colossae and the other cities of the Lycus valley at the period of Paul's stay in Ephesus (*cf.* Col. 1:6–7; 2:1). It was Paul's headquarters for most of the time of the Corinthian controversy and correspondence (1 Cor. 16:8), and the experience which he describes as 'fighting with wild beasts' happened there (1 Cor. 15:32). This seems to be a metaphorical allusion to something already known to the Corinthians, perhaps mob violence. (There was no amphitheatre at Ephesus, though the stadium was later adapted to accommodate beast-fighting.) G. S. Duncan (*St Paul's Ephesian Ministry*, 1929) has maintained that Paul was imprisoned two or three times at Ephesus, and that all the captivity Epistles were written from there and not from Rome. E. J. Goodspeed (*INT*, 1937), followed by C. L. Mitton and J. Knox, have located at Ephesus the collection of the Pauline Corpus of letters. There are difficulties in the hypothesis of an Ephesian imprisonment which suits the case, and although B. Reicke and J. A. T. Robinson have recently revived the idea that some or all of the captivity Epistles were written from Caesarea, it remains preferable to

place them in Rome (see C. H. Dodd, *BJRL* 18, 1934, pp. 72–92).

After Paul's departure Timothy was left at Ephesus (1 Tim. 1:3). The Pastors give a glimpse of the period of consolidation there. It is thought by many that Rom. 16 was originally addressed by Paul to Ephesus.

The city was later the headquarters of the John who had jurisdiction over the seven leading churches of Asia addressed in the Apocalypse. The church in Ephesus is addressed first of the seven (Rev. 2:1–7), as being the most important church in the *de facto* capital, and as being the landing-place for a messenger from Patmos and standing at the head of a circular road joining the seven cities in order. This church is flourishing, but is troubled by false teachers, and has lost its 'first love'. The false apostles (2:2) are most probably like the *Nicolaitans, who seem to have advocated compromise with the power of paganism for the Christian under pressure. The Ephesians were steadfast, but deficient in love. Ramsay characterized Ephesus as the 'city of change'. Its problems were the problems of a successful church coping with changing circumstances: the city too had had a long history of shifting sites (cf. 2:5b). The promise of eating of the tree of life is here probably set against the background of the sacred date-palm of Artemis, which figures on Ephesian coins.

According to Irenaeus and Eusebius, Ephesus became the home of John the apostle. A generation after his time Ignatius wrote of the continuing fame and faithfulness of the Ephesian church (*Ephesians* 8–9). The third General Council took place here in AD 431 to condemn Nestorian Christology, and sat in the double church of St Mary, the ruins of which are still to be seen. The city declined, and the progressive silting of its gulf finally severed it wholly from the sea.

C.J.H.

EPHPHATHA. The actual word addressed by Jesus to the deaf man (Mk. 7:34). It is probably an Aramaic imperative transliterated into Greek, and the Evangelist adds the translation (in Greek), 'be opened'. The Aramaic verb used is *p'tah*, 'to open'; it is not certain whether the simple passive (eth-peel) or intensive passive (ethpaal) was employed. The former form would be *'elp'tah*, the latter *'elpattah*. It seems that in either case the *l* was assimilated to the *p*; this is a regular feature of later Aramaic and its dialects (e.g. Syriac). An alternative possibility is that the word is Hebrew (niphil conjugation).

BIBLIOGRAPHY. J. A. Emerton, *JTS* 24, 1973, pp. 1–23.

D.F.P.

EPHRAIM. The second son of Joseph, born to him by Asenath, the daughter of Potipharah, before the years of famine came (Gn. 41:50–52). The sick Jacob acknowledged the two sons of Joseph (Gn. 48:5), blessing Ephraim with his right

hand and Manasseh with his left (vv. 13–14), thus signifying that Ephraim would become the greater people (v. 19).

In the order of the tribes in the wilderness encampment the standard of Ephraim's camp was on the W side (Nu. 2:18). From the tribe of Ephraim Elishama was to stand with Moses (Nu. 1:10), and Joshua the son of Nun, one of the spies, was descended from Ephraim (Nu. 13:8). He was chosen with Eleazar the priest to divide the land (Nu. 34:17). Ephraim is also included in the blessing of Moses.

Under the valiant leadership of Joshua, Ephraim with the other tribes received its inheritance, which is described in Jos. 16. The territory may be roughly identified as follows. Proceeding W from Gilgal we come to Bethel, then to lower Beth-horon, W to Gezer, then N to Lod and W towards the sea, N to the Qanah river and then E to Tap-puah, Janobah, Taanath-shiloh to Ataroth, then S to Nasrath and Gilgal.

From the beginning the tribe of Ephraim occupied a position of prestige and significance. It complained to Gideon that he had not called it to fight against the Midianites. His reply reveals the superior position of Ephraim. 'Is not the gleanings of the grapes of Ephraim better than the vintage of Abiezer?' (Jdg. 8:2). The men of Ephraim complained again in similar terms to Jephthah, and this led to war between the Ephraimites and the Gileadites.

The prestige of Ephraim kept it from looking with favour upon Judah. After the death of Saul, Abner, Saul's captain, made Eshbaal king over the N tribes, including Ephraim. Because of the Philistine domination, however, Eshbaal's authority was effectively limited to Transjordan. He reigned for 2 years, but Judah followed David (2 Sa. 2:8ff.). After Eshbaal's death the N tribes invited David to become their king.

Later David learnt that Israel followed after Absalom. The N tribes never did desire to yield to David's reign, but David grew continually greater and stronger. Under Solomon the S kingdom reached the pinnacle of splendour and prosperity. Nevertheless, even at this time, there was discontent in the N (1 Ki. 11:26ff.).

Rehoboam's folly provided the necessary pretext, and the N revolted, renouncing all claim to the promises made to David (1 Ki. 12:16). Nevertheless, God continued to send his prophets to the N kingdom, and one of the characteristics of the Messianic kingdom is to be the healing of the tragic schism introduced by Jeroboam the son of Nebat (cf. Ho. 1:11; Is. 11:13). Even when exile has overtaken the S as well as the N kingdom, Ephraim retains a special place: 'I am a father to Israel, and Ephraim is my first-born' (Je. 31:9).

EPHRAIM (geographical). The boundaries of Ephraim are recorded in Jos. 16, and with Manasseh in Jos. 17. Only some of the main topographical features of these boundaries have so far been determined beyond dispute; most of the places mentioned cannot be precisely located at present.

The S boundary of Ephraim is most clearly expressed in Jos. 16:1–3, where, however, it is given as the (S) boundary of 'the children of Joseph', i.e. Ephraim-Manasseh. But as Manasseh was situated

EPHRAIM

wholly to the N and NE of Ephraim, this boundary is, in practice, that of Ephraim. It ran (E to W) up from the Jordan and Jericho inland to Bethel (Beitin, c. 16 km N of Jerusalem), Luz (?near by) and Ataroth (site uncertain), then *via* the border of Lower Beth-horon to Gezer—well-known site—and the Mediterranean sea-coast (Jos. 16:1–3). V. 5 is difficult, but may perhaps further define part of this S boundary.

The N boundary from a point Michmetha(t)h (16:6) 'before Shechem' (17:7) turned W; its course in that direction ran from Tappuah (location still disputed) to and along the brook of Qanah (perhaps the present Wadi Qānah, which joins Wadi Aujah, and reaches the Mediterranean c. 6½ km N of Joppa) to the sea (16:8). E from Michmetha(t)h, the border turned by Taanath-shiloh (S) along the E of Janoah to (another) Ataroth, Naarah, and back to Jericho and the Jordan (16:6–7). On the N, Shechem apparently was within Ephraim's share, to judge from the levitical city-lists (Jos. 21:20–21; 1 Ch. 6:67).

The region in central W Palestine that fell to Ephraim is mainly relatively high hill-country with better rainfall than Judaea and some good soils; hence some biblical references to the fruitfulness of the Ephraim district. The Ephraimites had direct but not over-easy access to the great N–S trunk road through the W plain.

EPHRATH, EPHRATHAH. 1. The ancient name of *Bethlehem Judah, which occurs in all cases but one (Gn. 48:7; 'eḫrāṭ) in the form 'eḫrāṭā. Rachel was buried on the route there from Bethel (Gn. 35:16, 19; 48:7; cf. 1 Sa. 10:2); it was the home of Naomi's family (Ru. 4:11), who are described as Ephrathites ('eḫrāṭi, Ru. 1:2), of Ruth's descendant David (1 Sa. 17:12; cf. Ps. 132:6), and of the Messiah, as foretold in Mi. 5:2.

2. The gentilic 'eḫrāṭi is applied three times to Ephraimites (Jdg. 12:5; 1 Sa. 1:1; 1 Ki. 11:26).

3. The second wife of Caleb the son of Hezron (1 Ch. 2:19, 50; 4:4; cf. 2:24). T. C. M.

EPHRON. 1. Name of a 'son of Heth' (Hittite or Syrian), a son of Zohar from whom Abraham bought the cave of Machpelah as a burial-place for Sarah (Gn. 23:8; 25:9; 49:30). A similar type name (Apran) is known from *Alalakh, Syria. 2. A hill area between Nephtoah and *Kiriath-jearim which marked the border of Judah (Jos. 15:9; 18:15, rsv amended text). 3. A place near *Bethel taken by Abijah from Jeroboam I (2 Ch. 13:19). rsv 'Ephron'; MT 'Ephraim', av 'Ephraim'; cf. 2 Sa. 13:23) to be identified with Ophrah (Jos. 18:23). Perhaps a word meaning 'province' (VT 12, 1962, p. 339). Generally identified as et-Taiyibeh c. 7 km NE of Bethel. 4. A fort between Ashtoreth-karnaim (Carmion) and Beth-shan (Scythopolis) captured by Judas Maccabaeus (1 Macc. 5:46–52; 2 Macc. 12:27–29; Jos., *Ant.* 12. 346). Possibly the modern et-Taiyibeh SE of Galilee. D. J. W.

EPICUREANS. Some of the philosophers whom Paul encountered at Athens (Acts 17:18) were of this school, whose best-known disciple is the Roman poet Lucretius. The founder, Epicurus, was born in 341 bc on the island of Samos. His early studies under Nausiphanes, a disciple of Democritus, taught him to regard the world as the result of the random motion and combination of atomic particles. He lived for a time in exile and poverty. Gradually he gathered round him a circle of friends and began to teach his distinctive doctrines. In 306 he established himself in Athens at the famous 'Garden' which became the headquarters of the school. He died in 270 after great suffering from an internal complaint, but in peace of mind.

The founder's experiences, coupled with the general uncertainty of life in the last centuries before Christ, gave a special stamp to the Epicurean teachings. The whole system had a practical end in view, the achievement of happiness by serene detachment. Democritean atomism banished all fear of divine intervention in life or punishment after death; the gods follow to perfection the life of serene detachment and will have nothing to do with human existence, and death brings a final dispersion of our constituent atoms.

The Epicureans found contentment in limiting desire and in the joys and solaces of friendship. The pursuit of extravagant pleasure which gives to 'epicure' its modern connotation was a late perversion of their quest for happiness.

It is easy to see why the Epicureans found Paul's teaching about the resurrection strange and unpalatable. Jewish rabbis use the word *apigōrōs* to mean one who denies life after death, and later as a synonym for 'infidel'.

EPISTLE. Gk. *epistolē* and Lat. *epistula* represent a letter of any kind: originally simply a written communication between persons apart, whether personal and private or official. In this sense epistles are a part of the heritage of all literate peoples, and examples are to be found in the OT (2 Sa. 11; 1 Ki. 21; 2 Ki. 5; 10; 20; 2 Ch. 30; 32; Ezr. 4–5; 7; Ne. 2; 6; Est. 1; 3; 8–9; Is. 37; 39; Je. 29) and in the Greek papyri from Egypt (cf. all the large published collections of papyri, *passim*, and especially the Zenon correspondence). Such a letter was described by Demetrius, *Typoi epistolikoi* (1st century bc), as a written conversation, while Demetrius, *On Style* 3. 223ff., quotes Artemon, the ancient collector of Aristotle's letters, as calling it half a dialogue.

But the earliest collections of Greek letters generally regarded as genuine, in part at least, those of Isocrates and Plato, already show a tendency to use letters, or the letter-form, for larger purposes than mere private or official communication; so that among Isocrates' letters (368–338 bc) some are set speeches, or introductions to speeches, and Plato's Seventh Letter (c. 354 bc) is a refutation of popular misconceptions about his philosophy and conduct. In both cases the letters aim at other readers than those addressed, and are thus a form of publication. Compare here present-day letters 'to the Editor of *The Times*'.

Despite a feeling of often hinted at, and sometimes

Three places bearing the name Ephron: on the border of Judah, near Bethel and near Bethshan.

expressed, that such letters have neither the size nor the subject-matter of true letters, but are rather 'writings with "greetings" added' (Demetrius, *On Style, loc. cit.*), the epistolary form continued to be used for philosophical, scientific and literary publication (e.g. Epicurus, *Epistles*, and the three literary letters of Dionysius of Halicarnassus). The theory and practice of letter-writing came to be treated by the teachers of rhetoric (e.g. Demetrius, *On Style; idem, Typoi epistolikoi*), and letter-writing in the characters of famous men formed part of the rhetorical school exercise of *prosōpoeia*. The growth in Hellenistic and Roman times of collections of fictitious letters may be attributed to such exercises, and to the eagerness of the great libraries to buy additional works, especially of famous men.

G. A. Deissmann, confronted by the simplicity of most letters in the papyri, maintained a sharp distinction between 'genuine letters' as personal, direct, transient and un-literary, and 'epistles' as impersonal, aimed at a reading public and permanence, and literary. Feeling an undeniable similarity between certain elements in the NT Epistles and the papyri, he classed most of Paul's Epistles and 2 and 3 John as letters, Hebrews, James, 1 and 2 Peter, Jude and Revelation as epistles, and 1 John as a *diatribē* (*LAE*³, ch. 3, pp. 148–251). But the distinction cannot be so sharply maintained, as there are different degrees of 'literariness', sorts and sizes of 'public', and kinds of publication.

Of the Pauline letters to churches, those to the Corinthians, Galatians, Philippians and Thesalonians contain most personal elements, Romans

EPISTLE

fewer, and Ephesians and Colossians least of all. Galatians and Ephesians are composed on a rhetorical plan, and all of them have considerable rhetorical elements. In the Pastoral Epistles the personal references are fairly numerous and rhetorical elements comparatively few. Philemon, rightly regarded by Deissmann as the most personal letter in the NT, and compared to British Museum Papyrus 417, is nevertheless very cleverly written and contains rhetorical elements noticeable especially when considered beside Isocrates, *Ep* 8, and Demetrius, *Typoi epistolikoi* 12. Hebrews is the most artistic literary writing in the NT, being composed from beginning to end on the pattern of *proem, thesis, diēgēsis, apodeixis, epilogue*, laid down by Greek rhetoricians, and is written in rhythmic, periodic prose. In James, 1 and 2 Peter and Jude there are very few personal references; all are literary, especially 1 Peter; and 2 Peter and Jude are definitely rhetorical. 2 and 3 John appear as private communications, while 1 John is not, as we have it, in letter-form at all. Thus most of the NT Epistles show a greater or smaller affinity with preaching; some may be classed as sent sermons, while in others the letter-elements are a more literary form.

ERASTUS. 1. An assistant of Paul, who shared Timothy's mission to Macedonia to allow Paul to continue working from Ephesus (Acts 19:22). The mission may have been directed ultimately to Corinth (*cf.* 1 Cor. 4:17), and Erastus been one of the 'brethren' of 2 Cor. 8; but certainty is impossible. Undoubtedly, however, he is the Erastus mentioned as staying at Corinth in 2 Tim. 4:20.

2. City-treasurer (not 'chamberlain' as AV) of Corinth, sending greetings in Rom. 16:23 (***QUARTUS**). A Lat. inscription found at Corinth states, 'Erastus laid this pavement at his own expense, in appreciation of his appointment as aedile.' Many (*e.g.* Broneer) accept the identification with the Christian city treasurer.

Some further identify 1 and 2: G. S. Duncan, for example, suggests that 2 Tim. 4:20 indicates that Erastus, unlike Timothy, completed the journey to Corinth, where he became treasurer a year or so later (*St Paul's Ephesian Ministry*, pp. 79ff.); but such a rapid rise to power is most unlikely, and the name is quite common.

ERECH. An ancient city of Mesopotamia mentioned in the Table of Nations (Gn. 10:10) as one of the possessions of Nimrod in the land of *Shinar. Known to the Sumerians as *Unu(g)* and to the Akkadians as *Uruk*, it was one of the great cities of Sumerian times. It is named in the Sumer-

ian king list as the seat of the 2nd Dynasty after the Flood, one of whose kings was Gilgamesh, who later became one of the great heroes of Sumerian legend. Though the city continued in occupation during later periods (Gk. *Orchoë*), it never surpassed its early importance. Uruk is represented today by the group of mounds known to the Arabs as *Warka*, which lies in S Babylonia some 64 km NW of Ur and 6 km E of the present course of the *Euphrates. While the site was investigated over a century ago by W. K. Loftus (*Travels and Researches in Chaldaea and Susiana*, 1857), the principal excavations have been conducted by a series of German expeditions in 1912, 1928–39 and 1954–60. The results are of outstanding importance for the early history of Mesopotamia. Prehistoric remains of the Ubaid Period (***SUMER**) were followed by monumental architecture and stone sculpture of the Late Prehistoric Period which richly illustrate the material culture of Mesopotamia at the beginning of history. It was in these levels, dating from the 4th millennium BC, that the earliest inscriptions so far known were found. These are in the form of clay tablets, and, though the signs are only pictographic, it is probable that the language behind them was Sumerian.

ESARHADDON (Heb. *'esarhaddōn*; Assy. *Aššur-ah-iddin*, 'Ashur has given a brother') was king of Assyria and Babylonia 681–669 BC. He succeeded his father Sennacherib who was murdered in Tebet in 681 BC (2 Ki. 19:37; Is. 37:38). His first act was to pursue the murderers as far as Hanigalbat (S Armenia) and to quash the rebellion in Nineveh, which lasted 6 weeks. There is little support for the theory that Esarhaddon was the head of a pro-Babylonian faction or 'the son' mentioned in the Bab. Chronicle as the murderer (*DOTT*, pp. 70–73). His own inscriptions tell how he had been made crown-prince by his father earlier in the year, and though he had been viceroy in Babylon his attention to the religious centre was merely in keeping with his care for all the ancient shrines. His early military operations were designed to safeguard the N frontier and trade-routes against the warlike Teuṣpa and the incursions of the Cimmerians (***GOMER**), whom he defeated. In the S the Elamites, who had been defeated by his father, once more stirred up the tribes of S Babylonia, and Esarhaddon was forced to campaign against the 'sea-lands' where he installed Na'id-Marduk, son of *Merodach-baladan, as the local sheikh in 678 BC. His clashes with Elam and the Babylonians resulted in the deportation of many captives, some of whom were settled in Samaria (Ezr. 4:2).

In the W Esarhaddon continued his father's policy. He exacted heavy tribute from the vassal kings of Syria and Palestine, listing Manasseh (*Menasī*) of Judah (*Yaudi*) after Ba'ali of Tyre, with whom he concluded a treaty, having failed to isolate and thus subdue the port. The rulers of Edom, Moab and Ammon were made vassals after a series of raids on their territory in which he sought to counter the influence of Tirhakah of Egypt, who had incited a number of the Philistine cities to revolt. Esarhaddon sacked Sidon in 676 BC, after a 3-year siege, and incorporated part of its territory into an extended Assyrian province

(probably including Samaria). Some of the refugees from the city were housed in a new town, Kār-Esarhaddon, built nearby. About this time Gaza and Ashkelon were counted among his vassals.

The subordinate kingdoms in Syria and Palestine were called upon to provide materials for Esarhaddon's building operations in Assyria and in Babylon, which he now sought to revive after earlier changes of fortune. This may explain the temporary detention of Manasseh in Babylon (2 Ch. 33:11). Assyrian letters referring to tribute in silver received from Judah, Moab and Edom may be assigned to this time.

In May 672 BC Esarhaddon brought all the vassal-kings together to acknowledge his arrangements to ensure that the succession to the throne was less disturbed than his own. *Ashurbanipal was declared to be crown-prince or heir to Assyria and Šamaš-šum-ukin to Babylonia. Copies of the treaty imposed on the Median city-chiefs on this occasion, found at Calah (Nimrud), show the provisions to which all, including Manasseh, would have had to assent. They declared their loyalty to the Assyrian national god Ashur and their willingness to serve Assyria for ever. History tells how soon all the client kings broke their oaths.

Having gained control of the W, Esarhaddon subdued Egypt, defeated Tirhakah, besieged Memphis and counted the land as an Assyrian dependency under Neco. When the victorious army was withdrawn, local intrigues developed into open revolt. While Esarhaddon was on his way to deal with this in 669 BC he died at Harran, leaving five surviving sons and one daughter. His mother, the forceful wife of Sennacherib (Naqi'a-Zakutu), also survived him.

ESAU. Esau was the elder of Isaac's twin sons (Gn. 25:21–26). His relations with Jacob his brother are the subject of the well-known stories in Gn. 25:27–34; 27:1ff.; 32:3–12; 33:1–16. Esau was his father's favourite son, and it was Isaac's intention to impart to him the blessing that was the eldest son's right (Gn. 27:1ff.). However, the supremacy of Jacob over his older brother, foreshadowed before, and at the moment of, their birth (Gn. 25:21–26), and eventually confirmed unwittingly by the aged Isaac (Gn. 27:22–29, 33–37), was finally established.

It was from this duplicity on the part of Jacob, the ancestor of the Israelites, that there stemmed the deep-rooted animosity that dominated Israel's relations with Edom, of whom Esau was the ancestor. Instances of this antagonism between the Israelites and the Edomites occur in the OT (e.g. Nu. 20:18–21; 1 Ki. 11:14ff.; Ps. 137:7).

The chief importance of the biblical references to Esau lies in the theological significance given to his rejection, in spite of the right of succession being his by virtue of primogeniture. The biblical explanation is that the Lord hated Esau and loved Jacob (Mal. 1:2f.; Rom. 9:13). Esau symbolizes those whom God has not elected; Jacob typifies those whom God has chosen.

But the ground of this election was not any difference in the lives and characters of Jacob and Esau. Jacob was chosen before he and his brother were born. And even God's 'hate' and 'love' could

not be the ground of divine election, otherwise God's choice would depend on caprice or whim. God has exercised his sovereign will in the free exercise of his elective grace, the moral purpose of which he was the sole Originator. (*ELECTION.)

In Heb. 12:16f. Esau symbolizes those who abandon their hope of glory for the sake of the things that are seen and not eternal. J.G.S.S.T.

ESCHATOLOGY. From Gk. *eschatos*, 'last', the term refers to the 'doctrine of the last things'.

In contrast to cyclical conceptions of history, the biblical writings understand history as a linear movement towards a goal. God is driving history towards the ultimate fulfilment of his purposes for his creation. So biblical eschatology is not limited to the destiny of the individual; it concerns the consummation of the whole history of the world, towards which all God's redemptive acts in history are directed.

I. The OT perspective

The forward-looking character of Israelite faith dates from the call of Abraham (Gn. 12:1–3) and the promise of the land, but it is in the message of the prophets that it becomes fully eschatological, looking towards a final and permanent goal of God's purpose in history. The prophetic term 'the Day of the Lord' (with a variety of similar expressions such as 'on that day') refers to the coming event of God's decisive action in judgment and salvation in the historical realm. For the prophets it is always immediately related to their present historical context, and by no means necessarily refers to the end of history. Increasingly, however, there emerges the concept of a final resolution of history: a day of judgment beyond which God establishes a permanent age of salvation. A fully transcendent eschatology, which expects a direct and universal act of God, beyond the possibilities of ordinary history, issuing in a radically transformed world, is characteristic of *apocalyptic, which is already to be found in several parts of the prophetic books.

The prophets frequently depict the eschatological age of salvation which lies on the far side of judgment. Fundamentally it is the age in which God's will is to prevail. The nations will serve the God of Israel and learn his will (Is. 2:2f. = Mi. 4:1f.; Je. 3:17; Zp. 3:9f.; Zc. 8:20–23). There will be international peace and justice (Is. 2:4 = Mi. 4:3) and peace in nature (Is. 11:6; 65:25). God's people will have security (Mi. 4:4; Is. 65:21–23) and prosperity (Zc. 8:12). The law of God will be written on their hearts (Je. 31:31–34; Ezk. 36:26f.).

Frequently associated with the eschatological age is the Davidic king who will rule Israel (and, sometimes, the nations) as God's representative (Is. 9:6f.; 11:1–10; Je. 23:5f.; Ezk. 34:23f.; 37:24f.; Mi. 5:2–4; Zc. 9:9f.). A principal feature of these prophecies is that the Messiah will rule in *righteousness*. (In the OT itself 'Messiah' [Christ] is not yet used as a technical term for the eschatological king.) Other 'Messianic' figures in the OT hope are the 'one like a son of man' (Dn. 7:13), the heavenly representative of Israel who receives universal dominion, the suffering Servant (Is. 53), and the eschatological prophet (Is. 61:1–3). Commonly the eschatological act of judgment and salvation is accomplished by the personal coming of God himself (Is. 26:21; Zc. 14:5; Mal. 3:1–5).

II. The NT perspective

The distinctive character of NT eschatology is determined by the conviction that in the history of Jesus Christ God's decisive eschatological act has already taken place, though in such a way that the consummation remains still future. There is in NT eschatology both an 'already' of accomplished fulfilment and a 'not yet' of still outstanding promise. There is both a 'realized' and a 'future' aspect to NT eschatology, which is therefore probably best described by the term '*inaugurated eschatology*'.

The note of eschatological fulfilment already under way means that OT eschatology has become, in a measure, present reality for the NT. The 'last days' of the prophets have arrived: for Christ 'was made manifest at the end of the times' (1 Pet. 1:20); God 'in these last days ... has spoken to us by a Son' (Heb. 1:2); Christians are those 'upon whom the end of the ages has come' (1 Cor. 10:11); 'it is the last hour' (1 Jn. 2:18); cf. also Acts 2:17; Heb. 6:5. On the other hand, NT writers oppose the fantasy that fulfilment is already complete (2 Tim. 2:18).

It is important to preserve the theological unity of God's redemptive work, past, present and future, 'already' and 'not yet'. Too often traditional theology has kept these aspects apart, as the finished work of Christ on the one hand, and the 'last things' on the other. In the NT perspective the 'last things' began with the ministry of Jesus. The historical work of Christ ensures, requires and points us forward to the future consummation of God's kingdom. The Christian hope for the future arises out of the historical work of Christ. The Christian church lives between the 'already' and the 'not yet', caught up in the ongoing process of eschatological fulfilment.

Inaugurated eschatology is found already in Jesus' proclamation of the kingdom of God. Jesus modifies the purely future expectation of Jewish apocalyptic by his message that the eschatological rule of God has already drawn near (Mt. 4:17). Its power is already at work in Jesus' deeds of victory over the realm of evil (Mt. 12:28f.). In Jesus' own person and mission the kingdom of God is present (Lk. 17:20f.), demanding response, so that a man's participation in the future of the kingdom is determined by his response to Jesus in the present (Mt. 10:32f.). Thus Jesus makes the kingdom a present reality which nevertheless remains future (Mk. 9:1; 14:25).

The eschatological character of Jesus' mission was confirmed by his resurrection. Resurrection is an eschatological event, belonging to the OT expectation of man's final destiny. So the unexpected resurrection of the one man Jesus ahead of all others determined the church's conviction that the End had already begun. He is risen already as the 'first fruits' of the dead (1 Cor. 15:20). On behalf of his people, Jesus has already entered upon the eternal life of the eschatological age; he has pioneered the way (Heb. 12:2) so that others may follow. In Paul's terms, he is the 'last Adam' (1 Cor. 15:45), the eschatological Man. For all other men eschatological salvation now means sharing *his* eschatological humanity, *his* resurrection life.

So for NT writers, the death and resurrection of Jesus are the absolutely decisive eschatological event which determines the Christian hope for the future: see, e.g., Acts 17:31; Rom. 8:11; 2 Cor. 4:14; 1 Thes. 4:14. This accounts for the second distinct-

ive feature of NT eschatology. As well as its characteristic tension of 'already' and 'not yet', NT eschatology is distinctive in being wholly *Christ-centred*. The role of Jesus in NT eschatology goes far beyond the role of the Messiah in OT or later Jewish expectation. Certainly he is the heavenly Son of man (Dn. 7), the eschatological prophet (Is. 61; cf. Lk. 4:18-21), the suffering Servant (Is. 53), and even the Davidic king, though not in the way his contemporaries expected. But the NT's concentration of eschatological fulfilment in Jesus reflects not only his fulfilment of these particular eschatological roles. For NT theology, Jesus embodies both God's own work of eschatological salvation and also man's eschatological destiny. So he is, on the one hand, the Saviour and the Judge, the Conqueror of evil, the Agent of God's rule and the Mediator of God's eschatological presence to men: he is himself the fulfilment of the OT expectations of God's own eschatological coming (cf. Mal. 3:1 with Lk. 1:76; 7:27). On the other hand, he is also the eschatological Man: he has achieved and defines in his own risen humanity the eschatological destiny of all men. So now the most adequate statement of our destiny is that we shall be like him (Rom. 8:29; 1 Cor. 15:49; Phil. 3:21; 1 Jn. 3:2). For both these reasons the Christian hope is focused on the coming of Jesus Christ.

In all the NT writings, eschatology has these two distinctive characteristics: it is inaugurated and Christ-centred. There are, however, differences of emphasis, especially in the balance of 'already' and 'not yet'. The Fourth Gospel lays a heavy weight of emphasis both on realized eschatology and on the identification of eschatological salvation with Jesus himself (see, e.g., 11:23-26), but does not eliminate the future expectation (5:28f.; 6:39, etc.).

III. Christian life in hope

The Christian lives between the 'already' and the 'not yet', between the resurrection of Christ and the future general resurrection at the coming of Christ. This accounts for the distinctive structure of Christian existence, founded on the finished work of Christ in the historical past and at the same time living in the hope of the future which is kindled and guaranteed by that past history itself. The structure is seen, e.g., in the Lord's Supper, where the risen Lord is present with his people in an act of 'remembrance' of his death, which is at the same time a symbolic anticipation of the eschatological banquet of the future, witnessing therefore to the hope of his coming.

The time between the 'already' and the 'not yet' is the time of the Spirit and the time of the church. The Spirit is the eschatological gift promised by the prophets (Acts 2:16-18), by which Christians already participate in the eternal life of the age to come. The Spirit creates the church, the eschatological people of God, who have already been transferred from the dominion of darkness to the kingdom of Christ (Col. 1:13). Through the Spirit in the church the life of the age to come is already being lived in the midst of the history of this present evil age (Gal. 1:4). Thus, in a sense, the new age and the old age overlap; the new humanity of the last Adam co-exists with the old humanity of the first Adam. By faith we know that the old is passing and under judgment, and the future lies with the new reality of Christ.

The process of eschatological fulfilment in the overlap of the ages involves the mission of the

church, which fulfils the universalism of the OT hope. The death and resurrection of Christ are an eschatological event of universal significance which must, however, be universally realized in history, through the church's world-wide proclamation of the gospel (Mt. 28:18–20; Mk. 13:10; Col. 1:23).

The line between the new age and the old does not, however, run simply between the church and the world; it runs through the church and through the individual Christian life. We are always in transition from the old to the new, living in the eschatological tension of the 'already' and the 'not yet'. We are saved and yet we still await salvation. God has justified us, *i.e.* he has anticipated the verdict of the last judgment by declaring us acquitted through Christ. Yet we still 'wait for the hope of righteousness' (Gal. 5:5). God has given us the Spirit by which we share Christ's resurrection life. But the Spirit is still only the first instalment (2 Cor. 1:22; 5:5; Eph. 1:14) of the eschatological inheritance, the down-payment which guarantees the full payment. The Spirit is the first fruits (Rom. 8:23) of the full harvest. Therefore in present Christian existence we still know the warfare of flesh and Spirit (Gal. 5:13–26), the struggle within us between the nature we owe to the first Adam and the new nature we owe to the last Adam. We still await the redemption of our bodies at the resurrection (Rom. 8:23; 1 Cor. 15:44–50), and perfection is still the goal towards which we strive (Phil. 3:10–14). The tension of 'already' and 'not yet' is an existential reality of Christian life.

For the same reason the Christian life involves suffering. In this age Christians must share Christ's sufferings, so that in the age to come they may share his glory (Acts 14:22; Rom. 8:17; 2 Cor. 4:17; 2 Thes. 1:4f.; Heb. 12:2; 1 Pet. 4:13; 5:10; Rev. 2:10), *i.e.* 'glory' belongs to the 'not yet' of Christian existence. This is both because we are still in this mortal body, and also because the church is still in the world of Satan's dominion. Its mission is therefore inseparable from persecution, as Christ's was (Jn. 15:18–20).

It is important to notice that NT eschatology is never mere information about the future. The future hope is always relevant to Christian life in the present. It is therefore repeatedly made the basis of exhortations to Christian living appropriate to the Christian hope (Mt. 5:3–10, 24f.; Rom. 13:11–14; 1 Cor. 7:26–31; 15:58; 1 Thes. 5:1–11; Heb. 10:32–39; 1 Pet. 1:13; 4:7; 2 Pet. 3:14; Rev. 2f.). Christian life is characterized by its orientation towards the time when God's rule will finally prevail universally (Mt. 6:10), and Christians will therefore stand for that reality against all the apparent dominance of evil in this age. They will *wait* for that day in solidarity with the eager longing of the whole creation (Rom. 8:18–25; 1 Cor. 1:7; Jude 21), and they will suffer with *patient endurance* the contradictions of the present. Steadfast endurance is the virtue which the NT most often associates with Christian hope (Mt. 10:22; 24:13; Rom. 8:25; 1 Thes. 1:3; 2 Tim. 2:12; Heb. 6:11f.; 10:36; Jas. 5:7–11; Rev. 1:9; 13:10; 14:12). Through the tribulation of the present age, Christians endure, even rejoicing (Rom. 12:12), in the strength of their hope which, founded on the resurrection of the crucified Christ, assures them that the way of the cross is the way to the kingdom. Christians whose hope is focused on the permanent values of God's coming kingdom will be freed from the bondage of this

world's materialistic values (Mt. 6:33; 1 Cor. 7:29–31; Phil. 3:18–21; Col. 3:1–4). Christians whose hope is that Christ will finally present them perfect before his Father (1 Cor. 1:8; 1 Thes. 3:13; Jude 24) will strive towards that perfection in the present (Phil. 3:12–15; Heb. 12:14; 2 Pet. 3:11–14; 1 Jn. 3:3). They will live *vigilantly* (Mt. 24:42–44; 25:1–13; Mk. 13:33–37; Lk. 21:34–36; 1 Thes. 5:1–11; 1 Pet. 5:8; Rev. 16:15), like servants who daily expect the return of their master (Lk. 12:35–48).

The Christian hope is not utopian. The kingdom of God will not be built by human effort; it is God's own act. Nevertheless, because the kingdom represents the perfect realization of God's will for human society, it will also be the motive for Christian social action in the present. The kingdom is anticipated now primarily in the church, the community of those who acknowledge the King, but Christian social action for the realization of God's will in society at large will also be a sign of the coming kingdom. Those who pray for the coming of the kingdom (Mt. 6:10) cannot fail to act out that prayer so far as it is possible. They will do so, however, with that eschatological realism which recognizes that all anticipations of the kingdom in this age will be provisional and imperfect, that the coming kingdom must never be confused with the social and political structures of this age (Lk. 22:25–27; Jn. 18:36), and the latter will not infrequently embody satanic opposition to the kingdom (Rev. 13:17). In this way Christians will not be disillusioned by human failure but continue to trust the promise of God. Human utopianism must rediscover its true goal in Christian hope, not vice versa.

IV. Signs of the times

The NT consistently represents the coming of Christ as imminent (Mt. 16:28; 24:33; Rom. 13:11f.; 1 Cor. 7:29; Jas. 5:8f.; 1 Pet. 4:7; Rev. 1:1; 22:7, 10, 12, 20). This temporal imminence is, however, qualified by the expectation that certain events must happen 'first' (Mt. 24:14; 2 Thes. 2:2–8), and especially by clear teaching that the date of the end cannot be known in advance (Mt. 24:36, 42; 25:13; Mk. 13:32f.; Acts 1:7). All calculation is ruled out, and Christians live in daily expectation precisely because the date cannot be known. Imminence has less to do with dates than with the *theological* relationship of future fulfilment to the past history of Christ and the present situation of Christians. The 'already' promises, guarantees, demands the 'not yet', and so the coming of Christ exercises a continuous pressure on the present, motivating Christian life towards it. This theological relationship accounts for the characteristic foreshortening of perspective in Jesus' prophecy of the judgment of Jerusalem (Mt. 24; Mk. 13; Lk. 21) and John's prophecy of the judgment of pagan Rome (Rev.); both these judgments are foreseen as events of the final triumph of God's kingdom, because theologically they are such, whatever the chronological gap between them and the end. It is because God's kingdom is coming that the powers of this world are judged even within the history of this age. All such judgments anticipate the final judgment.

As the church's future, the coming of Christ must inspire the church's present, however near or distant in time it may be. In this sense, therefore, the Christian hope in the NT is unaffected by the so-called 'delay of the *parousia*' which some

ESCHATOLOGY

scholars have conjectured as a major feature in early Christian theological development. The 'delay' is explicitly reflected only in 2 Pet. 3:1-10 (cf. also Jn. 21:22f.): there it is shown to have its own theological rationale in God's merciful forbearance (cf. Rom. 2:4).

Some exegetes think the NT provides 'signs' by which the church will be warned of the approach of the end (cf. Mt. 24:3). The strongest support for this idea comes from Jesus' parable of the fig tree, with its lesson (Mt. 24:32f.; Mk. 13:28f.; Lk. 21:28-31). Yet the signs in question seem to be either the fall of Jerusalem (Lk. 21:5-7, 20-24), which, while it signals the coming of the end, provides no *temporal* indication, or characteristics of the whole of this age from the resurrection of Christ to the end: false teachers (Mt. 24:4f., 11, 24f.; cf. 1 Tim. 4:1; 2 Tim. 3:1-9; 2 Pet. 1-3; 1 Jn. 2:18f.; 4:3); wars (Mt. 24:6f.; cf. Rev. 6:4); natural disasters (Mt. 24:7; cf. Rev. 6:5-8); persecution of the church (Mt. 24:9f.; cf. Rev. 6:9-11), and the world-wide preaching of the gospel (Mt. 24:14). All these are signs by which the church at every period of history knows that it lives in the end-time, but they do not provide an eschatological timetable. Only the coming of Christ itself is unmistakably the end (Mt. 24:27-30).

The NT does, however, expect the time of the church's witness to reach a final climax in the appearance of *Antichrist and a period of unparalleled tribulation (Mt. 24:21f.; Rev. 3:10; 7:14). Paul certainly treats the non-appearance of Antichrist as an indication that the end is not yet (2 Thes. 2:3-12).

Antichrist represents the principle of satanic opposition to God's rule active throughout history (e.g. in the persecution of Jewish believers under Antiochus Epiphanes: Dn. 8:9-12, 23-25; 11:21ff.), but especially in the last times, the age of the church (1 Jn. 2:18). Christ's victory over evil, already achieved in principle, is manifest in this age primarily in the suffering witness of the church; only at the end will his victory be complete in the elimination of the powers of evil. Therefore in this age the success of the church's witness is always accompanied by the mounting violence of satanic opposition (cf. Rev. 12).

Evil will reach its final crescendo in the final Antichrist, who is both a false Messiah or prophet, inspired by Satan to perform false miracles (2 Thes. 2:9; cf. Mt. 24:24; Rev. 13:11-15), and a persecuting political power blasphemously claiming divine honours (2 Thes. 2:4; cf. Dn. 8:9-12, 23-25; 11:30-39; Mt. 24:15; Rev. 13:5-8). It is noteworthy that, while Paul provides a sketch of this human embodiment of evil (2 Thes. 2:3-12), other NT references find Antichrist already present in heretical teachers (1 Jn. 2:18f., 22; 4:3) or in the religious-political pretensions of the persecuting Roman empire (Rev. 13). The climax is anticipated in every great crisis of the church's history.

V. The coming of Christ

Christian hope is focused on the coming of Christ, which may be called his 'second' coming (Heb. 9:28). Thus the OT term, 'the *day of the Lord', which the NT uses for the event of final fulfilment (1 Thes. 5:2; 2 Thes. 2:2; 2 Pet. 3:10; cf. 'the day of God', 2 Pet. 3:12; 'the great day of God the Almighty', Rev. 16:14), is characteristically 'the day of the Lord Jesus' (1 Cor. 5:5; 2 Cor. 1:14; cf. 1 Cor. 1:8; Phil. 1:6, 10; 2:16).

The coming of Christ is called his *parousia* ('coming'), his *apokalypsis* ('revelation') and his *epiphaneia* ('appearing'). The word *parousia* means 'presence' or 'arrival', and was used in Hellenistic Greek of the visits of gods and rulers. Christ's *parousia* will be a personal coming of the same Jesus of Nazareth who ascended into heaven (Acts 1:11): but it will be a universally evident event (Mt. 24:27), a coming in power and glory (Mt. 24:30), to destroy Antichrist and evil (2 Thes. 2:8), to gather his people, living and dead (Mt. 24:31; 1 Cor. 15:23; 1 Thes. 4:14-17; 2 Thes. 2:1), and to judge the world (Mt. 25:31; Jas. 5:9).

His coming will also be an *apokalypsis*, an 'unveiling' or 'disclosure', when the power and glory which are now his by virtue of his exaltation and heavenly session (Phil. 2:9; Eph. 1:20-23; Heb. 2:9) will be disclosed to the world. Christ's reign as Lord, now invisible to the world, will then be made visible by his *apokalypsis*.

VI. The *resurrection

At the coming of Christ, the Christian dead will be raised (1 Cor. 15:23; 1 Thes. 4:16) and those who are alive at the time will be transformed (1 Cor. 15:52; cf. 1 Thes. 4:17), i.e. they will pass into the same resurrection existence without dying.

Belief in the resurrection of the dead is found already in a few OT texts (Is. 25:8; 26:19; Dn. 12:2) and is common in the intertestamental literature. Both Jesus (Mk. 12:18-27) and Paul (Acts 23:6-8) agreed on this point with the Pharisees against the Sadducees, who denied resurrection. The Christian expectation of resurrection, however, is based decisively on the resurrection of Jesus, from which God is known as 'God who raises the dead' (2 Cor. 1:9). Jesus, in his resurrection, 'abolished death and brought life and immortality to light' (2 Tim. 1:10). He is 'the living one', who died and is now alive for ever, who has 'the keys of death' (Rev. 1:18).

Jesus' resurrection was no mere re-animation of a corpse. It was entry into eschatological life, a transformed existence beyond the reach of death. As such it was the beginning of the eschatological resurrection (1 Cor. 15:23). The fact of Jesus' resurrection already guarantees the future resurrection of Christians at his coming (Rom. 8:11; 1 Cor. 6:14; 15:20-23; 2 Cor. 4:14; 1 Thes. 4:14).

Eschatological life, the risen life of Christ, is already communicated to Christians in this age by his Spirit (Jn. 5:24; Rom. 8:11; Eph. 2:5f.; Col. 2:12; 3:1), and this too is a guarantee of their future resurrection (Jn. 11:26; Rom. 8:11; 2 Cor. 1:22; 3:18; 5:4f.). But the Spirit's transformation of Christians into the glorious image of Christ is incomplete in this age because their bodies remain mortal. The future resurrection will be the completion of their transformation into Christ's image, characterized by incorruption, glory and power (1 Cor. 15:42-44). The resurrection existence is not 'flesh and blood' (1 Cor. 15:20) but a 'spiritual body' (15:44), i.e. a body wholly vitalized and transformed by the Spirit of the risen Christ. From 1 Cor. 15:35-54 it is clear that the continuity between this present existence and resurrection life is the continuity of the personal self, independent of physical identity.

In NT thought, immortality belongs intrinsically to God alone (1 Tim. 6:16), while men by their descent from Adam are naturally mortal (Rom. 5:12). Eternal life is the gift of God to men through the resurrection of Christ. Only in Christ and by

means of their future resurrection will men attain that full eschatological life which is beyond the reach of death. Resurrection is therefore equivalent to man's final attainment of eschatological salvation.

It follows that the damned will not be raised in this full sense of resurrection to eternal life. The resurrection of the damned is mentioned only occasionally in Scripture (Dn. 12:2; Jn. 5:28f.; Acts 24:15; Rev. 20:5, 12f.; cf. Mt. 12:41f.), as the means of their condemnation at the judgment.

VII. The state of the dead

The Christian hope for life beyond death is not based on the belief that part of man survives death. All men, through their descent from Adam, are naturally mortal. Immortality is the gift of God, which will be attained through the resurrection of the whole person.

The Bible therefore takes death seriously. It is not an illusion. It is the consequence of sin (Rom. 5:12; 6:23), an evil (Dt. 30:15, 19) from which men shrink in terror (Ps. 55:4f.). It is an enemy of God and man, and resurrection is therefore God's great victory over death (1 Cor. 15:54-57). Death is 'the last enemy to be destroyed' (1 Cor. 15:26), abolished in principle at Christ's resurrection (2 Tim. 1:10), to be finally abolished at the end (Rev. 20:14; cf. Is. 25:8). Only because Christ's resurrection guarantees their future resurrection are Christians delivered from the fear of death (Heb. 2:14f.) and able to see it as a sleep from which they will awaken (1 Thes. 4:13f.; 5:10) or even a departing to be with Christ (Phil. 1:23).

The OT pictures the state of the dead as existence in Sheol, the grave or the underworld. But existence in Sheol is not life. It is a land of darkness (Jb. 10:21f) and silence (Ps. 115:17), in which God is not remembered (Pss. 6:5; 30:9; 88:11; Is. 38:18). The dead in Sheol are cut off from God (Ps. 88:5), the source of life. Only occasionally does the OT attain a hope of real life beyond death, *i.e.* life out of reach of Sheol in the presence of God (Pss. 16:10f.; 49:15; 73:24; perhaps Jb. 19:25f.). Probably the example of * Enoch (Gn. 5:24; cf. Elijah, 2 Ki. 2:11) helped stimulate this hope. A clear doctrine of resurrection is found only in Is. 26:19; Dn. 12:2.

'Hades' is the NT equivalent of Sheol (Mt. 11:23; 16:18; Lk. 10:15; Acts 2:27, 31; Rev. 1:18; 6:8; 20:13f.), in most cases referring to death or the power of death. In Lk. 16:23 it is the place of torment for the wicked after death, in accordance with some contemporary Jewish thinking, but it is doubtful whether this parabolic use of current ideas can be treated as teaching about the state of the dead. 1 Pet. 3:19 calls the dead who perished in the Flood 'the spirits in prison' (cf. 4:6).

The NT hope for the Christian dead is concentrated on their participation in the resurrection (1 Thes. 4:13-18), and there is therefore little evidence of belief about the 'intermediate state'. Passages which indicate, or may indicate, that the Christian dead are with Christ are Lk. 23:43; Rom. 8:38f.; 2 Cor. 5:8; Phil. 1:23; cf. Heb. 12:23. The difficult passage 2 Cor. 5:2-8 may mean that Paul conceives existence between death and resurrection as a bodiless existence in Christ's presence.

VIII. The judgment

The NT insists on the prospect of divine judgment as, besides death, the single unavoidable fact of a man's future: 'It is appointed for men to die once,

and after that comes judgment' (Heb. 9:27). This fact expresses the holiness of the biblical God, whose moral will must prevail, and before whom all responsible creatures must therefore in the end be judged obedient or rebellious. When God's will finally prevails at the coming of Christ, there must be a separation between the finally obedient and the finally rebellious, so that the kingdom of God will include the one and exclude the other for ever. No such final judgment occurs within history, though there are provisional judgments in history, while God in his forbearance gives all men time to repent (Acts 17:30f.; Rom. 2:4; 2 Pet. 3:9). But at the end the truth of every man's position before God must come to light.

The Judge is God (Rom. 2:6; Heb. 12:23; Jas. 4:12; 1 Pet. 1:17; Rev. 20:11) or Christ (Mt. 16:27; 25:31; Jn. 5:22; Acts 10:42; 2 Tim. 4:1, 8; 1 Pet. 4:5; Rev. 22:12). It is God who judges through his eschatological agent Christ (Jn. 5:22, 27, 30; Acts 17:31; Rom. 2:16). The judgment seat of God (Rom. 14:10) and the judgment seat of Christ (2 Cor. 5:10) are therefore equivalent. (The judgment committed to the saints, according to Mt. 19:28; Lk. 22:30; 1 Cor. 6:2f.; Rev. 20:4, means their authority to rule with Christ in his kingdom, not to officiate at the last judgment.)

The standard of judgment is God's impartial righteousness according to men's works (Mt. 16:27; Rom. 2:6, 11; 2 Tim. 4:14; 1 Pet. 1:17; Rev. 2:23; 20:12; 22:12). This is true even for Christians: 'We must all appear before the judgment seat of Christ, so that each one may receive good or evil, according to what he has done in the body' (2 Cor. 5:10). The judgment will be according to men's lights (cf. Jn. 9:41); according to whether they have the law of Moses (Rom. 2:12) or the natural knowledge of God's moral standards (Rom. 2:12-16), but by these standards no man can be declared righteous before God according to his works (Rom. 3:19f.). There is no hope for the man who seeks to justify himself at the judgment.

There is hope, however, for the man who seeks his justification from God (Rom. 2:7). The gospel reveals that righteousness which is not required of men but given to men through Christ. In the death and resurrection of Christ, God in his merciful love has already made his eschatological judgment in favour of sinners, acquitting them for the sake of Christ, offering them in Christ that righteousness which they could never achieve. Thus the man who has faith in Christ is free from all condemnation (Jn. 5:24; Rom. 8:33f.). The final criterion of judgment is therefore a man's relation to Christ (cf. Mt. 10:32f.). This is the meaning of the 'book of life' (Rev. 20:12, 15; *i.e.* the *Lamb's* book of life, Rev. 13:8).

The meaning of Paul's doctrine of justification is that in Christ God has anticipated the verdict of the last judgment, and pronounced an acquittal of sinners who trust in Christ. Very similar is John's doctrine that judgment takes place already in men's belief or disbelief in Christ (Jn. 3:17-21; 5:24).

The last judgment remains an eschatological fact, even for believers (Rom. 14:10), though they may face it without fear (1 Jn. 4:17). We hope for acquittal in the final judgment (Gal. 5:5), 'the crown of righteousness' (2 Tim. 4:8), on the ground of the same mercy of God through which we have already been acquitted (2 Tim. 1:16). But, even for the Christian, works are not irrelevant

ESCHATOLOGY.

(Mt. 7:1f., 21, 24–27; 25:31–46; Jn. 3:21; 2 Cor. 5:10; Jas. 2:13), since justification does not abrogate the need for obedience, but precisely makes it possible for the first time. Justification is the foundation, but what men build on it is exposed to judgment (1 Cor. 3:10–15): 'If any man's work is burned up, he will suffer loss, though he himself will be saved, but only as through fire' (3:15).

IX. * Hell

The final destiny of the wicked is 'hell', which translates Gk. *Gehenna*, derived from the Heb. *gē-hinnōm*, 'the valley of Hinnom'. This originally denoted a valley outside Jerusalem, where child sacrifices were offered to Molech (2 Ch. 28:3; 33:6). It became a symbol of judgment in Je. 7:31–33; 19:6f., and in the intertestamental literature the term for the eschatological hell of fire.

In the NT, hell is pictured as a place of unquenchable or eternal fire (Mk. 9:43, 48; Mt. 18:8; 25:30) and the undying worm (Mk. 9:48), a place of weeping and gnashing of teeth (Mt. 8:12; 13:42, 50; 22:13; 25:30), the outer darkness (Mt. 8:12; 22:13; 25:30; cf. 2 Pet. 2:17; Jude 13) and the lake of fire and brimstone (Rev. 19:20; 20:10, 14f.; 21:8; cf. 14:10). Revelation identifies it as 'the second death' (2:11; 20:14; 21:8). It is the place of the destruction of both body and soul (Mt. 10:28).

The NT pictures of hell are markedly restrained by comparison with Jewish apocalyptic and with later Christian writings. The imagery used derives especially from Is. 66:24 (cf. Mk. 9:48) and Gn. 19:24, 28; Is. 34:9f. (cf. Rev. 14:10f.; also Jude 7; Rev. 19:3). It is clearly not intended literally but indicates the terror and finality of condemnation to hell, which is less metaphorically described as exclusion from the presence of Christ (Mt. 7:23; 25:41; 2 Thes. 1:9). The imagery of Rev. 14:10f.; 20:10 (cf. 19:3) should probably not be pressed to prove eternal torment, but the NT clearly teaches eternal destruction (2 Thes. 1:9) or punishment (Mt. 25:46), from which there can be no release.

Hell is the destiny of all the powers of evil: Satan (Rev. 20:10), the demons (Mt. 8:29; 25:41), the beast and the false prophet (Rev. 19:20), death and Hades (Rev. 20:14). It is the destiny of men only because they have identified themselves with evil. It is important to notice that there is no symmetry about the two destinies of men: the kingdom of God has been prepared for the redeemed (Mt. 25:34), but hell has been prepared for the devil and his angels (Mt. 25:41) and becomes the fate of men only because they have refused their true destiny which God offers them in Christ. The NT doctrine of hell, like all NT eschatology, is never mere information; it is a warning given in the context of the gospel's call to repentance and faith in Christ.

The NT teaching about hell cannot be reconciled with an absolute universalism, the doctrine of the final salvation of all men. The element of truth in this doctrine is that God desires the salvation of all men (1 Tim. 2:4) and gave his Son for the salvation of the world (Jn. 3:16). Accordingly, the cosmic goal of God's eschatological action in Christ can be described in universalistic terms (Eph. 1:10; Col. 1:20; Rev. 5:13). The error of dogmatic universalism is the same as that of a symmetrical doctrine of double predestination: that they abstract eschatological doctrine from its proper NT context in the proclamation of the gospel. They rob the gospel of its eschatological urgency and challenge. The gospel sets before men

their true destiny in Christ and warns them in all seriousness of the consequence of missing this destiny.

X. The millennium

The interpretation of the passage Rev. 20:1–10, which describes a period of a thousand years (known as the 'millennium') in which Satan is bound and the saints reign with Christ before the last judgment, has long been a subject of disagreement between Christians. 'Amillennialism' is the view which regards the millennium as a symbol of the age of the church and identifies the binding of Satan with Christ's work in the past (Mt. 12:29). 'Postmillennialism' regards it as a future period of success for the gospel in history before the coming of Christ. 'Premillennialism' regards it as a period between the coming of Christ and the last judgment. (The term 'chiliasm' is also used for this view, especially in forms which emphasize the materialistic aspect of the millennium.) 'Premillennialism' may be further subdivided. There is what is sometimes called 'historic premillennialism', which regards the millennium as a further stage in the achievement of Christ's kingdom, an interim stage between the church age and the age to come. (Sometimes 1 Cor. 15:23–28 is interpreted as supporting this idea of three stages in the fulfilment of Christ's redemptive work.) 'Dispensationalism', on the other hand, teaches that the millennium is not a stage in God's single universal redemptive action in Christ, but specifically a period in which the OT promises to the nation of Israel will be fulfilled in strictly literal form.

It should be emphasized that no other passage of Scripture clearly refers to the millennium. To apply OT prophecies of the age of salvation specifically to the millennium runs counter to the general NT interpretation of such prophecies, which find their fulfilment in the salvation already achieved by Christ and to be consummated in the age to come. This is also how Rev. itself interprets such prophecies in chs. 21f. Within the structure of Rev., the millennium has a limited role, as a demonstration of the final victory of Christ and his saints over the powers of evil. The principal object of Christian hope is not the millennium but the new creation of Rev. 21f.

Some Jewish apocalyptic writings look forward to a preliminary kingdom of the Messiah on this earth prior to the age to come, and John has very probably adapted that expectation. There are strong exegetical reasons for regarding the millennium as the consequence of the coming of Christ depicted in Rev. 19:11–21. (See G. R. Beasley-Murray, *The Book of Revelation*, NCB, 1974, pp. 284–298.) This favours 'historic premillennialism', but it is also possible that the image of the millennium is taken too literally when it is understood as a precise period of time. Whether it is a period of time or a comprehensive symbol of the significance of the coming of Christ, the theological meaning of the millennium is the same: it expresses the hope of Christ's final triumph over evil and the vindication with him of his people who have suffered under the tyranny of evil in the present age.

XI. The new creation

The final goal of God's purposes for the world includes, negatively, the destruction of all God's enemies: Satan, sin and death, and the elimination of all forms of suffering (Rev. 20:10, 14–15; 7:16f.;

21:4; Is. 25:8; 27:1; Rom. 16:20; 1 Cor. 15:26, 54). Positively, God's rule will finally prevail entirely (Zc. 14:9; 1 Cor. 15:24-28; Rev. 11:15), so that in Christ all things will be united (1:ph. 1:10) and God will be all in all (1 Cor. 15:28, *av*).

With the final achievement of human salvation there will come also the liberation of the whole material creation from its share in the curse of sin (Rom. 8:19-23). The Christian hope is not for redemption from the world, but for the redemption of the world. Out of judgment (Heb. 12:26; 2 Pet. 3:10) will emerge a recreated universe (Rev. 21:1; cf. Is. 65:17; 66:22; Mt. 19:28), 'a new heaven and a new earth in which righteousness dwells' (2 Pet. 3:13).

The destiny of the redeemed is to be like Christ (Rom. 8:29; 1 Cor. 15:49; Phil. 3:21; 1 Jn. 3:2), to be with Christ (Jn. 14:3; 2 Cor. 5:8; Phil. 1:23; Col. 3:4; 1 Thes. 4:17), to share his glory (Rom. 8:18, 30; 2 Cor. 3:18; 4:17; Col. 3:4; Heb. 2:10; 1 Pet. 5:1) and his kingdom (1 Tim. 2:12; Rev. 2:26f.; 3:21; 4:10; 20:4, 6); to be sons of God in perfect fellowship with God (Rev. 21:3, 7), to worship God (Rev. 7:15; 22:3), to see God (Mt. 5:8; Rev. 22:4), to know him face to face (1 Cor. 13:12). Faith, hope and especially love are the permanent characteristics of Christian existence which abide even in the perfection of the age to come (1 Cor. 13:13), while 'righteousness and peace and joy in the Holy Spirit' are similarly abiding qualities of man's enjoyment of God (Rom. 14:17).

The corporate life of the redeemed with God is described in a number of pictures: the eschatological banquet (Mt. 8:11; Mk. 14:25; Lk. 14:15-24; 22:30) or wedding feast (Mt. 25:10; Rev. 19:9), paradise restored (Lk. 23:43; Rev. 2:7; 22:1f.), the new Jerusalem (Heb. 12:22; Rev. 21). All these are only pictures, since 'no eye has seen, nor ear heard, nor the heart of man conceived, what God has prepared for those who love him' (1 Cor. 2:9).

ESDRAELON. The Greek form of the name *Jezreel. However, the Greek and Hebrew names really apply to two distinct but adjacent lowlands, even though in some modern works the term Jezreel is loosely extended to cover both regions. The vale of Jezreel proper is the valley that slopes down from the town of Jezreel to Beth-shan overlooking the Jordan rift-valley, with Galilee to the N and Mt Gilboa to the S.

Esdraelon is the triangular alluvial plain

bounded along its SW side by the Carmel range from Jokneam to Ibleam and Engannim (modern Jenin), along its N side by a line from Jokneam to the hills of Nazareth, and on the E by a line thence back down to Ibleam and Engannim. On the E, Jezreel guards the entry to its own valley, while in the W the SW spur of hills from Galilee leaves only a small gap by which the river Kishon flows out into the plain of Acre after crossing the Esdraelon plain. At the foot of the NE-facing slopes of Carmel the important towns of *Jokneam, *Megiddo, *Taanach and *Ibleam controlled the main passes and N-S routes through W Palestine, while these and Jezreel (town) also controlled the important route running E-W from the Jordan valley to the Mediterranean coast, the only one unimpeded by ranges of hills. Esdraelon was a marshy region, important mainly for these roads; the vale of Jezreel was agriculturally valuable as well as being strategically placed. For geographical background, see D. Baly, *Geography of the Bible*, 1974, pp. 39, 144-151. K. A. K.

ESHCOL. 1. Brother of Mamre and Aner, who were 'confederates' with Abraham when in Hebron, and joined with his company in the rescue of Lot (Gn. 14:13-24).

2. The valley where the spies sent forth by Moses gathered a huge cluster (Heb. *'eškōl*) of grapes, typical of the fruitfulness of the land (Nu. 13:23-24; 32:9; Dt. 1:24). Traditionally thought to be located a few km N of Hebron (already Jerome, *Ep.* 108. 11 = *PL* 22. 886), where the vineyards are still famous for the quality of their grapes.

Some scholars prefer a location S of Hebron (Gray; Noth), but although the texts are not explicit about the direction, it does seem to be implied that the spies continued N from Hebron to the Valley of Eshcol (Nu. 13:22-23).

G. I. D.

ESHTAOL (*'eštā'ōl*, from the verb *šā'al*, 'to ask'), **ESHTAOLITES.** A lowland city, W of Jerusalem, tentatively identified with the modern Eshwa', it was included in the territory of both Judah (Jos. 15:33) and Dan (Jos. 19:41), an anomaly which is partially explained by the fluidity of the border, a fact attributable to Amorite (Jdg. 1:34) and then Philistine pressure. The Eshtaolites are numbered amongst the Calebites, traditionally associated with Judah (1 Ch. 2:53).

It was at Eshtaol that the Danite Samson was first moved by the Spirit of the Lord (Jdg. 13:25) and where he was finally buried in the tomb of his father (Jdg. 16:31). From Eshtaol and neighbouring Zorah originated the Danite quest for a settled habitation (Jdg. 18:2, 11). A. E. C.

ESSENES. The name given in classical sources to a major Jewish sect which existed in Judaea at least from the middle of the 2nd century BC until the Jewish revolt in AD 66-70.

The etymology of the name (Gk. *Essēnoi*, *Essaioi*; Lat. *Esseni*) remains a puzzle. Of the numerous proposals, the three with the most to commend them are derivations from:

Plan of the buildings at Khirbet Qumran, believed to have been occupied by an Essene community. 2nd cent. BC-1st cent. AD

1. Aramaic 'asayya' 'healers';
2. Syriac *ḥassayyā* 'pious' [= Heb. *ḥasīdim*/Gk. *asidaioi*];
3. the Gk. name for priests of Artemis (*essēnas*). In any case, there is no evidence that 'Essene' was a self-designation.

Our main outside observations come from Philo (*Quod omnis Probus Liber sit* 75-91; *Apology*, preserved by Eusebius *Praep. Ev.* 8.11.1-18), Josephus (*BJ* 2.119-161 and *Ant.* 18.18-22; anecdotal comments in *BJ* 1.78-80; 2.113; 2.567; 3.11; 5.145; *Ant.* 13.171-172; 15.371-379; *Vit. Mos.* 10-11), Pliny (*NH* 5.73) and Hippolytus of Rome (*Refutation of All Heresies* 9.18-28). All of these require caution in interpretation (see *PHARISEES).

It is believed that the Jews who inhabited Qumran, and whose views are reflected in some of the DSS, were Essenes because of:

1. similarities of the classical descriptions with practices and community organization expressed in the DSS;
2. the agreement of Pliny's geographical comments with the location of Qumran;
3. the agreement of Josephus' chronological framework for the Essenes (c. 150 BC-AD 70) with the archaeological data of Qumran, the dating of the manuscripts (palaeography and C-14) and historical references in the texts. Consequently, we

have a considerable body of direct textual sources for the Essenes, unparalleled for any other Jewish group of the Second Temple period. Nevertheless, one must be cautious when reading the DSS for the history of Essenes. Several factors reveal a complex relationship among the DSS, Qumran and the Essenes: more than one community is represented among the DSS (see *DEAD SEA SCROLLS); the relationship between Qumran and these other communities is not yet clear; there is no solid evidence that Qumran was the focus for Essene life (some have even posited that the Qumran settlement was a break from the Essenes); the classical sources indicate diversity among the Essenes (e.g. marrying and celibate).

Generally it is safe to accept as Essene characteristics those elements in which the DSS evidence reinforces and corrects the picture derived from the classical sources. They lived in various communities throughout Palestine, but had a large settlement at Qumran. An initiation regime was required of all potential members: a preparatory period of study and examination was followed by 2 years of training, during which they were accepted in stages to share in the common property and the pure foods and drink. At some point a solemn oath of loyalty was taken. A strict hierarchy, dominated by priests and elders, ordered their communities,

led by individual fiscal and spiritual overseers, but judicial functions were carried out democratically by large bodies of full members. They held property in common but retained some personal discretion. Regularly (twice daily according to Jos.), they shared a common meal over which a priest had to pray. Their purification baths were unique in that access was restricted to members of the sect alone after a probationary year, and purification was required before common meals as well as for the usual cases of impurity. They differed from the temple authorities with regard to cultic purity, and therefore seem to have restricted or renounced participation in sacrifices. Because of their stringent purity, they avoided contact with oil, isolated excrement away from the community, and prohibited spitting into the middle of a group. Sabbath regulations among the Essenes were especially strict. Josephus's report that they prayed to the sun is unlikely to mean that the Essenes worshipped the sun, but refers rather to the practice of daily communal prayer at sunrise (Jos.: DSS) and sunset (DSS). Also, Josephus's statements that they believed in 'fate' and the immortality of the soul, express to a Gk. audience the determinism and (probably) life beyond death witnessed in the DSS. Essenes carefully guarded certain esoteric knowledge, including the names of angels. Wealth was despised as a corrupting influence. They devoted themselves to the study of sacred writings. Transgressions of Mosaic laws and community rules were strictly punished by fines and expulsion. It is not certain that the majority of Essenes were celibate or that they completely withdrew from all participation in the temple cult as is commonly believed.

Even though they are not mentioned in the NT, study of the Essenes is important for understanding early Christianity because of numerous similarities between the two groups (e.g. organization and offices, common meals, common property, purification baths restricted to those who have undergone instruction and repentance). Attempts to identify Essenes and early Christians have failed, however, and suggestions that the two groups inhabited a common quarter in Jerusalem remain highly speculative.

ESTHER. According to Est. 2:7, Esther's Jewish name was Hadassah (Myrtle). The name Esther may be the equivalent of the Persian *stara* ('star'),

though some find a link with the Babylonian goddess Ishtar.

Esther married Ahasuerus (Xerxes, 486-465 BC). Herodotus and Ctesias say that the wife of Xerxes was Amestris (who is probably Vashti), and that she went with Xerxes on his expedition to Greece, which happened after the events of Est. 1. On the way home she incurred Xerxes' anger by mutilating the mother of one of his mistresses and nearly starting a revolution (Her. 9. 108f.). Small wonder that Xerxes remembered his original plan to divorce her, and now looked for a successor, which he found in Esther. Amestris came into power again as queen mother during the reign of her son, Artaxerxes I, and may indeed be the 'queen' of Ne. 2:6. If we assume that Esther died within a few years of the events recorded in the book that bears her name, there is no difficulty in harmonizing the two queens.

Although Esther was a brave woman, who risked her life to save the Jews (4:1-17), the Bible does not commend her encouragement of the Jews to massacre their enemies in ch. 9. Here she was the child of her age. J.S.W.

ESTHER, BOOK OF. This book tells how *Esther, a Jewess, became the wife of a Persian king, and was able to prevent the wholesale massacre of the Jewish race within the Persian empire.

I. Outline of contents

- a. 1:1-22. Ahasuerus deposes his wife, Vashti, for refusing to appear at his banquet.
- b. 2:1-18. Esther, the cousin of Mordecai, a Jew, is chosen in Vashti's place.
- c. 2:19-23. Mordecai tells Esther of a plot to kill the king.
- d. 3:1-15. Mordecai refuses to bow to Haman, the king's favourite, who thereupon plans to massacre the Jews on a fixed date.
- e. 4:1-17. Mordecai persuades Esther to intercede with the king.
- f. 5:1-14. Esther invites the king and Haman to a banquet.
- g. 6:1-14. The king makes Haman honour Mordecai publicly as a reward for revealing the plot against him.
- h. 7:1-10. At a second banquet Esther reveals Haman's plan to massacre the Jews, and Haman is hanged on the gallows that he had prepared for Mordecai.
- i. 8:1-17. Since the edict for the massacre cannot be revoked, the king sends a second edict allowing the Jews to defend themselves.
- j. 9:1-19. The Jews take advantage of this to kill their enemies.
- k. 9:20-32. The deliverance is commemorated at the feast of Purim.
- l. 10:1-3. Mordecai is put in a position of authority.

II. Authorship and date

The book was written some time after the death of Ahasuerus (1:1), which would be after 465 BC if Ahasuerus is identified with Xerxes. Some Jews regarded Mordecai as the author, and the references in 9:20, 32 could suggest this. Much of the contents may have been inserted in the annals of the king, as mentioned in 10:2 and perhaps 6:1, and this would account for the omission of the name of God, although the reference to fasting for

ESTHER, BOOK OF

Esther in 4:16 certainly implies prayer, and the doctrine of providence is stated in 4:14.

It should be noted that the Gk. versions of Esther contain 107 extra verses, which do include references to God by name. These are collected together in the Apocrypha of our English Version, and are numbered as though they followed 10:3. In fact, their order in the Gk. is as follows: 9:2-12:6; 1:1-3:13; 13:1-7; 3:14-4:17; 13:8-15:16; 5:1-8:12; 16:1-24; 8:13-10:3; 10:4-11:1. The date given in 11:1 is 114 BC, and could be the date when the Gk. translation or expanded version was made.

III. Authenticity

Although some, such as R. H. Pfeiffer, regard the book as entire fiction, other commentators would agree with the verdict of H. H. Rowley that the author 'seems to have had access to some good sources of information on things Persian, and the nucleus of his story may be older than his book' (*Growth of the Old Testament*, p. 155). The story as such has not been confirmed by any Persian records, and it is often supposed that it cannot be fitted into what is known of Persian history.

King Ahasuerus is usually identified with Xerxes (486-465 BC), though a few, e.g. J. Hoschander and A. T. Olmstead, have identified him with Artaxerxes II (404-359 BC). If he is Xerxes we have an explanation of the strange gap between the third year in 1:3 and the seventh year of 2:16, since between 483 and 480 BC he was planning and carrying out his disastrous invasion of Greece. Herodotus (7. 114; 9. 108f.) gives the name of Xerxes' wife as Amestris, but we do not know from secular historians whether or not he had more than one wife. Although, according to Herodotus (3. 84), the Persian king was supposed to choose his wife from one of seven noble families (cf. Est. 1:14), rules of this kind could generally be evaded. Xerxes had no scruples about taking any women that he chose.

The author is alleged to be hopelessly in error in 2:5-6, when he describes *Mordecai as having been taken captive in 597 BC. By this time he would have been over 120. On the principle that a translation that makes sense is preferable to one that makes nonsense, we may refer the word 'who' in v. 6 to Mordecai's great-grandfather, Kish, as the Heb. allows us to do.

Other supposed improbabilities are largely a matter of subjective opinion. Thus, would *Haman have attempted the massacre of all the Jewish race simply because one man defied him, and would the king have permitted it? And would Haman have fixed a date for the massacre so far ahead? Such criticism shows a strange ignorance of human nature. Massacres and wars have been sparked off many times through the injured pride of one or two individuals. Persian kings also were easily swayed by their favourites, and in this case Haman represents the Jews as traitors (3:8). Haman is depicted as a thoroughly superstitious man, and the day of the massacre was chosen because the casting of lots indicated that it would be a lucky day (3:7). The gallows 25 m high (7:9) would be the typically extravagant display of a thwarted man in power, while the £2½ million offered as a bribe to the king in 3:9 is hardly to be taken seriously; what the king would understand was that a large proportion of Jewish property would be put in the royal treasuries, and with Oriental politeness he replies that Haman may

keep it for himself (3:11); both parties would understand that, so long as the king received a substantial share of the spoil, he would turn a blind eye to whatever Haman took for himself.

One strange interpretation of the book demands brief notice. This is the mythological origin postulated by Zimmern and Jensen. Esther is the goddess Ishtar; Mordecai is Marduk; Haman is the Elamite deity Humman; Vashti is Mashti, an Elamite goddess. The story may have concerned a conflict between Babylonian and Elamite gods. It would be strange if the Jews had made use of a polytheistic tale, or cultic ceremony, to account for a Jewish festival; and even if *Purim could be shown to have been originally a pagan ceremony, a whole new story must have been written round it, and in this story it is unlikely that the names of gods and goddesses would have been retained. It might still be true that the names of the characters in the book of Esther have some connection with the names of gods and goddesses, since there are other examples of Jews being given extra names that probably contain the names of some god or goddess, e.g. Dn. 1:7; Ezr. 1:8. Moreover there is another Mordecai mentioned in Ezr. 2:2. Esther is said to be a second name in Est. 2:7.

ETAM. 1. A place in the hill-country of Judah, rebuilt by Rehoboam (2 Ch. 11:6), probably referred to in 1 Ch. 4:3, and in the LXX of Jos. 15:59 (*Aitan*). The site is usually identified with modern Khirbet el-Ijoh, some 10½ km SSW of Jerusalem. 2. A village in the territory of Simeon (1 Ch. 4:32). The site is unknown, though some scholars would equate the place with 1 above. 3. The cave (*s'îp sela'*, 'cleft of rock') where Samson took refuge from the Philistines (Jdg. 15:8, 11). The site is unknown, but must be in W Judah.

BIBLIOGRAPHY. KB, p. 699; F. M. Abel, *Géographie de la Palestine*, 2, 1938, p. 321. T. C. M.

ETHAM. Camp of the Israelites somewhere on the isthmus of Suez (Ex. 13:20; Nu. 33:6-7), about whose precise location scholars differ. Müller suggested a connection with the name of the Egypt. god Atum; Naville proposed Edom; Clédat, Gauthier, Bourdon, Lagrange, Abel and Montet would connect it with the Old Egypt. word for 'fort' (*h̄tm*), a name which was given to several places; but none of these suggestions seems very likely. The Old Egypt. *h̄tm* seems rather to designate the frontier-city of Sile. (*ENCAMPMENT BY THE SEA.)

C. D. W.

ETHAN (Heb. *êṭān*, 'enduring', 'ancient'). A wise man in the time of Solomon, known as 'the Ezrahite', of the line of Judah, referred to in 1 Ki. 4:31, in the title of Ps. 89, and perhaps in 1 Ch. 2:6, if 'Zerah' is regarded as a form of 'Ezrah'.

Two other men called Ethan are mentioned

briefly—in 1 Ch. 6:42 (perhaps identical with *Jeduthun), and 1 Ch. 6:44; 15:17. J.D.D.

ETHICS, BIBLICAL.

I. The distinctive principle

The distinctiveness of the Bible's ethical teaching is well illustrated by the derivation of the words 'ethics' and 'morals' themselves. Both come from roots (Greek and Latin) which mean 'custom'. The implication is that we behave in an ethically correct manner when we do what custom dictates. We discover the things that are usually done, and conclude that these are the things we ought to do.

In sharp contrast to this approach, biblical ethics are Godcentred. Instead of following majority opinion or conforming to customary behaviour, the Scriptures encourage us to start with God and his requirements—not with man and his habits—when we look for moral guidelines. This central, unifying principle is expressed in many ways in the Bible:

(a) *The standard of goodness is personal.* If we want to discover the nature of goodness, the Bible directs us to the person of God himself. He alone is good (Mk. 10:18), and it is his will that expresses 'what is good and acceptable and perfect' (Rom. 12:2). Out in the Sinai desert, Yahweh promised Moses 'I will make all my goodness pass before you' (Ex. 33:19), and the promise was honoured with a special revelation of the Lord's character (Ex. 34:6f.). Unlike any other moral teacher, God is utterly consistent. What he wills, he is.

(b) *The source of moral knowledge is revelation.* According to the Bible, knowledge of right and wrong is not so much an object of philosophical enquiry as an acceptance of divine revelation. As Paul puts it, knowing God's will (which is equivalent to discovering what is right) comes through instruction in his law (Rom. 2:18). So while the moral philosopher investigates his data in order to draw judicious conclusions, the biblical writers are content to declare God's revealed will without feeling the need to justify their judgments.

(c) *Moral teaching is phrased as command, not statement.* Outwardly, the most striking difference between the Bible and a secular textbook on ethics is the way its moral teaching is communicated. To find reasoned-out arguments for ethical demands in the Bible, one has to look almost exclusively in the OT Wisdom literature (cf. Pr. 5:1ff.). Elsewhere, moral judgments are laid down flatly, not argued out reasonably. A philosopher who does not back his opinions with a well-argued case cannot expect people to take him seriously. But the biblical writers, inasmuch as they believed themselves to be conveying God's will, felt no need for logical argument to support their moral commands.

(d) *The basic ethical demand is to imitate God.* As God sums up goodness in his own person, man's supreme ideal, according to the Bible, is to imitate him. This is reflected in the OT refrain 'Be holy, for I am holy' (Lv. 11:44f., etc.); and in the way great old covenant words like *hesed* ('steadfast love') and *ḥinnukh* ('faithfulness') are used to describe both God's character and his moral requirements of man. In the NT, too, the same note is struck. Christians must display their heavenly Father's mercy, said Jesus, and even his moral perfection (Lk. 6:36; Mt. 5:48). And because Jesus 'bears the

very stamp of his nature' (Heb. 1:3), the call to imitate him comes with equal force (cf. 1 Cor. 11:1). We become imitators of the Father as we live out the Son's love (Eph. 5:1f.).

(e) *Religion and ethics are inseparable.* All attempts to drive a wedge between the Bible's moral precepts and its religious teaching fail. Because the biblical ethic is theocentric, the moral teaching of Scripture loses its credibility once the religious undergirding is removed (cf., e.g., the Beatitudes, Mt. 5:3ff.). Religion and ethics are related as foundation to building. The moral demands of the Decalogue, for example, are founded on the fact of God's redemptive activity (Ex. 20:2); and much of Jesus' moral teaching is presented as deduction from religious premises (cf. Mt. 5:43ff.). The same principle is well illustrated by the literary structure of Paul's Epistles. As well as providing specific examples of moral teaching built on religious foundations (e.g. 1 Cor. 6:18ff.; 2 Cor. 8:7ff.; Phil. 2:4ff.), Paul shapes his letters to follow the same pattern. A carefully presented theological main section is made the springboard for a clear-cut ethical tail-piece (cf., especially, Rom., Eph., Phil.). Christian ethics spring from Christian doctrine, and the two are inseparable.

II. The Old Testament

(a) *The covenant.* The covenant God made with Israel through Moses (Ex. 24) had direct and far-reaching ethical significance. In particular, the keynote of grace, first struck in the Lord's choice of covenant partner (Dt. 7:7f.; 9:4), sets the theme for the whole of the OT's moral teaching.

God's grace supplies the chief motive for obedience to his commandments. Appeals to godly fear are by no means absent from the OT (cf. Ex. 22:22ff.), but far more often grace provides the main stimulus to good behaviour. Men, as God's covenant partners, are invited to respond gratefully to his prior acts of undeserved love; they are summoned to do his will in gratitude for his grace, rather than submit in terror to threats of punishment. So slaves must be treated generously because God treated Hebrew slaves with generosity in Egypt (Dt. 15:12ff.). Businessmen are not to weight their scales unfairly, remembering that it was the God of justice who redeemed their ancestors (Lv. 19:36). Strangers are to be treated with the same kindness that the Lord of grace showed to his people—for you were strangers in the land of Egypt' (Lv. 19:33f.). In a word, God's covenant demand is 'you shall keep my commandments and do them', because 'I am the Lord... who brought you out of the land of Egypt to be your God' (Lv. 22:31f.).

The covenant also encouraged an intense awareness of corporate solidarity in Israel. Its effect was not only to unite the individual to God, but also to bind all covenant members into a single community (cf. the language Paul uses to describe the effect of the new covenant in Eph. 2:11f.). The recurrence of 'flesh and bone' language in the Bible illustrates this principle vividly; first used of a one-to-one relationship in Gn. 2:23, it could be applied by an individual to his extended family (Jdg. 9:1f.), by the nation declaring its loyalty to its leader (2 Sa. 5:1), and even—in later days—by one Jew describing his relationship to his race (Rom. 11:14, AV). So it was that when a man transgressed one of God's commandments, the whole community was implicated in his sin (Jos. 7:1f.); and when an

ETHICS, BIBLICAL

individual fell on hard times, everyone felt the obligation to go to his aid.

Hence the very strong emphasis the OT lays on social ethics. Corporate solidarity led straight to neighbour-concern. In the one close community unit, every individual was important. The poor had the same rights as the rich because they both came under the one covenant umbrella. Weaker members of society were specially protected (*cf.* the specific regulations of Ex. 22 and 23, with their safeguards for the widow, the orphan, the stranger and the poor).

(b) *The law.* The covenant provided the context for God's law-giving. Consequently, a distinctive feature of OT law was its stress on the maintenance of right relationships. Its main concern was not to set a fence round abstract ethical ideals, but to cement good relationships between people, and between people and God. So the majority of its specific precepts are couched in the second person rather than the third. Hence, too, the strongly positive and warm attitude adopted by those under the law towards law-keeping (*cf.* Pss. 19:7ff.; 119:33ff., 72); and the recognition that the most serious consequence of law-breaking was not any material punishment but the resulting breakdown in relationships (*cf.* Ho. 1:2).

At the heart of the law lie the Ten Commandments (Ex. 20:3ff.; Dt. 5:7ff.), concerned as they are with the most fundamental of relationships. No summary could be more inclusive. They set out the basic sanctities governing belief, worship and life—the sanctity of God's being, his worship, his name and his day; and the sanctity of marriage and family, life, property and truth. The context in which they are given is one of redemption (Ex. 20:2), and their relevance is not exhausted with the coming of Christ (Mt. 5:17ff.; Rom. 13:9; Jas. 2:10f.).

As well as being the fruit of God's redemptive work, the Decalogue has deep roots in the creation ordinances of Gn. 1 and 2. These are the ordinances of procreation and managerial responsibility for the rest of creation (Gn. 1:28); of the sabbath (Gn. 2:2f.); of work (Gn. 2:15) and of marriage (Gn. 2:24). Together (like the Decalogue), they touch upon all the main areas of human life and behaviour, and provide basic guidelines for those seeking a life-style that is in line with the Creator's ideal.

Man's fall into sin did nothing to abrogate these ordinances. Their lasting relevance is upheld in the rest of Scripture (*cf.* Gn. 3:16, 19; 4:1–2, 17, 25; 5:1ff.; 9:7). But the Fall did materially affect the specific content of the OT law. As well as penal sanctions, new provisions were necessary to deal with the radically different situation sin had created. Moses' permission of divorce (Dt. 24:1ff.) is a good case in point. This provision was God's concession to severely sin-torn marriage relationships, not an annulment of his creation marriage ordinance (Gn. 2:24; *cf.* Mt. 19:3ff.). Here, as elsewhere, we must be careful not to confuse God's tolerance with his approval; just as we must always clearly distinguish between the biblical ethic and some of the equivocal behaviour of God's people recorded in the Bible.

(c) *The prophets.* The 8th-century prophets have been aptly called 'the politicians of the covenant'. Social conditions had changed dramatically since Moses' times. Amos' contemporaries had summer-houses as well as winter-houses. Big business

flourished. There was financial speculation and money-lending on a large scale. Alliances and cultural exchanges were arranged with foreign powers. On the face of it, the covenant law had little help to offer to those struggling with the moral dilemmas of so vastly different an environment. But the prophets made it their business to interpret the law by digging down to its basic principles and applying these to the concrete moral problems of their day.

In particular, they echoed the law's deep concern for social justice. Accurately reflecting the spirit of the covenant's concern for the weak, Amos and Hosea flay those who sell the needy for a pair of shoes, accept bribes, use false weights and measures, or generally oppress the poor (Am. 2:6; 5:12; Mi. 6:11). With Isaiah and Hosea, they are particularly savage on those who try to hide their moral failures behind a facade of religious observance (Is. 1:10ff.; Ho. 6:6). God finds feast-days and hymn-singing nauseating, they thundered, while injustice and unrighteousness flourish (Am. 5:21ff.). A humble walk with him involves doing justice and loving kindness (Mi. 6:8).

The prophets also corrected any imbalance that may have resulted from observance of the covenant law. The covenant's stress on corporate solidarity, for example, may have blurred, in some minds, the concept of personal responsibility. So Ezekiel, especially, is at pains to point out that in God's sight every individual is morally responsible for what he does; no-one can simply shelve the blame for wrong-doing on his heredity and environment (Ezk. 18:20ff.). Again, God's special covenant concern for Israel had fostered in some people an unhealthy, narrow brand of nationalism which led them to despise foreigners. The prophets administered the necessary corrective by insisting that God's moral standards are applied evenly. His love embraces Ethiopians as well as Israelites (Am. 9:7). And Israel will not escape his judgment for sin by pleading her special position as the Lord's chosen people; in fact, says Amos, a privileged knowledge of God brings with it extra responsibilities and greater risk (Am. 1:1–3:2).

The enormity of sin, and the vastness of the gulf between the holy God and sinful men, impressed the prophets deeply (*cf.* Hab. 1:13; Is. 6:3ff.). Without a special act of divine grace, they knew no bridge could be built across this gap (*cf.* Je. 13:23). Man's renewal depended on the activity of God's Spirit (Ezk. 37:1ff.) and on a new kind of covenant law which God himself would write on his people's hearts (Je. 31:31ff.).

III. The New Testament

(a) *The Gospels.* Jesus showed great respect for the OT moral law; he came not to abolish but to fulfil it (Mt. 5:17ff.). But he did not teach as a legislator himself. Though he phrased much of his moral teaching in imperatives (*e.g.* Mt. 5:39ff.; Mk. 10:9) and taught with a law-giver's authority (*cf.* Mt. 7:24ff.; Mk. 1:22), it was not his purpose to lay down a comprehensive code of rules for moral living. Law prescribes or forbids specific things; Jesus was more concerned to set out and illustrate the general character of God's will. Law deals in actions; Jesus dealt far more in character and in the motives that inspire action.

Jesus' internalizing of the law's demands is well illustrated in the Sermon on the Mount. The law forbade murder and adultery. Jesus (while not, of course, condoning either) put his finger on the

thoughts and attitudes behind the actions. The man who nursed a private hatred towards his neighbour, or mentally undressed the latter's wife in lust, could not (he taught) evade moral blame by pleading that he had not broken the letter of the law (Mt. 5:21f., 27f.). The Beatitudes, with which the Sermon begins (vv. 3ff.), underline the same point. They comprise not a list of rules, but a set of congratulations directed at those whose lives exemplify godly attitudes. Conversely, the sins Jesus condemns are mainly those of the spirit, not those of the flesh. He has surprisingly little to say (e.g.) about sexual misconduct. On two occasions when sexual sin was brought to his notice (Lk. 7:37ff.; Jn. 8:3ff.), he deliberately turned the spotlight on to the bad motives of the critics. He reserved his most stinging rebukes for wrong attitudes of mind and heart—like moral blindness, callousness and pride (Mt. 7:3ff.; Mk. 3:5; Lk. 18:9ff.).

Jesus' approach to love provides a further illustration of the way he reinforced and developed OT moral teaching. Both parts of his well-known love-summary of the law (Mk. 12:28ff.) are taken straight from the pages of the OT (Dt. 6:4; Lv. 19:18). But he cut across the racial convictions of many of his contemporaries in his radical interpretation of the second of these commandments. Too often 'love your neighbour' was taken to mean 'love your covenant-neighbour—and him only'. Through (especially) the parable of the Good Samaritan (Lk. 10:29ff.), Jesus taught that neighbour-love must extend to anyone in need, irrespective of race, creed or culture. He universalized love's demands.

In expounding neighbour-love, Jesus identified grace as its distinctive feature. Other kinds of loving—all of them treated positively in the NT—are either a response to something attractive in the one loved (as with physical desire and friendship), or the kind of love that is limited to the members of a group (like family devotion). True neighbour-love, Jesus taught, operates quite independently of any lovableness. It is evoked by need, not merit, and does not look for returns (Lk. 6:32ff.; 14:12ff.). It has no group limits either. And in all these ways it mirrors the love of God (Jn. 3:16; 13:34; Lk. 15:11ff.; cf. Gal. 2:20; 1 Jn. 4:7ff.).

When the rich young ruler responded enthusiastically to Jesus' summary of the law, the Lord's rejoinder was 'You are not far from the kingdom of God' (Mk. 12:34). So as well as being the kingdom of God's law, love is the gateway to his kingdom, and Jesus' kingdom teaching is packed with ethical significance. Those who enter the kingdom are those who submit themselves to God's rule; when his kingdom comes, his will is done. And God provides those in his kingdom with royal guidance and power to carry right ethical decisions into practice.

It is this availability of supernatural moral power that makes sense of some of Jesus' otherwise impossible demands (cf. Mt. 5:48). He was no triumphalist (repentance is associated with the kingdom too—Mk. 1:15), but most of his moral imperatives were addressed to those already in the kingdom, with the implied assurance that all who submit to God's rule can share his strength to convert their ethical convictions into action.

Because the kingdom is a present reality in Christ, the King's guidance and power are available here and now. But because there is also a sense in which the fullness of the kingdom's coming is

still imminent, there is a consistent note of urgency in Jesus' moral teaching too. When God's rule over men is fully revealed there will be a judgment, and only a fool would ignore the warning note the kingdom sounds (cf. Lk. 12:20). Hence the gospel-call to repentance (Mt. 4:17).

(b) *The rest of the New Testament.* As is to be expected, the Epistles provide clear parallels to the moral teaching of the Gospels, even though they quote Jesus' words surprisingly rarely (cf. 1 Cor. 7:10; 9:14). But because they were written as practical answers to urgent questions from living churches, the tone of their moral teaching is slightly different. From the Gospels it would seem that Jesus taught mainly in broad general principles, leaving his hearers to make their own applications. In the Epistles, on the other hand, the applications are often spelt out in very specific terms. Sexual sin, for example, is analysed in considerable detail (cf. 1 Cor. 6:9; 2 Cor. 12:21), and sins of speech come in for similarly detailed treatment (cf. Rom. 1:29f.; Eph. 4:29; 5:4; Col. 3:8; Jas. 3:5ff.).

Another distinctive feature of the Epistles' ethical teaching is the recurrence of the so-called household codes (Eph. 5:22ff.; Col. 3:18f.; 1 Tim. 2:8ff.; Tit. 2:2ff.; 1 Pet. 2:18ff.). These are small sections of teaching on right relationships, especially in marriage, in the home and at work. They are notably conservative in tone, as are parallel sections on the relationship between believers and the secular authorities (cf. Rom. 13:1ff.; Tit. 3:1; 1 Pet. 2:13f.). However eagerly the early Christian community looked forward to the consummation of God's kingdom, their keenness clearly did not lead them to reject the basic authority structures on which the life of society was founded. Even in the book of Revelation, where the veil of apocalyptic language covering John's condemnation of the secular government at Rome is transparently thin, the saints are called to martyrdom, not revolution. Nevertheless, seeds of social change are to be found in the NT, notably in the relationships Christians are encouraged to foster with one another in the church (cf. Gal. 3:28).

The theme of the kingdom is not nearly so prominent in the Epistles as in the Gospels, but there is the same emphasis on man's need for God's guidance and power in moral living. In Paul's language, union with Christ (2 Cor. 5:17) and the indwelling Spirit (Phil. 2:13) raise the Christian's moral life to a new plane. Fed by God's Word (Heb. 5:14), the redeemed believer is given sharper insight into distinctions between good and bad (cf. Rom. 12:2); and indwelt by the Spirit, he has new power to do what he knows to be right.

It is sometimes said that in his revolt against Jewish legalism, and boosted by his confidence in the Spirit's power to inform and transform the Christian believer, Paul (especially) held that the OT moral law had become obsolete in Christ. There are certainly passages in the Epistles which, taken alone, might suggest such a view (e.g. Gal. 3:23ff.; Rom. 7:6; 10:4; 2 Cor. 3:6), but it is important to recognize that Paul uses the word 'law' in different ways. Where he uses it as shorthand for 'justification by law' (e.g. Rom. 10:4), he clearly regards living by law as both obsolete and dangerous for Christians. But where he uses the word simply to mean the expression of God's will (e.g. Rom. 7:12), he is far more positive. He quotes the Decalogue without embarrassment (e.g. Eph. 6:2f.), and writes freely about a law principle which is opera-

ETHICS, BIBLICAL

tive in the Christian life (Rom. 8:2; 1 Cor. 9:21; Gal. 6:2; cf. Jas. 1:25; 2:12). Here, as elsewhere, the teaching of the NT dovetails into that of the OT. So far as it contains God's basic moral demands the law retains its validity, because he alone expresses in his person and will all that is good and right.

ETHIOPIA. Settled by the descendants of *Cush (Gn. 10:6), biblical Ethiopia (Gk. *Aithiōps*, 'burnt face', cf. Je. 13:23) is part of the kingdom of Nubia stretching from Aswan (*SEVENEH) S to the junction of the Nile near modern Khartoum. Invaded in prehistoric times by Hamites from Arabia and Asia, Ethiopia was dominated by Egypt for nearly 500 years beginning with Dynasty 18 (c. 1500 BC) and was governed by a viceroy ('King's Son of Kush') who ruled the African empire, controlled the army in Africa and managed the Nubian gold mines.

During the 9th century the Ethiopians, whose capital was Napata near the fourth cataract, engaged in at least one foray into Palestine, only to suffer defeat at Asa's hand (2 Ch. 14:9–15). Ethiopia's heyday began about 720 BC when Pi-ankhi took advantage of Egypt's internal strife and became the first conqueror of that land in a millennium. For about 60 years Ethiopian rulers (Dynasty 25) controlled the Nile Valley. One of them, Tirhakah, seems to have been Hezekiah's ally and attempted to forestall Sennacherib's invasion (2 Ki. 19:9; Is. 37:9; J. Bright, *History of Israel*, 1972, pp. 296ff.), discusses the chronological problems in this narrative). Na. 3:9 alludes to the glory of this period: 'Ethiopia was her (Egypt's) strength.' Invasions by Esarhaddon and Ashurbanipal reduced the Ethiopian–Egyptian kingdom to tributary status; the destruction of Thebes (c. 663 BC; Na. 3:8–10) brought a total eclipse, fulfilling Isaiah's prophetic symbolism (20:2–6).

Ethiopian troops fought vainly in Pharaoh Neco's army at Carchemish (605 BC; Je. 46:2, 9). Cambyses' conquest of Egypt brought Ethiopia under Persian sway; Est. 1:1; 8:9 name Ethiopia as the most remote Persian province to the SW, while biblical writers sometimes use her to symbolize the unlimited extent of God's sovereignty (Ps. 87:4; Ezk. 30:4ff.; Am. 9:7; Zp. 2:12). 'Beyond the rivers of Ethiopia' (Is. 18:1; Zp. 3:10) may refer to N Abyssinia, where Jewish colonists had apparently settled along with other Semites from S Arabia. The Chronicler is cognizant of this close relationship between Ethiopia and S Arabia (2 Ch. 21:16).

In Acts 8:27 Ethiopia refers to the Nilotic kingdom of *Candace, who ruled at Meroë, where the capital had been moved during the Persian period. Modern Ethiopians (Abyssinians) have appropri-

ated biblical references to Ethiopia and consider the *Ethiopian eunuch's conversion to be a fulfilment of Ps. 68:31.

BIBLIOGRAPHY. E. A. W. Budge, *History of Ethiopia*, 1928; E. Ullendorff, *The Ethiopians*, 1960; *idem*, *Ethiopia and the Bible*, 1968; J. Wilson, *The Burden of Egypt*. 1951. D.A.H.

ETHIOPIAN EUNUCH. A high official (*dynastēs*), royal treasurer in the court of *Ethiopia's Queen *Candace, converted under Philip's ministry (Acts 8:26–40). It was not unusual in antiquity for *eunuchs, who were customarily harem attendants, to rise to positions of influence.

Barred from active participation in the Jewish rites by his race and his emasculation (Dt. 23:1), he was most probably a 'God-fearer'. His acquaintance with Judaism and the OT (the quotation from Is. 53 seems to be from the LXX) is not completely unexpected in light of Jewish settlements in Upper Egypt and the considerable impact made by Jewish life and thought on the Ethiopians. His zeal in studying the Scriptures, his ready reception of the gospel and baptism mark him as one of the outstanding converts in Acts, even if his confession (Acts 8:37) is not supported in the better MSS. Ethiopian tradition claims him as his country's first evangelist. D.A.H.

ETHIOPIAN WOMAN. Married by Moses, whom Aaron and Miriam then criticized (Nu. 12:1). As the last mention of Zipporah is just after the defeat of Amalek (Ex. 17) when Jethro returned her to Moses (Ex. 18), it is possible that she subsequently died, Moses then taking this 'Cushite woman' as his second wife, unless Moses then had two wives. 'Cushite' is usually taken as 'Ethiopian' (cf. *CUSH, *ETHIOPIA); if so, she probably left Egypt among the Israelites and their sympathizers. It is also, perhaps, possible to derive 'Cushite' from Kushi and Heb. Cushan, associated with Midian (Hab. 3:7); if so, this woman might be of allied stock to Jethro and Zipporah. K.A.K.

ETHNARCH (Gk. *ethnarchēs*, 'governor', 2 Cor. 11:32). An officer in charge of Damascus with a garrison under *Aretas IV, king of Arabia Petraea (9 BC–AD 39), who was encouraged by the Jews to arrest Paul after his conversion (cf. Acts 9:24–25). Damascus in 64 BC became part of the Rom. province of Syria. At this time (c. AD 33) it was temporarily under Aretas.

The title is used by Josephus for subordinate rulers, particularly of peoples under foreign control, e.g. the Jews in Alexandria (*Ant.* 14. 117); cf. Simon, ethnarch of Judaea under Demetrius II (1 Macc. 14:47). B.F.H.

EUNICE. Timothy's mother, a woman of notable faith (2 Tim. 1:5). She was Jewish (Acts 16:1) and pious, for Timothy's biblical instruction had begun early (2 Tim. 3:15), but her husband was a Gentile and her son uncircumcised (Acts 16:3). In view of Jewish intermarriage with leading Phrygian families (Ramsay, *BRD*, p. 357; cf. *CBP*, 2, pp. 667ff.), such things may represent her family's social climbing, not personal declension. Some Lat. MSS of Acts 16:1, and Origen on Rom. 16:21, call her a

widow, and *hypërchen* in Acts 16:3 might support this. She lived at Derbe or Lystra: linguistically a case can be made for either (cf. *BC*, 4, pp. 184, 254). Her name is Greek, and does not seem common.

It is sometimes suggested that Paul refers to Jewish faith, but the most natural interpretation of 2 Tim. 1:5 (and of Acts 16:1) is that Christian faith 'dwelt' (aorist, perhaps alluding to the event of conversion, doubtless in Paul's first missionary journey) 'first' in *Lois and herself' (i.e. antecedent to Timothy's conversion).

A.F.V.

EUNUCH (Heb. *sāris*). The derivation of the OT word is uncertain, but is thought to come from an Assyrian term meaning, 'He who is head (to the king)'. (So Jensen (*ZA* 7, 1892, 174A.1), and Zimmermann (*ZDMG* 53, 1899, 116 A.2); accepted by S. R. Driver and L. Koehler in their lexicons; see further note by the latter in his *Supplement*, p. 219.) The primary meaning is 'court officer'. In Hebrew a secondary meaning is found, namely, a 'castrate' or 'eunuch'. From Herodotus we learn that 'in eastern countries eunuchs are valued as being specially trustworthy in every way' (8. 105, tr. Selincourt). Such persons were frequently employed by eastern rulers as officers of the household. Hence, in the E it is sometimes difficult to know which of the two meanings is intended or whether both are implied. Potiphar (Gn. 39:1), who was married (v. 7), is called a *sāris* (LXX *eunouchos*): the meaning 'court officer' may be best here. In Is. 56:3 the meaning 'castrate' is obvious. In Ne. 1:11, 'I was the king's cupbearer', some copies of the LXX have *eunouchos*; but this is probably a slip for *oinochoos*, as Rahlfs in *Septuaginta* (1, p. 923) has seen. The 'castrate' was to be excluded from the assembly of the Lord (Dt. 23:1). There is no necessity to assume, as Josephus seems to do (*Ant.* 10. 186), that Daniel and his companions were 'castrates', for they were 'without blemish' (see Dn. 1:4).

In the NT the word *eunouchos* is used, and may be derived from *eunēn echō* ('to keep the bed'). Like its counterpart *sāris*, it need not denote strictly a castrate. In Acts 8:27 both meanings may be intended, in Mt. 19:12 the meaning 'castrate' is beyond doubt. In this last passage three classes of eunuch are mentioned, namely, born eunuchs, man-made eunuchs and spiritual eunuchs. The last class includes all those who sacrificed legitimate, natural desires for the sake of the kingdom of heaven. Report in the early church had it that Origen, misinterpreting in a literal sense the above passage, mutilated himself.

Judaism knew only two classes of eunuch: man-made (*sāris ādām*) and natural (*sāris hammā*), thus the Mishnah (*Zabim* 2. 1). This last term *sāris hammā* or 'eunuch of the sun' is explained by Jastrow, *Dictionary of Babylonian Talmud*, etc., 1, p. 476, to mean 'a eunuch from the time of seeing the sun', in other words, a eunuch who is born so. (*CHAMBERLAND.)

R.J.A.S.

EUODIA. This RSV rendering is to be preferred to the AV's 'Euodias' (Phil. 4:2), for the reference is to a woman rather than a man. Paul begs her and Syntyche to be reconciled. Probably, as Lightfoot suggests, they were deaconesses at Philippi.

J.D.D.

EUPHRATES. The largest river in W Asia, and on this account generally referred to as *hannāhār*, 'the river', in the OT (e.g. Dt. 11:24). It is sometimes mentioned by name, however, the Heb. form being *p'rāt* (e.g. Gn. 2:14; 15:18) derived from Akkadian *purattu*, which represents Sumerian *buranun*, and the NT form *Euphratēs* (Rev. 9:14; 16:12). The Euphrates takes its source in two main affluents in E Turkey, the Murad-Su, which rises near Lake Van, and the Kara-Su, which rises near Erzerum, and runs, joined only by the Hābūr (*HABOR) for 2,000 km to the Persian Gulf. From low water in September it rises by degrees throughout the winter to some 3 m higher by May, and then declines again until September, thus enjoying a milder régime than the *Tigris. In the alluvial plain of Babylonia (*MESOPOTAMIA) its course has shifted to the W since ancient times, when most of the important cities, now some km to the E of it, lay on or near its banks. This is illustrated by the fact that the Sumerians wrote its name ideographically as 'river of Sippar', a city whose ruins lie today some 6 km to the E (*SEPHARVAIM). In addition to the many important cities, including Babylon, which lay on its banks in the S plain, the city of Mari was situated on its middle course, not far from the junction with the Hābūr, and the strategic crossing-place from N Mesopotamia to N Syria was commanded by the fortress city of *Carchemish.

BIBLIOGRAPHY. S. A. Pallis, *The Antiquity of Iraq*, 1956, pp. 4-7.

T.C.M.

EUTYCHUS ('Lucky', a common Gk. name). A young man from Troas who fell from an upstairs window-seat during Paul's protracted nocturnal address there (Acts 20:7-12). H. J. Cadbury (*Book of Acts in History*, pp. 8ff.) points out a similar fatal accident in *Oxyrhynchus Papyri*, 3. 475. Luke's words suggest an increasing and eventually irresistible drowsiness, perhaps—since v. 8 seems related to the incident—induced by the numerous lamps rather than in spite of them.

The miraculous nature of the outcome has been questioned, Paul's words in v. 10 being applied to diagnosis, not healing. However, v. 9 shows that Luke was himself sure that Eutychus died. 'His life' would then be 'in him' from the moment of Paul's embrace (cf. 2 Ki. 4:34). On Paul's departure next morning, Eutychus was recovered (v. 12: according to the Western Text he joined the farewell party). Seen as an eyewitness account by Luke, the story is vivid and the broken sequence intelligible. The assumption that 'a current anecdote had come to be applied to Paul, that Luke found it in this form and introduced it into his narrative' (Dibelius) creates obscurities.

EVANGELIST. The word translated in the NT 'evangelist' is a noun from the verb *euangelizomai* 'to announce news', and usually rendered in evv as 'preach the gospel'. (The NT term echoes Heb. *m'basšēr*, *m'basšeret*, in Is. 40:9; 52:7.) The verb is very common in the NT, and is applied to God (Gal. 3:8), to our Lord (Lk. 20:1), and to ordinary church members (Acts 8:4), as well as to apostles

EVANGELIST

on their missionary journeys. The noun 'evangelist' occurs three times only in the NT. Timothy (2 Tim. 4:5) is exhorted by Paul to do the work of an evangelist; that is to say, make known the facts of the gospel. Timothy had accompanied the apostle on his missionary journeys. But it is plain from the injunctions in the two letters addressed to him that his work when the apostle wrote was very largely local and pastoral. That he is enjoined to do the work of an evangelist shows that a man who was an evangelist could also be a pastor and teacher.

In Acts 21:8 Philip is described as 'the evangelist'. Philip had been chosen as one of the Seven in Acts 6, and after the persecution of Stephen he was prominent in preaching the gospel in unevangelized parts (e.g. Acts 8:5, 12, 35, 40). Though an evangelist, he was not included among the apostles (Acts 8:14). A similar distinction is made between Timothy and the apostles in 2 Cor. 1:1 and Col. 1:1. It will be seen, then, that though apostles were evangelists, not all evangelists were apostles. This distinction is confirmed in Eph. 4:11, where the office of 'evangelist' is mentioned after 'apostle' and 'prophet', and before 'pastor' and 'teacher'. From this passage it is plain that the gift of evangelist was a distinct gift within the Christian church; and although all Christians doubtless performed this sacred task, as opportunity was given to them, there were some who were pre-eminently called and endowed by the Holy Spirit for this work.

Later in the history of the church the term 'evangelist' was used for a writer of one of the four Gospels.

EVE. The first woman, wife of *Adam and mother of Cain, Abel and Seth (Gn. 4:1–2, 25). When he had made Adam, God resolved to provide 'a helper fit for him' ('*ēzer k'negdō*, Gn. 2:18, 20, lit. 'a helper as in front of him', i.e. 'a helper corresponding to him'), so he caused him to sleep and, taking one of his ribs (*šēlā*, Gn. 2:21), made (*bānā*, Gn. 2:22, a word normally meaning 'to build') it into a woman (*l'isšā*). (*CREATION.) Adam, recognizing his close relationship, declared that she should be called 'Woman' (*isšā*), because she was taken out of (*min*; cf. 1 Cor. 11:8, *ek*) Man (*iš*)' (Gn. 2:23). Some scholars consider that *iš* and *isšā* are etymologically distinct, but this need not be significant, since the context requires only that there should be formal similarity between the words, as indeed is the case with *εὐν* 'man' and 'woman'.

Eve was the instrument of the serpent in causing Adam to eat the forbidden fruit (*FALL), and as a result God condemned her to bear children in pain, and to be ruled over (*māšal b'*) by Adam (Gn. 3:16). Adam then called her 'Eve' (*hawwā*, Gn. 3:20); because she was the mother of all living (*hay*). Many theories have been put forward as to the name *hawwā*. Some would see it as an archaic form of *hayyā*, 'living thing' (the LXX takes this view, translating it in Gn. 3:20 by *zōē*, 'life'), others note a similarity with Aramaic *hiwyā*, 'serpent', with which is connected a Phoenician (possibly serpent) deity *hwt*, but as with *iš* and *isšā* nothing beyond a formal assonance appears to be required by the text. The name *hawwā* occurs twice only in the OT (Gn. 3:20; 4:1), the word 'woman' being

more commonly used. In the LXX and NT it appears as *Heua* (*Eua* in some MSS), which passes to *Heva* in the Vulgate, and thence to *Eve* in the EVV.

A sidelight on the biblical statements about Eve is found in a Sumerian myth concerning the god Enki. In this Enki finds himself suffering from a series of ailments, to deal with each of which the goddess Ninḫursag produces a special goddess. Thus, when he says 'My rib (*ti*: written with a logogram, one of whose Akkadian values was *šiltu*, 'side, rib') hurts me', she replies that she has caused a goddess *Nin-ti* ('Lady of the rib') to be born for him. But Sumerian *Nin-ti* can equally mean 'Lady who makes live'. It may be that this reflects in some way a common original narrative with the Genesis account.

EVIL (Heb. *ra'*; Gk. *kakos*, *ponēros*, *phaulos*). Evil has a broader meaning than *sin. The Heb. word comes from a root meaning 'to spoil', 'to break in pieces': being broken and so made worthless. It is essentially what is unpleasant, disagreeable, offensive. The word binds together the evil deed and its consequences. In the NT *kakos* and *ponēros* mean respectively the quality of evil in its essential character, and its hurtful effects or influence. It is used in both physical and moral senses. While these aspects are different, there is frequently a close relationship between them. Much physical evil is due to moral evil: suffering and sin are not necessarily connected in individual cases, but human selfishness and sin explain much of the world's ills. Though all evil must be punished, not all physical ill is a punishment of wrongdoing (Lk. 13:2, 4; Jn. 9:3; cf. Job).

I. Physical evil

The prophets regarded God as the ultimate Cause of evil, as expressed in pain, suffering or disaster. In his sovereignty he tolerates evil in the universe, though he overrules and uses it in his administration of the world. It is used to punish individual and national wickedness (Is. 45:7; La. 3:38; Am. 3:6). The world must be marked by regulation and order to be the scene of man's moral life; otherwise there would be chaos. When men violate the basic laws of God they experience the repercussions of their actions, which may be in penal or retributive affliction (Mt. 9:2; 23:35; Jn. 5:14; Acts 5:5; 13:11). Divine 'vengeance' in the form of pain or sorrow does not imply evil passions in God. Pain may awaken an evil man to reality; till then 'he is enclosed in illusion' (C. S. Lewis, *The Problem of Pain*, p. 83). Nature's present 'vanity' (profitlessness, Rom. 8:19–23) is its mark of evil, the earth being under a curse (Gn. 3:17–18). Christian suffering, whether trouble or persecution, is divinely permitted for purposes of spiritual blessing (Jas. 1:2–4; 1 Pet. 1:7; etc.). It is chastening, not penal; nor can it separate from the love of God (Rom. 8:38–39); it prepares for glory (Rom. 8:18; 2 Cor. 4:16–18; Eph. 3:13; Rev. 7:14). Suffering and sorrow create sympathy and kindness in men,

bringing them into fellowship with God's purpose to overcome evil.

II. Moral evil

God is separate from all evil and is in no way responsible for it. Moral evil arises from man's sinful inclinations (Jas. 1:13-15). Israel repeatedly 'did evil' and suffered its consequences (Jdg. 2:11; 1 Ki. 11:6, *etc.*). Behind all history is a spiritual conflict with evil powers (Eph. 6:10-17; Rev. 12:7-12), 'the evil one' being the very embodiment of wickedness (Mt. 5:37; 6:13; 13:19, 38; Jn. 17:15; Eph. 6:16; 2 Thes. 3:3; 1 Jn. 2:13-14; 3:12; 5:18-19). Satan's power is under divine control (*cf.* Jb. 1-2), and will finally be broken (Heb. 2:14; Rev. 12:9-11).

God is against evil, but its existence is often a stumbling-block to belief in a God of love. It can only be attributed to the abuse of free-will on the part of created beings, angelic and human. God's whole saving activity is directed to deal with evil. In his life, Christ combated its manifestations of pain and sorrow (Mt. 8:16-17); but the cross is God's final answer to the problem of evil. His love was supremely demonstrated there (Rom. 5:8; 8:32) in the identification of the Lord with the suffering world as the Sin-bearer. The moral change effected in men by the gospel is evidence of the reality of Christ's triumph over all evil powers (Col. 2:15; 1 Jn. 3:8), and therefore of the final victory of God. Evil will be eliminated from the universe, and the creation will share redeemed man's glorious destiny. Both physical and moral evil will be banished eternally (Rev. 21:1-8).

EVIL-MERODACH. The king of *Babylon who released Jehoiachin of Judah from imprisonment in the first year of his reign (Je. 52:31; 2 Ki. 25:27-30). Amēl-Marduk ('man of Marduk') succeeded his father Nebuchadrezzar II in the early days of October 562 BC. According to Josephus (from Berossus), he ruled 'lawlessly and wantonly' (*Ap.* 1. 146), but the only allusions to him extant are in administrative tablets. He was killed c. 7-13 August 560 BC in a plot led by his brother-in-law *Nergal-sharezer (Neriglissar).

EVIL SPEAKING may be defined as slander, calumny, defamation or deceit. This may be done by spreading false reports (Pr. 12:17; 14:5, 25) or by reporting truth maliciously, *i.e.* tale-bearing (Lv. 19:16; Pr. 26:20).

Evil speaking is prohibited in Ps. 34:13; Pr. 24:28; Eph. 4:31; Jas. 4:11; 1 Pet. 3:10. It disqualifies a person from God's favour (Ps. 15:3) and from office in the church (1 Tim. 3:8; Tit. 2:3). When a Christian is slandered he must patiently bear it (1 Pet. 3:9) even as Christ did (1 Pet. 2:23).

The ninth commandment forbids false witness (Ex. 20:16; Dt. 5:20; *cf.* Ex. 23:1). To avoid the evil of false accusation more than one witness was required in courts of law (Nu. 35:30; Dt. 17:6; 19:15-21). M.R.G.

EVIL SPIRITS. The term 'evil (*ponēra*) spirit(s)' is found in but 6 passages (Matthew, Luke, Acts). There are 23 references to 'unclean (*akatharta*) spirits' (Gospels, Acts, Revelation), and these appear to be much the same. Thus in Lk. 11:24 'the unclean spirit' goes out of a man, but when he returns it is with 'seven other spirits more evil than himself' (v. 26). Similarly, 'unclean spirits' and 'demons' are interchangeable terms, for both are applied to the Gadarene demoniac (Lk. 8:27, 29).

These beings appear to have been regarded in more than one light. They might cause physical disability (Mk. 1:23; 7:25). Indeed, on most occasions in the NT when they are mentioned it is in such cases. There appears to have been nothing moral involved, for the sufferer was not excluded from places of worship, such as the synagogue. The idea would appear to be that the spirit was evil (or unclean) in that it produced baleful effects. But the sufferer was not regarded as especially evil or as polluted in any way. Yet the spirit itself was not to be regarded in neutral fashion. Everywhere it was to be resisted and defeated. Sometimes we read of Jesus as doing this in person (Mk. 5:8; Lk. 6:18), sometimes of such power being delegated to his followers (Mt. 10:1) or being exercised by them (Acts 5:16; 8:7). The spirits are apparently part of Satan's forces, and thus are reckoned as enemies of God and of men.

Sometimes it is clear that the spirits are concerned with moral evil. This is so in the case of the 'unclean spirit' who goes out of a man and returns with others more wicked than himself (Mt. 12:43-45). The story indicates the impossibility of a man's bringing about a moral reformation by expelling the demons within. There must also be the entry of the Spirit of God. But for our present purpose it is sufficient to notice that the spirits are evil and may bring about evil. The evil spirits 'like frogs' of Rev. 16:13 are also thought of as working evil as they gather the forces of wickedness for the great final battle.

Such passages indicate that on the biblical view evil is not merely impersonal. It is led by Satan, and, just as there are subordinate powers of good, the angels, so there are subordinate powers of evil. Their appearance is mostly concerned with the incarnation (with a resurgence in the last days) as they oppose the work of Christ. See further *SATAN, *DEMON POSSESSION. L.M.

EXCOMMUNICATION. Mt. 18:15-18; 1 Cor. 5; 2 Cor. 2:5-11; Tit. 3:10. The exclusion of a member from the church due to a serious (or aggravation, through stubbornness, of a less serious) offence. It is the final step in the negative side of normal discipline—there is also *Anathema and delivering over to *Satan. When educative discipline (*disciplina*) fails to prevent offences, repressive discipline is used to remove them. The *gradus admonitionis* leading up to excommunication are private remonstrance (incumbent on all, Lv. 19:17), then, if that proves ineffective, remonstrance with

EXCOMMUNICATION

the aid of witnesses; finally, the offender should be dealt with by the church, presumably through its duly-elected representatives, following the Jewish pattern. The apostle puts this responsibility upon the local church (1 Cor. 5:4-13). If the offender still shows no repentance he is to be excommunicated. 'Let him be to you as a Gentile and a tax collector' (Mt. 18:17).

Some critics (e.g. Bultmann, T. W. Manson) make this 'quasi-legal' procedure a later development of the church, from rabbinic sources. But then it is hard to see why Paul reproved the Corinthians so sharply for neglecting it. And our Lord's condemnation of these sources would be fresh in their minds (Mt. 23:13ff.). The opprobrious sense of 'Gentile and tax collector' has been said to show a Jewish-Christian origin, c. AD 50. This is, at the least, doubtful. Ultimately, it is a question of 'the historical validity of the Gospel record and of the origins of Christianity itself, and this question it is impossible to ignore' (W. Manson, *Jesus the Messiah*, 1952, p. 26). The mind of the early church is the mind of the Lord.

Public, notorious faults are to be rebuked publicly (1 Tim. 5:20; Gal. 2:11, 14). Very serious offences merit immediate excommunication (1 Cor. 5:3). It is also noteworthy, however, that no amount of excommunication will produce a perfect church, for it has to ignore secret sins and hypocrisy. Also, the oil of leniency has to be mixed with the vinegar of severity: 'We judge that it pertains unto sound doctrine . . . to attemper our life and opinion, so that we both endure dogs in the church, for the sake of the peace of the church, and, where the peace of the church is safe, give not what is holy unto dogs . . . that we neither grow listless under the name of patience, nor be cruel under the pretext of diligence' (Augustine, *Short Treatises*, 1884, p. 43).

The aims involved are, first, to promote the glory of God, that his name be not blasphemed owing to manifest evil in the church; second, to prevent the evil from spreading to other members (1 Cor. 5:6); and third, to bring about true repentance in the offender. Here the ultimate aim is seen to be redemptive (Calvin, *Institutes*, 4. 12. 5).

Excommunication implies that we suspend convivial intercourse with the offender, though not ceasing to pray for his recovery; and though he is excluded from the benefits of the sacraments, he will be encouraged to attend the preaching of the Word.

R.N.C.

EXODUS. This event marked the birth of Israel as a nation and—through the immediately-following covenant at Sinai—as a theocracy.

I. The event itself

After the Hebrews' residence in the Egyptian E Delta for 430 years (Ex. 12:40-41) culminating in enslavement in Egyptian state-covée in the 18th and 19th Dynasties, God commissioned Moses, with Aaron as his mouthpiece, to lead out the Hebrew slaves, tribal descendants of Abraham, Isaac and Jacob, from Egypt to become a nation in Palestine, the land of promise (Ex. 3-4). Despite the hostility and temporal power of the pharaoh and, later, Israel's own faithlessness, this duly came to pass (Jos. 24).

That a large group of subject people should go

out from a major state is neither impossible nor unparalleled in antiquity. In the late 15th century BC people of some fourteen 'lands', 'mountain-regions' and townships apparently decamped from their habitats within the Hittite kingdom, and transferred themselves to the land of Isuwa (Treaty-prologue of Suppiluliuma and 'Mat-tiwaza', Weidner, *Politische Dokumente aus Klein-asien*, 1923, p. 5), only later to be brought back by the powerful Hittite King Suppiluliuma. However, Pharaoh's attempts to retain, and then to recapture, the Hebrews were rendered utterly futile by God's marshalling against him the powers of nature in nine plagues and a supernatural punishment in the tenth, and by swamping his pursuing chariotry in the Re(e)jd Sea. The calling-out of a nation in this way specifically to serve a God, and live out a covenant directly with their God, is unique. The peoples who fled to Isuwa doubtless also considered themselves oppressed, but had no positive commission or divine calling to some high destiny. There went out with Israel a motley crowd, mixed in motives as in origins ('mixed multitude', Ex. 12:38, Heb. 'ērebrab, cf. Eng. 'riff-raff'). This element preferred meat to manna (Nu. 11:4, Heb. 'saššup, 'rabble').

Other specific aspects of the Exodus are more appropriately dealt with in other articles as follows: for *date* of the Exodus, see *CHRONOLOGY of the OLD TESTAMENT. For *route* of the Exodus, see also on Egyptian sites *ENCAMPMENT by the SEA. *BAAL-ZEPHON, *PITHOM, *RA'AMSES, *SUCCOTH, *MIGDOL, etc., and on the Sinaitic journeyings, *WILDERNESS of the WANDERING, *SINAI and individual palaces—*ELIM, *REPHIDIM, etc. For the Egyptian background to the oppression and conditions attending on the Exodus, see *EGYPT (IV), *MOSES and *PLAGUES of EGYPT.

II. The Exodus in later history

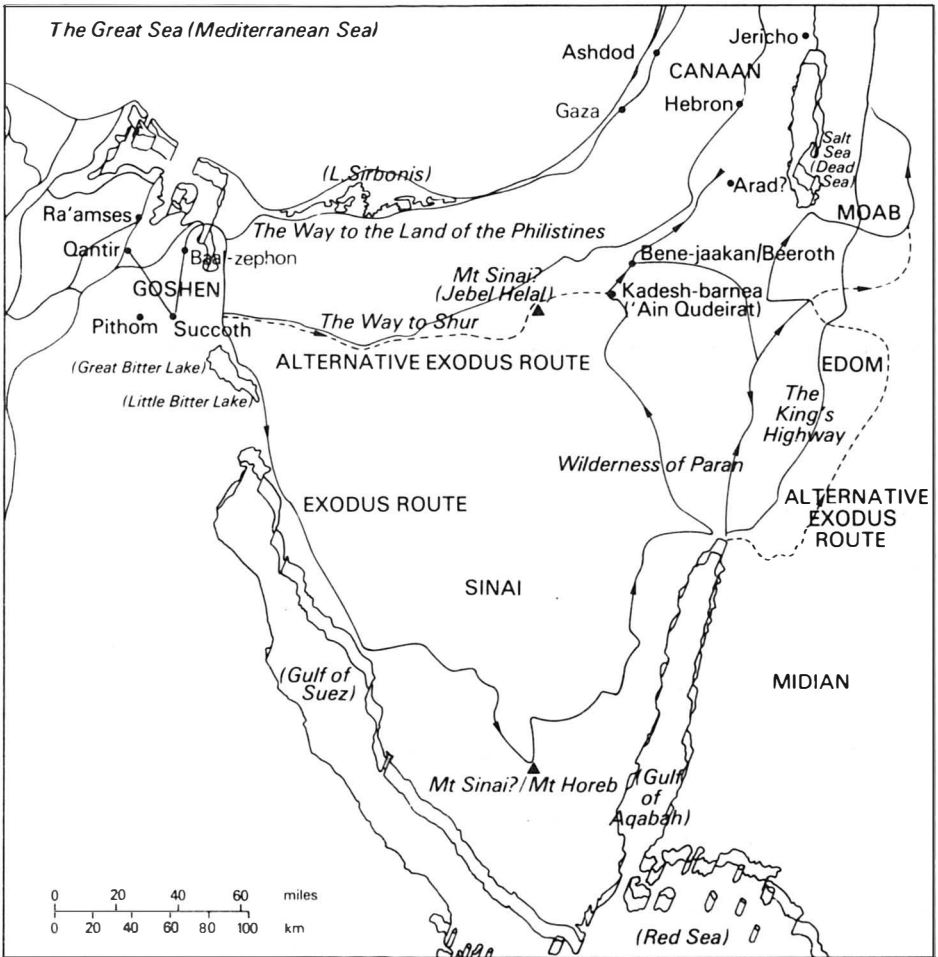

Repeatedly in later generations, the prophets in exhorting Israel to return to her God and the psalmists in their meditations hark back to this Exodus—to God's redeeming grace in summoning a nation from Egyptian bondage in fulfilment of promises to the Patriarchs, to serve himself and exemplify his truth. For them, the great redemption is ever to be remembered with gratitude and response in obedience. See such passages as the following: historical books, Jdg. 6:8-9, 13; 1 Sa. 12:6, 8; 1 Ki. 8:51; 2 Ch. 7:22; Ne. 9:9ff. For Psalms, cf. Pss. 77:14-20; 78:12-55; 80:8; 106:7-12; 114. Among the prophets, see Ho. 11:1; Je. 7:21-24; 11:1-8; 34:13; Dn. 9:15. In the NT Christ accomplished the final 'Exodus', the full redemption (cf. Heb. 13:13 and elsewhere generally).

Daube, *The Exodus Pattern in the Bible*, 1963; R. E. Nixon, *The Exodus in the New Testament*, 1963; background data. K. A. Kitchen, *ABD* 2, pp. 700-708. K.A.K.

EXODUS, BOOK OF.

I. Outline of contents

Exodus (the latinized form of LXX *exodos*, 'a going out') is the second section of the Pentateuch, and deals with the fortunes of Israel subsequent to the

Possible routes of the Exodus.

propitious times of Joseph's governorship. It records the two great culminating points in Israel's history: the deliverance from Egypt and the giving of the law. Henceforth the events of Exodus hold a central place in God's revelation of himself to his people, not only in the old but also in the new covenant, in which the Passover lamb provides the type for our Lord's sacrifice, and the Passover Feast is adapted to serve as the commemoration of our redemption.

The events leading up to and following Israel's flight from Egypt form the main theme of the book. The chronological setting is given only in general terms, consistent with the Hebrew treatment of history as series of events and not as a sequence of dates.

The book, after giving a short genealogical note to effect the transition from Genesis, begins with an account of the disquiet on the part of the Egyptians at the great numerical increase of the Israelites. To counteract what was considered to be a growing menace, the Israelites were first subjected to forced labour under Egyptian task-masters, probably both to meet a current need for a large

labour force and to keep them under strict observation. Then their labour was intensified, probably to reduce their leisure, and thus their opportunities for mischief, to a minimum. Finally an attempt was made to check any further increase in the population by the extermination of all new-born male infants. The boys rather than the girls would be chosen, as they would be regarded as potential instigators of revolt. This final step furnishes the background of the account of the birth and upbringing of Moses, the second great figure in Jewish history, at the Egyptian court. His early life, encounter with God and rise to leadership occupy chs. 2-4. In chs. 5-13 are related the attempts to gain release for Israel, ending in the *Plagues of Egypt and the institution of the *Passover. After the crossing of the *Red Sea and its celebration in song (14:1-15:21) follows a journal of the march to Sinai (15:22-18:27). The remainder of the book tells of the Covenant at Sinai (19-31), its breach (32-33), renewal (34) and the construction of the *tabernacle according to the instructions given (35-40).

II. Authorship

The leading critical schools see in Exodus a composition of diverse elements, originating from various sources or hands, ranging over a period from the 8th century until the 2nd century BC (A. H. McNeile, *Exodus*, p. ii; *PENTATEUCH, section II). To the hypothetical documents J (passages in which *YHWH* occurs), E (Elohim), D (Deuteronomical school), P (Priestly school) and R (various redactors) have been added L (lay source, O. Eissfeldt, *The Old Testament: An Introduction*, 1965, p.191), and B (*Bundesbuch*, book of the covenant, Ex. 20:22–23:33, Eissfeldt, p. 191). According to Eissfeldt (p. 211), the order of the growth of Exodus would seem to be: L J E B P R^a R^b R^c, where R is the redactor who added the source denoted by the superior letter to the corpus (pp. 210ff.).

In the opinion of Eissfeldt the 'pious' attitude of the redactors towards their material, considered from the literary and aesthetic points of view, was a disadvantage, as this 'piety' prevented them from fashioning out of their materials a new and higher literary unity. This would indeed have been remarkable restraint in view of the magnitude of the literary reconstruction they were undertaking without an apparent qualm. McNeile, however, says bluntly: 'Since in all ages of Israelite history every civil and religious institution was referred to Moses, every successive age found it necessary to manipulate the records' (*op. cit.*, p. ix). Again, according to McNeile it was the aim of the priestly writers 'to systematize traditions and often to supplement them, under the dominance of religious ideas' (*op. cit.*, p. lxxix), and that 'the narrators enriched the narratives from their own imagination', and 'the traditions acquired a miraculous element in the centuries that intervened between the events and the times of the several writers' (p. cxii).

About Moses, McNeile says: 'Vague traditions of the founder of the national religion were orally handed down ... legendary details would gather round his life' (p. cviii). He continues: 'It may be confidently asserted that Moses would not commit to writing a series of moral precepts'; and 'It is impossible to say of any particular detail that it derived from Moses himself' (p. cxviii). About the tabernacle this same author says: 'the historicity is unhesitatingly denied by all who accept the main principles of historical and literary criticism' (p. cxviii). The reason given for this last piece of scepticism is the mention of the tent of audience in 33:7. alleged to be identical with the tabernacle. It is, however, clear that the reference here is to the practice obtaining in the period preceding the erection of the tabernacle, the purpose of which was to be a sanctuary, symbolizing God's presence in their midst (25:8). S. R. Driver thinks that customs and rites 'are antedated and represented as having been already propounded and put in force in the Mosaic age' (*Exodus*, p. lxxv).

If these views had any objective validity the narratives in Exodus would cease to be of historical value. The theories are in the nature of the case not amenable to proof. As Eissfeldt says: '... the whole of Pentateuchal criticism is a hypothesis, though admittedly one that rests upon very significant arguments' (*op. cit.*, p. 240).

It is strange that P, written from a priestly point of view, does so little to enhance the priesthood. It is Moses, the political leader, who remains the

great hero, while the one who allows the people to fall into idolatry is Aaron, the priest, whom Moses rebukes and reinstates. This was not the only lapse on the part of Aaron. If the whole of the materials was arranged to give an ideal picture of the theocracy, as it was supposed to have existed in the Mosaic age (Driver, *op. cit.*, p. xii), then the project, in the light of the described stubbornness and intractability of the people, singularly miscarried.

Literary criticism in general would now hold as a truism that a literary work contains sources, and would never view these as evidence of multiple authorship (e.g., cf. J. L. Lowes, *The Road to Xanadu*). It is now also taken to be axiomatic that style is dictated largely by subject-matter, not by idiosyncratic vocabularies. The comparison of the alleged composite nature of the Pentateuch with the writings of Arabic historians, who are simply marshalling their witnesses, is not applicable to the literature of the ancient Semitic East (A. T. Chapman, *Introduction to the Pentateuch*, 1911).

The application of the dissecting criteria to documents of indisputable unitary authorship shows them to be worthless (cf. *EGYPT, V.b). The selection of criteria was arbitrary, and other possible selections would give radically different results. A key passage as the justification of documentary fragmentation is Ex. 6:3, where, it is claimed, the introduction of the name *YHWH* is stated to be an innovation. The great stress here laid on the continuity of identity with the God of the Patriarchs hardly indicates a new departure. There are two possible interpretations of this verse. 'Name' here can refer not to an appellation, but can stand for 'honour' and 'character', as it often does in Semitics generally. Or the sentence could be taken as an elliptical interrogative: 'for did I not let my name, *YHWH*, be known to them?' At least the 'and also' of the next verse followed by a positive implies a preceding positive (W. J. Martin, *Stylistic Criteria and the Analysis of the Pentateuch*, 1955, pp. 17f.; G. R. Driver, 'Affirmation by Exclamatory Negation', *Journal of the Ancient Near East Soc., Columbia Univ.* 5, 1973 (T. H. Gaster vol.), p. 109. Much study has been given to the traditions contained in Exodus, particularly by G. von Rad and M. Noth. All work like theirs is purely conjectural, so long as it is based upon the subjective literary criticism described above, and doctrinaire views of Israelite religious history. However, there is an advance in that the traditions are regarded in many cases as much older than the literary sources.

The Jewish view from the time of Joshua (8:34f.), subscribed to by our Lord, and accepted by the Christian church, held that Exodus was the work of Moses. From internal evidence this is also the impression given by the book itself. No objective philological evidence has been produced for the rejection of this view. If editing took place, one would expect it to be confined to such things as the modernization of geographical names. This done honestly in the interests of clarity would be far removed from inserting into documents extensive interpolations, and representing them as compositions of the Mosaic age.

III. The text

The text of Exodus is remarkably free from transcriptional errors. Letters on occasion have dropped out. There are a few examples of dittography (e.g. possibly of *sammim*, 'spices', in 30:34). Haplography (writing only once that which

occurs twice) appears, e.g., in 19:12, where an *m* (= 'from') has been omitted. In 11:1 a marginal note may have found its way into the text: 'when his sending away is final'. In 20:18, apparently through the omission of Heb. *y*, 'fear' has become 'saw'. In 34:19 the Heb. definite article *h* has become *t*. In 23:3, through the misreading of *g* as *w*, 'great' has become 'poor' (cf. Lv. 19:15). In 17:16 the letters *k* and *n* have apparently been confused: read probably: 'For he said: power is with the banner of the Lord'. In 23:5 *b* seems to have replaced *r*, changing 'help' into 'forsake'; the reading is possibly: 'and thou shalt refrain from abandoning it, thou shalt surely give him your help'. One could read the text as it stands: 'and thou shalt refrain from abandoning it, thou shalt surely along with him free it'.

The magnitude of the *numbers seems to some to present difficulties. The transmission of numbers is especially exposed to error. In any consideration of the large number of people involved and the problem of providing for them, it should be borne in mind that these were not an urbanized people, but men and women whose manner of life made them well able to fend for themselves.

W.J.M.
A.R.M.

EXPIATION. This term does not occur in AV, but it is found in some modern translations in place of 'propitiation', e.g. 1 Jn. 4:10, rsv. Objection is made to 'propitiation' on the ground that it means the appeasement of an angry God, an idea not found in Scripture. Therefore expiation is substituted for it. But the matter is not so simple. Expiation properly has a thing as its object. We may expiate a crime, or a sin. Propitiation is a personal word. We propitiate a person rather than a sin (though we should not overlook the fact that in the Bible 'propitiate' is occasionally found with sin as the object, the meaning being 'to make propitiation with respect to sin'). If we are to think of our relationship to God as basically personal we cannot afford to dispense with the concept of propitiation. Those who advocate the use of expiation must face questions like: Why should sin be expiated? What are the consequences if no expiation takes place? Is the hand of God in those consequences? Expiation is a valuable word only if we can confidently answer 'No' to the last question. If sin is a thing, and can be dealt with as a thing, blotted out, cast from us, and the like, then we may properly talk of expiation. But if sin affects man's relationship with God, if the relationship with God is the primary thing, then it is difficult to see how expiation is adequate. Once we bring in the category of the personal we need some such term as propitiation.

It seems, then, that, despite the confident claims of some, expiation is not the solution to our difficulties. The ideas expressed in the words usually translated *'propitiation' are not adequately safeguarded by the use of the term 'expiation'.

L.M.

EYE. The Heb. word for eye, 'ayin, with parallels in other Near Eastern languages, is used of the physical organ of man (Gn. 3:6) or beast (30:41), of God anthropomorphically (Ps. 33:18), and also of objects (Ezk. 1:18; cf. Rev. 4:6). The Gk. word *ophthalmos* has familiar derivations in English.

In Hebrew the physical organs are construed as acting semi-independently and possessing also psychical and moral qualities. Thus the eye not only has sight but is proud (Is. 5:15), has pity (Dt. 7:16), sleep (Gn. 31:40), delight (Ezk. 24:16), etc., and, while Paul emphasizes the interdependence of the physical organs (1 Cor. 12:16ff.), Mt. 5:29 preserves the Hebraic notion of the almost self-contained function of the organ.

The practice of putting out the eyes of a defeated enemy was common in the E (Jdg. 16:21; 2 Ki. 25:7).

The phrase 'the eye of the Lord is on those who fear him' (Ps. 33:18) is significant of God's watchful care (cf. Ps. 1:6).

Other phrases are: 'eye for eye' (Lv. 24:20); 'face to face', literally 'eye to eye' (Nu. 14:14); 'before their eyes', i.e., in full view (Gn. 42:24; cf. Je. 32:12); and 'between your eyes', i.e., on the forehead (Ex. 13:9); of the phylactery.

Derived usages are: 'face of the land' (Heb. 'ayin) (Ex. 10:5), and 'gleaming' or 'sparkling' (Ezk. 1:4; Pr. 23:31).

B.O.B.

EYE OF A NEEDLE. In Mt. 19:24; Mk. 10:25; Lk. 18:25 we find the statement of Jesus: 'It is easier for a camel to go through the eye of a needle than for a rich man to enter the kingdom of God.' This form of words, familiar in rabbinic writings, signifies something both very unusual and very difficult—e.g. in the Talmud an elephant passing through the eye of a needle is twice used of what is impossible, and a camel is portrayed as dancing in a very small corn measure (cf. also J. Lightfoot, *Horae Hebraicae*, 2, 1859, pp. 264f.). Some scholars interpret 'needle's eye' as a reference to a narrow gateway for pedestrians, but there is no historical evidence to support this. See F. W. Farrar, 'The Camel and the Needle's Eye', *The Expositor* 3, 1876, pp. 369-380.

J.D.D.

EZEKIEL (Heb. *y'hezqēl*, 'God strengthens'). The name is found in approximately its Heb. form in 1 Ch. 24:16 for the head of one of the priestly orders.

Ezekiel, the son of *Buzi, was deported to Babylon, almost certainly with Jehoiachin in 597 BC (2 Ki. 24:14-17). He was settled in the village of Tel-abib by the river *Chebar. Five years later he received his call as prophet (Ezk. 1:2), possibly at the age of 30 (1:1), though this interpretation is denied by many without offering a more satisfactory one. He lived for at least another 22 years (29:17).

We have little information about his life. Though he possessed detailed knowledge of the Jerusalem Temple and its cultus, there is no evidence he had served in it. Even those, e.g. Cooke (*ICC*), who suggest that the bulk of chs. 1-24 were pronounced in Jerusalem, do not suggest Temple service. His thought, more than that of any other prophet, is influenced by priestly symbolism. His prophecies

EZEKIEL.

were badly received (3:25), but we soon find him in an honoured position (8:1; 14:1; 20:1), due possibly to his family rank; the majority hardly took his message very seriously (33:30–32—AV is misleading in v. 30). His wife died suddenly the day Nebuchadrezzar invested Jerusalem (24:1–2, 15–18); there is no mention of children.

H. Klostermann, *Theologische Studien und Kritiken*, 1877, tried on the basis of such passages as 3:23–4:8 to show that he suffered from an organic nervous disease, which he called catalepsy. Though popular for a time, the view is today accepted by few. Considerable controversy exists as to how Ezekiel's symbolic actions are to be interpreted. Some, e.g. A. B. Davidson, *Ezekiel (CBSC)*, p. xxx, and J. Skinner, *HDB*, 1, p. 817a, have held they took place purely in the prophet's mind. More usual is the conception that, though they were carried out, in our understanding of them we must allow for a metaphorical element inconsistent with a purely literal interpretation. See also the following article.

H.L.E.

EZEKIEL, BOOK OF.

I. Structure and contents

The indications of date (1:2; 3:16; 8:1; 20:1; 24:1; 26:1; 29:1, 17; 30:20; 31:1; 32:1, 17; 33:21; 40:1) apart from those in chs. 25–32 form a coherent series marking major developments in Ezekiel's message (see previous article). It is reasonable to infer that chs. 25–32 were inserted in their present position on analogy with Is. 13–27 to mark the division between the two main phases of Ezekiel's activity; cf. also the probably original position of the prophecies against the nations in Jeremiah (so LXX). In chs. 1–24 he is the prophet of inexorable doom, interpreting coming events to the remnant in exile (not to Jerusalem!) to prepare them for their future role. Chs. 33–39 give an outline of the message by which he tried to build up the exiles as the people of God. The long interval between 33:21 and 40:1 (some 13 years), the striking change in style and the fact that Josephus writes of Ezekiel's two books (*Ant.* 10. 79) suggest that chs. 40–48 represent a separate, though allied, group of prophecies beside chs. 33–39.

II. Authorship and date

Ezekiel has an unquestioned place in Ben Sira's list at the beginning of the 2nd century BC (Ecclus. 49:8), but there was a move in the 1st century AD to have the book withdrawn from public use. For this there were three reasons. Some felt ch. 16 too repugnant for public reading; ch. 1 and parallels were used in dangerous theosophical speculations (the students of *Merkabah* ['chariot'] mysticism thought they were the key to the mysteries of creation); above all, numerous details in chs. 40–48 were considered contradictory to the law of Moses, already considered immutable. The labours of Hananiah ben Hezekiah, which resolved the apparent discrepancies, guaranteed for Ezekiel a public position in the Pharisaic canon.

This position was seldom challenged, and J. Skinner could say in 1898 (*HDB*, 1, p. 817a), 'The Book of Ezekiel (save for a somewhat corrupt text) exists in the form in which it left the hand of its author. . . . Neither the unity nor the authenticity of Ezekiel has been questioned by more than a very

small minority of scholars. Not only does it bear the stamp of a single mind in its phraseology, its imagery, and its mode of thought, but it is arranged on a plan so perspicuous and so comprehensive that the evidence of literary design in the composition becomes altogether irresistible.'

In spite of the cogency of these arguments the position began to change in 1924; attacks on the unity and authenticity of Ezekiel may be divided into three groups, which tend to overlap.

a. The date of composition

C. C. Torrey saw in it a pseudepigraph, written about 230 BC, describing the abominations of Manasseh's reign; an editor gave it its present form not later than 200 BC. M. Burrows reached a similar date by linguistic evidence. L. E. Browne advocated a date during the time of Alexander the Great. J. Smith, on the other hand, regarded Ezekiel as a N Israelite deported in 734 BC, who prophesied to his fellow exiles until he returned to Jerusalem in 691 BC, where he gave the bulk of his oracles. Such views have won very little favour.

b. The place of prophecy

Though Torrey's dating has had little acceptance, many have followed him in seeing the bulk of the book as Palestinian. It is widely believed that, whether or not Ezekiel was deported in 597 BC, he was prophesying in or near Jerusalem until its destruction in 586 BC. Perhaps the best presentation of this view is by Pfeiffer, *JOT*, 1948, pp. 535–543. The main justification for this interpretation is the traditional misinterpretation of Ezekiel's oracles before 586 BC as addressed to doomed Jerusalem. Its great weakness is the very extensive rearrangement of the text involved, and the absence of any adequate motivation for the distortion of Ezekiel's actual activity.

c. The unity of the book

Basing himself mainly on the contrast between Ezekiel's poetry and prose, G. Hölscher attributed to him only 170 verses (mostly poetry) of the total 1,273, the rest coming from a leivital editor between 500 and 450 BC. W. A. Irwin reached similar results by other methods, attributing some 250 verses to Ezekiel. Many deny chs. 40–48 to him. Their arguments are a challenge to profounder exegesis, but they have failed to carry conviction with the majority, though editorial insertions are increasingly recognized.

It seems fair to say that these intensive critical studies have largely cancelled themselves out. They have led to a deeper understanding of many aspects of the book, but have left the general position much as it was before 1924. Since the work of C. G. Howie there has been a general swing back to a more conservative position. Few now deny that it is an Exilic production by Ezekiel himself. In the first 39 chapters, G. Fohrer, mainly on subjective grounds, denies only just over 100 verses to the prophet, and that without impairing any major section of his message. About the same number of verses from the last 9 chapters are denied to the prophet but here the motivation seems to be more subjective.

There has also been a general swing away from the idea that Ezekiel must have prophesied in Jerusalem during the earlier part of his activity. The latest major commentary, that of W. Zimmerli, takes up a mainly conservative position, but does

not attribute the composition of the book to Ezekiel himself.

III. The text

Many *hapax legomena* and technical expressions and obscurity in the symbolical language have led scribes into frequent error. The LXX can often be used to correct the Hebrew, but only with extreme care. There is an interesting comparison of the Hebrew and Greek in Cooke, *Ezekiel. ICC.* pp. xl–xlvii.

IV. The religious teaching of the book

To understand the book correctly we must grasp that, like all the writings of the prophets, it is not a manual of theology; it is the word of God to a battered remnant in exile experiencing what the theologians of the time had considered impossible. If Ezekiel by his symbolism seems to stress the transcendence of God, it is to make clear that his omnipotence cannot be limited by the failure of his people. This leads to the most unsparing exposure of Israel's history and religion in the OT (16; 20; 23). The promise of restoration is no longer bound to the prior repentance of the people, but is an act of God's grace which leads to repentance (36:16–32). The restoration is above all to vindicate God's honour and not for Israel's sake. Because all is of God's grace, the relationship of the individual to God depends neither on his heredity nor his own past (18; 33:10–20). Many have deduced from 40–48 a picture of Ezekiel as a narrow, priestly ritualist, but this comes from failure to recognize the essentially eschatological character of these chapters. Witness to this is borne by the apparent lack of interest of the returned exiles in these chapters. They did not even try to enforce those points that lay in their power, such as confirming the priesthood to the Zadokites (44:15–16), or the apparent duplication of a Day of Atonement (45:18, 20; cf. rvmg. for LXX correctly). In the symbolism of exact conformity to divine plan and law we are shown God's people ultimately conforming perfectly to his purposes.

EZEL. The agreed rendezvous of David and Jonathan, occurring in I Sa. 20:19 (AV, RV, rsvmg.). It is sometimes taken to mean 'departure', but the rvmg. and the rsv, following the LXX, read 'this mound' and 'yonder stone heap' respectively, and assume corruption in the Heb. text. See also the mg. of I Sa. 20:41. G.W.G.

EZRA. According to the record in Ezr. 7, Ezra was sent to Jerusalem by Artaxerxes I in 458 BC. It would seem probable that he held a position in Persia comparable to Secretary of State for Jewish affairs. His task was to enforce the uniform observance of the Jewish law, and to this end he had authority to make appointments within the Jewish

state. A large company of exiles came with him, and he brought valuable gifts for the Temple from the king and the exiled Jews. He was asked to deal with the problem of mixed marriages, and, after fasting and prayer, he and a chosen committee blacklisted the guilty and induced some at least to put away their pagan wives (10:19).

After this we do not hear of Ezra until he reads the law publicly in Ne. 8. This was in 444 BC. Since he had been sent by the king on a temporary mission, he presumably returned with his report, but was sent back again on a similar mission when the walls of the city were completed. Nehemiah, in part of his memoirs in Ne. 12:36ff., records that he himself led one party round the walls on the occasion of their dedication, while Ezra led the other.

Largely on the strength of three passages, many have held that Ezra did not come to Jerusalem until the time of Artaxerxes II, i.e. in 398 BC, long after the time of Nehemiah.

a. Ezr. 9:9 speaks of a city wall, whereas the wall was not built until Nehemiah's time. But Ezr. 4:12 shows that a wall of some sort was being built in the reign of Artaxerxes I, and its destruction is probably referred to in 4:23 and Ne. 1:3. Ezra is rejoicing in faith at the work which has progressed so far.

b. Ezr. 10:1 speaks of a very great congregation in Jerusalem, whereas Ne. 7:4 says that only a few people lived in the city. But the context of Ezr. 10 shows that the congregation was drawn from all around Jerusalem, e.g. 10:7, whereas Ne. 7 is concerned with actual dwelling-houses in the city.

c. Ezr. 10:6 speaks of Jehohanan (or Johanan) the son of Eliashib as Ezra's contemporary. We know from Ne. 12:22–23 that Johanan was the grandson of Eliashib, and from the Elephantine papyri that Johanan was high priest in 408 BC. But Johanan was a common name, and it is reasonable to think that Eliashib had a son named Johanan, and also another son, Joiada, who in turn had a son, Johanan, who became high priest. Ezr. 10:6 does not say that Johanan was high priest in Ezra's day.

As against the idea that the writer of Ezra and Nehemiah confused Artaxerxes I and II (which this theory of the priority of Nehemiah demands), a writer even as late as 330 BC could not have confused the order of the two men. If Ezra really came in 398 BC, a few of the writer's contemporaries would have remembered him, and many would have been told of him by their parents; whereas no-one would have remembered Nehemiah. Thus the writer could not have put Ezra back before Nehemiah by accident, and no-one has suggested any reason for his doing so deliberately. (See J. Stafford Wright, *The Date of Ezra's Coming to Jerusalem*, 1958; H. H. Rowley, 'The Chronological Order of Ezra and Nehemiah' in *The Servant of the Lord and Other Essays*, 1952, pp. 129ff.)

It should be noted that Ezra attained a great reputation among the Jews in post-biblical times. In 2 Esdras 14 he is said to have been inspired of God to re-write the law, which had been destroyed in the Exile, and a number of other books. See also the following article.

EZRA, BOOK OF.

I. Outline of contents

a. 1:1–11. Cyrus permits the Jews to return from exile under Sheshbazzar. 537 BC.

b. 2:1–70. The register of those who returned.

c. 3:1–13. The altar is set up and the Temple foundations laid. 536 BC.

d. 4:1–5, 24. Enemies hinder the work until the time of Darius.

e. 4:6–23. Further opposition to the building of the city walls in the reign of Ahasuerus (Xerxes, 485–465 BC) and Artaxerxes (464–424 BC), resulting in a decree to stop the building altogether.

f. 5:1–6:22. Renewal of the Temple building through the prophecies of Haggai and Zechariah. In spite of protests to Darius the work is completed. 520–516 BC.

g. 7:1–28. Ezra is sent from Persia to enforce the law. 458 BC.

h. 8:1–36. Ezra's journey and safe arrival.

i. 9:1–10:44. Ezra and the Jews deal with the problem of mixed marriages.

In this outline it is assumed that the author has collected examples of opposition together in 4:6–23. There are those who think that Ahasuerus in v. 6 is Cambyses (529–522 BC) and Artaxerxes in v. 7 is the usurper Gaumata, or Pseudo-Smerdis, who reigned for a few months in 522–521 BC. But the subject-matter of vv. 7–23 is the walls and not the Temple, and it is probable that the damage referred to in v. 23 is that referred to in Ne. 1:3.

II. Authorship and date

See the general note under *CHRONICLES, of which it is probable that Ezra and Nehemiah formed part. Traditionally the author is Ezra himself, but some bring the date down to about 330 BC. Whether or not Ezra was the final compiler, chs. 7–9 would appear to be from his hand, much of this section being in the first person singular. The account in chs. 1–6 is compiled from records, including decrees (1:2–4; 6:3–12), genealogies and name lists (2), and letters (4:7–22; 5:6–17). There are two sections which have been preserved in Aramaic (4:8–6:18; 7:12–26). Aramaic was the diplomatic language of the day, and was suitable for the section dealing with the coming and going of letters and decrees between Palestine and Persia.

III. Credibility

The documents that are found in Ezra present no great difficulties of harmonization with one another and with what is known from secular history. We may note the following.

a. The decree of Cyrus (1), acknowledging Jehovah, is in harmony with Cyrus's favourable references to Babylonian deities in contemporary records. This is a public decree, written in terms that would appeal to the Jews. The formal decree in 6:3–5 is filed in the records, and gives the maximum size of the Temple for which the king was prepared to give a grant.

b. It is pointed out that from Hg. 2:18 we learn that the foundation of the Temple was laid in 520 BC, whereas Ezr. 3:10 indicates that it was laid in 536 BC. In actual fact so little was done in the intervening period that it is likely that the revival would begin with a fresh foundation ceremony. Records show that in important buildings there was more than one official foundation stone.

c. The date of the coming of Ezra is bound up with the book of Nehemiah, and is considered separately under the entry *EZRA, above. See also *NEHEMIAH, *SHESHBAZZAR, *ZERUBBABEL.

IV. The book of Ezra and I Esdras

Esdras is the Gk. equivalent of Ezra, and our Apocrypha contains in I Esdras a book that is very similar to Ezra, though with certain striking differences. It runs from 2 Ch. 35:1 to the end of Ezra, after which it adds Ne. 8:1–12. Its history is confused. Thus Cyrus permits the return under Sheshbazzar, while Darius commissions Zerubbabel to go and build the Temple and the city; yet 5:70–73 says that Zerubbabel was working in Judah 'as long as King Cyrus lived'. Thus, while it may be useful to compare the two versions, Ezra is undoubtedly the more reliable. The famous story of the three guardsmen comes in I Esdras 3.

Chronology for the book of Ezra.

F

FACE. The Eng. word usually translates Heb. *pānīm* or Gk. *prosōpon*. The Heb. word is used in many Eng. senses—of the faces of people and animals, and metaphorically of the sky; it could refer to the front of something, or its outward appearance. Then the 'face' of a person became synonymous with his 'presence', and the Heb. *līp'ne* (lit. 'to the face of', and so 'to the presence of', and 'in front of') is a very common preposition.

The face, of course, gives visible indication of inward emotions, and a variety of adjectives accompany the word in Scripture, such as 'sad', 'tearful', 'ashamed' or 'pale'. The face could change colour, darkening or blushing.

Modesty or reverence demanded the veiling of the face, as did Rebekah before Isaac. God's face might not be seen by man for fear of death (Ex. 33:20); in Isaiah's visions, seraphim veiled the Almighty's face. It was a sign of humility to bow the face to the ground; and falling on the face betokened great fear. Utter contempt, on the other hand, could be shown by spitting in somebody's face. Metaphorically, determination could be shown by 'setting' one's face—note the graphic phrase of Is. 50:7, denoting unswerving purpose. Determined opposition was made by withstanding someone to his face. Intimacy and understanding were conveyed by the phrase 'face to face'. This phrase has, of course, passed into English, as has also 'his face fell' (Gn. 4:5).

The face of the dead was covered (Jn. 11:44), and so this action to Haman made it clear that he was doomed (Est. 7:8).

When a man prostrated himself to make a request, his superior would raise the supplicant's head as a sign that the favour would be granted. To lift someone's face thus meant primarily to grant a favour (cf. Gn. 19:21), and then to make a favourite of (Dt. 10:17). This concept is also found in NT Greek, in the words *prosōpolēptēs* ('respector of persons'; literally, 'face-taker') and *prosōpolēpsia*, the abstract noun (cf. Acts 10:34; Rom. 2:11).

The 'face of God', i.e., his gracious presence, is an important OT theme, as, e.g., in the *showbread.

FAITH.

I. In the Old Testament

In the OT the word 'faith' is found twice only in AV (Dt. 32:20; Hab. 2:4), but RSV has it eighteen times. Twelve times it is used of breaking faith (e.g. Lv. 5:15; Dt. 32:51) or acting in good faith (Jdg. 9:15f.), while the other six passages speak rather of trust. We should not, however, conclude from the rarity of the word that faith is unimportant in the OT, for the idea, if not the word, is frequent. It is usually expressed by verbs such as 'believe', 'trust' or 'hope', and such abound.

We may begin with such a passage as Ps. 26:1, 'Vindicate me, O Lord, for I have walked in my integrity, and I have trusted in the Lord without wavering.' It is often said that the OT looks for men to be saved on the basis of their deeds, but this passage puts the matter in its right perspective. The Psalmist does indeed appeal to his 'integrity', but this does not mean that he trusts in himself or his deeds. His trust is in God, and his 'integrity' is the evidence of that trust. The OT is a long book, and the truths about salvation are stated in various ways. The writers do not always make the distinctions that we, with the NT in our hands, might wish. But close examination will reveal that in the OT, as in the NT, the basic demand is for a right attitude to God, i.e. for faith. Cf. Ps. 37:3ff., 'Trust in the Lord, and do good ... Take delight in the Lord, and he will give you the desires of your heart. Commit your way to the Lord; trust in him, and he will act.' Here there is no question but that the Psalmist is looking for an upright life. But there is no question, either, that basically he is advocating an attitude. He calls on men to put their trust in the Lord, which is only another way of telling them to live by faith. Sometimes men are urged to trust the Word of God (Ps. 119:42), but more usually it is faith in God himself that is sought. 'Trust in the Lord with all your heart; and do not rely on your own insight' (Pr. 3:5).

The latter part of this verse frowns upon trust in one's own powers, and this thought is frequent. 'He who trusts in his own mind is a fool' (Pr. 28:26). A man may not trust to his own righteousness (Ezk. 33:13). Ephraim is castigated for trusting 'in your chariots (Heb. 'way') and in the multitude of your warriors' (Ho. 10:13). Trust in idols is often denounced (Is. 42:17; Hab. 2:18). Jeremiah warns against confidence in anything human, 'Cursed is the man who trusts in man, and makes flesh his arm, and whose heart turns away from the Lord' (Je. 17:5). The list of things not to be trusted in might be multiplied, and it is the more impressive alongside the even more lengthy list of passages urging trust in the Lord. It is clear that the

FAIR HAVENS, modern Kaloi Limenes, a small bay on the S coast of Crete, a few km E of Cape Matala. Although protected by small islands, it is too open to be an ideal winter harbour (Acts 27:8), but it would be the last place where Paul's ship could stay to avoid the NW wind, as the coast swings N beyond Cape Matala. K.L.McK.

FAITH

men of the OT thought of the Lord as the one worthy object of trust. They put not their trust in anything they did, or that other men did, or that the gods did. Their trust was in the Lord alone. Sometimes this is picturesquely expressed. Thus he is 'my rock, and my fortress, and my deliverer, my God, my rock, in whom I take refuge, my shield, and the horn of my salvation, my stronghold' (Ps. 18:2). Faith may be confidently rested in a God like that.

Special mention must be made of Abraham. His whole life gives evidence of a spirit of trustfulness, of a deep faith. Of him it is recorded that 'he believed the Lord; and he reckoned it to him as righteousness' (Gn. 15:6). This text is taken up by NT writers, and the fundamental truth it expresses developed more fully.

II. In the New Testament

a. General use of the word

In the NT faith is exceedingly prominent. The Gk. noun *pistis* and the verb *pisteuō* both occur more than 240 times, while the adjective *pistos* is found 67 times. This stress on faith is to be seen against the background of the saving work of God in Christ. Central to the NT is the thought that God sent his Son to be the Saviour of the world. Christ accomplished man's salvation by dying an atoning death on Calvary's cross. Faith is the attitude whereby a man abandons all reliance in his own efforts to obtain salvation, be they deeds of piety, of ethical goodness or anything else. It is the attitude of complete trust in Christ, of reliance on him alone for all that salvation means. When the Philippian jailer asked, 'Men, what must I do to be saved?' Paul and Silas answered without hesitation, 'Believe in the Lord Jesus, and you will be saved' (Acts 16:30f.). It is 'whoever believes in him' that does not perish, but has everlasting life (Jn. 3:16). Faith is the one way by which men receive salvation.

The verb *pisteuō* is often followed by 'that', indicating that faith is concerned with facts, though there is more to it than that. James tells us that the devils believe 'that God is one', but this 'faith' does not profit them (Jas. 2:19). *pisteuō* may be followed by the simple dative, when the meaning is that of giving credence to, of accepting as true, what someone says. Thus Jesus reminds the Jews that 'John came . . . in the way of righteousness, and you did not believe him' (Mt. 21:32). There is no question here of faith in the sense of trust. The Jews simply did not believe what John said. This may be so also with respect to Jesus, as in Jn. 8:45, 'you do not believe me', or the next verse, 'if I tell the truth, why do you not believe me?' Yet it must not be forgotten that there is an intellectual content to faith. Consequently this construction is sometimes used where saving faith is in mind, as in Jn. 5:24, 'he who hears my word and believes him who sent me, has eternal life'. The man who really believes God will, of course, act on that belief. In other words, a genuine belief that what God has revealed is true will issue in a true faith.

The characteristic construction for saving faith is that wherein the verb *pisteuō* is followed by the preposition *eis*. Literally this means to believe 'into'. It denotes a faith which, so to speak, takes a man out of himself, and puts him into Christ (cf. the NT expression frequently used of Christians, being 'in Christ'). This experience may also be re-

ferred to with the term 'faith-union with Christ'. It denotes not simply a belief that carries an intellectual assent, but one wherein the believer cleaves to his Saviour with all his heart. The man who believes in this sense abides in Christ and Christ in him (Jn. 15:4). Faith is not accepting certain things as true, but trusting a Person, and that Person Christ.

Sometimes *pisteuō* is followed by *epi*, 'upon'. Faith has a firm basis. We see this construction in Acts 9:42, where, when the raising of Tabitha was known, 'many believed in the Lord'. The people had seen what Christ could do, and they rested their faith 'on' him. Sometimes faith rests on the Father, as when Paul speaks of believing 'in him that raised from the dead Jesus our Lord' (Rom. 4:24).

Very characteristic of the NT is the absolute use of the verb. When Jesus stayed with the Samaritans many of them 'believed because of his word' (Jn. 4:41). There is no need to add what they believed, or in whom they believed. Faith is so central to Christianity that one may speak of 'believing' without the necessity for further clarification. Christians are simply 'believers'. This use extends throughout the NT, and is not confined to any particular writer. We may fairly conclude that faith is fundamental.

The tenses of the verb *pisteuō* are also instructive. The aorist tense points to a single act in past time and indicates the determinative character of faith. When a man comes to believe he commits himself decisively to Christ. The present tense has the idea of continuity. Faith is not a passing phase. It is a continuing attitude. The perfect tense combines both ideas. It speaks of a present faith which is continuous with a past act of belief. The man who believes enters a permanent state. Perhaps we should notice here that the noun 'faith' sometimes has the article 'the faith', i.e. the whole body of Christian teaching, as when Paul speaks of 'the Colossians as being 'established in the faith', adding 'just as you were taught' (Col. 2:7).

b. Particular uses of the word

(i) In the Synoptic Gospels faith is often connected with healing, as when Jesus said to the woman who touched his garment in the crowd, 'Take heart, daughter; your faith has made you well' (Mt. 9:22). But these Gospels are also concerned with faith in a wider sense. Mark, for example, records the words of the Lord Jesus, 'All things are possible to him who believes' (Mk. 9:23). Similarly, the Lord speaks of the great results of having 'faith as a grain of mustard seed' (Mt. 17:20; Lk. 17:6). It is clear that our Lord called for faith in himself personally. The characteristic Christian demand for faith in Christ rests ultimately on Christ's own requirement.

(ii) In the Fourth Gospel faith occupies a very prominent place, the verb *pisteuō* being found 98 times. Curiously the noun *pistis*, 'faith', is never employed. This is possibly due to its use in circles of a Gnostic type. There are indications that John had such opponents in mind, and it may be that he wanted to avoid using a term of which they were very fond. Or he may have preferred the more dynamic meaning conveyed by the verb. Whatever his reason, he uses the verb *pisteuō* more often than any other writer in the NT, three times as often, in fact, as the first three Gospels put together. His characteristic construction is that

with the preposition *eis*, 'to believe into', 'to believe on'. The important thing is the connection between the believer and the Christ. Accordingly, John speaks again and again of believing in him or of believing 'in the name' of Christ (e.g. Jn. 3:18). The 'name', for men of antiquity, was a way of summing up the whole personality. It stood for all that the man was. Believing on the name of Christ, then, means believing in all that he is essentially in himself. Jn. 3:18 also says, 'He who believes in him is not condemned: but he who does not believe is condemned already.' It is characteristic of Johannine teaching that eternal issues are decided here and now. Faith does not simply give men assurance of everlasting life at some unspecified time in the future. It gives them everlasting life here and now. He that believes on the Son 'has' everlasting life (3:36; cf. 5:24, etc.).

(iii) In Acts, with its story of vigorous missionary advance, it is not surprising that the characteristic expression is the use of the aorist tense, to indicate the act of decision. Luke records many occasions wherein people came to put their trust in Christ. Other constructions are found, and both the continuing state and the permanent results of belief find mention. But decision is the characteristic thing.

(iv) For Paul, faith is the typical Christian attitude. He does not share John's antipathy to the noun, but uses it more than twice as often as he uses the verb. It occurs in connection with some of his leading ideas. Thus in Rom. 1:16 he speaks of the gospel as 'the power of God for salvation to every one who has faith'. It means a great deal to Paul that Christianity is more than a system of good advice. It not only tells men what they ought to do, but gives them power to do it. Again and again Paul contrasts mere words with power, always with a view to emphasizing that the power of the Holy Spirit of God is seen in the lives of Christians. This power becomes available to a man only when he believes. There is no substitute for faith.

Much of Paul's controversial writing centres round the dispute with the Judaizers. These men insisted that it was not enough for Christians to be baptized. They must also be circumcised, and, being thus admitted to Judaism, endeavour to keep the whole of the Mosaic law. They made obedience to the law a necessary pre-condition of salvation, at least in the fullest sense of that term. Paul will have none of this. He insists that men can do nothing, nothing at all, to bring about their salvation. All has been done by Christ, and no man can add anything to the perfection of Christ's finished work. So it is that Paul insists that men are justified 'by faith' (Rom. 5:1). The doctrine of * justification by faith lies at the very heart of Paul's message. Whether with this terminology or not, he is always putting the idea forward. He vigorously combats any idea of the efficacy of good deeds. 'A man is not justified by works of the law but through faith in Jesus Christ,' he writes to the Galatians and proceeds, 'even we have believed in Christ Jesus, in order to be justified by faith in Christ, and not by works of the law.' He adds resoundingly 'because by works of the law shall no one be justified' (Gal. 2:16). Clearly, for Paul, faith means the abandonment of all reliance on one's ability to merit salvation. It is a trustful acceptance of God's gift in Christ, a reliance on Christ, Christ alone, for all that salvation means.

Another outstanding feature of Pauline theology is the very large place the apostle gives to the work of the Holy Spirit. He thinks of all Christians as indwelt by the Spirit (Rom. 8:9, 14), and he connects this too with faith. Thus he writes to the Ephesians concerning Christ, 'you also, who . . . have believed in him, were sealed with the promised Holy Spirit, which is the guarantee of our inheritance' (Eph. 1:13f.). Sealing represented the mark of ownership, a metaphor readily understood in an age when many could not read. The Spirit within believers is God's mark of ownership, and this mark is put on men only as they believe. The apostle goes on to speak of the Spirit as 'the guarantee (*Gk. arrabōn*) of our inheritance'. Paul employs here a word which in the 1st century meant a down-payment, *i.e.* a payment which at one and the same time was part of the agreed price and the guarantee that the remainder would be forthcoming. Thus when a man believes he receives the Holy Spirit as part of the life in the age to come, and as an assurance that the remainder will infallibly follow. (* EARNEST.)

(v) The writer of the Epistle to the Hebrews sees that faith has always been a characteristic of the people of God. In his great portrait gallery in Heb. 11 he reviews the worthies of the past, showing how one by one they illustrate the great theme that 'without faith it is impossible to please' God (Heb. 11:6). He is particularly interested in the opposition of faith to sight. Faith is 'the assurance of things hoped for, the conviction of things not seen' (Heb. 11:1). He emphasizes the point that men who had nothing in the way of outward evidence to support them nevertheless retained a firm hold on the promises of God. In other words, they walked by faith, not by sight.

(vi) Of the other writers in the NT we must notice James, for he has often been held to be in opposition to Paul in this matter. Where Paul insists that a man is justified by faith and not by works James maintains 'that a man is justified by works, and not by faith alone' (Jas. 2:24). There is no more than a verbal contradiction, however. The kind of 'faith' that James is opposing is not that warm personal trust in a living Saviour of which Paul speaks. It is a faith which James himself describes: 'You believe that God is one; you do well. Even the demons believe—and shudder' (Jas. 2:19). He has in mind an intellectual assent to certain truths, an assent which is not backed up by a life lived in accordance with those truths (Jas. 2:15f.). So far is James from opposing faith in the full sense that he everywhere presupposes it. Right at the beginning of his Epistle he speaks naturally of 'the testing of your faith' (Jas. 1:3), and he exhorts his readers, 'show no partiality as you hold the faith of our Lord Jesus Christ, the Lord of glory' (Jas. 2:1). He criticizes a wrong faith but assumes that everyone will recognize the need for a right faith. Moreover, by 'works' James does not mean what Paul means by that term. Paul thinks of obedience to the commands of the law regarded as a system whereby a man may merit salvation. For James the law is 'the law of liberty' (Jas. 2:12). His 'works' look uncommonly like 'the fruit of the Spirit' of which Paul speaks. They are warm deeds of love springing from a right attitude to God. They are the fruits of faith. What James objects to is the claim that faith is there when there is no fruit to attest it.

Faith is clearly one of the most important con-

FAITH

cepts in the whole NT. Everywhere it is required and its importance insisted upon. Faith means abandoning all trust in one's own resources. Faith means casting oneself unreservedly on the mercy of God. Faith means laying hold on the promises of God in Christ, relying entirely on the finished work of Christ for salvation, and on the power of the indwelling Holy Spirit of God for daily strength. Faith implies complete reliance on God and full obedience to God.

FALL.

I. The biblical account

The story of the Fall of man, given in Gn. 3, describes how mankind's first parents, when tempted by the serpent, disobeyed God's express command by eating of the fruit of the tree of the knowledge of good and evil. The essence of all sin is displayed in this first sin: having been tempted to doubt God's word ('Did God say . . .?'), man is led on to disbelieve it ('You will not die'), and then to disobey it (they 'ate'). Sin is man's rebellion against the authority of God, and pride in his own supposed self-adequacy ('You will be like God'). The consequences of sin are twofold: first, awareness of guilt and immediate separation from God (they 'hid themselves'), with whom hitherto there had been unimpaired daily fellowship; and secondly, the sentence of the curse, decreeing toil, sorrow and death for man himself, and in addition inevitably involving the whole of the created order, of which man is the crown.

II. The effect on man

Man henceforth is a perverted creature. In revolting against the purpose of his being, which is to live and act entirely to the glory of his sovereign and beneficent Creator and to fulfil his will, he ceases to be truly man. His true manhood consists in conformity to the image of God in which he was created. This image of God is manifested in man's original capacity for communion with his Creator; in his enjoyment exclusively of what is good; in his rationality which makes it possible for him alone of all creatures to hear and respond to the Word of God; in his knowledge of the truth and in the freedom which that knowledge ensures; and in government, as the head of God's creation, in obedience to the mandate to have dominion over every living thing and to subdue the earth.

Yet, rebel as he will against the image of God with which he has been stamped, man cannot efface it, because it is part of his very constitution as man. It is evident, for example, in his pursuit of scientific knowledge, in his harnessing of the forces of nature and in his development of culture, art and civilization. But at the same time the efforts of fallen man are cursed with frustration. This frustration is itself a proof of the perversity of the human heart. Thus history shows that the very discoveries and advances which have promised most good to mankind have through misuse brought great evils in their train. The man who does not

love God does not love his fellow men. He is driven by selfish motives. The image of Satan, the great hater of God and man, is superimposed upon him. The result of the Fall is that man now knows good and evil.

The psychological and ethical effects of the Fall are nowhere more graphically described than by Paul in Rom. 1:18ff. All men, however ungodly and unrighteous they may be, *know* the truth about God and themselves; but they wickedly *suppress* this truth (v. 18). It is, however, an inescapable truth, for the fact of the 'eternal power and God-head' of the Creator is both manifested within them, by their very constitution as God's creatures made in his image, and also manifested all around them in the whole created order of the universe which bears eloquent testimony to its origin as God's handiwork (vv. 19f.; cf. Ps. 19:1ff.). Basically, therefore, man's state is not one of ignorance but of knowledge. His condemnation is that he loves darkness rather than light. His refusal to glorify God as God and his ingratitude lead him into intellectual vanity and futility. Arrogantly professing himself to be wise, he in fact becomes a fool (Rom. 1:21f.). Having wilfully cut himself adrift from the Creator in whom alone the meaning of his existence is to be found, he must seek that meaning elsewhere, for his creaturely finitude makes it impossible for him to cease from being a religious creature. And his search becomes ever more foolish and degrading. It carries him into the gross irrationality of superstition and idolatry, into vileness and unnatural vice, and into all those evils, social and international, which give rise to the hatreds and miseries that disfigure our world. The Fall has, in brief, overthrown the true dignity of man (Rom. 1:23ff.).

III. The biblical doctrine

It will be seen that the scriptural doctrine of the Fall altogether contradicts the popular modern view of man as a being who, by a slow evolutionary development, has succeeded in rising from the primeval fear and groping ignorance of a humble origin to proud heights of religious sensitivity and insight. The Bible does not portray man as risen, but as fallen, and in the most desperate of situations. It is only against this background that God's saving action in Christ takes on its proper significance. Through the grateful appropriation by faith of Christ's atoning work, what was forfeited by the fall is restored to man: his true and intended dignity is recovered, the purpose of life recaptured, the image of God restored, and the way into the paradise of intimate communion with God reopened.

IV. Its historical development

In the history of the church the classic controversy concerning the nature of the Fall and its effects is that waged by Augustine at the beginning of the 5th century against the advocates of the Pelagian heresy. The latter taught that Adam's sin affected only himself and not the human race as a whole, that every individual is born free from sin and capable in his own power of living a sinless life, and that there had even been persons who had succeeded in doing so. The controversy and its implications may be studied with profit in Augustine's anti-Pelagian writings. Pelagianism, with its affirmation of the total ability of man, came to the fore again in the Socinianism of the 16th and 17th

centuries, and continues under the guise of modern humanistic religion.

A halfway position is taken by the Roman Catholic Church, which teaches that what man lost through the Fall was a supernatural gift of original righteousness that did not belong properly to his being as man but was something extra added by God (*donum superadditum*), with the consequence that the Fall left man in his natural state as created (*in puris naturalibus*): he has suffered a negative rather than a positive evil; deprivation rather than deprivation. This teaching opens the door for the affirmation of the ability and indeed necessity of unregenerate man to contribute by his works towards the achievement of his salvation (semi-Pelagianism, synergism), which is characteristic of the Roman Catholic theology of man and grace. For a Roman Catholic view, see H. J. Richards, 'The Creation and Fall', in *Scripture* 8, 1956, pp. 109-115.

Although retaining the conception of man as a fallen being, contemporary liberal theology denies the historicity of the event of the Fall. Every man, it is said, is his own Adam. Similarly, certain forms of modern existentialist philosophy, which is essentially a repudiation of historical objectivism, are willing to make use of the term 'fallenness' to describe the subjective state in which man pessimistically finds himself. A floating concept, however, which is unrelated to historical event explains nothing. But the NT certainly understands the Fall as a definite event in human history—an event, moreover, of such critical consequences for the whole human race that it stands side by side with and explains the other great crucial event of history, namely the coming of Christ to save the world (see Rom. 5:12ff.; 1 Cor. 15:21f.). Mankind, together with the rest of the created order, awaits a third and conclusive event of history, namely the second advent of Christ at the end of this age, when the effects of the Fall will be finally abolished, unbelievers eternally judged, and the renewed creation, the new heavens and new earth wherein righteousness dwells, be established in accordance with almighty God's immutable purposes (see Acts 3:20f.; Rom. 8:19ff.; 2 Pet. 3:13; Rev. 21-22). Thus by God's grace all that was lost in Adam, and much more than that, is restored in Christ. (* SIN.)

FAMILY, HOUSEHOLD.

I. In the Old Testament

There is no word in the OT which corresponds precisely to modern English 'family', as consisting of father, mother and children. The closest approximation is found in the word *bayit* ('house'), which, from signifying the group of people, probably came to refer to the dwelling (AV translates as 'family' in 1 Ch. 13:14; 2 Ch. 35:5, 12; Ps. 68:6). In the Bible the term could be used not only of those sheltering under the same roof (Ex. 12:4) but also of much larger groups, as for instance the 'house of Israel' (Is. 5:7), which included the whole nation. Perhaps a closer equivalent to English 'family' is found in the phrase *bēt 'āb*, 'father's

house'. The term most frequently translated 'family' in the EVV is *mišpāhā*, which had more the meaning of 'clan' than the smaller 'family', being applied for instance to 600 Danites from two villages (Jdg. 18:11).

Some idea of the relation of these two terms can be gained from the account in Jos. 7:16-18 of the detection of Achan after the failure to capture Ai. The search was first narrowed to the 'tribe' (*sēbet*) of Judah, then to the clan (*mišpāhā*, AV 'family') of the Zarahites, and finally to the 'household' (*bayit*) of Zabdi. The fact that Achan was a married man with children of his own (7:24), but was still counted as a member of the *bayit* of his grandfather Zabdi, shows the extent of this term. Conceptually the members of a tribe can be pictured as a cone, with the founding ancestor at the apex and the living generation at the base. The term *sēbet*, 'staff', perhaps in reference to the staff, signifying the authority, of the founding ancestor, applied to the whole tribe; *mišpāhā* referred to a smaller division lower down in the cone; and the term *bayit* could apply to a yet smaller division, though its application depended upon its context, for if qualified by the name of the founding ancestor it could refer to the whole tribe. In each case the terms could indicate simply the base of the relevant cone, *i.e.* the living members of the group; or the entire volume of the cone, *i.e.* the members past and present, living and dead.

a. Determination of mates

In the choice of mates certain close relatives both by blood and * marriage were excluded (Lv. 18:6-18; Dt. 27:20-23), but outside these prohibited degrees marriage with kin was preferred, as is shown by the marriages of Isaac with Rebekah (Gn. 24:4), Jacob with Rachel and Leah (Gn. 28:2; 29:19), and Noah's wish concerning Samson (Jdg. 14:3). On the other hand, marriages with foreigners, Hittite (Gn. 26:34), Egyptian (Gn. 41:45), Midianite (Ex. 2:21), Moabite (Ru. 1:4), Zidonian (1 Ki. 16:31) and others, did take place. A special case where the mate is determined is found in the levirate marriage law, whereby if a married man died childless his next brother was obliged to marry the widow, and raise up children to perpetuate the name of the deceased.

b. Methods of acquiring a wife

In most cases the choice of a mate and subsequent arrangements for marriage were made by the parents concerned, as is shown by the fact that, though Samson was attracted by the Timnathite, he applied to his parents to make the arrangements. The usual method of acquiring a wife was by purchase, though this is not an altogether satisfactory term, since the 'bride-price' (*mōhar*; Gn. 34:12; Ex. 22:16; 1 Sa. 18:25), though it was a payment made by the man to the bride's father, was more in the nature of a compensation to the family for the loss of a valued member than an outright cash purchase. Service could be given instead of payment, as with Jacob, who served Laban 14 years for Rachel and Leah, but this practice was not common during the Monarchy. Unorthodox means of acquiring a wife, which did not always involve the parents, included capture in war (Dt. 21:10-14) or in raids (Jdg. 21), or seduction, in which case the seducer was obliged to marry the violated maiden (Ex. 22:16; cf. Gn. 34:1-4).

FAMILY, HOUSEHOLD

c. Residence

Israelite marriage was patrilocal: the woman left her father's house and went to live with her husband. In patriarchal times this would often have involved going to live in the same group, *bayit* or *mišpāhā*, as her husband's father and brothers, but in the time of the Monarchy the son on marriage probably left home to set up his own *bayit*, as is suggested by the smallness of many of the private houses uncovered in excavations. Three cases are sometimes quoted as evidence for matrilocal residence, Jacob, Gideon (Jdg. 8:31; 9:1-2) and Samson, but such an interpretation is not necessary. Jacob lived in Laban's 'house' only while he was working in return for his wives, and it was the manner rather than the fact of his departure which aroused Laban's ill-will (Gn. 31:26-28). Gideon did not himself live with the woman in question, and she was in any case no more than a concubine. The same is true of Samson and the Timnathite, whom he only visited, and did not live with.

d. Number of mates

While at the creation monogamy seemed to have been intended, by the time of the patriarchal age polygamy (polygyny not polyandry) is found. At first Abraham had but one wife, Sarah, but when she proved barren he followed the custom of the time in having children by her handmaid Hagar (Gn. 16:1-2), and he took Keturah as a wife after the death of Sarah (Gn. 25:1). In subsequent generations more wives were taken, Jacob having two and their two handmaids. The possession of two wives was evidently assumed in the Mosaic legislation (Dt. 21:15), and under the Judges and the Monarchy there was still less restraint, and the economic factor imposed the only limit. That this was not God's plan is shown by the prophetic representation of Israel as the sole bride of God (Is. 50:1; 54:6-7; 62:4-5; Je. 2:2; Ezk. 16; Ho. 2:4f.). In addition to wives and the maidservants of wives, those who could afford them had *concubines, and children born by these could be accorded equal status with true sons, if the father was so minded.

e. Husband and wife

In addition to the terms *'iš* and *'iššā*, 'man' and 'woman', which also served for 'husband' and 'wife', the husband was the *ba'al*, 'master', and *'ādōn*, 'lord', of the wife, which illustrates the legal and normally practical relative positions of the two. Until her marriage a *woman was subject to her father, and after marriage to her husband, and to each she was a chattel. A man could divorce his wife, but probably not she him; she did not inherit his property, which went to his sons; and she might have to get along with other wives. On the other hand, in practice there was great variation in accordance with personality and strength of character, and that some women came to public prominence is shown by the cases of Deborah (Jdg. 4-5), Athaliah (2 Ki. 11), Huldah (2 Ki. 22:14f.) and Esther. The duties of the wife included first of all the bearing and care of children, and such household tasks as cooking, in addition to helping the husband in the fields when opportunity offered. Fidelity was important in both parties, and there was strict provision in the law for the punishment of adultery. The most important function of the wife was the bearing of children, and *barrenness was a source of shame.

f. Parents and children

The four terms, 'father' (*'āb*), 'mother' (*'ēm*), 'son' (*bēn*) and 'daughter' (*bat*), have cognates in most Semitic languages and were in such frequent use in OT times that they are irregular in grammatical inflexion. The greatest wish of man and wife was for many children (Ps. 127:3-5), but especially for sons, as is clearly shown in the history of Abraham and his dealings with God, from whom they came. The eldest son occupied a special position, and on his father's death he inherited a double portion and became head of the family. Sometimes, however, a father would show special favour to his youngest son, as did Jacob for Joseph and then Benjamin. A daughter did not inherit from her father unless there were no sons (*cf.*, however, Jb. 42:13-15; see also *INHERITANCE).

In ancient Mesopotamia, particularly as evidenced in the Nuzi documents, the practice of adoption by childless people of someone to take the place of a son is well attested (*NUZI, *PATRIARCHAL AGE), and it was in keeping with this practice that *Abraham considered making one of his servants his heir (Gn. 15:3). There is, however, no specific legislation concerning this matter of *adoption in the OT. Such cases as are reported are either in a foreign setting (as for instance the case quoted above, Moses by Pharaoh's daughter (Ex. 2:10) and Esther by Mordecai (Est. 2:7, 15)) or else are not cases of full adoption, as the adoptees were already descendants of the adopters, as in the cases of Jacob and Joseph's sons (Gn. 48:5, 12), and Naomi and the child of Ruth (Ru. 4:16-17). When they were very small all children were looked after by the mother, but as the boys grew older they were taught to share their father's work, so that in general the father governed the *education of the son, and the mother that of the daughter. That to the children the mother was as worthy of honour as the father is shown by the fifth commandment (Ex. 20:12).

g. Other kinsfolk

The terms 'brother' (*'āh*) and 'sister' (*'āhōt*) could be applied not only to children of the same parents but to half siblings by either a different father or mother, and the restrictions on sexual intercourse between full siblings applied also to these (Lv. 18:9, 11; Dt. 27:22). Often of particular importance to children were their uncles and aunts, especially the mother's brother to the son, and the father's sister to the daughter. These are usually designated by the appropriate combination of terms such as *'hōt-āb*, 'father's sister', but sometimes described by the words *dōd*, 'uncle', and *dōdā*, 'aunt'. A woman would refer to her husband's father and mother by the special terms *hām* (e.g. Gn. 38:13, 25; 1 Sa. 4:19, 21) and *hāmōt* (e.g. Ru. 1:14), and it may be that *hōtēn* (e.g. Ex. 3:1; 4:18) and *hōtēnet* (Dt. 27:23) were corresponding terms used by the man of his wife's mother and father, though the limited contexts in which these terms occur make this uncertain.

h. Solidarity of kin

Two main factors made for solidarity in patriarchal times, common blood or descent, and common habitation and legal obligations according to customs and law. Though after the settlement in the land the tendency for families to divide weakened these, they continued to be of importance

throughout OT times. The community of interests among the members of the household, clan and tribe was also a source of unity within these groups, and under their heads. One of the outgrowths of this unity was the right of each member of a group to protection by that group, and indeed the obligations on the group to provide certain services. Outstanding among these was that of the *gō'el*, whose obligations might extend from marrying the widow of a kinsman (Ru. 2:20; 3:12; 4) to redeeming a kinsman from slavery into which he had sold himself to pay a debt (see also *AVENGER OF BLOOD).

T. C. M.

II. In the New Testament

Family (Gk. *patria*) is mentioned as such only three times, although the related idea of 'house' or 'household' (Gk. *oikos*, *oikia*) is more frequent. *patria* ('lineage, descent', *LSJ*) signifies the historical origin of a household, i.e. its 'patriarch', rather than its present head. A family might be a tribe or even a nation. In Acts 3:25 the promise to Abraham is quoted in the form, 'in your posterity shall all the families (*patriai*) of the earth be blessed'. The LXX has 'tribes' (*phylai*) in the original promise (Gn. 12:3) and 'nations' (*ethnē*) when the promise is recalled in Gn. 18:18 and 22:18. Joseph was 'of the house and lineage (*patria*) of David' (Lk. 2:4), where the patronymic is the vital point. As this verse shows, 'house' (*oikos*) can be used in the same sense (cf. Lk. 1:27); cf. also 'the house of Israel' (Mt. 10:6; 15:24; Acts 2:36; 7:42, etc.), 'the house of Jacob' (Lk. 1:33).

The prominence of paternity is well seen in the third occurrence of *patria*, Eph. 3:14–15: 'I bow my knees before the Father, from whom every family in heaven and on earth is named.' This means that, just as every *patria* implies a *patēr* ('father'), so behind them all stands the universal fatherhood of God whence the whole scheme of ordered relationships is derived. Elsewhere we meet the more restricted concept of the fatherhood of God in relation to the household of the faithful.

The word 'household', where it is not simply a synonym for 'family', is a unit of society which meets us everywhere in the Roman and Hellenistic, as well as the Jewish, world of the 1st century. It consisted not only of the lord (Gk. *kyrios*), master (Gk. *despotēs*) or paterfamilias, his wife, children and slaves, but also of various dependants, such as servants, employees and even 'clients' (e.g. freedmen or friends) who voluntarily joined themselves to a household for the sake of mutual benefits (*CAESAR'S HOUSEHOLD). The Gospels abound with allusions to the household and its character (e.g. Mt. 21:33ff.). The household was an important factor in the growth and stability of the church. Already among the Jews the household was the context of such religious exercises as the Passover, a weekly sacred meal, prayers and instruction (*EDUCATION). Luke states that 'the breaking of the bread' took place in the Jerusalem church 'by households' (Acts 2:46). This phrase, *kat' oikon*, occurs in papyri in contrast to the phrase 'by individuals' (*kata prosopon*—see *MM*).

In Hellenistic cities the role of the household in the establishment of churches was no less important. The first accession of Gentiles was the entire household of Cornelius at Caesarea, comprising household servants, a batman, kinsmen and near friends (Acts 10:7, 24). When Paul crossed to Europe, the church was planted at Philippi with the baptism of Lydia's household and that of the jailer (Acts 16:15, 31–34). At Corinth 'the first converts in Achaia' were the household of Stephanas (1 Cor. 16:15), which, in common, probably, with the households of Crispus the ruler of the synagogue and the hospitable Gaius (Acts 18:8; 1 Cor. 1:14–16; Rom. 16:23), was baptized by Paul himself. Other Christian households mentioned by name are those of Prisca and Aquila (at Ephesus, 1 Cor. 16:19; and perhaps Rome, Rom. 16:5), Onesiphorus (at Ephesus, 2 Tim. 1:16; 4:19), Philemon (at Colossae, Phm. 1–2), Nymphas or Nympha (at Laodicea, Col. 4:15), Asyncritus and Philologus (at Rome [?], Rom. 16:14–15).

In the Jerusalem church households were apparently instructed as units (Acts 5:42), and this was also Paul's custom, as he reminded the Ephesian elders (Acts 20:20). A regular catechesis existed setting forth the mutual duties of members of a Christian household: wives and husbands, children and fathers, servants and masters. See Col. 3:18–4:1; Eph. 5:22–6:9; 1 Pet. 2:18–3:7.

Reference is made to the church in the house of Prisca and Aquila (Rom. 16:5 and 1 Cor. 16:19), of Nymphas or Nympha (Col. 4:15) and of Philemon (or was it Archippus?) (Phm. 2). This means either that the household was regarded as a *church in itself, or that the church in a given locality met within the scope of one household's hospitality (see above, 'by households'). When Gaius is spoken of as host of 'the whole church' (Rom. 16:23), the existence of other household churches in Corinth is perhaps implied, with the suggestion that on occasion, presumably for the Lord's Supper (1 Cor. 11:18–22), they all came together 'as a church'. It is, however, not unimportant to note that both baptism and the Lord's Supper in certain situations took place within a household, not to mention instruction of wife and children (1 Cor. 14:35; Eph. 6:4), and that it was from the ranks of proved heads of households that overseers (bishops) as well as deacons for the church were drawn (1 Tim. 3:2–7, 12).

It is not surprising that the church itself should be thought of as the household of God (Eph. 2:19, where the figure is combined with that of the sacred republic) or the household of faith (Gal. 6:10). The description of believers as adopted sons (Rom. 8:15–17) or as servants and stewards (1 Pet. 4:10) implies this figure. Paul sees himself as a servant of Jesus Christ, a steward set to perform a particular ministry (Rom. 1:1; 1 Cor. 4:1; 9:17, rv). In a related picture the writer to the Hebrews depicts Moses as a faithful head steward in God's household, foreshadowing Christ as the son and heir (cf. Gal. 3:23–4:7) of the household of God; 'and we are his house', says the writer, 'if we hold fast our confidence and pride in our hope' (Heb. 3:1–6).

FAMINE

FAMINE. The Bible does not always indicate the moral and spiritual significance of the famines it records. Those, for example, of Gn. 12:10; 26:1; Acts 11:28, etc., are simply stated as historical facts. But famines, like every other event in nature or history, are elsewhere integrated into the characteristic biblical doctrine of divine providence, e.g. Am. 4:6; Rev. 6:8. Canaanite religion deified natural processes, and sought to control them by the practice of sympathetic magic, but Israel possessed a different key to prosperity. Yahweh, as Creator, possessed and controlled the 'forces' of nature, the seasons in their order, and the material foundation of man's life on earth (e.g. Ps. 104). The exercise of this power by the holy God directly corresponds to the relationship existing between him and man at any given time. Thus, at the one end of the scale the 'Messianic day', when perfect accord between God and his people exists, is marked by unprecedented fertility of the earth (e.g. Is. 4:2; 41:19; Ho. 2:21-22; Am. 9:13). On the other hand, the fruits of nature are withdrawn in times of disobedience, when the relationship of God and man is dislocated. Thus the curse on the soil was one of the foremost and immediate results of the Fall (Gn. 3:17-18), and God used famines throughout history as indications of his displeasure, and as warnings to repent (e.g. 1 Ki. 17:1; 18:17-18; Hg. 1:6, 9-11; 2:16-17). This view persists in Revelation (e.g. 6:5-8), where famine is a direct visitation on human sin. Obedience and prosperity (Ps. 1:1-3; Pr. 3:7-10; Is. 1:19), disobedience and want (Lv. 26:14-16) are biblical inseparables. This law is given classic expression in Dt. 28, and poetic illustration in Je. 14.

The famine (Gk. *limos*) which severely affected Judaea in the principate of Claudius (c. AD 46-47) is attested in other records: thus Josephus tells how Queen Helena of Adiabene bought grain in Egypt and figs in Cyprus for the relief of hard-pressed Judaeans (*Ant.* 20. 51f.). This famine figures in Acts as the occasion for the first instance of inter-church aid: when it was foretold by Agabus in the church of Syrian Antioch, that church collected a sum of money for the relief of the Jerusalem church (Acts 11:27-30).

The proclamation of Rev. 6:6 indicates that food prices would be up to ten times as high as in normal times.

In 2 Cor. 11:27 'hunger' (*limos*) is due to absence of food; 'without food' (*nēsteia*) implies voluntary fasting.

J. A. M.

F. F. B.

FAN (AV; RSV 'fork'; Heb. *mizreh*, 'fan'; Heb. *zārā*, 'to scatter', 'to winnow'; Gk. *ptyon*, 'fan'). A long wooden fork used by threshers to toss grain into the air so that the chaff is blown away (e.g. Is. 30:24; Je. 15:7), a method still found in some remote areas of the Middle East. Thus John the Baptist employed an easily understood figure of speech in depicting Christ as the great Winnower who would separate evil from good (Mt. 3:12; Lk. 3:17). (*AGRICULTURE.)

J. D. D.

FASTING. Fasting in the Bible generally means going without all food and drink for a period (e.g. Est. 4:16), and not merely refraining from certain foods.

I. In the Old Testament

The Heb. words are *šim* (verb) and *sôm* (noun). The phrase '*innā napšô*' ('to afflict the soul') also refers to fasting. First, there were certain annual fasts. Thus the Hebrews fasted on the Day of Atonement (Lv. 16:29, 31; 23:27-32; Nu. 29:7). After the Exile, four other annual fasts were observed (Zc. 8:19), all of them, according to the Talmud, marking disasters in Jewish history. Est. 9:31 can be interpreted as implying the establishment of yet another regular fast.

In addition to these there were occasional fasts. These were sometimes individual (e.g. 2 Sa. 12:22) and sometimes corporate (e.g. Jdg. 20:26; Joel 1:14). Fasting gave expression to grief (1 Sa. 31:13; 2 Sa. 1:12; 3:35; Ne. 1:4; Est. 4:3; Ps. 35:13-14) and penitence (1 Sa. 7:6; 1 Ki. 21:27; Ne. 9:1-2; Dn. 9:3-4; Jon. 3:5-8). It was a way by which men might humble themselves (Ezr. 8:21; Ps. 69:10). Sometimes it may have been thought of as a self-inflicted punishment (cf. the phrase 'to afflict the soul'). Fasting was often directed towards securing the guidance and help of God (Ex. 34:28; Dt. 9:9; 2 Sa. 12:16-23; 2 Ch. 20:3-4; Ezr. 8:21-23). Fasting could be vicarious (Ezr. 10:6; Est. 4:15-17). Some came to think that fasting would automatically gain man a hearing from God (Is. 58:3-4). Against this the prophets declared that without right conduct fasting was in vain (Is. 58:5-12; Je. 14:11-12; Zc. 7).

II. In the New Testament

The usual Gk. words are *nēsteuō* (verb), and *nēsteia* and *nēstis* (nouns). In Acts 27:21, 33 the words *asitia* and *asitos* ('without food') are also used.

As far as general Jewish practice is concerned, the Day of Atonement is the only annual fast referred to in the NT (Acts 27:9). Some strict Pharisees fasted every Monday and Thursday (Lk. 18:12). Other devout Jews, like Anna, might fast often (Lk. 2:37).

The only occasion when Jesus is recorded as fasting is at the time of his temptations in the wilderness. Then, however, he was not necessarily fasting from choice. The first temptation implies that there was no food available in the place he had selected for his weeks of preparation for his ministry (Mt. 4:1-4). Cf. the 40 days' fasts of Moses (Ex. 34:28) and Elijah (1 Ki. 19:8).

Jesus assumed that his hearers would fast, but taught them when they did so to face Godward, not manward (Mt. 6:16-18). When asked why his disciples did not fast as did those of John the Baptist and of the Pharisees, Jesus did not repudiate fasting, but declared it to be inappropriate for his disciples 'as long as the bridegroom is with them' (Mt. 9:14-17; Mk. 2:18-22; Lk. 5:33-39). Later they would fast like others.

In Acts leaders of the church fast when choosing missionaries (13:2-3) and elders (14:23). Paul twice refers to his fasting (2 Cor. 6:5; 11:27). In the former passage voluntary fasting, by way of self-discipline, appears to be meant (*nēsteia*); the latter passage mentions both involuntary 'hunger' (*limos*) and voluntary going 'without food' (*nēsteia*).

The weight of textual evidence is against the inclusion of references to fasting in Mt. 17:21; Mk. 9:29; Acts 10:30; 1 Cor. 7:5, though the presence of these references in many MSS in itself indicates that there was a growing belief in the value of fasting in the early church.

H. A. G. B.

FEAR. The Bible uses numerous words to denote fear. The most common of these (giving the noun forms) are Heb. *yir'ā*, 'reverence'; Heb. *pahād*, 'dread', 'fear'; Gk. *phobos*, 'fear', 'terror'. Theologically, four main categories can be suggested.

a. Holy fear

This comes from the believer's apprehension of the living God. According to Luther, the natural man cannot fear God perfectly; according to Rudolf Otto, he is 'quite unable even to shudder (*grauen*) or feel horror in the real sense of the word'. Holy fear, on the other hand, is God-given, enabling men to reverence God's authority, obey his commandments and hate and shun all form of evil (Je. 32:40; cf. Gn. 22:12; Heb. 5:7). It is, moreover, the beginning (or principle) of wisdom (Ps. 111:10); the secret of uprightness (Pr. 8:13); a feature of the people in whom God delights (Ps. 147:11); and the whole duty of man (Ec. 12:13). It is also one of the divine qualifications of the Messiah (Is. 11:2-3).

In the OT, largely because of the law's legal sanctions, true religion is often regarded as synonymous with the fear of God (cf. Je. 2:19; Ps. 34:11, Moffatt), and even in NT times the term 'walking in the fear of the Lord' was used in connection with the early Christians. Gentile adherents of the synagogue were called 'God-fearers' (Acts 10:2, etc.; cf. Phil. 2:12).

In the NT generally, however, emphasis is laid on God as loving and forgiving, the One who through Christ gives to men the spirit of sonship (Rom. 8:15), and enables them boldly to face up to life (2 Tim. 1:6-7) and death (Heb. 2:15) without fear. Nevertheless, a reverent fear remains; for the awesomeness of God has not changed, and there is a day of judgment to be met (2 Cor. 5:10f.). Godly fear stimulates the believer to seek holiness (2 Cor. 7:1), and is reflected in his attitude towards his fellow-Christians (Eph. 5:21).

b. Slavish fear

This is strictly a natural consequence of sin (Gn. 3:10; Pr. 28:1), and can come as a punishment (Dt. 28:28). It was felt by Felix when he heard Paul preach (Acts 24:25); it is felt by Christ-rejecters, for whom remains only 'a fearful expectation of judgment' (Heb. 10:27, RV, 31; cf. Rev. 21:8). Though not of itself good, this fear is often used by the Holy Spirit for the conversion of men (Acts 16:29ff., etc.).

c. Fear of men

This can be expressed as: (i) a reverential awe and regard of men, as of masters and magistrates (1 Pet. 2:18; Rom. 13:7); (ii) a blind dread of them and what they can do (Nu. 14:9; Is. 8:12; Pr. 29:25); and (iii) in a peculiar sense a Christian concern for them lest they be ruined by sin (1 Cor. 2:3; 2 Cor. 11:3; Col. 2:1). This kind of fear, and also the slavish fear mentioned in (b) above, can be cast out by true love to God (1 Jn. 4:18).

d. 'Fear' as the object of fear

Fear is used in another sense, as in Gn. 31:42, 53, where God is called the 'Fear' of * Isaac—i.e. the God whom Isaac feared and worshipped. Their 'fear', the thing that terrifies them, comes upon the wicked (Pr. 1:26-27; 10:24; cf. Is. 66:4). When the Hebrews entered the promised land God sent his

fear before them, destroying and scattering the Canaanites, or so impressing them with his fear as to render them spiritless and unable to withstand the invaders (Ex. 23:27-28). Fear in this sense is found also in Jb. 4:6 (cf. 9:34; 13:21): 'Is not your fear of God your confidence, and the integrity of your ways your hope?'

FEASTS. Heb. *hag*, 'feast' (Lv. 23:6; Dt. 16:16), *mō'dē Yahweh*, 'feasts of the Lord' (Lv. 23:2, 4; Nu. 15:3). The terms are expressive of a day or season of religious joy. While some of these feasts coincide with the seasons, it does not follow that they have their origin in the seasonal ritual of the religions of the ancient Near East. These are associated with the gods of the pantheon who banquet together or feast with men. (See C. H. Gordon, *Ugaritic Literature*, 1949, pp. 57-103; T. Gaster, *Thespis*, 1950, pp. 6-108.) Biblical feasts differ in origin, purpose and content. To the Israelite the seasons were the work of the Creator for the benefit of man. They manifested the beneficence of God towards his creatures. By these feasts man not only acknowledged God as his Provider but recorded the Lord's unbounded and free favour to a chosen people whom he delivered, by personal intervention, in this world (Ex. 10:2; 12:8-9, 11, 14; Lv. 23:5; Dt. 16:6, 12). The joy expressed was heartfelt. Religious commitment was not incompatible with pleasure in temporal things conceived as gifts of God (Lv. 23:40; Dt. 16:14). The response of the participant was religiously ethical. Acknowledgment of sin and devotion to the law of God was involved (Ex. 13:9; Zc. 8:9). The sacrifices offered bespoke forgiveness of sin and reconciliation with God (Lv. 17:11; Nu. 28:22; 29:7-11; 2 Ch. 30:22; Ezk. 45:17, 20). To be withheld from the feast was considered a loss and a bar from privilege (Nu. 9:7). Not only did the Israelite appear at the feast as a beneficiary of the divine favour, but he made return to the Lord as he had been blessed (Dt. 16:10). Only in unauthorized feasts did unbelieving Israelites eat, drink and play (Ex. 32:6; 1 Ki. 12:32-33).

The feasts of the OT do not follow the ancient Near Eastern pattern of a period of joy preceded by rites of mortification and purgation (T. Gaster, *op. cit.*, pp. 6, 12). The Bible festival itself contained the element of mourning, for this is involved in sacrifice for sin (Lv. 23:27; Nu. 29:7). There is no sharp line of demarcation between sorrow for sin and the joy of the Lord.

Prophetic displeasure with the feasts as observed by the Jews (Is. 1:13-20) was not because they were in themselves on a lower plane of piety, but because many Israelites had departed from their spiritual purpose. They made the sum of religion consist in external observance, which was never the divine intent for the feasts from the time of their promulgation (Na. 1:15). In the NT this was well understood by our

FEASTS

	Month	Modern equivalent	Feasts
1	Nisan	Mar.–Apr.	14–21 Passover (<i>pesah</i>): Feast of Unleavened Bread (<i>haḡ hammassôt</i>) ● (Ex. 12:3–20; Lv. 23:6; Dt. 16:1–8)

● Biblical □ Extra-biblical

Chart showing the major biblical and extra-biblical Jewish feasts.

Lord and devout believers who diligently and spiritually observed the prescribed feasts of the old economy (Lk. 2:41; 22:8; Jn. 4:45; 5:1; 7:2, 11; 12:20).

The feasts to which reference is made in the OT are as follows:

1. The Feast of Unleavened Bread, Heb. *haḡ hammassôt* (Ex. 23:15), or *Passover, Heb. *pesah* (Lv. 23:5), was established to commemorate the historical deliverance from Egypt (Ex. 10:2; 12:8, 14). It was one of the three annual festivals, and was observed on the fourteenth day of the first

month. For 7 days unleavened bread was eaten and no servile work done. The first and the last day being 'holy convocations', sacrifices were offered (Nu. 28:16-25; Dt. 16:1-8).

2. The Feast of Weeks. Heb. *ḥaḡ sâbû'ôt*. It is also called the 'feast of harvest' and 'the day of first fruits' (Ex. 23:16; 34:22; Nu. 28:26). Later it was known as *Pentecost because it was celebrated on the fiftieth day from the sabbath beginning the Passover. It was marked by a holy convocation and the offering of sacrifices.

3. The Feast of *Tabernacles, Heb. *ḥaḡ has-sukkôt*, or 'the feast of booths', is also called the 'feast of ingathering', Heb. *ḥaḡ hâ'âsîp* (Ex. 23:16; 34:22; Lv. 23:34; Dt. 16:13). It lasted 7 days, the first and last days being holy convocations. Fruit was gathered in and people dwelt in booths made of branches and boughs of trees (Lv. 23:39-43; Nu. 29:12-38).

4. The *Sabbath. This is regarded as a feast in Lv. 23:2-3, and called a 'sabbath of rest'. It was marked by a solemn assembly (Is. 1:13), and cessation from all labour. It was also a day of joy (Is. 58:13).

5. The Day of Blowing of Trumpets (Nu. 29:1). In Lv. 23:24 it is called 'a memorial of blowing of trumpets' and 'a sabbath'. Sacrifices were offered and hard labour ceased.

6. The Day of *Atonement (Lv. 23:26-31). It was observed on the tenth day of the seventh month, and was a day of a 'holy convocation' in which souls were afflicted and an atonement made for sin. It was observed but once in the year (Ex. 30:10).

7. The Feast of Purim, described in Est. 9. Established by Mordecai in the time of Ahasuerus to commemorate the remarkable deliverance from the intrigues of Haman, this was a day of feasting and gladness.

The extra-biblical feast of *h'nukkâ* is the celebration of the recovery and cleansing of the Jerusalem Temple by Judas Maccabaeus in 164 BC, after its desecration by Antiochus Epiphanes. It is also called the 'festival of lights'. See Jn. 10:22, where it is called by its Gk. name *enkainia* ('dedication').

BIBLIOGRAPHY. *EJ*, 6, cols. 1189-1196, 1237-1246. D.F.

FELIX. Brother of Claudius' favourite, the *freedman Pallas, through whose influence he was appointed procurator of Judaea. His name is usually taken to have been Antonius Felix (Tacitus, *Hist.* 5. 9), but the MSS of Josephus (*Ant.* 20. 137), as of Suidas, read 'Claudius Felix', though this is usually emended out. It is suggested, however, that reference in a new inscription to a procurator named Claudius must be to Felix, though the cognomen is not preserved (*IEJ* 16, 1966, pp. 259-264). This name would indicate that he was a freedman of Claudius himself, not, like Pallas, of Claudius' mother Antonia.

Tacitus (*Annals* 12. 54) and Josephus (*BJ* 2. 247ff.) also disagree as to the time and circumstances of his arrival in Palestine: Tacitus has him in Samaria before the trial of the procurator Ventidius Cumanus (is the 'many years' of Acts 24:10 some corroboration of this?), but in any case he seems to have held the procuratorship of Judaea from c. AD 52. Unrest increased under his rule, for 'with savagery and lust he exercised the powers of a king with the disposition of a slave' (Tacitus, *Hist.*

5. 9), and he was utterly merciless in crushing opposition. In c. AD 55 he put down the followers of a Messianic pretender of Egyptian origin, but the man himself escaped (Jos., *BJ* 2. 261ff.). When the riot recorded in Acts 21:27ff. broke out the tribune Claudius Lysias initially mistook Paul for this *Egyptian (Acts 21:38).

After his arrest Paul was conveyed to Caesarea, the Roman capital of Palestine, and was tried before Felix. Two well-attested characteristics of the governor stand out in the subsequent narrative: his disregard for justice and his avarice. He kept Paul in prison for 2 years, hoping he would be paid a fat bribe (Acts 24:26). Disappointed of this hope, he deferred judgment in a case where there was ample evidence of the prisoner's innocence (23:29), and upon his recall he left Paul in prison in order to please the Jews (24:27) or, according to the Western Text, to please his wife *Drusilla.

He was recalled by Nero, probably in AD 59 (*FESTUS), and was saved from proceedings instigated by the Jews only through the influence of Pallas. Of Felix' later history nothing is known.

E.M.B.G.
C.J.H.

FESTUS. Porcius Festus succeeded *Felix as procurator of Judaea. Nothing is known of his life before his appointment, and he died in office after about 2 years. In Josephus (*Ant.* 20. 182ff. and *BJ* 2. 271) he makes an agreeable contrast with his predecessor Felix and his successor Albinus. In Acts (24:27-26:32) he appears in a less favourable light. Though he tried Paul's case with commendable alacrity (25:6) and was convinced of his innocence (26:31), he was prepared to sacrifice Paul to do the Jews a pleasure (25:9). Hence the scandalous suggestion of retrial at Jerusalem. Paul was constrained to appeal to Caesar in the face of an arrangement which would have put him in the power of his enemies. Yet Festus was apparently baffled by Paul, and brought the case before Agrippa II and *Bernice. Paul's innocence emerges clearly in the sequel, but the appeal proceeds to Rome.

Festus was later involved when the Jewish leaders brought to Nero a successful suit against Agrippa's violation of the privacy of the Temple area (Jos., *Ant.* 20. 189ff.).

The date of Festus' arrival in Judaea is a major crux of Pauline chronology. W. M. Ramsay in *Pauline Studies*, pp. 348ff., argued that Eusebius' evidence, when rightly understood, points to AD 59, and some support for this date is found in the sudden change of procuratorial coinage in that year, an event most plausibly attributed to the arrival of a new governor (see H. J. Cadbury, *The Book of Acts in History*, 1955, pp. 91).

E.M.B.G.
C.J.H.

FIELD. A word used in the EVV for several biblical terms. 1. Heb. *sâdeh* (and its poetical form *sâday*) is the most common term (e.g. Gn. 2:5) with the simple meaning of 'field', 'plain', 'open space'. 2. *š'demâ* is used six times only (e.g. Dt. 32:32) with much the same meaning. 3. *bar* (Aram.) is used only in Dn. 2 and 4 with the same meaning. 4. *hûš*, 'the outside', is frequently translated 'abroad' (e.g. Dt. 23:13), but twice rendered 'field' (Jb. 5:10; Pr. 8:26). 5. *helqâ*, in fact, means 'portion of ground' but is translated 'field' in 2 Sa. 14:30. 6. *ereš*, the

FIELD

common word for 'earth, land', is translated 'field' in Ezk. 29:5 (AV). 7. *y'gēbīm*, a word which occurs once only in the OT, is there translated 'field' (Je. 39:10). 8. Gk. *agros*, 'field' (e.g. Mt. 6:28), in LXX is used mainly to render *sādeh*. 9. Gk. *chōra* usually refers to a large region (Acts 16:6), but is twice rendered 'field' (Jn. 4:35; Jas. 5:4), and its diminutive *chōrion* is translated 'field' in Acts 1:18–19.

T.C.M.

FIG, FIG-TREE (Heb. *r'ēnā*, 'fig', 'fig-tree'; Heb. *paḡ*, 'unripe first fig', Ct. 2:13 only; Gk. *olynthoi*, 'unripe fig', unspecified season, Rev. 6:13 only; Gk. *sykon*, 'fig', Gk. *sykē*, 'fig-tree').

Indigenous to Asia Minor and the E Mediterranean region, the fig-tree (*Ficus carica*) makes a tree up to 11 m high, although it often grows as a several-stemmed shrub in rocky places. It was brought into cultivation early in Palestine, like the vine and the olive (e.g. Jdg. 9:7ff.), with which it is associated in God's promises of prosperity and in prophetic warnings (Je. 5:17; Ho. 2:12; Joel 1:7, 12; Hab. 3:17). The fig is often planted with the vine (Lk. 13:6), so that its branches and the vine's foliage led to the well-known expression 'to sit down under one's own vine and fig-tree' as a symbol of long-continued well-being and prosperity (1 Ki. 4:25; Mi. 4:4; Zc. 3:10; cf. 2 Ki. 18:31; Is. 36:16—though some cases may refer merely to a rural preference for the cultivation of fig-trees overlooking houses).

The failure or destruction of these slow-growing trees, which demand years of patient labour (Pr. 27:18; Lk. 13:7), was a national calamity (Je. 5:17; Hab. 3:17; cf. Ps. 105:33), while productiveness was a token of peace and of divine favour. Figs are frequently mentioned in conjunction with the vine, palm and pomegranate (e.g. Dt. 8:8), and their absence formed part of the Israelites' complaint in Nu. 20:5.

Adam and Eve are said to have been clothed with girdles made from the fig-tree's broad leaves (Gn. 3:7), and fig leaves are still sewn together in the E and used as wrappings for fresh fruit sent to the markets, where they are a valuable item of commerce. Lumps or cakes of dried figs (from Heb. *āḥēlā*, 'pressed together') made an excellent food, were easy to carry and constituted an acceptable gift (1 Sa. 25:18; 1 Ch. 12:40). Such a mass of figs was prescribed by Isaiah as a poultice for Hezekiah's boil (2 Ki. 20:7; Is. 38:21).

The complicated biology of the fig has confused authors who are unfamiliar with it. The primitive fig-tree needs to be pollinated by a fig-wasp which creeps into the apical hole of the young fig. The insect has its life history inside inedible male caprifigs which are borne several times a year on the branchlets. The edible female figs are pollinated by these insects, but the commonly cultivated varieties of fig develop the fruit without the need of insect pollinators. Thus the figs mentioned in Je. 8:13; Rev. 6:13 do not belong to a definite crop, while the bad figs could be inedible caprifigs (Je. 24:2b; 29:17). Edible good figs of the first crop are referred to in Ct. 2:13 (Heb. *paḡ*, still unripe, green); Is. 28:4; Je. 24:2a; Ho. 9:10; Mi. 7:1; Na. 3:12. The curious incident when Jesus cursed the fig-tree (Mt. 21:18–22; Mk. 11:12–14) may be explained by the out-of-season leafiness of the tree well before the fruits normally mature.

The fig has inspired numerous similes, metaphors

and proverbs (e.g. Je. 24:1ff.; Mi. 7:1; Mt. 7:16; Jas. 3:12). In Hellenistic times figs were considered so important to the national economy that the Greeks made special laws to regulate their export.

The sycamore tree (Gk. *sykomōraia*; Lat. *Ficus sycomorus*) associated with Zacchaeus in Lk. 19:4 is often known as the mulberry-fig because it possesses the habit of the mulberry.

J.D.D.
F.N.H.

FIRE. A word usually represented in the OT by Heb. *ʿēš* and in the NT by Gk. *pyr*, the term generally used in the LXX for *ʿēš*. These signify the state of combustion, and the visible aspects of it, such as the flame. The production of fire by artificial means was a skill known to man from Stone Age times, but then and in later times great care was taken to preserve a burning fire to avoid the necessity for rekindling. Abraham apparently carried a piece of burning fire with him when he went to offer Isaac (Gn. 22:6), and Is. 30:14 indicates that this was a usual domestic practice. Probably the commonest methods of kindling a flame in biblical times were by means of the fire-drill, attested in the Egyptian hieroglyphic *d'* (18th Dynasty), and the striking of flint on iron pyrites, a practice attested from Neolithic times and therefore assumed to be in use later. It may be that this latter method is referred to in 2 Macc. 10:3.

Fire was used in the normal course for such purposes as cooking (Ex. 12:8; Jn. 21:9), providing warmth (Is. 44:16; Lk. 22:55) and refining metals (Ex. 32:24; Je. 6:29), but also for destroying such things as idols (Ex. 32:20; Dt. 7:5, 25), Asherim (Dt. 12:3), chariots (Jos. 11:6, 9) and cities (Jos. 6:24; Jdg. 18:27), and the culprits in two cases of sexual breach (Lv. 20:14; 21:9). It also played an important part in the worship of the tabernacle and Temple, where the altars of incense and of burnt offering constantly required it. The fire on the latter having been started by God (Lv. 9:24; 2 Ch. 7:1–3), it was kept burning continuously (Lv. 6:13). This fire was special, and offerings by means of 'strange fire' were not acceptable (Lv. 10:1; Nu. 3:4; 26:61). The heathen practice of making children 'pass through the fire' was occasionally practised by the Israelites (2 Ki. 3:27; 16:3; 17:17, 31; 21:6; 23:10; 2 Ch. 28:3; 33:6), was included in the condemnations of the prophets (Mi. 6:7). This practice does not necessarily denote human sacrifice so much as a dedication to *Moloch or Milcam. It may also have involved fire incantations similar to those practised in Mesopotamia (*AJO* 23, 1970, pp. 39–45).

Theophanies of God were sometimes accompanied by fire (Ex. 3:2; 13:21–22; 19:18; Dt. 4:11) and the image of fire is used to symbolize God's glory (Ezk. 1:4, 13), protective presence (2 Ki. 6:17), holiness (Dt. 4:24), righteous judgment (Zc. 13:9) and wrath against sin (Is. 66:15–16). It is also used of the Holy Spirit (Mt. 3:11; cf. Acts 2:3), of prophetic inspiration (Je. 5:14; 20:9; 23:29) and religious feeling (Ps. 39:3). In other contexts fire is used as a literary symbol of sin (Is. 9:18), lust (Ho. 7:6) and affliction (Ps. 46:12).

T.C.M.

FIREPAN (Heb. *maḥtá*, from *ḥaṭá*, 'to snatch up'). A bowl-shaped utensil with a handle used in connection with the tabernacle and Temple services for three different purposes. 1. In some passages it refers to the *snuffdish* made of gold, which held the pieces of burnt lamp-wick removed by the tongs or *snuffers (Ex. 25:38; 37:23; Nu. 4:9; 1 Ki. 7:50; 2 Ki. 25:15; 2 Ch. 4:22; Je. 52:19, the last four of these references being wrongly translated 'censer' and 'firepan' in AV). 2. Elsewhere it refers to the bronze *firepan* which was used to carry coals away from the altar of burnt offering (Ex. 27:3; Nu. 4:14, the second of these references being wrongly translated 'censer' in AV). 3. In other passages it is used of the **censer*, also made of bronze, in which incense was burnt (Lv. 10:1; 16:12; Nu. 16:6, 17-18, 37-39, 46). J.C.W.

FIRST-BORN.

I. In the Old Testament

The Heb. root *bkr*, found in many Semitic languages, has the general meaning '(to be) early'. *b'kōr*, 'first-born' (fem. *b'kirā*), is used of people and animals, cognate terms being employed for firstfruits, and the first-born son's privileges and responsibilities are known as his 'birthright' (*b'kōrah*). In Gn. 25:23, the eldest son is called *rah*, a description occurring elsewhere only in 2nd-millennium cuneiform texts.

The first-born was regarded as 'the beginning of (his) strength' (*rē'šit 'ōn*—Gn. 49:3; Dt. 21:17; cf. Ps. 78:51; 105:36) and 'the opener of the womb' (*petēr rehem*—Ex. 13:2, 12, 15; Nu. 18:15; etc.), emphasizing both paternal and maternal lines. The pre-eminent status of first-born was also accorded to Israel (Ex. 4:22) and the Davidic line (Ps. 89:27).

The eldest son's special position was widely recognized in the ancient Near East, though it was not usually extended to sons of concubines or slave-girls (cf. Gn. 21:9-13; Jdg. 11:1-2). The accompanying privileges were highly valued, and in the OT included a larger inheritance, a special paternal blessing, family leadership and an honoured place at mealtimes (Gn. 25:5-6; 27:35-36; 37:21ff.; 42:37; 43:33; Dt. 21:15-17). The double inheritance of Dt. 21:15-17, though apparently unknown to the Patriarchs (Gn. 25:5-6), is mentioned in several Old Babylonian, Middle Assyrian and Nuzi documents, and is alluded to elsewhere in the OT (2 Ki. 2:9; Is. 61:7).

These privileges could normally be forfeited only by committing a serious offence (Gn. 35:22; 49:4; 1 Ch. 5:1-2) or by sale (Gn. 25:29-34), though paternal preference occasionally overruled in the matter of royal succession (1 Ki. 1-2; 2 Ch. 11:22-23; cf. 1 Ch. 26:10). There is also a marked interest, especially in Genesis, in the youngest son (Jacob, Ephraim, David; cf. Isaac, Joseph), but such cases were certainly contrary to expectation (Gn. 48:17ff.; 1 Sa. 16:6ff.).

Where no sons existed, the eldest daughter took responsibility for her younger sisters (Gn. 19:30ff.). It was an Aramaean custom (Gn. 29:26), and perhaps also an Israelite one (1 Sa. 18:17-27), for the eldest daughter to be married first. A Ugaritic text mentions the transfer of birthright from the eldest to the youngest daughter.

In Israelite ritual, the first-born of man and beast had a special place. The male first-born be-

longed to Yahweh (Ex. 13:2; 22:29b-30; Nu. 3:13), and this was underlined by Israel's deliverance in the final plague. Children were redeemed in the Exodus generation by the Levites (Nu. 3:40-41), and later, at a month old, by a payment of five shekels (Nu. 18:16; cf. 3:42-51). Sacrifice of human first-born is occasionally mentioned, following Canaanite practice (2 Ki. 3:27; Ezk. 20:25-26; Mi. 6:7; cf. 1 Ki. 16:34), but this was a misinterpretation of Ex. 22:29. Clean male firstlings were sacrificed (Nu. 18:17-18; Dt. 12:6, 17), while imperfect animals were eaten in the towns (Dt. 15:21-23). Male firstlings of unclean animals were redeemed (Nu. 18:15), though an ass was redeemed with a lamb or had its neck broken (Ex. 13:13; 34:20).

II. In the New Testament

Jesus was the first-born (*prōtotokos*) of his mother (Mt. 1:25; Lk. 2:7), a phrase which allows, but does not demand, that Mary had other, later children (cf. Mk. 6:3; ***BRETHREN OF THE LORD**). As such, Jesus was taken to the Temple by Mary and Joseph to be offered to God (Lk. 2:22-24); since Luke omits mention of a price being paid to redeem the child, he may have intended the incident to be regarded as the dedication of the first-born to the service of God (cf. 1 Sa. 1:11, 22, 28). Jesus is also the first-born of his heavenly Father. He is the first-born of all creation, not in the sense that he himself is a created being, but rather that as God's Son he was his agent in creation and hence has authority over all created things (Col. 1:15-17). Similarly, he is the first-born in the new creation by being raised first from the dead, and is thus Lord over the church (Col. 1:18; Rev. 1:5). He is thus the first-born in a whole family of children of God who are destined to bear his image (Rom. 8:29). There may be an echo of Ps. 89:27 in Heb. 1:6, where God's Son is the object of worship by the angels at his coming into the world (whether the incarnation, resurrection or second advent is meant is debatable). Finally, God's people, both living and dead, can be described as the first-born who are enrolled in heaven, since they share the privileges of the Son (Heb. 12:23).

FISH, FISHING.

I. Kinds of fish and sources of supply

The general Heb. words for water-creatures are *dāg* and *dāgā*. According to the Mosaic law (Lv. 11:9-12; Dt. 14:9-10) water-creatures having fins and scales were 'clean', but those without fins and scales (e.g. shellfish) were 'unclean'. The creature which swallowed Jonah is called 'a great fish' in Jon. 1:17. Mt. 12:40 carefully adopts the same designation (Gk. *kētōs*, 'a large sea-monster', translated and interpreted by AV, RV and RSV as 'whale'). According to Tobit 6:2 a large fish in the Tigris

FISH, FISHING

river threatened to swallow Tobias. The fisherman of the parable of the drag-net (Mt. 13:48) discarded some fish because they were too small, inedible or 'unclean'. The fish in whose mouth Peter found the stater (Mt. 17:27) must have had a large mouth, like the fish of the Sea of Galilee called *Chromis simonis* after the apostle. In addition to the common Gk. word for fish, *ichthys* (e.g. Mt. 7:10), the NT uses the diminutive *ichthydion*, 'small fish' (Mt. 15:34; Mk. 8:7, both passages which describe the feeding of the four thousand), and *opsarion*, small fish eaten with bread (Jn. 6:11; 21:9). In the Sea of Galilee today at least twenty-four species of fish are found, sometimes in large shoals.

The Bible mentions Egypt as a place where fish are plentiful (Nu. 11:5), and the Sea of Galilee (Lk. 5:6) and Tyre (Ne. 13:16) are also noted as ample sources of supply. Fish cannot live in the salty waters of the Dead Sea, but Ezk. 47:10 foresees that this lake will be stocked with fish as one of the blessings of the kingdom of glory.

II. Fishermen and their methods

The strenuous life of fishermen required a strong physique (Lk. 5:2), and their speech was sometimes rough (Mk. 14:70f.). At least seven of Jesus' disciples were fishermen: Peter, Andrew, probably Philip, who also came from Bethsaida (Aram. for 'house of fishing') on the Sea of Galilee, James, John, Thomas and Nathanael (Mt. 4:18, 21; Jn. 1:44; 21:2). Some of these were partners in fishing and were used to working together (Lk. 5:7, 10).

The Bible mentions fishing by *net, specifically the casting-net (Mt. 4:18) and the large drag-net (Mt. 13:47).

On the Sea of Galilee the fishermen used small boats, which were propelled by oars (Jn. 6:19). The statement that the wind was contrary (Mt. 14:24) may indicate the use of a sail as in the present-day fishing-boats on this lake. (*SHIPS AND BOATS.) Often on the Sea of Galilee fishing was done at night (Lk. 5:5; Jn. 21:3). During the day the fisherman on the shore or wading in the water could throw the casting-net (Mt. 4:18). Larger nets were let down by several men from boats (Lk. 5:4). The fish were either emptied into the boat (Lk. 5:7) or the nets were dragged to the shore (Mt. 13:48; Jn. 21:8). Then the fish were sorted, the saleable ones being put in baskets and the useless ones thrown away (Mt. 13:48). The Bible does not refer to fishing as a recreation.

III. Marketing and preparation

In Jerusalem there was a Fish Gate (perhaps on the N side of the city), through which traders brought their fish to sell to the populace (Zp. 1:10). From Ne. 13:16 we know that Tyrian fish merchants lived in the city after the Exile. In Bible times common methods of preparing fish for eating were roasting (Jn. 21:9; Tobit 6:5), and salting and drying (Tobit 6:5, Sinaitic Text). The fish which Tyrians sold in Jerusalem and the small fish which were used in the miraculous feeding of the 5,000 and of the 4,000 (Mt. 14:17; 15:36) were probably prepared in the latter way. (*FOOD.)

IV. Fish worship

Dt. 4:18 forbids making images of fish for worship. The pagan fish-goddess Atargatis was worshipped at Ascalon and among the Nabataeans. The oxy-

rhynchus was worshipped in a nome in Egypt named after that fish.

V. Figurative and symbolic uses

People suffering misfortune (Ec. 9:12) or captured by enemies (Hab. 1:15) are compared to fish caught in a net. Fishing is used in the OT as a figure of God's judgment on nations or individuals (e.g. Je. 16:16; Ezk. 32:3). Jesus called disciples to become fishers of men (Mt. 4:19). The kingdom of heaven is likened to a drag-net (Mt. 13:47).

The fish was one of the earliest symbols of Christian art, because the letters of Gk. *ichthys* were taken as an acronym for *Iēsous Christos Theou Hyios Sōtēr*, 'Jesus Christ, of God the Son, Saviour' (see F. J. Dölger, *IXΘΥΣ*, 1928).

BIBLIOGRAPHY. G. Dalman, *Arbeit und Sitte*, 6, 1939, pp. 343-370; G. S. Cansdale, *Animals of Bible Lands*, 1970; J. D. M. Derrett, 'Peter's Penny', in *Law in the New Testament*, 1970, pp. 247-265; M. Nun, *The Sea of Galilee and its Fisherman in the New Testament*, 1989. J.T.

FLAGON. Heb. *nēḥel*, Is. 22:24, a large, two-handled jar for storing wine (*GLASS). AV translates Heb. *"ššā* as 'flagon', following the interpretation of Qimchi. However, Ho. 3:1 (Heb. *"ššē "nābīm* ... of grapes) and Ct. 2:5 (parallel to 'refresh me with apples', RSV) suggest a derivation from the root *"šš*, 'be firm', 'compress'. LXX preserves the meaning by translating 'cake from a pan' (*laganon apo lēganou*, 2 Sa. 6:19); 'raisin cake' (*pemmata meta staphidōn*, Ho. 3:1); 'sweet cake' (*amoritēn*, 1 Ch. 16:3; *amoras*, Ct. 2:5). Heb. *"ššā* denotes, therefore, a cake of compressed, dried grapes, possibly used as an offering in pagan worship (Ho. 3:1). (*VINE.) A.R.M.

FLAX (Heb. *pištā* in Ex. 9:31 and Is. 42:3; *pišteḥ* elsewhere in the OT; Gk. *linon* in Mt. 12:20). Used chiefly in making *linen, flax (*Linum usitatissimum*) is the oldest of the textile fibres. The plant grows often to a height of 1 m, and produces beautiful blue flowers. From the shiny seeds comes linseed oil.

Flax was cultivated by the Egyptians before the Exodus (Ex. 9:31) and, before the Conquest, by the Canaanites, who dried the stalks on the rooftops (Jos. 2:6). Among God's judgments in Hosea's day was the taking away of the flax (Ho. 2:9).

In the single NT reference (Mt. 12:20), an allusion to flax as being slow-burning, Matthew is quoting from Is. 42:3. J.D.D.

FLESH.

I. In the Old Testament

In the OT the principal word is *bāsār* (found 269 times), though *š'ēr* (16 times, 4 times translated 'flesh' in RSV) also occurs. *bāsār* denotes the principal constituent of the body, human (Gn. 40:19) or animal (Lv. 6:27). The latter use leads on to the thought of meat as used for food and to that of the flesh of the animal sacrifices, whether eaten or not. From the former usage 'flesh' comes to mean the whole body (Pr. 14:30), and by a natural extension of meaning the whole man, as when the

Psalms says, 'my body (Heb. flesh) also dwells secure' (Ps. 16:9). This leads to the concept of the union of one person with another. Man and wife are 'one flesh' (Gn. 2:24), and a man can say of his relatives, 'I am your bone and your flesh' (Jdg. 9:2).

Again, the notion of flesh as the whole man gives rise to the expression 'all flesh', which denotes the totality of human existence, sometimes also including the animal creation. There is sometimes the sense that flesh is weak: 'in God I trust without a fear. What can flesh do to me?' (Ps. 56:4). This is not the thought of moral weakness (perhaps the nearest we get to this is Ps. 78:39). It is the physical frailty of man that is meant.

II. In the New Testament

In the NT the Gk. word for 'flesh' is *sarx*. This term reproduces most of the OT meaning of *bāšār*. It denotes the fleshy part of the body, as in references to eating flesh (Rev. 19:18, etc.), or to the whole body (Gal. 4:13f.). It may mean the whole man, 'our bodies (lit. our flesh) had no rest ... fighting without and fear within' (2 Cor. 7:5), or 'within me, that is, in my flesh' (Rom. 7:18). As in the OT, man and wife are 'one flesh' (Mt. 19:5f.), and there are passages referring to 'all flesh' (Jn. 17:2). The weakness of the flesh is spoken of in connection with the apostles' failure to watch in Gethsemane (Mt. 26:41; Mk. 14:38).

But the NT has also some distinctive meanings. Akin to the 'my bone and my flesh' passages of the OT (though not quite the same) are those which refer to physical descent and the like. Thus Christ 'was descended from David according to the flesh' (Rom. 1:3). Paul can speak of 'Israel according to the flesh' (1 Cor. 10:18; see rsvmg.), and the Israelites as his 'kinsmen by race' (Gk. 'according to the flesh') (Rom. 9:3).

'The flesh' may stand for the whole of this physical existence, and there are references to being 'in the flesh' (Col. 2:1; rsv omits). There is no blame attached to this, and, indeed, Christ is said more than once to have been 'in the flesh' (Eph. 2:15; 1 Pet. 3:18; 1 Jn. 4:2, etc.). To be 'in the flesh' is not incompatible with being 'in the Lord' (Phm. 16). The flesh may be defiled (Jude 8) or purified (Heb. 9:13). The life that Paul the Christian now lived was 'in the flesh' (Gal. 2:20).

But, by definition, the flesh is the earthly part of man. It has its 'lusts' and its 'desires' (Eph. 2:3). If men concentrate on these they may be said to 'set their minds on the things of the flesh' (Rom. 8:5). And to set the mind on the flesh 'is death' (Rom. 8:6). This is explained as 'enmity against God' (Rom. 8:7). The man whose horizon is limited by the flesh is by that very fact opposed to God. He lives 'according to the flesh' (Rom. 8:13), that flesh that 'lusteth against the Spirit' (Gal. 5:17, AV; rsv has 'the desires of the flesh are against the Spirit' but AV is more literal). For a dreadful list of 'the works of the flesh', see Gal. 5:19-21. The flesh in this sense denotes the whole personality of man as organized in the wrong direction, as directed to earthly pursuits rather than the service of God.

L.M.

FLESH-HOOK (AV; RSV 'fork'). A bronze implement associated like others with the altar of burnt offering at the tabernacle (Ex. 27:3; 38:3; Nu. 4:14) and Solomon's Temple (1 Ch. 28:17; 2 Ch. 4:16). Seen in use at Shiloh (1 Sa. 2:13-14) as a three-pronged fork.

K.A.K.

FLESHPOTS (Heb. *sîr*, probably a foreign loan-word; cf. Arab. *sîr*, 'a large waterjar', and later Gk. *siras*). A large household utensil usually made of metal for placing over a fire (Ex. 16:3; Ec. 7:6, 'pot'; 2 Ki. 4:38, 'great pot'). It is used symbolically of Jerusalem (Ezk. 11:3, 'cauldron'), in similes for avarice (Mi. 3:3), and figuratively for speedy vengeance (Ps. 58:9). Such pots were in use in the sanctuary (Ex. 27:3; 2 Ki. 25:14, etc.) and were probably deep bronze cauldrons (so Je. 1:13, RV). They were also used as *washbasins (Ps. 108:9). Their shape was that adopted for the excavation of cisterns (2 Sa. 3:26). (*POTTER, *VESSELS.) J.D.D.

FLOOD. A deluge of water sent by God in the time of Noah to destroy all but a selected few from the earth (Gn. 6-8). The word used in the OT to describe this phenomenon is *mabbûl*, probably derived from *ybl*, 'to bring', the counterpart of Akkadian *wābābum*, 'to bring', which has the meaning, among others, 'to sweep away' (of water, wind, etc.) and from which are derived *biblum*, 'devastating flood', and *bubbulum*, 'flood'. A different word, *abūbum*, is used in the Akkadian flood stories. In the OT, *mabbûl* is otherwise found only in Ps. 29:10, also meaning 'flood'. In the LXX, *mabbûl* is translated by *kataklysmos*, and this is the word used in NT (Mk. 16:7; Lk. 17:27; 2 Pet. 2:5) to describe the same event.

In the EVV various other terms are translated by the word 'flood', most of them referring to rivers, either in normal flow or in spate, which was one of the meanings of 'flood' in AV English. Thus in OT *nāhār* (e.g. Jos. 24:2), *y'ôr* (e.g. Je. 46:7; the form 'ôr occurs in Am. 8:8), *nahal* (e.g. 2 Sa. 22:5), and *šibbōlet* (Ps. 69:2, 15; Jdg. 12:6), and in NT *potamos* (e.g. Mt. 7:25), all bear roughly this meaning. Other words translated 'flood' are *šeteḇ*, 'an overflowing' (e.g. Ps. 32:6), and the verb *nāzal*, 'to flow', in its participial form 'flower' (e.g. Ex. 15:8) in OT, and *plēmmyra*, 'high water' (Lk. 6:48), in NT.

a. The reason for the flood

When God saw that man was constantly planning and doing evil (Gn. 6:5), he resolved to bring a just destruction upon him (6:1-7). But *Noah was a righteous man, so he and his immediate family were to be spared to make a new start.

b. The preparation

Gn. 6:3 and 1 Pet. 3:20 indicate that through the longsuffering of God there would be 120 years' respite before the coming of the Flood. In this period God commanded Noah to build an *ark and gave him careful instructions for it. He also announced that he would make a covenant with Noah (6:18; see g, below).

c. The occupants of the ark

Eighty people, Noah, his three sons, Shem, Ham and Japheth, and their four wives were preserved in the ark (Gn. 6:18; 7:7, 13; 2 Pet. 2:5). There were

FLOOD

also two members, a male and a female, of each division (after their kind, *mīn*, not necessarily 'species'; *CREATION, II.d) of the animal kingdom, including the birds, on board (6:19–20; 7:8–9, 14–15) and in addition to these there were twelve extra creatures, six male and six female, of each clean species, presumably for food and sacrifice (7:2–3; some commentators interpret the numbers as seven, rather than fourteen altogether of each). Vegetable food for all these occupants was also stowed aboard. No mention is made of sea creatures, but these may have been included in 'every living thing of all flesh' (6:19), and could have been accommodated outside the ark.

d. The Flood

When Noah and his companions had entered the ark God secured it behind him (7:16) and loosed the waters. These came in the form of rain (7:4, 12), and of such force that the Bible says 'the windows of heaven were opened' (7:11), a very telling metaphor. The level of the waters was also raised from below, 'all the fountains of the great deep (*t'hôm*) were broken up' (7:11), but this may be a metaphorical statement, as is suggested by the use of the word *t'hôm*, which is usually found in poetic passages, so it is inappropriate to seek references to geological phenomena in it.

e. The chronology of the Flood

Noah entered the ark on the 17th day of the 2nd month of his 600th year (7:11), and the earth was dry on the 27th day of the 2nd month of his 601st year, so, counting 30 days to a month, the Flood lasted 371 days. The rain fell for 40 days (7:12) and the waters continued to rise for another 110 (7:24) = 150; the waters then fell for 74 days (8:5) = 224; 40 days later the raven was sent out (8:6–7) = 264; 7 days later Noah sent out the dove (8:8, with implication of 'other 7 days' in 8:10) = 271; he sent it out again 7 days later (8:10) = 278; and for the third time 7 days later (8:12) = 285; Noah removed the covering of the ark 29 days later (8:13 with 7:11) = 314; and the earth was finally dry 57 days later (8:14) = 371 days altogether.

f. The extent of the Flood

That everything (6:17), including man (6:7; 7:21) and beast (6:7, 13, 17; 7:21–22), was to be blotted out by the Flood is clearly stated, but it can be argued that these categories are qualified by the statements of locality: upon the earth (*'ereš*; 6:17; 7:17, 23); under heaven (*šamayim*; 6:17; 7:19); and upon the ground (*'ādamā*; 7:4, 23). *'ereš* can mean 'land' (e.g. Gn. 10:10), *šamayim* can mean 'sky', or the visible part of heaven within the horizon (e.g. 1

Archaeological indications of major floods in various Mesopotamian cities in the 4th–3rd millennia BC.

Ki. 18:45), and the extent of *"dāmā* would be determined by these other two words; thus it is possible that a flood of unexampled severity might meet these conditions without covering the entire surface of the globe. The argument that such a flood would make the preservation of animals unnecessary might be countered with the suggestion that if a whole environmental zone with its own individual fauna were involved, such a measure would be necessary. The statement that all the high mountains (*harē*) under the whole heaven were covered (7:19–20) and that near the end of the Flood they began to be seen (8:5) is interpreted in this scheme as a phenomenon due to the cloud and mist that must have accompanied the cataclysm. This interpretation favours a limited Flood, but the text is also capable of bearing the interpretation of a universal Flood, and dogmatism is not reasonable, either way. The theological teaching of the Bible has traditionally been interpreted in the sense that all men except Noah and his family were destroyed.

g. The end of the Flood

God remembered Noah in the ark, and caused the waters steadily to decrease until the ark came to rest on the mountains of Urartu (*ARARAT). The MT here, *hārē 'arārāt*, consonantal *hry'rrt*, is unequivocally in the plural (*-ēl-y*) and refers, therefore, to the mountains of Urartu (*ARARAT), a retrospective use of the name, but referring to the whole mountainous area of modern Armenia and not specifically to Mount Ararat. To find out whether it was safe to disembark Noah sent out a raven first, which was perhaps able to feed on carrion, and perch on the roof of the ark (8:7), and then a dove, which on the second attempt brought back an olive leaf, indicating perhaps that the waters had fallen enough for the foothills, where the olive trees grow, to be dry, and therefore sufficient food to be now available for the animals (8:8–11). The third time he sent out the dove it did not return (8:12), so he deemed it time to leave the ark, and this he was commanded by God to do. Noah then made burnt offerings of every clean beast and bird (see *c*, above), and God swore not to bring another flood (8:21–22; Is. 54:9), blessed Noah and his sons (9:1), and confirmed it in a covenant (9:11), whose sign was a bow in the clouds (9:13–17).

h. Cuneiform parallels

Stories of a flood have been found among the cuneiform documents excavated in the Near East. A Sumerian tablet from Nippur in S Babylonia relates how king Ziusudra was warned that the gods had decreed a deluge to destroy mankind and told to build a great boat in which to escape. This tablet was written *c.* 1600 BC, but the story had probably been known in Mesopotamia for many centuries before this. The fact of a devastating flood is a part of Sumerian historical and literary tradition. An Akkadian story is contained in incomplete copies of the *Atrahasis Epic* made *c.* 1630 BC and circulated widely during later centuries (it was known as *Ugarit). This describes a flood sent by the gods to destroy man after earlier attempts to control him had failed. The pious Atrahasis is warned by the creator-god Enki (or Ea) to build a boat and escape with his family, treasure and animals. Then the flood comes, lasting for 7 days, and, after a missing passage, Atrahasis offers a sacrifice to the

gods who gather like flies around it. They regret their act, and reinstitute society with the rule of individual guilt and punishment. The famous Babylonian *Story of the Flood*, which forms part of Tablet XI of the longer *Epic of Gilgamesh* (*BABYLONIA), derives largely from this work. It was a copy of this, which had been excavated from Nineveh some 20 years before, that was identified in the BM in 1872 by George Smith. In this version the hero, named Uta-napishtim (once Atrahasis, line 187) describes to Gilgamesh how he was given immortality after surviving the Flood. He tells the same story as the *Atrahasis Epic* with some details not preserved in that account. Notable among them is the boat's coming to rest on Mt Nisir (in NW Persia) and the despatch in succession of a dove, a swallow and a raven, the occupants of the boat disembarking when the raven did not return. These cuneiform accounts show similarities with Gn. 6–9, a fact which is possibly to be explained by common reference to an actual historical event. The many crude elements in the cuneiform versions suggest that these are the less reliable of the two accounts.

i. Sources

Many scholars consider that the narrative of the Flood in Gn. 6–9 is composed of two sources, J (Yahwist) and P (Priestly), woven together by a late editor, working after the return from the Exile. According to this theory, oral traditions from early times were brought together, and were committed to writing in the 'document' called J over a period of centuries, beginning in the time of the early monarchy. The other source (P) was the result of centuries of the traditions of the priests from the time of David, which were written down in the period from perhaps 500 BC to the time of Ezra, drawing, in the case of such sections as that dealing with the Flood, upon the Babylonian traditions as learnt during the Exile. Evidence for the two sources is found in such criteria as the use of the two divine names, *YHWH* in J and *'lōhīm* in P, and in such observations as that Noah is bidden to take seven (or fourteen) of every clean creature and two of every unclean creature into the ark (Gn. 7:2–3 = J), and that he is bidden to take one pair of every species (Gn. 6:19 = P; see *c*, above).

These matters are susceptible of other explanations, however (see Bibliography), and the unity of the Flood account is suggested by the consistent statements as to the cause of the Flood (Gn. 6:5–7, J, 11–13, P), the purpose of it (Gn. 6:7, J, 13, 17, P; 7:4, J, 21, P, 22–23, J; 8:21, J), and the saving of a representative remnant (Gn. 6:8, J, 18–20, P; 7:1–3, 7–9, J, 13–16a, P, 16b, J; 8:16–19, P).

j. Other Flood stories

A large number of Flood stories, principally from Europe, Asia and America have been recorded.

k. Archaeology and the Flood

Excavations at Ur, Kish, and Farah in Mesopotamia have uncovered evidence of serious floods. The excavators of the first two sites, Sir Leonard Woolley and S. H. Langdon, believed these remains were connected with the biblical Flood. This is unlikely, however, since the flood levels at the three sites do not all date from the same period, and in each case they are most readily explained as due to a river inundation of unusual severity. Moreover, the earliest, that at Ur, is unlikely to have taken place much before 4000 BC, a date

FLOOD

which comes well on in the continuous sequence of prehistoric cultures in the Near East, and one at which there is no sign of a break in other areas. If a serious local flood in the Mesopotamian plain is considered to be all that is implied by the biblical account, one or other of the flood deposits at these sites may be thought to be evidence of it, but if, as seems probable, a far more serious event is recorded in Genesis, the evidence from Mesopotamia must be considered irrelevant.

l. Geology and the Flood

No certain geological evidence of the biblical Flood is known. Many phenomena have been noted, however, which in the past, and particularly the 19th century, were cited as evidence of a serious flood. The majority of these are today most plausibly explained as vestiges of the glacial action of the Quaternary Ice Age, or as the result of much earlier geological occurrences. Associated with the ice age, however, were certain changes, such as varying sea-levels through locking up and release of water in the glaciers, and depression and rising of land masses in concord with the increase and decrease in the weight of ice on them, which might well have produced effects in keeping with the biblical account. The effective end of the last glaciation may be dated around 10,000 BC, so it may be that Noah and his contemporaries are to be given an antiquity of this magnitude (*GENEALOGY).

No certain evidence is, however, available, and any scheme to place the events described in Genesis in their actual historical setting can be no more than tentative.

FOLLY. While folly in the OT is sometimes plain silliness (e.g. Pr. 10:14; 14:15; 18:13), it is usually culpable: a disdain for God's truth and discipline (Pr. 1:7). Hence even the 'simple' or gullible man (*pe'et*) is not merely 'without sense' (Pr. 7:7ff.) but fatally wayward (Pr. 1:32). He must make a moral and spiritual choice, not only a mental effort (Pr. 9:1–6, 13–18; Ps. 19:7). Likewise the 'fool' (known by various, virtually interchangeable terms, chiefly *k'sil*, 'wil, *sākāl*) is typically one who, like Saul, has 'played the fool' (1 Sa. 26:21) and closed his mind to God (e.g. Ps. 94:8ff.; Pr. 27:22; Je. 5:21). The most hardened folly is that of the 'scoffer' (*lēš*, e.g. Pr. 1:22; 14:6; 24:9) and of the aggressive unbeliever called the *nābāl* (1 Sa. 25:25; Ps. 14:1; Is. 32:5f.).

Christ's warning against branding anybody 'fool' (*mōros*, Mt. 5:22) presupposes these spiritual and moral connotations (see Arndt for other ex-

planations). In 1 Cor. 1:25, 27 Paul takes up the term (*mōros*, 'foolishness') used by unbelievers in their faulty evaluation of God's purposes. A man's folly may sometimes lie in his being unable to perceive the issues (e.g. Lk. 11:40; 1 Cor. 15:36, *aphrōn*), but more likely in the fact that he has made an unworthy choice (e.g. Lk. 12:20, *aphrōn*; Rom. 1:21, *asynetos*; Gal. 3:1, 3, *anoētos*; Mt. 7:26, *mōros*).

D. A. H.
F. D. K.

FOOD. Within this general term are included all the vegetable and animal products used by man to maintain the physical life of his body.

I. In the Old Testament

a. Earliest periods

From the beginning (Gn. 1:29–30; 2:16) all seed-bearing plants (mainly grains and vegetables, presumably) and fruit-bearing trees served as food for man, and natural greenstuffs as food for animals. The Fall brought with it the necessity for hard toil in food gathering and production (Gn. 3:18, 23; 4:2–3). Food in the ark was evidently representative of that in common use at the time, but no details of it are given (Gn. 6:21). After the Flood, God promised that seedtime and harvest should not cease while the earth endured, and all living things (besides vegetation) might be used for food, but not their blood (Gn. 8:22–9:4). At the time of Noah's resettlement of the earth after the Flood, grape-growing (and, in consequence, drunkenness) first appears (Gn. 9:20–21).

b. The patriarchal age

In Egypt, Palestine and Mesopotamia in the early 2nd millennium BC, grain and various breads were a staple diet, along with milk, butter, cheeses, water, wine and beer. Doubtless the semi-nomadic Patriarchs lived mainly on the milk-products of their cattle and flocks, but also had bread (see the supply given to Hagar, Gn. 21:14) and sometimes cultivated grain seasonally as did Isaac (Gn. 26:12) and presumably Jacob (cf. Gn. 37:7), since he needed to buy Egyptian grain in time of famine (Gn. 42:2, 25f.; 43:2; 44:1–2). Lentil soup (a red soup) was probably a common dish in the days when Esau traded his birthright for a meal of it (Gn. 25:29–34), as it certainly was later on (e.g. 2 Sa. 17:28). Honoured guests were treated to the fattened calf accompanied by curds and milk (Gn. 18:6–8). With Abraham's action we may compare the references in the N Canaanite texts from Ugarit which mention slaughter and preparation of 'a lamb from the flock' or 'the sleekest of . . . fatlings' (*ANET*, pp. 146, 149, 151). Although meat was not an everyday dish, desert-game was popular in patriarchal Syria–Palestine. Isaac liked his tasty meat from the hunt (Gn. 27:3–4), just as did the Egypt. Sinuhe in Palestine a little earlier (*ANET*, p. 20). Presents to dignitaries might include nuts and honey as delicacies (Gn. 43:11). The tablets from the 18th-century BC palace at Mari indicate that large amounts of honey were provided at banquets for visiting royalty, and during the same period King Ishme-Dagan of Assyria sent pistachio-nuts to his brother ruling at Mari. In Egypt, too, honey was first and foremost the prerogative of royalty and high society, but was also occasionally enjoyed by their inferiors. Finally, the common meal was a

recognized token of amity between the two contracting parties of an agreement, e.g. Isaac and the Philistines in Gn. 26:30, and Jacob and Laban in Gn. 31:54. No details are given of the meal to which Joseph treated his brothers in Egypt (Gn. 43:31–34).

c. *Israel in Egypt*

In Egypt, despite their hard life, the captive Israelites had had a variety of food that they remembered with nostalgia in the wilderness journeyings: fish in plenty, cucumbers, melons, leeks, onions, garlic (Nu. 11:5). This list corresponds quite closely with known ancient Egypt. foods, not least in the E Delta (Goshen area) in the 13th century BC. Thus, in praising the region of Ra'ameses, a scribe extols its wealth of foods: onions and leeks, seven kinds of fish in its waters, and various fruits and vegetables (*ANET*, p. 471; better, R. A. Caminos, *Late-Egyptian Miscellanies*, 1954, p. 74).

d. *Food in Israel*

(i) *Vegetable foods.* Grain, wine and olive-oil were the three staple commodities (Dt. 7:13; Ne. 5:11; Ho. 2:8). The grain was mainly barley, wheat and sometimes spelt, an inferior wheat; see Ex. 9:32 (Egypt); Dt. 8:8; and Is. 28:25 (note order of grains). For preparation and baking of bread, see *BREAD; this basic food was the most appropriate word-picture for Christ himself, the Bread of Life (cf. Jn. 6:33, 35).

The *vine was the second great provider; not only of fresh grapes as a fruit (Nu. 6:3; Dt. 23:24) but also of dried grapes as raisins (1 Sa. 25:18; 30:12); of the sweet grape-juice, **asīs* (Is. 49:26; Am. 9:13; Joel 1:5; 3:18, AV, 'sweet wine', 'new wine'); of the half-fermented must or new wine (Jdg. 9:13; Ho. 4:11; Pr. 3:10; etc.); and of the fully fermented wine (*yayin*). These red juices of the grape were often called 'the blood of the grape' (Gn. 49:11; Dt. 32:14). *Wine in its various forms was the general drink in ancient Palestine. Various wines in ancient Egypt, Palestine (cf. that of Helbon, in Ezk. 27:18 and Assy. texts) and Asia Minor were celebrated in antiquity. Vinegar (wine gone acid), diluted with water, helped to refresh field-workers (Ru. 2:14).

Besides being a general word for fermented drinks, *šēkār*, 'strong drink', appears to have been applied specifically to beverages brewed from grain (i.e. beer; Herodotus, 2. 77) or dates (*ibid.*, 1. 193) or perhaps even honey. Beer was the more popular drink in Mesopotamia, but wine in Palestine; both were common in Egypt, where date-wine and other drinks are mentioned. For spiced wine, see (iv) *Seasoning*, below.

The third basic commodity, olive-oil, was used both as food and for cooking-fat. With flour, *oil went into breads and cakes, or these could be cooked in oil (Ex. 29:2); its use was universal, cf. the widow of Zarephath (1 Ki. 17:12).

For vegetables, see sections *b* and *c*, above, *Patriarchal age* (lentils) and *Israel in Egypt* (Nu. 11:5); beans, *pōl*, were also used (2 Sa. 17:28; Ezk. 4:9). The word occurs also in Egypt from the 13th century BC. Besides the grapes and olives already mentioned, fruits included *figs proper, sometimes pressed into fig-cakes (cf. Is. 38:21 for a medicinal use; also used medically at Ugarit, for horses), and also sycamore-figs, as in Egypt, that had to be notched to swell to edible size (which was Amos's occupation; Am. 7:14). Pomegranates were eaten

and their juice drunk (Ct. 8:2). The various nuts available included almonds (Je. 1:11) and pistachio-nuts (see under *Patriarchal age* above). In Pr. 25:11; Ct. 2:3, 5; 7:8; 8:5; Joel 1:12, the term *tappūah* probably means 'apple', although this interpretation is often questioned. Outside of Egypt and Palestine, Bab. texts indicate a long knowledge of the apple (*hašhūru*) in Mesopotamia, as well as in SE Asia Minor (Purušbanda, near modern Topada). (See also *TREES.)

(ii) *Animal products.* These include honey, fats and meat. The honey of wild bees found in rocks, trees, etc., was widely used (Dt. 32:13; Jdg. 14:8; 1 Sa. 14:25; 2 Sa. 17:29). The OT writers do not say whether the Hebrews (like the Egyptians) practised bee-keeping. *Honey was a delicacy much enjoyed (Ps. 19:10; Pr. 24:13). Palestine was indeed a land of 'milk and honey' (Ex. 3:8)—in the 15th century BC the Egyptian pharaoh Tutmosis III brought back hundreds of jars of honey from Syria—Palestine as tribute (7th and 14th campaigns). See the ecstatic description of Palestine's wealth of grain, wine, oil, honey, fruits and cattle by Sinuhe (*ANET*, pp. 19–20).

Milk was another staple item of diet, along with its products butter and cheese. For milk, cf. Pr. 27:27; Is. 7:22; Ezk. 25:4; for butter, Pr. 30:33; and for cheese, see Jb. 10:10; 1 Sa. 17:18; 2 Sa. 17:29 (as a *gī't*). Milk was often offered to the unexpected visitor or guest, as it was to Sisera in Jdg. 4:19; 5:25, and as it had been centuries earlier to the Egyptian fugitive Sinuhe (*ANET*, p. 19).

Meat was eaten only occasionally, except perhaps for the rich, who may have had it regularly. As with Abraham, guests were entertained to calf, kid or lamb (cf. Jdg. 6:19ff.; 2 Sa. 12:4), and these were acceptable gifts alive or already dressed (1 Sa. 16:20; 25:18). The fattened ox in the stall sometimes provided a princely repast (Pr. 15:17), just as in Egypt (picture in N. M. Davies, *Egyptian Paintings*, 1955, plate 4) or in Mesopotamia—witness the official, charged with banquetting arrangements for visiting royalty, who reports on a fattened ox so heavy with flesh that 'when he stands up, the blood rushes to his feet and he cannot stand . . . Eli's renegade sons preferred roast to boiled meat (1 Sa. 2:13–15), and meat boiled in a pot of water provided Ezekiel with a text (24:3–5). But a kid was not to be boiled in its mother's milk (Ex. 23:19), perhaps because this appears to have been associated with Canaanite sacrificial practice, and hence would carry similar implications to the 'food offered to idols' of NT times. Lv. 11:1–23, 29ff. (cf. 41ff.) and Dt. 14:3–21 record the law on animals allowed or forbidden as food. In addition to the ox, sheep and goat, it was permissible to eat seven kinds of venison (Dt. 14:5), and all other cloven-hoofed animals that chewed the cud. Those *animals which failed to fulfil both demands were forbidden as food and listed as 'unclean', together with more than a score of different kinds of birds. With regard to fish, etc., only those with both fins and scales might be eaten. A very few specified insects might be consumed (the locust-family). Some of the creatures forbidden were simply unfit for human consumption; others (e.g. swine) were unsafe in a hot climate; still others may have been too closely identified with surrounding idolatry. For fish, see section *c*, above, on *Israel in Egypt*, and *FISH, FISHING.

(iii) *Solomon's palace food-supplies.* In 1 Ki. 4:7, 22–23, 27–28, it is recorded that the governors of

Some of the principal food plants of the ancient Near East

FOOD

the twelve administrative provinces in Israel had each to supply a month's food in the year for Solomon's court: one day's provision being 30 *kôr* of fine flour, 60 *kôr* of meal, 30 cattle, 100 sheep, venison and fowls, and provender for the royal stables. Similarly, Solomon paid Hiram I of Tyre for his timber and woodcutters with 20,000 *kôr* of wheat per annum, and a corresponding quantity of oil. This palatial catering was typical of ancient Oriental courts, as is shown by Egyptian and Mesopotamian court-accounts. The courts of Nebuchadrezzar II of Babylon and Cyrus of Persia were apparently supplied by district-officials on a monthly basis, similar to the system in operation in Solomon's court: see R. P. Dougherty, *AASOR* 5, 1925, pp. 23–31, 40–46. Presumably Solomon's monthly supplies were levied either from, or in addition to, the local taxes in kind (grain for flour, livestock) paid by the twelve districts.

Not only the system but also the amount and the probable distribution of Solomon's court-provisions will bear some comparison with the consumption at other royal courts. The court-personnel of the ancient Orient may be divided conveniently into three classes: first, the king, the royal family and all the chief ministers of the realm; second, the main body of courtiers and subordinate officials attached to the 'departments' of the chief ministers; and third, the (probably) still greater number of domestic employees of every conceivable kind. The ancient Near Eastern palace was not just a royal residence but also the practical focus of the entire central government of the state. Partial statistics are available for comparison from Egypt and Mesopotamia. In the 18th century BC royal archives from Mari and Chagar Bazar in NW Mesopotamia record the daily food-supply for the king and his chief officials (*i.e.* the first class); the amounts ran into hundreds of litres (*qa*) of grain, bread, pastries, honey and syrups each day, averaging 945 litres daily at Chagar Bazar for the 'royal repast' (J. Bottéro, *Archives Royales de Mari*, 7, 1957, pp. 270–273). *Cf.* the great quantities of barley alone which were consumed in the Mari palace itself (see Birot, *ibid.*, 9, 1960, pp. 264–265). Similar accounts from the Egyptian court of the 13th Dynasty (same period) have also survived. Directly comparable is the vast supply for the court of Sethos I: K. A. Kitchen, *Rameside Inscriptions: Translations* 1, 1993, pp. 208ff., *Notes and Comments*, 1993, p. 163ff. Preparations for a pharaoh's arrival in the late 13th century BC included the furnishing of 9,200 loaves (eight varieties), 20,000 biscuits (two kinds) and vast quantities of other victuals (R. A. Caminos, *Late-Egyptian Miscellanies*, 1954, pp. 198–201). All these figures also apply principally to 'class 1' consumers (and possibly 'class 2' in the last example), but take no account of the numerous domestics ('class 3')—*e.g.* the 400 palace-women at Mari. Ration-tablets from Babylon in the 10th to 35th years (595–570 BC) of Nebuchadrezzar II give detailed accounts of grain and oil for royal captives, including King Jehoiachin of Judah and his sons, as well as numerous artisans from Egypt, Philistia, Phoenicia, Ionia, Lydia, Cilicia, Elam, Media and Persia. (For details, see *ANET*, p. 308; *DOTT*, pp. 84–86; basic source is E. F. Weidner, *Mélanges R. Dussaud*, 2, 1939, pp. 923–935; for useful background, see W. F. Albright, *BA* 5, 1942, pp. 49–55.)

In Solomon's case, if the *kôr* ('measure') be taken as 220 litres (R. B. Y. Scott, *BA* 22, 1959, p.

31; *cf.* *WEIGHTS AND MEASURES), then his 30 plus 60 *kôr* of flour and meal per day would be some 6,600 plus 13,200 litres respectively, totalling 19,800 litres or 594,000 litres per monthly quota. Bearing in mind the comparative figures given above, 600 litres a day would go to Solomon, his family and chief ministers (*cf.* 726 and 945 litres, Egypt and Chagar Bazar, above), *i.e.* 'class 1'; the other 6,000 litres of fine flour would perhaps go to the main body of courtiers and officials ('class 2'), and the 13,200 litres of ordinary meal to the crowd of domestic employees ('class 3'). Evidence from Mari indicates that 1 *iku* of land (3,600 square metres) produced 1 *ugar* of grain (1,200 litres). If Israelite crop-yields were at all similar, and if a litre of grain made about a litre of wholemeal flour, then it is possible to suggest that each month's flour-supply to Solomon's court (594,000 litres) would be roughly equivalent to the grain grown on 495 *iku* or about 424 acres. This represents an area of land about 1.7 sq. km—surely no impossible annual burden on each of Israel's twelve administrative districts. As for Hiram's 20,000 *kôr* of wheat per annum, this amount by the same reckoning would take up the crop-yield of about 305 *iku* or 262 acres for each month, *i.e.* from land about 1.06 sq. km, again a reasonable kind of figure.

(iv) *Seasoning and cooking* Cooking included the baking of bread and cakes (with or without leaven), making of soups and stews, and the roasting or boiling of meat (see above). *Salt was a prime necessity with a meal (Jb. 6:6). As already mentioned, sharing a meal marked agreement (Gn. 26:30; 31:54), and the phrases 'covenant of salt' (Nu. 18:19), or 'eating someone's salt' (Ezr. 4:14), were idioms of the same kind (*i.e.* indicating agreement or loyalty). *Herbs for seasonings included dill and cummin (Is. 28:25, 27) and coriander (Ex. 16:31; Nu. 11:7). Common use of these in antiquity is exemplified by actual finds of plants and seeds in Egyptian tombs from the 18th Dynasty onwards, and the mention of them in Egypt and Bab. texts (*cf.* L. Keimer, *Die Gartenpflanzen im Alten Ägypten*, 1, 1924, Nos. 24, 29–30, pp. 37–38, 40–42 and refs., 147–149).

In Mycenaean Greek tablets from Crete and Greece, written in the 'Linear B' script and dated to the 15th–13th centuries BC, occur the spices cummin (*ku-mi-no*), coriander (*ko-ri-a-da-na-do-no*) and sesame (*sa-sa-ma*) among others. These names (and probably some of the spices too) were imports from the Near East, *via* Syria–Palestine and Cyprus, and so witness to the antiquity of the use of both spices and names in the Bible lands. Details are given in M. Ventris and J. Chadwick, *Documents in Mycenaean Greek*, 1956, pp. 131, 135–136, 221–231; and Chadwick, *The Decipherment of Linear B*, 1958, pp. 64, 120, contains a brief treatment. Sesame is attested at this same period in Syria itself, at Ugarit (Gordon, *Ugaritic Textbook*, 3, 1965, p. 495, No. 2496, as *šsmn*).

Honey could be used in baking (*cf.* Ex. 16:31), but not in sacrifice to God (Lv. 2:11), although the Egyptians offered it to their gods. Sweetened and spiced wines (Ct. 8:2) and beers are also known from Egyptian and Mesopotamian texts, honey or herbs being used for this purpose. With the rather doubtful 'spice the spicery' in a cooking context in Ezk. 24:10 (meaning spiced meat?), one might compare 'spiced (lit. "sweetened") meat' in Egypt (*iwf snḏm*), Gardiner, *Ancient Egyptian Onomastica*, 2, 1947, pp. 255*–256*, A. 610.

The AV phrase 'white of an egg' (*rūr hallāmūt*, Jb. 6:6, rvmg. 'the juice of purslain'), used as a symbol of something tasteless, was perhaps the sap of some vegetable. D. J. Wiseman (*The Alalakh Tablets*, 1953, p. 87), in outlining 18th-century BC ration lists from Alalakh, notes a possible connection between *hīlīmitu*, classed among the grains, and Syr. *hallāmūt* (cf. Heb. form above); cf. A. R. Millard, *Ugarit-Forschungen* 1, 1969, p. 210.

II. In the New Testament

a. Vegetable foods

(i) *Cereals*. The staple human diet in the Bible is bread, made either from wheat flour (Mt. 13:33; Lk. 13:21) or barley flour (Jn. 6:9, 13; cf. Jdg. 7:13; 2 Ki. 4:42). The latter was the usual ingredient of bread for the poorer people (cf. Jos., *BJ* 5. 427; and, for the relative value of wheat and barley, Rev. 6:6). The NT witnesses to the primitive method of using corn by plucking the fresh ears (Lv. 23:14) and removing the husk by rubbing them in the hands (Dt. 23:25; Mt. 12:1; Mk. 2:23; Lk. 6:1). When this was done in another person's field it was accounted by the rabbis as equivalent to reaping, and therefore forbidden on the sabbath (Mishnah, *Shabbath* 7. 2). Other methods of dealing with the corn are referred to in Mt. 3:12 = Lk. 3:17; Lk. 22:31. Special mention should be made of the *maššōt* or cakes of unleavened pastry, which alone were permitted in Jewish households during the days of the Passover festival (Ex. 12:19; 13:7, etc.; 1 Cor. 5:7f.).

(ii) *Fruits and oil*. From the garden came grapes (Mt. 7:16) and thereby 'the fruit of the vine' (Mt. 26:29, etc.); and olives, although the latter (cf. Rom. 11:17ff.; Jas. 3:12) are never expressly recorded as an article of food. The olive, however, provided a most useful oil which was used in the preparation of food, and the olive berry itself was preserved by a process of pickling it in brine. Pickled olives were eaten with bread as a relish. A sauce compounded of dates, figs, raisins and vinegar and called *h'rōset* was a feature of the Paschal feast (Mk. 14:20; Jn. 13:26; in the Mishnah, *Pesahim*, 2. 8; 10. 3).

The fruit of the fig-tree is spoken of in Mt. 7:16 in the same context as the grape. These two fruits were much prized in Palestine, whereas at the extreme end of the social scale the fruit or pods of the carob-tree provided the frugal 'husks' which the prodigal would have been glad to eat in his plight (Lk. 15:16), though they were properly swine-food.

b. Animal products

(i) **Animals* (popularly speaking). The Jewish world of NT times was one in which dietary laws were strictly enforced, especially in regard to the distinction between *clean and unclean animals and birds (Lv. 11:1–23; Dt. 14:4–20; Acts 10:9ff.; the Mishnaic tractate *'Abodah Zarah*). The eventual breakdown of these dietary regulations is a notable theme of the NT (Mk. 7:18–20; Acts

15:20, 29; Rom. 14; 1 Cor. 8; 10. **IDOLS, MEATS OFFERED TO*). See W. L. Willis, *Idol Meat in Corinth*, *SBLDS* 68, 1985. Among the clean animals which were eaten as food (provided that they had been slaughtered in legitimate fashion and the blood drained away, thereby making them *kosher*) we may note the kid (Lk. 15:29), and the calf (Lk. 15:23) which had been specially fattened for a festive occasion.

(ii) **Fish*. Fish were similarly classified as clean and unclean according to the rubric of Dt. 14:9f. (cf. Lv. 11:9–12); and the reader of the Gospel story will be familiar with the names of the Galilean towns which were the centre of the fishing industry on the shores of the lake. The earliest disciples are called 'fishermen' (Mk. 1:16ff. and parallels). Apart from the reference in Lk. 11:11 there is the well-known mention of fish in the miraculous feedings of the multitude (Mk. 6:41ff. and parallels and Mk. 8:7ff. and parallels) as well as in the meals which the risen Lord shared with his own followers (Lk. 24:42–43; Jn. 21:9ff.). The popularity of the fish-symbol in early Christianity (cf. the definitive study of F. J. Dölger, *ΙΧΘΥΣ*, 1928) and the use of fish at some observances of the Eucharist in early Christian circles are probably derived from these Gospel incidents.

(iii) *Birds*. Birds as items of food are not mentioned in the NT, apart from the general reference in Acts 10:12 and the implication of the sale of sparrows in Mt. 10:29 and Lk. 12:6; but eggs are alluded to in Lk. 11:12.

(iv) *Insects*. Edible insects include the locust, which, along with wild honey, formed the diet of the Baptist in the Judaean wilderness Mk. 1:6). See R. L. Webb, *John the Baptizer and Prophet*, 1992.

c. Seasoning

To increase the pleasure of eating, various condiments were employed. The chief of these was salt, which has the property of adding savour to a dish of food (Jb. 6:6). This fact is made the central feature of some ethical instruction in the Gospels (Mt. 5:13; Mk. 9:50; Lk. 14:34) and Epistles (Col. 4:6). Compare, for the Jewish background here, W. Nauck, 'Salt as a Metaphor in Instructions for Discipleship', *Studia Theologica* 6, 1952, pp. 165–178. 'The Torah is like salt' is a common comparison among the Rabbis. Mint, dill, cummin and rue (conflating Mt. 23:23 and Lk. 11:42 which adds 'every herb': cf. *ExpT* 15, 1903–4, p. 528) continue the list of spices and *herbs used for flavouring; and in Mt. 13:31f. there is a reference to the mustard plant, the leaves of which were cut up and used to give extra flavour. The tiny mustard seed must be sown in the field, according to Jewish practice, and not in the garden; and in Palestine the plant could reach a height of 3 m. On the various issues raised by the mustard seed simile, see C.-H. Hunzinger, *TDNT* 7, pp. 287–291 (bibliography).

BIBLIOGRAPHY. D. E. Smith, 'Meal Customs', *ABD* 4, 1992, pp. 650–655. R.P.M.

FOOT. Heb. *reḡel*, with parallels in other Near Eastern languages, is used occasionally of objects (Ex. 25:26), but mainly of animal or human feet, or legs, and anthropomorphically, of God's feet. Derivatively it is used of the pace (Gn. 33:14). Gk. *pous* is used of the feet of man or beast.

Both in Heb. and Gk. the foot frequently indicates the position, destination or inclination of the

FOOT

person (Pr. 6:18; 7:11; Acts 5:9), and then further in reference to guidance of, and watchful care over, a person, principally by God (1 Sa. 2:9; Ps. 66:9; Lk. 1:79).

Figuratively the word is often used to symbolize defeat of an enemy, with the picture of putting one's foot on his neck (Jos. 10:24; 1 Cor. 15:25).

Falling at a person's feet indicates homage or supplication (1 Sa. 25:24; 2 Ki. 4:27), sitting there implies discipleship or learning (Acts 22:3), and casting something at a person's feet indicates an offering (Acts 4:35). The figure of the foot taken in a snare, or slipping, is used of calamity (Ps. 73:2; Je. 18:22).

The necessity to wash the feet, for comfort and cleanliness, resulted from the dusty roads, and foot-washing was a sign of *hospitality, generally performed by the meanest slave (1 Sa. 25:41; Lk. 7:44; Jn. 13:5ff.; cf. Acts 13:25). Removing one's dusty sandals was a sign of respect (Ex. 3:5) and of mourning (Ezk. 24:17). Shaking off the dust from one's feet was a *gesture of scorn, probably based on the idea that to take so much as dust from a place implied a bond (Mk. 6:11; cf. 2 Ki. 5:17).

B.O.B.

FOOTMAN. Heb. *raḡlī* from *reḡel*, 'foot'. The word is used of masculine persons only. Footmen are distinguished from children (Ex. 12:37; cf. Nu. 11:21). The word is a military term (Jdg. 20:2), and often denotes soldiers in general (1 Sa. 4:10; 15:4; 2 Sa. 10:6; 1 Ki. 20:29). It is used to distinguish infantry from chariot-fighters (2 Sa. 8:4; 2 Ki. 13:17; Je. 12:5; 1 Ch. 18:4; 19:18). AV uses 'footmen' in 1 Sa. 22:17 as a translation for *rāsīm*, *'runners' (RSV 'guard'), i.e. the fifty men who ran before the king's chariot (1 Sa. 8:11; 2 Sa. 15:1; 1 Ki. 1:5). They also acted as a guard (1 Ki. 14:27–28; 2 Ki. 10:25; 11:4 etc.; 2 Ch. 12:10–11) and as royal messengers (2 Ch. 30:6, 10). Elijah once acted as a runner before Ahab (1 Ki. 18:46). The royal posts of the Persian empire are called 'runners' (RSV 'couriers') in Est. 3:13, 15, and retain the name even when mounted (Est. 8:10, 14). The word is used as a simile in Jb. 9:25.

A. van S.

FOOTSTOOL. The word occurs seven times in the OT, but on only one occasion is it used in a literal sense (2 Ch. 9:18), and there a different word (*kebeš*) is used; on the other six occasions *hādōm raḡlayim*, 'stool of the feet', is used. The equivalent in the NT (*hypopodion tōn podōn*, 'footstool of the feet') occurs eight times, again only once used literally (where the word is simply *hypopodion*, Jas. 2:3), and apart from this reference all are quotations from the OT. In its metaphorical sense it has reference to God and applies to the ark of the covenant (1 Ch. 28:2) the Temple (which contains the ark) (Pss. 99:5; 132:7; La. 2:1); the earth (Is. 66:1; Mt. 5:35; Acts 7:49); and the enemies of his Messiah King (Ps. 110:1, referred to six times in the NT). The footstool of Tutankhamun of Egypt is carved with pictures of his enemies, and other Egyptian kings are shown resting their feet on their enemies' heads.

M.A.M.

FOREHEAD (Heb. *mēšah*; Gk. *metōpon*, literally 'between the eyes'). The set of the forehead can indicate opposition, defiance or rebellion (Je. 3:3,

'brow' in RSV), and hardness of the forehead indicates the determination or power to persevere in that attitude (Is. 48:4; Ezk. 3:8–9).

The forehead, being open and fully visible, was the most obvious place for a badge or mark (Ezk. 9:4; Ex. 28:38; Rev. 7:3; 13:16, etc.). In Ezekiel this mark was made with ink, but in the book of Revelation it is a seal, and in Exodus a plaque. Note also the *phylactery which was worn on the forehead (*EYE).

B.O.B.

FOREIGNER. The rather arbitrary fluctuation in EVV between alien, foreigner, sojourner and stranger tends to obscure the fact that different groups of people are in view. In the classification which follows this inconsistency of translation should be kept in mind.

a. *The stranger or alien*

A stranger is essentially one who does not belong to the house or community in which he finds himself. The word *zār* is from the root *zūr*, 'to turn aside' or 'to depart'. Thus it can be used simply of an outsider (1 Ki. 3:18). It can therefore mean one who usurps a position to which he has no right. The 'loose woman' in Proverbs is such an interloper. A further extension of the word makes it equivalent to alien or foreigner, i.e. one who does not belong to the nation, and so virtually equates it with an enemy (Is. 1:7; Je. 5:19; 51:51; Ezk. 7:21; 28:7, 10; Ob. 11).

b. *The foreigner*

The word *nokri* can refer simply to one of another race; but it also acquires a religious connotation because of the association of other nations with idolatry. It was for this reason that the Israelites were forbidden to intermarry with the Canaanites (Dt. 7:1–6). One of the indictments of Solomon is that he loved many foreign women who turned him aside from Yahweh (1 Ki. 11:1ff.). The Exile in Babylon was seen as a judgment on this decline, which was widespread in the nation. As a result the return from the Exile is marked by a vigorous enforcement of the prohibitions of mixed marriages. This emphasis by Ezra on national purity (Ezr. 9–10) was perverted in later Judaism into the hard exclusiveness which in the Judaizing movement in the early church proved such a hindrance to the free access of Gentile converts.

c. *The sojourner*

A sojourner is one whose permanent residence is in another nation, in contrast with the foreigner whose stay is only temporary. The word thus rendered is *gēr* from the root *gūr*, 'to sojourn', though the alternative *tōšāb* is sometimes used in the simple sense of a settler. The Israelites themselves were sojourners in Egypt (Gn. 15:13; Ex. 22:21; Dt. 10:19; 23:7). Indeed, this fact was to govern their attitude to the sojourners in Israel. These might comprise a whole tribe such as the Gibeonites (Jos. 9) or the remnants of the Canaanite tribes after the Conquest. Their number was quite considerable, as may be seen in Solomon's census of them (2 Ch. 2:17).

The sojourner had many privileges. The Israelites must not oppress him (Ex. 22:21; 23:9; Lv. 19:33–34). Indeed they are to go further and to love him (Dt. 10:19). One reason given for the observance of the sabbath is that the sojourner may

be refreshed (Ex. 23:12). The gleanings of the vineyard and the harvest field are to be left for him (Lv. 19:10; 23:22; Dt. 24:19-21). He is included in the provision made in the cities of refuge (Nu. 35:15; Jos. 20:9). He is ranked with the fatherless and widow as being defenceless; and so God is his defence and will judge his oppressor (Pss. 94:6; 146:9; Je. 7:6; 22:3; Ezk. 22:7, 29; Zc. 7:10; Mal. 3:5). The chief drawback of his position is that, if he is a bond-servant, he is not included in the general liberation in the year of Jubilee (Lv. 25:45-46).

As far as religious life is concerned, he is bound by the law which forbids leaven during the Feast of Unleavened Bread (Ex. 12:19). He must abstain from work on the sabbath and on the Day of Atonement (Ex. 20:10; Lv. 16:29). He shares the prohibitions on eating blood (Lv. 17:10, 13), immorality (Lv. 18:26), idolatry (Lv. 20:2) and blasphemy (Lv. 24:16). He might, however, eat unclean meat (Dt. 14:21). He is not compelled to keep the Passover, but if he wishes to do so he must be circumcised (Ex. 12:48). He is indeed virtually on a level with the Israelite (Lv. 24:22), and in Ezekiel's vision of the Messianic age he is to share the inheritance of Israel (Ezk. 47:22-23).

In the NT the great feature of the gospel is that those who were aliens from Israel, and so were 'strangers and sojourners' (Eph. 2:12, 19-20), have been made fellow heirs in the Israel of God. Now Christians are the aliens in this world and must live as pilgrims (1 Pet. 2:11).

FORERUNNER. This word is often used by Christians to describe John the Baptist, because in him the words of Mal. 3:1 found their fulfilment (Mk. 1:2 and Mt. 11:10), and also because his father Zechariah prophesied that he would 'go before the face of the Lord to prepare his ways' (Lk. 1:76). The actual word, however, is found only once in the NT, with reference to the ascended Christ (Heb. 6:20). It translates *prodromos*, a military term used of scouts sent on ahead to prepare the way for an advancing army.

Usually a 'forerunner' is of less importance than the person or persons for whose coming he is paving the way. This was true of the runners who preceded the chariots of kings (1 Sa. 8:11; ***FOOTMAN**); it was also true of John the Baptist, and of the messengers sent by Jesus to make ready his entrance into the villages of Samaria (Lk. 9:52). But in the case of Jesus himself, who entered for us within the veil into the holy of holies, having become our High Priest, the reverse is true. As the supreme Head of the church he has gone on ahead that his brethren may follow him in due course. Jesus made it clear to his followers that this was one of the main purposes of his departure to the Father, when he told them in the upper room that he was going to prepare a place for them in the many dwelling-places of his Father's house (Jn. 14:2-3). It is true that *already* Christians have boldness to enter heaven through the blood of Jesus (Heb. 10:19), and that God has already raised them up with Christ and made them to sit with him in the heavenly places (Eph. 2:6). They can through prayer and sacrament ascend in heart and mind to their Lord, and with him continually dwell. But,

because Jesus is their Forerunner, they have the assurance that one day they will themselves enter heaven as he has done and enjoy the glory which is now his. Christ will receive them unto himself, that where he is there they may be also (Jn. 14:3). 'The Forerunner is also the Way by which, after long following, the whole Church will reach at last the Father's House.' (See H. B. Swete, *The Ascended Christ*, 1911.) R.V.G.T.

FOREST. 1. Heb. *hōreš*, 'thicket', 'wood, wooded height', occurs in a number of passages (e.g. Ezk. 31:3), though in one of them (2 Ch. 27:4) the text is possibly corrupt and a proper name intended.

2. Heb. *pardēs*, 'park', a loan-word from Persian *pari-daeza*, 'enclosure', used of a preserve or park containing trees (Ne. 2:8), fruit-trees (Ct. 4:13) and laid-out *gardens (Ec. 2:5).

3. Heb. *ya'ar*, 'outspread place', the most common word, is found thirty-five times in the OT. In biblical times much of the hill-country was covered with forests. Apart altogether from general uses of the word, the Bible mentions several of the woods and forests by name, e.g. 'forest of Lebanon' (1 Ki. 7:2f.). (*Articles under such place-names.)

FORGIVENESS.

I. In the Old Testament

In the OT the idea of forgiveness is conveyed principally by words from three roots. *kpr* more usually carries the idea of atonement, and its use in connection with the sacrifices is frequent. Its use for 'forgive' implies that atonement is made. The verb *ns*' means basically 'lift', 'carry', and presents us with a vivid picture of sin being lifted from the sinner and carried right away. The third root is *slh*, of unknown derivation, but which corresponds in use pretty closely to our 'forgive'. The first and the last are used always of God's forgiveness, but *ns*' is applied to human forgiveness as well.

Forgiveness is not regarded as a truism, as something in the nature of things. Passages which speak of the Lord as not pardoning certain offences abound (Dt. 29:20; 2 Ki. 24:4; Je. 5:7; La. 3:42). Where forgiveness is obtained it is something to be received with gratitude and regarded with awe and wonder. Sin merits punishment. Pardon is astounding grace. 'There is forgiveness with thee,' says the Psalmist, and then (perhaps surprisingly to us) he adds, 'that thou mayest be feared' (Ps. 130:4).

Forgiveness is sometimes connected with atonement. *slh* is repeatedly connected with the sacrifices and, as we have seen, the verb from the root *kpr* has the essential meaning 'to make atonement'. Again, it may not be coincidence that *ns*', besides being used of the forgiveness of sin, is also used of bearing the penalty of sin (Nu. 14:33f.; Ezk. 14:10). The two seem to be connected. This does not mean that God is a stern Being who will not forgive without a *quid pro quo*. He is a God of grace, and the very means of bearing sin are instituted by him. The sacrifices avail only because he has given the blood as the means of making atonement (Lv. 17:11). The OT knows nothing of a forgiveness wrung from an unwilling God or purchased by a bribe.

FORGIVENESS

Forgiveness, then, is possible only because God is a God of grace, or in the beautiful expression in Ne. 9:17 'a God of pardons' (רַסַּו, 'a God ready to forgive'). 'To the Lord our God belong mercy and forgiveness' (Dn. 9:9). A very instructive passage for the whole OT understanding of forgiveness is Ex. 34:6f., 'The Lord, the Lord, a God merciful and gracious, slow to anger, and abounding in steadfast love and faithfulness, keeping steadfast love for thousands, forgiving iniquity and transgression and sin, but who will by no means clear the guilty.' Forgiveness is rooted in the nature of God as gracious. But his forgiveness is not indiscriminate. He will 'by no means clear the guilty'. On man's side there is the need for penitence if he is to be forgiven. While this is not put into a formal demand, it is everywhere implied. Penitent sinners are forgiven. Impenitent men, who still go on in their wicked way, are not.

It remains to be noticed that the thought of pardon is conveyed in a most graphic way by other imagery than the use of our three basic forgiveness words. Thus the Psalmist tells us that, 'As far as the east is from the west, so far does he remove our transgressions from us' (Ps. 103:12). Isaiah speaks of God as casting all the prophet's sins behind his back (Is. 38:17), and as 'blotting out' the people's transgressions (Is. 43:25; cf. Ps. 51:1, 9). In Je. 31:34 the Lord says, 'I will remember their sin no more,' and Micah speaks of him as casting sins 'into the depths of the sea' (Mi. 7:19). Such vivid language emphasizes the completeness of God's forgiveness. When he forgives, men's sins are dealt with thoroughly. God sees them no more.

II. In the New Testament

In the NT there are two main verbs to consider, *charizomai* (which means 'to deal graciously with') and *aphiēmi* ('to send away', 'to loose'). The noun *aphesis*, 'remission', is also found with some frequency. There are also two other words, *apolyō*, 'to release', which is used in Lk. 6:37, 'forgive, and you will be forgiven', and *pareisis*, 'a passing by', used in Rom. 3:25 of God's passing over of sins done in earlier days.

In the NT several points are made clear. One is that the forgiven sinner must forgive others. This is manifest in Lk. 6:37, cited above, in the Lord's Prayer, and in other places. A readiness to forgive others is part of the indication that we have truly repented. Moreover, it is to be whole-hearted. It springs from Christ's forgiveness of us, and it is to be like Christ's forgiveness: 'as the Lord has forgiven you, so you also must forgive' (Col. 3:13). Several times Christ insists on the same thing, as in his parable of the unmerciful servant (Mt. 18:23-35).

Forgiveness is not often linked directly with the cross, though sometimes this is done, as in Eph. 1:7, 'In him we have redemption through his blood, the forgiveness of our trespasses.' Similarly, from Mt. 26:28 we find that Christ's blood was shed 'for many for the forgiveness of sins'. More usual is it to find it linked directly with Christ himself. God 'in Christ forgave you' (Eph. 4:32). 'God exalted him . . . to give repentance to Israel and forgiveness of sins' (Acts 5:31). 'Through this man forgiveness of sins is proclaimed to you' (Acts 13:38). With these we should place passages wherein Jesus, during the days of his flesh, declared that men were forgiven. Indeed, in the incident of the healing of the paralysed man lowered through the roof, he worked the miracle expressly 'that you may know

that the Son of man has authority on earth to forgive sins' (Mk. 2:10). But the Person of Christ is not to be separated from his work. Forgiveness by or through Jesus Christ means forgiveness arising from all that he is and all that he does. In particular, it is not to be understood apart from the cross, all the more so since his death is often said to be a death 'for sin' (*ATONEMENT). In addition to the specific passages which link forgiveness and the death of Christ, there is the whole thrust of the NT passages dealing with the atoning death of the Saviour.

Forgiveness rests basically, then, on the atoning work of Christ. That is to say, it is an act of sheer grace. 'He is faithful and just, and will forgive our sins' (1 Jn. 1:9). On man's side repentance is insisted upon again and again. John the Baptist preached 'a baptism of repentance for the forgiveness of sins' (Mk. 1:4), a theme which is taken up by Peter with reference to Christian baptism (Acts 2:38). Christ himself directed that 'repentance and forgiveness of sins should be preached in his name' (Lk. 24:47). Forgiveness is similarly linked with faith (Acts 10:43; Jas. 5:15). Faith and repentance are not to be thought of as merits whereby we deserve forgiveness. Rather they are the means whereby we appropriate the grace of God.

Two difficulties must be mentioned. One is that of the sin against the Holy Spirit which can never be forgiven (Mt. 12:31f.; Mk. 3:28f.; Lk. 12:10; cf. 1 Jn. 5:16). This sin is never defined. But in the light of NT teaching generally it is impossible to think of it as any specific act of sin. The reference is rather to the continuing blasphemy against the Spirit of God by one who consistently rejects God's gracious call. This is blasphemy indeed.

The other is Jn. 20:23, 'If you forgive the sins of any, they are forgiven'. It is more than difficult to think of Christ as leaving in men's hands the determination of whether the sins of other men are to be forgiven or not. The important points are the plural ('any' is plural in the Gk.; it points to categories, not individuals), and the perfect tense rendered 'are forgiven' (it means 'have been forgiven', not 'will be forgiven'). The meaning of the passage then seems to be that as they are inspired by the Holy Spirit (v. 22) the followers of Jesus will be able to say with accuracy which categories of men have sins forgiven, and which not.

FORTIFICATION AND SIEGECRAFT.

I. Defence in the ancient world

a. Site and size of the fortress

Throughout most of the biblical period the words 'city' and 'fortress' (*miḥṣār*, et al.) were virtually synonyms in Palestine. Sometimes 'walled city' emphasizes this normal defensive aspect of a town in contrast to unwalled villages. The account of the rebuilding of Jerusalem under Nehemiah clearly demonstrates that walls make a city.

Whenever possible a natural defensible site was chosen for the city's location, although a water-source was also essential. A steep isolated hill, such

as Samaria, or an impregnable spur of a hill, such as Ophel, the site of David's Jerusalem, made excellent sites. Some cities, however, were selected because of regional strategical planning, protecting highways and communications, or like Bethel because of a readily available water-supply. These sites, and lower cities established when the population outgrew the upper city on a hill, required an artificial system of defence.

Usually the term 'fortress' implies a limited defence perimeter. In Palestine the average city or town covered about 2-4 hectares (5-10 acres). Some were half that area, others greater. For example, Jerusalem of David's day and Megiddo occupied 4.5-5.3 hectares (11-13 acres), whilst Canaanite Hazor covered some 81 hectares (200 acres). The capitals of Egypt, Assyria, Babylonia, Persia and Rome were exceptional in size and differed from normal cities in other features as well (e.g., *NINEVEH, *CALAH, *BABYLON).

City walls varied considerably in width, height and design. Solid walls averaged 3 m in width, but could be two to three times this at base. Casemate walls, a double wall system, averaged about 1.5 m each. In height walls ranged from about 6 m to at least 9 m. Usually the foundations were of stone and the walls proper of stone, mud-brick or brick above a varying number of stone courses. Defences could be strengthened by adding an outer wall within bow-shot of the main wall.

b. The development of city defences

Although open warfare was preferred, a defending army could retire to its city if necessary. Walls and associated fortifications were required both to prevent the enemy entering and to provide a protected firing-platform for the defenders. Walls and ramparts, free-standing or attached to the wall, bastions, towers and a battlement or crenellated parapet were all used at various times.

Excavations have revealed remains of city walls in Syria-Palestine from the 3rd millennium BC, probably developed under Mesopotamian influence. A long time-gap separates these from the earliest known fortifications. In pre-pottery Neolithic Jericho several walls of undressed stone were found as well as a circular tower 13 m in diameter with an interior shaft containing 22 steps. These and a 9 m wide moat cut from solid rock date to 7000-6000 BC, over 4000 years before Abraham. Open villages without fortifications were succeeded about 3000 BC by some fortified cities—Jericho, Megiddo, Gezer, Ai, etc. A variety of stone and/or brick walls were used, some with bastions and ramparts. Semi-circular and square corner towers have also been discovered.

During the next period, the Middle Bronze Age (Patriarchs to Joseph), some important changes were made to walls and gates, connected in part with the use of chariots and possibly the battering ram. About 1700 BC when the Hyksos entered Egypt (*CHRONOLOGY OF THE OT) a massive *terra pisée* or beaten earth bank was added to the existing walls or free-standing ramparts were built. Sometimes a wall was erected on top of the embankment. Massive stone walls also occur later (*SHECHEM). The rampart or 'glacis'—a special consolidated facing on a rampart or tell slope—often surfaced with plaster or chalk as waterproofing, may have been introduced to counter the arrival of the battering ram (*EAEHL*, p. 113). It enclosed, not a camp for chariots and their warriors,

but extended lower cities (*HAZOR). The Hyksos were apparently responsible for this new defence system, although the Canaanite inhabitants still occupied the cities. Finally a ditch or moat often fronted the rampart, the excavated material forming the embankment (*CAH*, 2, 1, pp. 77-116).

Joshua entered the land of Canaan in the Late Bronze Age, in the 13th century BC. Excavations have revealed little evidence of the defences of this era. There were few new developments and the Middle Bronze defence systems continued to be used or were reconstructed on the same lines. This could account for the apparent lack of walls at *Jericho attributable to Joshua's time. To date no Israelite fortifications are known before the days of Saul and David.

In the days of the united kingdom casemate walls were built at a number of cities. These consist of two thin parallel walls (1.5 m thick on average) separated by about 2 m, joined at regular intervals by transverse walls. The long narrow rooms formed within the wall could be used for living (Jos. 2:15), storage, or filled for added strength. Such a wall was cheaper to build yet provided reasonable solidity. Casemate walls were used from c. 1600 BC down to the 2nd century BC. Saul's capital at Gibeah was a fortress, 52 m by 35 m, with corner towers and casemate walls. Other walls were also used. At Beersheba two thin parallel walls, followed by a solid wall 4 m thick, are attributable to the Davidic-Solomonic era. Solomon's cities used different types of fortifications, although a hallmark of his fortifications, as seen at *Megiddo, *Hazor and *Gezer, is the use of casemate walls and a gate with three sets of piers and two towers. Throughout the rest of the OT period both solid and casemate walls were used, and at times an outer and inner wall (*LACHISH).

Royal fortresses, such as Gibeah of Saul, were built during the Iron Age. A series of forts, rectangular or irregular in shape, built in the Negeb between the 10th and 6th centuries BC mark the S extension of the Israelites. The citadel of *Arad was an important royal border fortress. Roman forts were also built in the Negeb, Arabah and Transjordan.

Excavations at *Jerusalem have revealed some of its defences throughout the ages. Kathleen Kenyon exposed sections of two walls well down in the Kidron Valley which were respectively the walls used down to the 7th century BC and a new wall built that century, destroyed by Nebuchadrezzar in 586 BC. A wall on the E crest of Ophel well above these would appear to be that built by Nehemiah, as he could not clear the debris left by the Babylonian destruction. On the W, 275 m from the Temple platform, over 40 m of wall 7 m thick built of large stones is probably the extension to Jerusalem's walls added by Hezekiah (2 Ch. 32:5).

In intertestamental and NT times one or two solid stone walls usually surrounded a city. At Mareshah the nearly square town wall had buttresses and corner towers. The excellent Roman wall at Samaria, apparently built by Herod, enclosed 69 hectares (170 acres). Herod the Great was the most prolific builder in all Palestine's history. His work at Jerusalem may be seen in the massive retaining wall of the Temple platform, especially in the areas excavated under B. Mazar and at the SE corner. Sections of Hasmonaean defences and the three walls of *Jerusalem in NT times are being discovered in current excavations.

FORTIFICATION AND SIEGECRAFT

At the citadel by the Jaffa gate part of the 'first wall', a massive Hasmonaean tower base, and the Phasael Tower of Herod's palace (David's Tower) are typical of the defence systems being recovered.

c. *The city gate*

The weakest point of a city's fortifications was the gate. A number of ways were developed to make this more secure. These included towers, angled approaches and inner gates with several sets of piers. Towers were used in the walls to protect the dead area at the foot of the wall, as was the 'glacis'. Most cities built on tells had one main gate, or one inner and outer gate. Large cities, such as Jerusalem, would have a number of gates. Up to about 1000 BC a number of posterns, small gates easily defended, allowed soldiers to leave or enter the city quickly because open battle was preferred.

Before the need for a straight entrance for chariots, angled gates with two doors hampered the enemy's assault. With the advent of chariots c. 1700 BC, towers and a complex gate with several piers or pilasters provided greater security. The towers and upper rooms enabled the defenders to fire down on the advancing foe. One upper room possibly was a special royal chamber, as reliefs in the Great Gate room at Medinet Habu suggest (cf. 2 Sa. 18:33). In the patriarchal age gates had two sets of three piers; so did the Solomonic gates, although with the entrance towers and walls this created three guardrooms. Two guardroom designs were used both before and after Solomon's day. At Dan and Tell en-Nasbeh an overlap in the walls formed a hollow square at the rear of which the gate was located. At en-Nasbeh a large tower on the right (outer wall) could handle attackers on three sides. Stone benches before the gate, and between the outer and inner gates at Dan, where there is also a probable throne base and canopy, mark the place of judgment (Ru. 4:1-2; 2 Sa. 19:8). The city gate was closed by massive wooden double doors. These doors were supported by posts sunk into the ground where they pivoted on specially hollowed-out stones. Discovery of these stones shows that only one set of doors was erected for each gate. When closed against the threshold stone the door was barred by a large beam held in position by sockets in both doorposts. Since an enemy would try to set fire to the doors they were often covered with metal sheets.

d. *Citadels and small forts*

The towered gateway was a virtual fortress or citadel in itself. The term 'tower' (*miḡdāl*, *et al.*) may also mean an inner citadel, a palace or temple (*BAAL-BERITH in Shechem), which provided an inner fortress for a secondary stand should the walls be breached. Sometimes a city was divided into sections for similar defensive reasons. 'Tower' may also refer to a small fortress or what we should call a blockhouse. The chain of forts in the Negeb and Transjordan are examples (above).

e. *The problem of water-supply*

Second only in importance to the walls and gates of a city was its water-supply. Until the invention of waterproof plaster to seal cisterns, every city needed a spring or stream nearby. Cisterns did enable fortresses to withstand long sieges, as Masada illustrates. Cities on tells, however, needed access to the springs at the base of the hill. In the 10th century and later, tunnels and shafts were dug

from within the city, giving access to the water, whilst outside entrances were blocked off. Such shafts were used at Megiddo, Hazor, Gezer, Gibeon and Jerusalem (*SILŌAM tunnel). These water-supply systems display advanced engineering knowledge and skills. Defenders tried to deny the invader water-supplies by filling cisterns, draining pools and concealing springs wherever possible. Food-supplies were also vital to withstand sieges, so that granaries and storehouses are found within cities.

II. Methods of attack

The least costly method of taking a city was, of course, to persuade it to surrender without fighting. The Assyrian Sennacherib used this technique in vain against Jerusalem. Other methods were to capture a city by some ruse or by surprise, as David secured Jerusalem. Joab entered the city probably by its water-tunnel. Usually, however, large cities had to be captured by assault or by long siege.

a. *The assault*

In a direct assault the invader could try to scale the wall by ladders, break through the walls by digging with tools or the battering-ram, penetrate the gate by firing it or battering it open, or tunnel under the wall. Where ramparts, moats or the side of a tell made direct attack difficult, an assault ramp was used. Part of the moat was filled with earth or rubble and an inclined ramp built up to the city wall proper. An Assyrian ramp investigated at Lachish in 1977 was made up entirely of large field stones. Assyrian reliefs from Nineveh depicting Sennacherib's assault on *Lachish (Is. 37:33) show the ramps were surfaced with wood. Assault troops behind large shields and the shield-covered battering-rams moved up the ramps, the latter protected by archers and slingers. The wooden beam of the ram had an iron axe-shaped head. When this penetrated the brick-work it was levered sideways to dislodge the bricks. A tower at the front of the ram was used by archers to fire at defenders on the walls. Mobile towers could also be brought against the walls, and catapults throwing large stones were used against the upper sections of the walls and the defenders. To prevent the escape of the besieged a mound or bank of earth was constructed around the city (Je. 6:6; Ezk. 17:17). From the walls the defenders would rain down arrows, javelins, stones, boiling water and also burning torches to set fire to the battering-rams. They also might make occasional sorties out of the city to destroy assault equipment and attack its protecting troops.

b. *The siege*

The protracted process of siege was used when a city was too powerful for a direct assault or when for other reasons the invader preferred to wait. By encircling the city the attackers sought to cut off its supplies and outside assistance, until the defenders were forced to surrender. An encircling mound and fortified camps were necessary to protect the more passive invading army. Sieges could last up to several years, such as the Assyrian siege of Samaria (2 Ki. 17:5).

c. *Capture and destruction*

After a city was captured it was normally plundered and burnt. Most cities, however, were rebuilt and used again. The surviving defenders might be deported, enslaved or placed under tribute, and

their leaders tortured, killed or taken as hostages. The most famous destruction of OT times was Nebuchadrezzar's devastation of all the Judaean cities, including Jerusalem, in 588–587 BC. Titus' destruction of Jerusalem in AD 70 was equally complete, although under the Romans lesser cities fared far better.

FORTUNATUS. A member of the Corinthian party which was a blessing to Paul at Ephesus (1 Cor. 16:17f.). Nothing else is certainly known of him. The name is Latin and a common one, and here the man is probably a slave. It has been needlessly assumed that he and *Achaicus belonged to the household of *Stephanas (cf. 1 Cor. 16:15) or even of Chloe (1 Cor. 1:11). It is attractive to find Fortunatus 'forty years on' in *1 Clement* 65, but, *pace* Lightfoot (*St Clement of Rome*, 1, p. 62; 2, p. 187), it is not certain that Clement's Fortunatus was a Corinthian. A.F.W.

FORUM OF APPIUS. A market town and staging-post in Latium, a foundation of Appius Claudius Caecus, the builder of the Via Appia, on which the town stands. It is 63 km from Rome, a place 'packed with barges and extortionate inn-keepers', if the poet Horace is to be believed. The town was the N terminus of the canal through the Pontine Marshes. This was one of the places where the Roman Christians met Paul (Acts 28:15); see also *TAVERNS, THE THREE. E.M.B.

FOUNDATION.

I. In the Old Testament

The Heb. *yāsaq* and compounds mean 'to fix firmly, found' and is thus used both literally and metaphorically of all types of foundations whether of buildings (Jb. 4:19) and objects such as altars (Ex. 29:12) or of the earth (Ps. 24:2; Is. 24:18), the inhabited world (Ps. 18:15) and the vault of heaven (Am. 9:6). In this way the future Israel (Is. 54:11), Zion (Is. 14:32) and the righteous (Pr. 10:25) are described.

The 'laying down' of foundations (Is. 28:16), especially of a temple (1 Ki. 6:37; Ezr. 5:16) was a matter of religious ritual. There is, however, no sure archaeological evidence that human sacrifice (or 'threshold covenant') was involved. The loss of Hiel's sons (1 Ki. 16:34) at the rebuilding of Jericho is interpreted as a punishment (Jos. 6:26) rather than as an offering. The choice and preparation were important and sometimes the foundations were laid on bed-rock or pure sand. Usually the site was levelled by filling within a retaining wall of stones either to support the whole structure or the corners. The foundations of Solomon's Temple consisted of large and expensively trimmed blocks of stone (1 Ki. 5:17; 6:37; 7:10; cf. 1 Ch. 22:2). It has been suggested that different parts of the foundation of the second Temple are referred to; that a retaining wall (Aram. *ušša*; Akkad. *uššū*, Ezr. 5:16) was first built to retain the foundation platform (*temenos*; Akkad. *timēnu*), then later

the returnees filled this in with earth and relaid foundations upon it (Ezr. 3:10; Zc. 4:9), but there is no archaeological or linguistic support for this theory. The foundations are often the only feature of ancient *architecture remaining today.

The 'gate of the foundation' in Jerusalem (2 Ch. 23:5, AV) may be the Horse-gate or 'Gate of Sur', while the 'rod of foundation' (*mūsādā*, Is. 30:32, AV 'grounded staff') is probably for 'staff of punishment' (RSV; reading *mūsār*).

II. In the New Testament

Two Gk. words are thus translated.

1. *katabolē*, 'a casting or laying down'. All ten occurrences of this word are bound up with the phrase 'the foundation of the world' (e.g. Mt. 13:35; Lk. 11:50).

2. *themelios*, 'anything laid', appears sixteen times. Generally this word is found in a figurative sense, but it is used literally in speaking of the wise man who builds his foundation upon a rock (Lk. 6:48). Christ is spoken of as the foundation of the church, i.e., the true and only basis of our salvation (1 Cor. 3:11). He is the chief *Cornerstone, and the apostles, who are the trustees and publishers of his gospel, are referred to as the foundation on which Christians are built (Eph. 2:20; cf. Rev. 21:14, 19). 'Foundation' is used also of one's ministry (Rom. 15:20; 1 Cor. 3:10), and in referring to the security of God's seal (2 Tim. 2:19). The first principles of divine truth are a foundation on which the rest depend (Heb. 6:1–2).

In a slightly different use of the word Timothy is instructed to urge those who are 'rich in this world' to lay up a good foundation (1 Tim. 6:19; cf. Heb. 11:10; Mt. 6:19–20) by trusting all to God—perhaps in contrast to the Ephesian merchants who deposited their earthly treasures in the temple of 'the great goddess Artemis'.

J.B.Tr.

FOUNTAIN. Palestine, owing to its geological structure, is a land of many springs, as was forecast to the Israelites before they settled there (Dt. 8:7). As a result of this, several Heb. words were in use which are commonly rendered 'fountain' or 'spring' in the evv.

1. *ayin*, 'spring, fountain', the commonest word (e.g. Gn. 16:7), is well known from the fact that in its construct form, 'ēn-(EVV 'En-'), it is a common element in place-names. Its Arabic cognate is familiar today, as in 'Ain es-Sultān, the spring by which the city of *Jericho stood. The word occurs in a modified form as the place-name Ainōn or Aenōn, where John baptized (Jn. 3:23). Sometimes translated *'well' in AV (e.g. Gn. 24:13).

2. *mā'yān*, 'place of springs', is a variant of 1 and rendered in the AV by both 'fountain' (e.g. Gn. 7:11) and 'spring' (e.g. Ps. 87:7).

3. *mabbīta'*, 'spring', from *nāba'*, 'to flow, bubble up', is rendered in the evv by both 'fountain' (e.g. Ec. 12:6) and 'spring' (e.g. Is. 35:7).

4. *māqōr*. This is sometimes used in a figurative sense of, e.g., 'life' (Ps. 36:9) or in a physiological sense (e.g. Lv. 20:18) and rendered in the evv by

FOUNTAIN

both 'fountain' (e.g. Ps. 36:9) and 'spring' (e.g. Pr. 25:26).

5. *mōšā*, 'place of going forth', comes from *yāšā*, 'to go out', and is sometimes rendered 'spring' (e.g. 2 Ki. 2:21). 6. *gal* is usually 'heap' (e.g. Gn. 31:46), but in Ct. 4:12 it is translated 'spring' (RSV, however, reads *gan*, 'garden'). 7. *gullā*, 'basin, bowl', is rendered 'spring' in EVV of Jos. 15:19 and Jdg. 1:15.

8. *šēdā*, 'foundation', '(mountain-)slope', which occurs only in the plural, is in the AV sometimes rendered 'spring' (Dt. 4:49; Jos. 10:40; 12:8) and thrice treated as part of a place-name, Ashdoth-pisgah (Dt. 3:17; Jos. 12:3; 13:20). The other EVV give 'slopes of Pisgah'.

9. *bōr*, 'cistern, well'. In Je. 6:7, where the *K'tib* gives *bawir* and the *Q'rē* *bayir*, the AV renders 'fountain' but RV and RSV give 'well'. 10. *hay*, 'living'. In Gn. 26:19 'living waters' is rendered 'springing water' in the EVV. 11. *nēḅeḳ* is a word which occurs only in the plural construct *nibḅḳē-yām*, in Jb. 38:16, and rendered 'springs of the sea' in the EVV.

In NT the principal Gk. word for 'spring', 'fountain' is *pēgē* (e.g. Rev. 7:17, etc.; cf. Mk. 5:29; Jn. 4:6), a word which is, in the LXX, used chiefly for Heb. *ayin*. T.C.M.

FREEDMEN (AV 'Libertines'), SYNAGOGUE OF THE. The Gk. of Acts 6:9 makes it difficult to determine whether the *Libertinoi*, the members of a Jewish synagogue at Jerusalem, worshipped by themselves, or with the Cyrenians, the Alexandrians, the Cilicians and the Asiatics. The meaning of the name is equally uncertain, and this has given rise to a number of variants for this verse (notably the reading 'Libyans' for 'Libertines', which appears in the Armenian vss and the Syriac). Schürer suggests that the Libertines were Rom. freedmen descended from Jews who had been prisoners of war under Pompey (63 BC) and subsequently released. Possibly only one synagogue is referred to here (then *kai Kyrēnaiōn . . . Asiai* is epexegetic of *Libertinōn*), which was attended by Jewish freedmen or their descendants from the places mentioned (so F. F. Bruce, *The Acts of the Apostles*, 1952, p. 156). s.s.s.

FREEMAN, FREEWOMAN. Two Gk. words are used. 1. *apeleutheros*, 'one fully freed', applies to a man who, born a slave, has been freed. In 1 Cor. 7:22a the reference is to one freed by the Lord from the bondage of sin (cf. 1 Cor. 12:13; Col. 3:11; Rev. 13:16, etc.). 2. *eleutheros*, 'free man', occurs in 1 Cor. 7:21, 22b; also in Rev. 6:15; *eleuthera*, 'free woman' (Gal. 4:22-23, 30) contrasts Sarah, Abraham's wife, with Hagar, his concubine, the Egypt. slave-girl. A metaphorical application of this is made in Gal. 4:31. J.D.D.

FRIEND OF THE BRIDEGROOM. The Heb. words *rēa*, *rē'eh* and *mērēa*, though often meaning 'friend' in general, sometimes have the special meaning of 'friend of the bridegroom', 'best man'. The ancient versions sometimes show this special meaning. In the case of an abortive marriage Mesopotamian law forbade any marriage between the 'friend' and the forsaken bride. This explains the reaction of the Philistines and of Samson on the marriage of his former fiancée with his best

man (Jdg. 14; 15:1-6). Jdg. 14:20 should be rendered 'to his best man, who had performed for him the offices of a best man'. A metaphorical use of the position of the best man is to be found in Jn. 3:29 (cf. 2 Cor. 11:2).

BIBLIOGRAPHY. A. van Selms, 'The best man and bride—From Sumer to St John', *JNES* 9, 1950, pp. 65-75. A. VAN S.

FRIEND OF THE KING. A phrase which was applied to various individuals. Ahuzzath was the 'friend' (*mērēa*) of Abimelech the king of Gerar (Gn. 26:26); Saul had a 'friend' (*mērēa*) (unnamed, 2 Sa. 3:8); Hushai the Archite was David's 'friend' (*rē'eh*, 2 Sa. 15:37); Solomon's 'friend' (*rē'eh*) was Zabud the priest (1 Ki. 4:5); and Baasha of Israel had a 'friend' (*rēa*) (unnamed, 1 Ki. 16:11). *rēa* is the common OT word for 'friend', and *mērēa* and *rē'eh* are generally taken as variant forms of it. It has been suggested, however, that *rē'eh* is to be connected with Egypt. *rh nsw. t*, which came in the Middle Kingdom to mean 'acquaintance of the king', or with *ruhi šarri* in the Amarna letters, which has much the same meaning. The title does not seem to have implied any specific function, though marriage arrangements were a special concern, but the importance of the 'friend' is shown by the fact that there was never more than one at a time. A similar title was found later in Persian times, Themistocles, for example, being named a 'King's Friend' by Xerxes.

FRINGES. A border of tassels along the edges of a garment (Dt. 22:12). This was bound by a blue cord, and served to remind the wearer of God's commands and of the need to obey them (Nu. 15:38-39). Various monuments show Hebrews and others wearing fringed garments. In NT times those who delighted in an outward show of piety put noticeably wide fringed borders on their garments (Mt. 23:5). K.A.K.

FRUIT, FRUITS. The AV translation of the following Heb. and Gk. words, some of which are used interchangeably: Heb. *ēḅ*, 'budding' (Ct. 6:11; Dn. 4:12, 14, 21); *y'ḅul*, 'increase' (Dt. 11:17; Hab. 3:17; Hg. 1:10); *t'mibā*, 'increase' (Jdg. 9:11; Is. 27:6; La. 4:9); *yeled*, 'child' (Ex. 21:22); *lehem* 'bread, food' (Je. 11:19); *nibh*, 'utterance' (Is. 57:19; Mal. 1:12); *ma'kāl*, 'eating' (Ne. 9:25); *m'le'ā*, 'fullness' (Dt. 22:9; also 'ripe fruits' in Ex. 22:29); *p'ri*, 'fruit' (107 times); *t'ḅū'ā*, 'incoming' (13 times); *kōah*, 'strength' (Jb. 31:39). Gk. *gennēma*, 'produce' (Mt. 26:29; Mk. 14:25; Lk. 12:18; 22:18; 2 Cor. 9:10); *karpos*, 'fruit' (64 times; *akarpōs*, 'without fruit', in Jude 12); *opōra*, 'ripe or full fruits' (Rev. 18:14).

a. *Literal use*

Mosaic law decreed that fruit-bearing trees be regarded as unclean for 3 years after planting, as the Lord's in the fourth year, and to be eaten by the people only in the fifth year. This preserved the health of the tree against premature plucking, gave

God his due place, perhaps commemorated the entrance of sin by forbidden fruit and certainly inculcated self-discipline. Fruit-trees were so highly valued that for many centuries thereafter, even during the bitterest wars, special efforts were made to protect them (*cf.* Dt. 20:19–20). See *AGRICULTURE, *FIG, *FOOD, *VINE, *TREES.

Children are sometimes spoken of as the fruit of the body or womb (Dt. 28:4; Ps. 127:3).

b. Metaphorical use

The term has inspired a large number of metaphorical uses, involving such phrases as the fruit of the Spirit (Gal. 5:22); fruit for God (Rom. 7:4) and for death (Rom. 7:5; *cf.* Jas. 1:15); fruit of the lips (*i.e.* speaking, Is. 57:19; Heb. 13:15); fruit unto holiness and life (Rom. 6:22); fruit of the wicked (Mt. 7:16) and of self-centredness (Ho. 10:1; *cf.* Zc. 7:5–6); fruit in season (*i.e.* true prosperity, Ps. 1:3; Je. 17:8); fruits of the gospel (Rom. 1:13; Col. 1:6); of righteousness (Phil. 1:11; Jas. 3:18); fruits which demonstrate repentance (Mt. 3:8; *cf.* Am. 6:12). The unfruitful works of darkness are contrasted with the fruit of light (Eph. 5:9–11).

'The tree of life with its twelve kinds of fruit' (Rev. 22:2) some regard as 'a sacrament of the covenant of works, and analogous to the bread and wine used by Melchizedek (Gn. 14:18) and to the Christian Eucharist (Mt. 26:29) in the covenant of grace' (*Baker's Dictionary of Theology*, 1960, p. 231). More probably it is a symbol of abundant life (Jn. 10:10).

BIBLIOGRAPHY. A. Goor and M. Nurock, *The Fruits of the Holy Land*, 1968; R. Hensel, *NIDNTT* 1, pp. 721–723; F. N. Hepper, *IEBP: Flowers and trees, Fruits and Vegetables, Ecology*, 1992.

J.D.D.

FUEL. *Coal was unknown to the Hebrews. Charcoal was used by the wealthy (Je. 36:22; Jn. 18:18) and by smiths, while the poor gathered their own sticks (I Ki. 17:10). Ezekiel refers to the use of dried *dung as a fuel (4:12ff.), a practice which obtains today among the poor. Is. 44:14–16 lists some of the trees used as fuel, while shrubs (especially 'broom', Ps. 120:4), briars and thorns (Ec. 7:6), chaff (Mt. 3:12) and hay (Mt. 6:30) were used to obtain a quick, fierce, but evanescent heat. Fuel appears to have been common property among the Hebrews, and to be charged for it was a great hardship (La. 5:4).

R.J.W.

FULLNESS. The Gk. word *plērōma*, translated 'fullness', carries three possible connotations: 'that which is filled'; 'that which fills or fills up', *i.e.* 'completes'; 'that which is brought to fullness or completion'.

The first does not seem to be relevant in the Scriptures, but the other two possibilities are important for the interpretation of certain crucial biblical texts. For the second we may cite Pr. 24:1, LXX (= 1 Cor. 10:26); Mt. 9:16; Mk. 6:43; 8:20. The Matthew reference may have the meaning 'that which makes something full or complete', as it refers to a patch which fills up the hole in a torn garment.

Under the third meaning should be placed Rom. 11:25, 'the full number, the totality of the Gentiles', and Rom. 15:29, 'the full measure of Christ's blessing'. Rom. 13:10 describes love as the *plērōma*

of the law. This has been construed as 'the sum total of the law's prescriptions and demands'; but it is possible that the correct meaning here is 'fulfilment'. Love, like the Lord Jesus, is the end of the law (Rom. 10:4; *cf.* Gal. 5:14; 6:2) in that it brings the law to its full realization and perfect completion in the sense of Mt. 5:17; 26:56; Mk. 1:15. This nuance leads on to those verses where the precise meaning of the word is disputed. It is convenient to divide them into two groups.

1. Col. 1:19 and 2:9 are best taken together. See J. Ernst, *Pleroma und Pleroma Christi*, 1970. The exegesis of the use of *plērōma* in 2:9 is undoubtedly 'the fullness of deity, the totality of the Godhead' which dwells in Christ; and this meaning may be decisive in settling the correct interpretation of 1:19. In this text the choice is between taking it as a quasi-technical term of early gnostic speculation, which used the word *plērōma* to denote the region inhabited by the 'full number' of intermediary beings which were thought to exist between the Creator God and the created world; and taking it in the sense 'God in his fullness', 'the entirety of God's attributes, his full divinity' which was pleased to dwell in Christ. On the former view, Paul is combating speculative teachers at Colossae, who reduced Christ to a member of the celestial hierarchy. The apostle asserts in reply to this teaching that Christ is the fullness of these intermediary beings. They are subsumed in him, for he is the *plērōma* of them all. See R. P. Martin, *Colossians and Philemon*, NCB, 1974, pp. 59f., 79f.

This view, however, which assumes that Paul and the Colossian heretics are using a common term, although supported by many scholars, among whom are J. B. Lightfoot, E. F. Scott, and R. Bultmann (*Theology of the New Testament*, 2, E.T. 1955, pp. 149ff.), is open to serious objection. Apart from the lack of convincing evidence for an early gnostic creed in the 1st century, the most obvious consideration which tells against this proposal is that stated by E. Percy, that there is no trace in 1:19 and 2:9 of a polemic against the use which the supposed heretical teachers were making of the term *plērōma*, and in any case it is very unlikely that Paul would have borrowed so important a term from such a source. J. A. T. Robinson's suggestion (*The Body*, 1952, p. 67), that the apostle deliberately took over for apologetic use this word which he found in Hellenistic circles, lacks plausibility.

With C. F. D. Moule and C. Masson we may accept the second view and interpret *plērōma* in its OT light, where the Heb. equivalent is *m'lō*; this reading sees the word as conveying the thought somewhat parallel to the Logos Christology of John, *i.e.* in Christ the sum-total of the divine attributes dwells and is revealed and communicated to men (Jn. 1:14, 16).

2. In Ephesians the term is taken by some commentators as applying to the church as well as to Christ; and this would confirm the view expressed above that *plērōma* is not being used in any technical 'gnostic' sense. In Eph. 1:10 there is a meaning similar to that in Mt. 5:17; Mk. 1:15; Gal. 4:4 with the thought that God's pre-ordained plan is now about to be consummated.

Eph. 1:22–23 may be taken in a number of ways, listed with admirable clarity by R. Yates, 'A Re-examination of Eph. 1:23', *ExpT* 83, 1971–2, pp. 146–151. The real crux is whether, on the one hand, *plērōma* refers to the church, which is then to

FULLNESS

be taken actively as that which completes Christ who is filling all things (corresponding to Eph. 4:10: so J. Dupont, *Gnosis: la connaissance religieuse dans les épîtres de Saint Paul*, 1949, p. 424, n. 1), or, in a passive sense, as that which is filled by Christ: or whether, on the other hand, *plērōma* should be treated as in apposition to 'him' in v. 22 and so taken to apply to the Lord himself as the One who has been designated by God the Father as the fullness of the Godhead who fills all in all (as in 1 Cor. 15:28). This latter interpretation has the advantage of harmonizing with the rest of the Epistle (4:10) and with the teaching of *plērōma* in Colossians noted above. See Moule for a defence of this view, and F. C. Syngue, who also takes *plērōma* as a reference to Christ.

Eph. 3:19 requires no comment, except that it confirms the understanding of *plērōma* as a Christological title. This verse is another way of expressing the hope that 'Christ may dwell in your hearts by faith' (3:17); Eph. 4:12-13 holds out the prospect of the whole body of believers coming into such an experience.

Another interpretation takes more seriously the voice of the verb (passive or middle) in the earlier texts. Christ is being fulfilled or is filling himself: but by or with whom? The answer to this question is that he is fulfilled either by the Christians who, as members of his Body, 'complement' the Head, and together form the 'whole Christ' (so A. Robinson, F. W. Beare); or with W. L. Knox, L. S. Thornton and J. A. T. Robinson, who propose the translation 'that which is filled by him who is always being filled (by God)', so that the meaning of the whole phrase is that the church is constantly receiving from Christ its Head the complete fullness which Christ receives from the Father.

FURNACE. A word used to translate five Heb. terms and one Gk.

1. *'attūn*. An Aram. word which is used in Dn. 3 of the furnace into which Shadrach, Meshach and Abednego were cast by Nebuchadrezzar. It was probably a loan-word from Akkad. *utūnu*, 'oven', as used for baking bricks or smelting metals.

2. *kiḫṣān*. A word occurring four times in the Bible, as a simile to describe the smoke of Sodom and Gomorrah (Gn. 19:28) and of Mt Sinai (Ex. 9:8, 10). In post-biblical Heb. it was understood to mean a kiln as used for firing pottery or burning lime.

3. *kūr*. A pot or crucible for smelting metals. The word always occurs in the Bible as a metaphor or simile of God's punishment or tempering of man. Egypt was a crucible of iron (Dt. 4:20; Je. 11:4; 1 Ki. 8:51); God will put Israel in the crucible and melt it with his fury (Ezk. 22:18, 20, 22); and Israel is passed through the crucible of affliction (Is. 48:10).

4. *'lil*. Used only in Ps. 12:6 in a simile of the words of God which are as silver tried in a furnace. The usage suggests a crucible.

5. *tannūr*. 'Portable stove' or 'oven' (*BREAD), the latter probably being a preferable translation in Ne. 3:11; 12:38; Is. 31:9; and perhaps Gn. 15:17, where AV gives 'furnace'.

6. *kaminos*. 'Oven, furnace', a word used in LXX to translate *'attūn*, *kiḫṣān* and *kūr*, and in Mt. 13:42, 50 and Rev. 9:2 as a figure of the fires of hell (*cf.* also Rev. 1:15).

Copper-refining furnaces have been excavated in Palestine at Beth-shemesh, Ai and Ezion-geber, the last lying at the S end of the Wadi Arabah, which forms a funnel down which powerful winds blow. Well-preserved furnaces for iron refining built below the level of the ground have been found at Tell Jemmeh (?Gerar). (*ARTS AND CRAFTS.)

BIBLIOGRAPHY. A. G. Barrois, *Manuel d'Archéologie biblique*, 1, 1939, pp. 372-373; R. J. Forbes, *Studies in Ancient Technology*, 6, 1958, pp. 66ff. T. C. M.

G

GAAL (Heb. *gā'al*). Son of Ebed; LXX(B) *Iobel* suggests Heb. *'ōbēd* = 'servant' (cf. Moore, *ICC, Judges*, p. 256, and Jdg. 9:28). Leader of a roving band, who came to Shechem in the reign of Abimelech to take advantage of disaffection in the city. His activity forced Abimelech to attack Shechem; Gaal and his men were expelled by Abimelech's governor, but Abimelech took vengeance on the city for supporting him (Jdg. 9:22-45). J.P.U.L.

GABBATHA. An Aramaic word meaning 'height', 'eminence'; the local, native word for the area. It must have been on a height.

Gabbatha identifies the same location as the other term, 'the Pavement' (*lithostrōton*), but does not describe exactly the same thing. As Jn. 19:13 specifies, it is a 'place' called either the Height or the Pavement. One may suppose that the Pavement was laid by Herod in front of his palace in the Upper City (at the NW angle of the first N wall). This palace was the official residence of the Roman governors, including Pilate, as is clear from incidents described by Josephus.

The Greek word *lithostrōton* was adopted by the Romans to describe a paved area, either of marquetry (*opus sectile*) or of flagstones. Both types of work are known to have been used by Herod; marquetry at Jericho (inlaid stones, some coloured, set in a pattern) and flags at Jerusalem, notably for the streets and terraces outside the immense walls of the Temple Mount (now excavated by Mazar). The foundations of this palace in the Upper City have been excavated, but the superstructures were missing. Nor has the Pavement been found as yet.

The site for 'the Pavement' favoured by Christian pilgrims at the Convent of the Sisters of Zion is to be rejected. Its adherents err in claiming that Jesus was brought to trial at the Antonia fortress on the Temple Mount; as stated above, the palace in the Upper City was Pilate's headquarters. Moreover the location of this pavement is slightly wrong even for the Antonia; it is probably part of the public square at the E gate of Hadrian's Aelia Capitolina. The pools beneath it were filled in and had siege-engines erected on them when the Romans under Titus attacked the Antonia (1st Revolt). At the time of Jesus they were open pools *outside* the walls of the Antonia. The pavement set over them, now shown as the *lithostrōton*, had not been laid. J.P.K.

GABRIEL (Heb. *Gabriel*, 'man of God' or 'strength of God'). One of the two angels whom the Bible names: the other is *Michael. He is sent to interpret Daniel's vision (Dn. 8:16) and to give him the prophecy of the 70 weeks (Dn. 9:21). Some

commentators identify the angel of Dn. 10:5ff. as Gabriel.

In intertestamental Jewish literature, Gabriel is one of the archangels, the 'angels of the presence' who stand before God's throne praising him and interceding for men (Tobit 12:15; *Jubilees* 2:2; 1QH 6:13; 1QSB 4; *Testament of Levi* 3:5, 7; cf. Lk. 1:19; Rev. 8:2). He is named either as one of four archangels, with Michael, Sariel (or Uriel) and Raphael (*1 Enoch* 9:1; 1QM 9:15f; cf. *1 Enoch* 40:6; 54:6; *Sibylline Oracles* 2:215 (some MSS); *Numbers Rabbah* 2:10), or as one of seven, with Uriel, Raphael, Raguel, Michael, Sariel (or Saraqael) and Remiel (*1 Enoch* 20). Gabriel's special responsibility is paradise (*1 Enoch* 20:7). He destroyed the antediluvian giants (*1 Enoch* 10:9). With the other archangels, he will officiate at the last judgment (*1 Enoch* 90:21f; cf. 54:6; *Sibylline Oracles* 2:214-219; 1 Thes. 4:16; Rev. 8:2). The Targums and rabbinic literature often identify anonymous angels in the OT as Gabriel or Michael.

In the NT, Gabriel is sent to Zechariah to announce the birth of John the Baptist (Lk. 1:11-20) and to Mary to announce the birth of Jesus (Lk. 1:26-38). His self-description, 'I am Gabriel, who stand in the presence of God' (Lk. 1:19) identifies him as one of the archangels (cf. *Tobit* 12:15).

R.J.B.

GAD ('good fortune'). 1. The seventh son of Jacob, his first by Leah's maid Zilpah (Gn. 30:10-11). Gad himself already had seven sons when Jacob and his family entered Egypt (Gn. 46:16); Jacob promised Gad's descendants a troubled life, but foretold that they would hit back (Gn. 49:19). They recur later in Moses' blessing (Dt. 33:20-21).

2. An Israelite tribe descended from Gad, and the territory they occupied. The tribe in Moses' time had seven clans (Nu. 26:15-18), was commanded and represented by one Eliasaph (Nu. 1:14; 2:14; 7:42; 10:20), and supplied a spy for exploration of Canaan (Nu. 13:15). When Israel reached the plains of Moab, Reuben, Gad and half-Manasseh sought permission to settle in Transjordan, on condition that they first help their fellow-Israelites to establish themselves in W Palestine (Nu. 32). The Gadites and Reubenites then hastily repaired cities (including Ataroth) and sheepfolds to safeguard their families and livestock (Nu. 32:34-38, cf. 26-27) while preparing to help their brethren, a promise of help duly kept (Jos. 22:1-8). Then came the incident of the altar of witness (Jos. 22:9-34). As tribal territory, Reuben and Gad received the Amorite kingdom of Sihon: Reuben had the land from *Aroer on the Arnon river, N to a

line running from the Jordan's mouth E to the region of Heshbon (Jos. 13:15-23). N of this line, Gad had all S Gilead, from the Jordan valley E as far as the S-to-N course of the upper Jabbok (the border with Ammon), and N generally as far as the E-to-W course of the lower Jabbok, but with two extensions beyond this: first, all the Jordan valley on the E side of Jordan river (formerly Sihon's) between the Dead Sea and the Sea of Galilee (or Chinneroth), and second, across the NE angle of the river Jabbok to include the district of *Mahainaim and a fertile tract flanking the E side of N Gilead N over Jebel Kafkafa to strategic Ramoth-gilead at modern Tell Ramith, 32 km NE of Jerash (cf. Jos. 13:24-28). Heshbon was assigned as a levitical city out of the territory of Gad (Jos. 21:38-39); hence perhaps read Jos. 13:16-17 as (Reuben's) 'border was from Aroer ... and all the plain by Medeba, [unto] Heshbon ...' (emending only by the addition of one letter, locative-*h*). Dibon, etc., are then cities between these limits, and Heshbon would be the southernmost territory of Gad.

The Gadites doubtless shared the troubles of Transjordanian Israel generally in the judges' period (e.g. Jdg. 10-12). In Saul's day the wooded Gileadite hills of Gad offered a place of refuge (1 Sa. 13:7), and Gadites among others joined the fugitive David and supported his becoming king (1 Ch. 12:1, 8-15, 37-38). Gadites likewise shared in, and were subject to, David's administration (2 Sa. 23:36; 24:5; 1 Ch. 26:32). On his Moabite Stone, roughly 840/830 BC, King Mesha mentions that the Gadites had long dwelt in the land of Ataroth. Just after this, within Jehu of Israel's reign, Hazael of Damascus smote all Gilead, Gad included (2 Ki. 10:32-33). In the 8th century BC Gadite settlement apparently extended NE into Bashan (1 Ch. 5:11-17), until Tiglath-pileser III carried the Transjordanians into exile (2 Ki. 15:29; 1 Ch. 5:25-26). Then the Ammonites again invaded Gad (Je. 49:1-6). Gad is assigned the southernmost zone in Ezekiel's vision of the tribal portions (48:27-28). Geographical background, in D. Baly, *Geography of the Bible*², 1974, pp. 210ff., 221ff., 227-232.

3. A prophet or seer, the contemporary of Saul and David; he advised David to leave Moab for Judah (1 Sa. 22:5). Later, God through Gad offered a choice of three possible punishments to David after his census, and then commanded that David build an altar on Araunah's threshing-floor (2 Sa. 24:10ff.; 1 Ch. 21). Gad helped David and Nathan in organizing music for eventual use in the Temple (2 Ch. 29:25), and wrote a history of David's reign (1 Ch. 29:29).

4. A pagan deity worshipped by the Canaanites as the god of Fortune for whom they 'prepare a table' (Is. 65:11, RV, AVMG.). (*GAD, VALLEY OF.)
K.A.K.

GAD, VALLEY OF. The place where the census ordered by David was begun is given as 'Aroer, on the right side of the city that is in the middle of the valley (Heb. *nahal*) of Gad' (2 Sa. 24:5, RV). In Dt. 2:36 Aroer is described as 'on the edge of the valley (*nahal*) of the Arnon'. Since the census would naturally begin at the S border of the Transjordan territory, this is probably the place intended. Various MSS of the LXX indicate corruptions in the text of 2 Sa. 24:5, which should read 'toward Gad and Jazer' (so RSV).
G.T.M.

GADARENES, GADARA. The only biblical references to the Gadarene area concern the story of the miracle of Legion and the swine. The word 'Gadarenes' is found in some texts or versions of Mt. 8:28; Mk. 5:1; and Lk. 8:26. The probability is, however, that it is the original reading only in Mt. (Compare these vv. in AV and modern EVV.) The actual site of the miracle is in little doubt, at the edge of the Sea of Galilee. It would have been in a sub-district of Gadara, which lay 10 km SE of the Sea, near the gorge of the Yarmuk (or Hieromax). The Mishnah claims that Gadara dates from the OT period. It was held variously by Ptolemies, Seleucids, Jews and Romans between the 3rd century BC and the Jewish War. It was one of the Decapolis cities. The ruins at Umm Qays now mark the site. (*GERASA.)
D.F.P.

GAIUS. A Latin praenomen, used without addition several times in the NT.

1. A Macedonian involved in the Ephesian riot (Acts 19:29; *ARISTARCHUS).

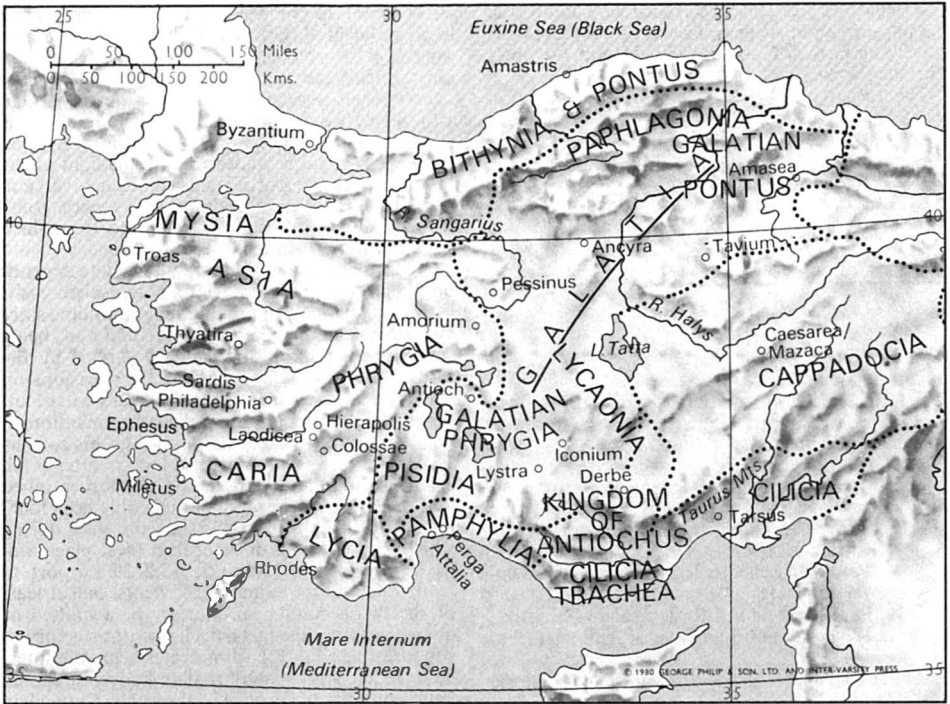

2. A companion of Paul's to Jerusalem, a member of the party which awaited the apostle at Troas (Acts 20:4f.), perhaps an official delegate of his church, which on the usual reading was Derbe. It is attractive, however, to follow the Western reading, 'of Douberus' (a Macedonian town), and also possible to attach 'of Derbe' to Timothy (in which case Gaius would be a Thessalonian). Either way he would be a Macedonian, and thus conceivably the same as 1. Proof is impossible: Luke may rather be interposing two Galatians (Timothy representing Lystra) between two Thessalonians and two Asians.

3. A Corinthian, baptized by Paul (1 Cor. 1:14). The church met in his house, and Paul stayed with him on his third Corinthian visit (Rom. 16:23). A suggestion of Ramsay's has been revived that Gaius was the praenomen of Titius *Justus (Acts 18:7). Origen (on Rom. 16) refers to a tradition that he became first bishop of Thessalonica.

4. The addressee of 3 John: the Elder commends his rectitude and hospitality (of which he asks a renewal), and expects to see him shortly. J. Chapman (*JTS* 5, 1904, pp. 366ff.) would identify him with any of the preceding, especially 1 and 3, but his reconstruction is highly conjectural. The name was very common; the four references may well represent four different people.
A.F.W.

GALATIA. 1. The ancient ethnic kingdom of Galatia located in the N of the great inner plateau of Asia Minor, including a large portion of the valley of the Halys river. A great population explosion in central Europe brought Gauls into this area during the 3rd century BC. Although never in the majority, the Gauls gained the upper hand and ruled over the more numerous tribes of Phrygians and Cappadocians. Ultimately the Gauls separated into three tribes, each inhabiting a separate area: the Trokmi settled in the E which bordered on Cappadocia and Pontus, with Tavium as their capital; the Tolistobogii inhabited the W bordering on Phrygia and Bithynia, with Pessinus as their chief town; and the Tektosages settled in the central area with Ancyra as their principal city.

2. The Roman province of Galatia. In 64 BC Galatia became a client of the Romans and, after

Galatia, an ancient ethnic kingdom which, as a new Roman province, also included parts of Pontus, Phrygia, Lycaonia, Pisidia, Paphlagonia and Isauria.

the death of Amyntas, its last king, was given full status as a Roman province (25 BC). The new province of Galatia included not only the old ethnic territory but also parts of Pontus, Phrygia, Lycaonia, Pisidia, Paphlagonia and Isauria. Within the provincial Galatia were the towns which the apostle Paul evangelized on his first missionary journey, viz. Antioch, Iconium, Lystra and Derbe (Acts 13–14). The latter two cities were Roman colonies, and the former two had been Romanized by the emperor Claudius. Large numbers of Romans, Greeks and Jews were attracted to these population centres because of their strategic geographical location.

A particularly difficult question arises out of Paul's use of the word 'Galatia' in the Epistle to the Galatians (1:2). Does Paul use the term in its geographical sense, *i.e.*, to denote the ancient ethnic kingdom of Galatia, or in its political sense, to denote the Roman province by that name? NT scholars are almost evenly divided on this question (*CHRONOLOGY OF THE NEW TESTAMENT).

It is clear from the account in Acts 13–14 that Paul visited S Galatia and established churches there. Did he ever conduct a mission in N Galatia? Two texts especially have been used to support such a ministry. The first (Acts 16:6) reads: 'And they went through the region of Phrygia and Galatia. . . . N Galatian proponents understand 'Phrygia' here to be the territory in which Antioch and Iconium were located, whereas 'Galatia' refers to the geographical or ethnic kingdom by that name. Ramsay, however, takes the phrase *tēn Phrygian kai Galatikēn chōran* to be a composite term describing a single area—the Phrygian-Galatic

region. The word *chōra*, 'territory', was the official word used to describe one of the *regiones* into which Roman provinces were divided. Part of the old kingdom of Phrygia belonged to the Roman province of Galatia and another part belonged to the province of Asia. Thus Acts 16:6 refers to the parts of Phrygia which had been incorporated into the Roman province of Galatia. This interpretation is supported by the following statement in the Acts account, 'having been forbidden by the Holy Spirit to speak the word in Asia'. The plan of the missionary party apparently was to strike out directly in a W direction from Antioch of Pisidia, which would have taken them into the province of Asia. Instead they went N towards Bithynia, crossing only a part of Asia.

The other passage is Acts 18:23. Here the order of the words is reversed: ' . . . and went from place to place through the region of Galatia and Phrygia, strengthening all the disciples'. The 'region of Galatia' here is probably 'Galatic Lycaonia, so called to distinguish it from eastern Lycaonia, which lay, not in the province of Galatia, but in the territory of King Antiochus' (F. F. Bruce, *The Book of the Acts*, 1954, p. 380). 'Phrygia' then would probably include both Galatic and Asiatic Phrygia, since on this occasion there was no prohibition to prevent Paul preaching the word in Asia. In neither of these passages in Acts does there seem to be any good reason to suppose that Galatia means N Galatia. It is doubtful that Paul ever visited the ancient kingdom to the N, much less that he conducted an extensive mission there. (* GALATIANS, IV).

There are three other occurrences of 'Galatia' in the NT. 2 Tim. 4:10 (which has the variant 'Gaul')

GALATIA

and 1 Pet. 1:1 are almost certain references to the Roman province, while a decision on 1 Cor. 16:1, 'the churches of Galatia', will depend on one's view of the passages discussed above.

GALATIANS, EPISTLE TO THE.

I. Outline of contents

Thanks, no doubt, to the sense of urgency with which the Epistle was written, it is difficult to trace a clear progression or sequence in its structure. It may be subdivided thus:

1. Greetings (1:1–5)
2. This new 'gospel' is no gospel (1:6–10)
3. Autobiography and apologia (1:11–2:14)
 - a. Paul received his commission direct from Christ (1:11–17)
 - b. Paul's first visit to Jerusalem after his conversion (1:18–24)
 - c. Paul's second visit to Jerusalem (2:1–10)
 - d. Why Paul opposed Peter at Antioch (2:11–14)
4. The gospel of grace does not encourage sin (2:15–21)
5. An appeal to the Galatians' personal experience (3:1–6)
6. The gospel covenant with Abraham is prior to Moses' law (3:7–22)
7. Christian maturity (3:23–4:11)
 - a. We are full-grown sons now (3:23–29)
 - b. Going back to infancy (4:1–7)
 - c. Going back to slavery (4:8–11)
8. A further personal appeal (4:12–20)
9. Christian freedom: the two Jerusalems (4:21–5:1)
10. Faith, not works (5:2–12)
11. Liberty, not licence (5:13–26)
12. A call to mutual aid (6:1–5)
13. Sowing and reaping (6:6–10)
14. Postscript in Paul's hand (6:11–18)
 - a. Paul takes up the pen (6:11)
 - b. False and true boasting (6:12–16)
 - c. The true marks of a servant of Christ (6:17)
 - d. Benediction (6:18)

II. Authorship and date

Except in such extreme and unrepresentative circles as the Van Manen school (whose views received publicity in *EBI*), the Pauline authorship of Galatians has been an axiom of NT criticism. Galatians has traditionally been recognized as one of the four 'capital epistles' of Paul (the other three being Romans and 1 and 2 Corinthians); indeed, it has been regarded as a standard by which other documents' claims to Pauline authorship could safely be measured.

On the 'N Galatian' view of its destination (see section IV, below) the Epistle could not have been written before AD 49/50, when Paul's second missionary journey began (Acts 16:6), and was more probably written after AD 52, when the third journey began and Paul visited 'Galatia' a second time

(Acts 18:23), since his reference to having preached to them 'at first' (Gal. 4:13)—literally 'the former time' (Gk. *to proteron*)—implies two visits to them. On the 'S Galatian' view the Epistle could have been written earlier; the words 'so quickly' (Gal. 1:6) indeed would imply a time not long after the first missionary journey (AD 47–8), and 'at first' (Gal. 4:13) could be understood in the light of the fact that in the course of the first journey Paul and Barnabas visited the S Galatian cities twice, going from Pisidian Antioch to Derbe and from there back to Pisidian Antioch (Acts 14:21).

A more precise determining of the date depends on the interpretation of Paul's Jerusalem visits listed in Galatians. In arguing that at no time since his conversion had he an opportunity of being commissioned for his missionary service by the Jerusalem apostles, he mentions the occasions on which he had met them since, and tells what happened then. Two Jerusalem visits are mentioned: one 3 years (or in the third year) after his conversion (Gal. 1:18) and another 14 years after (Gal. 2:1). The first of these is certainly that mentioned in Acts 9:26ff. The second has generally been identified with that of Acts 15:2ff., the visit during which the *Council of Jerusalem took place. But (i) if Gal. 2:1–10 and Acts 15:2–29 purport to relate one and the same set of events, one at least of the two accounts can scarcely be acquitted of misrepresenting the facts; (ii) it is unsatisfactory to suppose that Gal. 2:1–10 narrates a private interview which Paul and Barnabas had with James, Peter and John in advance of the public Council; in that case Paul's suppression of the findings of the Council is inexplicable, for they were directly relevant to the Galatian controversy; (iii) the fact that the findings of the Council are not mentioned in Galatians can best be explained if in fact the Council had not yet been held when the Epistle was written; (iv) if the Jerusalem visit of Gal. 2:1 is that of Acts 15, Paul's critics would have pointed out immediately that he had failed to mention the earlier visit mentioned in Acts 11:30; 12:25. (The view that the visit of Acts 11:30; 12:25 is a duplicate of that recorded in Acts 15 is unacceptable; and the high estimate of the accuracy of the narrative of *Acts, which underlies the present discussion, can be defended by strong arguments.) There are weighty reasons for identifying the visit of Gal. 2:1 with that of Acts 11:30, and for dating the Epistle shortly before the Council of Jerusalem, c. AD 48/49. The incident of Gal. 2:12 is probably to be correlated with Acts 15:1.

III. Occasion of writing

Galatians was plainly written to converts of Paul's who were in imminent danger of adulterating the gospel of Christian freedom which he had taught them with elements of Jewish legalism. Among these elements circumcision took a chief place; they also included the observance of the Jewish calendar (Gal. 4:10) and possibly Jewish food-laws. The 'churches of Galatia' had evidently been visited by Judaizers who cast doubt on Paul's apostolic status and insisted that, in addition to the faith in Christ which he inculcated, it was necessary to be circumcised and to conform in other respects to the Jewish law in order to attain salvation. When news of this reached Paul he wrote this letter in white-hot urgency, denouncing this teaching which mingled grace and law as a different gospel from that which he had preached to them in Christ's

name—in fact, no gospel at all—and entreating his readers to stand fast in their new-found liberty and not place their necks again under a yoke of bondage.

IV. Destination

The letter is addressed to 'the churches of Galatia' (1:2). To us this is a not unambiguous designation, for 'Galatia' was used in two distinct senses in the 1st century AD: it might denote ethnic Galatia in central Asia Minor, or the much larger Roman province of *Galatia. If the letter was sent to people in ethnic Galatia (the view of J. B. Lightfoot and most of the older commentators), we must suppose that that is the region visited by Paul in Acts 16:6 and 18:23 (or at least in one of these passages). But these two passages should probably be interpreted otherwise. There is, in fact, little evidence that Paul ever visited ethnic Galatia, whereas there is ample evidence that he visited the S area of the province of Galatia and planted churches there. The view that this Epistle is addressed to ethnic Galatia is commonly called the 'N Galatian' theory; the 'S Galatian' theory, on the other hand, supposes that the Epistle was sent to the churches of Pisidian Antioch, Iconium, Lystra and Derbe, all in the S of the Roman province, and all planted by Paul and Barnabas in the course of their first missionary journey (Acts 13:14–14:23).

Against the 'S Galatian' theory it has been argued that it would be psychologically inept for Paul to address his readers as 'Galatians' (Gal. 3:1) if in fact they were not ethnically Galatian. But if they belonged to different ethnic groups (Phrygian and Lycaonian) what common appellation could he have chosen to cover them all except their common political denominator, 'Galatians'? (So a modern writer, addressing a mixed group of English, Welsh and Scots, would probably address them as 'Britons' or 'British' in the political sense, although in its ethnic sense it would be applicable only to the Welsh members of the group.)

V. Principal arguments

If a logical analysis of the Epistle as a whole defies us, we can at least recognize the leading arguments which Paul uses in defence of true gospel liberty. Nine of them may be briefly stated as follows.

1. The gospel which Paul preached was the gospel which he received by direct commission from Christ; it came to his hearers with Christ's authority, not with Paul's (1:11ff.).

2. Against Paul's claim to unmediated commission from Christ, some argued that all valid apostolic authority must be mediated through Jerusalem, and that Paul's teaching or practice therefore was invalid if it deviated from the Jerusalem pattern. Paul replies by describing his visits to Jerusalem between his conversion and the time of writing, showing that the Jerusalem leaders had no opportunity of commissioning him but that, on the contrary, they acknowledged the apostolic commission (to the Gentiles) which he had already received from Christ (1:15–2:10).

3. If acceptance with God could have been obtained through circumcision and the other observances of the Jewish law, Christ's death was pointless and vain (2:21).

4. Christian life, as the Galatian converts knew from their own experience, is a gift of the Spirit of God; when they received it they received at the same time unmistakable proofs of the Spirit's pres-

ence and power in their midst. But if they began their Christian life on that high plane it was preposterous to imagine that they should continue it on the lower plane of legal works (3:2ff.).

5. The Judaizers justified their insistence on circumcision by appealing to the example of Abraham: since circumcision was the seal of Abraham's covenant with him, they argued, no uncircumcised person could have a share in that covenant with all the blessings which went with it. But the true children of Abraham are those who are justified by faith in God, as Abraham was; it is they who enjoy the blessings promised to Abraham. God's promise to Abraham was fulfilled in Christ, not in the law; therefore the blessings bestowed by that promise are to be enjoyed not through keeping the law (which came long after the promise and could not affect its terms) but through faith in Christ (3:6–9, 15–22).

6. The law pronounces a curse on those who fail to keep it in every detail; those who place their trust in the law therefore put themselves in danger of that curse. But Christ, by his death on the cross, bore the divine curse in his people's place and delivered them from the curse which the law pronounces; his people therefore ought not to go back and put themselves under the law with its attendant curse (3:10–14).

7. The principle of law-keeping belongs to the age of spiritual immaturity; now that Christ has come, those who believe in him have attained their spiritual majority as responsible sons of God. To accept the arguments of the Judaizers would be to revert to infancy (3:23–4:7).

8. The law imposed a yoke of slavery; faith in Christ brings liberation. Those whom Christ has emancipated are foolish indeed if they give up their freedom and submit afresh to the dictation of those elemental powers through which the law was mediated (4:8–11; 5:1; 3:19).

9. This freedom which the gospel of grace proclaims has nothing to do with anarchy or licence; faith in Christ is a faith which works by love and thus fulfils the law of Christ (5:6; 5:13–6:10).

These arguments are presented in a more systematic form in the Epistle to the Romans, written 8 or 9 years later. The basic understanding of the gospel which underlies all these arguments took shape in Paul's mind very probably quite soon after his conversion, although the way in which it finds expression in Galatians is due to the special situation to which Paul addresses himself here. But perhaps for that very reason Galatians has to this day been cherished by Christians as a great charter of gospel liberty.

GALEED (Heb. *gal'ēd*, 'witness pile'). Name given to the cairn erected by Jacob and Laban as a me-

GALEED

morial to their covenant made in N Transjordan (Gn. 31:47-48; *PILLAR). By Laban it was given the equivalent Aramaic name *Yegar-sahadutha*. Documents of the earlier 2nd millennium BC reveal a great mixture of ethnic groups in N Mesopotamia. It is quite possible that some Aramaeans were included among them and that their dialect had been adopted by other Semitic groups. Specific evidence of Aramaeans in this area at this date is not yet available (*ARAM). A.R.M.

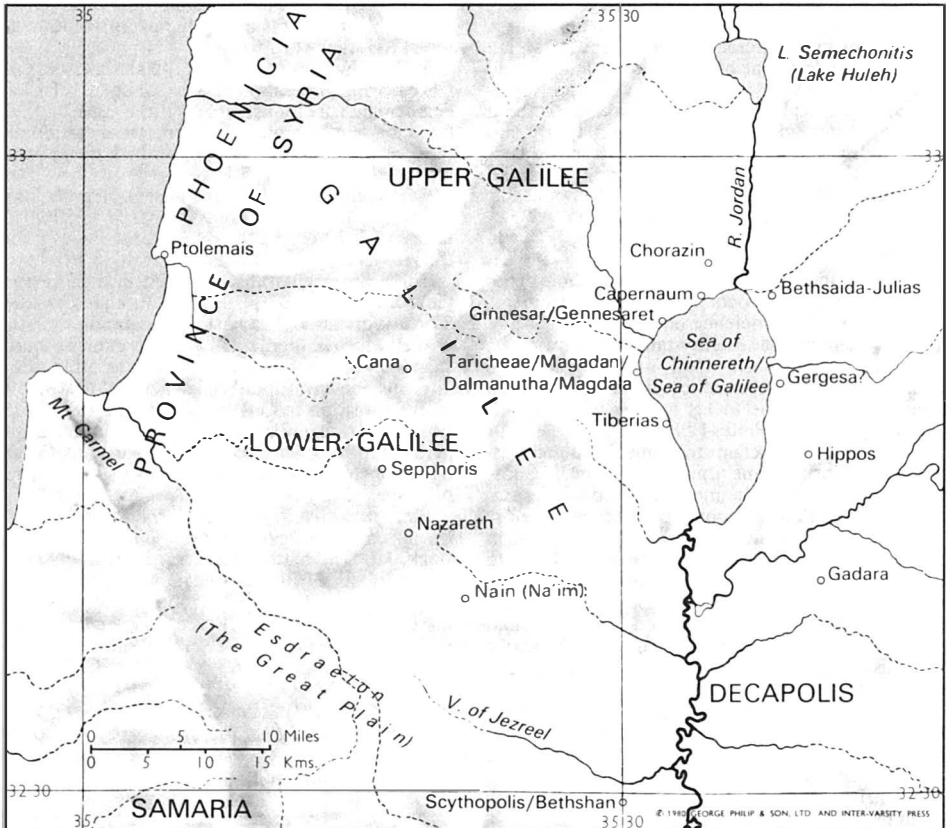

GALILEE (Heb. *gālil*, 'ring, circle', hence a 'district, region'). The regional name of part of N Palestine, which was the scene of Christ's boyhood and early ministry. The origin of the name as applied here is uncertain. It occurs occasionally in the OT (e.g. Jos. 20:7; 1 Ki. 9:11), and notably in Is. 9:1. The latter reference probably recalls the region's history: it originally formed part of the lands allocated to the twelve tribes, but, owing to the pressure from peoples farther north, its Jewish population found themselves in a kind of N salient, surrounded on three sides by non-Jewish populations—'the nations'. Under the Maccabees, the Gentile influence upon the Jews became so strong that the latter were actually withdrawn S for half a century. Thus Galilee had to be recolonized, and this fact, together with its diversity of population, contributed to the con-

tempt felt for the Galileans by the S Jews (Jn. 7:52).

Exact demarcation of the Galilee region is difficult, except in terms of the provincial boundaries of the Roman empire. The name was evidently applied to the N marchlands of Israel, the location of which varied from time to time. In the time of Christ, however, the province of Galilee formed a rectangular territory some 70 km from N to S, and 40 km from E to W, bordered on the E by the Jordan and the Sea of *Galilee, and cut off from the Mediterranean by the S extension of Syro-Phoenicia down the coastal plain.

Thus defined, Galilee consists essentially of an upland area, bordered on all sides save the N by plains—the coastlands, the plain of Esdraelon and the Jordan Rift. It is, in fact, the S end of the mountains of Lebanon, and the land surface falls, in two steps, from N to S across the area. The higher 'step' forms Upper Galilee, much of which is at 1,000 m above sea-level; in NT times it was a forested and thinly inhabited hill-country. The lower 'step' forms Lower Galilee, 450-600 m above sea-level, but falling steeply to more than 180 m below sea-level at the Sea of Galilee.

It is to this area of Lower Galilee that most of the Gospel narrative refers. Well watered by streams flowing from the N mountains, and possessing considerable stretches of fertile land in the limestone basins among its hills, it was an area of

NT Galilee: the scene of Christ's childhood and early ministry.

dense and prosperous settlement. It exported olive oil and cereals, and fish from the lake.

'Outside the main stream of Israelite life in OT times, Galilee came into its own in the NT' (D. Baly, *The Geography of the Bible*, 1957, p. 190). The Roman region was governed successively by Herod the Great (died 4 BC), Herod Antipas and Herod Agrippa. Cut off from Judaea—at least in Jewish eyes—by the territory of Samaria, Galilee nevertheless formed an integral part of 'the land', and the Galileans had, in fact, resisted the Romans even more doggedly than the S Jews. In the time of Christ the relationship between the two groups is well described as having been that of 'England and Scotland soon after the Union' (G. A. Smith, *Historical Geography of the Holy Land*²⁵, 1931, p. 425).

This, then, was the region in which Christ grew up—at Nazareth, in the limestone hills of Lower Galilee. Thanks to its position, it was traversed by several major routeways of the empire, and was therefore far from being a rural backwater. Its agriculture, fisheries and commerce provided him with his cultural background, and are reflected in his parables and teaching. Its people provided him with his first disciples, and its dense scattering of settlements formed their first mission field.

Today, Galilee and the plain of Esdraelon form the core area of N Israel, but its modern inhabitants have the task of rehabilitating an area which has lost much of the prosperity it enjoyed in NT days. Its forests have been largely replaced by *maquis*, the characteristic scrub of the Mediterranean, and many of its towns and villages, places which Christ knew and visited, have disappeared from the map, leaving hardly a trace behind them.

J.H.P.

GALILEE, SEA OF. A lake in the region of Galilee, also referred to, in the OT, as the 'sea of *Chinnereth' (Nu. 34:11) or Chinneroth (Jos. 12:3), and in the NT as the 'lake of Gennesaret' (Lk. 5:1) and the 'Sea of Tiberias' (Jn. 21:1). Its modern Heb. name is Yam Kinneret.

The lake is some 21 km long and up to 11 km broad, and it lies at 211 m below sea-level. The river Jordan flows through it from N to S; its waters are therefore sweet—unlike those of the Dead Sea—and its fisheries (*FISH), so prominent in the NT narrative, were famous throughout the Roman empire and produced a flourishing export trade. On the other hand, the position of the lake, in the depths of the Jordan Rift and surrounded by hills, renders it liable to atmospheric down-draughts and sudden storms.

The lake is bordered by a plain of varying width; in general, the slopes on the E side are abrupt (Mk. 5:13), and are somewhat gentler on the W. To the N and S are the river plains of the Jordan as it enters and leaves the lake.

The shores of the lake were the site of towns—Capernaum, Bethsaida, etc.—where much of Christ's ministry was carried out. In his time they formed a flourishing, and almost continuous, belt of settlement around the lake, and communicated and traded across it with each other. Today, only *Tiberias remains as a town—even the sites of several other former towns are uncertain—and changed patterns of commerce have robbed

the lake of its focal importance in the life of the region.

J.H.P.

GALL. The Hebrews used *rōs* and *m'rōrā* to describe a *plant and its fruit which were extremely bitter. Various translated as 'hemlock' AV, 'poisonous weeds' RSV, NEB (Ho. 10:4), 'poison' (Jb. 20:16; Je. 8:14) and 'venom' (cf. Dt. 32:33), it is frequently associated with the bitter herb wormwood (*Artemisia*) (Dt. 29:18; Je. 9:15; La. 3:19; Am. 6:12). Gall is referred to literally as the yellowish-brown secretion of the liver in Jb. 16:13; 20:14, 25. As a plant it probably refers to the extract of the colocynth gourd fruit (*Citrullus colocynthis*).

Metaphorically it denoted travail (La. 3:5) or any bitter experience (Acts 8:23). The anodyne offered to Christ during his crucifixion (Mt. 27:34; cf. Mk. 15:23) was a diluted wine containing stupefying drugs.

R.K.H.

F.N.H.

GALLIO. Lucius Junius Annaeus (or Annaeanus) Gallio was the son of Seneca the rhetorician and brother of Seneca the philosopher. An inscription at Delphi (*SIG*, 2³, 801; cf. text and discussion by K. Lake, *BC*, 5, pp. 460ff.) makes it virtually certain that he was proconsul of Achaia in AD 52–53, in which office we meet him in Acts 18:12ff. A fixed point for Pauline chronology is thus afforded, even though the precise dates of office are unknown. His brother Seneca writes of him (*Ep. Mor.* 104.1: *Quaest.* 4a, pref. 11), as do several other ancient writers (e.g. Pliny, *NH* 21. 33; Tacitus, *Ann.* 15. 73; Dio Cassius, 61. 35; 62. 25), with little to his discredit. Luke depicts his vigorous refusal to hear a Jewish-sponsored prosecution of Paul, on the ground that no criminal charge was brought. The now proverbial 'Gallio cared for none of those things' (Acts 18:17, AV) denotes less his religious indifference than his connivance at the subsequent outburst of anti-Semitism. The Western text conveys the sense: 'Gallio pretended not to see'. Gallio was executed by Nero's order in AD 65. J.H.H.

GALLOWS (Heb. *ēš*, 'tree'). Found only in the book of Esther (nine times). Haman had a gallows (AVMG, 'tree') made on which to execute Mordecai, but the mode of the intended execution has been much debated. Hanging was not usual in Persia, where the events took place; it is suggested that the Heb. word means 'pole' or 'stake' (which seems likely), and that, following Persian custom, the victim was to be impaled. (*CROSS.) J.D.D.

GAMALIEL (Heb. *gamli'ēl*, 'reward of God'; Gk. *Gamaliēl*). I. Son of Pedahzur, and a 'prince of the children of Manasseh' chosen to help Moses in taking the census in the wilderness (Nu. 1:10; 2:20; 7:54, 59; 10:23).

2. Son of Simon and grandson of Hillel (according to later, but doubtful, tradition). Gamaliel was a doctor of the law and a member of the Sanhedrin. Representing the liberal wing of the *Pharisees, the school of Hillel, as opposed to that of Shammai, he intervened with a reasoned and

GAMALIEL

persuasive speech at the trial of the apostles (Acts 5:33-40).

Paul acknowledged him as his teacher (Acts 22:3), and he was held in such high honour that he was designated 'Rabban' ('our teacher'), a higher title than 'Rabbi' ('my teacher'). See J. Neusner, *The Rabbinic Traditions about the Pharisees before 70*, 1, 1971, pp. 341ff.

The Mishnah (*Sotā* 9. 15) says, 'Since Rabban Gamaliel the Elder died there has been no more reverence for the Law, and purity and abstinence died out at the same time.' As we might expect from this reputation among the Jews, there is no evidence, despite early suggestions (e.g. *Clementine Recognitions* 1. 65), that he ever became a Christian. J.D.D.

GAMES.

I. In the Old Testament

a. Physical sport

In common with their Near Eastern neighbours, the life of the majority of Hebrews left little time or inclination for physical sport. When introduced by Hellenizing Jews in the time of Antiochus Epiphanes (1 Macc. 1:10-14; Jos., *Ant.* 15. 268) and patronized by Jason, the high priest (2 Macc. 4:7-17), the Greek love of sport was considered irreligious. Nevertheless, there can be little doubt that, despite the absence of explicit references, running, throwing and hunting were undertaken on occasions when they were not a necessity. Like the Egyptians and Babylonians, the people of Palestine would have enjoyed contests at weight-lifting and wrestling. Jacob's long wrestling-match may reflect both practised ability at the sport and the recognition of rules precluding holds below the belt (Gn. 32:24-26). The expression 'hip and thigh' (Jdg. 15:8) may be a technical wrestling term, like English 'cross-buttock'. It has been suggested that the group combat at Gibeon was initiated as a wrestling-match (2 Sa. 2:14), wrestling by grasping an opponent's belt being an ancient form of this sport. Archery could be a game of skill aiming at fixed marks (1 Sa. 20:20; Jb. 16:12; La. 3:12), as is shown on Assyrian reliefs, as well as a warlike art.

b. Games of chance

Gaming-boards have been discovered at a number of sites, including Tell el 'Ajjul and Beth-shemesh. Some made of ivory (Megiddo, c. 1350-1150 bc), stone (Gezer, c. 1200 bc) or wood were in 'human' or 'violin' shape pierced with peg-holes for a game of '55 Holes' commonly found in Egypt and Mesopotamia. Draughts was played on boards of twenty or thirty squares made of stone, clay, ebony or ivory and sometimes hollowed at the back to contain the men. Unlike modern western methods of play in these games, moves were made as a result of the throw of a dice (of which an ivory example of the 17th century bc was found at Tell Beit Mirsim), knuckle-bones or casting-sticks. Pyramidal or conical game places and counters have been found, also 'halma' men at Lachish. 'Chinese-type' chess was known in Elam and Babylonia from the 3rd millennium bc and may well have been played in Palestine. Unusual board-games, like those discovered at *Ur, Nineveh and Tell Halaf, Syria (8th century), were played, though the method of play is at present obscure. The Hebrews, with their

neighbours, considered that the lot (*piir*; *DIVINATION) was a means of determining the divine will, and in this way some board-games also had religious significance.

c. Children's games

The young played in the streets (Zc. 8:5), imitating their elders in daily life or at marriages and funerals. The boys may have imitated the Egyptian team-games shown in paintings and a form of tug-of-war, while the girls practised juggling or ball-games, including catch played by teams with one mounted on another's back. Leather-covered balls have been found. Whistles, rattles, model pots, chariots and animals (some with wheels) have been recovered and betray an unchanging taste for toys by the youngest. It is unlikely that all the slings found were used only in the serious business of driving birds from the crops or guarding the flocks from straying. There is no evidence that the figurines or small statues with movable joints found at a number of sites were dolls. It is more likely that they were cult objects. People of all ages were amused by miming, skipping-ropes, whipped tops and hoops.

d. Diversion

Feasting, songs, music, and especially dancing, were the commonest form of relaxation. Opportunity was taken for this at every domestic rejoicing (Je. 31:4), including merry-making at harvest (Jdg. 9:27; 21:21) as well as at such public and state functions as the royal accession (1 Ki. 1:40) or celebration of victory (Ex. 15:20; Jdg. 11:34; 1 Sa. 18:6). Story-telling and the art of propounding riddles was also a highly-esteemed practice (Jdg. 14:12; Ezk. 17:2; 1 Ki. 10:1). (*DANCE.)

II. In the New Testament

Apart from one obscure reference to a children's game (Mt. 11:16-17), and a possible allusion to a chariot race (Phil. 3:13f.), the games mentioned in the NT are the Greek athletic contests. Reference to 1 Macc. 1:10-14; 2 Macc. 4:13-14 will emphasize the Hellenic outlook of the writers who found metaphor in this worthy subject. The festivals were religious in origin and flavour, encouraged discipline, art, health and fair play, and were not without diplomatic usefulness (see Lysias, 33). Surviving odes of Pindar reveal the honour paid the victor in the Pythian, Nemean, Isthmian and above all the Olympic Games.

In the Epistles metaphors are drawn from the Games generally, and from the foot-race and from the chariot race in particular.

In 1 Cor. 9: 24-27 Paul calls attention to the vigorous training of the athlete (a metaphor also used by Epictetus). The athlete is preoccupied not with the immediate token prize of the wreath of wild olive, parsley, pine or laurel, but with the later reward. The Christian is likewise exhorted to strive 'for the mastery', for his reward is, by contrast, an 'incorruptible' crown (cf. 2 Tim. 2:5; 4:8; 1 Pet. 1:4; 5:4). 1 Cor. 9:26 depicts a boxing contest. Here the arms and hands were bound with studded leather, which inflicted grave injury, and the combatant therefore sought to evade rather than to parry—

hence the phrase 'beating the air'. Having begun with the scene of victory, Paul concludes with a picture of failure. He sees himself as the herald calling others to the contest, but himself disqualified from competing. 'Preached' and 'castaway' (1 Cor. 9:27, AV) are unhappy renderings (see RV, RSV). Metaphors drawn from the Games would carry particular weight with the readers of this Epistle, since the Isthmian Games were a Corinthian festival.

In Gal. 2:5; 7; Phil. 2:16; Heb. 12:1-2 the reference is to the foot-race, for which a minimum of clothing was worn. 'Every weight' probably refers to weight shed in preparatory training in order to bring the runner to peak condition for the race. 'The sin which clings so closely' is more clearly a reference to clothing. The 'cloud' is a common metaphor for multitudes. It suggests the runner's blurred vision of the spectators as his eyes are focused on the goal.

The reference in Phil. 3:13-14 is probably to a chariot race. Horse-racing with light chariots was well known to the Greeks, and references go back to Homer and Sophocles. They were also a spectacular feature of the festivals. At the time Paul wrote, they were especially in fashion with the Romans, and Philippi was a Roman colony. We may translate these verses: 'I do not count myself to have done this, but this one thing I do, forgetting those things which are behind, and stretching out to those which lie before, I make for the mark, towards the prize of the upward calling of God in Jesus his Anointed.' Paul pictures himself in the chariot, bent over the curved rail against which the charioteer's knees were pressed, and, with the reins round his body, stretching out over the horses' backs and leaning his weight on the reins. In such intense preoccupation a glance at 'the things behind' would have been fatal. E.M.B.

GARDEN. It was promised that the lives of God's redeemed people would be like a watered garden, ordered and fruitful (Is. 58:11; Je. 31:12; cf. Nu. 24:6).

In Egypt the Hebrews had known richly productive vegetable-gardens (Dt. 11:10; cf. Nu. 11:5; *FOOD). Fed from an irrigation-ditch, or from vessels by hand, a network of little earth channels criss-crossed the vegetable-beds like a chessboard. In New-Kingdom Egypt, M.-F. Moens, *Orientalia Lovanensia Periodica* 15, 1984, pp. 11-53.

In Palestine people cultivated gardens for vegetables ('garden of *herbs', 1 Ki. 21:2; 'what is sown', Is. 61:11), and fruit (Am. 9:14; Je. 29:5, 28; Ct. 4:16). Gardens might be associated with, or even part of, vineyards, olive-groves or orchards (Ec. 2:5; Am. 4:9; cf. 1 Ki. 21:2). Spices and choice plants featured in the gardens of royalty and of the nobility (Ct. 5:1; 6:2, 11 (walnuts); cf. 4:12-16 generally; Ec. 2:5). These and other gardens were walled round (cf. Ct. 4:12) and had to be kept watered, e.g. from a spring or pool (Ct. 4:15; cf. Ec. 2:5-6; contrast Is. 1:30). They may also have sometimes contained a summerhouse (2 Ki. 9:27). The 'king's garden' at Jerusalem was a well-known landmark (2 Ki. 25:4; Je. 39:4; 52:7; Ne. 3:15); and the Persian royal palace is mentioned as having a pleasure-garden (Est. 1:5; 7:7-8). Similarly, Egyptian and Mesopotamian kings kept fine gardens; and a garden once occupied a large court inside the sumptuous palace of the kings of Canaanite Ugarit (14th-13th century BC). For full references

to gardens in Assyria and Babylonia, see in Ebeling, Meissner and Weidner, *Reallexikon der Assyriologie*, 3, 1959, pp. 147-150. For 'Hanging Gardens' of Babylon see D. J. Wiseman, *Nebuchadnezzar and Babylon*, 1991, pp. 55-60, plates 1-II.

Tombs were sometimes situated in gardens (2 Ki. 21:18, 26; Jn. 18:1, 26; 19:41; *GETHESEMANE). A less happy use of gardens was for pagan rites, perhaps linked with the fertility cults of Canaan (Is. 1:29; 65:3; 66:17).

The Garden of *Eden was a symbol of God-created fertility (Gn. 13:10; Is. 51:3, etc.).

K. A. K.

GATH. One of the five principal Philistine cities, and formerly occupied by the Anakim (*ANAK; Jos. 11:22). The gentilic from the name *gat* was *gitti* or *gittim* (Jos. 13:3), and this accounts for the 'Gittite' of the evv. When the Philistines captured the ark and it brought ill fortune to Ashdod it was moved to Gath, where the people were struck with bubonic plague, so it was moved on to Ekron (1 Sa. 5:6-10; 6:17). Gath was famous as the home of *Goliath (1 Sa. 17), whom David killed. David later feigned madness to avoid retribution at the hands of Achish, king of Gath, when fleeing from Saul (1 Sa. 21:10-15), but subsequently took service under Achish, and lived for more than a year in his territory (1 Sa. 27). When David's fortunes revived, and later during Absalom's rebellion, after he had added Gath to his dominions (1 Ch. 18:1), he had Gittite friends in his retinue (2 Sa. 6:10-11; 15:19-21; 18:2) and a Gittite contingent among his mercenaries (2 Sa. 15:18). Another interesting Gittite is mentioned in 2 Sa. 21:20 (= 1 Ch. 20:6). He was very tall and had six digits on each extremity. Though Achish is still spoken of as king of Gath (1 Ki. 2:39-41), the city was probably subservient to David, and evidently continued subject to Judah in the time of Rehoboam, who fortified it (2 Ch. 11:8). It was captured by Hazael of Damascus in the late 9th century (2 Ki. 12:17), and may have regained its independence by the time Uzziah broke down its wall when he campaigned in Philistia (2 Ch. 26:6); soon afterwards Amos describes it as belonging to the Philistines (6:2), so it may have been a Philistine enclave, in loose vassalage, in the territory of Judah. Gath was besieged and conquered by Sargon of Assyria in the late 8th century.

The site has not been identified with certainty. Excavations at Tell el-'Areini some 30 km NE of Gaza failed to support its candidature. Tell esh-Sheri'ah and Tell es-Safi are other possibilities. So too is the adjacent Tell en Nagila or 'Araq el-Menshiyeh, but certainty must await further investigation.

GATH-HEPHER (Heb. *gat-hahēpēr*, 'winepress of digging'). The rendering Gittah-hepher of Jos. 19:13 in the AV arose through a misunderstanding of the *he locale*. A town on the border of Zebulun and Naphtali (Jos. 19:13), the birthplace of the prophet Jonah (2 Ki. 14:25). Identified with Khirbet ez-Zurra' and nearby el-Meshhed, 5 km NE of Nazareth. Ancient and continuous tradition indicated this as the birthplace and tomb of the

GATH-HEPHER

prophet. Jerome in the 4th century AD said that his tomb was about 3 km from Sepphoris, which would coincide with Gath-hepher.

M.A.M.

GAZA (Heb. 'azzā, LXX *Gaza*). One of the five principal Philistine cities. Originally inhabited by the Avvim, driven out by the Caphtorim (*CAPHTOR; Dt. 2:23), it was considered to mark the S limit of Canaan at the point on the coast where it was situated (Gn. 10:19). Joshua conquered it (Jos. 10:41) and found that some Anakim remained there (Jos. 11:21–22); the city was lost to Israel during his lifetime (Jos. 13:3). Judah, to whom it was allotted (Jos. 15:47), recaptured the town (Jdg. 1:18; though some hold that this refers to the same campaign as Jos. 10:41). In the period of the Judges Samson consorted with a harlot of Gaza in connection with which a description of the city gate is given (Jdg. 16:1–3). Israel's hold over Gaza must have been lost again at this period, for when the Philistines finally captured Samson they imprisoned him there, and it was there that he 'made sport' for them, and dislodged the pillars of the house, killing many of them (Jdg. 16:21–31). It has been pointed out that the description of Samson 'making sport' in front of a pillared building with spectators on the roof is reminiscent of some of the features of Cretan civilization, and this is to be expected in view of the origins of the *Philistines. At the time of the Philistine capture of the ark, Gaza with the other cities suffered from bubonic plague and made an offering of an emerald and a mouse of gold to avert it (1 Sa. 6:17).

The city occupied an important position on the trade routes from Egypt to W Asia, and from the 8th century it is frequently mentioned among Assyrian conquests. Tiglath-pileser III captured it (*Ha-az-zu-tu*) in 734 BC, perhaps at the request of Jehoahaz of Judah, the ruler, Hanno, fleeing to Egypt, and Tiglath-pileser set up an image of himself in the palace. Sargon had to repeat the action in 722 BC, for Hanno had returned to Gaza in support of a rebellion led by Hamath. Hanno was taken prisoner to Assyria. The city remained faithful to Assyria, for Sennacherib, when he proceeded against Hezekiah in Jerusalem, gave some of the territory taken from Judah to Šillibel, king of Gaza, and Esarhaddon put a strain on this loyalty when he laid heavy tribute on him and twenty other kings of the Hittite country. In the time of Jeremiah the city was captured by Egypt (Je. 47:1). Gaza was taken by Alexander the Great in 332 BC after a 5-month siege, and finally desolated—as prophesied by Amos (1:6–7), Zephaniah (2:4) and Zechariah (9:5)—by Alexander Jannaeus in 96 BC.

The site of ancient Gaza, Tell Kharubeh (I-Harube), lies in the modern city. Small excavations showed that it was occupied in the Late Bronze and Iron Ages, and pieces of Philistine pottery were found. Various remains show the importance of the place in Hellenistic and Roman times. Gabinius, the proconsul, rebuilt it in 57 BC on a new site to the S of the old, nearer the sea. It was presumably to distinguish the old abandoned site from this that the angel, who wanted Philip to go to the old site, qualified the name Gaza with the phrase 'this is a desert road' (*hautē estin erēmos*, Acts 8:26).

At Tell el-'Aijjul, 6 km SW, Flinders Petrie found

extensive cemeteries and a town that flourished during the 2nd millennium BC. Numerous pieces of gold jewellery were discovered in tombs and buildings of c. 1400 BC. Nearby later burials have been uncovered containing so-called *Philistine clay-coffins.

T.C.M.

A.R.M.

GEBA (Heb. *geba*, 'a hill'). A town belonging to Benjamin, 11 km N of Jerusalem and 5 km from Gibeah, from which it is to be distinguished; cf. Jos 18:24 and 28; Is. 10:29. It was assigned to the Levites under Joshua (Jos. 21:17; 1 Ch. 6:60). It was in the descent from here that Jonathan and his armour-bearer revealed themselves to the Philistines during their daring attack (1 Sa. 14:1ff.). In the days of Asa, king of Judah, it was fortified, and then regarded as the N limit of Judah; it replaced the name of Dan in the saying 'from Dan to Beersheba' (2 Ki. 23:8). It remained prominent after the Exile (Ne. 11:31; 12:29). The modern town of Jeba stands on the same site.

M.A.M.

GEBAL. 1. A Canaanite and Phoenician port whose ruins lie at Jebeil, 40 km N of Beirut. Its name, W Semitic *g'bal*, Akkad. *gubla*, Egyp. *kpn*, means 'hill, bluff'. The Gk. name Byblos may involve a phonetic shift *g-b*, or imply that it was the place where Greeks first saw papyrus (Gk. *byblos*) imported from Egypt as writing material.

Excavations, begun in 1919 by M. Dunand, have revealed a city that flourished from Neolithic times to the Crusades. By the mid-3rd millennium BC it was a centre for exporting cedar wood to Egypt, receiving Egyp. luxury goods in exchange. Strong stone ramparts guarded the city. Inside were temples, houses and tombs. At the end of the 3rd millennium it was sacked, but soon recovered. One temple was devoted to the city's patron goddess (Baalat Gebal), another was a memorial shrine filled with obelisks commemorating the dead, originally probably plastered and inscribed. Dozens of jars containing bronze weapons, jewellery and figures of gods were buried around the temples as offerings. Tombs of Byblian kings were furnished with Egyptian and stone vessels of about 1800 BC. From this time scribes at Byblos, trained to write in Egyptian, seem to have invented a simpler script, the Byblos hieroglyphic, a syllabary of about eighty signs known from texts engraved on stone slabs and copper plates. It may have been here that the alphabet arose (*WRITING). Certainly it was used here fully developed by about 1000 BC, the date of the stone coffin of King Ahiram which bears the longest early alphabetic inscription. Other texts from c. 900 BC show continuing links with Egypt. Byblos declined as the power of Tyre and Sidon grew.

Jos. 13:5 includes Gebal as part of the Promised Land then unconquered, and in fact Israel never ruled it. Solomon hired masons there (1 Ki. 5:18), and its skilled shipbuilders are mentioned in Ezk. 27:9. The Egyptian story of Wen-amun describes the city about 1100 BC (*ANET*, pp. 25–29).

2. A mountain region in Transjordan whose inhabitants allied with Israel's other neighbours against her (Ps. 83:7).

BIBLIOGRAPHY. M. Dunand, *Fouilles de Byblos*, 1937- : N. Jidejian, *Byblos through the Ages*, 1968. A.R.M.

GEBER. An Israelite prince, the son of Uri, who is mentioned, in what is perhaps a historical note to the list of Solomon's administrative districts, as the prefect of the whole of Transjordan ('the land of Gilead'; 1 Ki. 4:19) before Solomon divided it between his 6th and 7th districts, over the former of which he set Ben-geber (1 Ki. 4:13), possibly Geber's son.

BIBLIOGRAPHY. T. N. D. Mettinger, *Solomonic State Officials*, 1971, pp. 121-122. T.C.M.

GEDALIAH (Heb. *g'dalyá* or *g'dalyāhū*, 'Yahweh is great'). 1. Son of Ahikam, grandson of Shaphan, he was appointed chief minister and governor of Judah by Nebuchadrezzar II in 587 BC (2 Ki. 25:22). With Jeremiah the prophet he was entrusted with the care of some royal princesses and those persons remaining after the Babylonian war (Je. 41:16; 43:6). He made Mizpah his residence, and there he was joined by Jeremiah (40:6) and by many officers and men who had escaped from the enemy. These were granted asylum on condition that they maintained the peace (Je. 40:7-12). However, Baalis, king of Ammon, plotted against him and provoked a refugee officer, Ishmael, to assassinate Gedaliah (2 Ki. 25:25; Je. 41:1-3). Fear of possible Babylonian reprisals led more Jews to emigrate to Egypt, despite Jeremiah's warning (Je. 42). The Jewish fast on the third of Tishri commemorates the death of Gedaliah (Zc. 7:5; 8:19). A seal impression inscribed 'Belonging to Gedaliah who is over the House' found at Lachish almost certainly refers to this person.

Scarab-shaped seal impression, inscribed lgdlyhw 'sr 'l hbyt, 'belonging to Gedaliah who is over the house'. This may well be the Gedaliah who was made governor of Judah by the Babylonians in 587 BC (2 Ki. 25:22). Lachish, 6th cent. BC

2. Son of Jeduthun, instrumentalist leader of the levitical choir (1 Ch. 25:3, 9). 3. A priest married to a foreign woman in the time of Ezra (Ezr. 10:18). 4. Son of Pashhur, a leading citizen of Jerusalem and opponent of Jeremiah (Je. 38:1, 4-6). 5. Grandfather of the prophet Zephaniah and grandson of Hezekiah (Zp. 1:1). D.J.W.

GEDER. S Canaanite town (Jos. 12:13). LXX (B) reads *asei*, and other minuscules suggest 's' as second letter; *Goshen* may be the correct reading. Y. Aharoni, *LOB*, p. 231, suggests Gerar. J.D.D.

GEDERAH (Heb. *g'dērāh*). 1. In the Shephelah, Jos. 15:36; probably Kh. Judraya (M. Noth, *Josua*, *ad loc.*) on the N side of the Vale of Elah, opposite Soco. Kh. Jedireh, W of Latrun (L. Grollenberg), does not suit the context. 2. The 'Potteries' of the Monarchy, 1 Ch. 4:23 (AV 'hedges'); perhaps Tell ej-Judeideh N of the Mareshah valley (W. F. Albright, *JPOS* 5, 1925, pp. 50ff.), where a large quantity of stamped jar-handles has been found. 3. In Benjamin, 1 Ch. 12:4; possibly Judeira, NE of Gibeon, or Kh. Judeira, 10 km farther W. J.P.U.L.

GEDEROTH (Heb. *g'dērōt*). A town in the Lachish district of Judah, Jos. 15:41; 2 Ch. 28:18. The area of Qatra and modern Gadera, SE of Jabneel (F.-M. Abel, L. Grollenberg) is too far W and out of context (*GTT*, p. 147; M. Noth, *Josua*², p. 95). J.P.U.L.

GEDEROTHAIM (Heb. *g'dērōtāim*). May be a variant of *Gederah, Jos. 15:36; the count is correct without it; LXX ('its penfolds') read *gīdrōtēhāh*. J.P.U.L.

GEDOR (Heb. *g'dōr*). 1. A town in the hills of Judah (Jos. 15:58, and perhaps 1 Ch. 4:4); Kh. Jedur, 2 km W of Beit Ummar and just off the central ridge; possibly the Beth-gader of 1 Ch. 2:51 (*GTT*, p. 155). 2. In the Negeb, near Soco and Zanoah. The 'entrance of Gedor' (1 Ch. 4:39) may be the Nahal Hebron, though LXX has 'Gerar' (*LOB*, p. 388), while the context may indicate an area further SE. 3. In Benjamin, 1 Ch. 12:7; perhaps *Gederah (3). 4. A personal Benjamite name, 1 Ch. 8:31 = 9:37. J.P.U.L.

GEHAZI. The servant of Elisha. He may be the unnamed 'servitor' of 2 Ki. 4:43 and the 'servant' of 2 Ki. 6:15, but he is specifically named on only three occasions.

In 2 Ki. 4 he suggests to Elisha that the Shunammite should be rewarded with the promise of a son, and later takes Elisha's staff and lays it upon the dead child in the vain hope of restoring his life.

In 2 Ki. 5, after Elisha has refused to take a present from Naaman when his leprosy had been cured, Gehazi obtains gifts for himself under false pretences. As a punishment he himself is struck down with leprosy. 2 Ki. 5:27 should be compared with the leprosy regulations of Lv. 13:12-13. When this particular form of skin disease, whatever it may have been, turned the whole skin white, the victim was 'clean', and was not segregated. Hence Gehazi was able to continue as Elisha's servant.

In 2 Ki. 8:1-6 Gehazi relates to King Jehoram the story of how the Shunammite's son was restored to life. While he is talking the woman herself comes in to appeal to the king for the restoration of her property. J.S.W.

GELIOTH. Perhaps means 'circuit, circle' (of stones), cf. *Gilgal. Only named in Jos. 18:17, as on the border of Judah and Benjamin, in terms almost identical with those used of Gilgal (Jos. 15:7). As Gelieth and Gilgal have more or less the

GELILOTH

same meaning, both derived from Heb. *gālal*, 'to roll', they may be variant-names for one and the same place. J. Simons, *GTT*, p. 173, § 326, thinks of Geliloth as a small region near Jericho. Y. Aharoni, *LOB*, p. 235, sought it near Tal'at ed-Damm, S of the Wadi Qilt.

K. A. K.

GENEALOGY.

I. In the Old Testament

a. General

A genealogy in the OT sense is a list of names indicating the ancestors or descendants of an individual or individuals, or simply a registration of the names of people concerned in some situation. The word 'genealogy' in evv renders Heb. *yahaš*, which occurs only in Ne. 7:5, *sēper hayyahaš*, 'book of the genealogy', referring to a register of those who returned to Jerusalem with Sheshbazzar. Clearly 'genealogy' here is not used so strictly as in modern English where it is an account of descent from an ancestor by the enumeration of intermediate persons, though this is frequently what is intended. The genealogies of OT are found chiefly in the Pentateuch, and in Ezra-Nehemiah and Chronicles, and it is exclusively in the latter three books that the verbal form of *yahaš* occurs, always in the intensive reflexive stem (*hiṭyahēš*), 'enrol oneself by genealogy' (Ezr. 2:62; 8:1, 3; Ne. 7:5, 64; 1 Ch. 4:33; 5:1, 7, 17; 7:5, 7, 9, 40; 9:1, 22; 2 Ch. 12:15; 31:16-19). The term *tōlēdōt*, 'generations', is used in Genesis more or less in the sense of 'genealogical history' (*GENERATION).

(i) *Types of genealogies.* The genealogies given in the scriptural record range from a bare list of names as in 1 Ch. 1:1, through the most common type which links the names by means of a standard formula and inserts additional information under some but not all (e.g. Gn. 5 and cf. v. 24), to the fully expanded historical account which is based on a framework of names, as in the books of Kings.

Genealogies of two forms are found in the OT. 'Ascending' genealogies commonly have a linking formula, 'x the son (*bēn*) of y' (1 Ch. 6:33-43; Ezr. 7:1-5); 'descending' genealogies often have 'x begat (*yālad*) y' (Gn. 5; Ru. 4:18-23; osv translates 'became the father of'). The descending type of genealogy may include much information as to the age and actions of the individual links, whereas the ascending type is more commonly used to trace the ancestry of an individual back to some important figure of the past, when the doings of the intermediate figures do not affect the issue.

(ii) *Genealogies as sources for chronology.* That some genealogies in the Bible omit some generations is demonstrable (compare Mt. 1:1 with 1:2-17). For instance, the list of Aaron's descendants in Ezr. 7:1-5 omits six names which are given in 1 Ch. 6:3-14. (See also *CHRONOLOGY OF THE OLD TESTAMENT, III.a.) This is readily understandable from the formulae, for the word *bēn* could mean not only son but also 'grandson' and 'descendant', and in like manner it is probable that the verb *yālad* could mean not only 'bear' in the immediate physical sense but also 'become the ancestor of' (the noun *yeled* from this verb has the meaning of descendant in Is. 29:23). Factors such as the inclusion of the age of each member at the birth of his descendant and the number of years he lived after this

(Gn. 5:6), need not militate against an interpretation of these genealogies as being abridgments. As Green and Warfield have suggested, the purpose of mentioning the years of age may have been to emphasize the mortality in spite of vigorous longevity of these Patriarchs, thus bearing out one result of the Fall.

(iii) *Ancient Near Eastern usage.* Genealogies were a standard feature of ancient historical tradition. Naturally, royal family trees furnish our principal examples, but records of lawsuits over land ownership show that many other people maintained such knowledge. Assyrian scribes of the 1st millennium BC listed kings of Assyria from remote times, with a line almost unbroken spanning 1,000 years (*ANET*², pp. 564-566). The relationship of one to another was noted, and the length of reign of each. Heading the list are the names of 'seventeen kings who lived in tents'; long considered legendary, personifications of tribes, or fictitious, they now seem to have an historical basis with the discovery at *Ebla of a treaty naming the first of them. From the 17th century BC survives a list of kings of Babylon, their ancestors and predecessors, sharing some names with the early part of the Assyrian King List. Earlier still is the Sumerian King List, completed about 1800 BC, which names kings of S Babylonia reaching back to the Flood, and before (*ANET*, pp. 265-266). Hittite, Ugaritic and Egyptian scribes have also left us king lists of varying lengths and purposes.

Some of the particular characteristics of biblical genealogies may also be observed in the texts. The lists of names are interspersed with historical or personal notes, comparable with those in Gn. 4:21, 23; 36:24; 1 Ch. 5:9-10, etc. The Sumerian King List has one Mes-kiaga-nuna, king of Ur, as son of Mes-ane-pada, but contemporary records suggest he was in fact the grandson of Mes-ane-pada, his father being one A-ane-pada. Either a scribe has omitted the father's name by error because it was so like the grandfather's, or 'son' is used in a wider sense than in English. The wider usage was common in Babylonian, as in all Semitic languages, for 'member of a specific group', and from 1500 BC onwards, *māru* ('son') was used in the sense 'descendant of'. An interesting case is found in the Black Obelisk of Shalmaneser III which refers to *Jehu as 'son (*mār*) of Omri' when in fact he was not related, but simply ruled the same state. A remarkable Egyptian example is a brief text in which King Tirhakah (c. 670 BC) honours his 'father' Sesostrius III (c. 1870 BC) who lived some 1200 years before him. Similarly, King Abdul Aziz of Saudi Arabia was called Ibn (son of) Saud, though he was really the son of AbderRahman, and the Saud whose name he bore died in 1724. The use of relationship words, of family and dynastic names, and many other factors have to be borne in mind when interpreting any ancient genealogies.

There is thus no reason to suppose that all the genealogies in the Bible purport to be complete, since their purpose was more the establishment of descent from some particular ancestor or ancestors, a purpose unaffected by the omission of names, than the reckoning of exact chronologies (*CHRONOLOGY). It is wrong, too, to dismiss any part of them as legendary, personifications of tribes or deities, or pure fiction in the light of growing evidence that other similar records have factual bases.

b. Old Testament genealogies

The principal genealogical lists of the OT are:

(i) Adam to Noah (Gn. 5; I Ch. 1:1-4). Ten names, each given in the formula 'A lived x years and begat (*yālad*) B, and A lived after he begat B y years and begat sons and daughters, and all the days of A were z years, and he died'. The figures for x and y vary to some extent between the *MT*, the Samaritan Pentateuch (SP) and the *LXX*, though there is a considerable measure of agreement in the totals (z), as follows: Adam, 930; Seth, 912; Enos, 905; Cainan, 910; Mahalaleel, 895; Jared, 962 (*MT*, *LXX*), 847 (SP); Enoch, 365; Methuselah, 969 (*MT*, *LXX*), 720 (SP); Lamech, 777 (*MT*), 635 (SP), 753 (*LXX*); Noah's age at the Flood, 600. It is probable that this list is abridged, so that it cannot safely be used as a basis for *chronology. Reminiscent of this genealogy is the first part of the Sumerian King List, which names ten 'great men' who ruled before the Flood. The years of reign for these range in one recension as high as 43,200.

(ii) The descendants of Cain (Gn. 4:17-22).

(iii) The descendants of Noah (Gn. 10; I Ch. 1:1-23). The list of the nations who were descended from Shem, Ham and Japheth (*NATIONS, TABLE OF).

(iv) Shem to Abraham (Gn. 11:10-26; I Ch. 1:24-27). Ten names. A genealogy couched in the same terms as (i) above, except that, while the Samaritan Pentateuch gives the total years (z), *MT* and *LXX* give only the figures x and y . The totals given by the Samaritan Pentateuch and worked out for *MT* and *LXX* are as follows, the *MT* and Samaritan Pentateuch agreeing in most cases against the *LXX*. Shem, 600; Arpachshad, 438 (*MT*, SP), 565 (*LXX*); *LXX* here inserts Kainan, 460, omitted in *MT* and SP; Shelah, 433 (*MT*, SP), 460 (*LXX*); Eber, 464 (*MT*), 404 (SP), 504 (*LXX*); Peleg, 239 (*MT*, SP), 339 (*LXX*); Reu, 239 (*MT*, SP), 339 (*LXX*); Serug, 230 (*MT*, SP), 330 (*LXX*); Nahor, 148 (*MT*, SP), 208 (*LXX*); Terah, 205 (*MT*, *LXX*), 145 (SP); Abraham.

(v) The descendants of Abraham by Keturah (Gn. 25:1-4; I Ch. 1:32-33). (*ARABIA.)

(vi) The descendants of Nahor (Gn. 22:20-24).

(vii) The descendants of Lot (Gn. 19:37-38).

(viii) The descendants of Ishmael (Gn. 25:12-18; I Ch. 1:29-31).

(ix) The descendants of Esau (Gn. 36; I Ch. 1:35-54).

(x) The descendants of Israel (Jacob; Gn. 46), 1-6 by Leah; 7-8 by Bilhah; 9-10 by Zilpah; and 11-12 by Rachel.

1. Reuben (Gn. 46:9; Ex. 6:14; Nu. 26:5-11; I Ch. 5:1-10).

2. Simeon (Gn. 46:10; Ex. 6:15; Nu. 26:12-14; I Ch. 4:24-43).

3. Levi (Gn. 46:11; Ex. 6:16-26; I Ch. 6:1-53). This was an important genealogy, since the hereditary priesthood resided in this lineage and the high priests were descended from Aaron, whose own genealogy is given in condensed form in Ex. 6:16-22. The descent of Samuel from Levi is given in I Ch. 6 and that of Ezra from Aaron in Ezr. 7:1-5. See also (xi) below.

4. Judah (Gn. 46:12; Nu. 26:19-22; I Ch. 2:3-4:22; 9:4). This was the lineage of David (I Ch. 2-3), from whom the line of kings from Solomon to Josiah was descended (I Ch. 3:10-15).

5. Issachar (Gn. 46:13; Nu. 26:23-25; I Ch. 7:1-5).

6. Zebulun (Gn. 46:14; Nu. 26:26-27).

7. Dan (Gn. 46:23; Nu. 26:42-43).

8. Naphtali (Gn. 46:24; Nu. 26:48-50; I Ch. 7:13).

9. Gad (Gn. 46:16; Nu. 26:15-18; I Ch. 5:11-17).

10. Asher (Gn. 46:17; Nu. 26:44-47; I Ch. 7:30-40).

11. Joseph (Gn. 46:20; Nu. 26:28-37; I Ch. 7:14-27), through his two sons, Ephraim and Manasseh, who were accepted by Jacob as equivalent to his own sons (Gn. 48:5, 12; *ADoption).

12. Benjamin (Gn. 46:21; Nu. 26:38-41; I Ch. 7:6-12; 8:1-40; 9:7, 35-44). This was the lineage of Saul (I Ch. 8-9).

In addition to these lists, which establish genealogical relationships, there are a number of other registers of individuals in one context or another, mentioned in connection with certain periods of OT history.

(xi) Registers of Levites (see also (x) 3 above). Of the time of David (I Ch. 15:5-24), Jehoshaphat (2 Ch. 17:8), Hezekiah (2 Ch. 29:12-14; 31:12-17), Josiah (2 Ch. 34:8-13; 35:8-9), Zerubbabel and Joiakim (Ne. 12:1-24), Nehemiah (Ne. 10:2-13).

(xii) Registers of the reign of David. His recruits at Ziklag (I Ch. 12:3-13, 20), his mighty men (2 Sa. 23:8-39; I Ch. 11:11-47), his officers over the tribes (I Ch. 27:16-22) and his other administrative officers (I Ch. 27:25-31).

(xiii) Registers of families and individuals of the time of the return and the labours of Ezra and Nehemiah. Those who returned with Zerubbabel (Ne. 7:7-63; Ezr. 2:2-61), those who returned with Ezra (Ezr. 8:2-14), the builders of the wall of Jerusalem (Ne. 3:1-32), those who had foreign wives (Ezr. 10:18-43), those who signed the covenant (Ne. 10:1-27), those resident in Jerusalem (Ne. 11:4-19; I Ch. 9:3-17).

II. In the New Testament

There are two genealogies in the NT (Mt. 1:1-17; Lk. 3:23-38), both of which give the human ancestry of Jesus the Messiah (*GENEALOGY OF JESUS CHRIST).

Apart from the word *genesis* in Mt. 1:1, which is rendered 'genealogy' by *RSV*, the *EVV* translate the term *genealogia* thus in I Tim. 1:4 and Tit. 3:9. The corresponding verb, *genealogēō*, 'to trace ancestry', occurs in Heb. 7:6 in reference to Melchizedek, who did not count his ancestry from Levi. In the passages in Timothy and Titus the word 'genealogies' is used in a depreciatory sense, in Timothy in conjunction with the word *mythos*, 'fable', and in Titus together with 'foolish questions'. It is possible that in speaking of these Paul had in mind either the sort of mythical histories based on the OT which are found in Jewish apocryphal books such as the book of *Jubilees*, or else the family-trees of aeons found in Gnostic literature. They obviously do not refer to the genealogies of the OT.

T.C.M.
A.R.M.

GENEALOGY OF JESUS CHRIST. Twice in the NT we are presented with the detailed genealogy of Christ. The first Evangelist introduces his record, in language which echoes Genesis, as 'the book of the genealogy of Jesus Christ, the son of David, the son of Abraham', and then traces the line of descent through forty-two generations from Abraham to Christ (Mt. 1:1-17). The third Evangelist, immediately after his account of the baptism of Christ, says that 'Jesus, when he began his ministry, was about thirty years of age, being the son (as was supposed) of Joseph', and then goes back from Joseph through more than seventy generations to 'Adam, the son of God' (Lk. 3:23-38).

We need not examine the genealogy from Adam to Abraham, which is not given in Matthew, and which Luke patently derived—perhaps *via* 1 Ch. 1:1-4, 24-27—from Gn. 5:3-32; 11:10-26 (following LXX, since in v. 36 he inserts Cainan between Arphaxad and Shelah). From Abraham to David the two lists are practically identical; the line from Judah to David is based on 1 Ch. 2:4-15 (*cf.* Ru. 4:18-22). Mt. 1:5 adds the information that the mother of Boaz was Rahab (presumably Rahab of Jericho). From David to Joseph the lists diverge, for Matthew traces the line through David's son Solomon and the successive kings of Judah as far as Jehoiachin (Jeconiah), whereas Luke traces it through Nathan, another son of David by Bathsheba (1 Ch. 3:5, where she is called Bathshua), and not through the royal line. In Matthew Jehoiachin is followed by Shealtiel and his son Zerubbabel, and these two names appear also in Luke (3:27), but after this momentary convergence there is no further agreement between the lists until we reach Joseph.

It is most improbable that the names in either list which have no OT attestation were simply invented by the Evangelists or their sources. But if we take the lists seriously, the relation between them constitutes a problem. Both make Jesus a descendant of David; his Davidic descent was a matter of common repute during his ministry (Mk. 10:47f.) and is attested by the apostolic witness (Rom. 1:3; so Heb. 7:14 assumes that everyone knows that Jesus belonged to the tribe of Judah). But both lists trace his Davidic descent through Joseph, although they appear in the two Gospels which make it plain that Joseph, while Jesus' father *de iure*, was not his father *de facto*. The Lucan genealogy acknowledges this by the parenthetic clause 'as was supposed' in Lk. 3:23; similarly, the best attested text of Mt. 1:16 says that Joseph was 'the husband of Mary, of whom Jesus was born, who is called Christ'. Even with the Sinaitic Syr. reading of Mt. 1:16 ('Joseph ... begat Jesus ...') the biological sense of 'begat' is excluded by the following narrative (vv. 18-25), and it is in any case probable that in other parts of this genealogy too 'begat' implies legal succession rather than actual parentage. Matthew's line is probably intended to trace the succession to David's throne, even where it did not run through the direct line from father to son.

In that case it might be expected that Luke, on the contrary, would endeavour to present the line of biological descent. It has accordingly been held

by several commentators that the Lucan genealogy traces Jesus' lineage actually, though not explicitly, through Mary, his mother. It is possible to infer from Gabriel's words in Lk. 1:32 that Mary was a descendant of David; although these words may be explained by the reference to 'Joseph, of the house of David' in v. 27, while Mary in v. 36 is a kinswoman of Elizabeth, said to be 'of the daughters of Aaron' (v. 5). No help should be looked for in the Talmudic reference (TJ *Hagigah* 77d) to one Miriam, a daughter of Eli (*cf.* Heli, Lk. 3:23), for this Miriam has no connection with the mother of Jesus. In any case, it is strange that, if the Lucan list intended to trace the genealogy through Mary, this was not stated expressly. More probably both lists intend to trace the genealogy through Joseph. If Matthan, Joseph's grandfather in Mt. 1:15, is the same as Matthat, his grandfather in Lk. 3:24, then 'we should need only to suppose that Jacob [Joseph's father in Mt.] died without issue, so that his nephew, the son of his brother Heli [Joseph's father in Lk.] would become his heir' (J. G. Machen, *The Virgin Birth of Christ*, 1932, p. 208). As for the propriety of tracing Jesus' lineage through Joseph, 'Joseph was the heir of David, and the child, though born without his agency, was born in a real sense "to him"' (*ibid.*, p. 187). A more complicated account, involving levirate marriage, was given by Julius Africanus (c. AD 230), on the basis of a tradition allegedly preserved in the holy family (Eus., *EH* 1. 7).

If Nathan in Zc. 12:12 is David's son of that name, his house evidently had some special standing in Israel, and there might then be more significance than meets the eye in the fact that Jesus is made a descendant of his in Lk. 3:31.

The Lucan list enumerates twenty or twenty-one generations between David and the Babylonian Exile, and as many between the Exile and Jesus, whereas the Matthaean list enumerates only fourteen generations for each of these periods. But several generations are demonstrably omitted from the Matthaean list in the period from David to the Exile, and others may be omitted in the later period. 'Rhesa' in Lk. 3:27 may originally have been not an individual name, but Aram. *rēšā* ('prince'), the title of Zerubbabel (in which case the post-exilic section of the Lucan list may be derived from an Aramaic document).

The main purpose of the two lists is to establish Jesus' claim to be the Son of David, and more generally to emphasize his solidarity with mankind and his close relation with all that had gone before. Christ and the new covenant are securely linked to the age of the old covenant. Marcion, who wished to sever all the links binding Christianity to the OT, knew what he was about when he cut the genealogy out of his edition of Luke.

GENERATION. A word used in the evv to translate various biblical terms.

1. Heb. *tōl' dōt*. A word occurring ten times in Genesis (2:4; 5:1; 6:9; 10:1; 11:10, 27; 25:12, 19; 36:1; 37:2) in such a way as to divide it into eleven sections, each being styled 'the generations of ...' It also occurs in Gn. 10:32; 25:13; 36:9; Ex. 6:16, 19; Nu. 1 many times; 3:1; Ru. 4:18; 1 Ch. 1:29; 5:7;

7:2, 4, 9; 8:28; 9:9, 34; 26:31. In Ex. 28:10 the EVV translate it 'birth'. The word is formed from *yālad*, 'to bear, beget', and this probably accounts for the E.T. 'generation'. From its OT usage, however, it is apparent that the word means 'history' or 'genealogical history', of a family or the like. In the LXX the word is often rendered by Gk. *genesis* (see 3, below), and the expression *biblos geneaeōs Iēsou Christou*, 'book of the genealogy of Jesus Christ' in Mt. 1:1, closely reflects *sēper tōl'dōt 'ādām*, 'book of the genealogy of Adam', in Gn. 5:1.

2. Heb. *dōr*. A word occurring frequently, which corresponds in general to the word 'generation' as commonly understood in Eng. It can refer to a generation, as a period in the past (Is. 51:9) or future (Ex. 3:15), or to the men of a generation (Ex. 1:6). It is the word used in Gn. 17:7, 9, where God's covenant with Abraham and his descendants is announced. The word is also used to refer to a class of men, as in 'crooked generations' (Dt. 32:5) or 'generation of the righteous' (Ps. 14:5). The Aram. cognate, *dār*, occurs in Dn. 4:3, 34. Akkad. *duru* is used of a generation as grandfather to grandson spanning about 70 years.

3. Gk. *genesis*. Used chiefly in the LXX for *tōl'dōt*, and employed in the same sense in Mt. 1:1 (see 1, above). In the other NT occurrences, however, it is used in the sense of 'birth' (Mt. 1:18; Lk. 1:14; Jas. 1:23, 'his natural face', lit. 'face of his birth'; Jas. 3:6, 'cycle of nature', lit. 'course of birth').

4. Gk. *genēa*. Used chiefly in the LXX to translate *dōr*, and like it including among its meanings much the same range as Eng. 'generation'. It is used of the people living at a given time (Mt. 11:16), and, by extension, of the time itself (Lk. 1:50). It is also evidently used to designate the components of a genealogy (Mt. 1:17).

5. Gk. *genēma*, 'child' and 'offspring', occurring in Mt. 3:7; 12:34; 23:33; Lk. 3:7, in each case in the phrase 'brood of vipers', *av* 'generation of vipers'.

6. Gk. *genos*, 'race'. *av* translates the phrase *genos eklekton* in 1 Pet. 2:9 'chosen generation', but *rv* 'elect race' or *rsv* 'chosen race' is to be preferred.

It is sometimes held that a period of 40 years, the duration, for instance, of the wilderness wanderings, is to be taken as a round *number indicating a generation.

GENESIS, BOOK OF.

I. Outline of contents

a. *Pre-history: the creation record* (1:1-2:3)

b. *The story of man* (2:4-11:26)

His creation and Fall (2:4-3:24); his increasing numbers (4:1-6:8); the judgment of the Flood (6:9-9:29); the rise of nations (10:1-11:26).

c. *The story of Abraham* (11:27-23:20)

His entry into the promised land (11:27-14:24); the covenant and the promise (15:1-18:15); Sodom and Gomorrah (18:16-19:38); Sarah, Isaac and Ishmael (20:1-23:20).

d. *The story of Isaac* (24:1-26:35)

His marriage with Rebekah (24:1-67); death of his father and birth of his children (25:1-34); the promise renewed at Gerar (26:1-35).

e. *The story of Jacob* (27:1-36:43)

His obtaining of the blessing by deceit (27:1-46); his flight to Harran, and renewal of the promise at Bethel (28:1-22); his life and marriages in Harran (29:1-31:16); his return to the promised land, and renewal of the promise at Bethel (31:17-35:29); Esau's line (36:1-43).

f. *The story of Joseph* (37:1-50:26)

Joseph sold into Egypt (37:1-36); Judah and his daughter-in-law (38:1-30); Joseph in Egypt (39:1-45:28); Joseph's father and brothers in Egypt (46:1-47:31); Jacob's blessing gives priority to Ephraim and to Judah (48:1-49:28); deaths of Jacob and Joseph (49:29-50:26).

The book of Genesis closes with the people of Israel already in Egypt. They were the elect family among all mankind for whom God purposed to display the mighty acts of redemption outlined in Exodus. Among this people the tribe of Judah has already emerged as of special significance (49:9-12).

A technical analysis may also be based on the 10 occurrences of the phrase (or its equivalent), 'These are the generations of . . .'. *'Generations' (Heb. *tōl'dōt*) means 'begettings' or 'genealogical records'. This phrase is used with reference to the heavens and the earth (2:4); Adam (5:1); Noah (6:9); the sons of Noah (10:1); Shem (11:10); Terah (11:27); Ishmael (25:12); Isaac (25:19); Esau (36:1); Jacob (37:2).

II. Authorship

For a discussion of the authorship of the Pentateuch, see *PENTATEUCH. Concerning the authorship of Genesis in particular, there is nothing in the book to indicate its author. There are two opinions, though there are variants of each: (a) Mosaic authorship, (b) non-Mosaic authorship.

a. Mosaic authorship

The education that Moses received at pharaoh's court would have enabled him to read and write (Ex. 24:4; Dt. 31:9, etc.), and he would obviously be anxious to preserve the records that had come down. This means that Moses was not so much the author as the editor and compiler of Genesis. Family records had been handed down either orally or in written form, and Moses brought these together, editing and translating where necessary. The creation story in Gn. 1 may have been received as a direct revelation from God, since Moses certainly had the experience of immediate contact with God (e.g. Ex. 33:11; Dt. 34:10). Accordingly, we may legitimately look for documents or for orally transmitted stories in Genesis, and, if we use some recent terminology, we may speak of Moses as the one who faithfully set down what had come to him from past generations.

If we allow for a few later 'footnotes' added by copyists up to the time of the Monarchy to explain points for contemporary readers (e.g. 12:6; 13:7; 14:17, and parts of 36:9-43), there is nothing that need be dated after the time of Moses. While the proper interpretation of Ex. 6:3 does not exclude some use of the name Yahweh in Genesis, it would be perfectly understandable if Moses sometimes

GENESIS, BOOK OF

substituted the covenant name of his own day for the covenant name 'El Shaddai (God Almighty) of patriarchal times, in order to remind his readers that this was the same God as the God of Sinai.

For this section, see E. J. Young, *IOT*, 1949, pp. 51ff.

b. *Non-Mosaic authorship*

There is no one theory here that commands general acceptance. Since the days of Jean Astruc, in the 18th century, scholars have looked for various 'documents' in the Pentateuch. These for Genesis are J (which uses Yahweh for the divine name), E (which uses Elohim for the divine name) and P (which is concerned chiefly with religious matters). Early forms of this theory were extremely radical and denied historicity to a great deal in Genesis. More recently it has been argued that the 'documents' grew by the collection of ancient material until they reached their final shape; J in about the 10th or 9th century BC, E a little later and P in post-exilic times. Historicity is not necessarily denied in the more moderate forms of this theory.

More recently the 'documentary' theory has been abandoned by some who deny that formal documents ever existed. Scholars of this school speak of 'cycles of tradition' which grew up in various areas, chiefly with a religious interest, e.g. Ex. 1-12 is quoted as a 'cycle of tradition' that has the Passover event as its focal point. Some time later editors collected these materials and cast them into their present shape. For the most part the material was in oral form before collection. Again there is no necessary denial of historicity in this view, although some writers do deny exact historicity, but admit a 'general historicity'. This 'tradition history' school thinks in terms of the development of the traditions around central events which had significance for the religious life of Israel and found expression in their religious rituals and liturgies.

It is not possible to say in general conclusion that any one school today has acceptance by all scholars. The exact origin of Genesis remains something of a mystery.

III. The place of Genesis in the Bible

Genesis is the Book of Beginnings, the great introduction to the drama of redemption. Gn. 1-11 may be regarded as the prologue to the drama, whose first act begins at ch. 12 with the introduction of Abraham. At the other end of the drama the book of Revelation is the epilogue.

The prologue is cast in universal terms. God made all things (ch. 1). In particular, he made man, who became a rebel and a sinner (chs. 2-3). Sin became universal (ch. 4), and being rebellion against God is always under divine judgment, exemplified in the story of the Flood (chs. 6-9). Even after God had demonstrated his displeasure by an act of judgment in the Flood, man returned to his rebellion (ch. 11). Yet always God gave evidences of grace and mercy. Adam and Eve were cast out, but not destroyed (ch. 3); Cain was driven out but 'marked' by God (ch. 4); mankind was overwhelmed by the Flood but not obliterated, for a remnant was saved (chs. 6-9); man was scattered but allowed to live on (ch. 11).

That is the prologue which paints the background for the drama which is about to develop. What was God's answer to the universal, persistent sin of man? As the drama proper opens in Gn. 12

we meet Abraham, the first stage in God's answer. He would call out an elect people, from whom in due course would come the Redeemer. That people would proclaim the message of redemption to men everywhere. Genesis tells only the beginning of the story up to the time of Joseph, giving the setting for God's mighty act of deliverance from Egypt, pattern of the greater deliverance yet to be achieved.

IV. Genesis and historicity

It is extremely difficult to obtain independent evidence as to the historicity of Genesis, since many of the narratives have no parallel in non-biblical literature. This is especially difficult for Gn. 1-11, though easier for Gn. 12-50. It should always be remembered that much in the Bible is beyond scientific investigation, but notably those areas which touch on faith and personal relations. The areas on which one might ask for evidence in Genesis may be summarized as follows:

a. *The creation* (*CREATION)

b. *The origin of man*

The Bible asserts that God made man. It does not allow that there was any other source for man's origin. It is not possible, however, to discover from Genesis precisely how God did this. Scientifically, the origin of man is still obscure, and neither archaeology nor anthropology can give a final answer as to the time, place or means of man's origin. It is safest for the Christian to be cautious about the subject, to be content to assert with Genesis that, however it happened, God lay behind the process, and to be content to await further evidence before rushing to hasty conclusions (*MAN).

c. *The Flood*

There is no final evidence here either as to the time, the extent or the cause. There were certainly extensive floods in the area from which the Patriarchs came, and the ancient Sumerians had a detailed account of a great flood in the ancient world. There are no serious reasons, however, for accepting the suggestion of Sir Leonard Woolley that the flood at Ur, which left a deep deposit of silt revealed by his excavation, was in fact the result of the Bible *Flood.

d. *Patriarchal narratives*

It is possible today to read the patriarchal narratives against the background of the social, political and cultural state of the ancient Near East in the period 2000-1500 BC. While it is not possible to date the events in Genesis, it is true to say that the Bible reflects the life of certain areas of Mesopotamia during these centuries. (*PATRIARCHAL AGE.) H. H. Rowley, 'Recent Discoveries in the Patriarchal Age', *BJRL* 32, 1949-50, pp. 76ff. (reprinted in *The Servant of the Lord and Other Essays on the Old Testament*, 1952); J. Bright, *A History of Israel*², 1972, pp. 67-102.

V. Genesis and theology

It cannot be emphasized too strongly that the primary value of Genesis, as indeed of all Scripture, is theological. It is possible to devote a great deal of time and energy to all kinds of incidental details and to miss the great theological issues. For example, the story of the Flood speaks of sin, judgment, redemption, new life. To be occupied with details about the size of the ark, and with problems

of feeding or of the disposal of refuse, is to be concerned with side-issues. While God's revelation was largely in historical events, and while history is of tremendous significance for the biblical revelation, it is the theological significance of events that is finally important. Where corroborative evidence of the Genesis narratives is lacking, the theological significance may still be discerned.

J.S.W.
J.A.T.

GENTILES (Heb. *gōyim*, Gk. *ethnē* (or *Hellēnes*) via Vulg. *gentiles*). This was originally a general term for 'nations', but acquired a restricted sense by usage. In the OT the affinity of all nations is stressed in the tradition of Noah's descendants (Gn. 10). In God's covenant with Abraham his descendants are distinguished from other nations, but not in any narrowly exclusive sense (Gn. 12:2; 18:18; 22:18; 26:4). Israel became conscious of being a nation uniquely distinct from others by being separated to God after the Exodus (Dt. 26:5), and the covenant of Sinai (Ex. 19:6). From then on this dedication dominated all her relations with other nations (Ex. 34:10; Lv. 18:24-25; Dt. 15:6).

The Israelites were constantly tempted to compromise with the idolatry and immorality practised by other nations (1 Ki. 14:24), so bringing God's judgment on themselves (2 Ki. 17:7ff.; Ezk. 5:5ff.). On their return from the Exile the danger was still more insidious because of the corruptness of the Jews who had remained in Canaan (cf. Ezr. 6:21). This continual struggle against contamination from their neighbours led to so hard and exclusive an attitude to other nations that by the time of Christ for a Jew to stigmatize his fellow as 'Gentile' (*ethnikos*, Mt. 18:17) was a term of scorn equal in opprobrium to 'tax-collector', and they earned for themselves from Tacitus the censure that 'they regard the rest of mankind with all the hatred of enemies' (*Histories* 5. 5).

Yet the Gentiles were assigned a place in prophesies of the kingdom, merely as the vanquished who would enhance the glory of Israel (Is. 60:5-6), or as themselves seeking the Lord (Is. 11:10), and offering worship (Mal. 1:11) when the Messiah should come to be their Light (Is. 42:6), and to bring salvation to the ends of the earth (Is. 49:6). In this tradition Simeon hailed Jesus (Lk. 2:32), and Jesus began his ministry (Mt. 12:18, 21), and the Jews themselves could question whether he would go to the Gentiles (Jn. 7:35). Though hesitant and astonished when Cornelius was converted (Acts 10:45; 11:18), the church quickly accepted the equality of Jew and Gentile before God (Rom. 1:16; Col. 3:11), thus revealing the full scope of the gospel and its glorious hope for all (Gal. 2:14ff.; Rev. 21:24; 22:2).

P.A.B.

GENTLENESS. In Gal. 5:23 'gentleness' (*prajētēs*) is part of the ninefold 'fruit of the Spirit'. In 2 Cor. 10:1 Paul beseeches his readers by the 'gentleness' (*epieikeia*) of Christ, coupled with his 'meekness' (*prajētēs*). *epieikeia* suggests the yielding of a judge, who, instead of demanding the exact penalty required by strict justice, gives way to circumstances

which call for mercy. Thus the concession of a legal right may avoid the perpetration of a moral wrong (see R. C. Trench, *Synonyms of the New Testament*, pp. 153-157). Similarly in the OT the Heb. *'ānā*, 'to be humble', and its cognate noun are used of God: 'Thy gentleness (rsvmg.) made me great' (2 Sa. 22:36; Ps. 18:35). Although the word itself is rarely used, it expresses the typical condescension of the divine Judge, whose refusal to exact the full demands of the law lifts up those who would otherwise be crushed under its condemnation. The adjective *epieikēs* describes one of the qualities of the Christlike believer. Note the other qualities with which it is associated in 1 Tim. 3:3; Tit. 3:2; Jas. 3:17; 1 Pet. 2:18. *epieikeia* is used in a formal rhetorical sense in Acts 24:4.

J.C.C.

GERAR (Heb. *g'ārār*, 'circle'). An ancient city S of Gaza (Gn. 10:19) in the foothills of the Judaeen mountains. Both Abraham (Gn. 20-21) and Isaac (Gn. 26) stayed there, digging wells, and had cordial relations with Abimelech its king, though Isaac quarrelled with him at one stage. The city lay in the 'land of the *Philistines' (*'ereš p'lištim*, Gn. 21:32, 34; see also 26:1, 8), not necessarily an anachronistic designation. In the early 9th century BC it was the scene of a great victory by Asa of Judah over the invading Ethiopian army of Zerah (2 Ch. 14:13-14).

The site of Gerar was identified with modern Tell Jemmeh by W. M. Flinders Petrie, but following a survey by D. Alon, the site of Tell Abu Hureira, a mound about 18 km SE of Gaza, in the Wadi Eš-Sari'ah has been proposed as more likely. As no pre-Iron-Age remains had been found near it, this site had hitherto been believed to be a natural hill, but Alon's survey has shown that it was first inhabited in Chalcolithic times, and continued in occupation through every period of the Bronze and Iron Ages. The evidence of surface potsherds indicated that the city had a prosperous period in Middle Bronze Age, the age of the Patriarchs.

BIBLIOGRAPHY. Y. Aharoni, 'The Land of Gerar', *IEJ* 6, 1956, pp. 26-32; cf. F. M. Cross Jr. and G. E. Wright, *JBL* 75, 1956, pp. 212-213; W. F. Albright, *BASOR* 163, 1961, p. 48.

T.C.M.

GERASA. An important city of the classical period, ranking in importance with Palmyra and Petra. Lying in Transjordan, mid-way between the Dead Sea and the Sea of Galilee, and some 30 km E of the Jordan, the site today, still preserving the name in the form *Jaraš*, is one of the best preserved examples of a Roman provincial town in the Middle East. It is only indirectly mentioned in the Bible in the passages describing our Lord's visit to the E side of the Sea of Galilee, where the territory is described as the country of the Gerasenes (rv, Mk. 5:1; Lk. 8:26, 37, av 'Gadarenes'; in Mt. 8:28, av gives Gergesenes, rv, rsv *Gadarenes. In all three passages variant MSS give *Gerasēnos*, *Gergesēnos* and *Gadarēnos*. The town lies in a well-watered valley with a perennial stream running through the middle of it, and its wealth was probably derived from the cultivation of the fertile corn lands to the E of it. First noted in 1806 by the German traveller Seetzen, it was subsequently visited by many Europeans. In 1867 Charles Warren made many plans and photographs of the ruins. In 1878 a modern village was founded at the

GERASA

site, and the resulting destruction of the buildings led to considerable conservation, reconstruction and excavation under the auspices of the Department of Antiquities between the wars, a work that still goes on. The extent of the Roman remains makes research into the earlier periods difficult, but Gerasa probably emerged from a village to a Hellenistic town under the name of Antioch, some time after the 4th century BC, when increasing security made prosperity possible. It is first mentioned historically in the writings of Josephus, who states that Theodorus of Gadara took refuge there at the end of the 2nd century BC, but it was soon afterward taken by Alexander Jannaeus, and remained in Jewish hands until Pompey's conquest of 63 BC, when it became part of the province of Syria. The Hellenistic practice of allowing a measure of self-government was continued by Rome, and Gerasa, now one of the cities of the *Decapolis, flourished, carrying on a lively trade with the Nabataeans to the S. This prosperity was such that in the 1st century AD the city was largely rebuilt on a typical Roman plan with a straight main street flanked by columns leading to a forum. There were temples to Artemis and Zeus and two theatres and an enclosing wall round the whole. The 2nd century AD was, however, a period of greater prosperity, and the surviving remains, including a triumphal arch commemorating a personal visit by the emperor Hadrian in AD 129-130, date largely from that time. In the early 3rd century the city became a colony, but soon thereafter declined, and by the time of the Crusades it had been long deserted.

T.C.M.

GERIZIM. The more southerly of the two mountains which overshadow the modern town of Nablus, 4 km NW of ancient Shechem, called Jebel et-Tor in Arabic. It has been called the mount of blessing, because here the blessings for obedience were pronounced at the solemn assembly of Israel described in Jos. 8:30-35 (*EBAL, MOUNT).

A ledge halfway to the top is popularly called 'Jotham's pulpit', from which he once addressed the men of Shechem (Jdg. 9:7). On the summit are the bare ruins of a Christian church of the 5th century. Still earlier there stood there a temple of Jupiter, to which a staircase of 300 steps led up, as shown on ancient coins found in Nablus.

Gerizim remains the sacred mount of the Samaritans; for they have 'worshipped on this mountain' (Jn. 4:20) for countless generations, ascending it to keep the feasts of Passover, Pentecost and Tabernacles. According to Samaritan tradition, Gerizim is Mt Moriah (Gn. 22:2) and the place where God chose to place his name (Dt. 12:5). Accordingly it was here that the Samaritan temple was built with Persian authorization in the 4th century BC—the temple which was demolished by John Hyrcanus when he captured Shechem and the surrounding area c. 128 BC. See further E. Robertson, *The Old Testament Problem*, 1950, pp. 157-171; G. E. Wright, *Shechem*, 1965, pp. 170-184; *NEAEHL*, pp. 484-492.

G.T.M.

F.F.B.

GERSHOM, GERSHON. The form Gershom is used of the following people.

1. The elder son of Moses, born in Midian (Ex. 2:22; 18:3). The name (construed as 'banishment' or 'a stranger there') commemorated Moses' exile. Gershom's sons counted as Levites (1 Ch. 23:14-15).

2. A descendant of Phinehas the priest (Ezr. 8:2).
3. Levi's son (1 Ch. 6:1, 16-17; elsewhere the allied forms, 'Gershon' and 'Gershonite', are used). In the wilderness the Gershonites carried the tabernacle, tent, coverings, hangings and cords for the door, court and gate; they received two wagons and four oxen to help in the task. They encamped W of the tabernacle. Their males, over a month old, numbered 7,500; those who served (age-group 30-50) 2,630 (Nu. 3:17-26; 4:38-41; 7:7). In the land they obtained thirteen cities (Jos. 21:6). Under David the Asaphites and Ladanites, both Gershonite families, had special singing and treasury duties (1 Ch. 6:39; 23:1-11; 26:21-22). Gershonites are mentioned at the bringing up of the ark (1 Ch. 15:7), at the cleansings of the Temple under Hezekiah and Josiah (2 Ch. 29:12; 35:15), and as serving under Ezra (Ezr. 3:10) and Nehemiah (Ne. 11:17).

D.W.G.

GESHEM. Mentioned in Ne. 2:19; 6:1-2 as one of the chief opponents of Nehemiah, and almost certainly the Gashmu of Ne. 6:6. In these passages he is called simply 'the Arabian', but is evidently an influential person. Two inscriptions throw a vivid light on this man. One is a memorial in ancient Dedan (modern el-'Ula) dated 'in the days of Jasm (dialect-form of Geshem) son of Shahrur', testifying to Geshem's fame in N Arabia. The other is an Aramaic dedication on a silver bowl from an Arabian shrine in the Egyptian E Delta. It reads, 'What Qaynu son of Geshem, king of Kedar, brought (as offering) to (the goddess) Han-'Ilat.' This text of his successor shows that Geshem was none other than king (paramount chief) of the tribesfolk and desert traders of biblically attested *Kedar in N Arabia. The Persian kings maintained good relations with the Arabs from the time they invaded Egypt in 525 BC (cf. Herodotus, 3. 4ff., 88), which lends point to Ne. 6:6, for a complaint by Gashmu to the Persian king would not go unheard. For the silver bowl and full background on Geshem, see I. Rabinowitz, *JNES* 15, 1956, pp. 2, 5-9, and pls. 6-7. Cf. also W. F. Albright, 'Dedan' (also in English) in the Alt anniversary volume, *Geschichte und Altes Testament*, 1953, pp. 4, 6 (Dedan inscription).

K.A.K.

GESHUR, GESHURITES. I. In the list of David's sons in 2 Sa. 3:3 the third is 'Absalom the son of Maacah the daughter of Talmai king of Geshur', a city in Syria (2 Sa. 15:8; 1 Ch. 3:2), NE of Bashan (Jos. 12:5; 13:11, 13).

It was this city to which Absalom fled after the murder of his brother Amnon (2 Sa. 13:37) and to which David sent Joab to bring him back (14:23). The young man returned to Jerusalem, but only to plot rebellion against his father (2 Sa. 14:32; 15:8).

2. Another group called 'Geshurites' is attested in Jos. 13:2 and 1 Sa. 27:8 as resident in the Negeb, near the Egyptian border.

F.F.B.

GESTURES. The Oriental is much more given to physical gestures than is the Westerner. As might be expected, then, the Bible records numerous gestures. These may be roughly divided into three categories: first, natural physical reactions to certain circumstances; second, conventional or customary gestures; third, deliberate symbolic actions. Gestures of the first type are involuntary, and those of the second often tend to become so, through long habit.

Not many gestures of the first category are recorded; the Bible does not mention, for instance, shrugs and movements of the head by the storyteller. Signs with the hands, for different purposes, are recorded in Mt. 12:49 and Acts 12:17. The circumstances of the people around him also caused Jesus to sigh (Mk. 7:34) and to weep (Jn. 11:35).

A great number of conventional actions are to be found in Scripture. When greeting a superior one would bow low, and perhaps kiss his hand. Friends greeting each other would grasp the other's chin or beard, and kiss. Lk. 7:44–46 records the customary gestures of hospitality. Scorn was expressed by wagging the head and grimacing with the mouth (Ps. 22:7). In commerce, a bargain was sealed by 'striking' hands (Pr. 6:1—the gesture is lost in the rsv paraphrase). Extreme grief was expressed by tearing the garments and placing dust upon the head. This category also includes the physical attitudes adopted for prayer and benediction. Notice also Ex. 6:6 and Is. 65:2.

Symbolic action was a method of prophetic instruction; Ezekiel in particular made great use of it, and many of Jesus' actions were of a symbolic nature. He frequently touched those he meant to heal; he breathed on the disciples, as he imparted

the Holy Spirit (Jn. 20:22). Notice, too, Pilate's eloquent gesture in Mt. 27:24. See also *FOOT, *HAND, *HEAD, etc. D.F.P.

GETHSEMANE (from Aram. *gaṭ šemen*, 'an oil press'). A garden (*kēpos*, Jn. 18:1), E of Jerusalem beyond the Kidron valley and near the Mount of Olives (Mt. 26:30). It was a favourite retreat frequented by Christ and his disciples, which became the scene of the agony, Judas' betrayal and the arrest (Mk. 14:32–52). It should probably be contrasted with Eden, as the garden where the second Adam prevailed over temptation. Christ's action in Gethsemane (Lk. 22:41) gave rise to the Christian custom of kneeling for prayer. The traditional Latin site lies E of the Jericho road-bridge over the Kidron, and contains olive trees said to date back to the 7th century AD. It measures 50 m square, and was enclosed with a wall by the Franciscans in 1848. It corresponds to the position located by Eusebius and Jerome, but is regarded by Thomson, Robinson and Barclay as too small and too near the road. The Greeks enclosed an adjacent site to the N. There is a broad area of land NE of the Church of St Mary where larger, more secluded gardens were put at the disposal of pilgrims, and Thomson locates the genuine site here. The original trees were cut down by Titus (Jos., *BJ* 5. 523).

GEZER. One of the chief cities of pre-Roman Palestine from at least 1800 BC. It is strategically located on the road from Jerusalem to Joppa, on the most N ridge of the Shephelah overlooking the

The assault of the city of Gezer by the army of Tiglath-pileser III. A relief from the SW palace at Nimrud. 744–727 BC.

GEZER

Plan of the gate built by Solomon as part of the fortifications of Gezer.

A suggested reconstruction of Solomon's gate at Gezer.

Ayyalon valley, and 12 km from the main highway between Egypt and Mesopotamia. Pharaoh Thutmosis III captured the Canaanite city in c. 1468 bc. Ten el-**Amarna* letters from Gezer show the city vacillated but finally remained loyal to Egypt in the 14th century bc. At the time of the Hebrew conquest its Canaanite king, Horam, tried to help Lachish but was defeated (Jos. 10:33; 12:12). Gezer, however, was not taken by the Israelites (Jos. 16:10; Jdg. 1:29). Even so the city was included in Ephraim's territory as a Levitical city (Jos. 21:21). Soon after the conquest Pharaoh Merenptah claims, on his stele, to have recaptured it. Archaeological evidence indicates that after 1200 bc the Philistines controlled the city, possibly with Egyptian approval, which may explain David's battles in this region (2 Sa. 5:25). Gezer became an Israelite possession when the Egyptian pharaoh gave it to his daughter on her marriage to Solomon, who rebuilt the city and its defences (1 Ki. 9:15–17). Excavations (1964–73) have uncovered a six-chambered gate and defences. This area has also yielded great quantities of calcined stone, probably of Pharaoh Shishak's assault on Judah c. 925 bc (1 Ki. 14:25ff.). The city was rebuilt and remained an Israelite city until the end of the Assyrian occupation c. 630 bc. There was an Assyrian administrative centre in the city in which two contracts for the sale of land by an Israelite to an Assyrian were discovered. Settlement continued under the Persians, Selucids and Maccabees. Gezer (Gazara) figures frequently in the Maccabean struggle. Two interesting archaeological finds are the Gezer **Calendar* and a ten monolith **'High Place'* (c. 1600 bc onwards).

G.G.G.
J.W.

GIANT. A man of great stature. The word is used in EVV, sometimes following LXX, to render various Heb. words. 1. *n'pīlim* (Gn. 6:4; Nu. 13:33, AV) following LXX *gigas*. RV, RSV 'Nephilim' in both verses.

2. *rāpā', rāpā'*, perhaps variant forms derived from the proper name *r'pā'im* (**REPHAIM*), and so rendered by RV, RSV in Dt. 2:11, 20; 3:11, 13; Jos. 12:4; 13:12; 15:8; 17:15; 18:16 where AV gives 'giant'. In 2 Sa. 21:16, 18, 20, 22 and 1 Ch. 20:4, 6, 8, which speak of certain Philistines as 'sons of the giant', a man of great stature may be meant (*cf.* 2 Sa. 21:19–20); it may be noted here that **Goliath* is never described as a 'giant' in the Bible, but some scholars hold that these verses indicate descent from the Rephaim. The LXX translates these terms with *gigas* in such passages as Gn. 14:5; Jos. 12:4; 13:12; 1 Ch. 11:15; 14:9; 20:4, 6.

3. *gibbōr*, 'mighty man', and frequently so translated in EVV (*e.g.* Gn. 6:4; Jos. 1:14; 1 Sa. 9:1, *etc.*) but rendered 'giant' in Jb. 16:14 (AV, RV; RSV 'warrior'). The word corresponds very much with English 'hero' in meaning. The LXX gives *gigas* for this term in Gn. 6:4; 10:8–9; 1 Ch. 1:10; Pss. 19:5; 33:16; Is. 3:2; 13:3; 49:24–25; Ezk. 32:12, 21, 27; 39:18, 20.

One other word is translated by *gigas* in the LXX, *'anāq* (**ANAK*) in Dt. 1:28, though the EVV do not so take it.

No archaeological remains have been recovered

which throw any light on this question, unless the presence of Neanderthal skeletons of Palaeolithic date in the caves of Mt Carmel are considered to do so (**EMIM*; **ZUZIM*).
T.C.M.

GIBBETHON (Heb. *gibb'ōn*, 'mound'). A city in Dan (Jos. 19:44), given to the Kohathite Levites (Jos. 21:23). For some time it was in Philistine hands and was the scene of battles between them and N Israel. Here Baasha slew Nadab (1 Ki. 15:27) and, about 26 years later, Omri was acclaimed king (1 Ki. 16:17). Sargon of Assyria depicted the conquest of the city on the walls of his palace, amongst the triumphs of his 712 bc campaign (see P. E. Botta, *Monument de Ninive*, 1849, 2, pl. 89). Probably modern Tell el-Melât, W of Gezer.
G.W.G.

GIBEAH (Heb. *gib'ā*, *gib'at*). A noun meaning 'hill', and often so used in the Bible (*e.g.* 2 Sa. 2:25 and probably in 2 Sa. 6:3 with RV and RSV), but also used as a place-name. Owing to its similarity in form with the place-name *gebā'* (**GEBBA*), these two are sometimes confused (*e.g.* Jdg. 20:10).

1. A city in the hill country of Judah (Jos. 15:57), possibly to be identified with modern el-Jeba' near Bethlehem.

2. A city in Benjamin (Jos. 18:28), evidently N of Jerusalem (Is. 10:29). As a result of a crime committed by the inhabitants, the city was destroyed in the period of the Judges (Jdg. 19–20; *cf.* Ho. 9:9; 10:9). It was famous as the birthplace of Saul (1 Sa. 10:26), *gib'at sālūl*, 'Gibeah of Saul' (1 Sa. 11:4), and it served as his residence while he was king (1 Sa. 13–15), and after David was anointed in his place (1 Sa. 22:6; 23:19; 26:1). When David was king it was necessary to allow the Gibeonites to hang up the bodies of seven of Saul's descendants on the walls of Gibeah to make amends for his slaughter of them (2 Sa. 21:6; LXX 'Gibeon').

Biblical Gibeah of Saul is almost certainly to be identified with the mound of Tell el-Ful, about 5 km N of Jerusalem. The site was excavated by W. F. Albright in 1922–3 and 1933, with results that agreed with this identification. Further excavations were made by P. W. Lapp in 1964, bringing some changes to Albright's conclusions. The situation of the place away from running water meant that it was not permanently occupied until the Iron Age, when rain-water cisterns came into common use in the hill country. The first small settlement belonged to the 12th century bc, perhaps being destroyed in the episode which Jdg. 19–20 relate. After an interval, a small fortress was erected and manned about 1025–950 bc, the time of Saul. Albright had restored its plan as a rectangle with a tower at each corner, but only one tower has been uncovered, and Lapp's work has shown that the plan is uncertain. An iron plough-tip from this period was found, indicating the introduction of iron, monopolized up to now by the Philistines. There are signs that the fortress was pillaged and then abandoned for a few years, presumably at the death of Saul, but the site was soon reoccupied, possibly as an outpost in David's war with Ishbosheth. It must have lost its importance with David's conquest of the whole kingdom, however, and the excavations indicate that it lay deserted for about 2 centuries. The fortress was rebuilt with a watchtower, possibly by Hezekiah, and destroyed

GIBEAH

soon after (*cf.* Is. 10:29), to be re-fortified in the 7th century BC with a casemate wall (* FORTIFICATION). After a destruction attributed to Nebuchadrezzar's forces, there was quite an extensive village on the site until about 500 BC. A further period of abandonment ensued until the spread of a new village across the site in the Maccabean age. Thereafter there was sporadic occupation until the expulsion of all Jews from Jerusalem, when Gibeah presumably fell under the same ban because of its proximity to the city.

A.R.M.

GIBEON. At the time of the Israelite invasion of Canaan this was an important city inhabited by Hivites (Jos. 9:17; LXX * 'Horites' is perhaps preferable) and apparently governed by a council of elders (Jos. 9:11; *cf.* 10:2). Following the fall of Jericho and Ai, the Gibeonites tricked Joshua into making a treaty with them as vassals. They were reduced to menial service and cursed when their deceit was discovered. The Amorite kings of the S hill-country attacked Gibeon for its defection to the Israelites, but Joshua led a force to aid his allies and, by means of a hailstorm and a miraculous extension of the daylight, routed the Amorites (Jos. 9-10; 11:19). The city was allotted to Benjamin and set apart for the Levites (Jos. 18:25; 21:17). During the struggle between David and the adherents of Ishbosheth the two sides met at Gibeon. Twelve warriors from either side were chosen for a contest, but each killed his opposite number and only after a general mêlée were David's men victorious (2 Sa. 2:12-17). At 'the great stone which is in Gibeon' Joab killed the dilatory Amasa (2 Sa. 20:8). This may have been merely a notable landmark, or it may have had some religious significance connected with the high place where the tabernacle and the altar of burnt-

offering were, and where Solomon worshipped after his accession (1 Ch. 16:39; 21:29; 2 Ch. 1:3, 13; 1 Ki. 3:4-5). The 'Geba' of 2 Sa. 5:25 should probably be altered to 'Gibeon' in view of 1 Ch. 14:16; Is. 28:21 and LXX. The Gibeonites still retained their treaty rights in David's time, so that the only way of removing the guilt incurred by Saul's slaughter of Gibeonites was to hand over seven of his descendants for execution (2 Sa. 21:1-11). The close connection of Saul's family with Gibeon (1 Ch. 8:29-30; 9:35-39) may well have made his deed appear all the worse. Shishak of Egypt numbers Gibeon among the cities he captured (*ANET*, p. 242; *cf.* 1 Ki. 14:25). The assassins of Gedaliah, the governor of Judah appointed by Nebuchadrezzar, were overtaken by the 'great waters' of Gibeon and the prisoners they had taken set free (Je. 41:11-14). Gibeonites helped Nehemiah to rebuild the walls of Jerusalem (Ne. 3:7).

Excavations at el-Jib, some 9 km N of Jerusalem, between 1956 and 1962 have revealed remains of cities of the Early and Middle II Bronze Age, and of the Iron Age from its beginning to the Persian period. There was also a large town during Roman times. No remains of a Late Bronze Age settlement, which might be considered contemporary with Joshua, have been discovered, but burials of the time showed there had been life there. Some time in the Early Iron Age a large pit with a stairway descending around it was dug to a depth of 11 m in the rock. Steps led down a tunnel a further 12 m to a water-chamber, perhaps the 'pool' of 2 Sa. 2 and the 'waters' of Je. 41. It seems that this pit was often almost full of water. Later another tunnel was cut leading from the city to a spring outside the walls. The filling of the great pit contained the handles of many storage jars, stamped with a royal * seal or inscribed with the owners' names and the name Gibeon. Examination of the area around the pit has shown that it was the site of an extensive wine-making industry in the 7th century BC. Sealed jars of wine were stored in cool rock-cut cellars. The evidence suggests that the inscriptions relate to this site and so identify it.

The water-system at Gibeon consisted of a water-chamber cut into the rock, reached by a spiral staircase, and an Iron Age tunnel of 93 steps leading to the spring outside the city wall. Section through E side of hill, showing the stepped tunnel and spring.

Handles and mouth of a storage jar from el-Jib, inscribed in Old Hebrew gb'n gdr 'zrhyw, 'Gibeon-Gedor, Azariah'.

A. R. M.

GIDEON (Heb. *gid'ôn*, 'hewer, smiter'), the judge who delivered Israel from the Midianites, a bedouin people then dominating the central area of Palestine (Jdg. 6:1–8:35). He was the son of Joash, of the clan of Abiezer, of the tribe of Manasseh, and he was also called Jerubbaal. Some scholars hold that the narrative is composite, made up of at least two accounts (see the commentaries).

Gideon was called to deliver his people while threshing wheat secretly for fear of Midianite depredations. There followed an act of defiance in which he destroyed his father's Baal-altar and Asherah, from the consequences of which he was saved by Joash's quick-wittedness. The gesture of defiance seems to signify a protest against the assimilation of the worship of Yahweh with the Baal-cult. This act is associated with the giving to Gideon of the name Jerubbaal (*y'rubb'al*), which is variously interpreted as 'Baal strives', 'Baal founds' or 'may Baal give increase'. Some suggest that this may have been Gideon's earliest name, reflecting the prevailing syncretism, receiving, however, a new significance in view of this act of iconoclasm (*cf.* R. Kittel, *Great Men and Movements in Israel*, 1929, p. 65; F. F. Bruce, *NBCR, ad loc.*). In 2 Sa. 11:21 it appears as Jerubbesheth (*y'rubbeshet*), replacing the abhorred name Baal with the word for 'shame'.

The defeat of the Midianites is graphically described in Jdg. 7, when at God's command Gideon reduced his army from 32,000 to 300, and received personal reassurance during a secret reconnaissance when he heard a Midianite warrior's dream of defeat. He made a sudden night attack which demoralized the enemy and led to a thorough rout. Jdg. 8 records the completion of the victory with the slaying of Zebah and Zalmunna, despite the hostility of the towns of Succoth and Penuel, for which Gideon exacted punishment.

After the deliverance Gideon was asked to set up a hereditary monarchy, but he refused. He did, however, accept the golden earrings taken as spoil in battle, with which he made an 'ephod' (probably an image of Yahweh). This he set up in his own city, where it later became a source of apostasy.

The defeat of Midian was decisive, and Israel had peace during the remainder of Gideon's life. The final picture of Gideon is of a peaceful old age, with many wives and sons, among the latter being the notorious Abimelech (Jdg. 9).

Heb. 11:32 gives Gideon a place among the heroes of faith. He trusted in God rather than in a large army, gaining a victory with a handful of men which made it clear it was wholly of God. 'The day of Midian' seems to have become proverbial for deliverance by God without the aid of man (Is. 9:4). Gideon is portrayed as a humble man, and his refusal of the kingship establishes the fact that Israel's ideal government was a theocracy (Jdg. 8:23).

J. G. G. N.

GIFT. In the OT a dozen words are used of gifts of one kind or other. The sacrifices and other offerings were gifts to God (Ex. 28:38; Nu. 18:11, *etc.*). The Levites were also, in a way, a gift to the Lord (Nu. 18:6). Occasionally there is the thought of God's gifts to men, as health and food and wealth and enjoyment (Ec. 3:13; 5:19). Men gave gifts on festive occasions (Ps. 45:12; Est. 9:22), or in association with a dowry (Gn. 34:12). Gifts might be tokens of royal bounty (Dn. 2:6). But there was little goodwill in the 'gifts' (*rsv*, 'tribute') the Moabites brought David (2 Sa. 8:2). Gifts might be the expression of shrewd policy, as when 'a man's gift makes room for him' (Pr. 18:16). Indeed, a gift might be offered with altogether improper motives, so that the word comes to mean much the same as 'bribe'. The Israelites were commanded, 'thou shalt take no gift: for the gift blindeth the wise' (Ex. 23:8, *av*).

In the NT there is a marked change of emphasis. Some of the 9 Gk. words for 'gift' refer to men's gifts to God, as *anathēma* (Lk. 21:5), and especially *dōron* (Mt. 5:23f.; 23:18f., *etc.*). Some refer also to men's gifts to one another, *e.g.* *dōron* (Rev. 11:10), *dōma* (Mt. 7:11; Phil. 4:17). But the characteristic thing is the use of several words to denote entirely or primarily the gifts that God gives to men. *dōrea* (the word expresses freeness, bounty) is found 11 times, always of a divine gift. Sometimes this is salvation (Rom. 5:15, 17), or it may be undefined ('his inexpressible gift', 2 Cor. 9:15), or it is the Holy Spirit (Acts 2:38). James reminds us that 'Every good endowment (*dosīs*) and every perfect gift (*dōrēma*) is from above' (Jas. 1:17). A most important word is *charisma*. This may be used of God's good gift of eternal life (Rom. 6:23), but its characteristic use is for the *'spiritual gifts', *i.e.* the gifts which the Holy Spirit imparts to certain people. Everyone has such a gift (1 Pet. 4:10), but specific gifts are reserved for individuals (1 Cor. 12:30), and individuals endowed with these gifts are themselves 'gifts' from the ascended Christ to the church (Eph. 4:7ff.). The important passages

GIFT

are Rom. 12:6ff.; 1 Cor. 12:4–11, 28–30; 14; Eph. 4:11ff. Salvation is God's good gift to men, and all the rest arises from this basic truth. L.M.

GIHON (Heb. *gihôn*, 'stream'). 1. One of the four rivers of the Garden of *Eden, which has been identified variously with the Oxus, Araxes, Ganges, Nile and many other rivers. The Nile identification arises from the statement that it wound through (*sābab*) the land of *Cush (Gn. 2:13), which is identified with Ethiopia, but it is more probable that the Cush here referred to is the area to the E of Mesopotamia from which the Kassites later descended. If this is so, some river descending to Mesopotamia from the E mountains, perhaps the Diyala or the Kerkha, is possible, though the possibility of changed geographical features makes any identification uncertain.

2. The name of a spring to the E of Jerusalem, where Solomon was anointed king (1 Ki. 1:33, 38, 45). It was from this spring that Hezekiah cut a conduit to take the water to the pool of Siloam (2 Ch. 32:30) inside the city walls, and it was still outside the outer wall built by Manasseh (2 Ch. 33:14). It is probably to be identified with modern 'Ain Sitti Maryām.

BIBLIOGRAPHY. On 1 see E. A. Speiser, 'The Rivers of Paradise', *Festschrift Johannes Friedrich*, 1959, pp. 473–485; on 2 see J. Simons, *Jerusalem in the Old Testament*, 1952, pp. 162–188. T.C.M.

GILBOA (Heb. *gilbōa'*, probably 'bubbling fountain', although there is some doubt about this). Sometimes the name is anarthrous, while 'Mt Gilboa' also occurs. It was a range of mountains in the territory of Issachar, and so, in 2 Sa. 1:21, David apostrophizes 'ye mountains of Gilboa'. It was the scene of Saul's final clash with the Philistines and of his death (1 Sa. 28:4; 31). It may seem surprising to find the Philistines so far N, but the route from Philistia to Esdraelon was an easy one for armies on the march. The hills are now called Jebel Fuḳū'a, but the ancient name is perpetuated in the village of Jelbôn on the hillside. G.W.G.

GILEAD. 1. The son of Machir, son of Manasseh and progenitor of the Gileadite clan which was a major part of the tribe of Manasseh (Nu. 26:29–30; 27:1; 36:1; Jos. 17:1, 3; 1 Ch. 2:21, 23; 7:14–17). 2. A descendant of Gad and ancestor of some later Gadites (1 Ch. 5:14). 3. Jephthah's father (Jdg. 11:1–2).

4. The name applied to the whole or part of the Transjordanian lands occupied by the tribes of Reuben, Gad and half-Manasseh. Geographically, Gilead proper was the hilly, wooded country N of a line from Heshbon W to the N end of the Dead Sea, and extending N towards the present-day river and Wadi Yarmuk but flattening out into plains from c. 29 km S of Yarmuk. The N extension of these plains forms the territory of Bashan. Gilead thus defined is divided into N and S halves by the E–W course of the lower Jabbok river. S of Gilead proper (*i.e.* S of the Heshbon–Dead Sea line) and reaching to the Arnon river, there is a rolling plateau suitable for grain-growing, cattle and flocks. This tract, too, was sometimes included under 'Gilead'. But the term Gilead could in its widest

application be extended to cover all (Israelite) Transjordan (*cf.* Dt. 2:36 and especially 34:1; Jdg. 10–12; 20:1; 2 Ki. 15:29). 1 Sa 13:7 is interesting in that it uses 'Gad' in reference to a particular section, and 'Gilead' of the territory in general. It is also used as a general term in 2 Ki. 10:33, where 'all the land of Gilead', *i.e.* (Israelite) Transjordan, includes 'Gilead' (*i.e.* Gilead proper, plus the land to the Arnon) and Bashan'. For Gilead in the narrower sense, as the wooded hill-country stretching to the N and S of the Jabbok, see Dt. 3:10, where it is described as lying between the cities of the plain or tableland S of Heshbon and Bashan in the N, and Jos. 13:11 (in context). Either half of Gilead proper could be called simply 'Gilead' (referring to the N, see Dt. 3:15; Jos. 17:1, 5–6). Where fuller designations were used, Gilead S of the Jabbok (which fell to Gad) was sometimes called 'half the hill-country of Gilead' (rv, Dt. 3:12, *cf.* 16; Jos. 12:2, 5; *cf.* 13:25), a name also used of Gilead N of the Jabbok (Jos. 13:31). The N half was also known as 'the rest of Gilead' (Dt. 3:13). In Dt. 3:12 with 16, and 13 with 15, the sequence of full and abbreviated terms is particularly noteworthy. The simultaneous use of a term or title in both wide and restricted senses, or in both full and abbreviated forms, is a common phenomenon in antiquity and modern times alike. In most OT references to Gilead study of context usually shows the nuance intended.

The balm of Gilead was proverbial (Je. 8:22; 46:11; *cf.* Gn. 37:25). The rich woodland covering its hills is cited with Lebanon and Carmel as a symbol of luxury (Je. 22:6; 50:19; Zc. 10:10). It was the grazing-ground of goats (Ct. 4:1; 6:5), and also provided refuge for fugitives. Among those who sought refuge in Gilead were Jacob when he fled before Laban (Gn. 31:21–55), the Israelites who feared the Philistines in Saul's time (1 Sa. 13:7), Ishbosheth (2 Sa. 2:8–9) and David during Absalom's revolt (2 Sa. 17:22ff.).

GILGAL. The name can mean 'circle (of stones)', or 'rolling', from Heb. *gālal*, 'to roll'. In its latter meaning the name Gilgal was used by God through Joshua to serve as a reminder to Israel of their deliverance from Egypt when they were circumcised there: 'This day I have rolled away (*gallōtī*) the reproach of Egypt from you' (Jos. 5:9).

1. Gilgal to the E of Jericho, between it and the Jordan. The exact site of Gilgal within this area is still uncertain. J. Muilenburg (*BASOR* 140, 1955, pp. 11–27) very tentatively suggests a site just N of Khirbet el-Mefjir, about 2 km NE of OT Jericho (Tell es-Sultān). In support of this approximate location, Muilenburg adduces the combined testimony of the OT references and of later writers (Josephus, Eusebius, *etc.*), and a trial excavation revealed Early Iron Age remains there. J. Simons (*GTT*, pp. 269–270, §464) criticized Muilenburg's

view on the ground that Khirbet el-Mefjir is more fairly N than E of Jericho; but this is not a very strong objection because Khirbet el-Mefjir is as much E as it is N (see Muilenburg's map, *op. cit.*, fig. 1, p. 17).

Gilgal became Israel's base of operations after the crossing of Jordan (Jos. 4:19), and was the focus of a series of events during the conquest: twelve commemorative stones were set up when Israel pitched camp there (Jos. 4:20); the new generation grown up in the wilderness were circumcised there; the first Passover in Canaan was held there (Jos. 5:9-10) and the manna ceased (Jos. 5:11-12). From Gilgal, Joshua led forth Israel against Jericho (Jos. 6:11, 14ff.), and conducted his S campaign (Jos. 10) after receiving the artful Gibeonite envoys (Jos. 9:6), and there began to allot tribal territories (Jos. 14:6). Gilgal thus became at once a reminder of God's past deliverance from Egypt, a token of present victory under his guidance, and saw the promise of inheritance yet to be gained. On the camp at Gilgal in Joshua's strategy, compare Y. Kaufmann, *The Biblical Account of the Conquest of Palestine*, 1953, pp. 91-97, especially 92, 95f. Kaufmann also incisively refutes Alt's and Noth's erroneous views about Gilgal as an early shrine of Benjaminitic tradition (pp. 67-69).

In later days God's angel went up from Gilgal to Bochim in judgment against forgetful Israel (Jdg. 2:1); thence Ehud returned to slay a Moabite king for Israel's deliverance (Jdg. 3:19). Samuel used to visit Gilgal on circuit (1 Sa. 7:16); there Saul's kingship was confirmed after the Ammonite emergency with joyful sacrifices (1 Sa. 11:14-15; *cf.* 10:8). But thereafter, Saul offered precipitate sacrifice (1 Sa. 13:8-14), and it was at Gilgal that Samuel and Saul parted for ever after Saul's disobedience in the Amalekite war (1 Sa. 15:12-35). After Absalom's abortive revolt, the Judeans welcomed David back at Gilgal (2 Sa. 19:15, 40). In the days of Ahab and Joram, Elijah and Elisha passed that way just before Elijah's translation to heaven (2 Ki. 2:1) (although some, quite unnecessarily it would seem, consider this place to be distinct from the historic Gilgal), and there Elisha sweetened the wild gourds in the cooking-pot of a group of prophets who feared poison (2 Ki. 4:38).

But during the 8th century BC, at least under the kings Uzziah to Hezekiah, Gilgal became a centre of formal and unspiritual worship which like Bethel drew condemnation from Amos (4:4; 5:5) and Hosea (4:15; 9:15; 12:11). The association of Bethel and Gilgal (reflected also in 2 Ki. 2:1-2) was strengthened by an important road that connected them (Muilenburg, *op. cit.*, p. 13). Finally, Micah (6:5) reminds his people of Gilgal's first role in their spiritual pilgrimage, witnessing to God's righteousness and saving power, 'from Shittim to Gilgal', *i.e.* across Jordan into the promised land.

2. In Jos. 15:7, the N boundary of Judah at least came in view of a Gilgal that was 'opposite the ascent of Adummim'; in the parallel description of this line, as also the S boundary of Benjamin (Jos. 18:17), Geliloth is so described. But whether *this* Gilgal/Geliloth is the same as the famous Gilgal E of Jericho remains quite uncertain though just possible. Otherwise, it must be some other local 'circle' farther W. Suggestions about this boundary will be found in Simons (*GTT*, pp. 139-140, § 314,

173, § 326), who, however, makes too free a use of emendation.

3. In Dt. 11:30, the phrase 'opposite Gilgal' may refer to the Canaanites dwelling in the Arabah (Jordan rift valley), rather than to the mountains Ebal and Gerizim. If so, then this is simply the historic Gilgal, see I above. Compare *GTT*, p. 35, §§ 87-88.

4. Among Joshua's defeated enemies occurs the king of Goyyim belonging to Gilgal (Jos. 12:23) between the kings of Dor and Tirzah. This Gilgal might be the capital of a king ruling over a mixed population on the edge of the maritime plain of Sharon, if—as is sometimes suggested—it is to be placed at Jiljūliyah, about 5 km N of Aphek or about 22 km NE of the coast at Joppa.

5. The Beth-gilgal from which singers came to the dedication of the walls of Jerusalem by Nehemiah and Ezra is either the famous Gilgal (I above) or else remains unidentified (Ne 12:29).

K. A. K.

GIRDLE. In AV this word covers several Hebrew terms and body-garments. The word 'abnēt is used of the ceremonial sash, especially as worn by the high priest and his associates, made of embroidered linen in blue, purple and scarlet (Ex. 28:4, 39-40; 29:9; 39:29; Lv. 8:7, 13; 16:4), but worn also by other high dignitaries (Is. 22:21). In Ex. 28:8, 27-28, *etc.*, the 'curious girdle' of AV is *hēšēb*, 'device', of gold, blue, purple, scarlet, and fine linen, apparently an elaborately worked belt for the ephod (*DRESS, d). The term 'ēzōr usually means 'waistcloth', 'loincloth'. A rough leather one characterized the prophet Elijah (2 Ki. 1:8) and his NT counterpart John the Baptist (Mt. 3:4; Mk. 1:6, RV).

Jeremiah (13:1-11) was bidden to use a spoilt linen loincloth as a symbol that spoilt Judah was good-for-nothing. Centuries later, Agabus bound himself with Paul's girdle in token of Paul's coming captivity (Acts 21:11). Besides picturing the onset of Assyrian troops with well-girt loincloths (Is. 5:27; *cf.* ANEP, fig. 236), Isaiah envisaged (11:5) righteousness and faithfulness as clothing the son of David like a loincloth. Ezekiel (23:15) alludes to Babylonians arrayed in vermilion, waistbands and turbans(?); *cf.* ANEP, fig. 454.

h^agōr, *h^agōrā* means belt, waistband or girdle proper. Such belts were often ornate and valuable, including, doubtless, those for sale in Pr. 31:24 and belonging to fashionable women in Is. 3:24; *cf.* Dn. 10:5; Rev. 1:13; 15:6. They were used by warriors to support a sword in its sheath (2 Sa. 20:8; *cf.* 1 Ki. 2:5 and Heb. of 2 Ki. 3:21; *cf.* ANEP, figs. 173-174), and could be part of presents and rewards (1 Sa. 18:4; 2 Sa. 18:11). People at work commonly tucked up their clothes into their girdle, as is done in the East today.

The word *mēzāh*, 'girdle', occurs in Ps. 109:19; it and 'abnēt may perhaps be connected with the Egv. words *mdh* and *bnd* respectively (T. O. Lambdin, *JAOS* 73, 1953, pp. 146, 152). K. A. K.

GIRGASHITES. A tribe listed among the descendants of Canaan in Gn. 10:16; 1 Ch. 1:14, and part of the very mixed population of Canaan as described in the original promise to Abraham (Gn. 15:21; *cf.* Ne. 9:8). In due course they were

GIRGASHITES

overcome by Israel (Dt. 7:1; Jos. 3:10; 24:11). In N Canaanite Ugarit (14th/13th centuries BC), the Girgashites are indirectly attested by two personal names: *grgš* and *bn-grgš*, i.e. Girgash and Ben-Girgash (references in Gordon, *Ugaritic Textbook*, 3, 1965, p. 381, No. 619). The biblical and Ugaritic Girgash(ites) are probably different from a people in Asia Minor called Karkisa in Hittite annals and *krkš* in similar Egypt. records. K.A.K.

GIRZITES. In AV 'Gezrites'; either form is possible. Little-known semi-nomadic clans, associated with *Geshurites and *Amalekites in the NW of the *Negeb, and extirpated by David (1 Sa. 27:8) while he governed Ziklag under the Philistine Achish. K.A.K.

GLASS. Seldom mentioned in the Bible, glass was a rare luxury until Roman times. It was considered something precious like gold (Jb. 28:17, AV 'crystal'; Heb. *z'kūkit*). Several passages translated 'glass' (AV) refer to reflecting metal surfaces used as mirrors. Glazing was early known and used on beads and brickwork from c. 4000 BC, but glass itself is first attested in the Early Bronze Age (c. 2600 BC).

By the 18th Egyptian Dynasty (c. 1546-1316 BC) a glass factory at el-Amarna in Egypt imitated stone and pottery types and made small unguent vessels by casting, or by winding drawn glass rods round a sand core and re-heating.

Early core-formed decorated goblets, bottles and bowls have been found in N Mesopotamia (Rimah, Nuzi), Babylonia, N Syria (Alalakh) and Palestine (Megiddo). Other imported and local products have been discovered at Gezer, Lachish (Late Iron Age), Achziv and Hazor. From the 13th century BC glazes are mentioned in contemporary Hittite and Assyrian texts. A reference in a Ras Shamra text to *spgs*, 'glaze', makes it probable that this word is found in Pr. 26:23—'like glaze crusted over pottery are smooth lips and an evil heart' (*BASOR* 98, 1945, pp. 21, 24; now disputed, *Ugarit-Forschungen* 8, 1976, pp. 37-40). Cobalt and manganese were used as colouring agents, but early glass was not very transparent because of impurities in the basic materials. The iridescence common on ancient glass is due to decomposition and weathering.

In the late Iron and Israelite periods Egypt glass vessels, now imitating alabaster vessels (hence Gk. *alabastron*), were imported into Syria and Palestine. Phoenician products found at Samaria and elsewhere show that glass amphorae, juglets and aryballois were in use.

The Hellenistic period brought the additional technique which resulted in gold glass, millefiori and coloured glasses found at many Palestinian sites. The *alabastron* broken open as a gift for our Lord was probably a long-necked glass ointment bottle, the so-called tear-bottle (Mt. 26:7; Mk. 14:3; Lk. 7:37; AV 'alabaster box').

By the Roman period the invention of glass-blowing methods (at Sidon?) resulted in mass-produced table services which rivalled pottery and metal for ease and cheapness of manufacture. Much of this was translucent, and much like a highly-polished glaze. The latter may be the allusion in the *'sea of glass' (Rev. 4:6; 15:2) and in the city and street of the New Jerusalem made

of pure gold likened to glass (Rev. 21:18, 21).

BIBLIOGRAPHY. D. B. Harden, *Journal of Glass Studies* 12, 1970, pp. 17-27, 35-63; 13, 1971, pp. 45-63; A. L. Oppenheim *et al.*, *Glass and Glass-making in Ancient Mesopotamia*, 1970. D.J.W.

GLEANNING (*lāqat*, 'to gather, glean'; *ālal*, 'to roll, glean, suck', usually of grapes). Amid the rejoicing of harvest-time a kindly Israelitish law upheld the custom whereby the poor, orphans and strangers were allowed to glean grain, grapes and olives (Lv. 19:9-10; 23:22; Dt. 24:19). *Ruth took full advantage of the practice (Ru. 2:2ff.); Gideon used it in striking illustration of the superiority of Ephraim (Jdg. 8:2); and Jeremiah made of it a metaphor to express the complete annihilation of backsliding Israel (Je. 6:9; 49:9-10). The custom of gleaning still persists in certain eastern countries. (*AGRICULTURE). J.D.D.

GLORIA IN EXCELSIS. This term refers primarily to a liturgical hymn originating in the patristic church (cf. *SHERK*, 6, 501; *ODCC*) and inspired by the angelic hymn in Lk. 2:14. As in the visions to Zechariah and Mary (Lk. 1:13, 30), the reassurance of the angel in Lk. 2:10 is an intimation of the good news which he brings. The previous angelic proclamations were directed particularly to the persons to whom the visions came. The joy of this message is for all the people of God; the shepherds are only representative of the larger group who anticipate and long for the deliverance Messiah brings. The benediction of praise expresses not merely the hope for the future but the reality that has become actual in Messiah's birth:

To God in the highest, glory!
To his people on earth, peace!

'Men of God's good will' is the better-attested reading and is parallel to 'the people' in v. 10. It refers to those upon whom God's redemptive mercy has been bestowed and with whom he is well pleased (cf. Lk. 3:22). The peace which the angels announce is not the external and transient *pax Romana*; it is the peace which heals the estrangement between sinful men and a holy God (cf. Is. 9:6f.; Rom. 10:15). (*BENEDICTUS). E.E.E.

GLORY.

I. In the Old Testament

'Glory' generally represents Heb. *kābōd*, with the root idea of 'heaviness' and so of 'weight' or 'worthiness'. It is used of men to describe their wealth, splendour or reputation (though in the last sense *kābōd* is often rendered 'honour'). The glory of Israel was not her armies but Yahweh (Je. 2:11). The word could also mean the self or soul (Gn. 49:6).

The most important concept is that of the glory of Yahweh. This denotes the revelation of God's being, nature and presence to mankind, sometimes with physical phenomena.

In the Pentateuch the glory of Yahweh went with his people out of Egypt and was shown in the cloud which led them through the wilderness (Ex. 16:7, 10). The cloud rested on Mt Sinai, where Moses saw his glory (Ex. 24:15-18). No man could

see God's face and live (Ex. 33:20), but some vision of his glory was granted (Ex. 34:5–8).

The glory of Yahweh filled the tabernacle (Ex. 40:34–35) and appeared especially at the hour of sacrifice (Lv. 9:6, 23). These passages seem all to be connected with a 'thunderstorm-theophany', but there are also passages which suggest more the character of Yahweh which is to be made known throughout the earth (Nu. 14:21–22).

The historical bookstell of the Temple's becoming the place where the glory of Yahweh was especially to be located (1 Ki. 8:11; 2 Ch. 7:1–3).

In the prophets there are both the quasi-physical conception of Yahweh's glory as seen in the visions of Ezekiel (Ezk. 1:28, *etc.*) and also a more spiritualized doctrine (Is. 40:4–5; 60:1–3, *etc.*). The vision of Isaiah in the Temple seems to combine both ideas (Is. 6:1–4).

There can be found, likewise, in the psalms all the imagery of the storm (Pss. 18; 29) and also the idea of the future display of God's character to the world (Pss. 57:11; 96:3).

II. In the New Testament

Here the LXX is followed in translating *kābōd* by *doxa*. In secular Greek this means 'opinion' or 'reputation'. The former idea disappears entirely in the LXX and NT, and words akin to *kābōd* are also rendered by *doxa*.

In certain places in the NT *doxa* refers to human honour (Mt. 4:8; 6:29), but its chief use is to describe the revelation of the character and the presence of God in the Person and work of Jesus Christ. He is the outshining of the divine glory (Heb. 1:3).

The glory of God was seen by the shepherds at the birth of Christ (Lk. 2:9, 14) and by his disciples during his incarnate life (Jn. 1:14). Particularly was it revealed in his *semeia* (Jn. 2:11) and at his transfiguration (Mt. 17:1–8; Mk. 9:2–8; Lk. 9:28–36). This recalls the ascent of Moses to Sinai (Ex. 24:15) and of Elijah to Horeb (1 Ki. 19:8) and their visions of the glory of God. Now Christ both sees and reflects the divine glory, but no tabernacle needs to be built because the Word of God has pitched his tent in the human flesh of Jesus (Jn. 1:14) and his glory is to be more fully revealed at the coming exodus at Jerusalem (Lk. 9:31) and finally at his parousia.

In the Fourth Gospel it is the hour of dedication to death which is essentially the hour of glory (Jn. 7:39; 12:23–28; 13:31; 17:5; *cf.* Heb. 2:9).

The resurrection and ascension are also seen as manifestations of the glory of God in Christ (Lk. 24:26; Acts 3:13; 7:55; Rom. 6:4; 1 Tim. 3:16; 1 Pet. 1:21). But above all it is to be revealed in its fullness at the parousia (Mk. 8:38; 13:26, *etc.*).

Man, who was made as the image and glory of God (1 Cor. 11:7) for relationship with him, has fallen short of his destiny (Rom. 3:23), which has been fulfilled only by Christ, the second Adam (Heb. 2:6–9).

The glory of God in the face of Jesus Christ is still to be seen and reflected by the church (2 Cor. 4:3–6). It is the glory of the new covenant (2 Cor. 3:7–11), and it is especially shared both now (1 Pet. 4:14) and hereafter (Rom. 8:18) by those who suffer with Christ. The object of the church is to see that the world acknowledges the glory which is God's (Rom. 15:9) and is shown in his deeds (Acts 4:21), in his disciples (1 Cor. 6:20) and above all in his Son, the Lord of glory (Rom. 16:27).

GNOSTICISM. A term derived from Gk. *gnōsis*, 'knowledge'. Until modern times it was applied exclusively to a body of heretical teaching denounced by the church Fathers in the early Christian centuries. But in 20th-century scholarship it has often been applied more loosely to any form of religious belief which emphasizes any kind of dualism and/or the possession of secret knowledge. So, for example, Zoroastrianism, Mandaeanism, the Hermetic literature, the Dead Sea scrolls and even the NT itself have all been described as 'gnostic'.

I. Definition

This is one of the most hotly debated issues today, and there are two main schools of thought: one, represented by conservative British scholars such as R. McL. Wilson, which supports a 'narrow' definition (*i.e.* restricting the term to the 2nd-century Christian heresies); and the other, popularized especially by German scholars like R. Bultmann and K. Rudolf, which supports a 'wide' definition (*i.e.* including other groups with a similar outlook).

There are difficulties with the 'wide' definition of the term, for under this usage the word 'Gnosticism' comes to have such a broad connotation that it almost ceases to have any specific reference at all, and simply denotes the lowest common denominator of Hellenistic thought, in which dualism of one sort or another was of ten a prominent feature.

At the same time, however, there are also difficulties in defining more precisely what Gnosticism is. Some groups in the early church (*e.g.* Valentinians, Naassenes) actually called themselves Gnostics. But the church Fathers are far from unanimous in their attempts to define what was common even to these groups. Indeed Irenaeus went so far as to comment that 'there are as many systems of redemption as there are teachers of these mystical doctrines' (*Adv. Haer.* 1. 21. 1).

But in spite of such obstacles to comprehensive definition, these 2nd-century groups had enough in common for us to be able to form some idea of a basic Gnostic belief.

The foundation-stone of this belief was a radical cosmological dualism, *i.e.* the belief that the created world was evil, and was totally separate from and in opposition to the world of spirit. The supreme God dwelt in unapproachable splendour in this spiritual world, and had no dealings with the world of matter. Matter was the creation of an inferior being, the *Demiurge*. He, along with his aides the *archōns*, kept mankind imprisoned within their material existence, and barred the path of individual souls trying to ascend to the spirit world after death. Not even this possibility was open to everyone, however. For only those who possessed a divine spark (*pneuma*) could hope to escape from their corporeal existence. And even those possessing such a spark did not have an automatic escape, for they needed to receive the enlightenment of *gnōsis* before they could become aware of their

GNOSTICISM

own spiritual condition: '... it is not only the washing that is liberty, but the knowledge of who we were, and what we have become, where we were or where we were placed, whither we hasten, from what we are redeemed, what birth is, and what re-birth' (*Exc. Theod.* 78. 2). In most of the Gnostic systems reported by the church Fathers, this enlightenment is the work of a divine redeemer, who descends from the spiritual world in disguise and is often equated with the Christian Jesus. Salvation for the Gnostic, therefore, is to be alerted to the existence of his divine *pneuma* and then, as a result of this knowledge, to escape on death from the material world to the spiritual.

The Gnostics themselves conceptualized all this in a highly mythological form, but the realities to which it corresponded were undoubtedly of a more existential nature. The Gnostic was trying to discover his own identity, and the appreciation of this fact led the eminent psychiatrist Carl Gustav Jung, for example, to base many of his observations about human nature on an understanding of ancient Gnosticism.

From the standpoint of traditional Christianity, Gnostic thinking is quite alien. Its mythological setting of redemption leads to a depreciation of the historical events of the life, death and resurrection of Jesus. Its view of man's relationship to God leads to a denial of the importance of the person and work of Christ, while, in a Gnostic context, 'salvation' is not understood in terms of deliverance from sin, but as a form of existential self-realization.

II. Sources

We know of the Gnostic sects from two different sources:

a. The church Fathers

The most important work here is Irenaeus, *Against Heresies*, though Tertullian, Clement of Alexandria and Hippolytus of Rome all wrote extensively on the same subjects. Some of these writings are interdependent, and they all have a similar outlook. They were all written from the standpoint of orthodox Catholic Christianity, to refute what the Fathers saw as a corruption of that 'original' apostolic Christianity of which they believed themselves to be the true upholders. This means that they are tendentious works, rather than impartial accounts of Gnostic beliefs. They were also written on the basis of secondhand knowledge. This, of course, was inevitable, since *gnōsis* by its very nature was esoteric and was not therefore readily accessible to anyone who was not an initiate. Nevertheless, when compared with the writings of the Gnostics themselves, the accounts of the church Fathers can be seen to be fair and reliable, at least in their general outlines, if not always in specific details.

b. Gnostic texts

These are by far the most important sources of our modern knowledge of Gnosticism, for they suffer from none of the disadvantages of the patristic accounts, and give us a direct insight into the workings of the Gnostic mind.

A number of isolated Gnostic texts have been known for some time, including important ones like the *Pistis Sophia*, the *Books of Jeû* and the *Apocryphon of John*, as well as a number of lesser works. But most of our direct knowledge of Gnos-

tic writings comes from a remarkable find of 13 codices discovered about 1945 near Nag Hammadi in upper Egypt (*CHENOBOSKION). These were written in Coptic, though they are all translations of Gk. originals. They formed part of a library collected by an early Christian sect, and were eventually abandoned about AD 400. They comprise some 52 separate works. Publication of these texts has been a long and arduous business, and a complete facsimile edition of the original text did not become fully available until 1978. An Eng. translation of the texts had been published the previous year, though some of them had been made known much earlier through various scholarly articles and monographs. Nevertheless, the real task of interpreting these texts is only just beginning, and any assessment of them made now can only be provisional and tentative.

Some of the better-known works found at Nag Hammadi include a number of so-called 'gospels'. Like the Synoptic Gospel source Q, the *Gospel of Thomas* is a collection of sayings of Jesus, some of which parallel those found in the NT Gospels. Others are quite different, though some of them may well be genuine sayings of Jesus. But the collection as a whole has obviously been edited from a distinctively sectarian viewpoint. The *Gospel of Philip*, the *Gospel of Truth*, the *Coptic Gospel of the Egyptians* and the *Gospel of Mary* have less in common with the NT Gospels, and are more explicitly Gnostic in character.

The other Nag Hammadi texts include various collections of prayers, works with the title of *Apocryphon* ('secret book'—of James and of John), a number of others with the title of *Apocalypse* (of Paul, of James, of Adam, of Peter), together with heterogeneous examples of Gnostic speculative literature. Not all the works in this library represent the same type of Gnosticism. Many seem to be of Valentinian origin, but this does not apply to them all. Indeed some are not Gnostic at all. Codex VI, for example, contains a Coptic version of part of Plato's *Republic*, while two examples of early Christian wisdom writing are preserved in the *Teachings of Silvanus* (Codex VII) and the *Sentences of Sextus* (Codex XII).

An important question raised by these texts is the nature of Gnosticism itself *vis-à-vis* Christianity. Was it really a Christian heresy, as the Fathers supposed—or was it a non-Christian form of belief which in certain circles became overlaid with Christian ideas? So far as the evidence has been assessed, the Nag Hammadi texts do seem to show that there were non-Christian forms of Gnosticism. This can be seen most clearly in a comparison of *Eugnostos the Blessed* with the *Sophia of Jesus Christ*. For the two are so closely parallel that it is obvious that they must be different versions of the same text, though the former is cast in the form of a religio-philosophical tractate written by a teacher to his pupils, whereas the latter has the form of a post-resurrection discourse delivered by the risen Christ to his disciples. Detailed study of these two texts has so far tended to confirm that *Eugnostos the Blessed* is the original version, which was subsequently Christianized as the *Sophia of Jesus Christ*. Other texts, such as the *Apocalypse of Adam* and the *Paraphrase of Shem*, also seem to represent a non-Christian form of Gnosticism.

III. Origins

Where did Gnosticism come from? According to

the church Fathers, it was a perversion of Christianity. But that idea is now all but universally discounted, for it does not square with the evidence. There is, however, no consensus on the question of Gnostic origins. It is easy to recognize this or that Gnostic idea as having affinity with the concepts of some other religion, but it is very difficult to pin down more precisely the actual origin of Gnostic thought.

Some believe that Gnosticism was in some way connected with Judaism in one of its various forms, and it is undoubtedly true that OT ideas feature prominently in Gnostic speculations, though always in a context that tears them from the fabric of authentic OT thought. Others point to the similarities between Gnosticism and the kind of dualism often found in the writings of the Gk. philosophers. The discovery of part of Plato's *Republic* at Nag Hammadi certainly demonstrates that his ideas were not uncongenial to the Gnostics, though at the same time it is hardly proof that there was some intrinsic connection between them.

A different origin for Gnosticism has been sought in Iranian religion. Here again the evidence is scarcely conclusive, though it cannot be denied that Gnosticism is much closer in outlook to the cyclical concepts of those eastern religions which stem from Zoroastrianism than it is to traditional Christianity.

It is impossible to pinpoint accurately the origins of Gnosticism. Indeed it is unlikely that it had a single origin, for by nature Gnostic thinking was extremely syncretistic, and its adherents were always ready, even eager, to utilize religious ideas from many diverse sources to serve their own ends.

IV. Issues in New Testament interpretation

Two major issues for the student of the NT stem from the study of Gnosticism:

a. Pre-Christian Gnosticism

According to Reitzenstein (followed by Bultmann and many other German scholars), when Christianity first made its appearance in the Hellenistic world, its apostles found already in existence a comprehensive world-view that combined Greek and Oriental thought, and included the descent of a divine redeemer who saved the souls of mankind. This 'Gnostic' view was taken over *in toto* by the first Christians and applied to their experience of Jesus, so that he became the heavenly redeemer figure. Thus, the NT itself can be viewed as a form of Christianized Gnosticism.

There are many difficulties with the view that Gnosticism antedated Christianity. For one thing, there is no evidence for it, either in the texts known to Reitzenstein or in those now known to us. The Nag Hammadi texts have shown that there were non-Christian forms of Gnosticism, but that does not provide evidence for pre-Christian Gnosticism.

The idea that the NT is a form of Gnosticism is in any case unlikely, for there are serious and fundamental differences between the outlook of the Gnostics and that of the NT writers. The Gnostics held a cyclical concept of time, and the notion of history was meaningless to them. Gnostic redemption could never have any meaning in this life, but only in an escape from temporal existence to the world of spirit. By contrast, both OT and NT em-

phasize that time and history are important and both have a divine significance. God has acted in the course of the historical process as both Creator and Redeemer to provide salvation for his people. Whereas, for the Gnostic, God can be known only by an escape from history, to the Christian he can be supremely known because of his involvement in history, specifically in the life, death and resurrection of Jesus Christ. And Christian salvation is something to be enjoyed here and now in this world, rather than in some ethereal, 'spiritual' world.

b. Heresy and orthodoxy

Gnosticism is not, however, irrelevant for NT study. For traces of 'Gnostic' belief can be found in a number of NT writings, most strikingly in the beliefs of the Corinthian church as reflected in 1 Cor. These people claimed that because of their possession of special 'knowledge' they were released from the normal rules of society, and they claimed to be living an elevated, 'spiritual' existence even in their present material state. For them the resurrection was already a past event—past because they understood it spiritually, as did many Gnostics. And, like other Gnostics, they laid considerable emphasis on the supposed magical properties of the Christian sacraments.

Colossians has often been supposed to indicate the existence of a similar, though not identical, view in the church at Colossae, while the letters to the seven churches in Rev. 1-3 confirm the presence of similar 'Gnostic' ideas in other churches in the same area of Asia Minor. The Pastoral Epistles go so far as to denounce explicitly 'what is falsely called *gnōsis*' (1 Tim. 6:20), and 1 Jn. likewise seems to be written against some kind of 'Gnostic' background.

The NT writers themselves condemn these ideas. Though they often use Gnostic terminology in doing so, they make it clear that they do not accept its Gnostic connotations. But at the same time, the fact that such ideas seem to have been current, perhaps even widespread, in churches in different parts of the Roman empire, does give some credence to the hypothesis of W. Bauer, that the difference between heresy and orthodoxy was not so neatly defined in the 1st century as it later came to be by the anti-Gnostic Fathers of the Catholic Church.

GOAD. A long-handled, pointed instrument used to urge on the oxen when ploughing. Shamgar used one as a weapon and slew 600 Philistines (Jdg. 3:31). The term is employed metaphorically in Ec. 12:11 to describe the words of the wise, and in Acts 26:14 where Paul is warned that for him to

GOAD

resist the new heavenly directive will be as fruitless as for a stubborn ox to resist the goad. J.D.D.

GOD. God is and he may be known. These two affirmations form the foundation and inspiration of all true religion. The first is an affirmation of faith, the second of experience. Since the existence of God is not subject to scientific proof, it must be a postulate of faith; and since God transcends all his creation, he can be known only in his self-revelation.

The Christian religion is distinctive in that it claims that God can be known as a personal God only in his self-revelation in the Scriptures. The Bible is written not to prove that God is, but to reveal him in his activities. For that reason, the biblical revelation of God is, in its nature, progressive, reaching its fullness in Jesus Christ his Son.

In the light of his self-revelation in the Scriptures, there are several fundamental affirmations that can be made about God.

I. His Being

In his being God is self-existing. While his creation is dependent on him, he is utterly independent of the creation. He not only has life, but he is life to his universe, and has the source of that life within himself. God is utterly independent of every environment in which he wills to make himself known. This quality of God's being probably finds expression in his personal name, Yahweh, and in his self-affirmation: 'I am who I am', i.e. 'I am the one that has being within himself' (Ex. 3:14).

This perception was implied in Isaiah's vision of God: 'The Lord is the everlasting God, the Creator of the ends of the earth. He will not grow tired or weary . . . He gives strength to the weary, and increases the power of the weak' (Is. 40:28-29). He is the Giver, and all his creatures are receivers. Christ gave this mystery its clearest expression when he said: 'For as the Father has life in himself, so he has granted the Son also to have life in himself' (Jn. 5:26). This makes independence of life a distinctive quality of deity. Throughout the whole of Scripture God is revealed as the Fountainhead of all there is, animate and inanimate, the Creator and life-giver, who alone has life within himself.

II. His nature

In his nature God is pure spirit, which means intelligent energy. Christ made this disclosure about the God who is the object of our worship to the woman of Samaria: 'God is spirit, and those who worship him must worship in spirit and truth' (Jn. 4:24). In this respect we must distinguish between God and those of his creatures that are spiritual. When we say that God is pure spirit, it is to emphasize that he is not part spirit and part body as man is. He is simple spirit without form or parts, and for that reason he has no physical presence. When the Bible writers speak of God as having eyes, ears, hands and feet, they are ascribing to God powers that correspond to what these physical parts enable us humans to do. If we did not speak of God in physical terms in this way we could hardly speak of him at all. This, of course, does not imply any imperfection in God, since his life as Spirit is not a limited or restricted form of existence.

When we say that God is infinite spirit, we pass completely out of the reach of our experience. We

are limited as to time and place, as to knowledge and power. God is essentially unlimited, and every element of his nature is infinite. His infinity in relation to time we call his *eternity*, in relation to space his *omnipresence*, in relation to knowledge his *omniscience*, and in relation to power his *omnipotence*. God is eternal, all-present, all-knowing and all-powerful.

His infinity likewise means that God is *transcendent* over his universe. It emphasizes his distinctness as self-existing spirit, from all his creatures. He is not shut in by what we call nature, but infinitely exalted above it. Even those passages of Scripture which stress his local and temporal manifestation, lay emphasis also on his exaltation and omnipotence as a being external to the world, its sovereign Creator and Judge (cf. Is. 40:12-17).

At the same time God's infinity implies his *immanence*. By this we mean his all-pervading presence and power within his creation (cf. Ps. 139). He does not stand apart from the world, a mere spectator of the work of his hands. He pervades everything, organic and inorganic, acting from within outwards, from the centre of every atom, and from the innermost springs of thought and life and feeling, in a continuous sequence of energizing effect.

In such passages as Is. 57 and Acts 17 we have an expression of both God's transcendence and his immanence. In the first of these passages his transcendence finds expression as 'the high and lofty One who lives for ever, whose name is holy', and his immanence as the one who dwells 'with him who is contrite and lowly in spirit' (Is. 57:15, *וְיָ*). In the second passage, Paul, in addressing the men of Athens, affirmed of the transcendent God that 'the God who made the world and everything in it, is the Lord of heaven and earth, and does not live in temples built by hands. And he is not served by human hands, as if he needed anything, because he himself gives all men life and breath and everything else', and then affirms his immanence as the one who 'is not far from each one of us, for "In him we live and move and have our being"' (Acts 17:24, 28).

III. His character

God is personal. When we say this we assert that God is rational, self-conscious and self-determining, an intelligent moral agent. As supreme mind he is the source of all rationality in the universe. Since God's rational creatures possess independent characters, God must be in possession of a character that is divine in both its transcendence and immanence.

The OT reveals a God who is personal, both in terms of his own self-disclosure and of his people's relations with him, and the NT clearly shows that Christ spoke to God in terms that were meaningful only in a person-to-person relationship. For that reason we can predicate specific mental and moral qualities of God, such as we do of human character. Attempts have been made to classify the divine attributes, i.e. character qualities, under such headings as 'Mental and Moral', 'Communicable and Incommunicable' or 'Related and Unrelated'. Scripture would seem to give no support to any of these classifications. *God's names are to us the designation of his attributes, and it is significant that, historically, God's names were given in the context of his people's needs.

It would seem, therefore, more true to the biblical revelation to treat each attribute as a

manifestation of God in the human situation that called it forth, compassion in the presence of misery, long-suffering in the presence of ill-desert, grace in the presence of guilt, mercy in the presence of penitence, and so forth, suggesting that the attributes of God designate a relation which he establishes with those who feel their need of him. That bears with it the undoubted truth that God, in the full plenitude of his nature, is in each of his attributes, so that there is never more of one attribute than of another, never more love than justice, or more mercy than righteousness, but that God is unchanging, undiminished and wholly involved in all that he does. If there is one attribute of God that can be recognized as all-comprehensive and all-pervading, it is his *holiness, which must be predicated of all his attributes, holy love, holy compassion, holy wisdom, etc.

IV. His will

God is sovereign. That means that he makes his own plans and carries them out in his own time and way. His sovereignty in willing and working is simply an expression of his supreme intelligence, power and wisdom. God's will is not arbitrary, but acts in complete harmony with his character. It is the forth-putting of his power and goodness, and is thus the final determinant of all existence for the divine glory.

There is, however, a distinction between God's will which prescribes what *we* shall do, and his will which determines what *he* will do. So theologians distinguish between the *decretive will* of God by which he ordains whatsoever comes to pass, and his *preceptive will* by which he enjoins upon his creatures the duties that belong to them. The decretive will of God is thus always accomplished, while his preceptive will is often disobeyed.

When we conceive of the sovereign sway of the divine will as the ultimate ground of all that happens, either actively bringing it to pass (cf. Ps. 135:5-12), or passively permitting it to come to pass (cf. Acts 14:16), we need to recognize the distinction between the active will of God and his permissive will. The entrance of sin into the world, and its continued prevalence, must be attributed to the permissive will of God, since sin is a contradiction of his holiness and goodness. There is, therefore, a realm in which God's will to act is dominant, and a realm in which man's liberty appears in exercise against God. The Bible presents both in operation. The note which rings through the OT is that struck by Nebuchadrezzar: 'He does what he pleases with the powers of heaven and the peoples of the earth. No one can hold back his hand or say to him: "What have you done?"' (Dn. 4:35). In the NT we come across an impressive example of the divine will resisted by human unbelief, when Christ uttered his agonizing cry over Jerusalem: 'How often I have longed to gather your children together, as a hen gathers her chicks under her wings, but you were not willing!' (Mt. 23:37). Nevertheless, the sovereignty of God ensures that all will be overruled to serve his eternal purpose, and that ultimately Christ's petition, which his followers echo, 'Your will be done on earth as it is in heaven' (Mt. 6:10; 26:39-42) shall be answered.

It is true that we are not able to reconcile God's sovereignty and man's responsibility within a single logical frame. That is because we do not understand the full range of divine knowledge and comprehension of all the laws that govern human

conduct. The Bible teaches us that all life is lived in the sustaining will of God 'in whom we live and move and have our being', and that as a bird is free in the air, and a fish in the sea, so we humans have our own real freedom in the will of God who created us for himself. God sustains us all in the responsible freedom of being accountable to him for what we choose to do, and without this the deeper freedom of living for him in faith and love, and enjoying him as our supreme good, could not be.

V. His essential life

In his essential life God is a fellowship. The supreme revelation of God given in the Scriptures is that God's life is eternally within himself a loving fellowship of three equal and distinct persons, Father, Son and Spirit, and that in his relationship to his moral creatures God is extending to them the fellowship that is essentially his own. This truth might perhaps be read into the dictum that expressed God's deliberate will to create man: 'Let us make man in our image, after our likeness.' That form of words stands as an expression of the will of God, not only to reveal himself as a fellowship, but to open the divine life of fellowship to moral creatures made in his image and so fitted to enjoy it. While it is true that through sinning man lost his fitness for that holy fellowship, it is also true that God willed to restore it to him. This was the grand end of redemption: here we see God in Three Persons acting for our restoration, in electing love that claimed us, in redeeming love that emancipated us, and in regenerating love that recreated us for his fellowship (*TRINITY). It is the fitting climax of the biblical revelation that John affirms on the basis of Christ's redeeming work, linked with the divine plurality and fellowship of which he had spoken earlier (I Jn. 1:3-2:2; 3:24-4:6), 'God is love' (I Jn. 4:8-10, 16).

VI. His Fatherhood

The personal God can enter into personal relationships, and the closest and tenderest that the Bible knows is that of Father. This was Christ's most common designation for the One to whom he prayed and of whom he taught, and in theology the name of Father is reserved specially for the first Person of the Trinity. There are four types of relationship in which the word 'Father' is applied to God in Scripture.

1. There is his *Creational Fatherhood*. The fundamental relationship of God to man, whom he made in his own image, finds its most full and fitting illustration in the natural relationship which involves the gift of life. It is, more particularly, for man's spiritual nature that this relationship is claimed. In Heb. God is called 'the Father of our spirits' (12:9), and in Nu. 'the God of the spirits of all mankind' (16:22). Paul, when he preached in the Areopagus, used this consideration to drive home the irrationality of rational man worshipping idols of wood and stone, quoting the poet Aratus ('For we are his offspring') to indicate that man is a creature of God. The creaturehood of man is thus the counterpart of the general Fatherhood of God. Without the Creator-Father there would be no human race, no family of mankind at all.

2. There is the *Theocratic Fatherhood*. This is God's relationship to his covenant-people, Israel. In this, since it is a collective relationship that is indicated rather than a personal one, Israel, as

GOD

covenant-people, was the child of God (Ex. 4:22–23), and she was challenged to recognize and respond to this filial relationship: 'If I am a father, where is the honour due me?' (Mal. 1:6, cf. 2:10; Is. 64:8). But since the covenant relationship was redemptive in its spiritual significance, this may be regarded as a foreshadowing of the NT revelation of the divine Fatherhood.

3. There is *Generative Fatherhood*. This belongs exclusively to the second Person of the Trinity, designated the Son of God, and the only begotten Son. It is, therefore, unique, and not to be applied to any mere creature. Christ, while on earth, spoke most frequently of this relationship which was peculiarly his. God was his Father by eternal generation, expressive of an essential and timeless relationship that transcends our comprehension. It is significant that Jesus, in his teaching of the Twelve, never used the term 'Our Father' as embracing himself and them. In the resurrection message through Mary he indicated two distinct relationships: 'My Father, and your Father' (Jn. 20:17), but the two are so linked together that the one becomes the ground of the other. His Sonship, though on a level altogether unique, was the basis of their sonship, by virtue of the faith-communion and Holy Spirit-union that bound them to him.

4. There is also the *Adoptive Fatherhood*. This is the redeeming relationship that belongs to all believers, and in the context of redemption it is viewed from two aspects: that of their standing in Christ, and that of the regenerating work of the Holy Spirit in them. This relationship to God is basic for all believers, as Paul reminds the Galatians: 'For in Christ Jesus you are all sons of God, through faith' (Gal. 3:26). In this living union with Christ they are adopted into the family of God, and they become subjects of the regenerative work of the Spirit that bestows upon them the nature of children: one is the objective aspect, the other the subjective. Because of their new standing (justification) and their relationship (adoption) to God the Father in Christ, they become partakers of the divine nature and are born into the family of God. John made this clear in the opening chapter of his gospel: 'To all who received him, to those who believed in his name, he gave the right (authority) to become children of God – children born, not of natural descent, nor of human decision or a husband's will, but born of God' (Jn. 1:12, 13). And so they are granted all the privileges that belong to that filial relationship: 'if children, then heirs' is the sequence (Rom. 8:17).

It is clear that Christ's teaching on the Fatherhood of God restricts the relationship to his believing people. Nowhere is he reported as assuming this relationship to exist between God and unbelievers. Not only does he not give any hint of a redeeming Fatherhood of God towards all men, but he said pointedly to his cavilling opponents: 'You belong to your father, the devil' (Jn. 8:44).

While it is under this relationship of Father that the NT brings out the tenderest aspects of God's character, his love, his faithfulness and his watchful care, it also brings out the responsibility of our having to show God the reverence, the trust and the loving obedience that children owe to a father. Christ has taught us to pray not simply 'Our Father', but 'Our Father who art in heaven', thus inculcating reverence and humility. However intimate, rich and warm-hearted his love, God remains God, majestic, amazing and awesome.

R.A.F.
P.F.J.

GOD, NAMES OF. In considering the various names, titles or descriptions of God in the OT there are three words of basic importance—'ēl. 'lōhīm and Yahweh (Jehovah). It is necessary at the outset to realize the meaning of these severally, and their relationship one to another.

I. Basic names

a. El

El ('ēl), evv 'God' or 'god', has cognate forms in other Semitic tongues, and means a god in the widest sense, true or false, or even an image treated as a god (Gn. 35:2). Because of this general character it is frequently associated with a defining adjective or predicate. For example, in Dt. 5:9 we read, 'I the LORD (Yahweh) your God ('lōhīm) am a jealous God ('ēl)', or in Gn. 31:13, 'the God ('ēl) of Bethel'. In the Ras Shamra tablets, however, El is a proper noun, the name of the Canaanite 'high God' whose son was Ba'al. The plural of 'ēl is 'lōhīm, and when used as a plural is translated 'gods' (but see below). These may be mere images, 'wood and stone' (Dt. 4:28), or the imaginary beings which they represent (Dt. 12:2).

b. Elyon, El Elyon

'El 'elyōn, 'the most high God', was the title of God as worshipped by Melchizedek (see below). 'Elyōn is found in Nu. 24:16 and elsewhere. In Ps. 7:17 it is found in combination with Yahweh, and in Ps. 18:13 in parallel. See also Dn. 7:22, 25 for the Aram. plural 'elyōnīn; elsewhere in the Aram. of Daniel the equivalent of Heb. 'elyōn is 'illāyā (e.g. 4:17; 7:25).

c. Elohim

Though a plural form ('lōhīm), Elohim can be treated as a singular, in which case it means the one supreme deity, and in evv is rendered 'God'. Like its English equivalent, it is, grammatically considered, a common noun, and conveys the notion of all that belongs to the concept of deity, in contrast with man (Nu. 23:19) and other created beings. It is appropriate to cosmic and world-wide relationships (Gn. 1:1), because there is only one supreme and true God, and he is a Person; it approaches the character of a proper noun, while not losing its abstract and conceptual quality.

d. Eloah

This word ('lōah) is a singular form of 'lōhīm, and has the same meaning as 'ēl. In the OT it is chiefly found in poetry (e.g. Dt. 32:15, 17; it is most frequent in Job). The corresponding Aramaic form is 'lāh.

e. Jehovah

The Heb. word Yahweh is in evv usually translated 'the LORD' (note the capitals) and sometimes 'Jehovah'. The latter name originated as follows. The

original Heb. text was not vocalized; in time the 'tetragrammaton' YHWH was considered too sacred to pronounce; so "dōnāy ('my Lord') was substituted in reading, and the vowels of this word were combined with the consonants YHWH to give 'Jehovah', a form first attested at the start of the 12th century AD.

The pronunciation Yahweh is indicated by transliterations of the name into Greek in early Christian literature, in the form *iaoue* (Clement of Alexandria) or *iabe* (Theodoret; by this time Gk. *b* had the pronunciation of *v*). The name is certainly connected with Heb. *hāyā*, 'to be', or rather with a variant and earlier form of the root, *hāwā*. It is not, however, to be regarded as an imperfective aspect of the verb; the Hiph'il conjugation, to which alone such a form could be assigned, is not forthcoming for this verb; and the imperfective of the Qal conjugation could not have the vowel *a* in the first syllable. Yahweh should be regarded as a straightforward substantive, in which the root *hwh* is preceded by the preformative *y*. See L. Koehler and W. Baumgartner, *Lexicon in Veteris Testamenti Libros*, 1958, pp. 368f.; also L. Koehler, *Vom Hebräischen Lexikon*, 1950, pp. 17f.

Strictly speaking, Yahweh is the only 'name' of God. In Genesis wherever the word *šēm* ('name') is associated with the divine being that name is Yahweh. When Abraham or Isaac built an altar 'he called on the name of Yahweh' (Gn. 12:8; 13:4; 26:25).

In particular, Yahweh was the God of the Patriarchs, and we read of 'Yahweh the God (Elohim) of Abraham' and then of Isaac and finally 'Yahweh, the God of Abraham, and the God of Isaac, and the God of Jacob', concerning which Elohim says, 'this is my name for ever' (Ex. 3:15). Yahweh, therefore, in contrast with Elohim, is a proper noun, the name of a Person, though that Person is divine. As such, it has its own ideological setting; it presents God as a Person, and so brings him into relationship with other, human, personalities. It brings God near to man, and he speaks to the Patriarchs as one friend to another.

A study of the word *'name' in the OT reveals how much it means in Hebrew. The name is no mere label, but is significant of the real personality of him to whom it belongs. It may derive from the circumstances of his birth (Gn. 5:29), or reflect his character (Gn. 27:36), and when a person puts his 'name' upon a thing or another person the latter comes under his influence and protection.

f. *Yahweh Elohim*

These two words are combined in the narrative of Gn. 2:4-3:24, though 'Elohim' alone is used in the colloquy between Eve and the serpent. If the narrative concerning Eden was related to a Sumerian original it could have been brought by Abraham from Ur, and it would thus be possible to account for the different use in these two chapters from those which precede and follow it.

g. *How El, Elohim and Yahweh are related*

We are now in a position to consider how these three words agree or differ in their use. While there are occasions on which any one of them could be used of God, they are by no means identical or interchangeable. In the account of Gn. 14, now regarded by many as giving a true picture of the situation in the early 2nd millennium BC, we read how Abraham met with Melchizedek, the priest of

'ēl 'elyōn, 'the most high God'. Here we have Melchizedek's 'name' or title for the deity he worshipped. It would be clearly wrong to substitute either 'Elohim' or 'Yahweh' for 'ēl 'elyōn' (Gn. 14:18). Melchizedek blesses Abraham in the name of 'ēl 'elyōn, 'maker of heaven and earth', so identifying 'ēl 'elyōn as the supreme God (14:19-20).

The king of Sodom offers Abraham a gift, which he refuses, lifting up his hand to *Yahweh*, 'ēl 'elyōn, 'maker of heaven and earth' (14:22). He means that he also worships the supreme God, the same God (for there is only one), but knows him by the name of 'Yahweh'. (LXX and SP omit *Yahweh* in Gn. 14:22.)

To cite a second example, in Gn. 27:20 Jacob deceives his father with the words, 'Because Yahweh your God (Elohim) granted me success.' To interchange 'Yahweh' and 'Elohim' would not make sense. Yahweh is the name by which his father worships the supreme God (Elohim).

II. The revelation to Moses

The revelation made to Moses at the burning bush is one of the most striking and convincing incidents in the Bible story. After the opening words God introduces himself thus, 'I am the God (Elohim) of your father' (Ex. 3:6). This at once assumes that Moses would know the name of his father's God. When God announces his purpose of delivering Israel by the hand of Moses the latter shows reluctance and begins to make excuse.

He inquires, 'If ... the people of Israel ... ask me, "What (*mah*) is his name?" what shall I say to them?' (Ex. 3:13). The normal way to ask a name is to use the pronoun *mī*; to use *mah* invites an answer which goes further, and gives the meaning ('*what?*') or substance of the name.

This helps to explain the reply, namely, 'I AM WHO I AM' ('*ehyeh 'aser ehyeh*). And he said, 'Say this to the people of Israel, "I AM has sent me to you"' (Ex. 3:14). By this Moses would not think that God was announcing a *new name*, nor is it called a 'name'; it is just the inner meaning of the name Moses knew. We have here a play upon words; 'Yahweh' is interpreted by '*ehyeh*'. M. Buber translates 'I will be as I will be', and expounds it as a promise of God's power and enduring presence with them in the process of deliverance (*Moses*, pp. 39-55). That something like this is the purport of these words, which in English sound enigmatical, is shown by what follows, "'Yahweh, the God of your fathers, the God of Abraham, the God of Isaac, and the God of Jacob, has sent me to you": this is my name for ever' (v. 15). The full content of the name comes first; the name itself follows.

III. The interpretation of Exodus 6:2-3

After Moses' return to Egypt Yahweh further instructs him how to deal with Pharaoh and with his own people: 'I am the LORD (Yahweh),' he says. 'I appeared to Abraham, to Isaac, and to Jacob, as God Almighty ('*ēl šadday*), but by my name the LORD (Yahweh) I did not make myself known to them' (Ex. 6:3).

The former revelation, to the Patriarchs, concerned promises belonging to a distant future; it supposed that they should be assured that he, Yahweh, was such a God ('*ēl*') as was competent (one possible meaning of *šadday*) to fulfil them. The revelation at the bush was greater and more intimate, God's power and immediate and continuing presence with them being all wrapped up in the

GOD, NAMES OF

familiar name of Yahweh. Henceforth, 'I am Yahweh, your God' (Ex. 6:7) gives them all the assurance they need of his purpose, his presence and his power.

For God's self-revelation to the Patriarchs as God Almighty ('*ēl šadday*'), initiating or reaffirming his covenant with them, cf. Gn. 17:1; 35:11; 48:3—passages which, like Ex. 6:1–6, are assigned to the priestly narrator in the prevalent documentary hypothesis.

IV. Particular names containing El or Jehovah

a. 'El 'Olām

At Beersheba Abraham planted a tamarisk, and 'called there on the name of *Yahweh*', '*ēl 'ōlām*' (Gn. 21:33). Here 'Yahweh' is the name, and the description follows, 'the Everlasting God'. F. M. Cross has drawn attention to the original form of this name—'*El dhū-Ōlami*', 'God of Eternity' (cf. W. F. Albright in *BO* 17, 1960, p. 242).

b. 'Ēl-'Elōhē-Israel

Jacob, reaching Shechem, bought a piece of land, reared an altar and called it '*ēl-'lōhē-Yisrā'ēl*' (Gn. 33:20), 'God ('*ēl*) is the God ('*lōhīm*) of Israel'. In this manner he commemorates the recent encounter with the angel at the place he had called Peniel (*p'nī-'ēl*, 'the face of God', Gn. 32:30). He thus accepts Israel as his name and so renders worship to God.

c. Jehovah-jireh

In Gn. 22, when the angel of the Lord had pointed to a ram as a substitute for Isaac, Abraham named the place *Yahweh yir'eh*, 'the LORD provides' (vv. 8, 14).

d. Jehovah-nissi

In somewhat similar fashion, after the defeat of the Amalekites, Moses erected an altar and called it *Yahweh nissi*, 'the LORD is my banner' (Ex. 17:15). These, however, are not the names of God, but are commemorative of events.

e. Jehovah-shalom

This is the name given by Gideon to the altar he erected in Ophrah, *Yahweh šālōm*, 'the LORD is peace' (Jdg. 6:24).

f. Jehovah-tsidkenu

This is the name by which Messiah shall be known, *Yahweh šidqēnū*, 'the LORD is our righteousness' (Je. 23:6; 33:16), in contrast to the last king of Judah, who was an unworthy bearer of the name Zedekiah (*šidqiyāhū*, 'Yahweh is righteousness').

g. Jehovah-shammah

This is the name given to the city of Ezekiel's vision, *Yahweh šāmmā*, 'the LORD is there' (Ezk. 48:35).

h. The LORD of hosts

Differing from the preceding names, *Yahweh š'bh'ōt*, 'the LORD of hosts', is a divine title. It does not occur in the Pentateuch; it appears first in 1 Sa. 1:3 as the title by which God was worshipped at Shiloh. It was used by David in defying the Philistine (1 Sa. 17:45); and David again makes use of it as the climax to a glorious song of victory (Ps. 24:10). It is common in the prophets (88 times in Jeremiah), and is used to exhibit Yahweh as at all

times the Saviour and Protector of his people (Ps. 46:7, 11). The 'hosts' may originally have been the armies of Israel, as in 1 Sa. 17:45, but at an early date came to comprise all the heavenly powers, ready to do the LORD's command.

i. LORD God of Israel

This title (*Yahweh 'lōhē Yisrā'ēl*) is found as early as Deborah's song (Jdg. 5:3), and is frequently used by the prophets (e.g. Is. 17:6; Zp. 2:9). It follows in the series 'the God of Abraham, of Isaac, and of Jacob'. In Ps. 59:5 ('Thou, LORD God of hosts, art God of Israel') it is combined with the preceding title.

j. The Holy One of Israel

This title (*q'dōš Yisrā'ēl*) is a favourite in Isaiah (29 times—1:4, etc.) in both the earlier and later parts of the book, and also in Jeremiah and the Psalms. Somewhat similar to this is 'the Mighty One of Israel' ('*hīr Yisrā'ēl*, Is. 1:24, etc.); also 'the Glory (victory) of Israel' (*nēsaḥ Yisrā'ēl*, 1 Sa. 15:29) used by Samuel.

k. Ancient of days

This is the description (Aram. '*atīq yōmīn*') given by Daniel, who pictures God on his throne of judgment, judging the great world-empires (Dn. 7:9, 13, 22). It alternates with the title 'most High' (Aram. '*illāyā*', '*elyōnīn*', vv. 18, 22, 25, 27).

F. F. B.

GODLINESS. In pagan literature, godliness (Gk. *eusebeia, eulabeia* and related terms) meant showing proper caution, fear or reverence towards the gods. Such piety involved the offering of sacrifices and other cultic activities. It also meant honouring the gods by respecting elders, masters, rulers, and all the orders of life thought to be under the protection of the gods. When this terminology was used in the Bible, a different notion of fear or respect was intended. The one true God, as creator and redeemer, requires an active obedience to his revealed will and a personal devotion that surpasses lip-service, mere trepidation, or bare admiration (e.g. Pr. 1:7; Is. 11:2; 33:6; Lk. 2:25; Acts 10:2; 22:12). Pre-eminently, Jesus is the godly One, whose prayers were heard because of his 'godly fear' or 'reverent submission' to the Father (Heb. 5:7). His death and heavenly exaltation makes it possible for others to offer to God, through him, acceptable worship or service, 'with reverence and awe' (Heb. 12:28).

Ungodliness (Gk. *asebeia*) brings the wrath of God, because it involves suppressing the truth about God, worshipping created things rather than the Creator, and pursuing unrighteous relationships and behaviour (Rom. 1:18–25; 1 Tim. 1:9–11). It is a condition from which we can only be rescued by trusting 'him who justifies the ungodly'

(Rom. 4:5; cf. 5:6; Tit. 2:11–14). Godliness is most frequently mentioned in the Pastoral Epistles, where Paul uses the terminology to counter its misapplication by false teachers (1 Tim. 6:3–10; 2 Tim. 3:4–5). Positively, it is a God-honouring manner of life, issuing from a true knowledge of God and his grace in Jesus Christ (1 Tim. 3:16; 4:7–10; 2 Tim. 3:10–12; Tit. 1:1; 2:11–12). A genuine devotion to God transforms relationships and behaviour in every context. See *FEAR, *HOLINESS.

D.G.P.

GOG AND MAGOG. In Ezk. 38:2 we are introduced to 'Gog, of the land of Magog, the chief prince (AV, RVmg., RSV; RV 'prince of *Rosh'), of *Meshech and Tubal'. LXX understood Magog as a people, not a country. The only reasonable identification of Gog is with Gyges, king of Lydia (c. 660 BC)—Assyr. Gugu; Magog could be Assyr. *mā(t) gugu*, 'land of Gog'. The linkage with peoples at the extremities of the then known world (Ezk. 38:5–6; cf. Rev. 20:8) suggests that we are to regard them as eschatological figures rather than as a historically identifiable king, etc. This is the interpretation in Rev. 20:8 and rabbinic literature. The popular identification of Rosh with Russia, Meshech with Moscow and Tubal with Tobolsk in Siberia has nothing to commend it from the standpoint of hermeneutics, though some of the wilder Russian tribes would fit into the explanation given.

Since we need not interpret Ezk. 38–39 as earlier in time than Ezk. 40–48, and rabbinic tradition places Gog after the days of the Messiah, we need see no contradiction between Ezekiel and Revelation, provided we understand the millennium in the sense the rabbis gave to 'the days of the Messiah'.

H.L.E.

GOLAN. The N city of refuge in Transjordan, in Manasseh's territory of Bashan (Dt. 4:43), and a levitical city (Jos. 21:27). Location uncertain, but may be identified with Sahn el-Jolan, 22 km E of Aphek (Hippos). The district of Gaulanitis was later named after it.

BIBLIOGRAPHY. *LOB*, p. 377.

N.H.

GOLIATH. A *giant of Gath serving in the Philistine army (1 Sa. 17:4); Goliath may have descended from that remnant of the Rephaim which, after having been scattered by the Ammonites (Dt. 2:20–21; 2 Sa. 21:22), took refuge with the Philistines. For discussion of his origin, see G. A. Wainwright, 'Early Philistine History', *VT* 9, 1959, pp. 79f. His height is given as 'six cubits and a span', i.e. 3.2 m, if the cubit is understood as 52.5 cm (*WEIGHTS AND MEASURES). That this, though unusual, is not an impossible phenomenon, is confirmed by the discovery in Palestine of human skeletons of similar stature and of roughly the same period.

Goliath was slain by *David at Ephes-dammim in a duel whose religious character is attested by 1 Sa. 17:43, 45; and perhaps also by the Philistines' flight, if this is directly attributed to their conviction that the God of Israel had overcome their god

(cf. 2 Sa. 23:9–12; 1 Ch. 11:12ff.). Goliath's sword, which had been kept in the sanctuary at Nob, was given by the priest Ahimelech to David when the latter was fleeing from Saul to the king of Gath, for whom the weapon was likely to be an acceptable present.

Two later appearances of the name have puzzled scholars. Elhanan is recorded as having slain '(the brother of) Goliath the Gittite'—so AV of 2 Sa. 21:19, and again (without parentheses) in 1 Ch. 20:5, where the victim's name is given as Lahmi. It may be that *Elhanan was David's original name. On the other hand, some have suggested that this second Goliath could have been the son of David's adversary. For full discussion of the problem and possible emendation, see S. R. Driver, *Notes on the Hebrew Text of the Books of Samuel*, 1913; and E. J. Young, *IOT*, 1949, p. 181f.

J.D.D.

GOMER (*gōmer*, 'completion'). 1. The eldest son of Japheth and the father of Ashkenaz, Riphath and Togarmah (Gn. 10:2–3). In Ezk. 38 the people of Gomer are closely associated with the house of Togarmah in the army of Gog, and are probably to be identified with the ancient Gimirrai (Cimmerians), an Aryan group who conquered Urartu (Armenia) from their Ukrainian homeland some time before the 8th cent. BC, when they appear as enemies of Assyria.

2. The daughter of Diblaim and wife of *Hosea (Ho. 1:3). She bore Jezreel, Lo-ruhamah and Lo-ammi (Ho. 1).

G.W.G.

The region occupied by Gomer, known also as Gimirrai (Gimmerai), the territory of the 'Cimmerians'.

GOOD. The Hebrew word is *tōb* ('pleasant', 'joyful', 'agreeable'), signifying primarily that which gratifies the senses and derivatively that

GOOD

which gives aesthetic or moral satisfaction. The LXX renders *ἰὸβ* by *agathos*, the regular Greek word for good as a physical or moral quality, and sometimes by *kalos* (lit. 'beautiful'; hence, in classical as well as biblical Greek, 'noble', 'honourable', 'admirable', 'worthy'). The NT reproduces this usage, employing the two adjectives interchangeably (*cf.*, e.g., Rom. 7:12–21). Paul, following the LXX, uses the noun *agathosynē* for the Christian's goodness, with the accent especially on his beneficence (Rom. 15:14; Gal. 5:22; Eph. 5:9; 2 Thes. 1:11, RV: for the translation, see the commentaries). He also uses *chrēstotēs* ('goodness', AV, RV; 'kindness', RSV) for the merciful beneficence of God (Rom. 2:4; 11:22).

The common element of meaning in the many applications which the word 'good' has in every language is that of approbation, either for inherent value, or for beneficent effect, or both. There is nothing distinctive about the various non-moral senses in which the Bible speaks of things as 'good' (e.g. 'useful', as salt, Mt. 5:13; Lk. 14:34; 'of high quality', as gold, Gn. 2:12, or cattle, Gn. 41:26; 'productive', as trees, Mt. 7:17, ground, Lk. 8:8; *etc.*). But the biblical concept of moral and spiritual good is thoroughly theological, and stands in sharp contrast with the anthropocentric view of goodness developed by the Greeks and later thinkers in the Greek tradition. This biblical view may be analysed as follows.

a. *God is good*: for he is morally perfect, and gloriously generous.

The acknowledgment of God as good is the foundation of all biblical thinking about moral goodness. 'Good' in Scripture is not an abstract quality, nor is it a secular human ideal; 'good' means first and foremost what God is ('he is good', Ps. 100:5, *et al.*), then what he does, creates, commands and gives, and finally what he approves in the lives of his creatures. It is not that the biblical writers assess God in terms of a prior concept of goodness, but rather that, contemplating the supreme glory of God's perfections, they apply to him the ordinary word for acknowledging worth. By so doing, however, they give that word a new depth of meaning. They define good in terms of God; not vice versa. Accordingly, the biblical position is that God, and God alone, is good without qualification (Mk. 10:18 and parallels: on which see B. B. Warfield, *The Person and Work of Christ*, 1950, pp. 149ff.); and he is the arbiter and judge, as he is the norm and standard, of creaturely goodness. Man is good, and things are good, just so far as they conform to the will of God. Woe, then, to those who invert the divine scale of values, giving the name of good to what God calls evil, and vice versa (Is. 5:20).

In the OT the goodness of God is frequently invoked as a theme of praise and an argument in prayer (*cf.* 2 Ch. 30:18; Ps. 86:5). His goodness appears in the good that he does (Ps. 119:68), the beneficent activity of his good spirit (Ne. 9:20; Ps. 143:10), the many-sidedness of his cosmic generosity (Ps. 145:9); most notably, in his kindness to the needy and faithfulness to his covenant (Pss. 25:8; 73:1; La. 3:25; Na. 1:7). The Psalmists' reiterated exhortation to praise and give thanks to God, 'for he is good: for his steadfast love endures for ever' (Pss. 106:1; 107:1; 118:1; 136:1; *cf.* 100:4f; also 1 Ch. 16:34; 2 Ch. 5:13; 7:3), is quoted by Jeremiah as the characteristic motto theme of Israel's worship (Je. 33:11).

b. *The works of God are good*: for they reveal his

attributes of wisdom and power (see Ps. 104:24–31), and are the objects of his own approval.

When creation was done, 'God saw every thing that he had made, and behold, it was very good' (Gn. 1:31, *cf.* vv. 4, 10, 12, 18, 21, 25). The whole material order, as such, being God's handiwork, is good (1 Tim. 4:4; *cf.* Rom. 14:14). There is no room for Manichaeism in the Bible.

c. *The gifts of God are good*: for they express his generosity, and make for the welfare of their recipients.

'Beneficial', 'advantageous', is one of the standard secular meanings of 'good' as an adjective; as 'prosperity', 'well-being', is of 'good' as a noun. The Bible integrates this usage into its theology by teaching, not merely that all God's gifts are good, both in intention and in effect, but also that all good is in fact God's gift (Jas. 1:17; *cf.* Ps. 4:6). It is characteristic of God to do good to the needy, as it was of Jesus, God's anointed (Acts 10:38; Mk. 3:4). God does good to all men in his ordinary providence, showering on them the blessings of nature (Acts 14:17; Ps. 145:9; Lk. 6:35); and, as a perfect Father, he knows how to give good gifts to those who are his children through Christ (Mt. 7:11). God's promise to 'do good' to his people is a comprehensive promise of blessing (Je. 32:40, *cf.* 24:6f.), as the plea that God will 'do good' to them is a comprehensive prayer for it (Pss. 51:18; 125:4). In such passages the 'good' in question is the pledged blessing of the covenant; it is virtually 'salvation' (*cf.* Is. 52:7). 'Good' on the material level was the promised blessing of the old covenant (with 'evil', the state of blessing withdrawn, as its alternative: Dt. 30:15), and 'good' in the realm of spiritual privilege, 'good' not enjoyed under the old covenant, is the gift of the new (Heb. 9:11; 10:1). Both testaments, however, authorize God's faithful people to rest assured that in God's good time everything that is truly good for them will be made theirs (Pss. 84:11; 34:10, *cf.* 85:12; Rom. 8:32; Eph. 1:3).

'Good', as an adjective, is used in various instrumental senses in connection with God's gracious activity of doing good to men. It is used of the word of God that announces blessing, of the hand and work of God that conveys it, of the course of action that leads to enjoyment of it, and of the days in which that enjoyment is experienced (see 1 Ki. 8:56; Is. 39:8; Je. 29:10; Heb. 6:5; Ezr. 7:9; 8:18; Phil. 1:6; 1 Ki. 8:36; Je. 6:16; Ps. 73:28; 1 Pet. 3:10; *cf.* Ps. 34:12).

Even when God withdraws the 'good' of outward prosperity from his people and brings upon them 'evil' (hardship) in its place (*cf.* Jb. 2:10), there is still a sense in which he is doing them good. 'It is good' for a man to be thus afflicted; hereby he receives correction, for his own subsequent benefit (*cf.* Heb. 12:10), and is exercised and strengthened in faith, patience and obedience (Ps. 119:67, 71; *cf.* La. 3:26f.). Anything that drives a man closer to God is for his good, and the Christian's temporary distresses, under God, work for him an eternal weight of glory (2 Cor. 4:17). Paul is therefore fully entitled to insist that 'in everything (afflictions included) God works for good with those who love him' (Rom. 8:28). The Christian should regard every circumstance, however ungratifying, as among God's good gifts to him, the expression of a beneficent purpose and, if rightly used, a sure means to his lasting profit.

d. *The commands of God are good*: for they

express the moral perfection of his character and, by showing us how to please him, mark out for us the path of blessing (Ps. 119:39; Rom. 7:12; 12:2).

The moral ideal in the Bible is to do the will of God, as revealed in his law. When the rich ruler asked Christ what good thing he should do to gain life, Christ immediately directed him to the Decalogue (Mt. 19:17ff.). In a lawless and unloving world, Christians must resist the temptation to do as they are done by, and in face of evil must seek out and hold fast in their conduct that 'good' which the law prescribes (Rom. 12:9, 21; 1 Thes. 5:15, 21).

e. Obedience to God's commands is good: for God approves and accepts it (1 Tim. 2:3), and those who yield it profit by it (Tit. 3:8).

Unredeemed men do not and cannot obey God's law, for they are in bondage 'under sin' (Rom. 3:9ff.; 8:7f.). The evil tree (man as he is in Adam) must be made good before its fruit can be good (cf. Mt. 12:33–35). But those who are in Christ have been freed from sin's bondage precisely in order that they may practise the righteousness which the law prescribes (Rom. 6:12–22). The characteristic NT phrase for this obligatory Christian obedience is 'good works'. The performance of good works is to be the Christian's life's work; it was for this that God saved him (Eph. 2:10; Col. 1:10; 2 Cor. 9:8; Tit. 2:14; Mt. 5:14–16). The Christian is called to be ready for every good work that his circumstances admit of (2 Tim. 2:21; Tit. 3:1), so that it is a damning indictment of a man's Christian profession when he is 'unfit for any good deed' (Tit. 1:16; cf. Jas. 2:14–26). Good works are the Christian's adornment (1 Tim. 2:10); God takes pleasure in them, and will reward them (Eph. 6:8).

Good works are good from three standpoints: they are done (i) in accordance with a right standard (the biblical law: 2 Tim. 3:16f.); (ii) from a right motive (love and gratitude for redemption: 1 Thes. 1:3; Heb. 6:10; cf. Rom. 12:1ff.); (iii) with a right aim (God's glory: 1 Cor. 10:31; cf. 1 Cor. 6:20; Mt. 5:16; 1 Pet. 2:12). They take the form of works of love towards God and men, since 'love is the fulfilling of the law' (Rom. 13:8–10; cf. Mt. 22:36–40). This does not, of course, mean that no more is required of a Christian than a right motive; the point is, rather, that the particular acts which the commandments prescribe are to be understood as so many expressions of love, so that without a loving heart the commandments cannot be fulfilled. It is not that a right spirit excuses lapses from the letter of the law, but that rectitude in the letter is no fulfilling of the law where an attitude of love is lacking. The truly good man is no less than the truly righteous man; for, as the truly righteous man observes the spirit as well as the letter of the law (cf. Mt. 5:18–20), so the truly good man observes its letter as well as its spirit. Nor is the truly good man any more than the truly righteous man. In Rom. 5:7, where Paul for a moment sets the good man above the righteous man in value, he is speaking popularly, not theologically. The world thinks of righteousness as a merely negative rectitude, and of the kindness and generosity that mark the good man as something more than righteousness; but biblical theology effectively identifies righteousness with goodness, and goodness with righteousness, by insisting that what the law requires is, in fact, love.

Good works, then, are works of love, and the

nature of love is to give to the beloved. Love to God is expressed in the gift of personal devotion, however costly (cf. Mary's 'good work', Mk. 14:3–6). Love to men is expressed by doing them 'good', laying out one's own resources to relieve their need, and seeking their welfare in every possible way (Gal. 6:9f.; Eph. 4:29; cf. Pss. 34:14; 37:3, 27). The Jerusalem church's poor-relief system (Acts 2:44f.; 4:34ff.), and Paul's collection for the saints (cf. 2 Cor. 7–9) illustrate this. 'Kind', 'generous' are among the ordinary secular meanings of 'good' as a description of persons (cf. 1 Sa. 25:15; 1 Pet. 2:18); the Bible comprehends them in the Christian ethic, making the love of God and Christ the model and standard for the kindness and generosity required of Christians (cf. Eph. 5:1f.; Jn. 13:14, 34).

The believer who seeks thus to fulfil the law has a 'good conscience' (Acts 23:1; 1 Tim. 1:5, 19; Heb. 13:18; 1 Pet. 3:16, 21)—not because he thinks himself sinlessly perfect, but because he knows that his relationship with God is right, being founded on true faith and repentance. Such a Christian will appear to his fellows as a 'good man' (so Barnabas, Acts 11:24).

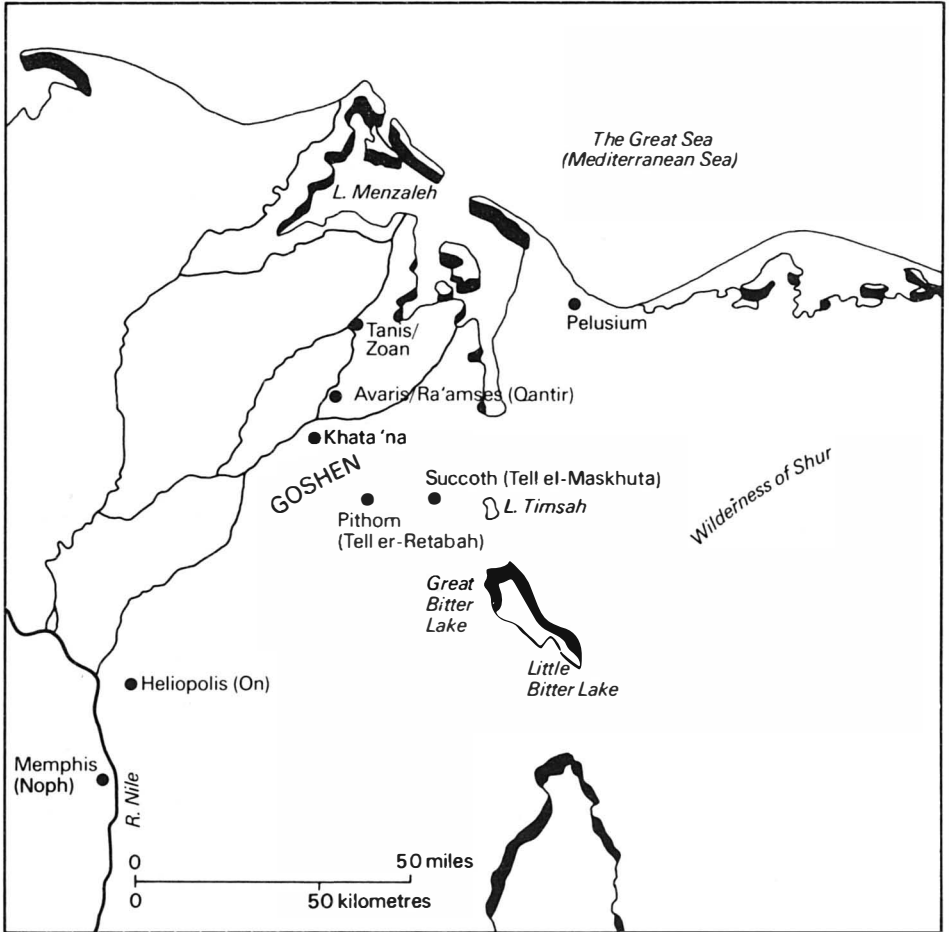

BIBLIOGRAPHY. BAGD, *s.v.* *agathos, kalos*; E. Beyreuther, *NIDNTT* 2, pp. 98–107; G. Vos in *DAC*, 2, 470f.; C. F. H. Henry, *Christian Personal Ethics*, 1957, pp. 209–218. J.I.P.

GOPHER WOOD (Heb. **šē-gōṣer*), the wood of which Noah's ark was constructed (Gn. 6:14). Many commentators favour an identification with cypress wood, on the ground of the similarity in name (Gk. *kyparissos*). Others, noting the similarity with Heb. *kōṣer* (*BITUMEN), suggest a resinous *tree. It may be that the word is connected in some way with Akkad. *gubru/gudru*, '(shepherd's) reed hut', and such a cuneiform parallel is further suggested by the construct **šē* which might correspond to the determinative *giš*, which precedes the names of trees and objects of wood, and which is read *iṣu* or *iš* in Akkadian. See *The Chicago Assyrian Dictionary*, 5, 1956, p. 118. T.C.M.

GOSHEN. 1. The territory assigned to Israel and his descendants during their Egyp. sojourn. Its exact location and extent remain uncertain, but it was certainly in Egypt (Gn. 47:6, 27), and in the E Nile Delta: Gn. 47:6 with 11 clearly equate Goshen with 'the land of Rameses', so named from the residence-city Pi-Ramesse, biblical *Ra'amses, in the NE Delta. The LXX's topographical interpretations are of uncertain authenticity. The E Delta would be suitably 'near' the court (Gn. 45:10) for Joseph serving his (probably Hyksos) pharaoh at *Memphis (near Cairo) or Avaris (NE Delta), cf. also Gn. 46:28–29; likewise for Moses interviewing his pharaoh at Pi-Ramesse (Ex. 7–12). Goshen was a well-favoured region suited to flocks and herds (Gn. 46:34; 47:1, 4, 6, 27; 50:8). It remained the habitat of the Hebrews until the Exodus, being therefore largely shielded from the plagues (Ex. 8:22; 9:26); nevertheless, contact was close with Egyptians living in the same general region (e.g. cf. Ex. 11:2–3; 12:35–36). The name *Gsmt* occurring in certain Egyp. texts, once equated with Heb. Goshen through Lxx Gesem, should be read *Šsmt* and is therefore irrelevant.

2. A district in the S of Palestine (Jos. 10:41;

GOSHEN

Goshen and the delta area of the river Nile.

11:16), probably named after 3, a town in the hills of S Palestine (Jos. 15:51), possibly near Zāhiriyyeh, c. 19 km SW of Hebron (so Abel) or else somewhat farther E (GTT, 1959, §§ 285–287, 497). (*GEDER.)
K.A.A.K.

GOSPEL (Gk. *euangelion*, 'good news'). In classical literature the word designated the reward given for good tidings. It also indicated the message itself, originally the announcement of victory, but later applied to other messages bringing joy. That it is found more than 75 times in the NT indicates a distinctly Christian connotation. The gospel is the good news that God in Jesus Christ has fulfilled his promises to Israel, and that a way of salvation has been opened to all. The gospel is not to be set over against the OT as if God had changed his way of dealing with man, but is the fulfilment of OT promise (Mt. 11:2–5). Jesus himself saw in the prophecies of Isaiah a description of his own ministry (Lk. 4:16–21).

Mark defines the 'gospel of God' in 1:14 (AV, following the Byzantine text, adds 'of the kingdom') as 'The time is fulfilled, and the kingdom of God is at hand'. To believe means salvation: to

reject is damnation (Mk. 16:15–16). This same gospel is proclaimed by the first heralds of Christianity, but now the essential message is made more explicit by the death and resurrection of Jesus the Christ. While the gospel came with Jesus (the Christ-event *is* the gospel), it was anticipated in God's promise of blessing to Abraham (Gal. 3:8) and promised in prophetic Scripture (Rom. 1:2).

The gospel not only comes in power (1 Thes. 1:5) but *is* the power of God (Rom. 1:16). It reveals the righteousness of God and leads to salvation all who believe (Rom. 1:16–17). Paul regards the gospel as a sacred trust (1 Tim. 1:11). Thus he is under divine compulsion to proclaim it (1 Cor. 9:16), and requests prayer that he may carry out his task with boldness (Eph. 6:19), even though this involves opposition (1 Thes. 2:2) and affliction (2 Tim. 1:8). The gospel is 'the word of truth' (Eph. 1:13), but it is hidden to unbelieving men (2 Cor. 4:3–4) who demand supernatural verification or rational proof' (1 Cor. 1:21–23). Even as it was by revelation that the full theological impact of the gospel came to Paul (Gal. 1:11–12), so also it is by the response of faith that the gospel comes with saving power (Heb. 4:2).

The use of 'Gospels' as a designation of the first four books of the NT is post-biblical (2nd cent. AD).

GOSPELS. The plural form 'Gospels' (Gk. *euangelia*) would not have been understood in the apostolic age, nor yet for two generations following; it is of the essence of the apostolic witness that there is only one true *euangelion*; whoever proclaims another, says Paul, is anathema (Gal. 1:8f.). The four records which traditionally stand in the forefront of the NT are, properly speaking, four records of the one gospel—the gospel of God . . . concerning his Son' (Rom. 1:1–3). It was not until the middle of the 2nd century AD that the plural form came to be used; thus Justin Martyr says that the 'memoirs composed by the apostles' are called 'Gospels' (*First Apology* 66). Earlier writers use the singular, whether they are referring to a single gospel-writing or to a set of such writings (cf. *Didache* 8. 2; Ignatius, *Philadelphians* 8. 2). The traditional titles of the four records imply that in them we have the gospel or good news about Christ according to each of the four Evangelists. And the usage of the singular form to denote the fourfold record continued for long after the earliest attested instance of the plural.

I. The oral stage

Most of the material in our Gospels existed for a considerable time in an oral stage before it was given the written form with which we are familiar.

a. The words of Jesus

Jesus began his Galilean ministry by 'preaching the gospel of God'; the content of this gospel was that the time appointed had arrived and the kingdom of God had drawn near; he urged his hearers to repent and believe the good news (Mk. 1:14f.; cf. Lk. 4:18–21). His preaching was no bolt from the blue; it was the fulfilment of the promise of God communicated in earlier days through the prophets. Now, at length, God had visited his people; this was the burden not only of Jesus' preaching but of his mighty works (Lk. 7:16), which were signs that the domain of evil was crumbling before the onset of the kingdom of God (Mt. 12:22–29; Lk. 11:14–22). The same theme runs through the parables of Jesus, which call his hearers to decision and watchfulness in view of the advent of the kingdom.

In addition to his public ministry, Jesus took care to give his disciples systematic instruction in a form that they could easily commit to memory. His debates with the Pharisees and other opponents, too, led to pronouncements which, once heard, would not be readily forgotten, and which in fact stood his disciples in good stead later on when they were confronted with controversial issues in which it was helpful to recall their Master's ruling.

b. The apostolic tradition

There are several references in the NT Epistles to the 'tradition' (Gk. *paradosis*) received by the apostles from their Lord and delivered by them in turn to their converts. This tradition, in the fullest sense,

comprises the apostles' witness to 'all that Jesus began to do and teach, until the day when he was taken up' (Acts 1:1f., cf. 1:21f.). This witness was borne and perpetuated in various ways—principally in missionary preaching, in the teaching of converts and in Christian worship. An outline of the basic facts of the missionary preaching is given by Paul in 1 Cor. 15:3ff.—'that Christ died for our sins in accordance with the scriptures, that he was buried, that he was raised on the third day in accordance with the scriptures, and that he appeared' to a large number of eyewitnesses, some of whom are named, and most of whom were still alive when Paul was writing. Paul adds that whether the gospel was preached by himself or by the original apostles, the basic facts of the message were the same (1 Cor. 15:11). This is confirmed by the evidence of the non-Pauline Epistles, and by the extracts from early Christian preaching summarized in Acts. In the preaching the saving events were announced; Jesus was proclaimed as Lord and Christ; men were summoned to repent and receive forgiveness through him.

Some occasional samples of the teaching of converts appear in the Epistles, from which it is plain that the basis of this teaching was what Jesus himself had taught. Thus, in giving instruction about marriage Paul quotes Jesus' commandment forbidding divorce (1 Cor. 7:10), and similarly quotes his ruling about the maintenance of gospel preachers (1 Cor. 9:14). But there is evidence of more systematic instruction by the catechetical method; and as the number of converts increased, especially in the course of the Gentile mission, 'schools' for the training of instructors would have become almost a necessity, and digests of the teaching of Jesus would inevitably have been drawn up, orally if not in writing. We may envisage such a life-setting for the 'sayings collection' on which Matthew and Luke drew, and at a later date the Matthaean Gospel itself has been viewed as taking shape in such a school; cf. K. Stendahl, *The School of St Matthew*, 1968.

In worship too the words and works of Jesus were bound to be recalled. In the earliest days of the faith those who had known Jesus could scarcely avoid saying to one another, when they met informally or at the stated occasions of fellowship and worship, 'Do you remember how our Master . . .?' In particular, the Lord's Supper provided a regular opportunity for retelling the story of his death, with the events immediately preceding and following it (1 Cor. 11:26).

The passion narrative, indeed, being told and retold both in Christian worship and in missionary preaching (cf. 1 Cor. 2:2; Gal. 3:1), took shape as a connected whole at an early date—a conclusion which is otherwise established by the form criticism of our existing Gospels. By the form-critical method an attempt is made to isolate and classify the various self-contained units which have been brought together in the written Gospels and to envisage the living situations in which they originated and were preserved in the oral stage of transmission. (* BIBLICAL CRITICISM, III.)

II. The written Gospels

The beginning of gospel writing, as we might expect, coincides with the end of the first Christian generation. As those who 'from the beginning were eyewitnesses and ministers of the word' (Lk. 1:2)

GOSPELS

were removed by death, the necessity of a permanent written record of their witness would be more acutely felt than before. It is just at this point that 2nd-century tradition places the beginnings of gospel writing, and rightly so: all four of our canonical Gospels are probably to be dated within the four decades AD 60–100. We need not suppose that the transmission of the apostolic witness had been exclusively oral before AD 60—some at least of the ‘many’ who, according to Lk. 1:1, had undertaken to draw up an orderly account of the evangelic events may have done so in writing before AD 60—but no document of an earlier date has survived except in so far as it has been incorporated in our written Gospels.

Several strands of tradition can be distinguished in the four Gospels. In this respect, as in some others, John stands apart from the other Gospels and is best considered independently. The other three Gospels are inter-related to the point where they lend themselves excellently to ‘synoptic’ study—e.g. as when their text is arranged in three parallel columns, so that their coincidences and divergences can be conveniently examined. For this reason they are commonly known as the ‘Synoptic Gospels’—a designation apparently first given to them by J. J. Griesbach in 1774.

a. *The Synoptic Gospels*

A comparative study of Matthew, Mark and Luke leads to the recognition that there is a considerable body of material common to all three, or to two of the three. The substance of 606 out of the 661 verses of Mark (leaving Mk. 16:9–20 out of the reckoning) reappears in abridged form in Matthew; some 380 of the 661 verses of Mark reappear in Luke. This may be stated otherwise by saying that, out of the 1,068 verses of Matthew, about 500 contain the substance of 606 verses of Mark, while out of the 1,149 verses of Luke some 380 are paralleled in Mark. Only 31 verses of Mark have no parallel in either Matthew or Luke. Matthew and Luke have each up to 250 verses containing common material not paralleled in Mark; sometimes this common material appears in Matthew and Luke in practically identical language, while sometimes the verbal divergence is considerable. About 300 verses of Matthew have no parallel in any of the other Gospels; the same is true of about 520 verses in Luke.

There is no short cut to a satisfactory account of this distribution of common and special material in the Synoptic Gospels. There is no *a priori* reason for holding one Gospel to be earlier and another later, for holding one to be a source of another and the latter to be dependent on the former. Nor will the objectivity of statistical analysis guarantee a solution. A solution can be attained only by the exercise of critical judgment after all the relevant data have been marshalled and the alternative possibilities assessed. If unanimity has not been reached after a century and a half of intensive Synoptic study, it may be because the data are insufficient for the purpose, or because the field of inquiry has been unduly restricted. Yet certain findings command a much greater area of agreement than others.

One of these is the priority of Mark and its use as a principal source by the other two Synoptic Evangelists. This finding, which is commonly said to have been placed on a stable basis by C. Lachmann in 1835, depends not merely on the formal

evidence that Matthew and Mark sometimes agree in order against Luke; Mark and Luke more frequently against Matthew; but Matthew and Luke never against Mark (which could be explained otherwise), but rather on the detailed comparative examination of the way in which common material is reproduced in the three Gospels, section by section. In the overwhelming majority of sections the situation can best be understood if Mark’s account was used as a source by one or both of the others. Few have ever considered Luke as a possible source of the other two, but the view that Mark is an abridgment of Matthew was held for a long time, largely through the influence of Augustine. But where Matthew and Mark have material in common Mark is fuller than Matthew, and by no means an abridgment; and time after time the two parallel accounts can be much better explained by supposing that Matthew condenses Mark than by supposing that Mark amplifies Matthew. While Matthew and Luke never agree in order against Mark, they do occasionally exhibit verbal agreement against him, but such instances mainly represent grammatical or stylistic improvements of Mark, and are neither numerous nor significant enough to be offset against the general weight of the evidence for Mark’s priority.

The common Marcan element in the Synoptic tradition is the more important because of the close relation between the framework of Mark and the apostolic preaching. This relation does not depend so much on the tradition which sees in Peter the authority behind the Marcan narrative (a tradition borne out by internal evidence in certain sections of the narrative) as on the fact (demonstrated by C. H. Dodd) that an outline of the primitive preaching, comparable to those outlines which can be discerned in a few passages in the NT Epistles and in the reports of speeches in Acts, supplies the thread on which Mark has strung his several units of gospel material.

The material common to Mark and one or both of the other Synoptic Gospels consists mainly of narrative. (The principal exceptions to this are the parables of Mk. 4 and the eschatological discourse of Mk. 13.) On the other hand, the non-Markan material common to Matthew and Luke consists mainly of sayings of Jesus. One might almost say that the Marcan material relates what Jesus did; the non-Markan material, what Jesus taught. We have here a distinction comparable to that commonly made (albeit to an exaggerated degree) between apostolic ‘preaching’ (*kerygma*) and ‘teaching’ (*didachē*). The non-Markan material common to Matthew and Luke may conveniently, and without prejudice, be labelled ‘Q’, in accordance with a custom dating from the beginning of the 20th century.

This body of material, extending to between 200 and 250 verses, might have been derived by the one Evangelist from the other, or by both from a common source. Few, if any, can be found to suggest that Matthew derived it from Luke, although some would find it easier to suppose this than to suppose that Luke derived it from Matthew. This latter supposition continues to receive widespread support, but it is specially vulnerable because it implies that Luke reduced to relative disorder the orderly arrangement in which the ‘Q’ material appears in Matthew, without giving any plausible reason why this should have been done.

The supposition that the ‘Q’ material was

derived from a common source by Matthew and Luke involves fewer difficulties than any alternative supposition.

When we attempt to reconstruct this postulated common source we must beware of thinking that we can do so in anything like a complete form. Yet what we can reconstruct of it reminds us forcibly of the general pattern of the prophetic books of the OT. These books commonly contain an account of the prophet's call, with a record of his oracles set in a narrative framework, but with no mention of his death. So the 'Q' material appears to have come from a compilation which began with an account of Jesus' baptism by John and his wilderness temptations; this forms the prelude to his ministry, and is followed by groups of his sayings set in a minimum of narrative framework; but there is no trace of a passion narrative. There are four main groups of teaching, which may be entitled: (i) Jesus and John the Baptist; (ii) Jesus and his disciples; (iii) Jesus and his opponents; (iv) Jesus and the future.

Since our only means of reconstructing this source is provided by the non-Marcian material common to Matthew and Luke, the question whether Mark also made some use of it cannot be satisfactorily answered. That it is earlier than Mark is probable; it may well have been used for catechetical purposes in the Gentile mission based on Antioch. The fact that some of the 'Q' material in Matthew and Luke is almost verbally identical, while elsewhere there are divergences of language, has sometimes been explained in terms of there being two distinct strands of tradition in 'Q', but a much more probable account is that 'Q' was translated into Greek from Aramaic and that Matthew and Luke sometimes use the same translation and sometimes different ones. In this regard it is apposite to recall the statement of Papias (*apud* Eus., *EH* 3. 39) that 'Matthew compiled the *logia* in the Hebrew [Aramaic] speech, and everyone translated them as best he could'. *Logia* ('oracles') would be a specially appropriate term for the contents of such a compilation as we have tried to recognize behind the 'Q' material.

What other sources were utilized by Matthew and Luke is an even more uncertain question than the reconstruction of the 'Q' source. Matthew appears to have incorporated material from another sayings-collection, parallel to 'Q' but preserved in Judaea rather than in Antioch—the collection conveniently labelled 'M'. Luke has embodied a block of quite distinctive material (found largely between chs. 9 and 18) which may have been derived from Caesarea—the material labelled 'L'. Whether these 'sources' had a written form before they were taken over by the Evangelists is doubtful. Luke has been pictured as amplifying his copy of the 'Q' source by means of the information acquired in Caesarea and elsewhere, thus producing the preliminary draft of his Gospel sometimes called 'Proto-Luke', into which at a later date blocks of Marcan material were inserted. For an evaluation of the 'Proto-Luke' hypothesis see D. Guthrie, *New Testament Introduction*³, 1970, pp. 175–183. In general, it may be agreed that Matthew conflates his sources while Luke combines his. The nativity narratives which introduce Matthew and Luke lie outside the general scheme of Synoptic criticism; with regard to them some dependence on Semitic documents cannot be excluded. But it must be emphasized that, fascinating and

instructive as Gospel source criticism is, the Gospels themselves are much more important than their putative sources. It is good to consider what sources the Evangelists may have used; it is better to consider what use they made of their sources. In recent years it has been increasingly recognized that redaction criticism has as important a place in Gospel study as tradition criticism—the latter tracing the history of the traditions which in due course the Evangelists received, the former concentrating on the contribution of the individual Evangelists in their treatment and presentation of the traditions. Each of the Synoptic Gospels is an independent whole, no mere scissors-and-paste compilation; each has its own view of Jesus and his ministry, and each has its special contribution to make to the full-orbed picture of Jesus with which the NT presents us.

b. *The Fourth Gospel*

John represents a good primitive tradition which was preserved independently of the Synoptic lines of tradition, not only in the memory of the beloved disciple but in a living Christian community, quite probably in the milieu from which at a rather later date came the *Odes of Solomon*. The large area of common background which John shares with the Qumran texts, and the links binding its structure to the Palestinian synagogue lectionary, have in recent times helped to impress upon us that the Johannine tradition has its roots in Jewish Palestine, however much the requirements of a wider Hellenistic audience were borne in mind when this Gospel was given its literary form at the end of the first Christian century. And the fixed outline of the apostolic preaching can be discerned in the Fourth Gospel 'no less clearly than in Mark' (C. H. Dodd, *The Apostolic Preaching and its Developments*, 1950, p. 69). (* JOHN, GOSPEL OF.)

III. The fourfold Gospel

At an early date after the publication of the Fourth Gospel the four canonical Gospels began to circulate as a collection, and have continued to do so ever since. Who first gathered them together to form a fourfold corpus we do not know, and it is quite uncertain where the fourfold corpus first became known—claims have been made for both Ephesus and Rome. Catholic and Gnostic writers alike show not only acquaintance with the fourfold Gospel but recognition of its authority. The Valentinian *Gospel of Truth* (c. AD 140–150), recently brought to light among the Gnostic writings from *Chenoboskion, was not intended to supplement or supersede the canonical four, whose authority it presupposes; it is rather a series of meditations on the 'true gospel' which is enshrined in the four (and in other NT books). Marcion stands out as an exception in his repudiation of Matthew, Mark and John, and his promulgation of Luke (edited by himself) as the only authentic *euangelion*. The documents of the anti-Marcionite reaction (e.g. the anti-Marcionite prologues to the Gospels and, later, the Muratorian Canon) do not introduce the fourfold Gospel as something new, but reaffirm its authority in reply to Marcion's criticisms.

In the half-century following AD 95 Theodor Zahn could find only four Gospel citations in surviving Christian literature which demonstrably do not come from the canonical four. That the 'memoirs of the apostles' which Justin says were read in church along with the writings of the prophets

GOSPELS

were the four Gospels is rendered the more probable by the fact that such traces of gospel material in his works as may come from the pseudonymous *Gospel of Peter* or *Gospel of Thomas* are slight indeed compared with traces of the canonical four.

The situation is clearer when we come to Justin's disciple Tatian, whose Gospel harmony or *Diatessaron* (compiled c. AD 170) remained for long the favourite (if not the 'authorized') edition of the Gospels in the Assyrian church. Apart from a small fragment of a Gk. edition of the *Diatessaron* discovered at Dura-Europos on the Euphrates and published in 1935, our knowledge of the work has until recently been indirect, being based on translations (some of them secondary or tertiary) from the Syr. text. But in 1957 a considerable portion of the Syr. original of Ephraem's commentary on the *Diatessaron* (written about the middle of the 4th century) was identified in a parchment manuscript in A. Chester Beatty's collection; this text was edited with a Latin translation by L. Leloir in 1963 and throws valuable light on the early history of the *Diatessaron*.

Tatian began his compilation with Jn. 1:1-5, and perhaps ended it with Jn. 21:25. It was the fourfold Gospel that supplied him with the material for his harmony; such occasional intrusions of extracanonical material as can be detected (possibly from the *Gospel according to the Hebrews*) do not affect this basic fact any more than do the occasional modifications of the Gospel wording which reflect Tatian's Encratite outlook. (*CANON OF THE NEW TESTAMENT.)

The supremacy of the fourfold Gospel which Tatian's work attests is confirmed a decade or so later by Irenaeus. To him the fourfold character of the Gospel is one of the accepted facts of Christianity, as axiomatic as the four quarters of the world or the four winds of heaven (*Adv. Haer.* 3. 11. 8). His contemporary Clement of Alexandria is careful to distinguish 'the four Gospels that have been handed down to us' from uncanonical writings on which he draws from time to time, such as the *Gospel according to the Egyptians* (*Miscellanies* 3. 13). Tertullian does not even draw upon such uncanonical writings, restricting himself to the canonical four, to which he accords unique authority because their authors were either apostles or men in close association with apostles. (Like other western Christian writers, he arranges the four so as to make the two 'apostolic' Gospels, Matthew and John, precede Luke and Mark.) Origen (c. AD 230) sums up the long-established catholic attitude when he speaks of 'the four Gospels, which alone are undisputed in the church of God beneath the whole heaven' (*Commentary on Matthew* in Eus., *EH* 6. 25. 4). (Like Irenaeus, Origen arranges them in the order with which we are familiar.)

All four of the Gospels are anonymous in the sense that none of them includes its author's name. The first reference to Matthew and Mark as Evangelists is found in Papias, bishop of Hierapolis in Phrygia in the first half of the 2nd century AD. His statement, made on the authority of 'the elder', that 'Mark, the interpreter of Peter, wrote down accurately all the words or deeds of the Lord of which he [Peter] made mention, but not in order . . .', is certainly a reference to our second Gospel. His statement about Matthew's compilation of *logia* (quoted above, under II) is more problematic, and it is still disputed whether it refers to our first

Gospel, or to a collection of the sayings of Jesus (as has been suggested in this article), or to a catena of Messianic prophecies, or to something else. The earliest explicit references to Luke and John as Evangelists come in the anti-Marcionite Gospel prologues (which to some extent at least draw upon Papias's lost work) and Irenaeus. The latter sums up the account which he had received as follows: 'Matthew put forth a Gospel writing among the Hebrews in their own speech while Peter and Paul were preaching the gospel in Rome and founding the church there. After their departure, Mark, Peter's disciple and interpreter, has likewise delivered to us in writing the substance of Peter's preaching. Luke, the companion of Paul, set down in a book the gospel proclaimed by that apostle. Then John, the disciple of the Lord, who reclined on his bosom, in turn published his Gospel while he was staying in Ephesus in Asia' (*Adv. Haer.* 3. 1. 1).

Without endorsing all that Irenaeus says, we may heartily agree that in the canonical Gospels we have the apostolic witness to the redemptive revelation of God in Christ preserved in a fourfold form. (See articles on the four Gospels.)

GOVERNMENT.

I. In the Old Testament.

During the OT period the people of God lived under various types of government. The Patriarchs might be called semi-nomads. The father was the head of the family and its priest. His jurisdiction extended not only over the members of the immediate family but also over all who were in his employ or subject to him. This type of government was similar to that of the bedouin nomads of Arabia. In the head of the family (*i.e.* of the clan) there resided even the power of life and death as well as that of making various decisions (*cf.* Jdg. 11:11ff.).

In Egypt the descendants of Jacob were in bondage until they were brought forth from the land by Moses. Moses acted as the representative of God, and the people listened to him. At this time also there were officers of the people, although it is difficult to say just how the Israelites were organized in relationship to Egypt. The organization of Sinai was unique in that it consisted in the formation of the tribes into a theocracy (*i.e.* 'the rule of God'—*theos*, 'god'; *kratos*, 'power', 'rule'). The essence of this type of government is set forth by divine revelation in Ex.

19:5-6. Primarily it was a rule of God over a nation that was to be holy and a kingdom of priests.

In the wilderness there were elders of the people who assisted Moses in his tasks. The plan of the theocracy was presented to them and they accepted it. God was to rule and he would rule through the agency of a human judge or king. This man should 'reign in righteousness', in that he should give decisions in accordance with strict justice and manifest in his rule the righteousness of God. The people were to be separate from the rest of the world, for they were holy, belonging unto God himself.

For a time the nation was not ready to accept the full implications of the theocracy. Under Joshua it was necessary that they should obtain possession of the land that had been promised to them. For a time there were rulers or judges over them, but there was no central organization. This condition led them to realize that they must have a king. Their request for a king, however, was made in an untheocratic spirit, for they merely wanted to be like the nations round about them. For this reason Samuel reproached them with having rejected Yahweh himself (1 Sa. 8:7).

The nation therefore needed not merely to learn that it must have a king but also that it must have the right kind of king. The first king chosen was a man who did not follow Yahweh, and for that reason was rejected. In David there was found the man after God's own heart. David rendered the decisions of a more important kind, but minor decisions were left to under-officers. Some of these officers are mentioned in the Scriptures, e.g. the priests, officers of the household, the cup-bearer, the officer in charge of the palace (1 Ki. 4:6), scribes, recorders, counsellors, chief of the army and chief of the king's guard (2 Sa. 8:18). The ministers of the king served in the administration of the affairs of the state (1 Ki. 4:2ff.).

Solomon divided the kingdom into twelve districts, over each of which he placed a prefect to provide victuals for the king and his house (1 Ki. 4:7ff.). The Exile brought about an interruption of the theocracy, which had long before ceased to be a theocracy in actual fact. After the Exile the Jews were subject to Persia, and Judaea was reconstituted as a temple-state, with the high priest at its head. The Persian king was represented by a provincial governor, who might occasionally be himself a Jew (e.g. Nehemiah). This same arrangement continued under the Greek period, although at this time a council of elders is introduced. The Temple constitution was abolished by Antiochus IV in 168 BC, but restored by the Hasmonaeanes who, however, combined the high-priesthood and the civil and military sovereignty in their own family. Their secular power was terminated by the Roman conquest of 63 BC but (except for the special circumstances of the rule of Herod the Great and Archelaus) the high priest was recognized by the Romans as head of the internal Jewish administration.

The central point of the theocracy was the Temple, which symbolized the dwelling-place of God in the midst of his people. Thus, Jerusalem, the city in which the Temple was located, became known as the holy city. The formal destruction of the theocracy occurred when the Temple was burned in AD 70.

E.J.Y.
F.F.B.

II. In the New Testament.

I. The situation in Palestine

The land was largely partitioned among a number of republican states (e.g. Caesarea and the cities of the Decapolis). This was a device used by the successive supervisory powers, and especially the Romans, to hellenize the population and thus contain Jewish nationalism. The less tractable areas (e.g. Galilee) were entrusted to Herodian princes, while Jerusalem itself and its neighbourhood were under the Sanhedrin, a council drawn from the religious aristocracy. The whole complex of governments was supervised in the interests of Roman frontier security by the Caesars, acting at different stages either through a Herodian client king or through a personal deputy, the prefect or procurator. Jewish nationalism found institutional expression in a series of religious sects, whose attitudes to the government ranged from terrorism (the Zealots) to detachment (the Essenes), on the one hand, and collaboration (the Sadducees), on the other. All were dedicated in their own way to the restoration of the kingdom.

a. The career of Jesus

Jesus was inextricably involved in this confusion of government. He was attacked at birth (Mt. 2:16) as a threat to Herod's throne, and denounced in death as a pretender to royal power (Jn. 19:21). He was dogged on all sides by pressures to avow this goal. The devil's advances (Mt. 4:9) were mirrored in popular enthusiasm (Jn. 6:15), the obtuse arrogance of the disciples (Mt. 16:22f.) and the fears of those who precipitated the arrest (Jn. 11:50). Faced with such a consensus of misconception, Jesus generally avoided the claim to kingship, but did not conceal it from the disciples (Lk. 22:29-30) and in the end owned it publicly (Jn. 18:36-37).

b. The teaching of Jesus

Three main assertions about the relation of the kingdom of heaven to temporal government may be singled out. (i) The kingdom of Jesus is not of the same order as the temporal powers. It is not established by political action (Jn. 18:36). (ii) Temporal power is not autonomous: it is enjoyed only by permission of God (Jn. 19:11). (iii) The temporal power therefore has its rights, as does God (Lk. 20:25): both must be conceded.

c. The church in Jerusalem

After the resurrection the disciples were again instructed in the nature of the kingdom (Acts 1:3). Their view of it was still narrowly political, however (Acts 1:6), and even after the ascension the preaching of Jesus' exaltation at God's right hand (e.g. Acts 2:32-36) was capable of political overtones (Acts 5:31), and certainly taken as politically provocative by the Sanhedrin (Acts 5:33ff.). The apostles defied a court order restraining their preaching on the grounds of their prior duty to God (Acts 5:29). The prosecution of Peter and James (Acts 12:2-3) may have been political, but in the cases of Stephen (Acts 6:11) and Paul (Acts 21:28) the offences were religious, and reflect the transformation of the Nazarenes into a regular sect of the Jewish religion, differentiated perhaps chiefly by the added sanction that the kingship of Jesus had lent to the law (Jas. 2:5, 8).

GOVERNMENT

2. The Hellenistic states

All the places outside Palestine where churches were established were, along with Rome itself, republican states, either satellites of the Romans or actual Roman colonies. Christians might thus become involved either with the local administration (e.g. Acts 16:19–21; 17:6, 22) or with the superintendent Roman governors (e.g. Acts 13:7; 18:12). The tendency to refer difficult cases to the Roman authority, however, meant that the attitude of that government became the major concern.

a. Support for the government

The only case where Christians were accused of direct opposition to the Caesars (Acts 17:7) was fobbed off by the authorities responsible. In all other known cases the charges were not political, and the various governments showed a reluctance to pursue them. Christian writers reciprocated this respectful *laissez-faire* (Rom. 13:1–7; 1 Tim. 2:2; Tit. 3:1): the teaching of Jesus was elaborated to show that the 'governing authorities' (*exousiai*) not only had their authority allowed by God but that they were positively 'ministers of God' for the punishment of evil; to oppose them was to oppose God. This attitude was sustained even (as happened under Nero) when the courts were being used for fabricated charges; the legitimacy of government was studiously defended, while its victims were solaced with the innocent sufferings of Christ (1 Pet. 2:11–25). Some have held that the restrainer of antichrist (2 Thes. 2:6–8) is meant to be the Roman government.

b. Criticism of the government

Even Paul had some reservations, however. The responsibility for the crucifixion rests on 'the rulers of this age' (1 Cor. 2:8). Saints must not settle their disputes in civil courts, because their destiny is to 'judge the world' (1 Cor. 6:2). Attention is repeatedly drawn to the rule of the 'only Sovereign, the King of kings' (1 Tim. 6:15), and the citizenship of the republic that transcends all the barriers of earthly states (e.g. Eph. 2:19). The demonic powers (*archai* or *exousiai*) over whom Christ has triumphed (Col. 2:15) and with whom we now struggle (Eph. 6:12) may well be conceived of as the forces behind human government. This is certainly the theme taken up in detail in the Revelation, which envisages a struggle for world government between God and satanic powers. The allusions to the ruler cult (Rev. 13:15) seem sufficiently plain to identify the enemy as the Roman Caesars. We know from Pliny (*Ep.* 10. 96) that attempts to induce Christians to escape condemnation by making the formal offering to the ruler met with incorrigible obstinacy. They had presumably decided that they were being asked to render to Caesar the things that were God's.

E. A. J.

GOVERNOR.

I. In the Old Testament

Since Israel through her history was involved directly or indirectly with various civilizations, each of which had its own distinctive constitutional system and titles for those in authority, it is not surprising to find a variety of Hebrew terms, and of English translations in rsv, e.g. 'governor', 'ruler', 'captain'. They may be classed as follows.

a. Technical words

Of these Heb. *pehā* (cf. Assy. *paḫatu*) is the most frequent, meaning the ruler of a district under a king, e.g. an Assyrian provincial governor (Is. 36:9), Chaldean and Persian governors (Ezk. 23:6, 23; Est. 3:12; 8:9), the Persian Tattenai (Ezr. 5:3; 6:6), whose satrapy included Palestine, Phoenicia and Egypt; and Nehemiah and Zerubbabel as governors of Judah (Ne. 5:14; Ezr. 6:7). The latter are also called 'Tirshatha' (Ezr. 2:63; Ne. 7:65, 70), the Heb. form of a Persian title (from Avestan *tarshāta*, 'reverenced').

b. General words

Nine other Heb. terms indicate authority in various spheres. *'allūp* (e.g. Zc. 9:7, of governors of Judah), *mōšēl* (Gn. 45:26, of Joseph in Egypt) and *šallīṭ* (Gn. 42:6, also of Joseph) are wider terms; the others have more particular references: *pāqīd* ('overseer', Je. 20:1, of a priest; cf. Gn. 41:34, of Egyptian officials), *hōqēq* (of lawgivers, Jdg. 5:9, 14), *sāḡān* ('deputy', 'lieutenant', e.g. Dn. 3:2, rsv 'governors'), *nāšī* (indicating social rank, 2 Ch. 1:2), *šar* ('governor of a city', 1 Ki. 22:26) and *nāḡīd* ('commander of a palace', 2 Ch. 28:7).

II. In the New Testament

Fewer Gk. words are used, and these sometimes imprecisely, sometimes with technical accuracy.

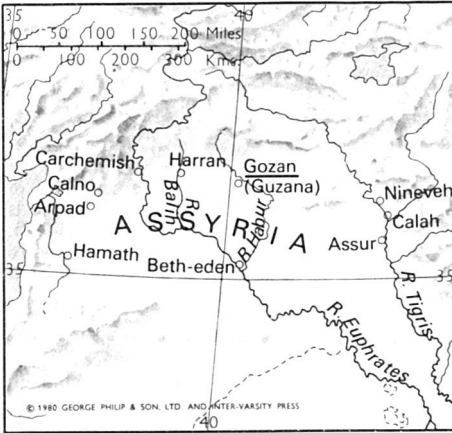

a. *hēgoumai* ('lead') and its derivatives occur most frequently. The term *hēgemōn* is used for governors in the general sense (Mk. 13:9; 1 Pet. 2:14) but more often describes Roman subordinate rulers, such as Pilate (Mt. 27:2; 28:14), Felix (Acts 23:26) and Festus (Acts 26:30), who were 'procurators' (or, in the case of Pilate, 'prefect') under the legate of the province Syria (the official Gk. equivalent was *epitropoi*).

b. Other terms appear at Jn. 2:8 (*architriklinos*, 'steward of the feast'), 2 Cor. 11:32 (*ethnarchēs*, 'ethnarch'), Gal. 4:2 (*oikonomos*, rsv 'trustees', cf. Lk. 12:42; 1 Cor. 4:2) and Jas. 3:4 (*euthynōn*, 'pilot').

B. F. H.

GOZAN is identified with ancient Guzana, modern Tell Halaf, on the Upper Habur river. Israelites from Samaria were deported here in 722 BC (2 Ki. 17:6; 18:11). Sennacherib, in his letter to Hezekiah (2 Ki. 19:12 = Is. 37:12), refers to the heavy punishment inflicted on this Assyrian provincial capital when it rebelled in 759 BC. Excavations in 1899, 1911–13 and 1927 (M. von Oppenheim, *Tell Halaf*, 1933) produced tablets of the 8th–7th centuries BC, in which W Semitic names may attest, or explain, the presence of the Israelite exiles (*A/O* Beiheft 6).

GRACE, FAVOUR.

I. In the Old Testament

a. Vocabulary

Grace involves such other subjects as forgiveness, salvation, regeneration, repentance and the love of God. There are "grace-words" which do not contain the word "grace" (Moffatt); see Dt. 7:7; 9:4-6. The OT 'grace-words' are:

(i) *hesed*, in RSV usually 'steadfast love', occasionally 'loyalty'. This is translated in AV as 'mercy' (149 times), 'kindness' (38), 'lovingkindness' (30) and 'goodness' (12). Luther translates it by *Gnade*, the German word for 'grace'. Despite that, it is not quite the equivalent of grace. It is a two-way word, and can be used of God and man. Of God, it certainly implies grace. Of man, it implies steadfast love to another human being or to God. It is often found in association with the word 'covenant', and denotes the attitude of faithfulness which both parties to a covenant should observe. For God's *hesed*, see La. 3:22; for man's, Ho. 6:6. Snaith suggests 'covenant love' as the nearest Eng. equivalent.

(ii) *hēn*, 'favour' (RSV). This is not a covenant word and not two-way. It is used of the action of a superior, human or divine, to an inferior. It speaks of undeserved favour; in AV it is translated 'grace' (38) and 'favour' (26). Examples of man's *hēn* are found in Gn. 33:8, 10, 15; 39:4; Ru. 2:2, 10. God's *hēn* is found in Je. 31:2 (RSV 'faithfulness', AV 'loving-kindness'). No-one can show *hēn* to God (as one can show *hesed*), for no-one can do him a favour.

b. The law

(i) Jn. 1:17 puts the law into sharp antithesis with grace. See Tit. 2:11, which also states that grace came into the world with Christ. That does not mean that grace was non-existent in the OT, but merely that it is not in the foreground, and that it is concerned chiefly with Israel. The Bible of ten uses antithesis where we would use comparison.

(ii) The idea of promise is developed in the NT in Gal. (3:16-22) and in Hebrews. It shows that grace is prior to law. God dealt with the Patriarchs as individuals by way of promise, and with the nation as a whole by way of law. The law was not

primary, but it clarified and emphasized the kind of *hesed* that God expected of his covenant people.

(iii) Grace is found, however, in the law itself. The election of Israel to be God's people is attributed in the law to God's free choice, and not to Israel's righteousness (Dt. 7:7-8; cf. 8:18). The initiative in the Sinai covenant comes from God, just as much as did the covenant of grace with Abraham. Then there is the statement in Ps. 19 of the converting or restoring power of the law.

c. The prophets

Repentance is the chief point of interest in the prophetic writings. Typical passages are Am. 5:14; Ho. 2:7; 6:1; 14:1; Is. 1:16-18; Je. 3:1, 7, 12-14. The prophets are often accused of a doctrine of repentance which lays stress on human willpower, as did the Pelagian heresy. But the prophets regarded repentance as inward (Joel 2:13). Ezekiel, who demanded that the individual should make himself a new heart (18:31), also recognized that a new heart can only be a gift of God's grace (36:26). With this agrees the 'new covenant' passage in Je. 31:31-34.

d. The Psalms

The word *hēn* is almost absent from the Psalms, though its cognates appear. *hesed* is very often found, e.g. Ps. 5:7; 57:3 ('steadfast love', AV 'mercy'); 89:33 (AV 'lovingkindness'). In the Psalms also is found the increasing use of the cognate word *hāsīd*, which is found in, e.g., Ps. 12:1; 86:2 ('godly man'); 79:2 ('saints'). The plural of this word (*hāsīdīm*) appears as 'Hasidaeans' in 1 Macc. 2:42; 7:13; 2 Macc. 14:6; it really meant those who were loyal to the covenant, the rigorous, devout, law-keeping party in Judaism, from whose ranks came the *Pharisees.

II. In the New Testament

a. Vocabulary

Gk. *charis* was the normal word used to translate Heb. *hēn*. The nearest corresponding verb, *charizesthai*, was used to denote forgiveness, human as well as divine (Col. 2:13; 3:13; Eph. 4:32). *eleos* represents the Heb. *hesed* and has the meaning of 'mercy'. It is not used very often, and occurs largely in passages based on the OT, such as Rom. 9:15-18, 23; 11:30-32. 'Grace' is preferred to 'mercy', because it includes the idea of the divine power which equips a man to live a moral life.

b. The Synoptic Gospels

Quite apart from the word *charis*, which is never placed on the lips of Jesus, the idea of grace is very prominent. Jesus says that he came to seek and save the lost. Many of his parables teach the doctrine of grace. The parable of the labourers in the vineyard (Mt. 20:1-16) teaches that God is answerable to no-one for his gifts of grace. The parable of the great supper (Lk. 14:16-24) shows that spiritual privilege does not ensure final bliss, and that the gospel invitation is to all. The prodigal son was welcomed by his father in a way he did not deserve (Lk. 15:20-24). Repentance is stressed as a condition of salvation (Mk. 1:15; 6:12; Lk. 24:47). Faith also has its place (e.g. Mk. 1:15; Lk. 7:50), although there is no theological statement on Pauline lines.

c. The writings of Luke

Both the Gospel and the Acts need special atten-

GRACE, FAVOUR

tion. Luke shows flexibility in dealing with the subject. Even the non-religious sense of the noun, of a favour done by one man to another, appears (Acts 24:27; 25:3, 9). The OT sense of 'favour' is seen in Lk. 1:30; 2:52; Acts 2:47; 7:10, 46. The dynamic sense of grace resulting in fearless courage and effective witness is seen in Acts 4:33; 11:23; 13:43 and is used in the context of the universal appeal of the gospel. Luke also brings together, in a way that even Paul does not, the terms 'gospel' ('word') and 'grace' (Lk. 4:22; Acts 14:3; 20:24).

d. The Pauline Epistles

The word 'grace' has a prominent place in the opening greetings and the closing benedictions of the Epistles, being added to the conventional Jewish greeting of 'peace'. The basis of Paul's doctrine is found in Rom. 1:16–3:20. Man is shown as a sinner, but by grace he is justified (Rom. 3:21–4:25), i.e. God in his grace treats him, though guilty, as if he had never sinned.

*Faith is the human response to divine grace (Rom. 5:2; 10:9; Eph. 2:8). This faith is the gift of God (Eph. 2:8); the words 'not your own doing' may refer to *sesōsmenoi* ('saved'), but Paul is seeking to point out that the word 'faith' must not be thought to imply some independent action on the part of the believer. See also 2 Cor. 4:13; Phil. 1:29. This faith, although it implies that there is no salvation through the law, is not unethical. Faith is morally vital by itself. It works 'through love' (Gal. 5:6). C. A. Anderson Scott (*Christianity according to St Paul*, 1927, p. 111) says that from the moment that faith was active a transformation of ethical outlook was ideally there.

The believer's position in grace is explained, not by anything in himself, but by the will of God. The doctrine of *election has two functions: it checks human independence and self-righteousness, and shows that in bestowing favour God is perfectly free (Eph. 1:1–6; 2 Tim. 1:9; Tit. 3:5). Every step in the process of the Christian life is due to grace—Gal. 1:15 (call); 2 Tim. 2:25 (repentance); Eph. 2:8–9 (faith).

In Rom. 8:28–30 Paul surveys the divine agency from the call to the final glory of the redeemed. He does not, however, overlook man's responsibility. Obedience (Rom. 1:5; 6:17) is a moral attitude, and cannot be made anything else. A man of himself turns to the Lord (2 Cor. 3:16). A. Stewart in *HDB* suggests that 1 Thes. 3:5 teaches that even perseverance is doubted. The two sides are brought together in Rom. 9–10. Ch. 9 contains the strongest possible statements of double predestination, while ch. 10 states that rejection by God is due to unbelief and disobedience. It must be remembered, however, that the primary subject of these chapters is not personal salvation, but the collective functions of those chosen by God to carry out his purpose.

Rom. 6 uses the figure of baptism to teach the conquest of sin by grace. See also 1 Cor. 6:11; 12:13; Eph. 5:26; Col. 2:12; Tit. 3:5. H. Wheeler Robinson (*The Christian Doctrine of Man*, 1926, pp. 124–125) holds that believers' baptism is not merely illustrative symbolism but the objective aspect of what is subjectively faith. Others would argue that infant baptism is a means of grace, because the child is a symbol of human inability and helplessness. These views seem to contradict the unvarying Pauline emphasis on faith.

e. The other NT writings

(i) 1 Pet. The apostle emphasizes grace in chs. 1–2 by means of the usual variants of covenant election and inheritance; 3:7 has the unusual phrase 'the grace of life'. Grace is also used in 5:10 in relation to the believer's future glory.

(ii) Heb. The writer uses most of the 'grace-words'. In 2:9 the grace of God is related to the sufferings of Christ. The word *charis* is used in 12:28 of human thankfulness to God. Grace is viewed as a calling to consecration in 12:14–15. The striking phrase 'the throne of grace' in 4:16 unites the divine majesty and grace. Another fresh phrase is 'the Spirit of grace' (10:29).

(iii) The Johannine writings. There is surprisingly little directly about grace, but God's love is emphasized throughout. The idea of grace must be related to that of 'eternal life'. Faith is prominent, and John uses a Gk. phrase *pisteuein eis* (believe into) of real *faith in Christ's person. The 'grace and truth' which characterize the glory of the incarnate Word in Jn. 1:14 (cf. v. 17) echo the 'mercy and truth' (*hesed we 'met*) of Ex. 34:6.

We conclude with Moffatt that the religion of the Bible 'is a religion of grace or it is nothing ... no grace, no gospel' (*Grace in the New Testament*, p. xv).

GRAIN. The commonest OT Heb. words are 1. *dāḡān*, wheat (fully-developed grain). 2. *bar*, grain of any kind standing in the open field (hence *bar* means also 'open country'). 3. *šeber*, grain, cereal, victuals, i.e. broken crushed grain.

'Parched grain' (*qālī, qālā, 'roasted'*) were ears or grains of wheat (Lv. 23:14; Ru. 2:14; 1 Sa. 17:17; 25:18; 2 Sa. 17:28) roasted over a blazing fire, usually on an iron pan or flat stone.

kussemet (Ex. 9:32; Is. 28:25; Ezk. 4:9), rendered 'spelt' (RSV) and 'rie', 'rye' or 'fitches' (AV), denotes the false spelt or einkorn wheat (*Triticum monococcum*) and not true spelt (*Triticum spelta*) which has not been recorded from Egypt of that time.

The Gk. word *kokkos* ('kernel', Mt. 13:31, etc.) denotes the singular form, e.g. 'a grain of mustard seed'.

By 'grain' in the Bible the cereal crops barley and wheat are usually intended. (*AGRICULTURE. *FOOD.) F.N.H.

Barley (Heb. *ś'ōrā*, Gk. *krithē*). An edible grain of the genus *Hordeum*. The grass *H. spontaneum*, which still grows wild in Palestine, gave rise to the primitive cultivated 'two-row' barley (*H. distichon*), and later to the 'six-row' barley (*H. vulgare*), which was the barley of biblical times and continues today.

Barley formed the major part of the staple food of Palestine (Dt. 8:8), particularly of the poorer classes (Ru. 2:17; Ezk. 4:9; Jn. 6:9). It has a shorter growing season than wheat and can flourish on poorer soil. Barley was also used as fodder for horses and cattle (1 Ki. 4:28), and for brewing.

judging from evidence of Philistine drinking vessels. In Jdg. 7:13 it apparently symbolizes a reformed Israel. Barley meal as a jealousy offering (Nu. 5:15) seems to show that basic integrity had been disrupted.

F. N. H.

Chaff. 1. Heb. *mōš*, the most common word, denotes worthless husks and broken straw blown away by the wind during the winnowing of grain (Jb. 21:18; Pss. 1:4; 35:5; Is. 17:13; 29:5; 41:15; Ho. 13:3; Zp. 2:2). 2. Heb. *h'šāš*, 'hay', 'dry grass' (Is. 5:24; 33:11). 3. Aram. *ūr*, 'skin', 'chaff' (Dn. 2:35). 4. Gk. *achyron*, 'chaff' (Mt. 3:12; Lk. 3:17).

In some of the above references it is applied figuratively in connection with superficial or wrong teaching, and with the inevitable fate of wrongdoers.

J. D. D.

Straw (Heb. *teḥen*; Arab. *tibn*). The stalk of wheat or barley, while chaff is the wind-scattered husk of the threshed grain, and stubble remains after harvesting. Chopped straw mixed with more solid foodstuffs contributed to the provender of horses, asses and camels (Gn. 24:32; Jdg. 19:19; 1 Ki. 4:28). In Egypt straw was and is mixed with clay to make the familiar mud bricks of the poorer houses. When the Israelite brickmakers, already overworked, had to collect their own straw, their burdens were almost intolerably increased (Ex. 5).

Straw is also still used in certain kinds of hand-moulded pottery, later burnt by fire. Such was the strength of leviathan that he could bend iron like straw (Jb. 41:27). In the peace of the Messianic age the lion will cease to devour flesh, and eat straw (Is. 11:7; 65:25). The final fate of Moab is pictured as straw trampled down among dung (Is. 25:10). In the Bible, stubble (Heb. *qasš*, 'dried up') is used to typify worthless inflammable substances, since chaff and straw were often thrown on to fires to give instant heat (Ex. 15:7; Jb. 13:25; 41:28–29; Ps. 83:13; Is. 5:24; so Gk. *kalamē* in 1 Cor. 3:12). See C. F. Nims, 'Bricks without Straw', *BA* 13, 1950, pp. 22ff.

R. A. S.

Wheat (Heb. *dāḡān*, Gk. *sitos*). A cereal grass of great antiquity and importance as a food of mankind. The typical wheat of OT times in the Mediterranean region was the 'emmer' wheat (*Triticum dicoccum*), which gave rise to the 'hard' wheat (*T. durum*) that was immensely important from Hellenistic times onward, thus including the NT period. Modern cultivated varieties are of the 'bread' wheat (*T. vulgare*). Owing to its physical and chemical qualities, wheat makes more palatable and better *bread than any other cereal.

Wheat formed an important part of the diet of the Israelites (Jdg. 6:11; Ru. 2:23; 2 Sa. 4:6), and the wheat harvest is used as a *calendar reference (Gn. 30:14; 1 Sa. 6:13; 12:17). Because of its importance as a food, it is a symbol of God's goodness and provision (Pss. 81:16; 147:14). It was used as a cereal offering in the Temple (Ezr. 6:9; 7:22) and forms part of the sacrifice made by David on Ornan's threshing-floor (1 Ch. 21:23).

Its botanical nature whereby one grain gives rise to several new ears of wheat, while the original grain is used up, is taken by Christ to show that spiritual fruitfulness has its origin in the death of self (Jn. 12:24; cf. 1 Cor. 15:36ff.). As symbolic of the children of God, it is contrasted with the valueless chaff (Mt. 3:12). Similarly, in Mt. 13:24–30 the darnel or tares (*Lolium temulentum*) in their early stages of growth appear as grass-like as wheat, but can easily be distinguished at harvest-time.

F. N. H. et al.

GRASS (Heb. *ḥāšīr*, *deše'*, *yereq*, *'ēšeb*; Gk. *chortos*).

Gn. 1:11 records that the earth brought forth vegetation (literally 'grass', as *av*) on the 'third day' of the creation narrative. In the promised land it provided food for cattle; it would be given to the land by God in response to the people's obedience (Dt. 11:15). It was the portion of Nebuchadrezzar during his madness (Dn. 4:15, 25).

Green pastures are not of permanent occurrence in Palestine, but last only for a while after the rains, withering in the dry season. As a result, grass is a fitting symbol of the transitoriness of human life (e.g. Ps. 103:15; Is. 40:6–7), of the brief sway of the rich man (Jas. 1:10–11), and is a figure of weakness, of perishing enemies (Is. 37:27 = 2 Ki. 19:26), of the wicked soon to be cut down (Ps. 37:2) and of haters of Zion (Ps. 129:6).

The multitude of blades is likened to a multitude of people (Jb. 5:25; Is. 44:4) and to a flourishing people (Ps. 72:16), and the luxuriance of green pastures is likened to serenity in the spiritual life (Ps. 23:2). In tender grass can be seen a quality of the just ruler (2 Sa. 23:4), and a benevolent ruler is as refreshing and productive of good as rain upon mown meadows (Ps. 72:6).

In contrast, a barren locality without grass can indicate God's wrath (Dt. 29:23).

R. A. H. G.

GREECE. Who the Greeks were is a famous crux. Their language is Indo-European and its earliest known location is in the Mycenaean states of the Peloponnese (as established by the decipherment of the Linear B script) in the 2nd millennium BC. When they emerge into history well into the 1st millennium they belong indifferently to either side of the Aegean.

The first flowering of the two institutions that became the hallmarks of Hellenism, speculative philosophy and republican government, apparently occurred on the Ionian coast of Asia Minor. Ionia is perhaps the OT Javan (Is. 66:19). The area of Greek settlement was never static. The republics were early established throughout the Black Sea, Sicily and S Italy, and as far W as Marseilles and Spain. After Alexander there were Greek states as far E as India. Under Seleucid and more especially Roman control the wealthy and ancient nations of Asia Minor and the Levant were systematically broken up into many hundreds of Greek republics, leaving only the most backward regions under the indigenous royal or priestly governments. This political fragmentation was always characteristic of the Greeks, as was the consequent subordination to foreign powers. Greece was never a political entity. 'The king of Greece' (*yāwān*, Dn. 8:21) must be one of the *Macedonian rulers, Alexander or a Seleucid, who controlled the affairs of many but by no means all Greek states. 'Greece' (*Hellas*) in Acts 20:2 must refer to the Roman province of *Achaia, which, while it contained many ancient Greek states, was now almost a backwater of Hellenism.

On the other hand, the ever-increasing diffusion

GREECE

of Greek institutions brought unification at a different level. The whole of the E Mediterranean and much beyond was raised to the common norm of civilization that Hellenism supplied. Both the opulence of the states and the degree of standardization are attested by the splendid ruins that indiscriminately litter these parts today. The ideal of a free and cultivated life in a small autonomous community, once the boast of a few Aegean states, was now almost universally accepted. *Athens was still a home of learning, but Pergamum, Antioch and Alexandria, and many others in the new world, rivalled or eclipsed her.

The states provided not only education but brilliant entertainment and a wider range of health and welfare services than most modern communities. It was membership in such a republic and use of the Greek language that marked a man as civilized (Acts 21:37-39). Such a person might be called a Greek, whatever his race (Mk. 7:26); all others were 'barbarians' (Rom. 1:14). The term 'Hellenists' in Acts 6:1; 9:29 presumably shows that this distinction applied even within the Jewish ethnic community. The term 'Greek' (*hellēn*, Acts 11:20; 19:17; Rom. 1:16, etc.) is, however, the regular NT usage for non-Jews, being virtually equivalent to 'Gentile'. *Greeks were frequently associated with the synagogues as observers (Jn. 12:20; Acts 14:1; 17:4; 18:4), but the exclusiveness of Israel as a nation was jealously preserved. It was the agonizing delivery of the gospel from this constricting matrix that marked the birth of the Christian religion in its universal form. The translation from Hebrew into Greek opened the gospel to all civilized men. It also produced the NT.

E. A. J.

GREEKS. Two words are used in the NT: *Hellēnes* and *Hellēnistai*. The term *Hellēnes* refers to the inhabitants of Greece or their descendants (cf. Acts 16:1; Rom. 1:14). It is also used, as a virtual equivalent of 'Gentile', to describe those who are not of Jewish origin (cf. Rom. 10:12; Gal. 3:28).

The term *Hellēnistai* is a crux. It is confined to Acts 6:1; 9:29 (where A reads *Hellēnas*); and 11:20 (as a variant reading, although *Hellēnas* is probably to be preferred). The objection to the traditional interpretation of *Hellēnistai* as 'Gk.-speaking Jews' is that Paul, who spoke Gk., called himself *Hebraios* (Phil. 3:5), which in Acts 6:1 forms the contrast to *Hellēnistai* (cf. C. F. D. Moule, *ExpT* 70, 1958-9, p. 100). Various alternatives have been offered: e.g. Jews who spoke only Gk. (Moule, *loc. cit.*); Gk.-speaking diaspora Jews living in Palestine (J. A. T. Robinson, *Twelve New Testament Studies*, 1962, pp. 116f.); 'non-conformist' Jews influenced by Hellenism and noted for their opposition to the Temple (O. Cullmann, *ExpT* 71, 1959-60, pp. 8-12, 39-43; also *The Johannine Circle*, 1976). s.s.s.

GREETING. Following modern idiom, rsv changes av 'salutation' invariably to 'greeting', the verb 'salute' to 'greet' or some equivalent. The social courtesies intended have six main biblical forms:

1. An epistolary message of greeting, involving no personal encounter. Paul occasionally uses the noun *aspasmos*, more frequently the cognate verb *aspasomai*, a customary formula in contemporary Gk. correspondence, as the papyri prove (see *MM*). The greeting may be in the name of the writer, or of some other person specified by him (cf. Rom. 16, etc.).

2. A formal greeting with obeisance from subject to monarch, invoking, with oriental exaggeration, eternal life for him (cf. Ne. 2:3, etc.; Heb.; Dn. 2:4, etc.; Aram.).

3. A face-to-face greeting, formal, verbal, perhaps with hand gesture, but without physical contact. The Gk. descriptive terms are the same as Paul's (Mt. 10:12; Mk. 12:38, etc.). Note the mock homage to Jesus in Mk. 15:18. The uttered word was frequently the imperative *chaire*, plural *chairete*, 'rejoice', av 'Hail!' (Mt. 27:29, etc.). The infinitive *chairein* is also used (cf. 2 Jn. 11; 1 Macc. 10:18, 25). The commonest Heb. terms are connected with blessing (root *bārak*, 2 Ki. 4:29, etc.), or with the invoking of peace (*šāl* *al l'šālôm*, 1 Sa. 17:22, etc.). Modern Heb. and Arab. greetings are based on the same vocabulary stock (cf. *šālôm*, *salaam*).

4. A formal cheek kiss, Heb. *nāšaq* and cognate noun; Gk. *philēma* (cf. 1 Sa. 10:1; Rom. 16:16, etc.). The double-cheek kiss is still daily exchanged between males in the Orient. 5. The affectionate kiss, normally on the mouth, implying greater intimacy (same words, Gn. 29:11; Ct. 1:2). 6. The deceitful kiss (same words, Pr. 27:6; the kiss of Judas, Mt. 26:48, etc.).

Greetings might be forbidden through urgency (2 Ki. 4:29; Lk. 10:4) or to prevent association with error (2 Jn. 11).

BIBLIOGRAPHY. G. Finkenrath, *NIDNTT* 2, pp. 356-358; H. Windisch, *TDNT* 1, pp. 496-502.

R. A. S.

GRINDER (from Heb. *tāhan*, 'to grind'). Grinding in the E is usually done by women (cf. Mt. 24:41). In Ec. 12:3 the word is used in a metaphorical sense to denote the teeth. For a full discussion of the Jewish poetic imagery employed here, see *ICC, Ecclesiastes*, pp. 186ff. J.D.D.

GRUDGE. Frequently found in the earliest translations, this word was altered to 'murmur' in most of the av occurrences, then similarly changed in all but two of the rv passages. Where it is retained in av several words are thus rendered, viz. Heb. *nātar*, 'to keep anger' (Lv. 19:18, so rsv); Heb. *lūn, lūn*, 'to murmur' (Ps. 59:15, rsv 'growl'); Gk. *stenazō*, 'to groan, sigh' (Jas. 5:9, rsv 'grumble'); Gk. *gongysmos*, 'grudging' (1 Pet. 4:9, so rsv); Gk. *ek lypēs*, 'grudgingly', 'out of grief' (2 Cor. 9:7, rsv 'reluctantly'). rsv translates 'grudge' at Dt. 28:54, 56; Mk. 6:19, *enechō* (av quarrel); 'grudging' at Dt. 15:10, *rā'a* (av 'grieve'). J.D.D.

GUARD. In the OT the word translates four Heb. terms. I. *tabbāh*. The word originally signified royal 'slaughterers' (*BDB*), but later came to mean guardsmen or bodyguard, being used of Pharaoh's bodyguard (Gn. 37:36; 39:1) and of Nebuchadrezzar's bodyguard (2 Ki. 25:8-10). (In Israel Aegean mercenaries [Cherethites and Pelethites] formed

David's bodyguard, while Carian troops seem to have had a similar appointment in the time of Athaliah [2 Ki. 11:4, 19].) 2. *mišmā'at*, from *šāma* 'hear', 'respond', the attitude of an obedient body of subjects, was sometimes the name given to the bodyguard (2 Sa. 23:23; cf. 1 Sa. 22:14). 3. *mišmār* denotes 'guard', 'watch' or 'guardhouse' in a camp (Lv. 24:12; Nu. 15:34), or 'guard-post' (Ne. 7:3). 4. *rāšim*, lit. 'runners', were the runners of the king who acted also as the royal bodyguard (1 Sa. 22:17; cf. 1 Ki. 1:5; 14:27). (*FOOTMAN.)

'Guard' occurs once in the AV of the NT (Acts 28:16), but the text is disputed (*CAPTAIN). The Temple had its own police department known as the Temple Guard, who were mostly Levites and whose task, among other things, was to keep out the forbidden Gentiles (cf. Mt. 27:65, RSV). The *spekoulatōr*, a Latinism found in Mk. 6:27, was one of ten such officers attached to a legion who acted mostly as couriers but sometimes as executioners; one such was in the employ of Herod Antipas.

R.P.G.

GUDGODAH. One of the Israelite encampments in the wilderness according to Dt. 10:7. Hor-haggidgad in Nu. 33:32-33 is probably another form of the same name. Its location is not known, although its proximity to *Bene-jaakan and *Jotbathah suggests that it was somewhere in the mountains W of Wadi Arabah. The suggestion that the name survives in Wadi Ḥadaḥid, in this area, is unlikely from a linguistic point of view. Baumgartner, comparing an Arab. word, has suggested that it may be an animal name, 'a cricket':

the first element of the longer form, Hor, appears to mean 'cave'.

BIBLIOGRAPHY. *KB*, pp. 169, 335 (bibl.).

G.I.D.

GULF (Gk. *chasma*, 'chasm' (RSV), from *chainō*, 'to gape' or 'yawn'). Found only in the parable of Lazarus and Dives (Lk. 16:19-31, AV), this word is sometimes connected with an ill-defined rabbinical belief that the souls of righteous and wicked exist after death in different compartments of Hades (see J. M. Creed, *The Gospel according to St Luke*, 1942, pp. 212-213), with no road between them, but so situated as to allow the inhabitants of each to see those of the other. There is, however, insufficient evidence for this application of the word. Any interpretation, moreover, must take into account the oriental love of imagery, for which full scope is provided by a subject such as this (which in various forms was a common feature of the writings of classical antiquity).

The passage seems to imply also that the gulf is seen in this earthly life, in which the respective conditions of Lazarus and Dives are reversed. Abraham, after outlining this aspect, is made to say, 'In all these things' (v. 26 RVmg.) '... there is a great gulf fixed.' It seems clear that the gulf is in character as well as in condition, otherwise the false impression would be given that some stigma attaches to riches in themselves. The story reminds us that it is of the very essence of the gospel that there is between believers and unbelievers a fundamental difference in this world and in the next. (*LAZARUS AND DIVES, *ABRAHAM'S BOSOM.)

H

HABAKKUK, BOOK OF.

I. Outline of contents

The prophecy attributed to Habakkuk consists of six sections.

a. 1:1-4. The prophet cries to God because of the lawlessness he sees around him and asks how long it will go unpunished.

b. 1:5-11. As if in reply, God announces that he is raising up the Chaldeans and describes the fierceness of their armies and their contempt for all who stand in their way.

c. 1:12-17. But if God is holy, how can he allow the brutal inhumanity and idolatry of the Chaldeans, whose atrocities are worse than the evils that they are sent to punish?

d. 2:1-5. The prophet waits in imagination upon his watchtower to see if God will resolve his dilemma. The answer comes in the asseveration of the principle that the pride of the Chaldean will be his downfall and the faithfulness of the righteous will be his salvation.

e. 2:6-20. A taunt-song (*māšāl*) addressed to the Chaldeans, consisting of a series of five woes predicting dire consequences upon them for the acts of inhumanity for which they are responsible.

f. 3:1-19. If this psalm of Habakkuk has any connection with the theme of the earlier chapters it describes a revelation of God coming in his awful majesty to bring judgment upon the nations and salvation to his people.

II. Authorship

So little is known of the prophet Habakkuk that anything that is written about him must be conjectural and based on internal evidence. His name may be connected with a Heb. root meaning 'embrace' (*hbq*) or with an Assyr. plant name, *hambakuku*. The Gk. form of his name is *Hambakoum*. The suggestions that he was the son of the Shunammite woman of 2 Ki. 4:16, or the watchman of Is. 21:6, have as little evidence to support them as the tradition associating him with Daniel in the lions' den (so Bel and the Dragon, verses 33ff.).

III. Date and background

There has been considerable discussion among scholars about which if any of these sections are original to Habakkuk, and there is no agreement with regard to unity, authorship and date. The only clear historical reference is to the Chaldeans in 1:6 and so the prophecy is usually dated at the close of the 7th century BC shortly after the battle of Carchemish (605 BC) when the Chaldeans routed the Egyptians under Pharaoh Neco on the fords of the Euphrates and marched W to subjugate King Jehoiakim of Judah.

The theory of Duhm and C. C. Torrey that 'Chaldeans' (Heb. *kašdim*) should read 'Kittim' in the sense of 'Greeks' was based on the problematical 1:9 (Heb. lit. 'the eagerness of their faces is eastwards'). This would fit in better with Alexander's invasion from the W (and a 4th-century date) than with Nebuchadrezzar's from the N or E. But the text of 1:9 is extremely difficult; there is no textual evidence for the reading 'Kittim' in 1:6; and the traditional dating is to be preferred.

IV. The prophet's message

A unity of theme may be observed throughout the book, though whether this is due to 'the molding influence of liturgical use' (Irwin) or to unity of authorship cannot be known. Habakkuk deals with the moral problem of God's raising up of the Chaldeans to inflict his judgment upon Judah, when their cruelty and barbarity are a denial of his righteousness. The answer given in 2:4 is that a man's arrogance carries within it the seed of his ruin, whereas the faithful man is assured of living in the light of God's favour. Clearly the full Pauline meaning of faith is not to be found in this oft-quoted scripture (cf. Rom. 1:17; Gal. 3:11; Heb. 10:38); indeed, it is doubtful whether Pauline faith could have been expressed by any Heb. word. But the NT gives a legitimate development of the prophet's thought through the medium of the LXX translation, *pistis*.

The Commentary on Habakkuk of the Dead Sea Scrolls interprets 1:4-2:20 only in the light of the history of the Qumran sect and gives no clue to the meaning of the prophecy. Although on 1:6 and elsewhere it reads 'This means the Kittim', there is no suggestion that the original 'Kasdim' was in need of emendation.

Irwin, 'The Psalm of Habakkuk', *JNES* 1, 1942, pp. 10-40; W. F. Albright, 'The Psalm of Habakkuk', in H. H. Rowley (ed.), *Studies in OT Prophecy*, 1950, pp. 1-18; D. W. Baker, *Nahum, Habakkuk and Zephaniah*, 1988. J.B.Tr.

HABOR. A river (the modern I-ġābūr) which carries the waters of several streams draining the Mardin area SW to the middle Euphrates. It ran through the Assyr. province of *Gozan (*n'har gōzān*, 'river of Gozan') and was one of the locations to which the Israelites were deported by the Assyrians (2 Ki. 17:6; 18:11; 1 Ch. 5:26). T.C.M.

HACHILAH (Heb. *h'qilā*, 'drought'). A hill in the wilderness of Judah where David was hidden when

the Ziphites plotted to betray him to Saul (1 Sa. 23:19; 26:1, 3). The site is uncertain, but generally regarded as being near Dahret el-Kôlâ, between Ziph and *En-gedi. J.D.D.

HADAD. The name of a Syrian deity meaning 'the Thunderer' (Heb. *h'adad*; Akkad. (*H*)*ad(d)u* or Adad) the storm-god, also named in Ras Shamra texts as *Baal. A Hadad temple at Aleppo is known. The personal names Hadad, and their dialectal variant Hadar, are probably abbreviations of names compounded with this divine element, e.g. *Hadadezer, *Ben-hadad, *Hadad-rimmon. There is as yet no evidence to support the view that Hadad was a specifically Edomite name, although it was borne by four rulers of that country.

1. The grandson of Abraham, being the son of Ishmael (Gn. 25:15 = 1 Ch. 1:30). The *MT* Hadad is supported by LXX readings, while the AV 'Hadar' follows the Syr. and other mss.

2. A son of Bedad who came from Avith and defeated the Midianites in the plain of Moab. He was succeeded as king of Edom by Samlah (Gn. 36:35-36; 1 Ch. 1:46).

3. A later king of Edom, named Hadar in 1 Ch. 1:50, whose native village was Pau.

4. An Edomite of the ruling family who lived in the time of Solomon. He was a young child and fled to Paran when Joab murdered his family after Judah's conquest of Edom. He took refuge in Egypt, where he married the pharaoh's daughter, his son Genubath being brought up at the Egyptian court. When Hadad heard of the death of David and Joab he returned to Edom and plotted against Solomon (1 Ki. 11:14-22, 25).

BIBLIOGRAPHY. A. LeMaire, 'Hadad l'Édomite ou Hadad l'Araméen', *Biblische Notizen* 43, 1988, pp. 14-15. D.J.W.

HADADEZER. This Aramaean personal name, meaning '(the god) *Hadad is (my) helper', was borne by at least two kings of the Damascus region. It is sometimes written 'Hadarezer', perhaps reflecting an Aramaic dialectal variant, in 2 Sa. 10:16-19; 1 Ch. 18:3-8 (AV).

Hadadezer, son of Rehob, was king of Zobah, E of Hamath, whose territory at one time included part of the bank of the river Euphrates (2 Sa. 8:3). He was defeated by David and the gilded shields of his bodyguard taken as trophies to Jerusalem together with booty from the towns of Bethah and Berothai in his territory, despite the advance of reinforcements from Damascus. Following this reversal his old enemy, Toi of Hamath, sent gifts to David (v. 10). However, Hadadezer continued to rule his territory and later supported the Ammonites in force in their war with David (2 Sa. 10:16-19; 1 Ch. 18:3-8). When the Israelites again defeated the Syrian forces *Rezon, a refugee from the court of Hadadezer, became king in Damascus and plotted against Solomon (1 Ki. 11:23).

A Hadadezer (Assyr. *Adad-idri*), king of Damascus, is named as one of the allies who, with Ahab of Israel, opposed Shalmaneser III at Qarqar in 853 BC (*DOTT*, pp. 47-48). These kings are sometimes identified with *Ben-hadad I-II. See *Or* 34, 1965, pp. 472-473 for name. D.J.W.

HADAD-RIMMON. The mourning in Jerusalem on the death of Josiah in battle with Neco II of Egypt in 609 BC is compared with that 'of Hadad-rimmon in the plain of Megiddo' (Zc. 12:11). It is commonly supposed to be the name of a place near Megiddo and thus to be identified with modern Rummaneh, S of that city. However, the form of the name meaning '(the god) *Hadad is (the god) Rimmon', and the context, may show that it is a composite name. Both elements mean 'the thunderer' and are local names or epithets for Baal, and such a name can be compared with the deity Rashap-shalmon. The allusion would then be to the great mourning normally associated with this deity personifying the elements in ceremonies at Megiddo, and perhaps a counterpart to that described in Jdg. 11:37-40 (*DOTT*, p. 133).

D.J.W.

HADRACH. A place on the N boundaries of Syria (Zc. 9:1). Mentioned in the Aram. inscription of Zakur of Hamath, c. 780 BC, it is the Hatarikka of Assy. inscriptions, once the seat of a district governor, near Qinneşrin, 25 km S of Aleppo (*HUCA* 18, 1944, p. 449, n. 108). A.R.M.

HAGAR. A Semitic, not an Egyptian, name and thus perhaps given to the woman by Abraham when he left Egypt. It may mean 'flight' or something similar, cf. Arab. *hegira*. Hagar was an Egypt. bondservant in Abraham's household, handmaid to Sarah; Abraham probably acquired her during his visit to Egypt. With the passing years Abraham felt keenly the lack of a son and heir, and, after the war of the kings (Gn. 14), with magnificent faith believed God's promise that he would indeed have a son (Gn. 15:2-6). But as time still passed, Abraham and Sarah had doubts, and sought to gain an heir by their own unsanctioned efforts: in accordance with the customary law of the period (attested in tablets from Ur and Nuzi), the childless Sarah urged Abraham to have a son by her servant Hagar—so Ishmael was born, the son of a slave-woman (Gn. 16). In conception, Hagar despised the barren Sarah, and fled into the desert from Sarah's wrath. At a well, God commanded her to return to her mistress and promised her numerous descendants. Awed by this experience of God, Hagar called the well 'the well of him who lives and sees me' (Beer-lahai-roi). In due course (Gn. 21:1-7) the promised son, Isaac, was born, the gift of God's initiative and supernatural grace. At Isaac's weaning the half-slave Ishmael mocked; God then commanded Abraham (against the custom of the day) to expel Hagar and her son (Gordon, *BA* 3, 1940, p. 3), for the line of promise was in Isaac, and God had another destiny for Ishmael (Gn. 21:9-14). In the wilderness the fugitive pair soon ran out of water, and Hagar sat apart from Ishmael to avoid witnessing his death. God then showed her a well of water. Ishmael grew up in Paran (in NE Sinai) as a hunter with the bow, and Hagar procured him a wife from her Egypt. homeland (Gn. 21:15-21).

Two millennia later, Paul had to rebuke his Galatian converts for hankering after a deceptive 'righteousness' gained by self-exertion in obeying the stipulations of the law, instead of continuing in

HAGAR

Christ by faith (Gal. 3–5). He used the story of Hagar and Ishmael, Sarah and Isaac, as an allegory. Ishmael was the son, by earthly effort, of Hagar the slave. Similarly, the Jews (i.e. 'the present Jerusalem') were 'sons' of the Sinai covenant (pictured as Hagar); their failure to keep it faultlessly demonstrated the power of sin and the futility of seeking justification by self-effort. Isaac was the son of a promise received by faith, the gift of God's grace: Sarah typified the covenant of promise and grace (cf. Gn. 15) and all reborn spiritually in saving faith are numbered with Isaac. As Isaac was the true heir and Hagar and Ishmael were expelled, so the law as a limited phase in God's plan of redemption was in due time supplanted by the covenant of faith established finally and eternally in Christ (Gal. 4:21–5:1). K. A. K.

HAGGAI, BOOK OF. This little book, as we know from the dates it contains, records messages given between August and December 520 BC. Some 18 years had elapsed since the return from Babylon permitted by Cyrus, but work on restoring the Temple had long since ceased (Ezr. 4:24). Haggai's main task was to rouse his contemporaries to action once more and in this he was assisted by the prophet Zechariah (Ezr. 5:1).

I. Contents and structure

Despite the internal evidence of chronological sequence the order of the text has been questioned and its rearrangement suggested (cf. NEB). The biblical order is attested by the *Scroll of the Twelve* from the caves of Murabba'at, the earliest known Heb. ms, and follows a recognizable pattern. The structure is a twofold accusation, response, assurance:

Accusation	1:1–11	2:10–17
Response	1:12–15	2:18–19
Assurance	2:1–9	2:20–23

Though there may well have been editorial arrangement of the prophecies, the immediacy of the message and the absence of comment upon it suggest that little time elapsed between the prophet's preaching and the publication of his words.

II. Development of theme

The twofold presentation serves a specific purpose. In the first half the prophet starts with the present and looks back over the previous 18 years, whereas in the second half he works from the present to the future, though in each case the assurance section contains references to promised blessing.

Part I. 1:1–11. Catching the current mood of lethargy Haggai intersperses accusation with diagnostic comment on the economic situation. One directive (v. 8) provides a goal for the community and a test of their willingness to accept correction. 1:12–15. The response is unprecedented. Zerubbabel the prince and Joshua the priest lead their people into unanimous acknowledgment of Haggai's authority as God's spokesman. With the promise of God's Spirit among them they make a start 3 weeks later on rebuilding the Temple.

2:1–9. After a further 4 weeks discouragement was again hindering progress. Because of their poverty the new building was necessarily basic, lacking the splendour of Solomon's Temple.

Nevertheless it would one day be beautified with silver and gold contributed by the nations, and would then surpass even that of Solomon.

Part II. 2:10–17. It was one thing to reconstruct the Temple but quite another to remove the contamination caused by its desecration under heathen armies. The mere offering of sacrificial meat in their ritual could not ensure acceptance by the Lord. Far from being a place of cleansing, the Temple-skeleton had been a defilement. Repentance was all-important, and of that obedience to the prophet was a tangible proof. God would acknowledge this change of heart by changing shortage into abundance.

2:18–19. The people had responded and the Lord would once again give his blessing. That very December day, when no farmer could predict what next year's harvest would be, God promised prosperity as a sign of his approval.

2:20–23. There are echoes here of the imagery used in 2:1–9. In 520 BC there was little in the political scene to cheer the returned exiles. The great powers were entrenched, but the day of their overthrow was imminent. Then the Davidic prince, Zerubbabel, God's chosen servant, would be the Lord's executive, like the signet ring which was used to seal royal documents (cf. Je. 22:24), and would perform all his will.

According to Haggai, there is a strict correlation between commitment to God's cause and the enjoyment of his good gifts. There are priorities too. When these are observed and God has pride of place, he will see that the needs of his work and of his people are met. For the fulfilment of the promise to Zerubbabel, see Mt. 1:12; Lk. 3:27.

BIBLIOGRAPHY. J. G. Baldwin, *Haggai, Zechariah, Malachi, TOTC*, 1972; R. L. Smith, *Micah-Malachi, WBC*, 1984; P. A. Verhoef, *The Books of Haggai and Malachi, NIC*, 1987. J. G. B.

HAGRITES. A prosperous tribe or confederation living E of Gilead which was attacked by Israelites in the time of Saul (1 Ch. 5:10, 18–22); in Ps. 83:6–8 they are listed among the enemies of Israel. They are mentioned in association with Aramaean tribes in an inscription of Tiglath-pileser III and the name also occurs in inscriptions in Nabataean, Sabaeen, etc. They are probably the *Agraioi* mentioned by Strabo, Ptolemy and Pliny. The resemblance to the name Hagar has inclined some to consider them as her descendants (Ishmaelites), but this is improbable. R. P. G.

HAIR. The normal Israelite custom, for both sexes, seems to have been to let the hair grow to considerable length. Absalom's luxuriant growth is recorded with apparent admiration (2 Sa. 14:26). It was only the weight of it that forced him to have it cut annually. Barbers are mentioned (Ezk. 5:1), but their function was to trim rather than to crop the hair. But by the NT period long hair was a 'shame' to a man (1 Cor. 11:14), although Paul made that statement to a church in Greece. Women, on the other hand, wore the hair long and practically uncut in both periods. The Talmud does mention women's hairdressers, but the root of the word (*m'gadd'la*) is 'to plait' rather than 'to cut'. Baldness was disliked, perhaps because of its possible connection with leprosy (cf. Lv. 13), and evidently

the youths' reference to Elisha's baldness was a studied insult. In Egypt the head and face were shaved, however, and Joseph had to comply with the local customs (Gn. 41:14). Dark hair was admired in both sexes; but grey hair was very honourable, and revered accordingly (*AGE, OLD AGE). Indeed, we find God himself portrayed as having grey (or white) hair (Dn. 7:9; cf. Rev. 1:14). But Herod the Great apparently preferred a youthful appearance, for he dyed his hair when it began to go grey.

The hair was treated in various ways. Samson had seven plaits, and women frequently braided or plaited their hair. Soldiers proceeding to battle let it hang loose, but to leave it unkempt was a sign of mourning; tearing it betokened fear and distress. The trimming of it had to be done in special ways; the forelock must never be cut (Lv. 19:27), since this was a feature of some idolatrous cults (cf. Dt. 14:1). To this day orthodox Jews observe this custom; small boys can be seen with the whole head cropped close, except for the ringlets hanging at the ears. The priests were given instructions about their hair by Ezekiel (44:20). The Nazirite had to leave his hair untrimmed so long as his vow lasted, and then shave it completely. This shaving signified purification (Lv. 14:8). Another special case was that of Samson, the secret of whose strength was his untrimmed hair.

It was a sign of hospitality to anoint a guest's head (Lk. 7:46). The hair was frequently anointed on festive occasions (cf. Ps. 45:7). Swearing by the hair (or head) was a custom which Jesus could not commend (Mt. 5:36).

In metaphor and simile the hair was used to denote multitude, insignificance and fineness (Ps. 40:12; Mt. 10:29f.; Jdg. 20:16).

BIBLIOGRAPHY. L. Köhler, *Hebrew Man*, E. T. 1956, pp. 26ff. D.F.P.

HALAH. A place in Assyria to which Israelites were deported from Samaria (2 Ki. 17:6; 18:11; 1 Ch. 5:26; cf. Ob. 20, rsv 'exiles in Halah' by small emendation). There is no doubt this was Assy. Halahhu, a town and district NE of Nineveh, giving its name to one of the gates of that city. Other proposed locations are far less likely. A.R.M.

HALAK (Heb. *hālāq*, 'smooth, bald'). A mountain (lit. 'the bald mountain') in Judaea which marked the S limit of Joshua's conquests (Jos. 11:17; 12:7). Its locality is described as 'going up to Seir'. Probably the modern Jebel Hālāq, W of the Ascent of Akrabbim. J.G.G.N.

HALLELUJAH. This is a transliteration of the Heb. liturgical call *half-lū-yāh* = 'praise ye Yah', the shortened form of Yahweh (see *GOD, NAMES OF), which occurs 24 times in the Psalter. Though it is merely one variant of several calls to praise, the fact that with one exception (Ps. 135:3) it is always found at the beginning or end of psalms, and these all anonymous and so presumably among the later ones, suggests that it had become a standardized call to praise in the post-exilic Temple worship.

The psalms where it is found fall into groups: (1) Pss. 104–105 (at the end), 106 (at the beginning and end, the latter being part of the doxology to the

Fourth Book of Psalter). (2) Pss. 111–113 (at the beginning), 115–117 (at the end), LXX is almost certainly correct in placing the repetition at the end of Ps. 113 at the beginning of Ps. 114, thus completing the series. (3) Ps. 135, at the beginning and end, but LXX correctly places the latter at the beginning of Ps. 136. (4) Pss. 146–150, at the beginning and end of each.

From the NT ('Alleluia', Rev. 19:1, 3–4, 6) the call has been taken over into Christian worship. Most of the Hallelujah psalms play a special role in synagogue worship. Pss. 113–118, the Egypt. Hallel, are sung at the feasts of *Passover, *Pentecost, *Tabernacles and *Dedication, at the first Pss. 113–114 being sung before the meal, Pss. 115–118 after the third cup (cf. Mk. 14:26). Pss. 135–136 are sung on the sabbath, and the Great Hallel (Pss. 146–150), with Ps. 145, at all morning services.

H.L.E.

HAM. I. (Heb. *hām*, LXX *cham*; etymology uncertain). One of the sons of Noah, probably the second (Gn. 5:32; 6:10; 7:13; 9:18; 1 Ch. 1:4, 8; though cf. Gn. 9:20–24), and ancestor of many descendants (*NATIONS, TABLE OF). In 1 Ch. 4:40 and Pss. 78:51; 105:23, 27; 106:22 the name is used to indicate one section of his descent: Egypt (*MIZRAIM). From its biblical usage the term 'Hamitic' is applied by modern authors to a group of languages of which Egyptian is one, and for precision it is limited to this linguistic sense, a Hamitic 'race' not being recognized by modern anthropological classifications. In the biblical sense, however, genetic descent is all that is implied, and with the movement and intermarriage of peoples and the changes of language which took place in ancient times common descent from Ham would not necessarily imply common habitat, language, or even race in a recognizable form. At the end of the Flood when Noah was drunk Ham saw him naked and informed his two brothers, who covered up their father. In consequence of this, Noah put a curse upon Canaan (Gn. 9:20–27). Many explanations of this apparent cursing of Canaan for what Ham had done have been put forward, perhaps the most plausible being that Canaan did something not recorded which was worthy of cursing and that the phrase 'his younger son' (*b'no haqqāṭān*, lit. 'his son/grandson, the little [one]') in v. 24 might refer to Canaan. This would be consistent with the twice-repeated statement (vv. 18, 22) that Ham was the father of Canaan.

2. *Hām*. The name of a city whose inhabitants, the Zuzim, were smitten by Chedorlaomer in the time of Abraham (Gn. 14:5). The site, though probably somewhere in Transjordan, is unknown. LXX (*hama autois*) interprets the Heb. *b'hām* 'in Ham' as *bāhem*, 'with them'. T.C.M.

HAMAN. The villain of the book of *Esther, who plots to massacre the Jews when his vanity is hurt by Mordecai's refusal to bow to him. He is eventually hanged on the gallows that he has prepared for Mordecai. He is called an *Agagite. His name may be derived from the Elamite god, Hum(b)an.

J.S.W.

HAMATH (Heb. *h'mat*, 'fortress, citadel'). City on the E bank of the Orontes, lying on one of the

'Hamath' (hmt) inscribed in Aramaic letters on an ivory label, probably captured by Sargon II and taken to Nimrud (Calah). 9.2 cm × 6.5 cm. 8th cent. BC.

main trade-routes to the S from Asia Minor. Gn. 10:18 describes it as Canaanite. In David's time, under King Toi (or Tou), it was friendly towards Israel (2 Sa. 8:9–10; 1 Ch. 18:9–10). Toi's son is named Joram in 2 Sa. 8:10. This is probably not a Yahweh name ('Yah is exalted'), but an abbreviation of Hadoram as given in 1 Ch. 18:10. Connection of a Hamathite rebel called *Ya'u-bidi* by Sargon of Assyria with Yahweh is also unlikely (*cf. ANET*, p. 285; *DOTT*, p. 59). Solomon controlled it (2 Ch. 8:4), and it was conquered by Jeroboam II (c. 780 BC, 2 Ki. 14:28) and Sargon (c. 721 BC, cf. 2 Ki. 18:33f.; Is. 36:18f.; 37:13, 18f.), some of its inhabitants being settled by the Assyrians in *Samaria worshipping their deity *Ashima there (2 Ki. 17:24ff.). Palace buildings of the 9th and 8th centuries BC were excavated by a Danish team, 1931–8 (see E. Fugmann, *Hama, l'Architecture des périodes préhellénistiques*, 1958). Inscriptions in Hittite hieroglyphs, cuneiforms and Aramaic were found. According to the Babylonian Chronicle, it was at Hamath that Nebuchadnezzar overtook the Egyptians fleeing from Carchemish in 605 BC (*cf. D. J. Wiseman, Chronicles of Chaldaean Kings*, 1956, p. 69). The city was known in Greek and Roman times as Epiphaneia; today it is *Hamāh*. The ideal N boundary of Israel reached 'Labo of Hamath', formerly rendered 'the entering in of Hamath', e.g. Nu. 34:8; Jos. 13:5; Am. 6:14, but probably modern Lebweh, NNE of Baalbek, at the watershed of the Beqa' valley, near one source of the Orontes, so at the head of the road N to Hamath, Assyrian Laba'u in the province of Supite (*ЗОВАН). For discussion see R. North, *Mélanges de l'Université S. Joseph* 46, 1970–1, pp. 71–103.

J.G.G.N.
A.R.M.

personal name especially in Upper Mesopotamia. Formerly I was identified with *Amraphel (Gn. 14:1).

Hammurapi (more correct than Hammurabi) as 'Governor of Babylon' was stated as having ten or fifteen kings 'going with him' as had his contemporary Rim-Sin of Larsa, while Ibal-piel of Eshnunna had twenty. The same Mari letter shows that all these were less powerful than the ruler of Yamhad.

Initially Hammurapi devoted himself to gaining control of *Babylonia and of the Euphrates waters. By 1764 BC he had defeated a coalition of Ashur, Eshnunna and Elam and the next year defeated Rim-Sin and by 1761 BC Zimrilim of *Mari. His reign was marked by a distinctive personal style which sought to unify Mesopotamia under a single ruler. He is now adjudged a weak administrator. A selection of his legal judgments (not a 'code' of laws, e.g. omission of homicide laws) survives on a diorite stele found at Susa in AD 1902. In this he reports to the national god Marduk on his role as 'king of justice' towards the end of his reign. The 282 sections of the Laws of Hammurapi (= LH) are roughly arranged to cover cases of theft and miscellaneous decisions (LH 1–25), property (26–49), commercial law (100–126), marriage (127–161), priestesses (178–184), adoption (185–194), assault (195–240), agricultural cases (241–267), rates and wages (268–277) and an appendix on slaves (278–282). Some of the cases and decisions are similar to earlier collections of laws (Ur-Nammu, Lipit-Ishtar, Eshnunna). A few are worded similarly to OT cases, e.g. false witness (LH 1, 3–4; *cf. Ex. 23:1–3; Dt. 19:16–20*), kidnapping (LH 14; *cf. Ex. 21:16*), loss of animals on deposit (LH 266–7; *cf. Ex. 22:10–13*), just as warning to the owner of goring ox (*Ex. 21:35–36*) compares with Eshnunna Law 53. Many of the specific cases concerning marriage, divorce and sexual offences, e.g. the death penalty for both parties in adultery with a married woman (*Dt. 22:22; LH 129*), have a similar approach. In other cases the offences are the same but the penalty differs, the Hebrew being seemingly the more con-

HAMMURAPI. (Akkad. [Amorite] Hammu-rapi, '(the god) Hammu heals'). 1. King of Babylon c. 1792–1750 BC, sixth in line of First Amorite Dynasty. 2. Name of two kings of Yamhad (Aleppo), the first c. 1760 BC. 3. King of Kurda, mid-2nd millennium BC. 4. Common 2nd millennium BC

sistently humane. In most cases the legal treatment differs, but precise comparison with OT is difficult since only the established fact (without supporting evidence) is given, followed by the oral judicial decision. These laws therefore represent a local Babylonian manifestation of the attitude to law and order common throughout much of the ancient Near East.

BIBLIOGRAPHY. C. J. Gadd, *CAH*, 2/1, 1973, pp. 176–227; D. J. Wiseman, *Vox Evangelica* 8, 1973, pp. 5–21; W. F. Leemans, 'Hammurapi's Babylon', *Sumer* 41, 1985, pp. 91–96. D.J.W.

HAMOR. '(He-)ass', see below. The ruler of Shechem in the time of Jacob (Gn. 33:19–34:31), from whose citizens (lit. 'sons', a common Sem. usage, cf. below) Jacob bought a plot of land (Gn. 35 as cited; Jos. 24:32). Both Hamor and his son Shechem fell in Simeon and Levi's slaughter of the Shechemite menfolk and despoliation of the city in revenge for the humiliation of their sister *Dinah. In the period of the judges Hamor's name was still attached to Shechem (Jdg. 9:28). In the NT, in his dramatic speech to the council, Stephen telescopes Abraham's purchase of the Machpelah cave with Jacob's acquisition of the plot at Shechem—a realistic mark of the rapid flow of Stephen's impromptu, lightning exposition of Israel's history, not an error by Luke (Acts 7:16).

Animal personal names such as Hamor, 'ass', were common in biblical lands and times. Cf. Merānum ('pup'), the name of a doctor in the Mari tablets of patriarchal date (Bottéro and Finet, *Archives Royales de Mari*, 15, 1954, p. 152, refs.; compare Mendenhall, *BASOR* 133, 1954, p. 26, n. 3). Egypt also affords many examples.

Killing an ass was sometimes part of covenant-making (Mendenhall, *op. cit.*), but to interpret the phrase 'sons of Hamor' as 'members of a confederacy'—as suggested by Albright, *Archaeology and the Religion of Israel*, 1953, p. 113—is unnecessary. 'Son' of a place or person often means simply a citizen of that place or member of that person's tribal group. Cf. the common phrase 'children (sons) of Israel', 'daughter of Jerusalem', as well as Assyrian usage. K.A.K.

HANANEL. In Ne. 3:1, a *Jerusalem tower, lying between the Sheep and Fish Gates, at the NE corner of the city. It is closely connected with the Tower of the *Hundred, and some scholars would equate the two, or else make them two parts of the same fortress. AV spells the name 'Hananeel'; Heb. is *h'nan'el*, 'God is gracious'.

The Targum of Zc. 14:10 seems to place the tower on the W of the city, by identifying it with the later Hippicus; this cannot be correct.

D.F.P.

HANANIAH (Heb. 'Yahweh has been gracious'). A Heb. name occurring frequently in the OT and, under its Gk. form *Ananias, in later times also.

1. A cult-prophet, son of Azur, whom Jeremiah denounced (Je. 28) for publicly declaring in the Temple that in 2 years' time, in opposition to Jeremiah's prophecy of 70 years (25:12), the booty taken from Jerusalem by Nebuchadrezzar would be restored, the captives returned and the power of Babylon broken. He confirmed his words by the

symbolic action of removing from Jeremiah's neck the yoke worn as a symbol of Jeremiah's policy of submission to Babylon (27:2–3, 12), and breaking it. Jeremiah's denunciation, 'Yahweh has not sent you' (28:15), was shown to be true by the death of Hananiah 2 months later.

2. Father of a prince under Jehoiakim, king of Judah (Je. 36:12). 3. Grandfather of Irijah, the officer of the guard who arrested Jeremiah as a traitor (Je. 37:13). 4. One of Daniel's companions in captivity, renamed Shadrach (Dn. 1:6–7, 11, 19). 5. Son of Zerubbabel (1 Ch. 3:19, 21). 6. A Benjaminite (1 Ch. 8:24). 7. Leader of one of the groups of musicians set up by David for the service of the Temple (1 Ch. 25:4, 23). 8. A captain in Uzziah's army (2 Ch. 26:11). 9. Commandant of the citadel whom Nehemiah put in charge of Jerusalem (Ne. 7:2). 10. Various persons figuring in the lists of Ezra-Nehemiah (Ezr. 10:28; Ne. 3:8, 30; 10:23; 12:12, 41). J.B.Tr.

HAND. In comparison with the Gk. word *cheir* (which is translated only by 'hand', with some composite words such as *cheiropoiētos*, 'made with hands'), the two main Heb. words translated 'hand' in RSV have very wide meanings. *yād* has many variant translations in RSV, and *kaḥ* several, all of which are related to the primary meaning, 'hollow' or 'palm', from a root meaning 'curved' or 'bent'. *kaḥ* is also the name of one of the letters of the Heb. alphabet, probably descriptive of its shape, which is somewhat like a reversed C.

In common with other parts of the body in Heb. thought, the hand is described as having apparently almost autonomous functions (1 Sa. 24:11). But the balancing of the phrases 'my power' and 'the might of my hand' in Dt. 8:17, and other examples of parallelism, indicate that this is far from absolute autonomy, the primary reference being to the action of the whole individual, although, at the same time, attention is specifically focused on the relevant functioning part (cf. Mt. 5:30).

Like the *arm, the hand (especially the right hand) is used as a symbol of might and power. In the case of 'hand', however, the figurative meaning has gone a step further than with 'arm'. See, e.g., Jos. 8:20, where *yād* is translated 'power'. There are several very common phrases in which the hand is used as a symbol of power, e.g. in or out of 'the hand of one's enemies' (Ps. 31:15; Mk. 14:41). Conversely, the dropping of the hands symbolizes weakness or lack of resolution, and to strengthen them is to remedy that (Is. 35:3; Jdg. 9:24). Left-handed persons are specially noted (Jdg. 3:15).

Lifting the hand is symbolic of violence (1 Ki. 11:26) as well as of supplication (Ex. 9:33; 17:11; Ps. 28:2), the *gesture being indicative of the attitude or action. The word *kaḥ*, indicating the open palm, is more frequently used in the latter sense.

Clasping hands (Jb. 17:3; AV, RSV 'give surety') ratified an agreement, as did also the placing of one's hand under another's *thigh (Gn. 24:9) or raising one's hand, as in a law court today (Gn. 14:22 [RSV 'I have sworn', lit. 'I have lifted my hand'] Ex. 17:16).

The touch of a person's hands was held to communicate authority, power or blessing, the right hand being more significant in this respect than the left, but both hands were often used (Gn.

HAND

48:13–14; Dt. 34:9). Notice especially the laying of the hands of the worshipper on the head of his sacrificial beast, where the communication of authority probably signified identity with the offering (Lv. 1:4); and the NT communication of the Holy Spirit or performance of miracles by the laying on of hands (Mk. 6:5; Acts 8:17–19; 19:11). This is but another indication that in Heb. thought, and to a certain extent in the NT as well, there was a close relation between what much Gk. and modern thought would designate separately as 'body' and 'spirit'.

'Absalom's monument' (2 Sa. 18:18) is literally 'Absalom's hand'.

BIBLIOGRAPHY. C. Ryder Smith, *The Bible Doctrine of Man*, 1951; D. P. Wright, 'The Gesture of Hand Placement in the Hebrew Bible and in Hittite Literature', *JAOS* 106, pp. 433–436. B.O.B.

HANDKERCHIEF (Gk. *soudarion*, in Acts 19:12, rendered as 'napkin' in Lk. 19:20; Jn. 11:44; 20:7). It transliterates Lat. *sudarium* defined etymologically (*sudor*, 'sweat') as a cloth for wiping perspiration. Catullus, however, uses the word for 'table-napkin' (12. 14), and Nero (Suetonius, *Nero* 25) undoubtedly used *sudarium* with the meaning of 'handkerchief'. E.M.B.

HANES. Is often identified with Egyp. *H(wt-*nni*)-*nsw**, Gk. –Lat. Heracleopolis magna, modern Iḥnās̄yeh el-Medīneh or Ahnās̄, about 80 km upstream (i.e. S) of Cairo, and an important city in Middle Egypt. However, this does not really suit Is. 30:4, in the two parallel clauses: 'His officials are at Zoan, and his envoys reach Hanes.' * Zoan is Tanis in the NE Delta, the seat of the 22nd–23rd Dynasty pharaohs, and Lower Egypt advanced headquarters of the Ethiopian 25th Dynasty, for Asiatic affairs. Hence the parallelism of the verse seems to demand that Hanes be closely linked with E Delta Tanis, not Upper Egypt Heracleopolis, far distant and irrelevant.

Two solutions are possible. W. Spiegelberg, *Aegyptologische Randglossen zum Alten Testament*, 1904, pp. 36–38, postulated a 'Heracleopolis parva' in the E Delta, arguing from Herodotus' mention of a province and city of Anysis there (2. 166, 137); this would then be Egyp. *H(wt-*nni*)-*nsw** of Lower Egypt, Heb. *Hanes*, and Assy. *Hininsi*. Cf. Caminos, *JEA* 50, 1964, p. 94. Or Hanes may merely be a Heb. transcription of an Egyp. *h(wt)-*nsw**, 'mansion of the king', as the name of the pharaoh's palace in Zoan/Tanis itself. Either interpretation is plausible; neither is proven. Some refer the 'his' (princes, envoys) of Is. 30:4 to the Judaeen king; but the natural antecedent is pharaoh in v. 3. Hence, with É. Naville, *Ahnas el Medīneh*, 1894, p. 3, these are pharaoh's officials at Zoan and his envoys who come to treat with the Jewish emissaries, either at Hanes as an advance-post for Zoan (Naville, Spiegelberg), or summoned to the 'Ha-nesu', the king's palace, in Zoan itself. K.A.K.

HANNAH (Heb. *hannā*, 'grace'). The favourite of the two wives of Elkanah, an Ephraimite who lived at Ramathaim-zophim (1 Sa. 1). The other wife, Peninnah, tormented her because she had no family. She vowed that if she bore a son she would

devote him to God as a *Nazirite. This she did, and named him *Samuel. Her song of thanksgiving (1 Sa. 2:1–10) suggests that she was a prophetess. It contains the first mention of the king as Yahweh's Messiah ('his anointed'). There are many echoes of it in Mary's song when Christ's birth was announced (Lk. 1:46–55; *MAGNIFICAT). She brought Samuel a robe every year when she came to Shiloh to worship. She later became the mother of three sons and two daughters (1 Sa. 2:19, 21). J.W.M.

HARA. With *Halah, *Habor and *Gozan, a place to which Tiglath-pileser III removed rebellious Israelites in 734–732 bc (1 Ch. 5:26). An Assyrian site of this name is not known. 2 Ki. 17:6; 18:11, however, interpret *hārā* as 'cities of the Medes' and LXX 'mountains' may represent Heb. *hārē*, 'hill-country'. D.J.W.

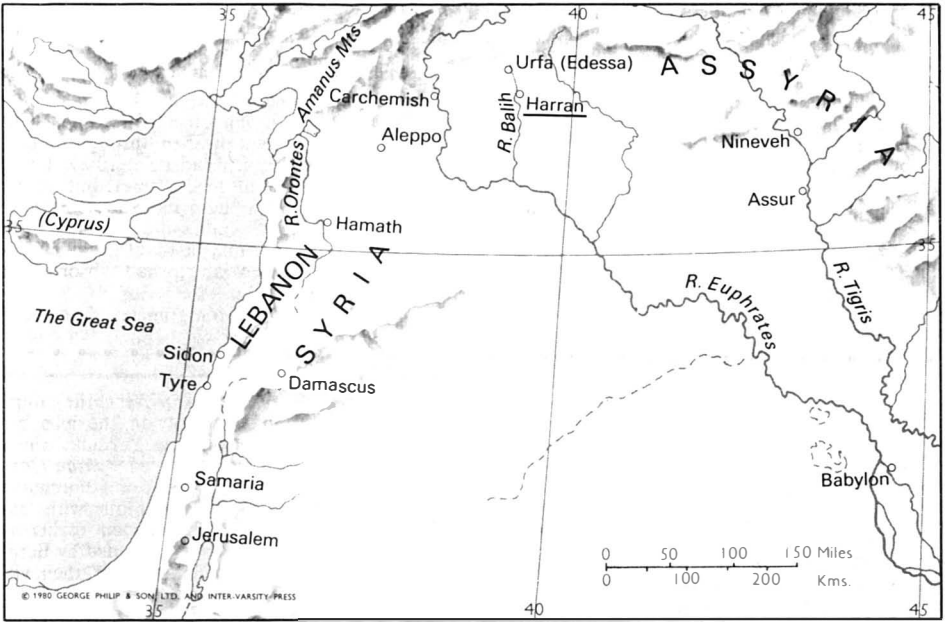

HARAN (Heb. *har(r)an*; Akkad. *harrānu*, 'cross-roads'; Gk. *charrhan*, Acts 7:4). 1. The city c. 32 km SE of Urfa (Edessa), Turkey, on the river Balīḥ, lies on the main route from Nineveh to Aleppo. Terah lived there with Abram (Gn. 11:31; cf. Acts 7:2, 4) before the latter migrated to Canaan (Gn. 12:1). It was the home of Isaac's bride *Rebekah. Jacob fled there to escape Esau (Gn. 29:4), married Leah and Rachel, daughters of Laban, and all his children (except Benjamin) were born there (Gn. 29:32–30:24).

Harran is referred to in texts from the Ur III period c. 2000 bc as a temple (*é.lul.hul*) for the worship of *Sin the moon-god, and its occupation is confirmed by archaeological evidence. Its strategic position made it a focus for Amorite tribes according to *Mari texts of the 2nd millennium bc, and later an Assyrian centre fortified by Adad-nirari I (c. 1310 bc) with a temple embellished by Tiglath-pileser I (c. 1115 bc). Harran rebelled and was sacked in 763 bc, an event used by Sennacherib's officials to intimidate Jerusalem (2 Ki. 19:12 = Is. 37:12). The city was restored by Sargon II, and the temple repaired and refurbished by Esarhaddon (675 bc) and by Ashurbanipal. After the fall of Nineveh (612 bc) Harran became the last capital of Assyria until its capture by the Babylonians in 609 bc. The Chaldean Dynasty's interest in the Babylonian temples led to the restoration of the Sin temples at Harran and at Ur. At the former the mother of Nabonidus (who lived to 104), and at the latter his daughter, were made the high priestesses. It was a thriving commercial city in contact with Tyre (Ezk. 27:23).

The site, excavated 1951–3, 1959, indicates clearly an occupation before the Assyrian period. The existing ruins are mainly from the Roman city near which the Parthians slew Crassus (53 bc) and from the later occupation by Sabaeen and Islamic rulers in Harran, then called Carrae. In AV of Acts 7:4 the city is named Charran.

2. Haran is also a personal name. (a) The son of Terah, brother of Abraham and Terah, father of Lot, Milcah and Iseah, who died at *Ur (Gn. 11:26–31); (b) A man of Judah, son of Caleb and his concubine Ephah (1 Ch. 2:46); (c) A Levite; son of Shimei, of Gershon (1 Ch. 23:9).

BIBLIOGRAPHY. S. Lloyd and W. Brice, *AS* 1, 1951, pp. 77–112; D. S. Rice, *AS* 2, 1952, pp. 36–84;

Harran ('Crossroads' or 'Highways') lies at a strategic point between Mesopotamia and the West.

C. J. Gadd, *AS* 8, 1958, pp. 35–92; K. Prag, *Levant* 2, 1970, pp. 63–94.

D.J.W.

HARARITE. A designation applied to some of David's heroes: Shammah (*šammā*) son of Agee, who was possibly the same as Shammah (*Šammā*) (2 Sa. 23:11, 33); Jonathan son of Shage (1 Ch. 11:34); and Ahiam son of Sacar (1 Ch. 11:35). The name is unknown outside the Bible, and may be that of a tribe or city, or may simply mean 'mountain dweller' from *har*, 'mountain, hill'. T.C.M.

HARMON. A place (RSV, Am. 4:3) otherwise not mentioned in OT (AV interprets as 'the palace', from vss. LXX has 'the mountains of Rimmon', possibly the hill of *Rimmon (Jdg. 20:45, 47). Various emendations, 'naked' (*'armōt*), 'devoted to destruction', have been suggested. More plausible is the suggestion, on the basis of Ugaritic *hrmn*, that this may be Harmel (S of *Kadesh on the Orontes).

BIBLIOGRAPHY. *BASOR* 198, 1970, p. 41.

D.J.W.

HAROD (Heb. *h'rōd*, 'trembling'). A copious and beautiful spring at the foot of Mt Gilboa, E of Jezreel, which flows E into the Beth-shean valley. Here Gideon, confronting the Midianite hordes, reduced his army in two stages from 32,000 to 300 (Jdg. 7:1–8). Probably Saul and his army camped here prior to the fatal battle on Mt Gilboa (1 Sa. 29:1; cf. 31:1). Two of David's 'mighty men', Shammah and Elika (2 Sa. 23:25; 1 Ch. 11:27), came from Harod, possibly to be identified with the modern 'Ain Jalud. A.E.C.

HAROSHETH. Always occurs as 'Harosheth of the Nations' (*h'rōšet hagōyim*). It is found

only in connection with *Sisera, a Canaanite commander who fought against Barak, and whose base it was (Jdg. 4:2, 13, 16). The battle is located in NW Palestine near the river Kishon. Mazar has suggested that a region rather than a city is implied, but v.16 would strongly suggest the latter (cf. Targum). Tell 'Amr NW of Megiddo and Tell el-Harbaj SE of Haifa have been suggested as possible sites, but of these the former appears to be disqualified by soundings indicating an absence of habitation before the 10th century BC. The city is not mentioned in extra-biblical documents, and the exact location remains uncertain.

BIBLIOGRAPHY. *LOB*, pp. 201, 203; B. Mazar, *HUCA* 24, 1952–3; pp. 80ff.; *GTT*, p. 288. w.o.

HARROW. A toothed implement dragged along the ground to break clods of earth after ploughing. The verb (Heb. *šādād*) always occurs parallel to verbs of ploughing or breaking the soil (Jb. 39:10; Is. 28:24; Hos. 10:11, AV 'break'). The actual form of the implement used is uncertain; it was drawn by a led ox (Jb. 39:10), but there is no known representation of anything corresponding to a modern harrow in form. Heb. *hāris* (2 Sa. 12:31) denotes a sharp or pointed implement, RSV 'picks' rather than AV 'harrows'. A.R.M.

HASIDAEANS. This is a transliteration of *Hasid-aioi* in 1 Macc. 2:42; 7:13; 2 Macc. 14:6, though 'Hasmonaeans' may be the correct reading in the last case. RVmg. and modern literature prefer the underlying Heb. *h'sidim*. This term, meaning fundamentally 'loyal ones', is used frequently in the Psalms (usually 'saints' in EVV). It seems to have been adopted by the zealots for the law, when Hellenistic ideas came flooding in early in the 2nd century BC.

Their leader seems to have been the high priest

HASIDAEANS

Onias III, deposed by Antiochus Epiphanes. They would have avoided armed struggle against the Syrians by withdrawing into the wilderness, but the implacable hostility of the Hellenizers drove them to support the Maccabees. As soon as they were granted a legitimate high priest they were prepared to return to normal life, but their leaders were murdered by Bacchides (1 Macc. 7:12–18). They had little sympathy with the nationalistic aims of the Hasmonaeans. Probably already under Simon, their party split in two. The majority, now known as *Pharisees, tried to win the people to their views. The minority, represented by the Essenes and Qumran Covenanters, despaired of all but divine eschatological intervention and withdrew to a greater or lesser degree from public life.

HATRED, HATE.

I. In the Old Testament

Hatred between brothers (Gn. 27:41; 37:4f., 8; 2 Sa. 13:22) or fellow-Israelites (Ps. 55:12f.; Pr. 14:20) is condemned (Lv. 19:17). Dt. 4:42; 19:4, 6, 11, and Jos. 20:5 distinguish between accidental and malicious manslaughter. Sexual love (2 Sa. 13:15; Dt. 22:13–16; 24:3; cf. Jdg. 14:16; see III, below) may turn to hatred. Personal enmity is sometimes tempered with mercy (Ex. 23:5; Jb. 31:29), but the enemies of Israel (2 Sa. 22:41; Ps. 129:5; Ezk. 23:28) or of the godly (Ps. 34:21; Pr. 29:10) are God's enemies too (Nu. 10:35; cf. Ex. 20:5; Dt. 5:9; 7:10). God hates both evil (Pr. 6:16; Am. 6:8) and evildoers (Dt. 32:41): so therefore do the righteous (Ps. 101:3; 139:21f.; 119:104, 113). God hates idolatry (Dt. 12:31; 16:22), injustice (Is. 61:8), worship that is inconsistent with conduct (Is. 1:14), and even sinful Israel herself (Ho. 9:15; cf. Je. 12:8).

II. In the New Testament

The Father (Jn. 15:24), Jesus (Jn. 7:7; 15:18, 24f.), and all Christians (Mk. 13:13; Lk. 6:22; Jn. 15:18–20; 17:14; 1 Jn. 3:13) are hated by the world; but believers must not hate either fellow-Christians (1 Jn. 4:20) or enemies (Mt. 5:43f.). Hatred of evil (Heb. 1:9 = Ps. 45:7; Rev. 2:6; cf. Mk. 3:5), though not of persons, is attributed to Christ. (*WRATH.)

III. Contrasted with love

'Hate' as opposed to 'love' in Gn. 29:31, 33 (cf. 30, 'loved . . . more'); Dt. 21:15–17; Mt. 6:24 = Lk. 16:13, implies the choice or preference of another rather than active hatred of what is not chosen or preferred. Cf. Mal. 1:2f. = Rom. 9:13 of God's election of Israel; Lk. 14:26 (cf. Mt. 10:37, 'loves . . . more'); Jn. 12:25 of the overriding claims of discipleship.

BIBLIOGRAPHY. J. Denney, *ExpT* 21, 1909–10, pp. 41f.; W. Foerster, *TDNT* 2, pp. 811–816; O. Michel, *TDNT* 4, pp. 683–694; H. Bietenhard, H. Seebass, *NIDNTT* 1, pp. 553–557. P.E.

HAVILAH (Heb. *h^wwilā*, 'circle', 'district'). I. A land (*'eres*) in the neighbourhood of *Eden, through which meandered (*sābab*) the river Pishon, and in which was found gold, *bdellium and *shoham*-stone (Gn. 2:11–12). The location of the place is unknown.

2. An area mentioned in the phrase 'from Havilah to Shur'; inhabited by the Ishmaelites (Gn. 25:18) and Amalekites (1 Sa. 15:7). It probably lay therefore in the area of Sinai and NW Arabia.

3. A name that occurs twice in Gn. 10: as a descendant of Ham through Cush (Gn. 10:7; 1 Ch. 1:9) and as a descendant of Shem through Joktan, Eber, Shelah and Arpachshad (Gn. 10:29; 1 Ch. 1:23). These may be entirely distinct, but as the names associated with them indicate a possible area of settlement in S Arabia and across the Bab el-Mandeb in Africa, it may be that the name indicates one strong tribe which had absorbed a weaker group.

BIBLIOGRAPHY. J. A. Montgomery, *Arabia and the Bible*, 1934, p. 39. T.C.M.

HAVVOTH-JAIR (Heb. *hawwōt jā'ir*), 'the camps (tent-villages) of Jair', probably in the hills between Mt Gilead proper and the Yarmuk, which were dotted with settlements called *'yārim* (Jdg. 10:4); a unique plural of *'ir*, 'town', or a diminutive (so Rashi, *Commentary*) homonymous with 'ass colts'. The area may have been known earlier as Havvoth Ham; so Nu.32:41 (as emended by Bergman, *JPOS* 16, 1936, pp. 235ff.), since 'their villages' (*hawwōtēhem*) has no plural antecedent; cf. Gn. 14:5. It was associated with the Argob, N of the Yarmuk, as part of Bashan, of which Og was the last king. Jair was credited with the conquest of the whole region (Dt. 3:14; 1 Ch. 2:23f.), including the Argob, to which the 'sixty cities' of Jos. 13:30; 1 Ch. 2:23 refer; cf. 1 Ki. 4:13. J.P.U.L.

HAZAEEL (Heb. *h^wzā'ēl*, *h^wzāh'ēl*, 'El sees' or 'whom God beholds'). A powerful king of Syria (Aram), God's scourge to Israel during the reigns of Jehoram, Jehu and Jehoahaz. Elijah was commissioned to anoint him as one of the three ordained to complete the extirpation of Baal-worship that he had begun (1 Ki. 19:15–17). Later, Hazael, as the emissary of Ben-hadad II to Elisha, learnt that he was to be king and would become an oppressor of Israel, a prophecy speedily put into effect by his murder of Ben-hadad and assumption of the throne (2 Ki. 8:7–15). He fought against Jehoram at Ramoth-gilead (2 Ki. 8:28–29; 9:14–15), and frequently defeated Jehu, devastating the country E of Jordan as far S as the Arnon valley (2 Ki. 10:32–33). He continued his attacks in the reign of Jehoahaz, and Israel was preserved from complete destruction only by God's mercy (2 Ki. 13:3, 22f.). 2 Ki. 12:17–18 reveals a Syrian incursion into SW Palestine, probably with the aim of securing the trade-routes. Gath was taken, and Jerusalem threatened, and Hazael was bought off only with a tribute from the Temple treasures. Syria's ascendancy was checked only after Hazael's death, when his son, Ben-hadad III, was thrice defeated by Jehoash of Israel (2 Ki. 13:24–25). As one of the chief Syrian oppressors of Israel, the memory of Hazael's might lingered, so that half a century later Amos recalled his name as symbolizing the height of Syria's power which would yet feel the fire of God's judgment (Am. 1:4).

Hazael's name also occurs in Assyrian cuneiform inscriptions as an opponent of Shalmaneser III from 841 BC onwards. The wording of one text shows that the Assyrians not only knew Hazael to be a usurper ('son of a nobody', *ANET*, p. 280,

Ivory plaque inscribed '... son of Amma, for our lord Hazael, in the year of ...'. Perhaps part of a tribute brought to Hazael, king of Damascus. From Arslan Tash, Syria. 9th century BC.

text (c), 14-2:1) but that they also knew that his predecessor was the victim of foul play (Weidner, *Afo* 13, 1940, pp. 233f.).

Hazael must have attained his throne before 841 BC, as his and the Israelite Joram's forces fought in 842 at Ramoth-gilead; 843 BC, as suggested by Unger (*Israel and the Arameans of Damascus*, 1957, p. 75), is an early enough date. Shalmaneser III and Hazael fought again in 837 BC. Thereafter for 30 years no further collision of the two kingdoms is known, until Adad-nirari III in c. 805-802 BC cowed the now ageing Hazael into submission (*ANET*, pp. 281-282; *DOTT*, pp. 51-52), referring to him as *Marī*, Aramaic for 'lord'. In Syria the earlier redoubtable Hazael had evidently become known as 'the lord' *par excellence*, and this current epithet was simply taken over by the Assyrian annalists. Hazael 'oppressed Israel all the days of Jehoahaz' (2 Ki. 13:22), who reigned c. 814/813-798 BC, and hence, at least briefly, outlived him, surviving to perhaps c. 797 or 796 BC.

Assyrian spoils from Hazael's Damascus included ivory-work, two pieces inscribed *l-mr'n Hz'z*, 'belonging to our lord Hazael', and another bearing the figure of a prince, just possibly a representation of Hazael himself.

K.A.K.

HAZARMAVETH (*h'sarmāwet*). The third son of *Joktan (Gn. 10:26; 1 Ch. 1:20), probably to be identified with the kingdom of Ḥaḍramaut in S *Arabia, written *hḍrmt* and later *hḍrmwt* in the native inscriptions. The latter form corresponds closely to the unvocalized Heb. *ḥšrmwt*, Heb. *ṣ* often corresponding to S Semitic *d*.

BIBLIOGRAPHY. G. Ryckmans, *Les Noms propres sud-sémitiques*, 1, 1934, p. 338; G. Brockelmann, *Grundriss der vergleichenden Grammatik der semitischen Sprachen*, 1, 1908, § 46. T.C.M.

HAZEROTH. A stopping-place on the desert journey of the Israelites (Nu. 11:35; 33:17-18), where Miriam became a leper (Nu. 12:1-16; cf. Dt. 1:1). Generally identified with 'Ayn Khodara, an oasis with a well on the way from Sinai to Aqabah. (*ENCAMPMENT BY THE SEA.) C.D.W.

HAZOR (Heb. *hāsōr*). A place-name, probably meaning 'settlement' or 'village', and therefore used of several places in the OT, of which the most

important was a fortified city in the territory of Naphtali (Jos. 19:36).

I. In the Old Testament

This city lay in N Palestine, and at the conquest it was the royal seat of Jabin (called 'king of Hazor', *melek-hāsōr*, Jos. 11:1), who organized a coalition against Joshua. The Israelites defeated this, however, Jabin was killed, and Hazor was destroyed and burnt (Jos. 11:1-13; 12:19). Hazor was the only city thus burnt, perhaps because of its former importance (Jos. 11:10), but in spite of this destruction a later king of the same name, who this time was styled 'king of Canaan' (*melek-k'nā'an*, Jdg. 4:2, 24) threatened Israel in the time of Deborah. Though his general, Sisera, had 900 *chariots at his disposal, the Israelites under Barak were able to defeat him, and crush Jabin (Jdg. 4; 1 Sa. 12:9). Some two centuries later Hazor was fortified, together with Jerusalem, Megiddo and Gezer, by Solomon when he was organizing his kingdom (1 Ki. 9:15), but in the 8th century, in the time of Pekah of Israel, Tiglath-pileser III of Assyria came and destroyed the city and carried off its remaining inhabitants to Assyria (2 Ki. 15:29).

II. Excavation

The site of Hazor was identified in 1875 by J. L. Porter with the abandoned mound of Tell el-Qedah some 8 km SW of Lake Huleh in Galilee. J. Garstang made some trial soundings in 1928, but the first major excavations were carried out from 1955 to 1958 and 1968 to 1969 by an Israeli expedition under Yigael Yadin. The site lies on a NE facing slope, and consists of the city tell of some 100,000 sq.m extent at the S end, and adjoining this to the N a much larger area of about 0.6 sq.km with an earthen rampart on the W or uphill side. The main tell was founded in the 3rd millennium, and the lower city added to it in the early part of the 2nd millennium, probably by the Hyksos. Though Garstang assumed this lower city to be a camping enclosure for horses and chariots, excavation revealed that the whole of this area had been occupied by a built city, which at its height must, with the tell proper, have accommodated up to 40,000 souls. A further indication of the importance of the city at this time is given by the discovery of a pottery jug with an Akkadian inscription (the earliest known in Palestine) scratched on it. Though crudely done, the inscription has been read as *Iš-me-ilam*, an Akkadian personal name, perhaps that of a Mesopotamian merchant. This lower city was occupied for only about five centuries, having been destroyed in the 13th century (Level 13). This destruction is attributed by the excavators to Joshua. Among the remains in this destroyed city were found a Canaanite temple and a small shrine. While the lower city lay barren, the tell was reoccupied by the Canaanites, and then by the Israelites. A city gate and casemate wall from the time of Solomon, almost exactly matching those found at *Megiddo and *Gezer (cf. 1 Ki. 9:15), were uncovered. Evidence from the later Israelite period included a pillared public building of the time of Ahab (taken by Garstang to be stables), and a fortress containing a thick layer of ash, in which was a fragment of a wine jar bearing the name Pekah (*pqh*), and other signs of violent destruction, probably due to Tiglath-pileser III, who took the city in 732 BC (2 Ki. 15:29).

III. In extra-biblical texts

Hazor is first mentioned in the Egypt. Execration Texts of the 19th century BC, as a Canaanite city likely to be a danger to the empire. It figures (*ḥa-ṣu-ra*) in the Mari archives of the first quarter of the 2nd millennium, and in a slightly later Bab. text, as an important political centre on the route from Mesopotamia, perhaps to Egypt. In one tablet the ruler is spoken of as a 'king' (*šarrum*), a title not usually applied to city rulers (*cf.* Jos. 11:1), and his importance is further indicated by the mention of ambassadors from Babylon travelling to see him. One king's name is given as Ibni-Adad, an Akkadian form suggesting Bab. influence, but there was also contact with the N and W, as is manifested in gifts from the king to Ugarit and Crete (*Kaptara*). Hazor is mentioned in the lists of their dominions made by the Egypt. kings Tutmosis III, Amenhotep II and Seti I in the 15th and 14th centuries BC. The city is later mentioned in the Amarna letters, of the 14th century, the ruler still being spoken of as a king (*Šar ḥa-zu-ra*). Finally, from the next century, the city is mentioned in an Egypt. papyrus (Anastasi I) in a military context. Thus the texts and excavations amply bear out the biblical testimony to the importance of the site.

IV. Other places of the same name

1. A place in the S of Judah (Jos. 15:23) whose site is unknown. 2. (*ḥāšōr ḥ'dattā*) 'New Hazor' (Jos. 15:25), a place in S Judah whose site is unknown. 3. Another name for Kerioth-hezron (Jos. 15:25) in S Judah, site unknown, perhaps the same as 2. 4. A place in Benjamin (Ne. 11:33) probably modern Khirbet Hazzur. 5. An area occupied by semi-nomadic Arabs, mentioned by Jeremiah (49:28, 30, 33).

BIBLIOGRAPHY. Y. Yadin *et al.*, *Hazor I*, 1958, *Hazor II*, 1960, *Hazor III-IV*, 1961, 1989; Y. Yadin, *Hazor* (Schweich Lectures, 1970), 1972; see also A. Malamat, *JBL* 79, 1960, pp. 12-19; *NEAEHL*, pp. 594-606. T.C.M.

HEAD. The head (Heb. *rōš*; Gk. *kephālē*) is not regarded as the seat of the intellect, but as the source of life (Mt. 14:8, 11; Jn. 19:30). Thus to lift up the head is to grant life in the sense of success (Jdg. 8:28; Ps. 27:6; Gn. 40:13, but *cf.* the pun in v. 19), or to expect it in God himself (Ps. 24:7, 9; Lk. 21:28). To cover the head by the hand or with dust and ashes is to mourn the loss of life (2 Sa. 13:19; La. 2:10). Figuratively, headship denotes superiority of rank and authority over another (Jdg. 11:11; 2 Sa. 22:44); though when Christ is spoken of as head of his body the church (Eph. 5:23; Col. 2:19), of every man (1 Cor. 11:3), of the entire universe (*hyper panta*, Eph. 1:22), and of every cosmic power (Col. 2:10), and when man is spoken of as the head of the woman (1 Cor. 11:3; Eph. 5:23; *cf.* Gn. 2:21f.), the basic meaning of head as the source of all life and energy is predominant.

The church is Christ's body and he is her head (Eph. 4:15f.): the two cannot be severed. In this unity of head and body, Christ the head directs the growth of the body to himself: he is not merely the source of being of the body (1 Cor. 10:16f.) but also the consummation of its life (Eph. 4:15f.); *cf.* *CORNERSTONE. Hence to give allegiance to any other spiritual mediator, as was being done at Colossae, cuts the vital link between the limbs and

Christ the head who is the source of all their being (Col. 2:18f.).

HEALTH, DISEASE AND HEALING.

I. Introduction

The biblical descriptions of health, disease, healing and death are limited by:

a. *The purpose of Scripture*, which is theological rather than medical. Only those details which are relevant to the over-all purpose, revealing God to man, are included. Thus, for example, it is sufficient to record that a boy was 'paralysed' and 'in terrible distress' (Mt. 8:6). The object was to indicate the severity of the illness and the gravity of the prognosis against which to contrast the greatness of the cure and the divine power of Christ. This illness may have been an example of poliomyelitis with respiratory paralysis. Like most of the diseases of the Bible it was unnecessary to say so even if that had been known. There is no evidence to suggest exactly what caused that boy's illness in medical terms (the proximal cause), although some instances of disease in OT and NT do have a spiritual explanation given (the ultimate cause), e.g. Lk. 13:11-16.

b. *Contemporary medical knowledge*. Descriptions of disease were simple and were mostly confined to what could be seen (e.g. ulcer, swelling, haemorrhage) and/or felt by an observer (fever) or by the patient himself (dysentery, paralysis).

c. *Contemporary public knowledge* was even more restricted. Even if the medical knowledge of the day had been advanced, it would not have been understood by the readers.

d. *Patterns of disease* are constantly changing. This is particularly true of diseases of micro-biological origin. 'Plague' refers to any epidemic disease and is not the equivalent of the modern infection with *Yersinia pestis*. Others may be unchanged for centuries, e.g. blindness from trachoma is still very common in the Middle East and was probably even more common in biblical times. In addition, the terms used to describe disease have also been greatly altered, even in the last few hundred years. No longer do doctors report that their patients suffer from the botch, the blain or the emerods, mentioned in the AV.

None the less, the biblical accounts of disease are based on observed facts. Sincere and honest men, mostly with no medical knowledge, wrote of what they saw as they understood best. The facts that they describe, therefore, can and should be treated as facts. Moreover, the standard of medical treatment (such as it was) and public hygiene (see VII, below) were superior to those of contemporary adjacent cultures.

II. Medical terms

a. *Some general (non-medical) terms used to describe disease, healing and health*

(i) OT. Heb. *ḥālā* is used for 'to be sick' (nouns *ḥālā* and *maḥlā*), and also *maḏweh* (Dt. 7:15; 28:61) and *dābār* (Ps. 41:8) meaning 'a matter' (*i.e.* evil matter). *rāpā* (to heal) is most commonly used for

healing, and is also used for 'physician' in Gn. 50:2 (twice); 2 Ch. 16:12; Jb. 13:4; Je. 8:22. Other OT terms include *hāyā* (revive) and *šūb* (restore).

The words for health are infrequently used in the OT, and then always figuratively (e.g. Je. 30:17; 33:6; Ps. 42:11; Pr. 12:18).

(ii) NT. Disease is normally described by the Gk. nouns *astheneia* (weakness), *malakia* (misfortune)—used three times in Mt. only, or the verbs *astheneō* (to weaken) or *kakōs echein* (lit. 'to have badly') and once (Jas. 5:15) *kamnō* (to be ill, to ail). The adjective *arrhōstos* ('not robust') is used four times (e.g. Mk. 6:13); *mastix* (a whip) is used not only literally but metaphorically of disease—see *Plague*, below.

The commonest non-technical words for healing and health are *ischyō* (be strong) and *hygiainō* (be healthy), while *sōzō* and *diasōzō* (save) are used both of physical and spiritual healing (see *Leprosy*, below). *stereoō* (set up, make strong) is used in Acts 3:16, where *holoklēria*, 'perfect health', also occurs, possibly indicating active rehabilitation to normal life as well as to physical well-being.

b. Some more technical terms describing disease and healing in the New Testament

nosos (disease), while a specific term, was used only of disease in general rather than of any individual case. Luke and the other Evangelists employ the word in the same way (e.g. Mt. 4:23; 8:17; Lk. 4:40; 6:17; Acts 19:12, etc.). For other yet more specific words, see below.

Verbs for healing are *therapeuō*, *iaomai* and *apokathistēmi*.

The medical terminology used by Luke, as well as his discreet silence about the failures of his colleagues in treating the woman with an issue of blood (see *Menstruation*, below), indicate his medical training. Only Luke quotes 'Physician, heal yourself' (4:23). In Lk. 4:35 *ripsan*, 'thrown him down', is a medical term describing epileptic convulsions and *blaptēin*, 'harm', is similarly a technical medical term (J. R. W. Stott, *Men with a Message*). In Lk. 24:11 *lēros*, 'idle tale', is a medical term used to describe the babblings of a feverish or insane patient (W. Barclay, *Commentary on Luke*).

c. Further medical terms

Barrenness. To be a wife without bearing children has always been regarded in the East, not only as a matter of regret, but as a reproach which could lead to divorce. This is the cause of Sarah's despairing laughter (Gn. 18:12), Hannah's silent prayer (1 Sa. 1:10ff.), Rachel's passionate alternative of children or death (Gn. 30:1) and Elizabeth's cry that God had taken away her reproach (Lk. 1:25). The awfulness of the coming judgment on Jerusalem is emphasized by the incredible statement, 'Blessed are the barren . . .' (Lk. 23:29). It was believed that the gift of children or the withholding of them indicated God's blessing or curse (Ex. 23:26; Dt. 7:14), as also did the barrenness or fruitfulness of the land (Ps. 107:33–34).

Blindness. Heb. *'iwwēr*, 'closed' or 'contracted', and its cognate *'iwwārōn*, *'awwereṭ* and *sanwērim*, 'blindness'; Gk. *typhlos*. Blindness was common throughout the Middle East in biblical times. It is probable that several different diseases were responsible. Trachoma may have been common then, as it still is in some parts, causing blindness in infancy. Gonorrhoea in the mother can infect the eyes of children during their birth and lead to

blindness. Blindness was sometimes seen as a punishment from God, as Dt. 28:28–29 indicates (also describing the pathetic grooping gait of the blind and their propensity for being robbed).

There is one fascinating instance of a two stage or double miracle of Jesus on a blind man (Mk. 8:22–25) in the Gentile town of Bethsaida. In the first miracle the blind man was led by Jesus out of the village, saliva was applied to his eyes and he was enabled to 'see'. However, presumably because he had never remembered seeing, his mind could not interpret the images he saw (v. 24). 'Men' looked like 'trees'; this is a well recognized phenomenon in those who have never seen and who have sight made possible by corneal grafting or cataract surgery—see a fascinating article by R. E. D. Clark on 'Men as trees walking' (*FR* 93), 1963, pp. 88ff.) in which the subject is reviewed in depth. Jesus therefore performed a further miracle. Again a simple sign, a touch, was given and then he 'saw everything clearly' (v. 25). If the man had once learnt to 'see' and then become blind the second miracle would not have been necessary (cf. Mt. 9:27–31; 12:22; 20:29–34; 21:14). The sign applied for each miracle, an aid to faith, may have been the more necessary for him if he was a Gentile. See *V*, below.

Boil, botch. Heb. *š'hin*, 'burning'; cf. root in Arab., Aram., Eth., 'to be hot'. A generic term which the OT uses to denote different kinds of localized inflammation. For the 'boils breaking out in sores' of the sixth plague (Ex. 9:9) see **PLAGUES OF EGYPT*. In Lv. 13:18–24 boils are mentioned in association with what is there termed leprosy, while the 'boils' (av) or 'loathsome sores' (RSV) which afflicted Job (2:7), of which various diagnoses have been made, may have been tuberculous leprosy. 'The boils of Egypt', which extended from head to toe (Dt. 28:27, 35), was probably one of the cutaneous diseases peculiar to Egypt (cf. Pliny, *NH* 26.5) such as an endemic boil or malignant pustule. Hezekiah's boil (2 Ki. 20:7; Is. 38:21) was probably a carbuncle.

Burn. Heb. *šārebet*, a 'burning' or 'scorching'. Used twice of a skin disorder (Lv. 13:24, 28) and once metaphorically (Pr. 16:27). It is not clear whether the word means a literal burn from fire or simply a skin disorder producing a burning sensation.

Childbirth. See *Midwifery*, below.

Consumption. Heb. *šāhepēt*, 'wasting away'. Occurs in Lv. 26:16; Dt. 28:22. In neither case is the exact medical meaning at all clear. It could mean tuberculosis, cancer or a host of other diseases producing wasting. Tuberculosis existed in Egypt when the children of Israel were there (D. Morse *et al.*, *Tuberculosis in Ancient Egypt*).

Deafness. Heb. *hērēs* 'silent', Gk. *kōphos*, 'blunted, dull, dumb'. The Israelites were to be kind to the deaf (Lv. 19:14). Isaiah foretold that the deaf would be made to hear (29:18; 35:5; 42:18), a prophecy fulfilled by Jesus (Mt. 11:5; Mk. 7:37).

One man whom Jesus healed was deaf and had 'an impediment in his speech' (*mogilalos*, 'speaking with difficulty', Mk. 7:32) which was probably caused by his deafness (but obviously might have been due to a separate mechanical defect, as av 'the string', lit. bond, 'of his tongue was loosed' might suggest). It is surely significant that his hearing was healed first. Some authorities consider that the man was deaf and dumb but the Greek does not suggest this. It is more likely that he could make noises but, because he could not hear them (or

HEALTH, DISEASE AND HEALING

other people's words), they did not form normal speech. Zechariah was temporarily dumb and deaf (Lk. 1:20, 22, 64). (*EAR.)

Dropsy. Gk. *hydrōpikos*, 'full of water' (Lk. 14:2). Dropsy (ascites) is strictly not a disease in itself but rather a sign of disease of the heart, kidneys or liver, etc.

Dumbness. Heb. *illēm*, 'dumb', 'bound', 'tied', *dūmān*, 'silent', *ālam*, 'to be dumb, bound, tied'. Gk. *alalos*, 'speechless', *aphōnos*, 'voiceless', and most commonly *kōphos*, 'blunted', 'dumb' or 'deaf'. This disorder occurred throughout biblical history. It can be attributed to no specific cause. Sometimes it was a feature of *demon-possession (e.g. Mt. 9:32–35; 12:22). Zechariah was temporarily dumb and deaf (Lk. 1:20, 22, 64) through an act of God because of his unbelief. The deaf man of Mk. 7:32 was almost certainly not dumb even though he is called the 'deaf-mute'.

Dysentery. The RSV rendering of Gk. *dysenteria* (AV 'bloody flux'), a technical medical term used by Herodotus, Plato, Aristotle, et al., the infectious disease of which Paul healed the father of Publius (Acts 28:8). It has been suggested that the 'incurable disease' of the bowels with which the Lord afflicted Jehoram was a chronic amoebic dysentery (2 Ch. 21:15, 18–19). See also *Prolapsed rectum*, below.

Emerods. (AV). See *Tumours*, below.

Epilepsy. Gk. *selēniazomai*, 'to be moon-struck', a concept from which the English word 'lunatic' is derived, occurs twice (Mt. 4:24; 17:15), translated 'lunatick' in AV, 'epileptic' in RSV. Epilepsy was thought to vary in its severity in cycle with the visible size of the moon. The boy described in Mt. 17:15 appears to have had typical *grandmal* epilepsy (cf. Mk. 9:17–29; Lk. 9:38–42) as well as being *demon-possessed, a condition from which epilepsy was distinguished (Mt. 4:24).

Fever. Heb. *qaddahaḥ*, 'burning heat' (Dt. 28:22); Gk. *pyretos*, 'fiery heat' (Lk. 4:38; Jn. 4:52; Acts 28:8, etc.). A generic term which in EVV covers various ailments, all of them suggesting the presence of a high temperature. Luke describes (4:38) Peter's wife's mother as having 'a great fever', indicating that he recognized degrees of fever and, probably, that he saw the grave prognosis indicated by the severity of the fever which Mt. (8:14) and Mk. (1:30) did not.

Inflammation. Heb. *dalleget* (only Dt. 28:22). The physical afflictions of consumption, fever and inflammation, and the climatic ones—heat and drought—would have combined to form an awful prospect. The terms are too vague to allow specific interpretation.

Issue; issue of blood. Apart from the more usual meanings of 'issue', the word is also used biblically in connection with disease. In Lv. 15:2ff. Heb. *zōb* denotes a discharge which rendered its victims ritually unclean. In Lv. 12:7; Mt. 9:20; Mk. 5:25; Lk. 8:43f.; Heb. *māqār* and Gk. *rhytis* and *haimorrhōē* (the latter of which is used in Lv. 15:33, LXX) refer to an issue of blood, translated by NEB as 'haemorrhages'. It is possible that the woman of Lk. 8:43, etc., had menorrhagia. See *Menstruation*, below.

Itch. I. Heb. *heres*, 'heat, sun, itch'. A skin condition, probably akin to eczema, included among the scourges ('which cannot be healed') which would overtake the disobedient (Dt. 28:27). No data are available for precise identification.

2. Heb. *neṭeq* (Lv. 13:30–37; 14:54). A general term, apparently meaning an irritating skin rash, sometimes regarded then as a sign of 'leprosy'. See also *Scab*.

Leprosy. The common OT word translated thus is *šāra'at* (Lv. 13–14) which in the LXX was rendered *lepra*, the same Greek word being used in the NT. Both terms were simple, non-specific, imprecise, 'lay' ones and lacked the precision of the modern word leprosy which indicates an infection by *Mycobacterium leprae*. *šāra'at* is primarily a word describing ritualistic uncleanness or defilement characterized by the presence of coloured patches. The same word was used to describe human skin disease (Lv. 13:1–46), discolouration of wool, leather, linen (vv. 47–59), and even the walls of houses (14:33–57), thus indicating that *šāra'at* cannot have been (but it might possibly have included) true leprosy. The word *lepra* in the NT occurs only in the Gospels and was used only of human disease. The evidence for uncleanness, on which the diagnosis was based, depended on the presence of depigmented (pale) patches on the human skin or discoloured or dark patches on the surface of inanimate objects. Some of the features described in Lv. 13–14 do not occur in leprosy and some suggest other conditions such as erysipelas adjacent to a boil (Lv. 13:18), infection following a burn (v. 24), ringworm, or sycosis of the scalp or beard (v. 29), pustular dermatitis (v. 36), etc. Leprosy is such a slowly-changing process it could not possibly have recovered in the 7 days of Lv. 13:4–6. It is significant that in Lk. 17:11–19, ten lepers were *cleansed* (*katharizō*) (v. 14), while only the one who was grateful was *cured* (*iaomai*) (v. 15) and he was told his faith had (lit.) saved him (*sōzō*) (v. 19) which may refer to his spiritual state or simply mean 'made well' (RSV). There is no clue as to the nature of their 'leprosy'—it is possible that more than one disease process was present among them.

Undoubted leprosy existed in India by c. 600 BC and in Europe by 400 BC. There is no definite evidence that it is referred to in the OT or that it even existed at the time of the Exodus, although it certainly did in NT times. For a detailed study of the subject, see S. G. Brown, *Leprosy in the Bible* (good bibliography).

Madness, mental disorder. Several different words are used, all non-specific. The more important are:

1. Heb. *hōlēlā*, *hōlēlūt*, 'foolishness', 'madness' or 'boasting' (Ec. 1:17; 2:12; 7:25; 9:3; 10:13).

2. Heb. *šiggā'ōn*, 'madness', 'erring', madness inflicted as a judgment from God (Dt. 28:28; Zc. 12:4).

3. Gk. *anoia*, 'mindlessness', leading to folly (2 Tim. 3:9) or rage (Lk. 6:11). In neither case is mental disease implied but rather unbalanced behaviour.

4. Gk. *paraphronia*, 'madness' (2 Cor. 11:23; 2 Pet. 2:16).

5. Gk. *mania* (Acts 26:25). Paul said he had not got (lit.) mania after Festus had accused him of raving (*mainomai*) madly (cf. Jn. 10:20).

The recurrent episodes of madness of *Saul and the single severe attack suffered by *Nebuchadrezzar are described in some detail. Saul (I Sa., *passim*) was a man who was gifted but in some respects inadequate, e.g. he was much at the mercy of other people's opinions; he was subject to moods of recurrent depression; and, in later life, he had the paranoid ideas and irritability characteristic of depression in older patients, though homi-

cidal tendencies such as he had are uncommon. His suicide is probably medically unimportant and that of a defeated warrior rather than a depressed neurotic. Nebuchadrezzar, active and irascible, had a hypomanic personality, *i.e.* an inherited liability to develop a manic-depressive psychosis. His illness (Dn. 4:28–37) was long-lasting and occurred when he was perhaps in his fifties. Though he remained conscious he was totally incapable of government. There was no evidence of organic disorder. There was some perversion of appetite. He recovered from it completely (v. 36) in the end, and it would be described today as involuntarily melancholia.

Menstruation. Heb. *dāwā* or *dāweh*, 'sick', 'menstruous' (Lv. 12:2, 5; 15:33; 18:19; 20:18). Both rsv and av translate the words rather inconsistently, although av uses such expressions as 'sick of her flowers' (Lv. 15:33). This normal, physiological feature of the life of women in the reproductive phase of their lives rendered them ritually unclean.

It is probable that the woman with an issue of blood (Mk. 5:25; Lk. 8:43 *rhysei haimatos*, 'a flow of blood'; Mt. 9:20 *haimorrhoeō*, 'to suffer from a flow of blood'; the latter word was used in Greek medical writings and in LXX for Lv. 15:33 meaning 'menstruous') had menorrhagia, a disease in which the menstrual flow is abnormally prolonged—in her case continuous for 12 years—and may produce anaemia.

Midwifery. While childbirth is a normal and healthy phenomenon, it seems appropriate to include it in this 'medical' section. Midwifery was in the hands of women, who had probably considerable experience, perhaps little skill and training (Gn. 38:27–30; Ex. 1:15–21; Ezk. 16:4–5). A birth-stool (Ex. 1:16, Heb. *'obnayim*, lit. 'double stones', probably indicating its origin) of the type used in Egypt at the time of the Exodus is described in the article *MIDWIFE.

Palsy, paralysis. The Gk. terms for a paralytic, *paralytikos* (e.g. Mt. 4:24; 9:2; Mk. 2:3) and to be paralysed, *paralyomai* (e.g. Lk. 5:18, 24; Acts 8:7; 9:33) are similar and non-specific. Some types of paralysis in biblical times were clearly non-fatal because patients managed to survive for many years in spite of being paralysed. The centurion's boy servant (Mt. 8:6) was paralysed and 'in terrible distress'. This could be a description of the frightening respiratory paralysis that is a feature of some cases of poliomyelitis.

Plague, pestilence. The av rendering of five Heb. and three Gk. words connected with disease, death or destruction. None is to be interpreted as necessarily indicating infection with *Yersinia pestis* (the modern 'plague').

1. Heb. *deber*, 'pestilence, plague'. Originally meaning 'destruction', this word is used comprehensively for all sorts of disasters, and is often linked with the sword and famine (which three evils generally go hand in hand; cf. Je. 14:12; Ezk. 6:11, etc.), and with divine visitation. It describes also the virulent epidemic which, after David's numbering of the people, cut off 70,000 Israelites (2 Sa. 24:15; cf. Jos., *Ant.* 7. 326), and is probably the same affliction as destroyed 185,000 of *Sennacherib's men (2 Ki. 19:35; Is. 37:36). The same word is found in Solomon's dedication prayer (1 Ki. 8:37; 2 Ch. 6:28); is employed in an unusual sense to describe God's effect on death (Ho. 13:14);

and, translated 'murrain', is connected with a disease of cattle (Ex. 9:3, av; cf. Ps. 78:50, avmg.).

2. Heb. *maggēpā*, 'plague, smiting' (Ex. 9:14; Zc. 14:12, etc.). 3. Heb. *makkā*, 'a smiting, beating' (Lv. 26:21; Je. 19:8, etc.). 4. Heb. *neḡā*, 'a touch, smiting'. This word, associated most often with leprosy (Lv. 13–14), also denotes any great distress or calamity (Ps. 91:10, etc.), or inward corruption (1 Ki. 8:38). 5. Heb. *neḡēp*, 'a stumbling, plague' (Ex. 12:13; Jos. 22:17, etc.). 6. Gk. *mastix*, 'a scourge, whip, plague' (Mk. 3:10; 5:29, 34; Lk. 7:21). This is used as a synonym for disease in general. 7. Gk. *loimos*, 'a plague, pestilence' (Mt. 24:7; Lk. 21:11; cf. Jos., *BJ* 6. 421). In both biblical references it is coupled with famine, but rv and rsv follow some older MSS in omitting 'pestilence' in Mt. 24:7–8. 8. Gk. *plēgē*, 'a stroke, plague'. This word is thus translated only in Rev. (9:20; 11:6, etc.), in connection with the judgment that will overtake the wicked.

Prolapsed rectum. Jehoram (2 Ch. 21:15, 18–19) was smitten 'with an incurable disease' in his bowels. After 2 years of this 'his bowels came out' and he died 'in great agony' (*taḥ'lu'im*—a plural noun not translated thus in any other place in rsv; it is translated 'deadly diseases' in Je. 16:4, and 'diseases' in Ps. 103:3). This was almost certainly chronic dysentery which, when very severe and prolonged, occasionally may be complicated by prolapse of the rectum or more of the large intestine, producing *intussusception* which itself produces intestinal obstruction. This could have been the cause of his painful death.

Scab, spot. Skin diseases are rife in the East, and it is often difficult both to identify precisely those mentioned in Scripture and to distinguish one from another. 'Scab', for example, represents four different Heb. words.

1. *gārāb*, Dt. 28:27 ('scurvy', av, Lv. 21:20; 22:22; LXX *psora*; Vulg. *scabies*). Included among the curses that should overtake the disobedient, this was evidently not the true scurvy, but a chronic disease which formed a thick crust on the head and sometimes spread over the whole body. It was regarded as incurable.

2. *yallepēt*, 'scabbed' (LXX *leichēn*). One of the afflictions that rendered men unfit for the priesthood (Lv. 21:20) and animals unsuitable for sacrifices (Lv. 22:22), it may be another form of I, above.

3. *sappahat* ('spot'), Lv. 13:2; 14:56.

4. *mispahat*, Lv. 13:6–8. A verbal form (*sippah*) is employed in Is. 3:17, 'smite with a scab'.

Tumours (RSV), Emerods (AV). The Philistines in Ashdod captured the *ark and the Lord 'afflicted them with tumours' (Heb. *'ōpālim*, 'tumours' or 'boils'), 1 Sa. 5:6. The root meaning of the Heb. word means 'to swell, bump up', hence the name of Mt Ophel at Jerusalem. The word may be a technical 'medical' one. When the ark was taken to Gath 'tumours broke out on them', 'both young and old' (5:9), and many died (5:11–12). After 7 months the ark was returned to Israel with golden models of five tumours and five 'mice' (Heb. *'akbār*), an inexact word meaning 'rodent' and including mice, rats and gerbils which were common in the Middle East (G. S. Cansdale, *Animals of Bible Lands*). Both rats and gerbils are known vectors of infected fleas which transmit bubonic plague. The description of a plague spreading along lines of communication and breaking out in

HEALTH, DISEASE AND HEALING

successive communities, producing multiple boil-like swellings or tumours and an illness that was sometimes fatal and that was associated with numerous 'mice' ruining the crops (6:5), is consistent with (though not proof of) a diagnosis of bubonic plague. It is possible that the same plague caused the seventy deaths in Beth-shemesh 'because they looked into the ark of the Lord' (6:19). The explanation for the number five (mice and tumours) models is 6:16–18.

Wen (AV) (Heb. *yabbeleg*, Lv. 22:22; cf. Lxx *myrmēkiōnta*). Included in a list of blemishes which made animals an unacceptable sacrifice to the Lord. According to Jewish tradition, the Heb. word applies to 'one suffering from warts'. RVmg. reads 'having sores'; RSV 'having a discharge'.

Withered hand. Gk. *xēros* (Mt. 12:10; Lk. 6:6, 8), 'dry', 'withered', denotes a hand in which the muscles are paralysed and shrunken, leaving the affected limb shorter and thinner than normal—a chronic condition in biblical times regarded as incurable. Some identify with a late complication of infantile paralysis (poliomyelitis). Luke records that it was the man's right hand.

III. The treatment of disease

The therapeutics of the Bible are those of the time, and are described in general terms, e.g. Pr. 17:22; Je. 46:11. Local applications are frequently referred to for sores (Is. 1:6; Je. 8:22; 51:8), and a 'cake of figs' is recommended by Isaiah for Hezekiah's boil (Is. 38:21). The good Samaritan used wine and oil as a local treatment (Lk. 10:34). Such treatment is often ineffective, however, as in the case of the woman with the issue of blood (Mk. 5:26), or conditions are apparently intrinsically incurable, as in the case of Mephibosheth (2 Sa. 4:4). In Dt. 28:27 there is a note of despair about some illnesses. It is not surprising that treatment is sometimes bound up with superstition, such as the attempt by Leah and Rachel to use mandrakes to increase sexual desire in infertility (Gn. 30:14–16). Wine is twice mentioned as a medicament and stimulant (Pr. 31:6; 1 Tim. 5:23).

The word physician is rarely used, but implies much the same as 'doctor' in English today (Heb. *rāpā*, e.g. Ex. 15:26; Je. 8:22; Gk. *iatros*, Mk. 5:26; Lk. 8:43). Asa is condemned (2 Ch. 16:12) for consulting 'physicians', but these may have been pagan, magically minded and worthless, and not really deserving the name of physician. The point of the condemnation is that he 'did not seek the Lord'. Job condemns his comforters as 'worthless physicians' (Jb. 13:4). In the NT physicians are twice mentioned proverbially by Christ (Lk. 4:23; 5:31). They are mentioned in the incident of the woman who had an issue of blood (Lk. 8:43). Luke is referred to by Paul as 'the beloved physician' (Col. 4:14).

The Jewish religion differed from many pagan ones in that there was almost no confusion between the offices of priest and physician. Declaration of diagnosis of, and freedom from, leprosy is an exception (Lv. 13:9–17; Lk. 17:14). Prophets were consulted about prognosis (see, e.g., 1 Ki. 14:1–13; 2 Ki. 1:1–4; 8:9; Is. 38:1, 21). A primitive form of bone-setting is mentioned in Ezk. 30:21. It is remarkable that medical practice changed so little in its essentials over the centuries during which the events described in the Bible occurred

that it is possible to speak of the whole time as though it were a relatively circumscribed period, and there was scarcely any element in it which could be dignified with the name of science.

IV. Demon possession

The singular phenomenon of *demon possession, rarely paralleled since apostolic times, is clearly something *sui generis*. It is recorded as having occurred at the time of Christ more frequently than at any other time. (The account of Saul—'an evil spirit from the Lord troubled him', in 1 Sa. 16:14–15—is probably to be regarded as a statement of his mental disorder rather than as a theological explanation of its origin.) It seems likely that Satan was particularly active at this time in an attempt to counter the effect of the *miracles of Christ and his apostles. Demon possession was real and cannot be 'explained' simply as the current interpretation of purely physical or mental disorders by ignorant (but sincere) people. Jesus himself made this diagnosis and accepted it when made by others. He was never deceived by contemporary error.

Those who were 'demon possessed' (Gk. *daimonizomenos* = 'demonized') could be used as a mouthpiece by the possessing spirit; they often had accompanying physical manifestations such as dumbness (Mt. 9:32), blindness (Mt. 12:22), epilepsy (Lk. 9:37–43) or mental disorder (Mk. 5:1–20). Particularly they were able to recognize the divinity of Jesus and knew they were subject to his authority. However, demon possession is definitely *not* synonymous either with epilepsy or with mental disorder in general, and is clearly distinguished by the Synoptists and in Acts (5:16) from the general run of disease. The disciples were commanded by Jesus to 'heal' (*therapeuō*) the sick but to 'cast out' (*ekballō*) demons and unclean spirits (Mt. 10:1, 8). Luke (9:37–43) describes how Jesus 'rebuked' (*epitimāō*) the unclean spirit and 'healed' (*iaomai*) the boy, suggesting that the presence of the unclean spirit (which was 'rebuked') was associated with, but distinct from, any medical or mental disease—probably epilepsy—which was 'healed'.

Different degrees of involvement were recognized as is shown (Mt. 15:22) by a girl 'severely possessed by a demon' (*kakōs daimonizetai*).

There is no significant difference between the 'man with an unclean spirit' (Mk. 5:2), 'the demoniac' (*daimonizomenos*) (Mk. 5:15–16) or the man who had been 'possessed with demons' (v. 18) as the same man was variously described.

The best authenticated modern cases seem to be those described by missionaries in China from about 1850 onwards. There is no good reason to doubt the biblical view of it as a 'possession' by an evil spiritual being of the personality and body of the person concerned. For present-day examples, see D. Basham, *Deliver us from evil*, 1972.

V. Miracles and healing

a. Healing—its meaning

Healing means the restoration of one to full health who had been ill—in body or mind (or both). This includes recovery resulting from medical treatment and spontaneous remission of a disease. It includes the improvement in a patient's outlook on his condition even if no physical amelioration is possible, and even a correction of a patient's misconception of the nature of his illness. In psychological disorders the term is used to describe an improved

mental state. It is important that these different facets of the meaning of the word be realized, because the biblical miracles of healing (apart from cases of demon possession) show healing in its primary medical sense of the restoration to normal in cases of organic disease. Any cases claimed as present-day miracles must show comparably outstanding cases of the healing of organic disorders. Changes in spiritual outlook, an improved acceptance of an organically incurable condition, or the natural and spontaneous remission of disease, are all continually occurring, but do not partake of the miraculous, in the strict theological sense. There are, of course, natural recoveries from illness, as well as miracles, recorded in the Bible, and in fact probably most recoveries other than the miraculous ones were natural, because of the almost complete ineffectiveness of therapy in ancient times.

b. Healing—its Author

God is the one who heals all our diseases (Ps. 103:3; Acts 3:12–16). Even today when medical and surgical skill is so developed, God is the healer, using men (trained or untrained) to do his work for him in the same way that he uses the governing authorities to maintain order and execute justice in the world (Rom. 13:1–5).

c. Healing—the use of means

Even in biblical times, when so few treatments for disease existed (see III, above), men were encouraged and expected to use the means that were available, both in OT times (e.g. the fig poultice for Hezekiah's boil, Is. 38:21) and in NT times (Paul's advice to Timothy, 1 Tim. 5:23). True faith in God gladly and gratefully uses such means as are available, whether medicines, blood transfusions or surgical operations to prevent death, as much as life-jackets to prevent drowning.

d. Faith healing

Various terms are currently used to describe healing that occurs without the use of means and in response to faith. Because all true healing comes from God the term 'divine healing' is not helpful to distinguish this special form. 'Spiritual' healing suggests more the restoration of health to the spirit than the body and moreover may be confused with the work of spiritists who, in the name of the devil, can produce spurious healing. Faith healing is a helpful term so long as the object of faith is clear (it is by no means always God).

e. Miraculous healing

A *miracle essentially consists of 'a striking interposition of divine power by which the operations of the ordinary course of nature are overruled, suspended or modified' (*Chambers's Encyclopaedia*, 'Miracle'). So far as miraculous healing in Scripture is concerned, the essential features are that the cure is instantaneous (the incident of Mk. 8:22–26 being a notable exception), complete and permanent, and usually without the use of means (the saliva of Mk. 7:33; 8:23; Jn. 9:6 is an exception; cf. also Mk. 5:27–29; Acts 5:15; 19:12). Divine miracles of healing show no relapses, which typify spurious miracles, except, of course, when dead persons were raised to life who, sooner or later, subsequently died again (e.g. Jairus' daughter, Mk. 5:21–24, 35–43; the widow of Nain's son, Lk. 7:11–15; Lazarus in Jn. 11:1–44, etc.).

1. *The purpose of miraculous healing.* Like the

other miracles in Scripture, they were dramatized signs and enacted parables intended to teach a double lesson. They were to *authenticate* the word of the person who performed them (e.g. Ex. 7:9; Lk. 5:20–24; Jn. 7:19–22; 10:37–38; Acts 2:22) and to *illustrate* the word. Thus what happened to the body of the paralytic in Lk. 5:18–26 was a proof and picture of what happened in his soul. It is important to see, therefore, that the purpose of the healing miracles was theological, not medical. The many who were healed at the beginning of the ministry of Jesus, of the early church and of individual Christians (e.g. Philip, Acts 8:5–8) gradually became fewer as the essential lesson was learnt. Many lay ill at the pool of Bethesda (Jn. 5:3) but Jesus healed only one because one was enough to teach the spiritual truth. If Christ's purpose had been the healing of the sick, he would have healed them all.

Thus a miracle of healing today should not be expected simply when it is medically desirable but rather where the Word of God and his servant needs to be authenticated and illustrated, and such evidence is not already available in the Bible. The fringe of an area of new evangelization on the mission field would therefore seem to be the most likely place for miraculous healing to occur today, the very place where miracles can least scientifically be proven! (But the church in general is now recovering her healing ministry as an integral part of the total gospel of wholeness, and such healings sometimes include the instantaneous as well as the more usual gradual recoveries. See J. C. Peddie, *The Forgotten Talent*, 1961; G. Bennett, *The Heart of Healing*, 1971; F. MacNutt, *Healing*, 1974; *The Power to Heal*, 1977.—N.H.)

2. *Miraculous healing in the Old Testament.* Even if medical means were also used, recovery in the OT is generally attributed to the intervention of God, e.g. the recovery of Moses (Ex. 4:24–26) from the illness associated with his disobedience over his son's circumcision is given an entirely spiritual significance. The healing of Miriam's leprosy (Nu. 12:1–15) and of Naaman, through Elisha (2 Ki. 5:8–14), appear to be miraculous. The healing of Jeroboam's suddenly paralysed hand (1 Ki. 13:4–6) and the raising from the dead of the son of the widow of Zarephath by Elijah (1 Ki. 17:17–24) and of the son of the Shunammite woman by Elisha (2 Ki. 4:1–37) are clearly miraculous. This boy's illness has been attributed to sunstroke; but it could equally well have been a fulminating encephalitis or a subarachnoid haemorrhage. (The Jews were conscious of the effects of the sun [see Ps. 121:6], and a case of sunstroke is reported in the Apocrypha [Judith 8:2–3].) The recovery of the Israelites bitten by the serpents when they looked on the bronze serpent is miraculous also, though individuals are not specified (Nu. 21:6–9). The salvation of the Israelites from the later plagues in Egypt is a curious example of what might be termed a 'prophylactic miracle', i.e. for them disease was miraculously prevented rather than miraculously healed. The recovery of Hezekiah (2 Ki. 20:1–11) was probably natural, though it is attributed directly to God (v. 8) and is accompanied by a nature miracle (vv. 9–11); the illness was probably a severe carbuncle.

Miraculous healing, even counting raising from the dead, is unusual in the OT, and the few cases seem to cluster about the two critical times of the Exodus and the ministry of Elijah and Elisha. See

HEALTH, DISEASE AND HEALING

Ex. 7:10–12 for nature miracles performed by Moses and Aaron. The miracles performed by the Egyptian sorcerers (Ex. 7:11, 22; 8:7) mimicked the first three miraculous signs wrought by Moses and Aaron (even though their second and third attempts only added to the sufferings of their people), but they were unable to counterfeit the power of God in the subsequent signs (8:18). Thus the miracles wrought by Moses achieved their purpose (7:9) of authenticating his word of authority and finally led to the escape of the children of Israel.

3. *Miraculous healing in the Gospels.* Our Lord's miracles of healing are reported by the Synoptists as groups (e.g. Lk. 4:40–41) and, in greater detail and more specifically, as individual cases. *Demon possession is clearly distinguished from other forms of disease (e.g. Mk. 1:32–34, where *kakōs echōn* is separate from *daimonizomenos*). People came to him in large numbers (Mt. 4:23–24) and were all healed (Lk. 4:40). Doubtless cases of mental as well as of physical illness were included, and on one occasion our Lord even restored a severed part of the body (Lk. 22:50–51). At the same time, these recorded instances can represent only a small fraction of those ill in the country at this time.

In the combined narrative of the four Gospels there are over twenty stories of the healing of individuals or of small groups. Some were healed at a distance, some with a word but without physical contact, some with physical contact, and some with both physical contact and 'means', i.e. the use of clay made from spittle, which was a popular remedy of the time for blindness (Mk. 8:23; Jn. 9:6) and deafness (Mk. 7:32–35). This may have been to aid the patient's faith, or to demonstrate that God does not exclude the use of means, or both. In one unique instance Jesus performed two successive miracles on the same man—see *Blindness*, above.

Luke's Gospel is the only one to give the story of the good Samaritan. It also includes five miracles of healing not recorded by the other Evangelists. These are the raising of the son of the widow of Nain (7:11–16), the healing of the woman 'bowed together' (13:11–16), the man with dropsy (ascites) (14:1–4), the ten lepers (17:12–19) and the healing of Malchus' ear (22:51). More details of cases are given and the writer uses the more technical *iaomai* for healing, rather than the non-technical words.

The Fourth Evangelist, unlike the Synoptists, never refers to healing of people in large numbers, nor to demon possession (though demons are referred to, and the word *daimonizomenos* is used, Jn. 10:21). In addition to the raising of Lazarus from the dead, only three cases are described. These are the healing of the nobleman's son of a serious febrile condition (4:46–54), the man paralysed 38 years (5:1–16), and the man born blind (9:1–14). These miracles of healing in John's Gospel are not only mighty works (*dynameis*) but also signs (*sēmeia*). They demonstrate that Christ's miracles of healing have not only an individual, local, contemporary physical significance but a general, eternal and spiritual meaning also. For example, in the case of the man born blind, the point is made that individual sickness is not necessarily attributable to individual sin.

4. *Miraculous healing in apostolic times.* While the promise of healing powers in Mk. 16:18 is probably to be dismissed as being no part of the true text, Christ had commissioned the Twelve

(Mt. 10:1) and the Seventy (Lk. 10:9). The Twelve were evidently commissioned for life, while the mission of the Seventy seems to have ended when they reported back (Lk. 10:17–20). In Acts there are several accounts of individual miracles, which have much the same character as those performed by Christ. The lame man in Jerusalem (3:1–11) and the one at Lystra (14:8–10), the paralytic (9:33–34), and Publius' father's dysentery ('bloody flux', *av*, 28:8) are individual cases, and there are a few reports of multiple healings, including that in 5:15–16 and the unique case of the use of clothing taken from Paul (19:11–12). Two people were raised from the dead (Dorcas, 9:36–41, and Eutychus, 20:9f.) and demons were cast out on two occasions (5:16 and 16:16–18). The author distinguishes between demon possession and other illness (5:16).

Cases of illness among Christians in apostolic times are mentioned. The fact that they occur indicates that the apostolic commission to heal could not be used indiscriminately to keep themselves or their friends free from illness. Timothy had a gastric complaint (1 Tim. 5:23). Trophimus was too ill to accompany Paul from Miletus (2 Tim. 4:20). Epaphroditus was gravely ill (Phil. 2:30), and his recovery is attributed to the mercy of God (Phil. 2:27). Most striking of all is Paul's enigmatic 'thorn in the flesh' (*skolops tē sarki*), which has been variously identified (most often as a chronic eye disease), but by few convincingly and by none conclusively. Its spiritual significance far exceeds its importance as an exercise in diagnosis. Paul gives three reasons (2 Cor. 12:7–10) for it; 'to keep his feet on the ground' (v. 7), to enable him to be spiritually powerful (v. 9) and as a personal service to Christ (v. 10, 'for Christ's sake'). There is perhaps more resemblance between this 'thorn' and Jacob's shrunken sinew than has been realized (Gn. 32:24–32).

The classical passage on prayer for the sick (Jas. 5:13–20) has suffered from two misinterpretations: that which finds in it authority for the institution of anointing those who are *in extremis*, and that which regards it as a promise that all who are sick and who are prayed over in faith will recover. The oil may have been used as was Christ's clay or spittle (see above) to reinforce faith, and may in some cases even have been medicinal. Or oil may be taken as a symbol of separating the sickness from the patient on to Christ (*cf.* Mt. 8:17), after the pattern of kings, *etc.* being *anointed to separate them from others for their office. For a full discussion, see R. V. G. Tasker's commentary on James (*TNTC*). The important points are that the outlook in the passage is spiritual (i.e. the matter is referred to God), the distress of the individual is made the concern of the church, and what is said neither excludes nor condemns the use by doctors of the normal means of healing available at any particular time and place. The whole of this passage is really concerned with the power of prayer.

5. *Miraculous healing after apostolic times.* This is, strictly, outside the scope of this article, but is relevant in that certain texts are quoted in favour of there being a possibility, and more, of miraculous healing mediated by Christians at the present day (*cf.* Jn. 14:12, above). However, there must be considerable caution in equating personal commands by Christ to the apostles with those which are generally binding upon Christians today. Such views are out of keeping with the general view of miracles as instruments and accompaniments of

revelation. Great care must be exercised in avoiding the magical in a search for the miraculous. The ecclesiastical miracles of patristic times, often posthumously attributed, sometimes became absurd. It has also been shown that the frequently quoted passages in Irenaeus, Tertullian and Justin Martyr, which purport to show that miracles of healing continued well into the 3rd century, will not in fact bear that interpretation. Post-apostolic claims should therefore be treated with extreme care. But this cautious attitude should not be confused with modern materialistic unbelief and scepticism. See also 1. *The purpose of miraculous healing*, above.

VI. The biblical outlook on disease

The topics of suffering and disease, in the Bible, are closely bound up with the questions of the nature and origin of evil itself. Suffering is a human experience, with diverse causes, and is one of the results of human sin. In the case of suffering from disease, the link is not usually obvious, though sometimes the illness is directly connected. From the account of the Fall of man in Genesis it is clear that soon afterwards man knew insecurity, fear and pain (Gn. 3:16-17). Here *'iṣṣābôn* (אִבּוֹן 'sorrow') is better rendered 'pain', and then mental anguish (Gn. 4:13). The direct connection between sin and suffering becomes rapidly more complex, but nations which obeyed God were, in general, promised freedom from disease (Ex. 15:25-26; Lv. 26:14-16; Dt. 7:12-16 and ch. 28, especially vv. 22, 27, 58-61). On the other hand, pestilence is one of the three sore judgments on the people of God (Je. 24:10; 32:24; Ezk. 14:21) and on other nations, e.g. Philistines (1 Sa. 5:6) and Assyrians (2 Ki. 19:35). There are passages such as Ps. 119:67, where the sinner himself is involved, and the case of the impotent man healed (Jn. 5:1-16), where his own fault is perhaps implied (v. 14). David's sin involved the afflictions of others (2 Sa. 24:15-17). On the whole, human suffering, from disease or from any other cause, is the effect on the individual of the spiritual malaise of the human society of which he is an integral part. In Job 1 something is seen of the activity of Satan. This is also apparent in Acts 10:38, where the sick are spoken of as 'all that were oppressed by the devil' and in the suggestive parable of the wheat and tares ('An enemy has done this', Mt. 13:28). Again, Christ himself spoke of 'this woman, whom Satan bound . . .' (Lk. 13:16).

God does not stand by helplessly, however. Suffering is sometimes used punitively. This may be on a national scale. Or it may be applied to individuals, as in the cases of Moses (Ex. 4:24), Miriam (Nu. 12:10), Uzziah (2 Ch. 26:16-21), Jeroboam (2 Ch. 13:20), Gehazi (2 Ki. 5:25-27), Ananias and Sapphira (Acts 5:5, 10), Herod (Acts 12:21-23) and Elymas (Acts 13:11). Much more detail is given when suffering is used constructively (Heb. 12:6-11), as in the case of Jacob, who, after a real physical injury miraculously inflicted, learnt to depend upon God, and matured spiritually to fulfil his new name of Israel (Gn. 32:24-32). Hezekiah's illness demonstrated his faith in God, and is probably in this category (2 Ki. 20:1-7). The book of Job shows that the real issue is a man's relationship to God rather than his attitude to his own suffering. It is the principal OT refutation of the view, put forward with great skill by Job's 'comforters', that there is an inevitable link between individual sin and individual suffering. After disposing of the

view, which is only partially true, that the reason for the existence of suffering is disciplinary, it leads to the sublime picture of Job both comforted, vindicated and blessed. It is important to realize that the biblical picture is not a mere *dualism. Rather, suffering is presented in the light of eternity and in relation to a God who is sovereign, but who is nevertheless forbearing in his dealings with the world because of his love for men (2 Pet. 3:9). Conscious of the sorrow and pain round about them, the NT writers look forward to the final consummation when suffering shall be no more (Rom. 8:18; Rev. 21:4).

This conception is different from the Gk. notion of the body as something inherently evil, and the spirit as something inherently good. The biblical conception of the transience yet nobility of the body is best seen in 2 Cor., especially in 5:1-10 (cf. also 1 Cor. 6:15). It is an integral part of the complex of the individual through which the personality is expressed.

VII. Hygiene and sanitation

One respect in which Jewish medicine was better than that of contemporary peoples was the remarkable sanitary code of the Israelites in Moses' time (e.g. Lv. 15). A. Rendle Short gives an excellent short account of this (*The Bible and Modern Medicine*, pp. 37-46). Although generally referred to as a code, the details are, in fact, scattered through the Pentateuch. The Jews, as a nation, might not have survived their time in the wilderness, or the many other vicissitudes through which they passed, without their sanitary 'code'. It deals with public hygiene, water supply, sewage disposal, inspection and selection of food, and control of infectious disease. The most interesting thing about it is that it implies a knowledge which in the circumstances of the Exodus and the wilderness wanderings they could scarcely have discovered for themselves, e.g. the prohibition, as food, of pigs and of *animals which had died natural deaths, the burial or burning of excreta, etc., and the contagious nature of some diseases. Burning of excreta (Ex. 29:14) was a particularly wise practice for a wandering people, since there was no time for dung to do good as manure. The spread of disease was thus effectively prevented. The origin of the word 'quarantine' is the Jewish use of the period of 40 days of segregation from patients with certain diseases (Lv. 12:1-4) adopted by the Italians in the 14th century because of the relative immunity of Jews from certain plagues. In a number of respects the biblical outlook on the sick, and on health in general, has a bearing on modern medical practice, and is perhaps more up-to-date than is generally realized. The story of the good Samaritan (Lk. 10:30-37) presents an ideal of care which has always inspired the medical and para-medical professions and typifies selflessness and after-care. There is more than a little in the Bible about what might be called 'the medicine of the family', the ideal of marriage among the Jews being a high one.

HEART (Heb. *lēb* or *lēbāb*; Gk. *kardia*). The term is used of the centre of things (Dt. 4:11; Jon. 2:3; Mt. 12:40); the root of the Heb. word, which is obscure, may mean centre.

The references to the physical organ as such are few and by no means specific. The clearest is 1 Sa. 25:37. In 2 Sa. 18:14 and 2 Ki. 9:24 the meaning seems to be wider, indicating the internal organs generally, especially since, in the former passage, Absalom remained alive after three darts had pierced his 'heart'. But this lack of accurate physiological definition is typical of Hebrew thought, particularly in respect of the internal organs. In Ps. 104:15, for instance, the 'heart' is affected by food and drink, and though this may not be true in a direct way physiologically, it certainly is true in experience, if one takes the 'heart' to mean, as outlined below, the inner man, in a wide sense.

The Hebrews thought in terms of subjective experience rather than objective, scientific observation, and thereby avoided the modern error of over-departmentalization. It was essentially the whole man, with all his attributes, physical, intellectual and psychological, of which the Hebrew thought and spoke, and the heart was conceived of as the governing centre for all of these. It is the heart which makes a man, or a beast, what he is, and governs all his actions (Pr. 4:23). Character, personality, will, mind are modern terms which all reflect something of the meaning of 'heart' in its biblical usage. (But *cf.* *BODY where mention is made of synecdoche.)

H. Wheeler Robinson gives the following classification of the various senses in which the words *lēb* and *lēbāb* are used.

- a. Physical or figurative ('midst'; 29 times).
- b. Personality, inner life or character in general (257 times, e.g. Ex. 9:14; 1 Sa. 16:7; Gn. 20:5).
- c. Emotional states of consciousness, found in widest range (166 times); intoxication (1 Sa. 25:36); joy or sorrow (Jdg. 18:20; 1 Sa. 1:8); anxiety (1 Sa. 4:13); courage and fear (Gn. 42:28); love (2 Sa. 1:1).
- d. Intellectual activities (204 times); attention (Ex. 7:23); reflection (Dt. 7:17); memory (Dt. 4:9); understanding (1 Ki. 3:9); technical skill (Ex. 28:3) (latter two = 'mind' in rsv).
- e. Volition or purpose (195 times; 1 Sa. 2:35), this being one of the most characteristic usages of the term in the OT.

The NT usage is very similar, and C. Ryder Smith writes of it as follows: 'It (the heart) does not altogether lose its physical reference, for it is made

of "flesh" (2 Cor. 3:3), but it is the seat of the will (e.g. Mk. 3:5), of the intellect (e.g. Mk. 2:6, 8), and of feeling (e.g. Lk. 24:32). This means that "heart" comes the nearest of the NT terms to mean "person".'

There is no suggestion in the Bible that the brain is the centre of consciousness, thought or will. It is the heart which is so regarded, and, though it is used of emotions also, it is more frequently the lower organs (*BOWELS, *etc.*), in so far as they are distinguished, that are connected with the emotions. As a broad general statement, it is true that the Bible places the psychological focus one step lower in the anatomy than most popular modern speech, which uses 'mind' for consciousness, thought and will, and 'heart' for emotions.

'Mind' is perhaps the closest modern term to the biblical usage of 'heart', and many passages in rsv are so translated (e.g. Ec. 1:17; Pr. 16:23). The 'heart' is, however, a wider term, and the Bible does not distinguish the rational or mental processes in the way that Gk. philosophy does.

C. Ryder Smith suggests that: 'The First great Commandment probably means "You shall love (*agapān*) the Lord your God with all your heart—that is with all your soul and with all your mind and with all your strength" (e.g. Mk. 12:30, 33).'

The heart of man does not always do that, however. It is not what it should be (Gn. 6:5; Je. 17:9), and the OT reaches its highest point in the realization that a change of heart is needed (Je. 24:7; Ezk. 11:19), and that, of course, is fulfilled in the NT (Eph. 3:17).

There are the exceptional people whose hearts are right with God (1 Ki. 15:14; Ps. 37:31; Acts 13:22), though it is obvious from what we know of David, the example referred to in the last passage, that this is not true in an absolute sense, but that repentance and conversion are still necessary (2 Ki. 23:25, of Josiah).

The right attitude of heart begins with its being broken or crushed (Ps. 51:17), symbolic of humility and penitence, and synonymous with 'a broken spirit' (*riah*). This brokenness is necessary because it is the hard or stony heart which does not submit to the will of God (Ezk. 11:19). Alternatively, it is the 'fat' or 'uncircumcised' heart which fails to respond to Yahweh's will (Is. 6:10; Ezk. 44:7).

Yahweh knows the heart of each one and is not deceived by outward appearance (1 Sa. 16:7), but a worthy prayer is, nevertheless, that he should search and know the heart (Ps. 139:23), and make it clean (Ps. 51:10). A 'new heart' must be the aim of the wicked (Ezk. 18:31), and that will mean that God's law has to become no longer merely external but 'written on the heart' and make it clean (Je. 31:33).

Thus it is that the heart, the spring of all desires, must be guarded (Pr. 4:23), and the teacher aims to win his pupil's heart to the right way (Pr. 23:26).

It is the pure in heart who shall see God (Mt. 5:8), and it is through Christ's dwelling in the heart by faith that the saints can comprehend the love of God (Eph. 3:17).

HEAVEN. Several words are translated 'heaven', but the only important ones are the Heb. *sāmāyim* and the Gk. *ouranos*. The former is plural, and the latter often occurs in the plural. But, just as in Eng., there does not seem to be any great difference between 'heaven' and 'the heavens'. The term is used of the physical heaven, especially in the expression 'heaven and earth' (Gn. 14:19; Mt. 5:18). Some suggest that the Bible writers thought of heaven in this aspect as solid, and rather like an inverted bowl (the 'firmament', Gn. 1:8). The sun makes his daily pilgrimage across it (Ps. 19:4-6), and there are windows through which the rain might descend (Gn. 7:11). Some Hebrews may well have held this idea, but it must not be forgotten that the men of the OT were capable of vivid imagery. It will never do to treat them as wooden literalists. The theological meaning of their language about heaven can be understood without recourse to such hypotheses.

Heaven is the abode of God, and of those closely associated with him. The Israelite is to pray, 'Look down from thy holy habitation, from heaven' (Dt. 26:15). God is 'the God of heaven' (Jon. 1:9), or 'the Lord, the God of heaven' (Ezr. 1:2), or the 'Father who is in heaven' (Mt. 5:45; 7:21, etc.). God is not alone there, for we read of 'the host of heaven' which worships him (Ne. 9:6), and of 'the angels in heaven' (Mk. 13:32). Believers also may look forward to 'an inheritance . . . kept in heaven' for them (1 Pet. 1:4). Heaven is thus the present abode of God and his angels, and the ultimate destination of his saints on earth.

Among many ancient peoples there was the thought of a multiplicity of heavens. It has been suggested that the NT bears witness to the rabbinic idea of seven heavens, for there are references to Paradise (Lk. 23:43), and to 'the third heaven' (2 Cor. 12:2; this was called Paradise on the rabbinic reckoning, cf. 2 Cor. 12:3). Jesus also is said to have passed 'through the heavens' (Heb. 4:14). These, however, are slender bases on which to erect such a structure. All the NT language is perfectly capable of being understood along the lines of heaven as the place of perfection.

Heaven comes to be used as a reverent periphrasis for God. Thus when the prodigal says 'I have sinned against heaven' (Lk. 15:18, 21), he means 'I have sinned against God'. So with Jn. 3:27, 'what is given him from heaven'. The most important example of this is Matthew's use of the expression 'the kingdom of heaven', which seems to be identical with 'the kingdom of God'.

Finally, we must notice an eschatological use of the term. In both OT and NT it is recognized that the present physical universe is not eternal, but will vanish away and be replaced by 'new heavens and a new earth' (Is. 65:17; 66:22; 2 Pet. 3:10-13; Rev. 21:1). We should understand such passages as indicating that the final condition of things will be such as fully expresses the will of God.

HEBER. 1. An Asherite, the son of Beriah (Gn. 46:17; Nu. 26:45; 1 Ch. 7:31-32; Lk. 3:35). 2. The husband of *Jael, known as Heber the Kenite (Jdg. 4:11, 17; 5:24), though he lived apart from the rest of the Kenites or nomad smiths. The context

suggests him to be a man of some importance. 3. A Judahite, the father of Soco (1 Ch. 4:18). 4. A son of Elpaal, a Benjaminite (1 Ch. 8:17). J.D.D.

HEBREWS. In the OT 'ibri is confined to the narrative of the sons of Israel in Egypt (Gn. 39-Ex. 10), the legislation concerning the manumission of Heb. servants (Ex. 21; Dt. 15; cf. Je. 34), the record of Israelite-Philistine encounter during the days of Samuel and Saul (1 Sa. 4; 13-14; 29), plus Gn. 14:13 and Jon. 1:9.

The patronymic 'Hebrew', 'ibri, used for Abraham and his descendants, can be traced to his ancestor Aber (Gn. 10:21ff.; 11:14ff.). Accordingly, this designation serves to tie the Abrahamic revelation to the covenant promise to Shem. The Noachic doxology in praise of the covenantal union of Yahweh with the family of Shem (Gn. 9:26) is echoed in Gn. 14 in the doxology of Melchizedek (vv. 19-20) celebrating God's covenantal blessing on Abraham the Hebrew, i.e. of the lineage of Shem. That the divine favour is shown to Abraham the Hebrew in a conflict which finds him in military alliance with the 'sons of Canaan' against the forces of an Elamite 'son of Shem' (cf. Gn. 10:15ff., 22) is indicative that the covenantal election of Shem announced by Noah was being more particularly realized through the Eberite (Hebrew) Semites (cf. Gn. 11:10-26).

The broad significance of 'ibri in Gn. 14:13 might also be plausibly assumed in the Gn. 39-Ex. 10 context (cf. especially Gn. 40:15; 43:32; Ex. 2:11). However, the usage there is perhaps not uniform, since there seems to be a simple equation of Hebrews and Israelites in Ex. 5:1-3 (cf. 3:18), for example, though in speaking of 'the God of the Hebrews' Moses possibly designates his brethren 'Hebrews' as being the Hebrews *par excellence*.

In view of this broader application of 'ibri, the appearance of non-Israelite or even non-Abrahamite 'ibrim need not come unexpectedly in non-biblical texts of the patriarchal and Mosaic ages. According to a popular theory, the *ḥa-BI-ru*, who figure in numerous texts of the 2nd millennium BC, are such 'ibrim. The term *ḥa-BI-ru* is usually regarded as an appellative denoting a social or professional group, but some find an ethnic component in their identity. However, the phonetic equation of 'ibri and *ḥa-BI-ru* is highly debatable. The *ḥa-BI-ru* presence in Canaan attested in the Amarna letters cannot be successfully identified with the Hebrew conquest.

On the basis of the interpretation of the term *ḥa-BI-ru* in Nuzi servant contracts as an appellative meaning 'foreign-servant', it has been contended that 'ibri in the legislation of Ex. 21:2 and Dt. 15:12, whose terms correspond closely to the stipulations of the *ḥa-BI-ru* contracts, denotes not a specific ethnic identity but the status of an alien and, therefore, that the 'ebed 'ibri is like the Nuzi *ḥa-BI-ru* a foreign servant. But that interpretation of *ḥa-BI-ru* in the Nuzi texts seems to be inaccurate, and certainly the biblical legislation is concerned with Israelite servants. Dt. 15:12 identifies the Heb. servant as 'your brother' (cf. v. 3; Je. 34:9, 14). It is objected that what Ex. 21 allows for an 'ebed 'ibri, Lv. 25 forbids for an Israelite; but what Ex. 21:2ff. allows is a voluntary perpetuation of an agreeable type of service, while Lv. 25:43-44 forbids compulsorily permanent, rigorous slavery. The Jubilee

HEBREWS

stipulation of Lv. 25 is a supplementary privilege granted the Heb. servant, which apparently yielded precedence to the servant's further right of voluntary lifelong service (Ex. 21:5-6).

It has been maintained that the *'ibrim* in I Sa. 13 and 14 are non-Israelite mercenaries (a role characteristic of the *ḥa-BI-ru*). But in 13:3-4 'the Hebrews' are obviously the same as 'all Israel'. Moreover, it is apparently the 'men of Israel' described in 13:6 to whom the Philistines refer in 14:11, designating them 'Hebrews'. There is similar identification of the *'ibrim* in 13:19-20 (cf. also 4:5-9). In 13:6-7 the *'ibrim* are not, as alleged, distinguished from the 'men of Israel'; rather, two groups of Israelites are described. V. 6 refers to those who had been excused from military service (2b) and later hid in the hills W of Jordan. V. 7 refers to certain Israelites, here called 'Hebrews', who had been selected by Saul (2a) but afterwards, deserting, sought refuge E of the Jordan (note the reduction in Saul's army: 13:2, 11, 15; 14:2). As for 14:21, even if, following evv, the *'ibrim* are regarded as having fought for the enemy, they might have been Israelite traitors. The original text of v. 21, however, supports the exegesis that certain Hebrews after a lapse of courage resumed their former active hostility against the Philistines by rejoining Saul. These *'ibrim* are those mentioned in 13:7a. Along with the men of Israel who had hidden in the hill-country of Ephraim (14:22; cf. 13:6) they returned to swell the ranks of Saul's unexpectedly triumphant army.

The OT usage of *'ibri* is thus consistently ethnic. Most occurrences being in discourse spoken by or addressed to non-Israelites, many would see a derogatory nuance in *'ibri*. The suggestion that *'ibri* is an alternative for 'Israelite' in situations where the person is not a free citizen on free soil is perhaps not unsuitable to any of the OT passages. But even if such a connotation were intended it would be neither primary nor permanent. In the NT, 'Hebrew' is found as an exclusivist term for Jews not decisively influenced by Hellenization (Acts 6:1), but also as a term distinguishing Jews in general from Gentiles (2 Cor. 11:22; Phil. 3:5).

HEBREWS, EPISTLE TO THE.

I. Outline of contents

The doctrinal theme: the superiority of Christ. 1:1-10:18

a. *The Person of Christ*, 1:1-4:13

(i) *Christ is superior to the Prophets* (1:1-4). The Prophets are here representative of OT revelation generally.

(ii) *Christ is superior to angels* (1:5-2:18). This is demonstrated by an appeal to various Scriptures, and Christ's apparent inferiority through suffering is then explained.

(iii) *Parenthesis* (2:1-4). Solemn warnings are given to those who neglect God's revelation.

(iv) *Christ is superior to Moses* (3:1-19). Since Moses was no more than a servant, Christ's Son-

ship establishes his superiority over the great law-giver. This superiority is also seen by the fact that Moses, unlike Christ, could not lead his people into rest.

(v) *Christ is superior to Joshua* (4:1-13). Although Joshua led the Israelites into their inheritance, a better rest, still future, remains for God's people.

b. *The work of Christ*, 4:14-10:18

This is particularly exemplified in his office as Priest.

(i) *His priesthood is divinely appointed* (4:14-5:10). In this section the sympathy of Christ as an essential qualification for the high-priestly office is emphasized.

(ii) *His priesthood is after the order of Melchizedek* (5:11-7:28). This section begins with a long digression consisting of rebuke, solemn warning and exhortation (5:11-6:8). Then the order of Melchizedek is explained. His priesthood is perpetual (7:1-3); it is anterior to, and therefore greater than, the levitical (7:4-10); it shows the imperfections of the levitical priesthood (7:11-19). Christ's priesthood is seen to be the perfect fulfilment of the order of Melchizedek because it was established by oath, is unaffected by death and unmarred by sin (7:20-28).

(iii) *His work is within the new covenant* (8:1-9:10). Every aspect of the old order has its counterpart in the new. There is a new sanctuary in which the Mediator of a new covenant has entered to minister.

(iv) *His work is centred in a perfect atonement* (9:11-10:18). Our High Priest offered a unique sacrifice (himself), and because this offering was made 'through the eternal Spirit' it is superior to the levitical offerings (9:11-15). The necessity of Christ's death is demonstrated by an illustration from a legal testament (9:16-22). His perfect sacrifice shows up the blemishes of the levitical system (10:1-10). His ministry, unlike the Aaronic, is complete and effective (10:11-18).

The practical application of the doctrinal theme. 10:19-13:25

a. *Exhortations to hold fast*, 10:19-25

b. *Parenthesis*, 10:26-37

(i) A serious warning against apostasy (10:26-31).

(ii) Encouragement based on the readers' former experiences (10:32-37).

c. *Examples from the past*, 11:1-40

The writer appeals to the heroes of faith in order to inspire his readers into heroic action.

d. *Advice concerning present sufferings*, 12:1-29

(i) Present trials to be regarded as chastisements (12:1-13).

(ii) Warnings based on the story of Esau (12:14-17).

(iii) A final contrast between the old and the greater glory of the new (12:18-29).

e. *Christian responsibilities*, 13:1-25

(i) Various exhortations affecting the social and personal life of the believer (13:1-8).

(ii) A concluding warning to the readers to go forth from the camp (of Judaism) and some final personal references (13:9-25).

II. Authorship and date

The question of authorship was of greater importance in the early church than it is today, for upon it depended the canonicity of the Epistle. Ancient tradition regarding authorship consisted of various opinions. Tertullian (*De Pudicitia* 20) attributed it to Barnabas, while Origen reports that many ancients held it to be by Paul, a view shared by Clement of Alexandria. The latter seems to have regarded it as written in the Heb. dialect but translated by Luke, and he appears to have received the tradition from his predecessor Pantaeus (the blessed presbyter). Origen mentions that some in his day ascribed it to Clement of Rome and others to Luke, but he himself regarded the thoughts as the apostle's though not the words. His own conclusion regarding authorship was that God alone knew for certain who wrote the Epistle, but this reserve was not followed by the later Alexandrians, who adhered so strongly to Pauline authorship that it became accepted as canonical not only in the E but also in the W, where earlier doubts concerning it had been strong. It was not, however, until the time of Jerome and Augustine that canonicity was settled in the W. The tradition of Pauline authorship was not again seriously challenged until the time of the Reformation, when Erasmus, Luther and Calvin all disputed it. Luther's idea that Apollos was the author has commended itself to many modern scholars, although none would regard it as any more than speculative. Grotius revived the early idea that Luke was the author, and many other suggestions have been offered by modern criticism. But it is significant that few modern scholars have attempted to support the theory of Pauline authorship. It falls down on difference of style, as Origen noted when he recognized the language as 'more Greek'; on different modes of composition, such as the absence of greetings, the manner of introducing exhortations, the method of argument, and the lack of Pauline signature; on the different historical situation in which the author places himself, for whereas Paul never tired of stating that he had received the gospel by revelation, this author makes clear his personal indebtedness to second-hand information (2:3-4); and on the difference of background clearly evident in the absence from this Epistle of any past spiritual crisis dominating the author's thought and in the absence of the familiar Pauline antitheses.

Two interesting alternative suggestions are those of Ramsay, who suggested that Philip wrote the Epistle from Caesarea after contact with Paul and sent it to the Jerusalem church, and of Harnack, who made out a case for Priscilla and Aquila as joint-authors. But at best these are only ingenious guesses, and modern criticism would do well to abide by Origen's caution and let the author remain incognito.

Although the information available for dating purposes is scanty, there is enough to enable the most probable period to be ascertained. Since it was cited by Clement of Rome (c. AD 95) it must have been produced some while before his time. In all probability it was written before AD 70, as no mention is made of the fall of Jerusalem and as the ecclesiastical situation suits an earlier date (cf. 13:7,17, where those in charge are vaguely called 'leaders'). Yet some interval is required after the foundation of the church addressed to allow for

the 'former days' of persecution to be regarded in retrospect. If the persecution was that under Nero a date about AD 67-8 would be required, but probably only general opposition is meant, in which case a date before AD 64 would be possible. Some scholars date the Epistle c. AD 80-90 on the strength of the author's use of the Pauline Epistles, but since the date of the collection of these Epistles is shrouded in mystery, and since the author does not show the influence of them all, little importance can be attached to this line of evidence.

III. Destination and purpose

The opening sentences of the Epistle give no indication of the location or identity of the readers, but the traditional title ascribes it simply 'To the Hebrews'. Although this was not part of the original text, it cannot be entirely ignored, since it may preserve genuine tradition. If that is so it must be Jewish Christians and not simply Jews who are intended. Yet a theory which has gained some support in modern times is that the title is no more than an inference from the substance of the Epistle and that it was really sent to Gentiles. Support for this notion is claimed from the consistent citations from LXX rather than the Heb. text of the OT and from the supposed Hellenistic background to which the writer appeals. The Epistle would then set forth the absolute character of Christianity to the Gentile world, showing it to supersede all other faiths, especially the mystery cults. But there is nothing in the Epistle which corresponds to mystery religions or to unbelief in religion as a whole.

Akin to this latter theory is the suggestion that the Epistle was an answer to a pre-Gnostic heresy of a type similar to that combated in Colossians. The passage showing Christ's superiority to angels (Heb. 1:4-14) would certainly give an effective answer to the tendency to angel-worship (cf. Col. 2:18). T. W. Manson went so far as to suggest that Apollos wrote this Epistle to the Colossian church to answer the two main tendencies of reliance on intermediaries (answered in chs. 1-4) and on ritual practices (chs. 5-10). Yet there are no evidences of pre-Gnostic tendencies in the situation underlying Hebrews such as clearly existed at Colossae.

The more widely-held view is that the Epistle was addressed to Jewish Christians to warn them against apostasy to Judaism. This is based on the serious exhortations in chs. 6 and 10, which presuppose that there is danger of a definite falling away which would amount to nothing short of crucifying the Son of God afresh (6:6) and of profanation of the blood of the covenant (10:29). Since the author is addressing those who have once tasted the goodness of God (6:4-5) and who are therefore in danger of forsaking Christianity for their old faith, and since the Epistle sets forth the superiority of Christianity to OT ritual, it is natural to suppose that Jewish Christians are in mind. The question then arises as to whether these Jewish Christians can be any more specifically defined, and various answers have been given to this inquiry: (a) that the Epistle was designed generally for all Jewish Christians; (b) that it was designed for a small house-community of Christians who had the capacity to be teachers (cf. 5:12) but who were not exercising it; and (c) that the readers were converted Jewish priests. The first view is difficult because of the personal notes in the conclusion (13:22-25) and the direct personal approach in many places in the body of the Epistle. The second

HEBREWS, EPISTLE TO THE

view is for this reason preferable, since a particular historic situation seems to be in mind, and the readers were evidently a group apart from the main body of the church, since 5:12 could not well apply to the whole community. Moreover, the language and concepts of the Epistle presuppose an educated group, and this lends support to the idea of an intellectual clique within the local church. As to the location of these Jewish Christians, various suggestions have been made, depending partially on theories of authorship. Palestine and Alexandria have both found supporters, the former particularly by those regarding Barnabas as the author, but Rome is more favoured, supported by the somewhat ambiguous allusion in 13:24 ('They who come from Italy send you greetings'). It is not without significance in this connection that the earliest evidence for the use of the Epistle is the writing of Clement of Rome. The third alternative mentioned above, *i.e.* that the readers were converted priests, has gained support from those who claim that the argument of the Epistle would be of great relevance to those who had just recently turned from Jewish ritual practices, and especially to those who had been connected with the Jerusalem Temple (Acts records that a great many of these people were converted through Stephen's ministry). It has been objected that no evidence of separate priestly communities exists from the primitive period, but nevertheless this Epistle may provide such evidence. There seems to be no conclusive reason against this theory, and it must remain an interesting conjecture.

Yet another view, a modification of the last, sees in the Epistle a challenge to restricted Jewish Christians to embrace the world mission. This is based on certain similarities between this Epistle and Stephen's speech, such as the conception of Christianity as superseding Judaism, and the definite call to the people addressed to leave their present position. But the resemblances must not be pressed too far, since Stephen's audience did not consist of Jewish Christians. But nevertheless it is possible that the apostasy danger was the forsaking of the divine world mission purpose. A group of Jewish Christians who regarded Christianity as little more than a sect of official Judaism would certainly have benefited from the arguments of this Epistle, and it seems possible that this view will gain more support.

IV. Canonicity

The Epistle had an interesting early history, with the West generally more reluctant to accept it than the East. Through the influence of Origen the eastern churches came to accept it, mostly on the strength of Pauline authorship. But although certain of the early western Fathers used it (Clement of Rome and Tertullian), it suffered a period of eclipse, until the time of Jerome and Augustine by whom it was fully accepted, and their opinion settled the matter for the western churches.

V. Background

An understanding of the author's milieu is essential for a right appreciation of his thought, and there has been a great deal of discussion on this subject. It may be dealt with under five headings.

a. Old Testament

Since the whole argument of the Epistle revolves around OT history and ritual, it goes without

saying that the author was deeply influenced by biblical teaching. In fact, it is to be noted that the basis of his approach is biblical and not Judaistic. His reverence for the sacred text is seen in the care with which he cites it, though always from LXX, in the manner in which he introduces his citations (*e.g.* the repetitive 'he says' in ch. 1) and in the strictly historical approach to OT history as contrasted with the contemporary allegorical tendencies. The author, well versed as he is in OT concepts, has clearly thought through the problem of the Christian approach to the OT, and his major emphasis is on the fulfilment in Christ of all that was adumbrated in the old order. This subject is further elaborated in the section on the theology of the Epistle, but for the present it should be noted that the author not only himself accepts the full authority of the Scriptures but clearly expects his readers to do the same.

b. Philonism

At the end of the 19th century a strong movement existed which assumed that the author's mind was so steeped in Philonic thought that it was only possible to understand his Epistle against the background of Philo's philosophical and allegorical expositions. The leading exponent of this view was E. Ménégoz, and one of his presuppositions was that a gap existed between this author's theology and that of Paul, and any similarities were clutched at to prove his indebtedness to Philo rather than to Paul. Yet some similarities cannot be denied. The notion of heaven as real and earth as only a place of shadows and the corresponding antitheses between the old covenant and the new show a similar tendency to Philo. Moreover, many words and phrases may be paralleled in the two authors, some of which occur nowhere else in the NT. C. Spicq finds the similarities reaching even to matters of style, schemes of thought, and psychology, and concludes that the author was a converted Philonist. Yet this opinion must be received with reserve, for the author differs from Philo on a number of important issues. His biblical exegesis is more akin to rabbinic methods than Philonic, his understanding of history is not, as Philo's, allegorical, and his idea of Christ as High Priest is far removed from Philo's abstract ideas of the Logos. A Christian Philonist would certainly transform his master's conceptions, but it is questionable whether the Christology of Hebrews stands in direct line of succession from Philo. The author may echo Philonic language and ideas, but his roots are without doubt elsewhere.

c. Primitive tradition

The question arises whether or not this Epistle is to be regarded as being a natural development from primitive Christian theology and whether it has any close connections with Pauline and Johannine theology, or even whether it stands as an unrelated attempt of an author to deal with the OT outside the main stream of development. Increasing interest is being shown in the early roots of the Epistle. The attempt to connect it with the catechesis of Stephen focuses attention on this, but further features from the primitive tradition may also be mentioned by way of illustration. The idea of the continuity between the old and new covenants, the interest in the earthly life of Jesus, the realization that his death must be interpreted, and the mixture of present and eschatological appeals, are all basic

to the primitive Christian tradition. The main theme of this Epistle, with its predominant interest in man's approach to God, could not fail to find roots in the earliest preaching and teaching. The author introduces many new features, such as Christ's enthronement and heavenly high priesthood, but he brings in nothing alien to that primitive tradition.

d. Paulinism

It was inevitable under the hypothesis of Pauline authorship which held the field for so long that the Epistle should be regarded as an aspect of Pauline theology, yet with the rejection of Pauline authorship an unfortunate reaction set in against any Pauline influence. Support for this extreme position has declined; but it is undeniable that there are some differences from Paul which would support the theory of the author's belonging to an independent stream of tradition, as, for instance, the different treatment of Christ's relation to the law, for there is an absence of that wrestling with the law which is so evident in Paul's experience. Yet the differences must not be stretched into contrasts, and it remains possible to conceive of the author as having been under Pauline influence while at the same time acknowledging his debt to other influences. Thus he becomes an independent witness, in the truest sense, of early Christian reflection upon the great themes of the gospel.

e. Johannine thought

Whether there are any close connections between the Johannine literature and this Epistle will clearly depend on the dating of each. It has been argued that Hebrews stands midway between Paul and John in the line of theological development (as, for instance, by R. H. Strachan, *The Historic Jesus in the New Testament*, 1931), but in view of the increasing emphasis which is being placed on the primitive character of the Johannine catechesis, to which the evidence of the Dead Sea Scrolls has lent some support, this notion of theological development must be modified. The main points of contact between Hebrews and the Johannine theology are the common use of antithetic parallelism, the similar conception of Christ's high-priestly work, the description of Christ as Shepherd, the allusion to the propitiatory work of Christ, and the attention given to the perfect character of that work.

To sum up, the author is no antiquary whose researches into the biblical revelation possess no relevance for Christians generally, whether ancient or modern, but a writer who presents a vital aspect of Christian thought, complementary to other streams of primitive tradition.

VI. Theology

All that precedes has prepared the way for the most important consideration, the theological contribution of the Epistle. The standpoint of the author is to regard Christianity as the perfect revelation of God. This meant that Christianity not only superseded all other faiths, including Judaism, but that it could not itself be superseded. Its salvation is eternal (5:9), so is its redemption, inheritance and covenant (9:12, 15; 13:20), while Christ's offering is described as being 'through the eternal Spirit' (9:14). This idea of the perfection and abiding character of Christianity pervades the whole Epistle and furnishes the key for the understanding of all its major themes.

a. Christology

The first part of the Epistle is devoted to demonstrating Christ's superiority to all other intermediaries, to prophets, angels, Moses, Joshua and Aaron, but the opening chapter strikes the positive and exalted note of his divine Sonship. This Sonship is conceived of as unique, for Christ is heir of all and agent of creation (1:2). He is even more closely related to God in 1:3, where he is described as the bursting forth of his glory and the express stamp of his nature, and these two statements taken together exclude the twin errors of difference of nature and lack of distinct personality. The pre-existence of Christ seems to be clearly in the author's mind. The further statement in 1:3 that after effecting purification the Son sat down on the right hand of the majesty on high links this opening Christological statement with the later theme of the Epistle, *i.e.* the processes of redemption. Although some have sought, mistakenly, to trace influences of the currently held enthronement ritual of a king who becomes a god, the idea of Christ's exaltation is firmly rooted in the primitive Christian tradition and is a close corollary to the ascension of Christ. When he comes to his later high priest theme the writer clearly intends to introduce his readers to an exalted Christ who no longer needs liturgical means for the purgation of sins.

The incarnation of the Son is many times mentioned. He was made lower than the angels (2:9) in order to taste death for everyone, he partook of the same nature as man (2:14), he was made like his brethren in every respect (2:17) and is capable of sympathizing with our weaknesses because he was in all points tempted as we are (4:15). These statements are a necessary prelude to the high priest theme, since he must be shown to be truly representative (*cf.* 5:1). The earthly life of Jesus comes into focus not only in his temptations (2:18; 4:15) but also in his agony of prayer (5:7), in his perfect obedience (5:8), in his teaching ministry (2:3) and in his endurance of hostility (12:3).

But it is the priestly office of Christ which dominates the author's thought. The Aaronic order was good as far as it went, but its inadequacy is brought out strikingly in contrast to the perfect priesthood of Christ. This leads the author to introduce the mysterious *Melchizedek theme before his expositions of the weakness of the levitical economy (5:6, 10; 6:20-7:19). There is no means of ascertaining whether the writer himself innovated this theme or received it from primitive tradition, as it is nowhere else elaborated in the NT. But Ps. 110 in which the theme occurs exerted a powerful influence on primitive Christian thought, mainly through our Lord's own use of it, and it is reasonable to suppose that this Psalm provided the author with his conception of a superior order of priesthood. Philo, it is true, had already identified Melchizedek with the Logos, but there is no need to appeal to Philo to account for the usage of this Epistle. Nor is it just to maintain that the Melchizedek exposition is entirely speculative and without any modern relevance, for although the method of argument in 7:1ff. borders on the allegorical, the author is clear on the fundamental Christian position that Christ must belong to a higher order than that of Aaron, and in introducing the Melchizedek motive he justifies his contention that, although Christ is not a Priest according to the Aaronic order, he still is a Priest, and not only a Priest but a King.

HEBREWS, EPISTLE TO THE

b. The work of Christ

Against the background of the weaknesses of the Aaronic order the author brings out the positive superiority of Christ's atoning work, and the major factors involved are: (i) the finality of Christ's offering (7:27; 9:12, 28; 10:10); (ii) the personal character of his offering in that he offered himself (9:14); (iii) the spiritual character of the offering (9:14); and (iv) the abiding results of his priestly work achieving as it did *eternal* redemption (9:12). The Aaronic order, with its constantly repeated ritual, could offer no comparison with this. Even the arrangement of furniture in the holy place and the holiest place is brought into the argument (9:1ff.) in order to contrast this with the greater and more perfect sanctuary into which Christ entered once for all by virtue of his own blood. The climax of the soteriological argument is essentially reached at 9:14, where Christ is said to have offered himself 'through the eternal Spirit', which brings into striking contrast the helpless and hapless victims of the Aaronic ritual and the deliberate self-offering of our High Priest. The practical application of all this is found in 10:19, where confidence of approach on the basis of Christ's high-priestly work is urged upon the readers, and this leads on to the mainly practical conclusion of the Epistle.

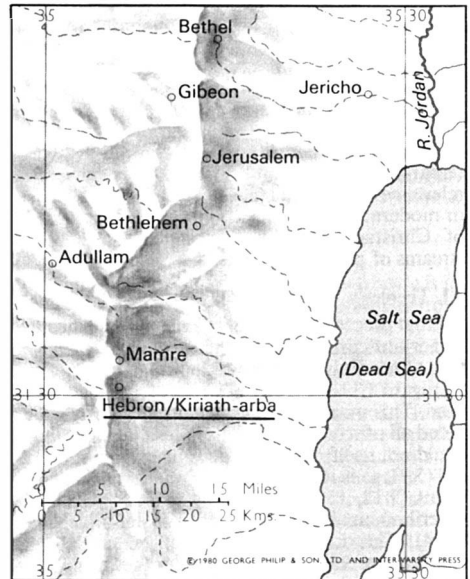

c. Other theological concepts

One of the great words of the Epistle is 'faith', but it has a different meaning from the Pauline concept. For this writer there is little of the dynamic concept of faith which accepts God's provision of salvation (though 10:22 approximates to this and requires to be so understood). In the use of the concept in the great gallery of heroes in ch. 11, the writer does not give a formal definition of faith but rather gives a description of some of its active qualities. It is essentially practical, comprising rather an approach to life than a mystical appropriation. In various ways the author makes clear the meaning of Christian *salvation*, which has deeply impressed him with its greatness (2:3). He makes use of Ps. 8 to introduce the fact that it is through humiliation that Christ gained the right to bring 'many sons to glory' (2:5-10); he conceives of salvation as deliverance from the power of the devil (2:14-15) and also depicts it as a rest into which believers enter as an inheritance (3:1-4:13). The processes of salvation are described as sanctification (*hagiasmos*, 12:14; cf. 2:11; 10:10, 29; 13:12) and perfection (*teleiōsis*, 7:11; cf. 11:40; 12:23).

HEBRON (Heb. *hebrōn*, 'confederacy'; cf. its alternative and older name Kiriath-arba, 'tetrapolis'), the highest town in Palestine, 927 m above the level of the Mediterranean, 30 km SSW of Jerusalem. The statement that it 'was built seven years before Zoan in Egypt' (Nu. 13:22) probably relates its foundation to the 'Era of Tanis' (c. 1720 BC). Abraham lived in its vicinity for considerable periods (*MAMRE); in his days the resident population ('the people of the land') were 'sons of Heth' (*HITTITES), from whom Abraham bought the field of Machpelah with its cave to be a family burying-ground (Gn. 23). There he and Sarah, Isaac and Rebekah, Jacob and Leah were buried (Gn. 49:31; 50:13). According to Josephus (*Ant.* 2. 199; 3. 305), the sons of Jacob, with the exception of Joseph, were buried there too. The traditional site of the Patriarchs' sepulchre lies within the great *Haram el-Halil*, the 'Enclosure of the Friend' (i.e. Abraham; cf. Is. 41:8), with its Herodian masonry. During the Israelites' wilderness wandering the twelve spies sent out to report on the land of Canaan explored the region of Hebron; at that time it was populated by the 'descendants of Anak' (Nu. 13:22, 28, 33) (*NEAEHL*, pp. 606-609). After Israel's entry into Canaan, Hoham, king of Hebron, joined the anti-Gibeonite coalition led by Adonizedek, king of Jerusalem, and was killed by Joshua (Jos. 10:1-27). Hebron itself and the surrounding territory were conquered from the Anakim by Caleb and given to him as a family possession (Jos. 14:12ff.; 15:13f.; Jdg. 1:10, 20). In Hebron David was anointed king of Judah (2 Sa. 2:4) and 2 years later king of Israel also (2 Sa. 5:3); it remained his capital for 7½ years. It was here too, later in his reign, that Absalom raised the standard of rebellion against him (2 Sa. 15:7ff.). It was fortified by Rehoboam (2 Ch. 11:10).

Hebron, burial-place of Abraham.

Hebron is one of the four cities named on royal jar-handle stamps found at *Lachish and other sites, which probably points to its importance as a major Judaeen administrative centre in the reign of Hezekiah. After the Babylonian captivity it was one of the places where returning exiles settled (Ne. 11:25; Kiriath-arba = Hebron). Later it was occupied by the Idumaeans, from whom Judas Maccabaeus captured it (1 Macc. 5:65). During the war of AD 66–70 it was occupied by Simon bar-Giora, but was stormed and burnt by the Romans (Jos., BJ 4. 529, 554).

Under the name of el-Ḥalīl it is one of the four sacred cities of the Muslims.

HEIFER (Heb. *'eḡlā*, 12 times; Heb. *pārā*, 'young cow', 6 times; Gk. *damalis*, 'tamed heifer', Heb. 9:13 only). Mixed with water, the ashes of an unblemished red heifer, burnt in its entirety 'outside the camp', imparted levitical purification (Nu. 19; Heb. 9:13). A heifer with a broken neck cleansed the nearest city from the blood-guiltiness of a corpse slain by unknown hands (Dt. 21:1–9). Jdg. 14:18; Je. 46:20; Ho. 4:16, etc., give interesting metaphorical usages.

HELAM. A city in Transjordan, probably the modern 'Alma, the location of the defeat of Haddadezer's Syrian forces, reinforced by Syrian troops from beyond the Euphrates, by David (2 Sa. 10:16f.), following the defeat of an Ammonite-Syrian alliance by David's captain Joab. The mention of the Gk. form, Eliam, constituting part of a place-name in Lxx of Ezk. 47:16, has led to a proposed alternative location on the border between Damascus and Hamath. Connection with Alema (1 Macc. 5:26) has also been suggested. R.A.H.G.

HELBON (Heb. *helbôn*, 'fat', 'fruitful'). A town mentioned in Ezk. 27:18 as trading wine to Tyre. This has been identified with the village of Khal-bun, 25 km N of Damascus. The author of the Genesis Apocryphon from Qumran wrote Helbon for the place-name *Hobah of Gn. 14:15, described as 'on the left hand of' or 'north of' Damascus, and this gives interesting evidence for thus identifying an otherwise unknown site. J.B.Tr.

HELDAI. Cf. Heled. (Heb. *heled* means 'duration of life'; cf. Arab. *halada* and *huldun*.)

1. In 1 Ch. 27:15, one of David's famous soldiers who was appointed over 24,000 in the 12th month. He was a Netophathite, and thus from Judah, from the stock of Othniel (cf. Jdg. 1:12–15). The 'Heled' of 1 Ch. 11:30 is doubtless the same person. He is called a free man (Heb. *gibbôr hayil*, v. 26), one of the commanders of the army. We must probably read 'Heled' and not 'Heleb' in 2 Sa. 23:29, and he may have been the same person as the above mentioned.

2. A Heldai is mentioned in Zc. 6:10 with Tobijah and Jedaiah. After they returned from the Exile, silver and gold was taken from them to make a crown for Joshua, the high priest. Heldai is called Helem in v. 14 (Heb.); this may have been a nickname or may be due to a scribal error. F.C.F.

HELEZ. The Heb. *heleş* may mean 'loins' or perhaps 'strength'.

1. One of David's heroes. The Helez of 2 Sa. 23:26 is probably the same as the one of 1 Ch. 11:27 and 27:10. The problem is that in 2 Sa. he is described as the Paltite (Heb. *paltî*, a man of *bêt pelet*, a place in Judah) and in 1 Ch. as the Pelonite (Heb. *p'lōnî* means 'any one'). We may have to change 'Pelonite' to 'Paltite' or to accept that Helez of 2 Sa. is not to be identified with the one of 1 Ch. 11 and 27. In 1 Ch. 27:10 he is called one 'of the sons of Ephraim'. It may be that as a descendant of Ephraim he was regarded as a Pelonite, 'one without any connection to Judah', but lived in Beth Pelet.

2. The son of Azariah, a descendant of Judah (1 Ch. 2:39). F.C.F.

HELKATH. In the border-territory of Asher (Jos. 19:25) and a levitical city (Jos. 21:31). 1 Ch. 6:75 gives Hukok as a variant for Helkath. The exact location in the Kishon valley is disputed; a likely site for it is Tell el-Harbaḡ nearly 10 km SE of Haifa (A. Alt, *Palästina-jahrbuch* 25, 1929, pp. 38ff.), or perhaps even better, Tell el-Qasis (or Kussis) 8 km SSE of Tell el-Harbaḡ (Y. Aharoni, *IEJ* 9, 1959, pp. 119–120). Helkath is probably the *hrkt* in topographical lists of the pharaoh Tutmosis III, c. 1460 BC. K.A.K.

HELKATH-HAZZURIM (Heb. *helqat hassurim*, 'field of flints' or 'field of (sword)-edges'). This is the name given to the place in Gibeon where there was a tournament between the champions of Joab and Abner, which led on to a battle (2 Sa. 2:16). Other meanings conjectured include 'field of plotters', based on the LXX *meris tōn epiboulōn*, 'field of sides' and 'field of adversaries'. (Cf. S. R. Driver, *Notes on the Hebrew Text of the Books of Samuel*, 1913.) J.G.G.N.

HELL. 'Hell' in the NT renders the Gk. word transliterated as 'Gehenna' (Mt. 5:22, 29–30; 10:28; 18:9; 23:15, 33; Mk. 9:43, 45, 47; Lk. 12:5; Jas. 3:6). The name is derived from the Heb. *gē(ben)(b'nē) hinnōm*, the valley of (the son[s] of) Hinnom, a valley near Jerusalem (Jos. 15:8; 18:16) where children were sacrificed by fire in connection with pagan rites (2 Ki. 23:10; 2 Ch. 28:3; 33:6; Je. 7:31; 32:35). Its original derivation is obscure, but Hinnom is almost certainly the name of a person. In later Jewish writings Gehenna came to mean the place of punishment for sinners (*Assumption of Moses* 10:10; 2 Esdras 7:36). It was depicted as a place of unquenchable fire—the general idea of fire to express the divine judgment is found in the OT (Dt. 32:22; Dn. 7:10). The rabbinic literature contains various opinions as to who would suffer eternal punishment. The ideas were widespread that the sufferings of some would be terminated by annihilation, or that the fires of Gehenna were in some cases purgatorial (*Rosh Hashanah* 16b–17a;

HELL

Baba Mezi'a 58b; Mishnah *Eduyoth* 2. 10). But those who held these doctrines also taught the reality of eternal punishment for certain classes of sinners. Both this literature and the Apocryphal books affirm belief in an eternal retribution (cf. Judith 16:17; *Psalms of Solomon* 3:13).

The teaching of the NT endorses this past belief. The fire of hell is unquenchable (Mk. 9:43), eternal (Mt. 18:8), its punishment is the converse of eternal life (Mt. 25:46). There is no suggestion that those who enter hell ever emerge from it. However, the NT leaves the door open for the belief that while hell as a manifestation of God's implacable wrath against sin is unending, the existence of those who suffer in it may not be. It is difficult to reconcile the ultimate fulfilment of the whole universe in Christ (Eph. 1:10; Col. 1:20) with the continued existence of those who reject him. Some scholars have contended that an eternal punishment is one which is eternal in its effects; in any case eternal does not necessarily mean never-ending, but implies 'long duration extending to the writer's mental horizon' (J. A. Beet). On the other hand Rev. 20:10 does indicate conscious, never-ending torment for the devil and his agents, albeit in a highly symbolic passage, and some would affirm that a similar end awaits human beings who ultimately refuse to repent. In any case, nothing should be allowed to detract from the seriousness of our Lord's warnings about the terrible reality of God's judgment in the world to come.

In Jas. 3:6 Gehenna, like the bottomless pit in Rev. 9:1ff.; 11:7, appears to be the source of evil on the earth.

NT imagery concerning eternal punishment is not uniform. As well as fire it is described as darkness (Mt. 25:30; 2 Pet. 2:17), death (Rev. 2:11), destruction and exclusion from the presence of the Lord (2 Thes. 1:9; Mt. 7:21–23), and a debt to pay (Mt. 5:25–26).

In 2 Pet. 2:4 only, we find the verb *tartaroō*, translated in rsv 'cast into hell', and rendered by the Pesh. 'cast down to the lower regions'. *Tartaros* is the classical word for the place of eternal punishment but is here applied to the intermediate sphere of punishment for fallen angels.

D.K.I.

HELLENISTS. Gk. *hellenistai*, people, not themselves Greeks (*hellēnes*), who 'hellenized', i.e. spoke the Greek language (*hellenisti*, Acts 21:37, etc.) and otherwise adopted the Greek way of life (*hellenismos*, 2 Macc. 4:10).

The earliest occurrence of the word in Greek literature is in Acts 6:1, where it denotes a group of Jewish Christians in the primitive church of Jerusalem, distinguished from the 'Hebrews' (*hebraioi*), who were probably Aramaic-speaking. The seven almoners, including Stephen and Philip, appointed in response to the Hellenists' complaint that the 'Hebrew' widows were being favoured over theirs in the distribution of charity from the common fund, all appear by their names to have been Hellenists (Acts 6:5). Many of the Hellenists would have connections with the Diaspora, whereas most of the Hebrews would be Palestinian Jews. The line

of demarcation between Hebrews and Hellenists cannot have been hard and fast, for many Jews were bilingual. Paul, for example, who spoke Greek habitually (as might be expected in a native of Tarsus), nevertheless calls himself 'a Hebrew born of Hebrews' (Phil. 3:5; cf. 2 Cor. 11:22). Perhaps the determinant factor with such a person was whether the services in the synagogue which he attended were conducted in Greek (cf. Acts 6:9) or in Hebrew.

To judge from Stephen and Philip, the Hellenists in the Jerusalem church were more forward-looking than the Hebrews, in teaching and practice alike. In the persecution which broke out after Stephen's death, it was mainly the Hellenists who were scattered, propagating the gospel wherever they went. Attempts to link these Hellenists with Essenes or with Samaritans have not been successful (apart from their antecedent improbability).

The Hellenists of Acts 9:29 were members of one or more Greek-speaking synagogues in Jerusalem.

In Acts 11:20 the mss are divided between 'Hellenists' (*hellenistas*) and 'Greeks' (*hellēnas*), with the weight of evidence favouring the former. Whichever reading be preferred, the context makes it plain that the reference is to Gentile residents of Antioch, to whom Christian visitors, 'men of Cyprus and Cyrene', took the initiative in preaching the gospel, whereas their associates on first coming to Antioch had preached it 'to none except Jews' (Acts 11:19). If they were not Greeks (*hellēnes*) by origin, they could have belonged to other ethnic groups in Antioch which had adopted Greek language and culture.

F.F.B.

HEMAN (Heb. *hēmān*, 'faithful'). 1. One of the sages whom Solomon excelled in wisdom (1 Ki. 4:31). Said to be a son of *Mahol; but 1 Ch. 2:6 calls him a son of Zerah, a Judahite.

2. A Kohathite Levite, son of Joel, one of David's leading singers (1 Ch. 6:33; 15:17, 19; 16:41–42; 25:1, 4–6; 2 Ch. 5:12; 35:15). Probably the 'sons of Heman' in 1 Ch. 25:4 are really the titles of parts of a prayer or anthem, the singers receiving names from their parts (cf. H. L. Ellison in *NBCR*, 1970, pp. 281f.; W. R. Smith, *The Old Testament in the Jewish Church*, p. 143 n.).

3. The Ezrahithe named in the title of Ps. 88. Probably the same as 1.

J.G.G.N.

HEN (Heb. *hēn*, 'favour'). One of the men who were to receive a symbolical crown (Zc. 6:14), this

may be a figurative name for Josiah who had earlier (6:10) been similarly described as 'the son of Zephaniah'.

J.D.D.

HENA. A city whose god, the Assyrians boasted, could not save it (2 Ki. 18:34). It is identified by LXX with Ana on the Euphrates. Hena and Ivvah have been identified as Arab. star names, and consequently taken as the names of deities. This is, however, unlikely, as the latter is almost certainly a place-name identical with Avva (2 Ki. 17:24, 31).

M.A.M.

HERALD. 1. Aram. *kārōz* occurs only in Dn. 3:4 with reference to the official who relayed Nebuchadrezzar's commands. *kārōz* may be derived from Old Persian *xrausa* (KB), 'caller', or is related to Hurrian *kirezzi*, 'proclamation'. The causative form of the associated verb *krz*, 'made a proclamation', occurs in Dn. 5:29 (see A. Shaffer, *Orientalia* 34, 1965, pp. 32-34). 2. Heb. *m'bašeret* (Is. 40:9; masculine. Is. 41:27), 'bringing good news', is rendered in rsv as 'herald of good tidings'. The verbal form is used elsewhere in Is. in the same sense of 'preaching the deliverance of' Yahweh (Is. 52:7; 61:1).

3. Gk. *kēryx* is translated 'herald' by rsv in 2 Pet. 2:5, but 'preacher' in 1 Tim. 2:7; 2 Tim. 1:11.

W.O.

A.R.M.

HERBS AND SPICES. Here considered in the popular sense of edible culinary, or sometimes medicinal, plants, although strictly a herb is a non-woody plant with seasonal foliage and varying expectation of life in the root. This selection of species mentioned in the Bible is complementary to the articles on *plants, *trees, *cosmetics and individual subjects.

In the OT *dešē* normally denotes grass, *hāšir*, *'ēšēb*, and the less common *yārāq* (Dt. 11:10; 1 Ki. 21:2; Pr. 15:17) may mean grass, and also herbs or vegetables. *'ōrōt* (2 Ki. 4:39) is talmudically rendered 'garden-rocket' or 'colewort' (*Eruca*), precision perhaps exceeding the evidence (*Yoma* 18b). Is. 26:19 may speak of the dew of light (rsv) rather than the dew of herbs (av). The NT uses *chortos* for pasturage, *lachanon* for herbs in the popular sense.

Spices are aromatic vegetable substances, highly esteemed by ancient Near Eastern peoples. Spice caravans pioneered the trading routes from N India to Sumeria, Akkad and Egypt at a very early period, and subsequently these routes became an important factor in cultural exchanges. While many spices were brought to Palestine from Mesopotamia and India, a number of those in common use were the product of the country itself. In OT times the Palestinian spice trade was carefully protected. Solomon derived considerable revenue by exacting tolls of the caravans passing through his realm.

Herbs and spices such as cummin, dill, cinnamon and mint were employed in the preparation of food (Ezk. 24:10) and the flavouring of wines (Ct. 8:2). The manufacture of the sacred *incense necessitated the use of frankincense, stacte, galbanum, onycha and sweet cane (Ex. 30:34), while substances such as cassia, aloes and spikenard

were used as unguents for cosmetic purposes (Est. 2:12; Ct. 4:14; Mk. 14:3; Jn. 12:3).

When bodies were being prepared for burial it was customary for spices to be placed in the grave-clothes as a form of embalming. They included mixtures of myrrh and aloes (Jn. 19:39), or, more generally, 'spices and ointments' (Lk. 23:56). While they did not significantly inhibit putrefaction, they served as deodorants and disinfectants.

Aloes (Heb. *"hālīm* in Pr. 7:17; Nu. 24:6, 'lign aloes'; *"hālōt* in Ps. 45:8; Ct. 4:14). Probably the modern eaglewood (*Aquilaria agallocha*) found today in E Bengal, Malaya and parts of China. From it was derived a precious spice used in biblical times for perfuming garments and beds. The perplexing question of the reference in Nu. 24:6 may suggest that the tree (or one similar) grew in the Jordan valley, but Balaam need not have actually seen the tree of which he spoke.

Aloes in Jn. 19:39 refers to a totally different liliaceous plant *Aloe barbadense*, also known as *A. vera*, wild in the Yemen and now widely naturalized. The juice of its fleshy, sword-like leaves is bitter and was used for embalming.

Balm (Heb. *š'ri*, *š'ri*; LXX *rhētinē*). This product of *Gilead, a somewhat vague geographical area, was exported to Egypt (Gn. 37:25; 43:11) and to Tyre (Ezk. 27:17). Celebrated for healing properties (Je. 46:11) and often used for cosmetic purposes, it was used also to symbolize deliverance from national distress (Je. 8:22; 51:8). It was probably an aromatic gum or spice, but the original meaning of the word is not clear and it cannot now be identified with any plant in Gilead, despite the claims made for a similarly-named substance prepared by the monks of Jericho from the fruit of the *zaqqūm* (*Balanites aegyptiaca*). Some understand the *š'ri* of Gn. 37:25 to be gum mastic, a product of the shrub *Pistacia lentiscus* which, common in Palestine for healing purposes, is used by the Arabs in flavouring coffee and sweets, and as a chewing-gum. Classical authors applied the name 'balm of Gilead' to what is now known as Mecca balsam or stacte (*Commiphora gileadensis*), still imported into Egypt from Arabia. The gum (Heb. *n'kōl*, 'spicery' av) of Gn. 37:25; 43:11 could have been the exudate from the stems of the small prickly shrub *Astragalus gummifer*. It grows on the arid slopes of Iran and Turkey and belongs to the pea family.

Bitter herbs (Heb. *m'rōrīm*; Gk. *pikrides*). A salad composed of herbs constituted part of the Passover ordinance (Ex. 12:8; Nu. 9:11), and ordinarily was eaten after the Passover lamb had been tasted. The bitter herbs were not named individually, but are identified in the Mishna as lettuce, chicory, eryngo, horseradish and sow-thistle, although all these may not have been available in biblical times. Though *m'rōrīm* was used elsewhere of 'bitterness' (cf. La. 3:15), the Passover herbs, being easily prepared, reminded the Israelites of their haste in leaving Egypt, not their bitter persecution there.

Black cummin (Heb. *qesah*: 'fitches' av, 'dill' rsv). *Nigella sativa*, or nut-meg flower, is an annual closely related to the ornamental love-in-the-mist, but with greenish-blue flowers and black seeds. Its dry fruits were beaten with light sticks (Is. 28:27) to avoid damaging the aromatic, oily seeds, which were a favourite condiment of the ancient Greeks and Romans and are still used for seasoning bread and as a carminative. See also **Dill** below.

HERBS AND SPICES

Cassia (Heb. *giddā*, Ex. 30:24; Ezk. 27:19; *q' s'f' ol*, Ps. 45:8). These two words, identified as similar in the Pesh. and the Targ., have traditionally been considered to refer to the bark of *Cinnamomum cassia*. But, since this is a Far Eastern tree, it is unlikely to have been the fragrant aromatic substance used in the anointing oil of Ex. 30:24. The word 'cassia', like other plant products (e.g. ebony), was probably applied in ancient times to one substance and the application later transferred to another more easily obtainable product having properties similar to or better than the original. Cassia and cinnamon were perfumes used at Roman funerals by which time the E trade routes were established and they used the products at present known by these names.

Cinnamon (Heb. *qinnāmōn*; Gk. *kinnamōmon*). Traditionally considered to be the product of *Cinnamomum zeylanicum*, a plant of the laurel family cultivated in Ceylon and Java, but possibly cinnamon, like cassia, was obtained from an as yet uncertainly identified plant more readily available to the Israelites in Sinai. Used as one of the perfumes of the 'holy anointing oil' (Ex. 30:23), and for beds (Pr. 7:17), it was highly prized in Solomon's day (Ct. 4:14), and was listed as one of the valuable commodities of 'Babylon the Great' (Rev. 18:13).

Coriander (Heb. *gaḏ*, Ex. 16:31; Nu. 11:7). Indigenous to the Mediterranean area, this small umbelliferous annual (*Coriandrum sativum*) is known to have been used as early as 1550 BC for culinary and medicinal purposes. Its aromatic seed, to which the wandering Israelites likened *manna, is grey-yellow in colour, enclosed in a spherical fruit 4 mm in diameter.

Cummin (Heb. *kammōn*; Gk. *kyminon*). An aromatic seed from *Cuminum cyminum*, a plant indigenous to W Asia and cultivated from the earliest times. Resembling the caraway in taste and appearance, it is used to flavour dishes, particularly during fasts, and is said to have medicinal properties. The plant is still threshed with sticks to preserve the small brittle seeds which would be crushed by a wheel (Is. 28:27). The scribes and Pharisees, scrupulously paying tithes of cummin, were charged by Jesus with neglecting weightier matters (Mt. 23:23).

Dill (Gk. *anēthon*, 'anise' av, Mt. 23:23). An annual umbelliferous plant (*Anethum graveolens*) with finely divided leaves and small greenish yellow flowers. The seeds and leaves were widely used for culinary and medicinal purposes in antiquity. See **Black cummin** above for 'dill' of Is. 28:27.

Henna. A cultivated shrub (*Lawsonia inermis*; Heb. *kōpēr*, Ct. 1:14; 4:13, 'camphire' av) which favours warm conditions such as prevail at Ein Gedi where Solomon had vineyards. Its fragrant white blossoms were given between friends; its pulverized leaves were made into a paste as a cosmetic by women in ancient times to impart a yellow dye to skin, especially the palms of the hands, and the men's beards, even the manes and tails of horses. Any women thus adorned who fell captive to the Hebrews were required to remove all traces of the dye (Dt. 21:11–12). The orange or bright yellow colour probably had pagan associations.

Mint (Gk. *hēdyosmon*, Mt. 23:23; Lk. 11:42). Many species of the mint family (Labiatae) are fragrant, but the most likely one to be used was a species of *Mentha*, probably the horse-mint (*M. longifolia*). It is a perennial about 40 cm high with mauve flowers in whorls. The characteristic essen-

tial oils present in mints make the herbs a useful condiment. NT references, however, merely point out the scrupulosity of the Pharisees, who tithed even the commonest garden herbs.

Myrrh (Akkad. *murru*; Heb. *mōr*). The resinous exudate from incisions on the stems and branches of a low shrubby tree, either *Commiphora myrrha* (formerly *Balsamodendron myrrha*) or the closely related *Commiphora kataf*. Both species are native to S Arabia and adjacent parts of Africa. The gum oozes from the wounds as 'tears' which harden to form an oily yellowish-brown resin.

Myrrh was an ingredient of the holy anointing oil (Ex. 30:23–33). It was prized for its aromatic qualities (Ps. 45:8; Pr. 7:17; Ct. 3:6; 4:14; 5:5, 13), and used in female purification rites (Est. 2:12), as well as in cosmetic preparations. Myrrh was presented to the infant Jesus by the magi (Mt. 2:11); it formed part of an anodyne offered to him on Calvary (Mk. 15:23), and was one of the spices employed at his burial, together with aloe, as a form of embalming (Jn. 19:39).

The 'myrrh' of Gn. 37:25; 43:11 (Heb. *lōt*) carried by Ishmaelite traders to Egypt was probably a ladanum resin obtained from the rock roses *Cistus laurifolius* or *C. creticus* (= *C. villosus*). They are rounded evergreen bushes sticky to the touch, with large white or pink rose-like flowers.

Rue (Gk. *pēganon*, Lk. 11:42). A perennial herb up to 80 cm high, shrubby at the base, with grey-green leaves emitting a strong odour. *Ruta chalepensis* grows in rocky places in Palestine, and the similar *R. graveolens* is S European, having been in cultivation since ancient times. Rue was highly prized for its medicinal values, having alleged disinfectant and antiseptic properties, and for flavouring food. Christ criticized the Pharisees for their meticulous legalism in tithing it while neglecting more important matters.

Saffron (Heb. *karkōm*, LXX *krokos*, Ct. 4:14). This expensive substance is produced from the flowers of *Crocus sativus*, a native of Greece and flowers of *Crocus sativus*, a native of Greece and Asia Minor. Only the orange styles and stigmas are collected, dried and packed. In antiquity saffron was used for dyeing and colouring foodstuffs. It was also a therapeutic agent, being used as an emmenagogue, stimulant and antispasmodic. The ancient Egyptians employed a different plant, safflower (*Carthamus tinctorius*), which yields a yellow dye similar to saffron for colouring the grave-clothes of mummies.

Spikenard (Heb. *nērd*; Gk. *nardos*). The fragrant essential oil referred to as a perfume in Ct. 1:12; 4:13f. is very likely to be the same as the *lardu* of Assyro-Babylonian inscriptions, which was obtained from the camel-grass, *Cymbopogon schoenanthus*, common in the deserts of Arabia and N Africa.

Spikenard of the NT (Mk. 14:3; Jn. 12:3) was described as 'pistic', an obscure term probably meaning 'genuine'. This perfume is considered to have been obtained from the essential oil in the roots of *Nardostachys jatamansi*, a more pleasantly scented relative of the valerian. It is native of the Himalayas and is still used for the hair.

Stacte (Heb. *nāṭāp*; Gk. *staktē*). One of the ingredients of the sacred incense (Ex. 30:34). The Heb. name indicates 'dropping', from which is implied its origin as an exudate in the form of drops.

Two plants are possibilities: the balm-of-Gilead (*Commiphora gileadensis*), a native of S Arabia in spite of its name, and storax (*Styrax officinale*) of the Palestinian hills. The balm-of-Gilead is also known as opobalsam and is a much-branched bush less than the height of a man, with small, three-foliolate leaves. The storax is a small tree with white flowers. The resin is obtained from both by making incisions in the branches. Another suggestion, *Liquidambar orientalis*, also known as storax, is not as likely since it is a tree of Cyprus, Rhodes and Turkey.

Sweet cane (Heb. *qāneh*, Is. 43:24; Je. 6:20). Whole dry rhizomes of sweet flag (*Acorus calamus*), a marsh plant of the arum family, were traded as sweet cane in ancient times for use as a tonic and stimulant. Native of temperate Asia, it has been introduced into a wider area. The sugar cane, with which sweet-cane has also been identified, actually spread E after OT times.

BIBLIOGRAPHY. See *PLANTS. F.N.H. *et al.*

HERESY. The Gk. word *haireisis* properly denotes 'choice', and this is the meaning which it always bears in the LXX; in classical authors, however, it can refer to a philosophical school which the individual chooses to follow. Similarly, the NT uses the word to denote a 'party', with the suggestion of self-will or sectarian spirit; but it must be noted that none of the parties thus described is in a state of schism from its parent body. The Sadducees (Acts 5:17) and the Pharisees (Acts 15:5; 26:5) form sects within the fold of Judaism; and the same word is used to describe Christianity as seen from outside (Acts 24:5, 14; 28:22). Josephus, however, uses the same term to describe the Essenes as well, who were in schism (*Ant.* 13. 171; 18. 18–22). When parties appear within the church they are called 'heresies' (1 Cor. 11:19, where Paul seems to imply that, though bad, they have the good result of making it clear who are the true Christians). Such divisions are regarded as a work of the flesh (Gal. 5:20), and primarily as a breach of mutual charity, so that the heretic, *i.e.* the man who stubbornly chooses to form or follow his own group, is to be rejected after two admonitions (Tit. 3:10).

The only NT use of 'heresy' in the sense of opinion or doctrinal error occurs in 2 Pet. 2:1, where it includes a denial of the Redeemer. Among incipient heresies mentioned in the NT, the most prominent are: Gnosticism of a Jewish type (Col. 2:8–23) and Docetism (1 Jn. 4:2–3; 2 Jn. 7).

G.S.M.W.
R.T.B.

HERMAS. One of a group of Christians greeted, some by name, in Rom. 16:14. They apparently belonged to a single community, perhaps a house-church. The name is a fairly common diminutive for a number of compound names. Origen's suggestion that the author of *The Shepherd of Hermas* (*PATRISTIC LITERATURE) is indicated here has nothing to commend it.

A.F.W.

HERMENEUTICS. This term, from Gk. *hermēneūō* ('interpret'), is used to denote (a) the study

and statement of the principles on which a text—for present purposes, the biblical text—is to be understood, or (b) the interpretation of the text in such a way that its message comes home to the reader or hearer. In our own day this aim has been pursued by means of an existential interpretation of the text. For example, while the understanding of the parables of Jesus is greatly aided at one level by an examination of the local and contemporary setting (as in J. Jeremias, *The Parables of Jesus*, 1954), their relevance to readers today has been brought out by existential interpretation (as in G. V. Jones, *The Art and Truth of the Parables*, 1964, or E. Linnemann, *The Parables of Jesus*, 1966). There is a place for both levels of interpretation, but without the prior historical exegesis the existential hermeneutic lacks any anchorage. The task of existential hermeneutics has been seen as the re-establishment, for today's reader of (say) the parables, of that common understanding with his hearers which Jesus established when he first told them. (*INTERPRETATION, BIBLICAL.)

Woodbridge (eds.), *Hermeneutics, Authority and Canon*, 1986.

F.F.B.

HERMES. Originally the spirit inhabiting the *herma* or cairn, set up as a guide-mark or boundary. Hence the doorside *herms*, roughly carved phallic stones of Athens, and the god's function as guide of living and dead, as patron of road-users (including footpads), and as Zeus' attendant and spokesman (Acts 14:12). (The cultic association of Zeus and Hermes at Lystra is illustrated in that part of Asia Minor by the legend of Pilemon and Baucis, preserved by Ovid, and by inscriptions in which the two deities appear together. The description of Hermes as 'the chief speaker' in Acts 14:12 is paralleled by Iamblichus' description of him as 'the leader of the utterances'.) Anthropomorphic myth made him the son of Zeus and Maia, heaven's swift messenger, patron of commerce, eloquence, literature and youth. Latinized as Mercurius (Mercury).

F.F.B.

HERMETIC LITERATURE. A collection of writings associated with the name of 'Hermes Trismegistos' ('Thrice-great Hermes').

I. Origin and character

The writings represent a coalescence of Egyptian and Greek modes of thought, often transfused with mystical personal religion. Hellenistic syncretism identified Thoth, the Egyptian scribe of the gods, with the Greek Hermes, whose functions were not dissimilar. In this way the name of the ancient and wise 'Hermes Trismegistos' became attached to much of the magical and astrological lore of the Egyptian temples, which was now seasoned with Greek science and presented in a revelatory form. The surviving literature of this type may go back to the early 2nd century BC.

HERMETIC LITERATURE

More permanent interest attaches, however, to the more recognizably philosophical and religious treatises in Greek, of diverse but unknown authorship, in which Hermes, Tat (really a by-form of Thoth, but regarded as distinct), Asclepius and others appear as teacher and disciples. The treatises are usually dated in the 2nd and 3rd centuries AD: some may be slightly earlier. The main extant items are a body of eighteen treatises (of which one has been artificially constructed from fragments) preserved in Christian manuscript tradition, and a long tractate dedicated to Asclepius, surviving in a Latin translation, and in a Coptic version in the Nag Hammadi library (*CHENOBOSKION). In addition there are some thirty Hermetic fragments in the *Anthology* of Stobaeus, and others in other early writers. Three other tractates included in Codex 6 of the Nag Hammadi library in addition to the Coptic version of *Asclepius* 21–29 are *Authoritative Teaching*, *The Discourse on the Eighth and Ninth*, and *The Prayer of Thanksgiving*. *Asclepius* and *The Discourse* both specifically mention Hermes, but all contain similarities with the previously known Hermetic documents. *The Prayer*, although very short, is valuable for the light it sheds on Hermetic cultic practices.

Some of the tractates are in the form of epistolary discourses: others are Socratic dialogues. The most famous, the *Poimandres*, is a vision reminiscent of that of Hermas (*PATRISTIC LITERATURE).

II. Contents

In some ways the *Poimandres* may be taken as a typical Hermetic work. In it *Poimandres* (perhaps from the Coptic *p-emi-n-re*, 'knowledge of the [sun] god'), described as 'the Mind (*Nous*) of the Sovereignty', offers to reveal to Hermes what he longs to know: 'the things that are, and to understand their nature, and to know God'. There follows the story of the creation of the universe and the fall of man. The former has elements drawn from Gn. 1; the latter describes how archetypal man, God's image, entered into a fatal embrace with Nature, and accordingly became a mixed being, both mortal and immortal. Escape from the dead hand of Nature is, however, possible for those who repent and abandon corruption, till the ascent of the soul is completed at death, when body, passion, feeling are utterly surrendered, and man enters into God.

Not all the *Hermetica* are as coherent, but the aim expressed and the outlook reflected in the *Poimandres* are generally dominant. Knowledge is the goal; the mortal body the curse; regeneration (enthusiastically described in Treatise 13), the purification of the soul from the taint of matter, the *summum bonum* the soul's final liberation and absorption into God. There is a warm strain of devotion: the appeal to heedless humanity in the *Poimandres* and the still more impassioned cry of Treatise 7 are moving; and the occasional hymns are fervent and rapturous.

To this mystical piety is added rather shopsoiled philosophy, partly Platonic, partly Stoic in origin, with a free use of cosmogonic myth. Judaic sources are under tribute, and there are echoes of the language of the Lxx. Indeed, it is arguable that Jewish influences originally stimulated religion of this type. The various elements do not always cohere: there are inconsistencies and contradictions of thought within the corpus. The whole tendency is monotheistic, though not polemically

so. Of ceremony or sacrament little is said. Although there is no evidence of a Hermetic 'church', there is a reference in the Nag Hammadi tractate, *On the Eighth and the Ninth*, to a brotherhood consisting of Hermetic saints, and in the *Prayer* to cultic kissing and eating of food without blood.

III. The *Hermetica* and the Bible

The Hermetic use of the OT, as already noted, is undoubted. The relationship between Hermetic religion and the NT is more variously assessed. The Christian father Lactantius, who thought of 'Hermes' as writing in remote antiquity, delightedly notes his monotheism and his address of God as 'Father' (*Divine Institutes* I. 6). More recent writers point to subtler parallels of thought and language with the NT, though not all of equal significance. The Logos in Hermetic thought, for instance, is both cosmic and an activity of the soul: but not personal. A statement like 'Thou who by a word hast constituted all things that are' (*Poimandres* 21) need have no other background than Gn. 1; there is no definite article in the original. More striking are phrases like 'No one can be saved before rebirth' (*Treat.* 13. 1), 'He that loveth the body, the same abideth in darkness' (*Poimandres* 19), and the 'Johannine' vocabulary of light and darkness, life and death, belief and witness. Direct influence by the NT on later *Hermetica* is not impossible, but unproven: direct influence of the Hermetic literature on the NT would be even harder to substantiate. However, while our extant religious *Hermetica* are almost certainly later than most of the NT, they clearly derive from a well-established tradition; and those may be right who suggest that John has partly in view a public with this *kind* of education and devotion. We must remember, however, that the *Hermetica* are but one example of contemporary piety; and the language of the Johannine writings can be paralleled also in the Judaic, and essentially biblical, dualism of Qumran.

As to content, it will be seen that the Hermetic parallels are closest with what might be called the accidentals of the NT: with the process of redemption rather than with its essential nature and the means by which it is effected. Concerned with sin as ignorance or passion to be sloughed off, rather than as rebellion requiring reconciliation, and with desire set on a salvation which involved deification through union with God, the motive forces of the Hermetists maintained a pagan, not a biblical, direction. And, while the ethical teaching of the *Hermetica* is insistent and lofty, its other-worldly nature does not allow for the concreteness of biblical ethics. As C. H. Dodd says, the Hermetists share the second, but not the first half of the description of 'pure religion' in Jas. 1:27. (*GNOSTICISM.)

Grese, *JCSBR* 28, pp. 37–54.

A.F.W.

HERMOGENES. Mentioned with Phygelus as representative of Asian Christians who once repudiated Paul (2 Tim. 1:15). The language indicates Roman Asia (not, as some suggest, an Asian community in Rome), and a specific action (*cf.* RV)—perhaps breaking off relations (through fear of involvement?) when Paul had a right to expect their support. For the meaning of 'turned away', *cf.* Mt. 5:42: total apostasy is not in question. The occasion, which is unlikely to have been very remote, was known to Timothy, but it is not to us (*ONESIPHORUS). A.F.W.

HERMON (Heb. *hermôn*, 'sanctuary'). A mountain in the Anti-Lebanon Range, and easily the highest (2,814 m) in the neighbourhood of Palestine. It is called also Mt Sirion (Heb. Sion, Dt. 4:48), and known to the Amorites as S(h)enir (Dt. 3:9). Note, however, that Ct. 4:8 and 1 Ch. 5:23 explicitly distinguish between Hermon and *Senir (*cf.* *GTT*, p. 41; *DOTT*, p. 49).

Regarded as a sacred place by the original inhabitants of Canaan (*cf.* 'Baal-hermon', Jdg. 3:3; 'Baal-gad', Jos. 13:5, *etc.*), it formed the N boundary of Israel's conquests from the Amorites (Dt. 3:8; Jos. 11:17, *etc.*). Snow usually lies on the top all year round, causing plentiful dews in stark contrast to the parched land of that region (hence probably the Psalmist's allusion in Ps. 133:3), and the melting ice forms a major source of the Jordan. Hermon is identified with the modern Jebel es-Sheik, 'the Sheik's mountain', 48 km SW of Damascus (but on this point see *GTT*, p. 83). Its proximity to Caesarea Philippi has made some suggest Hermon as the 'high mountain' (Mk. 9:2, *etc.*) of the *transfiguration.

A misleading reference to 'the Hermonites' (Ps. 42:6, AV) should probably be amended to RV 'the Hermons', signifying the three summits of Mt Hermon. J.D.D.

HEROD. 1. Herod the Great, king of the Jews 40–4 BC, born c. 73 BC. His father Antipater, a Jew of Idumaeen descent, attained a position of great influence in Judaea after the Roman conquest and was appointed procurator of Judaea by Julius Caesar in 47 BC. He in turn appointed his son Herod military prefect of Galilee, and Herod showed his qualities by the vigour with which he suppressed brigandage in that region; the Roman governor of Syria was so impressed by his energy that he made him military prefect of Coele-Syria. After the assassination of Caesar and subsequent civil war Herod enjoyed the goodwill of Antony. When the Parthians invaded Syria and Palestine and set the Hasmonaeen Antigonus on the throne of Judaea (40–37 BC) the Roman senate, advised by Antony and Octavian, gave Herod the title 'king of the Jews'. It took him 3 years of fighting to make his title effective, but when he had done so he governed Judaea for 33 years as a loyal 'friend and ally' of Rome.

Until 31 BC, despite Antony's goodwill, Herod's position was rendered precarious by the machinations of Cleopatra, who hoped to see Judaea and Coele-Syria reunited to the Ptolemaic kingdom. This peril was removed by the battle of Actium, after which Herod was confirmed in his kingdom by Octavian (Augustus), the new master of the

Roman world. Another source of anxiety for Herod was the Hasmonaeen family, who resented being displaced on the throne by one whom they regarded as an upstart. Although he married into this family by taking to wife Mariamne, granddaughter of the former high priest Hyrcanus II, Herod's suspicions led him to get rid of the leading Hasmonaeen survivors one by one, including Mariamne herself (29 BC).

Herod pacified the territories on his NE frontier in the interests of Rome, and Augustus added them to his kingdom. He furthered the emperor's cultural policy by lavish building projects, not only in his own realm but in foreign cities (*e.g.* Athens). In his own realm he rebuilt Samaria and renamed it

Sebaste after the emperor (Gk. *Sebastos* = Lat. *Augustus*); he rebuilt Strato's Tower on the Mediterranean coast, equipped it with a splendid artificial harbour, and called it Caesarea, also in honour of the emperor. Other settlements and strongholds were founded throughout the land. In Jerusalem he built a palace for himself on the W wall; he had already rebuilt the Antonia fortress (called after Antony) NW of the Temple area. The greatest of all his building enterprises was the reconstruction of the Jerusalem Temple, begun early in 19 BC.

Nothing that Herod could do, not even the expenditure lavished on the Temple, endeared him to his Jewish subjects. His Edomite descent was never forgotten; if he was a Jew by religion and rebuilt the Temple of the God of Israel in Jerusalem, that did not deter him from erecting temples to pagan deities elsewhere. Above all, his wiping out of the Hasmonaeen family could not be forgiven.

This drastic action did not in fact put an end to his domestic troubles. There was friction between his own female relatives and his wives, and between the children of his respective wives. His two sons by Mariamne, Alexander and Aristobulus, were brought up at Rome and were his designated heirs. Their Hasmonaeen descent (through their mother) made them acceptable to the Jewish people. But their privileged position stirred the envy of their half-brothers, and especially of Herod's eldest son Antipater, who set himself to poison his father's mind against them. At last (7 BC) they were found guilty of plotting against their father, and executed. Antipater derived no advantage from their death, for 3 years later he too fell victim to Herod's suspicions, and was executed only a few days before Herod's own death (4 BC).

Herod's suspicious nature is well illustrated by the story of the visit of the Magi and the slaughter of the infants of Bethlehem (Mt. 2); although this story does not appear elsewhere, any rumour of a rival king of the Jews was bound to rouse his worst fears. This suspicion latterly grew to insane proportions, and in consequence Herod has been remembered more for his murderous outbursts than for his administrative ability.

In his will he bequeathed his kingdom to three of his sons—Judaea and Samaria to Archelaus (Mt. 2:22), Galilee and Peraea to Antipas, and his NE territories to Philip (Lk. 3:1). These bequests were ratified by Augustus.

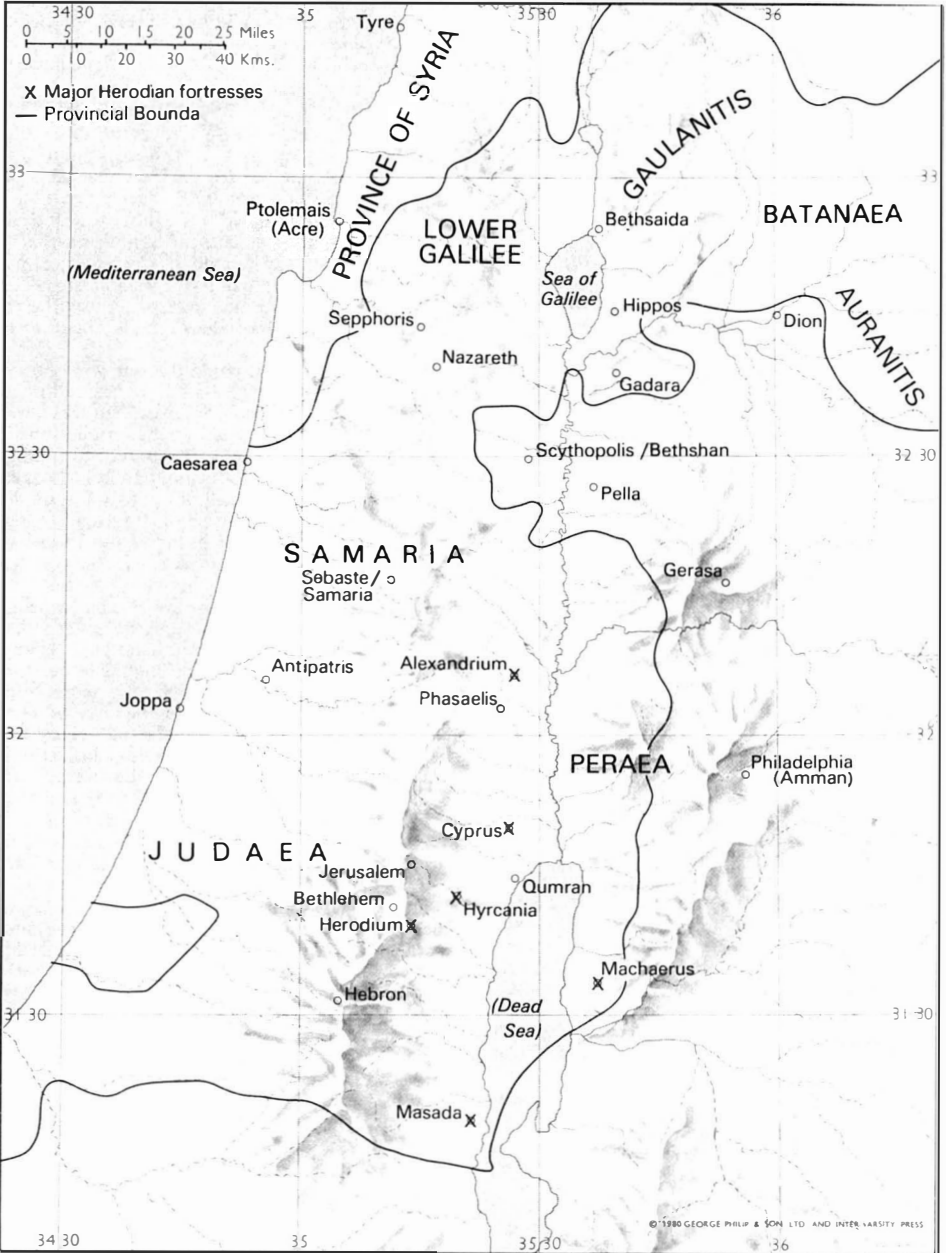

2. Archelaus ('Herod the Ethnarch' on his coins). He reigned in Judaea 'in place of his father Herod' (Mt. 2:22) from 4 BC to AD 6, but without the title of king. He was Herod's elder son by his

HEROD

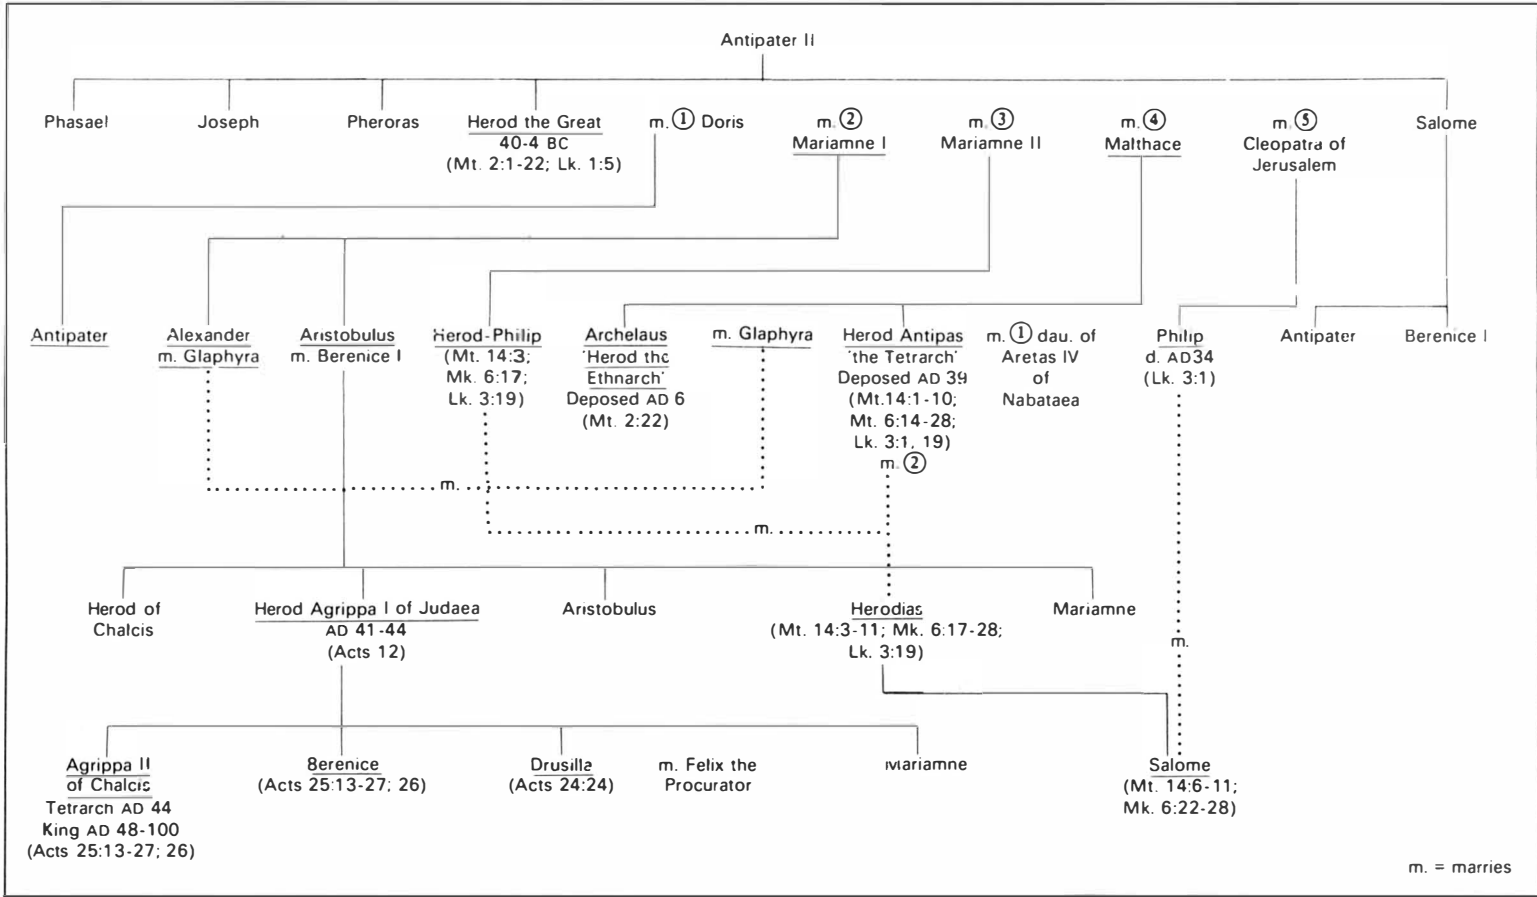

Samaritan wife Malthace, and has the worst reputation of all the sons of Herod. He offended Jewish religious susceptibilities by marrying Glaphyra, the widow of his half-brother Alexander. He continued his father's building policy, but his repressive rule became intolerable; a deputation of the Judaeian and Samaritan aristocracy at last went to Rome to warn Augustus that, unless Archelaus were removed, there would be a full-scale revolt. Archelaus was accordingly deposed and banished, and

Judaea became a Roman province, administered by prefects appointed by the emperor.

3. 'Herod the tetrarch' (Lk. 3:19, etc.), who bore the distinctive name of Antipas. He was Herod's younger son by Malthace, and inherited the Galilean and Peraean portions of his father's kingdom. In the Gospels he is conspicuous chiefly for his part in the imprisonment and execution of John the Baptist (Mk. 6:14-28) and for his brief encounter with Jesus when the latter was sent to him by Pilate

The kingdom of Herod the Great.

Herod's family tree simplified. The names underlined are those principally discussed in the article HEROD.

HEROD

for judgment (Lk. 23:7ff.). Jesus is recorded as having once described him as 'that fox' (Lk. 13:31f.). He was the ablest of Herod's sons, and like his father was a great builder; the city of Tiberias on the Lake of Galilee was built by him (AD 22) and named in honour of the Emperor Tiberius. He married the daughter of the Nabataean king *Aretas IV, but divorced her in order to marry *Herodias, the wife of his half-brother Herod Philip. According to the Synoptic Evangelists, John the Baptist incurred the wrath of Antipas for denouncing his second marriage as unlawful; Josephus (*Ant.* 18. 118) says that Antipas was afraid that John's great public following might develop into a revolt. Aretas naturally resented the insult offered to his daughter, and seized the opportunity a few years later to wage war against Antipas (AD 36). The forces of Antipas were heavily defeated, and Josephus says that many people regarded the defeat as divine retribution for Antipas' killing of John the Baptist. In AD 39 Antipas was denounced to the Emperor Gaius by his nephew Agrippa (see 4) as a plotter; he was deposed from his tetrarchy and ended his days in exile.

4. 'Herod the king' (Acts 12:1), otherwise known as Agrippa. He was a son of Aristobulus and grandson of Herod the Great. After his father's execution in 7 BC he was brought up in Rome, in close association with the imperial family. In AD 23 he became so heavily involved in debt that he had to leave Rome. For a time he received shelter and maintenance at Tiberias from his uncle Antipas, thanks to his sister Herodias, whom Antipas had recently married. But he quarrelled with Antipas and in AD 36 returned to Rome. There he offended the Emperor Tiberius and was imprisoned, but on Tiberius' death the following year he was released by the new emperor, Gaius (Caligula), from whom he received the title of king, with territories NE of Palestine as his kingdom. On Antipas' banishment in AD 39, Galilee and Peraea were added to Agrippa's kingdom. When Claudius became emperor in AD 41 he further augmented Agrippa's kingdom by giving him Judaea and Samaria, so that Agrippa ruled over a kingdom roughly equal in extent to his grandfather's. He courted the goodwill of his Jewish subjects, who looked on him as a descendant of the Hasmonaeans (through his grandmother Mariamne) and approved of him accordingly. His attack on the apostles (Acts 12:2f.) was perhaps more popular than it would have been previously, because of their recent fraternization with Gentiles (Acts 10:1-11:18). His sudden death, at the age of 54 (AD 44), is recorded by Luke (Acts 12:20ff.) and Josephus (*Ant.* 19. 343ff.) in such a way that the two narratives supplement each other illuminatingly. He left one son, Agrippa (see 5), and two daughters: Bernice (born AD 28), mentioned in Acts 25:13ff., and Drusilla (born AD 38), who became the 3rd wife of the procurator Felix (*cf.* Acts 24:24).

5. Agrippa, son of Herod Agrippa (see 4), born in AD 27. He was adjudged too young to be made successor to his father's kingdom. Later, however, he received the title of king from Claudius, with territories N and NE of Palestine which were increased by Nero in AD 56. He changed the name of his capital from Caesarea Philippi to Neronias as a compliment to the latter emperor. From AD 48 to 66 he had the prerogative of appointing the Jewish high priests. He did his best to prevent the outbreak of the Jewish war against Rome in AD 66; when his

efforts failed he remained loyal to Rome and was rewarded with a further increase of his kingdom. He died childless about AD 100. He is best known to NT readers for his encounter with Paul (Acts 25:13-26:32), whom he charged, in bantering vein, with trying to make a Christian of him (Acts 26:28).

C. Braund, *CQ* 33, pp. 239-242. F.F.B.

HERODIANS. They are mentioned as enemies of Jesus once in Galilee, and again at Jerusalem (Mk. 3:6; 12:13; Mt. 22:16). Their association with the Pharisees in the question regarding the paying of tribute to Caesar suggests agreement with them in the issue at stake, that is, nationalism versus submission to a foreign yoke. This fact and the formation of the word (*cf.* *Caesariani*) seems to prove that they were a Jewish party who favoured the Herodian dynasty. The view that they were a religious party known in rabbinical literature as 'Boethusians', *i.e.* adherents of the family of Boethus, whose daughter Mariamne was one of the wives of Herod the Great and whose sons were raised by him to the high priesthood, is not now generally held.

BIBLIOGRAPHY. H. Hoehner, *Herod Antipas*, 1972, repr. 1980; N. Hillyer, *NIDNTT* 3, pp. 441-443. J.W.M.

HERODIAS (Mk. 6:17; Lk. 3:19), daughter to Aristobulus (son of Herod the Great by Mariamne). She married, first, her uncle Herod Philip (son of Herod the Great by a second Mariamne, and not to be confused with *Philip the tetrarch), and secondly, her uncle Herod Antipas (*HEROD, 3). By her first husband she had a daughter Salome, who married her grand-uncle Philip the tetrarch. The identity of Herodias' daughter in Mk. 6:22ff. is uncertain. When Antipas was exiled in AD 39 Herodias chose to accompany him rather than accept the favour which Gaius was willing to show to the sister of his friend Agrippa (*HEROD, 4). F.F.B.

HESHBON (Heb. *hešbôn*, 'device'). A city of Moab, taken by Sihon king of the Amorites and made his royal city (Nu. 21:26). After his defeat by the Israelites (21:21-24) it was given to Reuben (32:37), but later passed over to Gad, whose land bordered on Reuben, and was assigned by them to the Levites (Jos. 21:39). By the time of Isaiah and Jeremiah, at the height of its prosperity, Moab had retaken it (Is. 15:4; Je. 48:2, *etc.*), but by the time of Alexander Jannaeus it is once more in the hands of Israel (Jos., *Ant.* 13. 397). Remains of old pools and conduits may be seen in a branch of the present Wadi Hesbān which flows by the city (*cf.* Ct. 7:4).

Excavations at Tell Hesban (1968-78) have found buildings from the Iron Age, c. 1200 BC onwards, but no Late Bronze Age remains that might be associated with Sihon. There are a few Late Bronze Age sites nearby, however.

HETHLON. (Heb. *ḥeṭlôn*). A city on the ideal N boundary of Palestine as seen by Ezekiel, near Hamath and Zedad and referred to only by him (Ezk. 47:15; 48:1). Identified with the modern Heitela, NE of Tripoli, Syria.

J.D.D.

HEZEKIAH (Heb. *ḥizqiyā* or *ḥizqiyāhū*, 'Yahweh is [my] strength').

1. The 14th king of Judah. Son of Ahaz who was 25 at the start of his reign and reigned for 29 years (2 Ki. 18:2; 2 Ch. 29:1). He was outstanding for his own piety (2 Ki. 18:5) and also cared for previous traditions and teaching (Pr. 25:1). His importance is reflected by the three accounts of his reign (2 Ki. 17–20; Is. 36–39; 2 Ch. 29–32).

There are difficulties surrounding the chronology of Hezekiah's reign, but he appears to have assumed a co-regency with Ahaz c. 729 BC and became king c. 716 BC. Thus the fall of Samaria (722 BC) occurred in the 6th year of his reign (as co-regent; 2 Ki. 18:10), while Sennacherib invaded Judah (701 BC) in the 14th year of his reign (as sole monarch; 2 Ki. 18:13). The king's illness and recovery appear to have occurred just before Sennacherib's invasion, when Hezekiah was promised an extra 15 years of rule (2 Ki. 20) (*STEPS).

After the pagan practices introduced during the period of Ahaz's submission to the Assyrians (cf. Is. 2:6ff.; 8:16ff.), Hezekiah undertook a major reform of religious practice in the 1st year of his sole reign (2 Ch. 29:3ff.). He re-established the true worship of Yahweh in the purified and renovated Temple, reaffirmed the covenant between Yahweh and his people, and reinstated the Passover on a grand scale (2 Ch. 30:26), even inviting Israelites from the N to participate (2 Ch. 30:5ff.). He also destroyed the *high places in the surrounding area (2 Ki. 18:4; 2 Ch. 31:1) as well as breaking up the bronze *serpent which Moses had made in the wilderness but which had come to be regarded as an idol (2 Ki. 18:4).

Politically, Hezekiah was restive under Assyrian domination and he allied Judah with an anti-Assyrian revolt instigated by Egypt and led by *Ashdod. Judah must have listened to Isaiah's warnings (Is. 20), for although Sargon II claimed to have subdued *ia-u-di*, 'Judah' (cf. *DOTT*, p. 61; also N. Na'aman, *BASOR* 214, 1974, p. 27), no evidence of an invasion at this time is found in the OT. When Sargon died (705 BC) Hezekiah, seeing an opportunity to rebel against his son, Sennacherib, entertained envoys of the rebel Chaldean, *Merodach-baladan (2 Ki. 20:12–19; Is. 39) and received promises of support from Egypt. He also strengthened his own defences in Jerusalem, including digging the *Siloam tunnel to safeguard the water-supply (2 Ki. 20:20; Is. 22:9ff.).

Sennacherib's own records of his campaign in the W picture Hezekiah as leader of rebellion (*ANET*, pp. 287–288; *DOTT*, pp. 64–69). He claims to have taken forty-six fortified towns and imprisoned Hezekiah 'like a bird in a cage in Jerusalem, his royal city'. He does not claim to have conquered the city and the OT tells of Yahweh's

intervention by destroying the Assyrian army (2 Ki. 19:32–36).

The mention of *Tirhakah, king of Ethiopia, in 2 Ki. 19:9, has led some to propose a second campaign by Sennacherib into Judah, c. 688 BC, since Tirhakah would have been too young in 701 BC to have taken part and also was not then called 'king'. It has, however, been shown that he was 20–21 at this time and that the title is in terms of the time of writing rather than of the events themselves (cf. K. A. Kitchen, *The Third Intermediate Period in Egypt*, 1972, pp. 385–386 and nn. 823–824).

2. The father of a clan which returned from Babylonian exile with Ezra (Ezr. 2:16; Ne. 7:21), and among those who sealed the new covenant with Yahweh (Ne. 10:17). His name is given in two forms, Ater being Akkadian. Ne. 10:17 lists the names as separate people.

D.W.B.

HIDDEKEL. The ancient name of the river *Tigris used in the account of the Garden of Eden (Gn. 2:14) and in Daniel's description of his visions (Dn. 10:4) in the 3rd year of Cyrus. The name comes from Akkadian *idiqlat*, which is equivalent to Sumerian *idigna*, i.e. always flowing river.

T.C.M.

HIEL (Heb. *ḥi'el*, 'El lives'; but cf. LXX 'brother of God', from *"ḥi'el*). A Bethelite whose sons were (accidentally?) killed during his rebuilding of Jericho c. 870 BC, fulfilling Joshua's curse (1 Ki. 16:34; cf. Jos. 6:26).

D.W.B.

HIERAPOLIS. A city in the Roman province of Asia, in the W of what is now Asiatic Turkey. It was situated about 10 km N of *Laodicea, on the opposite side of the broad valley of the Lycus. The city was built around copious hot springs, which were famed for their medicinal powers. There was also a subterranean vent of poisonous gases (the Plutonium), which was later filled in by the Christians in about the 4th century AD. When the hot water flows over the edge of the city terrace it forms spectacular pools and cascades encrusted with lime. The resulting white cliffs give the site its modern name Pamuk-kale ('cotton castle'). These natural features made Hierapolis ('sacred city', for earlier 'Hieropolis', 'city of the sanctuary') an ancient centre of pagan cults, from which its importance and prosperity mainly derived.

The church in Hierapolis was probably founded while Paul was living at Ephesus (Acts 19:10), perhaps by Epaphras. It is mentioned only in conjunction with its close neighbours, *Colossae and *Laodicea (Col. 4:13). There may be a reminiscence of its famous hot waters in Rev. 3:15–16, in contrast with the cold waters of Colossae and the tepid of Laodicea.

According to Polycrates, bishop of Ephesus c. AD 190, as quoted by Eusebius (*HE* 3. 31), the apostle Philip was buried at Hierapolis, though the authorities show confusion between apostle and evangelist. Papias and the Stoic philosopher Epicetetus were also connected with the city.

C.J.H.

HIGH PLACE

HIGH PLACE. The Heb. word *bāmā*, rendered 'high place' by AV, RSV and JB, is used over 100 times in *MT* and in two distinct ways: of heights in a literal sense and of shrines. NEB renders 'heights' and 'hill shrine'.

The 20 non-cultic uses are all in the plural form and in poetic passages. In contrast to other height words, the plural *bāmōt* always carries overtones of dominance and control. Battles often took place on hill slopes; possession of heights therefore gave lordship over the land (Nu. 21:28; 2 Sa. 1:19, 25). Thus Israel asserted that God 'rides' or 'walks' on the heights (Am. 4:13; Mi. 1:3) or that he sets Israel (Dt. 32:13; Is. 58:14) or an individual (2 Sa. 22:34; Ps. 18:33; Hab. 3:19) 'upon the heights of the earth'. Cylinder seals portray *Baal astride mountains and in the Ras Shamra texts he is called *rkb rpt*, 'rider of the clouds'. Both Akkadian and Ugaritic had closely related words denoting heights or the middle region of the body (cf. Jb. 9:8).

The association of heights with lordship may account for their choice as locations of shrines. It has been suggested that, despite the warnings of Moses (Dt. 12, etc.), Israel took over the Canaanites' shrines after the conquest. Certainly loyal worshippers of God used *bāmōt* in the early Monarchy period. Samuel officiated at a special sacrifice when Saul was anointed before invited guests (1 Sa. 9) and later Saul went with a group of prophets coming down from a *bāmā* led by lute, pipe and drum (1 Sa. 10:5). By the time of Solomon Gibeon had risen to unique status and was known as 'the Great High Place'. The *tabernacle and the altar of bronze 'which Bezalel, son of Uri, son of Hur' had made was kept there and it was at Gibeon that God challenged Solomon in a dream about the character of his reign (1 Ki. 3; 2 Ch. 1).

After the disruption of the kingdom in 922 BC the *bāmōt* posed a new threat to the purity of Israel's faith. In the N kingdom Jeroboam built 'houses of the high places' as part of his campaign to distract his subjects' attention away from Jerusalem (1 Ki. 12). Thus 'he made Israel to sin' for the *bāmōt*, though often nominally dedicated to God, clearly included many Canaanite features, such as images, standing stones, Asherah poles, sacred prostitution and other fertility rites. Bloodshed, instability and apostasy characterized the two centuries of the N kingdom's existence and, as the biblical historians saw, the *bāmōt* were a major source of the moral and religious collapse (2 Ki. 17:9). In the S kingdom the situation was little better. *bāmōt* revived under Rehoboam. Attempts to suppress them by Asa and Jehoshaphat had no lasting results. Hezekiah conducted a more thorough reformation (2 Ki. 18:1-8), but his son Manasseh 'who did more evil than all the kings that were before him' again revived *bāmōt*. Under Josiah a far-reaching purge was undertaken (2 Ki. 23), but his successors were not of his calibre and the shrines were again reviving when the Babylonian army put an end to the Judean kingdom. Little is known of the *bāmōt* thereafter.

Early study of the *bāmōt* reveals the embarrassment felt at the use of these shrines by Israel's heroes. The Talmud and the rabbis sharply distinguished between 'great' and 'small' *bāmōt* or maintained that the ban was lifted periodically. J. Wellhausen solved the problem by suggesting that the single sanctuary law was not operative until the time of Josiah; the book of Deuteronomy was but

a 'pious fraud'. It seems more likely that Samuel, Saul and Solomon simply wished to claim these shrines for God without realizing the syncretistic dangers which had been plain to Moses and were all too accurately vindicated by history.

W. F. Albright proposed that the *bāmōt* were basically tomb-shrines, but no excavated shrine or unamed biblical reference has clear mortuary associations. P. H. Vaughan suggests that *bāmōt* were round or flat cult platforms on which worship was celebrated. However, although some *bāmōt* may have contained a platform, the term seems more naturally taken as embracing the whole cult area including altar, stones, houses, etc.

A gradual development in the location of *bāmōt* is discernible. Shrines on heights were typical of the early period (Nu. 22:41; 1 Sa. 9), whereas later they are to be found in the towns (2 Ki. 17:9) or, in one instance, in a valley (Je. 7:31). By the end of the Monarchy period, the term was applied to many types of local shrine. Thus 2 Ki. 23 refers to a small gate shrine, royal centres to foreign gods, large public shrines and local rustic shrines all as *bāmōt*.

Widely publicized discoveries at Gezer and the 'Conway High Place at Petra' have now been discounted as *bāmōt*. Despite a 'wishful thinking' phase, archaeology has now revealed examples of the main types of biblical *bāmōt*. Shrines outside settlements are known from Naharijah, Samaria, Jerusalem and 'the Great High Place at Petra'. *bāmōt* in towns on heights are known from Megiddo and Arad. Shrines on lower ground in towns are known from Hazor, Dan and Jerusalem. Small gate shrines are known from Tirzah and Dan. Biblical evidence about the structures, cult and tendency of a shrine to change its status can all be illustrated from archaeological discoveries, so revealing a detailed picture of the period when Israel 'had as many gods as towns' (Je. 2:28).

HILKIAH (Heb. *ḥilqīyāhū*, *ḥilqīyā*, 'my portion is Yahweh').

1. The father of Eliakim, Hezekiah's chamberlain (2 Ki. 18:18, 26, 37; Is. 22:20; 36:3, 22).

2. The high priest in Josiah's reign. During the repairs on the Temple, he found the book of the law, and brought it to the notice of Shaphan the scribe. Subsequently he was a member of the king's deputation to Huldah the prophetess to learn God's will in the matter, and later he helped to put Josiah's reformation into effect (2 Ki. 22-23; 2 Ch. 34; 35:8).

3, 4. Levites of the family of Merari (1 Ch. 6:45; 26:11). 5. One who stood with Ezra the scribe when he read the law of God from a wooden pulpit (Ne. 8:4). 6. A chief of the priests who went up to Judaea with Zerubbabel (Ne. 12:7, 21). Possibly identical with 5.

7. The father of Jeremiah the prophet, and member of the priestly family of Anathoth (Je. 1:1). Probably a descendant of Abiathar, David's high priest who was expelled by Solomon for supporting Adonijah (1 Ki. 2:26). Hilkiah was

possibly the officiating priest to the rural community at Anathoth.

8. The father of Gemariah, one of Zedekiah's ambassadors to Nebuchadrezzar (Je. 29:3).

J.G.G.N.

HILL, HILL-COUNTRY. These terms translate the Heb. words *gib'ā* and *har*. The root-meaning of the former is convexity; bare hills, like an inverted basin, are a common feature of Palestine, notably the area of Judah. But *gib'ā* is often a proper name (Gibeah) to indicate towns built on such eminences, coupled with a distinguishing 'surname' (e.g. 'of Saul', 1 Sa. 11:4).

The second word, *har*, may indicate a single eminence or a range of hills; this led to some confusion in AV, but recent EVV make it clear when a range of hills is meant. The mountainous backbone of Palestine is so styled sometimes divided into the N and S parts of it, respectively called the hill-country 'of Ephraim' and 'of Judah'. It should, however, be noted that it is not always possible to decide whether a single hill or a hilly region is meant.

D.F.P.

HINNOM, VALLEY OF. A valley to the S of Jerusalem, also styled 'the valley of the son (or sons) of Hinnom'. It was associated in Jeremiah's time with the worship of Molech. Josiah defiled this shrine, and put an end to the sacrifices offered there. Later the valley seems to have been used for burning the corpses of criminals and animals, and indeed refuse of any sort. Hence the name came to be used as a synonym for *hell, the Hebrew phrase *gē* ('valley of') *hinnōm* becoming *geenna* in Greek, whence Gehenna in Latin and English. Jewish tradition at one time held that the mouth of hell was in the valley.

The identification of the valley presents problems. It formed part of the boundary between the territories of Judah and Benjamin, and lay between the 'south side of the Jebusite; the same is Jerusalem' and Enrogel (Jos. 15:7f., AV). So clearly the identification of these two localities will affect our identification of the Valley of Hinnom. If *En-rogel was the Virgin's Fountain, the Valley of Hinnom can be equated with the Kidron valley, which runs from the E to the SE of Jerusalem. But if it was what is now called Bir Eyyub, two possibilities remain: the valley was either the Tyropoeon valley, running from the centre of Jerusalem to the SE, or the valley encircling the city on the W and S, now called the Wadi al-Rababi. Each of these three valleys, at its SE extremity, terminates near Siloam. Muslim tradition supports the Kidron valley identification, but that is the least likely; the great majority of scholars accept the Wadi al-Rababi as the correct identification.

D.F.P.

HIRAM. The king of *Tyre, contemporary with David and Solomon; he reigned 979/8–945/4 BC (according to Albright, 969–936 BC).

a. Name

Heb. *Hirām* (Sa. and Ki.); *Hirōm* (1 Ki. 5:10, 18; Lxx. *H(e)iram*); *Hirām* (Ch.) is a Phoenician name possibly equivalent to, or an abbreviation for, *Ahīram* (Nu. 26:38), meaning 'my brother is the exalted (god)', as *Ḥiel* stands for *Ahīel* (1 Ki.

16:34). Hiram, or Hiram-(abi), was also the name of the chief technician from Tyre, married to a woman of Naphtali (1 Ki. 7:13f.) or Dan (2 Ch. 2:13) sent by King Hiram to help Solomon.

b. Relations with Judah

Hiram was a great admirer of David (1 Ki. 5:1) and sent materials and craftsmen to aid the building of his palace at Jerusalem (2 Sa. 5:11; 1 Ch. 14:1). On Solomon's accession Hiram sent ambassadors to make fresh contacts which led to a trade-treaty whereby he supplied wood from Lebanon and skilled craftsmen for the construction of the new Temple at Jerusalem, in return for an annual payment by Solomon of wheat and fine oil (1 Ki. 5:2–11) which the Phoenician cities lacked. Additional payments of barley and wine seem to have been required for the maintenance of the Tyrian workmen, who included technicians acquainted with fabric design and dyes, sent to instruct the Israelites (2 Ch. 2:3–7).

Twenty years later, on the completion of the Temple, Solomon gave Hiram twenty villages in Galilee, presumably near Tyre, and received in exchange 120 talents of gold (1 Ki. 9:10–14). Such treaties to adjust the borders between states are known from early Syrian agreements (e.g. Alalab). These treaties, which were planned for the economic advantage of both parties, were supplemented by trading operations in which Solomon's ocean-going *ships joined the fleet of Hiram to import gold, silver and various kinds of rarities, including monkeys (1 Ki. 10:22; 2 Ch. 9:21). The vessels sailing from Ezion-geber for *Ophir were accompanied by experienced pilots provided by Hiram (1 Ki. 9:26–28; 2 Ch. 8:17–18). The trade expansion of *Phoenicia in Hiram's time included colonies in N Africa and Spain.

c. The reign of Hiram

Apart from the OT, Hiram's rule is chronicled by Josephus (*Ant.* 8. 50–54; *Contra Apionem* 1. 17f.), based on the historians Menander and Dius. According to this source, Hiram (Lxx *Chiram*, Gk. *Heiramos*, *Heirōmos*) was the son of Abi-baal and reigned 34 years before dying at the age of 53. The building of the Temple at Jerusalem began in his 11th year, i.e. the 4th year of Solomon (1 Ki. 6:1). Hiram warred against Cyprus to enforce the payment of tribute and fortified the island of Tyre, where he built temples to Astarte-Melqart (later Hercules) and enriched the older temples.

Josephus, like Eupolemos and Alexander Polyhistor, recounts the letters, said to have been preserved in the state archives at Tyre, which passed between Hiram and Solomon concerning the building of the Temple. Josephus states also that the two kings engaged in an exchange of riddles until Solomon was defeated by a young Tyrian named Abdemon. Clement of Alexandria and Tatian say that a daughter of Hiram was married to Solomon; cf. 1 Ki. 11:1–2.

D.J.W.

HIRE, HIRELING. The two main classes of *wage-earner in Israel were the foreign mercenary and the agricultural labourer, typifying respectively dereliction of duty (Je. 46:21) and stinting service (Jb. 7:11) under exploitation (Mal. 3:5). Hence the

HIRE, HIRELING

pejoratives in Jn. 10:12–13 and Lk. 15:19. David introduced foreign mercenaries to buttress the newly adopted monarchy (2 Sa. 8:18). The agricultural labourer was debased by an enclosure movement in the 8th century (Is. 5:8) which dispossessed many freehold farmers of their patrimony and left them in *debt. By custom the ultimate discharge of debt was perpetual *slavery (2 Ki. 4:1). The law provided that an Israelite who, through poverty, had to sell himself to a fellow-Israelite should be allowed the status of an employee and be manumitted in the year of Jubilee (Lv. 25:39–55). Other laws also protected him (e.g. Lv. 19:13; cf. Dt. 24:14–15). Jacob's two contracts (Gn. 29) disclose a background of nomadic kinship and recall the great national codes of the 2nd millennium BC.

HITTITES (Heb. *hitim*, *b'ne heth*). In the OT the Hittites are, firstly, a great nation which gave its name to the whole region of Syria, 'from the wilderness and this Lebanon as far as the great river, the river Euphrates, all the land of the Hittites to the Great Sea toward the going down of the sun' (Jos. 1:4); and secondly, an ethnic group living in Canaan from patriarchal times until after the Israelite settlement (Gn. 15:20; Dt. 7:1; Jdg. 3:5), called literally 'the children of Heth' (Gn. 23:3, etc.) after their eponymous ancestor Heth, a son of Canaan (Gn. 10:15).

I. The Hittite empire

The Hittite empire was founded c. 1800 BC by an Indo-European nation which had settled in Asia Minor in city-states some two centuries before. They derived the name 'Hittite' from the Hatti, the earlier inhabitants of the area where they settled, whose legacy is clearly traceable in Hittite art and religion and in divine and royal names and titles. With the spread of the Hittite empire the designation 'Hittites' was extended to the peoples and lands which it incorporated.

An early Hittite king, Tudhaliyas I (c. 1720 BC), has been identified (precariously) with 'Tidal king of nations' of Gn. 14:1. About 1600 BC Hattusilis I extended his rule over parts of N Syria. His successor Mursilis I established a new capital at Hattusas (modern Boğaz-köy), E of the Halys; it is largely to the archives uncovered there since 1906 that we owe our knowledge of Hittite history and literature. Mursilis I captured Aleppo and subsequently (c. 1560 BC) raided Babylon—an event which precipitated the fall of the 1st Babylonian Dynasty.

King Telepinus (c. 1480 BC) was the great Hittite legislator. There are some striking affinities between the Hittite law-codes and those of the Pentateuch, although affinities are found in matters of detail and arrangement rather than in general conception. Whereas the Pentateuchal codes resemble the great Semitic law-codes of the ancient Near East in employing the *lex talionis* as a basic principle, the Hittite laws are dominated by the distinctively Indo-European principle of compensation (*Wergeld*). Some analogy has also been discerned between Hittite treaty forms and OT covenant terms. Other notable points of contact

are found in the levirate marriage and in the procedures for ascertaining the divine will or the unknown future by means of teraphim and 'ōbōl ('familiar spirits').

The Hittite empire reached the peak of its power under Suppiluliumas I (c. 1380–1350 BC). It was in his province of Kizzuwatna, in SE Asia Minor, that iron was first smelted in the Near East on a scale which justifies one in speaking of the beginning of the Iron Age. He extended his empire over Upper Mesopotamia and over Syria as far S as the Lebanon. The Hittites thus collided with the N thrust of the Egyptian empire in Asia, and hostilities continued between the two powers until 1284 BC, when a non-aggression pact between Hattusilis III and Rameses II recognized the Orontes as their common frontier.

The Hittite empire collapsed around 1200 BC as the result of blows from western enemies.

II. The Hittite kingdoms

With the fall of the Hittite empire, 24 city-states of the Tabali ('Tubal' in the OT) became heirs to the Hittite home territory N of the Taurus range. In Syria seven city-states which had belonged to the Hittite empire perpetuated the name 'Hittite' for several centuries; their rulers were called 'the kings of the Hittites'. Hamath on the Orontes and Carchemish on the Euphrates were among the most important of the seven. Hamath was allied with David (2 Sa. 8:9ff.), whose kingdom bordered on 'Kadesh in the land of the Hittites' (2 Sa. 24:6; *ТАНТИМ-НОДСИ). Solomon traded and intermarried with these 'kings of the Hittites' (1 Ki. 10:28f.; 11:1). In the 9th century BC their military reputation could throw the army of Damascus into panic (2 Ki. 7:6). But in the following century they were reduced one by one by the Assyrians; Hamath fell in 720 BC and Carchemish in 717 (cf. 2 Ki. 18:34; 19:13; Is. 10:9).

The Assyrian and Babylonian records of the period (as late as the Chaldean dynasty) regularly refer to the whole of Syria (including Palestine) as the 'Hatti-land'; Sargon II in 711 BC can speak of the people of Ashdod as 'the faithless Hatti'.

The language of the seven Hittite kingdoms is known from hieroglyphic texts which have been deciphered in recent years; bilingual inscriptions in hieroglyphic Hittite and Phoenician, discovered at Karatepe in Cilicia (1946–7), have helped considerably in their decipherment. The language of these texts is not identical with the official language of the earlier Hittite empire, which was written in cuneiform script and identified as an Indo-European language in 1917; it resembles rather a neighbouring Indo-European language called Luwian.

III. The Hittites of Canaan

The Hittites of Canaan in patriarchal times appear as inhabiting the central ridge of Judah, especially the Hebron district. It has been surmised that they were a branch of the pre-Indo-European Hatti, or early migrants from some part of the Hittite empire; the Hittite empire itself never extended so far S. They may, on the other hand, have had nothing in common with the N Hittites but their similar (though not completely identical) name. In Gn. 23 the Hittites are the resident population of Hebron ('the people of the land') among whom Abraham lives as 'a stranger and a sojourner' and from whom he buys the field of Machpelah, with its

cave, as a family burying-ground. The record of the purchase is said to be 'permeated with intricate subtleties of Hittite laws and customs, correctly corresponding to the time of Abraham' (M. R. Lehmann, *BASOR* 129, 1953, p. 18; but see for another opinion G. M. Tucker, *JBL* 85, 1966, pp. 77ff.). Esau grieved his parents by marrying two 'Hittite women . . . women of the land' (Gn. 27:46; cf. 26:34f.)—apparently in the Beersheba region. Jerusalem, according to Ezk. 16:3, 45, had a mixed Hittite and Amorite foundation. The name of *Araunah the Jebusite (2 Sa. 24:16ff.) has been thought to be Hittite, and Uriah the Hittite, evidently a Jerusalemite, was one of David's mighty men (2 Sa. 23:39). Ahimelech, one of David's companions in the days of his outlawry, is called a Hittite (1 Sa. 26:6).

The last reference to the Hittites of Canaan is in Solomon's reign (2 Ch. 8:7); thereafter they were merged in the general population of the land.

HIVITE. One of the sons of Canaan (Gn. 10:17; 1 Ch. 1:15); an early inhabitant of Syria and Palestine, named as distinct from the Canaanites, Jebusites, Perizzites, Gergashites and Amorites (Ex. 3:8; 23:28; Dt. 7:1), and in association with the *Arkites known to have dwelt in Lebanon (Gn. 10:17). This accords with their principal location in the Lebanon hills (Jdg. 3:3) and the Hermon range as far as the valley leading to Hamath (Jos. 11:3), where they still lived in the time of David, who lists them after Sidon and Tyre (2 Sa. 24:7). HIVITES were conscripted as labourers for Solomon's building projects (1 Ki. 9:20; 2 Ch. 8:7). Others were settled in Shechem, whose founder is described as son of Hamor, a Hivite, in the time of Jacob (Gn. 34:2) and near Gibeon (Jos. 9:7; 11:19).

Many equate the Hivites (Heb. *Hiwwî*; Gk. *Heuaios*) with the *Horites (*Horri[m]*), assuming a scribal confusion between the Heb. *w* and *r*. In Gn. 36:20–30 Zibeon is called a Horite as opposed to a Hivite in v. 2. Similarly, the LXX of Gn. 34:2 and Jos. 9:7 renders 'Horite' for 'Hivite', and some read 'Hittite' (*hittî*.) for 'Hivite' in Jos. 11:3; Jdg. 3:3. The derivation from *hawwâ*, 'tent-village', is uncertain, as is the identification of the Hivites, otherwise unattested.

BIBLIOGRAPHY. H. A. Hoffner, *TynB* 20, 1969, pp. 27–37. D.J.W.

HOBAB (Heb. *hōbāb*, 'beloved'). Nu. 10:29 speaks of 'Hobab, the son of Raguel the Midianite, Moses' father in law'—ambiguous wording which leaves unclear whether Moses' father-in-law was Hobab or Raguel (Reuel). Jdg. 4:11 (cf. Jdg. 1:16) says Hobab; Ex. 2:18 says Reuel; but evidence is too slight to choose between the two accounts. Is-

lamic tradition identifies Hobab with Jethro, but others suggest an identification between Reuel and *Jethro (Ex. 2:18; 3:1). The latter would make Hobab the brother-in-law of Moses; but such an interpretation of the Heb. word (*hōlēn*) is questionable. J.D.D.

HOBABH. The name of the place to which Abraham pursued the four kings who had pillaged Sodom and Gomorrah and carried off Lot (Gn. 14:15). It lay 'on the left hand of', that is (to one facing E) to the N of Damascus. Though modern sites have been suggested, the place is unknown. A district Ube is mentioned in the *Amarna letters and identified by some with Tell el-Salihiye c. 20 km E of Damascus. T.C.M.

HOLINESS

a. Meaning

In the OT, the main Heb. root denoting holiness or the holy is *qds*. It appears as a noun, verb and adjective over 850 times. In the LXX, the *qds* group is translated primarily by the *hagios* group, the usage which forms the semantic background of *hagios* and cognates in the NT. Etymological studies suggest for *qds* at least two associations, namely, 'separation' and 'brightness' (Muilenberg, 617) but the result of such studies are of limited value. More fruitful is a consideration of the term as the focal point of an idea which emerges by reference to its context and the wider semantic field.

b. Old Testament

The idea of the holy is at the heart of God's self-revelation and his call of Israel (Ex. 19:6; Lv. 19:2). This highlights the two dimensions of holiness. With respect to God, holiness is his quintessential nature (Hartley, 56), his very selfhood (Ex. 15:11; Is. 6:3; Am. 4:2). With respect to humans, objects, places, times and miscellaneous items like war and the covenant (Dn. 11:28), holiness is always derived and dependent upon proximity or relationship to the holy God. Holiness may also be predicated of lesser celestial beings (Ps. 89:5–7; Zc. 14:5) but the context implies that they are holy by proximity to God.

God's holiness is associated with other biblical and post-biblical words: power, glory, transcendence, uniqueness, exclusiveness, pureness, dangerousness. Earlier studies (e.g. that by Otto) stressed transcendence but the fundamental biblical picture is of God as the Holy One in the midst of his people (Ho. 11:9), a picture which emerges from the earliest chapters of Gn. (3:8). God's holiness does not make him unapproachable (Is. 57:15). On the contrary, he is a seeking God, whose holiness is expressed in his saving activity (Is. 40–55). At the same time, any approach to God can only be made under the provisions which God has himself established. The entire cultus has to do with making it safe for God's people to encounter the holy God who dwells in their midst. Any approach to God made under other conditions is dangerous (Ex. 19:12, 21, 24).

The holy God created a people by making his covenant with them (Ex. 19:5, 6; 20:1ff.). The lives of God's people were now to reflect his own holiness: 'You shall be holy for I am holy' (Lv. 19:2). This key verse is at the centre of the so-called

HOLINESS

Holiness Code (Lv. 17–26), which shows the standards of holy living: in worship, in love for the neighbour, and in promoting justice and rooting out injustice. These foci are expressed in a variety of ethical commands which apply in cultic, sexual and social relationships. These mandates are to be followed by the forgiven people of God, not only for their own sake but for the sake of all peoples (Ex. 19:5–6).

The awesomeness of God's holiness, with a corresponding sense of personal unworthiness and the need for cleanness in God's sight, is seen clearly in Is. 6. The 8th century prophets are critical of the abuse of the sacrificial system, arguing that God's means of grace must be matched by righteous living and inward cleansing (Is. 1:10–20; Je. 7:1–27). The prophet tradition further develops the priestly belief that the holiness of God demands justice (Is. 5:16; Je. 31:31–34; Ezk. 28:22; 38:23). God manifests his holiness by moving humans to righteous living by which they model his values in their communal life and mediate a true knowledge of the Holy One to the nations (Is. 42:1, 6).

God abhors sin and injustice among his people; his holiness brings judgment upon it. The purpose of such judgment, however, is not destructive but redemptive. The supreme manifestation of God's holiness is his love. When God acts to save, it is to vindicate his holiness before all people (Ezk. 36:22–32). When Isaiah preaches forgiveness and redemption, he calls the God of mercy the Holy One of Israel (Is. 10:20; 12:6; 29:19). Hosea in particular demonstrates how holiness 'finds deeper expression in the conquering holy love rooted in the covenantal bond of grace' (Mullenburg, 621).

If corporate holy living by the people of God was the primary concern of the priestly and prophetic traditions, the primary concern of the wisdom tradition was individual holy living. Particularly noteworthy is Ps. 24:2–3.

Who shall ascend the hill of the Lord?
And who shall stand in his holy place?

He who has clean hands and a pure heart,
who does not lift up his soul to what is false,
and does not swear deceitfully.

This passage builds on the priestly view that purity is a prerequisite for holiness of life. It calls for cultic cleanness but also shows that holiness demands individual integrity and single-minded devotion to God.

c. New Testament

Holiness in the NT exhibits remarkable continuity with the OT. The Lord's Prayer (Mt. 6:2 = Lk. 11:2) hallows the name of the Father in a manner reminiscent of Ezekiel. The trisagion of Rev. 4:6b–10 presupposes Is. 6:3 while the Song of Moses and the Lamb (Rev. 15:4–7) reflects Ps. 99. God's call of a holy people (1 Pet. 2:9–10) reflects Ex. 19:2 and Ho. 2:23, while the command and response of holy living (1 Pet. 1:15) mirrors Lv. 11:44; 19:2.

Few passages refer to God's holiness, though the NT always assumes the holiness of God the Father. Likewise, the term 'holy' is not often applied to Jesus, but when it is, it carries great weight. Luke emphasizes that Jesus, who will be called holy from his birth (Lk. 1:35), is full of the Holy Spirit (Lk. 3:22; 4:1) and his ministry as a whole is exercised in the power of the Holy Spirit (Lk. 3:22; 4:1, 14, 18; Acts 3:14; 4:27, 30). His life is holy in char-

acter (Heb. 1:9; 4:15, 1 Pet. 2:22). In conflict with evil he is recognized as the Holy One (Mk. 1:24). Peter confesses that Jesus is the Holy One of God (Jn. 6:69) while Rev. 3:7 gives Jesus the same ascription ('holy and true') as is given to God in Rev. 6:10. Jesus, designated Son of God in power by the Spirit of holiness through the resurrection from the dead (Rom. 1:4), incarnates holiness for us (1 Cor. 1:30).

The most frequent ascription of holiness to a divine person is to the *Holy Spirit*, who is the Spirit of God and of Christ (Rom. 8:9). All NT writers saw the coming of Jesus as God's Messiah who was to give the Spirit (Jn. 1:33; 20:22), and who poured the Spirit out at Pentecost on all flesh (Acts 2:17ff.), as the inauguration of the new age. The inextricable links between Father, Son and Spirit (Mt. 28:19) support the later doctrine of the Holy Trinity.

The Spirit is designated the Holy Spirit to distinguish him from other spirits (Mk. 3:28–30) and to show that he shares the holiness of God (Mt. 12:28 = Lk. 11:20). In the OT, God's holiness is displayed in awesome power; in the NT, God's powerful presence in the midst of his people is first through the words and deeds of Jesus the Messiah (Mt. 4:23–9:23; Jn. 5:19–29; 14:8–11), then through the Holy Spirit (Jn. 7:39; 14:25–26).

As is the case in the OT, a holy God calls a holy people (1 Pet. 1:15–16) so that they might proclaim his wonderful deeds (1 Pet. 2:9–10). Holiness continues to be permanently required of God's people. The adjective *hagios* is often used substantively to refer to Christians in the relationship to God. Consecrated to him in obedience to his call, and accepted by him in the greatness of his grace, these persons are designated the *hagioi*. Through the sanctifying presence of the indwelling Spirit, on the basis of the atoning work of Christ, people who believe are made holy, children of God (Rom. 8:14–17). See *SANCTIFICATION. They live their lives through 'God's empowering presence' (see Fee) by the Spirit (Gal 5:16; Rom. 8:12–13), producing the active Christlikeness which is the fruit of the Spirit (Gal. 5:22). These holy people, born of the Spirit (Jn. 3:5–8), are made one through the Spirit (1 Cor. 12:12–13; Eph. 4:3–4) who empowers them for the proclamation of the gospel (Acts 1:8) and whose gifts are always given to be used for the upbuilding of the community of faith (1 Cor. 12:27).

HOMOSEXUALITY. The Bible says nothing specifically about the homosexual condition (despite the rather misleading *RSV* translation of 1 Cor. 6:9), but its condemnations of homosexual conduct are explicit. The scope of these strictures must, however, be carefully determined. Too often they have been used as tools of a homophobic polemic which has claimed too much.

The exegesis of the Sodom and Gibeah stories (Gn. 19:1–25; Jdg. 19:13–20:48) is a good case in point. We must resist D. S. Bailey's widely-quoted claim that the sin God punished on these occasions was a breach of hospitality etiquette without sexual overtones (it fails to explain adequately both the double usage of the word 'know' (*yāda*) and the reason behind the substitutionary offer of Lot's daughters and the Levite's concubine); but neither account amounts to a wholesale condemnation of all homosexual acts. On both occasions the sin condemned was attempted homosexual rape, not a caring homosexual relationship between consenting partners.

The force of the other OT references to homosexuality is similarly limited by the context in which they are set. Historically, homosexual behaviour was linked with idolatrous cult prostitution (1 Ki. 14:24; 15:12; 22:46). The stern warnings of the levitical law (Lv. 18:22; 20:13) are primarily aimed at idolatry too; the word 'abomination' (*tō'ēbā*), for example, which features in both these references, is a religious term often used for idolatrous practices. Viewed strictly within their context, then, these OT condemnations apply to homosexual activity conducted in the course of idolatry, but not necessarily more widely than that.

In Rom. 1 Paul condemns homosexual acts, lesbian as well as male, in the same breath as idolatry (vv. 23–27), but his theological canvas is broader than that of Lv. Instead of treating homosexual behaviour as an expression of idolatrous worship, he traces both to the bad 'exchange' fallen man has made in departing from his Creator's intention (vv. 25f.). Seen from this angle, every homosexual act is unnatural (*para physin*, v. 26), not because it cuts across the individual's natural sexual orientation (which, of course, it may not) or infringes OT law (*contra McNeill*), but because it flies in the face of God's creation scheme for human sexual expression.

Paul makes two more references to homosexual practice in other Epistles. Both occur in lists of banned activities and strike the same condemnatory note. In 1 Cor. 6:9f. practising homosexuals are included among the unrighteous who will not inherit the kingdom of God (but with the redemptive note added, 'such were some of you'); and in 1 Tim. 1:9f. they feature in a list of 'the lawless and disobedient'. The latter is especially important because the whole list represents an updated version of the *Ten Commandments. Paul parallels the 7th commandment (on adultery) with a reference to 'immoral persons' (*pornoi*) and 'sodomites' (*arsenokoitai*), words which cover all sexual intercourse outside marriage, whether heterosexual or homosexual. If the Decalogue is permanently valid, the significance of this application is heightened still further.

It has been suggested that the meaning of *arsenokoitēs* in 1 Cor. 6:9 and 1 Tim. 1:10 may be restricted to that of 'male prostitute' (cf. *Vulg. masculi concubitores*). Linguistic evidence to support this view is lacking, however, though the word itself is certainly rare in literature of the NT period. It seems beyond reasonable doubt that Paul intended to condemn homosexual conduct (but not homosexual people) in the most general and theologically broad terms he knew. His three scattered references fit together in an impressive way as an expression of God's will as he saw it. As

Creator, Law-Giver and King, the Lord's condemnation of such behaviour was absolutely plain.

BIBLIOGRAPHY. D. J. Atkinson, *Homosexuals in the Christian Fellowship*, 1979; E. Moberly, *Homosexuality: A New Christian Ethic*, 1983; P. Coleman, *Gay Christians*, 1989. D.H.F.

HONEY, HONEYCOMB (Heb. *d'baš*, 'honey', the usual word; *nōpēt*, 'juice', 'dropping'; *ya'ar*, 'comb'; *ya'raṭ had-d'baš*, 'comb of honey'; *šūp d'baš*, 'a flowing of honey'; Gk. *meli*, 'honey'; *melissian kērion*, 'honeycomb'). A favourite *food in biblical times (Pr. 24:13; cf. Ecclus. 11:3), honey was found in hollows of the rocks (Dt. 32:13; Ps. 81:16); in trees (1 Sa. 14:25–26, though the Heb. text here is obscure); in the wilderness of Judaea (Mt. 3:4; Mk. 1:6); and in animal carcasses (Jdg. 14:8).

Honey was used in cake-making (Ex. 16:31), and was regarded as having medicinal properties (Pr. 16:24). It was as acceptable gift (2 Sa. 17:29; 1 Ki. 14:3); a valuable resource (Je. 41:8); and was evidently plentiful enough to be exported (Ezk. 27:17, but some suggest that in this verse and in Gn. 43:11 grape or date syrup (Arab. *dibs*) may be intended; cf. Jos., *BJ* 4. 469). It was forbidden as an ingredient of any meal-offering to Yahweh (Lv. 2:11) because of its liability to fermentation (so Pliny, *NH* 11. 15), but included in tithes and first-fruits (2 Ch. 31:5), which incidentally suggests domesticated bees (*ANIMALS). In later times bee-keeping may have been practised by the Jews.

Canaan is spoken of as a land 'flowing with milk and honey' (Ex. 3:8, etc.; cf. *ANET*, pp. 19–20), for a discussion of which see T. K. Cheyne's note (*EBI*, 2104). Goshen is similarly described (Nu. 16:13).

Honey as the 'chief of sweet things' has inspired many figurative allusions—e.g. Ps. 19:9–10; Pr. 5:3 (cf. Ct. 4:11); Pr. 24:13–14 (cf. Ecclus. 32:26); Ezk. 3:2–3; Rev. 10:9. J.D.D.

HOOK. 1. Heb. *hāh* (Ezk. 29:4; 38:4), *hāhi* (Ex. 35:22; 2 Ki. 19:28; Is. 37:29; Ezk. 19:4, 9). A hook put in the nose of a tamed beast to lead it about, or of a wild one to bring it under control. 2. *hōhīm* (2 Ch. 33:11), nose rings. Assyrian monuments show this method of treating captives. NEB has 'spiked weapons'. 3. *š'pattayim* (Ezk. 40:43); possibly a double-pronged hook used in flaying a carcass, but the meaning is uncertain. RVMG, NEB render as 'ledges'. 4. *mazmērōt*, 'pruning hooks' (Is. 2:4; 18:5; Joel 3:10; Mi. 4:3). Small sickle-shaped knives employed by vinedressers, easily convertible to, and probably used as, a weapon of war. 5. *wāw* (Ex. 26:32, etc.) is used only in connection with the hangings of the *tabernacle. 6. *agmōn* (Jb. 41:1), *hakkā* (Jb. 41:2; Is. 19:8; Hab. 1:15), *šinnā* and *sirōt dūgā* (Am. 4:2) and Gk. *ankistrōn* (Mt. 17:27) all mean 'fish hook'. N.H.

HOPE. Hope, it would seem, is a psychological necessity, if man is to envisage the future at all. Even if there are no rational grounds for it, man still continues to hope. Very naturally such hope, even when it appears to be justified, is transient and illusory; and it is remarkable how often it is qualified by poets and other writers by such epithets as 'faint', 'trembling', 'feeble', 'desperate', 'phantom'. The Bible sometimes uses hope in the

HOPE

conventional sense. The ploughman, for example, should plough in hope (1 Cor. 9:10), for it is the hope of reward that sweetens labour. But for the most part the hope with which the Bible is concerned is something very different; and in comparison with it other hope is scarcely recognized as hope. The majority of secular thinkers in the ancient world did not regard hope as a virtue, but merely as a temporary illusion; and Paul was giving an accurate description of pagans when he said they had no hope (Eph. 2:12; cf. 1 Thes. 4:13), the fundamental reason for this being that they were 'without God'.

Where there is a belief in the living God, who acts and intervenes in human life and who can be trusted to implement his promises, hope in the specifically biblical sense becomes possible. Such hope is not a matter of temperament, nor is it conditioned by prevailing circumstances or any human possibilities. It does not depend upon what a man possesses, upon what he may be able to do for himself, nor upon what any other human being may do for him. There was, for example, nothing in the situation in which Abraham found himself to justify his hope that Sarah would give birth to a son, but because he believed in God, he could 'in hope' believe 'against hope' (Rom. 4:18). Biblical hope is inseparable therefore from faith in God. Because of what God has done in the past, particularly in preparing for the coming of Christ, and because of what God has done and is now doing through Christ, the Christian dares to expect future blessings at present invisible (2 Cor. 1:10). The goodness of God is for him never exhausted. The best is still to be. His hope is increased as he reflects on the activities of God in the Scriptures (Rom. 12:12; 15:4). Christ in him is the hope of future glory (Col. 1:27). His final salvation rests on such hope (Rom. 8:24); and this hope of salvation is a 'helmet', an essential part of his defensive armour in the struggle against evil (1 Thes. 5:8). Hope, to be sure, is not a kite at the mercy of the changing winds, but 'a sure and steadfast anchor of the soul', penetrating deep into the invisible eternal world (Heb. 6:19). Because of his faith the Christian has an assurance that the things he hopes for are real (Heb. 11:1); and his hope never disappoints him (Rom. 5:5).

There are no explicit references to hope in the teaching of Jesus. He teaches his disciples, however, not to be anxious about the future, because that future is in the hands of a loving Father. He also leads them to expect that after his resurrection renewed spiritual power will be available for them, enabling them to do even greater works than he did, to overcome sin and death, and to look forward to sharing his own eternal glory. The resurrection of Jesus revitalized their hope. It was the mightiest act of God wrought in history. Before it 'panic, despair flee away'. Christian faith is essentially faith in God who raised Jesus from the dead (1 Pet. 1:21). This God towards whom the Christian directs his faith is called 'the God of hope', who can fill the believer with joy and peace, and enable him to abound in hope (Rom. 15:13). Because of the resurrection, the Christian is saved from the miserable condition of having his hope in Christ limited to this world only (1 Cor. 15:19). Christ Jesus is his Hope for time and eternity (1 Tim. 1:1). His call to be Christ's disciple carries with it the hope of finally sharing his glory (Eph. 1:18). His hope is laid up for him in heaven (Col.

1:5) and will be realized when his Lord is revealed (1 Pet. 1:13).

The existence of this hope makes it impossible for the Christian to be satisfied with transient joys (Heb. 13:14); it also acts as a stimulus to purity of life (1 Jn. 3:2-3) and enables him to suffer cheerfully. It is noticeable how often hope is associated in the NT with 'patience' or 'steadfastness'. This virtue is vastly different from Stoic endurance, precisely because it is bound up with a hope unknown to the Stoic (see 1 Thes. 1:3; Rom. 5:3-5).

In the light of what has been said it is not surprising that hope should so often be mentioned as a concomitant of faith. The heroes of faith in Heb. 11 are also beacons of hope. What is perhaps more remarkable is the frequent association of hope with love as well as with faith. This three-fold combination of faith, hope and love is found in 1 Thes. 1:3; 5:8; Gal. 5:5-6; 1 Cor. 13:13; Heb. 6:10-12; 1 Pet. 1:21-22. By its connection with love, Christian hope is freed from all selfishness. The Christian does not hope for blessings for himself which he does not desire others to share. When he loves his fellow-men he hopes that they will be the recipients of the good things that he knows God longs to give them. Paul gave evidence of his hope just as much as his love and his faith when he returned the runaway slave Onesimus to his master Philemon. Faith, hope and love are thus inseparable. Hope cannot exist apart from faith, and love cannot be exercised without hope. These three are the things that abide (1 Cor. 13:13) and together they comprise the Christian way of life.

HOPHNI AND PHINEHAS. The two sons of *Eli, 'priests of the Lord' at Shiloh (1 Sa. 1:3). Both names are Egyptian, meaning 'tadpole' and 'the Nubian' respectively. They are described as 'worthless men; they had no regard for the Lord' (1 Sa. 2:12). They abused their privileges as priests, claiming more than their proper share of the sacrifices and insisting on having it when and as they pleased on threat of force, so that men treated the offerings of the Lord with contempt. Because of this and their licentiousness, a curse was pronounced against the house of Eli, first by an unknown prophet (1 Sa. 2:27-36) and later by Samuel (1 Sa. 3:11-14). They died in the battle against the Philistines at Aphek (1 Sa. 4:11).
J. W. M.

HOPHRA. The pharaoh Ha'a'ibrē' Wahibrē; Gk. Apries, 4th king of the 26th Dynasty, who reigned for 19 years, from 589 to 570 bc. He was an impetuous king, over-ambitious to meddle in Palestinian affairs. The Heb. form *hōḫra* is best derived from his personal name, (Wa)hibrē', precisely as with Shishak, Tirhakah and Neco. 'Pharaoh-hophra' is explicitly mentioned only in Je. 44:30, but several other references to 'Pharaoh' in the prophets concern him. Shortly after Hophra's accession, Zedekiah requested forces from him, presumably against Nebuchadrezzar (Ezk. 17:11-21).

Hophra duly invaded Palestine during Nebu-

chadrezzar's siege of Jerusalem (Je. 37:5; perhaps also Je. 47:1?), accompanied by his fleet (Herodotus, 2. 161). In 588 Ezekiel prophesied against the Egyptians (Ezk. 29:1-16) and Jeremiah prophesied Hophra's retreat (Je. 37:7). The Babylonians raised the siege of Jerusalem (Je. 37:11) just long enough to repulse Hophra; whether a battle actually occurred is uncertain. After a disastrous Libyan campaign and a revolt which resulted in Ahmose becoming co-regent, Hophra was slain in conflict with Ahmose (*cf.* Je. 44:30). K.A.K.

HOR. I. A mountain on the border of Edom where Aaron was buried (Nu. 20:22-29; 33:37-39; Dt. 32:50), possibly Moserah (Dt. 10:6), although Nu. 33:30, 39 distinguishes them. The place was in the region of Kadesh (Nu. 20:22; 33:37). More accurately it is 'Hor, the mountain', suggesting that it was a prominent feature.

Josephus (*Ant.* 4. 82) thought it was near Petra, and tradition has identified it with Jebel Nebi Harun, a lofty peak 1,460 m high, to the W of Edom. This, however, is far from Kadesh.

Jebel Madeira, NE of Kadesh, on the NW border of Edom has been suggested, for Israel began the detour round Edom at Mt Hor (Nu. 21:4), and Aaron could well have been buried here 'in the sight of all the congregation' (Nu. 20:22-29). However the site should be sought on 'the way of Atharim' from Kadesh-barnea to the vicinity of Arad, because it is always mentioned on the line of this journey (see references above).

2. A mountain on the N border of Israel, probably one of the N summits of the Lebanese range in the vicinity of the coast. From Jos. 13:4 the N border of 'the land that remains' included the region of Byblos and extended to Aphek on the Amorite border. Mt Hor was thus probably one of the NW peaks of the Lebanese range N of Byblos, such as Ras Shaqqah. J.A.T.

HORESH. A place in the wilderness of Ziph (I Sa. 23:15-19), possibly to be identified with Khirbet Khoreisa some 9-10 km S of Hebron. AV, RV 'wood' is grammatically possible but topographically unlikely; trees could scarcely have grown in this region. R.P.G.

HORITES, HORIM. The ancient inhabitants of Edom, defeated by Chedorlaomer (Gn. 14:6), said to be the descendants of Seir the Horite (Gn. 36:20) and an ethnic group distinct from Rephaim. They were driven out by the sons of Esau (Dt. 2:12, 22). Esau himself seems to have married the daughter of a Horite chief, Anah (Gn. 36:25). The Horites (Heb. *hōri*, Gk. *chorraios*) also occupied some places in central Palestine, including Shechem (Gn. 34:2) and Gilgal (Jos. 9:6-7), the LXX reading 'Horite' in both passages (AV; RSV, 'Hivite').

The E Horites cannot be identified as Hurrians either archaeologically or linguistically (Semitic personal names in Gn. 36:20-30). Some think the pre-Edomites to have been cave-dwellers (*hōr*) and equate this with the Egyp. name for Palestine (*hr = hurru*) cited with Israel on the Merenptah stele c. 1225 bc.

The pre-Israelite Jebusites ruled by Abdi-hepa during the *Amarna period seem to be Hurrians,

as was *Araunah (Ornan, *rwnh*, *wrnh*, 2 Sa. 24:16; *rnn* (1 Ch. 21:18), the Hurrian word for 'the king[sl]lord' (*ewirne*).

Hurrian, a non-Semitic (Caucasian?) language was spoken by a people who formed part of the indigenous population of N Syria and Upper Mesopotamia from c. 2300 bc. From the 18th century they are well attested at Mari and Alalakh as well as in the Hittite archives where from c. 1500 to 1380 bc Hurrian myths and literature are found.

At this time the Hurrian kingdom of Mitanni, ruled by kings with Indo-Aryan names, corresponded with Egypt (*e.g.* Tušratta-Amenophis IV) and influenced Assyria (*e.g.* *Nuzi). Hurrian personal names are found throughout Syro-Palestine (*ALALAH, *TAANACH, *SHECHEM) and some biblical names may best be considered of Hurrian origin: Anah, Ajah, Dishon, *Shamgar, Toi and Elisha (D. J. Wiseman, *JTVI* 72, 1950, p. 6).

Hori was also the personal name both of an Edomite (Gn. 36:22; 1 Ch. 1:39) and of a Simeonite (Nu. 13:5).

BIBLIOGRAPHY. I. J. Gelb, *Hurrians and Subarians*, 1944; E. A. Speiser, *Introduction to Hurrian*, 1941; E. A. Speiser, *JWH* 1, 1953, pp. 311-327; H. A. Hoffner, *POTT*, 1973, pp. 221-226; G. Wilhelm, *The Hurrians*, 1989. D.J.W.

HORMAH (Heb. *hormāh*). An important town in the Negeb, formerly Canaanite Zephath (destroyed by Judahites and Simeonites, Jdg. 1:17); its king is listed as defeated by Joshua (Jos. 12:14). The Israelite name 'sacred' recalled the sacrifice of the captured town under a national vow made after a previous defeat (Nu. 21:1-3); there is no clear link with Nu. 14:45, though AV follows Symmachus, Vulg., *et al.*, in emending 'way of Atharim' to 'way of the spies' (see *BDB*, *s.v.* Atharim).

Hormah was certainly linked with *Arad, but is not identical; *cf.* Jos. 12:14; Jdg. 1:16f. The sequence in Jos. 15:30f.; 19:4f. suggests that it was in the N of Simeon, towards Ziklag; W. F. Albright proposed Tell es-Sheri'ah as the only site in this area with extensive Late Bronze remains (*BASOR* 15, 1924). A more S location, at the limit of Canaanite pursuit towards Kadesh, is indicated by Nu. 14:45; Dt. 1:44. J. Garstang suggested Tell el-Milh (Tel Malhata), 22 km E of Beersheba, but it now seems likely that this was Canaanite *Arad and that Middle Bronze fortifications S of Tel Masos, 6 km to the W, represent Hormah.

Bimson, *Redating the Exodus*, 1981, pp. 190, 217f.; V. Fritz, *BASOR* 241, 1981, pp. 61-74; *NEAEHL*, pp. 986-989. J.P.U.L.

HORN (Heb. *qeren*; Gk. *keras*). I. Used literally of the horns of the ram (Gn. 22:13; Dn. 8:3), the goat (Dn. 8:5), and the wild ox (Heb. *r'ēm*, Dt. 33:17; Pss. 22:21; 92:10; AV 'unicorn'). It was used as a receptacle for oil for ceremonial anointing (1 Sa. 16:1, 13; 1 Ki. 1:39). The ram's horn (*qeren hayyōbēl*) was also used as a *musical instrument (Jo. 6:5; *cf.* 1 Ch. 25:5).

2. The horn-shaped protuberances on the four corners of the *altars in the tabernacle and Temple, an example of which has been found at

HORN

Megiddo. The sacrificial blood was smeared on these (Ex. 29:12; Lv. 4:7, 18, etc.) and they were regarded as places of refuge (cf. the respective fates of Adonijah and Joab, 1 Ki. 1:50ff.; 2:28ff.).

3. Horns symbolized power, in Zedekiah's prophetic action (1 Ki. 22:11) and in Zechariah's vision (Zc. 1:18ff.), and often the word is metaphorically used in poetic writings. God exalts the horn of the righteous and cuts off the horn of the wicked (Ps. 75:10, etc.). He causes the horn of David to sprout (Ps. 132:17; cf. Ezk. 29:21). He is spoken of as 'the horn of my salvation' (2 Sa. 22:3; Ps. 18:2; cf. Lk. 1:69), but this may be a metaphor based on the horns of the *altar as the place of atonement. Am. 6:13 'horns' (AV) should be read as a place-name, Karnaim (so RSV).

4. In the peculiar apocalyptic usage of Dn. 7 and 8 and Rev. 13 and 17 the horns on the creatures in the visions represent individual rulers of each world-empire.

5. For 'ink-horn', see *WRITING. J.B.T.R.

HORONAIM. A town of Moab (Is. 15:5; Je. 48:3, 5, 34) which lay at the foot of a plateau close to Zoar. The *Moabite Stone refers to it in line 32. Some would identify it with el-'Araq, 500 m below the plateau, where there are springs, gardens and caves. It may, however, be Oronae, taken from the Arabs and restored to the Nabataean king by Alexander Jannaeus (Jos., *Ant.* 13. 397; 14. 18).

J.A.T.

HOSANNA. The Gk. form of a Heb. term, used at the triumphal entry of Jesus into Jerusalem (Mt. 21:9, 15; Mk. 11:9; Jn. 12:13). The Heb. consists of the hipil imperative *hōśā*, 'save', followed by the enclitic particle of entreaty *nā*, sometimes translated 'pray', 'we beseech thee'. It does not occur in the OT except in the longer imperative form *hōśfā nā* in Ps. 118:25, where it is followed by the words, also quoted at the triumphal entry, 'Blessed be he who enters in the name of the Lord.' Ps. 118 was used in connection with the Feast of Tabernacles, and v. 25 had special significance as a cue for the waving of the branches (*lūlāb*); see Mishnah, *Sukkah* 3. 9; 4. 5. But similar expressions of religious enthusiasm were not restricted to the Feast of Tabernacles: 2 Macc. 10:6-7 implies that psalm-singing and branch-waving were part of the festivities at the Feast of Dedication also. We may reasonably assume that the waving of palm-branches and the cries of Hosanna which welcomed Jesus were a spontaneous gesture of religious exuberance, without any reference to a particular festival and without the supplicatory meaning of the original phrase in Ps. 118.

J.B.T.R.

HOSEA, BOOK OF. This first book in the collection of twelve small prophetic writings which conclude our OT comes from the 8th century bc and, along with Amos, is addressed to the N kingdom Israel, often called by Hosea Ephraim. There is every indication that the prophet had his home in the N and loved the land and its people. It was therefore all the more painful for him to have to issue rebukes and threats when appeals went unheeded. The intensity of his emotion may be

gauged from his vivid use of language. He packs metaphors and similes into allusions which in his day were no doubt extremely telling, though their exact meaning sometimes escapes the modern reader. Changes of subject-matter are abrupt and, in the absence of introductory phrases, it is by no means self-evident where one passage ends and another begins. The material appears to have been arranged in roughly chronological order, and to recognize historical situations behind the prophet's words is to find an important aid to understanding.

I. Outline of contents

- 1:1 Title
- 1:2-9 The prophet's family before 752 bc
- 1:10-2:1 A sermon on his children's names
- 2:2-15 Unfaithful Israel, prosperous now but not for long
- 2:16-23 The Lord's new covenant
- 3:1-5 The Lord's love will have its way
- 4:1-5:7 Sweeping condemnations of pagan worship and its consequences
- 5:8-7:16 Panic at the encroachment of Assyria c. 733 bc
- 8:1-14 Religious and political disintegration
- 9:1-9 The despised prophet warns of exile
- 9:10-17 Their population will decline
- 10:1-8 Their altars will be in ruins
- 10:9-15 They will reap as they have sown
- 11:1-11 The Lord's love recoils from punishment
- 11:12-12:14 A sermon on Jacob the deceiver
- 13:1-16 Death is inevitable, exile is imminent c. 724 bc
- 14:1-8 The Lord's pledge to forgive those who return to him
- 14:9 Concluding exhortation

II. Historical setting

Though Hosea prophesied in Israel the opening verse mentions only one king, Jeroboam II, who reigned in Israel. His successors were deemed unworthy of mention and the period of Hosea's ministry is marked instead by the reigns of the corresponding kings in Judah. The period covered by the prophecy is the last 30 years of the N kingdom. After years of prosperity, reflected in the prophecy of Amos but seen by him as a gross abuse of God-given resources, decline set in suddenly after the death of Jeroboam II (753 bc). The highly confident, rollicking behaviour depicted in Hosea 4 and 5 suggests the earlier period of the prophet's ministry, when politically everything seemed set fair and there was a booming economy. At that time a prophecy of destruction must have seemed incredible.

As time went on the sequence of events should have reinforced the truth of the prophet's words, but habitual attitudes were not easily changed, even under threat of invasion. The armies of Assyria marched nearer and nearer to Israel during the reign of Tiglath-pileser III (745-727 bc), until in 743 Damascus was forced to pay tribute. Before the death of Menahem of Israel in 742/1 this same king records having received tribute from Israel. On a later occasion each man paid the price of a slave to avoid deportation (2 Ki. 15:19-20).

An attempt at revolt against Assyria was made by Pekah of Israel (740-732 bc) in alliance with Syria (Is. 7); even if Judah had joined the coalition the cause would still have been hopeless. Assyrian power was too great and in 732 Damascus fell to

the enemy. At the same time Israel was invaded, her Galilean territory annexed, and many of her subjects taken captive (Ho. 7:8–9). It was during Hoshea's reign (732–723/2) that an appeal was made to Egypt (2 Ki. 17:4) in an attempt to find liberation from the Assyrian yoke (Ho. 9:3; 11:5; 12:1). The attempt was abortive, Hoshea was taken captive and in 722 Samaria fell after a siege of 3 years.

Despite the worsening political situation there was no change for the better in Israel's way of life, nor was there any desire to listen to the word of the prophet.

III. Israel's way of life

Unlike his contemporary Amos, Hosea laid much of the blame for Israel's collapse on the adoption of an alien life-style borrowed from Canaanite neighbours. By going after 'Baal', the prophet's shorthand for the pagan deity and all that he stood for, Israel committed herself to a system which affected not only worship. Every part of life, from work in the fields, the use of leisure and the presuppositions of social duties and commitments to political decisions and relationships, was bound up with it. The Baals were regarded as the source of fertility (2:5; 4:10) and of financial prosperity (2:8). To worship them demanded neither self-discipline nor high moral standards. Instead, orgiastic ritual at the shrines appealed to the sensual in human nature and militated against everything that the ancient covenant morality had stood for.

The leaders of the nation, kings, priests and merchants, were the major offenders in promoting this way of life (5:1–7). It had become the norm, whereas the prophet's passion for the right was regarded as slightly mad (9:7). If the powerful in the land were to take rebuke and initiate reform, the prophet had an unenviable task ahead of him. There is evidence that at the first sign of Assyria's encroachment there was some attempt at repentance (6:1–3), but it was superficial and did not begin to result in a reformed society.

Socially lawlessness and injustice reigned. Burglary and highway robbery, murder, drunkenness, intrigue (6:7–7:7) and all the consequent evils are noted by the prophet; but his concern is not merely to list sins and point an accusing finger. What grieves him and drives him to protest is the choice Israel has made, rejecting the Lord, to whom Israel was 'betrothed', for worthless gods which, far from bestowing prosperity, could bring only ruin to the land and its people.

IV. The involvement of the prophet

To Hosea's mind it was no accident that his own personal experience had prepared him to understand the profound truth of the Lord's undying love for Israel, despite the fact that Israel had rejected him. The way Hosea expresses this (1:2) raises problems for the modern reader. Whatever explanation a biographer might have revealed, looking back Hosea could see that his experience was no accident. The Lord was in it, preparing his servant for a ministry which he could not have exercised without that particular form of suffering.

His wife Gomer bore three children whose names spoke of the Lord's judgment: 'Jezreel', the place where Jehu's sword ended the dynasty of Omri (2 Ki. 9:23–10:17), 'Not pitied' and 'Not

my people' (1:4–9). It seems that subsequently Gomer left her husband for the promiscuous life that came most easily to her, and that eventually, worn and no longer attractive, she found herself forsaken, only to be bought back by the husband she had deserted. After keeping her for a while in seclusion he would restore her to her place as his wife. The story is not told explicitly, for the point is not to intrigue us with human heart-break but to demonstrate the consistency of God's love. There are therefore differences of interpretation as to the prophet's action, but as regards Israel the Lord would provide a way back to himself after the discipline of exile, and 'Not my people' would again become 'Sons of the living God' (1:10).

To help him understand the situation Hosea drew on his knowledge of God's dealings with the Patriarchs, in particular with Jacob, who strove to get his own way, even to the extent of striving with God (12:2–14). Yet the Lord had his way even with this cunning man from whom the nation was descended. Just as Jacob brought exile upon himself, so Ephraim was preparing his own destruction. As in the case of Jacob this was not the end of the story, so the prophet saw that exile would not be the last word on Israel's guilt.

Hosea also knew the Exodus story and meditated on its significance for his own time (11:1–4). Like a father with wayward sons, the Lord went on making provision for his people, though they did not realize the source of their health and progress. The Lord's love, like that of a caring parent, continued despite his son's rebellion and rejection. Still he called Ephraim 'my people' (11:7). Conflict between the Lord's love and his need to chastise and destroy tore the very heart of God (11:8). Here the prophet comes very close to the NT revelation of God's love as seen in the cross.

Opposition from the authorities is hinted at in 9:7. Not surprisingly, in the light of the treatment of earlier prophets (1 Ki. 19:2; 22:8; Am. 7:12–13), Hosea was regarded as an interfering fool, who could be passed off as a madman, to be shut away if necessary. He identified with and shared the Lord's suffering to the extent that he shared his love.

V. Hosea's theology

Whereas Amos had a message for Israel's neighbours as well as for God's people, Hosea concentrates on the relationship between the Lord and Israel, bound together as they were by a covenant of which the name Yahweh was a pledge and token (12:9). The terms of the covenant are referred to in 13:4, where reference is made to the first commandment. Evidently the Ten Commandments were known. The name Yahweh occurs most frequently, and when Elohim is used it is almost always with the possessive, 'your God' or 'our God'. Four times Hosea uses El, the Holy One (11:9, 12), the living God (1:10), the Lord of hosts (12:5). Here the emphasis is on the incomparability of Israel's God.

On another level Hosea sees that Israel has brought trouble on her own head. The natural disasters and military defeats Israel had suffered resulted from the outworking of a providential law of cause and effect, though Hosea never spoke of this as operating in any mechanical way. It is the Lord himself who is at work in circumstances, secretly eating 'like a moth' ('festering sore', ЯВ, НЕВ)

HOSEA, BOOK OF

to destroy, or 'like dry rot' to cause collapse (5:12). This law will operate till full judgment has been worked out. Harvests will fail (9:2), riches will prove useless to save (9:6), conception will not take place and even if it does children will be born only to become war fodder (9:11-14). Men must learn that the mysterious generative powers they possess and the reproductive life of plants and animals are not ultimately under human control. There is a built-in retribution which comes into play to check abuse.

Hosea uses outrageous similes in likening the Lord to a lion, a leopard and a she-bear robbed of her cubs (13:7-8). In each case the animal is doing no more and no less than by nature it was intended to do. Such was the Lord's love that he could do no less than roar and destroy and devour. He too had been robbed of the love of his people and raging Assyrian armies would literally tear and devour and carry away their prey. Thus historical events as well as the world of nature were seen to be directed according to the Lord's will.

Did Hosea's contemporaries regard the prophet's accusations as exaggerated, so that the punishment appeared altogether out of proportion to the crime? This may well have been so, hence Hosea's insistence that throughout their history, with the possible exception of the first flush of the Exodus deliverance (2:15; 11:1). Israel had been rebellious. As soon as they encountered Baal-worship in the wilderness their true nature became apparent (9:10; 13:16). King-making had been another sign of apostasy (13:10; *cf.* 9:15), and the prophet commented on the collapse of the monarchy as kings were murdered and replaced by usurpers (7:7; 8:4). History again proved to be working out the Lord's purpose, and its meaning could be discerned by the man in tune with God's word. The apostasy of Hosea's contemporaries was the culmination of a long history of such rebellion and now the time had come for the Lord to call a halt. Israel did not in fact know the Lord, though they claimed to know him (8:2). For this reason they misunderstood his dealings with them. Such estrangement could not be resolved, largely because no estrangement was admitted on Israel's side. Neither appeals nor threats made any impression and therefore punishment had to come.

Undoubtedly Israel had set much store by public worship. The repentance formula (6:1-3) may have been a well-known 'general confession', and there was no lack of worshippers at the shrines (4:13; 8:11). Sacrifices were offered and the ritual was observed, but there was only the most fleeting consciousness of any need of forgiveness, and therefore worship bore no fruit in changed lives (6:4-6). Knowledge of God would have brought home the enormity of the people's need of forgiveness and of positive response to the Lord's steadfast love. Without these there would never be justice and right dealing between men.

In the light of all this, what hope could Hosea hold out for his own time or for the future? He knew that the next stage would be exile and the destruction of all that Israel had held dear. Then access to their idols would no longer be open (2:6), they would not be able to hold their festivals, and poverty would bring home to them their desperate need (2:9f.). This experience would drive them back to the Lord (2:7) and cause the 'wayward wife' to listen once more to his words of love

(2:14). The result would be true repentance (3:5) and an enduring betrothal relationship (2:19-20).

Later in the book, when Assyria's sword was about to complete its work, the prophet found hope in meditation on the Exodus (12:13). Israel at that time had in no way merited deliverance, yet the Lord had worked through his prophet Moses to bring it about. They still had the same Lord (13:4) in whom alone was their hope (14:4). The anguish which the prophet saw so clearly to be involved in God's love was ultimately to issue in the incarnation and the cross. Jesus Christ would bear the penalty of estrangement on behalf of men and so open up the way back to communion with God. The confession of 14:1-3 would then become meaningful for men and promised blessing would become a reality (14:4-8). After that the Lord would find his lovingkindness returned.

BIBLIOGRAPHY. J. L. Mays, *Hosea*, 1969; H. W. Wolff, *Hosea*, E.T. 1974; F. I. Anderson and D. N. Freedman, *Hosea*, AB, 1980; L. J. Wood, *Hosea*, EBC, 1985; D. Stuart, *Hosea-Jonah*, WBC, 1987; T. E. McComiskey, 'Hosea', in *The Minor Prophets* 1, 1992. J.G.B.

HOSHEA (Heb. *hōšēa*). 1. The original name of Joshua (Nu. 13:8; *cf.* Dt. 32:44) which was changed by Moses (Nu. 13:16).

2. An official placed by David over the Ephraimites (1 Ch. 27:20).

3. The son of Elah; the 20th and last king of the N kingdom of Israel, who wrested the throne from Pekah by assassinating him (2 Ki. 15:30) and reigned for 9 years (2 Ki. 17:1). During Pekah's reign (c. 733 bc), Tiglath-pileser III had overrun much of Israel and claims to have established Hoshea as a vassal on his throne (*ANET*, p. 284). Expecting support from the pharaoh So, Hoshea stopped paying tribute, leading to an advance by Shalmaneser V (724 bc). When Hoshea asked him for peace, Shalmaneser arrested him and occupied the land, finally capturing Samaria in 722 bc, bringing the N kingdom to an end (2 Ki. 17:3-6). Hoshea, whose death is not recorded, apparently sought to change the religious policies of his predecessors since he receives only a qualified censure of his reign (2 Ki. 17:2).

4. A witness to the people's covenant with Yahweh after the exile (Ne. 10:23). D.W.B.

HOSPITALITY. Throughout Scripture, the responsibility of caring for the traveller and those in need is largely taken for granted. Although examples are found right through the Bible, the only specific commands about providing hospitality concern the Christian's responsibility towards his fellow believer.

I. In the Old Testament

Comparison with modern bedouin tribes, among whom hospitality is very highly regarded, suggests that the prominence of hospitality in the OT is partly due to Israel's nomadic origins. Abraham's generosity towards the three strangers (Gn. 18:1-8) provides an excellent illustration of nomadic practice, and was often remembered in later Jewish writings for its exemplary character, though settled

communities were no less welcoming to the stranger (Jdg. 13:15; 2 Ki. 4:8ff.)

Hospitality in the OT was more than just a custom, however. It was also a demonstration of faithfulness to God (Jb. 31:32; Is. 58:7). One might even entertain Yahweh (Gn. 18:1–8) or his angels (Jdg. 6:17–23; 13:15–21; cf. Heb. 13:2), while God in his turn held a feast on the day of the Lord to which guests were invited (Zp. 1:7). The divine provision of *cities of refuge (Nu. 35:9–34; Jos. 20:1–9) and concern for the sojourner (Ex. 22:21; Lv. 19:10; Dt. 10:19) indicate the extent of OT hospitality.

Failure to provide for the traveller's needs was a serious offence, liable to punishment by God (Dt. 23:3–4) and man (1 Sa. 25:2–38; Jdg. 8:5–17). The use of *peša'* (1 Sa. 25:28), a term employed for transgression of covenants, indicates the importance attached to such obligations. The unique breach of hospitality by Jael (Jdg. 4:11–21; 5:24–27) could be commended only because of her unwavering loyalty to old family ties and to Yahweh. Some invitations were better refused, however, since they might result in spiritual ruin (Pr. 9:18).

Though hospitality was extended to all, a particular responsibility existed to provide for one's own family (Gn. 29:1–14; Jdg. 19:10–12; Is. 58:7) and for God's servants (2 Sa. 17:27–29; 1 Ki. 17:10ff.; 2 Ki. 4:8ff.). A future son-in-law might be entertained as a guest, though this is known only as a Midianite custom (Ex. 2:20). The peace agreement between Heber the Kenite and Jabin of Hazor seems to have included a mutual obligation to provide hospitality (Jdg. 4:11–21).

That a host was responsible for the safety and welfare of his guests is vividly illustrated by Lot and by the old man of Gibeah (Gn. 19:8; Jdg. 19:24–25). The immorality of the communities in which both lived suggests that their disregard for their daughters was due more to the prevailing moral climate than to the requirements of the hospitality oath.

A stranger would wait at the city-gate for an offer of hospitality (Gn. 19:1; Jdg. 19:15), though the well also formed a suitable meeting-place (Gn. 24:14ff.; Ex. 2:20). Sometimes hospitality might be given in return for an earlier kindness (Ex. 2:20; 2 Sa. 19:32–40). Bread and water was the minimum provision (Dt. 23:4; 1 Ki. 17:10–11), though such meagre fare was often exceeded. A guest's feet were washed from the dust of travel (Gn. 18:4; 19:2; 24:32; Jdg. 19:21), and his head sometimes anointed with oil (Ps. 23:5; Am. 6:6; cf. Lk. 7:46). The best *food might be presented (Gn. 18:5; 1 Sa. 25:18), and meat, rarely eaten in the E, specially procured (Gn. 18:7; Jdg. 6:19; 13:15; cf. Lk. 15:23). Curds and milk also particularly refreshed the traveller (Gn. 18:8; Jdg. 5:25). Animal fodder was supplied when required (Gn. 24:14, 32; Jdg. 19:21), while Elisha even received furnished accommodation (2 Ki. 4:10).

II. In the New Testament

The Gk. terms used are *philoxenia* (lit. 'love of strangers'), cf. *xenizō*, 'to receive as a guest', also *synagō* (Mt. 25:35ff.) and *lambanō* (3 Jn. 8).

Many aspects of OT hospitality reappear in the NT. The courtesies of providing water for a guest's feet and oil for his head continue, though the NT also mentions a kiss of welcome and guests reclining at a meal (Lk. 7:44ff.). In fact, Simon the

Pharisee's home appears to have been an open house, judging by the way in which the presence of the woman who anointed Jesus was unconsciously accepted (Lk. 7:37ff.).

A special responsibility towards God's servants is also evident, and Jesus' earthly ministry (Mk. 1:29ff.; 2:15ff.; Lk. 7:36ff.; 10:38–41) and the apostles' missionary labours (Acts 10:6ff.; 16:15; 17:7) were greatly dependent on the hospitality they received. The NT develops this by regarding the giving or refusing of hospitality to Jesus and his followers as an indication of one's acceptance or rejection of the gospel (Mt. 10:9; Lk. 10:4), even at the final judgment (Mt. 25:34–46). These Christian responsibilities, however, are no more than a pale reflection of divine generosity. Jesus both spoke of the parable of the Great Supper (Mt. 22:2ff.; Lk. 14:16ff.) and gave the disciples an example to follow (Jn. 13:1ff.). Above all, he took the obligations of hospitality to the extreme by laying down his life to redeem his guests (Mk. 10:45; 14:22ff.).

The NT letters specifically command the provision of hospitality for fellow believers (e.g. Gal. 6:10). The existence of certain special factors in the 1st century AD emphasized the importance of these instructions. Persecution led to Christians being scattered and driven from their homes, and in many cases there was doubtless very real material need (Acts 8:1; 11:19). Itinerant preachers were also a charge upon the church. They received nothing from the pagan world (3 Jn. 7), and therefore became the responsibility of local Christians (Acts 9:43; 16:15; 18:3, 7), even though risks might be involved (Acts 17:5–9). Sometimes the hosts would be the evangelists' own converts (3 Jn. 5–7). False teachers, however, were to be turned away (2 Jn. 10), and letters of recommendation served to identify genuine cases (Rom. 16:1; 2 Cor. 3:1). Many inns of the time were also of low standard, both materially and morally, and the Christian traveller would often have found them unattractive.

The 'pursuit' of hospitality (Rom. 12:13) was obligatory for the Christian, who must ensure that the needs of fellow believers were properly met, though hospitality was to be offered to all (Rom. 12:13–14; Gal. 6:10). Thus Paul instructs the Colossian church to receive Mark (Col. 4:10), and assumes that Philemon will prepare a room for Paul when he is released from prison (Phm. 22). The duty of providing hospitality was also one of the special qualifications of a *bishop (1 Tim. 3:2; Tit. 1:8), and of a *widow requiring support from the church (1 Tim. 5:10).

Although hospitality was a mark of civilization for the Greeks, and the NT contains an excellent example of non-Christian generosity (Acts 28:7), hospitality in the NT had a specifically Christian character. It was to be offered freely, without grudging (1 Pet. 4:9) and in a spirit of brotherly love (Heb. 13:1). Such love (*agapē*: 1 Pet. 4:8; cf. Rom. 12:9) is essentially outward-looking, issuing in a readiness to provide for the needs of others, and could be demonstrated only because the giver had received a gift (*charisma*) from God (1 Pet. 4:10–11). The care of others was therefore the discharge of a debt of gratitude.

III. The biblical inn

OT references to a 'lodging place' (*mālōn*) are rare (Gn. 42:27; 43:21; Ex. 4:24; Je. 9:2) and specific

HOSPITALITY

locations are confined to routes linking Egypt and Palestine or Midian. Nothing is known of these places, though one of them was large enough to accommodate a sudden influx of nine travellers (Gn. 42:27). The LXX equivalent *katalyma* and the cognate verb *katalyō* suggest the idea of unharnessing the animals, though it usually conveyed the general sense of lodging. Bethlehem's inn (*katalyma*) may have been a fairly simple lodging-place. It was probably not a guest-room in a private house, as no name is given, and may have been the village's common responsibility. Elsewhere *katalyma* describes a room in a private residence borrowed for the Passover meal (Mk. 14:14; Lk. 22:11; cf. Lk. 19:7). The *pandocheion* of Lk. 10:34 is more developed, being open to anyone and providing overnight shelter, food and attention for a recognized charge, while *xenia* is used both for Philemon's guest-room and the place of Paul's house-arrest in Rome (Phm. 22; Acts 28:23).

HOST, HOST OF HEAVEN. In RSV, the word most commonly translated 'host' is *šāḥā*, used nearly 400 times. *hayil* is also translated 'host' a number of times (but see *ARMY), while *maḥ'neh* ('host' in AV) is translated 'camp' or 'encampment'. Each of these words, with due regard to its special emphasis, may be used quite neutrally, for example of pharaoh's 'host' but equally of the 'host' of Israel. However, when used of the host of Israel, there are usually religious overtones, and there are two exclusively religious uses of *šāḥā* which ought to be noted.

a. Host of heaven

This phrase (*š'ḥā haššāmayim*) occurs about 15 times, in most cases implying the object of heathen worship (Dt. 4:19, etc.). The two meanings 'celestial bodies' and 'angelic beings' are inextricably intertwined. The LXX translation, using *kosmos*, *stratia* or *dynamis*, does not help to resolve this. No doubt to the Heb. mind the distinction was superficial, and the celestial bodies were thought to be closely associated with heavenly beings. In fact, the implied angelology of C. S. Lewis' novels (*Out of the Silent Planet*, etc.) would probably have commended itself with some force to the biblical writers. The Bible certainly suggests that angels of different ranks have charge of individuals and of nations; no doubt in the light of modern cosmology this concept, if retained at all (as biblically it must be), ought properly to be extended, as the dual sense of the phrase 'host of heaven' suggests, to the oversight of the elements of the physical universe—planets, stars and nebulae.

b. Lord of hosts (Yahweh š'ḥā'ōḏ)

This expression is used nearly 300 times in the OT and is especially common in Isaiah, Jeremiah, Zechariah and Malachi. It is a title of might and power, used frequently in a military or apocalyptic context. It is significant that the first occurrence is 1 Sa. 1:3 in association with the sanctuary at Shiloh. 'Of hosts' is rendered in LXX either by transliteration as *sabaōth* (cf. Rom. 9:29; Jas. 5:4)

or by use of *pantokratōr* ('almighty'). It is thought by some to have arisen as a title of God associated with his lordship over the 'host' of Israel; but its usage, especially in the prophets, clearly implies also a relationship to the 'host of heaven' in its angelic sense; and this could well be the original connotation. (*GOD, NAMES OF.) M.T.F.

HOURLY (Heb., Aram. *šā'ā*; Gk. *hōra*) is used in Scripture in a precise sense and in a more general sense.

1. In its more precise sense (which is probably later than the more general sense), an hour is one-twelfth of the period of daylight: 'Are there not twelve hours in the day?' (Jn. 11:9). They were reckoned from sunrise to sunset, just as the three (Jewish) or four (Roman) watches into which the period of darkness was divided were reckoned from sunset to sunrise. As sunrise and sunset varied according to the time of the year, biblical hours cannot be translated exactly into modern clock-hours; and in any case the absence of accurate chronometers meant that the time of day was indicated in more general terms than with us. It is not surprising that the hours most frequently mentioned are the third, sixth and ninth hours. All three are mentioned in the parable of the labourers in the vineyard (Mt. 20:3, 5), as is also the eleventh hour (vv. 6, 9), which has become proverbial for the last opportunity. The two disciples of Jn. 1:35ff. stayed with Jesus for the remainder of the day after going home with him, 'for it was about the tenth hour' (v. 39), i.e. about 4 p.m., and darkness would have fallen before they concluded their conversation with him. The third, sixth and ninth hours are mentioned in the Synoptic record of the crucifixion (Mk. 15:25, 33f.). The difficulty of reconciling the 'sixth hour' of Jn. 19:14 with the 'third hour' of Mk. 15:25 has led some to suppose that in John the hours are counted from midnight, not from sunrise. The one concrete piece of evidence in this connection—the statement in the *Martyrdom of Polycarp* (21) that Polycarp was martyred 'at the eighth hour', where 8 a.m. is regarded by some as more probable than 2 p.m.—is insufficient to set against the well-attested fact that Romans and Jews alike counted their hours from sunrise. (The fact that the Romans reckoned their civil day as starting at midnight, while the Jews reckoned theirs as starting at sunset, has nothing to do with the numbering of the hours.) The 'seventh hour' of Jn. 4:52 is 1 p.m.; such difficulty as is felt about the reference to 'yesterday' in that verse is not removed by interpreting the hour differently. In Rev. 8:1 'half an hour' represents Gk. *hēmiorion*.

2. More generally, 'hour' indicates a fairly well-defined point of time. 'In the same hour' (Dn. 5:5, AV, RV; 'immediately', RSV) means 'while the king and his guests were at the height of their sacrilegious revelry'. 'In the selfsame hour' (Mt. 8:13, AV) means 'at that very moment' (RSV) when Jesus assured the centurion that his plea to have his servant healed was granted'. Frequently some specially critical occasion is referred to as an 'hour', e.g. the hour of Jesus' betrayal (Mk. 14:41; cf. Lk. 22:53, 'your hour', i.e. 'your brief season of power'); the hour of his parousia, with the attendant resurrection and judgment (Mt. 25:13; Jn. 5:28f.). In John the appointed time for Jesus' passion and glorification is repeatedly spoken of as his

Biblical divisions of time, showing the night-watches. The hours (around the perimeter) will vary in length as they are calculated according to the times of sunrise and sunset.

'hour' (cf. Jn. 2:4; 7:30; 8:20; also 12:23; 17:1). The present situation between the times is 'the last hour' (1 Jn. 2:18); the rise of many antichrists indicates that Christ is soon to appear.

HOUSE (Heb. *bayit*; Gk. *oikos, oikia*). The Heb. and Gk. words are used with reference to various kinds of buildings and also in the sense of 'household, family'. Particularly in the NT, the 'house of God' is developed into an important theological concept. Architectural information in the Bible has been supplemented considerably by the results of archaeological excavation, though a complete picture of the houses people lived in is still not available for every period.

I. Old Testament

Heb. *bayit*, which occurs over 2,000 times, is cognate with a nominal form occurring in many Semitic languages. It has a wide use in the OT for all kinds of dwellings, from palaces (e.g. Je. 39:8) and

temples (e.g. 1 Ki. 8:13) to private houses (e.g. Ex. 12:7; Dt. 6:7) and possibly even tents (Gn. 33:17). Houses were usually constructed of solid materials, stone, timber and plaster (Lv. 14:37, 39, 45; Am. 5:11), and were often built into the city wall (Jos. 2:15). Some were of excellent quality (Dt. 8:12; Hg. 1:4), such as David's cedar palace (2 Sa. 7:2, 7; cf. 1 Ki. 7:2; 1s. 22:8) or the luxurious ivory-decorated houses of Samaria (1 Ki. 22:39; Am. 3:15). *bayit* is often combined with other nouns to indicate either a specialized building or part of a building, e.g. winter and summer houses (Je. 36:22; Am. 3:15), prisons (Gn. 39:20ff.; 2 Ki. 25:27), the Persian king's harem (Est. 2:9ff.) and above all the Jerusalem Temple ('house of God', 1 Ch. 9:11, 13, 26; 'house of Yahweh', 1 Ki. 7:12, 40-41). It is also used in other combinations to describe the quality or character of life in a house or building, e.g. pleasantness, mirth (Ezk. 26:12; Mi. 2:9; Ec. 7:4), mourning (Je. 16:5; Ec. 7:2, 4) and rebelliousness (Ezk. 2:5-6). By extension, *bayit* can sometimes signify the 'homes' of various animals (sparrow, Ps. 84:3-4; stork, Ps. 104:17; spider's web, Jb. 8:14; moth, Jb. 27:18; wild ass, Jb. 39:5-6; calf, 1 Sa. 6:7, 10), and is also used for various receptacles such as an altar trench (1 Ki. 18:32), perfume containers

HOUSE

Reconstruction of a two-storey house with its paved central courtyard and flat roof surrounded by a parapet. Based on houses of c.1800 BC, excavated at Ur, possibly contemporary with Abraham.

(Is. 3:20) and holders for poles (Ex. 25:27). Occasionally, it refers to the transitoriness of the human body (Jb. 4:19; cf. 2 Cor. 5:1–10), and even to *Sheol (Jb. 38:20).

An important sense of *bayit*, found in over a quarter of the total references, is that of 'household, family', which can include those living in tents (Nu. 16:32; Dt. 11:6). The frequent phrases 'father's house' and 'house of Israel' are both associated with the biblical concept by which a family, tribe or nation derives its name from an ancestor or leader. Finally, 'house' can designate both persons (including slaves) and property (Gn. 39:1–2; Ex. 20:17; 1 Ki. 13:8) belonging to a household.

II. New Testament

Much of the OT usage is continued in the NT. *oikos* has both literal and figurative meanings, with 'household, family, race' in addition to 'house'. The rarer *oikia* is largely synonymous with *oikos* in the NT, though it sometimes has the specialized meaning 'possession', notably in the distinctive phrase 'devour widows' houses' (Mk. 12:40). 'House' often occurs in the NT with reference to the Temple, both in its earthly and heavenly forms. For example, Jesus spoke in both senses of 'my Father's house' (cf. Jn. 2:16; 14:2), which was to be an international prayer-house (Mk. 11:15–17; cf. Is. 56:7; 60:7, Lxx) rather than a 'house of trade' (Jn. 2:16; cf. Zc. 14:21).

A most important development of the idea of 'God's house' was its application to the church (e.g. Eph. 2:19–22; Heb. 3:1–6), whose communal character was emphasized in the concepts of the 'spiritual house' (1 Pet. 2:5) and God's temple (1 Cor. 3:16; 6:19). In contrast to the pagan temples

and even the stone Temple in Jerusalem, the believers were 'living stones' (1 Pet. 2:5) in a temple built by Jesus, God's Son (Heb. 3:3, 6). In this house of God, the pillar of the truth (1 Tim. 3:15), all believers are priests (1 Pet. 2:5, 9) offering continual sacrifices (Heb. 13:15–16), obedient to God, without fear of final judgment (1 Pet. 4:17).

The theme of the 'household of God' undoubtedly owed much to the function of the house in early Christianity as a place of meeting and fellowship (e.g. 2 Tim. 4:19; Phm. 2; 2 Jn. 10). Whole households turned to the Lord (e.g. Acts 16:34; 1 Cor. 1:16), and the breaking of bread (Acts 2:46), evangelism (Acts 5:42) and teaching (Acts 20:20) were conducted 'from house to house'.

III. Archaeology

a. General

The large majority of houses in ancient Palestine were built in fortified cities, though there were also many dependent villages. Even the farmer often lived in the city, although he might camp out at harvest-time, and threshing-floors were always near the city. Large cities might cover an area of 20 acres, though most towns or villages probably did not average more than about 6 acres. Houses were usually packed closely together, particularly if the city was built on a hill, so that space was used economically. Town planning is known as early as the mid-3rd millennium BC, and during the Israelite period towns were often arranged with a central complex of houses encircled by a street and a wall with houses attached (e.g. Tell beit Mirsim, Tell en-Nasbeh). Larger houses were often on the W side of a city, to escape from smoke and dirt carried by the prevailing W winds.

Ground plan of a villa of the early 2nd millennium BC in Palestine. Stairs lead to the upper floor and main living-rooms from the central courtyard.

Foundations varied according to the size and importance of the house, though they were important both because of the severe effects of heavy rain (*cf.* Mt. 7:24–27) and because Palestine is an earthquake area. The foundations sometimes went down into virgin soil, or even to the bedrock in the case of large houses, though in many instances remains of earlier walls and foundations were used in the building of new houses. If the ground was sloping, foundation layers were set on level terraces. The foundation layer often provided a ground plan for the house. The laying of foundations might be accompanied by human sacrifice (Jos. 6:26; 1 Ki. 16:34), but there is no widespread evidence of this horrific practice.

The walls of private houses were usually built of rough stone and mud-brick; where stone was scarce, the entire house was of mud-brick on stone foundations. The mud-bricks were coated with waterproof plaster on the inner faces of the wall, sometimes up to only half the height of the wall, while floors were made of marly clay, which can withstand hard use from bare feet. In the case of richer houses, the floor was sometimes paved, even in the courtyard. Strengthening of walls was sometimes achieved by placing hewn-stone pilasters at the corners and at regular intervals along the walls, or during the Divided Monarchy by stone pilasters laid horizontally, particularly in the upper parts of the wall. Walls could be up to 1 m thick, though interior walls were often thinner.

Doors were fixed in a frame of two doorposts, lintel, and still or threshold. The doorway was usually lower than a man's height, and the door usually opened inwards, being prevented from swinging outwards by ridges on the lintel and threshold. The latter also served to keep out water and dirt. Doorposts were of wood (Ex. 21:6; Dt. 15:17) or stone (Is. 6:4), and the door could be locked or bolted (*cf.* 2 Sa. 13:17–18).

Windows are known from the 4th millennium BC onwards in Palestine. They were rarely on the ground floor, as the open door furnished plenty of light during most of the year, and were usually placed in the wall opposite the entrance. Window-

space was kept to a minimum to keep the temperature down in summer and up in winter. Assyrian wall-reliefs of the Israelite city Lachish show windows high in the towers of the outer wall, and such windows in city walls provided a means of escape more than once (Jos. 2:15; 1 Sa. 19:12). Ivory carvings from various sites portraying a woman's face at a balustraded window may be related to the lattice windows of the OT which were located in outside walls (Jdg. 5:28; 2 Ki. 1:2; Pr. 7:6; Ct. 2:9).

Many houses had two storeys, though, since no building in ancient Israel has yet been preserved with a complete roofed ground floor or ceiling, the original height of a building is not always certain. Upper rooms were reached by stairs or ladders. These rooms provided the main living and sleeping accommodation (*cf.* 2 Ki. 9:13, 17), and guests could also be looked after there (1 Ki. 17:19; 2 Ki. 4:10–11). Roofs were constructed from beams covered with branches and a thick layer of mud plaster, though the rafters were sometimes supported by a row of pillars along the middle of the room. Cylindrical stone rollers about 60 cm long were used to keep the roofs flat and waterproof, though roofs needed to be replastered annually prior to the rainy season to seal cracks which had developed during the summer heat. The family would often sleep on the roof in summer or use it to dry raisins, figs, flax, *etc.*, in the sun. A parapet was to be built as a safety precaution according to Dt. 22:8. Vaulted roofs were certainly in use in Palestine by the Persian period, while the tiled roof also appeared before NT times. The rooftop was also a place of worship, either for Baal and especially the host of heaven (Je. 19:13; Zp. 1:5), or for the true God (Acts 10:9).

b. Life in the house

The house during most of the biblical period was usually a dwelling-place, store-room, and even had industrial and commercial purposes. There is evidence of dyeing, weaving and corn-grinding in houses, while at Jericho there is some indication that grain was sold from narrow booths attached to exterior house-walls. The farmer lived in the house, with everything he owned. Foods sufficient for the winter, fodder for the animals, storage jars and farm tools were all kept in the house. Archaeologists have been surprised by the amount of carbonaceous matter found in these houses, especially in those destroyed by Joshua's troops. In very cold, wet weather and in times of war, the family would also have to share the house, or at least the courtyard, with the most valuable of the animals. Religious objects have also been found in many houses, such as horned altars, incense stands, braziers and figurines. Many inhabitants undoubtedly followed local practices in contrast to the official worship of Yahweh.

The furniture in the house varied with the wealth of the inhabitants. The poor could afford only kitchen equipment and bedding. The furniture in the guest-room given to Elisha would be typical of that used in the average family (2 Ki. 4:10). It consisted of a bed, table, chair and a lamp. The rich used a high bed, others a cot, while the poorest used a reed mat on the floor. Plenty of bedding was necessary, for Palestine's winters are cold and damp. There would be chests to hold clothes and bedding. The furniture of the wealthy was inlaid with ivory, and others sometimes imitated this in

HOUSE

common bone inlay. The ivory inlays in turn were sometimes inlaid with gold and precious stones. The hand-loom would also be found in many homes.

In winter, to keep the house warm, the cooking was often done indoors, and in the coldest weather a pottery or copper brazier filled with burning charcoal was used, though this was not very efficient. An oven was usually built in the courtyard of the house. Hollow at the top, it could be about 60 cm in diameter at the base and about 30 cms in height, and was often shaped of alternate layers of clay and potsherds. Inside the house were stone or clay storage-silos. Large jars were employed for keeping the winter's supplies, and there was a mill for grinding the grain. Flour was kept in a wide-mouthed jar, and olive oil was stored in a specially designed vessel. Often there was a large stone mortar set in the floor, where various foods could be prepared by grinding with a pestle. If there was no cistern in the house, a large jar for storing water was at hand, with smaller jars to carry water from the spring. Wide-mouthed cooking-pots for stirring food and narrow-mouthed ones for heating liquids have been found, along with a wide variety of bowls used in serving foods. The rich used gold and silver tableware, and copper kitchen kettles. Am. 6:4-6 describes the luxurious life of Israel at its worst.

c. Developments in architecture

(i) *Pre-Israelite period.* The oldest houses in Palestine were sturdy one-room structures mainly of circular or rectangular design. Two-room houses appear c. 5000 BC at Jericho, while some Chalcolithic houses with artistic representations on the walls have been preserved. By the 3rd millennium BC, two-room houses, usually rectangular, were much commoner, though the largest known house of this period is at et-Tell (Ai?), being c. 18 m long and containing three equal rectangular rooms. Ap-sidal houses are also found at several sites in the early 3rd millennium, and may have been a native Canaanite type of house.

During the resurgence of urban life in the Middle Bronze Age, the courtyard-based house became widespread in Palestine, though the poor continued to live in single-room hovels. Rooms were built on one or more sides of the courtyard, though rooms on all four sides are rare in Palestine. A large house dating to c. 1600 BC has been uncovered at Tell beit Mirsim (Debir?), where the courtyard alone measured 11 x 6 m and the six roofed rooms on two floors covered a floor-space of c. 140 sq. m. A more complex example of a century earlier from Ta'anach had good-quality walls 1 m thick, neatly-plastered floors, an internal staircase, and the ground floor measured c. 210 sq. m.

(ii) *Israelite period.* Where the Israelites replaced Canaanite towns, the quality of housing was noticeably poorer, though standards improved rapidly in the days of David and Solomon, partly through Phoenician influence. The most striking difference of all is the absence of Canaanite cult-objects in the period immediately following the Conquest. The poorest houses comprised a single room with a courtyard, of which many examples were found at Tell Qasile. The commonest-type house, however, of the pre-exilic period is what has become known generally as the four-room house, which appears to be an original Israelite concept.

It was rectangular in design, and had a fixed arrangement of a back room, running the width of the building, which was joined to three parallel rooms stemming from it. The central 'room' was usually an enclosed courtyard through which the other rooms were entered, and the lateral rooms were often divided into two and closed off by pillars. The quality of such houses varied enormously, but the same basic plan was used for monumental and public buildings, e.g. at Hazor, Tell beit Mirsim.

(iii) *Hellenistic period.* Some Hellenistic cities of Palestine show a definite attempt at city planning on the rectangular pattern. The wealthy now added a bathroom to their houses. By NT times the rich were making a winter paradise out of Jericho, more luxurious than even Pompeii. It was spread over a wider area and had spacious gardens. The wealthy house of NT times in Palestine was similar to the Roman house everywhere. There was an outer court with its surrounding rooms, and behind it a second court with its adjacent rooms. In this latter area there was the utmost privacy.

(iv) *Royal palaces.* The OT gives only a brief description of Solomon's palace, but the detailed account of the building of the Temple enables us to conjecture what the palace looked like, for it was designed by the same architects and constructed by the same craftsmen. The masonry was of fine dressed stone laid in headers and stretchers. Fine woods, finished to show off their textures, were used for interior decoration. The excavation of the governor's palace at Megiddo has thrown light on Solomon's building programme. The palace of the Omri dynasty at Samaria was also built by Phoenician workmen. Here the king lived apart from his people in a citadel, built with very strong walls, and at least partially insulated from the poverty of much of his population. The beautiful ivory inlays are an indication of the luxurious style of living (cf. Am. 6:4-6), in marked contrast to the poorer areas of the city. Herod's palace in Jerusalem, with its extensive gardens, was the last word in luxury, as was also his winter palace at Jericho.

HOZAI. The name of a history, translated in RSV as 'the Seers', quoted in 2 Ch. 33:19, RV, which recorded certain of the deeds of King Manasseh, and his prayer. The translation 'the Seers' for 'Hozai' follows LXX, which presupposes a Heb. text *hōzim*. The *MT hōzai* means 'my seers'.

R. A. H. G.

HUKKOK. A town on the S border of Naphtali, listed with Aznoth-tabor (Jos. 19:34). Generally identified with Yakuk, 8 km W of the suggested site of Capernaum. 1 Ch. 6:75 gives it as a Levitical city in Asher, but this may be a mistake for Helkath as in the parallel passage, Jos. 21:31. Y. Aharoni, *LOB*, p. 378, proposed Khirbet el-Jemeijmeh.

J. D. D.
A. R. M.

HULDAH. This prophetess, wife of Shallum, keeper of the wardrobe (either of priestly vestments or royal robes), lived in the second (western?) quarter of Jerusalem. She was consulted (c. 621 bc), on behalf of King Josiah, by Hilkiah the chief priest, Shaphan the scribe and others, following the discovery of 'the book of the law in the house of the Lord' (2 Ki. 22:14; 2 Ch. 34:22). She accepted the book as the word of Yahweh, and with his authority prophesied judgment against Jerusalem and Judah after Josiah's death. It is noteworthy that, although both Jeremiah and Zephaniah were prophesying at this time, it is she who was approached on this matter of the cultus.

M.B.

HUMILITY. The importance of this virtue springs from the fact that it is found as part of the character of God. In Ps. 113:5-6 God is represented as being incomparably high and great, and yet he humbles himself to take note of the things which are created, while in Ps. 18:35 (cf. 2 Sa. 22:36) the greatness of God's servant is attributed to the humility (gentleness) which God has displayed towards him.

Wherever the quality is found in the OT it is praised (e.g. Pr. 15:33; 18:12) and God's blessing is frequently poured upon those who possess it. Moses is vindicated because of it (Nu. 12:3), while Belshazzar is reproved by Daniel (5:22) because he has not profited by the experience of Nebuchadnezzar before him, which might have brought him into an attitude of humility. 2 Ch. in particular makes it the criterion by which the rule of successive kings is to be judged.

The term is closely connected in derivation with affliction, which is sometimes brought upon men by their fellows, and sometimes attributed directly to the purpose of God, but is always calculated to produce humility of spirit.

Similarly, in the NT, at Mt. 23:12 and parallels, the same word is used to express the penalty for arrogance (abasement) and the prerequisite of preference (humility). In the first case it is a condition of low estate which will be brought about through the judgment of God. In the second it is a spirit of lowliness which enables God to bring the blessing of advancement. Paul too, in Phil. 4:12, uses it to describe his affliction, but goes on to make clear that the virtue lies in the acceptance of the experience, so that a condition imposed from without becomes the occasion for the development of the corresponding attitude within. In the same Epistle (2:8) he cites as an example to be emulated the humility of Christ, who deliberately set aside his divine prerogative and progressively humbled himself, receiving in due time the exaltation which must inevitably follow.

Like all virtues, humility is capable of being simulated, and the danger of this is particularly plain in Paul's letter to the Colossians. Whatever may be the true rendering of the difficult passage in Col. 2:18, it is clear that here and in 2:23 the reference is to a sham. In spite of all the appearances of humility, these false teachers are really puffed up with a sense of their own importance. Setting their own speculative system over against the revelation of God, they deny the very thing which by their asceticism they seem to proclaim. Paul warns his readers against this pseudo-

humility and goes on in 3:12 to exhort them to the genuine thing.

HUNDRED, TOWER OF THE. In Ne. 3:1, a Jerusalem tower which stood between the Sheep and Fish Gates, probably near the NE corner of the city. The Hebrew is *ham-mē'ā*, meaning 'the hundred'; AV reads 'Meah', omitting the definite article, while RSV translates it literally. The name may refer to its height—perhaps 100 cubits; or to the number of its steps; or to the number of the garrison it housed. (*JERUSALEM.) D.F.P.

HUNTING, HUNTER. The narratives of the patriarchal period depict the Hebrews as occupied chiefly with the raising of flocks and other semi-sedentary agricultural activities. Hunting was seldom engaged in as a pastime, and was generally resorted to only either at the promptings of hunger or when the wild animals with which Palestine abounded in antiquity (Ex. 23:29) threatened the security of the Hebrews and their flocks (Jdg. 14:5; 1 Sa. 17:34). Certain individuals, however, were renowned for their hunting prowess, including Ishmael (Gn. 21:20) and Esau (Gn. 25:27).

By contrast the ancient Mesopotamians and Egyptians spent considerably more time in the pursuit of game. Many Assyrian monuments and bas-reliefs depict hunting-scenes, indicating a long tradition of sporting activity which may well go back as far as Nimrod, the mighty hunter of antiquity (Gn. 10:8) who colonized Assyria (Gn. 10:11). Whereas the Mesopotamians hunted lions and other ferocious beasts, the Egyptians preferred to catch game and predatory birds. In this pursuit dogs and cats frequently participated.

The austerity of the Hebrew diet in ancient times was occasionally relieved by such delicacies as partridge (cf. 1 Sa. 26:20), gazelle and hart meat (Dt. 12:15). The provision for Solomon's table also included roebuck (1 Ki. 4:23). Such is the general nature of OT references to hunting that few of the animals are named, and virtually nothing is said of the methods employed or of the accoutrements of the hunter. At Hassuna in Iraq the camp of a hunter was unearthed and found to contain weapons, storage jars and tools dating back to c. 5000 BC. Biblical references allude to bows and arrows (Gn. 27:3), clubs (Jb. 41:29, rv), slingstones (1 Sa. 17:40), nets (Jb. 19:6), the snares of fowling (Ps. 91:3) and pits for larger animals such as bears (Ezk. 19:8).

While hunting was not a common occupation in ancient Palestine, its procedures were sufficiently familiar to be enshrined in figurative speech (Jb. 18:10; Je. 5:26). The NT employs few hunting metaphors (Lk. 11:54; Rom. 11:9; Mt. 22:15).

HUR (*hūr*, 'child'? or *HORITE). I. A prominent Israelite who with Aaron held up the arms of Moses at Rephidim in the battle against Amalek (Ex. 17:10, 12), and who also helped Aaron to judge the people while Moses went up into Mt Sinai (Ex. 24:14).

HUR

2. A descendant through Caleb and Hezron of Perez (1 Ch. 2:19–20) and grandfather of *Bezalel (Ex. 31:2; 35:30; 38:22; 1 Ch. 4:1; 2 Ch. 1:5). 3. A son of Ephraim and father of Caleb (1 Ch. 2:50; 4:4).

4. One of the five kings of Midian who were killed with Balaam by the Israelites (Nu. 31:8; Jos. 13:21). 5. The father of one of Solomon's twelve commissariat officers (1 Ki. 4:8). The son, who was over the district of Mt Ephraim, is not named, so RSV transliterates the Heb. 'son of' and names him Ben-hur. 6. The father of Rephaiah, who helped to rebuild the walls and was ruler over half of Jerusalem in Nehemiah's time (Ne. 3:9).

T.C.M.

HUSHAI. The story of Hushai the Archite (*cf.* Jos. 16:2), his devotion to his king and his readiness to undertake a dangerous errand for him, affords a model for the Christian to study and to follow (2 Sa. 15:32ff.). Hushai's arrival at the heights E of Jerusalem where David halted, and his successful mission, defeated the advice of Ahithophel and came as an answer to David's prayer (v. 31). In a list of David's officers the Chronicler includes Hushai as 'the king's friend' (1 Ch. 27:33; *cf.* 2 Sa. 15:37). Baanah, Hushai's son, appears in the list of Solomon's local officers (1 Ki. 4:7, 16). G.T.M.

HUSHIM. 'Those who hasten'. 1. A son of Dan (Gn. 46:23), called Shuham in Nu. 26:42. 2. A son of Aher the Benjaminites (1 Ch. 7:12). 3. One of the two wives of Shaharaim and the mother of Abitub and Elpaal (1 Ch. 8:8, 11). G.W.G.

HUZZAB (Heb. *huṣṣab*, uncertain meaning, possibly from *nāṣab*, 'it is decreed'). Occurring only in Na. 2:7. LXX gives *hē hypostasis* = Heb. *maṣṣāb* = 'standing-place'. AV, RV read as a proper name, but no such name is known in the cuneiform texts. RSV renders 'its mistress', referring to the Assyrian queen, but J. M. P. Smith (*ICC*) thought a reference to the goddess of Nineveh more likely. W. Gesenius derived it from *ṣāḥab* and put it at the end of v. 6, reading 'the palace is dissolved and *made to flow away*'. NEB renders 'the train of captives goes into exile'. J.G.G.N.

HYMENAUS. A pernicious teacher associated with *Alexander (1 Tim. 1:19–20) and *Philetus (2 Tim. 2:17). Paul's delivery of Hymenaeus and Alexander to Satan recalls 1 Cor. 5:5; both passages have been interpreted of excommunication (*i.e.* surrender to Satan's sphere) and of the infliction of bodily punishment. These are not, of course, incompatible, but the verbal similarity with Jb. 2:6, LXX, and various other disciplinary transactions in the apostolic church (*cf.* Acts 5:3–11; 8:20–24; 13:9–11; 1 Cor. 11:30) suggest that physical effects were at least included. There are also parallels in execration texts (*cf.* LAE, p. 302). At all events the discipline, though drastic, was merciful and remedial in intention.

It had not, however, evoked repentance when 2 Tim. 2:17 was written. The error of Hymenaeus and others, described in clinical terms as 'feeding like gangrene', was still much in Paul's mind. It involved a 'spiritualization' of the resurrection

(including, doubtless, the judgment), doctrine always repugnant to the Greek mind: there were similar misunderstandings at Corinth earlier (1 Cor. 15:12). Such ideas took various forms in Gnostic religion: *cf.* the claim of the false teachers in the *Acts of Paul and Thecla* 14 (combining two ideas): 'We will teach thee of that resurrection which he asserteth, that it is already come to pass in the children which we have, and we rise again when we have come to the knowledge of the true God' (tr. M. R. James, *Apocryphal New Testament*, p. 275).

The name (that of the marriage-god) is not noticeably frequent. A.F.W.

HYMN. The Gk. *hymnos* was used by the classical writers to signify any ode or song written in praise of gods or heroes, and occasionally by LXX translators of praise to God, *e.g.* Pss. 40:3; 65:1; Is. 42:10. In the NT the word occurs only in Eph. 5:19 and Col. 3:16, with the verbal form (*hymnēō*) in Mt. 26:30 and the parallel Mk. 14:26 (which refer to the singing of the second part of the Hallel, Pss. 115–118); Acts 16:25 (of Paul and Silas singing in prison); and Heb. 2:12 (a quotation from Ps. 22:22, LXX). It is clear, however, that the singing of spiritual songs was a feature of the life of the apostolic church, as is witnessed by 1 Cor. 14:15, 26; Jas. 5:13, the Christian canticles recorded by Luke, and the many doxologies found elsewhere in the NT. They were used as a spontaneous expression of Christian joy, as a means of instruction in the faith (Col. 3:16), and, on the basis of synagogue practice, as an integral part of the worship of the church.

The threefold division of psalms, hymns and spiritual songs (*ōdai*) must not be pressed too closely, as the terms overlap, but two distinct styles of composition can be observed. The first followed the form and style of the OT psalm and was a Christian counterpart of the psalmodic writing exemplified by the 1st-century BC *Psalms of Solomon* or the *Hymns of Thanksgiving (Hōdāyōt)* of the Qumran sect. In this category may be included the canticles: Lk. 1:46–55 (*MAGNIFICAT); 1:68–79 (*BENEDICTUS); 2:29–32 (*NUNC DIMITTIS). The second group consists of doxologies (as Lk. 2:14; 1 Tim. 1:17; 6:15–16; Rev. 4:8, 11; 5:9, 12–13; 7:12, *etc.*), many of which were doubtless used in corporate worship. Some other passages have been loosely described by commentators as hymns, where the majesty of the subject-matter has driven the writer to poetical language, *e.g.* 1 Cor. 13; Rom. 8:31–39; Eph. 1:3–14; Phil. 2:5–11; but there is no certainty that they were ever set to music or recited liturgically. Fragments of liturgical or credal formulae have been detected in Eph. 5:14; 1 Tim. 3:16; 2 Tim. 2:11–13; Tit. 3:4–7.

HYPOCRITE. In English a hypocrite is one who deliberately and as a habit professes to be good when he is aware that he is not. But the word itself is a transliteration of Gk. *hypokritēs*, which mostly meant play-actor. Though it was soon in ecclesiastical Greek to take on its modern meaning, it

seems impossible to prove that it bore this meaning in the 1st century AD. In LXX it is twice used to translate Heb. *hānēp̄*, 'godless'.

In the NT, hypocrite is used only in the Synoptic accounts of Christ's judgments on the scribes and Pharisees. Though 'Pharisaic' sources (*Soṭah* 22b) acknowledge and condemn hypocrisy in their ranks, the general tenor of the NT, the 1st-century evidences for the teaching of the Pharisees in Talmud and Midrash and their support by the mass of the people (*Jos., Ant.* 13. 298), all make it hard to accept a general charge of hypocrisy against them. A study of the actual charges against them will show that only in the rarest cases can we

possibly interpret them as hypocrisy. We find blindness to their faults (Mt. 7:5), to God's workings (Lk. 12:56), to a true sense of values (Lk. 13:15), an over-valuation of human tradition (Mt. 15:7; Mk. 7:6), sheer ignorance of God's demands (Mt. 23:14-15, 25, 29), and love of display (Mt. 6:2, 5, 16). It was only Christ, the sole perfect reader of inward realities (Mt. 23:27-28), who dared pass this judgment.

I

IBLEAM. A Canaanite town in the N borderland of Manasseh, whose territory extended to (not 'in') Issachar (Jos. 17:11; Y. Kaufmann, *The Biblical Account of the Conquest of Palestine*, 1953, p. 38). During the Israelite settlement, its Canaanite inhabitants were subdued, not expelled (Jdg. 1:27). The site of Ibleam is now Khirbet Bil'ameh, c. 16 km SE of Megiddo on the road from Beth-shean (2 Ki. 9:27). It is probably the Bileam of 1 Ch. 6:70, a levitical city. Ibleam occurs in Egp. lists as *Ybr'm*.

K.A.K.

ing it was Bethlehem-judah, identified him with *Boaz.

J.P.U.L.

ICHABOD (Heb. *īkābōd*). The name given by the wife of Phinehas to her child, on hearing that the Philistines had captured the ark (1 Sa. 4:19-22, cf. 14:3). There are several possible explanations: (1) that 'i is interrogative ('where is the glory?'); (2) 'i is the negative particle ('no glory', cf. Josephus, *Ant.* 5. 360); (3) that the name stands for 'ābī-kābōd ('my father is glory').

R.P.G.

IBZAN (Heb. *ībzan*). Known only from Jdg. 12:8-10; a national judge for 7 years, following Jephthah; apparently a person of consequence, who raised a large family and arranged marriages for thirty sons. His home and burial-place was Bethlehem, probably of Zebulun (Jos. 19:15), 11 km WNW of Nazareth; Jewish commentators, assum-

ICONIUM. A city of Asia Minor mentioned in Acts 13:51; 14:1, etc. and 2 Tim. 3:11 as the scene of Paul's trials, and in Acts 16:2 as a place where Timothy was commended. Standing on the edge of the plateau, it was well watered, a productive and wealthy region. It was originally Phrygian, its

Iconium in the Roman province of Galatia, Asia Minor.

name Kawania: its religion remained Phrygian into Roman times, the worship of a mother goddess with eunuch priests. After being for a time the chief city of Lycaonia, and passing through various political fortunes, it was at length included in the kingdom of Galatia and a little later in the Roman province of Galatia. Its fame and prestige grew greatly under Roman rule: Claudius honoured it with the title of *Claudiconium*, and under Hadrian it became a colony in an honorary sense (since no Italians were settled there). In NT times, then, it maintained the polity of a Hellenistic city, the juridical powers of the assembly being vested in the two magistrates annually appointed.

The passage in Acts 14, though brief, gives occasion for differing interpretations. The so-called Western Text implies two attacks on Paul, one open, the second more subtle, after which the apostles flee. Two classes of Jewish leaders are mentioned, 'chief men of the synagogue' and 'rulers', a distinction epigraphically defensible. The text of Codex Vaticanus and its allies has a more difficult text with only one attack of fairly long duration implied. Here the rulers of v. 5 may plausibly be identified with the magistrates of the city, as Ramsay suggests, but whether the Old Uncial text is a bad abbreviation, or the Western Text an attempt at correction of a text perhaps corrupt, has not yet been finally decided.

Iconium is the scene of the well-known apocryphal story of Paul and Thecla, contained in the longer *Acts of Paul*. Apart from the scarcely doubtful existence of an early martyr of the name, there is no ascertainable historical content to be found in the story.

J.N.B.

IDDO. The name represents seven variant spellings in the Heb. and its derivations and meanings are uncertain. 1. The father of Ahinadab, one of Solomon's officers, 1 Ki. 4:14 ('iddō'). 2. A Levite of the line of Gershon, 1 Ch. 6:21 (*MT* 6:6 'iddō), but called Adaiah in 6:41 (*MT* 6:16). 3. A tribal chief of the E section of Manasseh, 1 Ch. 27:21 (*yiddō*). 4. A seer and prophet cited as one of the sources of the Chronicler in 2 Ch. 9:29 (*ye'dī* but *Q'rē' ye'dō*); 12:15 and 2 Ch. 13:22 ('iddō'). 5. The grandfather ('father' in Ezra) of Zechariah the prophet, Zc. 1:1, 7 ('iddō); Ezr. 5:1; 6:14 ('iddō'). 6. One of those guilty of a mixed marriage; *evv* Jaddai (AV Jadau), Ezr. 10:43 (*yiddō* or *yadday*). 7. Head of one of the priestly families which returned to Jerusalem with Zerubbabel, Ne. 12:4 ('iddō'); 12:16 ('iddoy').

J.G.B.

IDOLATRY. The story of OT religion could be told for the most part in terms of a tension between a spiritual conception of God and worship, the hallmark of the genuine faith of Israel, and various pressures, such as idolatry, which attempted to debase and materialize the national religious consciousness and practice. We do not find, in the OT, an ascending from idolatry to the pure worship of God, but rather a people possessing a pure worship and a spiritual theology, constantly fighting, through the medium of divinely-raised spiritual leaders, religious seductions which, never-

theless, often claimed the mass of the people. Idolatry is a declension from the norm, not an earlier stage gradually and with difficulty superseded.

If we consider the broad sweep of evidence for patriarchal religion we find it to be a religion of the altar and of prayer, but not of idols. There are certain events, all associated with Jacob, which might appear to show patriarchal idolatry. For example, Rachel stole her father's *teraphim (Gn. 31:19). By itself, this, of course, need prove nothing more than that Jacob's wife had failed to free herself from her Mesopotamian religious environment (*cf.* Jos. 24:15). If these objects were of legal as well as religious significance, the possessor of them would hold the right of succession to the family property (*Nuzi). This accords well with the anxiety of Laban, who does not appear otherwise as a religious man, to recover them, and his care, when he fails to find them, to exclude Jacob from Mesopotamia by a carefully-worded treaty (Gn. 31:45ff.). Again, it is urged that Jacob's pillars (Gn. 28:18; 31:13, 45; 35:14, 20) are the same as the idolatrous stones with which Canaan was familiar. The interpretation is not inescapable. The pillar at Bethel is associated with Jacob's vow (see Gn. 31:13), and could more easily belong to the category of memorial pillars (*e.g.* Gn. 35:20; Jos. 24:27; 1 Sa. 7:12; 2 Sa. 18:18). Finally, the evidence of Gn. 35:4, often used to show patriarchal idolatry, actually points to the recognized incompatibility of idols with the God of Bethel. Jacob must dispose of the unacceptable objects before he stands before this God. That Jacob 'hid' them is surely not to be construed as indicating that he feared to destroy them for reasons of superstitious reverence. It is allowing suspicion to govern exegesis if we do more than assume that this was the simplest as well as the most effective way of disposing of non-combustible objects.

The weight of evidence for the Mosaic period is the same. The whole narrative of the golden calf (Ex. 32) reveals the extent of the contrast between the religion which stemmed from Mt Sinai and the form of religion congenial to the unregenerate heart. These religions, we learn, are incompatible. The religion of Sinai is emphatically aniconic. Moses warned the people (Dt. 4:12) that the revelation of God vouchsafed to them there contained no 'form', lest they corrupt themselves with images. This is the essential Mosaic position, as recorded in the Decalogue (Ex. 20:4; *cf.* Ex. 34:17). The prohibition in Dt. 4:12 is in the realm of religion, it should be noted, not of theology. It is correct to speak of a 'form' of the Lord and Dt. 4:12 and Nu. 12:8 have the word *t'mūnā* ('form') in common. But for Israel to carry this over into religious practice could only involve corruption of truth and life. This is a striking testimony to the aniconic nature of Israel's worship. The second commandment was unique in the world of its day, and the failure of archaeology to unearth a figure of Yahweh (while idols abounded in every other religion) shows its fundamental place in Israel's religion from Mosaic days.

The historical record of Judges, Samuel and Kings tells the same story of the lapse of the nation from the spiritual forms proper to their religion. The book of Judges, at least from ch. 17 onwards, deliberately sets out to picture for us a time of general lawlessness (*cf.* 17:6; 18:1; 19:1; 21:25). We should not dream of seeing in the events of ch. 19 the norm of Israelite morality. It is

IDOLATRY

candidly a story of a degraded society and we have as little reason for seeing the story of Micah (Jdg. 17-18) as displaying a lawful but primitive stage in Israel's religion. The same comment from the author of Judges points in turn to the religious corruption (17:1-13; see v. 6), social unrest and lawlessness (18:1-31; see v. 1) and moral declension (19:1ff.) of the day.

We are not told in what form the images of Micah were made. It has been suggested that, since they subsequently found a home in the N Danite sanctuary, they were in the calf or bull form. This is likely enough, for it is a most significant thing that when Israel turned to idolatry it was always necessary to borrow the outward trappings from the pagan environment, thus suggesting that there was something in the very nature of Yahwism which prevented the growth of indigenous idolatrous forms. The golden calves made by Jeroboam (1 Ki. 12:28) were well-known Canaanite symbols, and in the same way, whenever the kings of Israel and Judah lapsed into idolatry, it was by means of borrowing and syncretism. H. H. Rowley (*Faith of Israel*, pp. 77f.) urges that such evidences of idolatry as exist after Moses are to be explained either by the impulse to syncretism or by the tendency for customs eradicated in one generation to reappear in the next (cf. Je. 44). We might add to these the tendency to corrupt the use of something which in itself was lawful: the superstitious use of the ephod (Jdg. 8:27) and the cult of the serpent (2 Ki. 18:4).

The main forms of idolatry into which Israel fell were the use of graven and molten *images, pillars, the *asherah and *teraphim. The *massékā*, or molten image, was made by casting metal in a mould and shaping it with a tool (Ex. 32:4, 24). There is some doubt whether this figure, and the later calves made by Jeroboam, were intended to represent Yahweh, or were thought of as a pedestal over which he was enthroned. The analogy of the cherubim (cf. 2 Sa. 6:2) suggests the latter, which also receives the support of archaeology (cf. G. E. Wright, *Biblical Archaeology*, p. 148, for an illustration of the god Hadad riding upon a bull). The cherubim were, however, concealed from view and were at any rate 'unearthly' in appearance. They could not point to any unacceptable affiliation of the enthroned God with earthly parallels. The bulls, on the contrary, were not (as far as the narrative suggests) concealed from view and could not but point to an involvement of Yahweh in fertility religion and theology.

The pillars and the asherah were both forbidden to Israel (cf. Dt. 12:3; 16:21-22). In Baal sanctuaries the pillar of Baal (cf. 2 Ki. 10:27) and the pole of the Asherah stood beside the altar. The pillar was thought of as a stylized representation of the presence of the god at the shrine. It was the object of great veneration: sometimes it was hollowed in part so as to receive the blood of sacrifice, and sometimes, as appears from its polished surface, it was kissed by its devotees. The asherah was wooden, as we learn from its usual destruction by burning (Dt. 12:3; 2 Ki. 23:6), and probably originated from the sacred evergreen, the symbol of life. The association of these with Canaanite fertility practice sufficed to make them abominable to Yahweh.

The OT polemic against idolatry, carried on chiefly by prophets and psalmists, recognizes the same two truths which Paul was later to affirm: that the idol was nothing, but that nevertheless

there was a demonic spiritual force to be reckoned with, and that the idol therefore constituted a positive spiritual menace (Is. 44:6-20; 1 Cor. 8:4; 10:19-20). Thus, the idol is nothing at all: man made it (Is. 2:8); its very composition and construction proclaims its futility (Is. 40:18-20; 41:6-7; 44:9-20); its helpless bulk invites derision (Is. 46:1-2); it has nothing but the bare appearance of life (Ps. 115:4-7). The prophets derisively named them *gillilim* (Ezk. 6:4, and at least 38 other times in Ezekiel) or 'dung pellets' (Koehler's *Lexicon*), and '*lilim*, 'godlets'.

But, though entirely subject to Yahweh (e.g. Ps. 95:3), there are spiritual forces of evil, and the practice of idolatry brings men into deadly contact with these 'gods'. Isaiah, who is usually said to bring the ironic scorning of idols to its peak, is well aware of this spiritual evil. He knows that there is only one God (44:8), but even so no-one can touch an idol, though it be 'nothing', and come away unscathed. Man's contact with the false god infects him with a deadly spiritual blindness of heart and mind (44:18). Though what he worships is mere 'ashes', yet it is full of the poison of spiritual delusion (44:20). Those who worship idols become like them (Ps. 115:8; Je. 2:5; Ho. 9:10). Because of the reality of evil power behind the idol, it is an *abomination (*tō'ēbā*) to Yahweh (Dt. 7:25), a detested thing (*šiqqūs*) (Dt. 29:17), and it is the gravest sin, spiritual adultery, to follow idols (Dt. 31:16; Jdg. 2:17; Ho. 1:2). Nevertheless, there is only one God, and the contrast between Yahweh and idols is to be drawn in terms of life, activity and government. The idol cannot predict and bring to pass, but Yahweh can (Is. 41:26-27; 44:7); the idol is a helpless piece of flotsam on the river of history, only wise after the event and helpless in the face of it (Is. 41:5-7; 46:1-2), but Yahweh is Lord and controller of history (Is. 40:22-25; 41:1-2, 25; 43:14-15, etc.).

The NT reinforces and amplifies the OT teaching. Its recognition that idols are both nonentities and dangerous spiritual potencies has been noted above. In addition, Rom. 1 expresses the OT view that idolatry is a decline from true spirituality, and not a stage on the way to a pure knowledge of God. The NT recognizes, however, that the peril of idolatry exists even where material idols are not fashioned: the association of idolatry with sexual sins in Gal. 5:19-20 ought to be linked with the equating of covetousness with idolatry (1 Cor. 5:11; Eph. 5:5; Col. 3:5), for by covetousness Paul certainly includes and stresses sexual covetousness (cf. Eph. 4:19; 5:3; 1 Thes. 4:6, Gk.; 1 Cor. 10:7, 14). John, having urged the finality and fullness of revelation in Christ, warns that any deviation is idolatry (1 Jn. 5:19-21). The idol is whatever claims that loyalty which belongs to God alone (Is. 42:8).

The bearing of the biblical teaching on idols on its monotheistic doctrine of God cannot be overlooked. In its recognition of the magnetism of idolatrous religion for Israel and also in such seeming recognition of 'other gods' as, e.g., Ps. 95:3, the OT acknowledges not the real existence of the 'gods' but the real existence of the threat to Israel, the menace of alternative cults and claims. It thus constantly holds its monotheism (as indeed the NT also does) in the setting of the religion and religious environment of the people of God.

IDOLS, MEATS OFFERED TO. Among the questions submitted by the Corinthians for the apostle's ruling was the matter of 'food offered to idols', a phrase which represents one Gk. term, *eidōlothyta*. Paul handles this subject in 1 Cor. 8:1–13 and 10:14–33. The background of the Corinthians' query may first be sketched.

I. The background

In the ancient system of sacrifice, which was the centre not only of the religious life of the Graeco-Roman world in the 1st century but also of the domestic and social life, only part of the sacrifice was presented to the god in the temple. The sacrifice was followed by a cultic meal, when the remainder of the consecrated food was eaten either in the precincts of the temple or at home. Sometimes the remaining food was sent to the market to be sold (1 Cor. 10:25).

Evidence for the practice of a meal in the temple is found in the following well-known Oxyrhynchus papyrus which Lietzmann regards as 'a striking parallel' to the reference in 1 Cor. 10:27: 'Chaeremon invites you to dinner at the table of the lord Serapis (the name of the deity) in the Serapeum tomorrow the 15th at the 9th hour' (= 3 p.m.) (quoted and discussed in Chan-Hie Kim's essay, 'The Papyrus Invitation', *JBL* 94, 1975, pp. 391–402). An invitation to a meal of this character, whether in the temple or in a private house, would be commonplace in the social life of the city of Corinth, and would pose a thorny question for the believer who was so invited. Other aspects of life in such a cosmopolitan centre would be affected by the Christian's attitude to idol-meats. Attendance at the public festivals, which opened with pagan adoration and sacrifice, would have to be considered. Membership of a trade guild, and therefore one's commercial standing, and public-spiritedness were also involved, as such membership would entail sitting 'at table in an idol's temple' (1 Cor. 8:10). Even daily shopping in the market would present a problem to the thoughtful Christian in Corinth. As much of the meat would be passed on from the temple-officials to the meat-dealers and by them exposed for sale, the question arose: was the Christian housewife at liberty to purchase this meat which, coming from sacrificial animals which had to be free from blemish, might well be the best meat in the market? Moreover, there were gratuitous banquets in the temple precincts which were a real boon to the poor. If 1 Cor. 1:26 means that some of the Corinthian church members belonged to the poorer classes, the question of whether they were free or not to avail themselves of such meals would have been a practical issue.

II. Different reactions

Conviction in the church was sharply divided. One group, in the name of Christian liberty (6:12; 10:23; cf. 8:9) and on the basis of a supposed superior knowledge (*gnōsis*, 8:1–2), could see no harm in accepting an invitation to a cultic meal and no possible reason why food, formerly dedicated in the temple, should not be bought and eaten.

The justification for such an attitude of religious syncretism was, first, that the meal in the temple

precincts was just a social occasion. They claimed that it had no religious significance at all. And, secondly, they appear to have stated that in any case the pagan gods are nonentities. 'An idol has no real existence' and 'there is no God but one' was their plea of defence (8:4; cited probably from the Corinthians' own letter to Paul).

On the other hand, the 'weak' group (8:9; cf. Rom. 15:1) viewed the situation differently. With abhorrence of the least suspicion of idolatry, they believed that the demons behind the idols still exerted malign influence on the food and 'contaminated' it, thus rendering it unfit for consumption by believers (8:7; cf. Acts 10:14).

III. Paul's answer

Paul begins his answer to the church's inquiry by expressing agreement with the proposition, 'There is no God but one' (8:4). But he immediately qualifies this explicit confession of his monotheism by reminding his readers that there are so-called gods and lords which exert demonic influence in the world. He concedes the point, however, that 'for us' who acknowledge one God and one Lord, the power of these demons has been overcome by the cross, so that the Corinthians ought no longer to be in bondage to them (cf. Col. 2:15–16; Gal. 4:3, 8–9). Not all the Corinthian believers have found that freedom in Christ, and their case must be remembered and their weak conscience not outraged by indiscreet action (8:7–13). The apostle has a more serious word to say on this matter, which he takes up after a digression in ch. 9.

He comes to grips with the menace of idolatry in 10:14ff. These verses are an exposition of the inner meaning of the Lord's Table in the light of communion in the body and blood of Christ (10:16); the unity of the church as the body of Christ (10:17); the spell cast by demons over their worshippers at idol-feasts which led actually to a compact with the demons (10:20); and the impossibility of a double allegiance represented by trying to share both the table of the Lord and the table of demons (10:21–22). (* LORD'S SUPPER.)

The apostle in this section, therefore, takes a serious attitude to the implications of attendance at idolatrous banquets (cf. 10:14). In line with rabbinical teaching which was later codified in the Mishnah tractate *'Abodah Zarah* ('Strange Worship'), he forbids absolutely the use of food and drink in an idol-temple (10:19–20; cf. Rev. 2:14) on the ground no doubt that, as the rabbis said, 'as a dead body defiles by overshadowing, so also an idolatrous sacrifice causes defilement by overshadowing', i.e. by having been brought under a pagan roof, and by this contact becomes ritually unclean. See the Mishnah in Danby's edition, p. 649, n. 3.

But, in regard to food which has formerly been offered in the temple and is afterwards made available for consumption, Paul says that it is permitted on the basis of Ps. 24:1 (1 Cor. 10:25ff.). Although such food has been dedicated in the temple and is exposed for sale in the meat-market, it may be eaten by virtue of being God's creation (1 Tim. 4:4–5). This is a distinct departure from the rabbinical ceremonial rules (and, indeed, from the apostolic decree of Acts 15:28–29), and is the practical application of the Lord's word in Mk. 7:19, 'Thus he declared all foods clean'; cf. Acts 10:15). The only qualification is that the 'law of love' (*TDNT* 2, p. 379) must be observed, and a Christian's own freedom to eat such food must be

IDOLS, MEATS OFFERED TO

waived if the conscience of the 'weaker' believer is likely to be damaged and he is thereby caused to stumble (10:28–32), or if a Gentile is scandalized by this practice (10:32). The situation envisaged by these verses is a Christian's acceptance of an invitation to a meal in a private house (10:27). In such a circumstance the believer is free to eat the food set before him, making no inquiries as to its 'past history', *i.e.* where it comes from or whether it has been dedicated in an idol shrine. If, however, a pagan, at the meal, draws attention to the food and says, 'This has been offered in sacrifice'—using the pagan term *hierothyton*—then the food must be refused, not because it is 'infected' or unfit for consumption, but because it 'places the eater in a false position, and confuses the conscience of others' (Robertson–Plummer, *I Corinthians*, p. 219), notably his heathen neighbour (10:29). This reading differs from the suggestion of Robertson–Plummer, where they take the speaker in v. 28 to be a Gentile Christian using the terminology of his pre-Christian days; it is better, however, to regard this speaker as 'one of them that believe not' in v. 27; and then the apostle's word links up with the altruism of the rabbis, who taught that a devout Jew will not countenance idolatry lest he should encourage his Gentile neighbour in error, for which he would then be responsible (*Aboth* 5. 18; *Sanhedrin* 7. 4, 10).

Fee, *The First Epistle to the Corinthians*, *NIC* 1987; H. Hübner, 'eidōlothyon', *EDNT* 1, pp. 386–388. R.P.M.

IDUMAEA. The Gk. form (*idoumaia*) of the Heb. 'ḏōm refers to an area in W Palestine, rather than to Edom proper. At the time of the Exodus, Edom extended to both sides of the Arabah, and the W portion reached close to Kadesh (Nu. 20:16). David subdued Edom, but there was continual conflict between *Edom and Judah. After the fall of Jerusalem in 587 BC the Edomites took advantage of the calamity to migrate into the heart of S Judah, S of Hebron. Several prophets inveighed against Edom for this (Je. 49:7–22; La. 4:21–22; Ezk. 25:12–14; 35:3; Ob. 10ff.).

Later, as various Arab groups, notably the Nabataeans, pressed into old Edom, more migrants settled in Judah, and the area they occupied became known as Idumaea (1 Macc. 4:29; 5:65). Judas Maccabaeus had successful campaigns against these people, and John Hyrcanus subdued them c. 126 BC, placed them under Antipater as governor and compelled them to be circumcised (Jos., *Ant.* 13. 258). Antipater was the grandfather of *Herod the Great. The word Idumaea occurs in the NT only in Mk. 3:8. J.A.T.

IGNORANCE. As is the case with *knowledge, ignorance has in Scripture a moral rather than a purely intellectual connotation, except in such casual uses as the Pauline 'I would not have you ignorant, brethren... ' (Rom. 1:13, AV), which simply means 'I want you to know... ' (RSV).

In the books of the Law ignorance is regarded as a palliating feature of sinful acts. For sins done in ignorance (*s'gāgā*) expiation could be made by sacrifice (*cf.* particularly Lv. 4–5; Nu. 15:22–29). This

idea of ignorance as an excuse is reflected in the NT uses of the verb *agnoēō*, 'to be ignorant', and its derivatives. Paul declares that he received mercy for his persecution of the church because he acted ignorantly in unbelief (1 Tim. 1:13); and at Athens he tells his Gentile audience that God overlooked the times of ignorance (Acts 17:30; *cf.* 3:17).

Nevertheless, although ignorance partly excuses the sins which result from it, ignorance itself is often culpable. It may be linked with hardness of heart (Eph. 4:18; *cf.* 2 Cor. 4:4) or even be deliberate (2 Pet. 3:5; *cf.* Rom. 1:18ff.; 10:3).

Ignorance is used absolutely to refer to the condition of the Gentile world which had not received the revelation of God (Acts 17:23, 30; Eph. 4:18; 1 Pet. 1:14; 2:15). This usage is found in LXX; *e.g.* Wisdom 14:22.

The word *idiōtēs*, translated 'ignorant' in AV of Acts 4:13 (RSV 'uneducated'), implies the want of special training rather than of knowledge in general; *cf.* the modern somewhat derogatory use of 'layman'.

M.H.C.

IJON. A town in N Naphtali taken by the Syrians under *Ben-hadad along with *Dan and *Abel of Beth-maacah (1 Ki. 15:20 = 2 Ch. 16:4). Subsequently captured by Tiglath-pileser III in 733 BC (2 Ki. 15:29). Possibly the Dan-jaan of 2 Sa. 24:6. Generally identified with Tell Dibbin, 30 km N of Lake Huleh. D.W.B.

ILLYRICUM. The name of the large mountainous region on the E of the Adriatic, extending to the central Balkans in the E and reaching from NE Italy and the Celtic tribes in the N to Macedonia in the S. Its name was derived from that of one of the first tribes within its boundaries that the Greeks came across. Its inhabitants spoke dialects which were probably the linguistic ancestors of modern Albanian. The Romans had first come into conflict with some of its tribes in the 3rd century BC, but it was not finally conquered till the 1st century AD, when it was divided into the provinces of Pannonia and Dalmatia. Paul says at the time of writing the Epistle to the Romans (15:19) that it was the limit of his evangelistic activity. His reference to it appears to be inclusive, but it is not known when, or from what direction, he had entered it (possibly from Macedonia when he revisited that province after his Ephesian ministry, Acts 20:1). It was the first Latin-speaking province which he visited in the course of his apostolic ministry, and could have prepared him for his projected mission in Latin-speaking Spain (Rom. 15:24, 28). B.F.C.A.

IMAGE. The term denotes a material representation, usually of a deity. Unlike the term 'idol', which has a pejorative overtone, 'image' is objectively descriptive. Throughout the ancient Near East numerous images of various deities were to be found in temples and other holy places, such as open-air shrines; many private houses also contained a niche where the image of the protective deity of the household stood. Images were commonly anthropomorphic (in human form), though theriomorphic images (in animal form) were also widely used, especially in Egypt.

The region of Illyricum in the time of Paul.

The form of the image, especially of the theriomorphic examples, frequently represented some prominent characteristic of the particular deity; thus an image of a bull (e.g. of El in Canaan) portrayed the god's power and fertility. The image was not primarily intended as a visual representation of the deity, but as a dwelling-place of the spirit of the deity enabling the god to be physically present in many different places simultaneously. A worshipper praying before an image would not necessarily accept that his prayers were being offered to the figure of wood or metal itself, but would probably have regarded the image as a 'projection' or embodiment of the deity. Of course, those in Israel who denied any reality to the deity represented by the image maintained that the worshippers of foreign deities were paying homage to mere wood and stone (*IDOLATRY).

Images were made in various ways. A molten image (*massēkā*) was cast in a mould from copper, silver or gold. A graven image (*pesel*) was carved from stone or wood; wooden images could be overlaid with precious metals (cf. Is. 40:19, NEB). See Is. 41:6-7; 44:12-17.

I. In the Old Testament

a. Images of foreign gods. Though the making and worshipping of images is forbidden by Pentateuchal law (Ex. 20:4-5) and condemned by the prophets (e.g. Je. 10:3-5; Ho. 11:2), their use in Israel throughout pre-exilic times was common (Jdg. 6:25; 1 Ki. 11:5-8; 16:31-33), even at times within the Temple itself (2 Ki. 21:3-5, 7).

b. Images of Yahweh. Standing stones (*massēbōt*) erected by the Patriarchs (e.g. Gn. 28:18, 22; 35:14) were perhaps originally regarded as images (similarly the sacred trees; cf. Gn. 21:33), but were later forbidden (Asherah, Dt. 16:21) or re-interpreted as merely commemorative objects (cf. Gn. 31:45-50; Jos. 4:4-9). Later, images of Yahweh were denounced by pure Yahwists: the golden calf at Sinai (Ex. 32:1-8), the image (*ΕΡΝΟΒ) made by Gideon (Jdg. 8:26-27), the golden calves at Dan and Bethel (1 Ki. 12:28-30), the calf of Samaria (Ho. 8:6).

c. Man as the image of God. In a few texts in Genesis (1:26-27; 5:2; 9:6) man is said to have been created 'in' or 'as' the image of God, 'according to his likeness'. Though many interpreters have thought to locate the 'image' of God in man's reason, creativity, speech, or spiritual nature, it is more likely that it is the whole of man, rather than some part or aspect of him, that is the image of God. The whole man, body and soul, is the image of God; man is the corporeal image of the incorporeal God. As in the ancient Near East, man as the image of God represents him through his participation in the divine breath or spirit (cf. Gn. 2:7; perhaps also the spirit of God is included in the 'us' of 1:26; cf. the reference to the spirit of God in 1:2). Man's role as ruler of the earth is established by his creation as God's image (1:27). Elsewhere in the ancient Near East it is usually the king who is said to be the image of God, but in Gn. 1 it is mankind as a whole that is God's viceroy and representative. Significantly, man is still spoken of as the image of God after the Fall: the force of Gn.

IMAGE

9:6 depends on the belief that man represents God, so that an injury done to a man is an injury done to God himself (cf. also Jas. 3:9).

II. In the New Testament

The NT teaching builds on the foundation laid in the OT. There man is described (in the seminal passage of Gn. 1:26f.) as made to be God's representative on earth and to act as God's vicegerent and steward of creation. The term is best thought of as functional, and man's destiny as man is in view (see, in particular, D. J. A. Clines' essay for details and exegetical support).

The two passages of 1 Cor. 11:7 and Jas. 3:9 re-echo this teaching, and both assert the continuance of man's position in the created order and as reflecting the divine 'glory', in spite of human sinfulness. The emphasis in the NT, however, falls more on the person of Jesus Christ who is called the 'image of God' (2 Cor. 4:4; Col. 1:15; both are creed-like passages, set on a polemical background, to oppose current false or inadequate notions). Christ's rank as the 'image' of the Father derives from his unique relationship as pre-existent. He is the Logos from all eternity (Jn. 1:1–18), and so he is able to reflect faithfully and fully the glory of the invisible God. See too Heb. 1:1–3 and Phil. 2:6–11 where parallel expressions are used to clarify the unique relationship of Jesus Christ to God. 'Image' (or its equivalent terms, 'form', 'stamp', 'glory') does not suggest a mere likeness to God or a paradigm of his person. Rather it connotes a sharing in the divine life and indeed an 'objectivation' of the essence of God, so that the One who is by nature invisible comes to visible expression in the figure of his son (see the evidence in R. P. Martin, *op. cit.*, pp. 112f.).

He is thus the 'ultimate Adam' (1 Cor. 15:45) who stands at the head of a new humanity that draws its life from him. So Jesus Christ is both the unique 'Image' and the prototype of those who owe their knowledge of God and life in God to him (Rom. 8:29; 1 Cor. 15:49; 2 Cor. 3:18; 1 Jn. 3:2).

The term 'image of God' is closely connected with 'the new man' (Eph. 4:24; Col. 3:10f.; cf. Gal. 3:28). This is a reminder that there are important social aspects to what the 'image' means as it is reproduced in human lives, both in the fellowship of the church and in man's custodianship of nature (Heb. 2:8, referring to Ps. 8).

There is an eschatological dimension also to be recognized. The fulfilment of God's plan for humanity-in-Christ awaits the parousia when Christians' mortal existence will be transformed to a perfect likeness to their Lord (1 Cor. 15:49; Phil. 3:20–21), and in this way the image of God in man will be fully restored.

IMMANUEL (Heb. 'immānū'ēl, 'with us is God'). The word is found twice in OT (Is. 7:14; 8:8) and once in NT (Mt. 1:23, rsv 'Emmanuel'). It may be employed also in Is. 8:10.

To understand the significance of the word, which in itself means 'God with us', we must note the context in which it appears. Syria and Israel had desired to form a coalition with Judah in order to oppose the increasing power of Assyria. Judah had vacillated, and Syria and Israel determined to punish her. Upon hearing this news, Ahaz trembled. Isaiah was sent to him to inform him that he had nothing to fear. The power of his enemies was about played out, and they could do him no harm. Isaiah even commanded him to ask for a sign in confirmation of the divine message. This Ahaz refused to do. Hence, in reply to the hypocritical king, Isaiah announces that the Lord will give to the people of Judah a sign. In vision the prophet beholds a virgin ('almā, i.e. an unmarried woman), who is with child and about to bear a son and she will call his name Immanuel.

In any interpretation of this prophecy there are three factors which must be kept in mind.

a. The birth of the child is to be a sign. It is true that in itself a sign need not be a miracle, but in this particular context, after the command issued to Ahaz to ask for a sign deep or high, one would be justified in expecting a sign such as the recession of the shadow on the sundial. There should be something unusual in the birth; a birth in the ordinary course of nature would not seem to meet the requirements of the sign. In this connection it must be noted that the question is made more difficult by the fact that there cannot be a local reference of the prophecy to Hezekiah, because Hezekiah had already been born.

b. The mother of the child is an unmarried woman. Why did Isaiah designate her by this particular word 'almā? It is sometimes said that had he wished to teach a virgin birth there was a good word at his disposal, namely, *b'ūlā*. But an examination of the usage of the latter word in OT reveals that it was very unsatisfactory, in that it would have been ambiguous. The word *b'ūlā* may designate a virgin, but when it does the explanatory phrase 'and a man had not known her' is often added (cf. Gn. 24:16). The word may also designate a betrothed virgin (cf. Dt. 22:23ff.). In this latter case the virgin is known as the wife ('iššā) of the man, and he as her husband ('iṣ). But the word *b'ūlā* may also indicate a married woman (Joel 1:8). On the basis of this latter passage a tradition arose among the Jews in which the word could clearly refer to a married woman. Had Isaiah employed this word, therefore, it would not have been clear what type of woman he had in mind, whether virgin or married. Other Heb. words which were at his disposal would not be satisfactory. Had he wished to designate the mother as a young woman he would most likely have employed the common term *na"rā* ('girl'). In using the word 'almā, however, Isaiah employs the one word which is never applied (either in the Bible or in the other Near

Eastern sources) to anyone but an unmarried woman. This unmarried woman might have been immoral, in which case the birth could hardly have been a sign. We are left then with the conclusion that the mother was a good woman and yet unmarried; in other words, the birth was supernatural. It is the presence of this word '*almâ*' which makes an application of the passage to some local birth difficult, if not impossible.

c. We must note the force of the term Immanuel. A natural reading of the passage would lead us to expect that the presence of God is to be seen in the birth of the child himself. This interpretation, however, is seriously disputed, and vigorously rejected by most modern writers on the passage. The presence of God is found, rather, so we are told, in the deliverance of Judah from her two northern enemies. The infancy of the child is made the measure of time that would elapse until the two enemies are removed. Such a period of time would be short—a child learns the difference between good and evil at a tender age. Hence, within, say, 2 years, or possibly even less, Judah would have nothing to fear from Syria and Israel. In this deliverance the presence of God would be manifested, and as a token or pledge of this deliverance some mother would call her child Immanuel.

This interpretation poses tremendous problems which it does not answer. What warrant would a mother have for naming her particular child Immanuel? How could she know that her own child and no other would be a sign that in 2 years or so the presence of God would be manifested in the deliverance of Judah from Syria and Israel? Furthermore, how would Israel itself know that a particular child had been born in answer to the prophecy and that the birth of this particular child would be the promised sign? It would seem that, if the prophecy refers to a local birth, the child to be born must be someone prominent. The most prominent person, namely Hezekiah, is ruled out, and therefore we must assume that it is a child of Isaiah or some other child of Ahaz. But this is also ruled out by the word '*almâ*'. Neither the wife of Ahaz nor the wife of Isaiah could properly be designated an '*almâ*', for the obvious reason that both were married women.

It seems best, then, to apply the name Immanuel to the Child himself. In his birth the presence of God is to be found. God has come to his people in a little Child, that very Child whom Isaiah later names 'Mighty God' ('*ēl gibbôr*'). This interpretation is strengthened by the fact that Isaiah is seeking to dissuade men from trusting the Assyrian king. The nation's help rests not in Assyria but in God. In this dark moment God is with his people. He is found in the birth of a Child.

The infancy of the divine Child is a measure of the time that will elapse until Ahaz is freed from the fear of his two northern enemies (Is. 7:15-16). Ahaz rejects the sign of Immanuel, and turns to the king of Assyria. That king and his successors caused Judah's downfall, but for the remnant there was given the promise of Immanuel, and in Immanuel they would find their hope and salvation.

INCARNATION.

I. Meaning of the word

Neither the noun 'incarnation' nor the adjective 'incarnate' is biblical, but the Gk. equivalent of Lat. *in carne* (*en sarki*, 'in flesh') is found in some important NT statements about the person and work of Jesus Christ. Thus the hymn quoted in 1 Tim. 3:16 speaks of 'he was manifested in the flesh' (so rsv, following the true text). John ascribes to the spirit of antichrist any denial that Jesus Christ has 'come in the flesh' (1 Jn. 4:2; 2 Jn. 7). Paul says that Christ did his reconciling work 'in his body of flesh' (Col. 1:22; cf. Eph. 2:15), and that by sending his Son 'in the likeness of sinful flesh' God 'condemned sin in the flesh' (Rom. 8:3). Peter speaks of Christ dying for us 'in the flesh' (*sarki*, dative of reference: 1 Pet. 3:18; 4:1). All these texts are enforcing from different angles the same truth: that it was precisely by coming and dying 'in the flesh' that Christ secured our salvation. Theology calls his coming the incarnation, and his dying the atonement.

What does *'flesh' mean in these texts? In the Bible this word (Heb. *bāšār*, *s'ēr*; Gk. *sarx*) has fundamentally a physiological meaning: 'flesh' is the solid stuff which, together with blood and bones, makes up the physical organism of a man or animal (cf. Gn. 2:21; Lk. 24:39; 1 Cor. 15:50). Since Heb. thought associates bodily organs with psychical functions, we find that in the OT 'flesh' can cover the psychological as well as the physical aspects of man's personal life (cf. the parallelism between 'flesh' and 'heart', Ps. 73:26, and between 'flesh' and 'soul', Ps. 63:1). The word, however, bears more than a merely anthropological significance. The Bible sees physical flesh as a theologically significant symbol—a symbol, namely, of the created and dependent sort of life which men and animals share, a sort of life which is derived from God and which, unlike God's own life, requires a physical organism to sustain it in its characteristic activity. Hence 'flesh' becomes a generic term for men, or animals, or men and animals together (cf. Gn. 6:12; 7:15, 21f.), viewed as creatures of God, whose life on earth lasts only for the comparatively short period during which God supplies the breath of life in their nostrils. 'Flesh' in this theologically developed sense is thus not something that a man *has*, but something that he *is*. Its mark is creaturely weakness and frailty (Is. 40:6), and in this respect it stands in contrast with 'spirit', the eternal and unflagging energy that is of God, and is God (Is. 31:3; cf. 40:6-31).

To say, therefore, that Jesus Christ came and died 'in the flesh' is to say that he came and died in the state and under the conditions of created physical and psychical life: in other words, that he who died was man. But the NT also affirms that he who died eternally was, and continues to be, God. The formula which enshrines the incarnation therefore is that in some sense God, without ceasing to be God, was made man. This is what John asserts in the prologue of his Gospel: 'the Word' (God's agent in creation, who 'in the beginning', before the creation, not only 'was with God', but himself 'was God', Jn. 1:1-3) 'became flesh' (Jn. 1:14).

II. Origin of the belief

Such an assertion, considered abstractly against the background of OT monotheism, might seem

INCARNATION

blasphemous or nonsensical—as, indeed, orthodox Judaism has always held it to be. It appears to mean that the divine Maker became one of his own creatures, which is a *prima facie* contradiction in theological terms. Whence came the conviction that inspired John's strange statement? How did the early church's belief that Jesus of Nazareth was God incarnate arise? On the assumption that it was not occasioned by what Jesus himself said and did, but grew up later, attempts have been made to trace its origin to Jewish speculations about a pre-existent superhuman Messiah, or to the polytheistic myths about redeemer-gods which were characteristic of Hellenistic mystery-religions and Gnostic cults. But it is now widely recognized that these attempts have failed: partly because the differences between these Jewish and Gentile fancies and NT Christology have invariably proved to be more substantial and deep-rooted than their surface similarities are; partly because it has been shown that a virtual claim to deity is embedded in the most undoubted sayings of the historical Jesus, as reported in the Synoptic Gospels, and that a virtual acceptance of this claim was fundamental to the faith and worship of the primitive Palestinian church, as pictured in the first chapters of Acts (the substantial historicity of which is now rarely disputed). The only explanation that covers the facts is that the impact of Jesus' own life, ministry, death and resurrection convinced his disciples of his personal deity even before he ascended. This, of course, is precisely the account of the matter which the Fourth Gospel itself gives (see especially Jn. 20:28ff.). In line with this, Acts tells us that the first Christians prayed to Jesus as Lord (7:59), even before Pentecost (1:21: the 'Lord' who chooses apostles is surely 'the Lord Jesus' of v. 21, cf. v. 3); that, beginning on the day of Pentecost, they baptized in his name (2:38; 8:16; 19:5); that they invoked and put faith in his name (*i.e.* in himself: 3:16; 9:14; 22:16; cf. 16:31); and that they proclaimed him as the One who gives repentance and remission of sins (5:31). All this shows that, even if the deity of Jesus was not at first clearly stated in words (and Acts gives no hint that it was), it was nevertheless part of the faith by which the first Christians lived and prayed. *Lex orandi lex credendi*. The theological formulation of belief in the incarnation came later, but the belief itself, however incoherently expressed, was there in the church from the beginning.

III. Standpoint of the New Testament writers

It is important to note the nature and limits of the interest which motivates NT thinking about the incarnation, particularly that of Paul, John and the author of Hebrews, who deal with the subject comparatively fully. The NT writers nowhere notice, much less handle, the metaphysical questions about the mode of the incarnation, and the psychological questions about the incarnate state, which have been so prominent in Christological discussion since the 4th century. Their interest in Christ's person is not philosophical and speculative, but religious and evangelical. They speak of Christ, not as a metaphysical problem, but as a divine Saviour; and all that they say about his person is prompted by their desire to glorify him through exhibiting his work and vindicating his centrality in the redemptive purpose of God. They never attempt to dis-

sect the mystery of his person; it is enough for them to proclaim the incarnation as a fact, one of the sequence of mighty works whereby God has wrought salvation for sinners. The only sense in which the NT writers ever attempt to explain the incarnation is by showing how it fits into God's over-all plan for redeeming mankind (see, *e.g.* Rom. 8:3; Phil. 2:6–11; Col. 1:13–22; Jn. 1:18; 1 Jn. 1:1–2; and the main argument of Hebrews, 1–2; 4:14–5:10; 7:1–10:18).

The exclusiveness of this evangelical interest throws light on the otherwise puzzling fact that the NT nowhere reflects on the * virgin birth of Jesus as witnessing to the conjunction of deity and manhood in his person—a line of thought much canvassed by later theology. This silence need not mean that any of the NT writers were ignorant of the virgin birth, as some have supposed. It is sufficiently explained by the fact that NT interest in Jesus centres elsewhere, upon his relation to the saving purposes of God. Proof of this is given by the way in which the virgin birth story is itself told by Matthew and Luke, the two Evangelists who recount it. Each lays all his stress, not on the unique constitution of the Person thus miraculously born, but on the fact that by this miraculous birth God began to fulfil his long-foretold intention of visiting and redeeming his people (*cf.* Mt. 1:21ff.; Lk. 1:31ff., 68–75; 2:10f., 29–32). The only significance which they, or any NT writers, see in the incarnation is directly soteriological. The Scotist speculation, popularized by Westcott, that the incarnation was primarily for the perfecting of creation, and only secondarily and incidentally for the redeeming of sinners, finds not the least support in the NT.

The apostolic writers clearly see that both the deity and the manhood of Jesus are fundamental to his saving work. They see that it is just because Jesus is God the Son that they are to regard his disclosure of the Father's mind and heart as perfect and final (*cf.* Jn. 1:18; 14:7–10; Heb. 1:1f.), and his death as the supreme evidence of God's love for sinners and his will to bless believers (*cf.* Jn. 3:16; Rom. 5:5–10; 8:32; 1 Jn. 4:8–10). They realize that it is Jesus' divine Sonship that guarantees the endless duration, sinless perfection and limitless efficacy, of his high-priestly service (Heb. 7:3, 16, 24–28). They are aware that it was in virtue of his deity that he was able to defeat and dispossess the devil, the 'strong man armed' who kept sinners in a state of helpless thralldom (Heb. 2:14f.; Rev. 20:1f.; *cf.* Mk. 3:27; Lk. 10:17f.; Jn. 12:31f.; 16:11). Equally, they see that it was necessary for the Son of God to 'become flesh', for only so could he take his place as the 'second man' through whom God deals with the race (1 Cor. 15:21f., 47ff.; Rom. 5:15–19); only so could he mediate between God and men (1 Tim. 2:5); and only so could he die for sins, for only flesh can die. (Indeed, the thought of 'flesh' is so bound up with death that the NT will not apply the term to Christ's manhood in its glorified and incorruptible state: 'the days of his flesh' (Heb. 5:7) means Christ's time on earth up to the cross.)

We should, therefore, expect the NT to treat any denial that Jesus Christ was both truly divine and truly human as a damning heresy, destructive of the gospel; and so it does. The only such denial that it knows is the docetic Christology (traditionally, that of Cerinthus) which denied the reality of Christ's 'flesh' (1 Jn. 4:2f.), and hence of his physical death ('blood', 1 Jn. 5:6). John denounces this

in his first two Epistles as a deadly error inspired by the spirit of antichrist, a lying denial of both the Father and the Son (1 Jn. 2:22–25; 4:1–6; 5:5–12; 2 Jn. 7, 9ff.). It is usually thought that the emphasis in John's Gospel on the reality of Jesus' experience of human frailty (his weariness, 4:6; thirst, 4:7; 19:28; tears, 11:33ff.) is intended to cut at the root of the same docetic error.

IV. Elements of the New Testament doctrine

The meaning of the NT claim that 'Jesus Christ has come in the flesh' may be drawn out under three heads.

a. *The Person incarnate*

The NT uniformly defines the identity of Jesus in terms of his relation to the one God of OT monotheism (cf. 1 Cor. 8:4, 6; 1 Tim. 2:5; with Is. 43:10f.; 44:6). The basic definition is that Jesus is God's *Son*. This identification is rooted in Jesus' own thought and teaching. His sense of being 'the Son' in a unique sense that set him apart from the rest of men went back at least to his 13th year (Lk. 2:49), and was confirmed to him by his Father's voice from heaven at his baptism: 'Thou art my beloved Son' (Mk. 1:11; cf. Mt. 3:17; Lk. 3:22; *agapētos*, which appears in all three reports of the heavenly utterance, carries the implication of 'only beloved': so again in the parable, Mk. 12:6; cf. the similar words from heaven at the transfiguration, Mk. 9:7; Mt. 17:5). At his trial, when asked under oath whether he was 'the Son of God' (a phrase which on the high priest's lips probably signified no more than 'Davidic Messiah'), Mark and Luke report Jesus as making an affirmative reply which was in effect a claim to personal deity: *egō eimi* (so Mk. 14:62; Lk. 22:70 has: 'you say (*sc. rightly*) that *egō eimi*'). *egō eimi*, the emphatic 'I am', were words that no Jew would take on his lips, for they expressed the self-identification of God (Ex. 3:14). Jesus, who according to Mark had used these words before in a similar suggestive way (Mk. 6:50; cf. 13:6; and cf. the long series of *egō eimi* sayings in John's Gospel: Jn. 4:26; 6:35; 8:12; 10:7, 11; 11:25; 14:6; 15:1; 18:5ff.), evidently wished to make it perfectly clear that the divine Sonship to which he laid claim was nothing less than personal deity. It was for this 'blasphemy' that he was condemned.

Jesus' references to himself as 'the Son' are always in contexts which mark him out as uniquely close to God and uniquely favoured by God. There are comparatively few in the Synoptic Gospels (Mt. 11:27 = Lk. 10:22; Mk. 13:32 = Mt. 24:36; cf. Mk. 12:1–11), but many in John, both in Jesus' own words and in the Evangelist's commentary. According to John, Jesus is God's 'only' Son (*monogenēs*: 1:14, 18; 3:16, 18). He exists eternally (8:58; cf. 1:1f.). He stands in an unchanging relation of perfect love, union and communion, with the Father (1:18; 8:16, 29; 10:30; 16:32). As Son, he has no independent initiative (5:19); he lives to glorify his Father (17:1, 4), by doing his Father's will (4:34; 5:30; 8:28f.). He came into the world because the Father 'sent' him (42 references), and gave him a task to fulfil there (4:34; 17:4; cf. 19:30). He came in his Father's name, *i.e.* as his Father's representative (5:43), and, because all that he said and did was according to the Father's command (7:16ff.; 8:26ff.; 12:49f.; 14:10), his life on earth revealed his Father perfectly (14:7ff.). When he speaks of the Father as greater than himself (14:28; cf. 10:29) he is evidently referring, not to any essen-

tial or circumstantial inferiority, but to the fact that subordination to the Father's will and initiative is natural and necessary to him. The Father is greater than he because in relation to the Father it is always his nature freely and joyfully to act as a Son. But this does not mean that he is to be subordinated to the Father in men's esteem and worship. Just the reverse; for the Father seeks the Son's glory no less than the Son seeks the Father's glory. The Father has committed to the Son his two great works of giving life and executing judgment, 'that all may honour the Son, even as they honour the Father' (5:21ff.). This amounts to saying that the Father directs all men to do as Thomas did (20:28), and acknowledge the Son in the same terms in which they ought to acknowledge the Father himself—namely, as 'my Lord and my God'.

The NT contains other lines of thought, subsidiary to that of divine Sonship, which also proclaim the deity of Jesus of Nazareth. We may mention the more important of these: (i) John identifies the eternal divine *Word* with God's personal Son, Jesus Christ (Jn. 1:1–18; cf. 1 Jn. 1:1–3; Rev. 19:13; * *Logos*). (ii) Paul speaks of the Son as 'the *image* of God', both as incarnate (2 Cor. 4:4) and in his pre-incarnate state (Col. 1:15), and in Phil. 2:6 says that prior to the incarnation Jesus Christ was in the 'form' (*morphē*) of God: a phrase the exact exegesis of which is disputed, but which J. B. Phillips is almost certainly right to render: 'always . . . God by nature'. Heb. 1:3 (RV) calls the Son 'the effulgence of his (God's) glory, and the *very image of his substance*'. These statements, made as they are within a monotheistic frame of reference which excludes any thought of two Gods, are clearly meant to imply: (1) that the Son is personally divine, and ontologically one with the Father; (2) that the Son perfectly embodies all that is in the Father, or, putting it negatively, that there is no aspect or constituent of deity or character which the Father has and the Son lacks. (iii) Paul can apply an OT prophecy concerning the invocation of 'the Lord' ('Yahweh') to the Lord Jesus, thus indicating that it finds its true fulfilment in him (Rom. 10:13, quoting Joel 2:32; cf. Phil. 2:10f., echoing Is. 45:23). Similarly, the writer to the Hebrews quotes Moses' exhortation to the angels to worship God (Dt. 32:43, LXX), and the psalmist's declaration: 'Thy throne, O God, is for ever and ever' (Ps. 45:6), as words spoken by the Father with reference to his Son (Heb. 1:6, 8). This shows that both writers regard Jesus as divine. (iv) The regular NT habit of referring to Jesus as 'Lord'—the title given to the gods of Hellenistic religion (cf. 1 Cor. 8:5), and invariably used in LXX to render the divine name—would seem to be an implicit ascription of deity.

b. *The nature of the incarnation*

When the Word 'became flesh' his deity was not abandoned, or reduced, or contracted, nor did he cease to exercise the divine functions which had been his before. It is he, we are told, who sustains the creation in ordered existence, and who gives and upholds all life (Col. 1:17; Heb. 1:3; Jn. 1:4), and these functions were certainly not in abeyance during his time on earth. When he came into the world he 'emptied himself' of outward glory (Phil. 2:7; Jn. 17:5), and in that sense he 'became poor' (2 Cor. 8:9), but this does not at all imply a curtailing of his divine powers, such as the so-called kenosis theories would suggest. The NT stresses rather that the Son's deity was not reduced through the

INCARNATION

incarnation. In the man Christ Jesus, says Paul, 'dwelleth *all the fullness of the Godhead* bodily' (Col. 2:9; cf. 1:19).

The incarnation of the Son of God, then, was not a diminishing of deity, but an acquiring of manhood. It was not that God the Son came to indwell a human being, as the Spirit was later to do. (To assimilate incarnation to indwelling is the essence of the Nestorian heresy.) It was rather that the Son in person began to live a fully human life. He did not simply clothe himself in a human body, taking the place of its soul, as Apollinaris maintained; he took to himself a human soul as well as a human body, *i.e.* he entered into the experience of human psychical life as well as of human physical life. His manhood was complete; he became 'the man Christ Jesus' (1 Tim. 2:5; cf. Gal. 4:4; Heb. 2:14, 17). And his manhood is permanent. Though now exalted, he 'continueth to be, God and man in two distinct natures, and one person, for ever' (*Westminster Shorter Catechism*, Q. 21; cf. Heb. 7:24).

c. The incarnate state

(i) It was a state of *dependence* and *obedience*, because the incarnation did not change the relationship between the Son and the Father. They continued in unbroken fellowship, the Son saying and doing what the Father gave him to say and do, and not going beyond the Father's known will at any single moment (cf. the first temptation, Mt. 4:2ff.). His confessed ignorance of the time of his return (Mk. 13:32) should no doubt be explained, not as edifying pretence (Aquinas), nor as evidence of his having laid aside his divine knowledge for the purpose of the incarnation (the kenosis theories), but simply as showing that it was not the Father's will for him to have this knowledge in his mind at that time. As the Son, he did not wish or seek to know more than the Father wished him to know.

(ii) It was a state of *sinlessness* and *impeccability*, because the incarnation did not change the nature and character of the Son. That his whole life was sinless is several times asserted (2 Cor. 5:21; 1 Pet. 2:22; Heb. 4:15; cf. Mt. 3:14-17; Jn. 8:46; 1 Jn. 2:1f.). That he was exempt from the entail of original sin in Adam is evident from the fact that he was not bound to die for sins of his own (cf. Heb. 7:26), and hence could die vicariously and representatively, the righteous taking the place of the unrighteous (cf. 2 Cor. 5:21; Rom. 5:16ff.; Gal. 3:13; 1 Pet. 3:18). That he was impeccable, and could not sin, follows from the fact that he remained God the Son (cf. Jn. 5:19, 30). Deviation from the Father's will was no more possible for him in the incarnate state than before. His deity was the guarantee that he would achieve in the flesh that sinlessness which was prerequisite if he were to die as 'a lamb without blemish or spot' (1 Pet. 1:19).

(iii) It was a state of *temptation* and *moral conflict*, because the incarnation was a true entry into the conditions of man's moral life. Though, being God, it was not in him to yield to temptation, yet, being man, it was necessary for him to fight temptation in order to overcome it. What his deity ensured was not that he would not be tempted to stray from his Father's will, nor that he would be exempt from the strain and distress that repeated insidious temptations create in the soul, but that, when tempted, he would fight and win; as he did in the initial temptations of his Messianic ministry

(Mt. 4:1ff.). The writer to the Hebrews stresses that in virtue of his firsthand experience of temptation and the costliness of obedience he is able to extend effective sympathy and help to tempted and distraught Christians (Heb. 2:18; 4:14ff.; 5:2, 7ff.).

Moule, *The Origin of Christology*, 1977. J.I.P.

INCENSE. A common feature of OT ritual, incense was a costly offering and a sign essentially of the acknowledgment of deity (cf. Mal. 1:11). The word has a double application: it refers both to the substance used for burning and to the aromatic odour which is produced. Two Heb. words are thus rendered: (1) *l'ḥōnā*, 'frankincense'; and (2) *q'tōreṭ*, the 'sweet smoke' (עֲוֹ 'incense') of Is. 1:13. Among the Israelites only priests were allowed to offer incense. When the Lord gave Moses instructions for Aaron, these included strict regulations concerning the use of incense in the holy place (Lv. 16:12f.). Incense is also used in Scripture as a symbol for prayer (e.g. Ps. 141:2; Rev. 8:3f., Gk. *thymiama*).

Frankincense (Heb. *l'ḥōnā*). This substance consisted of the resinous exudate of certain *Boswellia* trees, the principal species being *B. frereana*, *B. carteri* and *B. papyrifera* in NE Africa, *B. sacra* in Dhofar, S. Arabia, and *B. serrata* in NW India, where they grow in semi-desert mountains. They furnished much of the wealth acquired by traders who followed the old spice-routes from S. Arabia to Gaza and Damascus (Is. 60:6).

The whitish-yellow aromatic resin was obtained by incising the bark, and, although acrid to the taste, frankincense was extremely odoriferous. It comprised one ingredient of the holy anointing oil (Ex. 30:34), and was also burnt with other substances during the cereal-offering (Lv. 6:15). Frankincense was placed in purified form on the showbread in the tabernacle (Lv. 24:7). While it gratified the senses (Ct. 3:6; 4:6, 14), it was also symbolic of religious fervour (cf. Mal. 1:11). The gift of frankincense presented to Christ by the wise men (Mt. 2:11) has been interpreted as symbolizing his priestly office.

See F. N. Hepper, 'Arabian and African Frankincense', *JEA* 55, 1969, pp. 66-72.

Galbanum (Heb. *helb'nā*; etymology uncertain). A strong-smelling spice (Ex. 30:34), usually regarded as the gum of an umbelliferous plant, *Ferula galbaniflua*, native to Persia.

The other constituents of the sacred incense were stacte and onycha (*HERBS AND SPICES).

See also *SACRIFICE AND OFFERING (OT), IV, a;

*COSMETICS AND PERFUMERY, V. *b* (which includes bibliography). F.N.H.

INCREASE. A noun or verb meaning multiplication or growth, translating sundry Heb. and Gk. words. Primarily the term involved the natural reproduction and germination of cattle and harvest, but always under God's direction and control (Lv. 26:4; Dt. 7:13; Ps. 67:6), as acknowledged by the tithe (Dt. 14:22; cf. Pr. 3:9). Hence prosperity is a sign of God's favour (Dt. 6:3), adversity of his displeasure (Je. 15:8), and man's exacting gain from possessions is condemned in the same manner as usury (Lv. 25:37; Ezk. 18:8ff.; cf. Ps. 62:10). The term is used symbolically of Israel's relationship with God (Je. 2:3) and of the spiritual blessings God imparts (Is. 29:19; 40:29), especially by the coming of the Messiah (Is. 9:3, 7).

In the NT the term is applied to the growth of the church in numbers (Acts 6:7; 16:5; 1 Cor. 3:6) and in depth (Eph. 4:16; Col. 2:19). It is also applied to individuals generally (Lk. 2:52; Jn. 3:30; Acts 9:22), and specifically with regard to faith (Lk. 17:5; 2 Cor. 10:15), love (1 Thes. 3:12; 4:10), knowledge (Col. 1:10), or ungodliness (2 Tim. 2:16). P.A.B.

INDIA.

I. Early period

Heb. *hōddū*, from Old Persian *hindu* (cf. Sanskrit *sindhu*), in inscriptions of Darius I and Xerxes I of Persia. The area so designated was that part of the Indus valley and plains E of the Afghan mountains incorporated into the Persian empire by Darius I, who made it his E boundary (Herodotus, 3. 94; 4. 40, 44). In Est. 1:1; 8:9 the limits of the dominion of Ahasuerus (Xerxes I) are 'from India unto Ethiopia', *hōddū* and *kūš*; this corresponds with Xerxes I's own Old Persian inscriptions, cf. the list of countries including 'Sind' or India (*Hidus*) and Ethiopia (*Kušiya*) in R. G. Kent, *Old Persian: Grammar, Texts, Lexicon*, 1953 ed., p. 151, ll. 25, 29 and § 3. But long before this, trade between India and Mesopotamia is known as early as c. 2100 bc (Ur III period), both in texts and by the presence of Indus Valley seals in Mesopotamia. Some think that *Ophir might be Indian (S)upāra. India was the source of the war-elephants used by Alexander and his Seleucid successors in Syria, and in the Graeco-Roman period many exotic products came from India, usually through S Arabia, either up the Red Sea or overland up the W side of Arabia. On routes and navigation, cf. van Beek and Hourani, *JAOs* 78, 1958, pp. 146-147; and 80, 1960, pp. 135-139. Greek principalities maintained themselves for some time in parts of NW India; cf. W. W. Tarn, *The Greeks in Bactria and India*, 1938. For Indians in Egypt in the Graeco-Roman period, cf. Sir H. I. Bell, *Cults and Creeds in Graeco-Roman Egypt*, 1953, p. 48; E. Bevan, *History of Egypt under the Ptolemaic Dynasty*, 1927, p. 155; models from Memphis: Petrie, *Memphis I*, 1909, pp. 16-17, plate 39.

II. Later period

Between the 1st century bc and c. ad 200, India and the Mediterranean lands entered into closer commercial and cultural relations, stimulated by the Roman market for Eastern luxuries and facil-

tated by the discovery of the nature of the monsoons, with the subsequent opening of a regular sea-route to the Tamil towns (mod. Cranganore and Kottayam) and even to Madras (*Sopatma*) and beyond. Against this background we must view the stories of the first introduction of Christianity to India. The unanimous tradition of the old S India church traces its foundation to Thomas the apostle. The narrative of the gnosticizing *Acts of Judas Thomas* (*NEW TESTAMENT APOCRYPHA) also sets Thomas' activities in India. In itself it is the wildest legend, but J. N. Farquhar argued that it reflects accurate knowledge of 1st-century India and postulated that Thomas worked first in the Punjab and later in the S (*BJRL* 11, 1926; 12, 1927). There seems, however, no other early account of Thomas in India clearly independent of these *Acts* (A. Mingana, *BJRL* 11, 1926; 12, 1927). The pripatetic Pantaenus is said to have been a missionary in India some time before ad 180, and to have found Christians there with Matthew's Gospel in Hebrew left by Bartholomew (Eusebius, *EH* 5. 10); but a loose designation of Aden or some other part of Arabia may be involved. That the Syriac S India church is very ancient is undeniable: the question of apostolic or subapostolic foundation remains open.

INHERITANCE.

I. In the Old Testament

In the OT there are two basic roots for inheritance, *nāhal* and *yāraš*. In each case the emphasis was much more upon possession generally than upon the process of succession, though this idea is not altogether absent. The words occur only rarely in Gn. and Ex. and are most frequent in Nu. and Dt., which look forward to the allotment of land in Canaan, and in Jos. which records how it was put into effect. The law of inheritance was as follows. Land belonged to the family rather than to the individual. There was therefore a strict entail. The eldest son received a double portion and the others equal shares. If a man died leaving no sons the inheritance went to his daughters; if no daughters, to his brothers; if no brothers, to his father's brothers; if no father's brothers, to the next of kin (Nu. 27:8-11). If daughters inherited they had to marry in their own tribe (Nu. 36:6). The emphasis of the word *yāraš* is on possession, for the heir succeeded by right and not by disposition. Wills were unknown in Israel before the time of Herod. Before the giving of the law the Patriarchs were free to pass over the *first-born in favour of a younger son. Abraham, Isaac and Jacob were all younger sons. Joseph was preferred to Reuben (1 Ch. 5:1-2) and Ephraim to Manasseh (Gn. 48:8-20). The giving of the rights of the first-born to the first-born of a second and favourite wife was forbidden in Dt. 21:15-17. However, in the case of the royal succession David was preferred to his older brothers (1 Sa. 16:11) and Solomon to Adonijah (1 Ki. 2:15), though the normal custom was for the first-born to succeed (2 Ch. 21:3).

If a man died childless his brother had to marry his widow (Gn. 38:8-9; Dt. 25:5-10; Mt. 22:23-25). The first son of that union was regarded as the

INHERITANCE

first-born of the deceased brother, and therefore if there were only one son the surviving brother would have no heir. It was accordingly possible for the brother not to marry his brother's wife, and then the right went to the nearest kinsman (Ru. 2:20; 3:9-13; 4:1-12). In the book of Ruth, Ruth plays the part of Naomi, who was past the age of marriage (Ru. 4:17). Land could not be sold in perpetuity (Lv. 25:23-24). If it was sold it could be redeemed by the next of kin (Lv. 25:25). Naboth knew Ahab's offer was against the law (1 Ki. 21:3).

The land of Canaan was regarded as the inheritance of Yahweh in a particular way (Ex. 15:17; cf. Jos. 22:19; Ps. 79:1), though he was God of all the earth (Ps. 47:2, etc.). It was for that reason that Israel was able to enjoy it as their inheritance.

The promises made to Abraham concerned a land as well as descendants (Gn. 12:7; 15:18-21, etc.). Abraham's faith was shown in believing that he would have descendants when he was childless and his wife was past child-bearing age, and in believing that he would have a land, though during his lifetime he was a nomad with no settled possession (Acts 7:5). The children of Israel were brought out of Egypt not only to escape from bondage but also to inherit a land (Ex. 6:6-8). This land was conquered by them, but it was the gift of Yahweh (Jos. 21:43-45). He allotted them in it an inheritance which was to last for ever (Gn. 13:15, etc.).

Lots were cast to discover Yahweh's disposal of portions to individual tribes (Jos. 18:2-10). Eventually it was to be a remnant who returned from exile to inherit the land (Is. 10:20-21, etc.). Those who formed that faithful remnant were to inherit the nations as well (Ps. 2:8).

The Levites were to have no territory because Yahweh was their inheritance (Dt. 18:1-2). Materially this meant that their portion consisted of the dues and firstfruits given by the people to Yahweh (Dt. 18:3-5). Spiritually the idea was extended to the whole of Israel (Ps. 16:5-6, etc.). Also Israel was to be his inheritance as the people which belonged specially to him (Dt. 7:6; 32:9). (*PROMISED LAND.)

II. In the New Testament

In the NT 'inheritance' renders Gk. *klēronomos* and its cognates, derived from *klēros*, meaning a 'lot'. The inheritance is narrowed down to the true Israel, Christ himself, who is 'the heir' (Mk. 12:7). As heir of God he enters into a possession given to him because of his relationship. He has been made heir of everything (Heb. 1:2). Believers in a sense share the divine sonship by adoption and therefore also the divine heirship (Rom. 8:17). They follow in the footsteps of faithful Abraham as heirs of the promise (Rom. 4:13-14) and like Isaac they are his children, heirs according to promise (Gal. 3:29). Their inheritance is something which is given by God's grace because of their status in his sight, and it is in no sense earned.

The object of the Christian inheritance is all that was symbolized by the land of Canaan, and more. Believers inherit the kingdom of God (Mt. 25:34; 1 Cor. 6:9-10; 15:50; Gal. 5:21; Eph. 5:5; Jas. 2:5). They inherit the earth or 'the land' (Mt. 5:5; cf. Ps. 37:29). They inherit salvation (Heb. 1:14), a blessing (1 Pet. 3:9), glory (Rom. 8:17-18), and incorruption (1 Cor. 15:50). These are all 'the promises' (Heb. 6:12), not received in their fulfilment by the believers of the OT (Heb. 11:39-40). In Hebrews stress is laid upon the new 'covenant' or 'testa-

ment'. It is on this that the promised inheritance is based, especially as it required the death of the testator (Heb. 9:15-17). Two men asked Jesus what they should do in order to inherit eternal life (Lk. 10:25; 18:18), and Christ spoke of that as being part of the blessing of the new world (Mt. 19:29). A Christian man and wife are joint heirs of the grace of life (1 Pet. 3:7).

The consummation of the blessings promised will not take place until the parousia. The inheritance is reserved in heaven (1 Pet. 1:4). He who overcomes is to have the inheritance of God (Rev. 21:7). However, that does not alter the fact that many of the blessings of heirship may be enjoyed in advance. The Holy Spirit is the agent who makes our position as heirs real (Rom. 8:16-17), and he is given to us 'as the guarantee of our inheritance until we acquire possession of it' (Eph. 1:14). He was sent to the church after Christ's own entry into his inheritance at his ascension.

In the NT we still see God's people as his inheritance (Eph. 1:18), and all the blessings mentioned above show that he himself is still their inheritance.

But that inheritance is not of right, it is by the free disposition of God, who is able in his sovereign pleasure to dispossess those who seem to have most title to it and give it to others of his choice.

INNER MAN. Paul uses this phrase (*ho esō anthrōpos*, in Rom. 7:22; 2 Cor. 4:16; Eph. 3:16) to denote the Christian's true self, as seen by God and known (partially) in consciousness. (For a vindication of the view that Rom. 7:14-26 pictures Paul the Christian, see A. Nygren, *Romans*, 1952, pp. 284ff.) The contrast, implicit if not explicit, is with *ho exō anthrōpos*, 'the outward man' (2 Cor. 4:16), the same individual as seen by his fellow-men, a being physically alive and active, known (so far as he is known) through his behaviour.

This contrast differs both from that which Paul drew between the new and old man (*i.e.* between man's status, condition and affinities in Christ and apart from Christ), and from that which Platonists drew between the immaterial, immortal soul (the real man) and his material, mortal body (his lodging), or, again, between the soul's rational (higher) and sensual (lower) impulses. The contrast in view is rather that between the 'outward appearance' and the 'heart' drawn in 1 Sa. 16:7: 'inner man' and *'heart' are, indeed, almost synonymous. This contrast reflects two facts. First, God, the searcher of hearts, sees things in a man that are hidden from his fellows, who see only his exterior (*cf.* 1 Sa. 16:7; Mt. 23:27f.). and Peter's assertion that meekness and quietness adorn 'the hidden person of the heart', which God notices, if men do not, 1 Pet. 3:3f.). Secondly, God's renewal of sinners in Christ is a hidden work (Col. 3:3f.), of which human observers see only certain of the effects (*cf.* Jn. 3:8). The sphere of character, and of the Spirit's transforming work, is not the outward, but the inner man. The exact point of the contrast differs in each of the three texts.

1. In 2 Cor. 4:16 it is between the outward Paul,

the Paul whom men saw, worn down by constant work, ill health, anxiety, strain and persecution, and the Paul whom God knew and who knew God, the Paul who had been recreated, and was now indwelt, by the Spirit (2 Cor. 5:5, 17), and who after physical dissolution would be 'further clothed' with a resurrection body (2 Cor. 5:1ff.). The outward Paul was going to pieces; the real Paul was daily renewed.

2. In Rom. 7:22f. the contrast is between the 'law (active principle) of sin' in Paul's 'members', influencing his outward actions, and the 'law of my mind', Paul's heart's delight in God's law and heart's desire to keep it, which desire sin constantly frustrated.

3. In Eph. 3:16-19 the contrast is only implicit. The inward man, the heart, the temple in which Christ dwells and the sphere of his strengthening operation, is the real, abiding self, the self that knows Christ's love and will be filled into God's fullness; but this self is hidden from men. Hence Paul has need to exhort his readers to show the world what God has wrought in them by the quality of their outward conduct (Eph. 4-6).

J. I. P.

INSPIRATION. Noun formed from Latin and English translations of *theopneustos* in 2 Tim. 3:16, which AV rendered: 'All Scripture is given by inspiration of God, and is profitable for doctrine, for reproof, for correction, for instruction in righteousness.' 'Inspired of God' in RSV is no improvement on AV, for *theopneustos* means out-breathed rather than in-breathed by God--divinely inspired, rather than in-spired. In the last century Ewald and Cremer argued that the adjective bore an active sense, 'breathing the Spirit', and Barth appears to agree (he glosses it as meaning not only 'given and filled and ruled by the Spirit of God', but also 'actively out-breathing and spreading abroad and making known the Spirit of God' (*Church Dogmatics*, I, 2, E.T. 1956, p. 504)); but B. B. Warfield showed decisively in 1900 that the sense of the word can only be passive. The thought is not of God as breathing through Scripture, or of Scripture as breathing out God, but of God as having breathed out Scripture. Paul's words mean, not that Scripture is inspiring (true though this is), but that Scripture is a divine product, and must be approached and estimated as such.

The 'breath' or 'spirit' of God in the OT (Heb. *ruah*, *n'sāmā*) denotes the active outgoing of divine power, whether in creation (Ps. 33:6; Jb. 33:4; cf. Gn. 1:2; 2:7), preservation (Jb. 34:14), revelation to and through prophets (Is. 48:16; 61:1; Mi. 3:8; Joel 2:28f.), regeneration (Ezk. 36:27), or judgment (Is. 30:28, 33). The NT reveals this divine 'breath' (Gk. *pneuma*) to be a Person of the Godhead. God's 'breath' (i.e. the Holy Spirit) produced Scripture, as a means to the conveyance of spiritual understanding. Whether we render *pasa graphē* as 'the whole Scripture' or 'every text', and whether we follow RSV or RV in construing the sentence (RV has 'Every scripture inspired of God is also profitable . . .', which is a possible translation), Paul's meaning is clear beyond all doubt. He is affirming that all that comes in the category of Scripture, all that has a place among the 'sacred writings' (*hieragrammata*, v. 15, RV), just because it is God-

breathed, is profitable for the guiding of both faith and life.

On the basis of this Pauline text, English theology regularly uses the word 'inspiration' to express the thought of the divine origin and quality of Holy Scripture. Actively, the noun denotes God's out-breathing operation which produced Scripture: passively, the inspiredness of the Scriptures so produced. The word is also used more generally of the divine influence which enabled the human organs of revelation—prophets, psalmists, wise men and apostles—to speak, as well as to write, the words of God.

I. The idea of biblical inspiration

According to 2 Tim. 3:16, what is inspired is precisely the biblical writings. Inspiration is a work of God terminating, not in the men who were to write Scripture (as if, having given them an idea of what to say, God left them to themselves to find a way of saying it), but in the actual written product. It is Scripture—*graphē*, the written text—that is God-breathed. The essential idea here is that all Scripture has the same character as the prophets' sermons had, both when preached and when written (cf. 2 Pet. 1:19-21, on the divine origin of every 'prophecy of the scripture'; see also Je. 36; Is. 8:16-20). That is to say, Scripture is not only man's word, the fruit of human thought, premeditation and art, but also, and equally, God's word, spoken through man's lips or written with man's pen. In other words, Scripture has a double authorship, and man is only the secondary author; the primary author, through whose initiative, prompting and enlightenment, and under whose superintendence, each human writer did his work, is God the Holy Spirit.

Revelation to the prophets was essentially verbal; often it had a visionary aspect, but even 'revelation in visions is also verbal revelation' L. Koehler, *Old Testament Theology*, E.T. 1957, p. 103). Brunner has observed that in 'the words of God which the Prophets proclaim as those which they have received directly from God, and have been commissioned to repeat, as they have received them . . . perhaps we may find the closest analogy to the meaning of the theory of verbal inspiration' (*Revelation and Reason*, 1946, p. 122, n. 9). Indeed we do; we find not merely an analogy to it, but the paradigm of it; and 'theory' is the wrong word to use, for this is just the biblical doctrine itself. Biblical inspiration should be defined in the same theological terms as prophetic inspiration: namely, as the whole process (manifold, no doubt, in its psychological forms, as prophetic inspiration was) whereby God moved those men whom he had chosen and prepared (cf. Je. 1:5; Gal. 1:15) to write exactly what he wanted written for the communication of saving knowledge to his people, and through them to the world. Biblical inspiration is thus verbal by its very nature; for it is of God-given words that the God-breathed Scriptures consist.

Thus, inspired Scripture is written revelation, just as the prophets' sermons were spoken revelation. The biblical record of God's self-disclosure in redemptive history is not merely human testimony to revelation, but is itself revelation. The inspiring of Scripture was an integral part in the revelatory process, for in Scripture God gave the church his saving work in history, and his own authoritative interpretation of its place in his eternal plan. 'Thus saith the Lord' could be prefixed to each book of

INSPIRATION

Scripture with no less propriety than it is (359 times, according to Koehler, *op. cit.*, p. 245) to individual prophetic utterances which Scripture contains. Inspiration, therefore, guarantees the truth of all that the Bible asserts, just as the inspiration of the prophets guaranteed the truth of their representation of the mind of God. ('Truth' here denotes correspondence between the words of man and the thoughts of God, whether in the realm of fact or of meaning.) As truth from God, man's Creator and rightful King, biblical instruction, like prophetic oracles, carries divine authority.

II. Biblical presentation

The idea of canonical Scripture, *i.e.* of a document or corpus of documents containing a permanent authoritative record of divine revelation, goes back to Moses' writing of God's law in the wilderness (Ex. 34:27f.; Dt. 31:9ff., 24ff.). The truth of all statements, historical or theological, which Scripture makes, and their authority as words of God, are assumed without question or discussion in both Testaments. The Canon grew, but the concept of inspiration, which the idea of canonicity presupposes, was fully developed from the first, and is unchanged throughout the Bible. As there presented, it comprises two convictions.

1. *The words of Scripture are God's own words.* OT passages identify the Mosaic law and the words of the prophets, both spoken and written, with God's own speech (*cf.* 1 Ki. 22:8-16; Ne. 8; Ps. 119; Je. 25:1-13; 36, *etc.*). NT writers view the OT as a whole as 'the oracles of God' (Rom. 3:2), prophetic in character (Rom. 16:26; *cf.* 1:2; 3:21), written by men who were moved and taught by the Holy Spirit (2 Pet. 1:20f.; *cf.* 1 Pet. 1:10-12). Christ and his apostles quote OT texts, not merely as what, *e.g.*, Moses, David or Isaiah said (*see* Mk. 7:10; 12:36; 7:6; Rom. 10:5; 11:9; 10:20, *etc.*), but also as what God said through these men (*see* Acts 4:25; 28:25, *etc.*), or sometimes simply as what 'he' (God) says (*e.g.* 1 Cor. 6:16; Heb. 8:5, 8), or what the Holy Spirit says (Heb. 3:7; 10:15). Furthermore, OT statements, not made by God in their contexts, are quoted as utterances of God (Mt. 19:4f.; Heb. 3:7; Acts 13:34f., citing Gn. 2:24; Ps. 95:7; Is. 55:2 respectively). Also, Paul refers to God's promise to Abraham and his threat to Pharaoh, both spoken long before the biblical record of them was written, as words which Scripture spoke to these two men (Gal. 3:8; Rom. 9:17); which shows how completely he equated the statements of Scripture with the utterance of God.

2. *Man's part in the producing of Scripture was merely to transmit what he had received.* Psychologically, from the standpoint of form, it is clear that the human writers contributed much to the making of Scripture—historical research, theological meditation, linguistic style, *etc.* Each biblical book is in one sense the literary creation of its author. But theologically, from the standpoint of content, the Bible regards the human writers as having contributed nothing, and Scripture as being entirely the creation of God. This conviction is rooted in the self-consciousness of the founders of biblical religion, all of whom claimed to utter—and, in the case of the prophets and apostles, to write—what were, in the most literal sense, the words of another: God himself. The prophets (among whom Moses must be numbered: Dt. 18:15; 34:10) professed that they spoke the words of Yahweh, setting before Israel what Yahweh had

shown them (Je. 1:7; Ezk. 2:7; Am. 3:7f.; *cf.* 1 Ki. 22). Jesus of Nazareth professed that he spoke words given him by his Father (Jn. 7:16; 12:49f.). The apostles taught and issued commands in Christ's name (2 Thes. 3:6), so claiming his authority and sanction (1 Cor. 14:37), and they maintained that both their matter and their words had been taught them by God's Spirit (1 Cor. 2:9-13; *cf.* Christ's promises, Jn. 14:26; 15:26f.; 16:13ff.). These are claims to inspiration. In the light of these claims, the evaluation of prophetic and apostolic writings as wholly God's word, in just the same way in which the two tables of the law, 'written with the finger of God' (Ex. 24:12; 31:18; 32:16), were wholly God's word, naturally became part of the biblical faith.

Christ and the apostles bore striking witness to the fact of inspiration by their appeal to the authority of the OT. In effect, they claimed the Jewish Scriptures as the Christian Bible: a body of literature bearing prophetic witness to Christ (Jn. 5:39f.; Lk. 24:25ff., 44f.; 2 Cor. 3:14ff.) and designed by God specially for the instruction of Christian believers (Rom. 15:4; 1 Cor. 10:11; 2 Tim. 3:14ff.; *cf.* the exposition of Ps. 95:7-11 in Heb. 3-4, and indeed the whole of Hebrews, in which every major point is made by appeal to OT texts). Christ insisted that what was written in the OT 'cannot be broken' (Jn. 10:35). He had not come, he told the Jews, to annul the law or the prophets (Mt. 5:17); if they thought he was doing that, they were mistaken; he had come to do the opposite—to bear witness to the divine authority of both by fulfilling them. The law stands for ever, because it is God's word (Mt. 5:18; Lk. 16:17); the prophecies, particularly those concerning himself, must be fulfilled, for the same reason (Mt. 26:54; Lk. 22:37; *cf.* Mk. 8:31; Lk. 18:31). To Christ and his apostles, the appeal to Scripture was always decisive (*cf.* Mt. 4:4, 7, 10; Rom. 12:19; 1 Pet. 1:16, *etc.*).

The freedom with which NT writers quote the OT (following LXX, Targums, or an *ad hoc* rendering of the Hebrew, as best suits them) has been held to show that they did not believe in the inspiredness of the original words. But their interest was not in the words, as such, but in their meaning; and recent study has made it appear that these quotations are interpretative and expository—a mode of quotation well known among the Jews. The writers seek to indicate the true (*i.e.* Christian) meaning and application of their text by the form in which they cite it. In most cases this meaning has evidently been reached by a strict application of clear-cut theological principles about the relation of Christ and the church to the OT. (See C. H. Dodd, *According to the Scriptures*, 1952; K. Stendahl, *The School of St Matthew*, 1954; R. V. G. Tasker, *The Old Testament in the New Testament*, 1954; E. E. Ellis, *Paul's Use of the Old Testament*, 1991.)

III. Theological statement

In formulating the biblical idea of inspiration, it is desirable that four negative points be made.

1. The idea is not of mechanical dictation, or automatic writing, or any process which involved the suspending of the action of the human writer's mind. Such concepts of inspiration are found in the Talmud, Philo and the Fathers, but not in the Bible. The divine direction and control under which the biblical authors wrote was not a physical or psychological force, and it did not detract from,

but rather heightened, the freedom, spontaneity and creativeness of their writing.

2. The fact that in inspiration God did not obliterate the personality, style, outlook and cultural conditioning of his penmen does not mean that his control of them was imperfect, or that they inevitably distorted the truth they had been given to convey in the process of writing it down. B. B. Warfield gently mocks the notion that when God wanted Paul's letters written 'He was reduced to the necessity of going down to earth and painfully scrutinizing the men He found there, seeking anxiously for the one who, on the whole, promised best for His purpose; and then violently forcing the material He wished expressed through him, against his natural bent, and with as little loss from his recalcitrant characteristics as possible. Of course, nothing of the sort took place. If God wished to give His people a series of letters like Paul's, He prepared a Paul to write them, and the Paul He brought to the task was a Paul who spontaneously would write just such letters' (*The Inspiration and Authority of the Bible*, 1951, p. 155).

3. Inspiredness is not a quality attaching to corruptions which intrude in the course of the transmission of the text, but only to the text as originally produced by the inspired writers. The acknowledgment of biblical inspiration thus makes more urgent the task of meticulous textual criticism, in order to eliminate such corruptions and ascertain what that original text was.

4. The inspiredness of biblical writing is not to be equated with the inspiredness of great literature, not even when (as often) the biblical writing is in fact great literature. The biblical idea of inspiration relates, not to the literary quality of what is written, but to its character as divine revelation in writing.

J.I.P.

INTERPRETATION, BIBLICAL. The purpose of biblical interpretation is to make the meaning and message of the biblical writings plain to their readers. Some principles of interpretation are common to the Bible and other literature, especially other ancient literature; other principles of interpretation are bound up with the unique place of the Bible in the revelation of God and in the life of his people.

I. General interpretation

Each part of the Bible must be interpreted in its context, and that means not only its immediate verbal context but the wider context of time, place

and human situation to which it belongs. Thus there are a number of considerations to be kept in mind if the meaning of the text is to be grasped as fully as is desirable.

a. Language and style

The idioms and constructions of the biblical languages can differ quite widely from those with which we are familiar today, and some acquaintance with these is necessary for a proper interpretation (*LANGUAGE OF THE APOCRYPHA; *LANGUAGE OF THE OT; *LANGUAGE OF THE NT). The literary categories represented in the Bible should also be noted; this will save us, for example, from interpreting poetry according to the canons of prose narration, or vice versa. Most of the literary categories in the Bible are well known from other literature, but biblical prophecy, and still more biblical apocalyptic, have features peculiar to themselves which call for special interpretative procedures.

b. Historical background

The biblical narrative covers the whole span of Near Eastern civilization until AD 100, a period of several millennia within which a succession of sweeping changes took place. It is therefore important to relate the various phases of the biblical revelation to their proper historical context if we are to understand them aright; otherwise we may find ourselves, for example, assessing people's conduct in the Middle Bronze Age by the ethical standards of the Gospels. And we can discern the permanent principles in a biblical document only when we first of all relate that document to the conditions of its own times; we shall then be better able to reapply to our times those features of its teaching which are valid for all time.

c. Geographical setting

We should not underestimate the influence exercised by climate and terrain on a people's outlook and way of life, including its religion. The religious conflicts of the OT are interwoven with the conditions of Palestinian geography. Baal-worship, for example, arose in a land where life depended on rain. To the Canaanites Baal was the storm-god who fertilized the earth, and Baal-worship was a magical ritual calculated to ensure regular rainfall and plentiful harvests. Indeed, to such an extent have geographical conditions entered into the biblical language, literal and figurative, that some acquaintance with these conditions is necessary for an understanding of the language. This is especially true of the OT, but even in the NT it has long been recognized, for instance, that the historical geography of Asia Minor makes an important contribution to the interpretation of Acts and the Epistles.

d. The human situation

Even more important than questions of time, place and language are questions about the everyday life of the people whom we meet in the Bible, their loves and hates, their hopes and fears, their social relations, and so forth. To read the Bible without regard to this living environment is to read it in a vacuum and to put constructions upon it which it was never intended to bear. Thanks largely to archaeological discovery, we are able to reconstruct in fair measure the private and public conditions in which the people of the Bible lived, in age after

INTERPRETATION, BIBLICAL

age; while a sympathetic reading of the text itself enables us in some degree to get under their skins and look at the world through their eyes. It is not unimportant to try to envisage what it must have felt like to be a servant in Abraham's household, an Israelite slave in Egypt, a citizen of Jericho when Joshua's men were marching round the city or a citizen of Jerusalem in face of Sennacherib's threats, a soldier in David's army, a captive maid waiting on Naaman's wife or a builder of the wall under Nehemiah. We may then realize that part of the Bible's perennial appeal is due to its concentration on those features of human life that remain basically the same in all times and places.

II. Special interpretation

Biblical interpretation involves not only the interpretation of the several documents but their interpretation as part of the Bible, having regard to the way in which each part contributes to the purpose of the Bible as a whole. Since the Bible records God's word to man and man's response to God, since it contains 'all things necessary to salvation' and constitutes the church's 'rule of faith and life', we may look for such a unity throughout the volume that each part can be interpreted in the light of the whole. We may look, indeed, for some unifying principle of interpretation.

In traditional Jewish interpretation of the Heb. Scriptures this unifying principle was found in the Law, understood in accordance with the teaching of the great rabbinical schools. The Prophets and the Writings were treated largely as commentaries on the Law. In addition to the surface meaning of the text, the *p'sat*, there was the more extended application, the *d'ras*, derived by the use of various well-defined principles of exegesis, but sometimes appearing far-fetched by the exegetical standards of today.

In the NT and early Christian literature the OT oracles are viewed as a unity, instructing the reader 'for salvation' and equipping him with all that he needs for the service of God (2 Tim. 3:15ff.). The prophets, speaking in the power of the Holy Spirit, bear witness to Christ as the One in whom the promises of God find their fulfilment. The NT writers—whose diversity of personality, style and thought must be taken into account in the interpretation of their works—are agreed on this. In Heb. 1:1f. the 'many and various ways' in which God spoke in earlier days are contrasted with the perfect and final word which he has spoken in his Son; in the Pauline writings God's dealings with the world are traced through successive stages associated with Adam, Abraham, Moses and Christ. Biblical interpretation in the NT has Christ as its unifying principle, but this principle is not applied mechanically but in such a way as to bring out the historical and progressive nature of the biblical revelation. This creative principle of interpretation was certainly derived by the apostolic church from Christ himself.

In post-apostolic times biblical interpretation was influenced by a Gk. concept of inspiration which called for large-scale allegorization of the text. This influence was most apparent in Alexandria, where in the pre-Christian period it is found in the biblical interpretation of Philo. By allegorization, it was believed, the mind of the inspiring Spirit could be ascertained; by allegorization much in the Bible that was intellectually or ethically unacceptable in its literal sense could be made accept-

able. This method, developed by the Alexandrian Fathers and taken over from them by many of the Western Fathers, in fact obscured the mind of the Spirit and obliterated the historical character of biblical revelation. In contrast to the Alexandrians the school of Antioch, while not rejecting allegorization entirely, did more justice to the historical sense of the text.

The distinction between the literal sense of Scripture and the higher or spiritual sense was elaborated in mediaeval times, and three varieties of spiritual sense were distinguished—the allegorical, which deduced doctrine from the narrative; the moral, which drew lessons for life and behaviour; and the anagogical, which derived heavenly meanings from earthly things. Yet the early Middle Ages also saw good work done in the field of literal interpretation, notably by the 12th-century school of St Victor in France.

The Reformers laid fresh emphasis on the literal sense of Scripture and on the grammatico-historical method of exegesis as the way to establish its literal sense. Grammatico-historical exegesis is fundamental, but when the foundation has been laid by its means theological exegesis and practical application are also called for. Moreover, the use of the Bible in the life of the people of God throughout the centuries continually brings fresh aspects of its meaning to light, although these fresh aspects have general validity only as they are rooted in the true and original sense. Thus, we may understand the Epistle to the Romans better because of the part it played in the lives of Augustine, Luther and Wesley; but the part it played in their lives owes its significance to the fact that these men had a rare grasp of what Paul really meant when he wrote the Epistle.

Typological interpretation, revived in our own day, must be used (if at all) with caution and restraint. Its most acceptable form is that which discerns in the biblical recital of God's acts of mercy and judgment a recurring rhythm, by virtue of which earlier stages in the recital can be viewed as foreshadowings and illustrations of later stages (*cf.* Paul's use of the wilderness experiences of Israel in 1 Cor. 10:1ff.).

Christians have an abiding standard and pattern in their Lord's use of the OT, and part of the Holy Spirit's present work for them is to open the Scriptures as the risen Christ opened them for two disciples on the Emmaus road (Lk. 24:25ff.).

IRA (Heb. 'irā'). 1. A Jairite, described as 'David's priest' (2 Sa. 20:26), a difficult description to understand, as he was not of the tribe of Levi. However, Pesh. reads 'of Jattir', which was a city of Levi. Alternatively, 'priest' here may mean a chief official (*cf.* 2 Sa. 8:18, av; 1 Ch. 18:17, av).

2. An Ithrite, one of David's mighty men (2 Sa. 23:38). May be same as I if Pesh. reading is correct.

3. Another of David's heroes, son of Ikkesh the Tekoite (2 Sa. 23:26). M.A.M.

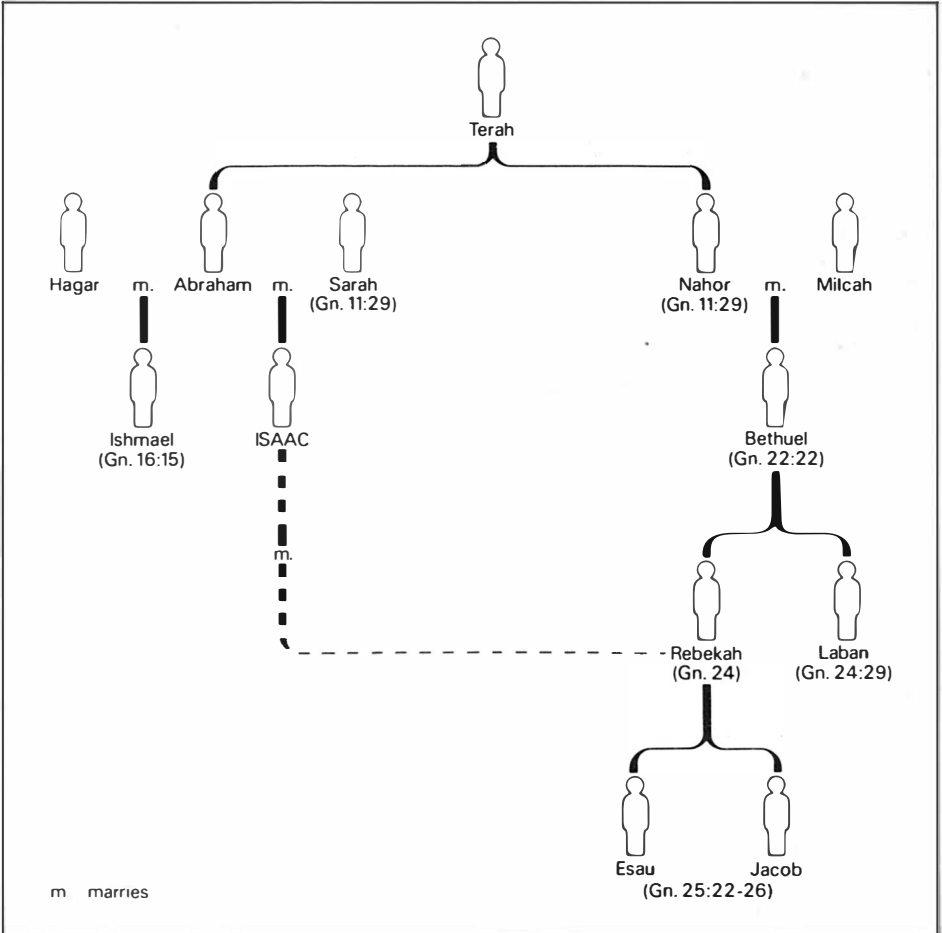

ISAAC (Heb. *yīshāq*, 'he laughs' or 'laughter'). At the announcement of Isaac's birth Abraham laughed (Gn. 17:17), and later Sarah herself laughed at the thought that she who was so old should bear a son (Gn. 18:12-15). At Isaac's birth, when Abraham was 100 years old, Sarah declares that God has made her to laugh (Gn. 21:6). On the day of Isaac's weaning Ishmael laughed (Gn. 21:9). It is difficult to discover a precise subject for the verb, and possibly it is best to take the form impersonally. Some scholars render 'God laughs', but there is little warrant for this interpretation.

The two great features of Isaac's life centre upon his birth and marriage, and the reason for this is that he was the seed through whom the line of promise was to be continued. Abraham had been sorely tested with respect to the promise of a seed, and now, at an advanced age, when he was as good as dead, that seed came. Thus, it is seen that God is carrying out his purposes in fulfilment of the promises made to Abraham (Gn. 12:1-3), even though those promises seem to man to be incapable of fulfilment.

At the feast of Isaac's weaning the sight of Ish-

mael 'playing with her son Isaac' aroused Sarah's resentment. Hagar and her son Ishmael were therefore driven from the household (Gn. 21). God then put Abraham to the test, commanding him to slay his son Isaac. Abraham obeyed God and the Lord intervened, providing a ram for the sacrifice. The promise is then renewed, that Abraham shall have much seed (Gn. 22).

The second feature of Isaac's life which is of significance is his marriage. That Isaac should be born was a miracle, and soon afterwards it seemed that he must die. How, then, could he be the promised seed? He lives, however, and attention is centred upon his marriage, for it is to be through him that the line of promise is to be continued. Abraham is concerned that the promised seed be continued and sends his eldest servant to take a wife for Isaac from his own country, Harran. Rebekah, the daughter of Bethuel, Abraham's nephew, is indicated as the intended bride and willingly leaves her home to accompany the servant. Isaac receives her and brings her into his mother's tent. Isaac and Rebekah are married, with love developing as a result of Isaac's considerate and courteous actions (Gn. 24).

The family of Isaac.

ISAAC

For 20 years Rebekah was barren, and so it is again seen that the promised seed is not to come merely through the natural means of ordinary fatherhood, but through God's supernatural creative power. Rebekah's barrenness causes Isaac to entreat the Lord, and the announcement is made to Rebekah that two children are struggling in her womb (Gn. 25:22–26). These two children, representing two nations, will follow mutually hostile courses. Isaac himself is to remain a sojourner in the land and, instead of going to Egypt in time of famine, remains at Gerar. At the sign of crisis he, like Abraham, seeks to protect his wife by introducing her as his sister. After quarrels with the herdsmen at Gerar he goes to Beersheba and finally makes an agreement with Abimelech. Mutual antagonism appears between Isaac and Rebekah, occasioned by Jacob's actions. Being deceived, Isaac pronounces the paternal blessing upon Jacob and utters a devout prophetic wish upon Esau. Isaac died at the age of 180 years, and was buried by his sons, Esau and Jacob.

In the NT his birth as the son of promise is mentioned in Rom. 4:16–21; 9:7–9; the separation between him and Ishmael is allegorized in Gal. 4:22–31; his being offered up by his father is recalled in Heb. 11:17–19; Jas. 2:21–23 (for its further influence, as in Rom. 8:32a, cf. H. J. Schoeps, *Paul*, 1961, pp. 141ff.); his being the father of Esau and Jacob is referred to in Rom. 9:10–13; his blessing of these two sons is treated in Heb. 11:20 as evidence of his faith.

E.J.Y.

ISAIAH (Heb. *y'sā'yāhū*, 'Yahweh is salvation'), son of Amoz (Heb. *āmōs*, to be distinguished from the prophet Amos, Heb. *āmōs*), lived in Jerusalem (Is. 7:1–3; 37:2). According to Jewish tradition, he was of royal blood; it has sometimes been inferred from the narratives and oracles of his book that he was, at any rate, of noble descent; but there is no certainty about this. As appears from the superscription to the book (1:1), he prophesied under Uzziah (791/790–740/739 BC), Jotham (740/739–732/731 BC), Ahaz (735–716/715 BC) and Hezekiah (716/715–687/686 BC). (The regnal dates are those assigned by E. R. Thiele.) He was called to be a prophet 'in the year that king Uzziah died' (6:1), i.e. in 740/739 BC; his last appearance which can be dated with certainty was at the time of Sennacherib's campaign of 701 BC (or c. 688 BC, if we assume a second campaign of Sennacherib against Jerusalem). Tradition has it that he was sawn asunder in Manasseh's reign (see the late *Martyrdom of Isaiah*, ch. 5); some see a reference to this in Heb. 11:37, but the reference is dubious and the tradition appears to have no sound historical basis. It is quite possible that Isaiah survived into Manasseh's reign; the absence of Manasseh's name from 1:1 could be due to the fact that Isaiah played no public part after Manasseh became king.

Isaiah was married; his wife is called 'the prophetess' (8:3), perhaps because she too prophesied. Two sons are mentioned, both of whom bear symbolic names (8:18)—Shear-jashub, 'Remnant will return' (7:3) and Maher-shalal-hash-baz, 'Hasten booty, speed spoil' (8:1–4).

Isaiah and Micah were contemporaries (cf. 1:1 with Mi. 1:1). Isaiah's activity was preceded by that of Amos and Hosea (Am. 1:1; Ho. 1:1). Amos and Hosea prophesied mainly against the N tribes; Isaiah and Micah concentrated their

prophecies mainly on Judah and Jerusalem (Is. 1:1).

In the first half of the 8th century both Israel, under Jeroboam II (c. 782–753 BC), and Judah, under Uzziah, enjoyed a time of great prosperity. This was due in large measure to the weakness of the kingdom of Aram and to Assyria's non-intervention in the W for considerable periods. Uzziah's reign may be described as the most prosperous time that Judah had known since the disruption of the Monarchy after Solomon's death. Under Uzziah and Jotham prosperity and luxury abounded in Judah; we have this state of affairs reflected in Is. 2–4. But with the accession to power of Tiglath-pileser III (745–727 BC), Assyria began once more to impose her yoke on the W lands. Pekah of Israel and Rezin of Damascus formed an anti-Assyrian coalition and tried to compel Ahaz of Judah to join them. When Ahaz refused, they threatened to depose him and place a puppet of their own on his throne (734 BC). Isaiah's action at this time is recorded in ch. 7. Ahaz committed the sinful folly of asking the Assyrian king for aid; the result was that Judah became a satellite state of Assyria. In 732 BC the Assyrians captured Damascus and annexed the territory of Israel N of the Plain of Jezreel, leaving Hoshea to rule the remainder of the N kingdom as their vassal. When he revolted, Shalmaneser V (727–722 BC) besieged Samaria, and his successor Sargon II (722–705 BC) captured it in his accession year. Even after that there were various independence movements directed against Assyrian domination. On these occasions Isaiah, who had withdrawn for a time into a smaller circle after his fruitless protest against Ahaz's foreign policy in 734 BC (8:16ff.), raised his voice again to warn Judah against participating in such movements, and particularly against relying on Egyptian aid. According to 14:28 the Philistines in the year of the death of Ahaz sent a delegation to Jerusalem to arrange an anti-Assyrian alliance; on this occasion again Isaiah uttered a warning note (14:29–32).

Under Hezekiah there were other movements of this kind, notably the revolt of Ashdod, which was crushed in 711 BC, when the Assyrians besieged and captured Ashdod (cf. Is. 20:1). Judah and Egypt were implicated in this revolt. It is quite possible that Is. 18 should be dated about this time; an Ethiopian dynasty was ruling in Egypt then. After Sargon's death there were widespread risings against his successor Sennacherib (705–681 BC). Judah was one of the states which revolted, and this resulted in Sennacherib's expedition of 701 BC, during which he overran Judah and besieged Jerusalem. Various oracles in chs. 28–31 may date from the years 705–701 BC, including the warnings against leaning on Egypt in 30:1–7; 31:1–3. Chs. 36–37 record Sennacherib's threat to Jerusalem, Jerusalem's liberation and Isaiah's activity throughout this time of danger. Chs. 38–39, which probably relate to the same period, tell of Hezekiah's sickness and recovery, and the mission of *Merodach-baladan.

N.H.R.

ISAIAH, BOOK OF.

I. Outline of contents

a. *Prophecies relating to Isaiah's own time*, 1:1–35:10

(i) *Introduction* (1:1–31). Condemnation of a merely external form of worship, etc. Date uncertain.

(ii) *Prophecies from Isaiah's earliest period* (for the greater part) (2:1–5:30). Prophecy of the coming kingdom of peace (2:2–5; cf. Mi. 4:1ff.). The Day of the Lord which is to bring down everyone who is proud and exalted (2:6–22). The haughty women of Jerusalem ('Isaiah's fashion-journal') (3:16–4:1). The song of the vineyard (5:1–7).

(iii) *Isaiah's inaugural vision* (6:1–13).

(iv) *The present world-empire and the coming kingdom of God* (7:1–12:6). Chs. 7:1–9:7 originate chiefly from the time of the Syro-Ephraimite war. Rebuke of Ahaz and prophecy of Immanuel (7:1–25). Isaiah's temporary withdrawal from the public eye (8:11–22). The birth of the Messiah (9:1–7). The hand stretched out to smite Ephraim (probably one of Isaiah's earliest oracles) (9:8–10:4). Assyria brought low by the Holy One of Israel (10:5–34). The Messiah and the kingdom of God (11:1–12:6); especially here a sharp contrast is drawn between the violent world-empire and the peacefulness of the coming kingdom. Ch. 12 contains a song of thanksgiving; it forms a conclusion to this section.

(v) *Mainly prophecies regarding foreign nations* (13:1–23:18). Babylon (13:1–14:23) (incorporating the impressive taunt-song in 14:4–23). Assyria (14:24–27). The Philistines (14:28–32). Moab (15:1–16:14). Aram and Ephraim (17:1–14; probably not long before ch. 7). Ethiopia and Egypt (18:1–20:6; 20, and probably 18, are to be dated c. 715 bc; the date of 19 is uncertain). Babylon (21:1–10). Edom ('Watchman, what of the night?') (21:11f.). Arabia (21:13–17). Jerusalem (22:1–14). Shebna and Eliakim (22:15–25). Phoenicia (23:1–18).

(vi) *The consummation: the 'Isaianic apocalypse'* (24:1–27:13). See below, under III.a (iv).

(vii) *Zion's sin, oppression and deliverance; Assyria's downfall; Egypt's vain help* (28:1–33:24). Several of the prophecies in these chapters are to be dated between 705 and 701 bc. The parable of the ploughman (28:23–29). The Messianic kingdom (32:1–8).

(viii) *A twofold future* (34:1–35:10). The judgment of Edom and the world (34:1–17). Salvation for 'the ransomed of the Lord' (35:1–10).

b. Historical chapters, 36:1–39:8

Sennacherib's invasion (36:1–37:38). Hezekiah's sickness and recovery (38:1–22). Mission of Merodach-baladan (39:1–8).

c. Prophecies which presuppose the Babylonian Exile, 40:1–55:13

These chs. foretell Israel's liberation from exile and the restoration of Zion, and in doing so they proclaim the majesty of Yahweh. They may be divided as follows:

(i) *Introduction* (40:1–31). The substance of the following chs. is presented; it consists of four parts: vv. 1–2, vv. 3–5, vv. 6–11, vv. 12–31.

(ii) *Prophecies in which those concerning Cyrus are conspicuous* (41:1–48:22). He is mentioned by name in 44:28; 45:1. Cf. 41:1–16 (Cyrus' activity will make the nations tremble, but there is no need for Israel to fear), 41:21–29 (Cyrus' activity will cause Zion to rejoice), 43:9–15 (Cyrus overthrows Babylon), 44:24–45:13 (Cyrus' victory leads to the rebuilding of Zion), 46:8–13 (amidst prophecies of Babylon's downfall), 48:12–16. Cf. also the prophecies of Babylon's downfall, especially 46:1–

47:15. There is a marked contrast drawn between the 'daughter of Babylon' (ch. 47) and the 'daughter of Zion' (49:14ff., etc.). Throughout these chs. Israel is comforted in her distress, her deliverance from Babylon is promised (cf. 41:8–20; 42:8–43:8; 43:16–44:5; 48, *passim*), Yahweh's majesty is proclaimed, and the contrast between him and the idols is emphasized (cf. 42:8–17; 44:6–20; 45:9–25, *passim*). In 42:1–7, the first of the 'Servant Songs', the Servant of the Lord is introduced.

(iii) *Chapters in which the restoration of Zion is prominent* (49:1–54:17). Cf. 49:14–50:3; 51:17–52:12; 54. We hear no more of the conquests of Cyrus or the ruin of Babylon; there is consequently less emphasis on the contrast between Yahweh and the idols. In 49:1–9a; 50:4–11 and 52:13–53:12, the second, third and fourth 'Servant Songs', there are further prophecies concerning the Servant of the Lord, his mission to Israel and the nations, his obedience and suffering, his death and vindication.

(iv) *Exhortation to accept these promises in faith* (55:1–13).

d. Various prophecies, 56:1–66:24

It is not easy to summarize the contents of these chs. The prophecies which they contain are diverse in nature and may even refer to different times. In some places Israel appears to be in exile (57:14; 58:12; 60:10ff.; 63:18; 64:10f.), in others the nation seems settled in Canaan (e.g. 57:3–7). Many of the ideas which are expressed in these chs. have already appeared in the preceding sections of the book.

(i) *Law-abiding proselytes and even eunuchs have a share in God's salvation* (56:1–8; see especially v. 7).

(ii) *Leaders and people alike are rebuked for their sins, particularly for idolatry* (56:9–57:13a). This section may refer to the reign of Manasseh.

(iii) *Comfort for the contrite* (57:13b–21; see especially v. 15); an affinity can be traced here with chs. 40–55.

(iv) *False and true religion* (58:1–14). Special mention is made of fasting and sabbath-observance.

(v) *Deliverance is conditional upon repentance* (59:1–21). Rebuke of sins (vv. 1–8); complaint and confession of sin (vv. 9–15a); judgment and deliverance (vv. 15b–20); Yahweh's covenant (v. 21).

(vi) *Zion's deliverance* (60:1–62:12; note again the close affinity with chs. 40–55). The glorious prospect of salvation for Zion involves blessing for the nations as well (60:1–3). The appearance of the messenger of joyful news in 61:1ff. (cf. 40:9; 41:27; 52:7) becomes the programme of Jesus' ministry in Lk. 4:17ff.

(vii) *Yahweh's vengeance against Edom* (63:1–6).

(viii) *Penitence and supplication*. God who wrought such wonderful deliverances for his people in the past is entreated to intervene on their behalf again (63:7–64:12).

(ix) *Rebels against God and obedient servants* (65:1–25). Idolatry rebuked (vv. 3ff., 11); new heavens and a new earth promised (v. 17).

(x) *Ch. 66:1–24*. Yahweh's repudiation of forbidden forms of sacrificial worship (vv. 1–4), Zion glorified and sinners punished (vv. 5–24).

II. Origin, construction, authorship

a. Isaiah's literary activity

We are given but little information about Isaiah's own literary activity. In 8:1 only a short inscription

ISAIAH, BOOK OF

is involved ('Maher-shalal-hash-baz'); 8:16 should be understood in a figurative sense; 30:8 may relate to the writing down of the brief utterance of v. 7, 'Rahab who sits still', although it is possible that a more extensive passage was to be recorded. The reference to 'the book of the Lord' in 34:16 implies that the preceding prophecy of ch. 34 was written down. The 'I' style in chs. 6 and 8 tells in favour of the assumption that these chs. were written by Isaiah himself; it is noteworthy, however, that ch. 7 speaks of him in the third person (*cf.* ch. 20).

It is very likely, indeed, that more prophecies were written by Isaiah himself than the above-mentioned passages indicate. In favour of this conclusion the high standard and unity of language and style may be taken into consideration. But if Isaiah himself had had a substantial part in the composition of his book, its structure would presumably have been more straightforward than is now the case.

Chs. 36–39 are essentially parallel to 2 Ki. 18:13–20:19. In this connection it should be borne in mind that, according to 2 Ch. 26:22; 32:32, Isaiah also figured as a historical writer. The question whether Isaiah was the author of chs. 36–39 cannot be answered with certainty.

b. Construction

The book of Isaiah is decidedly not an arbitrary string of disconnected prophecies. There is a certain chronological arrangement. Chs. 2–5 consist to a large extent of prophecies from Isaiah's earliest activity. 7:1–9:7 originate mostly from the period of the Syro-Ephraimite war (734 bc). Chs. 18–20 take us to the period 715–711 bc, and various prophecies of chs. 28–37 belong to the years between 705 and 701 bc. The greater part of chs. 40–66 consists of prophecies uttered from an exilic, or perhaps even post-exilic, standpoint.

There is also a certain arrangement according to subject-matter (see I, Outline of contents). In this regard an outstanding feature is the group of oracles concerning foreign nations in chs. 13–23; it should also be noted here that most of the prophecies in these chapters are introduced by the words 'The oracle concerning...'. Chs. 40–55 also, to a considerable degree, form a unity. One further point: in 39:6ff. there is clearly a transition from chs. 1–39 to chs. 40–66.

On the other hand, chronological order has certainly not been followed throughout. For example, 9:8–10:4 contains what is perhaps one of Isaiah's oldest prophecies; ch. 17 may date from the period shortly before 734 bc, *i.e.* close in time to ch. 7; 28:1–6 contains an early prophecy. It should also be noted that, while prophecies from an exilic standpoint occur chiefly in chs. 40ff., ch. 35 also presupposes the period of the Exile; and we may even be forced to the conclusion that chs. 56–66 set alongside one another prophecies whose respective standpoints are pre-exilic (*e.g.* 56:9–57:13), exilic (*e.g.* chs. 60–62) and post-exilic (*e.g.* ch. 58).

Again, it is equally plain that arrangement according to subject-matter has not been carried through with entire consistency. As we have seen, chs. 13–23 consist mainly of prophecies about foreign nations, but ch. 22 forms an exception, and elsewhere there are other prophecies against foreign nations (for example, the oracle against Assyria in 10:5–34 is similar to that in 14:24–27).

It should be noted, too, that there are supercriptions in 1:1; 2:1 and 13:1; and further, the ac-

count of the vision in which Isaiah received his call to be a prophet does not come until ch. 6.

The situation is involved—more involved, indeed, than might be gathered from the considerations which have been briefly outlined above. It may be taken as certain that our book of Isaiah has been constructed on the basis of shorter collections. But in the end we can only say that the history of its composition can no longer be reconstructed. Scholars have made various attempts to trace the stages of its composition, but have not reached convincing conclusions. Thus, some have supposed that chs. 1–12, 13–23, 24–27, 28–35 originally formed separate collections. Admittedly these divisions, lying before us in their present arrangement, do form more or less self-contained units. The song of ch. 12 or the promise of salvation in ch. 35 would form an appropriate conclusion to a collection. But we should reckon with the possibility that this is due to the work of the latest redactor.

As for chs. 40–55, they probably contain a collection of originally independent prophecies: it is hardly to be assumed that they formed a unity from the beginning. On the other hand, in these chs. the same subjects recur time and again. Their arrangement is by no means completely arbitrary; *i.e.* a certain chronological order can be observed (see I, Outline of contents). Many critics are of the opinion that these chs., in essence at least, come from one author.

c. Authorship

Many scholars nowadays deny great portions of the book to Isaiah—not only in the sense that he did not write them down, but in the sense that their subject-matter does not come from him at all. Even chs. 1–35 are believed by some to contain much non-Isaianic material. Some scholars go farther than others, but there is a wide measure of agreement that Isaiah cannot be credited with chs. 13:1–14:23; 21; 24–27; 34–35. In addition, critical scholars are practically unanimous in the view that chs. 40–66 do not come from Isaiah.

Chs. 40–55 are believed to be mainly the work of a prophet to whom the name Deutero-Isaiah ('Second Isaiah') has been given. It is held that his prophecies must be dated between the first victories of the Persian king, Cyrus (*c.* 550 bc), and Cyrus' conquest of Babylon, which was followed by his decree permitting the Jewish exiles to return to their own country (538 bc). Some defend the view that part of Deutero-Isaiah's prophecies should be assigned to the period after 538 bc. Babylon is mostly envisaged as this prophet's field of activity; others think of Palestine, Egypt and other lands.

As for chs. 56–66, some scholars credit Deutero-Isaiah with them too, while others ascribe them to a separate author, called Trito-Isaiah ('Third Isaiah'), who is dated either *c.* 450 bc, in the time of Malachi (*e.g.* by B. Duhm), or *c.* 520 bc, in the time of Haggai and Zechariah (*e.g.* by E. Sellin and K. Elliger). Others, again, take the view that the prophecies of chs. 56–66 do not all come from the same time; it has even been held that some come from the 8th century bc, some from the 2nd.

The following considerations are relevant to the Deutero-Isaiah question:

1. The unanimous testimony of tradition credits Isaiah with the authorship of the whole book. Chs. 1–39 and 40–66 have come down to us as a unity;

ch. 39:6–8 may certainly be regarded as a planned transition from the first to the second part of the book. From Ecclus. 48:24f. it is plain that Jesus ben Sira (c. 200 BC) considered Isaiah to be the author of chs. 40–66 as well as of chs. 1–39. The Qumran MSS of Isaiah indicate that, at the time when they were copied (2nd or 1st century BC), the book was regarded as a unity. It is true that the testimony of extra-biblical tradition is not decisive; and in the judgment of the present author it cannot be said that the OT itself points unequivocally to Isaiah as author of the entire book. Even so, two things should be borne in mind.

First, Deutero-Isaiah is taken to be one of the greatest prophets, if not *the* greatest prophet, of Israel; it would be surprising indeed if every trace of this great prophet had been so thoroughly effaced from tradition that his very name is unknown to us. Secondly, the evidence of the NT naturally takes a special place in the testimony of tradition. The following passages from chs. 40–66 are introduced in the NT by some such words as 'that which was spoken by the prophet Isaiah': 40:3 (in Mt. 3:3); 42:1–4 (in Mt. 12:17–21); 53:1 (in Jn. 12:38 and Rom. 10:16); 53:4 (in Mt. 8:17); 65:1f. (in Rom. 10:20f.). To this it may be added that those who deny chs. 40ff. to Isaiah usually deny him ch. 13 on similar grounds; but the superscription of this chapter ascribes it to 'Isaiah the son of Amoz'.

2. The weightiest argument for ascribing chs. 40ff. to Deutero-Isaiah is no doubt the fact that these chapters have as their background the period of the Babylonian Exile—more precisely, the closing years of the Exile, from 550 BC onwards. At the very outset it is stated that Israel 'has received double for all her sins' (40:2). Babylon is the oppressing power (46–47), not Assyria, as we should expect in Isaiah's time. The Persian king, Cyrus (559–529 BC), is mentioned by name. While his conquest of Babylon is predicted in 43:14; 48:14, *etc.*, it is suggested by 41:1–7, 25, *etc.*, that he has already achieved his first successes.

It may be said in reply that the Spirit of prophecy can reveal the future to the prophets; and it is true that this fact has not always been taken sufficiently into account by adherents of the Deutero-Isaiah theory. But even those who are prepared to make full allowance for it find themselves faced with difficulties here. It is certainly inconceivable that Isaiah stood in the Temple court, comforting his people in view of a calamity which was not to come upon them until more than a century had elapsed. We may indeed suppose that Isaiah communicated these prophecies to the circle of his disciples (*cf.* 8:16)—or rather that he did not speak them but only committed them to writing. Even so, the question arises: if we credit Isaiah with these chs., must we not assume that his inspiration took a very 'mechanical' form, bearing no relation to the concepts existing in the prophet's conscious mind? The following suggestion may help in some degree to meet these objections.

Isaiah wrote down these prophecies in Manasseh's reign. He found it impossible to appear in public in those years (*cf.* 2 Ki. 21:16). Iniquity had reached such a pitch that Isaiah recognized that the divine judgment was bound to come (*cf.* 2 Ki. 21:10–15); indeed, before his mind's eye it had already come. Then the Spirit of prophecy showed him that this judgment in its turn would come to an end (see under III. *a* (ii), 'Judgment and salvation'). It can be said further that the judgment

which Isaiah saw as already fulfilled before his mind's eye was 'delayed' by Manasseh's repentance (2 Ch. 33:12ff.) and Josiah's reformation (2 Ki. 22–23). It is, besides, important to observe that, according to Is. 39:5–7, Isaiah knew that a deportation to Babylon would take place.

And while it is true that these prophecies presuppose as their background the closing phase of the Babylonian Exile, and Cyrus is represented as having already entered upon the stage of history, yet in other respects the author expresses himself much less concretely on conditions during the Exile than might have been expected from someone who lived in the midst of it.

3. Attention has been drawn to the differences between chs. 1–39 and 40–66 in matters of language, style and conceptions. It may indeed be said that in 1–39 the language is suggestive and full of illustrations, while in 40–66 it is often more verbose; that in 40–66 the cosmological aspect of the Kingship of God is more prominent than in 1–39; that while 1–39 speak of the Messiah-King, this figure is displaced in 40–66 by the suffering Servant of Yahweh. Yet these divergences do not make it necessary to abandon belief in the unity of the book. For over against these divergences there are striking points of similarity. As examples of these it may be pointed out, first, that as chs. 1–39 do not describe only Messiah's glory (*cf.* 11:1 with 53:2), so chs. 40–66 do not describe only the Servant's suffering (*cf.* 42:1–7; 53:11f.); and secondly, that the divine appellation 'the Holy One of Israel' occurs 12 times in chs. 1–39, 13 times in chs. 40–66 and only five times in the rest of the OT. *Cf.* further J. H. Eaton, *VT* 9, 1959, pp. 138–157.

The preceding paragraphs are intended to give some idea of the lines along which the discussion of these problems proceeds and of the arguments which are adduced on either side. The conclusion is that it is both unnecessary and open to objection to deny to Isaiah any share in the composition of chs. 40–66. On the other hand, even those who desire to submit unconditionally to the testimony of Scripture may come to the conclusion that the book of Isaiah contains some parts which are not of Isaianic origin. This is perhaps the situation already in chs. 1–39. And especially with regard to chs. 40–66 there are reasons for accepting this suggestion. In the opinion of the present writer it is acceptable to hold that chs. 40–66 contain an Isaianic core, upon which the prophet's disciples (men who felt themselves closely bound to him) later worked in the spirit of the original author. It is, however, impossible for us to assess how much belongs to the Isaianic core and how much to the later elaborations.

Two final remarks will close this section.

1. There is a prevalent trend of thought nowadays which lays great emphasis on the significance of oral tradition. According to this trend of thought, a prophet's utterances were handed down orally by the circle of his disciples; in this process they were repeatedly adapted to the changing circumstances of the time. If there is an element of truth in this view it should certainly be taken into account in any attempt to explain the origin of Is. 40–66. It might lead to the conclusion that chs. 40–66 contain an Isaianic core but that the extent of this core can no longer be ascertained.

2. It should be remembered that those who deny to Isaiah the whole of chs. 40–66 frequently assume that the author or authors of these chs.

ISAIAH, BOOK OF

belonged to the school of Isaiah. It is admitted that, alongside all the arguments for diversity of authorship, there is a close affinity between chs. 1–39 and 40–66. See, e.g., what was said above about the appellation 'the Holy One of Israel'.

III. The message of the book

From ancient times Isaiah has been considered the greatest of OT prophets. He has been called 'the eagle among the prophets', 'the Evangelist of the Old Covenant', and the like. His book is not only lofty in style and conception, but rich in spiritual meaning.

a. Chs. 1–39

In endeavouring to outline the message of these chapters we may start with the divine appellation 'the Holy One of Israel' (which, as we have seen, is characteristic of Isaiah), and with the name of one of his sons, Shear-jashub, 'Remnant will return'.

That God was the Holy One was inscribed indelibly on Isaiah's heart as a result of his inaugural vision (6:3). As Amos has been called the prophet of righteousness and Hosea the prophet of loving-kindness, so Isaiah has been called the prophet of holiness (*cf.* 1:4; 5:16, 24; 8:14; 10:17, 20; 12:6; 17:7; 29:23; 30:11f.; 31:1; 37:23, *etc.*). God is the Holy One: that means he is so highly exalted above his creatures as to be totally different from them, not only in his moral perfection (*cf.* 6:5) but also in his power, his wrath, his love, his faithfulness and all his virtues (*cf.* also 29:16; 31:3). Yahweh's holiness is the very essence of his divine being, which causes men to tremble before him as they worship him.

This holy God has associated himself in a special way with Israel (1:2; 5:1ff., *etc.*), and in a pre-eminent degree with the house of David (8:13; 11:1, *etc.*). He dwells in the midst of Israel, on Mt Zion (8:18; 11:9, *etc.*).

The fact that God is 'the Holy One of Israel' involves an abiding tension in his relation to his people. On the one hand, he fulminates in a violent way against Israel's sin; on the other hand, he does not break his covenant with Israel. Hence the assurance: 'Remnant will return'. This means, first: judgment will come, only a remnant will be left. But it also means: at least a remnant will be left, a remnant will indeed return (*i.e.* to its homeland). In his wrath God remembers mercy. It is also possible to translate: 'Remnant returns to God, changes its mind'; its return and deliverance come along the path of conversion. This remnant-doctrine figures prominently in Isaiah's preaching, from the very first (6:13). And he may have seen the beginnings of the remnant in the circle of his disciples, among whom he withdrew himself from public life for a considerable time at an early stage in his ministry (8:16–18).

Some of the implications of the outlined teaching of Isaiah may now be elaborated.

(i) *God's requirements and Israel's sin.* The Holy One of Israel requires his people to sanctify him (8:13) by putting their trust in him alone, by keeping his commandments, by paying heed to the words of his prophets. Because Yahweh has entered into a covenant with Israel, Israel's sin is essentially apostasy (1:2–4; 30:1–9, *etc.*). Instead of preserving due humility in the presence of the Holy One of Israel, they are haughty and frivolous (2:6ff.; 3:8; 5:15f., 19ff.; 22:1ff.; 28:15; 29:14ff.; 32:9ff., *etc.*). Isaiah repeatedly insists that sin, in

whatever sphere it may be committed, is first and foremost sin against God.

Isaiah denounces sinful worship (although this is not so prominent a feature of his preaching as of Hosea's); he inveighs against a ritual which confines itself to external matters (1:10ff.; 29:13), against the offering of sacrifices on the high places (1:29), against heathen worship (2:6–8; 17:7f.; 30:2; 31:7, *etc.*; see also 8:19).

Especially during the early years of his ministry he also spoke out sternly against sins in the social realm—oppression of the defenceless, immoderate luxury, drunkenness, *etc.* (*cf.*, e.g., 1:15–17, 21–23; 3:14f., 16ff.; 5:7–8, 11ff., 14, 22f.; 10:1f.; 28:7ff.; 32:9ff.). In this connection we may think of a possible influence of Amos.

In the political domain, Isaiah's governing demand is trust in the Holy One of Israel (7:9ff.; 8:12f.; 10:20; 17:7; 28:16; 30:15, *etc.*). What did this involve in practical politics? Isaiah never advocated defencelessness, but he uttered repeated warnings against joining in coalitions, especially with Egypt (14:28–32; 18; 20; 30:1–7; 31:1–3). This abstention from active participation in world-politics would, in the circumstances, also have been a requirement of statecraft (*cf.*, e.g., 36:5f.), but Isaiah's warnings should not be attributed to keen political vision, but to divine revelation (see also 30:1). Isaiah's warnings may sometimes have been heeded; we do not hear of any open conflict between Assyria and Judah during the years 714–711 BC. But often people would not listen to him. Ahaz's attitude, for example, is made quite clear in ch. 7 (*cf.* 2 Ki. 16:7ff.); and as for the time of Hezekiah, see 29:15; 30:1ff.; 31:1ff.; 36:4ff. (*cf.* 2 Ki. 18:7).

(ii) *Judgment and salvation.* It is often objected that the preaching of judgment and salvation in Is. 1–39 contains inherent contradictions. From this it is concluded that various parts of these chapters do not come from Isaiah, or else that Isaiah's views underwent a change; for example, a distinction is drawn between a pro- and an anti-Assyrian period in his ministry. But it has already been said that an inevitable tension is involved in the title 'the Holy One of Israel'. As the situation requires, this may mean that he protects Israel and Jerusalem, the Temple city, the royal city; it may mean that he enters into judgment expressly against Israel and Jerusalem. Therefore there is no need for surprise if Isaiah, in his preaching of judgment and salvation, does not always lay the emphasis in the same place (*cf.* 28:23–29; it is rightly said that this parable has a central place in the preaching of Isaiah). The persistent emphasis in his preaching is what was revealed to him at the outset, in his inaugural vision (6:11–13). A thoroughgoing judgment is to come upon Judah and upon Jerusalem as well (3:1–4:1; 5:1–7, 8–24; 32:9–14, *etc.*); in this connection the Assyrians are mentioned (5:26–30; 7:17ff.; 8:5–8, *etc.*); but through and beyond this judgment, which is consequently sometimes portrayed as a purifying judgment (1:24ff.; 4:2ff.), a remnant is saved, and for this remnant a triumphant future breaks (4:2ff.; 10:20ff., *etc.*). But this is not all that should be mentioned here. This thoroughgoing judgment on Jerusalem does not fall immediately. Isaiah is allowed to prophesy that Pekah and Rezin's attack on Jerusalem will fail (7:1–8:4), that the Assyrians will overflow Judah and cause great distress to Jerusalem, but will in their turn be struck by divine judgment and not be permitted to

capture Jerusalem (8:9f.; 10:5–34; 14:24–32; 18; 29:1–8; 31:4ff.; 37:6f., 21–35). One statement does not contradict another. (It is to be noted too that before the reassuring prophecies of 37:6f., 21–35, Sennacherib has dealt treacherously, 30:1ff.; cf. 2 Ki. 18:14ff., and blasphemed the Holy One of Israel.) That Isaiah's prophecies on this subject are not inherently contradictory is also shown by their fulfilment. The Assyrians did cause much distress to Jerusalem in 701 BC, but were not able to capture it; later on a thoroughgoing judgment did fall on Jerusalem, at the hand of the Babylonians. Isaiah nowhere specifies the Assyrians as the executors of the thoroughgoing judgment of Jerusalem; in a later time he foretold that the Babylonians would come (39:5ff.). Finally, some prophecies, like those of 5:14ff., have their complete fulfilment only in the eschatological judgment (see below, under subsection (iv)).

The prophet's summons to repentance should also be mentioned in this connection. In a sense his announcement of judgment and salvation is conditional; if they harden their hearts, judgment will follow; if they repent, forgiveness and salvation will be theirs (1:16ff.; 30:15ff., etc.). But this announcement is conditional only in a sense; for as early as Isaiah's inaugural vision it was revealed to him that Yahweh was determined to execute judgment on Judah; the broad masses of the people were sunk so deep in their sins that Isaiah's preaching would have no effect save to harden their hearts still more (6:9ff.). Equally, there is no uncertainty about the coming salvation. And, just as Isaiah's preaching, by hardening his hearers' hearts, contributed to Israel's ripening for judgment, so too it contributed to the postponement of the judgment, the rescue of Jerusalem and the formation of the remnant on which Yahweh purposed to bestow his salvation.

The salvation proclaimed by Isaiah includes the deliverance of Jerusalem from great distress, but this deliverance is not the full salvation. The promised salvation in its fullest sense is based on the remission of sins (cf. 1:18; 6:5f., etc.), and it consists further in a renewal of the heart (cf., e.g., 32:15ff.), a life lived in accordance with God's commandments, a life crowned with prosperity and glory. In this salvation Zion would take a central place, but the other nations would participate in it too (cf. 1:19, 26f.; 2:2–5; 4:2–6; 33:13ff.). Special mention should also be made here of the Messianic prophecies, which are of paramount importance (cf. 9:1–7; 11:1–10, where there is a marked contrast with the Assyrian empire described in 10:5ff., cf. also 16:5; 28:16f.; 32:1ff.; 33:17; the Immanuel prophecy of 7:14 is also Messianic, as its quotation in Mt. 1:22f. shows, but indirectly so, as v. 16 indicates). In these prophecies Isaiah naturally employs OT terms—the Messiah is portrayed as king of Israel, and the idea is raised that he will liberate his people from the Assyrians (9:3; cf. 11:1ff., with the preceding oracle)—but by means of these terms he gives a glorious portrayal of the coming salvation, which Christians recognize as having been inaugurated with the first advent of Christ, and as coming to its complete fulfilment with his second advent (cf. 11:9, etc.).

(iii) *The Holy One of Israel and the nations.* That Yahweh is the only true God is stated more emphatically in chs. 40ff. than in 1–39, yet it is stressed plainly enough in the first part of the book (cf. 2:8; 30:22; 37:16, etc.). Yahweh is Lord of the whole

earth (6:3). All that happens is his doing, the execution of his decree (5:12, 19; 14:24, 26; 37:26, etc.). He directs the history of Israel and of the other nations too. Assyria is the rod of his anger (10:5ff.; cf. 5:26; 7:17ff.; 8:7f., etc.); but because of the Assyrians' pursuit of their own ambitions (10:7ff.), their haughtiness, their violence, their cruelty, their faithlessness and their blasphemy of Yahweh, they too will have to undergo his judgment (8:9; 10:5ff.; 14:24–27; 18:4–6; 29:1–8; 30:27–33; 31:8f.; 33:1ff.; 36–37, etc.). See further the prophecies concerning Babylon (13–14; 21:1–10), Moab (15–16; cf. also 25:10ff.), Ethiopia and Egypt (18–20), Edom (21:11f.; 34), and other nations. We should observe, too, that Isaiah predicts not only disaster but also blessing for the nations—e.g. in the great prophecy of 19:18–25, with its promise that Egypt, Assyria and Israel will be joint witnesses for Yahweh (cf. 16:1ff.; 18:7; 23:15–18, and also 2:2–5; 11:10, etc.).

(iv) *Chs. 24–27.* These chapters, which form an epilogue to chs. 13–23, call for a special mention, because of their eloquent portrayal of world judgment (24) and the great salvation which God will accomplish (all nations will have a share in this salvation: 'He will swallow up death for ever'; cf. 25:6ff.) and because of their reference to the resurrection of the just (26:19).

b. Chs. 40–55

Jerusalem lies in ruins, Israel is in exile in Babylonia and the Exile has lasted a long time. The people of Israel are in great distress (42:22; 51:18ff.), Yahweh's anger lies heavily upon them because of their sins (40:2; 42:24f.; 51:17, etc.); they think that he has forgotten them (40:27; 49:14). Some of them have come to regard the place of their exile as their homeland (55:2). But the prophet promises that Yahweh is about to liberate his people, and he urges them to believe his promise.

(i) *The Holy One of Israel* (41:14, 16, 20; 43:3, 14f.; 45:11; 47:4; 48:17; 49:7; 55:5) *is able to help.* In view of what is said above, it is not surprising that nowhere in the OT is it asserted so emphatically as in these chs. that Yahweh is the one true God, that he alone can help (cf. 41:1ff., 21ff.; 43:10f.; 44:6, 8; 45:5, 14, 18, 21f.; 46:9, etc.) Trust in other gods is vain, image-worship is sinful folly (40:18ff.; 41:7, 29; 42:8, 17; 44:6–20, 25; 45:20; 46:1ff.; 47:9ff.). He far transcends all his creatures; he has created all things (this has more stress in chs. 40–55 than in chs. 1–39) and directs the course of all things (cf. 40:12–26, which forms the introduction to vv. 27–31; 41:4; 43:13; 44:7; 48:13, etc.). He is the eternal God (40:28; 41:4; 43:10; 44:6; 48:12); he acts in accordance with his own good pleasure (45:9ff.), and his decree is certain of accomplishment (44:28; 46:10, etc.). His word, spoken by the mouth of his prophets, will not return to him 'empty'—without fulfilling its mission (40:6–8; 55:10f.). Even a world-conqueror such as Cyrus is but a tool in his hand for the performance of his purpose (41:1ff., 21–29; 43:9–15; 44:24–45:13; 46:8–13; 48:12–16).

(ii) *The Holy One of Israel is willing to help.* Israel has not deserved his help; she has shown herself unworthy of it (43:22ff., etc.). But Israel is his people (40:1, etc.; cf. too, e.g., 43:15; 44:2), and his name, his reputation, is involved in Israel's deliverance (48:1–11, etc.). His relation to Israel, to Zion, is compared to the marriage bond (50:1; 54:5ff.). He has chosen Israel out of all the nations (41:8f.; 48:10, etc.) and Israel is his servant—a title which implies both a privilege (41:8f., etc.) and a

mission (43:10, etc.). His love is unchangeably set upon Israel, upon Zion (40:11; 43:3f.; 46:3f.; 49:15ff., etc.), and his righteousness is the guarantee of her liberation (e.g. 41:10; 45:24).

(iii) *The Holy One of Israel will certainly help.* The coming salvation is painted in bright colours. The basis of this salvation, and at the same time its very essence, consists in his turning away his anger, his remission of Israel's sin (40:2; 43:25; 44:22; 51:21ff., etc.). He uses Cyrus as his instrument to inaugurate his salvation; Cyrus is described in quite remarkable terms as Yahweh's 'anointed' (45:1), and the man whom he 'loves' (48:14, etc.). Babylon is overthrown by him (46-47; cf. 43:14; 48:14); Israel is set free, her exiled children are gathered from all the lands of their dispersion, and return to Canaan (43:1-8, 18-21; 48:20f.; 49:24-26; 52:11f., etc.). Yahweh returns to Zion (40:9-11; 52:7f.), Zion is once again inhabited (49:17-23; 54:1ff.), rebuilt (44:28; 45:13; 54:11f.), and protected (54:14-17).

Note especially the following points. 1. This work of deliverance is described as a new creation (41:20; 45:8; cf. 45:18). The miracles which marked the Exodus from Egypt are now to be repeated on a grander scale (43:16ff.; 48:21; 51:9f., etc.). 2. The prophet sees the whole future as a unity. Israel's liberation from exile is viewed as the beginning of the great era of salvation, in which all things will be made new. Here it can be mentioned that Israel's homeward progress is attended by a series of nature-miracles (41:17ff.; 43:18-21; 48:21; 49:9bf.; 55:12f.; cf. 54:13). 3. It is repeatedly emphasized that the grand aim of all this is the praise and glory of God (41:20; 43:21; 44:23; 48:9-11, etc.).

The prophet bends all his energies to persuade the people to accept and believe this assurance of blessing; see especially the closing ch. 55. He tries to convince them by pointing to Yahweh's majesty in nature and history. He propounds pointed questions, and challenges them to enter into debate (cf., e.g., 40:12-31; 49:14ff.). He also challenges the Gentile nations and their gods: can these gods do what the God of Israel does? It is the God of Israel who has called Cyrus into being and raised him up, in order that he may be the instrument to set Israel free. The God of Israel is therefore the only One who can foretell the result of Cyrus' actions. As certainly as Yahweh made the 'former things' come to pass—that is to say, as certainly as he fulfilled what he foretold in earlier days—so certainly will he bring the 'new things' to pass by the fulfilment of the promises which he now makes through his prophet (41:1ff., 21-29; 43:9-15; 44:6-45:25; 46:8-13; 48:12-16; cf. 42:9; 48:1-11). With all this the prophet does not furnish proofs in the strict sense of the word, but he makes a strong appeal to mind, heart and conscience.

All this underlines the outspoken universalism of these chapters. Yahweh, the Creator of the universe, directs world-events, including the victorious career of Cyrus. He rebukes the nations, particularly Babylon, because of their hostility to Israel and also because of their idolatry (41:11-16; 42:13, 17; 46; 47). The goal to which he is directing the course of the world is summed up in the words, 'to me every knee shall bow, every tongue shall swear' (45:23); in this serving of Yahweh lies also the salvation of the nations of the earth; cf., e.g., 42:10-12; 45:6, 22-24; 51:4f.

(iv) On the 'Servant Songs' (42:1-7; 49:1-9a; 50:4-11; 52:13-53:12), see *SERVANT OF THE LORD.

c. Chs. 56-66

The following features are specially noteworthy in these concluding chapters:

1. Yahweh is presented as the living God. He is fearful in his anger (59:16ff.; 63:1-6), but he bends down in kindness to his people, he shows them mercy and restores their comfort, he delights in Zion (57:15ff.; 60:10; 61:1ff.; 62:4f.; 63:7, 15; 65:1f., 8, 19; 66:2, 13). That he is no inflexible or inexorable power is movingly shown in the review of his dealings with Israel in earlier days (63:8ff.).

2. A sharp contrast is drawn between those in Israel who love God and those who disobey him (e.g. 57:1; 65:13ff.; 66:5; cf. 65:8).

3. It is frequently said, but without justification, that in some parts at least of this section of the book a legalist and nationalist spirit is manifested. True, it is clearly laid down that it is necessary to practise righteousness if one is to share in the coming salvation, and occasionally the importance of keeping the sabbath is stressed (cf., e.g., 56:1-8). But this is not intended to inculcate a spirit of ceremonialism and legalism; on the contrary, this very spirit is roundly condemned (cf. 58; 66:1, 5), and an attitude of humility is repeatedly commended (cf., e.g., 57:15; 61:2f.; 66:2). As to the glorifying of Zion (cf., e.g., 60:4ff.; 61:5ff.; 66:20), this is no mere outburst of nationalist feeling. Zion is not only the capital of Judah but the dwelling-place of God; and the Gentiles who turn to him participate in his salvation (e.g. 56:1-8; 60:3).

N. H. R.

ISHBOSHETH. The name (2 Sa. 2-4) is commonly thought to have been Eshbaal originally, altered by scribes who wrote *bošet* ('shame') instead of the apparently pagan divine name *Baal. In I Ch. 8:33; 9:39 the form Eshbaal is written. Recently a strong case has been argued against this view, *bošet* being understood as a divine attribute, 'pride, strength'. Ishbosheth and Eshbaal would be alternative names for one man (so, too, Mephibosheth and Meribbaal; see M. Tsevat, *HUCA* 46, 1975, pp. 71-87). A son of Saul, the Ishvi of I Sa. 14:49 (a corruption of Ishiah, i.e. Ishbaal), he was made king of Israel at *Mahanaim, out of reach of the Philistines, by Abner, his father's commander. As David's power grew, Abner began an intrigue with him but was murdered. Ishbosheth's supporters lost heart, and two of his cavalry officers, Rechab and Baanah, assassinated him during his midday rest (2 Sa. 2-4). The LXX account of this crime is more explicit than *MT* (2 Sa. 4:6, cf. AV with *rvmg.* or *rsv.*), which may be

emended to agree with the Greek. The death of Ishbosheth enabled David to gain control of all Israel from the house of Saul.

A.R.M.

ISHI (Heb. *īšī*, 'my husband'). In Ho. 2:16 the name which the Israelites were to use for God, to supersede 'Baali' with its pagan associations.

J.D.D.

ISHMAEL (Heb. *yīšmā'ēl*, 'God hears'). 1. The son of Abraham by Hagar the Egyptian handmaid of Sarah. When Sarah realized that she was barren, she gave her handmaid to Abraham to conceive seed for her (Gn. 16:2). An example of this ancient custom has been discovered in the *Nuzi tablets (*ANET*, p. 220). After conceiving by Abraham, Hagar began to despise Sarah, who then drove her out of the home with Abraham's reluctant consent. On her way to Egypt she was met by the angel of Yahweh, who told her to return and submit to Sarah. He also gave her the promise of a multiplied seed through her son Ishmael, who would be 'a wild ass of a man' (16:12; *cf.* Jb. 39:5-8). Ishmael was born when Abraham was 86, 11 years after his arrival in Canaan (16:15-16; *cf.* 12:4). 13 years later, both Ishmael and his father were circumcised in obedience to God's command (17:25-26). But on that same day, God had also promised Abraham a son by Sarah. The fact that he had long since centred his hopes on Ishmael caused him to cry out, 'O that Ishmael might live in thy sight!' (17:18). God then assured him that Ishmael would beget twelve princes and ultimately a great nation (17:20; *cf.* 16:10; 25:13-16). When Ishmael was about 16, a great celebration was held at the weaning of the child Isaac (21:8). Ishmael gave vent to his jealousy of 'the child of the promise' (Rom. 9:7-9) by 'mocking' him. The apostle Paul employs the verb 'persecuted' (*ediōke*) to describe this act (Gal. 4:29) and builds upon it an extended allegory of the opposition of legalistic religionists to those 'born according to the Spirit' (Gal. 4:21-31). Sarah insisted that both Ishmael and Hagar be expelled from the home, and Abraham consented only after the Lord revealed to him that 'through Isaac shall your descendants be named' (Gn. 21:12). Hagar and her son nearly perished from thirst in the desert of Beersheba, until the angel of Yahweh pointed her to a well of water in response to Ishmael's cry. He grew to be an archer, married an Egyptian and fathered twelve princes (25:12-16). Esau married one of his daughters (28:9; 36:3, 10). He joined Isaac in the burial of their father and died at the age of 137 (25:9, 17).

2. A descendant of Saul and Jonathan, and the son of Azel (1 Ch. 8:38; *cf.* 9:44). 3. A man of Judah, father of the Zebadiah who was a high official under King Jehoshaphat (2 Ch. 19:11). 4. The son of Jehohanan, and a captain of hundreds who took part in the conspiracy against Athaliah (2 Ch. 23:1). 5. A son of Pashhur the priest. He was one of those whom Ezra compelled to put away their foreign wives (Ezr. 10:22).

6. The son of Nethaniah, of the seed royal of Judah, who murdered Gedaliah 2 months after the destruction of Jerusalem in 586 bc. When Gedaliah was appointed by Nebuchadrezzar to be the governor of Judah, many Jews gathered themselves to him at Mizpah for security. Among these, however, was Ishmael, who was jealous of Gedaliah

and permitted himself to be hired by Baalis the king of Ammon to plot the governor's death. In spite of Johanan's warnings, Gedaliah trusted Ishmael and invited him and ten of his men to a banquet. They used the occasion to murder Gedaliah and all the others in Mizpah. Two days later they killed a group of Jewish pilgrims and set off for Ammon with many hostages, including Jeremiah and the king's daughters. They were pursued by Johanan and other captains and were overtaken at Gibeon. The hostages were rescued, but Ishmael and eight of his men escaped to Ammon (2 Ki. 25:25; Je. 40:7-41:18).

ISLAND, ISLE (Heb. *'i*, pl. *'iyyim*; Gk. *nēsos*, *nēsion*). Etymologically, the Heb. term is frequently supposed to mean 'habitable land', through a cognate Arab. word, but 'coastlands' is a better translation, as usually in rsv. The general OT usage is to denote the islands and coastlands of the Mediterranean. The idea of distance is also included, *e.g.* Is. 66:19; Je. 31:10. Occasionally it appears to have the strict meaning, *e.g.* 'Kittim' or 'Cyprus' (rsv) in Je. 2:10; 'Caphtor' in Je. 47:4 (see rsv; probably Crete). Isaiah's usage is interesting. In 42:15 it denotes 'dry land' as opposed to water. In 40:15 it is parallel to 'nations'; in 41:1; 49:1 to 'peoples'; and in 41:5 to 'the ends of the earth'.

NT usage is unambiguous. Several islands are named, *e.g.* Cyprus (Acts 4:36; 13:4; 15:39), Crete and Cauda (Acts 27), Malta (Acts 28:1) and Patmos (Rev. 1:9).

J.G.G.N.

ISRAEL (Heb. *yīsrā'ēl*, 'God strives'). 1. The new name given to Jacob after his night of wrestling at Peniel: 'Your name,' said his supernatural antagonist, 'shall no more be called Jacob, but Israel, for you have striven [*šārītā*, from *sārā*, 'strive'] with God and with men, and have prevailed' (Gn. 32:28). With this account, assigned to J in the four-document hypothesis, *cf.* Ho. 12:3f., 'in his manhood he [Jacob] strove [*šārā*] with God. He strove [*wayyāšar*, from the same verb] with the angel and prevailed'. The re-naming is confirmed at Bethel in Gn. 35:10 (assigned to P), where God Almighty appears to Jacob and says: 'Your name is Jacob; no longer shall your name be called Jacob, but Israel shall be your name.' 'So,' adds the narrator, 'his name was called Israel.' Thenceforward Israel appears throughout the OT as an occasional synonym for Jacob; it is used most frequently when the Patriarch's descendants are called 'the children (or people) of Israel' (Heb. *b'nē yīsrā'ēl*).

2. The nation which traced its ancestry back to the 12 sons of Jacob, referred to variously as 'Israel' (Gn. 34:7, *etc.*), 'the people of Israel' (Ex. 1:8, *etc.*), 'the (twelve) tribes of Israel' (Gn. 49:16, 28), 'the Israelites' (Gn. 32:32, *etc.*). The earliest reference to the nation of Israel in a non-Israelite record appears in an inscription of Merenptah, king of Egypt, c. 1230 bc, 'Israel is desolate; it has no seed left' (*DOTT*, p. 139). The next non-Israelite references come in inscriptions of Shalmaneser III of Assyria, c. 853 bc, mentioning 'Ahab the Israelite' (*DOTT*, p. 47), and of Meshah

of Moab, whose victory-inscription (c. 830 BC) makes repeated mention of Israel, including the boast, 'Israel perished utterly for ever' (*DOTT*, pp. 196f.; *MOABITE STONE. For illustrations see *IBA*, figs. 40, 48, 50–51).

I. Israel's beginnings

Merenptah's reference practically coincides with the beginning of Israel's national history, for it is the Exodus from Egypt, which took place in his reign or his father's, that marks Israel's birth as a nation. Some generations previously their ancestors, members of a pastoral clan, went down from Canaan to Egypt in time of famine and settled in the Wadi Tumilat. The early kings of Dynasty 19 drafted them in large numbers into forced labour gangs for the building of fortified cities on Egypt's NE frontier. In these circumstances they might have been completely assimilated to their fellow-serfs had not their ancestral faith been reawakened by Moses, who came to them in the name of the God of their fathers and led them out of Egypt amid a series of phenomena in which he taught them to recognize the power of that God, put forth for their deliverance.

Under Moses' leadership they trekked E by 'the way of the wilderness of the Yam Suph' until they reached the place where the God of their fathers had previously revealed himself to Moses by his covenant-name Yahweh and commissioned him to bring them out of Egypt. There, at the foot of Mt Sinai, they were brought into special covenant-relationship with Yahweh. He had already shown

himself to be their God by rescuing them from bondage in Egypt; they now undertook to be his people. This undertaking involved their obedience to the 'Ten Words' in which Yahweh made his will known to them. They were to worship him alone; they were not to represent him by means of any image; they were to treat his name with due reverence; they were to reserve every seventh day for him; and in thought, word and deed they were to behave one towards another in a manner befitting the covenant which bound them together. They were to be a people set apart for Yahweh, and were therefore to have something of his righteousness, mercy and truth reproduced in their lives.

This attitude we may call practical monotheism. Whether the gods of neighbouring peoples had any sort of existence or not was a question about which neither Moses nor his followers were likely to trouble their minds; their business was to acknowledge Yahweh as supreme and sole God.

Moses was not only Israel's first and greatest legislator; in his own person he combined the functions of prophet, priest and king. He judged their lawsuits and taught them the principles of religious duty; he led them from Egypt to the Jordan, and when he died, a generation after the Exodus, he left behind him no undisciplined body of slave-labourers, such as had followed him out of Egypt, but a formidable host ready to invade Canaan as conquerors and settlers.

This host, even before its settlement in Canaan, was organized as a confederacy of twelve tribes, united in part by a common ancestry but even

more so by common participation in the covenant with Yahweh. The visible token of their covenant unity was the sacred ark, housed in a tent-shrine which was located in the centre of their encampment when they were stationary, but which preceded them on the march or in battle. They formed close alliances with other nomad groups such as the Kenites (to whom Moses was related by marriage), the Kenizzites and the Jerahmeelites, who in due course appear to have been incorporated into the tribe of Judah. It was probably a breach of alliance on the part of another nomad group, the Amalekites, that was responsible for the bitter feud which Israel pursued against them from generation to generation. Alliance with such pastoral communities was very different from alliance with the settled agricultural population of Canaan, with its fertility cults so inimical to pure Yahweh-worship. Their covenant with Yahweh strictly prohibited the Israelites from making common cause with the Canaanites.

The principal centre of the tribes of Israel in their wilderness period was Kadesh-barnea, evidently (from its name) a sanctuary and also (from its alternative name En-mishpat) a place where causes were heard and judgment pronounced. When they left Kadesh-barnea some of them infiltrated N into the central Negeb, but the main body advanced S and E of the Dead Sea, skirting the territories of their Edomite, Ammonite and Moabite kinsfolk, who had very recently organized themselves as settled kingdoms. Farther N in Transjordan lay the Amorite kingdoms of Sihon and Og, which they entered as hostile invaders. The resisting forces of Sihon and Og were crushed, and their territories were occupied—these are the territories later known as Reuben, Gad and E Manasseh. Part at least of the Israelite community thus settled down to an agricultural way of life even before the crossing of the Jordan.

II. The settlement in Canaan

The crossing of the Jordan was followed quickly by the capture and destruction of the fortress of *Jericho. From Jericho they pressed into the heart of the land, taking one fortress after another. Egypt was no longer in a position to send help to her former Canaanite vassals; only along the W coastal road did she now exercise some control, as far N as the pass of Megiddo, and even in that region the Philistine settlement (c. 1190 BC) was soon to present a barrier to the extension of Egyptian power.

A coalition of five military governors of Canaanite fortresses attempted to prevent the Israelites from turning S from the central hill-country, where Gibeon and the associated cities of the Hivite tetropolis had submitted to them as subject-allies. The coalition was completely defeated in the pass of Beth-horon and the road to the S lay open to the invaders. Although the chariot-forces of Canaanite citadels prevented them from operating in more level country, they soon dominated and occupied the central and S highlands, and also the Galilean uplands, N of the Plain of Jezreel.

The tribes which settled in the N were cut off from their fellows in central Canaan by a chain of Canaanite fortifications in the Plain of Jezreel, stretching from the Mediterranean to the Jordan. Judah, in the S, was even more effectively cut off from the central tribes by the stronghold of Jerusalem, which remained a Canaanite enclave for 200 years.

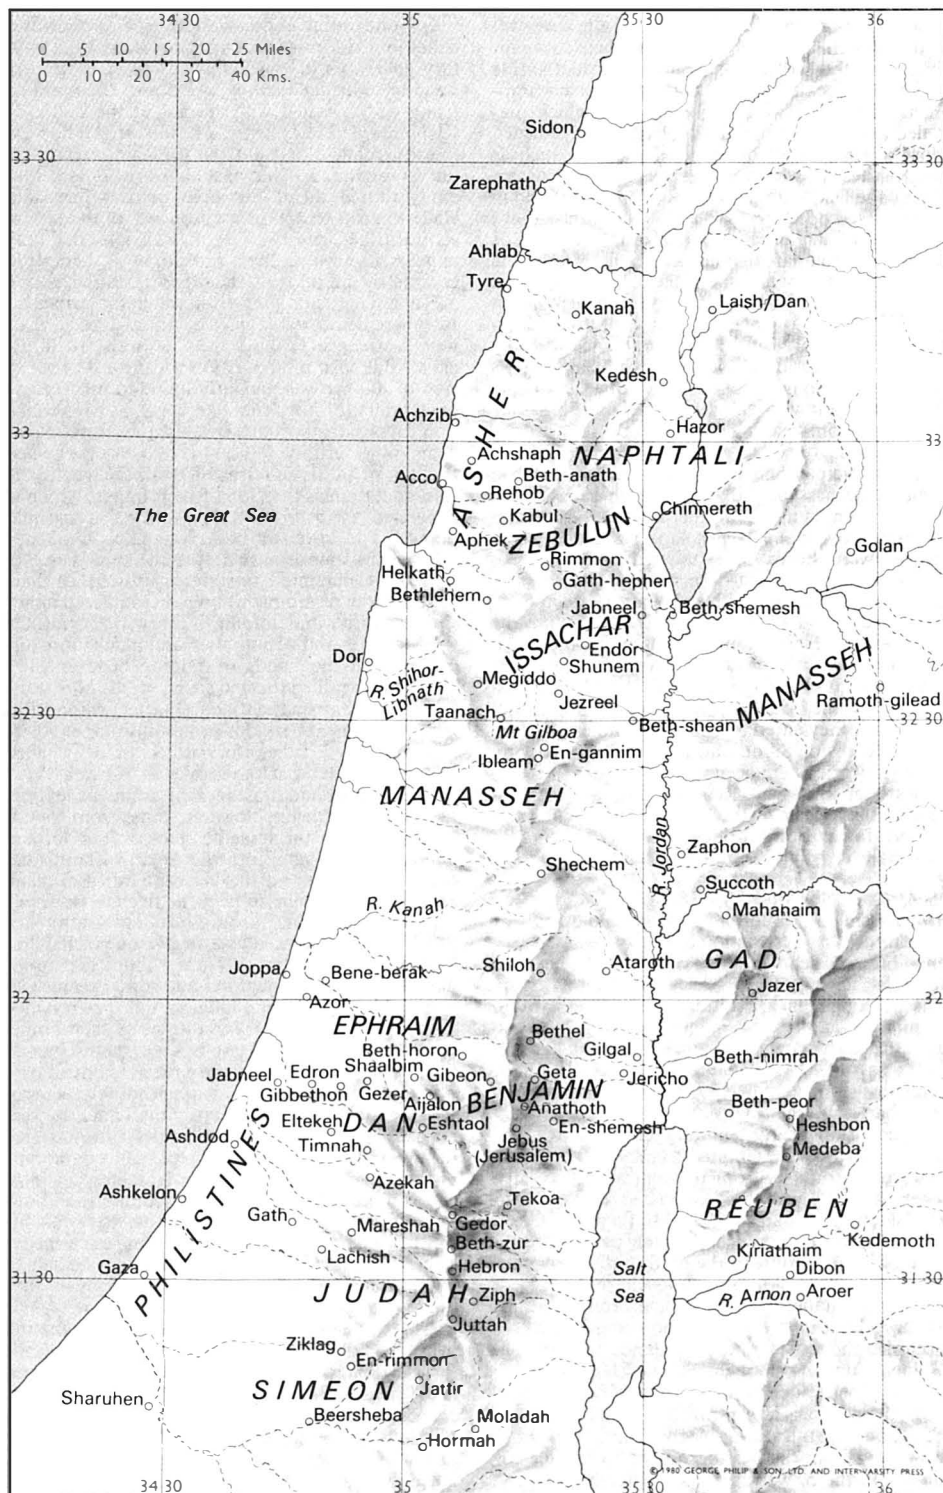

On one notable occasion the N and central tribes joined forces in an uprising against the military governors of the Plain of Jezreel, who were steadily reducing them to serfdom. Their united rising was crowned with success at the battle of Kishon (c. 1125 BC), when a sudden storm flooded the watercourse and put the Canaanite chariotry out of action, so that the light-armed Israelites easily routed them. But even on this occasion, while the call to action went out to all the N and central tribes, and to those in Transjordan, Judah appears to have received no summons, being too completely cut off from the other tribes.

On an occasion like this, when the tribes of Israel remembered their covenant-bond, their united strength enabled them to resist their enemies. But such united action was rare. The recession of danger was regularly followed by a period of assimilation to Canaanite ways. This assimilation involved intermarriage and the imitation of Canaanite fertility rites, so that Yahweh was thought of rather in terms of Baal, the fructifying rain-god, than as the God of their fathers who had redeemed them from Egypt to be his peculiar people. The covenant-bond was thus weakened and they became an easy prey to their enemies. Not only did Canaanite city-states try to reduce them to servitude; from time to time they suffered incursions from beyond Jordan, by their own kinsmen the Moabites and Ammonites, and much more disastrously at the hands of raiding bedouin. The leaders who rallied them in such periods of distress were the charismatic 'judges' after whom this whole settlement period is commonly named; these men not only led them forward to victory against their enemies but back to loyalty to Yahweh.

The greatest and most recalcitrant menace to Israelite independence, however, came from the W. Not long after the Israelites crossed the Jordan, bands of sea-rovers from the Aegean islands and coastlands settled on the W seaboard of Canaan and organized themselves in the five city-states of Ashdod, Ashkelon, Ekron, Gaza and Gath, each of which was governed by a *seren*—one of the 'five lords of the Philistines'. These *Philistines intermarried with the Canaanites and soon became Canaanite in language and religion, but they retained the political and military traditions of their homelands. Once they had established themselves in their pentapolis they began to extend control over other parts of Canaan, including those parts occupied by the Israelites. Militarily the Israelites were no match for them. The Philistines had mastered the art of iron-working, and kept it as a monopoly in their own hands. When the Israelites began to use iron implements in their agriculture the Philistines insisted that they must come to Philistine smiths to have them sharpened. This was a means of ensuring that the Israelites would not be able to forge iron implements of war with which they might rise against their overlords.

At last the Philistines extended their domination over the Plain of Jezreel as far as the Jordan. While their suzerainty did not menace Israelite existence, it did menace Israelite national identity. The covenant shrine in those days was established at *Shiloh, in the territory of Ephraim, where the sacred ark was tended by a priesthood tracing its lineage back to Aaron, the brother of Moses. This priesthood took a leading part in an inter-tribal revolt against the Philistines which was an utter failure. The ark was captured, Shiloh and the

ISRAEL

The tribes of Israel.

sanctuary were destroyed and the central priesthood was practically wiped out (c. 1050 BC). All the visible bonds which united the tribes of Israel had disappeared, and Israel's national identity seemed likely to disappear with them.

That it did not disappear, but rather became more vigorous, was due to the character and enterprise of *Samuel, the greatest of Israel's charismatic leaders between Moses and David. Samuel, like Moses, combined the functions of prophet, priest and judge; and in his own person he provided a rallying-centre for the national life. Under his guidance Israel returned to its covenant loyalty, and with the return of religious devotion came a resurgence of national spirit; after some years the Israelites were able to defeat the Philistines on the very battlefield where they had been so shamefully routed.

As Samuel grew old, the question of the succession became acute. There arose a widespread demand for a king, and at last Samuel consented to this demand and anointed the Benjaminite *Saul to reign over them. Saul's reign began auspiciously with a prompt retort to a hostile show of force by the Ammonites, and this was followed by successful action against the Philistines in the central highlands. So long as Saul accepted Samuel's direction in the religious sphere all went well, but Saul's fortunes began to decline when a breach came about between them. He met his death in battle against the Philistine at Mt Gilboa, in a bold but vain attempt to bring the N tribes, beyond the Plain of Jezreel, into the unity of Israel. The Philistine grip on Israel was now firmer than ever (c. 1010 BC).

III. David and Solomon

The man who enabled Israel to throw off the Philistine yoke was *David, a member of the tribe of Judah, at one time a military commander under Saul and later a mercenary warrior with the Philistines. On Saul's death he was immediately acclaimed as king of Judah, and 2 years later the tribes of Israel as a whole also invited him to be their king. In a series of brilliant military actions he inflicted decisive defeats on the Philistines, who thereafter had to live as David's vassals. The capture of Jerusalem by David in the 7th year of his reign provided his kingdom with a strong and strategically situated capital and also with a new religious centre. The ark was brought back from exile and solemnly installed in a tent-shrine on Mt Zion, later superseded by Solomon's Temple.

After establishing Israelite independence and supremacy in Canaan, David went on by conquest and diplomacy to build up an empire stretching from the Egyptian border and the Gulf of Aqaba to the Upper Euphrates. This empire he bequeathed to his son Solomon, who overtaxed its resources by a grandiose building programme and the maintenance of a splendid court. For the more efficient exploitation of his kingdom's revenue, he divided it into twelve new administrative districts, which took the place of the old tribal divisions, and exacted not only heavy taxes but compulsory labour on public works, ultimately even from his Israelite subjects. The burden at last became intolerable. Towards the end of his reign most of the subject nations had regained their independence, and after his death (c. 930 BC) the tribes of Israel themselves split into two kingdoms—the N kingdom of Israel, which renounced its allegiance to the throne of David, and the S Kingdom of Judah,

consisting of the tribal territories of Judah and Benjamin, over which the descendants of David and Solomon continued to reign in their capital at Jerusalem (*JUDAH, IV).

IV. The kingdom of Israel

Jeroboam, founder of the separate monarchy in the N, elevated the two ancient sanctuaries of Dan (in the far N) and Bethel (near the frontier with Judah) to the status of national shrines. In both of these golden bull-calves provided the visible pedestals for Yahweh's invisible throne (the function fulfilled by golden cherubs in the Jerusalem Temple). Early in his reign both Hebrew kingdoms were invaded by the Egyptians under Shishak, but the S kingdom appears to have suffered the more, so that later the N kingdom had no need to fear an attempt by the Davidic dynasty to regain control of its lost territories.

A more serious threat, however, presented itself from the N. The Aramaean kingdom of Damascus, founded in Solomon's reign, began to encroach on Israelite territory about 900 BC, and this was the beginning of 100 years of intermittent war which at times reduced Israel to desperate straits.

The security of the kingdom of Israel was also impaired by frequent palace-revolts and dynastic changes. Only two dynasties—those founded by Omri (c. 880 BC) and Jehu (c. 841 BC)—lasted for more than two generations. Jeroboam's son was assassinated by Baasha, one of his army commanders, in the year after he succeeded to the kingdom; when Baasha had reigned for 20 years his son too fell victim to a similar fate. A few years of civil war followed, from which Omri emerged as the victor.

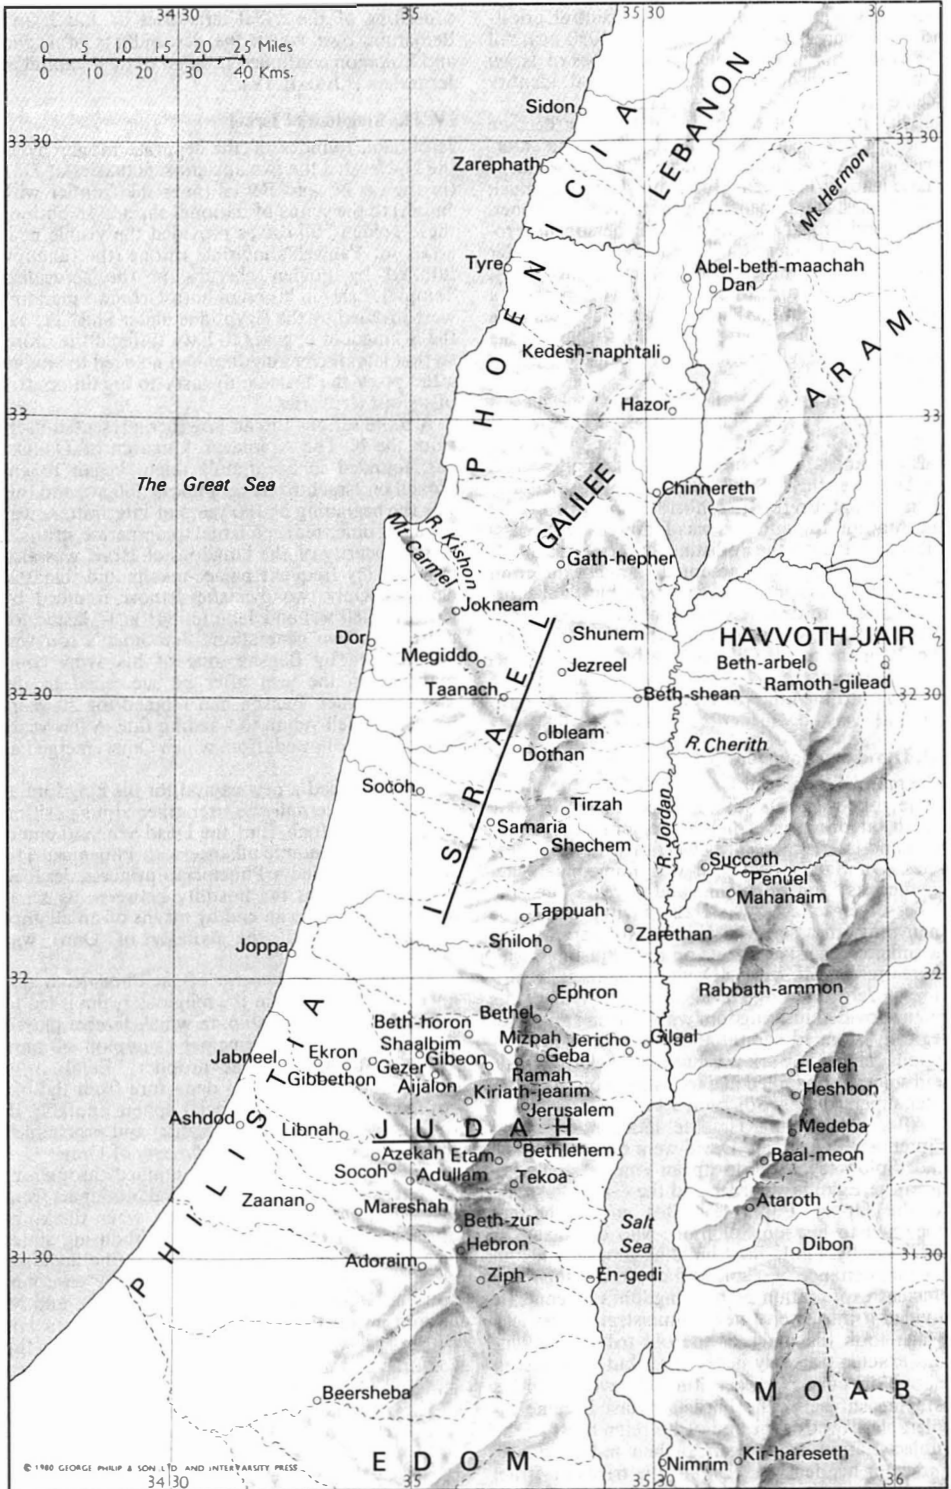

Omri founded a new capital for his kingdom at *Samaria. Externally he strengthened his position by subduing Moab, E of the Dead Sea, and entering into an economic alliance with Phoenicia. His son Ahab married a Phoenician princess, Jezebel, and also brought the hostility between his kingdom and Judah to an end by means of an alliance which lasted until the dynasty of Omri was overthrown.

The commercial benefits of the Phoenician alliance were great, but in the religious realm it led to a revival of Baal-worship, in which Jezebel played a leading part. The principal champion of pure Yahweh-worship was the prophet *Elijah, who also denounced the royal departure from the old covenant-loyalty in the social sphere (notably in the case of Naboth the Jezreelite) and proclaimed the impending doom of the dynasty of Omri.

The war with Damascus continued throughout the reigns of Omri and his descendants, apart from 3 years during the reign of Ahab, when the kings of Israel and Damascus and neighbouring states formed a military coalition to resist the invading king of Assyria, Shalmaneser III. They gave him battle at Qarqar on the Orontes (853 BC), and he did not invade the W lands again for 12 years. His withdrawal was the signal for the break-up of the coalition and the resumption of hostilities between Israel and Damascus.

The extermination of the house of Omri in Jehu's revolt (841 BC) was followed by the suppression of official Baal-worship. The revolt was supported by the prophetic guilds, who had no reason to love the house of Omri. But it gravely weakened the kingdom of Israel in face of the Aramaean assaults, and the first 40 years of the dynasty of

ISRAEL

The kingdoms of Israel and Judah.

Jehu were years of continual tribulation for Israel. Not only were Israel's Transjordanian territories overrun by the enemy but her N provinces too; the Aramaeans invaded the Plain of Jezreel and made their way along the Mediterranean seaboard as far S as Gath. Israel had been reduced to desperate straits when in 803 bc the Assyrian king Adad-nirari III invaded Syria, raided Damascus and imposed tribute on it. Damascene pressure on Israel was relaxed; and the Israelites were able to take advantage of this turn of fortune and regain many of the cities which the Aramaeans had taken from them.

Throughout the years of tribulation there was one man in Israel whose morale and confidence in Yahweh never wavered—the prophet *Elisha. Well might the king of Israel address him on his death-bed as 'the chariots of Israel and its horsemen' (2 Ki. 13:14). Elisha died with a prediction of victory over the Aramaeans on his lips.

The first half of the 8th century bc witnessed a return of prosperity to Israel, especially under Jeroboam II, the 4th king of Jehu's dynasty. Both Hebrew kingdoms were free from external molestation; Damascus was too weak after her rough handling by Assyria to renew her aggression. Jeroboam extended his kingdom's frontiers and the national wealth increased greatly.

But this increase of national wealth was concentrated in the hands of a relatively small section of the population—the well-to-do merchants and landowners, who enriched themselves at the expense of the peasantry. The smallholders who had formerly tilled their own fields were now obliged in large numbers to become serfs on the growing estates of their wealthy neighbours, cultivating the land which they had once cultivated as independent owners. This increasing disparity between two sections of Israel's freeborn citizens called forth the denunciation of such prophets as Amos and Hosea, the more so as the rich expropriators of their poorer neighbours were punctilious in the performance of what they considered their religious duties. The prophets insisted tirelessly that what Yahweh required from his people was not sacrifices of fatted beasts but righteousness and covenant-loyalty, for lack of which the nation faced disaster greater than anything it had hitherto known.

About 745 bc the dynasty of Jehu ended as it had begun, by assassination and revolt. In that year Tiglath-pileser III became king of Assyria and inaugurated a campaign of imperial conquest which in less than a quarter of a century brought an end to the existence of the kingdom of Israel and to the independence of the kingdom of Judah. Menahem of Israel (c. 745–737 bc) paid tribute to Tiglath-pileser, but an anti-Assyrian policy was pursued by Pekah (c. 736–732 bc), who allied himself for this purpose with Damascus. Tiglath-pileser took Damascus, abolished the monarchy and transformed the territory into an Assyrian province; the N and Transjordanian regions of Israel were detached and made into Assyrian provinces. The upper strata of the populations of these areas were deported and replaced by immigrants from other parts of the Assyrian empire. When Hoshea, the last king of Israel, withheld payment of tribute from Assyria at the instance of Egypt, he was imprisoned. Samaria, his capital, was stormed in 722 bc after a 3-years' siege, and became the seat of government of the Assyrian province of

Samaria. A further deportation took place—according to Assyrian records 27,290 people were taken captive—and foreign settlers were sent to take their place.

V. The province of Samaria

The deportation of Israelites from the N and Transjordanian territories was so thorough that these territories quite lost their Israelite character. In the province of Samaria it was different; the immigrants in due course adopted Israelite religion—'the law of the god of the land' (2 Ki. 17:26ff.)—and were completely assimilated to the Israelites who had not been carried away; but the *Samaritans, as the population of the province of Samaria were later called, came to be despised as racial and religious half-breeds by the people of Judah farther S, especially from the end of the 6th century bc onward.

King Hezekiah of Judah attempted (c. 705 bc) to revive the religious unity of Israel by inviting the people of Samaria to come to Jerusalem to worship, but his attempt was rendered ineffective by Sennacherib's invasion of Judah (701 bc). Greater success attended the action of Hezekiah's great-grandson Josiah, who took advantage of the recession of Assyrian power to extend his political sovereignty and religious reformation into the regions formerly belonging to the kingdom of Israel (621 bc). The fact that he tried to bar Pharaoh Neco's advance at Megiddo is evidence enough of the expansion of his kingdom, but his death there (609 bc) brought an end to such hopes as might have been cherished of the reunion of all Israel under a prince of the house of David. The land of Israel passed under the hegemony of Egypt, and a few years later under that of Babylonia.

The Babylonians appear to have perpetuated the Assyrian provincial organization in the W. After the assassination of Gedaliah, governor of Judah under the Babylonians, the land of Judah with the exception of the Negeb (now being occupied by the Edomites) was added to the province of Samaria (c. 582 bc). No great change in this respect resulted from the Persian conquest (539 bc), except that the men of Judah exiled under Nebuchadrezzar were allowed to return and settle in Jerusalem and the surrounding area, which now became the separate, if tiny, province of Judaea under a governor appointed by the Persian king (*JUDAH, V).

The Samaritans made friendly overtures to the restored exiles and offered to co-operate in rebuilding the Jerusalem Temple, but these overtures were not welcomed by the Judaeans, who no doubt feared that they would be swamped by the much greater numbers of the Samaritans, and also had serious doubts of the Samaritans' racial and religious purity. In consequence, a long-standing breach which might have been healed at this time became more bitter than ever, and the Samaritans seized every opportunity to represent the Judaeans to the Persian authorities in an unfavourable light. They were unable to prevent the rebuilding of the Jerusalem Temple, which had been authorized by Cyrus in 538 bc, but they had better success for a time in obstructing the Judaeans' attempts to fortify Jerusalem. When, however, Artaxerxes I sent *Nehemiah to Judah as governor in 445 bc, with express directions to rebuild the walls of Jerusalem, the Samaritans and other neighbours of Judah might betray their chagrin in various ways

ISRAEL

but could take no effective action in face of the royal edict.

The governor of Samaria at this time was *Sanballat, who continued in office for many years. In 408 bc he is mentioned in a letter from the Jewish community of Elephantine (*PAPYRI, II. c) in Egypt, who seek the good offices of Sanballat's sons in procuring permission from the Persian court for the rebuilding of their temple, which had been destroyed in an anti-Jewish riot 2 or 3 years previously. This temple had been built more than a century before to serve the religious needs of a Jewish community which the Egyptian kings of Dynasty 26 had settled on their S frontier as an insurance against Ethiopian inroads. Before writing to Sanballat's sons, the Elephantine Jews had tried to enlist the aid of the high priest in Jerusalem, but he had paid no attention to their plea; no doubt he disapproved of the existence of a rival temple to that in Jerusalem. Sanballat's sons—not unnaturally, in view of the relations between Samaria and Jerusalem—showed greater alacrity, and procured the necessary permission for the rebuilding of the Elephantine temple.

The fact that it was Sanballat's sons and not their father whom the Elephantine Jews approached suggests that, while Sanballat was still nominally governor, his sons were discharging many of his duties on his behalf, probably because of his age.

The Elephantine papyri which supply us with our information about this Jewish community in Egypt are particularly interesting because they portray a group of Jews who show no signs of having been influenced by the reformation of Josiah's days. In this they form a strong contrast to the Jews who returned from exile to Jerusalem and the surrounding territory. The latter, together with their brethren in Babylonia, had learnt the lesson of exile, and were increasingly marked by strict adherence to the Torah, including especially those features of it which were calculated to mark off the people of the law from all other communities. The emergence of the Jews as the people of the law in the most particularist sense is associated above all with the work of *Ezra, under whom the Pentateuchal law became the recognized constitution of the Judaeans temple-state, subject to the overriding authority of the Persian court.

The work of Ezra (which had the whole-hearted backing of Nehemiah as governor) meant that the cleavage between the Samaritans and Judaeans was less likely than ever to be mended. Some time before 400 bc a scion of the Jerusalem high-priestly family, Manasseh by name, who had married a daughter of Sanballat, was installed by his father-in-law as high priest of the ancient holy place on Mt Gerizim, near Shechem, where a temple was built by royal permission. The rival cult thus established to that of Jerusalem has survived to the present day—based, remarkably enough, on the same law-book as that recognized by the Jews.

VI. Under the Macedonians

The conquest of the Persian empire by Alexander the Great brought no constitutional changes either to Samaria or to Judah. These provinces were now administered by Graeco-Macedonian governors in place of the former Persian governors, and tribute had to be paid to the new overlord in place of the old one. The Jewish *diaspora*, which had been widespread under the Persian empire—Haman did

not exaggerate when he described them to Xerxes as 'dispersed among the peoples in all the provinces of your kingdom' (Est. 3:8)—now found new centres to settle in, especially Alexandria and Cyrene. Hellenistic influences inevitably began to give evidence of their presence among them. These influences in some directions were good; we may think in particular of the situation among the Greek-speaking Jews of Alexandria which necessitated the translation of the Pentateuch and other OT writings into Greek in the 3rd and 2nd centuries bc, and thus made the knowledge of Israel's God accessible to the Gentile world (*TEXTS AND VERSIONS, OT). On the other hand, there was a tendency to imitate features of Hellenistic culture which were inextricably interwoven with paganism and which otherwise blurred the distinction between Yahweh's 'peculiar people' and their neighbours. How far a prominent Jewish family could go in unscrupulous assimilation to the unworthier aspects of life under the Hellenistic monarchies is illustrated by Josephus's account of the fortunes of the Tobiads, who enriched themselves as tax-collectors on behalf first of the Ptolemies and then of the Seleucids.

Among the dynasties which inherited Alexander's empire, the two which chiefly affect the history of Israel are those of the Ptolemies in Egypt and of the Seleucids who dominated Syria and the lands beyond the Euphrates. From 320 to 198 bc the Ptolemies' rule extended from Egypt into Asia as far as the Lebanon range and the Phoenician coast, including Judaea and Samaria. In 198 bc the Seleucid victory at Panion, near the sources of Jordan, meant that Judaea and Samaria were now tributary to Antioch instead of Alexandria. The defeat which the Seleucid king Antiochus III suffered at the hands of the Romans at Magnesia in 190 bc, and the heavy indemnity which they imposed on him, involved an enormous increase of taxation for his subjects, including the Jews. When his son, Antiochus IV, attempted to redress the situation by imposing his sovereignty over Egypt (in the two campaigns of 169 and 168 bc), the Romans forced him to relinquish these ambitions. Judaea, on the SW frontier of his kingdom, now became a region of strategic importance, and he felt that there was grave reason for suspecting the loyalty of his Jewish subjects. On the advice of unwise counsellors, he decided to abolish their distinctive nationhood and religion, and the climax of this policy was the installation of a pagan cult—the worship of Zeus Olympios (a name metamorphosed by the Jews into 'the abomination of desolation')—in the Temple at Jerusalem in December 167 bc. The Samaritan temple on Gerizim was similarly diverted to the worship of Zeus Xenios.

Many pious Jews endured martyrdom at this time sooner than forswear their religion. Others took up arms against their overlord. Among the latter were members of the priestly family of the Hasmonaeans, headed by Mattathias of Modin and his five sons. The outstanding son, Judas Maccabaeus, was a born leader of men, who excelled in guerrilla warfare. His initial successes against the royal forces brought many of his fellow-countrymen under his leadership, including a large number of the pious people in Israel, the *h'asidim* (*HASIDAEANS) who realized that passive resistance was not enough in face of the present threat to their national and religious existence. Larger

armies were sent against them by the king, but they too were routed by the unexpected tactics of Judas and his men.

It became clear to the king that his policy had misfired, and Judas was invited to send ambassadors to Antioch to discuss conditions of peace. Antiochus had military plans for the reconquest of seceding territories in the E part of his kingdom, and it was important to reach a settlement on his Egyptian frontier. The basic Jewish condition was, naturally, the complete rescission of the ban on Jewish religious practice. This was conceded; the Jews became free to practise their ancestral religion. The concession was followed at once by the purification of the Temple from the idolatrous cult which had been installed in it, and its rededication to the age-long worship of the God of Israel. The dedication of the Temple at the end of 164 bc (ever afterwards commemorated in the festival of Hanukkah; cf. Jn. 10:22) was probably not envisaged in the terms of peace, but in itself it might have been accepted as a *fait accompli*.

It speedily became clear, however, that Judas, with his brothers and followers, was not content with the regaining of religious liberty. Having won that success by force of arms, they continued their struggle in order to win political independence. The dedication of the Temple was followed by the fortification of the Temple hill, over against the citadel or Akra (*JERUSALEM, IV) which was manned by a royal garrison. Judas sent armed bands to Galilee, Transjordan and other regions where there were isolated Jewish communities and brought them back to the safety of those parts of Judaea which were controlled by his forces.

Such a succession of hostile acts could not be overlooked by the Seleucid government, and further armies were sent against Judas. Judas fell in battle in the spring of 160 bc, and for a time the cause which he had led seemed lost. But events played into the hands of his successors. In particular, the death of Antiochus IV in 164 bc was followed by a lengthy period of intermittent civil war in the Seleucid empire, between rival claimants to the throne and their respective partisans. Jonathan, the brother of Judas who took his place as leader of the insurgent party, lay low until times were propitious, and then by diplomatic dealing won rapid and astounding advancement. In 152 bc Alexander Balas, who claimed the Seleucid throne on the ground that he was the son of Antiochus IV (the validity of this claim is difficult to assess), authorized Jonathan to maintain his own military force in Judaea and recognized him as high priest of the Jews, in return for Jonathan's promise to support him.

Antiochus IV had begun his intervention in Jewish religious affairs, which ultimately brought about the Hasmonaean rising, by deposing and appointing Jewish high priests at his own discretion, in defiance of ancient custom. Now a Hasmonaean accepted the high-priesthood from a man whose title to bestow it was based on his claim to be son and successor to Antiochus IV. So much for the high ideals with which the struggle had begun!

The pious groups who had lent their aid to the Hasmonaeans, at a time when it seemed that only by Hasmonaean might could religious freedom be regained, were disposed to be content when that goal was attained, and grew increasingly critical of the Hasmonaeans' dynastic ambitions. But no

feature of these ambitions displeased them more than the Hasmonaean assumption of the high-priesthood. Some of them refused to recognize any high-priesthood other than the Zadokite one as legitimate, and looked forward to a day when the sons of Zadok would once more officiate in a purified Temple (*DEAD SEA SCROLLS). One branch of the Zadokite family was permitted to found a Jewish temple at Leontopolis in Egypt and function in the high-priestly office there; but a temple outside the land of Israel could not be countenanced by those *h'sidim* who had any regard for the law.

In 143 bc Jonathan was trapped and put to death by one of the rival claimants for mastery of the Seleucid kingdom, but he was succeeded by his brother Simon, under whom the Jews achieved complete independence from the Gentile yoke. This independence was granted in a rescript from the Seleucid king Demetrius II in May 142 bc, by which the Jews were released from the obligation to pay tribute. Simon followed up this diplomatic success by reducing the last vestiges of Seleucid ascendancy in Judaea—the fortress of Gazara (Gezer) and the citadel in Jerusalem. Demetrius had embarked on an expedition against the Parthians, and could take no action against Simon, even had he so wished. Simon received signal honours from his grateful fellow-Jews for the freedom and peace which he had secured for them. At a meeting of the popular assembly of the Jews in September 140 bc, it was decreed, in consideration of the patriotic achievements of himself and his brothers before him, that he should be appointed ethnarch or governor of the nation, commander-in-chief of the army and hereditary high priest. This triple authority he bequeathed to his descendants and successors.

Simon was assassinated at Jericho in 134 bc by his son-in-law Ptolemy, son of Abubus, who hoped to seize supreme power in Judaea. But Simon's son, John Hyrcanus, thwarted the assassin's plans and secured his position as successor to his father.

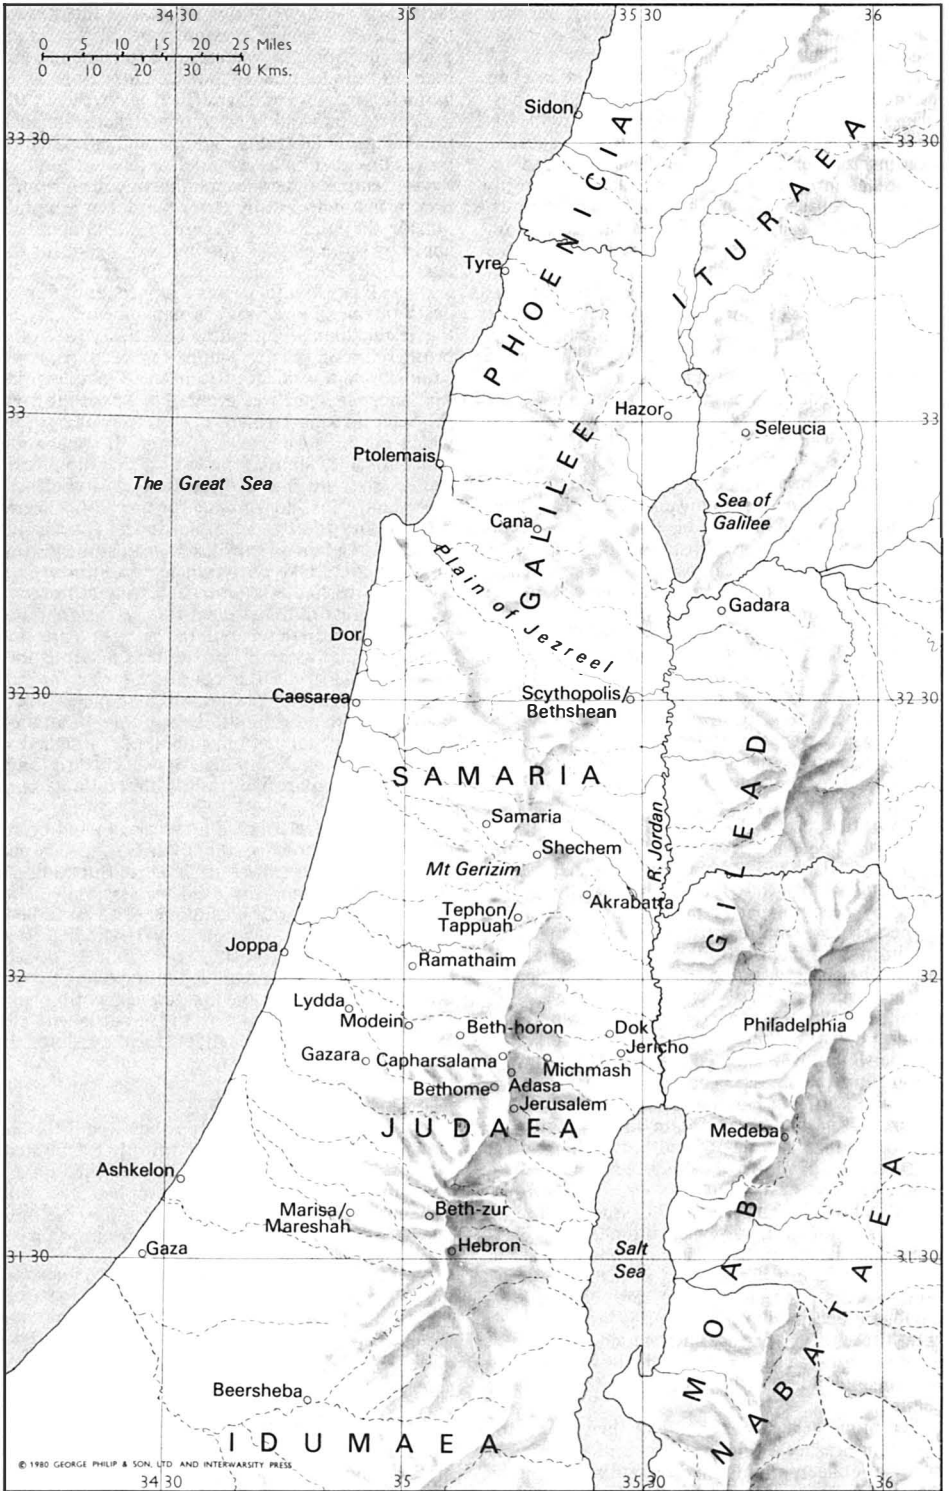

The Seleucid king Antiochus VII, who had tried to reassert his authority over Judaea during Simon's later years, succeeded in imposing tribute on John Hyrcanus for the first few years of his rule. But the death of Antiochus VII in battle with the Parthians in 128 bc brought Seleucid overlordship over Judaea to a decisive end.

VII. The Hasmonaean Dynasty

In the 7th year of John Hyrcanus, then, the independent state of Judaea was firmly established, 40 years after Antiochus IV had abolished its old constitution as an autonomous temple-state within the empire. The devotion of the *h'sidim*, the military genius of Judas and the statesmanship of Simon, together with increasing division and weakness in the Seleucid government, had won for the Jews more (to all outward appearance) than they had lost at the hands of Antiochus IV. No wonder, then, that the early years of independence under John Hyrcanus were looked back to by later generations as a kind of golden age.

It was in the time of John Hyrcanus that the final breach between the majority of the *h'sidim* and the Hasmonaean family came about. John was offended by their objections to his tenure of the high-priesthood, and broke with them. From this time onward they appear in history as the party of the *Pharisees, although it is not certain that they

ISRAEL

Israel in the inter-testamental period.

owed that name (Heb. *p'rušim*, 'separated ones') to the fact of their withdrawal from their former alliance with the Hasmonaeans, as has frequently been supposed. They remained in opposition to the regime for 50 years. Those religious leaders who supported the regime and manned the national council appear about the same time with the name *Sadducees.

John Hyrcanus profited by the growing weakness of the Seleucid kingdom to extend his own power. One of his earliest actions after the establishment of Jewish independence was to invade Samaritan territory and besiege Samaria, which held out for a year but was then stormed and destroyed. Shechem was also captured and the Samaritan shrine on Mt Gerizim was demolished. The Samaritans appealed to the Seleucid king for help, but the Romans warned him not to interfere. The Hasmonaeans, at an early stage in their struggle, had secured a treaty of alliance with the Romans, and this treaty was renewed by John.

To the S of his kingdom John warred against the Idumaeans, conquered them and forced them to accept circumcision and adopt the Jewish religion. He reduced Greek cities in Transjordan and invaded Galilee.

His work in Galilee was continued by his son and successor Aristobulus I (104–103 BC), who forced the subjected Galileans to accept Judaism, as his father had done with the Idumaeans.

According to Josephus, Aristobulus assumed the title 'king' instead of that of 'ethnarch' with which his grandfather and (so far as we know) his father had been content, and wore a diadem in token of his royal estate. No doubt he hoped in this way to enjoy greater prestige among his Gentile neighbours, although his coins designate him, in language more congenial to his Jewish subjects, as 'Judah the high priest'.

Aristobulus died (perhaps of phthisis) after a year's reign and was succeeded by his brother Alexander Jannaeus (103–76 BC), who married his widow Salome Alexandra. A more inappropriate high priest than Jannaeus could hardly be imagined. He did go through the motions of his sacred office on occasions of high ceremony—and did so in a way that deliberately offended the sentiments of many of his most religiously minded subjects (especially the Pharisees). But the master-ambition of his reign was military conquest. His pursuit of this policy brought him many reverses, but by the end of his reign he had brought under his control practically all the territory that had been Israelite in the great days of the nation's history—at a ruinous cost to all that was of value in his people's spiritual heritage.

Greek cities on the Mediterranean seaboard and in Transjordan were his special targets for attack; one after another he besieged and conquered them, showing by his ruthless vandalism how little he cared for the true values of Hellenistic civilization. He modelled his way of life on that of the cruder Hellenistic princelings of W Asia. Feeling against him on the part of many of his Jewish subjects reached such a pitch that, when he suffered a disastrous defeat at the hands of a Nabataean force in Transjordan in 94 BC, they revolted against him and even enlisted the aid of the Seleucid king Demetrius III. But other Jewish subjects of Jannaeus, however much they disliked him, found the spectacle of a Seleucid king being called in to help a revolt against a member of the Hasmonaeans

family too much for their patriotism; they volunteered to support the cause of their hard-pressed king and enabled him to put down the revolt and send the Seleucid contingents packing. The barbarity of the revenge which Jannaeus took against the leaders of the revolt (who evidently included some outstanding Pharisees) was long remembered with horror.

Jannaeus bequeathed his kingdom to his widow, Salome Alexandra, who ruled it as queen regnant for 9 years. She bestowed the high-priesthood on her elder son, Hyrcanus II. In one important respect she reversed the policy of her predecessors; she befriended the Pharisees and paid attention to their counsel throughout her reign.

Her death in 67 BC was followed by civil war between the supporters of the claims of her two sons, Hyrcanus II and Aristobulus II, to succeed to supreme power in Judaea. Aristobulus was a typical Hasmonaeans prince, ambitious and aggressive; Hyrcanus was a nonentity, but was easily manipulated by those who supported his claims in their own interests, among whom the dominating personality was the Idumaeans Antipater, whose father had been governor of Idumaea under Jannaeus.

The civil strife between the two brothers and their respective partisans was halted by the Romans in 63 BC, in circumstances which brought Judaea's short-lived independence under the Hasmonaeans to an end.

VIII. The Roman supremacy

In 66 BC the Roman senate and people sent their most brilliant general at that time, Pompey, to bring to a successful conclusion the war which they had been waging intermittently for over 20 years with Mithridates, king of Pontus, who had carved out an empire for himself in W Asia from the lands of the decadent Seleucid kingdom and neighbouring states. Pompey was not long in defeating Mithridates (who fled to Crimea and committed suicide there); but having done that, he found himself faced with the necessity of reorganizing the political life of W Asia. In 64 BC he annexed Syria as a province of Rome, and was invited by various parties in the Jewish state to intervene in its affairs too and put an end to the civil war between the sons of Jannaeus.

Thanks to Antipater's shrewd appraisal of the situation, the party favouring Hyrcanus showed itself willing to co-operate with Rome, and Jerusalem opened its gates to Pompey in the spring of 63 BC. The Temple, however, which was separately fortified and was held by the partisans of Aristobulus, sustained a siege of 3 months before it was taken by Pompey's forces.

Judaea now became tributary to Rome. She was deprived of the Greek cities which the Hasmonaeans had conquered and annexed, and the Samaritans were liberated from Jewish control. Hyrcanus was confirmed in the high-priesthood and leadership of the nation; but he had to be content with the title of 'ethnarch', for the Romans refused to recognize him as king. Antipater continued to support him, determined to exploit this new turn of events to his own advantage, which (it must be conceded) coincided largely with the advantage of Judaea.

Aristobulus and his family endeavoured time after time to foment rebellion against Rome so as to secure power in Judaea for themselves. For many years, however, these attempts proved abort-

ISRAEL

ive. Successive Roman governors kept a firm grip on Judaea and Syria, because these provinces now lay on the E frontier of the Roman empire, beyond which was the rival empire of Parthia. The strategic importance of this area may be gauged by the number of dominant figures in Roman history who play a part in the history of Judaea in these years—Pompey, who annexed it to the empire; Crassus, who as governor of Syria in 54–53 bc plundered the Jerusalem Temple and many other temples in Syria while collecting resources for a war against the Parthians, but was defeated and killed by them at Carrhae in 53 bc; Julius Caesar, who became master of the Roman world after defeating Pompey at Pharsalus in 48 bc; Cassius, a leader of Caesar's assassins, who as proconsul of Syria from 44 bc proved financially oppressive to Judaea; Antony, who dominated the E provinces of the empire after he and Octavian had defeated Caesar's assassins and their followers at Philippi in 42 bc; and then Octavian himself, who defeated Antony and Cleopatra at Actium in 31 bc and thereafter ruled the Roman world alone as the emperor Augustus. Throughout the vicissitudes of Roman civil and external war Antipater and his family made it their settled policy to support the chief representative of Roman power in the E at any one time, whoever he might be and whichever party in the Roman state he might belong to. Julius Caesar in particular had reason to be grateful for Antipater's support when he was besieged in Alexandria during the winter of 48–47 bc, and he conferred special privileges not only on Antipater himself but on the Jews as well.

This confidence which the Romans learnt to place in Antipater's family was manifested outstandingly in 40 bc, when the Parthians invaded Syria and Palestine and enabled Antigonus, the last surviving son of Aristobulus II, to regain the Hasmonaean throne and reign as king and high priest of the Jews. Hyrcanus II was mutilated so as to be disqualified from ever becoming high priest again. Antipater was now dead, but an attempt was made to seize and liquidate his family. One son, Phasael, was captured and killed, but Herod, the ablest of Antipater's sons, escaped to Rome, where the senate nominated him king of the Jews, at the instance of Antony and Octavian. It was his task now to recover Judaea from Antigonus (who was left in peace by the Roman commander in Syria when the Parthian invaders were driven out) and to rule his kingdom in the interests of the Romans, as their 'friend and ally'. The task was not easy, and its successful completion in 37 bc, with the storming of Jerusalem after a siege of 3 months, secured for Herod a bitter ill-will on the part of his new subjects which no effort of his could remove. Antigonus was sent in chains to Antony, who ordered him to be executed. Herod tried to legitimate his position in Jewish eyes by marrying Mariamne, a Hasmonaean princess, but this marriage brought him more trouble, not less.

Herod's position was precarious for the first 6 years of his reign. Although Antony was his friend and patron, Cleopatra longed to incorporate Judaea in her kingdom, as her earlier Ptolemaic ancestors had done, and tried to exploit her ascendancy over Antony to this end. The overthrow of Antony and Cleopatra in 31 bc, and Herod's confirmation in his kingdom by the conqueror, Augustus, brought him some relief externally, but domestic peace was denied him both in his family

circle and in his relations with the Jewish people. Yet he governed Judaea with a firm hand, serving the interests of Rome even better than a Roman governor could have done. (For further details of his reign, *HEROD, I.)

When Herod died in 4 bc his kingdom was divided among three of his surviving sons. Archelaus governed Judaea and Samaria as ethnarch until AD 6; Antipas governed Galilee and Peraea as tetrarch until AD 39; Philip received as a tetrarchy the territory E and NE of the Sea of Galilee which his father had pacified in the emperor's interests, and ruled it until his death in AD 34. (*HEROD, 2, 3; *PHILIP, 2.)

Antipas inherited a full share of his father's political acumen, and continued the thankless task of promoting the Roman cause in his tetrarchy and the surrounding regions. Archelaus, however, had all his father's brutality without his genius, and soon drove his subjects to the point where they petitioned the Roman emperor to remove him so as to prevent a revolt from breaking out. Archelaus was accordingly deposed and banished, and his ethnarchy was reconstituted as a Roman province of the third grade. In order that its annual yield of tribute to the imperial exchequer might be assessed, the governor of Syria, *Quirinius, held a census in Judaea and Samaria. This census provoked the rising of *Judas the Galilean, and, while the rising was crushed, its ideals lived on in the party of the *Zealots, who maintained that the payment of tribute to Caesar, or to any other pagan ruler, was an act of treason to Israel's God.

After the census, Judaea (as the province of Judaea and Samaria was called) received a prefect as governor. These prefects were appointed by the emperor and were subject to the general supervision of the governors of Syria. The early Roman prefects exercised the privilege of appointing the high priest of Israel—a privilege which, since the end of the Hasmonaean dynasty, had been exercised by Herod and Archelaus after him. The prefects sold the sacred office to the highest bidder, and its religious prestige was naturally very low. By virtue of his office the high priest presided over the *Sanhedrin, which administered the internal affairs of the nation.

Of the earlier prefects the only one whose name is well known is Pontius *Pilate, whose harsh and stubborn character is recorded in the pages of Josephus and Philo—not to mention the part he plays in the NT narrative. His construction of a new aqueduct to provide Jerusalem and the Temple with a better water-supply illustrates the material benefits of Roman rule; his flouting the religious scruples of the Jews by insisting on defraying the expense of it from the sacred Temple-fund illustrates an aspect of Roman rule which was largely responsible for the revolt of AD 66—the insensitivity of many of the governors to local feeling.

For a short time, between the years 41 and 44, Judaea enjoyed a welcome relief from administration by Roman prefects. Herod Agrippa I, a grandson of Herod the Great and Mariamne, to whom the emperor Gaius had given Philip's former tetrarchy as a kingdom in AD 37 (augmenting it by the addition of Galilee and Peraea in AD 39, after the deposition and banishment of Antipas), received Judaea and Samaria as further extensions of his kingdom from the emperor Claudius in AD 41 (*HEROD, 4). Because of his descent from the Hasmonaean (through Mariamne) he was popu-

lar with his Jewish subjects. But his sudden death in AD 44, at the age of 54, meant that the province of Judaea (now including Galilee as well as Samaria) reverted to rule by Roman governors, now called procurators, since Agrippa's son, Agrippa the Younger (*HEROD, 5), was too young to be entrusted with his father's royal responsibility. One concession was made to Jewish sentiment, however: the privilege of appointing the high priest, which Agrippa had inherited from the prefects who preceded him, did not go back to the procurators who followed him, but was given first to his brother Herod of Chalcis, and then (after the death of that Herod in AD 48) to Agrippa the Younger.

IX. End of the second commonwealth

During the 20 years or so that followed the death of Herod Agrippa I, troubles multiplied in Judaea. The people in general found the re-imposition of procurators all the more irksome after their brief spell of government by a Jewish king; and the procurators themselves did little to conciliate the sentiments of their Jewish subjects. There was a succession of risings stirred up by pseudo-Messiahs such as *Theudas, who was killed by a cavalry detachment sent against him by the procurator Fadus (AD 44-46), or by Zealot leaders such as James and Simon (two sons of Judas the Galilean), crucified by the next procurator Tiberius Julius Alexander (AD 46-48). The fact that Alexander was a renegade Jew, scion of an illustrious Jewish family of Alexandria, did nothing to ingratiate him with the Jews of Judaea.

It was during the procuratorships of Fadus and Alexander that Judaea was hard hit by the famine of Acts 11:28. Josephus records how Helena, the queen-mother of Adiabene, E of the Tigris, bought grain in Egypt and figs in Cyprus at this time for the relief of the famine-stricken people of Judaea. The royal family of Adiabene were the most distinguished Jewish proselytes of the period; some of them actually fought on the Jewish side in the war against Rome which broke out in AD 66.

Under the procuratorship of *Felix disaffection increased in Judaea. Felix set himself energetically to rid the province of insurgent bands, and his severe measures against them were attended by temporary success, but they alienated large numbers of the population, in whose eyes the insurgents were not criminals but patriots.

The closing years of Felix's procuratorship were attended by fierce riots between the Gentile and Jewish inhabitants of Caesarea, arising out of a dispute about civic privileges. Felix sent the leaders of both parties to Rome to have the matter decided by the emperor, but was himself recalled and replaced in the procuratorship by Festus (AD 59). The Caesarean dispute was decided in favour of the Gentiles, and Jewish resentment at the decision, coupled with the Gentiles' malicious exploitation of their victory, was one of the factors in the explosion of AD 66.

*Festus was a relatively just and mild governor, but he died in office in AD 62, and his two successors, Albinus and Florus, by their persistent offending of Jewish national and religious sentiment, played into the hands of the anti-Roman extremists. The last straw was Florus' sacrilegious seizure of 17 talents from the Temple treasury. This provoked a riot which was put down with much bloodshed. The moderate elements in the nation, aided by the younger Agrippa, counselled re-

straint, but the people were in no mood to listen to them. They cut the communications between the fortress of Antonia and the Temple courts, and the captain of the Temple, who was leader of the war-party in Jerusalem, formally renounced the imperial authority by putting an end to the daily sacrifice for the emperor's welfare.

Matters had now escaped Florus' control, and even the intervention of Cestius Gallus, governor of Syria, with stronger military forces than Florus had at his disposal, proved ineffective. Gallus had to withdraw, and his army suffered heavy losses on its retreat through the pass of Beth-horon (November AD 66).

This success, as it seemed to the insurgent Jews, filled them with false optimism. The extremists' policy appeared to have been vindicated: Rome could not stand before them. The whole of Palestine was placed on a war footing.

But Vespasian, who was entrusted with the putting down of the revolt, set about his task methodically. In 67 he crushed the rebellion in Galilee. Some of the leaders of the Galilean revolt, however, escaped to Jerusalem, and their arrival there added to the internal strife which racked the city during its last years and months. In the summer of 68 Vespasian was approaching Jerusalem itself when news came of Nero's deposition and death at Rome. The ensuing civil war at the heart of the empire nerved the defenders of Jerusalem with fresh hope; it looked from their standpoint as though Rome and the empire were on the verge of dissolution and Daniel's 5th monarchy was about to be established on their ruins.

From Caesarea, Vespasian watched the progress of events at Rome. On 1 July, AD 69, he himself was proclaimed emperor at Alexandria by the governor of Egypt (the same apostate Jew, Alexander, who had earlier been procurator of Judaea); the example of Alexandria was swiftly followed in Caesarea and Antioch and by the armies in most of the E provinces. Vespasian returned to Rome to occupy the imperial throne, leaving his son Titus to complete the suppression of the revolt in Judaea. By the end of AD 69 all Judaea had been subdued except Jerusalem and three strongholds overlooking the Dead Sea.

Jerusalem was invested in the spring of AD 70. By May half the city was in the hands of the Romans, but the defenders refused to accept terms of submission. On 24 July the fortress of Antonia was stormed; 12 days later the daily sacrifices ceased in the Temple, and on 29 August the sanctuary itself was set on fire and destroyed. Four weeks later the whole city was in Titus' hands. It was razed to the ground, except for part of the W wall, with three towers of Herod's palace on that wall, which provided headquarters for a Roman garrison. The last centre of revolt to be crushed was the almost impregnable fortress of Masada, SW of the Dead Sea, where a Zealot force held out until the spring of AD 74 and then committed mass-suicide in preference to being captured.

Judaea was reconstituted as a province under its own imperial legate, directly responsible to the emperor and in no way subordinate to the imperial legate of Syria; unlike the procurators, the imperial legates of Judaea had legionary forces under their command. The former Temple tax, which Jews throughout the world had paid for the maintenance of the house of God at Jerusalem, was still exacted, but it was now diverted to the

ISRAEL

maintenance of the temple of Jupiter on the Capitoline hill in Rome.

With the disappearance of the Temple hierarchy and the Sanhedrin as formerly organized, the chief internal authority in the Jewish nation passed to a new Sanhedrin of rabbis, led at first by Yohanan ben Zakkai, a teacher of the school of Hillel. This religious court exercised its control through the synagogues and began the work of codifying the traditional body of oral law which was in due course committed to writing in the Mishnah towards the end of the 2nd century AD. It was in large measure due to the action of Yohanan ben Zakkai and his colleagues and their successors that Israel's national and religious identity survived the downfall of the Temple and the Second Jewish Commonwealth in AD 70 (*TALMUD AND MIDRASH.)

F.F.B.

ISRAEL OF GOD. Paul's statement that 'not all who are descended from Israel belong to Israel' (Rom. 9:6) is in line with the prophetic insistence that the true people of God, those who are worthy of the name of Israel, may be but a relatively small 'remnant' of faithful souls within the nation of Israel. In the NT the concept of such a remnant appears in the preaching of John the Baptist, who insists that descent from Abraham is valueless in itself (Mt. 3:9 = Lk. 3:8). Jesus' calling of disciples around himself to form the 'little flock' who were to receive the kingdom (Lk. 12:32; cf. Dn. 7:22, 27) marks him out as the founder of the new Israel; he explicitly designated the twelve apostles as judges of 'the twelve tribes of Israel' in the new age (Mt. 19:28; Lk. 22:30). The 'little flock' was to be augmented by the accession of 'other sheep' who had never belonged to the Jewish fold (Jn. 10:16).

Whether the expression 'the Israel of God' in its one appearance in the NT (Gal. 6:16) denotes believing Jews only, or believing Jews and Gentiles without distinction, is disputed; the latter is more probable, especially if the expression is to be construed in apposition to 'all who walk by this rule'. But that the community of believers in Jesus, irrespective of their natural origin, is looked upon as the new Israel throughout the NT is clear. They are 'the twelve tribes in the dispersion' (Jas. 1:1), 'the exiles of the dispersion' (1 Pet. 1:1), who are further designated, in language borrowed from OT descriptions of Israel, as 'a chosen race, a royal priesthood, a holy nation, God's own people' (1 Pet. 2:9).

But the nucleus of this new Israel is Jewish (Rom. 11:18). And while the greater proportion of 'Israel according to the flesh' is at present prevented, by a partial and temporary blindness, from recognizing their ancestral hope in Jesus, the time is coming when the veil will be removed from their eyes (2 Cor. 3:16) and they will be re-established by

faith as members of the beloved community: their present estrangement will last only 'until the full number of the Gentiles come in, and so all Israel will be saved' (Rom. 11:25ff.).

F.F.B.

ISSACHAR. 1. The fifth son of Jacob and Leah and the ninth son of Jacob (Gn. 30:18; 35:23). The name may derive from a compound of Heb. *īś*, 'man', and *sākār*, 'wages', hence 'a hired worker', although others suggest a less likely connection with a verbal form, meaning, 'May (God) show mercy'. Issachar's tribal portion fell between Mt Gilboa and the hills of Lower Galilee, at the E end of the Valley of Jezreel, but the boundaries cannot be drawn precisely. In some of the lists (e.g., Jdg. 1:30) Issachar is not mentioned and may have been included with Zebulun (as Simeon was incorporated with Judah). Manasseh also seems to have expanded N into the territory of Issachar. Sixteen cities and their associated villages were assigned to Issachar (Jos. 19:17-23; cf. 17:10-11).

The close connection between Zebulun and Issachar is shown in their inclusion in a common blessing (Dt. 33:18-19). The mountain mentioned is undoubtedly Tabor, where there was a common sanctuary.

Issachar was involved in the campaign led by Deborah, who probably came from this tribe (Jdg. 5:15), although it is not mentioned in the prose account (ch. 4). The battle began in Issachar's territory and completely broke the Canaanite domination of the low-lying areas. The minor judge, Tola, was a man of Issachar (Jdg. 10:1) as was also the usurper, Baasha (1 Ki. 15:27). Issachar was one of the twelve administrative districts set up by Solomon (1 Ki. 4:17).

The blessing of Jacob (Gn. 49:14-15) has been viewed as evidence that part of Issachar was resident in the land in the Amarna period, maintaining its position by giving a certain amount of compulsory labour to its Canaanite overlords. But the implied reproach may be merely a statement of the fact that Issachar's material prosperity made it submissive and effete. At the time of David, however, the tribe had gained a reputation for wisdom (1 Ch. 12:32), a fact which re-emerges in the Talmudic statement that the wisest members of the Sanhedrin came from Issachar.

2. The seventh son of Obed-edom, a Levitical gatekeeper in the Davidic period (1 Ch. 26:5).

A.E.C.

ITALY (Gk. *Italia*). By the middle of the 1st century this name had come to have substantially its modern geographical meaning. 'All roads led to *Rome', and even before the time of Christ many Jews had resorted to Italy, especially to the metropolis. It was because the emperor Claudius had carried out a purge against the Jews that Paul met

*Aquila and Priscilla (Acts 18:2). Italy was the apostle's destination when after his appeal to Caesar he and other prisoners embarked at Caesarea on what was to be his most famous journey (Acts 27:1, 6). In Heb. 13:24 'those who come from Italy' greet the addressees. J.D.D.

ITHAMAR (Heb. *'itāmār*). The meaning of the name is uncertain, but may possibly be 'land of palms'. The youngest of Aaron and Elisheba's four sons (Ex. 6:23), Ithamar was ordained to the priesthood (Ex. 28:1) and directed the building of the tabernacle (Ex. 38:21). In the apostasy of Nadab and Abihu he remained faithful in all but the matter of the sin-offering (Lv. 10). He was placed over the Gershonites and Merarites (Nu. 4:28, 33). For evidence that Eli was a descendant of Ithamar, see 1 Sa. 14:3; 22:9; 1 Ch. 24:3. A man called Daniel, one of his descendants, is named among the returning exiles (Ezr. 8:2).

G.W.G.

ITHIEL. Probably 'God is with me' (correcting Heb. pointing to *'ittiēl*). 1. A Benjamite ancestor of Sallu who resided in Jerusalem in Nehemiah's time (Ne. 11:7). 2. A man mentioned with Ucal in Pr. 30:1. An altering of the word-divisions results in the more satisfactory rendering: 'I have wearied myself, O God (*lā'īl 'ēl*), and am consumed' (RVmg.; NEB; BDB). D.A.H.

ITHRA (Heb. *yitrā*, 'abundance'). Husband of Abigail, David's sister, and father of Amasa, one of David's generals. Though called an Israelite in 2 Sa. 17:25, the marginal reading and 1 Ch. 2:17 describe him as an Ishmaelite and give his name as 'Jether' (cf. 1 Ki. 2:5). J.D.D.

ITHRITE. 'Ithrites' was the name given to one of the families descended from Kiriath-jearim (1 Ch. 2:53). Two members of David's bodyguard, Ira and Gareb, came from this family (2 Sa. 23:38; 1 Ch. 11:40) and may have originated from the town of *Jattir (1 Sa. 30:27). R.A.H.G.

ITTAI (Heb. *'ittay*, ? '(God) is with me'). 1. The leader of 600 men from Gath, who joined David shortly before Absalom's rebellion. His fidelity was such that he refused to leave the king when he advised him to return (2 Sa. 15:19–22). 'Gittite' indicates that he was a Philistine; he was probably a soldier of fortune who found in David a leader worthy of his loyalty. With Joab and Abishai, he was subsequently one of David's 3 generals (2 Sa. 18:2).

2. A Benjamite. One of the 'thirty' of David's mighty men (2 Sa. 23:29; 'Itai' in 1 Ch. 11:31).

J.G.G.N.

ITURAEA (Gk. *Itouraia*, Lk. 3:1). The name, mentioned in conjunction with *Trachonitis, almost certainly comes from Heb. *y'tūr* (AV 'Jetur'), a son of Ishmael (Gn. 25:15–16; 1 Ch. 1:31), mentioned also as a tribe at war with the Israelites E of the Jordan (1 Ch. 5:19). Little or nothing is known of them thereafter until the time of the Jewish king

Aristobulus I (105–104 BC), who is recorded as having fought against the Ituraeans and taken from them a portion of their land (Jos., *Ant.* 13. 318). Thereafter frequent allusion is made to them by classical writers (Josephus, Strabo, Pliny, Dio Cassius, etc.). Sometimes they are called Syrians, sometimes Arabians.

At the time of the Roman conquest they were known as a wild robber tribe especially proficient in the use of the bow, but not associated with any precisely defined geographical location. It was part of the territory ruled by Herod the Great, after whose death in 4 BC the kingdom was partitioned, and certain lands including Trachonitis and what was called 'the house of Zeno (or Zenodorus) about Paneas' formed the tetrarchy of Philip (*TETRARCH). If, as seems likely, this latter section was inhabited by Ituraeans, it may have been known as Ituraea, for migratory tribes frequently gave their name to their new home. Josephus, in defining the limits of Philip's sovereignty, does not specifically mention Ituraea—some would say because it was indistinguishable from Trachonitis (*Ant.* 17. 189).

Is Luke's reference, then, to be understood as a noun or as an adjectival form? Does he intend the place or the people? No certainty is possible. Place-names of this region and time are notoriously elastic and liable to corruption, and overlapping is frequently found. The most we can safely say is that it was, in W. Manson's words (*Luke in MNTC*), 'a hilly country in the Anti-Lebanon range, inhabited by roving Arabs'.

Caligula gave it to Herod Agrippa I. When the latter died it was incorporated into the province of Syria under procurators.

IVA. A town conquered by the Assyrians in Isaiah's time, illustrating the certain defeat of Samaria (2 Ki. 18:34; 19:13; Is. 37:13). Probably Ava of 2 Ki. 17:24. Imm ('Aya) on the Orontes and 'Ama in Elam are among suggested locations. D.J.W.

D.W.B.

IVAH. A foreign town conquered by the Assyrians during the time of Isaiah and used as an illustration of the inevitability of the defeat of Samaria (2 Ki. 18:34; 19:13; Is. 37:13). Probably the Ava of 2 Ki. 17:24. The location is unknown. D.W.B.

IVORY (Heb. *šēn*, 'tooth', or *šēnabbīm* (1 Ki. 10:22; 2 Ch. 9:21) thought by some to be 'tooth of elephant' (so LXX), but possibly meaning 'ivory (and) ebony' as in Ezk. 27:15; cf. Akkad. *šin piri*).

Ivory was a form of wealth and a mark of luxurious and fine goods (1 Ki. 10:18–22; Rev. 18:12, Gk. *elephantinos*). It was used for thrones and sometimes overlaid with gold (1 Ki. 10:18), for couches (Am. 6:4), and for furnishing and paneling rooms or palaces, hence Ahab's 'house of ivory' in *Samaria (1 Ki. 22:39; cf. Ps. 45:8) condemned by Amos (3:15). Its commonest use was in the manufacture of small objects and in composite models, where it simulated human flesh and thus was employed figuratively in poetry (Ct. 5:14; 7:4;

IVORY

in the latter, 'tower of ivory' may, however, be a reference to a specific locality).

Most ivory in use in Syria and Palestine came from Syrian (so-called 'Asiatic') elephants (*Elephas maximus*) which inhabited the upper Euphrates until hunted to extinction in the late 1st millennium BC. Other sources were India, from which tusks (*qarnōt šēn*) were imported by ocean-going ships (2 Ch. 9:17, 21) to Babylonia (Ur) by Phoenicians who decorated their vessels with plaques of ivory (Ezk. 27:6), or overland from the Nilotic Sudan via Dedan in central Arabia (v. 15). Five tusks were found in the excavations at *Alalakh (Syria).

In the early 3rd millennium ivory was used for carving small figurines (Beersheba area), animal heads (Jericho), or for silhouettes for inlay, in the early Mesopotamian fashion, in wooden objects (El-Jisr). By the following millennium the trade flourished. Tusks are shown on Egyp. paintings and Assy. sculpture as valued trophies of war. The Syro-Phoenician trade and guilds of ivory-workers under Egyptian influence sought to meet a growing export market to Assyria, making use of inlay, appliqué, ajouré, veneer and fretwork techniques. Furniture, especially chairs, beds, caskets and round boxes (pyxides), are found, some showing

foreign influences in design. Remarkable caches of ivories have been recovered from Ras Shamra and Megiddo (c. 1200 BC) and Nimrud (*CALAH) in Assyria (c. 700 BC). In the Israelite period ivories from Samaria and Hazor attest its use for ladies' hair combs, unguent vases, flasks and elaborate spoons supported by figures of maidens as well as furniture. See also *PHOENICIA, *ARTS AND CRAFTS.

IYE-ABARIM, a stopping-place on the Exodus journey on the borders of Moab (Nu. 21:11; 33:44-45). Iye-abarim (Heb. 'iyē hā"bārīm, ruins of Abarim, or of the regions beyond) is abbreviated in Nu. 33:45 AV to Iim. Abel identifies it with the ancient site of Maḥaiy to the SE of Moab, Glueck places it farther W, and du Buit chooses a site near the river Arnon. Its position is still debatable. J.A.T.

J

JAAR (Heb. *ya'ar*, 'forest') in the OT usually means 'forest', but once only it may be a proper name (Ps. 132:6) as a poetical abbreviation for 'Kiriath-jearim (city of forests). The allusion in his psalm is to the bringing of the ark to Jerusalem from Kiriath-jearim, where it had lain for 20 years or more after it was recovered from the Philistines (1 Sa. 7:1-2; 1 Ch. 13:5). Some take the word here, as elsewhere, to mean forest and refer it' to the oath in the preceding verses. M.A.M.

JAAZANIAH (Heb. *ya'azanyah(u)*, 'Yahweh hears'). 1. The Judaeen army-commander, son of Hoshaiiah, who supported Gedaliah at Mizpah (2 Ki. 25:23; Je. 40:8). Jezaniah (Je. 40:8) may be the same as the brother of Azariah (Je. 43:2, LXX). A seal found at Mizpah (Tell en-Nasbeh) inscribed 'Ja'azaniah, servant of the king' may be ascribed to this man, but the name was common, occurring on ostraca from Lachish (1) and Arad (39).

The imprint of an onyx scaraboid seal inscribed in Old Hebrew script (as described in the accompanying article). c. 600 BC.

- 2. Son of Jeremiah, a Rechabite leader (Je. 35:3).
- 3. Son of Shaphan, an Israelite elder, seen in a vision by Ezekiel (8:11) offering incense to idols in Jerusalem. 4. Son of Azur, seen by Ezekiel at the E gate of the Temple (Ezk. 11:1). D.J.W.

JABAL. A son of Adah, wife of Lamech, and ancestor of those 'who dwell in tents and have cattle (*šimiqneh*)', or perhaps better 'who dwell in tents and places of reeds' (*m* [local] + *qāneh*, 'reed'). See Gn. 4:20. J.D.D.

JABBOK. A river flowing W into the river Jordan, some 32 km N of the Dead Sea. It rises near Amman (*RABBAH) in Jordan and in all is over 96 km long. It is today called the Wadi Zerqa. It

marked a boundary line between Ammonite and Gadite territory (Dt. 3:16), once the Israelites had defeated the Amorite king Sihon S of the Jabbok (Nu. 21:21ff.). It was also the river forded by Jacob (Gn. 32:22) on the occasion of his wrestling with the angel and subsequent change of name. There may well be a play on words here: 'Jabbok' is in Heb. *yabbōq*, while '[and] . . . wrestled' is [way] *yē'ābēq*. In the unvowelled text there is just an extra letter, an aleph, in the latterword. D.F.P.

JABESH-GILEAD (Heb. *yābēš gil'ād*). An Israelite town E of the Jordan which kept out of the war against Benjamin and suffered severe reprisals (Jdg. 21). Here Saul proved his kingship, routing the Ammonites who were besieging it (1 Sa. 11). The citizens rescued Saul's body from the walls of Beth-shan after the battle of Gilboa (1 Sa. 31; 1 Ch. 10).

Tell abu-Kharaz, on the N side of the Wadi Yabis where it reaches the plain, is the probable site (N. Glueck, *BASOR* 89, 91, 1943; *The River Jordan*, 1946, pp. 159-166). This isolated hill, 3 km from the Jordan and 15 km from Beth-shan, dominates the area and was heavily fortified in Israelite times. Earlier writers located Jabesh smaller sites upstream, but only Tell el-Maqlub is pre-Roman; this Glueck identifies with Abel-meholah. M. Noth (*ZDPV* 69, 1953, p. 28) disputes some of Glueck's arguments, but the fact that Tell abu-Kharaz exists makes Maqlub an unlikely location for Jabesh. J.P.U.L.

JABEZ (Heb. *yabēs*, 'he makes sorrowful'). 1. A city, evidently in Judah, inhabited by 'the families of the scribes' (1 Ch. 2:55). 2. The head of a family of the tribe of Judah (1 Ch. 4:9-10), an 'honourable' man whose prayer God answered. For discussion of a play on the Heb. words here, see C. F. Keil, *Chronicles*, p. 88; J. M. Myers, *1 Chronicles*, 1965, pp. 28f. J.D.D.

JABIN (Heb. *vābīn*, possibly '[God] perceives'). 1. A king of *Hazor, leader of an alliance of N princes defeated in battle by Joshua, who afterwards slew Jabin (Jos. 11:1-14). 2. Another king of Hazor (called 'king of Canaan' in Jdg. 4:2) who for 20 years 'cruelly oppressed' the Israelites, who had been reduced thus to vassalage because of idolatry. Liberation came when Barak and Deborah defeated Jabin's general *Sisera (Jdg. 4:3-16), a notable victory immortalized in the Song of Deborah (Jdg. 5) and leading to the destruction of Jabin (Jdg. 4:23-24), which is briefly referred to also in Ps. 83:9. J.D.D.

JABNEEL (Heb. *yabn'el*, 'God (El) causes to build'), a name, of which a comparable form *Jabn-ilu* occurs in the Amarna letters, which is used of two places in the Bible.

1. A city on the SW boundary of Judah (Jos. 15:11) and probably to be identified with Jabneh, a Philistine city which was captured by Uzziah (2 Ch. 26:6). Jabneh was called Jamnia in the Gk. and Rom. periods, and it was at this city that the Sanhedrin was re-formed after the destruction of Jerusalem in AD 70.

2. A town of Naphtali (Jos. 19:33), possibly to be identified with modern Khirbet Yamma (see *NEAEHL*, pp. 1515-1516).

BIBLIOGRAPHY. M. Avi-Yonah, *Gazetteer of Roman Palestine* (Qedem, 5), 1976, p. 67; S. Z. Leiman, *The Canonization of Hebrew Scripture*, 1976, pp. 120-124. T.C.M.

JACHIN and BOAZ. The names of the decorated bronze pillars or columns which flanked the entrance to the *Temple of Solomon in Jerusalem (1 Ki. 7:21; 2 Ch. 3:15-17). When Nebuchadrezzar captured Jerusalem in 587 BC, they were broken up and taken to Babylon (2 Ki. 25:13).

I. Description and construction

The columns were 18 cubits high (c. 9 m) and 12 cubits in circumference (c. 1 m diameter) and were topped with capitals which were 5 cubits high (c. 2.5 m) (1 Ki. 7:15-16). The Chronicler gives the height as 35 cubits (2 Ch. 3:15) which is thought to indicate the combined height of both columns allowing 1 cubit for inserting the columns into their bases and capitals. At the time of the destruction of the Temple the capitals are said to be 3 cubits high (2 Ki. 25:17); this reduction in height may have occurred when Jehoash (2 Ki. 12:6ff.) or Josiah (2 Ki. 22:3ff.) undertook renovations in the Temple (cf. Je. 52:22). This is preferable to the view that the earlier figure was mis-read or that there has been an error in the transmission of the text.

Various attempts have been made to visualize the decoration as it is described (1 Ki. 7:17-22, 41-42; Je. 52:22-23). It would appear that the capital had four opened and inverted lotus petals (*šusān*, rsv 'lily-work') 4 cubits in width (*bā'ūlām*, 1 Ki. 7:19, rsv 'in the vestibule', so Yeivin) and above this an inverted bowl (*gullā*). This bowl or pommel was encircled by a network (*š'ḥāḳā*) fringed with two rows of pomegranates.

The columns and capitals were cast by Hiram, a craftsman from Tyre (1 Ki. 7:13-14), who worked in the ground between Succoth and Zarethan (1 Ki. 7:46). They were hollow (Je. 52:21) and may have been cast with a technique similar to that used by Sennacherib when he had large mythical beasts cast in bronze (*ARAB*, 2, 1927, p. 169; also see Underwood, *Man* 58, 1958, p. 42), or some method akin to the casting of mediaeval cannon barrels may well have been adopted for this immense task.

II. Purpose

Although it has been suggested that the columns supported the roof of the porch, the OT description includes them with the furnishings of the Temple rather than with the architectural element and says that they were placed 'at' or 'near' (1 Ki. 7:21) and 'before' (2 Ch. 3:17) the porch. There is considerable evidence for free-standing columns at

the entrances of temple sanctuaries. Bases for columns have been found in 13th-century BC temples at *Hazor, and Kamid el-Loz in a Phoenician temple at Kition and an Israelite temple at *Arad, but whether these were free-standing is impossible to determine. The appearance of the columns can be gauged from clay model shrines found in Palestine and Cyprus (13th-9th centuries BC) and from ivories found at Arslan Tash and Nimrud. Impressions of temples on Greek and Roman coins from Cyprus and Phoenicia and descriptions made by Herodotus (2. 44), Strabo (3. 4. 170) and Lucian (*de dea Syria* 15. 27) reveal that pairs of columns continued to be placed at the entrances of temples until at least the 2nd century AD.

While it is clear that the columns did not serve an architectural function, any religious significance that they may have had is obscure. They may indicate the divine presence, as did the pillars of fire and smoke during the desert wanderings (Ex. 33:9; Dt. 31:15). Various stones and pillars in use from prehistoric times to the present seem to have a similar portent.

III. Names

The names of the columns may enshrine the memory of David's ancestry through his mother (Jachin occurs as a Simeonite name [Nu. 26:12] and in a priestly family [1 Ch. 24:1]) and through the paternal line (*BOAZ). However, a more likely theory is that the names may be the first words of oracles giving power to the Davidic dynasty: perhaps 'Yahweh will establish (*yāqīn*) thy throne for ever' and 'In the strength (*b'ōz*) of Yahweh shall the king rejoice' or something similar.

C.J.D.

JACOB. It is fitting that almost a quarter of the book of Genesis should be devoted to the biography of Jacob, the father of the chosen people. Written documents of the 2nd millennium BC have provided extensive material corroborating the background to the stories of Gn. 26-50. While this does not prove the existence of the Patriarch or the historicity of the narrative, it does show that they are not late compositions from the time of the Exile with imaginative and anachronistic details. Rather it suggests that the stories were recorded in writing at an early date (*PATRIARCHAL AGE). A collection of stories with details apparently discrediting the hero is unlikely to be centred on a mythical figure.

I. Date

The exact limits of the lifetime of Jacob cannot be fixed because of a lack of explicit correlations between the biblical accounts and the surviving secular records (*CHRONOLOGY OF THE OLD TESTAMENT). Evidence at present available suggests approximately the 18th century BC. Such a date would place his settlement in Goshen, not far from the Egyptian court, early in the period of the Hyksos domination, centred on Tanis (*EGYPT, *ZOAN). This date also allows *Abraham's life to be placed in the 20th and 19th centuries BC, as suggested by biblical and archaeological evidence.

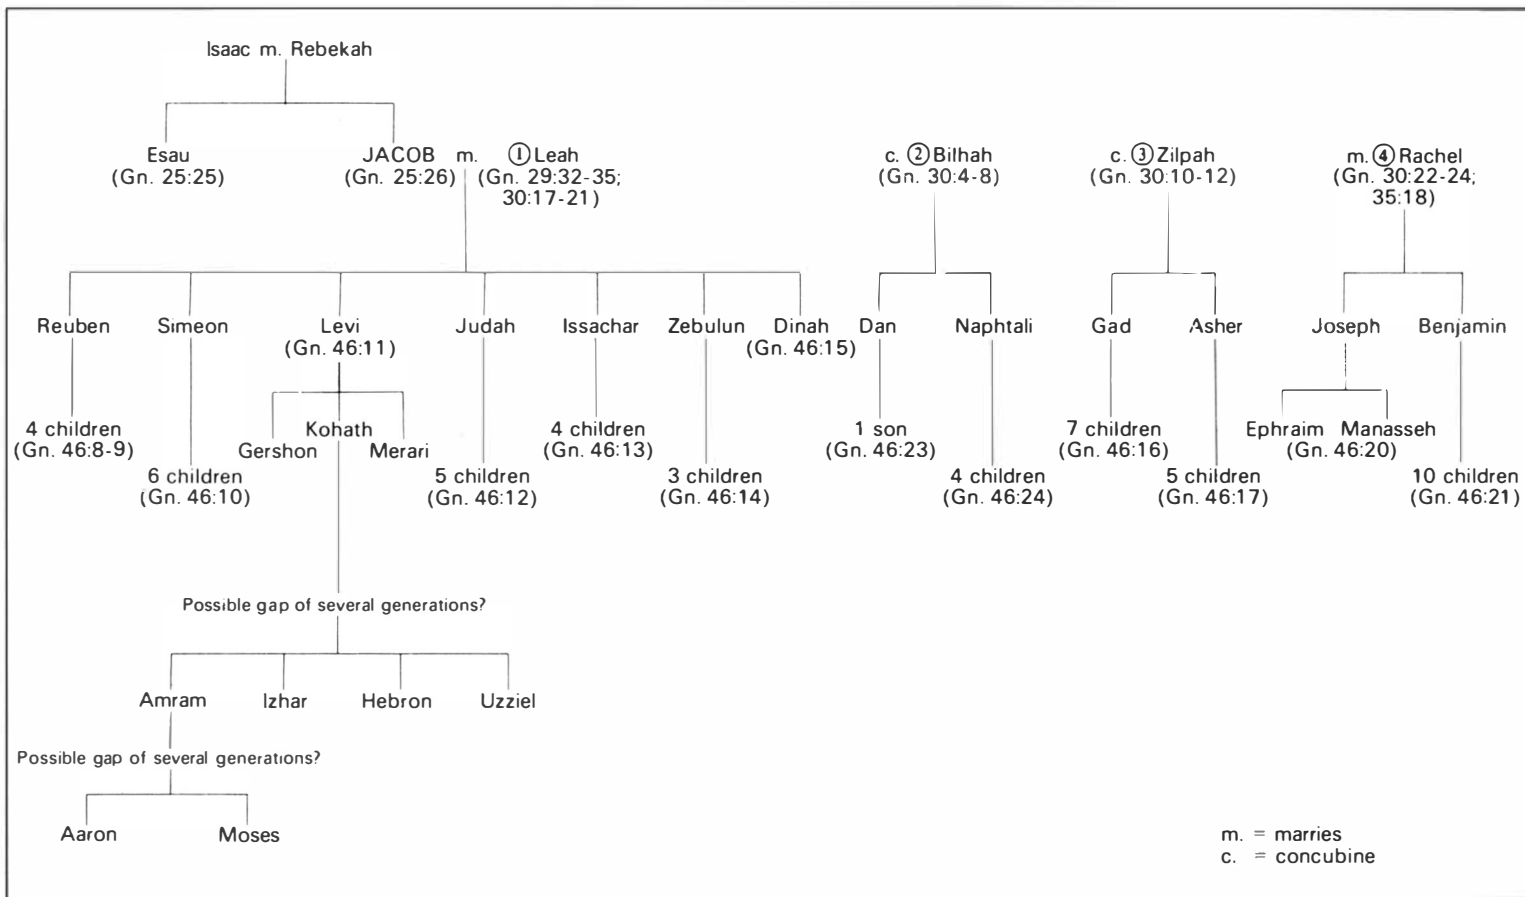

Palestine and Syria in the time of Jacob.

II. Biography

Jacob was born clutching the heel (Heb. *'ēqēb*) of his elder twin Esau (Gn. 25:26), so the name given to him was 'he clutches' or, on another plausible interpretation, 'he clutched' (Heb. *ya'qōb*). This may have been intentional punning on a current name *ya'qōb-il*, 'may God protect' or 'God has protected'. Cuneiform and Egyptian documents of the period contain personal names from the same root (*'qb*), including some of parallel form, in use among people of the W Semitic group (*AMORITES).

Jacob 'supplanted' (this is a nuance developed from 'to take by the heel, to overtake', Heb. root *'qb*) his brother, first obtaining the birthright of the elder son by taking advantage of his brother's hunger and then beguiling Isaac into giving to him the blessing which was by custom that of the first-born. The first-born son normally inherited more of the paternal estate than each of the other children (twice as much later, cf. Dt. 21:16). As well as the special legacy, it seems that the chief heir was marked out for a social and religious position as

Jacob and his descendants.

head of the family. The bestowal of a blessing by the father, and the possession of the household gods, probably symbolized this. These customs may be deduced from contemporary deeds of adoption and legal records as well as from the biblical accounts. The brief narrative of the sale of Esau's birthright for a meal does not tell how the exchange was confirmed or whether it was recorded officially. A document of the 15th century BC records the sale of the patrimony of a man in Assyria. A document from the same milieu shows that the oral promise of a man to his son could be upheld in a court of law (see *ANET*, p. 220). So Isaac's blessing was irrevocable, as the text emphasizes (Gn. 27:33f.). Thus Jacob became the bearer of God's promise and the inheritor of Canaan (cf. Rom. 9:10-13). Esau received the less fertile region, which became known as *Edom. Rebekah, the mother, obtained Isaac's permission for Jacob to flee from Esau's anger to her home in *Paddan-aram (Gn. 28:1ff.). She used as excuse the need for Jacob to marry a member of the same clan and so avoid mixed marriages such as Esau had contracted with the local people.

The central event of Jacob's life took place during his flight N. At the end of a day's journey, perhaps the first, he had arrived in the hill-country near *Bethel, some 100 km from Beersheba. This is a reasonable distance for a fast camel to cover in one day. The first stage of the flight would obviously finish as far from home as possible. There is no indication that Jacob had any knowledge of a particular sanctity attaching to the area, although he may have known of the site of his grandfather's altar (Gn. 12:8). As he slept he was granted the vision of a ladder between heaven and earth and of the God of his family standing above it. The promise given to Abraham was confirmed to him and he was given a promise of divine protection. Jacob commemorated his dream by setting up the stone on which he had rested his head and pouring a libation of oil over it (Gn. 28:11ff.). Such simple monuments were often erected in sacred places (*PILLAR). This one marked the place where, for Jacob, God was known to be present.

The narrative leaps from Bethel to the district of Harran at the time of Jacob's arrival. As had Eliezer (Gn. 24:11), so Jacob came first to the well outside the city. Here he was met by his cousin Rachel and taken to Laban, his uncle, who accepted him as his kinsman. When a month had elapsed, Jacob agreed to work for his uncle and, after 7 years, to take Rachel as his wife (Gn. 29:11ff.). The wedding was duly celebrated in the presence of witnesses to the oral or written marriage contract, legally required in Babylonia to give a woman the status of wife. Laban claimed a local custom as his excuse for actually giving his elder daughter Leah to Jacob. That the elder daughter should be married first is a custom not otherwise known. Jacob acquiesced in Laban's action and a new agreement was made allowing Jacob to marry Rachel after the week (presumably of celebrations) was completed. Seven more years' service were required in place of the money given by a man to his father-in-law (*MARRIAGE).

Eleven sons and one daughter were born to Jacob in Laban's house during the 20 years he stayed there. Leah bore four sons while Rachel remained barren. Her chagrin was partly overcome by giving her maid Bilhah to Jacob and adopting her two sons (*Nuzi). Leah did likewise with her maid Zil-

pah, who also bore two sons. The knowledge that adoption might lead to conception by the adoptive mother may have prompted this (cf. Sarah and Hagar, Gn. 16:2). Two more sons and a daughter were borne by Leah before Rachel bore Joseph. Several of the names given to Jacob's children also occur in contemporary texts, although there is no mention of the biblical characters known.

Harran was an important trading centre as well as a fertile agricultural and pastoral district. Laban, it may be assumed, had a town house where he lived during the summer harvest season, taking his flocks to pasture on the hills during the winter. As head of what was evidently a fairly wealthy family, he would have had authority over his own household and perhaps in the city council. Jacob's request to be allowed to return to his home was, perhaps, made at the end of the 14 years' service for his two wives, and after Rachel had borne her first son, Joseph. His management of Laban's flocks had been so successful that Laban was unwilling to let him go (Gn. 30:25ff.). An agreement was made whereby Jacob should continue to work for Laban in return for all the beasts of Laban's flocks and herds which were of impure colour. In this way Jacob would build up a capital from which to support his family. Laban, again breaking his agreement, removed all the animals to which Jacob might lay claim, but Jacob, following advice received in a dream, ingeniously turned his father-in-law's trickery to his own advantage without infringing the agreement. His prosperity aroused the envy of Laban's sons, who felt that he was robbing them of their lawful inheritance (Gn. 31:1). A divine command overcame any reluctance Jacob may have had at leaving Harran without Laban's approval. Rachel and Leah supported his plan, since, they claimed, their father had spent the dowry they should have received (*MARRIAGE). The flight was accomplished while Laban was away from home for sheep-shearing. A 2-day start enabled Jacob and his flocks to travel as far as Gilead in N Transjordan before he was overtaken by Laban (Gn. 31:22ff.). Seven days for Laban's pursuit, covering about 400 miles, is well within the reach of a riding camel. Laban complained of Jacob's furtive departure but his particular concern was for the theft of his gods (*TERAPHIM, *NUZI). If possession of these images did mark the head of the family, then Rachel's deed was intended to exalt Jacob. She managed to retain them by a ruse. Jacob in turn reminded Laban of how well he had served him, complying with all the current requirements of a good herdsman, and how ill he had been rewarded. A pact was made, Laban using his authoritative position to dictate the terms: his daughters were not to be maltreated, nor should Jacob take another wife. A pillar was erected to commemorate the covenant and a cairn was built. These also served as points of demarcation beyond which neither party should go: possibly a recognition of the extent of Jacob's territorial rights under the promise. Each party called upon God to be witness and punish whoever might break the covenant. A sacrifice was made and the two parties shared a meal as a sign of their goodwill.

Jacob proceeded to *Mahanaim, where an angelic host met him, and then he sent scouts to discover Esau's attitude (Gn. 32:1ff.). At his approach, Jacob took care to safeguard half of his possessions and also sent a large gift to his brother. After he had asked for divine protection, and as he

JACOB

was about to ford the river Jabbok at *Penuel, he was engaged in a struggle with a stranger who prevailed only by dislocating Jacob's thigh. This incident was regarded as Jacob's redemption 'from all evil' (Gn. 48:16), the new name Israel showing that he was able to contend with God (*cf.* Ho. 12:4), his disability displaying his subordination. Esau's friendly greeting did not overcome Jacob's qualms. He turned down to *Succoth instead of following Esau. From Succoth he moved up to a town in the territory of Shechem and purchased a piece of land. The rape of Dinah and the vengeance taken by her brothers made the area hostile to him (Gn. 34:1ff.). God instructed him to go to Bethel, presumably outside the jurisdiction of Shechem, to worship. The various pagan symbols brought from Paddan-aram were buried before the family could proceed. As before, Jacob erected a pillar to commemorate his communion with God and poured a libation. He did the same to mark Rachel's tomb at *Ephrath but without a libation (Gn. 35:1-20). After Isaac's death (Gn. 35:28-29) he settled in the region of Hebron and there lived as he had in Harran, by herding and by cultivation. When the famine struck and he was invited to Egypt, he first sought assurance that it was right for him to go S of Beersheba (Gn. 46:1ff.).

Before his death he adopted the two sons of Joseph and gave them a special blessing, preferring the younger over the elder (Gn. 48). The blessings of the twelve sons are recorded in a poetic composition that plays upon the meanings of their names (Gn. 49:1-27). Jacob died, over 130 years old, and was buried in the family tomb at *Machpelah near Hebron (Gn. 50:13).

His descendants called themselves by his name *Israel (paralleled by Jacob in poetry). As the chosen people they had the privilege of striving with God.

A. R. M.

III. New Testament references

Jacob the son of Isaac is listed in the genealogies (Mt. 1:2; Lk. 3:34). More significant is the recurring conjunction, Abraham, Isaac and Jacob, where Jacob stands with the other two as a type of the eternally blessed (Mt. 8:11; Lk. 13:28). All three Synoptists record Jesus' quotation of Ex. 3:6, 'I am the God of Abraham, and the God of Isaac, and the God of Jacob' (Mt. 22:32; Mk. 12:26; Lk. 20:37; also Acts 7:32). This sonorous formula (taken up in the Jewish liturgy, *cf.* the Eighteen Benedictions) gives emphasis and solemnity to the character of God as the one who entered into covenant relation with the Patriarchs of old, and who honours his promises. Peter uses nearly the same formula to heighten his declaration of 'what God has done in Christ (Acts 3:13). Stephen mentions Jacob several times (Acts 7:12, 14-15, 46). The last time he speaks of 'the God of Jacob', thus giving this Patriarch central importance in the history of religion. Paul refers to Jacob twice, the first time to bring out God's purposes in election (he chose Jacob before the two children were even born, Rom. 9:11-13), and the second time as a way of symbolizing the nation (Rom. 11:26). Finally, this Patriarch figures in Hebrews as one of the heroes of faith (Heb. 11:9, 20f.).

A Jacob also occurs as the name of the father of Joseph in the Matthean genealogy of our Lord (Mt. 1:15-16).

L. M.

JAEEL (Heb. *yā'ēl*, 'wild goat'). The wife of Heber the Kenite and murderer of Sisera (Jdg. 4:17-21). At that time the Canaanites, under the leadership of Jabin, king of Hazor, and Sisera dominated Israel. In a parenthetical note (Jdg. 4:11) the presence of the Kenites as far N as Zaanannim, on the border of Naphtali (Jos. 19:33), is explained; normally they were associated with the tribe of Judah. Their skills in metal-working would make them useful allies to the Canaanites (Jdg. 4:17).

After the Israelites, under Deborah and Barak, had inflicted a crushing defeat upon the Canaanites, the main part of the defeated army fled W. Sisera, however, evidently having abandoned his command, headed N, probably to seek sanctuary at Hazor. Jael, appreciating his vital importance (*cf.* Jdg. 4:22), offered him hospitality, which, according to contemporary custom, guaranteed protection. Her treachery was increased by her attempt to convey a sense of security (Jdg. 4:18). Since the erection of tents was women's work, Jael was able to despatch Sisera efficiently by driving a tent peg into his temple. To be killed by a woman would be considered a disgrace (*cf.* Jdg. 9:54). So Deborah's prophecy, that the principal honour of slaying Sisera would be a woman's, was fulfilled (Jdg. 4:9).

This victory gave permanent relief from Canaanite oppression and allowed Israel control of the strategic Esdraelon valley. It was immortalized in the Song of Deborah (Jdg. 5), reckoned to be contemporary, which shows a barbaric exultation in Jael's vicious act (Jdg. 5:24-27). But, whilst not approving, we must not overlook the natural human reaction of these long-oppressed Israelites at the death of their arch-enemy.

Various unlikely emendations have been suggested to remove the surprising reference to Jael in Jdg. 5:6. The point made is probably that, although Shamgar and Jael were living when Israel was persecuted, neither was able to effect deliverance. Deborah gains full credit for this.

A. E. C.

JAHAZ (Heb. *yahaš*). A site in the plains of Moab where Israel defeated Sihon, the Amorite king (Nu 21:23; Dt. 2:32; Jdg. 11:20). The name occurs in several forms—Jahzah, Jahaza (Jos. 13:18), and Jahazah (Jos. 21:36; Je. 48:21). It fell in the portion of Reuben, and was assigned to the Merarite Levites (Jos. 13:18; 21:34, 36). The area was later lost to Israel, but Omri reconquered the land as far as Jahaz. The *Moabite Stone (lines 18-20) states that the Israelites dwell there while they fought Mesha. Finally, Mesha drove them out and added Jahaz to his domains.

M. du Buit would place the site just off the central highlands road on the right of the Wadi Wali Y. Aharoni has proposed Khirbet el-Medeiyinet on the fringe of the desert (*LOB*). The city was still in Moabite hands in the days of Isaiah and Jeremiah (Is. 15:4; Je. 48:21, 34).

J. A. T.

JAHZEIAH (Heb. *yah'yā*, 'Yahweh sees, reveals'; אב 'Jahaziah', Ezr. 10:15). One of four men mentioned in connection with the controversy over foreign wives. אב regards the four as supporting Ezra, 'being employed about this matter'; but the

same Heb. phrase can be translated also as 'opposed this' (so rsv, *BDB*, etc.). The context would seem to support the AV rendering. J.D.D.

JAIR (Heb. *yā'ir*, 'he enlightens'). 1. Descendant of Manasseh who, during the conquest E of the Jordan under Moses, took several villages on the border of Bashan and Gilead (Nu. 32:41) and named them *Havvoth-jair. 2. A judge who judged Israel for 22 years (Jdg. 10:3, 5). His thirty sons had thirty cities in Gilead, the name Havvoth-jair being associated with them. 3. Father of Mordecai (Est. 2:5).

4. (*yā'ir*, 'he arouses'.) Father of *Elhanan (I Ch. 20:5), one of David's heroes; he is called Jaareg-oregim (2 Sa. 21:19) by a scribal error. M.A.M.

JAIRUS. A ruler of the synagogue whose daughter was healed by Christ (Mk. 5:21-43; Lk. 8:41-56; cf. Mt. 9:18-26). The name may be derived from Heb. *yā'ir*, 'Yahweh enlightens' (cf. Jair, Jdg. 10:3). He is named by Mark and Luke but not by Matthew. His duties included the conducting of the synagogue worship and the selection of those who were to lead the prayer, read the Scriptures, and preach in it. There was generally only one *archisynagōgos* to each synagogue (Matthew describes him simply as *archōn*, which here has the same significance).

Jairus came to Jesus after he had crossed the sea of Galilee from the Decapolis and landed near Capernaum. His daughter, aged 12, was at the point of death, and he asked him to come and heal her. On the way to his home Jesus healed the woman with a haemorrhage. Then the news came that the girl was dead. Most of those present felt it unnecessary to trouble Christ any further, and they were scornful of his statement that the girl was not dead but asleep. When all but Peter, James, John, Jairus and his wife had been dismissed, Jesus took her by the hand and she came back to life. He ordered her to be fed and enjoined strict secrecy upon them.

From a literary point of view it is interesting to see how Matthew compresses the story, so much so as to give the impression that the child was dead when Jairus first approached Jesus. It is also noteworthy that the Aramaic phrase *t'litā qūm(i)* is retained by Mark. R.E.N.

JAMES (Gk. *Iakōbos*, Heb. *ya"qōb*, 'heel-catcher', 'supplanter').

1. The son of Zebedee, a Galilean fisherman who was called with his brother John to be one of the twelve apostles (Mt. 4:21). These two along with Peter formed the inner core of three among the twelve, being present at the raising of Jairus' daughter (Mk. 5:37), the transfiguration (Mk. 9:2), and the agony in Gethsemane (Mk. 14:33) to the exclusion of the others. James and John, whom Jesus nicknamed 'Boanerges, that is, sons of thunder' (Mk. 3:17), were rebuked by Jesus when they suggested that they should 'bid fire come down from heaven' to destroy a Samaritan village which had refused to receive the Jerusalem-bound Jesus (Lk. 9:54). The pair also caused envy among the disciples by requesting a place of honour in Christ's kingdom; while not promised this advantage, they were told they would drink the cup their

Master was to drink (Mk. 10:39), a prophecy which was fulfilled for James when he was 'killed ... with the sword' by Herod Agrippa I, c. AD 44 (Acts 12:2).

2. The son of Alphaeus, another of the twelve apostles (Mt. 10:3; Acts 1:13). He is usually identified with 'James the younger', the son of Mary (Mk. 15:40). The description 'the younger' (Gk. *ho mikros*, 'the little') distinguishes him from the sons of Zebedee as either younger or smaller in stature.

3. An otherwise unknown James who was the father of the apostle Judas (not Iscariot) in the Lucan writings (Lk. 6:16; Acts 1:13; the other Gospels have Thaddaeus instead of Judas).

4. The brother of Jesus who, along with his brothers Joses, Simon and Judas (Mt. 13:55), apparently did not accept the authority of Jesus before the resurrection (see Mk. 3:21 and Jn. 7:5). After the risen Jesus had appeared to him (I Cor. 15:7), he became a leader of the Jewish-Christian church at Jerusalem (Gal. 1:19; 2:9; Acts 12:17). Tradition stated that he was appointed first bishop of Jerusalem by the Lord himself (Eusebius, *EH* 7.19). He presided at the first Council of Jerusalem, which considered the terms of admission of Gentiles into the church, formulated the decree which was promulgated to the churches of Antioch, Syria and Cilicia (Acts 15:19-23), and remained as sole leader of the Jerusalem church, working to maintain its unity with Paul and his mission when Paul visited Jerusalem for the last time (Acts 21:18ff.). A few years later James suffered martyrdom by stoning at the instigation of the high priest Ananus during the interregnum after the death of the procurator Festus in AD 61 (Josephus, *Ant.* 20.9). Hegesippus' largely legendary tradition claims that James was known as 'the Just' because of his (Jewish) piety (Eusebius, *EH* 2.23). Jerome (*De viris illustribus* 2) records a fragment from the lost apocryphal *Gospel according to the Hebrews* (*NEW TESTAMENT APOCRYPHA) containing a brief and probably unhistorical account of the appearance of the risen Jesus to James. James is the traditional author of the canonical Epistle of James, where he describes himself as 'a servant of God and of the Lord Jesus Christ' (Jas. 1:1).

JAMES, EPISTLE OF.

I. Outline of contents

- a. Introduction
Greeting 1:1
Statement and restatement of themes 1:2-27
(Test of faith, speech and spirit, piety and poverty)
- b. Development
Piety and poverty 2:1-26
Speech and spirit (Wisdom) 3:1-4:12
Test and result 4:13-5:6
- c. Conclusion (with restatement of themes) 5:7-20

II. Authorship and date

Due to uncertainty about the identity of the author, who describes himself as 'James, a servant of God and of the Lord Jesus Christ' (1:1), this Epistle did not receive general acceptance in the W until the 4th century. Most Christians recognized that James the son of Zebedee was martyred too

JAMES, EPISTLE OF

early to have been the author, and there is no evidence that the early church ever attributed the Epistle to any other James, e.g. 'James the younger', Mk. 3:18; 15:40; Luther's attribution to some unknown James was the result of his dogmatic devaluation of the work as 'a right strawy epistle', since it apparently contradicted Paul on the matter of justification and did not set forth the central doctrines of salvation.

Some modern scholars, noticing the almost complete lack of references to distinctively Christian doctrines, the apparently disjointed nature of the moral axioms in which the Epistle abounds, and the fact that Jesus Christ is explicitly mentioned only twice, have rejected the idea that it was composed by any Christian, suggesting instead that an originally pre-Christian Jewish homily was adapted for Jewish-Christian use by the insertion of 'Jesus Christ' at 1:1 and 2:1. Other scholars, noticing doctrinal and church situations which could point to a date later than the life of the Lord's brother, regard the Epistle as a late Christian homily written to meet the needs of the more settled Christian communities after early evangelistic fervour had subsided (AD 70-130).

- The first theory, which sometimes attributes the work to an unknown James or pseudonymously to the patriarch Jacob, might account for such expressions as 'Abraham our father' (2:21) and 'the Lord of hosts' (5:4), and the emphasis laid upon works in justification (2:14-26). It could also explain the phenomena that the writer speaks like a second Amos when he denounces the rich (5:1-6), and cites Abraham (2:21), Rahab (2:25), Job (5:11) and Elijah (5:17) as examples of virtue, but not Jesus. Yet these and similar features do not demand such an explanation, especially if the Epistle were written before the wide circulation of the Gospels, for the OT was the Bible of the early Christians. As has been pointed out, 'there is no sentence in the Epistle, which a Jew could have written and a Christian could not'. Moreover, the Christianity of the Epistle is much more extensive than it appears on the surface, and it is difficult to suppose that the imaginary Christian interpolator would have been capable of exercising such great restraint!

The second theory, which normally assumes that the work was pseudonymously attributed to the Lord's brother to give it authority, gains credence from the quality of Greek in the Epistle and the argument that 2:14-26 was written to counteract an antinomian perversion of Paul's doctrine of justification by faith. But it fails to account for the primitive features of the Epistle (e.g. the mention of elders and not bishops in 5:14) and the Palestinian colouring (e.g. 'the early and the late rain' in 5:7). Furthermore, were the Epistle pseud-epigraphic, it is hard to explain why the author did not use a clearer and more exalted title (e.g. 'James the apostle' or 'James the brother of the Lord').

The address 'to the twelve tribes in the Dispersion' (1:1), probably referring to scattered Jewish-Christian congregations (it is the reason why the letter is included among the general or catholic Epistles), the homiletic character of the work, its Jewish-Christian flavour, its concern with a communal ethic and community solidarity, its echoes of the later Jewish Wisdom literature ('wisdom', probably meaning the Spirit, is one of its keywords, see 1:5; 3:17), of nonconformist Jewish theology (it contains striking parallels to the *DEAD SEA SCROLLS), and of the sayings of Jesus which

became embodied in the Sermon on the Mount (cf. 2:13 and Mt. 5:7; 3:12 and Mt. 7:16; 3:18 and Mt. 7:20; 5:2 and Mt. 6:19; 5:12 and Mt. 5:34-37), and the note of authority with which the author speaks are all consistent with the tradition that he was James the Lord's brother, first 'bishop' of the church in Jerusalem. Moreover, although the Epistle contains some curious non-biblical literary phrases (e.g. 1:17, 23; 3:6), its Hebraic features coupled with the frequent use of rhetorical questions, vivid similes, imaginary dialogues, telling aphorisms and picturesque illustrations make it reasonable to suppose that we are listening to the completely bilingual Palestinian Jewish-Christian James, who resided at Jerusalem, a cosmopolitan centre for both Jews and Christians, for some 30 years after the resurrection of Jesus. The resemblances in Greek words and phrases between the Epistle and James' speech at the Council of Jerusalem (cf. 1:1 and Acts 15:23; 1:27 and Acts 15:14; 2:5 and Acts 15:13; 2:7 and Acts 15:17) may afford possible supporting evidence. It seems logical to suppose that either James himself composed the work, or else a secretary or later redactor compiled it from James' sermons. The situation of the church in the Epistle fits an early date of origin for much, if not all, of the contents: a date before the Council of Jerusalem (AD 48/49) would best explain the data, including the seeming conflict with Paul in 2:14-26.

III. Teaching

The Epistle concerns itself with the need for Christians to resist the pressure to compromise with the world, especially with respect to the use of wealth. It supplements and in no way contradicts the teaching of Gal. and Rom. on the matter of justification. James does not use the word 'justified' in 2:21 with reference to the occasion in the Abraham narrative to which Paul refers, viz. Gn. 15:6, but with reference to Gn. 22, a declaration of justification on the occasion of the binding of Isaac, itself the crown of a life of charity and faithfulness *flowing from* the faith of Gn. 15:6.

Roman Catholics have always valued the Epistle highly as affording evidence for the doctrines of justification by works, auricular confession (5:16), and extreme unction (5:14). On the other hand, Protestants—unduly influenced by Luther—have tended to regard it as somewhat sub-Christian. But Calvin pointed out that this Epistle contains nothing unworthy of an apostle of Christ, but on the contrary gives instruction on numerous subjects, all of which are important for Christian living, such as 'patience, prayer to God, the excellency and fruit of heavenly truth, humility, holy duties, the restraining of the tongue, the cultivation of peace, the repression of lusts, the contempt of the world, and the like'. Many modern evangelicals have begun to see the folly of underemphasizing the ethical implications of justification and the place which good works should occupy in the Christian life. As R. V. G. Tasker has said in *TNTC*, 'Whenever faith does not issue in love, and dogma, however orthodox, is unrelated to life: whenever Christians are tempted to settle down to a self-centred religion, and become oblivious of the social and material needs of others; or whenever they deny by their manner of living the creed they profess, and seem more anxious to be friends of the world than friends of God, then the Epistle of James has something to say to them which they reject at their peril.'

In an age when evangelicals are again concerned about social righteousness, the use of wealth and communal life, this Epistle calls for special study, for it draws attention to community-building virtues and to the destructive social force of improperly used wealth. In an age when the severity of the divine nature and the transcendence of God tend to be forgotten, the balance needs to be redressed by the emphasis laid in this Epistle on the unchangeable God (1:17), the Creator (1:18), the Father (1:27; 3:9), the Sovereign (4:15), the Righteous One (1:20), who must not be tested by evil men (1:13), to whom humanity must submit in humility (4:7, 10), the Lawgiver, the Judge, the Saviour and Destroyer (4:11–12), who will brook no rivals (4:4–5), the Giver of wisdom (1:5) and grace (4:6), who promises a crown of life to those who stand the test of faith and love him alone (1:12).

BIBLIOGRAPHY. Commentaries by M. Dibelius, 1975; S. Laws, *BNTC*, 1980; P. H. Davids, *NIGTC*, 1980; *NIBC*, 1989; R. P. Martin, *WBC*, 1988.

P.H.D.

JANNES AND JAMBRES. Paul speaks of certain false and morally dangerous teachers as resisting the truth as 'Jannes and Jambres' resisted Moses (2 Tim. 3:6–8). These names do not occur in OT, but extra-biblical allusions show that the Egypt. magicians of Ex. 7–8 are intended. Like them, the teachers played on superstitious susceptibilities with a plausibly presented parody of the truth.

The names, of unknown age, occur in various forms. The so-called 'Zadokite Work', now known to belong with the Qumran literature, has Belial raising up 'Yohaneh and his brother' against Moses and Aaron (7.19 in R. H. Charles, *Pseud-epigrapha*, 1913; 5.19 in C. Rabin, *The Zadokite Documents*, 1958, p. 21); the Babylonian Talmud 'Yohane and Mamre' (*Menahoth* 85a; cf. the spelling 'Mambres' in most Lat. and some Gk. MSS of 2 Tim. 3:8). Jewish legend made much of them, even attributing their paternity to Balaam. Pagan sources refer, not always perspicuously, to one or both (cf. Pliny, *NH* 30. 1. 11; Apuleius, *Apology* 90; Numenius of Apamea in Eusebius, *Praep. Ev.* 9. 8. 1), reflecting the story's celebrity. Origen knew a book on the subject (*Comm. in Mt.* 23:37; 27:9), and the Gelasian Decree a *Penitence of Jannes and Jambres*, of which M. R. James identified a fragment in a Saxon MS (*JTS* 2, 1901, pp. 572ff.). It is improbable, however, that Paul is alluding to the book: he would employ the names simply as being then in common use, with Ex. 7–8 alone in mind.

BIBLIOGRAPHY. *HJP*, 2, 3, pp. 149ff.; *SB*, 3, pp. 660ff.

A.F.W.

JANOAH (Heb. *yānōah*, *yānōhā*, 'rest'). 1. A town (see *NEAEHL*, p. 860) of Naphtali seized by Tiglath-pileser during Pekah's reign (2 Ki. 15:29). Possibly modern Yanūḥ, NW of Acco (*LOB*, p. 379). 2. A town of Ephraim, SE from Shechem, used in defining Ephraim's border with Manasseh (Jos. 16:6–70; av 'Janohah'). Modern Khirbet Yānun. J.G.G.N.

JAPHETH (Heb. *yēpēt*). One of the sons of Noah, usually mentioned last of the three (Gn. 5:32; 6:10; 7:13; 9:18, 23, 27; 1 Ch. 1:4), but his descendants are recorded first in Gn. 10 (and 1 Ch. 1:5–7). He was the ancestor of a number of tribes and

peoples, most of whom had names which in historical times are associated with the regions to the N and W of the Middle East, especially Anatolia, and the Aegean (*NATIONS, TABLE OF). Japheth and his wife were among the eight people who escaped the Flood, and in a later incident he and Shem covered the nakedness of their father, Noah. In Noah's prophetic declaration after this episode he prayed that God might enlarge Japheth, and that *he* might dwell in the tents of Shem, and have Canaan as a servant (Gn. 9:27). Many commentators take *he* to refer to God rather than Japheth, though either interpretation is possible.

If the latter alternative is followed the reference may be to the benefits of the gospel which, coming first to the descendants of Shem, were later extended to the N peoples. In the above verse the word used for 'may he enlarge' is *yāpī*, but this is probably only a play on words and does not have anything else to do with the name Japheth (*yēpēt*), which does not occur elsewhere in the Bible or in the ancient inscriptions. Some have connected Japheth, however, with the Gk. mythological figure *Japetos*, a son of earth and heaven, who had many descendants. The name is not Gk., so may be a form of the biblical name.

Wiseman, *Genesis 10: Some Archaeological Considerations*, *JTVI* 87, 1955, pp. 14ff.; D. Neisman, 'The Two Genealogies of Japheth', in H. A. Hoffner (ed.), *Orient & Occident*, 1973, pp. 119ff.

T.C.M.

JAREB. The av name or epithet of a king of Assyria who received tribute from Israel (Ho. 5:13; 10:6). If taken as a personal name it is assumed that the reference is to Tiglath-pileser III and Menahem's attempt to buy off the Assyrians in 738 BC (2 Ki. 15:19) or to the plea by Ahaz for his help against Rezin of Syria and Pekah of Israel (2 Ki. 16:7–10). Sayce's suggestion that it is Sargon II, conqueror of Samaria in 722 BC, is unlikely because of the date and circumstances.

It is more probable, since the customary definite article is here omitted, that *melek yārēb* is a title to be translated 'warlike (or contending) king' or, taking *malki rab* as an old form for *melek rab*, the usual Assyrian royal title of 'great king'. Cf. rvmg., rsvmg., 'a king that contends'; avmg., 'the king that should plead'. On either interpretation the historical reference would be that quoted above.

D.J.W.

JARMUTH (Heb. *yarmūt*). 1. Tel Yarmut (Khirbet Yarmuk), in a commanding position above the Wadi Surar 5 km S of Beth-shemesh. Late Bronze walls and pottery indicate occupation of 6–8 acres by a population of 1,500–2,000 before the Israelite invasion, when Jarmuth was a leading Amorite city. See Jos. 10:3; 15:35; Ne. 11:29.

BIBLIOGRAPHY. A. Ben-Tor, *IEJ* 35, 1985, pp. 71–73; *NEAEHL*, pp. 661–665.

2. A leitical town in Issachar, Jos. 21:29, otherwise Remeth (Jos. 19:21; cf. Lxx(B) Jos. 21:29), Ramoth (1 Ch. 6:73); but the Egyptians called the district 'the hills of Yarmuta'. Aharoni (*LOB*, p. 28) suggests Khokav-hayyarden, the Crusader Belvoir, 10 km N of Bethshan. J.P.U.L.

JASHAR, BOOK OF

JASHAR, BŌOK OF. In Jos. 10:13 and 2 Sa. 1:18 the book of *yāsār* ('the upright one') is mentioned. Solomon's words in 1 Ki. 8:12–13, according to LXX, who put them after 8:53, are to be found in 'the book of the song'. As 'song', *šyr*, closely resembles *yšr*, perhaps the same book is meant here. All three quotations are in poetic style. It is possible that more quotations from ancient poetry came from this lost book. Some scholars identify it with 'the book of the wars of the Lord' (Nu. 21:14). As the quotations differ in metre, style and general contents, and date from different times, it is not probable that the book was a 'national epic'; it was rather a collection of songs with short historical introductions, cf. Arab. anthologies as, e.g., *Ḥamāsa*. It must have been composed under Solomon's reign or later. The name *yāsār* is probably related to *Jeshurun. Printed books of Jashar are modern fabrications.

A. vanS.

JASHOBEAM. 1. . . . a Hachmonite, was chief of the three', 1. Ch. 11:11; 'son of Zabdiel', 1 Ch. 27:2. He is to be identified with 'Josheb-bashebeth, a Tah-chemonite' (2 Sa. 23:8), which might be read 'Josheb-bashebeth the Hachmonite' (*hahakmōni* for *tahk'mōni*, meaning unclear). LXX *Iebosthe, Iesebada*, Lucian *Iesbaal* imply a form 'Ishbaal'. David's leading warrior, who slew 'three hundred' (1 Ch.) or 'eight hundred' (2 Sa.), which is more likely, as it gives him superiority over Abishai (2 Sa. 23:18). (*CAPTAIN.)

2. Another warrior, who joined David at Ziklag (1 Ch. 12:6).

A. R. M.

JASON. 1. Paul's host at Thessalonica (Acts 17:5–9). A rabble instigated by Jews raided his house, and, not finding Paul and Silas, seized Jason with some converts, and accused him before the politarchs (local magistrates) of harbouring seditious agitators. The prisoners were released on giving security for good behaviour. Luke does not say whether this involved a promise not to shelter the missionaries (cf. T. W. Manson, *BJRL* 35, 1952–3, p. 432), or simply to keep the peace. In either case the effect was the hasty departure of Paul (Acts 17:10) in circumstances which precluded an early return (cf. 1 Thes. 2:18). Jason was no doubt a Jew (cf. Acts 17:2 with 18:2–4) and probably a Christian (cf. Acts 17:7).

2. A Christian at Corinth, sending greetings in Rom. 16:21. 'Kinsman' here probably means 'fellow Jew' (cf. vv. 7, 11 and Rom. 9:3). Jason may be identical with I; if Sosipater is the *Sopater of Acts 20:4, Paul may be linking two fellow-Macedonians.

The name—that of the leader of the Argonauts—was very widespread, and Greek-speaking Jews seem to have sometimes used it instead of the similar-sounding, but conspicuously Jewish, name Jesus, i.e. Joshua (Deissmann, *Bible Studies*, p. 315n.).

A. F. W.

JATTIR (Heb. *yattir*). Hurvat Yatir (Khirbet Attir) on the SW escarpment of the Hills of Judah, 21 km from Hebron; assigned to the priests

(Jos. 21:14). David shared the spoils of the Amalekites with its inhabitants (1 Sa. 30:27). J. P. U. L.

JAVAN. One of the sons of Japheth (Gn. 10:2; 1 Ch. 1:5) and father of a group of peoples, *Elisah, *Tarshish, *Kittim and *Dodanim (Gn. 10:4; 1 Ch. 1:7), whose associations are with the regions to the N and W of the Middle East. It is generally accepted that this name (Heb. *yāwān*) is to be identified with Gk. *Iōnes*, which occurs as *Iaones*, probably for *Iawones*, in Homer (*Iliad* 13. 685), and refers to the people who later gave their name to Ionia. The name also occurs in Assyr. and Achaemenian inscriptions (*Jāmanu* and *Yauna* respectively). Isaiah mentions the descendants of Javan (LXX *Hellas*) beside Tubal as one of the nations (*gōyīm*) inhabiting distant islands and coastlands (*iyymim*, Is. 66:19). In the time of Ezekiel the descendants of Javan (LXX *Hellas*) were known as traders in men, bronze vessels and yarn, with Tyre (Ezk. 27:13, 19; in v. 19 RSV prefers to read *mē'ūzāl*, 'from Uzal', for *m'ūzāl*, 'that which is spun, yarn'). The name Javan (EVV Greece) is used in the prophecies of Daniel to refer to the kingdom of Alexander of Macedon, and in Zc. 9:13 the term (EVV Greece, LXX *Hellēnes*) is probably used of the Seleucid Greeks.

JAZER. A town of the Amorite kingdom of Sihon captured by Israel (Nu. 21:32) and part of the pasture-lands allotted to the tribe of Gad. It was later given to the Merarite families of the tribe of Levi. During David's reign, Jazer furnished 'mighty men of valour' (1 Ch. 26:31) and was one of the towns on the route of the census-takers (2 Sa. 24:5). The Moabites gained control of it, probably a little before the fall of Samaria (Is. 16:8–9; Je. 48:32, where 'sea of' has been considered a scribal error). Judas Maccabaeus captured and sacked the town c. 164 BC (1 Macc. 5:7–8). The site may be Khirbet Gazzir on the Wadi Šza'ib near es-Salt.

A. R. M.

JEALOUSY. The principal OT term rendered as jealousy in the English Bible is *qin'ā* from the verb *qānā*, root meaning 'become dark red' (Nu. 5:14; Pr. 6:34; Ezk. 16:42; etc.). The normal LXX translation of *qin'ā* and its cognates is *zēloō* or the cognate *parazēloō* (Dt. 32:21; cf. Rom. 10:19), and these are the principal terms used in the NT (Acts 7:9; Rom. 11:11; 1 Cor. 10:22; 13:4). Both Heb. and Gk. words refer to an exclusive single-mindedness of emotion which may be morally blameworthy or praiseworthy depending on whether the object of the jealousy is the self or some cause beyond the self. In the former case the result is envy, or hatred of others (Gn. 30:1; Pr. 3:31; Ezk. 31:9), which for the NT is the antithesis of love and hence the enemy of true Christian fellowship (1 Cor. 13:4; 2 Cor. 12:20; Jas. 3:14). The Bible however also represents the other possibility, of a 'divine jealousy' (2 Cor. 11:2), a consuming single-minded pursuit of a good end (1 Ki. 19:10; Ex. 20:5; 1 Cor. 12:31). This positive usage is frequently associated with the marriage relationship where a jealousy for the exclusiveness of the relationship is the necessary condition of its permanence (Nu. 5:11ff.; Ezk.

16:38; 2 Cor. 11:2). Jealousy is referred to God as well as men (Ex. 20:5; 34:14; Na. 1:2). Difficulty is sometimes felt with this, due principally to the way in which the negative connotations of the term have come to predominate in common English usage. Scripture however also witnesses to a positive application of jealousy and finds in this idea a highly relevant term to denote God's holy zeal for the honour of his name and the good of his people who are bound to him in the marriage of the covenant (Dt. 32:16, 21; 2 Ki. 19:31; Ezk. 36:5f.; Zc. 1:14f.; Jn. 2:17). In this sense the jealousy of God is of the essence of his moral character, a major cause for worship and confidence on the part of his people and a ground for fear on the part of his enemies.

B.A.M.

JEBUSITE. The ethnic name of a people dwelling in the hills (Nu. 13:29; Jos. 11:3) round about Jerusalem (Jos. 15:8; 18:16). Descended from the third son of Canaan (Gn. 10:16; 1 Ch. 1:14), they are, however, listed as a distinct, but minority, group of people living alongside such peoples as Amorites and Heth. Jebus was a name given to Jerusalem, the principal city in their territory (Jdg. 19:10-11; 1 Ch. 11:4-5; called Jebusi in Jos. 18:16, 28, rsv) and 'Jebusite' described the inhabitants of the city (Gn. 15:21; Ex. 3:8). Later the term is used of the former inhabitants (Ezk. 16:3, 45; Zc. 9:7).

Unless Melchizedek was ruler of Jerusalem (*SALEM), its earliest king named in the OT is Adoni-zedek (Jos. 10:1), who raised his local Amorite allies (v. 5) to protect the city from the Israelites entering the area. He met his death at Beth-horon (vv. 10-11). According to the *Amarna tablets (c. 1400 BC), *Urusa-limmu* was under Abdi-hepa, whose name, like that of a later Jebusite ruler *Araunah (2 Sa. 24:24) or Ornan (1 Ch. 21:15), is non-Semitic, probably Hurrian or *Horite. Jebus was burnt after its capture by the men of Judah (Jdg. 1:8), but its original inhabitants regained control at least until the attack by David (2 Sa. 5:6). The Jebusites were allowed to remain on the temple hill until their ground was bought over or the Jebusite minority absorbed by the Judeans who built a new quarter on Zion (Jdg. 1:21; 19:11).

D.J.W.

JEDUTHUN (Heb. *y'dūtūn*). A Levite appointed by David to conduct the music of the Temple along with Heman and Asaph (1 Ch. 25:1, 3, 6, etc.). He is also known as *Ethan (1 Ch. 6:44, etc.), which was possibly his name before his appointment. A variation of the name, Jedithun (*y'dūtūn*), appears several times in the *K'tūb* (Ps. 39, etc.). The name appears in the titles of three psalms: 39, 62, 77. In the first of these the title is simply 'to (*l'*) Jeduthun', but in the other two it is 'al Jeduthun', which may mean 'according to' or 'over'; if the latter, Jeduthun there means the family or guild of singers called after him. The family continued to officiate after the Exile (Ne. 11:17).

M.A.M.

JEHOAHAZ (Heb. *y'hō'āhāz*, 'Yahweh has grasped').

1. A variant of the name of *Ahaziah, Jehoram's son, 6th king of Judah (c. 848-841 BC; 2 Ch. 21:17; 25:23) in which the divine element comes first rather than last.

2. Son of Jehu; the 11th king of the N kingdom of Israel, who reigned for 17 years after his father's

death (c. 814-798 BC; 2 Ki. 13:1). His reign saw the repeated advances of Syria under *Hazeel and *Ben-hadad II, recorded as a result of his misdeeds (13:2-3). These included toleration of pagan worship (v. 6). His forces were so depleted (v. 7) that finally he had to call on Yahweh for aid (v. 4; cf. v. 22).

3. An inscription of *Tiglath-pileser III records tribute being received from *ia-u-ha-zi (māt)ia-u-da-a*, 'Jehoahaz of Judah' (DOTT, p. 57). This is the full form of the abbreviated name *Ahaz, 13th king of Judah, who sent gifts to the Assyrian king (2 Ki. 16:7-8).

4. 4th son of Josiah (1 Ch. 3:15) who became the 18th king of Judah upon his father's death at Megiddo (c. 609 BC; 2 Ki. 23:30). After reigning 3 months, he was deported by the pharaoh Neco to his headquarters at Riblah in Hamath and then to Egypt, where he died (23:33-34). Jeremiah called him *Shallum (Je. 22:11-12), an indication that Jehoahaz was his throne name (cf. A. M. Honeyman, *JBL* 67, 1948, p. 20).

D.W.B.

JEHOIACHIN (Heb. *y'hōyākīn*, 'Yahweh will establish'; 'Jeconiah' in 1 Ch. 3:16; cf. Mt. 1:11-12; 'Coniah' in Je. 22:24, 28).

Jehoiachin was appointed king of Judah by the Babylonians following the revolt and death of his father Jehoiakim (6 December 598 BC). His brief reign of 3 months and 10 days (2 Ch. 36:9; Jos., *Ant.* 10. 98) is described in 2 Ki. 24:8-6; 2 Ch. 36:9-10. It was marked by evil, and the prophet Jeremiah foretold the end of both his rule and dynasty (Je. 22:24-30). According to Josephus (*Ant.* 10. 99) Nebuchadrezzar changed his mind about the appointment and returned to besiege Jerusalem and carried off the 18-year-old king, with his mother Nehushta, his family, and fellow Jews, to exile in Babylon. This famous historical event is also described in the OT and in the Bab. Chronicle. The city fell on 16 March 597, and Jehoiachin's young uncle Mattaniah (Zedekiah) was appointed to succeed him (2 Ki. 24:17; Je. 37:1).

In Babylon Jehoiachin was treated as a royal hostage. He is named (*Ya'u-kin*) in Bab. tablets, dated between 595 and 570 BC, as receiving rations at the court in company with his five sons (E. F. Weidner, *Mélanges Syriens offerts à M. René Dussaud*, 2, 1939, pp. 923ff.; DOTT, pp. 84-86). Impressions of a seal, thought to belong to his steward Eliakim (DOTT, p. 224), were actually made a century earlier (see *BA* 53, 1990, pp. 74-79). The Jews in Babylonia reckoned the years by those of Jehoiachin's captivity (Ezk. 1:2). After Nebuchadrezzar's death his successor Amēl-Marduk (*EVIL-MERODACH) in 561 BC showed Jehoiachin special favour and removed him from prison to the royal palace (2 Ki. 25:27-30; Je. 52:31-34). Jehoiachin's eldest son Shealtiel, the father of Zerubbabel, was born in 598 BC. Another son Shenazar is named in 1 Ch. 3:18.

BIBLIOGRAPHY. D. J. Wiseman, *Nebuchadrezzar and Babylon*, 1985, pp. 81ff.

D.J.W.

JEHOIADA (Heb. *y'hōyādā*, 'Yahweh knows') was a popular name in OT times. I. The father of Benaiah (2 Sa. 8:18), a valiant man from Kabzeel in the Negeb (1 Ch. 11:22); the son was one of David's officers. 2. The leader of the Aaronites, who supported David at Ziklag (1 Ch. 12:27). 3. The son of Benaiah, and grandson of Jehoiada, one of David's counsellors (1 Ch. 27:34).

JEHOIADA

4. The chief priest of the Temple in Jerusalem during the reigns of Ahaziah, Athaliah and Joash was also named Jehoiada. He married Jehosha-beath, sister of King Ahaziah, and played a prominent part in political affairs. On the death of Ahaziah he frustrated the queen-mother Athaliah's attempt to destroy all 'the seed royal'. He and his wife hid their nephew, Joash, for 6 years in the Temple precincts, while Athaliah usurped the throne. Then in a *coup d'état* he brought him out of hiding as the rightful ruler of Judah. A covenant was made for his protection, and another on his proclamation as king (2 Ki. 11:17). During Joash's minority, Jehoiada virtually ruled on his behalf. He destroyed the shrines of Baal and organized the Levites. He helped in the selection of Joash's two wives to ensure the royal succession (2

Ch. 24:3). After a rebuke from Joash himself he repaired the Temple (2 Ki. 12:7). When he died at the age of 130, he was buried in the royal tomb, in recognition of his service to the community.

5. A priest in Jerusalem before the Exile, during the lifetime of Jeremiah, who was replaced by Zephaniah (Je. 29:26). 6. The son of Paseah who returned from the Exile with Nehemiah and played his part in the rebuilding programme (Ne. 3:6).

M.B.

JEHOIAKIM (Heb. *y'hōyāqim*, 'Ya(h)w has established'; cf. Joakim, 1 Esdras 1:37-39). King of Judah (609-598 BC), a son of *Josiah and elder brother of *Jehoahaz, whose place he took at the command of Neco II of Egypt. His name was

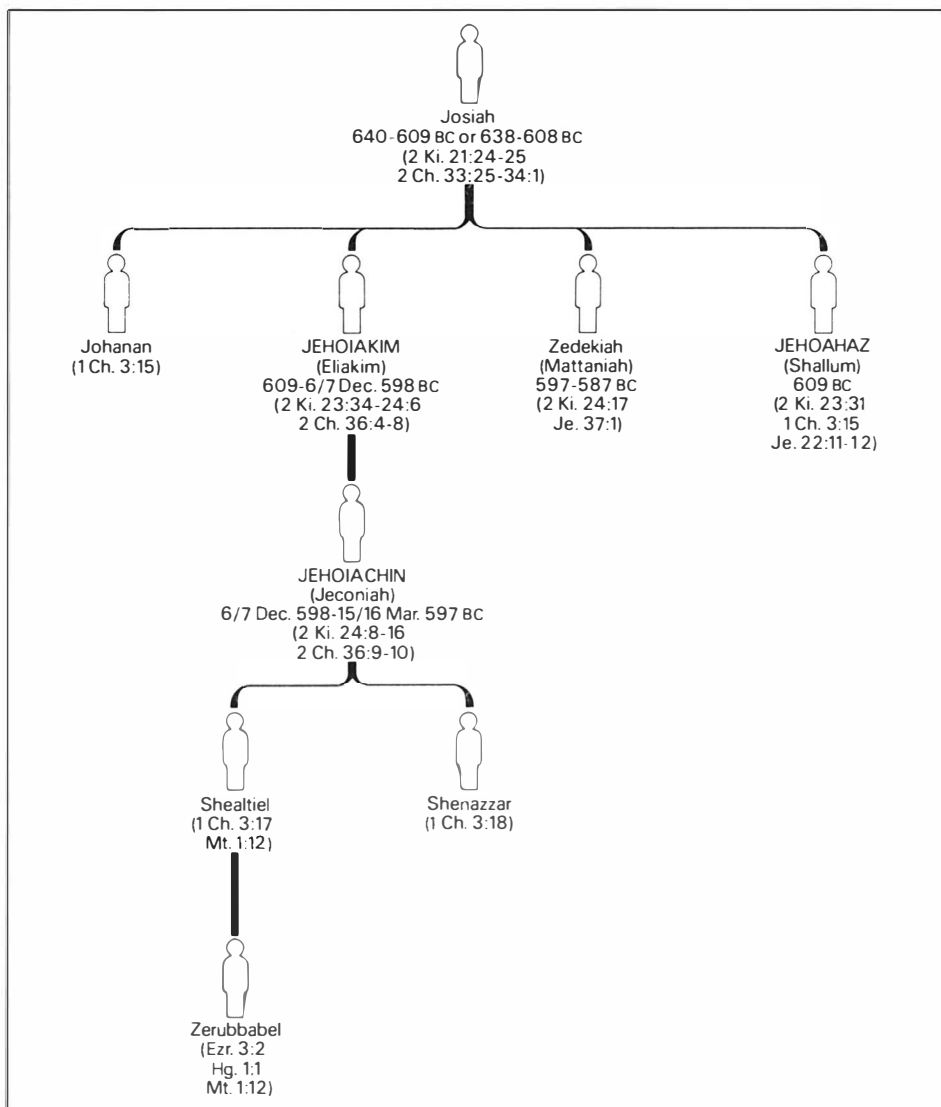

Chart showing how Jehoahaz, Jehoiachin and Jehoiakim were related.

changed from Eliakim as a mark of vassalage. The reign is recorded in 2 Ki. 23:34–24:6; 2 Ch. 36:4–8, and as the last-named entry in the 'book of the Chronicle of the Kings of Judah' (2 Ki. 24:5). To pay the Egypt. dues Jehoiakim imposed heavy land taxes (2 Ki. 23:35). He built costly royal buildings, using forced labour (Je. 22:13–17), and is described as an oppressive and covetous ruler. The religious decay during his reign is noted by the contemporary prophets Jeremiah and Habakkuk. Josiah's reforms were forgotten in the reversion to idolatry and introduction of Egypt. rites (Ezk. 8:5–17). Jehoiakim shed much innocent blood (2 Ki. 24:4) and had the prophet Uriah murdered for opposing him (Je. 26:20–21). He opposed Jeremiah (36:26) and personally burnt the scroll from which Jehudi read the words of the prophet to him (v. 22). He was 'unjust and wicked by nature, and was neither reverent toward God, nor kind to man' (Josephus, *Ant.* 10. 83), that is, he followed in the tradition of Manasseh's sin (2 Ki. 24:3).

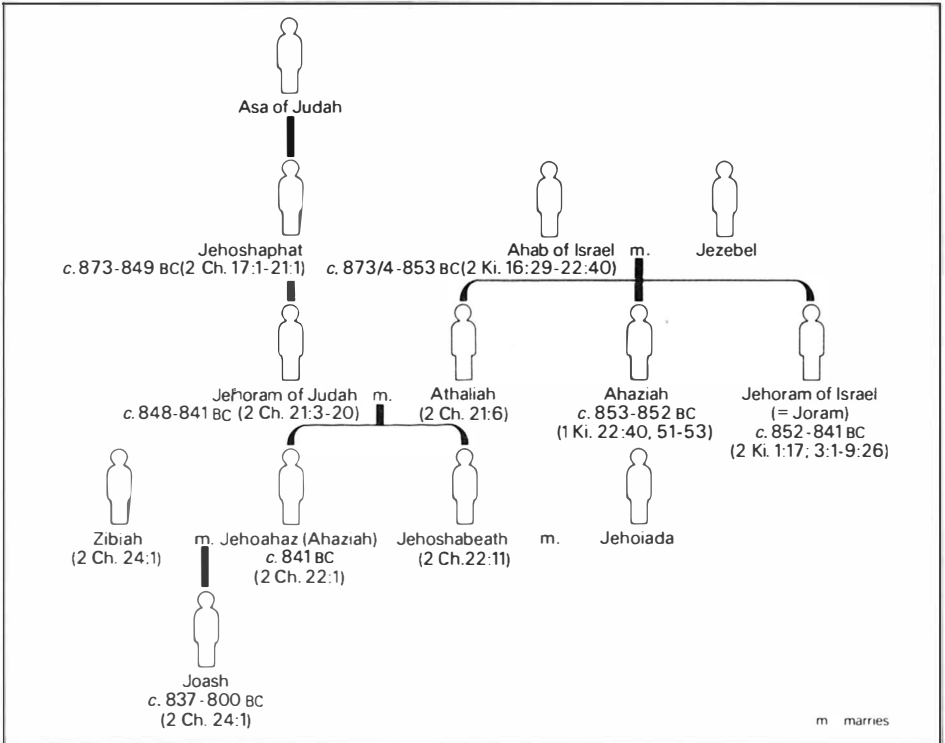

In Jehoiakim's fourth year (605 BC) Nebuchadrezzar defeated the Egyptians at *Carchemish and won control of Palestine as far as the Egypt. border (Je. 25:1; 46:2), but it was not until the following year that Jehoiakim, with other rulers, went before Nebuchadrezzar to submit to him as vassal (Je. 36:9–29; Bab. Chronicle). Three years later, doubtless encouraged by the Egyptian defeat of the Babylonians in 601 BC, but against the advice of Jeremiah, Jehoiakim rebelled (2 Ki. 24:1). Nebuchadrezzar did not at first intervene but sent local Babylonian garrison troops with Syrians, Moabites and Ammonites to raid Judah (v. 2). At length, 3

months and 10 days before Jerusalem fell to the Bab. besiegers Jehoiakim died, aged 36 (*i.e.* 6 December 598 BC). His death occurred on the way to captivity (2 Ch. 36:6), apparently at the instigation of Nebuchadrezzar, who, according to Josephus (*Ant.* 10. 97), had his body thrown outside the city wall as prophesied by Jeremiah (22:18f.). 2 Ki. 24:6 is silent as to his burial. Jehoiakim was succeeded by his son Jehoiachin.

BIBLIOGRAPHY. D. J. Wiseman, *Chronicles of Chaldean Kings*, 1956, pp. 20–32, 65–75; *AUSS* 20, 1982, pp. 103–109. D.J.W.

JEHONADAB (Heb. *y'hōnādāb*, 'Yahweh is liberal'). Jonadab is an alternative form of this name. 1. Son of Shimeah, David's brother. His cunning enabled his friend Amnon, David's son, to obtain his foul desire on Tamar, Amnon's half-sister (2 Sa. 13:3–5). His knowledge of the death of Amnon would seem to indicate complicity in it, although he was his professed friend (2 Sa. 13:30–33). 2. A son of Rechab, a Kenite (1 Ch. 2:55; Je. 35:6). He prohibited his clan from engaging in agriculture, possessing vineyards and using their produce, and dwelling in settled communities (Je. 35:6–10). But this may have been codifying what was already general practice. He was a zealous worshipper of Yahweh and assisted Jehu in suppressing the worship of Baal Melqart (2 Ki. 10:15, 23). M.A.M.

JEHORAM (Heb. *y'hōrām*, 'Yahweh is exalted'). Sometimes abbreviated to Joram. 1. A Levite in the

Family tree of Jehoram and Jehoshaphat.

JEHORAM

time of David (1 Ch. 26:25). 2. A prince of Hamath (2 Sa. 8:9–12; 1 Ch. 18:9–11 suggests his real name was Hadoram. 3. A priest in the time of Jehoshaphat (2 Ch. 17:8).

4. King of (N) Israel, 852–841 bc; the last ruler of the dynasty of Omri (2 Ki. 1–9). Jehoram was a son of King Ahab and Jezebel, and although he is said to have removed one pagan feature of Israel's worship, in general he followed the unorthodox ways of other N kings (2 Ki. 3:1–3). He had to deal with the Moabites' rebellion against their position as vassals of Israel (*MOABITE STONE) and won a spectacular, though not conclusive, victory over the Moabites (3:4–27). He was later wounded in battle with the Syrians (8:28–29). Some of the other Elisha stories also have as their background the conflict between Israel and Syria, and refer to 'the king of Israel' (5:1–8; 6:8–23; 6:24–7:20; cf. 8:1–6), but we cannot be sure whether or not this king was Jehoram. Jehoram was killed and succeeded by *Jehu when recovering from injury in his capital, Jezreel (9:1–37). It was Elisha who instigated this deed; he saw it as a beginning to God's final act of judgment on Ahab and Jezebel, who were still alive and active for evil in Jezreel (9:7–10, 22). It was thus also the further fulfilment of Elijah's prophecy concerning Ahab and Jezebel (9:24–26, 30–36; cf. 1 Ki. 21:17–29).

5. King of Judah, 848–841 bc (2 Ki. 8:16–24; 2 Ch. 21). He was son of and successor to Jehoshaphat, but reversed his father's Yahwist policies. He married Athaliah, who was a daughter of King Ahab of Israel and thus a sister of King Jehoram of Israel, and led Israel in the pagan and bloody ways of Ahab and Jezebel. Edom and Libnah both successfully threw off their vassal status in relation to Judah in his day, and the Philistines and Arabians invaded and plundered his kingdom. He died of illness and he departed with no one's regret (2 Ch. 21:20); he was succeeded by his son Ahaziah. J.E.G.

JESHOSHABEATH, JESHOSHEBA. Daughter of Jehoram, sister or half-sister of Ahaziah. She saved the life of Joash (2 Ki. 11:2) when Athaliah sought to kill all the royal seed. Her marriage to Jehoiada (2 Ch. 22:11) is the only recorded instance of a union between a princess of the royal house and a high priest. M.A.M.

JESHOSHAPHAT (Heb. *y'hōšāpāt*, 'Yahweh has judged').

1. An official clerk under David and Solomon (2 Sa. 8:16; 20:24; 1 Ki. 4:3; 1 Ch. 18:15). 2. One of twelve officers appointed over Israel by Solomon (1 Ki. 4:17; cf. v. 7).

3. Son and successor of Asa as 4th king of Judah (c. 873–849 bc). Jehoshaphat strengthened Judah against aggression by fortifying and placing standing garrisons in N towns (2 Ch. 17:2, 12–19). He also broke with previous practice in entering into a parity treaty with Ahab of Israel by taking one of Ahab's daughters, Athaliah, to marry his son, Jehoram (2 Ch. 18:1; cf. 21:6; 2 Ki. 8:18). This new alliance had its effect on other peoples, including the Philistines and Arabs, who brought tribute to Jehoshaphat (2 Ch. 17:10–11), but the association with apostate Israel almost proved Judah's undoing after Jehoshaphat's death (2 Ki. 11:1–3).

Jehoshaphat's reign is noted for its adherence to Yahweh's instructions (1 Ki. 22:42; 2 Ch. 20:32). He eradicated much of the pagan worship (1 Ki. 22:43, 46) and provided itinerant teachers of Mosaic law (2 Ch. 17:7–9). He reorganized the legal system by appointing judges in key cities, with an appeal court in Jerusalem (2 Ch. 19:4–11).

4. Father of *Jehu, 10th king of Israel (2 Ki. 9:2; 14:20). D.W.B.

JESHOSHAPHAT, VALLEY OF. The name which Joel gives to the place of the final judgment in Joel 3:2, 12. In both of these verses 'Jehoshaphat' (meaning 'Yahweh has judged') is associated with statements that God will judge (Heb. *šāpāt*). Therefore it is probable that 'the valley of Jehoshaphat', like 'the valley of decision' in v. 14, is a term symbolic of the judgment, not a current geographical name.

The valley of Jehoshaphat has been variously identified. Some have thought that Joel had no definite place in mind; e.g. Targum Jonathan translates this name 'the plain of the decision of judgment', and Theodotion renders 'the place of judgment'. Since Joel uses the geographical term 'valley', most students have thought that some location was intended. Ibn Ezra suggests the valley of Berachah S of Bethlehem, where Jehoshaphat's forces gathered after the destruction of enemies (2 Ch. 20:26), but Zc. 14 locates the judgment near Jerusalem, and according to 1 *Enoch* 53:1 all people gather for judgment in a deep valley near the valley of Hinnom. Jewish, Christian and Muslim traditions identify the place of final judgment as the Kidron valley, between Jerusalem and the mount of Olives. Therefore many have been buried there, Muslims especially on the W slope and Jews especially on the E slope of the valley. A Graeco-Roman tomb on the E slope has been called mistakenly the tomb of King Jehoshaphat. As early as the Bordeaux pilgrim (AD 333) and Eusebius' *Onomasticon* (s.v. *Kollas*), the name Jehoshaphat was associated with this valley. Some object that Joel uses the word *'ēmeq*, 'broad valley', while the Kidron valley is called *nahal*, 'ravine' (2 Sa. 15:23). Other identifications are 'the king's dale' (2 Sa. 18:18), which runs into the Kidron valley from the NW (so C. F. Keil. E. G. Kraeling) and the valley of Hinnom, W and S of Jerusalem (so G. W. Wade).

JEHU (Heb. *yēhū*, meaning uncertain. Possibly an abbreviation of *y'hōhū*, 'Yahweh is he').

1. An ambidextrous Benjamite warrior who aided David at Ziklag (1 Ch. 12:3).

2. A seer, son of Hanani, who foresaw the end of Baasha's dynasty (1 Ki. 16:1–7). He also prophesied to Jehoshaphat (2 Ch. 19:2) and chronicled his reign (20:34).

3. Son of Jehoshaphat (2 Ki. 9:2), who reigned as the 10th king of the N kingdom of Israel for 28 years (c. 842–815 bc; 2 Ki. 10:36), where he founded its 4th dynasty.

Religious apostasy reached such an extent in Israel during the reigns of Ahab and Jehoram (2 Ki. 8:27) that a revolt was instigated by Elisha's

appointing a prophet to anoint Jehu king (9:1-13). This rebellion was also supported by elements among the people, e.g., the Rechabites (10:15-16). Jehu, receiving the acclamation of the army of Jehoram which he commanded, went to Jezreel, where the king lay wounded following a battle at Ramoth-gilead (8:28-29). He there killed both Jehoram and Ahaziah, king of Judah, who came out to meet him (9:21-27; cf. 2 Ch. 22:9). The new king entered Jezreel and had Jezebel put to death. He then eradicated all opposition by executing Ahab's family and followers (2 Ki. 10:1-11) as well as 42 visiting members of Ahaziah's family (vv. 12-17; 2 Ch. 22:8). He then proceeded to stamp out worship of Baal by tricking the god's followers into meeting together and then slaughtering them, also destroying their temple (2 Ki. 10:18-28).

Jehu himself continued in apostasy by worshipping golden calves at Bethel and Dan (vv. 29-31), for which he was punished by the Syrians, under *Hazael, annexing parts of his territory (vv. 32-33).

The Black Obelisk of *Shalmaneser III mentions tribute paid by 'ia-ii-a mar hu-um-ri, 'Yāv, son of *Omri' (DOTT, pp. 48-49). This is generally taken to refer to an action of Jehu of Israel not mentioned by the OT. He, or his representative, is pictured bowing before the king. Yāv might also be an abbreviated form of the name Jehoram (P. K. McCarter, BASOR 216, 1974, pp. 5-7). In either case the date would be 841 BC (E. R. Thiele, BASOR 222, 1976, pp. 19-23). D.W.B.

JEHUDI (Heb. *y'hūdi*). Normally means 'a Jew', as in Zc. 8:23, but in Jg. 36:14, 21, 23 it is the name of an officer of Jehoiaqim's court, who commanded Baruch to read the roll of Jeremiah's prophecies to the princes, and later himself read it to the king, until Jehoiaqim personally destroyed it. J.G.G.N.

JEPHTHAH. One of the later (c. 1100 BC) Hebrew judges (Jdg. 11:1-12:7), whose name *yīp̄tāh* is 'probably shortened from *yīp̄tāh-ēl*, "God opens (sc. the womb)", which is cited as a proper name in Sabeian (NBCR, p. 267). The son of a common heathen prostitute (*zōnā*) and the then childless Gilead, Jephthah felt he had been illegally disinherited by the younger legitimate sons of Gilead. He fled to the land of *Tob. From there he and the renegades he gathered raided settlements and caravans and, like David's gang (1 Sa. 22:2; 27:8-9; 30), may have protected Israelite villages from marauding tribes, perhaps including the Ammonites.

Thus when the Israelites in Transjordan were threatened by a full-scale invasion of the Ammonites, the elders of Gilead invited Jephthah to be their commander. He consented only when they promised he would continue as their head (i.e. judge) after fighting ceased. This pact was confirmed with oaths taken at Mizpeh (Gn. 31:48-49). Jephthah's attempted diplomacy to dissuade the Ammonites failed (Jdg. 11:12-28).

Given courage and ingenuity for his task by the Spirit of God, Jephthah passed through Gilead and Manasseh to raise additional troops. He then passed over the Jabkok to Israelite headquarters at Mizpeh. There, before moving against the Ammonites, he vowed a vow (*neḡer*) unto his God, a

common practice before battle among ancient peoples. Jephthah intentionally promised Yahweh a human sacrifice, probably intending a slave, because a single animal would have been as nothing from a people's leader. The LXX translation of *hayyōsē*, *ho emporeuomenos*, 'whoever comes by the way', long ago indicated that this is the proper interpretation. V. 31 should read: 'Then whoever comes forth . . . shall be the Lord's, and I will offer him up for a burnt offering.' Jephthah was living among heathen who offered human sacrifices to pagan deities (cf. 2 Ki. 3:27) and in a day when the law of Moses was little known or practised. Jephthah might sincerely (although wrongly—Lv. 18:21; Dt. 12:31) suppose 'that Jehovah would need to be propitiated by some offering as costly as those which bled on the altars of Chemosh and Moloch' (F. W. Farrar).

After subduing the Ammonites by faith (Heb. 11:32) Jephthah returned triumphantly to his headquarters house, only to meet his daughter, his only child, leading a victory procession (cf. 1 Sa. 18:6; Ex. 15:20). With utter grief, Jephthah felt he must fulfil his vow by offering her as a burnt-offering (*ōlā*, which always was burnt). He did not devote her to a life of celibacy (a view not introduced until Rabbi Kimchi), for there is no record that female attendants in tabernacle or Temple had to be virgins (Anna had been married, Lk. 2:36).

Jephthah showed himself as stern with his brethren the Ephraimites as he was with his enemies the Ammonites and with himself concerning his daughter. Offended because they had no share in his victory, the Ephraimites threatened his life. Jephthah answered harshly and slaughtered them relentlessly at the Jordan (Jdg. 12:1-6). J.R.

JERAH. One of the sons of *Joktan (Gn. 10:26; 1 Ch. 1:20), some of whom can be connected with tribes of S Arabia. The name (*yerah*) is identical in form with the Heb. for 'month' or '*moon', and the word occurs in the S Arabian inscriptions (*yrh*) with this meaning, so it may be concluded that the descendants of Jerah had likewise settled in S Arabia. The site of Beth-Yerah (Khirbet Kerak) on the Sea of Galilee is probably unrelated.

BIBLIOGRAPHY. J. A. Montgomery, *Arabia and the Bible*, 1934, p. 40. T.C.M.

JERAHMEEL (Heb. *y'rahmē'ēl*, 'may God have compassion'). 1. The ancestor of the Jerahmeelites, a clan on the S frontier of Judah, 'the Negeb of the Jerahmeelites' (1 Sa. 27:10; cf. 30:29), related to the Calebites (cf. 1 Sa. 25:3) and bordering on the

'Jerahmeel, the king's son' (lyrhml bn hmlk) named on a seal impression in clay dating from the late 7th cent. BC. He may be identified with the Jerahmeel who burnt Jeremiah's scroll (Je. 36:26). 12 mm × 10 10 mm.

JERAHMEEL

Kenites. Like the Calebites, they were absorbed into the tribe of Judah; their adoptive relationship to other branches of that tribe is given in 1 Ch. 2:9ff., together with the sub-divisions of the Jerahmeelite clan itself. They play a very minor part in the OT record, but by dint of large-scale textual emendation T. K. Cheyne concluded that they occupy a position of major importance in the narrative—a theory which retains interest only as a notable aberration in the history of biblical criticism (cf. *EBr*, s.v. 'Jerahmeel', etc.)

2. In 1 Ch. 24:29 the son of one Kish, a member of the Merarite clan of the tribe of Levi. 3. In Je. 36:26 a member of the royal family of Judah who occupied an official position at the court of Jehoiakim. F.F.B.

JEREMIAH.

I. His background

Jeremiah's history covered a span of 40 years—from his call in the 13th year of King Josiah (626 BC) until the fall of Jerusalem in 587 BC. In those 4 decades he prophesied under the last five kings of Judah—Josiah, Jehoahaz, Jehoiakim, Jehoiachin and Zedekiah. While he was preaching, important personalities and events were shaping history beyond his native Judah. It was one of the most fateful periods in the history of the ancient Near East and it affected Judah's history too.

The Assyrian empire disintegrated and Babylon and Egypt were left to struggle against each other for the leadership of the E. The chronology of the last quarter of the 7th century BC has been greatly clarified by the publication of some tablets which were excavated years ago but which had lain in obscurity in the vaults of the British Museum in London. In 1956 D. J. Wiseman made these Chaldean documents available to students of the ancient Near East, thus making possible a reappraisal of the chronology of the last quarter of the 7th century BC. Further light has also been shed by the discovery of ostraca (letters on jar fragments) and bullae (seals), in some cases naming personalities known from the book of Jeremiah. The most interesting seal reads: 'belonging to Berekyahu (Baruch) son of Neriyahu (Neriah) the scribe'. This is probably the very Baruch who helped Jeremiah record his prophecies (Je. 36:4), and who may indeed have written the third-person accounts of Jeremiah's life. Other seals name Gemariah, the son of Shaphan (Je. 36:11) and 'Jerahmeel, the son of the king' (Je. 36:26; see P. J. King, *Jeremiah: An Archaeological Companion*, pp. 93–99). For the ostraca, see **Ile** below.

Jeremiah's life and times which fall within this all-important period are remarkably well documented, and the intimacies of his personality are more vividly portrayed than those of the more spectral Minor Prophets or even of Isaiah and Ezekiel.

When Jeremiah was called to the prophetic office he was still 'a child' (*na'ar*, 1:6), an ambiguous term descriptive of infancy (Ex. 2:6) and advanced adolescence (1 Sa. 30:17). If the demure Jeremiah simply meant he was spiritually and socially immature the word might indicate that he was not the average age of a prophet, say between 20 and 30, if we may argue from the rules laid down for Levites (Nu. 8:24; 1 Ch. 23:24). Assuming, then, that at his call Jeremiah was in his early 20s his boyhood was spent in the reigns of Manasseh and Amon. When

the call came to Jeremiah nearly a century had passed since the N kingdom of Israel (Samaria) had fallen to the Assyrians. Judah in the S, however, contrived to survive. By a miracle it weathered the storm of Sennacherib's invasion as Isaiah had predicted. King Hezekiah initiated reforms in Judah's religion and morals (2 Ki. 18:1ff.), but these had been nullified by the long apostasy of his son Manasseh (2 Ki. 21:1ff.) and the short idolatrous reign of Amon (2 Ki. 21:19ff.). While Judah was wallowing in the slough of idolatry the Assyrians under Esarhaddon and Ashurbanipal conquered Egypt. Under Psammetichus (664–610 BC) Egypt reasserted herself and began afresh to intimidate Judah, who found herself vacillating between now the blandishments, now the menaces of the two world powers, Egypt and Babylon. In this atmosphere of international political tension and national religious declension Jeremiah grew up into boyhood.

Doubtless many in Judah yearned for the dawn that would end the night of 60 years' moral degeneracy. Jeremiah grew up in a pious priestly home (1:1). His name, 'Yahweh exalts' or 'Yahweh throws down', might well symbolize both his parents' prayers for the disconsolate nation and their aspirations for young Jeremiah. They would communicate to him their anxiety over the religious persecutions and apostasies of Manasseh and Amon, educate him in Israel's laws, and fill his fertile mind with the teachings of Isaiah and other prophets of the previous century.

II. The five reigns

a. Josiah

When God called Jeremiah, Josiah (640–609 BC), who had been on the throne of Judah for 12 years, had already introduced religious reforms (2 Ch. 34:4–7). But it was not until 621 BC, the 18th year of his reign, that he initiated a systematic reformation in Judah's religion and morals (2 Ki. 23).

The impulse to reform was generated by the momentous discovery in the Temple of 'the book of the law' by Hilkiah. Jeremiah had already been a prophet for 5 years. Probably chs. 1–6 describe conditions in Judah before Josiah's main reforms in 622–621 BC. The nation is incorrigibly corrupt, insensible to God's offer of pardon, and oblivious to the menace of an invincible enemy. Apart from 11:1–8, which may contain hints of Jeremiah's enthusiasm for Josiah's reforms, the prophet has left no reference to the last 12 years of Josiah's reign. In 609 BC the king was killed at Megiddo (2 Ki. 23:29) in an abortive attempt to resist Pharaoh Neco (610–594 BC), successor to Psammetichus. Naturally Jeremiah mourned the early death of Josiah (22:10a) of whom he thought kindly (22:15f.).

b. Jehoahaz

Neco continued to meddle in the affairs of Judah. Jehoahaz (or Shallum, Je. 22:11) succeeded Josiah (609 BC) but 3 months later was deposed by Neco, who imposed on Judah a heavy tribute (2 Ki. 23:31–33) and appointed Jehoiakim (or Eliakim), brother of Jehoahaz, to the throne (2 Ki. 23:34; 2 Ch. 36:2, 5). Jeremiah lamented Jehoahaz's deposition and exile to Egypt (22:10–12).

c. Jehoiakim

In this reign (609–597 BC) an event of great political significance occurred—the battle of

Carchemish (Je. 46) in 605 bc. The Egyptians under Neco were crushed by the Chaldeans under Nebuchadrezzar at the battle of Carchemish, on the right-hand bank of the Euphrates NW of Aleppo, and at Hamath. Politically this event was pivotal because it marked the transference of the hegemony of the Middle East to Babylon. Therefore Carchemish also had considerable significance for Judah. Since all routes to the Egyptian border were now under Nebuchadrezzar's control, it was inevitable that the whole Middle East should come under his rule (Je. 25:15ff.). From that moment, therefore, the prophet advocated Judah's submission to Babylonian suzerainty. In 604 bc Nebuchadrezzar sacked the city of Ashkelon, against which Jeremiah (47:5–7) and Zephaniah (2:4–7) prophesy judgment. In Je. 36:9ff. a fast in Judah is proclaimed. This undoubtedly points to an approaching national calamity; and indeed the date of Nebuchadrezzar's campaign against Ashkelon coincides with the date of this fast in Judah. Jeremiah anticipates that from Ashkelon Nebuchadrezzar will come against Judah; hence the fast and the proclamation of Jeremiah's message in Jerusalem. But Jeremiah's policy opposed Jehoiakim's domestic and foreign strategy. The king favoured idolatrous usages (2 Ki. 23:37), and his selfishness and vanity aggravated Judah's misfortunes (Je. 22:13–19). Jehoiakim had scant respect for the prophet's person (26:20–23) or message (26:9). His vacillating policy of alliance with Egypt, then with Babylon, was probably due to the fact that the outcome of the fighting between Babylon and Egypt in the year 601/600 bc was inconclusive. Three years later he rebelled against Babylon, but failure only brought him under the Babylonian yoke more completely, and this exacerbated Judah's anguish (2 Ki. 24:1f.). Jeremiah reprimanded the king, the prophets and the priests, and the hostility which this rebuke engendered is mirrored in his oracles. He was persecuted (12:6; 15:15–18), plotted against (11:18–23; 18:18), imprisoned (20:2), declared worthy of death (26:10f., 24; cf. vv. 20–23; 36:26). His prophecies in written form were destroyed (36:27). But in these depressing circumstances Jeremiah persisted in his ministry—interceding for Judah (11:14; 14:11; 17:16), expostulating with God (17:14–18; 18:18–23; 20:7–18), unmasking the time-serving prophets (23:9–40), predicting the destruction of the Temple (7:1–15) and nation (chs. 18f.), and lamenting the doom of his people (9:1; 13:17; 14:17). Eventually Jehoiakim's life ended violently in Jerusalem at the close of 598 bc, the 11th year of his reign, as Jeremiah had foretold (22:18; cf. 2 Ki. 24:1ff.). On the other hand, 2 Ch. 36:6f. speaks of Nebuchadrezzar's binding Jehoiakim in fetters to take him to Babylon. Dn. 1:1f. also speaks of Jehoiakim's exile in the 3rd year of his reign.

d. Jehoiachin

Jehoiachin (or Coniah, 22:24, 28, or Jeconiah, 24:1) succeeded Jehoiakim in 597 bc and reaped what his father had sown. This immature youth of 18 reigned only 3 months (2 Ki. 24:8). The rebellion of Jehoiachin's father compelled Nebuchadrezzar in the 7th year of his reign to besiege Jerusalem, and the youthful king of Judah 'went out' (2 Ki. 24:12), *i.e.* gave himself up. He, along with the majority of Judah's aristocracy, artisans and soldiers, was exiled to Babylon (as Je. 22:18f. implies) and the Temple was plundered (2 Ki. 24:10–16). In

the Babylonian Chronicle we now find for the first time confirmation of this information from an extra-biblical contemporary source. Jeremiah had already predicted Jehoiachin's fate (22:24–30). 36 years later, however, he was released by the son and successor of Nebuchadrezzar (2 Ki. 25:27–30).

e. Zedekiah

Zedekiah, the new appointee of Nebuchadrezzar to the throne of Judah, was Josiah's youngest son (Je. 1:3) and uncle of Jehoiachin (2 Ki. 24:17; 2 Ch. 36:10). This OT account of Zedekiah's appointment by Nebuchadrezzar to succeed Jehoiachin is fully verified by the Babylonian Chronicle. His reign (597–587 bc) sealed Judah's doom (2 Ki. 24:19f.). He was weak and vacillating, and his officers of state were men of humble station. Having superseded the exiled aristocracy, they now looked upon them with contempt, but Jeremiah had his own convictions concerning the 'bad' and the 'good' figs (24:1ff.). It was to the latter that the prophet sent his famous letter (29:1ff.). But both in Babylon and Judah false prophets sought to have Jeremiah executed (28:1ff.; 29:24ff.). The main point at issue between them was the length of the captivity. Jeremiah foretold an exile of 70 years, while the false prophets argued that it would last only 2 years.

Jeremiah's main conflict with Zedekiah was over the question of rebellion against Nebuchadrezzar. A revolt was planned in the 4th year of the reign in conspiracy with neighbouring states which the prophet violently opposed (chs. 27f.). However, Zedekiah seems to have succeeded in allaying Nebuchadrezzar's suspicions by visiting Babylon the same year (51:59).

Finally, however, in the 7th or 8th year of his reign Zedekiah compromised himself irrevocably in the eyes of Nebuchadrezzar by entering into treasonable negotiations with Pharaoh Hophra. The die was cast, and the Babylonians marched again into Judah. As the Assyrians had done in Hezekiah's reign they reduced first the cities of Judah. Je. 34:7 comes from a point in proceedings when only the S outposts of Lachish and Azekah still held out, a moment that has been illuminated by the so-called Lachish ostraca, one of which records the lament of an officer in a remote station that the lights of Azekah have now gone out, and he looks in hope for the lights of Lachish (Ostrakon 4; see P. J. King, *Jeremiah: An Archaeological Companion*, p. 82f.). In Zedekiah's 9th year (589) the Babylonians besieged Jerusalem for the second time. But before (21:1–10) and during the siege (34:1ff., 8ff.; 37:3ff., 17f.; 38:14ff.) Jeremiah had only one message for Zedekiah—surrender to the Babylonians, for Jerusalem must fall into their hands. Jeremiah's interpretation of the battle of Carchemish 17 years earlier (605) was being fully vindicated. At one point during the siege, the Egyptian army's advance compelled the Babylonians to withdraw, but hopes that Jeremiah was mistaken were quickly disillusioned. His warning that the Babylonians would annihilate the Egyptians was soon fulfilled and the siege was immediately resumed (37:1–10). The perfidy of some Jews towards their slaves at this juncture roused Jeremiah's withering scorn and severest condemnation (34:8–22). Thanks to the cowardly vacillations of Zedekiah, the prophet was so rigorously maltreated by his enemies during the siege that he despaired of his life. Arrested on the charge of

JEREMIAH

deserting to the enemy, he was thrown into a dungeon (37:11-16), but was later removed to a prison in the guard-court close to the palace (37:17-21). He was then accused of treason and thrown into a disused cistern, where he would have died but for the timely intervention of Ebed-melech. He was later transferred to the prison court (38:1-13), where the king secretly conferred with him (vv. 14-28).

During the last stages of the siege Jeremiah, in a great act of faith, bought the land belonging to his cousin in Anathoth (32:1-15). At this moment too he proclaimed promises of restoration (32:36-44; 33:1-26). To this period may be assigned his great prophecy of a new covenant (31:31ff.), ultimately fulfilled in Christ the Mediator of that covenant. But Judah's cup of iniquity was now full and in 587 judgment engulfed the doomed city of Jerusalem (ch. 39). Here also it is instructive to notice that the account of the captivity of Jerusalem in the Bab. Chronicle agrees in general with the OT account in 2 Ki. 24:10-17; 2 Ch. 36:17; Je. 52:28. The destruction of Jerusalem is now to be dated 587 BC, not 586, calculating the new year from the spring rather than the autumn, according to the Babylonian calendar.

Nebuchadrezzar treated Jeremiah kindly, and when he appointed Gedaliah governor of Judah Jeremiah joined him at Mizpah (40:1-6). The murder of Gedaliah soon followed (41:1ff.), and the remnant in Mizpah resolved to flee into Egypt in spite of the earnest protestations of Jeremiah, who, along with Baruch his secretary, was compelled to accompany them (42:1-43:7). The last scene in the aged Jeremiah's stormy ministry shows him at Tahpanhes in Egypt still unbowed. He prophesies the conquest of Egypt by Nebuchadrezzar (43:8-13) and rebukes the idolatrous worship of the Jews then residing in Egypt (44:1ff.). Of subsequent events in his life or the circumstances of his death nothing is known.

III. Jeremiah's personality

Jeremiah's personality is the most sharply etched of any of the OT prophets. Indeed, it is no exaggeration to say that in order to understand what the OT means by the term 'prophet' it is necessary to study the book of Jeremiah. Jeremiah's call, his vocation as a bearer of the word of God, the authority which this communicated to him, the manner in which the word was revealed to him, his clear-cut distinctions between the true prophet and the false, his message and the agonizing dilemmas in which his fidelity to it entangled him—all are delineated in Jeremiah's oracles with an authority that is irresistible. This is because of the correlation between the prophet's spiritual and emotional experience and his prophetic ministry. For interpretations of Jeremiah's inner life, especially in his so-called Confessions or prayers of lamentation, see Skinner and McConville (ch. 3).

It is impossible to plumb the depths of grief into which Jeremiah was plunged. Despairing of comfort (8:18, 21), he desired to dissolve in tears for doomed Judah (9:1; 13:17) and abandon her to her self-inflicted fate (9:2). Convinced of ultimate failure, he cursed the day he was born (15:10; 20:14-18), accused God of having wronged him (20:7a), complained of the ignominy that had befallen him (20:7b-10), invoked imprecations upon his tormentors (18:18, 21-23). It is in this sense that the emotional, highly-strung Jeremiah was a tragic

figure. The tragedy of his life springs from the conflicts which raged within and around him—his higher self wrestling with the lower, courage conflicting with cowardice, certain triumph struggling with apparent defeat, a determination to abandon his calling defeated by an inability to evade it (cf. 5:14; 15:16, 19-21 with 6:11; 20:9, 11; 23:29). But these fierce internal conflicts and the ignominy in which his calling involved him (15:17f.; 16:2, 5, 8) compelled him to find in God a refuge. Thus the OT ideal of communion with God comes to its finest expression in Jeremiah. And it was in this fellowship with God that Jeremiah was able finally to withstand the erosive effects of timidity, anguish, helplessness, hostility, loneliness, despair, misunderstanding and failure.

IV. His message

a. Jeremiah's concept of God

God is Creator and sovereign Lord who governs all things in heaven and earth (27:5; 28:23f.; 5:22, 24; 10:12f.). While the gods of the nations are non-entities (10:14f.; 14:22), Israel's God disposes all things according to his will (18:5-10; 25:15-38; 27:6-8). He knows the hearts of men (17:5-10) and is the fountain of life to all who trust in him (2:13; 17:13). He loves his people tenderly (2:2; 31:1-3), but demands their obedience and allegiance (7:1-15). Sacrifices to pagan gods (7:30f.; 19:5) and oblations offered to him by a disobedient people (6:20; 7:21f.; 14:12) are alike abominations to him.

b. Jeremiah and idolatry

From the outset the prophet was a proclaimer of judgment. The sinfulness of Judah made this inevitable. The particular evil against which Jeremiah inveighed was idolatry. His many references to the worship of heathen deities confirm that the practice was widespread and diverse. Baal, Moloch and the queen of heaven are mentioned. Idols were found in the Temple (32:34), and in the vicinity of Jerusalem children were sacrificed to Baal and Moloch (cf. 7:31; 19:5; 32:35). Josiah had suppressed the idolatrous practices which his grandfather Manasseh had promoted, but the nation had apostatized after Josiah's death.

c. Jeremiah and immorality

Throughout the OT immorality was a concomitant of idolatry. This principle is powerfully exemplified in Jeremiah's idolatrous generation (5:1-9; 7:3-11; 23:10-14). Inescapably moral corruption followed the elimination of the fear of God and reverence for his law. Profligacy and improbity were common even among the priests and prophets (5:30f.; 6:13-15; 14:14). Instead of arresting immorality, they contributed to its spread. Ironically, idolatrous and immoral Judah was still zealously religious! This explains Jeremiah's oft-reiterated contention that before God the moral law takes precedence over the ceremonial. This principle Jeremiah applies to Judah's reverence for the ark (3:16), the tablets of the Torah (31:31f.), the covenant sign of circumcision (4:4; 6:10; 9:26), the Temple (7:4, 10f.; 11:15; 17:3; 26:6, 9, 12; 27:16) and the sacrificial system (6:20; 7:21f.; 11:15; 14:12).

d. Jeremiah and judgment

Naturally, then, the inevitability of judgment was prominent in Jeremiah's message. Judah's punish-

ment at the hands of God took many forms, such as drought and famine (5:24; 14:1-6) and invasion by a foreign power (1:13-16; 4:11-22; 5:15-19; 6:1-15, *etc.*). And inexorably the great day of doom dawned when God's instrument for punishing apostate Judah appeared (25:9; 52:1-30). The history of the background against which these oracles of judgment should be set has become much clearer with the publication of *Chronicles of Chaldaean Kings (626-556 BC)*, to which reference has already been made. It describes a number of international events which took place in Jeremiah's lifetime, and hints of these are found in his oracles against the foreign nations. Doubtless his oracles against the nations in ch. 25 were written under the influence of Nebuchadrezzar's first advance W (Je. 25:1; *cf.* v. 9). Ch. 46 opens with a reference to the battle of Carchemish in 605. Then comes an oracle relating to Nebuchadrezzar's campaign against Egypt (46:13-26). The Bab. Chronicle also provides a factual basis for Jeremiah's oracles against Kedar and Hazor (49:28-33) and Elam (49:34-39). It also relates how Nebuchadrezzar in 599 made raids against the Arab tribes (*cf.* Je. 49:29, 32), while in 596 he campaigned against Elam. Hitherto this oracle has had no historical basis. See further for the light shed by the Bab. Chronicle on the dating and authenticity of the oracles in Jeremiah 46-51 in *JBL* 75, 1956, pp. 282f.

e. Jeremiah and the false prophets

Jeremiah's elevated conception of, and total commitment to, his call evoked within him an uncompromising antagonism towards the professional prophets and priests, and they in turn were his sworn enemies. Jeremiah's major polemic with the priests was over their policy of making gain of their office and their contention that the Jerusalem Temple would never fall to the Babylonians (6:13; 18:18; 29:25-32, *etc.*). The false prophets confirmed the duped people of Judah in this facile optimism (8:10-17; 14:14-18; 23:9-40, *etc.*).

f. Jeremiah's hope

By contrast Jeremiah was an uncompromising preacher of judgment. However, his announcement of judgment was shot through and through with hope. Judah's exile in Babylon would not last for ever (25:11; 29:10). Indeed, Babylon herself would be overthrown (50f.). This word of hope concerning Judah's survival of judgment was present in Jeremiah's message from the start (3:14-25; 12:14-17), but as the situation became more ominous Jeremiah's confidence shone brighter (23:1-8; 30-33). And it was this hope that gave birth to his great act of faith in the darkest days (32:1-15).

g. Jeremiah and Judah's religion

Jeremiah could therefore anticipate the destruction of the Temple, the fall of the Davidic dynasty, the cessation of the sacrificial system and the ministry of the priesthood with perfect equanimity. He even proclaimed that the covenant sign of circumcision was largely meaningless without the circumcision of the heart (4:4; 9:26, *cf.* 6:10). Confidence in Temple, sacrifice, priesthood, was vain unless accompanied by a change of heart (7:4-15, 21-26). Even the ark of the covenant would be dispensed with (3:16). Knowledge of the law without obedience to the law was valueless (2:8; 5:13, 30f.; 8:8). Jeremiah therefore sees the necessity of having the law written not on stone but on the heart, thus

prompting all to spontaneous and perfect obedience (31:31-34; 32:40). The passing away of the outward symbols of the covenant signified not the end of the covenant but its renewal in a more glorious form (33:14-26).

h. Jeremiah and the ideal future

Thus Jeremiah looks far beyond Judah's return from exile and the resumption of life in Palestine (30:17-22; 32:15, 44; 33:9-13). In the ideal future Samaria will have a part (3:18; 31:4-9), abundance will prevail (31:12-14), Jerusalem will be holy unto the Lord (31:23, 38-40), and be named 'the Lord is our righteousness' (33:16). Its inhabitants will return to the Lord penitently (3:22-25; 31:18-20) and with their whole heart (24:7). God will forgive them (31:34b), put his fear within them (32:37-40), establish the rule of the Messianic Prince over them (23:5f.) and admit the Gentile nations to a share of the blessing (16:19; 3:17; 30:9).

V. His oracles

The oracles in Jeremiah's book are not presented to the reader in chronological sequence. His ministry was spread over five reigns, and the oracles emanate from all periods. For example, much of chs. 2-6 may come from Josiah's reign; chs. 26, 35-36 are from Jehoiakim's; and chs. 21, 24, 29, 37-39 come from the time of Zedekiah. Some commentators have attempted to date all the oracles (Bright, Holladay), but there are many uncertainties.

Since, then, the chapters are not arranged chronologically, probably their subject-matter has determined their present order. Ch. 36 would seem to confirm this suggestion. When Jeremiah's oracles were first committed to writing in the 4th year of Jehoiakim (604 BC) they covered a period of 23 years—from the 13th year of Josiah (626 BC) until 604 BC. These oracles Jehoiakim destroyed in the 5th year of his reign, but Baruch rewrote them at Jeremiah's dictation, and 'manysimilar words were added to them' (36:32). What these additions were is uncertain, as are also the contents of the original roll which Jehoiakim destroyed. But clearly the original oracles and the additions formed the nucleus of the book of Jeremiah as it has come down to us, although how the whole was given its final form can only be conjectured. But the disorderly arrangement of the oracles strengthens the conviction that they are the words Jeremiah's inspired lips uttered and were then put together during days of danger and turmoil.

The question of the order of Jeremiah's oracles is also bound up with the relation between the *MT* and *LXX* text of his book. The *Gk.* translation deviates from the *Heb.* text in two respects. (i) It is shorter than the *Heb.* text by approximately one-eighth (*i.e.* about 2,700 words). This is the more remarkable when it is recalled that on the whole the text of the *LXX* corresponds fairly closely to the *MT*. The main exceptions are Jeremiah, Job and Daniel. (ii) In the *LXX* the oracles against the foreign nations (46-51) are placed after 25:13, and their sequence is also altered. These divergences go back to Origen's time, but it is difficult to believe that the *Heb.* and *Gk.* texts represent two different recensions of the book of Jeremiah. Because of Jeremiah's prophetic stature and spiritual calibre, these two texts of his book must have existed from a very early date, since no text which differed so radically from the received text as the *Gk.* differs from the *Heb.* would have been able to gain a

JEREMIAH

foothold if it had been produced centuries after Jeremiah's death.

In the debate on the superiority of one text to the other those who favour the LXX version argue that it gives the oracles against the foreign nations a more natural context, and that some of the omissions (e.g. 29:16–20; 33:14–26; 39:4–13; 52; 28–33, etc.) could not have been accidental. But the foregoing references to the Bab. Chronicle have shown how it now enables us to re-create the historical background against which some of these oracles have to be set, especially those against Kedar, Hazor, Elam and the Arabs. Those who support the claims of the Heb. text emphasize 'the arbitrary character of the renderings' (Streane), which according to Graf makes it 'altogether impossible to give to this new edition—for one can scarcely call it a translation—any critical authority'. The impression too is that the omissions are not motivated by scholarly interests. And the fact remains that the men of the 'great synagogue' who did so much in determining the Canon of the OT preferred the Heb. text to the Gk. version.

VI. Conclusion

In summarizing the greatness of Jeremiah, several things should be stressed. He recognized that Josiah's reforms were in reality a retrograde movement because they threatened to undo the work of the prophets. Reformation in worship without reformation of heart was useless. He also perceived that religion in Judah would continue even though the Temple and Jerusalem were destroyed. In his famous letter to the exiles in Babylon (ch. 29) he affirmed that in a pagan land Jews could still worship God although denied the ministry of priesthood and the service of sacrifice. Indeed, they could be closer to God in Babylon than were their brethren in Jerusalem, who made the outward trappings of religion a substitute for inward faith.

He saw too that, since religion was essentially a moral and spiritual relation with God (31:31–34), its demands must also be moral and spiritual. The essence of the new covenant was inwardness. This is not the same as 'individualism'. Rather, Jeremi-

ah's rejection of the 'sour grapes' proverb (Je. 31:29–30) was intended to relieve a new generation of the burden of inherited guilt, while affirming its own responsibility for its standing before God. The new covenant people of God remains the 'house of Israel and the house of Judah' (Je. 31:31), i.e. a community.

In Christian terms this new community is to be understood as those who belong together in Christ. The new covenant is established by his death and resurrection, and by the dwelling of his Spirit among his people (Heb. 8:8–13; 10:16–17). In the life which he gives, enabling them to live in the Spirit, lies the way through the old impasse of a covenant which could not be kept (Je. 31:32).

JERICHO.

I. Name

The original meaning of the name Jericho is open to doubt. It is simplest to take Heb. *y'rihō* as from the same root as *yārēah*, 'moon', and to connect it with the early W Semitic moon-god *Yarih* or *Yerah*. Cf. remarks by Albright in *Archaeology and the Religion of Israel*, 1953 edn., pp. 83, 91–92, 197 note 36, and in *AASOR* 6, 1926, pp. 73–74. Some suggest *rwah*, 'fragrant place' (*BDB*, p. 437b, after Gesenius), or as 'founded by (deity) I.Īō' (*PEQ* 77, 1945, p. 13), but this is improbable.

II. Sites

OT Jericho is generally identified with the present mound of Tell es-Sultan c. 16 km NW of the pres-

Jericho and adjacent ancient sites.

ent mouth of the Jordan at the Dead Sea, 2 km NW of er-Riha village (modern Jericho), and about 27 km ENE of Jerusalem. The imposing, pear-shaped mound is about 400 m long from N to S and roughly 200 m wide at the broad N end, and some 20 m thick. Herodian and NT Jericho is represented by the mounds of Tulul Abu el-'Alayiq, 2 km W of modern er-Riha, and so is S of OT Jericho. The mountains of Judaea rise abruptly from the plains of Jericho a little distance to the W.

III. History

a. Before Joshua

(i) *Beginnings.* The story of Jericho is virtually a précis of the whole archaeological history of Palestine between c. 8000 and c. 1200 BC. (For the special abbreviations used here, see bibliography at the end of this article.) Every settlement at Jericho has owed its existence to the fine perennial spring there and the 'oasis' which it waters (*DUJ*, pl. 1); in the OT Jericho is sometimes called 'the city of palm trees' (Dt. 34:3). Already c. 9600/7700 BC, food-gathering hunters may have had a shrine there, and Palestine's earliest-known agriculturists built huts by the spring (*AHL*, pp. 41–43; pl. 5A). Early in the 8th millennium BC (Carbon-14 date), the oldest town of Jericho was built with a stone revetment-wall that included at least one tower (with built-in stairway) and round houses. Subsequently, spacious rectangular houses became fashionable and skulls of venerated ancestors (?) were embodied in clay-moulded portrait heads of remarkable realism (*DUJ*, pp. 67–73 and pls. 25, 29–30, or *AHL*, pp. 43–47 and pl. 7, for 'prepottery Neolithic, phase A'; *DUJ*, pp. 51–67 and pls. 20–22, or *AHL*, pp. 47–57, 60 and pls. 13ff., for 'phase B'). In the 5th and 4th millennia BC later Jericho citizens learnt to make pottery, but eventually abandoned the place ('Pottery Neolithic A and B', 'Jericho IX and VIII' of older books, *DUJ*, pp. 79–94, *AHL*, pp. 60–70). Ancient Jericho is currently the primary source of information on the earliest settled life of Palestine; cf. also *W*, chs. 2–4 and *GJSJ*, pp. 55–72.

(ii) *Early historical period.* From c. 3200 BC Jericho was again inhabited as a walled and towered town of the Early Bronze Age, when towns famous later (e.g. Megiddo) were first founded, contemporary with Egypt's Pyramid Age and the Sumerian civilization in Mesopotamia (*DUJ*, pp. 167–185; *AHL*, pp. 101–134; *W*, ch. 5; *GJSJ*, pp. 75–88, cities I and II). But c. 2300 BC Jericho perished violently at the hands of uncultured newcomers who eventually resettled the site (Albright's Middle Bronze Age I; K. M. Kenyon's Intermediate Early/Middle Bronze Age, cf. *DUJ*, pp. 186–209; *AHL*, pp. 135–161). These coalesced with the Canaanites of the Middle Bronze Age proper (c. 1900–1600/1550 BC). Biblically this was the period of Abraham, Isaac and Jacob; the remains from contemporary Jericho throw a vivid light on the daily life of Abraham's Canaanite/ Amorite town-dwelling neighbours. The tombs have preserved more than the badly-denuded town buildings. Splendid pottery, wooden three- and four-legged tables, stools and beds, trinket-boxes of bone inlay, basketry, platters of fruit and joints of meat, metal daggers and circlets—all have been preserved by peculiar atmospheric conditions (*DUJ*, pp. 210–232 [city], 233–255 [tombs]; *AHL*, pp. 162–194; *GJSJ*, pp. 91–108). For restoration of a Jericho

house-interior, see *DUJ*, endpapers. For reconstructions of the walled city on its mound, see *Illustrated London News*, 19 May 1956, pp. 554–555; cf. *AHL*, p. 188, fig. 45.

b. Jericho and the Old Testament

(i) *Joshua's invasion.* After c. 1600 BC Jericho was violently destroyed, probably by Egypt's 18th Dynasty imperial pharaohs. After this the only (Late Bronze) occupation found at Jericho dates mainly between c. 1400 and 1325 BC; from the 13th century BC, the date of the Israelite conquest (*CHRONOLOGY OF OT), virtually nothing is known (*DUJ*, pp. 259–263; *AHL*, pp. 197–198, 209–211). Garstang's 'Late Bronze Age' walls (*GJSJ*, ch. 7) actually date from the Early Bronze Age, over 1,000 years before Joshua, because of the associated Early Bronze remains, and they are overlaid by Middle Bronze material, only subsequently identified in Miss Kenyon's excavations (e.g. *DUJ*, pp. 170–171, 176–177, and especially 181). It is possible that in Joshua's day (13th century BC) there was a small town on the E part of the mound, later wholly eroded away. Such a possibility is not just a 'harmonistic' or heuristic view, but one suggested by the evidence of considerable erosion of the older settlements at Jericho. The tombs conclusively prove the importance of Middle Bronze Age Jericho (patriarchal period), although on the city mound most of the Middle Bronze town—and even much of the Early Bronze one before it—was eroded away between c. 1600 and c. 1400 BC (cf. *DUJ*, pp. 170–171, and also 45, 93, 259–260, 262–263). When so much damage was done by the elements in barely 200 years it is easy to see how much havoc natural erosion must have wrought on the deserted mound in the 400 years that separated Joshua from Jericho's refounding by Hiel the Bethelite (I Ki. 16:34) in Ahab's reign. It seems highly likely that the washed-out remains of the last Late Bronze Age city are now lost under the modern road and cultivated land along the E side of the town mound, as the main slope of the mound is from W down to E. It remains highly doubtful whether excavation here (even if allowed) would yield much now. The narrative of Jos. 3–8 within which the fall of Jericho is recounted is known to reflect faithfully conditions in, and topography of, the area, while Joshua's generalship is recounted in a realistic manner. On terrain, cf. J. Garstang, *Joshua-Judges*, 1931, pp. 135–148 (his earth-tremors, providentially sent, remain a valid suggestion, even though his 'Late Bronze' (actually Early Bronze) walls do not now count as direct evidence for Joshua's day). On Joshua's generalship, cf. Garstang, *op. cit.*, pp. 149–161, and Y. Kaufmann, *The Biblical Account of the Conquest of Palestine*, 1953, pp. 91–97.

(ii) *From Joshua to Nehemiah.* For centuries no attempt was made to rebuild the town-mound of Jericho in awe of Joshua's curse (Jos. 6:26), but the spring and oasis were still frequented, perhaps supporting a hamlet there. In the time of the judges, Eglon king of Moab temporarily occupied the oasis (Jdg. 3:13) and David's envoys tarried there after being outraged by Hanun of Ammon (2 Sa. 10:5; 1 Ch. 19:5); the 'blockhouse' may have been a guard-post in this period (10th century BC: so Albright and Wright, cited by Tushingham, *BA* 16, 1953, p. 67). Then in Ahab's reign (c. 874/3–853 BC) Hiel the Bethelite refounded Jericho proper

JERICO

and finally fulfilled the ancient curse in the loss of his eldest and youngest sons (1 Ki. 16:34). This humble Iron Age Jericho was that of Elijah and Elisha (2 Ki. 2:4–5, 18–22), and it was in the plains of Jericho that the Babylonians captured Zedekiah, last king of Judah (2 Ki. 25:5; 2 Ch. 28:15; Je. 39:5; 52:8). The remains of this Jericho (9th–6th centuries BC) are very fragmentary (erosion again to blame), but quite definite: buildings, pottery and tombs; probably the Babylonians destroyed the place in 587 BC (see *BA* 16, 1953, pp. 66–67; *PEQ* 85, 1953, pp. 91, 95; *DUJ*, pp. 263–264). After the Exile, a modest Jericho still existed in Persian times. Some 345 Jerichoans returned to Judaea with Zerubbabel (Ezr. 2:34; Ne. 7:36), and their descendants in Jericho helped with repairing Jerusalem's walls in 445 BC under Nehemiah (Ne. 3:2); a pottery jar-stamp (c. 4th century BC) 'belonging to Hagar (daughter of) Uriah' is the last memento of OT Jericho (Hammond, *PEQ* 89, 1957, pp. 68–69, with pl. 16, corrected in *BASOR* 147, 1957, pp. 37–39; cf. also Albright, *BASOR* 148, 1957, pp. 28–30).

c. New Testament Jericho

In NT times, the town of Jericho was sited S of the old mound. In that region, Herod the Great (40/37–4 BC) and his successors built a winter palace with ornamental gardens, near the famous palm and balsam groves that yielded lucrative revenues. Fragmentary ruins that may be connected with these great buildings have been excavated. See Kelso and Baramki, 'Excavations at New Testament Jericho' in *AASOR* 29/30, 1955, and *BA* 14, 1951, pp. 33–43; Pritchard, *The Excavation at Herodian Jericho* in *AASOR* 32/33, 1958, and *BASOR* 123, 1951, pp. 8–17. Herod brought water by aqueduct from the Wadi Qilt (Perowne, *Life and Times of Herod the Great*, 1956, plates opposite pp. 96–97).

The environs of NT Jericho witnessed Christ's healing of blind men, including Bartimaeus (Mt. 20:29; Mk. 10:46; Lk. 18:35). Zacchaeus (Lk. 19:1) was not the only wealthy Jew who had his home in this fashionable district. The immortal story of the good Samaritan is set on the narrow, bandit-infested road from Jerusalem down to Jericho (Lk. 10:30–37).

IV. Bibliography

Sir Charles Warren sank shafts at Jericho in about 1868 with little result. The first scientific excavation there (1907–9) was by Sellin and Watzinger (*Jericho*, 1913), but they could not date their finds properly. Apart from his errors over 'Joshua's Jericho' (see above), Garstang in 1930–6 put the archaeology of the site on a sound basis. See J. and J. B. E. Garstang, *The Story of Jericho*, 1948 (*GSJ*). Detailed preliminary reports are in *Liverpool Annals of Archaeology and Anthropology* 19, 1932, to 23, 1936, and in *PEQ* for the same years. Miss Kenyon reviewed Garstang's results in *PEQ* 83, 1951, pp. 101–138. Further older bibliography is in Barrois, *Manuel d'Archéologie Biblique*, 1, 1939, pp. 61, 63.

Detailed preliminary reports of Miss Kenyon's excavations from 1952 to 1958 are in *PEQ* 84, 1952, to 92, 1960; *BASOR* 127, 1952, pp. 5–16; *BA* 16, 1953, pp. 45–67, and 17, 1954, pp. 98–104. For an instructive (and humorous) general account, see *W* = M. Wheeler, *The Walls of Jericho*, 1956 (paperback, 1960). Best detailed over-all account is

DUJ = K. M. Kenyon, *Digging Up Jericho*, 1957 (fully illustrated), supplemented for the earliest periods by *AHL* = K. M. Kenyon, *Archaeology in the Holy Land*, 1960. The definitive publication is K. M. Kenyon and others, *Jericho I–V*, 1960–83. General background and a summary in P. Bienkowski, *Jericho in the Late Bronze Age*, 1986. For NT Jericho, see above (III. c) and good background by L. Mowry, *BA* 15, 1952, pp. 25–42. Overall bibliography, cf. E. K. Vogel, *Bibliography of Holy Land Sites*, 1974, pp. 42–44; survey, cf. *NEAEHL*, 2, pp. 674–695. K. A. K.

JEROBOAM (probably 'may the people increase'; possibly 'may he contend for the people', i.e. against Rehoboam's oppressions).

1. First king of Israel (c. 931–910 BC; 1 Ki. 11:26–14:20; 2 Ch. 10:2–13:20), Jeroboam, son of Nebat, seems to have been a wealthy land owner (*gibbôr hayil*, 1 Ki. 11:28), able to equip himself and others for war, despite the fact that his mother was a widow. *Solomon, building the Millo, placed Jeroboam, an Ephraimite, in charge of the workforce of the N tribes. The king's oppressive practices led Jeroboam to foment a revolt, resulting in his exile to Egypt until Solomon's death. The LXX contains an unreliable midrash (based partly on Hadad's experiences, 1 Ki. 11:14–22) which attempts to complete the sketchy biblical picture of Jeroboam's flight. His friendship with *Shishak was short-lived, for the pharaoh's subsequent invasion (c. 925 BC) proved costly to both Judah and Israel (including the destruction, as archaeological evidence indicates, of Gezer, Taanach, Megiddo, Beth-shean, *et al.*). Rehoboam's rash refusal to initiate a more clement policy than his father's brought the fulfilment of Ahijah's prophecy (1 Ki. 12:29ff.): the kingdom was rent asunder. Benjamin alone remained loyal to Judah and became a battleground for a series of border skirmishes between the two kings (1 Ki. 14:30). The conflict with Judah (1 Ki. 15:6–7; 2 Ch. 13:2–20) along with repeated pressures from Damascus and the Philistine cities, prompted Jeroboam to fortify key cities like Shechem, Penuel and Tirzah, which had served in turn as his capitals (1 Ki. 12:25; 14:17).

Jeroboam incurred divine wrath by building, in Dan and Bethel, shrines that rivalled the Jerusalem Temple and were staffed by a newly formed, non-levitical priesthood. The date of the Feast of Tabernacles was changed in the process (1 Ki. 12:31–32). The infamous calves were probably not representations of deity but pedestals on which the invisible Yahweh was supposed to stand (cf. W. F. Albright, *From the Stone Age to Christianity*, 1957, pp. 299–301). They threatened the covenant faith by encouraging a syncretism of Yahweh worship with the fertility cult of Baal and thus drew prophetic rebuke (e.g. the man of God, 1 Ki. 13:1ff.; Ahijah, 1 Ki. 14:14–16). Jeroboam's ascent to the throne by popular choice rather than hereditary right doomed the N kingdom to dynastic instability from the beginning. His royal cult set the pattern for his successors, who are customarily evaluated as perpetuating his sins (e.g. 1 Ki. 16:26).

BIBLIOGRAPHY. M. Aberbach, L. Smolar, in *IDBS*, 1976, pp. 473–475; J. Bright, *A History of Israel*², 1972, pp. 226–235; J. Gray, *1 and 2 Kings*², 1970; *EJ*, 9, cols. 1371–1374; M. Noth, *The History*

A seal inscribed 'belonging to Shema, servant of Jeroboam' (lišm' 'bd yr̄bm), probably Jeroboam II (793–753 BC). The roaring lion was used as a symbol for Judah. Length 3·8 cm. Megiddo.

of Israel², 1960, pp. 225ff.; M. Haran, *VT* 17, 1967, pp. 266ff., 325ff.

2. Jeroboam II (c. 793–753 BC) was the 4th king of Jehu's dynasty and one of Israel's most illustrious rulers (2 Ki. 14:23–29). Co-regent with his father for a decade, Jeroboam II carried on Jehoash's policies of aggressive expansion. Aided by Adad-nirari's campaigns (805–802 BC) which broke the back of the Aramaean kingdom and by the Assyrian preoccupation with Armenia, he was able to restore Israel's boundaries virtually to their Solomonic scope and thus fulfil Jonah's prophecy (2 Ki. 14:25).

Jeroboam's administrative skills combined with comparative freedom from foreign attack to bring unparalleled economic prosperity. Excavations in *Samaria, including the discovery of the Samaritan ostraca, have demonstrated the grandeur of Jeroboam's fortress city together with the luxury and false worship which vexed Amos' righteous soul (e.g. Am. 6:1–7; 5:26; 8:14). Extreme wealth and poverty (Am. 2:6–7), empty religious ritual (Am. 5:21–24; 7:10–17) and false security (Am. 6:1–8) are among the characteristics of Jeroboam's lengthy reign. Amos' gloomy prophecy (7:9) was verified when Shallum's successful *coup* against Zechariah (whose name shows that Jeroboam retained some regard for Yahweh, 2 Ki. 15:8–12) wrote *finis* to Jehu's house. See J. Bright, *op. cit.*, pp. 254–256; *EJ*, 9, cols. 1374–1375; M. F. Unger, *Israel and the Arameans of Damascus*, 1957, pp. 89–95. D.A.H.

JERUEL (Heb. *y'ru'el*, 'founded by El'; LXX 'Jeriel'). Mentioned by the prophet Jahaziel as the wilderness where Jehoshaphat would meet and conquer the Moabites and Ammonites (2 Ch. 20:16). Possibly identical with, or a part of, the wilderness of *Tekoa, the country extending from the W shores of the Dead Sea N of En-gedi. J.D.D.

JERUSALEM.

I. Introduction and general description

Jerusalem is one of the world's famous cities. Under that name, it dates from at least the 3rd millennium BC; and today is considered sacred by the adherents of the three great monotheistic faiths, Judaism, Christianity and Islam. The city is set high in the hills of Judah, about 50 km from the Mediterranean, and over 30 km W of the N end of the Dead Sea. It rests on a none-too-level plateau, which slopes noticeably towards the SE. To the E lies the ridge of Olivet. Access to the city on all sides except the N is hampered by three deep ravines, which join in the Siloam Valley, near the well Bir Eyyub, SE of the city. The E valley is Kidron; the W is now called the Wadi al-Rababi, and is probably to be equated with the Valley of Hinnom; and the third cuts the city in half before it runs S, and slightly E, to meet the other two. This latter ravine is not mentioned or named in Scripture (although Maktesh, Zp. 1:11, may well have been the name of part of it), so it is usually referred to as the Tyropoeon Valley, *i.e.*, the Valley of the Cheese-makers, after Josephus.

Eminences rise each side of the Tyropoeon Valley, and the city can at once be divided into W and E halves. Ignoring lesser heights, we may subdivide each of these two sections into N and S hills. When considering the growth and development of the city (see IV) it will be important to visualize these details. In discussing the respective heights and depths of these hills and valleys, it must be realized that they have changed considerably over the centuries. This is inevitable in any city continuously inhabited for centuries, and particularly when periodic destructions have taken place. Layer after layer of rubble and debris piles up, amounting here and there to more than 30 m in parts of Jerusalem. In the case of Jerusalem there is also the

JERUSALEM

factor that deliberate attempts have been made at various periods to fill in valleys (especially the Tyropoeon) and diminish hills.

Jerusalem's water-supply has always presented problems. Apart from Bir Eyyub, the well mentioned above, there is only the Virgin's Spring, which is connected by an aqueduct with the Pool of Siloam. There are, and have been, other reservoirs, of course, such as Bethesda in NT times and Mamilla Pool today, but they all depend on the rains or else on aqueducts to fill them. Bir Eyyub and the Virgin's Spring are in all probability the biblical En-rogel and Gihon respectively. Bir Eyyub lies SE of the city, at the junction of the three ravines mentioned above. The Virgin's Spring is due N of Bir Eyyub, E and a little S of the Temple area. Thus it is evident that only the SE part of Jerusalem has a reliable water-supply. (See A. Mazar, 'The Aqueducts of Jerusalem', in *Y. Yadin, Jerusalem Revealed*, pp. 79-84.)

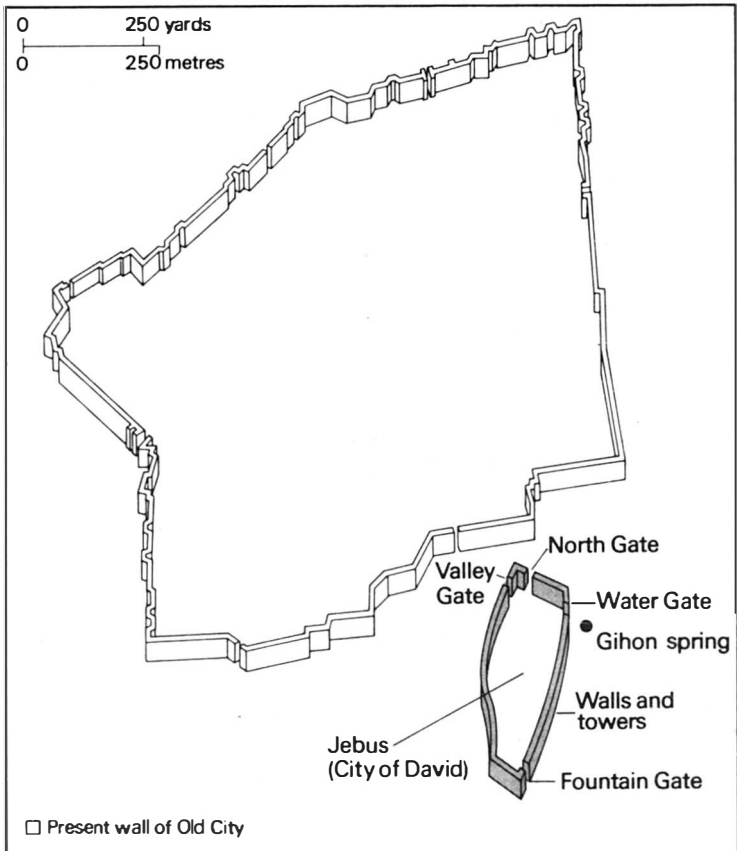

II. Name

The meaning of the name is not certain. The Heb. word is usually written *y'rušā'aim* in the OT, but this is an anomalous form, since Heb. cannot have two consecutive vowels. The anomaly was resolved in later Heb. by inserting the letter 'y', thus giving *y'rušā'ayim*; this form does in fact occur a few times in the OT, e.g., Je. 26:18. This may well have

been understood to be a dual (for the ending *-ayim* is dual), viewing the city as twofold. (Similarly, the Heb. name for 'Egypt', *mišrayim*, appears to be dual.) But there can be little doubt that the original form of the word in Heb. was *y'rušālēm*; this is evidenced by the abbreviation *šālēm* (Eng. 'Salem') in Ps. 76:2, and by the Aramaic form of the name *y'rušlēm*, found in Ezr. 5:14, etc.

The name is pre-Israelite, appearing in the Egypt. Execration Texts (19th-18th century; the form appears to be Rushalimum) and in later Assyrian documents (as *Urusalim* or *Urisalimmu*). The first part of the name is usually thought to mean 'foundation'; the second element, though cognate with the Heb. word for 'peace', probably originally referred to a Canaanite deity Shalem. Thus 'foundation of Shalem' is probably the original sense of the name; in course of time, however, the second element will have been associated with 'peace' (Heb. *šālôm*) in Jewish minds; cf. Heb. 7:2.

In NT Greek the name is transliterated in two different ways, *Hierosolyma* (as in Mt. 2:1) and *Hierousalēm* (as in Mt. 23:37). The latter is evidently a close approximation to the Heb. pronunciation, and incidentally an additional evidence for an 'e' as the original final vowel in Hebrew. The former is deliberately Hellenized, to make a Greek-sounding word; the first part of the word at once recalls the Greek word *hieros*, 'holy', and probably the whole

Jebus, the site of the City of David, Jerusalem, on the SE hill, Mt Zion.

was understood to mean something like 'sacred Salem'. LXX has only the form *Hierousalēm*, whereas Greek classical writers use *Hierosolyma* (e.g. Polybius; so too Latin, e.g. Pliny).

Jerusalem is described in Is. 52:1 as the holy city, and to this day it often receives this title. The Heb. phrase is *'ir haq-qōdeš*, literally 'the city of holiness'. Probably the reason for this title was that Jerusalem contained the Temple, the shrine where God deigned to meet his people. Hence, the word *qōdeš* came to mean 'sanctuary' as well as 'holiness'. To Judaism, then, Jerusalem was the holy city without a rival. It was natural for Paul and John, seeing that the earthly city was far from perfect, to designate the place where God dwells in true holiness as 'Jerusalem which is above' (Gal. 4:26) and 'new Jerusalem' (Rev. 21:2).

For other names the city has borne, see III, in historical sequence.

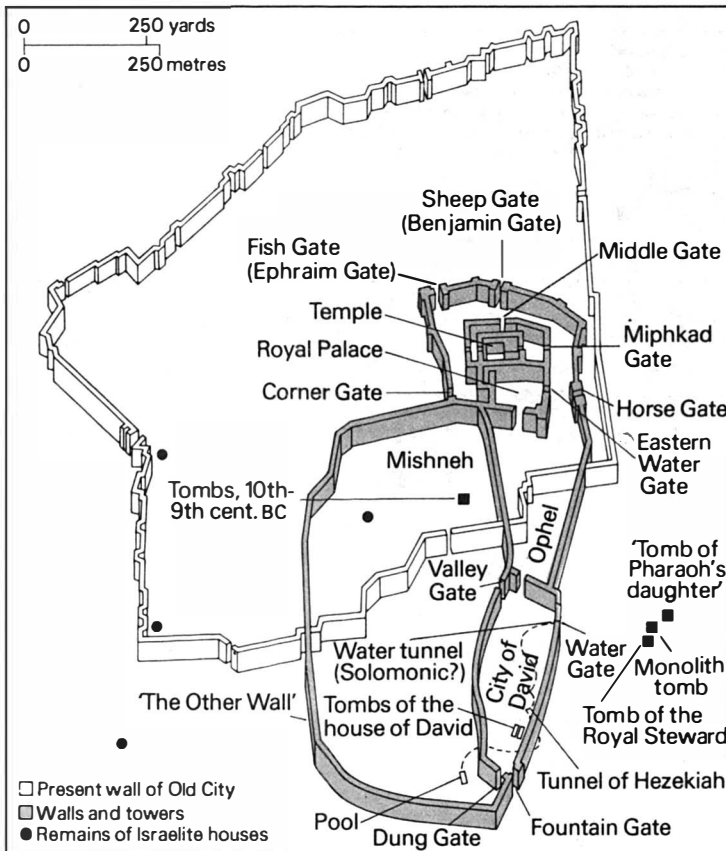

III. History

Traces of prehistoric settlement at Jerusalem have been found, but its early history cannot be traced. After a bare mention in the Egypt. Execration Texts early in the 2nd millennium, it reappears in the 14th-century el-Amarna letters, ruled by a king named Abdi-Khepa. At that time it was under the

suzerainty of Egypt, and was probably little more than a mountain fortress. Possible pentateuchal references to it are as Salem (Gn. 14:18) and the mountain in the 'land of Moriah' of Gn. 22:2. According to very ancient tradition, the latter was the place where later the Temple was built, but there is no possible proof of this. As for Salem, it is almost certainly to be identified with Jerusalem (cf. Ps. 76:2); if so, it was ruled in Abraham's day by an earlier king, Melchizedek, who was also 'priest of God Most High' (*'ēl 'elyōn*).

When the Israelites entered Canaan they found Jerusalem in the hands of an indigenous Semitic tribe, the Jebusites, ruled over by a king named Adoni-zedek. This ruler formed an alliance of kings against Joshua, who soundly defeated them; but Joshua did not take the city, owing, doubtless, to its natural strength of position. It remained in Jebusite hands, bearing the name Jebus. Comparing Jdg. 1:8 with Jdg. 1:21, it appears that Judah overcame the part of the city outside the fortress walls, and that Benjamin occupied this part, living peaceably alongside the Jebusites in the fortress.

This was the situation when David became king. His first capital was Hebron, but he soon saw the value of Jerusalem, and set about its capture. This was not only a tactical move but also a diplomatic

Jerusalem from Solomon to Hezekiah, showing extensions to the N and W, including the Temple area.

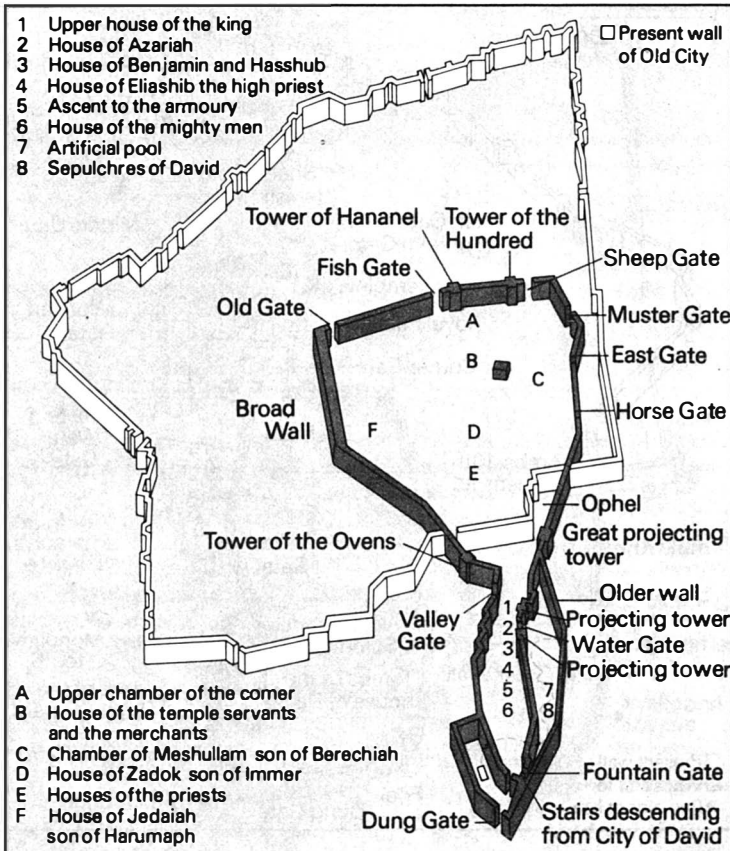

JERUSALEM

one, for his use of a city on the Benjamin–Judah border would help to diminish the jealousy between the two tribes. The Jebusites felt confident of their safety behind the fortress walls, but David's men used an unexpected mode of entry, and took the citadel by surprise (2 Sa. 5:6ff.). In this passage we meet a third name, 'Zion'. This was probably the name of the hill on which the citadel stood; Vincent, however, thinks the name originally applied rather to the fortress building than to the ground it occupied.

Having taken the city, David improved the fortifications and built himself a palace; he also installed the ark in his new capital. Solomon carried the work of fortification further, but his great achievement was the construction of the Temple. After his death and the subsequent division of the kingdom, Jerusalem naturally declined somewhat, being now capital only of Judah. As early as the 5th year of Solomon's successor, Rehoboam, the Temple and royal palace were plundered by Egypt. troops (1 Ki. 14:25f.). Philistine and Arab marauders again plundered the palace in Jehoram's reign. In Amaziah's reign a quarrel with the king of the N kingdom, Jehoash, resulted in part of the city walls being broken down, and fresh looting of Temple and palace. Uzziah repaired this damage to the fortifications, so that in the reign of Ahaz the city was able to withstand the attacks of the com-

bined armies of Syria and Israel. Soon after this the N kingdom fell to the Assyrians. Hezekiah of Judah had good reason to fear Assyria too, but Jerusalem providentially escaped. In case of siege, he made a conduit to improve the city's water-supply.

Nebuchadrezzar of Babylon captured Jerusalem in 597 and in 587 bc destroyed the city and Temple. At the end of that century the Jews, now under Persian rule, were allowed to return to their land and city, and they rebuilt the Temple, but the city walls remained in ruins until Nehemiah restored them in the middle of the 5th century bc. Alexander the Great ended the power of Persia at the end of the 4th century, and after his death his general Ptolemy, founder of the Ptolemaic dynasty in Egypt, entered Jerusalem and included it in his realm. In 198 bc Palestine fell to Antiochus II, the Seleucid king of Syria. About 30 years later, Antiochus IV entered Jerusalem, destroying its walls and plundering and desecrating the Temple; and he installed a Syrian garrison in the city, on the Akra. Judas the Maccabee led a Jewish revolt, and in 165 bc the Temple was rededicated. He and his successors gradually won independence for Judaea, and the Hasmonaean dynasty ruled a free Jerusalem until the middle of the 1st century bc when Rome intervened. Roman generals forced their way into the city in 63 and 54; a Parthian army plundered it

Probable reconstruction of Jerusalem as rebuilt by Nehemiah in the 5th cent. BC.

in 40; and 3 years after that Herod the Great had to fight his way into it, to take control. He first had to repair the damage created by these various incursions; then he launched a big building programme, erecting some notable towers. His most renowned work was the rebuilding of the Temple on a much grander scale, although this was not finished within his lifetime. One of his towers was Antonia, commanding the Temple area (it housed the Roman garrison which came to Paul's aid, Acts 21:34).

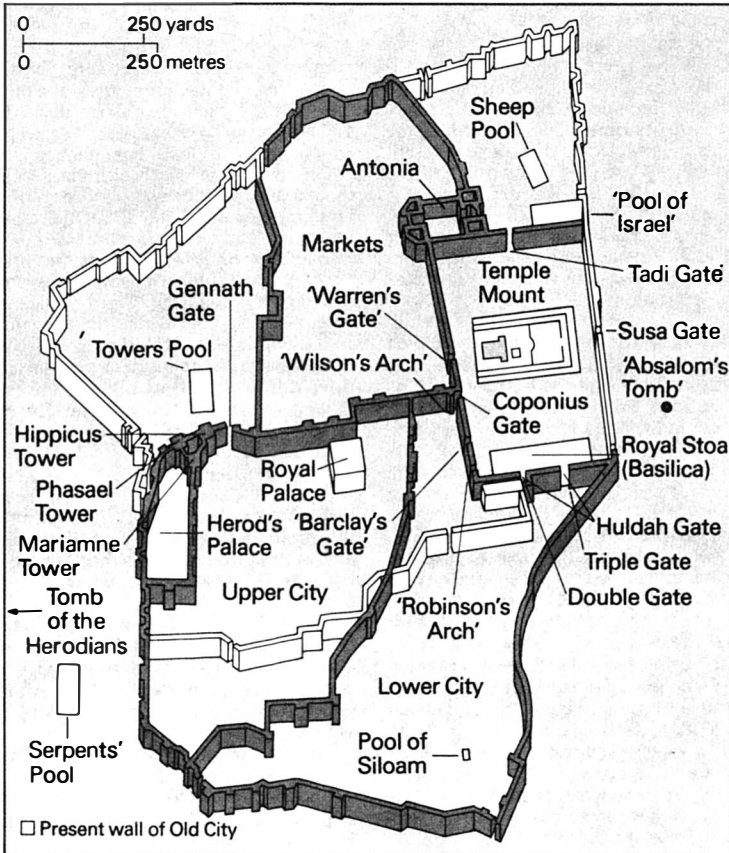

The Jewish revolt against the Romans in AD 66 could have but one conclusion; in AD 70 the Roman general Titus systematically forced his way into Jerusalem, and destroyed the fortifications and the Temple. He left three towers standing; one of them, Phasael, still remains, incorporated in the so-called 'Tower of David'. But further disaster awaited the Jews: another revolt in AD 132 led to the rebuilding of Jerusalem (on a much smaller scale) as a pagan city, dedicated to Jupiter Capitolinus, from which all Jews were excluded. This was the work of the emperor Hadrian; he called the newly constructed city Aelia Capitolina (the name even found its way into Arabic, as Iliya). It was not until the reign of Constantine (early 4th century) that the Jews were again permitted to enter the city. From his reign on, the city became

Christian instead of pagan, and many churches and monasteries were built, notably the Church of the Holy Sepulchre.

Jerusalem has suffered many vicissitudes since the 2nd century, and has been captured and held at various times by Persian, Arab, Turkish, Crusader, British and Israeli troops and administrations. The most important building developments in the Old City (as opposed to the rapidly growing modern suburbs) were due to the early Muslims, the Crusaders and finally the Turkish sultan Suleiman the Magnificent who in 1542 rebuilt the city walls as they can be seen today. The Israelis give the city its ancient Heb. name, *y'rūsālayim*; the Arabs usually call it *al-Quds* (*al-Sharif*), 'the (noble) Sanctuary'.

IV. Growth and extent

It must be stated at the outset that there is a good deal of uncertainty about the physical history of Jerusalem. This is, of course, partly due to the periodic disasters and destructions, and to the layers upon layers of rubble that have piled up over the centuries. These factors have caused difficulty elsewhere, of course, but archaeologists have often been able to surmount them to a large extent. The particular problem with Jerusalem is that it has been continuously inhabited and still is, so that excavations can be made only with difficulty.

Jerusalem in the time of Herod the Great.

JERUSALEM

Archaeologists here have to dig where they can, not where they think it might be profitable. On the other hand, there is an abundance of traditions, Christian, Jewish and Muslim; but in many cases it is not easy to evaluate them. So uncertainty and controversy remain; however, much valuable archaeological work has been done during the last century, and it has solved some problems.

Scripture nowhere gives a systematic description of the city. The nearest approach to such a description is the account of the rebuilding of the walls by Nehemiah. But there are a great number of references giving some information. These have to be pieced together, and fitted in with the picture we get from archaeology. Our earliest description of the city is that of Josephus (*BJ* 5. 136-141); Josephus is here laying a background for his account of the gradual capture of the city by Titus and the Roman armies. This too has to be fitted into the picture.

Excavations have conclusively shown that the earliest city was on the SE hill, an area now wholly outside the city walls (the S wall was retracted N in the 2nd century AD). It must be clearly borne in mind that the original Zion lay on the E ridge; the name was by the time of Josephus already erroneously attached to the SW hill.

Few traces remain from the pre-Jebusite period, but it may be inferred that a small town grew on the SE ridge, within easy reach of the spring Gihon in the valley to the E. The Jebusites enlarged the city to a limited extent, most notably by the construction of terraces E, so that their E wall lay well down the slope towards the spring. This terracing and E wall seem to have needed frequent maintenance and repair till their final destruction by the Babylonians in the early 6th century BC, after which the E wall was again retracted to the ridge. Present opinion is inclined to consider the word *'Millo' (e.g. 2 Sa. 5:9; 1 Ki. 9:15), which derives from a Heb. root meaning 'fill', to refer to this terracing.

In times of peace it was common practice for houses to be built outside the walls, which from time to time necessitated new walls and fortifications. David's and Solomon's city extended N, in particular, the Temple being built on the NE hill; the royal palace was probably situated in the area between the older city and the Temple area.

This intermediate area is probably the 'Ophel' of such passages as 2 Ch. 27:3 (the name means 'swelling', and was used of the citadel of other cities too, e.g. Samaria, cf. 2 Ki. 5:24, NEB); but some scholars apply the term to the whole E ridge S of the Temple. The Jebusite city, or perhaps more strictly the central fortress of it, already bore the name 'Zion' (the meaning of which is uncertain, perhaps 'dry area' or 'eminence') at the time of David's capture, after which it was also called 'the city of David' (cf. 2 Sa. 5:6-10; 1 Ki. 8:1). The name 'Zion' became, or remained, synonymous with Jerusalem as a whole.

It was in the prosperous days of the 8th century BC that the city first spread to the W ridge; this new suburb seems to have been called the Second Quarter or Mishneh (2 Ki. 22:14). A wall later enclosed it, built either in Hezekiah's reign (cf. 2 Ch. 32:5) or somewhat later. It is certain that this extension included the NW hill, but whether the SW hill was now occupied is as yet unresolved. Israeli archaeologists conclude that it was, and that the Pool of Siloam was inside the city walls in Hezekiah's reign.

When Nebuchadrezzar's troops sacked Jerusalem in 587 BC, they destroyed most of the buildings and demolished the city walls. The Temple was rebuilt at the end of the century, and the city had a small population once again. In the mid-5th century the Persian authorities permitted Nehemiah to rebuild the city walls. No doubt he restored earlier walls where possible, but it is clear from excavations that he retracted the E wall on the E side to the crest of the hill because the ancient terraces were broken beyond repair and no doubt the W ridge was abandoned. Persian period deposits occur principally on the top of the E hill. Nehemiah's description of Jerusalem presents several problems. It is not clear which gates were in the city wall and which led into the Temple. Names of gates changed from time to time, and there are difficulties in the Heb. text. Earlier attempts to interpret Nehemiah's data require revision in the light of recent excavations. Although Nehemiah gives no indication of direction or changes of direction, it is fairly clear that the circuit he described in ch. 3 began N of the city and took an anti-clockwise direction.

There is little evidence that the city spread to the W ridge again until the 2nd century BC. After the Maccabean revolt, the city began to grow once more. Herod the Great was responsible for a major building programme in the late 1st century BC, and the city continued to develop until its destruction at the end of the Jewish War (AD 66-70). Our major literary source for this whole period is Josephus; but his information leaves us with a number of problems as yet unresolved.

The first of these problems is the position of the 'Akra', the Syrian fortress set up in Jerusalem in 169 BC. Its purpose was plainly to keep the Temple courts under close surveillance, but neither Josephus nor I Maccabees makes it clear whether the garrison was located N, W or S of the Temple. Opinions remain divided, but the most recent excavations tend to support the third of these possibilities. (See *BASOR* 176, 1964, pp. 10f.)

A second problem concerns the course of the 'Second Wall' and the 'Third Wall' mentioned by Josephus, who tells us that the Romans penetrated Jerusalem in AD 70 by progressively breaching three N walls. Josephus describes the termini of the three walls, but he does not give information as to the line followed by any of them. Excavations have supplemented his information here and there, but many uncertainties remain.

Thus, the remains of an ancient wall at the present-day Damascus Gate have been identified by K. M. Kenyon as part of the Third Wall, but by Israeli archaeologists as part of the Second Wall; and finds considerably further N have been linked with the Third Wall by the latter, but with a wall of circumvallation (erected by Titus, during the siege of Jerusalem) by Kenyon. The Third Wall was begun by Agrippa I (AD 41-44), and scarcely finished by the outbreak of the Jewish War AD 66, so that stratigraphical methods would scarcely serve to distinguish Agrippa's Wall from Titus' Wall.

One special point of interest concerning the Second Wall, which must have been built in the 2nd or 1st century BC (Josephus does not date its construction) is its relationship to the Church of the Holy Sepulchre. If the church has any claim to marking the authentic site of the crucifixion and burial of Christ, its site must have lain outside the

city walls; but for many years it was considered doubtful whether the site lay inside or outside the line of the Second Wall (the Third Wall was not then in existence). It has now been established that this area lay to the N of the wall; the site may therefore be authentic.

The city lay in ruins between AD 70 and the Bar-Kokhba revolt 60 years later. The emperor Hadrian then rebuilt the city, naming it Aelia Capitolina; his city was much smaller than its predecessor, with the permanent retraction of the S wall. During the Christian era, the size of Jerusalem has been by no means constant. The present-day walled area ('the Old City') was given its definitive shape by Suleiman the Magnificent in the 16th century.

V. Theological significance

By natural metonymy, the names 'Zion' and 'Jerusalem' frequently stand for the body of citizens (even when far away in exile), the whole of Judah, the whole of Israel, or the entire people of God.

Jerusalem plays an important theological role in both Testaments; in this respect too it is not readily distinguishable from the wider perspective of the whole land. Two motifs predominate: Jerusalem is at the same time the place of Jewish infidelity and disobedience, and also the place of God's election and presence, protection, and glory. The process of history demonstrated the former, which inevitably provoked divine anger and punishment; the glories of the city can only lie in the future. (See especially Is. 1:21; 29:1-4; Mt. 23:37f.; and Ps. 78:68f.; Is. 37:35; 54:11-17.) The contrast between the actual and the ideal naturally gave rise to the concept of a heavenly Jerusalem (cf. Gal. 4:25f.; Heb. 12:22; Rev. 21).

Jeremias, *Jerusalem in the Time of Jesus*, 1969. On theology see *TDNT* 7, pp. 292-338; W. D. Davies, *The Gospel and the Land*, 1974. D.F.P.

JESHIMON (Heb. *y'šimōn*, 'waste', 'desert'). Apparently used as a proper noun in Nu. 21:20; 23:28; 1 Sa. 23:19, 24; 26:1, 3. G. A. Smith, followed by G. E. Wright and F. V. Filson, identifies the name simply with the Wilderness of Judaea, but there is reason to think that in the Nu. references a location NE of the Dead Sea is indicated. See *GTT*, pp. 22f. R.P.G.

JESHUA. This is a late form of the name Joshua (the same individual is called Jeshua in Nehemiah and Ezra, and Joshua in Haggai and Zechariah). There is doubt about how many Jeshuas there are, but the following may perhaps be distinguished.

1. The head of a course of priests (1 Ch. 24:11, *av* 'Jeshuah'). 2. A Levite mentioned in Hezekiah's reorganization (2 Ch. 31:15). 3. The high priest also called Joshua (Ezr. 2:2, *etc.*). 4. A man of Pahath-moab who returned from the Exile with Zerubbabel (Ezr. 2:6). 5. A head of a house of priests associated with 'the sons of Jedaiah' (Ezr. 2:36). 6. A Levite. Jeshua son of Azaniah (Ne. 10:9). 7. One of the chief of the Levites, the son of

Kadmiel (Ne. 12:24; the text here may be corrupt). 8. The father of Ezer, ruler of Mizpah (Ne. 3:19). 9. The son of Nun (Ne. 8:17) (*JOSHUA).

It is clear that the name was a common one at the time of the return from the Exile. But little is told us of the various bearers of the name, and it is possible that some of those in the list ought to be identified with others.

Jeshua is also the name of a place in Judah (Ne. 11:26), usually taken as identical with Shema (Jos. 15:26), and Sheba (Jos. 19:2). The original form would be Shema, *m* becomes *b*, then *w*, and finally *j* is prefixed. L.M.

JESHURUN (Heb. *y'šurūn*, 'the upright one'; LXX 'the beloved one'). A poetic variant of the name Israel (Dt. 32:15; 33:5, 26, *av* 'Jesurun'). Used of the chosen Servant (Is. 44:2), the same Gk. word of LXX is used of Jesus (Eph. 1:6) and the church (Col. 3:12; 1 Thes. 1:4; 2 Thes. 2:3; Jude 1). Possibly to be interpreted 'People of the Law' (cf. D. J. Wiseman, *Vox Evangelica* 8, 1973, p. 14). D.W.B.

JESSE (Heb. *yīšay*). Grandson of Boaz and father of David. He lived in Bethlehem and is commonly termed 'the Bethlehemite', but once the 'Ephraimite of Bethlehem-Judah'. He was the father of eight sons (1 Sa. 16:10-11), but the names of only seven are known (1 Ch. 2:13-15). The eighth is omitted, probably as he had no issue, unless the Elihu of 1 Ch. 27:18 is other than Eliab.

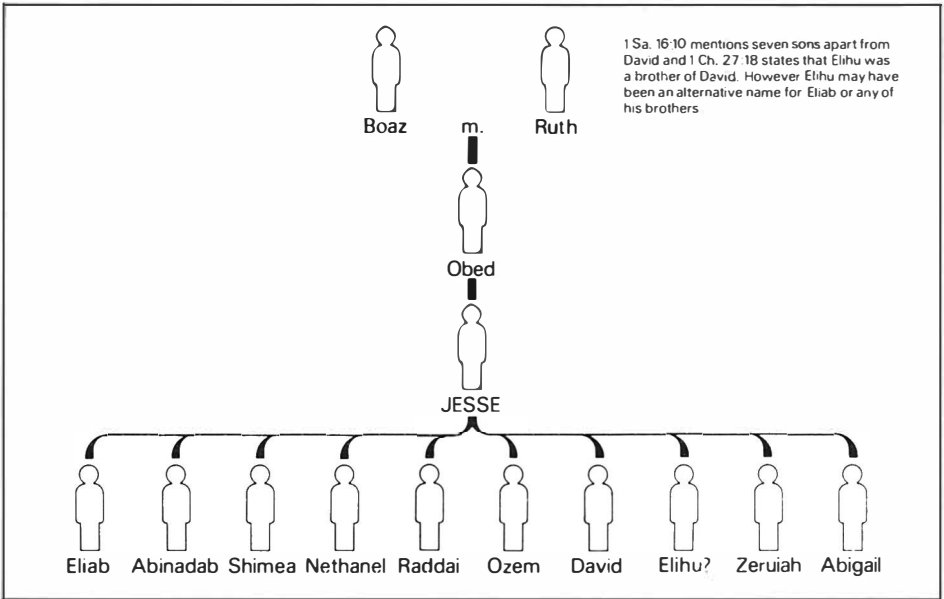

Ancient Jewish tradition (Targ. Ruth 4:22) followed by later interpreters (cf. Avmg.) identifies Nahash (2 Sa. 17:25) with Jesse. Two other solutions are more probable. Either Abigail and Zeruih were daughters of Jesse's wife by a former marriage to a Nahash (cf. A. P. Stanley, *Jewish Church*, Lect. 22) or Nahash may be a feminine name and taken as the mother of the daughters. Jesse's last appearance is at the cave of Adullam, whence David sent his parents for safety to Moab (1 Sa. 22:3-4). M.A.M.

JESUS CHRIST, LIFE AND TEACHING OF. A general article on the life and teaching of Jesus can touch only briefly on individual incidents and issues. Full use should therefore be made of the numerous references (at the end of sections and by asterisks in the text) to articles on specific points.

I. Sources

a. Non-Christian sources

Very few early references to Jesus with any claim to be independent of Christian sources have survived. The only direct mention by a Roman historian is a bare record of his execution by order of Pontius Pilatus in Judaea in the reign of Tiberius (Tacitus, *Annals* 15. 44). Other early Roman references to Christians do not refer to Jesus as a historical figure. The Jewish historian *Josephus has one brief account of Jesus, which is generally agreed to have been rewritten by Christians; it is likely that the original text referred to him as a reputed miracle-worker and teacher who attracted a considerable following and was executed by crucifixion under Pilate, though even this content is disputed (*Ant.* 18. 64). A number of rather obscure passages in the Talmud, whose reference to Jesus is in most

Jesse's family tree according to 1 Ch. 2:13-17 (see p. 563).

cases only conjectural, add no clear historical detail, beyond the statement that he was hanged on Passover Eve, after due trial, as a sorcerer and one who 'led Israel astray' (*Sanhedrin* 43a). Non-Christian evidence therefore substantiates the fact of Jesus' existence, his popular following, his execution and the rough date (Pilate was in office in Judaea AD 26-36).

b. Christian sources

1. Outside the NT there are numerous accounts of the life and teaching of Jesus in early Christian writings (*NEW TESTAMENT APOCRYPHA). Some are clearly legendary, aiming to fill the gaps in the narratives of the canonical Gospels or to heighten the miraculous element. Others are apparently written to propagate Gnostic and other deviant views. While some of these works are quite early (early 2nd century), most of their historically credible material is clearly based on the canonical Gospels; only the *Gospel of Thomas* is generally treated seriously as possibly preserving independent authentic tradition, and many even of its sayings are influenced by Gnosticism, while many of the rest are paralleled in the canonical Gospels.

2. Thus in practice we are almost entirely restricted to the four canonical Gospels for evidence about Jesus. The rest of the NT contributes only a few isolated sayings and traditions (e.g. Acts 20:35; 1 Cor. 11:23-25).

The reliability of the Gospels as historical sources is hotly debated. Their primary purpose is clearly more than a mere recounting of facts, but it is not so clear that their avowedly 'propagandist' purpose necessarily calls in question their historical accuracy. If the Gospels are studied in the light of comparable literature of the period, and particularly of what is known of Jewish ideas of tradition, it appears that, while there was considerable

freedom in the selection and wording of sayings and narratives, so that each writer's individual thought and purpose come out in the way he presents his material, they were essentially concerned to pass on a carefully preserved tradition of the words and deeds of Jesus. See further *Gospels, and the articles on the Gospels individually; also *Tradition.

II. Setting

A. Time

Jesus was born shortly before the death of *Herod the Great in 4 BC (Mt. 2:1, 13-15); the exact date cannot be determined. His public ministry began when he was 'about thirty years of age' (Lk. 3:23); this was some time after the beginning of John the Baptist's mission in, probably, AD 28 (Lk. 3:1ff.). The length of his ministry is again impossible to determine exactly, but a period of roughly 3 years is generally agreed (based on the two springtimes indicated in Mark before the final Passover, Mk. 2:23; 6:39, and the three Passovers of Jn. 2:13; 6:4; 12:1). This would suggest a date of about AD 33 for the crucifixion, and if the Gospels indicate that the Passover (Nisan 14/15) fell on a Friday in the year of the crucifixion (though this too is disputed: see *LORD'S SUPPER), the astronomical data for AD 33 would support this date. But certainty on the precise dates is impossible. (*CHRONOLOGY OF THE NEW TESTAMENT.)

BIBLIOGRAPHY. H. Hoehner, *Chronological Aspects of the Life of Christ*, 1977; J. P. Meir, *A Marginal Jew* I, 1991, pp. 372-433.

b. Place

Practically the whole of Jesus' public ministry took place within Palestine. Only a few journeys outside Palestine are recorded, e.g. into Phoenicia and Decapolis (Mk. 7:24, 31), and to Caesarea Philippi on the slopes of Mt Hermon (Mk. 8:27). Jesus first came to the notice of John the Baptist in the Jordan valley, and John's Gospel records some early ministry in that area and in Judaea (Jn. 1:28-42; 2:13-4:3, dated before John's imprisonment, 3:24; 4:1-3, after which the Galilean ministry began, Mk. 1:14). Thereafter the main scene of ministry was Galilee, punctuated by visits to Jerusalem recorded by John in connection with festivals, until the final Passover visit.

c. Historical situation

1. Palestine had been under Roman rule for some 60 years when Jesus was born. It was indirect rule, through local princes, of whom *Herod the Great was the most famous. The division of his kingdom among his sons resulted in three regional rulers, of whom *Herod Antipas, tetrarch of Galilee and Peraea, held office throughout the period of Jesus' ministry; he is the Herod whom we meet in the Gospels outside the infancy stories. Archelaus, who took over Judaea and Samaria, was deposed after 10 years of misrule, and here direct rule was imposed, in the person of a Roman prefect, responsible to the governor of the province of Syria. The prefect during the period of Jesus' ministry was Pontius *Pilate.

Roman rule brought real benefits to the subject nation, but it was not popular. A special grievance was the system of taxation under which the already high official taxes were swollen by the unofficial rake-off of the *tax-collectors (AV 'publicans') who thus became a feared and hated group, both as extortioners and as collaborators with the occupying power. But the chief cause of resentment was the mere fact of political subjection, a position felt by many to be incompatible with Israel's status as the people of God.

2. The varying Jewish reactions to this situation may be seen in the attitudes of the 'parties' which had by this time emerged within Judaism. The priestly *Sadducees, who with the lay 'elders' exercised the effective leadership of the Jews under Roman rule (*SANHEDRIN) seem to have been more concerned with the maintenance of the *status quo* and the proper observance of the Temple ritual than with any ideological resistance to Roman rule. The *Pharisees, though in some cases willing to support insurrectionary movements, busied themselves with the law and the complex business of its rigorous application to everyday life. The *Essenes went further and opted out of all political and social involvement in favour of a monastic withdrawal. (The *DEAD SEA SCROLLS provide vivid documentation of such a separatist group at Qumran.) But there was a strong and popular movement towards political activism (*'ZEALOT', the name of one such group later in the century, is often used loosely to denote the various groups who took this stance), particularly since the abortive revolt of Judas of Galilee, provoked by the *census of AD 6. Sporadic outbreaks of insurrectionary activity, particularly in Galilee, led up eventually to the devastating Jewish War AD 66-70.

3. *Galilee, Jesus' home province, stood to some extent apart from the Jewish heartland of Judaea.

Its population, until quite recently largely Gentile, and geographically separated from Judaea by the hostile territory of Samaria, was despised by Judaeans Jews as of questionable religious orthodoxy, if not still half-pagan. The pronounced N accent made a Galilean conspicuous in Jerusalem society. This difference of background may be a significant factor in Jesus' dealings with the Jewish authorities. It is also relevant to his reputation with the Romans, to whom 'Galilean' was almost tantamount to 'revolutionary'.

4. The *languages* of Palestine in the 1st century AD are a complex problem. It seems clear that Aram., Heb. and Gk. were all spoken. Aram. was most probably Jesus' vernacular, but a Galilean would almost certainly also have a working knowledge of Gk., and Heb. (in a form akin to the later Mishnaic) may well have been the medium for his debates with the religious authorities in Jerusalem.

BIBLIOGRAPHY. F. F. Bruce, *New Testament History*, 1982, chs. 1-9; C. Rowland, *Christian Origins*, 1985, pp. 25-108; J. Stambaugh and D. Balch, *The Social World of the First Christians*, 1986; S. Freyne, *Galilee, Jesus and the Gospels*, 1988.

III. Birth and childhood

The details of the birth of Jesus are recorded only in the Gospels of Matthew and Luke, each Gospel clearly using different sources, that of Matthew concentrating more on Joseph's side of the story, while Luke shows an intimate knowledge of Mary's experiences (and of those of her relative Elizabeth, mother of John the Baptist) which it is generally agreed could only have been derived, directly or indirectly, from Mary herself. It is therefore the more remarkable that on the crucial fact of the supernatural origin of Jesus' birth, without a human father, the two Gospels with their independent sources are agreed (*VIRGIN BIRTH).

The circumstances of Jesus' birth and childhood were in striking contrast to the supernatural mode of his conception. He was born in the animal quarters of a crowded village inn, and brought up in a very ordinary home in the obscure Galilean village of *Nazareth, which had achieved no mention in earlier literature. His family may have been what we would call 'middle class', the 'carpenter' (actually more a building contractor) being a skilled craftsman, perhaps employing labour, and a respected figure in village life (*ARTS AND CRAFTS, III. c). But the Gospel records make it clear that they were not affluent (Lk. 2:24; cf. Lv. 12:8), and Jesus' parables sometimes reflect experience of a home where comfort and money were limited (e.g. Lk. 11:5-7; 15:8-10). The fact that Joseph is not mentioned after the birth and childhood stories, and that Jesus was referred to in the village as 'Mary's son' (Mk. 6:3), is often taken to mean that Joseph died while Jesus was young, leaving Jesus as the oldest son to run the family business and provide for his four younger brothers and unknown number of sisters (Mk. 6:3).

In such circumstances Jesus could not aspire to a higher education. His full knowledge of the OT Scriptures attests to his having received the normal Jewish child's education at the village *synagogue-school, and the one story of his childhood preserved in the Gospels indicates an abnormal aptitude in matters of religious debate (Lk. 2:42-50). Beyond this we know nothing of his childhood, though his later teaching shows a mind well

JESUS CHRIST, LIFE AND TEACHING OF

stocked with the incidents and characters of daily life in a country village.

IV. The beginning of public ministry

a. *John the Baptist*

The occasion of Jesus' emergence from obscurity was the mission of *John the Baptist, a Judean relative of Jesus who had grown up as an ascetic in the Judean desert, and whose call for repentance in the light of God's imminent judgment attracted large crowds to be baptized by him in the Jordan. It was among these followers of John that Jesus found his first disciples, with John's active encouragement (Jn. 1:35-42). John recognized in Jesus the judge whose coming he had predicted (Mt. 3:11f., etc.), and while the later style of Jesus' mission apparently caused him some doubts (Mt. 11:2-3), he does not seem to have withdrawn that recognition, even though some of his disciples maintained a separate existence throughout the NT period (Acts 18:24f.; 19:1-5).

b. *The baptism of Jesus*

Jesus' baptism by John was the event which most clearly inaugurated his mission. Why Jesus chose to submit to a baptism whose explicit significance was of repentance with a view to the forgiveness of sin has been much debated. Christians have agreed, following the lead of the NT (e.g. Jn. 8:46; Heb. 4:15; 1 Pet. 2:22), that it was not consciousness of personal sin which prompted him. More plausible is the suggestion that his intention was to identify himself with what John stood for, a 'vote' for the purified and reformed Israel which John demanded, and whose ideals were to form an important element in Jesus' own preaching. Further, in identifying himself with those who responded to John's call for repentance, he put himself in a position to be their representative. His own enigmatic explanation, 'thus it is fitting for us to fulfil all righteousness' (Mt. 3:15), may reflect an understanding of his role in line with that of the Servant of the Lord, who by his suffering on behalf of his people was to 'make many to be accounted righteous' (Is. 53:11).

Whatever Jesus' own intention, his baptism in fact led to a decisive revelation of his future role (Mk. 1:10f.). A visible descent of the Holy Spirit upon him marked him as the promised deliverer of, e.g., Is. 11:2; 42:1 and 61:1, while a voice from heaven addressed him in terms reminiscent of Ps. 2:7 and Is. 42:1, the former greeting the Lord's anointed as his Son, and the latter introducing the Servant, chosen by God to deliver his people. Thus several important strands in OT Messianic hope are woven together, and the decisive role of Jesus in God's redemptive purpose is marked out.

c. *The temptation of Jesus*

The 'temptation' (Mt. 4:1-11; Lk. 4:1-13), which followed quickly, was essentially an exploration of what it meant to be 'Son of God', as he had just been proclaimed at his baptism. 'If you are the Son of God . . .' is the theme of the challenges, and a study of Jesus' replies to them shows that their focus was not primarily on the way his mission should be accomplished, but on his own relationship with God. The temptation to turn stones into bread was to doubt his Father's care and wisdom in providing this period of abstinence. The temptation to leap from the Temple wall was to force his

Father's hand to prove that he would protect his Son, rather than accept his care on trust. The third temptation was to compromise the Son's necessarily absolute loyalty to his Father. Jesus' three replies are drawn from verses in Dt. 6-8, and refer to the lessons the nation Israel was intended to learn from its experiences in the wilderness, suggesting that Jesus now takes up the nation's role as son of God, and by his success where Israel failed proves to be the true Son.

The encounter with Satan, concluding a long period of withdrawal in the desert area around the Jordan valley, thus served to strengthen Jesus' understanding of his unique status as Son of God which was to be the key to his mission. There is no suggestion that these were the whole of the temptations Jesus ever faced (cf. Heb. 4:15), or even that they were typical. They were the focal point of a vital period of preparation.

d. *The move to Galilee*

Jesus' public ministry now began, apparently at first in the Jordan valley with a focus on baptism parallel to that of John (Jn. 3:22f.; 4:1f.). Jesus appeared to many as a second Baptist, and a certain amount of rivalry soon arose between the two groups of disciples, though John refused to countenance this (Jn. 3:26-30). But this style of activity was soon brought to an end both by Jesus' increasing popularity coming to the notice of the authorities, and especially by the arrest of John the Baptist by Antipas, partly, as the gospels record, due to his criticism of Antipas' marriage, but also, according to Josephus, on suspicion of arousing political unrest, a charge which could easily affect the parallel ministry of Jesus. In this situation Jesus withdrew into his own region of Galilee, and his style of ministry changed to an itinerant preaching and healing mission. We do not hear of him baptizing again. (See II. b for the geographical location of the ministry.)

V. Features of Jesus' public ministry

a. *Life-style*

Despite Jesus' 'middle-class' background (above, III), his chosen style of life from this point was one of no financial security. He and his disciples lived on the contributions and hospitality of those who supported his mission (Mt. 10:8-11; Lk. 8:3; 10:38-42). He taught them to rely on God for all material needs (Mt. 6:24-34), and demanded that one would-be disciple should give away all his possessions (Mk. 10:17-22). Their money was held in common (Jn. 12:6; 13:29), but it sufficed only for their basic needs. Poverty, for Jesus, was not a disaster (Lk. 6:20f., 24f.; Mk. 10:23-31). Unmarried, and with no settled home (Lk. 9:58) or material ties, he was free to travel around Palestine preaching and healing.

In the early part of his ministry he was invited to speak in *synagogues as a visiting teacher (Mk. 1:21, 39; Mt. 9:35; Lk. 4:16-27), but later synagogue teaching is not mentioned (because his radical teaching was unacceptable?), and Jesus is found teaching the crowds in the open air, and devoting an increasing proportion of time to the instruction of his closest disciples.

b. Disciples

Like other Jewish teachers, Jesus gathered a group of *disciples. The 'crowds' came and went, listening to Jesus eagerly, but not committed to follow him; the 'disciples' were those who to a greater or lesser degree threw in their lot with him, and accompanied him on his travels. From among these disciples, an inner circle of 'the twelve' (often called the 'apostles', though the term 'apostle' is not confined to them in the NT) was selected by Jesus; and within the Twelve the special group of Peter, James and John were selected as Jesus' most intimate companions on a number of significant occasions.

To be a disciple involved an unreserved and exclusive commitment to Jesus. It involved, at least for the inner circle, the acceptance of his style of life (though not the permanent abandonment of home and family, as the case of Peter illustrates, Mk. 1:29-31; 1 Cor. 9:5), and a readiness to suffer persecution and ostracism for his sake (Mt. 10:16-39). It is an indication of the authority and attractiveness of Jesus and his teaching that he could nonetheless call people to follow him and expect to be taken seriously.

The majority of his disciples were Galileans. Of the inner circle it is probable that all except *Judas Iscariot (if his name means 'man of Kerioth') were from Galilee. But in character and background they varied from *Thomas the pessimist to *Peter the extrovert, and from *Matthew the tax-collector (and therefore in the employment of the pro-Roman government) to *Simon 'the Zealot'. To have held together such a group, and made them the foundation of the world's greatest religion, is no mean part of the achievement of Jesus.

c. Social attitudes

One of the most persistent objections to Jesus on the part of the Jewish establishment was his habit of keeping doubtful company, particularly that of 'tax-collectors and sinners', the outcasts of respectable society. That he even took meals with them was especially scandalous. But Jesus defended his actions as essential to his mission, which was to those in need, whatever their social standing (Mk. 2:17; cf. Lk. 15:1-2 and the sequel). He would welcome and talk with women of doubtful morals whom others shunned (Lk. 7:36-50; Jn. 4:7ff.), and even found a welcome among *Samaritans, the traditional enemies of the Jews (Jn. 4:39-42; Lk. 17:11-19). His story of the Good Samaritan (Lk. 10:29-37) is a daring challenge to the traditional Jewish taboo. His direct contacts with Gentiles were few but positive (Mt. 8:5-13; 15:22-28), and his teaching made it clear that he did not regard Gentiles as an inferior category, but gave them a place alongside Jews in God's purpose (e.g. Mt. 8:11-12; Lk. 4:25-27).

This unwillingness to be restricted by conventional social barriers is seen also in his relations with rich and poor. Most of his closest disciples seem to have been from the same social class as himself (particularly fishermen, owning boats and employing men, Mk. 1:20), but his preaching met with a favourable response among the poor (e.g. Mt. 11:5), while he also had rich and influential followers (e.g. Nicodemus and Joseph of Arimathea, Jn. 19:38-42), and was at home in more affluent company (Lk. 7:36; 14:1ff.). He was apparently unimpressed by wealth or poverty as such: it was the attitude to wealth which mattered (Mk. 12:41-

44; Lk. 12:13-21). He required of his followers a similar unconcern for artificial barriers (Lk. 14:7-14), and sternly condemned a callous neglect of the less fortunate (Lk. 16:19ff.).

In all this Jesus' concern was with the real needs of those he met, physical and spiritual, and in meeting those needs he cared little if conventions and taboos were overridden.

BIBLIOGRAPHY. M. Hengel, *Property and Riches in the Early Church*, 1974; R. T. France, *EQ* 51, 1979, pp. 3ff.

d. Disputes about the law

Debates with the Jewish religious leaders, especially the *scribes and *Pharisees, took up a good part of the Gospel narratives. Jesus lacked a formal scribal education (Jn. 7:15), but his style of teaching and his group of disciples cast him in the role of a *rabbi, and he was sometimes so addressed. The content of his teaching at many points, however, inevitably set him apart from scribal orthodoxy, and was a major factor in the hostility which eventually led to his death.

Central was the issue of authority. The authority of the OT *law itself was not in question, but rather the authority to interpret it. Scribal *tradition had evolved a complex and constantly growing body of oral teaching on the precise application of the law to the most minute areas of everyday life, and this tradition too was regarded as authoritative. Points of dispute were settled by appeal to previous teachers. In contrast, Jesus paid little attention to traditional rules not clearly found in the OT, and never quoted an authority other than himself (and, of course, the OT); note his formula, 'You have heard . . . but I say to you . . .' (Mt. 5:21f., 27f., 31f., etc.).

The issues are seen most clearly in the debate on defilement (Mk. 7:1-23), where Jesus explicitly accuses the Pharisees and scribes of evading OT requirements on the basis of man-made rules, and dismisses the issue of ritual defilement as relatively trivial; and in the numerous clashes on the observance of the *sabbath (e.g. Mk. 2:23-3:6; Lk. 13:10-17), one of the most elaborately legislated areas in scribal tradition, where Jesus cut through the tangle of legislation to the original intention of the sabbath, and asserted his own right to determine its proper observance.

The series of six 'antitheses' in the Sermon on the Mount (Mt. 5:21-48) further illustrates Jesus' radical approach to the law, going beyond the literal rule to the thought behind the act, and putting principles before precepts even to the extent of apparently setting aside the latter (Mt. 5:38f.). This radical attitude to legal questions made Jesus a danger to the scribal establishment, and the popularity of his views made it essential to get rid of him. The conflict was apparently heated, with very strong language being used by both sides (Mk. 3:22; Mt. 23:1-36). It was the legalistic attitude of the scribal authorities, more than their actual traditions, which Jesus found necessary to denounce.

BIBLIOGRAPHY. D. J. Moo, *JSNT* 20, 1984, pp. 3-49.

e. Miracles

Christian and non-Christian sources attest that Jesus was known to his contemporaries as a worker of *miracles. The vast majority of those recorded are cases of miraculous healing, and the Gospels

JESUS CHRIST, LIFE AND TEACHING OF

present healing, often of large number of people, as a regular feature of Jesus' ministry (Mk. 1:32-34; 3:7-12; 6:55f.; Lk. 7:21f.). Often coupled with his healing miracles (though usually carefully differentiated from them, e.g. Mk. 1:32-34; Lk. 13:32) are his exorcisms (***DEMON POSSESSION**). Both of these activities were expected also of his disciples when they went out in his name (Mk. 6:13; Mt. 10:8), and they are integrally related with his preaching, as aspects of a total onslaught on the powers of evil, in their physical as well as their spiritual manifestation.

Healing and exorcism were an accepted part of the activity of godly men within 1st-century Judaism, but nothing approaching the intensity of Jesus' healing ministry is recorded of any contemporary figure (***HEALTH, V**). The range of complaints he healed is very wide, from paralysis to blindness, and from leprosy to a severed ear. Three cases of restoring to life those who had recently died are also recorded. Unlike some contemporary exorcists, he used little or no ritual, a mere word of command being often the only means employed (Mt. 8:8f., 16). The overwhelming impression was of his simple authority over physical and spiritual evil, and his compassion for those in need. His healing ministry was not a bid for recognition, nor was it primarily designed to prove anything, but it was the automatic response of his compassion to human need when he met it.

Jesus' other ('nature') miracles are comparatively few, but again the same pattern of an automatic and unselfconscious response to a pressing need can be seen in most of them, feeding hungry crowds, supplying wine in an emergency, providing fish after a night of fishing in vain, and calming a storm on the lake. That Jesus solved such problems by miraculous means was not so much a deliberate display of power as a natural result of who he was. Only the walking on water and the sudden withering of the fig-tree seem to have been performed more to teach the nature of his person and mission than to meet a definite need.

The miracles, then, are not *the* proof of Jesus' divine nature, though they imply it. They are an inevitable part of a total ministry of deliverance and of the conquest of evil.

f. Political stance

The charge on which Jesus was finally condemned was of political sedition (Lk. 23:2): he had claimed to be 'king of the Jews'. While the title never occurs in his sayings, he did often speak about the '*kingdom of God' as the object of his mission (see below, VII, d), and such language, particularly in Galilee, was open to nationalistic interpretation. Much of his early support was probably due to hopes that he would lead a revolt against Rome, culminating in the unsuccessful attempt to force him to accept the title of 'king' (Jn. 6:14f.). After this episode his support seems to have decreased, and more of his time was spent instructing his disciples on the true nature of his mission.

Some modern writers (especially S. G. F. Brandon, *Jesus and the Zealots*, 1967) have tried to show that Jesus' intentions were in fact political, and that the spiritual nature of his kingship is a later invention in the gospels to gloss over his real revolutionary aim. While Jesus was certainly not as blind to political and social problems as more pietistic Christians have suggested, Brandon's view involves a wholesale rewriting of the Gospels on very

flimsy grounds. The Jesus of the Gospels was at pains to correct misunderstandings of the nature of his mission (Mk. 8:27-38; 12:35-37; 14:61f.), avoided publicity and popular demonstrations until the last week of his ministry, refused to affirm the nationalist position when asked about the validity of Roman taxation (Mk. 12:13-17), and was declared innocent of sedition by the Roman prefect (Lk. 23:13-16). His declared attitude to the Jewish nation of his day, which he regarded as approaching its final punishment for its rejection of God's messengers in the imminent destruction of Jerusalem (Lk. 11:47-51; 13:25-35, etc.), is quite incompatible with nationalist sympathies. The circumstances of his ministry inevitably laid him open to political suspicion, but there is ample evidence that his own intentions were otherwise, even though some of his followers undoubtedly expected him to adopt a nationalist role. (***MESSIAH, II, a**.)

g. Jesus' authority

The Gospels tell us that the dominant impression of Jesus' ministry was that of authority. This is true both of his boldly self-authenticating teaching (Mk. 1:22) and of his miraculous activity (Mk. 1:27; Mt. 9:8). It was his personal authority which impressed the Gentile centurion (Mt. 8:8f.), which caused his disciples to leave their homes and jobs to follow him, and which carried all before him when he strode into the Temple court and threw out the traders (Mk. 11:15-17). While Jesus himself refused to state openly the source of this authority (Mk. 11:27-33), the implication is clear that it derived from God, and his own claim to be Son of God carried the same implication. After his resurrection he declared openly his universal authority (Mt. 28:18; cf. Jn. 17:2).

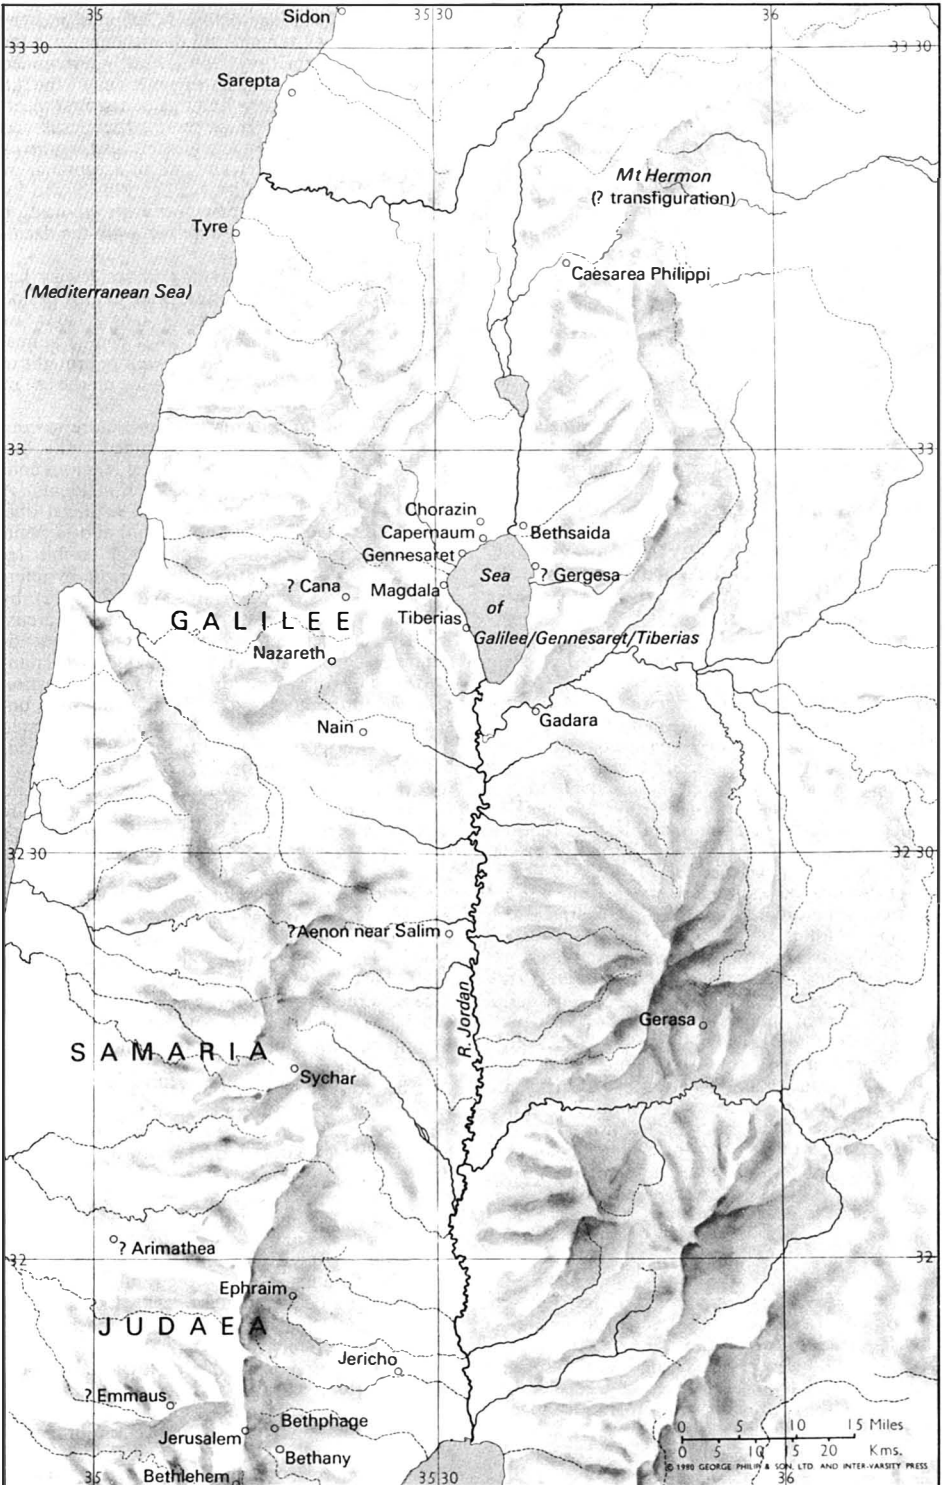

VI. The close of the ministry

a. The last week in Jerusalem

Jesus' last visit to Jerusalem was deliberately undertaken with the knowledge that it would lead to the final confrontation with the authorities, culminating in his own death (Lk. 13:33; 18:31-33). It was made at *Passover time, when Jerusalem would be crowded with pilgrims, and when the themes of death and redemption were in mind. Certain incidents are of special importance.

1. *The entry.* Jesus' arrival in Jerusalem was deliberately dramatic. Instead of arriving unnoticed among the thousands of other pilgrims, he staged a conspicuous ride into the city on a donkey, while his disciples and other pilgrims greeted him with shouts of '*Hosanna' (Mk. 11:1-10). It was a visible allusion to Zc. 9:9-10, the prophecy of the king coming to Jerusalem on a donkey. Its intention was clearly to make a Messianic claim, and it was so interpreted by the crowds, who would include many of his former supporters from Galilee. The prophecy is of a king of peace, but many probably interpreted the gesture in a more militantly nationalistic sense.

2. *Cleansing the Temple.* One of Jesus' first acts on arrival was equally deliberately symbolic. He threw out from the Temple precincts the traders in sacrificial animals and in the special Temple coin-

Map showing the places prominent in the ministry of Jesus Christ.

JESUS CHRIST, LIFE AND TEACHING OF

age, whose market was officially established there at Passover time by the priestly authorities (Mk. 11:15-18). This action not only expressed his repudiation of the current religious leadership and their attitude to worship. It also inevitably called to mind passages such as Mal. 3:1-4 and Zc. 14:21, and thus further reinforced his Messianic claim. (It should be noticed, incidentally, that the object of Jesus' 'violence' was not the Roman government, but the Jewish authorities; this was not an expression of nationalistic militancy.)

3. *Debates.* The week was marked by a continuing dialogue with the religious authorities. Several specific debates are recorded, covering the source of Jesus' authority (Mk. 11:27-33), his attitude to Roman taxation (Mk. 12:13-17), the question of resurrection of the dead (Mk. 12:18-27), the greatest commandment (Mk. 12:28-34) and the status of the Messiah as 'son of David' (Mk. 12:35-37). Such debates were held in public, as Jesus was teaching in the Temple precincts, and their object was to elicit from him either blasphemous or politically damaging statements which could be used against him. Jesus avoided incriminating answers, but none the less succeeded in imparting some important teaching. He went further to make clear his repudiation of the current leadership in Israel, in his parable of the tenants in the vineyard (Mk. 12:1-12), and in his continuing polemic against the scribes and Pharisees in particular (especially Mt. 23). He also predicted in more detail the coming destruction of Jerusalem and its Temple (Mk. 13).

4. *The Last Supper.* This 'farewell meal' was also a pre-arranged (Mk. 14:13-16) and deliberate act. It was in a sense a *Passover meal, though possibly held a day before the official celebration, in the knowledge that the next evening would be too late. (See *LORD'S SUPPER, I. a for details of the date.) At the meal Jesus gave some vital last instructions to his closest disciples in view of his imminent departure, and also revealed that he was to be betrayed by one of their number (though without apparently identifying the traitor explicitly, except perhaps to John, Jn. 13:23-26). But the focus of the meal was the symbolic sharing of bread and wine which he gave as tokens that his coming death was to be for the benefit of his disciples (and beyond them of 'many'). This symbolic act (performed in the context of the Passover celebration of redemption) was the clearest statement Jesus ever made of the redemptive purpose of his death, and it has fittingly become, as he himself directed, the focus of worship among his followers. (See further *LORD'S SUPPER, I. b for the significance of the words used on this occasion.) It finally put an end to any doubts his disciples may have had of his commitment to death, as the will of the Father for him.

b. Trial and death

Jesus was arrested quietly at night on the slopes of the Mount of *Olives. Judas' action as inside informer enabled the authorities to locate him among the thousands of pilgrims camping on the slopes, and Jesus himself refused to evade or resist arrest, accepting, after his prayer of surrender in *Gethsemane, that this was God's purpose.

A series of hearings during that night and the following (Friday) morning make up the so-called *'Trial of Jesus'. A first, probably quite unofficial, hearing before *Annas, the deposed high priest

(Jn. 18:12-23), produced no formal result. There followed two hearings before *Caiaphas and the *Sanhedrin, one at night and the other early in the morning, the former probably a hastily summoned preliminary hearing, the latter a meeting of the full Sanhedrin, ratifying the findings of the first meeting, and passing a formal verdict that Jesus was guilty of blasphemy. Precisely what his blasphemy was held to be is not certain, but his acceptance of the Messianic title and his further allusions to Ps. 110:1 and Dn. 7:13 to predict his future vindication and power (Mk. 14:61f.) were certainly the deciding factors.

The sentence for blasphemy under Jewish law was death. But capital powers were at this period limited to the Roman prefect (see *TRIAL OF JESUS), while blasphemy was not a charge admissible in Roman law. Jesus was therefore brought to *Pilate on a charge of sedition, based on the use of the title 'King of the Jews'.

Pilate's reluctance to try, and still more to convict, Jesus is primarily to be explained by his disdain for his Jewish subjects and their religious concerns (see *PILATE for details of other incidents). A realization that the charge was an artificial one, and that Jesus' career had not been that of a political revolutionary, would only add to his reluctance. But attempts to evade the issue by referring the case to Herod Antipas (Lk. 23:6-12), by offering to release Jesus in accordance with a customary Passover amnesty (Mk. 15:6-15), by sending him for *scourging without the full capital punishment (Jn. 19:1-5), and by a simple declaration of Jesus' innocence (Lk. 23:22, etc.) all proved unsuccessful in the face of a carefully orchestrated expression of popular hostility to Jesus. The deciding factor was the insistence of the Jewish authorities that a threat to the Roman government could not be ignored; the implication was that failure to convict Jesus would be reported to Pilate's superiors (Jn. 19:12). Jesus was condemned to be crucified.

For details of crucifixion as a method of execution see *Cross. It was the death of a delinquent slave, and also of a rebel against the imperial power. The public and prolonged agony was a deliberate deterrent to other would-be rebels.

Jesus' crucifixion was not unusual in its method. What was unusual was the bearing of the victim. Despite the savage cruelty of the Roman scourging and the soldiers' mockery, the carrying of the heavy crossbeam and the crucifixion itself, Jesus' recorded words during his crucifixion are of forgiveness and concern for others, and prayer to his Father (*SEVEN WORDS). His bearing impressed the Roman centurion (Mk. 15:39; cf. Lk. 23:47) and even his fellow-victim (Lk. 23:40-42), as unique.

Also unusual was the speed and suddenness of his death; crucified men very seldom died the same day, and then only after a long period of increasing loss of consciousness. Jesus died quickly, and apparently by a deliberate act of will (Lk. 23:46; cf. Jn. 19:30). His final cry of 'It is accomplished' (Jn. 19:30) shows him not as the victim of circumstances, but as in control of the situation, the purposeful actor in a drama of crucial significance.

Jesus' burial was another unusual feature, and indicates the support he still enjoyed in influential circles; crucified bodies were normally left unburied. The rock-cut tomb of *Joseph of Arimathea was probably one of many in the vicinity (*BURIAL AND MOURNING).

c. Resurrection and ascension

That Jesus' tomb was found to be empty on the Sunday morning following his crucifixion is asserted in different ways by all four Gospels, and cannot be seriously disputed on historical grounds. Explanations of this fact which dispense with a literal *resurrection of his body are entirely speculative, and open to more palpable objections than the fact they aim to discredit.

The Gospels and Paul (in 1 Cor. 15) together attest also to probably eleven separate encounters with the risen Jesus in the period immediately following that Sunday morning. Their varied and generally quite unexpected character, and the different groups involved (from single individuals to a group of more than 500), make it impossible to dismiss them as hallucinations, and the difficulty of fitting them all together (as with the accounts of finding the empty tomb) only makes it the more unlikely that there was any deliberate collusion in perpetrating a well-intentioned deception.

On these grounds, Christians have concluded that Jesus rose bodily from the tomb, with a body which, while set free from some of the limitations of time and space (he could pass through closed doors, and appear and disappear suddenly), was solidly physical, able to break bread and to eat, and to be mistaken for a gardener or a fellow traveller.

For some weeks Jesus continued to appear in this way to his disciples, not living or travelling with them, but in single encounters. Having thus convinced them of his victory over death, and assured them that they could continue to rely on his presence and help even when he was physically removed, he left them in a way which showed clearly that his bodily presence was no longer necessary (Acts 1:9-11; *ASCENSION). It was for them in future to continue the mission which he had begun, and in which he would always be spiritually present with them (Mt. 28:18-20).

VII. The teaching of Jesus

The teaching of Jesus is not easily set out in systematic form; it was not delivered as an ordered treatise, but in a wide variety of real-life situations and encounters. In an article of this nature we can only pick out certain key themes and emphases of his teaching, concentrating on those which were most distinctive and unexpected in the environment of 1st-century Judaism.

a. Forms of teaching

Formally, Jesus' teaching has much in common with the methods traditionally employed by Jewish teachers. His arguments from and about scriptural texts, his ethical exhortations, his rules of conduct, his parables and his eschatological predictions can all be paralleled, in terms of teaching method, in rabbinic or sectarian Judaism of the period. So also can the rhythmic and sometimes poetic form in which much of his teaching is cast, and which was an aid to memorization. It is in the tone and

content of his teaching that its uniqueness lies. For instance, while *parable was a known and accepted teaching form, there is nothing in Jewish literature to match the vividness, the variety and the sheer quantity of Jesus' parables, still less the doctrinal and ethical emphases which they convey.

It is a characteristic of Jesus' teaching that it was not delivered in an academic lecture-type setting. It arose out of personal encounters, questions from enquirers, debates with the religious authorities (usually initiated by them), and the need to instruct his disciples in the light of his own imminent suffering and death, and of their role in continuing his ministry afterwards. While Jesus did 'lecture' to the crowds, often for long periods (e.g. Mk. 6:34f.), such carefully structured discourses as we find in the Gospels (e.g. the *SERMON ON THE MOUNT and the discourses in the GOSPEL OF *JOHN) bear the marks of a later compilation of sayings of Jesus rather than of verbatim transcripts of actual addresses.

Particularly characteristic of Jesus' teaching are epigrams, striking expressions often using deliberate exaggeration and paradox to drive home his point (e.g. Mk. 10:25; 12:17; Lk. 9:24, 58, 60, 62). Illustrations are frequent and graphic. Sometimes he used visual aids or acted parables (e.g. Mt. 18:2; Jn. 13:1-15). Jesus' teaching can never have been dull, and it is consequently far more memorable than more formal or stylized teaching. Above all, it is not merely theoretical, but life-related.

b. Use of the Old Testament

Jesus based his teaching firmly on the OT. His recorded words in the Gospels contain more than 40 verbatim quotations, about 60 clear verbal allusions or other references to OT passages and well over 100 other possible allusions, where it is hard to say whether a specific allusion is intended or Jesus' mind was so full of OT words and ideas that he inevitably expressed himself in ways reminiscent of the OT.

He used the OT in every aspect of his teaching. He discussed its legal and ethical requirements, and used these as the basis for his own moral teaching (e.g. Mt. 5:17-48; Mk. 10:2-9; 12:28-31). He used its historical narratives to illustrate aspects of his own teaching (e.g. Mk. 2:25f.; Mt. 12:40-42; 24:37-39). In debate with the religious leaders he normally turned to the OT as the final authority, and sometimes chided them over their failure to grasp its basic principles (e.g. Mk. 7:6-13; 12:24; Mt. 12:3-7). But it is especially in his teaching about the nature of his own person and mission that Jesus uses the OT, and that in a variety of ways.

Sometimes he simply quotes clear OT predictions as finding their fulfilment in him. Many of these are predictions of the coming *Messiah, and these cause no surprise to the Christian (for details see g. below). But many of the passages he alluded to in this connection make no mention of a Messiah, but only of God himself coming to judge and save (e.g. Mt. 11:5, alluding to Is. 35:5f.; Lk. 19:10 to Ezk. 34:16, 22; Lk. 22:20 to Je. 31:31); these also Jesus sees as fulfilled in his coming. Even more remarkably, many passages which are not predictive at all, but are simply accounts of historical persons, events, etc., are none the less taken up as patterns which are 'fulfilled' in Jesus' mission (e.g. Mt. 12:40-42 referring to Jonah and Solomon; Mt. 4:4, 7, 10 referring to Israel's wilderness experience in

JESUS CHRIST, LIFE AND TEACHING OF

Dt. 8:3; 6:16, 13; Mk. 12:10f. quoting Ps. 118:22f.). This last method of using the OT is more fully developed in the rest of the NT (especially Heb.), and is generally known as *typology'. Numerous incidental allusions throughout Jesus' teaching show that he saw his ministry as 'fulfilling' not only the explicit predictions of the OT, but the whole pattern of God's working in the history of Israel which it records.

BIBLIOGRAPHY. R. T. France, *Jesus and the Old Testament*, 1971; J. W. Wenham, *Christ and the Bible*, 1973.

c. The time of fulfilment

Jesus' first recorded words in his Galilean ministry are a concise statement of the basic presupposition of all his teaching: 'The time is fulfilled, and the kingdom of God is at hand' (Mk. 1:15). In Luke's Gospel Jesus' first public appearance focuses on the claim, 'Today this scripture (Is. 61:1f.) has been fulfilled in your hearing' (Lk. 4:21). Throughout his ministry this note of present fulfilment is of central importance. This was the arrival of the Messiah, the coming of the Day of Yahweh long expected by the Jews, the fulfilment of all the hopes of the OT (see *b*, above). While he did not openly use the title 'Messiah' (see *g*, below, and *MESSIAH, II. a), he never denied that this was his role, and when John the Baptist asked him directly, he replied with a clear affirmative (Mt. 11:2-6, alluding to Is. 35:5f.; 61:1).

The coming of Jesus thus introduces, according to his own teaching, a new era. The many centuries of expectation now give way to fulfilment. Jesus' use of typology (see *b* above) does not simply see his ministry as a *repetition* of the previous patterns of God's working, but as their *climax*. This is now the final and definitive act of God which brings in the promised days of salvation (and of judgment). It is in Jesus himself, his teaching, and especially his saving ministry of suffering, death and vindication, that God's dealings with men are henceforward focused.

A recognition of this emphasis is vital to a grasp of the significance of much of Jesus' teaching. He is not simply reaffirming what was already there in the OT, but bringing that to which the OT pointed forward, and in which it finds its role fulfilled. From now on the OT itself can only truly be understood *Christologically*.

Thus Jesus gives no sanction to a search for the fulfilment of prophecy in world events unrelated to his ministry. He himself is the focus of fulfilment, and that fulfilment has already arrived in his coming.

This emphasis is summed up in his announcement at the Last Supper of a 'new *covenant' (Lk. 22:20; 1 Cor. 11:25). The covenant made with Israel at Sinai (Ex. 24, etc.) is now, as Jeremiah had predicted (Je. 31:31-34), replaced by a new covenant, established by the sacrificial death of Jesus. A new era has begun.

d. The kingdom of God

This idea of present fulfilment and of a new age comes out particularly in the teaching of Jesus about the *kingdom of God, one of his central themes. He used the term in a wide variety of contexts, so that its essential meaning needs careful definition. It means the *sovereignty* of God, the situation in which God is in control, his rule or reign. Now while in one sense God is always in

control, it is also a fact that man rejects his sovereignty and rebels. The 'coming of the kingdom' therefore denotes the practical implementation of God's rule in human affairs, and it was this coming of the kingdom which Jesus announced as he began his ministry (Mk. 1:15). Other sayings reinforce the message that his coming already brought into operation the rule of God (e.g. Mt. 12:28; Lk. 17:20f.). Thus he could already speak of people 'entering' or 'receiving' the kingdom (Mk. 10:15, 23-25; Lk. 12:31; 16:16), and assure his disciples that 'Yours is the kingdom of God' (Lk. 6:20; cf. Mt. 5:3, 10).

At the same time, there is an important sense in which the kingdom is still future, when it will 'come with power' (Mk. 9:1; cf. Mt. 6:10; Lk. 19:11; 22:18); for the acceptance of God's sovereignty which was open to all men in Jesus' ministry, and which was realized in the experience of those who followed him (in that sense the kingdom was already present), would one day become a universal fact, when all men everywhere would recognize the rule of God.

That future consummation is the ultimate horizon of Jesus' proclamation of the kingdom, but it is the final completion of a process already begun in his earthly ministry. The new era which Jesus came to bring is the era of the rule of God. As individuals respond to his message, that rule is progressively established. The 'already' and the 'not yet' combine in a grand panorama of history, of which we have yet to see the culmination. But at the centre of it stands Jesus himself, for it is in response to his teaching and through faith in his saving work that a man can be restored to a true relationship with God, and so 'enter the kingdom of God'.

BIBLIOGRAPHY. G. E. Ladd, *The Presence of the Future*, 1973; R. T. France, *Divine Government*, 1990.

e. God the Father

To enter the kingdom of God, then, is essentially to accept God's rule. And as such it involves a new relationship with God. So Jesus taught his followers, those who through his ministry entered the kingdom of God, to regard God as their Father. This very personal image of the disciple's relationship with God occurs very frequently in the Gospels, and is one of the most distinctive and novel features of Jesus' teaching. He taught them to address God as 'Our Father who art in heaven' (Mt. 6:9; *LORD'S PRAYER), and to rely on his fatherly care and provision in the very practical matters of food and clothing, because 'your heavenly Father knows that you need them all' (Mt. 6:25-34). Their Father could be relied on to protect them (Mt. 10:28-31) and to provide them with all good things (Mt. 7:7-11). As sons of their Father they must try to be like him, perfect (Mt. 5:43-48).

Jesus' teaching of the Fatherhood of God is not, therefore, a general statement of God's benevolence to his creation, but a specific relationship of love and trust open only to those who have entered the kingdom. It is totally opposed to either a vague universalism or a formal religiosity. It is an exclusive and intimate relationship.

But if Jesus' teaching on God as the Father of his disciples was novel, even more remarkable was his claim to be, in a still more exclusive sense, himself the Son of God. He regularly addressed God as 'Father' or 'my Father', assuming an intimacy

never before heard in Jewish religion. (See J. Jeremias, 'Abba', in *The Prayers of Jesus*, 1967, pp. 11-65.) In the Gospel of John the overwhelming majority of references to God as Father (and there are well over 100) are specifically to him as the Father of *Jesus*. The exclusiveness of this relationship is shown by the fact that Jesus never coupled himself with even his disciples as being *in the same sense* sons of God; he never referred to God as 'our Father', including himself in the 'our'. Mt. 11:27 sums up the relationship: 'All things have been delivered to me by my Father; and no one knows the Son except the Father, and no one knows the Father except the Son and any one to whom the Son chooses to reveal him.'

Thus there are two distinct ways of being related to God as Father. There is the essential Father/Son unity which is exclusively the prerogative of Jesus; and there is the disciple's privilege, into which Jesus alone can introduce him, of knowing and depending on God as his Father in heaven. There is no suggestion in Jesus' teaching of a more general Fatherhood of *God embracing all men.

f. Ethics of the kingdom

Jesus' attack on legalism and his tendency to place personal need before conventional rules (see above, V. c, d) are reflected in the ethics he laid down for his disciples. There is no weakening of the moral demand; the standard is perfection (Mt. 5:48). The righteousness he requires is greater than that of the most scrupulous legalists (Mt. 5:20). But its greatness consists not in a further proliferation of rules of conduct (in fact Jesus made no attempt to lay down a complete ethic for all areas of life), but in a more searching critique of motives and attitudes. There are still rules (the *SERMON ON THE MOUNT contains many of them), but Jesus' demand focuses on the thought behind the act (e.g. Mt. 5:21-28; Mk. 7:14-23). Most striking in his teaching is the focal place given to *love* (Mk. 12:28-34; cf. Lk. 6:27-35; Mt. 7:12; Jn. 13:34f.; 15:12-17, etc.); and lest this demand should be weakened into sentimentality, the Good Samaritan is held up as an example of how love works (Lk. 10:25ff.), and unselfish service is made the criterion of true greatness (Mk. 10:42-45).

Such a practical love must inevitably have its effect on social attitudes and action. Jesus did not, as far as the Gospels record, make specific proposals for the reform of society, any more than he engaged in political agitation (see above, V. f). But both his life (see above, V. a, c) and teaching tend to undermine a comfortable acceptance of the socio-economic *status quo*. In particular his recommendation of poverty (Lk. 6:20-25; Mk. 10:17-31; Mt. 6:19-24) and his call for unstinting generosity (Lk. 6:34f.; 12:33; 14:12-14; Mk. 10:21) provide the foundation, if not the framework, for a quite radical social ethic. (See R. T. France, 'God and Mammon: the practical relevance of the teaching of Jesus', *EQ* 51, 1979, pp. 3ff.)

Discipleship is, then, a serious and total commitment, which may demand drastic renunciation not only of material possessions but of reputation and relationships (Mk. 10:28-31; Mt. 10:34-39). It is not for the dilettante (Lk. 9:62). It requires a complete reorientation whereby God and not man becomes the point of reference for a man's life and thought (Mt. 6:33, and the whole thrust of Mt. 6),

and the ruling motive is not the prospect of reward from man or even from God but gratitude for the forgiving grace of God (Mt. 18:23-35; Lk. 7:36-47).

It is this reorientation rather than specific ethical rules which marks out the ethic of Jesus as radical in comparison with either the legalism or the humanitarianism which marked the best religious systems of his day.

g. The mission of Jesus

We have seen that Jesus regarded himself as playing the central role in bringing in the kingdom of God. It was in his ministry that the hopes of the OT were to find their fulfilment. In other words, he was the *Messiah.

Yet Jesus hardly ever claimed to be Messiah, using that term. The only occasion when he took the initiative in making this claim was outside Jewish territory (Jn. 4:25f.). When others referred to him as Messiah ('Christ') he accepted the idea, but was clearly anxious to avoid the title itself, and substituted his regular title 'Son of man' (Mk. 8:29-33; 14:61f.; *MESSIAH, II. a). Popular Jewish Messianic hope was firmly committed to a political and nationalistic understanding of the coming day of liberation, and Jesus had no such political intentions (see above, V. f). His own conception of his mission as Messiah was such that popular Judaism would not have recognized it under that name, and so the title itself was an embarrassment.

But if Jesus avoided the *title* 'Messiah' (and with it the still more politically loaded 'Son of David', which others used of him but which he never used of himself), he did refer specifically to several figures of OT prediction as fulfilled in his ministry. Four or five such figures stand out in his teaching, and the selection is instructive. He was David's lord, as portrayed in Ps. 110:1 (Mk. 12:35-37; 14:62); the humble and rejected shepherd/king who recurs several times in Zc. 9-13 (Mt. 21:1-11; 24:30; 26:31); the suffering Servant of the Lord in Isaiah 53 (Mk. 10:45; 14:24; Lk. 22:37; *SERVANT OF THE LORD, II. a), with the related figure of the Lord's anointed in Is. 61:1 (Lk. 4:18ff.; Mt. 11:4f.); and the vindicated and enthroned 'son of man' in Dn. 7:13f. (Mk. 8:38; 13:26; 14:62; Mt. 19:28; 25:31; 28:18). The emphasis, therefore, except in the case of Dn. 7:13f. (on which see below, i), is strongly on a role of suffering, rejection and death, and a humble rather than a commanding status. Even the discussion of Ps. 110:1 in Mk. 12:35-37 is specifically designed to dissociate Jesus from the title 'Son of David' with its political implications; the dominant figure of OT Messianism, a king like David, does not otherwise appear in Jesus' selection, but is superseded by the picture of suffering and humiliation.

It is for this reason, probably, that Jesus regularly referred to himself as the 'Son of man'. Other titles already had a clearly defined, and usually nationalistic, content, but 'Son of man' was not current as a Messianic *title* in mainstream Judaism (though Dn. 7:13f. was widely referred to as a Messianic prophecy, without use of the title as such), and this rather enigmatic phrase (cf. Jn. 12:34) enabled Jesus to define his own conception of his Messianic role. (See further *MESSIAH, II. a; *JESUS CHRIST, TITLES OF.)

The necessity of his suffering and death is a constant theme of Jesus' teaching (especially Mk. 8:31; 9:31; 10:33f.; but also Mk. 9:12; 10:38, 45; 12:6-8;

JESUS CHRIST, LIFE AND TEACHING OF

14:8, 21–25; Mt. 26:54; Lk. 9:31; 12:50; 13:32f.; 17:25; 22:37; Jn. 10:11–15; 12:23–25; etc.), and it is frequently stressed that this *must* be so, because it is written.

The purpose of this suffering and death is most clearly spelt out in some of the references to Isaiah 53, which speaks of the Servant's role of suffering for the sins of his people, dying on their behalf, and thus 'making many to be accounted righteous'; thus Jesus would 'give his life as a ransom for many' (Mk. 10:45), and his 'blood of the covenant' would be 'poured out for many for the forgiveness of sins' (Mt. 26:28). This is sacrificial language, and the goal of Jesus' death is to be the final sacrifice which would make possible the forgiveness of sins and the restoration of fellowship between man and God, thus ending man's rebellion and bringing in the kingdom of God. This redemptive theology appears seldom and allusively in Jesus' teaching, but its direction is unmistakable, and is subsequently taken up into the more developed theology of Paul and the other NT writers. (* ATONEMENT; * REDEMPTION.)

h. The people of God

It is often asserted that Jesus did not intend to found a church. If by 'church' is understood a formal, hierarchical organization, this is no doubt true. But the conception of his mission outlined above inevitably involved the creation of a new community of those who through his redemptive sacrifice entered the kingdom of God. This community, focused at first in his immediate group of disciples but destined to embrace all who responded to his teaching of whatever racial or social background, figures significantly in his teaching.

The word 'church' (*ekklesia*) occurs only twice in the Gospels. In Mt. 18:17 it refers to the local group of followers of Jesus gathered together to settle disputes among its members, while in Mt. 16:18 it foreshadows the NT view of the universal church as Jesus' continuing representative on earth. But other terms imply the same idea of a defined community: they are, e.g., God's 'little flock' (Lk. 12:32; cf. Mk. 14:27; Jn. 10:16), his family (Mk. 3:34f.; 10:29f.; Mt. 10:25), and the guests at his banquet (Mk. 2:19; Mt. 8:11f.; 22:1–14).

Hitherto Israel, the nation, had been the special people of God. Now, Jesus taught, the true people of God will be both wider and narrower than Israel: Gentiles will find a place at the banquet, while some Jews will not (Mt. 8:11f.; cf. Mt. 22:12–10). John the Baptist had warned that to be Jewish was not in itself a guarantee of salvation (Mt. 3:8–10), and Jesus took up the same theme. In numerous metaphors and allusions the impression is given that the true Israel is now focused in himself (see above, c; also IV. c) and in those who respond to his call to repentance. This conviction, symbolized in his choice of twelve disciples as his foundation group (see especially Mt. 19:28), and expressed in his establishment of a 'new covenant' (Lk. 22:20, etc.), explains why, while his own ministry was deliberately limited to Israel (Mt. 10:5f.; 15:24), he could send out his disciples after his resurrection to make disciples of all nations (Mt.

28:19; Lk. 24:47; Acts 1:8), to form a people of God drawn from all corners of the earth (Mk. 13:27). (* ISRAEL OF GOD.)

i. The future

Jesus looked for a future 'coming of the kingdom' (see above, d). But precisely how and when he expected it to come is not systematically spelt out, and a number of different interpretations are possible. The following stages in this consummation seem, however, to be clearly taught.

1. Jesus several times predicted that after his suffering he would receive the power and dominion of the 'son of man' of Dn. 7:13f. (see above, g). When this vindication is expected is not always clear, but in Mt. 28:18, after the resurrection, he claimed that it was already accomplished. Mk. 14:62 also seems to envisage an imminent vindication, which his judges will themselves witness.

2. One future event which is clearly and repeatedly predicted by Jesus is the destruction of Jerusalem and its Temple (Mk. 13:2 and the following discourse; Lk. 21:20ff.; cf. also Mt. 23:37–39; Lk. 23:28–31). This is presented as the inevitable result of the Jewish rejection of God's final appeal (Lk. 13:34f.; 19:41–44; cf. Mt. 22:7), and it will come upon that generation (Mt. 23:36; Mk. 13:30). It is likely that some of Jesus' sayings about the 'coming of the Son of man' (again echoing Dn. 7:13f.) relate at least in part to this event rather than to his second coming, particularly as they too envisage a fulfilment within the living generation (Mk. 8:38–9:1; Mt. 10:23; Mk. 13:26, 30). This act of judgment would then be a further manifestation of his vindication. It is not agreed how much of the *Olivet Discourse refers to the question about the destruction of the Temple with which it opens and how much to a more ultimate future, but certainly the fate of Jerusalem holds a prominent place in Jesus' expectations for the future, and is viewed in relation to his own ministry.

3. A further application of Dn. 7:13f. is to the final judgment (Mt. 25:31–34; cf. Mt. 19:28). Most fully portrayed in Mt. 25:31ff., this 'day of judgment' is mentioned frequently in Jesus' teaching, applying both to individuals and to communities or nations (e.g. Mt. 10:15, 32f.; 11:22–24; 12:36, 41f.). In this final judgment too Jesus plays a central role.

4. Jesus also predicted his own second coming, or *parousia* (the term occurs in the Gospels only in Mt. 24:3, 27, 37, 39), sometimes called the 'day of the Son of man'. It will be as unmistakable and as universally visible as a flash of lightning (Lk. 17:24). It will be sudden and quite unexpected (Mt. 24:37–44; Lk. 17:26–35), demanding constant readiness (Mt. 24:42–51; 25:1–13). Its date cannot be calculated; indeed Jesus himself disclaimed any knowledge of when it would be (Mk. 13:32).

These four aspects of Jesus' teaching about the future merge into one another, so that it is not always possible to be sure which is referred to. In general, while 1 represents a constant state of affairs from the resurrection on, 2 relates to a specific future event expected within the generation, and 3 and 4 are two aspects of the final consummation when the kingdom is fully established; but all are

related to Jesus' continuing role as the vindicated and enthroned 'Son of man'. Exegetical disagreement over the reference of specific passages should not be allowed to obscure this over-all pattern in Jesus' vision of the coming of the kingdom of God. Such an understanding of his teaching gives no support to the allegation that Jesus expected the end of the world in the very near future; and it ensures that his call for constant readiness is as binding on us today as on those who first heard him. (*ESCHATOLOGY.)*

JESUS CHRIST, TITLES OF. A title is a designation which describes or refers to some particular function or status of a person and hence may indicate the honour which is to be ascribed to him. For example, John was known as 'the Baptist' because this term described his characteristic function. Such a function need not be a unique one; there were many people who could be designated by such formulae as 'Z the prophet' or 'Y the king'.

Names and titles are closely related. Sometimes what began as a name could become a title, and vice versa. This is well illustrated in the case of the Roman emperors. Originally Caesar was the family name of Julius Caesar and his adopted nephew Octavian who became the first Roman emperor; after that it became a title meaning 'the Emperor' (Phil. 4:22; although it is mostly used without the article in the NT, e.g. Mk. 12:14-17, it still remains a title). Octavian himself was given the title 'Augustus' by the Roman senate in 27 BC; it means 'worthy of reverence' and was translated into Gk. as *sebastos*. As such it could be used of later emperors (Acts 25:21, 25), but to most people today it is the name of the first emperor, since it was the name by which he was known from the time of its presentation.

The meaning of a title can be altered by the character and deeds of a particular person who holds it and gives it a new stamp. The functions of a king in the UK have been drastically altered over many centuries, so that the title no longer conveys

the same meaning as it did when it was first used. The simple title of 'the Leader' (*der Führer*) has been so much coloured by the particular character of Adolf Hitler who used it as a political title in Germany as to render it quite unsuitable for further use in politics.

Finally, there may be cases where a person can be described in such a way that it is clear that he holds the status, or performs the functions, associated with a particular title even though the title itself is not applied to him in that context. Thus we might say 'Z was king in all but name' of somebody who usurped a throne.

These rather general considerations are relevant to a consideration of the titles given to Jesus in the NT, and will help us to avoid some of the pitfalls in the study of this topic.

I. Titles used for Jesus during his lifetime

The name *Jesus* is not strictly a title for the person who bore it. It is, however, a name with a meaning, being a Greek form of 'Joshua', i.e. 'Yahweh is salvation'. The NT writers were well aware of this meaning (Mt. 1:21). The name thus indicated the function which was ascribed to Jesus, and this later found expression in the title *Saviour*, which was at first simply a *description* of the function of Jesus (Acts 5:31; 13:23; Phil. 3:20) but then became part of his solemn title (2 Tim. 1:10; Tit. 1:4; 2 Pet. 1:11). Jesus was the personal name of the Saviour, and while its titular significance remains present for informed hearers, it is probable that to many people it is now no more than a name (compare how the fact that 'John' means 'gift of God' is not usually in mind when the name is used).

Jesus was a common enough name in the first half of the 1st century AD, although it is significant that by the end of that century it was beginning to drop completely out of use: it was too sacred for use as a personal name by Christians, and it was abhorrent to Jews. To distinguish Jesus (Christ) from other bearers of the name he was known as *Jesus from Nazareth* or *Jesus the Nazarene*. The use of this phrase may have acquired some theological significance in view of the similarity of the word 'Nazirite'.

As a result of his characteristic activity Jesus was known as a *Teacher*, and addressed by this title just like any other Jewish teacher (Mk. 4:38; 9:17, 38; 10:17; *et al.*). Occasionally, when there was no danger of confusion with other teachers, he could be called simply 'the Teacher' (Mk. 5:35; 14:14; Jn. 11:28). Jewish teachers were regularly addressed as *Rabbi* (literally, 'my great one'), a mark of respect which came to mean 'the revered' (*sc.* teacher). This form of address was used by the disciples for Jesus (Mk. 9:5; 11:21; 14:45), although it was not used to refer to him in the third person. In Luke Jesus is sometimes addressed as *Master* (*epistatēs*; Lk. 5:5; 8:24; *et al.*), a term which suggests respect for Jesus by his disciples and sympathizers, and which perhaps was used of his relationship to groups of people rather than to individuals. A further respectful term was *Lord* (*kyrie*, the vocative form of *kyrios*). In the Gospels this probably represents an original Aramaic *rabbī* or *mārī* ('my lord') used as a respectful title (Mk. 7:28; Mt. 8:2, 6, 8; *et al.*). Although this form of address may simply refer to Jesus as a teacher worthy of respect (Lk. 6:46; Jn. 1:3:13f.), there is a case that Jesus was sometimes addressed in this way in his capacity as a person with miraculous powers (G. Vermes, *Jesus*

JESUS CHRIST, TITLES OF

the Jew, pp. 122–137). The term is not used in Mt. and Mk. as a means of referring to Jesus by a third person (except Mt. 21:3; Mk. 11:3), but Luke calls Jesus 'the Lord' not infrequently in narrative passages (Lk. 7:13; 10:1, 39, 41; *et al.*). This usage suggests that Luke was well aware that the full significance of the title was not realized until after the resurrection, but that he wanted to show that Jesus acted during his lifetime with something of the same authority which he possessed in full measure after the resurrection.

The fact that Jesus was regarded as more than an ordinary Jewish teacher is expressed in the term *Prophet* (Mt. 21:11, 46; Mk. 6:15; 8:28; Lk. 7:16, 39; 24:19; Jn. 4:19; 6:14; 7:40; 9:17). This understanding of his own position was recognized and expressed by Jesus (Mk. 6:4; Lk. 4:24; 13:33f.). In themselves neither of the titles, 'teacher' and 'prophet', distinguished Jesus from other teachers and prophets of his time, whether from Jewish religious leaders or from some groups of early church leaders (e.g. Acts 13:1), although naturally the early church would have claimed that Jesus was *the Teacher and Prophet par excellence*.

It is probable, however, that in some cases the term *The Prophet* was used in a unique sense. Jewish thought expected the coming of Elijah, or a person like him, to usher in the End, and there was some speculation whether John the Baptist or Jesus was to be identified as this so-called eschatological or final prophet (cf. Jn. 1:21, 25). There is some apparent confusion on the matter, since John denied that he was the prophet, while Jesus claimed that John was in fact Elijah (Mt. 17:12f.). The confusion would disappear if the reference in Jn. 1:21, 25 was to the coming of a final prophet like Moses (Dt. 18:15–19); Peter identified Jesus as this 'Mosaic' prophet (Acts 3:22–26), and this would leave the way clear for John to be regarded as a separate forerunner of the End, a prophet like Elijah. The difficulty may have arisen because Jewish thought did not keep the two figures quite separate. It is probable that Jesus himself saw his role as that of the Mosaic prophet. He did not use the title in this connection, but he regarded himself as re-enacting the work of Moses and as fulfilling the role of the prophet who speaks in Is. 61:1–3. He used passages from Is. 29:18f.; 35:5f. and 61:1 to describe his own work (Lk. 4:18f.; 7:22) in terms of a new creation of the paradisaical conditions of the Exodus period and the wilderness wanderings, *i.e.* in terms of the work of Moses. From this point of view the teaching of Jesus in which he reinterpreted the law of Moses may also be significant.

Just as Jesus saw his work in terms of the law-giver and the prophets (Moses and Elijah/Elisha; cf. Lk. 4:25–27), so it is probable that the Jewish concept of wisdom affected his thinking, although the actual title of *Wisdom* is not applied to him in the Gospels (see, however, 1 Cor. 1:24, 30). In the OT and the intertestamental literature we find the personified concept of Wisdom as the assistant of God at creation and (in the form of the law) as the guide of God's people (Pr. 8:22–36). The wise man *par excellence* was Solomon, and it is no accident that Jesus claimed that in his ministry something greater than Solomon was present (Mt. 12:42). Wisdom was regarded as sending her emissaries to men to reveal God's ways (Pr. 9:3–6). At times Jesus spoke as if he were such an emissary (Lk. 11:49–51) or as if he himself were to be identified with Wisdom (Lk. 13:34; cf. Mt. 23:34–37).

Jewish hopes were centred on the establishment of God's rule or kingdom, and this hope was often associated with the coming of an agent of God to exercise his rule. Such a person would be a king, anointed by God and belonging to the line of David. The term *Anointed One*, which could be used to describe a king, priest or prophet, came to be used as a technical term in the intertestamental period for this expected agent of God. The Heb. word was *māšīah*, from which was derived the *transliterated* Gk. form *Messias*, anglicized as *Messiah; the corresponding Gk. word meaning 'anointed' was *Christos*, from which comes the alternative English form *Christ*. Since the expected ruler was expected to be a *King* and a *Son* (*i.e.* descendant) of *David*, these two terms were also used as titles or designations for him.

It stands beyond all doubt that Jesus was put to death by the Romans on a charge of claiming to be the king of the Jews (Mk. 15:26). The question is whether he explicitly claimed this office and implicitly acted in this role. The actual term 'Messiah' is only rarely found on the lips of Jesus. In Mk. 12:35 and 13:21 (cf. Mt. 24:5) he speaks about the Messiah and claimants to Messiahship without directly identifying himself as Messiah. In Mt. 23:10 and Mk. 9:41 he is represented as teaching his disciples, apparently with reference primarily to the situation in the early church. Mt. 16:20 merely echoes v. 16. It follows that Jesus did not refer to himself as Messiah in his public teaching to the crowds and that at best he used the title rarely in speaking to his disciples (cf. Jn. 4:25f.). The situation is the same with regard to 'Son of David'; the question in Mk. 12:35–37 does not explicitly identify Jesus as the Son of David. Nor did Jesus publicly claim the title of 'King' (Mt. 25:34, 40 is addressed to the disciples). On the other hand, many of Jesus' actions could be regarded as those of the Messiah. His baptism with the Spirit was regarded by both himself (Lk. 4:18) and the early church (Acts 4:27; 10:38) as an anointing. He proclaimed the coming rule of God, associated its coming with his own activity (Mt. 12:28), and acted with an authority that suggested that he stood in the place of God (Mk. 2:7). It is not surprising that the question whether he was the expected king was in the air (cf. Jn. 4:29; 7:25–31) and that the people would have made him king (Jn. 6:15). At his trial he was asked whether he was the Messiah, and on this occasion he did publicly admit the fact (Mk. 14:61f.; cf. Jn. 18:33–38). At an earlier point Peter named him as the Messiah, and Jesus did not reject the identification (Mk. 8:29f.); people who hoped that he would mercifully help them in their need addressed him as 'Son of David' (Mk. 10:47f.).

The evidence shows that while Jesus implicitly acted as Messiah he was reticent on the matter and indeed tried to hush down suggestions that he was the Messiah (Mk. 8:30). Various explanations have been offered for his attitude. We can dismiss the view that the Gospels have misrepresented the situation, and that Jesus was not recognized by himself or anybody else to be the Messiah; only after the resurrection did the church give this title to him (so W. Wrede, *The Messianic Secret*, E. T. 1971; *contra*: J. D. G. Dunn, *TynB* 21, 1970, pp. 92–117). One important element in explanation is certainly that Jesus' concept of Messiahship was markedly different from that of many Jews who expected the Messiah to inaugurate a political upheaval and liberate the country from the Romans;

even if there were Jews with a more spiritual ideal of the Messiah's work, Jesus had to guard against this misrepresentation. (It should go without saying that Jesus in no way associated himself with the advocacy of violence by the political revolutionaries of his day; on this subject the last word has been spoken by M. Hengel, *Was Jesus a Revolutionist?*, 1971.) Another element may be that Jesus did not wish to claim Messiahship until he had shown himself to be Messiah by what he did, or until people recognized the real significance of his ministry. In so doing he freed Messiahship from its this-worldly political associations and reinterpreted it in terms of the OT concept of God's mighty act of salvation.

Undoubtedly, however, the Gospels give the impression that Jesus preferred to use another description, *Son of man* (note the shift in terminology in Mk. 8:29f./31 and 14:61/62). This unusual Gk. expression can have arisen only as a translation of an idiomatic Semitic phrase (Heb. *ben 'ādām*; Aram. *bar 'nās(ā)*) which means either a particular member of the species 'man' (e.g. Ezk. 2:1) or mankind in general (e.g. Ps. 8:4). In Dn. 7:13f. the phrase describes 'one like a man' (NEB) or 'what looked like a human being' (TEV) who comes with the clouds to the Ancient of Days and receives everlasting dominion over all peoples from him. In the language of Jesus' time it appears to have been possible to use the phrase as a modest way of referring to oneself in certain situations, although opinions differ whether it was used to make a statement true of mankind in general and hence of the speaker in particular or to make a statement applying only to the speaker.

The phrase occurs quite often on the lips of Jesus, and its occurrences in the Synoptic Gospels have led to much debate.

1. On the one hand, it has been assumed that the significance of the phrase is derived from Dn. 7:13f., in which case it refers to the future coming of a heavenly being described with apocalyptic symbolism (Mk. 13:26; 14:62) and to the role played by this figure at the last judgment (Mk. 8:38; Mt. 10:23; 19:28; 25:31; Lk. 12:8f.; 17:22-30; 18:8). Some scholars think that the early church was the first to use this concept to describe the future role of Jesus (so N. Perrin, *A Modern Pilgrimage in New Testament Christology*, 1974); others argue, on the basis of Lk. 12:8f., that Jesus looked forward to the coming of an apocalyptic figure *other than himself* who would vindicate his work, and that it was the early church which later identified Jesus himself with this coming figure (so H. E. Tödt, *The Son of Man in the Synoptic Tradition*, 1965); others again argue that Jesus looked forward to his own future coming as the Son of man (so O. Cullmann, *The Christology of the New Testament*, 1963).

Alongside these 'future' statements there are others which speak of the present authority and humiliation of the Son of man (Mk. 2:10, 27f.; Lk. 6:22; 7:34; 9:58; 12:10; 19:10) and prophesy his suffering, death and resurrection (Mk. 8:31; 9:9, 12, 31; 10:33f., 45; 14:21, 41; cf. Lk. 24:7). It is hard (but not impossible: see below) to see how statements like these could be made about the Son of man described in Dn. 7, and accordingly many scholars think that the use of Son of man in such sayings derives from the early church which, having identified Jesus as the coming Son of man, proceeded to use the same title with reference to his

earthly ministry and his passion. Other scholars hold that Jesus produced his own creative re-interpretation of the role of the Son of man under the influence of the prophecy of the suffering Servant of Yahweh (Is. 52:13-53:12).

2. On the other hand, various scholars take the use of *bar 'nās(ā)* as a self-designation in Aram. as their starting-point, and hold that Jesus used it simply as a means of referring to himself. On this view, the statements in the Gospels which are non-apocalyptic in content and refer to Jesus simply as a man are most likely to be authentic. Later, the use of the term by Jesus led the church back to Dn. 7, and it proceeded to reinterpret the teaching of Jesus in apocalyptic terms (G. Vermes, *op. cit.*, pp. 160-191).

3. It is probable that scholars have been led astray by insisting on one basic origin for all the sayings and not taking the ambiguity of the term sufficiently seriously. Clearly it could be used as a self-designation, even although the precise circumstances in which this was felt to be proper remain uncertain. At the same time it cannot be denied that the term could have a titular force. C. F. D. Moule rightly observes that the use of the article in the phrase may give the force of 'the human figure' (sc. the one mentioned in Dn. 7:13f.; 'Neglected Features in the Problem of "the Son of Man"', in J. Gnlika (ed.), *Neues Testament und Kirche*, 1974, pp. 413-428). The fact that this figure played a role in some areas of Jewish thought is shown by the allusions in *1 Enoch* and *4 Ezra* (although the dating of the crucial portions in *1 Enoch* is notoriously insecure). The most probable approach, therefore, is still that which takes Dn. 7:13f. as its starting-point and sees there a figure, perhaps the leader and representative of Israel, with whom Jesus identifies himself. This figure is one possessing authority and destined to rule the world, but the way to that rule is by humility, suffering and rejection. It is not too difficult to understand Jesus speaking in this way, provided that he can be assumed to have looked forward to his own rejection and subsequent vindication by God. This assumption is wholly probable when we take account of: (a) Jesus' recognition of the realities of the situation in which he carried on a ministry that brought him into collision with the hostile Jewish authorities; and (b) Jesus' acceptance of the way of life of the godly man described in the OT, according to which the godly can expect rejection and persecution and must put their trust in God to deliver them. This pattern can be traced in certain of the Psalms (especially Pss. 22; 69), in the prophecies of the suffering Servant and in the career of 'the saints of the Most High' in Dn. It is also to be found in the book of Wisdom (although it is doubtful whether this book could have influenced Jesus himself) and in the popular legends in which the Jews glorified the fate of the Maccabean martyrs. Against this considerable background it would be strange if Jesus had not understood his career in such terms. At the same time, his manner of speaking certainly mystified his hearers: 'Who is this Son of man?' (Jn. 12:34). It was probably a deliberate means of concealing his own claims to some extent so as not to lead to false expectations. It laid claim to authority but an authority which was largely rejected by men. Thus by his use of this phrase Jesus laid claim to being the final representative of God to men, destined to rule but rejected by Israel, condemned to suffer but vindicated by God.

JESUS CHRIST, TITLES OF

One of the elements which contributed to Jesus' understanding of his role as Son of man was the figure of the *Servant of Yahweh*. The actual title was not used by Jesus, and the nearest approach to its use is when it occurs in a quotation from Is. 42:1-4 in Mt. 12:18-21. Nevertheless, there is good evidence that Jesus saw himself as fulfilling the role of one who came to serve and give himself as a ransom for many (Mk. 10:45; cf. 14:24; Is. 53:10-12) and who therefore 'shared the fate of criminals' (Lk. 22:37; TEV; cf. Is. 53:12; R. T. France, *TynB* 19, 1968, pp. 26-52).

If the above titles express the role of Jesus, his status and relationship to God find expression in the title of *Son of God*. The use of this title for angels and other heavenly beings does not seem to be of central significance for its application to Jesus. More important is the way in which it was used in the OT to refer to the people of Israel as a whole and to their king in particular and to express the relationship which they had to God in terms of divine care and protection on the one hand and human service and obedience on the other. It is possible that by NT times the Messiah was beginning to be regarded as in some special sense the Son of God, and the thought that godly individuals were the special objects of God's fatherly care and concern had also developed.

Jesus himself was undoubtedly conscious of a particular relationship to *God whom he addressed in prayer by the intimate name of *Abba (Mk. 14:36). It is against this background that we should understand his use of the term 'Son' to express his relationship to God as his Father (Mt. 11:27; Lk. 10:22). Here he claims that the same intimacy exists between himself and God as between a son and his father, so that he alone is qualified to reveal God to men. Yet there are secrets of the Father's purpose hidden even from the Son (Mk. 13:32). Although the allusion may well not have been clear to the crowds, it is likely that the reference to the owner's son in the parable of the vineyard (Mk. 12:6) was a veiled way of pointing to Jesus himself and to his fate. This sense of a unique Sonship goes beyond the general sense of a filial relationship to God which might have been held by a pious Jew. It is further to be seen in the way in which God himself addresses Jesus as his Son in the stories of the baptism and the transfiguration (Mk. 1:11; 9:7), and also in the manner of address used by Satan and the demons (Mt. 4:3, 6; Mk. 3:11; 5:7). The evidence shows that Jesus himself was extremely reticent to express his sense of unique personal relationship to God; nevertheless it is clear that the Jewish authorities suspected that he was making claims of this kind (Mk. 14:61; Lk. 22:70), claims which were perhaps made more openly on occasion than the Synoptic Gospels suggest (in Jn. Jesus' self-revelation is more public, but this may be due to the way in which John has deliberately brought out more clearly the full implications of Jesus' teaching for his readers). It is in this title that the fullest expression of who Jesus was is to be found (see I. H. Marshall, *Int* 21, 1967, pp. 87-103).

II. The use of titles in the earliest period of the church

A period of some 20 years separates the death and resurrection of Jesus from the earliest NT documents (the earliest letters of Paul) which can be reliably dated. By Paul's time the use of various

titles to refer to Jesus was well established; he manifestly used an existing, fully developed terminology which he could take for granted and which he had no need to explain to his readers. It is, however, difficult to trace the use of the various titles and the associated theological understanding of Jesus during this pre-literary period. We have to proceed by attempting to recognize occurrences of the titles in the NT writings which can plausibly be regarded as reflecting traditional usage; this is a subjective process and leads to hypotheses of varying credibility. We can also make use of the account of the early church given to us in Acts, but it has to be recognized that Luke wrote some years after the events which he described, and that there would be an inevitable tendency to adopt the terminology with which his readers were familiar. We may compare how a well-known public figure tends to be described by his later title even when his earlier career is being discussed; there is a temptation to say 'Queen Victoria spent her earlier years in Kensington Palace' rather than more pedantically 'Princess Victoria (who later became Queen) spent her earlier years . . .'. Nevertheless, with due caution we can make some progress in tracing the early development of titles to describe Jesus.

Some scholars have admittedly shown considerable boldness in postulating a series of stages in the Christological thinking of the early church on the assumption that an original understanding of Jesus in purely Jewish terms was succeeded by an understanding that was increasingly affected by Hellenistic ways of thinking mediated to the church first by Diaspora Judaism and then more directly by the Gentile world (F. Hahn; R. H. Fuller). While some broad developments of this kind no doubt occurred, the hypothesis cannot be used to trace stages of development with any precision, since it is clear that influences of all kinds affected the church from its earliest days and also that we have to do with the Christological thinking of a number of different semi-independent churches. There is no possibility of tracing a simple evolutionary line of development through the complex thought-processes of the first 20 years or so of the Christian church. What we can say is that this period was one of unparalleled creative thinking in the development of Christology (I. H. Marshall, *NTS* 19, 1972-3, pp. 271-287).

It is sometimes suggested that the early church's interest in Jesus was originally purely functional rather than ontological (O. Cullmann). It was concerned with what Jesus did rather than who he was, and did not ask metaphysical questions about his status. But to put the alternatives so sharply is probably to separate what originally belonged together: function and status cannot be so easily separated. The early church was no doubt concerned with what Jesus had accomplished, but the very nature of what he had accomplished inevitably raised the question of his relationship to God from the very start, and this is reflected in the titles used to describe him.

During this period most of the ordinary 'human' terms used to describe Jesus during his ministry fell out of use, except in so far as they were preserved in narrative material about his career. Terms such as *Rabbi* and *Teacher* were no longer appropriate. The term *Prophet* which had represented a higher level of popular insight into the function of Jesus likewise dropped out of use; although the term was still applied to him (Acts

3:22f.; cf. 7:37), it does not occur as an actual title of Jesus. What is surprising is the virtually complete disappearance of *Son of man* from circulation. The phrase is found as a title only on the lips of the dying Stephen (Acts 7:56). Elsewhere it has survived only in a citation from the OT (Heb. 2:6; quoting Ps. 8:5) and in a description of Jesus in Rev. 1:13; 14:14 (cf. Dn. 7:13f.). But the thought was probably still alive. One the one hand, it is possible that we have a translation of 'Son of man' into more intelligible Gk. as 'the Man' in one or two passages where Jesus is placed over against Adam, the first man (Rom. 5:15; 1 Cor. 15:21, 47; cf. 1 Tim. 2:5). On the other hand, the Gospels have preserved the use of the term on the lips of Jesus. As we observed, there are scholars who claim that the use of the term originated in the early church, or that at least the majority of examples of its use were developed by the early church on the basis of a small number of actual sayings of Jesus. While these suggestions are highly unlikely, we cannot exclude the possibility that the inclusion of the title in a few sayings may be due to the early church; this is most probably the case in Jn. where the teaching of Jesus has come down to us in a form where it is impossible to disentangle the actual words of Jesus from the Evangelist's interpretative commentary. But it is important that John's fuller expression of the implicit significance of the title takes place within the confines of a Gospel, and as teaching which is ascribed to Jesus himself and which ultimately rests on his own words (see IV, below). There is no indication that the early church used the title independently. Clearly it was regarded as a term that was appropriate only on the lips of Jesus as a self-designation, with the one exception of Acts 7:56. It never became a term for use in confessional statements (with the possible exception of Jn. 9:35).

Although the title of *Servant* did not occur in the Gospels, we saw that the associated motifs were present in the description of the work of Jesus as service for 'the many'. This same motif reappears in the thinking of the early church. It is most obvious in 1 Pet. 2:21–25, where the passion and death of Jesus are described in language drawn from Is. 53; it is not quite so clearly present in a number of traditional formulae in Paul which express the significance of the death of Jesus (Rom. 4:25; 8:34; 1 Cor. 11:23–25; 15:3–5; Phil. 2:6–11; 1 Tim. 2:6; J. Jeremias, *TDNT* 5, pp. 705–712). The title itself (*pais*) is to be found in Acts 3:13, 26; 4:27, 30 where Jesus is declared to be God's Servant who was delivered up by the Jews to death, but raised and glorified by God to be the source of blessing for his people. If Jesus is designated here by a title also borne by David (Acts 4:25, *pais*) and the prophets (Rev. 11:18; 22:9, *doulos*), here it is above all the thought of Is. 42:1–4; 52:13f. which has influenced the early church. Although the title does not reappear until the Apostolic Fathers and has therefore been suspected to be a Lucan rather than a primitive designation for Jesus, it is more likely that the term was used in the Palestinian church and then fell out of use because of its ambiguity in the form *pais* (which can mean 'child' or 'servant') and its subordinationist colouring in the form *doulos* ('slave').

According to the speech attributed to Peter on the day of Pentecost the significance of the resurrection was that God had made the Jesus whom the Jews crucified to be both Lord and *Christ* (Acts

2:36). This text gives the key to the development of the Christological titles. The resurrection was the decisive event which led the followers of Jesus to a new evaluation of his person, and this was confirmed for them by the gift of the Spirit coming from the exalted Jesus (Acts 2:33). Jesus' claims to be a 'Messianic' figure of some kind had now been vindicated by God in raising him from the dead and thereby attesting the truth of these claims. The One who died under Pilate's sarcastic placard as 'The King of the Jews' had now been shown to be king in a deeper sense. The actual title of 'king' does not seem to have been used overmuch. It is true that the king replaced the 'kingdom' in the apostolic preaching, but the word was perhaps politically dangerous (Acts 17:7) and use of it was restrained (Rev. 17:14; 19:16); note, however, that the title of 'Lord' which was equally dangerous politically was in frequent use. 'Messiah'—a word meaningless outside Heb.-speaking circles—was replaced not so much by 'king' as by 'Christ'. In this form the title tended to lose its original meaning of 'anointed one' (see, however, 2 Cor. 1:21) and to take on more the sense of 'Saviour'. It was particularly used in statements about the death and resurrection of Jesus (Rom. 5:6, 8; 6:3–9; 8:34; 14:9; 1 Cor. 15:3–5; 1 Pet. 3:18; W. Kramer, *Christ, Lord, Son of God*, 1966). It was as the One who died and rose again that Jesus was the Christ. Although 'Christ' tended to become more and more a name for Jesus, rather than a title, it continued to have a sense of dignity about it, so that it was scarcely ever used alone with the title 'Lord' (i.e. in the combination 'the Lord Christ'; Rom. 16:18; Col. 3:24) but rather in the form 'the Lord Jesus Christ'.

In Acts 3:20f. Jesus is represented as the One who is designated to appear as the Christ at the end of time. Accordingly it has been claimed (especially by F. Hahn) that the earliest Christology of the church was concerned with the future coming of Jesus, and that the various titles of Son of man, Christ and Lord were originally used to indicate what his function would be at the end of time; only later (though still within this pre-literary period) was it realized that the One who would come as Christ and Lord at the end was *already* Christ and Lord by virtue of his resurrection and exaltation (and that the resurrection and exaltation confirmed an existing status). This theory lacks substantiation. Acts 3:20f. can only mean that the One who has already been ordained as the Christ will return at the end of time. Jesus is not the Messiah-designate, but is already the Messiah. It was indeed only because of the resurrection and what it implied concerning the person of Jesus that the early church could look forward with confidence to his parousia as the Son of man. It was, accordingly, the death and resurrection which established the meaning of the term Christ: the Christian message in Paul's view was exclusively oriented to 'Christ crucified' (1 Cor. 1:23; 2:5).

The other title which figures in Acts 2:36 is *Lord*. By the resurrection God had demonstrated that Jesus was indeed the Lord, and the early church applied the words of Ps. 110:1 to him in virtue of this event: 'The Lord said to my Lord, Sit at my right hand, till I make thy enemies a stool for thy feet' (Acts 2:34f.). This text had already been used by Jesus when he taught that the Messiah was David's Lord (Mk. 12:36) and in his reply to the high priest at his trial (Mk. 14:62). If Jesus was

JESUS CHRIST, TITLES OF

now Lord, it followed that the task of the early church was to lead people to recognize the status of Jesus. New converts became members of the church by acknowledging Jesus as Lord: 'If you confess with your lips that Jesus is Lord and believe in your heart that God raised him from the dead, you will be saved' (Rom. 10:9; cf. I Cor. 12:3). The great significance of this confession is seen in Phil. 2:11 where the climax of God's purpose is that all creation will acknowledge Jesus Christ as Lord. In this confession there may well be a polemical note, since it places Jesus over against other 'lords' recognized by worshippers in the Hellenistic world. Certainly Jews recognized only one God and Lord, but pagans worshipped 'gods many and lords many'; over against them both Christians acknowledged 'one God, the Father, . . . and one Lord, Jesus Christ' (I Cor. 8:6). The Roman emperor too was acclaimed as lord (*dominus*) by his subjects and successive emperors increasingly claimed their total allegiance; this was to lead to keen conflicts of conscience for Christians at a later stage.

An important piece of evidence for the early Christian use of the title for Jesus is the phrase preserved in Aramaic in I Cor. 16:22: *'*Maranatha*'. This is a combination of two words and means 'Our Lord, come' or 'Our Lord has/will come'. Scholars debate whether it was originally a prayer for the parousia of Jesus as Lord (cf. Rev. 22:20) or a promise that his coming was at hand (cf. Phil. 4:5). The fact that the phrase was preserved in a Gk.-speaking church in Aram. indicates that it was originally used in an Aram.-speaking church, i.e. it most probably arose in the earliest days of the church in Palestine. Evidence from Qumran has helped to confirm the possibility of this development in an Aram.-speaking environment (J. A. Fitzmyer, *NTS* 20, 1973-4, pp. 386-391).

The final term to be discussed in this section is *Son of God*. It may well have been especially associated with the preaching of Paul: it is significant that Acts 9:20 links the title with his preaching, and that it appears only once elsewhere in Acts, namely in a citation of Ps. 2:7 in Paul's sermon in Pisidian Antioch (Acts 13:33). Here the promise, 'Thou art my Son, today I have begotten thee', is applied by Paul to the resurrection which is regarded as the begetting of Jesus to new life. The thought, however, is not that Jesus became God's Son by being raised from the dead, but rather that *because* he was his Son, God raised him from the dead (cf. Wisdom 2:18). The same thought reappears in Rom. 1:3f., generally regarded as a pre-Pauline formula, where Jesus is said to have been declared to be Son of God with power by the resurrection from the dead. In I Thes. 1:9f. the sonship of Jesus is again connected with the resurrection, and this fact is made the basis for the hope of his parousia.

Two further elements appear to be associated with the title of 'Son' in this early period. One is the thought of the pre-existence of the Son; a number of texts speak of God sending his Son (Jn. 3:17; Rom. 8:3; Gal. 4:4f.; I Jn. 4:9f., 14), and clearly presuppose that the Son came from being with the Father into the world. This line of thought is expressed quite explicitly without the actual use of the term 'Son' in the pre-Pauline hymn in Phil. 2:6-11 (R. P. Martin, *Carmen Christi*, 1967). Here Jesus is a divine figure, existing in the image of God and

equal with God, who exchanged his heavenly mode of existence for a human, earthly form of existence in humility. Although the hymn speaks of his 'emptying himself*' so that he exchanged the form of God for that of a slave, the fact that Paul regarded Jesus as God's Son during his life and death indicates that he did not interpret the hymn to mean that Jesus surrendered his divine nature in order to become incarnate. Rather, 'He emptied Himself' in that He took the servant's form . . . ; and this necessarily involved an eclipsing of His glory as the divine Image in order that He might come, in human flesh, as the Image of God incarnate' (R. P. Martin, p. 194).

The other element associated with the title of Son is that God gave him up to suffer and die (Rom. 4:25; 8:32; Gal. 2:20; cf. Jn. 3:16). There may be some connection here with the OT example of Abraham who was prepared to give up his son, Isaac, to show his faith and obedience (Gn. 22:12, 16). Nor did God withhold his only Son, but gave him up freely to take away our sins. By the use of the title 'Son' the greatness of the divine sacrifice is made all the more plain.

It is not certain at what point the tradition of the virgin birth of Jesus began to influence the Christological thinking of the church. The implication of both the birth stories is that the circumstances of Jesus' birth were kept quiet (cf. Mt. 1:19; Lk. 2:19, 51), and there is very little evidence that the tradition influenced the church before it was given expression in the Gospels. In both accounts Jesus is presented as the Son of God (Mt. 2:15; Lk. 1:32, 35) whose birth as the son of Mary is due to the influence of the Holy Spirit; it is as the Son of God that he is qualified for the office and task of the Messiah (Lk. 1:32f.). Not only so, but as the Son of God he can be designated *Emmanuel*, 'God with us'; his presence on earth is tantamount to that of God himself. The two accounts do not take up the question of the relation between the Spirit-conception of Jesus and his identity with the pre-existent Son of God; their concern is exclusively with the way in which the son of Mary could be born as the Son of God.

III. Paul's use of Christological titles

In the preceding section we have seen that the essential stages in the development of the Christological vocabulary of the church had already taken place before the writing of Paul's letters. He uses an existing vocabulary in them, and he can assume that the terms which he uses are generally familiar to his Christian readers. Consequently, there is little to be said about the use of the titles which is distinctive of Paul. This may well be because he himself was closely involved in the development of the theology of the early church and had already made his own contribution to the common store of Christological thinking before he came to write his letters. In conscious opposition, therefore, to the scheme adopted by R. Bultmann (*Theology of the New Testament*, 1, 1952, ch. 3), L. Goppelt rightly refuses to discuss 'The kerygma of the Hellenistic Church aside from Paul' because this simply leads to 'unhistorical abstractions'; while recognizing that there were many currents of thought in the early church, he prefers to discuss the theology of Paul in the light of the traditions which he received and the situations in which he worked (*Theologie des Neuen Testaments*, 2, 1976, pp. 360f.).

Two titles which we might have expected to find

in Paul's letters are conspicuously absent or rare. Paul never uses *Servant* with respect to Jesus, and he uses the motifs associated with the title only when alluding to traditional material. He does, however, think of himself and his fellow workers as slaves of God (*doulos*), and just once he can speak of Jesus as a *minister* (*diakonos*; Rom. 15:8) for the circumcision (*i.e.* for the Jews). He also sees the role of the *Servant* as being fulfilled in the missionary witness of the church (Rom. 10:16; 15:21; *cf.* Acts 13:47).

The actual name *Jesus*, used by itself, is quite rare in Paul (about 16 occurrences), although it is of course common in combinations. Half of these occurrences are in 2 Cor. 4:10–14 and 1 Thes. 4:14 where Paul is discussing how the death and resurrection of Jesus are repeated in the lives of believers. Otherwise he mainly uses 'Jesus' when he is discussing what other titles should be predicated of its bearer (1 Cor. 12:3; *cf.* 2 Cor. 11:4; Phil. 2:10).

For Paul *Christ* has become the main designation by which he refers to Jesus. His message was the 'gospel of Christ' (*e.g.* Gal. 1:7), and a study of the occurrences of 'Christ' produces a Pauline theology in miniature (see the excellent treatment by W. Grundmann, *TDNT* 9, pp. 543–551). He takes over the traditional uses of the title with respect especially to the death and resurrection of Jesus, but he also uses it in many other ways. The distinctively Pauline element comes out in the use of the phrase 'in Christ', by which Christ is described as the determining circumstance which conditions the life of the believer (J. K. S. Reid, *Our Life in Christ*, 1963, ch. 1). This means that the phrase does not refer so much to a mystical union with a heavenly figure but rather to the historical facts of the crucifixion and resurrection which condition our existence. Thus justification takes place 'in Christ' (Gal. 2:17); the individual Christian is 'a man in Christ' (2 Cor. 12:2), and the churches are 'in Christ' (Gal. 1:22, Gk.); Christian witness takes place 'in Christ' (1 Cor. 4:15; Phil. 1:13, Gk.; 2 Cor. 2:17). At every point the Christian life is determined by the new situation brought about by the fact of Christ.

Paul frequently uses the combination 'Jesus Christ' as a title. Sometimes the words occur in the reverse order 'Christ Jesus', but a satisfying explanation for the variations in word order has not been discovered: grammatical reasons may contribute to the variation, and it has also been suggested that Paul wished to emphasize the human Jesus or the heavenly, pre-existent Christ by placing one or the other first. In any case, there does not appear to be any difference in the use of the compound title from that of the simple 'Christ', except that the compound title was felt to be more emphatic and dignified.

Paul's usage of *Lord* is essentially the same as that of the pre-Pauline church. Here especially there is no need to invoke the influence of pagan worship of cult deities in order to account for the distinctive features of Pauline usage. This thesis—along with the associated claim that much of Paul's theology was derived from transfer of originally pagan ideas to Christianity—has been increasingly shown to be unnecessary and untenable (O. Cullmann, *op. cit.*, ch. 7). Of course Christians who already acknowledged Jesus as Lord had to define more closely what they meant by this title over against pagan worship of other lords (1 Cor. 8:6), but this is quite different from saying that the Christian usage was derived from the pagan.

Since confession of Jesus as Lord was the mark of the Christian, and since for Christians there was no other Lord, it was natural for Paul to speak simply of 'the Lord' when he wished to refer to Jesus. It is true that the same title was used to refer to God the Father, and that this can lead to a certain ambiguity as to whether God or Jesus is meant (this is especially the case in Acts; J. C. O'Neill, *SJT* 8, 1955, pp. 155–174); generally, however, 'Lord' is used for God by Paul almost exclusively in quotations from the OT, so that there is little risk of confusion.

If the title 'Christ' had come to have the connotation of 'Saviour', that of 'Lord' primarily expresses the exalted position of Jesus and his rule over the universe and especially over believers who accept his Lordship. It is thus especially used when the responsibility of Christians to obey Jesus is being expressed (*e.g.* Rom. 12:11; 1 Cor. 4:4f.). But Paul also uses it quite freely to refer to the earthly Jesus (1 Cor. 9:5), especially with reference to what came to be known as 'the supper of the Lord' (1 Cor. 10:21; 11:23, 26f.) and also when referring to instructions given by the earthly Jesus (1 Cor. 7:10, 25; 9:14; *et al.*). It is not surprising that the formula 'in Christ' is altered to 'in the Lord' when it occurs in the context of exhortations and commands (Eph. 6:1; Phil. 4:2; Col. 4:17; *et al.*). Nevertheless, the use of the two titles is quite fluid, and sometimes Paul uses the one where we might have expected him to use the other.

Compound titles including the title of Lord are frequent in Paul, and are evidently used in order to exalt the person thus designated. The early Christian confession 'Jesus (Christ) is Lord' lies behind the development of 'the Lord Jesus (Christ)' (2 Cor. 4:5), and Paul often speaks of *our* Lord, thereby emphasizing both the need for personal commitment to Jesus and also the saving care and concern of Jesus for his people. This formula is found in the introductory salutations of Paul's letters where 'God our Father and the Lord Jesus Christ' are associated together as the source of spiritual blessings. W. Grundmann (*TDNT* 9, p. 554) has suggested that behind this formula there lies the OT phrase 'the Lord God' which was transformed in Christian worship into 'God the Father' and the co-ordinated 'Lord Jesus Christ', indicating that the person who has Jesus as his Lord also has God as his Father. Whether or not this explanation is correct, two facts are noteworthy. The one is that here God the Father and Jesus are placed quite naturally alongside each other in a way that indicates an equality of status; to be sure, the subordination of Jesus to the Father is always carefully preserved (1 Cor. 15:28; Phil. 2:11), but no other being is ever placed alongside the Father in this way. The second fact is that the OT usage of 'Lord' as a title for God has undoubtedly influenced Christian usage. This is clear from Phil. 2:10f. which takes up the language of Is. 45:22–25 and applies what is said there about God to Jesus. Similarly, in Rom. 10:9, 13 a citation from Joel 2:32 about calling on the name of the Lord (*i.e.* Yahweh) has been applied to Jesus. This usage is by no means peculiar to Paul (*cf.* Jn. 12:38; Heb. 1:10; 1 Pet. 3:14f.; Jude 24f.; Rev. 17:14; 19:16). When, finally, Paul refers to 'the day of the Lord', he undoubtedly understands the Lord here to be no longer Yahweh but Jesus (1 Cor. 1:8; 2 Cor. 1:14).

If statistics were our guide, it would appear that *Son of God* (15 occurrences) was much less import-

JESUS CHRIST, TITLES OF

ant for Paul than *Lord*, which appears at least ten times more frequently in his writings. Nevertheless, as M. Hengel (*The Son of God*, 1976, ch. 3) has shown, Paul uses this title for Jesus when he is summing up the content of his gospel (Rom. 1:3-4, 9; Gal. 1:15f.), and tends to reserve it for important statements. He uses it when the question of the relationship between God and Jesus is particularly in his mind, and, as we saw earlier, took up the traditional statements which spoke of God sending his pre-existent Son into the world and giving him up to die for us. He brings out especially the fact that it is through the work of the Son that we can be adopted as God's sons (Rom. 8:29; Gal. 4:4-6).

A number of other expressions are used by Paul in this connection. Jesus is described as the **Image* of the invisible God (Col. 1:15; cf. 2 Cor. 4:4); he is the **Firstborn* of all creation (Rom. 8:29; Col. 1:15-18) and the *Beloved* (Son) of God (Eph. 1:6). These, however, should be regarded more as descriptions of Jesus than as titles. The same is true of other phrases which describe various functions of Jesus, such as **Head* (Eph. 1:22) and even *Saviour* (Eph. 5:23; Phil. 3:20).

It is a moot point whether the title *God* is applied to Jesus by Paul. The interpretation of Rom. 9:5 (see rsv and mg.) is debatable, but the text should probably be understood as a doxology to the Christ as God (B. M. Metzger, in B. Lindars and S. S. Smalley (ed.), *Christ and Spirit in the New Testament*, 1973, pp. 95-112). Equally ambiguous is 2 Thes. 1:12 (see TEV and mg.; NIV and mg.).

By the time that we reach the Pastoral Epistles the rich diversity of titular usage characteristic of the earlier Pauline writings is beginning to disappear. *Son of God* is not used at all. Neither *Jesus* nor *Christ* is used independently (except in 1 Tim. 5:11) but only in combination, usually in the order *Christ Jesus*. *Lord* is, however, used as an independent title and also in combinations. In several cases we probably have examples of formal, credal statements expressed in a dignified style and based on traditional material (1 Tim. 1:15; 2:5f.; 6:13; 2 Tim. 1:9f.; 2:8; Tit. 2:11-14; 3:6). There is no doubt that here Jesus is given the title of *God* (Tit. 2:13), and he shares with God the title of *Saviour* (2 Tim. 1:10; Tit. 1:4; 2:13; 3:6).

IV. The titles of Jesus in the Johannine literature

In Jn. the pattern of usage is similar to that in the other Gospels. The Gospel is concerned with the activities of the human person *Jesus*, and the compound form *Jesus Christ* is used only a couple of times when the total significance of Jesus is viewed from a post-resurrection standpoint (Jn. 1:17; 17:3—the latter passage being uttered from the perspective of one who has 'accomplished the work' which the Father gave him to do). Although the term *Lord* is frequently used in the vocative to address Jesus, it is scarcely used in narrative to refer to Jesus (only in Jn. 4:1; 6:23; 11:2) until after the resurrection which established the new status of Jesus. Nevertheless, it is significant that Jesus himself describes his status as that of a 'master' (Jn. 13:13f., 16; 15:15, 20) who can give commands to his slaves—although he regards his disciples as friends rather than slaves.

One of the key questions in Jn. is whether Jesus is the *Messiah* of both Jewish and Samaritan expectation; the purpose of the Gospel is to lead to belief that this is the case (Jn. 20:31). Despite the rarity of its use in the other Gospels, Jesus is con-

fessed as *Messiah* in Jn. (Jn. 1:41; 4:29; 11:27), but it is interesting that the word never appears on the lips of Jesus himself. Other quasi-titular descriptions of Jesus which are used in Jn. include the *Coming One* (Jn. 11:27; 12:13; cf. Mt. 11:3); the *Holy One of God* (Jn. 6:69; cf. Mk. 1:24), the *Saviour* (Jn. 4:42), the *Lamb of God* (Jn. 1:29, 36), the *Prophet* (Jn. 6:14; 7:40) and the *King of Israel* (Jn. 1:49; 12:13; 18:33-38; 19:3, 14-22). Several of these are also found in the Synoptic Gospels.

Jesus' characteristic self-designation of *Son of man* also figures prominently in Jn., but here there is a new stress on the heavenly origin of the Son of man, his descent into this world, his glorification on the cross and his significance as the giver of life (Jn. 3:13; 5:27; 6:27, 53, 62; 12:23, 34; 13:31) which is absent from the Synoptic Gospels. While it is unnecessary to assume that foreign influences have contributed to the use of the title in Jn., the language used is sufficiently different from that in the Synoptic Gospels to suggest that, although the sayings in Jn. ultimately rest on the actual teaching of Jesus, they have been to some extent rewritten by the Evangelist or his sources (S. S. Smalley, *NTS* 15, 1968-9, pp. 278-301).

The most fundamental title for Jesus in Jn. is undoubtedly *Son of God*. It indicates the closeness of the relationship between the Father and his pre-existent, only Son (Jn. 3:16-18); this relationship is one of mutual love (Jn. 3:35; 5:20), and it is expressed in the way in which the Son obeys the Father (Jn. 5:19) and is entrusted by him with his functions as the judge and the bringer of life (Jn. 5:17-30). The unique filial relationship of Jesus to God which we find in the Synoptic Gospels is here most clearly expressed (Jn. 11:41; 12:27f.; 17:1). Essentially the same ideas are conveyed by the title **Logos* (or *Word*) which figures in the prologue to the Gospel. So closely is the *Logos* identified with God, that it is not surprising to find that Jesus is actually given the title of *God*; this is clearly the case in Thomas' confession in Jn. 20:28, where it is the appearance of the resurrected Jesus which leads to recognition of his divine status, but it is also probable that Jesus is described as 'the only Son, who is the same as God and is at the Father's side' (TEV) in Jn. 1:18 (the text, however, is uncertain).

Finally, it should be noted that there are various 'I am' sayings in Jn. which apply such descriptions as 'the Good Shepherd' and 'the true Vine' to Jesus. Sometimes we simply have the words 'I am he' (Jn. 4:26; 6:20; 8:24, 28, 58; 13:19). Since these words echo the self-affirmation of Yahweh found in Is. 43:10; 48:12, it is likely that we should see them as a veiled indication of the deity of Jesus.

The use of titles in the Johannine Epistles is similar to that in the Gospel, although of course there is a difference between the way in which the earthly Jesus is described in a Gospel and that in which the risen Lord is described in an Epistle. It is a curious but no doubt unimportant fact that 3 Jn. is the only NT book which never refers to Jesus. In 1 Jn. *Jesus* is often the subject of statements in which his significance as *Christ* or *Son of God* is expressed (1 Jn. 2:22; 4:15; 5:1, 5). While the question raised here may be simply whether Jesus was indeed the *Messiah* of Jewish expectation, scholars generally agree that the issue was rather whether there had been a true and lasting incarnation of God in Jesus. The opponents of John appear to have denied that there was a true and lasting union

between the Messiah or Son of God and Jesus (1 Jn. 4:2; 2 Jn. 7), and John had to emphasize that *Jesus Christ* had truly come in both water and blood, i.e. in his baptism and his death. He therefore uses the full title 'his Son Jesus Christ' (1 Jn. 1:3; 3:23; 5:20) to indicate the object of Christian belief. Only the Son of God can be the *Saviour* of the world (1 Jn. 4:14). The term *Lord* is absent from the Epistles of John.

In Rev. *Jesus* figures prominently as a designation, in the same way as in Heb. The fuller title *Jesus Christ* is used only as a solemn designation in the introduction to the book (Rev. 1:1f., 5), but there are four references to (the) *Christ* or to *his Christ* (Rev. 20:4, 6; 11:15; 12:10), which show that the thought of the Messiah as God's agent in the establishment of his rule was very much alive for John. This idea is further seen in the way in which the divine titles of *King* and *Lord* are used of both God and Jesus (Rev. 15:3; 17:14; 19:16). But undoubtedly the most distinctive title of Jesus in Rev. is that of **Lamb* which is used 28 times here and nowhere else (the Gk. word used in Jn. 1:29, 36; Acts 8:32; 1 Pet. 1:19 is different). The Lamb combines the paradoxical features of being slain or sacrificed (Rev. 5:6) and yet being the Lord who is worthy of worship (Rev. 5:8). He displays his wrath against evil (Rev. 6:16) and leads the people of God in battle (Rev. 17:14), and yet it is his blood which acts as a sacrifice for sin (Rev. 7:14) and through which his martyred people emerge victorious (Rev. 12:11).

V. The titles of Jesus in the rest of the New Testament

Of the remaining books of the NT, Heb. is perhaps the most distinctive in its use of titles. Thus it reverts to the use of the simple *Jesus* to designate the One who suffered humiliation and death and yet has been exalted by God (Heb. 2:9; 13:12). It can also refer to him simply as the *Lord* (Heb. 2:3; 7:14) or as *Christ* (Heb. 3:6, 14; *et al.*). But although the writer is no doubt conscious that *Christ* means 'anointed' (Heb. 1:9), he uses it more as a name which needs to be explained by other titles. He describes Jesus as a *Pioneer* of salvation and faith (Heb. 2:10; 12:2), using a phrase which may have had a wider currency as a Christological title (Acts 3:15; 5:31). But above all he thinks of Jesus as the *High Priest* and expounds his work in terms of this category drawn from the OT sacrificial legislation. If this term is more a description than a title of Jesus, the term *Son* is the significant title which underlies it. It is only after he has established the identity of Jesus as the Son of God, exalted above the angels and Moses, that the writer goes on to demonstrate how this position qualified Jesus to be the high priest and mediator between God and man. The writer makes careful use of Pss. 2:7 (Heb. 1:5; 5:5) and 110:4 to define the status of Jesus. He stresses the enormity of rejecting the salvation achieved by so exalted a Saviour (Heb. 6:6; 10:29).

Jas. is remarkable for referring only twice to the *Lord Jesus Christ* (Jas. 1:1; 2:1), but when he speaks of the coming of the Lord (Jas. 5:7f.) he is no doubt thinking of Jesus.

In 1 Pet. the use of *Jesus* as an independent name is missing, and the writer prefers *Jesus Christ*. He uses *Lord Jesus Christ* once (1 Pet. 1:3) in a traditional phrase. But he refers frequently to *Christ*, and it is interesting that he does so particularly in the context of suffering and death (1 Pet. 1:11, 19;

2:21; 3:18; *et al.*) which we saw to be characteristic of the primitive use of the title. He also speaks of confessing Christ as *Lord* (1 Pet. 3:15; cf. 2:13) in a way which is again reminiscent of early usage.

2 Pet. is characterized by the use of *Lord Jesus Christ*. The title of *Saviour* is also frequent here (2 Pet. 1:1, 11; 2:20; 3:2, 18), and in 2 Pet. 1:1 Jesus is described as 'our God and Saviour'. The usage of Jude is generally similar; both writers use the unusual form *despotēs*, 'Lord', for Jesus (2 Pet. 2:1; Jude 4), possibly because the background thought is that of the redemption of slaves; the term was not a popular one because it suggested arbitrary despotism.

VI. Conclusion

The teaching of the NT about the person of Jesus is not confined to what is expressed by the titles whose use has been rapidly sketched above. We should also need to take into account what is said about the character and activity of Jesus both during his earthly life and in his heavenly state; it is also important to consider the kinds of credal statement and literary works which were created to express his significance. Nevertheless, the titles themselves sum up much of the NT teaching. Study of them enables us to see how the thinking of the disciples was moulded by their first contact with Jesus during his lifetime, and then decisively fixed by their experience of him as the risen Lord, and finally elaborated in the course of their evangelism and teaching in the Jewish and Hellenistic world. In differing ways the titles express the supreme worth of Jesus as the Son of God, his saving function as Messiah and Saviour, and his honourable position as the Lord. The early church drew on a rich source of material to explain who Jesus was; basically it took its material from the OT, which it saw as the divinely given prophecy of the coming of Jesus, but at the same time it did not shrink from using titles which would be meaningful in the wider world. Some titles proved less adequate than others, but collectively they all bear testimony to the fact that in Jesus God has acted decisively to judge and save the world, and they summon all to acknowledge that this Jesus is indeed one with God and worthy of the worship that is fitting for God himself.

I. H. M.

JETHRO. Moses' father-in-law *Reuel, called Jethro in Ex. 3:1; 4:18. He brought Zipporah and

JETHRO

her sons to meet Moses at Mt Horeb, and held a sacrifice to Yahweh in thanksgiving for the deliverance of Israel. Here he also advised Moses to delegate the administration of justice (Ex. 18). Moses persuaded Jethro's son Hobab to join the Israelites. In Jdg. 4:11 'Hobab the Kenite' is called Moses' *hōtēn*, perhaps a broad term for 'in-law'; this, with Jdg. 1:16, is the only evidence for Jethro's Kenite descent. The name may mean 'pre-eminence'.

J.P.U.L.

JEW (Heb. *y'hūdî*; Aram. *y'hūdai*; Gk. *joudaios*; Lat. *judaicus*). Originally a member of the state of *Judah (2 Ki. 16:6; Ne. 1:2; Je. 32:12) and so used by foreigners from the 8th century BC onwards (e.g. Assy. *Yaudaia*, *ANET*, pp. 287, 301). Non-Jews used this term of the former inhabitants of the province of Judah as opposed to other nations in post-exilic times (Est. 9:15; Dn. 3:8; Zc. 8:23) or of proselytes to *Judaism (Est. 8:17). 'Jewess' occurs in 1 Ch. 4:18; Acts 16:1; 24:24 and 'Jewish' in Gal. 2:14 (Gk.); Tit. 1:14. The 'Jew's language' describes the local Semitic dialect spoken in Judah which, like 'Jew' (Je. 34:9), becomes synonymous with 'Hebrew'. אב 'Jewry' (Dn. 5:13; Lk. 23:5; Jn. 7:1) stands for Judah.

In the NT, 'Jews' is used of members of the Jewish faith or their representative leaders (especially Jn.), but in modern times, and especially in the state of Israel, this is sometimes extended to denote ethnic birth but not necessarily religion. Its precise connotation is therefore now often a matter of debate.

D.J.W.

JEWELS AND PRECIOUS STONES. In biblical times as nowadays various forms of jewellery were worn and highly esteemed by both men and women (Ex. 11:2; Is. 3:18–21). They were given as presents (Gn. 24:22, 53), and were an important item of spoil in war (2 Ch. 20:25). They were a form of wealth, especially before the use of coins (2 Ch. 21:3), and were used as a standard of value (Jb. 28:16; Pr. 3:15; Rev. 21:11). Among the various types of jewellery used we find mention of bracelets for the arm (Gn. 24:22, 30, 47; Ezk. 16:11), ornaments for the ankles (Is. 3:18, 20), necklaces (Gn. 41:42; cf. Lk. 15:8, where the ten pieces of silver may have been coins strung together to form a necklace), crowns (Zc. 9:16; here the Lord's people are likened to shining jewels in a crown), ear-rings (Gn. 24:22), nose-rings (Is. 3:21) and rings for the fingers (Gn. 41:42; Est. 3:10; Lk. 15:22). These might be made of gold, silver or other metals (Ex. 3:22).

A considerable number of precious and semi-precious stones were known and used in jewellery. Inscribed seals have been found in cornelian, chalcidony, jasper, agate, onyx, rock crystal, haematite, jade, opal and amethyst (D. Diring, 'Seals', in *DOTT*, pp. 218–226). The stones were valued for their rarity, beauty and durability. The modern method of faceting was not employed; instead the stones were rounded and polished, and often engraved and carved.

In general, the ancients were more familiar with semi-precious than with precious stones. Since many species of stone occur in a variety of colours and since a scientific terminology had not been de-

veloped, the identification of the various stones mentioned in the Bible is not always easy, and in some cases we can only guess at the meaning of the terms used. Etymology is not much help, since many of the roots simply mean 'sparkle', 'gleam' or the like. The following list is geared to the RSV translation.

Agate (*š'ḥō*, Ex. 28:19; 39:12) was probably modern agate, a type of translucent quartz with layers of different colours, or the very similar onyx. In Is. 54:12; Ezk. 27:16 (*kaḥkōd*), a red stone, possibly carbuncle, red jasper (NEB) or ruby (JB), may be meant (cf. Ezk. 27:16, where Symmachus has *karchēdonion*, i.e. carbuncle). For Rev. 21:19, RSV, TEV, see **Chalcedony**.

The word **Alabaster** (*alabastron*, Mk. 14:3 = Mt. 26:7; Lk. 7:37), originally the neuter form of the adjective *alabastrous*, was used to mean an alabaster flask with a long neck for storing perfume, the neck being broken off when the contents were used; but the word was also used for flasks of this shape of any material. Ancient alabaster was a banded variety of calcium carbonate produced by gradual deposition from solution in water, as in stalactites; modern alabaster is a softer stone, a variety of gypsum (calcium sulphate).

Amethyst (*ahlāmā*, Ex. 28:19; 39:12) was the well-known stone of that name, a purple variety of transparent, crystalline quartz. (NEB 'jasper' identifies it as an Egypt. stone.) So also in Rev. 21:20 (*amethystos*, so called because it was supposed to prevent intoxication).

Beryl (*taršīš*, Ex. 28:20; 39:13; Ct. 5:14; Ezk. 1:16; 10:9; 28:13; Dn. 10:6) was associated with Spain (Tarshish), and was probably Spanish gold topaz, known to the ancient world as chrysolith. In Rev. 21:20 (*bēryllos*) ordinary green beryl is meant.

Carbuncle (*bāreḡet*, Ex. 28:17; 39:10; *bār'qaṭ*, Ezk. 28:13) was probably a green stone in view of the LXX translation as 'emerald' (*smaragdōs*) in the Ex. references; possibly green felspar (NEB) is meant. (The modern carbuncle is a red stone.) In Is. 54:12 (*eqdah*) a red stone is meant in view of the derivation from *qāḏah*, 'to kindle', possibly garnet (NEB).

For **Cornelian** (better spelt 'cornelian', the common form being due to confusion with Latin *caro*), see **Sardius**, below.

Chalcedony (*chalkēdōn*, Rev. 21:19, NEB; RSV 'agate') is usually taken to have been a green stone, since Pliny refers to a kind of emerald and jasper as Chalcedonian (from Chalcedon in Asia Minor). (The word is used in modern writers for various types of translucent quartz, including agate, onyx, cornelian and chrysoprase.)

Chrysolite (*chrysolithos*, Rev. 21:20) is the ancient term for yellow topaz (aluminium fluo-silicate) or yellow quartz. (Note that ancient chrysolite is modern topaz, and vice versa.) For Ezk. 1:16; 10:9; 28:13, RSV, see **Beryl**, above. For Ex. 28:17 NEB see **Topaz**.

Chrysoprase (*chrysoprasos*, Rev. 21:20) is in modern usage an apple-green form of chalcedony, but the identification here is uncertain. The name suggests a golden-tinted variety.

Coral (*rāmōl*, Jb. 28:18; Ezk. 27:16) may be either black or red coral. It is, of course, not strictly a precious stone, being the skeleton of innumerable small marine polyps. *rāmōl* also occurs in Pr. 24:7, *MT*, but this is probably to be read as *rāmōl*, 'high'. The RSV translates *p'ninim* as coral

Jewels, precious and semi-precious stones as translated in some versions of the Bible.

JEWELS AND PRECIOUS STONES

in La. 4:7, where some red stone is meant (see **Pearl**, below).

Crystal (*gābīš*; Jb. 28:18a) is a translucent substance (*cf.* *elgābīš*, 'hail') but G. R. Driver thinks that gypsum is meant (*cf.* **NEB** 'alabaster'). The word *z'kōkūt* ('crystal', Jb. 28:17, AV) was applied in the ancient world not simply to rock crystal (pure transparent crystalline quartz) but to any hard, transparent, colourless substance. Glass may be meant (RSV). *qerah* (Ezk. 1:22) is elsewhere translated 'frost' or 'ice'. In Rev. 4:6; 21:11; 22:1 (*krystatallon*, *krystatallizō*), either ice or rock crystal may be the rendering.

Diamond (*yāh'lōm*, Ex. 28:18; 39:11; Ezk. 28:13) is of uncertain identification. The modern diamond was probably unknown in OT times, the first certain reference to it apparently being in Manilius (1st century AD). Probably a white, opaque stone is meant (possibly moonstone); G. R. Driver suggests jadeite or nephrite (*cf.* **NEB**). In Je. 17:1 (*šāmīr*) adamant or emery, a form of corundum (the hardest substance known except for diamond), is meant (*cf.* Ezk. 3:9; Zc. 7:12).

Emerald (*nōpeḳ*, Ex. 28:18; 39:11; also Ezk. 27:16, where various scholars consider the text uncertain) may have been a green stone like the modern emerald, but in view of the LXX translation (*anthrax*, 'a burning coal'), some authorities prefer the purple almandine garnet (**NEB**). In Rev. 4:3 (*smaragdinos*) and 21:19 (*smaragdōs*), the green emerald is meant.

For **Glass**, see **Crystal**.

For **Hyacinth**, see **Jacinth**.

Jacinth (*lešem*, Ex. 28:19; 39:12; AV 'figure') is usually thought to have been a yellow stone; G. R. Driver prefers a blue stone such as turquoise (**NEB**). In the NT jacinth (*hyacinthos*, Rev. 21:20) is a blue stone, aquamarine (the blue variety of beryl), sapphire or turquoise. (Modern jacinth is quite different.) The name was used to indicate a blue colour (in classical Greek as a noun it means the hyacinth or bluebell), as in Rev. 9:17 (*hyacinthinōs*), where rsvmg. has 'hyacinth' and rsv has 'sapphire'.

Jasper (*yāš'peh*, Ex. 28:20; 39:13; Ezk. 28:13) is a translucent, green stone. In Rev. 4:3; 21:11, 18–19 (*iaspis*), green quartz may be meant. In 21:11 the reference to crystal suggests that a transparent stone may be intended.

For **Lapis lazuli**, see **Sapphire**.

Onyx (*šōham*, Gn. 2:12; Ex. 25:7; 28:8, 20; 35:9, 27; 39:6, 13; 1 Ch. 29:2; Jb. 28:16; Ezk. 28:13) has been identified as a green stone (*cf.* LXX 'beryl' in some of these verses) or as onyx (translucent agate with layers of black and white). The word means finger-nail, the stone being so called because of its appearance. S. R. Driver prefers red carnelian. For Rev. 21:20, see **Sardonyx**, below.

Pearl is found in the OT in Jb. 28:18a (*gābīš*) AV, where RSV has 'crystal'. In the RSV 'pearl' is found as the translation of *p'ninim* in Jb. 28:18b (AV, 'rubies'). The same Heb. word occurs in Pr. 3:15; 8:11; 20:15; 31:10 and La. 4:7 (it is also accepted by some scholars as an emendation in Ps. 45:14). In all these references AV has 'rubies'; RSV has 'jewels' or 'costly stones', except in La. 4:7, where it has 'coral'. **BDB** prefer 'corals' (*cf.* **NEB**), but E. Burrows (*JTS* 42, 1941, pp. 53–64) argues that the word properly means 'pearls' but also has the generic sense of 'jewels'. *Unger's Bible Dictionary* (1957, p. 742) suggests that the pink pearls found in the Red Sea are meant, and this would solve the

difficulty of La. 4:7, where a reddish stone is indicated.

There is no doubt that in the NT *margariēs* means 'pearl'. Pearls are noted as articles of feminine ornament (1 Tim. 2:9, where they are frowned upon; Rev. 17:4) and of merchandise (Mt. 13:45f.; Rev. 18:12, 16). The gates of the New Jerusalem are each made of a single large pearl or possibly of mother-of-pearl (Rev. 21:21). The kingdom of heaven is like a fine pearl which a man will seek to obtain at the cost of all that he has (Mt. 13:45f. In view of the context it is unlikely that this parable refers primarily to Christ giving his life for men, although in fact Christ himself is the supreme example of giving up all for the sake of the kingdom). On the other hand, it is as foolish to put the Christian message before men who refuse to appreciate it as to cast pearls before swine (Mt. 7:6; *cf.* *Didache* 9. 5, where Christ's saying is used to justify exclusion of the unbaptized from the Lord's Supper).

Ruby is found in AV as a translation of *p'ninim* in six places (see **Pearl**, above). RV also has 'ruby' in Is. 54:12 and Ezk. 27:16 for *kaḳkōd* (see **Agate**, above).

Sapphire (*sappīr*, Ex. 24:10; 28:18; 39:11; Jb. 28:6, 16; Ct. 5:14; Is. 54:11; La. 4:7; Ezk. 1:26; 10:1; 28:13) was the ancient name for lapis lazuli (*cf.* rsvmg.), a deep blue stone with golden flecks of iron pyrites (*cf.* 'dust of gold', Jb. 28:6). Lapis lazuli is also meant in Rev. 21:19 (*sappheiros*). The modern sapphire (blue corundum) was scarcely known to the ancients. For Rev. 9:17, RSV, see **Jacinth**, above.

Sardius (*ōdem*, Ex. 28:17; 29:10; Ezk. 28:13) was certainly a red stone (from *ādām*, 'to be red'), probably modern sard (a form of cornelian; *cf.* Ezk. 28:13, RSV), *i.e.* a deep brown or red form of quartz. It is also mentioned in Rev. 21:20 (*sardios*) and is the sardine stone of Rev. 4:3 (*sardinios*): RSV and **NEB** have carnelian/cornelian in both places.

Sardonyx (*sardonyx*, Rev. 21:20, RV, **NEB**; RSV 'onyx') is in modern usage a form of agate with layers of brown and white; but, according to *LSJ*, in ancient usage a stone was called 'onyx' when the dark ground was simply streaked or spotted with white, and 'sardonyx' when the different colours were arranged in layers.

Topaz (*pit'dā*, Ex. 28:17; 39:10; Jb. 28:19; Ezk. 28:13) was a yellow stone, probably yellow rock crystal or chrysolite (a pale yellow variety of peridot); *cf.* Ezk. 1:16; 10:9; 28:13, **NEB** (*taršīš*). So also in Rev. 22:20 (*topazion*).

The fullest list of stones in the OT is given in the description of the high priest's breastpiece (Ex. 28:17–20, repeated in 39:10–13). This contained four rows of three stones, each stone engraved with the name of one of the twelve tribes of Israel. Later authors commenting on the OT regarded these twelve stones as symbolic of the months of the year or the signs of the zodiac (Philo, *Vit. Mos.* 2. 124ff.; Jos., *Ant.* 3. 186), but it is impossible to work out any correlations. Some scholars have rearranged the order of the stones in the *MT* on the basis of the LXX translation, but this is a dubious procedure.

An abbreviated version of the same list of stones is found in Ezk. 28:13 as a description of the covering of the king of Tyre when, according to the poetic imagery used here, he was in Eden, the garden of God. Nine of the stones are mentioned, the jacinth, agate and amethyst being omitted. In

the LXX version of this verse, however, the full list of twelve stones is substituted.

A list of twelve stones is given in Rev. 21:19f. as decorations of the foundations of the New Jerusalem. The basis of this description is clearly Is. 54:11f. (cf. also Tobit 13:16-18). The number twelve is clearly significant for John, and various attempts have been made to ascertain whether the twelve stones have any special meaning. It is likely that the form of the vision has been influenced by the description of the twelve stones of the high priest's breastpiece; scholars have attempted to relate the two lists of stones more closely to each other, but in view of the difficulties of translation from Heb. to Gk. and the fact that John was probably not quoting verbatim from Ex., it is very doubtful whether we can say more than that he was generally influenced by the description in Ex. R. H. Charles (*JCC, ad loc.*) has taken up the symbolism of the signs of the zodiac mentioned above and holds that the stones represent these signs arranged in precisely the opposite order to that in which the sun travels through the zodiac, thus portraying the truth that the New Jerusalem and Christianity bear no relation to those religions in which men worship the sun; this theory is implausible (T. F. Glasson, *JTS* n. s. 26, 1975, pp. 95-100). It is further possible that the stones, like the twelve gates of the city, are symbolical of the tribes of Israel (A. M. Farrer, *A Rebirth of Images*, 1949, pp. 216ff.), but again it is impossible to work out convincing identifications of individual stones with individual tribes. In the light of 21:14 there is perhaps more to be said for the suggestion that the stones represent the twelve apostles, in which case individual identifications are clearly not to be attempted. What is beyond dispute in the symbolism is that in the New Jerusalem we see the fulfilment of the OT prophecy of the perfect city of God in which the saints of the old and new covenants find a place. (*MINING AND METALS, *ORNAMENTS.)

JEZANIAH (Heb. *y'zanyāhū*). One of the Judean military commanders who joined Gedaliah at Mizpah (Je. 40:8). He was among those who sought counsel from Jeremiah concerning going down to Egypt (Je. 42:1-LXX here has 'Azariah', cf. 43:2). In 2 Ki. 25:23 his name appears as *'Jaazaniah'. J.C.J.W.

JEZEBEL. 1. The daughter of Ethbaal, priest-king of Tyre and Sidon. She was married to Ahab, to ratify an alliance between Tyre and Israel, by which Omri, Ahab's father, sought to offset the hostility of Damascus towards Israel (c. 880 BC). Provision was made for her to continue to worship her native god Baal in Samaria, her new home (1 Ki. 16:31-33).

She had a strong, domineering character, and was self-willed and forceful. A fanatical devotee of Melqart, the Tyrian Baal, her staff numbered 450 of his prophets, and 400 prophets of the goddess Asherah, by the time Ahab was king (1 Ki. 18:19).

She clamoured for her god to have at least equal rights with Yahweh, God of Israel. This brought her into conflict with the prophet Elijah. A battle between Yahweh and Baal was fought on Mt Carmel, when Yahweh triumphed gloriously (1 Ki. 18:17-40). Even so, this and the massacre of her prophets, instead of diminishing her zeal, augmented it.

Her conception of an absolute monarchy was at variance with the Heb. covenant-relationship between Yahweh, the king and the people. She took the lead in the incident of Naboth's vineyard with high-handed, unscrupulous action, affecting the whole community as well as undermining the throne of Ahab. It resulted in the prophetic revolution and the extermination of the house of Ahab. She had written letters and used her husband's seal (1 Ki. 21:8), but that she had a seal of her own is suggested and illustrated by N. Avigad, *IEJ* 14, 1964, pp. 274-276.

After Ahab's death, Jezebel continued as a power in Israel for 10 years, in her role as queen-mother, throughout the reign of Ahaziah, then during Jehoram's lifetime. When Jehoram was killed by Jehu she attired herself regally (2 Ki. 9:30), and awaited him. She mocked Jehu, and went to her fate with courage and dignity (842 BC).

It is remarkable that Yahweh was honoured in the naming of her three children, Ahaziah, Jehoram and Athaliah (if indeed she was Athaliah's mother), but they may have been born before her ascendancy over Ahab became so absolute.

2. In the letter to the church at Thyatira (Rev. 2:20), 'that Jezebel of a woman' is the designation given to a seductive prophetess who encouraged immorality and idolatry under the cloak of religion (*NICOLAS). This could refer to an individual, or to a group within the church. It indicates that the name had become a byword for apostasy.

M.B.

JEZREEL (Heb. *Yizra'el*, 'God sows'). 1. The town in Judah (Jos. 15:56), home of Ahinoam, one of David's wives (1 Sa. 25:43). 2. A city of Issachar in the Jezreel plain (*ESDRAELON), about 90 km N of Jerusalem, identified with Zer'in (Jos. 19:18). The city and surroundings are associated with several notable events. The Israelites assembled by its spring before engaging the Philistines at Gilboa (1 Sa. 29:1, 31). It was part of Ishbosheth's short-lived kingdom (2 Sa. 2:8ff.) and an administrative district of Solomon (1 Ki. 4:12). Recent excavations have revealed a fortified site from the time of Ahab, 300 × 150 m, with fortifications, including a moat, 36 m wide. It is thought to have been Ahab's chariot centre, and the scene of the tragedy of Naboth and his vineyard (1 Ki. 21). Here Joram was slain by Jehu, and his body significantly cast into the vineyard so appropriated by Ahab (2 Ki. 8:29; 9:14-29). At Jehu's instigation Jezebel (2 Ki. 9:30-37) and the remnant of Ahab's household (2 Ki. 10:1-11) were also slain. Parts of Israelite buildings have been found (*Levant* 26, 1994, pp. 1-50). 3. The name symbolically given to Hosea's eldest son (Ho. 1:4-5) and to Israel (Ho. 2:22). 4. A Judahite (1 Ch. 4:3).

J.W.

J.D.D.

JOAB (Heb. *yō'āh*, 'Yahweh is father'). 1. Son of Zeruiah, half-sister of David (2 Sa. 2:18). His

JOAB

father's name is not recorded here, but Josephus (*Ant.* 7. 11) gives it as Suri, whose sepulchre was in Bethlehem (2 Sa. 2:32).

Joab is first heard of when, with his brothers Asahel and Abishai, he led David's army to victory at Helkath-hazzurim against Ishbosheth's rebel forces under Abner (2 Sa. 2:12-17). In fleeing, *Abner reluctantly killed *Asahel in self-defence and was himself later treacherously slain by Joab, ostensibly in blood-revenge (2 Sa. 2:23; 3:27, 30), but probably also because Abner's new-found loyalty to David confronted Joab with a potential rival for the king's favour.

David was angry with his nephew for this murder, greatly mourned Abner as 'a prince and a great man', and prophesied that God would punish the killer (2 Sa. 3:31-39). Nevertheless, after taking the Jebusite stronghold, Joab was made commander-in-chief of all Israel (2 Sa. 5:8; 1 Ch. 11:6, 8), of which David was by this time king.

Joab proved himself a skilful general who greatly helped the establishment of the monarchy, but his character was a strange mixture. Apart from his personal deeds of violence and his opportunism, his cruelty can be seen in the way he swiftly comprehended and carried out David's plan to kill Uriah (2 Sa. 11:6-26). Yet he could be magnanimous also, as when he gave David the credit after the capture of Rabboth-ammon (2 Sa. 12:26-31). Perhaps most notably and surprisingly, he tried to dissuade David from numbering the people (2 Sa. 24:2-4).

Joab is found in the role of peacemaker, reconciling David and Absalom on one occasion (2 Sa. 14:23, 31-33), but later when Absalom's guilt was clearly seen he had a hand in his death (2 Sa. 18:14-33), despite David's injunction that the young man's life should be spared. After this David superseded Joab by Amasa as commander (2 Sa. 19:13), but the resourceful Joab subdued Sheba's revolt and seized the first opportunity to slay the new commander, who had proved inefficient (2 Sa. 20:3-23). Thereafter for a time Joab seems to have been restored to favour (2 Sa. 24:2).

In David's last days Joab's loyalty to the king faltered, and with Abiathar and others he supported Adonijah as claimant to the throne (1 Ki. 1:5-53), in defiance of David, who had resolved that Solomon should succeed him (1 Ki. 2:28). For once Joab supported the wrong side, and it eventually cost him his life (1 Ki. 2:34), when with the connivance of Solomon he was slain by Benaiah before the altar at Gibeon, where he had fled for sanctuary.

2. Son of Seraiah (1 Ch. 4:14; cf. Ne. 11:35), a Judahite. 3. A family which returned with Zerubbabel (Ezr. 2:6; Ne. 7:11). Probably the 'Joab' of Ezr. 8:9 is the same person.

J.D.D.

JOANNA. One of several women, healed by Jesus, who assisted in maintaining the Lord's itinerant company. Her husband, Chuzai, was a responsible official of Herod Antipas: whether in the household ('a steward of Herod's', NEB) or in government ('the chancellor', Moffatt) is uncertain (Lk. 8:1-3). She sought also to share in the last offices to the Lord's body, and became instead one of those who announced the resurrection to the Twelve (Lk. 24:1-10). Luke's notes may indicate

personal acquaintance with, and possibly indebtedness for information to, these women.

A.F.W.

JOASH, JEHOASH (Heb. *yô'ās*, *y'hô'ās*, 'Yahweh has given'). 1. Father of *Gideon; member of the Abiezrite branch of the tribe of Manasseh living at Ophrah (Jdg. 6:11-32). A Baal worshipper who had his own altar and *Asherah, which Gideon replaced by an altar to Yahweh (vv. 25-27). He told those who would defend him that Baal could take care of himself (v. 31). It was possibly he who renamed Gideon Jerubbaal (v. 32).

2. An ambidextrous Benjaminite warrior who, although a relative of Saul, aided David in his revolt (1 Ch. 12:1-3).

3. A 'son' of King *Ahab to whom the prophet Micaiah was to be taken in order to be imprisoned after angering Ahab by prophesying unfavourably (1 Ki. 22:26; 2 Ch. 18:25f.). Possibly 'son of the king' was an official's title rather than a kinship form.

4. Son of *Ahaziah and 8th king of Judah (c. 837-800 BC). When Athaliah annihilated the royal line at the death of her son Ahaziah, his aunt Jehosheba hid him in the Temple for 6 years under the protection of her husband *Jehoiada, the high priest (2 Ki. 11:1-6; 2 Ch. 22:10-12). At 7 years of age he was proclaimed king by Jehoiada and Athaliah was executed (2 Ki. 11:7-20; 2 Ch. 23:1-15).

Joash's reign lasted 40 years (2 Ki. 12:1), although the 6 years of Athaliah's reign might be included in this number. He rebuilt the *Temple with the help of Jehoiada (2 Ki. 12:5-16; 2 Ch. 24:4-14) but allowed the re-emergence of pagan practices upon Jehoiada's death (2 Ch. 24:17-18). When reprimanded for this by Zechariah, son of Jehoiada, he killed him (2 Ch. 24:20-22). In order to forestall a Syrian invasion under *Hazael, Joash bribed him with the Temple's treasure (2 Ki. 12:18-19). Joash was killed in a plot by his officers to replace him (2 Ki. 12:21-22; 2 Ch. 24:25-26).

5. Son of *Jehoahaz; 12th king of Israel who reigned 16 years (c. 801-786 BC; 2 Ki. 13:10). Israel was under external pressure from three sources during his reign. A stele of Adad-nirari III from Rimah records him receiving tribute from 'Iu'usu the Samaritan' in 796 BC (S. Page, *Iraq* 30, 1968, pp. 139ff.; cf. A. Malamat, *BASOR* 204, 1971, 37ff., concerning the reading of the name). The Aramaeans were oppressing them, but he was able to regain territory from them which had previously been lost (2 Ki. 13:22-25). Joash was helped in this by the ageing Elishah (vv. 14-19). He was also challenged by *Amaziah, king of Judah, whom he defeated. He sacked Jerusalem, taking hostages to ensure good conduct (2 Ki. 14:8-14; 2 Ch. 25:17-24).

D.W.B.

JOB (Heb. *'iyyôb*). Apart from the book bearing his name and the passing references to him in Ezk. 14:14, 20, Jas. 5:11 we have no reliable information about Job. It is impossible to show that the Jewish, Christian and Muslim legends about Job (the latter summarized in W. B. Stevenson, *The Poem of Job*, 1947, ch. 6) have any firm roots in a pre-biblical form of the story. Apart from the tradition of the

location of Job's home (see below), which may be no more than intelligent deduction from the Bible, we have the impression of popular or pious fancy.

If we identify the Daniel (*dānī'ēl*) of Ezk. 14:14 not with the Daniel (*dāniyyē'l*) of the Exile but with the person mentioned in Ugaritic inscriptions, we can with some confidence give all three names in Ezk. 14:14 a very early date. If we do not accept this clue we have no indication of his date. The location of the land of Uz, where he lived, is uncertain. The modern tendency is to regard it as on the borders of Edom, certain indications in the book being regarded as Edomite; but the traditions placing it in the Hauran (Bashan) are far more probable. Job was a man of great wealth and high social position, but the book is so concerned with stressing his position among the Wise that it avoids precise details; we can, however, unhesitatingly reject the legends that make him a king.

As a result of divine permission Satan robbed him of his wealth, his ten children and finally his health. There is no agreement on what disease he was smitten with, the main suggestions being elephantiasis, erythema and smallpox. This wide disagreement is due to the symptoms being given in highly poetic language. His relations and fellow-townsmen interpreted his misfortunes as a divine punishment for gross sin and threw him out of the town, the rabble taking a particular pleasure in this. His wife accepted the common opinion and urged him to expedite the inevitable end by cursing God.

Job was visited by three friends, Eliphaz, Bildad and Zophar, also members of the Wise, and rich and affluent, as he had been. When they saw his plight they shared popular opinion and could only sit in silence with Job on the dunghill outside the city gate for the 7 days of mourning for a man as good as dead. Job's outburst of agony led to a long, vehement discussion, ending with a wordy intrusion by a younger man, Elihu. All this only revealed the bankruptcy of traditional wisdom and theology when faced with an exceptional case like Job's. Though his friends' lack of comprehension drove Job almost to distraction, it also turned him to God and prepared him for the revelation of divine sovereignty, which brought him peace. The mob was confounded by his healing, the doubling of his wealth, and the gift of ten children.

H.L.E.

JOB, BOOK OF.

I. Outline of contents

Ch. 1 and 2 (in prose) introduce us to the encounter in heaven between God and Satan and its effects on earth. Ch. 3 is Job's great 'Why?'; Eliphaz gives his views in chs. 4-5 and Job replies in chs. 6-7. Bildad continues in ch. 8, Job replying in chs. 9-10. The first round of the discussion is completed by Zophar's contribution in ch. 11 and Job's reply in chs. 12-14. In the second round we hear Eliphaz (15), Bildad (18) and Zophar (20), with Job's replies in chs. 16-17, 19, 21. As the text stands (see III, below), the third round is incomplete, only Eliphaz (22) and Bildad (25) speaking, with Job's replies in chs. 23-24, 26-27. After an interlude in praise of wisdom (28), Job sums up the debate (29-31). Elihu's intervention follows in chs. 32-37, and then God replies to Job in chs. 38-

42:6. The book ends with a prose epilogue telling of Job's restored prosperity (42:7-17).

II. Authorship and date

The book is anonymous. The 'official' Talmudic tradition, followed by many earlier Christian writers, is that the book was written by Moses (*Baba Bathra* 14b, *seq.*), but the continuation of the passage and other statements show that this is merely a pious pronouncement, based presumably on a feeling of fitness, and not to be taken seriously. The simple fact is that we have no purely objective evidence to guide us either in the question of authorship or of date. The evidence for a very early date lies mostly in the non-mention of any of the details of Israelite history, but this is sufficiently explained by the author's wish to discuss the central problem outside the framework of the covenant. Other evidence, such as the mention of the Chaldeans as nomadic raiders (1:17) and of the archaic *q'sitā* (42:11), point merely to the antiquity of the story and not to that of its present written form. Moderns have varied in their dating from the time of Solomon to about 250 BC, dates between 600 and 400 BC being most popular, though there is a growing tendency to favour later dates. A Solomonic date, accepted by Franz Delitzsch and E. J. Young, is the earliest we can reasonably adopt. The arguments from subject, language and theology probably favour a somewhat later date, but since the book is *sui generis* in Heb. literature, and the language is so distinctive (some even regard it as a translation from Aramaic, or consider the author lived outside Israel), while the theology is timeless, any dogmatism derives from subjectivism or preconceptions.

III. Text

The fact that we are dealing with some of the most difficult poetry in the OT, and that in the vocabulary we have some 110 words (W. B. Stevenson, *The Poem of Job*, p. 71) not found elsewhere, has made the scribe's task very difficult. Unfortunately the versions are no great help in checking the Heb. text. The LXX must be used with great caution. In its earlier form about 17-25% of the Heb. is missing, probably because the translators were daunted by their task; the rendering is often free and periphrastic, and not seldom incorrect.

The main textual problem concerns chs. 26-27. As they stand they are Job's answer to Bildad's third speech. No objection can be raised to Zophar's failure to speak a third time; it is in keeping with his character, and would be the most obvious proof of Job's verbal triumph over his friends. Indubitably we hear Job speaking in 27:2-6, but in its context it is virtually impossible to ascribe 27:7-23 to him. It is probably part of Zophar's third speech or possibly of Bildad's. If that is so, no entirely satisfactory reconstruction of the text has been suggested and it may be that part of the original ms has been lost, which could easily happen with a brittle papyrus roll.

IV. Integrity

Most scholars separate the prose prologue and epilogue from the poetry of 3:1-42:6. Where this is interpreted as meaning that they are older than the poem, and that the author transformed the heart of the old story into magnificent verse, the theory is unobjectionable and quite possibly correct. There are no objective proofs for the suggestion that the

JOB, BOOK OF

prose was added later to the verse by another hand, whether it is earlier or later in composition. In the hands of W. B. Stevenson (*op. cit.*) this theory has been used to impose a non-natural interpretation on the book.

Very many scholars regard certain portions as later insertions. In descending order of importance the chief are: Elihu's speeches (32–37), the praise of divine wisdom (28) and certain parts of God's answer (39:13–18; 40:15–24; 41:1–34). In every case the linguistic arguments are very tenuous. The argument from their contents is liable to take the passages in isolation. A very reasonable defence of them in their actual setting can be made.

V. As Wisdom literature

R. H. Pfeiffer, *JOT*, 1948, pp. 683f., says very well: 'If our poet ranks with the greatest writers of mankind, as can hardly be doubted, his creative genius did not of necessity rely on earlier models for the general structure of his work. . . . We may regard it as one of the most original works in the poetry of mankind. So original in fact that it does not fit into any of the standard categories devised by literary criticism . . . it is not exclusively lyric . . . nor epic . . . nor dramatic . . . nor didactic nor reflective . . . unless the poem is cut down to fit a particular category.' The convention that calls Job part of Heb. Wisdom literature and aligns it with Proverbs and Ecclesiastes and compares it with certain Egyp. and Bab. 'Wisdom' writings is justified only if we are careful to keep Pfeiffer's warning in mind. For all that, it is clear that Job and his friends are depicted as, and speak primarily as, members of the Wise, and they are so addressed by Elihu (34:2).

The Wise in Israel sought to understand God and his ways by studying the great uniformities of human experience by reason illuminated by 'the fear of the Lord'. Proverbs is a typical example of their understanding of life. Job is a flaming protest, less against the basic concept of Proverbs that a God-fearing life brings prosperity, godlessness suffering and destruction, than against the idea that thereby the ways of God are fully grasped. Job is not a type; he is the exception that makes folly of the assumption that through normal experience the depths of God's wisdom and working can be fully grasped.

VI. The problem of Job

The poem is so rich in its thought, so wide in its sweep, that much in human experience and its mysteries has been found mirrored there. Mostly, however, it has been regarded as concerned with the problem of human suffering. Though he has overstated his case, W. B. Stevenson (*op. cit.*, pp. 34ff.) makes it clear that in the poem there is far less allusion to Job's physical sufferings than has often been assumed. Job is concerned less with his physical pain than with his treatment by his relations, his fellow-townsmen, the mob and finally his friends. But these are merely evidence that God has forsaken him. In other words, Job's problem is not that of pain, nor even suffering in a wider sense, but the theological one, why God had not acted as all theory and his earlier experiences demanded he should. Being a child of his age, he had naturally built up his life on the theory that God's justice implied the equation of goodness and prosperity.

Taken out of their context, the words of his friends and Elihu are more acceptable than many

of the rasher utterances of Job. They are rejected by God (42:7), not because they are untrue, but because they are too narrow. This is made especially clear by the discussion on the fate of the wicked. With all Job's exaggeration we recognize at once that his friends are in fact producing an *a priori* picture of what the fate of the wicked should be. They create their picture of God only by a careful selection of evidence. Job's agony is caused by the breakdown of his theological world-picture.

This explains the apparently unsatisfactory climax in which God does not answer Job's questions or charges, but though he proclaims the greatness of his all-might, not of his ethical rule. Job is satisfied. He realizes that his concept of God collapsed because it was too small; his problems evaporate when he realizes the greatness of God. The book does not set out to answer the problem of suffering but to proclaim a God so great that no answer is needed, for it would transcend the finite mind if given; the same applies to the problems incidentally raised.

H.L.E.

JOCHEBED (Heb. *yôkebed*, probably 'Yahweh is glory', though M. Noth [*Die israelischen Personennamen*, 1928, p. 111] thinks it may be of foreign origin.) The mother of Moses, Aaron and Miriam (Ex. 6:20; Nu. 26:59). She was a daughter of Levi, and married her nephew Amram. However, according to the LXX of Ex. 6:20 they were cousins, though S. R. Driver (*CBSC*, 1918) thinks that *MT* preserves a genuine ancient tradition. J.G.G.N.

JOEL, BOOK OF.

I. Outline of contents

Joel discusses four main topics: (a) the appalling devastations of successive plagues of locusts, literal enough, yet symbolizing deeper meanings; (b) the renewed fruitfulness of the land on the repentance of Israel; (c) the gifts of the Spirit; (d) final judgment on the nations which have wronged Israel, and the blessedness-to-be of the land of Judah. In all these, primary and eschatological references intertwine.

a. The locust plague, 1:1–12

For locusts in the OT, cf. also Ex. 10:12–15 *et passim*, with Pss. 78:46; 105:34; also Pr. 30:27; Na. 3:15, 17, etc. (*ANIMALS.)

(i) Joel claims in customary prophetic manner that he has received the word of the Lord, giving his own name and that of his father, both otherwise unknown (1:1).

(ii) The burden of his message is prodigious—a locust plague in successive swarms, of frightening dimensions (1:2–4; cf. Ex. 10:14). Full etymological, entomological and figurative discussion of v. 4 will be found in commentaries.

(iii) The effects of the plague are vividly described (1:5–12). The first to be mentioned, perhaps in derision, is the loss to the drunkard of his

solace. The teeth of the locust host are fearsome (*cf.* Pr. 30:14, *etc.*)—the very fig-bark is devoured, the white, sappy interior uncovered to the world. Temple priests should mourn with the bitterness of an aged virgin whose betrothed died in her youth before marriage, for the very materials of sacrifice are cut off (*cf.* Dn. 8:11; 11:31; 12:11; contrast Is. 1:11–15; Mt. 6:6; *etc.*). The devastation in cornfield, vineyard and orchard is vividly described.

b. The fruits of repentance, 1:13–2:27

(i) The priests in sackcloth are to lament, with fasting and prayer, the day of God's wrath, the 'conquest from the Conqueror', to reflect palely the striking Heb. assonance (1:13–15; see Ne. 9:1; Est. 4:3, 16; Dn. 9:3, *etc.*, contrasted with Is. 58:4ff.; Je. 14:12; Zc. 7:5; *etc.*). The OT views on sacrifice and fasting are not contradictory; much depended on circumstance and particular usage. Joel need not stand condemned because he is more ritualistic than Amos or Isaiah.

(ii) It seems reasonable to regard the next section (1:16–20) as a prayer, despite the vivid initial delineation of locust ravage. V. 18 should read 'What shall we put in them?'—*i.e.* the flimsy barns not rebuilt through lack of need. The fire and flame of v. 19 may be heat and drought, or even the vivid red colouring in the locust bodies.

(iii) The prophet now reverts from the devastation of the locusts to their initial onslaught, likening it to the Day of the Lord (2:1–11). V. 2b is typical oriental idiom (*cf.* Ex. 10:14). Vividly accurate is the likening of the swarm to an advancing fire. The fruitful earth before them becomes a black desolation as they pass over it (v. 3). First-hand experience is reflected also in the likening of the separate locusts to horsemen, and the parallel drawn between the noise of their advance and the sound of a rapidly spreading bush fire (vv. 4–5). People are horror-stricken before the unswerving, unjostling, accurate advance of myriads of myriads of these insects, invincible through sheer numbers (vv. 6–9). The real locusts could be symbols of the Gentiles in the valley of decision, before their judgment.

(iv) In the hour of horror it is not too late to repent, with mortification of the flesh (2:12–14). Official rending of the garments may be hypocritical; real repentance is in the heart. This may even make God 'repent' of his recently appropriate judgment, and provide sacrificial materials again. This is oriental symbolism, implying no 'sinful' deity.

(v) A fresh call to special temple worship is given (2:15–17). This embraces priests and people, with specific mention of suckling babes, tottering greybeards and newly-weds, who normally enjoyed far-reaching exemptions from public duties. J. A. Bewer (*JCC*, 1911) ingeniously points the imperatives as perfects, without consonantal change, making v. 15, not v. 18, the turning-point of the book, and the beginning of continuous narrative.

(vi) The devastation of the locust will be surpassed by the plenty that the Lord will grant on repentance (2:18–25). V. 20 means that the physical bodies of the locusts in Judaea will be wind-driven into the Dead Sea and the Mediterranean Sea, and this will be followed by a stench of decay (18–25).

c. The gifts of the Spirit, 2:28–32

The outpouring of the Spirit described in this passage is the apex of prophetic utterance. Vv. 28–29,

and 32 were clearly fulfilled at Pentecost; aspects of vv. 30 and 31 were fulfilled in the passion of our Lord. Ecstatic prophesying might include the gift of tongues. The pillars of smoke might be sand columns raised by desert whirlwinds, or the conflagration of doomed cities. A solar eclipse can make a blood-red moon. What more saving name could be foreshadowed in v. 32 than that of Jesus? Everything here has a meaning—yet there is a deeper meaning belonging to the days when the last sands of human time will sink for evermore.

d. God's enemies judged, 3:1–21

The surface meaning of this section is the prediction of divine vengeance on the nations which have scattered and persecuted the Jews. The references of vv. 3–8 are clearly historical. The locusts might foreshadow these armies of Gentiles in their brief hour of victory. Vv. 9–11 are biting in their sarcasm as the prophet urges the heathen to make war on God. God alone will judge the assembled nations in the valley of decision (vv. 12, 14; *JEHOSHASHAT, VALLEY OF). The full horror of vv. 15ff., 19a, and the full benediction of v. 18, are both alike as yet unrealized. Earthly prophecy and eschatology are wedded in a chapter of rich prefiguring. The Christian church is the heir of the OT, and the sure word of prophecy, be it about Egypt or anything else, will come to pass in God's good time.

II. Authorship and date

This is superb extrovert literature, betraying a Judaeic flavour, but intrinsically concerned with bigger issues than contemporary politics. This makes dating exceptionally difficult. Most scholars maintain (*cf.* W. Nowack, 1922; K. Marti, 1904), some deny (*cf.* Bewer, *JCC*) that Joel is a literary unity. Older conservatives dated the book in the 8th century BC, the time of Amos and Hosea. Oesterley and Robinson adopt the extreme late dating of 200 BC, others assign between these limits. R. K. Harrison (*IOT*, 1970, pp. 874–882) discusses the issues thoroughly, but, stressing the book's timelessness, will not commit his dating beyond 'in advance of 400 BC'. Were the early dating to be taken as correct, certain familiar prophetic battle-cries would then find their first known utterance in Joel. Ploughshares might have been considered the fathers of swords before the hope of the reverse transformation was born (Joel 3:10; Is. 2:4).

III. Special characteristics

Joel was the vehicle of a divine revelation which has a significance perhaps beyond his full understanding. In his book the impinging of the eternal on the temporal, which is the hallmark of genuine inspiration, is undeniably in evidence. This is especially true in his arresting description of locust-plague havoc, symbolic of God's wrath and punitive visitation of sin. Vividly portrayed also is God's gracious restoration of his people following upon repentance. There are factual prophecies linked with our Lord's death, with the coming of the Holy Spirit, with both the horror and the hope of the end-times. This is one of the briefest and yet one of the most disturbing and heart-searching books of the OT.

R.A.S.

JOGBEHAH (Heb. *yōgb 'hā*, 'height'). A town in Gilead assigned to Gad (Nu 32:35), named also in Gideon's pursuit of the Midianites (Jdg. 8:11). It is the modern Jubeihāt, about 10 km NW of Amman and 1057 m above sea-level.

J.D.D.

JOHANAN (Heb. *yōhānān*, 'Yahweh is gracious'). A number of men are so called in the OT, the most notable being the son of Kareah. A Jewish leader who supported Gedaliah on the latter's appointment as governor of Judah (2 Ki. 25:23; Je. 40:8) after the fall of Jerusalem, Johanan offered to kill Ishmael, who was plotting Gedaliah's assassination (Je. 40:13-16). The offer rejected and the warning ignored, Ishmael succeeded in his purpose. Johanan pursued him, rescued the people captured by him (Je. 41:11-16), and took them and the protesting Jeremiah to Tahpanhes in Egypt (Je. 43:1-7).

Others possessing the same name include the eldest son of Josiah, king of Judah (1 Ch. 3:15); a son of Elieoenai (1 Ch. 3:24); a grandson of Ahimaaz (1 Ch. 6:9-10); a Benjaminite recruit of David at Ziklag (1 Ch. 12:4); a Gadite who likewise joined David (1 Ch. 12:12); an Ephraimite chief (2 Ch. 28:12, where Hebrew has 'Jehohanan'); a returned exile in Artaxerxes' time (Ezr. 8:12); and a priest in the days of Joiakim (Ne. 12:22-23).

J.D.D.

JOHN, THE APOSTLE. Our information about John comes from two sources: NT and Patristic.

I. New Testament evidence

a. In the Gospels

John was the son of Zebedee, probably the younger son, for except in Luke-Acts he is mentioned after his brother James. Luke gives the order Peter, John and James, probably because in the early days of the church John was closely associated with Peter (Lk. 8:51; 9:28; Acts 1:13). That John's mother's name was Salome is an inference from Mk. 16:1 and Mt. 27:56; for the third woman who is said to have accompanied the two Marys to the tomb is designated Salome by Mark, and 'the mother of Zebedee's children' by Matthew. Salome is usually regarded as the sister of Mary the mother of Jesus, because in Jn. 19:25 four women are said to have stood near the cross, the two Marys mentioned in Mark and Matthew, the mother of Jesus, and his mother's sister. If this identification is correct, John was a cousin of Jesus on his mother's side. His parents would appear to have been well-to-do, for his father, a fisherman, had 'hired servants' (Mk. 1:20); and Salome was one of the women who 'provided for Jesus out of their means' (Lk. 8:3; Mk. 15:40). John has often been identified with the unnamed disciple of John the Baptist, who with Andrew was directed by the Baptist to Jesus as the Lamb of God (Jn. 1:35-37); and if *prōtos* is read in Jn. 1:41, it is possible that Andrew was the first of these two disciples to bring his brother Simon to Jesus, and that the unnamed disciple (John) subsequently brought his own brother James. This is not certain, however, as there are textual variants (see *TNTC*). After their sub-

sequent call by Jesus to leave their father and their fishing (Mk. 1:19-20), James and John were nicknamed by him *Boanērges*, 'sons of thunder' (Mk. 3:17), probably because they were high-spirited, impetuous Galileans, whose zeal was undisciplined and sometimes misdirected (Lk. 9:49). This aspect of their character is shown by their outburst after a Samaritan village had refused their Master entrance (Lk. 9:54). Moreover, their personal ambition was, it would seem, untempered by a true insight into the nature of his kingship; and this lingering trait of selfishness, together with their readiness to suffer for Jesus regardless of self, is illustrated in the request they made to him (a request encouraged by their mother [Mt. 20:20]) that they should be allowed to sit in places of special privilege when Jesus entered into his kingdom (Mk. 10:37).

On three important occasions in the earthly ministry of Jesus, John is mentioned in company with his brother James and Simon Peter, to the exclusion of the other apostles: at the raising of Jairus' daughter (Mk. 5:37), at the transfiguration (Mk. 9:2) and in the garden of Gethsemane (Mk. 14:33); and, according to Luke, Peter and John were the two disciples sent by Jesus to make preparations for the final Passover meal (Lk. 22:8).

John is not mentioned by name in the Fourth Gospel (though the sons of Zebedee are referred to in 21:2), but he is almost certainly the disciple called 'the disciple whom Jesus loved', who lay close to the breast of Jesus at the Last Supper (13:23); who was entrusted with the care of his mother at the time of his death (19:26-27); who ran with Peter to the tomb on the first Easter morning and was the first to see the full significance of the undisturbed grave-clothes with no body inside them (20:2, 8); and who was present when the risen Christ revealed himself to seven of his disciples by the sea of Tiberias. In the account of that last incident in ch. 21, support is given to the later tradition that John lived on to a great age (21:23). The evidence of Jn. 21:24 for the Johannine authorship of this Gospel is capable of different interpretations (see *TNTC*).

b. In the Acts

According to the early narratives of Acts, John, together with Peter, with whom he remained closely associated, had to bear the main brunt of Jewish hostility to the early Christian church (Acts 4:13; 5:33, 40). Both men showed a boldness of speech and action which astounded the Jewish authorities, who regarded them as 'uneducated, common men' (Acts 4:13). John, it would seem, continued for some years to play a leading part in the church at Jerusalem. On behalf of the other apostles he and Peter laid hands on the Samaritans who had been converted through the ministry of Philip (Acts 8:14); and he could be described as a reputed 'pillar' of the Jerusalem church at the time when Paul visited the city some 14 years after his conversion (Gal. 2:9). We do not know when John left Jerusalem, nor where he went after his departure. Assuming that he is the seer of the book of Revelation, he was presumably at Ephesus when he was banished to Patmos 'on account of the word of God, and the testimony of Jesus' (Rev. 1:9), though the date of this exile is uncertain. There is no other mention of John in the NT, though some think that he refers to himself as 'the elder' in 2 Jn. 1; 3 Jn. 1.

II. Patristic evidence

There is a certain amount of late but probably unreliable evidence, that John the apostle died as a martyr early in his career, perhaps at the time his brother James was slain by Herod (Acts 12:2). A 9th-century chronicler, George Hamartolos, reproduces, as we can now see, a statement contained in the history of Philip of Side (c. 450), a relevant fragment of which was discovered by de Boor in 1889, to the effect that Papias, bishop of Hierapolis in the middle of the 2nd century, in the second book of his *Expositions* asserted that both the sons of Zebedee met a violent death in fulfilment of the Lord's prediction (Mk. 10:39). Though some scholars accept this testimony as genuine, most regard Philip of Side as an unreliable witness to Papias, and are impressed by the absence from Eusebius of any reference to the early martyrdom of John, and also by the failure of Acts to mention it, if both the sons of Zebedee in fact suffered in the same way at approximately the same time. It is true that some support for Philip of Side's statement seems to be obtainable from a Syr. martyrology written about AD 400, in which the entry for 27 December is 'John and James the apostles at Jerusalem'; and also from a calendar of the church at Carthage, dated AD 505, in which the entry for the same date reads 'John the Baptist and James the apostle whom Herod killed', for it is pointed out by those who accept this evidence that, as the Baptist is commemorated in this calendar on 24 June, the probability is that the entry for 27 December is a mistake for 'John the Apostle'. It is, however, very doubtful whether the Syr. martyrology preserves an ancient tradition independent of the Gk.-speaking church; nor does it follow that, because the two brothers were commemorated on the same day, they were commemorated as being both martyrs in *death* who had been slain at the same time. Nor again does the reference to the sons of Zebedee as 'drinking the cup' and 'being baptized with the baptism of Christ' necessarily imply that both were destined to come to a violent end.

Against this partial and weakly attested tradition must be set the much stronger tradition reflected in the statement of Polycrates, bishop of Ephesus (AD 190), that John 'who reclined on the Lord's breast', after being 'a witness and a teacher' (note the order of the words), 'fell asleep at Ephesus'. According to Irenaeus, it was at Ephesus that John 'gave out' the Gospel, and confuted the heretics, refusing to remain under the same roof as Cerinthus, 'the enemy of truth'; at Ephesus that he lingered on 'till the days of Trajan', who reigned AD 98-117. Jerome also repeats the tradition that John tarried at Ephesus to extreme old age, and records that, when John had to be carried to the Christian meetings, he used to repeat again and again 'Little children, love one another'. The only evidence that might seemingly conflict with this tradition of John the apostle's residence at Ephesus is negative in character. It is alleged that if, as the writers at the end of the 2nd century assert, John resided long at Ephesus and exercised such influence, it is remarkable that there should be an entire absence of any reference to John in the extant Christian literature which emanated from Asia during the first half of the century, particularly in the letters of Ignatius and the Epistle of Polycarp. But, even if the absence of allusions to John in these documents is significant, it may

merely be an indication that 'there was a difference between his reputation and influence at the beginning and at the close of the century' (so V. H. Stanton, *The Gospels as Historical Documents*, 1, p. 236). On any score the objection, it would seem, is insufficient to overthrow the tradition which later became so firmly established. Westcott concluded that 'nothing is better attested in early church history than the residence and work of St John at Ephesus'. It is true that Westcott wrote before the evidence for John's early martyrdom had accumulated, but as we have seen, that evidence is not adequate enough or reliable enough to confute the definite statements of the man who occupied the see of Ephesus at the close of the century, and of the man who at the same period made it his primary aim to investigate the traditions of the apostolic sees.

JOHN THE BAPTIST. Born (c. 7 BC) to an elderly couple, Zechariah a priest and his wife Elizabeth, he grew to manhood in the wilderness of Judaea (Lk. 1:80), where he received his prophetic call, c. AD 27 (Lk. 3:2). The view that his wilderness period was spent in association with the Qumran community or a similar Essene group must be treated with caution; even if it could be substantiated, it was a new impulse which sent him forth 'to make ready for the Lord a people prepared' (Lk. 1:17), and his prophetic ministry must have involved a break with any Essene or similar group with which he may previously have been connected. After the Spirit of prophecy came upon him, he quickly gained widespread fame as a preacher calling for national repentance. Crowds flocked to hear him, and many of his hearers were baptized by him in the Jordan, confessing their sins.

His attitude to the established order in Israel was one of radical condemnation; 'the axe', he said, 'is laid to the root of the trees' (Mt. 3:10; Lk. 3:9). He denounced the religious leaders of the people as a brood of vipers, and denied that there was any value in the bare fact of descent from Abraham. A new beginning was necessary; the time had come to call out from the nation as a whole a loyal remnant who would be ready for the imminent arrival of the Coming One and the judgment which he would execute. John thought and spoke of himself as a mere preparer of the way for this Coming One, for whom he was unworthy, he said, to perform the lowliest service. Whereas John's own ministry was characterized by baptism with water, the Coming One's ministry would be a baptism with the Holy Spirit and fire.

That John aimed at giving the loyal remnant a distinct and recognizable existence is suggested by the statement in Josephus (*Ant.* 18. 117) that John was 'a good man who bade the Jews practise virtue, be just one to another, and pious toward God, and come together by means of baptism'; these last words seem to envisage the formation of a religious community which was entered by baptism. This is probably an accurate assessment of the situation. But when Josephus goes on to say that John

JOHN, EPISTLES OF

'taught that baptism was acceptable to God provided that they underwent it not to procure remission of sins but for the purification of the body, if the soul had first been purified by righteousness', he differs from the NT account. The Evangelists say quite plainly that John preached a 'baptism of repentance for the remission of sins'. Josephus is probably transferring to John's baptism what he knew to be the significance of Essene washings; the Qumran *Rule of the Community* gives an account of the significance of such washings almost identical with that which Josephus gives of John's baptism. But John's baptism, like his preaching, may well represent a deliberate turning away from Essene beliefs and practices.

Among those who came to John for baptism was Jesus, whom John apparently hailed as the Coming One of whom he had spoken—although later, in prison, he had doubts about this identification and had to be reassured by being told that Jesus' ministry was marked by precisely those features which the prophets had foretold as characteristic of the age of restoration.

John's ministry was not confined to the Jordan valley. The statement in John 3:23 that he left the Jordan valley for a time and conducted a baptismal campaign (presumably of brief duration) 'at Aenon near Salim', where there was abundance of water, has implications which are easily overlooked. For W. F. Albright (*The Archaeology of Palestine*, 1956, p. 247) is probably right in locating this place NE of Nablus, near the sources of the Wadi Far'ah—that is to say, in territory which was then Samaritan. This could explain certain features of Samaritan religion attested for the early Christian centuries, but it also illuminates the words of Jesus to his disciples in John 4:35–38, spoken with regard to the people in this very area, and ending with the statement: 'others have laboured, and you have entered into their labour'. The harvest which they reaped (Jn. 4:39, 41) had been sown by John.

After this period of ministry in Samaria John must have returned to the territory of Herod Antipas (*HEROD, 3), probably Peraea. He aroused Antipas' suspicion as the leader of a mass movement which might have unforeseen results; he also incurred his hostility, and still more that of Herod's second wife *Herodias, by denouncing their marriage as illicit. He was accordingly imprisoned in the Peraean fortress of *Machaerus and there, some months later, put to death.

In the NT John is presented chiefly as the forerunner of Christ. His imprisonment was the signal for the start of Jesus' Galilean ministry (Mk. 1:14f.); his baptismal activity provided a starting-point for the apostolic preaching (Acts 10:37; 13:24f.; cf. 1:22 and Mk. 1:1–4). In Jesus' estimation, John was the promised Elijah of Mal. 4:5f., who was to come and complete his ministry of restoration on the eve of 'the great and terrible day of the Lord' (Mk. 9:13; Mt. 11:14; cf. Lk. 1:17). Jesus also regarded him as the last and greatest member of the prophetic succession: 'the law and the prophets were until John: since then the good news of the kingdom of God is preached' (Lk. 16:16). Therefore, while unsurpassed in personal stature, he was (in respect of privilege) less than the least in the kingdom of God; he stood on the threshold of the new order as its herald (as Moses viewed the promised land from Pisgah) without entering in. His disciples

preserved their corporate existence for a considerable time after his death.

JOHN, EPISTLES OF.

I. Background and circumstances of I John

I John is headed as an Epistle, but there is nothing 'epistolary' in the strict sense about it (contrast 2 and 3 John), and it is more like a tract addressed to a particular situation.

It was called forth by the activities of false teachers who had seceded from the church (or churches) to which John is writing, and who were attempting to seduce the faithful (2:18f., 26). They formed an esoteric group, believing that they had superior knowledge to ordinary Christians (cf. 2:20, 27; 2 Jn. 9) and showing little love to them (cf. 4:20).

They were forerunners of the later heretics generally known as 'Gnostics' (from Gk. *gnōsis*, meaning 'knowledge') and claimed a special knowledge of God and of theology. On the basis of their new doctrine they appear to have denied that Jesus was the Christ (2:22), the pre-existent (1:1) Son of God (4:15; 5:5, 10) come in the flesh (4:2; 2 Jn. 7) to provide salvation for men (4:9f., 14). But the precise form which this heresy took is uncertain. It is generally regarded as having had some affinity with the views held by Cerinthus in Asia Minor at the end of the 1st century, although it was not fully identical with what we know of his teaching. According to Cerinthus, Jesus was a good man who was indwelt by the heavenly Christ from the time of his baptism until just before his crucifixion (Irenaeus, *Adv. Haer.* 1. 26. 1, in J. Stevenson, *A New Eusebius*, 1957, No. 70)—a view which is apparently contradicted in 5:6 and in various verses where belief that Jesus *is* (not simply *was*) the Christ, the Son of God, is emphasized (2:22; 5:1, 5). Such teaching was probably bound up with the common gnostic distinction between spirit and matter, according to which a real incarnation of God in man was impossible and was only apparent (as in Docetism) or temporary (as in Cerinthianism).

The false teachers further claimed that they were 'sinless' (1:8, 10) and possibly also that they did not need redemption through the death of Jesus Christ, while they were in fact morally indifferent, following the ways of the world (cf. 2:15), ignoring the commandments of Christ (2:4), and freely doing what they pleased (without, however, indulging in gross sin). They did not realize that sin is a moral category, *i.e.* lawlessness (3:4, 7f.), and consequently they felt quite consistent in claiming sinlessness while indulging in selfishness and lack of love. Probably we are to see here also the influence of the gnostic distinction between spirit and matter: since the body (matter) was evil anyhow and only the (divinely implanted) spirit or soul mattered, their bodily behaviour was irrelevant to their Christian belief.

John writes to provide an antidote to this teaching, and the progress of the argument in his tract is best understood when this is kept in mind. Attempts to explain its difficult structure in terms of source criticism (R. Bultmann; W. Nauck; J. C. O'Neill) have met with little favour.

II. Outline of contents of 1 John

John begins by stating that his purpose is to explain to his readers what he has heard and seen as regards the word of life manifested in Jesus Christ, so that there may be joyful fellowship between himself, his readers and God (1:1-4).

He then states the fundamental proposition, *God is light*, and on the basis of this universally acceptable truth proceeds to take up certain erroneous slogans of his opponents (1:6a, 8a, 10a; 2:4a). In opposition to them he asserts that only those who walk in the light can have fellowship with God and cleansing through the blood of Jesus. To deny that one is a sinner in need of cleansing is to commit self-deceit, but sinners can be sure of forgiveness from a faithful God through the righteous Advocate, Jesus Christ. To claim a true knowledge of God without obeying his commandments is to be a liar (1:5-2:6).

Christians, then, are called to obey God's new commandment. Although it is really an old one, yet it is now presented anew as the law of the new era of light which has already begun to shine in the darkness of the old, sinful world. John feels able to address his readers in this way because they have already entered into this new era and enjoy the privileges of forgiveness, knowledge and power, and he further exhorts them not to cling to the sinful world which is doomed to pass away (2:7-17).

One of the marks of the arrival of the new era is the rise of these false teachers who have now left their temporary home in the church. Their teaching is a denial that Jesus is the Christ, the Son of God, and this really means that they are denying God the Father himself. They claim special knowledge, to be sure, but John assures his readers that in view of their anointing by God (*i.e.* with the Spirit or perhaps with the Word of God) all Christians have true knowledge (2:18-27).

He now counsels them to abide in Christ, the holy and righteous One, and to test themselves and their teachers by their likeness to him. This leads to the thought of the great privilege of Christians as children of God, and the even greater privilege that at the advent of Christ they will become altogether like him—all of which constitutes a powerful incentive to holy living (2:28-3:3).

What, then, is the character of children of God in contrast with those who are the children of the devil? Since Christ came to take away sin, it follows that God's children do not, and in fact cannot, sin, while the children of the devil neither do what is right nor show love. By this uncompromising statement, which must be considered in the light of 1:8, John means that the Christian as a *Christian* cannot sin: he is speaking of the ideal character of the Christian, in contrast with the false teachers who made no attempt to emulate this ideal (3:4-10).

In fact, Christians can expect to be hated by children of the devil, just as Abel was murdered by Cain; by contrast, the mark of the true Christian is love, seen not in murder but in self-sacrifice and practical charity (3:11-18).

Through such deeds of love a man knows that he is a Christian, so that, even if his conscience at times condemns him, he can still have perfect confidence before his Judge, the God who knows his desire to love and serve him (*cf.* Jn. 21:17); indeed, armed with this confidence, he can be bold in prayer, since he knows that he is pleasing God by keeping his commandment of love, and, further, he will receive inward assurance from the Spirit of God (3:19-24).

But how can a Christian be sure that he has the Spirit of God? For the false teachers also claim to have the Spirit. John replies that correct belief about Jesus Christ come in the flesh is the sure sign of true inspiration. The false teachers, however, are motivated by the spirit of antichrist (4:1-6).

After this digression, John returns to the theme of love. Love, he repeats, is the token that a man is born of God, for, as was shown in the sacrifice of Christ, *God is love*. (This is John's second great declaration about the nature of God.) Even if men cannot see God, they can know that he dwells in them if they show love (4:7-12).

John now summarizes the grounds of Christian assurance—possession of the Spirit, confession of Jesus Christ and the practice of love. These are signs that God dwells in us and give us confidence for the day of judgment, since there can be no fear where there is love. Yet, to avoid any antinomian or 'spiritualistic' misunderstanding, John emphasizes that such love for God is inevitably accompanied by love for the brethren. All who truly confess Jesus Christ love God and their fellow-men. Nor is it difficult to keep this commandment, for by faith those who are born of God can overcome the forces arrayed against them (4:13-5:4).

This leads John back to the theme of faith. True Christian faith is centred on Jesus Christ, who not only submitted to the water of baptism but also shed his blood on the cross, and to whom the Spirit bears witness (Jn. 15:26). These three—the Spirit, water and blood—are God's sure testimony to confirm faith in Christ. John possibly also means that the saving activity of the Spirit in the church (or the individual believer) and the sacraments of baptism and the Lord's supper continue this testimony. To disbelieve this testimony is to make God a liar and to reject the eternal life which he has given to men in his Son (5:5-12).

In conclusion, John states that his purpose has been to assure his readers of their salvation. Since they can be sure of divine response to their prayers, they are to win back erring brethren through prayer (although prayer is of no avail in the case of mortal sin, whatever that may be). Finally come three great declarations—that Christians have power not to sin, that they belong to God, and that they are in Jesus Christ who is their great instructor—and a final admonition to avoid idolatry (*i.e.* worship of pagan gods, but the meaning is not certain) (5:13-21).

III. Background and contents of 2 and 3 John

2 and 3 John are real letters, each long enough to be accommodated on a standard size sheet of papyrus (25 by 20 cm) and conforming to the pattern of letter-writing of the time. (For a remarkably close parallel to the structure of 3 John, see C. K. Barrett, *The New Testament Background: Selected Documents*, 1956, No. 22.)

2 John is addressed from 'the elder' to 'the elect lady and her children'. This is in all likelihood a

JOHN, EPISTLES OF

symbolic manner of addressing a church (cf. 1 Pet. 5:13), perhaps intended to baffle any hostile people into whose hands the letter might fall (1-3). The occasion of the letter is similar to that of 1 John (cf. 2 Jn. 7 with 1 Jn. 4:3); false teachers were travelling from church to church and denying that the Son of God had really been incarnate. The elder issues a warning against such teaching; those who 'go on' to accept this new or higher teaching are abandoning their faith in God, the Father of Jesus Christ. He cautions his friends not to extend hospitality to the false teachers, and he encourages them to follow after the truth which already abides in them and to fulfil the command of love (4-11). Finally, he expresses the hope of seeing them soon and adds greetings from his own church (12f.).

3 John is a private letter (like Philemon) addressed to the elder's friend Gaius, who was a leading member in another church. He is commended for his attachment to the truth and for showing practical love to travelling preachers who depended on the churches for their keep (1-8). His attitude is the reverse of that of Diotrephes, who was seeking to be the leader in his church (probably a neighbouring church to that of Gaius), resisting the advice of John and perhaps withholding a previous letter of his from the church, refusing to welcome the travelling preachers and excommunicating those who did welcome them. It is likely that we see here the difficulties caused by the development of a settled local church leadership alongside the existence of apostolic overseers and travelling teachers, and that Diotrephes was aspiring to the position of 'bishop' in his own church and resented any interference from outside. Such difficulties were no doubt bound to arise as the apostles passed on, but it is clear that Diotrephes was not handling matters in a Christian manner. The elder warns that he will come and deal personally with Diotrephes if necessary (9-11). Finally, a word of commendation is added for Demetrius (probably the bearer of the letter and a travelling teacher), and the letter concludes with warm greetings (12-14).

IV. External attestation of the Epistles

1 John was used by Papias (c. 140) according to Eusebius, and is quoted by Polycarp (c. 110-120) and very probably by Justin (c. 150-160). It was accepted as the work of the fourth Evangelist, John the apostle, by Irenaeus (c. 180), the Muratorian Canon (c. 180-200), and Clement of Alexandria (c. 200). According to Eusebius, there was never any questioning of its authenticity. 2 and 3 John are probably listed in the Muratorian Canon (J. Stevenson, *op. cit.*, No. 124 and note); 2 John is quoted by Irenaeus, and both Epistles were probably commented on by Clement of Alexandria. Lack of mention and doubts about their canonicity, reflected in Eusebius, who quotes Origen (J. Stevenson, *op. cit.*, No. 289), were due to their slight nature.

V. Provenance, authorship and date

The Asian provenance of all five Johannine writings is still the most likely. For the Epistles this is supported by the Cerinthian teaching which is opposed and by the traditions which connect their author with Ephesus.

The authorship of the Epistles and of the Johannine writings presents problems which are not yet fully solved.

First, it is certain that one author is responsible for the three Epistles, although this was denied by Jerome and more recently doubted by R. Bultmann (*op. cit.*, pp. 1f.). 1 John is anonymous, but we may now assert that its author was also 'the elder'.

Second, it is reasonably certain that John's Gospel and 1 John are by the same author. This is disputed by C. H. Dodd (pp. xlvii-lvi; more fully in 'The First Epistle of John and the Fourth Gospel', *BJRL* 21, 1937, pp. 129-156) and C. K. Barrett (*The Gospel according to St. John*, 1955, pp. 49-52), but convincing proof is given by A. E. Brooke (pp. i-xix), W. F. Howard (*The Fourth Gospel in Recent Criticism and Interpretation*), 1955, pp. 281-296), and W. G. Wilson (*JTS* 49, 1948, pp. 147-156). There can really be no doubt that John and 1 John represent the same mind at work in two different situations. John is a profound study of the incarnation of Christ addressed primarily as an apologetic to the outside world; 1 John is a tract called forth by a particular situation in the church. The differences between the two can largely be explained by this difference of audience and purpose. Logically John precedes 1 John, but whether this was the order of composition is hardly possible to determine; John is obviously the work of many years of meditation, and 1 John may have been written in that period.

Third, the relation of Revelation (which is ascribed to John the apostle by strong external evidence) to John and 1-3 John must be considered. The theory of common authorship of all five books is very difficult to maintain, as was seen quite early by Dionysius of Alexandria (J. Stevenson, *op. cit.*, No. 237). There are considerable theological differences between Revelation and the other Johannine writings, although there are also close similarities. Further, the Greek of Revelation is unlike that of any other book in the NT; despite suggestions that it was originally written in Aramaic, and so possibly by the same person who wrote John and 1-3 John in Greek, the theory of common authorship must remain doubtful.

In view of these facts, various theories of authorship have been put forward, of which three deserve attention.

First, the traditional theory, which is supported by D. Guthrie (*New Testament Introduction*), attributes all five books to John the apostle. He was known as 'the elder' *par excellence* in Asia Minor on account of his age and authority (cf. 1 Pet. 5:1 for a similar title). Against this theory must be reckoned the problems raised by Revelation and the uncertainty which some scholars find in the external evidence for the apostolic authorship of John's Gospel.

A second solution, which avoids the first of these difficulties, is that John's Gospel and 1-3 John are by John the apostle and Revelation by another John who is otherwise unknown to us. This was essentially the theory of Dionysius of Alexandria, and is supported today by A. Wikenhauser (*New Testament Introduction*, E.T. 1958, pp. 547-553). On this view, some connection between the two Johns must be presupposed to account for the theological similarities between the writings.

A third solution, which avoids the second of the difficulties in the traditional theory, sees a close disciple of John the apostle as the author of John's Gospel and 1-3 John and John himself as possibly the author of Revelation. (There are various forms

of this theory.) On this view, it was John's disciple who was known as 'the elder'.

Support for this third solution has often been sought in a well-known passage in Papias (J. Stevenson, *op. cit.*, No. 31); Papias refers to certain of the apostles, including John, who are apparently dead, as 'elders' and then to two living disciples of the Lord, Aristion and the elder John. Some scholars think that this elder John was a disciple of John the apostle and was the author of John's Gospel and 1-3 John. But this is extremely conjectural. It is not certain whether Papias is here referring to one John (the apostle) twice or to two separate Johns, and weighty names can be quoted for both interpretations. Further, Papias clearly applied the title of 'elder' to more than one person (including John the apostle in any case), and it is not certain that he used the title in the same sense as the author of 2 and 3 John. Finally, Papias does not state that the hypothetical 'elder John' was a disciple of John the apostle. We cannot, therefore, be certain on this theory that the elder of 2 and 3 John was called John or that he was the 'elder John' of Papias.

On the whole, it still remains most plausible that the Gospel and the three letters are the work of John the apostle or of a close disciple of his.

The date of 1-3 John cannot be rigidly determined. The evidence from Qumran allows the possibility of an earlier development of the kind of theology found in the Johannine literature than was formerly believed possible. The chief clue, however, is the nature of the heresy attacked and the church situation, both of which suggest a date between the 60s and 90s of the 1st century; our knowledge of the church in this period is so meagre that a closer dating is impossible.

JOHN, GOSPEL OF.

I. Outline of contents

a. *The revelation of Jesus to the world*, 1:1-12:50

- (i) Prologue (1:1-18).
- (ii) The manifestation of Jesus (1:19-2:11).
- (iii) The new message (2:12-4:54).
- (iv) Jesus, the Son of God (5:1-47).
- (v) The bread of life (6:1-71).
- (vi) Conflict with the Jews (7:1-8:59).
- (vii) The light of the world (9:1-41).
- (viii) The good shepherd (10:1-42).
- (ix) The resurrection and the life (11:1-57).
- (x) The shadow of the cross (12:1-36a).
- (xi) Epilogue (12:36b-50).

b. *The revelation of Jesus to his disciples*, 13:1-17:26

- (i) The Last Supper (13:1-30).
- (ii) The farewell discourses (13:31-16:33).
- (iii) Jesus' prayer for his disciples (17:1-26).

c. *The glorification of Jesus*, 18:1-21:25

- (i) The passion of Jesus (18:1-19:42).
- (ii) The resurrection of Jesus (20:1-31).
- (iii) The commission to the disciples (21:1-25).

II. Purpose

A clear statement of the purpose of John is given in Jn. 20:30f. (*Cf.* W. C. van Unnik, *TU* 73, 1959, pp. 382-411.) John has made a selection out of a large number of available 'signs', and his purpose in narrating them is to bring his readers to the belief that Jesus is the Christ (*i.e.* the Messiah) and the Son of God, and thus to bring them into an experience of eternal life.

From this statement we can draw certain conclusions which are amply attested by the substance of the Gospel. First, it is basically an evangelistic document. Second, its explicit method is to present the work and words of Jesus in such a way as to show the nature of his person. Third, the description of this person as Messiah indicates that a Jewish audience is probably in mind. Since, however, John appears to be writing for an audience outside Palestine and in part ignorant of Jewish customs, it is an attractive hypothesis that he wrote especially for Jews of the Diaspora and proselytes in Hellenistic synagogues. (*Cf.* J. A. T. Robinson, *Twelve NT Studies*, 1962, pp. 107-125.) This naturally does not exclude a Gentile audience from his purview, although the view that the Gospel was written primarily to convert the thoughtful Gentile (*cf.* C. H. Dodd, *The Interpretation of the Fourth Gospel*, 1953) is unlikely.

This main purpose does not exclude other, subordinate aims. Thus, first, John consciously stresses points which would refute the false or antagonistic views about Jesus held by Jews in his time. There may also be an attempt to correct an over-zealous veneration for John the Baptist. Second, particularly in 13-17, John addresses Christians and gives teaching about life in the church. But the view that a principal aim of John was to correct the church's eschatology (so C. K. Barrett) is not tenable, although this is not to deny that the Gospel contains eschatological teaching. Third, it is often alleged that John was written as a polemic against Gnosticism. This view gains some plausibility from the purpose of 1 John, but is not so self-evident as is sometimes supposed; nevertheless, John was no doubt aware of the danger of Gnosticism while he wrote, and his Gospel is in fact an excellent weapon against Gnosticism.

III. Structure and theological content

a. *The historical structure*

As a historical work, John is selective. It begins with the incarnation of the pre-existent Word of God in Jesus (1:1-18), and then passes straight to the early days of Jesus' ministry—his baptism by John and the call of his first disciples (1:19-51), and his return from the Jordan to Galilee (1:43). But the scene of his work is not confined in the main to Galilee, as in the Synoptic narrative. Only a few of the incidents related take place there (1:43-2:12; 4:43-54; 6:1-7:9). Once the scene is Samaria (4:1-42), but most frequently it is Jerusalem, usually at the time of a Jewish feast (2:13; 5:1; 6:4; 7:2; 10:22; 11:55; *cf.* A. Guilding, *The Fourth Gospel and Jewish Worship*, 1960). The last of these incidents is the raising of Lazarus, which provoked the Jewish leaders to do away with Jesus (11:45ff.), although, as in the Synoptic Gospels, their enmity

JOHN, GOSPEL OF

had been mounting for some time (e.g. 7:1). From this point the narrative follows lines familiar to us from the Synoptic Gospels—the anointing at Bethany (12:1–11), the triumphal entry (12:12–19), the Last Supper (13), recorded with no reference to its sacramental features, the arrest (18:1–12), trials and Peter's denial (18:13–19:16), the crucifixion and resurrection (20–21). Yet in this section also there is much material not found in the Synoptic Gospels, especially the last discourses and prayer (14–16; 17), the details of the trial before Pilate (18:28–19:16), and the resurrection appearances.

There is no need to doubt that this historical outline corresponds broadly to the actual order of events, although it must be remembered that John has recorded only a few incidents and arranged them from the standpoint of his presentation of Jesus as the Messiah.

b. *The theological content*

(i) *John as revelation.* This historical outline is the vehicle of a theological presentation of Jesus. John's purpose is to reveal the *glory* of Jesus as the Son of God. As the pre-existent Son he shared the glory of the Father (17:5, 24), and in his earthly life his glory was demonstrated to the world—or rather to those who had eyes to see (1:14)—in the series of signs which he wrought (2:11). Yet in these signs Jesus was seeking not his own glory but that of the Father (5:41; 7:18). This revelation of Jesus before the world is the theme of chs. 1–12, which concludes with a summarizing passage and a clear break in thought (12:36b–50). Since the world had largely not believed in him (12:37), Jesus turned to his disciples, and in chs. 13–17 we have a revelation of his glory, seen in humble service, to the disciples, who were themselves also called to a life in which God is glorified (15:8; 21:19). But a theme which had been hinted at earlier also finds expression here, namely that Jesus is supremely glorified in his passion and death. Thus the third section of the Gospel (chs. 18–21) shows us that the hour has come in which Jesus is glorified as the Son of God and glorifies God.

At the same time the Gospel may be regarded as a revelation of *truth* (1:14, 17). In the Gospel the world is characterized by error, imperfection and sin, because it has lost contact with God who is the true One (7:28); to it Jesus brings the truth of God (18:37). He himself is the incarnation of truth (14:6) and will be succeeded by the Spirit of truth (14:17). He leads men to a true worship of God (4:23f.) and frees them from the errors of the devil (8:44) through knowledge of the truth (8:32). In contrast to the empty satisfactions of the world he brings true, real bread for the souls of men (6:32, 55).

(ii) *Signs and witnesses.* The way in which this revelation is brought to men is twofold. First, there are the *signs* or *works* performed by Jesus, seven of which (excluding the resurrection) are related at length. They are signs not simply because they are evidence of a miraculous, supernatural power (4:48) but rather because by their character they show that their author is sent by God (9:16) as the Messiah and Son of God (3:2; 6:14; 7:31); they thus authenticate his person to those who have eyes to see (2:23; 12:37).

Usually these signs are the basis of a discourse or dialogue in which their spiritual significance is brought out. There is, however, what may be regarded as a further series of signs in words.

Seven times (6:35; 8:12; 10:7, 11; 11:25; 14:6; 15:1; to which 8:24 is perhaps to be added) Jesus says, 'I am . . .'. A number of concepts, all of them already current in religious language, are here taken over by Jesus and used to explain who he is and what he has come to do. What is especially significant is that this use of 'I am' contains a veiled claim to deity.

Second, the glory of Jesus is attested by *witnesses*. Jesus himself came to bear witness to the truth (18:37), and witness is borne to him by John the Baptist, the woman of Samaria, the crowd who saw his signs (12:17), the disciples (15:27), the witness at the cross (19:35), and the Evangelist himself (21:24). Witness is also given by the Scriptures (5:39), by the Father (5:37), and by Jesus' signs (10:25). Such witness was meant to lead men to faith (4:39; 5:34).

(iii) *The Person of Jesus.* These signs and witnesses are thus meant to show that Jesus is the Son of God who offers life to men. Right at the beginning of the Gospel he is affirmed to be the *Word* (**Logos*) of God (1:14, 17). Although this technical term does not recur in John, it is plain that the rest of the Gospel is an exposition and justification of the doctrine that the Word became flesh. The use of 'Word' is singularly happy, for by it John was able to speak to Jews who had already taken some steps towards regarding God's creative Word (Ps. 33:6) as in some sense a separate being from God (cf. the figurative description of Wisdom in Pr. 8:22ff.), to Christians who preached the Word of God and virtually identified it with Jesus (cf. Col. 4:3 with Eph. 6:19), and to educated pagans who saw the Word as the principle of order and rationality in the universe (popular Stoicism). But what John says goes far beyond anything that had previously been said.

Second, Jesus is the *Messiah* from the house of David awaited by the Jews (7:42). In fact, the great question for the Jews is whether Jesus is the Messiah (7:26ff.; 10:24), and the confession of the disciples is that this is precisely who he is (1:41; 4:29; 11:27; 20:31).

Third, he is the *Son of man*. This term is the key to Jesus' understanding of himself in the Synoptic Gospels, where it is connected with three ideas, the 'hiddenness' of his Messiahship, the necessity of his suffering, and his function as judge at the parousia. These ideas are latent in John (cf. 12:34; 3:14; 5:27), but the emphasis falls on the two ideas that the Son of man has been sent from heaven as the revealer of God and the Saviour of men (3:13; 9:35) and that he is glorified by being 'lifted up' to die (12:23–34).

Fourth, he is the *Son of God*. This is probably Jesus' most important title in John. Since the heart of the gospel is that God sent his Son as Saviour (3:16), John's purpose is to lead the reader to recognize the claim of Jesus (19:7) and make the confession of the disciples (1:34, 49; 11:27) that he is the Son of God. As Son, he reveals the Father (1:18), whose activities of life-giving and judgment he shares (5:19–29). Through belief in him men receive salvation (3:36) and freedom (8:36).

But to say that Jesus is the Son of God is, fifth, to ascribe full deity to him. Thus he who as the Word of God is himself *God* (1:1), is also confessed by men on earth as Lord and God (20:28, which is the climax of the Gospel; cf. also 1:18, rsvmg.).

(iv) *The work of Jesus.* A further set of titles expresses what Jesus came to do for men and what

he offers them. These are summed up in 14:6, where Jesus claims to be the way, the truth, and the life. The last of these words, *life*, is the favourite word in John for salvation. The world of men is in a state of death (5:24f.) and is destined for judgment (3:18, 36). What Jesus offers to men is life, defined by John as knowledge of God and Jesus Christ (17:3). Jesus himself can thus be called the life (1:4; 11:25; 14:6), the giver of *living water* (i.e. life-bestowing water, 4:14), and *living bread* (6:33f.). To receive Jesus by believing in him (3:36; 6:29) is to receive the bread of life, and to eat the flesh and drink the blood of Jesus (an expression in which many scholars see an allusion to the Lord's Supper) is to partake of eternal life (6:54).

This same truth is presented in the picture of Jesus as the *light* of the world (8:12), developed especially in ch. 9. The state of men is now regarded as blindness (9:39–41) or darkness (3:19; 12:46), and Jesus is the one who cures blindness and gives the light of life to those who walk in darkness. He is also depicted as the way to God (14:1–7). This idea is hinted at in 10:9, where he is the *door* of the sheepfold, but here another idea becomes prominent—that Jesus is the *good shepherd* who gives his life for the sheep and gathers them into his sheepfold. Three vital ideas are contained in this description. First, Jesus is the true fulfilment of the OT promise of a shepherd for the people of God. (Note that life and light are Jewish descriptions of the Law which finds its fulfilment in Jesus.) Second, his death is not simply due to the opposition of his enemies, but is a saving death on behalf of men (10:11) by which they are drawn to God (12:32). Only through a sacrificial death can sin be removed (1:29) and life be given to the world (6:51 b). Third, the picture of a flock introduces the idea of the church.

(v) *The new life.* Jesus is thus portrayed as the *Saviour* of the world (4:42). In his presence men face the decisive moment in which they either accept him and pass from death to life (5:24) or remain in darkness until the day of judgment (12:46–48).

Such acceptance of Jesus occurs when the Father draws men to his Son (6:44). Through the work of the Spirit of God, whose movement is beyond human comprehension, there then takes place the radical change known as the *new birth* (3:1–21) by which a man becomes a son of God (1:12).

From the human side this change is the product of *faith*, which is centred on the Son of God who was lifted up on the cross to save the world (3:14–18). A distinction is drawn between two kinds of faith—intellectual acceptance of the claims of Jesus (1:14; 8:24; 11:27; 20:31), which by itself is not sufficient, and full self-committal to him (3:16; 4:42; 9:35–38; 14:1).

Such faith is closely related to *knowledge*. Whereas ordinary men have no real knowledge of God (1:10; 16:3), through knowledge of Jesus men can know the Father (8:19; 14:7). The content of this knowledge is not stated in John; there is no place here for the esoteric revelations characteristic of the mystery religions. Our only clue is that the way in which men know God and are known by him is analogous to the way in which Jesus knows God and is known by him (10:14f.).

One thing, however, can be said. This new relationship is characterized by *love*. Disciples share in a relationship of mutual love with God like that

which exists between the Father and the Son (3:35; 14:31), though it is to be noted that their love is directed towards the Son rather than towards the Father (14:23; 15:9; 17:26; 21:15–17; cf. 5:42; 1 Jn. 4:20f.).

Other expressions are also used to express this communion of disciples with Jesus. They are said to *abide* in him (6:56; 15:4–10), and he abides in them (6:56; cf. 14:17). The preposition *in* is also important in describing the close relationship of mutual indwelling between God and Jesus and between Jesus and his disciples (14:20, 23; 17:21, 23, 26).

(vi) *The people of God.* Although the word 'church' is not found in John, the idea is most certainly present. To be a disciple is automatically to be a member of the *flock* whose shepherd is Jesus. Jesus also uses the concept of the *vine* (15:1–8). A new vine is to replace the old vine (i.e. the earthly people of Israel); Jesus himself is the stem, and from him life flows to the branches and enables them to bear fruit.

The life of disciples is characterized by a *love* which follows the example of Jesus, who humbly washed his disciples' feet (13:1–20, 34f.). Such love is in contrast with the attitude of the world which *hates* and *persecutes* the disciples (15:18–16:4, 32f.), and its result is that the church shows that *unity* for which Jesus prays in ch. 17.

But the church is no closed fellowship; others are to come to belief through the word of the disciples (17:20). This is confirmed in ch. 21, where the idea of *mission* or sending (20:21) is developed. The 153 fish are symbolic of the spread of the gospel to all men, and the task of the good shepherd is handed on from the Master to the disciples.

(vii) *Eschatology.* Jesus thus looks forward to the continuing life of the church after his glorification (14:12). In anticipation of his second advent he promises to come to the church (14:18) in the person of the *Spirit*. The Spirit comes to the individual disciple (7:37–39) and to the church (14:16f., 26; 15:26; 16:7–11, 13–15), and his function is to take the place of Jesus (as 'another Counsellor') and glorify him.

It may thus be said that in John the future is 'realized' in the present; Jesus comes again through the Spirit to his disciples, they already partake of eternal life, and already the process of judgment is at work. Yet it would be wrong to conclude that in John the future activity of God is replaced by his present activity. No less than in the rest of the NT is the future coming of Jesus (14:3; 21:23) and the future judgment of all men (5:25–29) taught.

IV. Textual problems and source criticism

Two passages found in the AV of John do not belong to the original text and have been removed to the margin in modern vss. These are the *Pericope de Adulteria* (7:53–8:11), a genuine story about Jesus which has been preserved outside the canonical Gospels and found its way into certain late MSS of John, and the explanation of the moving of the water (5:3b–4), which is omitted in the best MSS.

A special problem is raised by ch. 21. While E. C. Hoskyns held that it was an integral part of the original Gospel, the majority of scholars think that it was either a later addition of the author or (less probably) that it was added by another hand. The main argument is that 20:31 reads like the conclusion of a book; some scholars also find

JOHN, GOSPEL OF

stylistic differences between ch. 21 and chs. 1–20, but in the opinion of C. K. Barrett these are not in themselves decisive.

Some scholars (e.g. R. Bultmann) believe that the present order of the material in John is not that of the author but has been seriously altered, perhaps by loose sheets of papyrus being combined in the wrong order. There is, however, no objective textual evidence for this, although the phenomenon is not unknown in ancient literature. The displacements found in ch. 18 in certain mss are clearly secondary, and Tatian (c. 170), who made some alterations in order when he was combining the Gospels in a single narrative, does not support modern reconstructions. Most recent commentators find that the Gospel makes good sense as it stands.

Attempts have also been made, most comprehensively by R. Bultmann, to trace the use of written sources and editorial activity in John. While the use of sources is probable, there is little unanimity regarding their extent. It is likely that the Gospel went through several stages of composition, a fact which makes analysis extremely difficult.

V. The background of thought

After a period in which John was regarded as a Hellenistic book, to which the closest parallels were to be found in a strongly Hellenized Judaism, mystery religions and even Greek philosophy, there is at present a rediscovery of the essentially Jewish background of the Gospel.

Much evidence has been found of Aramaic traditions behind the Synoptic Gospels and John (M. Black, *An Aramaic Approach to the Gospels and Acts*³, 1967). An Aramaic sayings source may lie behind John—Aramaic being, of course, the mother tongue of Jesus. The thought in John is often expressed with the parataxis and parallelism which are well-known features of Semitic writing. All the indications are that the linguistic background of John is Aramaic, although the theory that it was originally written in Aramaic is unconvincing.

This naturally means that the thought of John is likely to be Jewish, which is in fact the case. Although there are comparatively few quotations, most of the key ideas in John are taken from the OT (e.g. word, life, light, shepherd, Spirit, bread, vine, love, witness) and Jesus is portrayed as the fulfilment of the OT.

Parallels with contemporary Jewish thought, especially with orthodox rabbinic Judaism, may also be found, it being only natural that Jesus and his followers should often have agreed with the OT scholars of their time and been influenced—both positively and negatively—by them (cf. 5:39; 7:42). Since Palestinian Judaism had been subject to Hellenistic influences for about two centuries, there is no need to look wider for Hellenistic influence upon John. The degree of resemblance between ideas found in John and in Philo of Alexandria is variously estimated.

The Jewish sectarian texts from Qumran also help to fill in the background of John, although their importance for the understanding of the NT tends to be exaggerated. Attention is usually drawn to the dualism of light and darkness and to the Messianic hopes found in the texts, but the roots of these ideas lie in the OT, and it is doubtful whether a direct influence from Qumran upon John re-

quires to be postulated. (See F. M. Braun, *RB* 62, 1955, pp. 5–44; J. H. Charlesworth (ed.), *John and Qumran*, 1972).

Other possible formative influences are discussed in detail by C. H. Dodd. He rightly rejects Mandaeism, a pagan-Christian syncretism whose earliest literature is considerably later than John. But he devotes considerable attention to Hellenistic mystery religion, especially as depicted in the *Corpus Hermeticum* (*HERMETIC LITERATURE), a series of tracts probably emanating from Egypt in the 3rd century in their present form. But, while there are interesting parallels of thought which demonstrate that John would be intelligible to pagans and not merely to Jews, a close affiliation of thought is unlikely. (Cf. G. D. Kilpatrick in *Studies in the Fourth Gospel*, ed. F. L. Cross, 1957.)

In the 2nd century there was a developed Christian *Gnosticism, and we must certainly think of some kind of 'pre-Gnosticism' in the 1st century, reflected in the polemic in Col. and 1 Jn. The theory that John was influenced by the Gnostic heretics whom he opposes (cf. II, above) was propounded by E. F. Scott (*The Fourth Gospel*, 1908, pp. 86–103); more recently than this R. Bultmann and E. Käsemann have argued that in John Jesus is presented in terms of Gnostic myths. The view of C. H. Dodd that Johannine Christianity is entirely different from Gnosticism in spite of a common background (*op. cit.*, p. 114) does much greater justice to facts.

Within the early Christian world the Johannine literature occupies a unique place and represents an independently developed strand of thought. Nevertheless, its teaching is that of the Christian church generally, and the differences from, say, Paul are more of form than of content. (Cf. A. M. Hunter, *The Unity of the New Testament*, 1943.)

VI. External attestation

The existence of John's Gospel is attested in Egypt before AD 150 by the Rylands Papyrus 457, the earliest known fragment of a NT ms.

The use of John as an authoritative Gospel alongside the other three is attested by the Egerton Papyrus 2, also dated before 150 (C. H. Dodd, *New Testament Studies*, 1953, pp. 12–52). It was also used by Tatian in his *Diatessaron*, and Irenaeus (c. 180) speaks of a four-Gospel canon. John was certainly also known and used in heretical Gnostic circles—e.g. by Ptolemaeus, a disciple of Valentinus, by the *Gospel of Peter* (c. 150), and (fairly certainly) by the author of the Valentinian *Gospel of Truth*. Knowledge of John by other writers in this period is difficult to attest. There are traces of Johannine language in Ignatius (c. 115) and Justin (c. 150–160), but it is questionable whether literary dependence is indicated.

Traditions about the authorship of John are given by Irenaeus, who states that John, the disciple of the Lord, gave out the Gospel at Ephesus. This tradition is repeated by Clement of Alexandria (c. 200) and the anti-Marcionite prologue to John; the 2nd-century date of the latter is, however, suspect. The Muratorian Canon (c. 180–200) gives a legend in which John the apostle is the author, and the apostolic authorship was accepted by Ptolemaeus. But Papias, who had close access to apostolic traditions, is silent on the matter, and Polycarp, who was an associate of John according to Irenaeus, quotes the Epistles but not the Gospel. Nor do the apocryphal *Acts of John* say anything

about the Gospel. At the beginning of the 3rd century there was some opposition to the apostolic authorship of John, possibly because of the use made of it by the Gnostics.

VII. Authorship

At the end of the 19th century the view that John the apostle wrote the Fourth Gospel was widely accepted on the basis of the external evidence set out above and the internal evidence. The latter received its classical formulation from B. F. Westcott and from J. B. Lightfoot (*Biblical Essays*, 1893, pp. 1–198), who demonstrated that the Gospel was written by a Jew, by a Palestinian Jew, by an eyewitness of the events recorded, by an apostle, and, in particular, by the apostle John, who is referred to as the ‘beloved disciple’.

A number of arguments have been raised against this chain of reasoning. First, there is the theory that *John died as a martyr at an early age, but this is rightly rejected by the majority of scholars.

Second, the alleged geographical and historical inaccuracy of John is held to militate against authorship by an eyewitness. The most recent archaeology has, however, confirmed the geographical accuracy of John in a striking way (cf. R. D. Potter, *TU* 73, 1959, pp. 329–337). For the historical problem, see below.

Third, it is alleged that the apostle John was incapable of writing such a Gospel. He was an unlearned man—a view which finds its only and inadequate basis in a questionable exegesis of Acts 4:13 and ignores such analogies as Bunyan, the Bedford tinker. As an apostle he could not have written a Gospel so different from the other three—a view which does not take into account the special purpose of John and the fact that we have no other Gospel directly written by an apostle for comparison. As a Jew he could not have the mastery of Hellenistic thought seen in the Gospel—see, however, V, above. Finally, nobody would presume to call himself the ‘beloved disciple’—which is, however, no more than a subjective argument (those who find it weighty can attribute the use of the title to John’s scribe).

Fourth, the weightiest argument is the slowness of the church to accept John’s Gospel. The reliability of Irenaeus has been called in question (but with uncertain justification), and it has been observed that the people who might be expected to know John and quote from it fail to do so. Against this must be pointed out the general weakness of arguments from silence (cf. W. F. Howard, *The Fourth Gospel in Recent Criticism and Interpretation*⁴, 1955, p. 273) and the fact that the evidence for the acceptance and use of the other three Gospels is almost equally scanty before the period in which we find all four Gospels accepted together. Further, we are completely ignorant of the circumstances of publication of John except for the brief note in 21:24.

It may be taken as quite certain that we can safely disregard any theory which denies a connection between John the apostle and the Gospel. Three possibilities then arise. First, John may have composed it himself with the aid of an amanuensis. Second, a disciple of John may have used the memoirs of John or a Johannine tradition as the basis for the Gospel. A third possibility, which is a variant of the second, is that there was a Johannine ‘school’, possibly to be linked with S Palestine, in which the characteristic Johannine theology was

developed and whose members produced the Johannine literature. It is, however, difficult to bring forward decisive evidence for or against such a theory. (One may compare K. Stendahl’s hypothesis of a Matthean school, the evidence for which is still flimsy.)

It is difficult to decide between these theories. But the tradition that John dictated the Gospel is widespread (cf. R. V. G. Tasker, *TNTC*, 1960, pp. 17–20) and bears the marks of genuineness. There are still good grounds for maintaining a close association of John the apostle with the actual writing of the Gospel.

(See also *JOHN, EPISTLES OF.)

VIII. Provenance and date

Early tradition connects John the apostle with Asia Minor and in particular with Ephesus. A connection with Asia Minor is most suitable for 1–3 Jn. and is demanded by Rev.; whether the author of the latter be the Evangelist or an associate of his, this strengthens the case for Asia.

The claims of other places cannot, however, be ignored. The apparent lack of knowledge of John in Asia gives weight to the claims of Alexandria: here John was certainly used very early by the gnostics (cf. also the papyri), the climate of thought (Hellenistic Judaism) could be regarded as suitable, and the general remoteness of Alexandria would explain the Gospel’s slow circulation. There is, however, no tradition connecting John with Alexandria. The claims of Antioch have also been pressed, but they are hardly strong. Some would connect the Gospel of John with S Palestine in view of its background of thought, but this only confirms that for part of his life the author was resident in Palestine.

John is usually dated in the 90s. This view is based on the assumed dependence of John on the Synoptic Gospels (but see IX, below) and the alleged post-Pauline character of its theology. While there is no need to regard John as dependent on Paulinism, it is difficult to avoid the impression that it is not an early writing. If it is connected with Ephesus it must be placed after the activity of Paul there; this is confirmed by the date of 1–3 Jn., which is hardly earlier than the 60s. If John is connected with some other place of composition, e.g. Palestine, an earlier date is possible but remains unlikely. The real point of the ‘Palestinian background’ argument is that the date no longer needs to be put extremely late in order to account for the development of thought. (Cf. J. A. T. Robinson, *op. cit.*, pp. 94–106.)

IX. Relation to the Synoptic Gospels

a. Knowledge of the Synoptic tradition

The accepted opinion until about 40 years ago was that John knew the Synoptic Gospels, or at least Mark and Luke, and that he wrote in order to correct, supplement or replace them. Sharp criticism of this view came from P. Gardner-Smith (*St. John and the Synoptic Gospels*, 1938), B. Noack (*Zur Johanneischen Tradition*, 1954) and C. H. Dodd (*Historical Tradition in the Fourth Gospel*, 1963), who argued that John was dependent on the oral tradition behind the Synoptics, and wrote independently of them. The closest contacts are between John and Luke, especially in the passion narrative, but it is doubtful whether these prove literary dependence; Luke may well have had access to

JOHN, GOSPEL OF

the traditions recorded in John or even had personal acquaintance with its author (cf. G. W. Broomfield, *John, Peter and the Fourth Gospel*, 1934).

The external evidence must also be taken into account. Papias' information about Mark and the Logia came from [John] 'the elder', who may be connected with the composition of the Gospel of John. Clement of Alexandria wrote, 'Last of all, John, perceiving that the external facts had been made plain in the Gospel, being urged by his friends, and inspired by the Spirit, composed a spiritual Gospel.' We can, of course, accept this description of John as the spiritual Gospel without believing that John wrote out of a knowledge of the other Gospels, but it is difficult to believe that he did not have some idea of their contents, even if he did not have copies of them before him as he wrote. The question, then, must be regarded as still open.

b. Comparison of the narratives

Two problems arise here. The first is whether the Synoptic and Johannine narratives are compatible with each other and can be worked into a single account. It is a fact that attempts can be made to fit the two together in a reasonably convincing manner and thus to shed new light on both. (E. Stauffer, *Jesus and His Story*, 1960.) This is possible because the two accounts describe the activity of Jesus at different periods and in different localities; the old-fashioned idea that the Synoptic Gospels leave no room for a ministry in Jerusalem (other than in the passion narrative) is now quite discredited. It must be remembered, of course, that none of the Gospels pretends to give an exact chronological narrative, so that a detailed reconstruction of the order of events is impossible.

The second problem concerns the cases where historical contradictions appear to arise between the Gospels, including cases where it is held that John is consciously correcting data given in the Synoptic Gospels. Examples of this are the reason for Jesus' arrest (in particular, the question why the raising of Lazarus is omitted in the Synoptic narrative; see a possible answer in J. N. Sanders, *NTS* 1, 1954-5, p. 34); the date of the cleansing of the Temple; and the date of the last supper and crucifixion (see N. Geldenhuys, *Commentary on the Gospel of Luke*, 1950, pp. 649-670). The extent of such difficulties can be exaggerated, but it must be admitted that some real problems exist to which answers have yet to be found. In any case the substance of the Gospel records is not affected by these differences.

c. The discourses in John

The teaching ascribed to Jesus in John differs markedly in content and style from that in the Synoptic Gospels. Such familiar ideas as the kingdom of God, demons, repentance and prayer are missing, and new topics appear, such as truth, life, the world, abiding and witness. At the same time there are close and intricate connections between the two traditions, and common themes appear, e.g. Father, Son of man, faith, love and sending. The style and vocabulary also differ. There are no parables in John, and Jesus often speaks in long discourses or dialogues which are unparalleled in the Synoptic Gospels.

Many scholars, therefore, believe that John gives us his own thoughts or his own meditations upon the words of Jesus rather than his *ipsisissima verba*. This conclusion is strongly supported by the fact

that a very similar style and content is found in 1 Jn. Nevertheless, it must be carefully qualified. First of all, the Gospel of John contains many sayings which are similar in form and content to Synoptic sayings (cf. B. Noack, *op. cit.*, pp. 89-109; C. H. Dodd, *op. cit.*, pp. 335-349) and which have equal right to be regarded as authentic. Second, there is, on the other hand, at least one famous 'bolt from the Johannine blue' in the Synoptic Gospels (Mt. 11:25-27) which is a standing warning against the facile assumption that the Synoptic Jesus did not speak the language of the Johannine Jesus. Third, the same traces of Aramaic speech and the same conformity to Jewish methods of discussion are to be found in John as in the Synoptic Gospels.

Thus we can say with considerable confidence that the sayings recorded in John have a firm historical basis in the actual words of Jesus. They have, however, been preserved in a Johannine commentary from which they can be separated only with great difficulty. (Cf. the problem of Gal. 2:14ff.; where does Paul's speech to Peter end and his meditation upon it begin?) This is no radical conclusion. So conservative a scholar as Westcott saw, for example, the words of John rather than of Jesus in 3:16-21.

X. History and interpretation in John

The purpose of John (see II, above) demands that, in broad outline at least, the contents of John be regarded as history; it completely fails of attainment if John gives us a legendary construction devised to substantiate the church's preaching of Jesus as the Messiah instead of the historical facts which lie behind and authenticate that preaching. (See C. F. D. Moule, *The Phenomenon of the NT*, 1967, pp. 100-114.)

It has already been suggested that many of the difficulties commonly raised against the historicity of John are by no means so serious as they are often made out to be. There is in fact a growing tendency to recognize that John contains important historical traditions about Jesus and that an adequate understanding of his earthly life cannot be obtained from the Synoptic Gospels alone (cf. T. W. Manson, *BJRL* 30, 1947, pp. 312-329; A. M. Hunter, *According to John*, 1968).

On the other hand, the total impression given by John after a reading of the Synoptic Gospels is that here we have an interpretation of Jesus rather than a strictly literal account of his life. The teaching which he gives is different and the picture of his person is also different, particularly as regards his Messianic and filial self-consciousness. Yet it would be unwise to over-emphasize these differences. Jesus is no less human in John than in the other Gospels, and even the 'Messianic secrecy' of the Synoptic Gospels is not altogether absent from John. F. F. Bruce can go so far as to say that there is no fundamental discrepancy between the Jesus of the Synoptic Gospels and of John (*The New Testament Documents*⁵, 1960, pp. 60f.).

What this amounts to is that John does not contradict the other Gospels but interprets the Person who is depicted in them. While the other Evangelists have given us a photograph of Jesus, John has given us a portrait (W. Temple, *op. cit.* below, p. xvi). Consequently, in the light of what has been said, John can be used as a source for the life of Jesus and for John's interpretation of that life, even if it is impossible to separate these two rigidly from each other. The earthly life of Jesus cannot be

completely understood in isolation from his revelation of himself as the risen Lord to his church. Under the inspiration of the Spirit (cf. 14:26; 16:14) John has brought out the meaning of the earthly life of Jesus; he interprets the story of Jesus, and in doing so he gives us, in the words of A. M. Hunter, 'the true meaning of the earthly story' (*Introducing New Testament Theology*, 1957, p. 129).

I.H.M.

JOKNEAM, JOKMEAM (Heb. *yoqnam*, *yoqm'am*). 1. A Canaanite city (Jos 12:22), no. 113 in the list of Tuthmosis III; modern Tel Yoqnean (Tell Qeimun), 12 km NW of Megiddo. 'The brook east of' (*'al p'ne*, facing) Jokneam (Jos. 19:11), which bounded Zebulun, was probably not the Kishon (*GTT*) but a tributary (*LOB*). As a levitical city, Jokneam was in Zebulun (Jos. 21:34), so the boundary may have run S of the Kishon here.

BIBLIOGRAPHY. *GTT*, pp. 306, 350; *LOB*, pp. 152, 257; M. Noth, *Josua*² (German), 1953, p. 115; J. Drinkard, *JBL* 98, 1979, pp. 285f.; A. Ben-Tor, *IEJ* 33, 1983, pp. 30-54; *NEAEHL*, pp. 805-811.

2. A levitical city in Ephraim (1 Ch. 6:68, perhaps Kibzaim, Jos. 21:22); in the Jordan valley, 1 Ki. 4:12, but Noth and Gray regard this as Jokneam (1). Perhaps Tell el-Mazar (B. Mazar, *VT Supp.* 7, 1960, p. 198; *LOB*, p. 313).

J.P.U.L.

JOKSHAN. A son of Abraham and Keturah, and father of Sheba and Dedan (Gn. 25:2-3; 1 Ch. 1:32). The name is sometimes assumed to be another form of *Joktan (Gn. 10:25-29; 1 Ch. 1:19-23), but bearers of these names are kept distinct in the genealogical lists.

R.J.W.

JOKTAN. A son of Eber of the family of Shem, and father of Almodad, Sheleph, Hazarmaveth, Jerah, Hadoram, Uzal, Diklah, Obal, Abimael, Sheba, Ophir, Havilah and Jobab (Gn. 10:25-26, 29; 1 Ch. 1:19-20, 23), many of whom have been connected with tribes in S Arabia. The name is

unknown outside the Bible, but on the basis of the descendants a region of occupation in S or SW Arabia may be postulated. The modern tribes of S Arabia claim that the pure Arabs are descended from Joktan.

T.C.M.

JONAH. Hebrew personal name, meaning 'dove'. The NT form of the name in AV is normally Jonas, twice Jona. 1. A Heb. prophet of the reign of Jeroboam II of Israel, in the 8th century BC. He came from Gath-hepher, a Zebulunite town, located in the vicinity of Nazareth. His father's name was Amittai. He predicted the territorial expansion achieved by Jeroboam at the expense of Syria (2 Ki. 14:25). This Jonah is also the hero of the book that bears his name, the fifth of the twelve Minor Prophets. The book differs considerably from the other OT Prophets in that it is almost entirely narrative and contains no long prophetic oracles. (See the following article.)

2. The father of Simon Peter, according to Mt. 16:17. Some mss of Jn. 1:42; 21:15ff. also call him Jonah (cf. AV rendering), but the best attested reading here is 'John'.

D.F.P.

JONAH, BOOK OF.

Map showing the area covered by the mission of Jonah.

I. Outline of contents

The book is divided into four chapters, which neatly divide the subject-matter. The first chapter relates that Jonah, bidden by God to go to Nineveh and protest against its wickedness, rebelled and took ship in the opposite direction. A storm arose, and the sailors eventually threw Jonah overboard, at his own suggestion. A great fish then swallowed the prophet. Ch. 2 gives the text of his prayer, or rather psalm of thanksgiving, from the fish's belly. The fish presently disgorged Jonah on to the shore. Ch. 3 shows Jonah going to Nineveh, after all. His preaching of doom led the citizens to repent of their evil ways. In ch. 4 we find Jonah angry at their repentance and subsequent escape from destruction; whereupon God, by inducing Jonah's pity on

JONAH, BOOK OF

a plant, taught him that he must have compassion for all men.

II. Authorship and date

The book gives no indication who its author was. Jonah himself may have written it, but the book nowhere uses the first person (contrast, for example, Ho. 3:1); and the probability of a date later than the 8th century is indicated by the implication of Jon. 3:3 that Nineveh was no more (it was destroyed in 612 BC). If Jonah was not the author, nobody can say who did write it. The date of writing, then, may have been in the 8th century, but was more probably not earlier than the 6th century. The twelve Minor Prophets were known and venerated by the end of the 3rd century (cf. *Ecclus.* 40:10), so a 3rd-century date for the book is the latest it can possibly be allowed. The universalistic emphasis of the book is frequently considered to be a protest against the ultra-nationalistic spirit of the Jews after the time of Ezra; however, universalistic passages occur as early as the 8th century (cf. *Is.* 2:2ff.). Various features of the Heb. of Jonah constitute the strongest argument for post-exilic date; but the brevity of the book permits no certainty. (See also D. W. B. Robinson in *NBCR* on this issue.)

III. Interpretations

The nature of the book is a very controversial topic. It has been variously explained as mythology, allegory, commentary (or Midrash), parable and history. The mythological and allegorical approaches are no longer in vogue, and may safely be set aside. Most present-day scholars see the book as primarily parabolic, but partly midrashic, *i.e.* relating traditions about Jonah additional to the bare details of 2 Ki. 14. The parabolic interpretation views the book as a moral tale, comparable with Nathan's story to David (2 Sa. 12:1ff.) or with our Lord's parable of the Good Samaritan (Lk. 10:30ff.) which, of course, sought to teach the same lesson as the book of Jonah. The parabolic viewpoint is not merely an expedient to avoid believing in the miracle of Jonah's emerging alive from the fish's belly, as has sometimes been claimed. Such parables are frequent in Scripture; the chief argument against this interpretation is the unparalleled length of the story.

The historical interpretation is based on the obvious sense of the text, and the fact that the story is applied to a definite and historical figure, Jonah the son of Amittai (whereas the characters in the above-mentioned parables are anonymous). Certainly Jewish tradition accepted the book as history, and our Lord's references to it (Mt. 12; Lk. 11) probably, though not necessarily, imply that he did so too. The historical interpretation is, however, challenged on several points, notably the miracle of the fish, the vast size attributed to Nineveh, the statement that its king and citizens not only listened to a Heb. prophet but without hesitation or exception repented, and lastly, the unnaturally fast rate of growth of the gourd. However, it may be that the first was a genuine miracle; in any case the story may have modern parallels (see A. J. Wilson). The growth of the gourd might again be miraculous; or, more simply, one can claim that Jon. 4:10 is not intended to be strictly literal. As for the size of Nineveh (Jon. 3:3), it is possible that the author intended a much bigger area than the city itself; confirmation of this may be seen in the fact that he refers to a 'king of Nineveh' (3:6), whereas

other OT writers speak of kings of Assyria, of which country Nineveh was the last capital. (But see *NINEVEH.) It can also be asserted that in the low fortunes of Assyria prior to the accession of Tiglath-pileser III (745 BC) the Ninevites would readily have listened to a prophet who forecast disaster unless they repented. Theirs was a polytheistic religion, so they might well have sought to avoid offending even a foreign unknown deity.

It is fair to say that none of the objections to the historical interpretation is insuperable. The same might be said about the parabolic interpretation. The choice seems to rest, therefore, between these two.

IV. Purpose

It is generally agreed that the purpose of Jonah is didactic; it ends with a challenging question (cf. Lk. 10:36). It is disputed whether the intention was a protest against a narrow, exclusivistic Judaism; a challenge to missionary endeavour; or an explanation for the apparent non-fulfilment of earlier prophetic oracles against foreign nations. Without knowing the exact circumstances in which the book was issued, we cannot easily decide the question; in any case, these possibilities are not mutually exclusive. The book undeniably stresses the universal powers of God, over individuals and nations east and west, and over life and death; and also the universal mercy and love of God, towards disobedient Jews and cruel Gentiles alike.

V. Composition

The book is widely accepted as a unity, apart from the psalm (2:2-9), which many scholars have held to be an interpolation. The present trend may be towards its acceptance, however (cf. Kaiser, *IOT*, p. 196). The psalm is not so inapposite as has often been claimed; Jonah had been rescued from a watery grave—even if he had yet to be released from the fish's belly—and the use of traditional language depicting death in marine metaphors is therefore remarkably fitting. At the same time, it is noteworthy that the more usual frame of reference of such a psalm lays the basis for the NT interpretation of its significance (cf. Mt. 12:39ff.).

D. F. P.

JONATHAN (Heb *y'hônān* or *yônān*, 'Yahweh has given').

1. Son of Gershom, descendant of Moses (AV 'Manasseh'). He was hired by Micah to officiate as priest before an idol in Ephraim, then became priest and progenitor of a line of priests to the Danites 'until the day of the captivity of the land' (Jdg. 17; 18:30-31).

2. Eldest son of King Saul by his only wife (1 Sa. 14:49-50), he was his father's heir, which makes his loyalty and affection for David, who succeeded Saul, the more wonderful (1 Sa. 20:31). Jonathan

first appears in the biblical record as the victor at Geba, a Philistine stronghold, though his father's strategy at that time suggests by analogy that he may have taken part in the relief of Jabesh-gilead (1 Sa. 11:11; 13:2). His prowess and courage as a warrior, recalled in David's elegy (2 Sa. 1:22), are clearly seen in his lone attack on another Philistine garrison, an incident which also shows his ability to inspire loyalty as well as to offer it (1 Sa. 14:7). It is for his own loyalty to David, however, that he is chiefly remembered; a loyalty made more difficult because it conflicted with his filial duty to and affection for Saul, his father and sovereign. As the king, deserted by the Spirit of God and a victim to increasing fears and passions, showed ever greater hatred to 'the man after God's own heart' who was to succeed him, so Jonathan, in fealty to the brotherhood pact sworn with David after the death of Goliath (1 Sa. 18:1–4), was driven into defiance and deception of his father, even to the jeopardizing of his own life (1 Sa. 19:1–7; 20). The parting scene between the two friends is most moving. It does not appear that Jonathan accompanied his father on the two expeditions against David, to Engedi and Hachilah, and he disappears finally in the tragic Philistine victory at Mt Gilboa, along with his father and brothers (1 Sa. 31:2). Gifted physically and morally, he is a model to those of a more favoured dispensation of loyalty to truth and friendship, as well as of that peacemaking which is the role of the sons of God.

3. Others who bore this name are an uncle of David, a counsellor and scribe, perhaps to be identified with the nephew of David who slew a giant (1 Ch. 27:32; 2 Sa. 21:21–22); a son of the high priest Abiathar, who was involved in the attempts on David's throne by Absalom and Adonijah, though not as a rebel (2 Sa. 15:36; 17:15–22; 1 Ki. 1:41–49); one of David's 'mighty men' (2 Sa. 23:32; 1 Ch. 11:34); a son of Kareah associated with Gedaliah during the domination of Jerusalem by Nebuchadrezzar (Je. 40:8); and a scribe in whose house Jeremiah was imprisoned (Je. 37:20). The same name occurs at the time of the restoration (Ezr. 8:6; 10:15; Ne. 12:11, 14, 35).
 T.H.J.

JOPPA. The ancient seaport, now part of Tel Aviv-Jaffa (Heb. *yāfā*), was the only major harbour between Acco (Haifa) and the Egypt. border (see also *DOR, *CAESAREA). It served Jerusalem 50 km away. Tuthmosis III captured it by stratagem in the 15th century BC, and after the entry of the Israelites it marked the border of Dan's territory (Jos. 19:46). Liberated from Philistine control by David, it was used as a port to bring in Lebanon cedars sent by Hiram for Solomon's temple (2 Ch. 2:15, 16) and by Cyrus for the second temple (Ezr. 3:7). Jonah embarked here for Tarshish (1:3). Sennacherib captured the town in 701 BC. It was given to the Sidonians under Eshmunazzar and they occupied the port until it was colonized by the Gks. Under the Hasmonaeans it became part of Judaea until destroyed by Vespasian in AD 67. Peter stayed in Simon the tanner's house (Acts 9:43) and had the vision of God embracing Jew and Gentile (Acts 10:5, 11f.). Excavation shows occupation from the 17th century BC onwards. A pre-Philistine temple of the 13th century shows the existence of a lion cult and also wooden columns on stone bases to support the ceiling (cf. Jdg. 16:25–27).

JORDAN. The Jordan depression is unique among the features of physical geography. Formed as a result of a rift valley, it is the lowest depression on earth. The headwaters of the river Jordan, fed by springs, collect into Lake Huleh, 70 m above sea-level. Ten km S at Lake Tiberias the river is already nearly 200 m below the Mediterranean, while at the N end of the Dead Sea the floor of the trench has dropped a further 177 m and the river has plunged to 393 m below sea-level. Thus the name 'Jordan' (Heb. *yarden*) aptly means 'the descender'. The river is the largest perennial course in Palestine, and its distance of some 120 km from Lake Huleh to the Dead Sea is more than doubled by its meander. No other river has more biblical allusions and significance.

I. Archaeological sites

Archaeological sites in the Jordan valley have revealed it to be one of the earliest loci of urban settlement in the world. The Natufian transition from hunting to urban life at Jericho may be as old as 7000 BC. A pottery-making people arrived about 5000 BC, and with the later pottery (Neolithic B culture) the first evidence occurs of links with other Jordan valley sites and the N Fertile Crescent. Copper was introduced in the Chalcolithic period (4500–3200 BC), such as at Teleilat Ghassul, just N of the Dead Sea. At Ghassul, three city levels existed from the 4th millennium onwards, with evidence of irrigation farming. This Ghassulian culture is identified widely in Palestine, but it was especially prevalent in the Jordan valley, at Me'jar, Abu Habil, Jiftlik Beth-shan, Engedi and Tell esh-Shuneh, S of the Sea of Galilee.

At the end of the 4th millennium at least three groups of peoples entered the Jordan valley from the N, to settle in unvalled villages in the plains of Esdraelon, or from the E via Jericho. This period K. M. Kenyon has called proto-urban. City-states then began to appear in the Jordan valley, such as Jericho in the S, Beth-shan in the centre and Beth-yerah (Khirbet Kerak) in the N, and these traded with Egypt and Mesopotamia.

About 2200 BC Amorite nomads invaded the valley and destroyed many of the urban centres. They may have been part of a vast general eruption of peoples that went on from 2300 to 1900 BC, that is, to the beginning of the Middle Bronze Age. Abraham may have come into the Jordan valley in association with this period of nomadic unrest. This was followed by the N invasion of the Hyksos culture, when elaborate urban defences in depth were built at such towns as Jericho. Following the defeat of the Hyksos by the Egyptians, the great fortress towns of the Jordan valley, such as Beth-shan and Hazor, were rebuilt and equipped with Egyptian garrisons. Then later in the Bronze Age, at least by 1220 BC, the Israelites entered Palestine through the Jordan valley. There is evidence of the destruction of the cities of Hazor, Debir and Lachish. But the archaeological evidence for Joshua's capture of Jericho is obscure.

II. Topographical features

a. The Huleh basin

The Jordan valley begins below Mt Hermon (2,814

The Jordan valley in OT times

m) out of whose limestone springs issue the headwaters of the Jordan. Baniyas, later called Caesarea Philippi, may have been the centre of Baal-gad in the valley 'of Lebanon' (Jos. 12:7). It was the territory of Dan, the N limit of Israel, whose inhabitants controlled the vital trade route into Syria and were likened to a nest of vipers (Gn. 49:17). Moving down the upper valley is the Huleh area, a depression some 5 × 15 km, where ancient lava flows blocked the valley, so that the Jordan plunges 280 m in 15 km of gorges. On the plateau overlooking the Huleh plain stands the site of Hazor, the great Canaanite town.

b. The Tiberias district

Beyond the Huleh gorges, at about 213 m below sea-level, the Jordan enters the Sea of Galilee, a harp-shaped lake, 21 km long, and about 13 km across. Fed by numerous thermal springs, its fresh waters are well stocked with fish, the maximum depth of 50 km permitting vertical migrations of the fish with the seasonal temperatures. It was, therefore, probably in the hot summer season when the normal winter temperature of 13° C. lies 37 m below the surface of the lake, that Jesus advised the fishermen to 'cast into the deep' (Lk. 5:4). The methods of catching *fish referred to in the Gospels are still practised: the single-hook line (Mt. 17:27); the circular fishing net (Mt. 4:18; Mk. 1:16); the draw-net cast out by a boat (Mt. 13:47f.); deep-sea nets (Mt. 4:18f.; Mk. 1:19f.); and deep-sea fishing undertaken with two boats (Lk. 5:10).

A dense population clustered round the lake in our Lord's day, and it was the sophisticated city folk of Chorazin, Bethsaida and Capernaum that he condemned (Mt. 11:20-24). 'There is no spot in the whole of Palestine where memories heap themselves up to such an extent as in Capernaum' (G. Dalman). Jewish life thrived in its synagogues (Mt. 12:9; Mk. 1:21; 3:1; 5:22; Lk. 4:31; 6:6; 8:41). There lived Jairus, the chief of the synagogue (Mk. 5:22), the centurion who built a synagogue (Lk. 7:5) and Levi the customs official (Mt. 9:9; Mk. 2:14; Lk. 5:27). E of Capernaum was Bethsaida from which Philip, Andrew and Peter came (Jn. 1:44), and beyond that the less populous district of the Gadarenes, where the heathen reared their pigs (Lk. 8:32). The lake, plains and steep rocky slopes, interspersed with boulders and thistle-fields, provide the setting for the parable of the sower (Mk. 4:2-8), while in spring the flowered carpets of asphodels, anemones and irises are also telling sermons.

Dominating this lake environment are the surrounding mountains, especially those of the NW, which played so vital a part in the prayer-life of our Lord, where he taught his disciples (Mt. 5:1) and from which he appeared as the risen Lord (Mt. 28:16). The NE corner of the lake is supposedly the scene of the miracle of the feeding of the five thousand (Lk. 9:10-17).

c. The 'Ghor' or Jordan valley

This runs for over 105 km between Lake Tiberias and the Dead Sea. The Yarmuk, entering the left bank of the Jordan 8 km downstream from the lake, doubles the volume of flow, and the valley is progressively deepened to as much as 50 m below the floor of the trough. In this sector, three physical zones are distinguishable: the broad upper terrace of the Pliocene trough, the Ghor proper; the

lower Quaternary terrace and the flood plain of the river, the Zor; and between them the deeply dissected slopes and badlands of the Qattara. It is the Qattara and the Zor together, rather than the river Jordan, which have created the frontier character of this obstacle (Jos. 22:25). The N half of the Ghor is a broad, well-cultivated tract, but the Judaeo-Gilead dome, crossing the trough, narrows the valley S of Gilead. Beyond it, the trough becomes increasingly more arid, until at the head of the Dead Sea there is scarcely more than 5 cm mean annual rainfall. The Qattara badlands, carved grotesquely in soft marls and clays, create a steep, desolate descent to the valley floor. The Zor, making its way in vivid green vegetation cover, stands out in sharp contrast below, hence its name *gā'ôn* ('luxuriant growth') of Jordan (Je. 12:5; 49:19; 50:44; Zc. 11:3; cf. Ps. 47:4; 59:12; Pr. 16:18). The haunt of wild animals (Je. 49:19), it is partly flooded in spring (Jos. 3:15). Thus the question can be understood, 'And if in a safe land you fall down, how will you do in the jungle of the Jordan?' (Je. 12:5).

Between the Yarmuk in the N and the Jabbok are nine other perennial streams entering the left bank of the Jordan, and their water-supply explains why all the important settlements were located on the E side of the Ghor, towns such as Succoth, Zaphon, Zaretan, Jabesh-gilead and Pella. With the aid of irrigation, this was probably the view Lot saw 'like the garden of the Lord' (Gn. 13:10). The brook Cherith may well have been a seasonal tributary of the Jabesh farther N, where Elijah, a native of Jabesh-gilead, hid himself from Ahab (1 Ki. 17:1-7). Between Succoth and Zarthan (identified by Glueck as Tell es-Saidiyeh) Solomon had his copper cast in earthen moulds, using local clay and fuel (1 Ki. 7:46; 2 Ch. 4:17). In this section of the valley, there are a number of fords, though the river was not bridged until Roman times. Near the mouth of the Jabbok, both Abraham and Jacob crossed it (Gn. 32:10). Somewhere here, the Midianites crossed pursued by Gideon (Jdg. 7:24; 8:4-5). Twice David crossed it in the rebellion of Absalom (2 Sa. 17:22-24; 19:15-18). But between the Jabbok confluence and the Dead Sea, crossings are more difficult, owing to the swift current. The miraculous crossing of the Israelites appears to have taken place at Adam (modern Tell Dāmiyeh), 26 km N of Jericho (Jos. 3:1-17; 4:1-24; Ps. 114:3, 5).

Between the Jabbok and Beth-nimrah for 26 km (Is. 15:6) there are no streams entering the Jordan, and little settlement. Oasis towns occur near springs, such as Jericho W of the Jordan, and in the plains of Moab (Nu. 20:1) to the E was Shittim, where the spies were sent (Jos. 2:1-7).

JOSEPH.

I. In the Old Testament I. Name

Joseph is a jussive form of the verb *yāsaḇ*, 'to add'; the name *yōsēḇ* means 'may he (God) add (sons)';

JOSEPH

cf. Gn. 30:24. A Palestinian place-name *yšp-ir* (i.e. *y-š-p-El*) in Egyp. topographical lists of the 15th and 14th centuries BC has been compared with Heb. *yōšēp̄*. But the 's'-sounds are different and the two names are almost certainly not related (so W. F. Albright, *JPOS* 8, 1928, p. 249). For the Egyp. *y-š-p-El*, compare biblical place-names such as Iph-tahel (Jos. 19:14, 27).

II. History

a. Background

Joseph was the eleventh son of Jacob, his first by Rachel (Gn. 30:24; 35:24), and his favourite son (Gn. 37:3; cf. 33:2, 7). The story of Joseph is one of the most graphic and attractive in the OT: a spoil boy sold into Egyp. slavery by jealous brothers, who makes good in adversity, and from an unjust imprisonment rises to the highest offices of state. By wise planning he averts the scourge of famine, thereby saving Egypt, Canaan and his own family from starvation. Reconciliation with his brothers follows and the family settles in the pastures of Goshen in the NE Delta. After burying Jacob in Canaan, Joseph commands that his bones too should be carried there when Israel's descendants eventually leave Egypt for the land of promise. The story as told in Genesis cannot be bettered; the following paragraphs will therefore merely present some Egyp. and related background material and deal with some textual points.

b. Date

The most likely date for Joseph is the period of the Hyksos pharaohs, c. 1720–1550 BC (*CHRONOLOGY OF THE OLD TESTAMENT). These were Semitic rulers who had infiltrated from Canaan, but scrupulously observed Egyp. conventions. At first they took over the existing Egyp. bureaucratic administration, but later appointed naturalized Semites to high office. For the historical background, see *EGYPT: History.

c. The 'coat of many colours'

Jacob's partiality for Joseph was marked by the 'coat of many colours' (AV, RV) or 'long robe with sleeves' (cf. RVmg., RSV). Archaeologically either rendering of the Heb. *k'ṭōneṭ passim* is possible. For Semites in multicoloured garb, see *IBA*, p. 29, fig. 25, right, or in colour, E. W. Heaton, *Everyday Life in Old Testament Times*, 1956, dust-jacket; later examples in *IBA*, p. 35, fig. 29, or *ANEP*, p. 17, fig. 52. These same garments, especially the last cited examples, are also of ten long and sleeved. In favour of the meaning 'varicoloured', *passim* has been compared with Assy. *paspasu*, 'brightly coloured bird' and Arabic *fasafisa*, 'mosaic' (Eisler, *Orientalistische Literaturzeitung* 11, 1908, pp. 368–371, and cf. *ibid.*, 14, 1911, p. 509). The rendering 'long robe with sleeves' is attained by taking *pas* as flat of hand or foot, hence *k'ṭōneṭ passim* is a 'tunic of (= reaching to) palms and soles' (*BDB*, p. 821 a). On dreams, see below.

d. Joseph sold into Egypt

The text records that, when Joseph was sent to visit his brothers pasturing the flocks, they at first planned to kill him, but instead put him in a cistern at the suggestion of the more scrupulous Reuben, who secretly hoped to rescue him. After the brothers had sat down to a meal, a caravan of Ishmaelite merchants from Gilead appeared in the

distance; so they quickly decided to rid themselves of Joseph by selling him off. When the caravan came near, 'they'—Joseph's brothers—sold him to the first of the travellers that they met: 'Midianite traders' (Gn. 37:28). When the caravan had passed on, Reuben returned to the pit and was distraught at finding Joseph gone. This directly suggests that Reuben had been absent from the first appearance of the caravan until it (and Joseph) had passed on.

Certain points require comment. Why should Reuben be absent? Of many possible reasons, the simplest is that when the foreign caravan was sighted, Reuben, the most conscientious of the brothers (and true to character), went off to mount guard among the sheep: passing foreigners could not be trusted not to flich a few choice animals. Reuben would have to wait till they had passed. By the time Reuben could safely return, Joseph was sold and gone; they then sent his blood-stained robe to Jacob.

Who sold Joseph into Egypt? In Egypt the Midianites (actually Medanites, see below) sold Joseph to Potiphar (Gn. 37:36), who bought him from the Ishmaelites (Gn. 39:1). The caravan was Ishmaelite, including under this designation Midianites or Medanites; the terms overlap. This interchange of terms is most plainly exhibited by Jdg. 8:24, which explicitly states that the Midianites beaten by Gideon 'had golden earrings, because they were Ishmaelites'. The spelling Medanites in the Heb. of Gn. 37:36 may indicate an overlap of a third term; compare Gn. 25:2 (= 1 Ch. 1:32), where both Medan and Midian are sons of Abraham by Keturah. The use of multiple terms in a narrative is indicative not of disparate documents but of typical Near Eastern stylistic usage. For similar use of three terms within a few lines compare the Egyp. stele of Sebekkhu (c. 1850 BC), who refers to the one general foe of his pharaoh's Palestinian campaign as *Mntyw-Sit*, 'Asiatic bedouin'; as *Rntw hst*, 'vile Syrians'; and as '*mw*', 'Asiatics'. There can be no question of separate documents behind this little stone stele, executed as a unit at one man's volition; such examples could be multiplied.

Who sold Joseph to the caravan? 'They drew' (Gn. 37:28) is at first sight ambiguous, able to refer either to the brothers or to the Midianites. In Gn. 45:4–5 Joseph plainly charges his brothers in private with having sold him into slavery (simple form of the verb), which would refer the 'they' of Gn. 37:28 to his brothers, not the Midianites. This accords with the syntax of Heb. and parallel literatures. In Egypt, a text records that when King Tuthmosis II 'flew to heaven', i.e. died, his son Tuthmosis III ascended the throne and 'his sister' Hatshepsut governed the land. This latter 'his' refers back, not to Tuthmosis III, but to Tuthmosis II (Schott, *Krönungstag d. Königin Hatshepsut*, 1955, p. 197). Note that 'Midianites' in Gn. 37:28 has no article, and can mean either just 'Midianites' (undefined) or else '(some) Midianites', i.e. part of the main body, there being no indefinite article in Heb. Finally, there is Gn. 40:14–15, where Joseph tells the butler that he 'was stolen out of the land of the Hebrews'. Why did he not openly admit that he had been sold into slavery? The reason is perfectly plain. Joseph here desperately pleads his innocence of any offence, seeking to persuade the butler to get him out of prison; it would have wrecked his plea to have revealed the humiliating fact that he had been sold into slavery

by his own blood brothers. With his brothers in private (Gn. 45) Joseph could be frank; but the butler would be bound to think they had had some good reason to rid themselves of him, and Joseph's appeal would be in vain. Joseph therefore said vaguely that he was 'stolen', which was true in so far as his brothers had no right to sell him for gain. This is not a question of harmonization at any price, but of common sense and practical psychology. The truth is that Gn. 37; 39-40; 45 read plainly when put in their proper setting of exact exegesis, Heb. and other Near Eastern syntax and literary usage, and the motivated actions of individuals.

e. Joseph in Egypt

Joseph was but one of many young Semites who became servants in Egypt. households between 1900 and 1600 bc. Papyrus Brooklyn 35.1446, part of a prison-register (see below), bears on its reverse a list of 79 servants in an Egypt. household c. 1740 bc, of whom at least 45 were not Egyptians but 'Asiatics', i.e. Semites like Joseph. Many of these have good NW Semitic names linguistically related to those of Jacob, Issachar, Asher, Job (Ayyabum) and Menahem. Some were 'domestics' (*hry-pr*) just like Joseph in Gn. 39:2 ('in the house'). See Hayes, *A Papyrus of the Late Middle Kingdom*, 1955, and Albright, *JAOS* 74, 1954, pp. 222-233.

There are ample scattered indications of numbers of Asiatics in Egypt at this period, some of whom reached high and trusted positions under their masters (Posener, *Syria* 34, 1957, pp. 145-163), rather like Joseph, who became Potiphar's steward (*imy-r pr*, a common Egypt. title).

Potiphar's title (*šar-hattabbāhim*) 'captain of the guard', i.e. of Pharaoh's bodyguard, would render the Egypt. *šhd-šmsw*, 'Instructor of Retainers'. However, Vergote (*Joseph en Egypte*, 1959, pp. 31-35) has put up a plausible case for interpreting his title as actually 'butler'. For the Egypt. original of Potiphar's name, see *POTIPHAR, *POTIPHERA. Both Potiphar and the 'butler' and 'baker' of Gn. 40 are termed *sāris*, usually rendered 'officer', but in Semitic it often means 'eunuch'. However, eunuchs are not prominent in Egypt, and *sāris* in early times meant generally 'courtier, dignitary' as much as 'eunuch' (though this was the main meaning later). See *JEA* 47, 1961, p. 160.

The incident of Potiphar's covetous wife, who turned the tables on Joseph by asserting the opposite of the truth, is often compared with a very similar incident in the Egypt. *Tales of Two Brothers*. However, there is no other point of contact at all between these two narratives: Joseph's is pure biography, while everything else in the *Two Brothers* is pure fantasy. For a full translation see, e.g. Erman-Blackman, *Literature of the Ancient Egyptians*, 1927, pp. 150-161, as the extracts in *ANET*, pp. 23-25, are abbreviated. More prosaic Egypt. documents reveal that Potiphar's wife was not unique in her sin.

Egypt. prisons served a threefold purpose: as local lock-ups like modern prisons, as forced-labour reserves for state corvée and as centres for remanded prisoners awaiting trial (cf. Joseph). Trials were sometimes conducted in the prisons, whose administration was highly organized, as the Papyrus Brooklyn (Hayes, *op cit.*) vividly shows; each prisoner's record was filed under seven

Joseph was invested with high office by Pharaoh in the traditional Egyptian manner (Gn. 41:42). The ceremony is illustrated by the investiture of Paser as vizier of Sethos I. Drawing after a carving in the tomb of Paser, Thebes, c. 1300 bc.

JOSEPH

separate headings, from initial arrest to completion of the sentence. The 'keeper of the prison' (Gn. 39:21–23, etc.) probably represents the Egyp. title *s'wty n hnt* which has the same meaning.

The 'butler' of Gn. 40 should be rendered *'cup-bearer', Heb. *mašqeh* being the exact equivalent of Egyp. *wḏpw*, later *wb*, 'cup-bearer' (cf. Gn. 40:11, 13). Bakers, too, are well known in Egypt, but chief bakers apparently were not explicitly so called. Perhaps the Egyp. title *sš wḏhw nsw*, 'Royal Table-scribe', is the nearest equivalent. For bread-baskets carried on the head, see *IBA*, p. 33, fig. 28. *Dreams (Gn. 37; 40–41) were considered important also in the non-biblical East. The 'magicians of Egypt' (*hartummim*, an Egyp. word) were familiar figures, and special manuals were used for interpreting dreams. For details, see under *MAGIC AND SORcery, 2. II.

Joseph had to be properly shaved and robed in linen to appear at court (Gn. 41:14). His practical approach to the threat of famine impressed the pharaoh, who invested him with high office in traditional Egyp. manner, bestowing signet, fine linen and gold necklace. Joseph's exact rank is disputed; it seems most probable that he was actually vizier, second only to the pharaoh (so Vergote); but some would make him a minister for agriculture directly responsible to the king in person (Ward, *JSS* 5, 1960, pp. 144–150). The mention of chariots (Gn. 41:43) and horses (Gn. 47:17) fits the Hyksos period and decades immediately preceding, but not earlier. Remains of horses from the period just before the Hyksos have been excavated near Wadi Halfa (Faulkner, *JEA* 45, 1959, pp. 1–2). For the Egyp. names of Joseph and his wife, see *ZAPHENATH-PANEAH and *ASENATH.

Egypt was famed for her great agricultural wealth; cf. reckoning of grain, *IBA*, p. 32, fig. 27. But Egypt also suffered periodic famines; one oft-quoted biographical text reads: 'When famine came for many years, I gave grain to my town in each famine' (Vandier, *La Famine dans l'Égypte ancienne*, 1936, p. 115). The Egyptians would not eat with the Hebrews (Gn. 43:32) for fear of transgressing various ritual taboos on food (Montet, *L'Égypte et la Bible*, 1959, pp. 99–101). It is possible that Gn. 44:5 on divination should be rendered 'is it not from this (= the silver cup) that my lord drinks and concerning which he will assuredly divine?' (cf. Gn. 44:15); for possible cup-divination, see *MAGIC AND SORcery, 2. II.

When pharaoh invited Joseph's family to settle in Egypt (Gn. 45:17–21; 46:5), he sent wagons and told them to leave all, for they would have sufficiency in Egypt. Judging from Egyp. scenes 200 years later, such wagons were probably large, two-wheeled ox-carts. (For an excellent picture and discussion of these, see Aldred, *JNES* 15, 1956, pp. 150–153, pl. 17.) Sinuhe, a fugitive Egyptian in Syria c. 1900 BC, was also told to leave all by the pharaoh who recalled him to Egypt. Different customs again explain an allusion in Gn. 46:34b; by this means Joseph's family could be settled in secluded security in Goshen. Joseph's economic policy in Gn. 47:16–19 simply made Egypt in fact what it always was in theory: the land became pharaoh's property and its inhabitants his tenants. The priests were exempt not from taxation but only from Joseph's one-fifth levy, and the temple estates were separately managed (Gn. 47:22, 26). Gn. 47:21 merely indicates that throughout Egypt

Joseph brought the people of each district into their nearest cities where the granaries were, the better to feed them; the unsavoury emendation in rsv ('he made slaves of them') is unnecessary. Gn. 48–49 reflects purely Asiatic usage within the patriarchal family; such oral blessings as Jacob's were legally binding in W Asia in the first half of the 2nd millennium BC (cf. Gordon, *BA* 3, 1940, p. 8).

f. Death of Joseph

Both Joseph and his father were embalmed in the Egyp. manner (Gn. 50:2–3, 26), and Joseph was 'put in a coffin in Egypt'. Coffins at this period were anthropoid, wooden ones with a conventional portrait-face at the head-end. The period of embalming varied in length; 40 days is one possibility among many. But 70 days' mourning was characteristic. Joseph's age at death, 110 years, is also significant: this was the ideal life-span in Egyp. eyes, and to them would signify divine blessing upon him.

For background, detailed discussion, and full source references, see J. Vergote, *Joseph en Égypte*, 1959; on D. B. Redford, *A Study of the Biblical Story of Joseph*, 1970, see K. A. Kitchen, *Oriens Antiquus* 12, 1973, pp. 233–242.

III. Joseph's descendants

The tribes of Ephraim and Manasseh, descended from Joseph's two sons, were sometimes termed '(the tribe of) Joseph', or house of Joseph; 'sons of Joseph' is common (Nu.; Jos.). So, Joseph is blessed as progenitor of the two future tribes by Jacob (Gn. 49:22–26; cf. Gn. 48), and Moses also blesses 'Joseph', meaning Ephraim and Manasseh (Dt. 33:13, 16). Compare also Nu. 13:11; Dt. 27:12; Jdg. 1:22–23, 35; Ps. 80:1 (poetic); and Ezk. 47:13. K. A. K.

2. In the New Testament

The husband of Mary. He is not mentioned in Mark and the references in Jn. 1:45 and 6:42 are indirect. According to Matthew, he was a descendant of David (Mt. 1:20). It seems that the genealogy in Lk. 3 is not that of Joseph but of Mary (but see *GENEALOGY OF JESUS CHRIST). Luke had already shown that Jesus was not the son of Joseph. Matthew is tracing the legal relationship back to David and Abraham.

Matthew and Luke both record that Jesus was conceived by the Holy Spirit at a time when Joseph was betrothed to Mary, but before he had intercourse with her (Mt. 1:18; Lk. 1:27, 35). Luke records the revelation by an angel to Mary, Matthew that to Joseph. It seems that Matthew drew his information from Joseph (possibly *via* James, the Lord's brother) and that Luke obtained his from Mary.

Joseph acted as a father towards Jesus, taking him to Jerusalem for the purification (Lk. 2:22) and fleeing with him to Egypt to escape Herod. He returned to Nazareth and settled there (Mt. 2). He took the boy Jesus to Jerusalem each year for the Passover (Lk. 2:41). Perhaps his words in Lk. 2:49 indicate that Jesus knew when he was 12 years old that he was not Joseph's son.

It is almost certain that Joseph was not alive during the ministry of Jesus. There is no direct mention of him, and it is hard to explain otherwise the word to John from the cross (Jn. 19:26–27) and the reference to Mary and his brothers seeking

Jesus (Mt. 12:46; Mk. 3:31; Lk. 8:19). It is natural to assume that the brothers of Jesus were sub-sequent children of Joseph and Mary.

Others mentioned in the NT who bear this name are three ancestors of Joseph the husband of Mary (or ancestors of Mary?) (Lk. 3:24, 26, 30); Joseph called Barsabbas, surnamed Justus, the unsuccessful candidate for the apostleship of Judas (Acts 1:23); and one of the brothers of the Lord (Mt. 13:55). It was also the natal name of *Barnabas (Acts 4:36).

R.E.N.

JOSEPH OF ARIMATHEA. A Jew of *Arimathea, 'a good and righteous man, . . . and he was looking for the kingdom of God' (Lk. 23:50–51), 'a disciple of Jesus, but secretly, for fear of the Jews' (Jn. 19:38), and a member of the Sanhedrin who had not voted for Jesus' death. He was rich and, having asked Pilate for Jesus' body, provided fine linen for the burial, laying it in his own, unused, rock tomb (Mt. 27:57–60). (In this Matthew perhaps sees the fulfilment of Is. 53:9.) In a legend which first appears in William of Malmesbury he is sent by Philip from Gaul to Britain in AD 63 and founded the first Christian settlement in this country, afterwards the site of Glastonbury. There is no reference to this story in Gildas and Bede. J. A. Robinson, in his *Two Glastonbury Legends*, 1926, says that the passages are interpolations. A still later legend, probably composed by Walter Map in 1200, tells how Joseph brought the Holy Grail to England.

J.W.M.

JOSEPHUS, FLAVIUS. A Jewish historian, who was born AD 37/38, and died early in the 2nd century. He was the son of a priest named Matthias, of the order of Jehoiarib (1 Ch. 24:7), and claimed kinship with the Hasmonaeans, who belonged to that order. After a brief period of association with the Essenes, and with an ascetic wilderness-dweller named Banus, he joined the party of the Pharisees at the age of 19. On a visit to Rome in AD 63 he was impressed by the power of the empire. He was strongly opposed to the Jewish revolt against Rome in AD 66, and although he was given a command in Galilee in which he manifested considerable energy and ability, he had no confidence in the insurgent cause. After the Roman seizure of the stronghold of Jotapata, which he had defended until further resistance was useless, he escaped with forty others to a cave. When this refuge in turn was about to be stormed the defenders entered into a suicide pact, and Josephus found himself one of the last two survivors. He persuaded his fellow-survivor that they might as well surrender to the Romans, and then he contrived to win the favour of Vespasian, the Roman commander, by predicting his elevation to the imperial purple. This prediction came true in AD 69. Next year Josephus was attached to the Roman general headquarters during the siege of Jerusalem, acting as interpreter for Titus (Vespasian's son and successor in the Palestinian command), when he wished to offer terms to the defenders of the city. After the fall of Jerusalem Josephus went to Rome, where he settled down as a client and pensioner of the emperor, whose family name, Flavius, he adopted.

Not unnaturally, Josephus' behaviour during the war won for him the indelible stigma of treason in

the eyes of his nation. Yet he employed the years of his leisure in Rome in such a way as to establish some claim on their gratitude. These years were devoted to literary activity in which he shows himself to be a true patriot according to his lights, jealous for the good name of his people. His first work was a *History of the Jewish War*, written first in Aramaic for the benefit of Jews in Mesopotamia and then published in a Gk. edition. The account of the outbreak of the war is here preceded by a summary of Jewish history from 168 BC to AD 66. His two books *Against Apion* constitute a defence of his people against the anti-Jewish calumnies of an Alexandrian schoolmaster named Apion; in them, too, he endeavours to show that the Jews can boast a greater antiquity than the Greeks, and in the course of this argument he has preserved for us a number of valuable extracts from ancient writers not otherwise extant. His longest work is his *Jewish Antiquities*, in twenty books, relating the history of his people from earliest times (in fact, he begins his narrative with the creation of the world) down to his own day. This work was completed in AD 93. Finally, he wrote his *Autobiography* largely as a defence of his war record, which had been represented in unflattering terms by another Jewish writer, Justus of Tiberias. It is impossible to reconcile the account of his war activities given in his *Autobiography* with that given earlier in his *History of the Jewish War*.

For the history of the Jews between the reign of Antiochus Epiphanes (175–164 BC) and the war of AD 66–74, and especially for the period beginning with the Roman occupation of 63 BC, the works of Josephus are of incomparable value. He had access to first-rate sources, both published and unpublished: the work of Nicolas of Damascus, historiographer to Herod the Great, supplied a detailed record of that monarch's career; official Roman records were placed at his disposal; he consulted the younger Agrippa (*HEROD, 5) on various details concerning the origin of the Jewish war, and of course could rely on his own immediate knowledge of many phases of it. He can indeed be thoroughly tendentious in his portrayal of personalities and presentation of events, but his 'tendency' is so obvious that the reader can easily detect it and make necessary allowances for it.

The works of Josephus provide indispensable background material for the student of late intertestamental and NT history. In them we meet many figures, both Jewish and Gentile, who are well known to us from the NT. Sometimes his writings supply a direct commentary on NT references, e.g. on the mention of Judas of Galilee in Acts 5:37 and of the *'Egyptian' in Acts 21:38. It is unlikely, however, that his works were known to any NT writer. Of special interest are his references to John the Baptist (*Ant.* 18. 116ff.), to James the Lord's brother (*Ant.* 20. 200), and to our Lord (*Ant.* 18. 63f.)—a passage which, while it has been subjected to some Christian editing, is basically authentic.

BIBLIOGRAPHY. The standard edition of Josephus' works in Greek is that by B. Niese (1887–95). The Loeb edition (1926–65), in Greek and English, begun by H. St J. Thackeray and completed by R. Marcus and L. H. Feldman, comprises 10 volumes. The best-known English translation is that by W. Whiston (1736); revisions by Shilleto (1890) and Margoliouth (1906) are supplanted by the Loeb edition. *The Jewish War*, translated by G. A. Williamson was revised by E.

F.F.B.

JOSHUA, 1. Joshua ben Nun, grandson of Elishama chief of Ephraim (1 Ch. 7:27; Nu. 1:10), was called by his family *hōšea'*, 'salvation', Nu. 13:8 (אֲשֵׁר 'Oshea'); Dt. 32:44 Heb.; this name recurs in the tribe of Ephraim (1 Ch. 27:20; 2 Ki. 17:1; Ho. 1:1). Moses added the divine name, and called him *y'hōšua'*, normally rendered in Eng. 'Joshua'. The Gk. *Iēsous* reflects the Aram. contraction *yešū'* (*cf.* Ne. 3:19, *etc.*).

At the Exodus Joshua was a young man (Ex. 33:11). Moses chose him as personal assistant, and gave him command of a detachment from the as yet unorganized tribes to repel the raiding Amalekites (Ex. 17). As the Ephraimite representative on the reconnaissance from Kadesh (Nu. 13–14) he backed Caleb's recommendation to go ahead with invasion. *Caleb, the senior and leading figure, sometimes is mentioned alone in this connection; but it is unlikely that there was a version of the episode excluding Joshua, or that any later historian denied, or was unaware, that he too escaped the curse on the unbelieving people.

While Moses was alone before God at Sinai, Joshua kept watch; in the Tent of Meeting also he learnt to wait on the Lord; and in the years following, something of Moses' patience and meekness was doubtless added to his valour (Ex. 24:13; 32:17; 33:11; Nu. 11:28). In the plains by the Jordan he was formally consecrated as Moses' successor to the military leadership, co-ordinate with *Eleazar the priest (Nu. 27:18ff.; 34:17; *cf.* Dt. 3 and 31, where Joshua's position is naturally emphasized). He was then probably about 70 years old; Caleb was a remarkably vigorous 85 when he began to occupy the Judaea hills (Jos. 15:13–15).

Joshua occupied and consolidated the area of Gilgal, fought successful campaigns against Canaanite confederacies and directed further operations as long as the united efforts of Israel were required. Settlement of the land depended on tribal initiative; Joshua sought to encourage this by a formal allocation at Shiloh, where the national sanctuary was established. The time had come for him to dissolve his command and set an example by retiring to his land at Timnath-serah in Mt Ephraim. It was perhaps at this time that he called Israel to the national covenant at Shechem (Jos. 24). Ch. 23, his farewell, may refer to the same occasion; but the substance is different, and seems to imply a later period. Joshua died aged 110, and was buried near his home at Timnath-serah.

For *JOSHUA, BOOK OF, see the following article, which also discusses some modern theories of the invasion of Canaan and of Joshua's role.

2. Joshua ben Josedech was high priest of the restoration in 537 bc. Under him the altar was rebuilt and the Temple dedicated. Progress was hindered by opposition, however, until in 520 bc he was strengthened by the prophecies of Haggai and

Zechariah, including a remarkable pattern of justification by the grace of God (Zc. 3). He was named prophetically the 'Branch' (or, 'shoot'; *šemah*, Zc. 6:12). See J. Stafford Wright, *The Building of the Second Temple*, 1958, for a review of the problems in Ezra and Haggai.

3. Joshua of Beth-shemesh, owner of the field to which the ark was brought when the Philistines sent it back to Israel (1 Sa. 6:14). J.P.U.L.

JOSHUA, BOOK OF. The book of Joshua records the invasion of Canaan by Israel and its partition among the tribes. It tells in detail how they crossed the Jordan and secured a bridgehead, describes more briefly two campaigns which broke the power of the Canaanites and summarizes Israel's further military progress. The account of the partition includes a full description of Judahite territory, and notes on the Kenite settlement of Hebron and the difficulties experienced in N Manasseh. After referring to the levitical settlements and the problem of the Transjordanian tribes, the book closes with an account of Joshua's spiritual testament, the climax being the national covenant at Shechem.

I. Outline of contents

a. *The invasion of Canaan* (1:1–11:23)

(i) *Change of command* (1:1–4:24). Commission; reconnaissance; the river crossing.

(ii) *The bridgehead* (5:1–8:35). Gilgal to Ai.

(iii) *Campaign in the south* (9:1–10:43). The Hivite cities; defeat of the Jerusalem confederacy; cities captured.

(iv) *Campaign in the north, and further progress* (11:1–23).

b. *The settlement in Canaan* (12:1–24:33)

(i) *List of defeated enemies* (12:1–24).

(ii) *The early settlements* (13:1–17:18). Unfinished tasks; Transjordan; Caleb; the land of Judah; allotments for Ephraim and Manasseh.

(iii) *Later settlements* (18:1–21:45). Shiloh conference; cities of refuge; levitical towns.

(iv) *The way ahead* (22:1–24:33). The Witness Altar; Joshua's charge; the covenant at Shechem.

II. Composition and purpose

In the Heb. Bible, Jos. heads the 'Former Prophets', which cover Israelite history from the invasion to the Exile. In immediate and natural sequence to Dt., the book extends from Joshua's assumption of command to his passing and the death of Eleazar. Chs. 1–11 form a continuous narrative, though the treatment is progressively more summary, ending with a general evaluation of Joshua's achievement (11:15–23). In whatever form the author found his material, he has made of it a story of the highest dramatic quality, alike in treatment of the subject and in narrative technique. This is no mere editing of pre-existing work; but much is omitted or generalized to get the broad picture, in due proportions, into a limited space.

A climax is reached at the end of ch. 11, but the story is not finished. The book is about Joshua's work, and about the fulfilment of God's promises in that Israel was in possession of the land 'which I swore to their fathers to give them' (1:6, *cf.* 23:14; 24:13). For both purposes it must give an account of the settlement, and show the position of

Joshua	Numbers	Dt.	Subject	Notes
1:1-9		31	Joshua commissioned	Especially Dt. 31:6, 7f., 12b, 23.
1:3-4		11:24	Extent of promises	Slight differences in phrasing.
1:12-15	32	3:18f.	Eastern tribes	Phrasing echoes Dt., with variations.
8:30-35		11:29-32; 27	Reading the Law at Shechem	Jos. abbreviates, but also mentions ark and foreigners.
12:1-16	21:21-35	2:26-3:17; 4:45-49	Conquests in Transjordan	Dt. 3:1f. = Nu. 21:33f.; Jos. phrases occur in various places in Dt.
13:6-7	34:13, 17		'divide this land'	Verbs differ.
13:8-12, 15-31	32:33-42	2:36, 3:8ff.	Settlement in Transjordan	Distinctive description of Aroer in Jos. and Dt.
13:14, 33	18:24	14:27	No territory for Levi	<i>Cf.</i> Dt. 18:1f.
14:1	34:17		Joshua and Eleazar	<i>Cf.</i> Jos. 19:51.
14:6ff.	14:24	1:28-36	Caleb's inheritance	
15:1-4	34:3-5		South frontier	'Your', Jos. 15:4; as Nu. 34:3.
17:3-6	27:1-11		Women's inheritance	
18:4-10	34:13-29		Commission for the partition	10 supervisors nominated in Nu., 21 scribes in Jos.
20	35:9-29	19:1-13	Sanctuary towns	Joshua expands on acceptance procedure, but is otherwise brief.
20		4:41-43	Transjordan towns	
21	35:2-8		Levitical towns	
23:3		1:30	'God fights for you'	<i>Cf.</i> Ex. 14:14.
23:6		5:32	'turn not...'	
23:8		10:20 <i>etc.</i>	'cleave to him'	v. 7 'make mention' <i>cf.</i> Ex. 23:13.
23:13	33:55		'thorns in your side'	<i>s^eninim</i> only here.

Passages in Numbers and Deuteronomy recalled in Joshua.

strength in which Joshua left the nation. In this part there is much use of sources, some of which reappear elsewhere (Nu., Jdg., Ch.). The author keeps firm control of his material, editing heavily in places (e.g. ch. 20, and probably in most of the boundary lists). Joshua's 'farewell to the nation' is recorded in ch. 23; but from the prophetic viewpoint his work was really crowned by the Shechem Covenant, though this may have been much earlier (24:28; RSV 'then', v. 1, is intrusive).

III. Authorship, sources, date

Dt. echoes strongly in Jos., both in its purpose and its language. There is also much (especially in the

second part) of quite another stamp. It was therefore natural that Pentateuchal source-analysis was projected into Jos., and the concept of a 'Hexateuch' has been promoted. The theory has been largely unsuccessful because (a) insecure criteria have bred disagreement and increasing confusion in the analysis; (b) the 'priestly source' (P) is especially difficult to identify, and Jos. raises in an acute form the disputed question whether such a source was ever an independent narrative (see C. R. North, *The Old Testament and Modern Study*, 1951); (c) in its general form and concept, Jos. is much more one of the Former Prophets than part of the Law.

JOSHUA, BOOK OF

A fresh approach was made by M. Noth, stressing the importance of traditions and trying to see how they were developed. Noth concluded that an author belonging to a 'deuteronomistic school' had edited old compilations of sanctuary traditions and settlement records to form the 'Joshua' part of a complete deuteronomistic history, subsequently retouched by P. This lead has been widely taken, and is accepted in the main by Gray and Soggin (latest commentaries in English). Implications for dating depend on the view taken of Dt. itself. The term 'deuteronomistic' becomes assimilated to 'prophetic', and the theory fails to explain why there is so little 'deuteronomistic style' in Jdg. (cf. S. R. Driver, *LOT* ⁹, pp. 112, 126ff.; C. F. Burney, *Judges*, 1920, pp. xliif.).

Noth emphasized the extent of aetiology (stories explaining names and monuments) in the traditions, and took an extremely sceptical view of its value (criticized by J. Bright, *Early Israel in Recent History Writing*, 1956). Others have explored the role of religious festivals in tradition-history, but the reconstructions are largely speculative.

IV. Historical evaluation

The account of the invasion has often been criticized as 'unrealistic', presenting a 'total reduction' of Canaan in contrast to the 'more sober account' in Jdg. 1 (Gray, p. 43). This assessment misinterprets both books. Jos. does not say that all was over in two campaigns (11:18), and it preserves hints of trouble (15:63; 17:12-18) which could easily have been omitted; but it is primarily concerned with the great measure of success in the invasion, and with the reasons for it. On the other hand, Jdg. 1 is not an account of the invasion; it highlights the beginnings of failure, but the whole book would be pointless if there had not been great success.

Many scholars have imagined an invasion by independent tribes (see H. H. Rowley, *From Joseph to Joshua*, 1948). Noth went so far as to claim that Israel was formed in Canaan as an 'amphictyony' (holy alliance, on the Gk. analogy); cf. Bright, *op. cit.*, pp. 83ff., for criticism; and B. D. Rathjen, *JNES* 24, 1965, pp. 100-104. Archaeological evidence is still very incomplete, and its interpretation often uncertain, but there is enough proof of the destruction of Canaanite society (e.g. Hazor, Tell Beit Mirsim) to demand that the invasion be taken seriously. Theories of a piecemeal invasion must restrict Joshua's role to that of a local leader, or at most an arbitrator (Soggin, pp. 14-18). The ground of such theories lies not so much in any analysis of Joshua-Judges as in the devaluation of Moses' work.

The crux of the biblical account is that the 'Sinai tradition' is the authentic tap-root of Israel's faith and hence of her political being (see Jos. 24). G. E. Mendenhall (*BA* 25, 1962, pp. 66-87) sees it as precipitating a liberation movement in Canaan, but he overstates the case. Biblical evidence of the absorption of non-Israelite elements into the tribal system presupposes the system itself, based ultimately on kinship.

V. Spiritual content

The importance of Joshua for Christians lies chiefly in that it (a) shows God's faithfulness to his covenant (cf. Dt. 7:7; 9:5f.); (b) records the development of his purpose for the nation; (c) gives reasons for a failure, already foreshadowed (17:13; 18:3), to carry out the divine plan; (d) provides

analogies for discipleship, since the spiritual issues of faith, obedience and purity were clearly at stake in the invasion.

Israel under Joshua showed better morale than their fathers, but were no less susceptible to polytheism and nature-religion (Nu. 25; Dt. 4:3, 23). Determination to extirpate the Canaanites and their religion was therefore of prime importance (cf. Gn. 15:16; Ex. 20:2-6; 23:23-33; 34:10-17; Nu. 31:15ff.; Dt. 7). The Israelites could not understand or give effect to a redemptive approach, while daily contact with Canaanite culture would jeopardize their own faith in a unique, all-powerful God, as well as their moral standards, as the sequel showed. Moreover, salvation by grace could not be generally offered (as under the NT) before its necessary judicial ground had been publicly set out in Christ's death; but we see a pattern of it in God's dealing with Rahab (cf. Heb. 11:31). God's purpose at the time was not to teach Christianity, but to prepare the way for Christ through Israel.

The experiences of Israel in Canaan, as in the deserts, were 'written for our admonition' (1 Cor. 10:11). The chief theme of the book is that God gave Israel rest, which their unbelieving fathers had failed to obtain (Ps. 95:11). In Heb. 4:1-11 it is shown that this is a 'type'; the principle, which the Psalmist applied in his own generation, is equally valid for the Christian, while the promise is completely fulfilled (v. 8) only in the rest which God has provided for us in Christ (cf. J. N. Darby, *Synopsis*, 1, p. 328). If this is the primary application of the invasion story, there is also much to be learnt from the successes and failures, and from Joshua's leadership.

VI. Text and translations

Apart from topographical problems, the Heb. text contains few obscurities. The LXX maintains an average standard; its Heb. original does not appear materially different from the MT.

JOSIAH (Heb. *yōšiyāhū*, 2 as *yōšiyā*, 'May Yahweh give'). I. The 17th king of Judah. As son of Amon and grandson of Manasseh, the 'people of the land' enthroned him at the age of 8 upon the assassination of his father. He reigned for 31 years (c. 640-609 BC; 2 Ki. 21:24-25:1; 2 Ch. 33:25-34:1).

Assyria, while still Judah's overlord, was weak enough for the vassal to take cautious steps towards freedom. In 632/2 BC, Josiah, in turning back to Yahweh (2 Ch. 34:32), was turning away from an imposed dependence on Assyria and its gods. By 629/8 BC, Ashurbanipal being aged, Josiah was able to free the country of Assyrian as well as residual native cultic practices (2 Ch. 34:3b-5). Not only was this carried out in Judah, which Josiah must have taken from the control of the weakening Assyrians, but also extended into Israel (2 Ch. 34:6-7). This period of religious reform and political emancipation also produced the great prophet Jeremiah a year later (Je. 1:2).

In 622/1 BC. the 'book of the law' was found during the course of Temple repairs (2 Ki. 22:8–10; 2 Ch. 34:8–18). It is commonly accepted that this scroll was, or contained, the book of Deuteronomy, although this is not proven. This collection of ancient law, fanning the already burning feeling of nationalism, led to further political and religious reform. On the basis of this book, Josiah obliterated pagan worship (2 Ki. 23:4–14), including the false priests (*K'mārīm*, Akk. *kumru*; 2 Ki. 23:5) and the altar at Bethel (2 Ki. 23:15; cf. 1 Ki. 13:2). He and the people made a new covenant with Yahweh (2 Ki. 23:1–3; 2 Ch. 34:29–33) which would make this book the law of the land. He also celebrated the Passover in such a grand style as had not been seen since the days of Samuel (2 Ki. 23:21–23; 2 Ch. 35:1–19).

In 609 BC, *Neco II of Egypt went from the Egypt. outpost in Megiddo to Harran in aid of the Assyrians (A. K. Grayson, *Assyrian and Babylonian Chronicles*, 1975, p. 96, ll. 66–69), whose king had been driven out of his capital by Babylonia and the Medes. Seeing Egypt as a threat to his own kingdom, in spite of Neco's denial, Josiah met him in Esdraelon, and was severely wounded, dying in Jerusalem (2 Ki. 23:29–30; 2 Ch. 35:20–24).

2. An Israelite during the time of Zechariah who had not been exiled to Babylon (Zc. 6:10).

BIBLIOGRAPHY: A. Malamat, *Journal of the Ancient Near Eastern Society of Columbia University* 5, 1973, pp. 167–179; John McKay, *Religion in Judah under the Assyrians*, 1973, pp. 28–44; H. G. M. Williamson, *VT* 32, 1982, pp. 242–248; 37, 1987, pp. 9–15. D.W.B.

JOT AND TITTLE. In Mt. 5:18 (AV) 'jot' is a transliteration of *iōta* (RSV), the name of the Gk. *i*; here, however, it stands for the corresponding Heb. *yōd*, the smallest letter of the alphabet, the use of

Left: the smallest letter in the Hebrew alphabet, *y* (Heb. *yōd*, AV 'jot'). Centre and right: the letters *r* (Heb. *rēš*) and *d* (Heb. *dālet*), distinguished from each other by the addition of a 'tittle' to the latter. Hebrew script of the 1st cent. AD.

which is frequently optional. 'Tittle' is a variant spelling for 'title', which in older Eng. meant a stroke above an abridged word, and then any minor stroke. Here and in Lk. 16:17 it represents *keraiā*, meaning a horn, and refers to the minor strokes which distinguish one letter from another, e.g. in Heb. *bēṭ* and *kaḇ*, *dāleṭ* and *rēš*. H.L.E.

JOTBAH. Birthplace of Manasseh's wife (2 Ki. 21:19). Conquered by Tiglath-pileser III (ANET, p. 283). Called Jotapata during the Roman period

(Jos., *BJ* 2. 573). Tentatively identified with Khirbet Jefat (W. F. Albright, *JBL* 58, 1939, pp. 184f.), c. 20 km E of Sea of Galilee. D.W.B.

JOTBATHAH. A stopping-place in the Israelites' wilderness wanderings (Nu. 33:33–34; Dt. 10:7). Described in Dt. as 'a land of brooks of water', it is identified with either 'Ain Ṭābah in the Arabah N of Elath or perhaps more accurately with Ṭabeh, about 11 km S of Elath on the W shore of the Gulf of Aqabah (LOB, p. 183). w.o.

JOTHAM (Heb. *yōṭām*, 'Yahweh is perfect'). 1. The youngest of the 70 legitimate sons of Jerubbaal (Gideon), and sole survivor of Abimelech's massacre of the other brothers. Through the parable of the trees selecting the bramble to be their king (an honour previously declined by the cedar, the olive and the vine), Jotham warned the Shechemites against Abimelech (Jdg. 9:5ff.). The warning was ignored, and the curse that he uttered was fulfilled 3 years later (v. 57).

2. Son of Uzziah (Mt. 1:9), and 12th king of Judah. He began his reign as co-regent c. 750 BC when his father was found to be a leper (2 Ki. 15:5), and was sole monarch c. 740–c. 732 BC (*CHRONOLOGY OF THE OLD TESTAMENT). A man who feared God, Jotham built the high gate of the Temple, fortified and extended the land of Judah and subdued the Ammonites (2 Ch. 27:3–6). 3. A son of Jahdai and descendant from Caleb (1 Ch. 2:47). J.D.D.

JOY. The biblical words are: Heb. *šimhā*, verb *šāmēah*, which imply also its outward expression (cf. the Arab. cognate, meaning 'to be excited'), and less usually *gil* (verb and noun); Gk. *chara* (verb *chairō*), and *agalliasis* (frequently used in LXX, and corresponding to *šimhā*), meaning intense joy.

In both OT and NT joy is consistently the mark both individually of the believer and corporately of the church. It is a quality, and not simply an emotion, grounded upon God himself and indeed derived from him (Ps. 16:11; Phil. 4:4; Rom. 15:13), which characterizes the Christian's life on earth (1 Pet. 1:8), and also anticipates eschatologically the joy of being with Christ for ever in the kingdom of heaven (cf. Rev. 19:7).

I. In the Old Testament

Joy is related to the total national and religious life of Israel, and is particularly expressed in terms of noisy, tumultuous excitement at festivals, sacrifices and enthronements (Dt. 12:6f.; 1 Sa. 18:6; 1 Ki. 1:39f.). Spontaneous joy is a prevailing feature of the Psalter, where it is a mark both of corporate worship (largely centred on the Temple, Pss. 42:4; 81:1–3) and of personal adoration (Pss. 16:8f.; 43:4). Isaiah conceives of joy in other than simply ritual terms (cf. Ps. 126), and he associates it with the fullness of God's salvation, and therefore (in terms of a cosmic rejoicing) with the anticipation of a future state (Is. 49:13; 61:10f.). In later Judaism, as a result, joy is a characteristic of the last days.

II. In the New Testament

The Synoptic Gospels record the note of joy in connection with the proclamation, in its varied forms, of the good news of the kingdom: for example, at

the Saviour's birth (Lk. 2:10), at the triumphal entry (Mk. 11:9f.; Lk. 19:37), and after the resurrection (Mt. 28:8). In the Fourth Gospel it is Jesus himself who communicates this joy (Jn. 15:11; 16:24), and it now becomes the result of a deep fellowship between the church and himself (*cf.* 16:22).

In Acts joy marks the life of the early church. It accompanies the gift of the Holy Spirit to the disciples (Acts 13:52), the miracles performed in the name of Christ (8:8), and the fact and report of the conversion of the Gentiles (15:3); it also characterizes the eucharistic meal (2:46).

Paul uses the term *chara* in three ways. First, progress in the faith on the part of the members of the body of Christ, and particularly those he has led to Christ, is a cause for joy—he describes them, indeed, as *hē chara hēmōin*, ‘our joy’ (1 Thes. 2:19f.; *cf.* Phil. 2:2). Secondly, Christian joy may paradoxically be the outcome of suffering and even sorrow for Christ's sake (Col. 1:24; 2 Cor. 6:10; *cf.* 1 Pet. 4:13; Heb. 10:34, *etc.*), since it is produced by the Lord and not by ourselves. Joy is in fact, finally, a gift of the Holy Spirit (Gal. 5:22), and is therefore something dynamic and not static. Moreover, it derives from love—God's and ours—and is therefore closely associated with love in Paul's list of the fruit of the Spirit. But since it is a gift which may be interrupted by sin, every believer is called upon to share in the joy of Christ by a daily walk with him and a daily practice of rejoicing in the knowledge of him and his salvation (1 Thes. 5:16; Phil. 3:1; 4:4; 1 Pet. 1:8).

BIBLIOGRAPHY. The standard work on the subject is E. G. Gulin, *Die Freude im Neuen Testament*, 1932; see also J. Moffatt, *Grace in the New Testament*, 1931, p. 168, for the relation between *chara* and *charis*; E. Beyreuther, G. Finkenrath, *NIDNTT* 2, pp. 352–361; *TDNT* 1, pp. 19–21; 2, pp. 772–775; 9, pp. 359–372. s.s.s.

JOZACHAR (Heb. *yōzākār*, ‘Yahweh has remembered’). A servant of Joash who took part in his assassination (2 Ki. 12:21–22) but was subsequently executed by Amaziah (2 Ki. 14:5). Some MSS read ‘Jozabad’ in 2 Ki. 12:22, abbreviated to ‘Zabad’ in 2 Ch. 24:26, by confusion with the similar name of the other assassin, Jehozabad.

JUBAL. A son of Adah, wife of Lamech, and ancestor of those who ‘handle the harp (*kinnôr*) and pipe (*‘ūgāb*)’ (Gn. 4:21). (*MUSIC AND MUSICAL INSTRUMENTS.) T.C.M.

JUBILEES, BOOK OF. A Jewish intertestamental work, extant completely only in Ethiopic and partly in Latin, though fragments in the original Heb. have now been found at Qumran. It was probably written in the late 2nd century BC in (proto-) Essene circles shortly before the Qumran sect came into existence. It was popular at Qumran, where its special legal precepts and calendar were observed. (It is cited by name in CD 16. 13f.)

Jubilees is a midrash or legendary rewriting of Genesis and the early chapters of Exodus. It gives the biblical history a detailed chronology, calculated in jubilee periods of 49 years, each divided into 7 weeks of years, each year a solar year of 364 days. The revelation at Sinai occurs in the 50th jubilee since the Creation. (Several texts from Qumran employ jubilee periods in historical and eschatological speculation.)

Jubilees supplements the biblical narrative with legends about the Patriarchs, passages of eschatological prophecy and legal material endorsing a strict sectarian interpretation of the Law. In opposition to hellenizing influences, the author glorifies the Law as distinguishing Israel from the Gentiles. The solar calendar has the same effect of setting Israel apart from the Gentiles, and faithful Israel from apostate Israel: only this calendar ensures the observance of the festivals on the correct dates.

The *Jubilees* *calendar derives from 1 Enoch and was observed at Qumran. A day of the month falls on the same day of the week every year; e.g. New Year's day always falls on a Wednesday. Some scholars have suggested, as a solution to the problem of the date of the Last Supper, that Jesus celebrated the Passover according to this calendar, i.e. on a Tuesday evening.

JUDAEA. The Gk. and Rom. designation of the land of *Judah. The word is actually an adjective

('Jewish') with *gē* ('land') or *chōra* ('country') understood. After the Roman conquest (63 BC) it appears both in a wider sense, denoting all Palestine, including Galilee and Samaria, and in the narrower sense, which excludes these two regions. Herod's kingdom of Judaea (37–4 BC) included all Palestine and some districts E of the Jordan. Archelaus' ethnarchy of Judaea (4 BC–AD 6) embraced Judaea in the narrower sense and Samaria, and the same is true of the Rom. province of Judaea from AD 6 to 41. After the death of Herod Agrippa I in AD 44 the Rom. province of Judaea included Galilee also. (*ISRAEL.)

The 'wilderness of Judaea' (Mt. 3:1), associated with John the Baptist, is probably identical with the 'wilderness of Judah' (Jdg. 1:16, *etc.*), *i.e.* the desert to the W of the Dead Sea. J.D.D.

JUDAH.

I. The son of Jacob

The 4th son of Jacob by Leah (Gn. 29:35) was called Judah (*y'hiūdā*), the name is there explained as meaning 'praised', as derived from the root *ydh*, 'to praise'. Gn. 49:8 contains a play on this meaning. The derivation is widely rejected, but no other suggested etymology has been generally accepted (for literature, see *KB*). Judah early took a leading role among his brothers, as is shown by the story of Joseph (Gn. 37:26–27; 43:3–10; 44:16–34; 46:28). Gn. 38, though throwing light on the beginnings of the tribe of Judah, clearly stands in its present position to contrast Judah's character with that of Joseph. Though Gn. 49:8–12 is not strictly a promise to Judah of kingship, but rather of leadership, victory and tribal stability, the promise of *Shiloh involves kingship ultimately. The genealogies of Judah's descendants are found in 1 Ch. 2–4.

II. Other individuals of the same name

After the Babylonian Exile Judah became increasingly one of the favourite names among the Jews. Five men of this name are mentioned in the OT, *viz.* a Levite, ancestor of Kadmiel (Ezr. 3:9), possibly the father or son of Hodaviah (Ezr. 2:40); a Levite of the return under Zerubbabel (Ne. 12:8); a levitical contemporary of Ezra (Ezr. 10:23); a leading Benjaminite under Nehemiah (Ne. 11:9); a priest under Nehemiah (Ne. 12:36). In Ne. 12:34 probably members of the tribe in general are meant by 'Judah'. In the NT the name is represented by its Hellenized form *Judas (shortened to Jude in Jude 1).

III. The tribe of Judah

a. From the Exodus till Saul

Judah plays no special role in the story of the Exodus and of the wilderness wanderings, though it is to be noted that he was the leader of the vanguard (Nu. 2:9). There is no significant change in the two census figures from this period (Nu. 1:27; 26:22).

Achan, a member of the tribe, was the cause of the defeat of Israel before Ai (Jos. 7). This may be the reason for the special task laid on Judah to lead an independent attack on the Canaanites (Jdg. 1:1–2). No explanation is given, but it is clear that Judah's portion was allocated not by lot in Shiloh (Jos. 18:1–10) but before its conquest (Jdg. 1:3); *cf.* the similar treatment of Ephraim and half Man-

asseh (Jos. 16–17). It was bounded on the N by the portions of Dan and Benjamin, and ran approximately E and W from the N end of the Dead Sea, S of Jerusalem and the Gibeonite tetrapolis to the Mediterranean. Its W and E frontiers were the Mediterranean and the Dead Sea, and it extended S as far as cultivation permitted (*cf.* Jos. 15).

Judah first overran most of the coastal plain, soon to be occupied by the Philistines (Jdg. 1:18), but evidently quickly withdrew from the struggle (Jdg. 1:19; 3:3; Jos. 11:22; 13:2–3). Since it was the best of the land apportioned to him that Judah voluntarily abandoned to Simeon (Jos. 19:1, 9), it is reasonable to suppose that he hoped to have Simeon as a buffer between him and the unconquered coastal plain.

The story of the conquest of the S in Jdg. 1:1–17 has been very widely interpreted to mean that Judah (and other tribes) entered the land from the S *before* the invasion under Joshua (*cf.* H. H. Rowley, *From Joseph to Joshua*, 1950, pp. 4f., 101f., 110ff., with literature), but the whole trend of modern archaeological discovery seems to be unfavourable to the theory, which is unacceptable on other, general grounds.

The failure to maintain a hold on Jerusalem (Jdg. 1:8, 21), combined with the existence of the semi-independent Gibeonite tetrapolis (Jos. 9; 2 Sa. 21:1–2), created a psychological frontier between Judah and the central tribes. Though there was no barrier to communications (*cf.* Jdg. 19:10–13), Judah will increasingly have looked S to Hebron rather than to the sanctuary at Shiloh. While Judah provided the first of the judges, Othniel (Jdg. 3:9–11), and shared in the early action against Benjamin (Jdg. 20:18), he does not seem even to have been expected to join against Jabin and Sisera (Jdg. 5). As a result, when Judah became tributary to the Philistines (Jdg. 15:11), he appears not to have appealed to the other tribes, nor do they seem to have been concerned.

The fact of this division seems to have been generally recognized, for by Saul's time we find the contingent from Judah separately enumerated (1 Sa. 11:8; 15:4; 17:52; 18:16).

b. Under David and Solomon

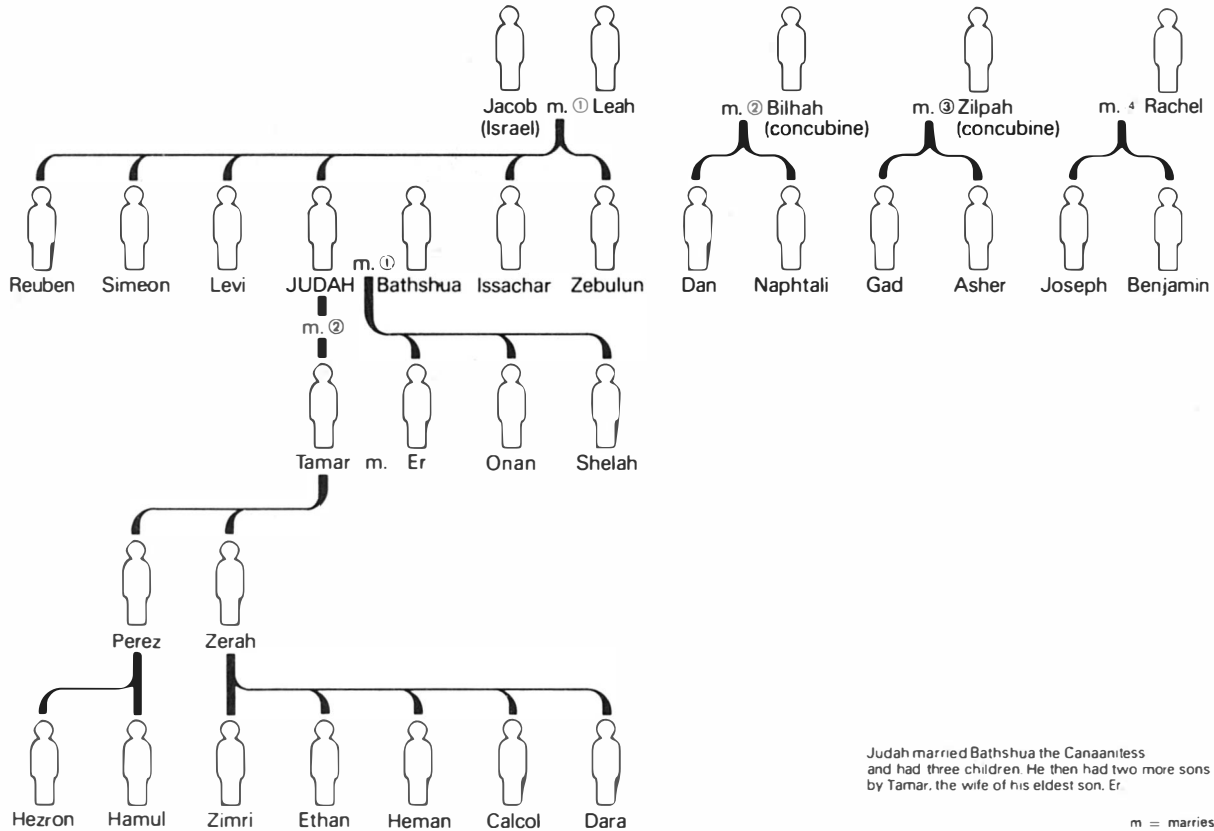

After Saul's death this growing split was perpetuated by David's being crowned as king in Hebron over Judah (2 Sa. 2:4). A. Alt is probably correct in maintaining ('The Formation of the Israelite State in Palestine', in *Essays on Old Testament History and Religion*, 1966, pp. 216ff.) that the crowning of David as king over 'all Israel' (2 Sa. 5:1–5) made him king of a dual kingdom in which Judah kept its separate identity. Certainly during Absalom's rebellion Judah seems to have maintained its neutrality, while the N followed the rebel.

There is no evidence that Solomon showed any favouritism to Judah compared with the other tribes, for 'and one officer, which was in the land' (1 Ki. 4:19, *rvmg.*) will refer to Judah (*rsv*).

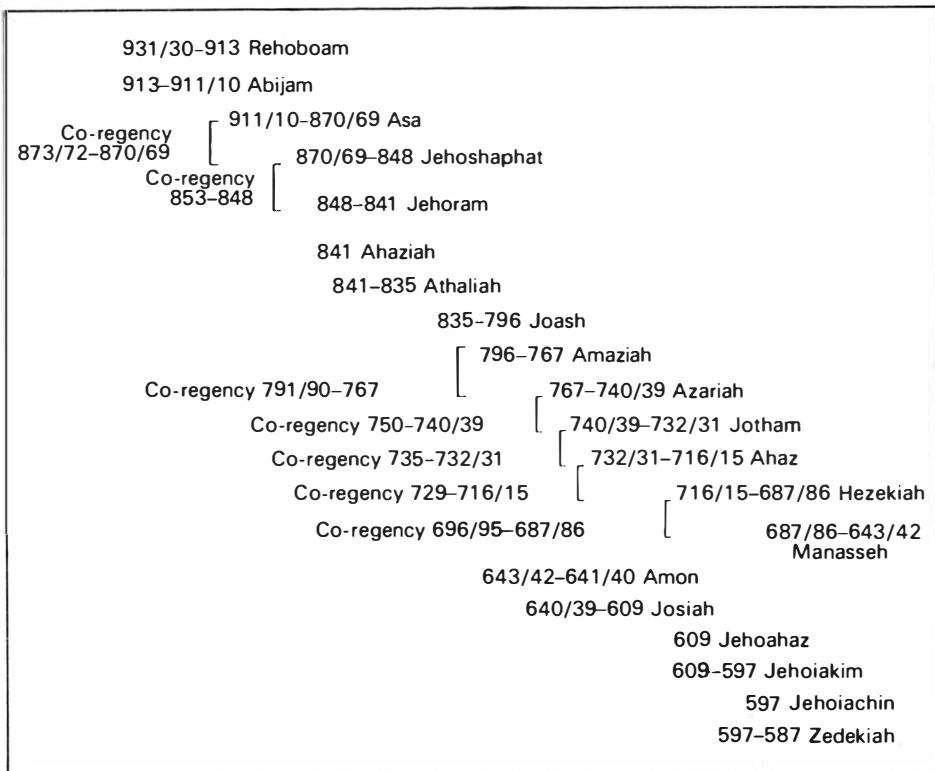

IV. The kingdom of Judah

a. Its relations with Israel

If A. Alt's view is correct, Judah and Israel in accepting different kings were acting in accordance with their rights as separate political entities. Apart from Jeroboam himself, the kings of Israel do not seem to have sought the destruction of Judah (*cf.* 2 Ki. 14:13–14), and the prophets never questioned

Judah's family tree according to 1 Ch. 2:3-6

Dates of the kings of Judah.

the right of Israel to exist, though they foresaw the time when it would return to its allegiance to 'David'.

The heritage of Solomon's riches seemed to give Judah the advantage at the disruption, despite its less fertile land and smaller population compared with the N. In spite of claims to the contrary, there is no evidence that Rehoboam later disregarded the command of Shemaiah (1 Ki. 12:22-24) and attacked Jeroboam. The suggestion that Shishak's attack on Judah (1 Ki. 14:25-26) was in support of his ally Jeroboam lacks positive evidence in its support. The resultant loss of the wealth Solomon had amassed, even though Israel seems to have suffered from Shishak's attack as well, meant that Judah now stood permanently in a position of material inferiority compared with Israel. The evidence suggests that Judah needed a prosperous Israel for its own prosperity.

One effective test of the absolute, rather than relative, prosperity of Judah was its ability to control Edom, or as much of it as was necessary for the safeguarding of the trade-route to the Gulf of Aqabah. Rehoboam made no effort to maintain his father's precarious hold on the area. Jehoshaphat evidently completely subdued the country (1 Ki. 22:47), but later he had to install a vassal king (2 Ki. 3:9). Edom regained its independence under his son Jehoram (2 Ki. 8:20-22). Amaziah, about half a century later, reconquered Edom (2 Ki. 14:7). This time the conquest was more effective, and not until the troubles of Ahaz' reign 60 years later was Edom finally able to free itself (2 Ki. 16:6). After this Judah

does not seem even to have attempted conquest.

It was only a decisive victory by Abijah (or Abijam) that restored a measure of parity between the kingdoms (2 Ch. 13). Asa, faced with the capable Baasha, could maintain it only by allying himself with Ben-hadad, king of Damascus (1 Ki. 15:18-20). The dynasty of Omri, disturbed both by the increasing power of Damascus, and even more by the threat from Assyria, made peace with Judah, which was later sealed by the marriage of Athaliah, Ahab's daughter, or perhaps sister (2 Ki. 8:26), with Jehoram. It is widely held that at this time Judah was Israel's vassal. So far from this being true, the evidence suggests that Jehoshaphat used Israel as a buffer between him and Assyria. This is the most likely explanation why Judah does not figure on Shalmaneser's list of his enemies at the battle of Qarqar, nor for that matter on the 'Black Obelisk'. He seems to have looked on, with the sole exception of the battle of Ramoth-gilead (1 Ki. 22:1-38), while Israel and Damascus tore at one another's vitals. Hence, by the end of his long reign, he felt himself strong enough to refuse Ahaziah's request for a joint venture to Ophir after the first had failed (1 Ki. 22:48-49 compared with 2 Ch. 20:35-37). The relative equality between the kingdoms at this time is seen in the fact that Jehu, though he had killed Ahaziah of Judah (2 Ki. 9:27), did not venture to carry his anti-Baal campaign into Judah, nor, on the other hand, did Athaliah try to avenge her son's death.

In the century between the accession of Jehu and the deaths of Jeroboam II and Uzziah the

JUDAH

fortunes of Judah seem to have kept pace with those of Israel both in affliction and prosperity. Probably the latter came more slowly to the S, even as the hollowness of its prosperity was revealed somewhat later than in Israel.

b. Earlier foreign enemies

Until the collapse of Israel the history of Judah is singularly uninfluenced by foreign threats. Shishak's invasion was a last stirring of Egypt's ancient power until the Assy. advance forced it to measures of self-defence. The Philistines had been so weakened that we find them as aggressors only when Judah was weakest, viz. under Jehoram (2 Ch. 21:16) and Ahaz (2 Ch. 28:18). At the height of Hazael's power, when he had almost destroyed Israel, Jehoash was forced to become tributary to Damascus, but this cannot have lasted long. In fact, the only two major threats of this period were from those sudden movements that the nomads and semi-nomads of the desert have periodically thrown up. Zerah 'the Cushite' (2 Ch. 14:9) is more likely to have been an Arabian (*cf.* Gn. 10:7) than an Ethiopian, *i.e.* a Sudanese. The second was from a sudden movement of the inhabitants of the Transjordan steppe-land (2 Ch. 20:1, 10).

c. Judah and Assyria

As stated above, the earlier advances of Assyria do not seem to have affected Judah. When Damascus and Israel attacked Ahaz (2 Ki. 16:5), it was a last desperate attempt to unite the remnants of the West against the advance of Tiglath-pileser III. There are no grounds for thinking that Judah was threatened by the Assyrians, for until they wanted to challenge Egypt they would hardly alarm it by advancing prematurely to its desert frontier. By accepting the suzerainty of Assyria Ahaz virtually sealed the fate of Judah. On the one hand, it remained a vassal until the approaching doom of Assyria (612 BC) could be foreseen; on the other, it was caught up in the intrigues stirred up by Egypt, for which it duly suffered. Hezekiah's revolt in 705 BC, crushed by Sennacherib 4 years later, reduced Judah to a shadow of its former self, at least two-thirds of the population perishing or being carried away captive, and a large portion of its territory being lost. For details, see J. Bright, *A History of Israel*², 1972, pp. 282–286, 296–308; *DOTT*, pp. 64–70.

d. Revival and downfall

A revival of religious and nationalistic feeling under the young Josiah began just after Ashurbanipal's death (631 BC), when the weakness of Assyria was already becoming manifest. The steps in reform indicated in 2 Ch. 34:3, 8 suggest how closely interwoven religion and politics had become, for each step was in itself also a rejection of Assy. religious and therefore political control. By the height of the reform in 621 BC Josiah, though probably still nominally tributary to Assyria, was in fact independent. With or without the approval of his nominal overlord he took over the Assy. provinces of Samaria and E Galilee (2 Ch. 34:6) and doubtless recovered the territory that Hezekiah had lost as a punishment for his rebellion. There is no reliable evidence that the Scythian inroad, which did so much to give Assyria its mortal wound, affected or even reached Judah.

There is no indication that Josiah offered any opposition to Pharaoh Psammetichus' expedition

in aid of Assyria in 616 BC, but when Pharaoh Neco repeated the expedition in 609 BC Josiah evidently felt that in the new international position his only chance of maintaining Judah's independence was to fight, but in the ensuing battle at Megiddo he met his death. There is no evidence for the suggestion that he was acting in alliance with the rising star of *Babylon, though the possibility must not be rejected.

Egypt marked its victory by deposing Josiah's son Jehoahaz and replacing him by his brother Jehoiakim, who had, however, to accept Babylonian overlordship soon after Nebuchadrezzar's victory at Carchemish (605 BC) (Dn. 1:1; 2 Ki. 24:1). In 601 BC Nebuchadrezzar was checked by Neco in a battle near the Eyp. frontier, and on his withdrawal to Babylon Jehoiakim rebelled. Judah was ravaged by Bab. troops and auxiliary levies (2 Ki. 24:2). Jehoiakim died an obscure death in December 598 BC, before he could suffer the full penalty of rebellion, and Jehoiachin, his 18-year-old son, surrendered Jerusalem to Nebuchadrezzar on 16 March 597 BC.

His uncle Zedekiah became the last king of Judah, but revolted in 589 BC. By January 588 BC the Bab. armies were before the walls of Jerusalem. In July 587 BC the walls were breached and Zedekiah was captured to meet a traitor's fate (2 Ki. 25:6–7); a month later the city was burnt down and the walls razed.

e. Religion under the Monarchy

Popular religion in Judah was probably as degraded by concepts of nature-religion as in Israel, but its relative isolation and openness to the desert will have made it less influenced by its Canaanite forms. Its lack of major sanctuaries—only Hebron and Beersheba are known to us, with Gibeon in Benjamin—increased the influence of Jerusalem and its Solomonic Temple. It is questionable whether any king of Israel could even have attempted the centralizing reforms of Hezekiah and Josiah. The Davidic covenant (2 Sa. 7:8–16), far more than the general atmosphere of the 'Fertile Crescent', made the king the undisputed leader of the national religion, even though cultic functions were denied him (2 Ch. 26:16–21).

The power of the king might be used for good, as in the reformations, but where national policy seemed to demand an acceptance of Baal-worship, as under Jehoram, Ahaziah and Athaliah, or a recognition of the Assy. astral deities, as under Ahaz and Manasseh, there was no effective power that could resist the royal will. The royal authority in matters of religion will also have helped to make the official cult for many merely an external and official matter.

f. Exile (597–538 BC)

Apart from an unspecified number of ordinary captives destined to slavery, Nebuchadrezzar deported the cream of the population in 597 BC (2 Ki. 24:14; Je. 52:28—the difference in figures is doubtless due to different categories of captives being envisaged). A few, including the royal family, became 'guests' of Nebuchadrezzar in Babylon; others, *e.g.* Ezekiel, were settled in communities in Babylonia, where they had apparently full freedom apart from the right to change their domicile; the skilled artisans became part of a mobile labour force used by Nebuchadrezzar in his building operations. The destruction of Jerusalem added to the

general total of captives (2 Ki. 25:11), and Je. 52:29 shows there was another group of designated deportees. The murder of Gedaliah, whom Nebuchadnezzar had made governor of Judah, led to a large-scale flight to Egypt (2 Ki. 25:25–26; Je. 41:1–43:7). This, in turn, was followed in 582 BC by another, obviously punitive, deportation to Babylonia (Je. 52:30).

As the result of deportation and flight Judah was left, and remained, virtually empty (see W. F. Albright, *The Archaeology of Palestine*², 1954, pp. 140–142). The land S of a line between Beth-zur and Hebron seems to have been detached from Judah in 597 BC; into it the Edomites gradually moved. As a result, this area was lost to Judah until its capture by John Hyrcanus after 129 BC and the forcible Judaizing of its population. The remainder was placed under the governor of Samaria and deliberately kept virtually empty; there is no evidence for the infiltration of other peoples. It may be presumed that Nebuchadnezzar intended to follow the normal Assyrian practice of bringing in settlers from other conquered areas (cf. 2 Ki. 17:24), but for some reason refrained.

V. Post-exilic Judah

a. Restoration

Babylon fell to Cyrus in 539 BC, and the next year he ordered the rebuilding of the Jerusalem Temple (Ezr. 6:3–5); he accompanied this with permission for the deportees and their descendants to return (Ezr. 1:2–4). The list of names, involving a total of some 43,000 persons, in Ezr. 2 may well cover the period 538–522 BC, but there are no solid grounds for doubting that there was an immediate and considerable response to Cyrus' decree.

Sheshbazzar, a member of the Davidic royal family, seems to have been Cyrus' commissioner to oversee the rebuilding of the Temple; he will have returned (or died?) after the laying of the foundations (Ezr. 5:14, 16). There is no evidence that Judah was detached politically from the district of Samaria until the time of Nehemiah; the title 'governor' given Sheshbazzar is too specific a rendering for *pēhā*. Zerubbabel, probably heir-apparent of the royal house, does not seem to have held any official position, the title of *pēhā* in Hg. 1:1; 2:21 being probably honorific —note his non-appearance in Ezr. 5:3–17. Other Jewish leaders bore the title *pēhā* in the following decades, appointed by the Persians.

By the time of Ezra in the second half of the 4th century it had become apparent to most that political independence and the restoration of the Davidic monarchy were no more than a hope for the more distant future. Ezra transformed the Jews from a national state into a 'church', making the keeping of the Torah the purpose of their existence. The political insignificance of Judaea under the Persians and the relatively peaceful conditions of the country favoured the steady instruction of the mass of the people in the Torah. The only political upheaval of the period may have been a deportation to Babylonia and Hyrcania, though many doubt it (cf. Jos., *Contra Apionem* I. 194).

b. The end of Judah

The campaigns of Alexander the Great will hardly have affected Judaea, but his founding of Alexandria provided a centre for a western, and for the most part voluntary, dispersion, which soon

rivalled that of Babylonia and Persia in numbers and surpassed it in wealth and influence. The division of Alexander's empire among his generals meant that Palestine became a debatable land between Syria and Egypt. Till 198 BC it was normally in the hands of the Egypt. Ptolemies, but then it became part of the Syrian Seleucid empire.

The extravagances of the rich Hellenized upper classes of Jerusalem, in large proportion priests, and the unbalanced efforts of Antiochus Epiphanes (175–163 BC) to Hellenize his empire, which led him to forbid circumcision and Sabbath-keeping and to demand the worship of Greek deities, created an alliance between religious zeal and dormant nationalism. The Jews achieved first religious autonomy and then political freedom (140 BC) for the first time since Josiah. By 76 BC their boundaries extended virtually from the traditional Dan to Beersheba. For the history of this meteoric rise and sudden collapse, see *ISRAEL.

When the Romans destroyed the last vestiges of political independence in AD 70, and especially after the crushing of Bar-Kokhba's revolt in AD 135, Judaea ceased to be a Jewish land, but the name of Judah in its form of Jew became the title of all dispersed through the world who clung to the Mosaic law, irrespective of tribal or national origin.

BIBLIOGRAPHY. Archaeological discovery has put all earlier treatments of the subject to a greater or less degree out of date. John Bright, *A History of Israel*², 1972, gives an up-to-date and balanced presentation with a mention of the most important literature. See A. R. Millard, 'The Meaning of the Name Judah', *ZAW* 86, 1974, pp. 246f. For the text of *Kings*, see J. A. Montgomery and H. S. Gehman, *The Books of Kings, ICC*, 1951. For extra-biblical texts naming Judah, see J. B. Pritchard, *ANET*³, 1969; and *DOTT*. For the post-exilic period, see W. O. E. Oosterley, *A History of Israel*, 2, 1932; F. F. Bruce, *Israel and the Nations*, 1963. See *ISRAEL.

H.L.E.

JUDAISM. When one defines Judaism as 'the religion of the Jews', i.e. their faith and their practice, one must ask which historical era is in view, for the religion of the Jews has changed through the centuries. The religion of the Patriarchs in the book of Genesis, that of the era of the Sinaitic Covenant and Mosaic Law, and that of the post-exilic period and the rabbinic Judaism that followed the destruction of the second Temple (of which the modern forms of Orthodox and Conservative Judaism are direct descendants), are all different.

Here we are concerned primarily with the Judaism of the Greco-Roman period, the later post-exilic period up to the end of the 1st century when rabbinic Judaism began to consolidate itself in order to survive without nation and Temple. This therefore is the Judaism of the second Temple, the time of Jesus and the emergence of Christianity. Twentieth-century study of this Judaism has resulted in two momentous conclusions that will determine much of what is discussed below. First, it has become increasingly clear that even this Judaism was very diverse. The once fashionable talk of 'normative' Judaism in this period (e.g. as in G. F. Moore) has given way to the reference to Judaisms in the plural. Second, the all too common Christian portrayal of this Judaism as a legalistic

JUDAISM

religion, wherein one established righteousness before God on the basis of good works, is now seen to be a caricature. Understood correctly, this Judaism embodies a 'covenantal nomism', *i.e.* a law-centredness within the covenantal framework (thus E. P. Sanders) that rests as squarely upon the grace of God as does Christianity. The implications of these important conclusions will be made clear in what follows.

I. The fundamental elements of all Judaisms

Despite its diversity, we may note constant elements that serve as the *sine qua non* of anything that bears the name Judaism. The importance of these basic, constitutive elements can hardly be exaggerated. In every case they derive from the scriptures that came to be canonized by the end of the 1st century as the Heb. Bible.

a. Election and covenant

The origin and basis of Judaism is to be found already in the Abrahamic Covenant (Gn. 12:1-3). Abram is chosen by God – the one true God, as Israel's monotheism insisted – to be the recipient of wonderful blessings that will involve the emergence of a great nation and ultimately blessing for all the families of the earth. These covenant promises that brought Abram into a special relationship with Yahweh required no special merit or righteousness on his part. The election of Abraham, and the promises bestowed upon him, rest solely upon God's gracious initiative. Further statements of the Abrahamic Covenant add references to the gift of the land (13:14-17) and many descendants (15:5) who will have power over their enemies (22:17). The covenant is renewed with Abraham's son Isaac (26:3-4) and his grandson Jacob (28:13-15), who in turn articulates it to Joseph (48:3-4, 21). It is 'an everlasting covenant' (17:7). This promise, confirmed and extended with new metaphors in the covenants at Sinai (Ex. 19:3-6; Dt. 7:6-9) and with David (2 Sa. 7:8-16), is foundational to all Judaisms and a fixed point that henceforward separates Jew from non-Jew.

b. Torah

Of nearly equal importance to election and covenant is the gift of the Torah, in the sense of the commandments given to Israel at Sinai through the mediation of Moses (Ex. 20-40; Lv. 1-27). Although the Torah does not establish Israel, it is nevertheless her supreme calling. The Sinaitic statements link the covenantal promises with obedience to the Law. Moses is instructed to tell the people: 'Now therefore, if you will obey my voice and keep my covenant, you shall be my own possession among all the peoples' (Ex. 19:5) and similarly: 'If you obey the commandments of the Lord your God which I command you this day, by loving the Lord your God, by walking in his ways, and by keeping his commandments and his statutes and his ordinances, then you shall live and multiply, and the Lord your God will bless you in the land which you are entering to take possession of it' (Dt. 30:16). This still does not mean, however, that Israel must keep the commandments in order to enter into relationship with God. Her election remains prior to the call to obedience, yet now the maintenance of that elect status, and the realization of the covenant promises, are made contingent upon obedience to the commandments. From this time on Judaism in principle becomes what has

been called a 'covenantal nomism', *i.e.* a religion focused on the obedience to the Law, but within the larger and prior framework provided by election and covenant. Judaism of necessity becomes nomistic, 'law-centred', but within a context of grace (hence, not 'legalistic').

c. Temple

The focal point of the religious praxis of the Jews became first the wilderness tent-shrine and then the Solomonic Temple. Through the several aspects of the tent-shrine/Temple, *i.e.* its structure (with the ark of the covenant in the holy of holies, and the various courts of approach), its cultus (the sacrificial ritual) and its mediatorial priesthood and regulations, the Jews learned about the holiness of God, the sinfulness of humanity, and the necessity of atonement for the experience of forgiveness. The Temple, housing the presence of God in Israel's midst, furthermore became the symbolic centre of Israel's identity as God's people, its centre of authority, not only religiously but economically, nationally and politically. After the destruction of Solomon's Temple in 586 BC, when the Jews returned from the exile, it became an immediate priority to build a second temple (Ezr. 1:3; 3:2-3, 10-13).

In principle all Jews and all Judaisms were committed to the Temple. There was not, however, always agreement concerning the morality or the legitimacy of the priesthood in charge of the Temple. With the deposition of Onias III in 174 BC the Temple fell into the control of a succession of high priests not of the Zadokite lineage. The Qumran sect rejected not the Temple itself but the illegitimate reigning priesthood, and looked for the day when the Temple would be purged and Zadokite priests would once more gain control.

d. Land

As we have seen, the land was a part of the covenantal promises from the very beginning. The land became inextricably connected with the hope of the Jews in the covenant loyalty of Yahweh. The future that God had promised to Israel was inconceivable apart from the reality of the secure possession of the land. Thus the land, like the Temple, came to have a highly symbolic significance for the Jews.

II. The emergence of Second Temple Judaisms

a. The crucial significance of the exile

The Babylonian exile was a catastrophe of immeasurable significance for the subsequent shape of Judaism. The defeat of Judah and the destruction of the Temple represented the boldest possible contradiction of Israel's election and covenant promises. The tension in post-exilic perspectives is everywhere apparent (*e.g.* La. 5:19-22; Ps. 137:1-4; Hg. 2:3; Zc. 1:12; 2 Baruch 10:6-11:7). The dominant explanation of the tragedy, leaning on the rationale of such Torah passages as Dt. 4:25-28; 30; 31:27-29, focused on Israel's failure to obey the commandments of the Lord (see esp. La. 1:8, 18, 22; 4:6; Ezr. 5:12; 9:6-7, 13; Ne. 9:26-31; Zc. 7:12; Testament of Moses 3:13; Testament of Judah 23; Testament of Zebulun 9; Testament of Naphtali 4:1-3; Psalms of Solomon 9:1-3). The other side of the coin was that Israel had not yet experienced the fulfilment of the promises given to her, because she had not been obedient to the Law.

Even after the actual return from the exile many Jews probably believed that because of the lack of the fulfilment of the promises, Israel still remained in exile. Therefore post-exilic Judaism turned to the Law with a new, burning intensity.

This has led to the commonly encountered, yet simplistic, contrast between the religion of the OT and 'Judaism'. Therefore many speak of the birth of Judaism in the new reading of the Law of Moses by Ezra the scribe (law scholar) recorded in Ne. 8:1–12, followed by the study of 'the words of the Law' in 8:13–18. The balance with the covenant has now clearly shifted towards nomism.

b. The attempted destruction of Judaism by Antiochus IV Epiphanes

In 168–167 BC an event occurred that was in many respects analogous to the experience of exile and also of very great importance in shaping the mindset of the Second Temple Judaism of the time of Jesus. Antiochus defiled the Temple, prohibited the practice of Judaism, and attempted to Hellenize the Jews thoroughly. Although this disaster was effectively counteracted by the heroic deeds of the Maccabees, it left its indelible mark on the psyche of 2nd-century Judaism. The importance of maintaining the distinctives of the Law burned more deeply in the Jewish mind.

c. The development of apocalyptic

Apocalyptic flourished in the soil of post-exilic Judaism. It provided a way to cope with the apparent failure of God to fulfil the promises made to Israel, and thus eased the tension referred to above. The goal that God had in mind, the age to come, could not be reached by evolution within ordinary history. The future was indeed in God's hands, but the fulfilment of the promises would come only through a radical divine intervention. The time for this was unchangeably fixed in the will of God and indications of its nearness had been revealed (Gk. *apokalypṓtō*), so it was claimed, to certain individuals who published their views commonly under the pseudonyms of past heroes of the scriptures. All Israel had to do was to wait patiently and in readiness.

III. Sects and varying aspects of Second Temple Judaism

a. Pharisees

Pride of place must go to the Pharisees, because it is they who served as the fountain-head of all later (post 70) Judaism. They are logically, if not in fact, the descendants of the Torah movement begun by Ezra and the 2nd-century BC Hasidim who, like the Maccabees, so valiantly resisted the Hellenization of the Jews. The Pharisees' programme for the post-exilic situation was to adhere to the commandments more faithfully by spelling out their meaning in great detail, thus building a fence around the Torah ('*Abot* 3:14). This they did by developing an oral tradition that elaborated the commandments. This tradition was later claimed to have been derived from Moses on Sinai ('*Abot* 1:1), where two laws, written and oral, were supposedly given. The Pharisees appear in the gospels as arch-opponents of Jesus and are described by him as those who 'sit on Moses' seat', *i.e.* those who are known for their expertise in the interpretation of the law of Moses (Mt. 23:2; cf. Josephus, *War* 1.110; *Ant.* 17.41; 13.297). The Pharisees'

quest for righteousness is approved by Jesus in principle and yet he severely criticises their oral tradition (*e.g.* Mk. 7:8–9; Mt. 23:4, 13–28). The Pharisees focused on matters of ritual purity, calling for the standards of purity observed by the priests in the Temple to be applied to ordinary households. They were most concerned with table fellowship including the dietary restrictions, although Sabbath observance and tithing were also important, as was circumcision.

It is well known that the Pharisees, unlike the Sadducees, believed in the resurrection of the dead as well as in angels and demons (*cf.* Acts 23:8 and the Josephus references mentioned above). They also differed from the Sadducees in believing in reward and retribution after death and that the promises made to Israel would find a future fulfilment through the coming of a Messiah. (Many, if not all, Pharisees accepted the apocalyptic perspective on the future.) The Pharisees held the sovereignty of God and human free will in unresolved tension. See also *PHARISEES.

b. Essenes

Already known from Josephus and the Damascus Document (but surprisingly not mentioned in the NT), the Essenes have now become much more familiar to us, thanks to the discovery of the Dead Sea Scrolls. These Scrolls probably reflect a monastic community of Essenes living at Qumran on the NW shore of the Dead Sea (Essene communities existed elsewhere as well) from the 2nd century BC to AD 70. The agenda of the Essenes was also the intensive quest for achieving the righteousness of the Torah. The most distinctive belief held by the Essenes, however, was that they themselves were the community of the new covenant living in the last days immediately prior to the eschatological realization of Israel's hope. The leader of the community, the Teacher of Righteousness, interpreted the prophetic writings so as to show that the community members were what the prophets were talking about as they spoke of the end of the present age. See also *ESSENES.

c. Sadducees

The Sadducees were a priestly group who held the authority of the high priesthood and thus had power over the Temple cultus. As aristocratic opportunists who catered to the Romans in the administration of Palestine, the Sadducees reflected their lack of belief in the eschatological fulfilment of Israel's promises. As we have seen, they did not accept the resurrection of the dead, nor therefore did they believe in reward or retribution after death. They appeared to want to make the most of the present *status quo* and they firmly rejected the partial determinism of the Pharisees, believing in the full freedom of the individual. They refused to accept the authority of the Pharisees' oral law and accepted the final authority of the Pentateuch alone. There is some rabbinic evidence that the Sadducees disagreed with the Pharisees over certain purity issues. See also *SADDUCEES.

d. Zealots

Although possessing little if any distinctiveness as a Jewish sect (in most respects they agreed with the Pharisees; Josephus, *Ant.* 18.23), the 'fourth philosophy' described by Josephus deserves mention here. With Maccabean successes in their minds,

JUDAISM

this group believed that God would honour violent tactics against the Romans. If the Sicarii ('daggermen'), political assassins, are not to be identified with the Zealots, they at least shared a similar perspective. Such a viewpoint obviously differed dramatically from the Pharisees' idea of determinism and the apocalyptists' notion of a fixed time for the realization of the promises. Yet their hope was not dissimilar to that of the apocalyptic perspective, despite the fact that they would not wait passively for God to act, but took political action themselves. The ambitions of the Zealots came to a tragic end with the capture of Masada in AD 74, although the zealous spirit surfaced for a while again in the Second Jewish Revolt of AD 132–135. See also *ZEALOTS.

IV. The emergence of rabbinic Judaism

The catastrophe of the fall of Jerusalem and the destruction of the Temple in AD 70 confronted Judaism with yet another pivotal crisis, as significant as the Babylonian exile and Antiochus' desecration of the Temple and persecution of Judaism, yet possessing a finality not contradicted by the Second Jewish Revolt of AD 132–135. Of all the varieties of Judaism existing in the Second Temple Period, only one emerged from the ashes: Pharisaic Judaism. As G. E. Moore put it, 'Judaism is the monument of the Pharisees' (*Judaism* 2, p. 193). In the last decades of the 1st century, rabbinic Judaism began to consolidate itself at Yavneh under the leadership of Johanan ben Zakkai. In Jacob Neusner's phrase, Pharisaic Judaism moved 'from politics to piety'. Without abandoning the basic belief structure of Judaism outlined above, rabbinic Judaism focused persistently on personal obedience of the law as stipulated in the growing oral tradition. Although the rabbis undoubtedly prayed for the fulfilment of the promises and the realization of Israel's hope (e.g. in the Qaddish), in the rabbinic world of Torah piety, it was as though time had stopped. Without the Temple and without a nation, the focus of piety became the individual, his table, his prayer, his study of the Torah, and particularly the study of the commandments. Through the work of the Tannaim ('repeaters') the oral law was maintained and further developed until it was edited and put into final form, in what is known as the Mishnah, by Judah the Patriarch, c. AD 200. Other Tannaic materials (*Baraitoth*) were gathered into the Tosephta ('supplement') and their work can also be seen in the Midrashim (commentaries on Scripture). Further custodians of rabbinic tradition, the Amoraim ('speakers') continued work that eventually came to fruition in the commentaries on the Mishnah, represented by the Babylonian and Palestinian Talmuds. And thus the course and tone of Judaism was set down to its present manifestations.

JUDAS. I. The Lord's brother (Mt. 13:55 = Mk. 6:3). Perhaps the author of the Epistle of *Jude, who styles himself 'brother of James' (*BRETHREN OF THE LORD).

2. The son of James, and one of the Twelve (Lk. 6:16), called also Lebbaeus (Mt. 10:3, AV) and Thaddaeus (Mk. 3:18), who asked Jesus a question in the upper room (Jn. 14:22). Some regard him as the author of the Epistle of Jude.

3. For Judas Iscariot, see next article.

4. The Galilean who stirred up a rebellion against the Romans (Acts 5:37). Josephus says he was born in Gamala (*Ant.* 18. 3), and places the rebellion in AD 6. *Quirinius defeated the rebels and Judas was slain. 5. A Jew at whose house in Damascus Paul lodged (Acts 9:11). 6. A prophet surnamed Barsabbas, who with Silas was chosen by the Jerusalem Christian leaders to accompany Paul and Barnabas to Antioch to convey the apostles' decision regarding circumcision (Acts 15:22–33). J.D.D.

JUDAS ISCARIOT.

I. Name and origin

In the Synoptic lists of the Twelve whom Jesus called 'to be with him' (Mk. 3:14) the name of Judas always appears last, and usually with some description which brands him with an infamous stigma (e.g. 'who betrayed him', Mk. 3:19; Mt. 10:4; Lk. 6:16; cf. Jn. 18:2, 5). We may compare the case of Jeroboam I, in the OT, who is mentioned with horror as the one 'who made Israel to sin'.

The term 'Iscariot' is applied to his name, in the Synoptic texts and in Jn. 12:4; while in the other Johannine references the textual tradition shows considerable variation, with the name of Simon

being given as Judas' father (Jn. 6:71; 13:2, 26), and Iscariot being further explained by the addition *apo Karyotou* (in certain readings of 6:71; 12:4; 13:2, 26; 14:22). These additional facts supplied by John would confirm the derivation of 'Iscariot' from Heb 'is q'riyot, 'a man of Kerioth'. Kerioth is located in Moab, according to Je. 48:24, 41; Am. 2:2; but there is another possible identification, Kerioth-hezron (Jos. 15:25), which is 19 km S of Hebron. This geographical explanation of 'Iscariot' is preferable to the view which traces the word to *sikarios*, by way of an Aramaicized 'isqaryā ā, 'an assassin' (cf. Acts 21:38), as suggested by Schulthess and O. Cullmann, *The State in the New Testament*, E.T. 1957, pp. 15f. But see, to the contrary, M. Hengel, *Die Zeloten*, 1961, p. 49.

II. Career

In the apostolic band Judas was treasurer (Jn. 13:29), while another Johannine text speaks of him as a thief (12:6), mainly, we may suppose, on the ground that he 'pilfered' the money which was entrusted to him. For this sense of the verb translated 'used to take' in 12:6, as attested in the papyri, see A. Deissmann, *Bible Studies*, E.T. 1901, p. 257.

The closing scenes of the Gospel story are shadowed by the treachery of this 'one of the twelve', as he is repeatedly called (Mk. 14:10, cf. 14:20; Jn. 6:71; 12:4). He raises the voice of criticism against the action of Mary, who anointed the Master's feet with the precious ointment (Jn. 12:3-5). The comment of the Evangelist is intended to stress the avarice of Judas, who saw in the price of the ointment nothing of the beautiful deed which Jesus praised (Mk. 14:6) but only a means by which the apostolic fund would be increased, and thereby his own pocket lined. And even this motive was cloaked under a specious plea that the money could be given away to relieve the poor. Thus to covetousness there is added the trait of deceit. Immediately following this incident at Bethany he goes to the chief priests to betray the Lord (Mt. 26:14-16; Mk. 14:10-11; Lk. 22:3-6). Mark records simply the fact of the treachery, adding that money was promised by the priests.

Matthew supplies the detail of the amount, which may have been a part-payment of the agreed sum (with an implicit allusion to Zc. 11:12, and possibly Ex. 21:32; cf. Mt. 27:9). Luke gives the deep significance of the act when he records that Satan entered into the traitor and inspired his nefarious sin (cf. Jn. 13:2, 27). All Synoptists agree that Judas determined to await a favourable opportunity when he might deliver Jesus up to his enemies 'privately', i.e. secretly, by craft (for this rendering in Lk. 22:6; Mk. 14:1-2, see J. Jeremias, *The Eucharistic Words of Jesus*, E.T. 1966, p. 72).

That opportunity came on the evening when Jesus gathered in the upper room for the last meal with the Twelve (Mk. 14:17ff. and parallels); and this fact is perpetuated in the church's eucharistic tradition which dates from the time of St Paul (1 Cor. 11:23: 'on the night when he was betrayed'). The Lord, with prophetic insight, foresees the action of the traitor whose presence is known at the table. In the Marcan account Judas is not mentioned by name, and there seems to be a general air of bewilderment as to the traitor's identity. The conversation of Mt. 26:25 with the question-and-answer dialogue is best understood as spoken in whispered undertones, while the Johannine ac-

count preserves the first-hand tradition of the beloved disciple's question and Jesus' action with the Paschal sop, both of which may have been said and done in a secretive fashion. At all events, this is the Lord's final appeal to Judas—and the traitor's final refusal. (See F. C. Fensham, 'Judas' Hand in the Bowl and Qumran', *RQ* 5, 1965, pp. 259-261, for Judas' rejection of Jesus.) Thereafter Satan takes control of one who has become his captive; and he goes out into the night (Jn. 13:27-30).

The pre-arranged plan for Jesus' arrest was carried through. The secret which Judas betrayed was evidently the meeting-place in Gethsemane later that night; and to our Lord at prayer there came the band of soldiery, led by Judas (Mk. 14:43). The sign of identification was the last touch of irony. 'The one I shall kiss is the man'; and with that the traitor's work was completed.

The last chapters of Judas' life are beset with much difficulty. Of his pathetic remorse the Scripture bears witness, yet the only Evangelist to record this is Matthew (27:3-10). To this account of his agony of remorse and suicide, the account of Acts 1:18-19 must be added; and also, to complete the evidence, the grotesque testimony of Papias, *Frag.* 3, preserved by Apollinarius of Laodicea. This last-named text may be conveniently consulted in the series *Ancient Christian Writers*, 6, translated and annotated by J. A. Kleist, 1957 edn., p. 119. Papias relates how Judas' body swelled (this may be a possible meaning of Acts 1:18 for the εὐν 'falling headlong'; see Arndt, s.v. *prēnēs*), and dies on his own land. There have been various attempts at harmonization (e.g. Augustine's suggestion that the rope broke and Judas was killed by the fall, in the manner of Acts 1:18, thus conflating the Matthean and Acts accounts). But even more terrifying than the gruesome details of these accounts is the plain, stark verdict of Acts 1:25: 'this ministry and apostleship, from which Judas turned aside, to go to his own place'. The apostle had become an apostate; and had gone to the destiny reserved for such a man.

III. Character

This reference invites the question of the true character of Judas. If 'his own place' is the place he chose for himself, what motives led him to his awful destiny and fate? How can we reconcile this statement with those scriptures which give the impression that he was predetermined to fulfil the role of traitor, that Jesus chose him, knowing that he would betray him, that he had stamped on him from the beginning the inexorable character of 'the son of perdition' (Jn. 17:12)? Psychological studies are indecisive and not very profitable. Love of money; jealousy of the other disciples; fear of the inevitable outcome of the Master's ministry which made him turn state's evidence in order to save his own skin; an enthusiastic intention to force Christ's hand and make him declare himself as Messiah—de Quincey's famous reconstruction; a bitter, revengeful spirit which arose when his worldly hopes were crushed and this disappointment turned to spite and spite became hate—all these motives have been suggested. Three guiding principles ought perhaps to be stated as a preliminary to all such considerations. I. We ought not to doubt the sincerity of the Lord's call. Jesus, at the beginning, viewed him as a potential follower and disciple. No other presupposition does

JUDAS ISCARIOT

justice to the Lord's character, and his repeated appeals to Judas. 2. The Lord's foreknowledge of him does not imply fore-ordination that Judas must inexorably become the traitor. 3. Judas was never really Christ's man. He fell from apostleship, but never (so far as we can tell) had a genuine relationship to the Lord Jesus. So he remained 'the son of perdition' who was lost because he was never 'saved'. His highest title for Christ was 'Rabbi' (Mt. 26:25), never 'Lord'. He lives on the stage of Scripture as an awful warning to the uncommitted follower of Jesus who is in his company but does not share his spirit (cf. Rom. 8:9b); he leaves the Gospel story 'a doomed and damned man' because he chose it so, and God confirmed him in that dreadful choice.

JUDE, EPISTLE OF. One of the *Catholic Epistles'.

I. Outline of contents

The Epistle falls into five parts:

- a. Salutation (vv. 1–2).
- b. Jude's purpose in writing (vv. 3–4).
- c. False teachers denounced and their doom foretold (vv. 5–16).
- d. Exhortation to Christians (vv. 17–23).
- e. Exhortation (vv. 24–25).

II. Authorship, date and canonicity

The author of this little tract identifies himself as 'Jude, a servant of Jesus Christ and brother of James'. In the early church there was only one James who could be referred to in this way without further specification—'James the Lord's brother' (as he is called in Gal. 1:19). This points to an identification of the author with the Judas who is numbered among the brothers of Jesus in Mt. 13:55 and Mk. 6:3, the Judas whose two grandsons, according to Hegesippus, were examined and dismissed by Domitian when he was informed that they belonged to the house of David (Eusebius, *EH* 3, 19–20). Its date cannot be fixed with certainty; it may be tentatively assigned to the second half of the 1st century AD, after the fall of Jerusalem (v. 17 refers to the apostles in the past). We have express references to it towards the end of the 2nd century, in the Muratorian list and elsewhere; but there are probable allusions to it earlier in that century, in the *Didache* and the *Shepherd of Hermas*. Although its canonicity was long disputed, we may be glad that it was finally established, for (as Origen says) 'while it consists of but a few lines, yet it is full of mighty words of heavenly grace'.

III. Occasion and purpose

Jude had projected another treatise, concerning 'our common salvation', when he found himself obliged to take up a more controversial line, in vigorous defence of the apostolic faith. This defence

was made necessary by the alarming advances made by an incipient gnosticism in the circle of Christians to which Jude addresses himself—not in this case an ascetic form of teaching like that attacked by Paul in Colossians, but an antinomian form which may have appealed to Paul's teaching about Christian liberty, misinterpreting that liberty as licence and using it 'as an opportunity for the flesh' (cf. Gal. 5:13). This is suggested by Jude's description of the false teachers in question as 'perverting the grace of our God into licentiousness' as well as 'denying our only Master and Lord, Jesus Christ' (v. 4).

IV. Argument of the Epistle

False teaching requires to be exposed; it is not enough to set the truth alongside it in the expectation that everyone will recognize which is which. The refutation of error is an essential correlative to the defence of the faith 'once for all delivered to the saints' (v. 3).

The doom of these false teachers has been pronounced of old. God's judgment, if slow, is sure, and once executed it abides for ever. This appears from the examples of the disobedient Israelites who died in the wilderness (cf. 1 Cor. 10:5; Heb. 3:17; this was evidently a commonplace of primitive Christian 'typology'), of the rebellious angels of Gn. 6:1–4, and of the cities of the plain (cf. Gn. 19). Like those prototypes, the false teachers defy divinely constituted authority, unlike the archangel Michael, who would not use insulting language even to the devil (vv. 8–10). (Clement and Origen tell us that the incident of Michael's dispute with the devil was related in the *Assumption of Moses*, but the part of this work containing the incident is no longer extant.) The examples of Cain, Balaam and Korah also point the lesson of doom for these latter-day followers of theirs (v. 11).

These false teachers introduce trouble and disgrace into the church's fellowship, into its very love-feasts; they are shepherds who feed themselves and not the flock ('blind mouths', in Milton's phrase), clouds which blot out the sun but send down no refreshing rain, trees which produce only Dead Sea fruit (v. 12). They are ineffectual as roaring waves whose rage expends itself in froth and foam; they are stars wandering out of their orbits into eternal night (v. 13). The judgment which awaits them at the parousia was foretold by Enoch (vv. 14f.; cf. *1 Enoch* 1.9).

True believers, however, need not be alarmed at the activity of such people, of whose rise and fall the apostles had given them warning in advance. Let them safeguard themselves by being built up in faith, praying in the power of the Spirit, continuing steadfastly in the fellowship of divine love, and looking forward to the consummation of mercy and life at the appearing of Christ (vv. 17–21). While they must abhor and avoid all false teachers, they should pity and rescue those who are led astray by them (vv. 22–23).

The Epistle ends with an ascription of praise to God as the One who is able to guard his people from stumbling until they stand without blemish 'before the presence of his glory with rejoicing'.

F.F.B.

JUDGES. The Heb. word (*šōpēṭ*) means one who dispenses justice, punishing the evil-doer and vindicating the righteous. The corresponding word for 'judgment' is used to describe a rule by which he must be guided (Ex. 21:1).

I. The Mosaic institution

In the wilderness period Moses wore himself out by sitting to judge the cases brought to him (Ex. 18:13-27, and cf. Ex. 2:14). On Jethro's advice he appointed deputies to judge ordinary cases, bringing to him only the most important (see also Dt. 1:9-18).

The Deuteronomic law provides for the appointment of judges, and *officers to assist them (Dt. 16:18); 'in all your towns'. So the more primitive rule of the nomadic period is adapted to the future settlement.

There is insistence upon the need for scrupulous fairness, and impartial justice (Dt. 1:16f.; 16:19f.; 24:17f.; 25:13-16). Since the book of the law was in the charge of the priests, the more important cases were to be tried by a judge with priests as assessors (Dt. 17:8-13). During the period of the conquest we find judges taking part in assemblies of the nation (Jos. 8:33; 24:1).

II. The period of the Judges

After the death of Joshua there followed the period of disorganization, tribal discord and defeat, which is described in the book of Jdg. But when the people cried to the Lord, the author tells us, he 'raised up judges, who saved them' (Jdg. 2:16). These national heroes are sometimes called 'deliverers' (Av 'saviours') (3:9, 15), and of most of them it is said that they 'judged Israel' for a stated period of years, Othniel being the first (3:9) and Samson the last (16:31).

It is clear that this imparts a new meaning to the word 'judge', namely, that of a leader in battle and a ruler in peace. We may see in them a type of Christ, who came to be our Saviour, is with us as our Leader, and will come to be our Judge.

In I Sa. there is a transition to the time of the monarchy. Eli 'had judged Israel forty years' (I Sa. 4:18), and 'Samuel judged Israel all the days of his life', going in circuit to Bethel and Gilgal and Mizpeh; and appointed his sons also as judges (7:15-8:1).

Texts from *Mari (c. 1800 BC) describe the activities of leaders termed *šāpīṭum*, generally similar to the work of Israelite 'judges'. These acted as local provincial 'governors' working with other neighbouring 'governors' under the Great King (A. Marzal, *JNES* 30, 1971, pp. 186-217). Their responsibilities included the exercise of justice, maintenance of order, collection of taxes and tribute, and provision of information and hospitality. Thus the Heb. *šōpēṭ* should probably be better translated 'governor' than 'judge' since the latter describes only part of his function. Similar officials are named in the earlier tablets from *Ebla.

III. Under the Monarchy

Under the kings we find judges engaged in both judiciary and other administration. Among David's officers 'Chenaniah and his sons were appointed to outside duties for Israel, as officers and judges' (I Ch. 26:29).

After the disruption, Jehoshaphat displayed zeal for 'the book of the law of the Lord' (2 Ch. 17:9),

appointed judges and officers city by city (19:5), and charged them to deal faithfully (2 Ch. 19:9f.; cf. Dt. 16:19f.).

Finally, on the return from exile, the decree of Artaxerxes bade Ezra set magistrates and judges to administer justice and to teach the people (Ezr. 7:25).

Later rulers of Phoenician cities took the title *šōpēṭ*; cf. the Carthaginian *suffetes*, mentioned by Roman writers (*PHOENICIA).

G. T. M.
D. J. W.

JUDGES, BOOK OF. Judges follows chronologically upon the Pentateuch and Joshua and describes the history of Israel from Joshua's death to the rise of Samuel. It takes its name from its leading characters, the *šōp'ṭim* (Jdg. 2:16). These *'judges', however, were more than judicial arbiters; they were 'deliverers' (Av 'saviours') (3:9), charismatically empowered by God's Holy Spirit for the deliverance and preservation of Israel (6:34) up to the establishment of the kingdom (cf. the use of this same word for the chief magistrates of Carthage, and as a synonym for 'king' in ancient Canaanitish Ugarit, *Anat* 5. 40). Yahweh himself is the chief *šōp'ṭ* (Jdg. 11:27).

I. Outline of contents

a. Events following the death of Joshua (1:1-2:5)

With initial obedience the tribes of Judah and Simeon advanced S to the conquest of Bezek, Jerusalem (not held, 1:21), Hebron and Debir (re-occupied since their devastation in Jos. 10:36, 39), Hormah, and three of the Philistine cities (not held, Jdg. 1:19). The Joseph tribes likewise captured Bethel (1:22-26), which had revolted (cf. Jos. 8:17; 12:9). But then came failure: Israel ceased to remove the Canaanites, no more cities were taken (Jdg. 1:27-36), and the tribe of Dan actually suffered eviction from its allotted territory (1:34). Such tolerance of evil necessitated the extended period of chastening that followed (2:1-5).

b. Israel's history under the judges (2:6-16:31)

(i) *The writer's prophetic understanding of history (2:6-3:6).* This book teaches divine retribution: that God in his providence recompenses a nation in direct correspondence to the faithfulness of its people. Israel at this time suffered under constant temptation to adopt the fertility rites of their Canaanitish neighbours, along with their confessedly superior agriculture. Many recognized that Yahweh had guided Israel in the wilderness, but Baal seemed better able to make the crops come out of the ground! Jdg. thus exhibits a repeated cycle of sin (Baal-worship), servitude (to foreign aggressors), supplication (to the merciful God, for relief) and salvation (through divinely raised up judges).

(ii) *Six successive periods of oppression and the careers of twelve deliverer-judges (3:7-16:31).*

1. *Invasions of Cushan-rishathaim (3:7-11).* After adopting the ways of Canaan, Israel suffered for 8 years under the depredations of Cushan-rishathaim, an invader who came from Hittite-controlled Mesopotamia (Jdg. 3:8). The cause, however, lay in Israel's sin (3:7) (see below, part c).

JUDGES, BOOK OF

Palestine in the time of the Judges.

But when they 'cried to Yahweh, Yahweh raised up a deliverer for the people of Israel, . . . Othniel, . . . Caleb's younger brother' (3:9). The 40 years of peace that followed may correspond to the parallel period of Hittite overlordship, until some years after the death of Suppiluliuma in 1346 bc (*CAH*, 2, 2:19).

2. *Oppression under Eglon* (3:12–31). Just prior to the days of international confusion coincident with the rise of Egypt's aggressive 19th Dynasty, 'Israel again did what was evil . . . ; and Yahweh strengthened Eglon the king of Moab against Israel' (3:12). 'But when (they) cried to Yahweh, (he) raised up for them a deliverer, Ehud, . . . the Benjaminite' (3:15), and granted them 80 years of peace, perhaps dating from the time of the treaty of 1315, between Seti and Mursil, *cf.* its renewal in 1284 by Rameses II. Neither Egypt nor the Hittites seem to have comprehended their providential function, but the years in which either succeeded in bringing peace to Palestine do seem to correspond to the very periods that God had ordained for granting 'rest' to his people (*cf.* J. Garstang, *Joshua-Judges*, 1931, pp. 51–66). Shamgar next achieved a limited success against early Philistines, who were better equipped than he (3:31).

3. *Deliverance by Deborah* (4:1–5:31). With the decay of the empires and the rise of local Canaanite oppression under Jabin II of Hazor (4:2–3), God raised up the fourth of the judges, the woman Deborah. Her military commander, Barak, proceeded to muster the N-central tribes to the Valley of Esdraelon for war with Jabin's troops led by Sisera. But, 'From heaven fought the stars, from their courses they fought against Sisera' (5:20): a divinely sent cloudburst immobilized the Canaanite chariotry, and Sisera was slain in flight by a Kenite woman. The 40 years of peace that followed upon Deborah's victory may parallel the strong rule of Rameses III, the last great pharaoh (1199–1168 bc).

4. *Deliverance by Gideon* (6:1–8:32). Next there appeared out of the E desert, Midianites and Amalekites to plunder sinful Israel (Jdg. 6:2–6; *cf.* Ru. 1:1). But Israel was cleared of the nomadic raiders (7:19–25; 8:10–12; *cf.* the peaceful background of Ru. 2–4, some 20 years later).

5. *The rise and fall of Abimelech* (8:33–10:5). The turmoil that resulted from the attempt of Gideon's son Abimelech to make himself king over Israel (Jdg. 9) was rectified by the sixth and seventh judges, Tola and Jair (10:1–5).

6. *Oppression under Ammon and the Philistines* (10:6–16:31). But with the apostasy that subsequently arose, God gave up his land to simultaneous oppressions by the Ammonites in the E and the Philistines in the W (10:7). After 18 years E Israel was freed by Jephthah, the eighth judge (ch. 11), who was succeeded by the three minor judges. W Israel, however, remained subject to the rising power of the Philistines, despite the spectacular exploits of Samson, the twelfth and last judge of the book of Judges (chs. 13–16).

c. An appendix (17:1–21:25)

This provides details on two events from Israel's very first period of apostasy (before Othniel; *cf.* the appearance of Phinehas in 20:28 and the mention of the events of ch. 18 in Jos. 19:47, the author of which seems contemporary with the conquest, Jos. 5:1; 6:25, though see *JOSHUA, II). The purpose of the appendix is to illustrate the depth

of Israel's sin, whereby almost every standard of the Decalogue was transgressed. The section on Micah and the Danites (chs. 17–18) relates, *e.g.*, how Micah stole from his mother and then converted the proceeds into an idol for his house of gods (17:5). God's Levite, meanwhile, wandered unsupported, until hired by Micah. But he in turn proved false to his employer when offered a position of leadership by the covetous, idolatrous and murderous Danites (18:25). Yet this Levite was Jonathan, a direct descendant of Moses (18:30). Nothing, admittedly, is said respecting the seventh commandment (on purity); but the following chapters (19–21, the Benjaminite outrage) describe not simply civil war and the harbouring of criminals but also harlotry and marital desertion by a Levite's concubine (19:2), homosexuality, rape and adultery (19:22–24), and finally mass abduction (21:23). Such were the results when 'every man did what was right in his own eyes'.

II. Authorship and date

The book of Jdg. makes no direct statement about the date of its writing. The song of Deborah (5:2–31) does claim contemporary composition (5:1), and its authenticity is generally accepted. But the book as a whole could not have been compiled for another 2 centuries. It refers to the destruction and captivity of Shiloh (18:30–31) during the youth of Samuel (I Sa. 4; c. 1080 bc); and the last event that it records is the death of Samson (Jdg. 16:30–31), which occurred a few years before Samuel's inauguration as judge (c. 1063). Furthermore, the repeated explanation that 'in those days there was no king in Israel' (17:6; 18:1; 21:25) suggests that the book was written *after* the accession of Saul as king in 1043 bc. Yet the popular appreciation for the kingship is still fresh; and the book seems to have been composed before the sack of Gezer in 970 bc (I Ki. 9:16; *cf.* Jdg. 1:29) or David's capture of Jerusalem in 1003 (2 Sa. 5:6–7; *cf.* Jdg. 1:21).

The writer of Jdg. must therefore have been a man who was active during the early reign of Saul (before 1020 bc). He must also have been a prophet; for in the Heb. Bible, Jdg. takes its place in the prophetic division of the canon (the 'former' prophets: in Josephus, *Against Apion* 1. 8, the historical books, Jos.–Jb.), *cf.* the sermonic tone of 2:10–14; 3:7–8, *etc.* The most likely possibility is Samuel the prophet, who is indeed identified as the author of Jdg.–Ru. according to the Jewish Talmud (*Baba Bathra* 14b). But since this traditional account goes on to make the improbable assertion that Samuel also wrote 'the book which bears his name', we seem justified in concluding only that the author must, at least, have been one of Samuel's prophetic associates.

III. Sources of the book

The writer of Jdg. may have relied upon oral and written sources that are now lost, *e.g.* hero-anthologies, such as 'the book of the *yāsār* [up-right]' (Jos. 10:13). Modern critics are accustomed to assert that the writer's sources consisted of largely independent materials (later perhaps a 'J' and 'E' document) and edited by an exilic Deuteronomist ('D') and post-exilic Priestly ('P') redactors; but this analysis runs counter to the evidence of the book itself and unnecessarily discredits the unity and authenticity of its contents. It seeks, for example, to equate God's call to Gideon at the winepress and his resulting sacrifice (Jdg. 6:11–24,

JUDGES, BOOK OF

A chronology of the Judges period based on the years of oppression and peace. (For a different interpretation see CHRONOLOGY OF THE OT.)

said to be 'J') with his subsequent command to Gideon to destroy the Baal altar and to replace it with one to Yahweh (6:25-32, said to be 'E'), as if these were two conflicting versions of one call. Or again, it confuses Gideon's taking of the Midianite princes Oreb and Zeeb at the fords of the Jordan (7:24-25, 'E') with his final capture of the kings, Zeba and Zalmunna, farther east (8:10-11, 'J'), though it must then eliminate the words in 8:10, 'all who were left of the army', as being an attempt by some later editor to harmonize the supposedly conflicting stories. (*PENTATEUCH.)

The Heb. text of the book of Jdg. is better preserved than that of any of the other Former Prophets and is generally free from errors of scribal transmission. Its ancient LXX translation, however, exhibits inner-Greek variations to the extent that Rahlfs' edition of the LXX now presents on each page two divergent forms of Gk. text, according to codices A and B.

IV. Historical background

The historical background to the period of Jdg. concerns, locally, the presence of the Canaanites. Prior to the Heb. conquest, Moses had ordered their 'destruction' (Dt. 7:2; cf. Jos. 6:17), both because of long-standing immorality (Dt. 9:5; cf. Gn. 9:22, 25; 15:16) and because of their debasing religious influence upon God's people (Dt. 7:4); for on countless 'high places' the Canaanites worshipped local gods of fertility, Baalim, with rites that included sacred prostitution and even child sacrifice (11:31). Joshua had thus subdued the whole of Canaan (Jos. 11:16; cf. 21:43). But its

native inhabitants had not yet lost their potential for resistance. Indeed, Moses himself had anticipated a gradual occupation of the land (Ex. 23:28-30; Dt. 7:22); and much still remained to be possessed (Jos. 13:1). On the international scene, the relevant facts may be outlined as follows: (1) At the time of Joshua's death, perhaps soon after 1400 BC, 18th Dynasty Egyptian imperial control over Palestine had become ephemeral: Amenhotep III was content to rule in decadent luxury; and his successor, Amenhotep IV (Akhenaten, c. 1379-1362 BC; CAH, 2, 2, p. 1038), devoted his exclusive attention to monotheistic religious reforms. The contemporary *Amarna letters from the Canaanite city-states contain futile pleas for help against the plundering Habiru. This designation embraces the biblical *Hebrews, though it was also used for various Hurrian (?) aggressors from the N (descendants of Eber, Gn. 10:21, 25; cf. M. G. Kline, WTJ 19, May 1957, p. 184; 20, November 1957, p. 68). For this era was marked, at the same time, by revived Hittite activity from beyond Syria. King Suppiluliuma (c. 1385-1346 BC), the greatest of the Hittites, at the first encouraged anarchy among the states farther S and later achieved their practical domination for himself and his son Mursil II.

(2) But Egypt, under the new 19th Dynasty (1320-1200 BC), in turn experienced revival. Seti I retook Galilee and Phoenicia in 1318, defeated the Hittites, and 3 years later concluded a treaty with Mursil, by which Syria was assigned to Hittite control and Palestine and Phoenicia to Egyptian. Young Rameses II (1304-1237) indeed broke the treaty and invaded the Hittite territory. But after

years of costly fighting the former division of power was re-established by the treaty of 1284; and peace was kept until the decline of the Hittite empire, due to the barbarian invasions in the latter part of the century.

(3) With the fall of Crete to the barbarians in 1200 BC the ousted Philistines, 'the remnant of the coastland of Capthor' (Je. 47:4) fled E to reinforce their older settlements on the coast of Palestine (cf. Gn. 21:32; Dt. 2:23). Driven back from Egypt in about 1191 by Rameses III of the 20th Dynasty, they proceeded to consolidate their position in Canaan. Before the end of the century they were thus able to mount the first of their great offensives against Israel, with which event the history of the book of Judges comes to a close.

V. Chronology

The over-all chronology of Jdg. is indicated by the statement of Jephthah, near the conclusion of the period, that Israel had by his time been occupying Palestinian territory for some 300 years (Jdg. 11:26; cf. the similar figure drawn from 1 Ki. 6:1). The calculation of a more precise chronology, however, depends upon two other facts that appear in the biblical record. First, since the lapse of time from the termination of the conquest to the commencement of the first (Mesopotamian) oppression is not stated, one must count backward from the accession of Samuel, c. 1063 BC (reckoning, from the probable date of 930 for the division of the kingdom, with 113 years for Solomon, David (over all Israel), and Saul and his successors [1 Ki. 11:42; 2:11; Acts 13:21], plus 20 years for Samuel [1 Sa. 7:2; cf. *HDB*, I, p. 399]). Second, since some of the judges overlapped each other (cf. Ehud and Shamgar, Jdg. 3:30-4:1), the chronology is best gathered from the dated oppressions and subsequent deliverances. Of particular significance is the fact that the 40-year Philistine oppression (13:1) in W. Palestine continued uninterruptedly from the deaths of Tola and Jair (10:7), through the judgeships of Jephthah, the three minor judges, Eli and Samson, down to the victorious advent of Samuel. (See the chart on p. 641.)

Confirmation of 1216 for Deborah's victory now arises from pottery types found in the last Canaanite city at Hazor, so that 'Barak is to be dated in the second half of the 13th century' (*CAH*, I, 1:239). 319 years (1382-1063) would thus seem to elapse between the first oppression and Samuel's rise, which suggests a conquest dating 1406-1400 BC. An alternative date c. 1240 would require greater compression of the Judges' data. (*CHRONOLOGY OF THE OLD TESTAMENT.)

VI. Teaching

From the principles stated in Jdg. 2:6-3:6 and the concrete historical examples furnished by the remainder of the book, its teaching may be summarized as follows.

a. *God's wrath at sin* (2:11, 14). Israel's hope for survival was dependent upon their intertribal unity, yet such co-operative effort arose only from a common dedication to their God (cf. 5:8-9, 16-18). Loss of faith meant extinction.

b. *God's mercy upon repentance* (2:16). Even foreign oppression served as a medium of divine grace, for Israel's edification (3:1-4).

c. *Man's total depravity*: For after each deliverance, 'whenever the judge died, they turned back and behaved worse than their fathers' (2:19). Indi-

vidualistic society had demonstrated its inherent inadequacy, for man on his own inevitably goes wrong (17:6). Israel needed a king, though indeed only such a king as should accomplish the ultimate will of God (cf. 8:23; 9:6, 56). The author of Jdg. was thus one of civilization's first true historians, not simply recording events, but then interpreting the facts on the basis of an explicit philosophy of history. As to the permanent validity of his deuteronomic philosophy of retribution, one must grant that in those early days, when revelation was more limited, providence operated more obviously than at present. But his basic principles remain eternally sound: the sinning nation shall be punished, the repentant shall be saved, and all man-created systems must ultimately fail. The only valid hope of history lies in the coming of Christ, the King.

J.B.P.

JUDGMENT (Heb. *šāpāt*; Gk. *krima, krisis*).

I. Biblical teaching

God appears in the OT very commonly in the role of 'Judge of all the earth' (Gn. 18:25), or more generally as a 'God of justice' (Mal. 2:17; cf. Dt. 1:17; 32:4; Pss. 9:8; 94:2; 97:2; Is. 30:18; 41:1; 61:8; Je. 12:1; Ezk. 7:27; Mi. 6:1f.; etc.). Judgment does not simply imply an impartial and detached weighing up of good and evil but rather the thought of vigorous action against evil. It is on this understanding that the people of God are summoned to exercise judgment in turn (Is. 1:17; Mi. 6:8; Zc. 8:16). The judgment of God is not impersonal, the operation of some undeviating principle, it is a strongly personal notion. It is closely linked to the thought of God's character of mercy, lovingkindness, righteousness, truth, etc. (Ps. 36:5f.; Ezk. 39:21; Ho. 2:19). It is the working out of the mercy and wrath of God in history and in human life and experience. Thus the judgment of God can bring deliverance for the righteous (Dt. 10:18; Ps. 25:9-10) as well as doom for the wicked (Ex. 6:6; Nu. 33:4; Dt. 32:41; Is. 4:4; Je. 1:10; 4:12; Ezk. 5:10; 23:10; 28:22). Judgment is a particularly rich idea in the OT and a variety of other terms are used with this meaning (cf. *dūn*, Gn. 30:6; Jb. 36:17; *pll*, 1 Sa. 2:25; Ps. 106:30; *pqd*, Je. 14:10; 51:47; *ykh*, Is. 1:18; Mi. 6:2; *riḥ*, Ex. 23:2f.; Ps. 43:1). As the OT draws towards its close the thought of God's judgment becomes increasingly bound up with the eschatological expectation of the coming Day of the Lord (Joel 1:1f.; Am. 5:18f.; 8:9f.; Ob. 15 and *passim*; Zp. 1:7, 14f.; Mal. 4:1f.).

The NT, as we should expect, continues the OT stress upon judgment as belonging to the nature of God and as part of his essential activity (Rom. 1:18; Heb. 12:23; 1 Pet. 1:17; 2:23; Rev. 16:5f.). As

JUDGMENT

in the OT, God's judgments are not confined to the future but are already at work in man's life in the present age (Jn. 8:50; Rom. 1:18, 22, 24, 26, 28; Rev. 18:8). Judgment is associated even now with Christ who exercises the Father's judgments (Mt. 3:1ff.; 10:34; Jn. 3:19; 5:30; 8:12, 16; 9:39). The light of God's word is already shining into the world through his self-revelation in man's moral experience, and supremely in the incarnate Word, Jesus Christ. The judgment of men is therefore already in operation, for they show by their evil deeds that they 'love darkness rather than light' (Jn. 3:19).

The spotlight in the NT, however, falls upon the 'judgment to come', a future and final judgment which will accompany the return of Christ (Mt. 25:31-46; Jn. 5:22, 27f.; Rom. 3:5f.; 1 Cor. 4:3-5; Heb. 6:1f.). This is the coming Day of judgement (Jn. 6:39; Rom. 2:15f.; 1 Cor. 1:8; 5:5; Eph. 4:30; Phil. 2:16; 2 Thes. 1:10; 1 Pet. 2:12; 2 Pet. 3:12; 1 Jn. 4:17; Jude 6; Rev. 6:17; 16:14). Christ himself will judge (Jn. 5:22; 12:47f.; Acts 10:42; 17:31; 2 Tim. 4:8). All men will be judged; none will be absent (2 Tim. 4:1; Heb. 12:23; 1 Pet. 4:5). Even the angels will be passed under judgement (2 Pet 2:4; Jude 6). Every aspect of life will come into account, including the 'secrets of men' (Rom. 2:16), 'the purposes of the heart' (1 Cor. 4:5; cf. Mk. 4:22; Lk. 12:2f.), and 'every careless word' (Mt. 12:36). The judgement will not be confined to unbelievers. Christians too (see III, below) will face a judgment (Mt. 7:22f.; 25:14-30; Lk. 19:12-28; 1 Cor. 3:12-15; 2 Cor. 5:10; Heb. 10:30; Jas. 3:1; 1 Pet. 1:17; 4:17; Rev. 20:12f.). There can be no avoiding this coming judgment (Heb. 9:27); it is as certain as death (Rom. 2:3; Heb. 10:27). Nowhere is this fact more clearly asserted than in the teaching of the parables of Jesus (Mt. 13:24-30, 36-43, 47-50; 21:33-41; 22:1-14; 25:1-13, 31-46; etc.).

II. The basis of judgment

The basis of judgment will be man's response to the revealed will of God. It will therefore include the entire range of human experience, thoughts, words and deeds, and will be such as to allow account to be taken of different degrees of knowledge of God's will, and hence of different degrees of ability to fulfil it (Mt. 11:21-24; Rom. 2:12-16). It will be utterly just and completely convincing (Gn. 18:25; Rom. 3:19). The judge of all the earth will do right and every mouth will be stopped in acknowledgment of the justice of his judgments (cf. Jb. 40:1-5; 42:1-6). Like Job we can cling to the justice of God (Jb. 13:13f.; 16:18f.; 19:23f.; 23:1-17; 31:1-40). In face of the frequent injustices of life in the present age we can rest in the certainty that God knows all, that he is not mocked and that he has appointed a day in which he will judge the world in righteousness (Acts 17:31). We can trust him to act in his future work of judgment with the same perfection and triumph which he manifests in the present in his works of grace and sovereignty.

Sometimes a difficulty is alleged as far as the basis of judgment is concerned in that Scripture appears to speak with two voices at points. On the one hand our *justification before God is said to rest on faith alone apart from our good works (Rom. 5:1f.; 3:28), and yet judgment is elsewhere declared to be on the basis of human works (Mt. 16:27; 25:31-46; Rom. 2:6; 1 Cor. 3:8; Rev. 22:12). The difficulty is more apparent than real. The following points need to be borne in mind.

i. Justification is an eschatological idea; *i.e.* it means that we are declared righteous before God at his judgment seat. It anticipates precisely the issue under discussion here, the final judgment of God. The man of faith who is trusting in the perfect merit and finished work of Christ has a guarantee of acquittal at the last day (Rom. 5:1; 8:1; 1 Cor. 1:30). The meaning of faith in Christ is nothing less than the truth that Christ's 'good works', *i.e.* his perfect obedience in life and death, are imputed to us here and now and will stand to our account on the judgment day. In this fundamental sense there can be no justification for anyone apart from 'works', *i.e.* the obedience of Christ in life and death which represents the only basis for human standing before God.

ii. This relationship to the perfect character and works of Christ is not merely judicial. We are not simply declared to be righteous. Our union with Christ implies a real incorporation into his death and resurrection (Rom. 6:1ff.; Gal. 2:20; Eph. 2:5f.; Col. 2:20; 3:1f.). Hence the character of Christ will inevitably be reproduced in a measure in the lives of his people. This is the insistence of James (*cf.* 2:18ff.). Faith without works is spurious because there is no such thing as a faith in Christ which does not incorporate us into union with him in his whole redeeming mission, including his death and resurrection, with all the radical implications of that for subsequent moral character. Putting this point more technically, justification which does not lead to sanctification is shown to have been no justification at all. In the words of a Puritan writer we must 'prove our pedigree by daring to be holy' (W. Gurnall). *Cf.* Rom. 6:1f.; Heb. 2:10f.; 1 Jn. 3:5f. Of course the Christian will remain a sinner to the end as far as his moral practice is concerned. Indeed it is only 'in Christ' that he begins to see sin in its true proportion and discover the depth of his moral depravity (1 Jn. 1:8-2:1f.). Yet alongside this he is 'being changed into his likeness from one degree of glory to another' (2 Cor. 3:18). Thus if a person is truly reborn by the Spirit (Jn. 3:1ff.) the scrutiny of God will certainly uncover evidences of this in their 'works'. But these works are the direct fruit of the Christian's having been regenerated by the Holy Spirit. They are in no sense a human ground of self-justification, but are simply elements of God's gift and grace towards us in Jesus Christ.

iii. When Jesus was asked 'What must we do, to be doing the works of God?' he replied, 'This is the work of God, that you believe in him whom he has sent' (Jn. 6:28f.). It is a mistake at this point to distinguish between Father and Son. God's supreme work and claim upon man, and his perfect will for his creature are expressed in Jesus Christ. God's will for us is therefore that we recognize and make response to the person and mission of Jesus. To believe in him is accordingly to work the works which God requires.

iv. Particular difficulty has been found with respect to the parable in Mt. 25:31-46, and recent interpreters have made all sorts of points on the basis of this parable, *e.g.* the idea of the so-called 'anonymous Christian' (J. A. T. Robinson, K. Rahner). This expresses the notion that some people, including atheists who have spurned God and his witness to them, agnostics who aspire to sit on the fence with respect to God's witness to them, and men and women of other faiths who have repudiated to a greater or lesser degree Christian claims for Christ, because they feed the hungry,

visit the prisoners, minister to the needy, even fight in wars of liberation from political oppression, are unconsciously followers of Christ and will be acquitted at the end because in ministering to the needy in this way they have actually ministered to Christ. Such interpretations, however, suffer from a crucial weakness; they require us to interpret one parable (which is not a straightforward piece of Scripture teaching anyway since it *is* a parable) in a manner which yields conclusions at plain variance with many other clear sections of the Bible in general and the teaching of Jesus in particular. Conversely, if we are able to interpret this parable in a manner which does not involve any basic contradictions but which enables it to be integrated harmoniously into Jesus' other teaching, then clearly that ought to be the course to follow on any sound hermeneutic. This second course is entirely possible if we keep before us Jesus' statement that the acts of mercy which are in question in the parable are done to his 'brethren' (25:40). Here is a reflection of a truth which he states elsewhere that the church as the instrument of his mission to the world is so identified with him that men's response to the disciples of Jesus and their testimony becomes their response to him (Mt. 10:9-14, 40; 12:48-50; 18:18; Mk. 9:37; Jn. 20:21ff.) 'He who receives you receives me.' 'The deeds of the righteous are not just casual acts of benevolence. They are acts by which the mission of Jesus and his followers was helped, and helped at some cost to the doers, even at some risk' (T. W. Manson, *The Sayings of Jesus*, 1949, p. 251; cf. G. E. Ladd, *A Theology of the New Testament*, 1974, pp. 116-119). All this is not to deny the fact that many non-Christians perform deeds of love and mercy, or even that Christians are sometimes put to shame by their 'good works'. These works however need to be evaluated biblically. They are evidences of God's 'common grace' operating within fallen society restraining evil and promoting goodness. We ought to give thanks for this to God, and identify our Christian compassion where possible with all such efforts for the well-being of our human neighbours. Such action, however, even when carried to the limits of self-sacrifice, cannot claim to be atoning or justifying. These people too are fallen sinners who at many points in their lives are resisting God's will and claim, and these too can have hope at the coming judgment only in the righteousness of Christ. There are no 'anonymous Christians'. 'There is salvation in no one else (than Jesus Christ), for there is no other name under heaven given among men by which we must be saved' (Acts 4:12). The basis of judgment remains our response to God's will as embodied in his general and special revelation focused in Jesus Christ.

There is one further view of the basis of judgment which requires comment. This is the notion that the *only* basis upon which a man or woman may be exposed to the final judgment and condemnation of God is their explicit rejection of the gospel of Christ. In support of this, scriptures such as Mk. 16:15f.; Jn. 3:18, 36; Rom. 10:9-12; Eph. 4:18; 2 Pet. 2:3f.; 1 Jn. 4:3 are cited which represent *unbelief* as the ground of condemnation. However, we note the following: (a) these passages only prove that faith in Christ is the one way of salvation, which is not the same as proving that conscious rejection of Christ is the only ground of condemnation. No doubt unbelief is a great and serious matter and the form in which sin expresses itself

when men spurn the one hope of their redemption, but it is not the only form of man's revolt against God, and hence it is certainly not the only possible ground on which man stands condemned before God. (b) In fact the Bible represents men as already under condemnation before the gospel is preached to them, and it is precisely this prior condemnation which represents the need of man to which the gospel comes as God's gracious answer. The effect of the gospel is not first to create and then to remove man's condemnation, but to deal with the condemnation which already hangs over man's head (cf. Rom. 1:18; 2:12; 5:16, 18; Eph. 2:4; 5:3-6; Col. 3:5f.). (c) The view that the gospel creates the possibility of man's condemnation as well as of his deliverance cannot but have a most debilitating effect upon evangelistic and missionary zeal, since, if it is only by rejecting the gospel men are finally condemned, and if, as statistics show, the majority of those who hear the gospel do not accept it, then on purely utilitarian grounds it is in the interests of the greatest happiness of the greatest number not to preach the gospel at all, and indeed to do all in our power to stop its being preached. This ludicrous and patently unbiblical conclusion shows how mistaken is the original premise.

The germ of truth in this position is that increased knowledge and increased opportunity do imply increased responsibility. Scripture certainly does recognize that men are not equal as far as their opportunity to know God is concerned, and this factor will be taken into account when God exercises his judgment (Mt. 11:20-24; Rom. 2:1-24; 2 Pet. 2:21). The principle of Lk. 12:48, 'to whom much is given, of him will much be required', is applicable at this point. Thus the general comment that those who have never heard the gospel will be judged by the light they have is correct. However, we need to add that the light they have had has not been followed by them. Only in Jesus Christ is there hope of salvation (Jn. 14:6; Acts 4:12; Eph. 2:12).

Scripture witnesses to a division at the final judgment between the 'righteous' and the 'wicked', the 'elect' and the 'non-elect', *i.e.* 'those whose names were found written in the book of life' and those whose names were 'not found written in the book of life' (Dn. 12:1-3; Mal. 3:18; Mt. 13:30, 39-43, 49f.; 25:32f., 41, 46; Mk. 13:27; Jn. 5:28f.; 1 Cor. 1:18f.; 2 Cor. 2:15f.; Rev. 20:11-15). The future existence of those who are acquitted at the final judgment is referred to in the Bible as *heaven; that of those not acquitted as *hell.

III. The judgment of Christians

Scripture speaks also of a judgment of Christians. Christ at his coming will judge his people (Mt. 25:14-30, 31-46; Lk. 19:12-28; 1 Cor. 3:12-15; 2 Cor. 5:10; 1 Pet. 1:17; Rev. 20:12f.). Christians will be judged by their Lord in respect of their stewardship of the talents, gifts, opportunities and responsibilities granted to them during the course of their lives. The reference to this judgment in 1 Pet. 1:17 is particularly significant in conveying its character. The divine judgment of the people of God will be a fatherly judgment. It will not be such as to place in peril the Christian's standing within the family of God; it will have all of a father's understanding and compassion; and yet it is not therefore to be lightly or carelessly regarded. This fatherly judgment will be exercised by Christ at his coming.

JUDGMENT

IV. Human judgment

Here as elsewhere man is called upon to imitate God. Just as God is a righteous judge, so men are called upon to judge righteously (Lk. 12:57; Jn. 7:24) in the constant recognition that ultimately the judgment is God's (Dt. 1:17). The Christian is expected to show discrimination and judgment in moral matters, and the ability to do so is a sign of true maturity (Lk. 12:57; Jn. 7:24; Rom. 15:14; 1 Cor. 2:15; 6:1-6; 10:15; 2 Cor. 13:5; Phil. 1:9f.; Col. 1:9; 1 Jn. 4:1). However, the Christian is also given frequent warnings against the danger of passing judgment on others in a way which attempts to anticipate the final divine judgment (Mt. 7:1; Lk. 6:41f.; Jn. 8:7; Rom. 2:1; 14:4; Jas. 4:1). All human judgments are provisional in the light of the coming judgment (1 Cor. 4:3-5). When the new age is fully manifest at the return of Christ, Christians, according to 1 Cor. 6:2f., will be called upon to exercise judgment with respect to the world (v. 2), and angels in particular (v. 3).

V. Present attitudes

There are few points at which the teaching of the Bible is more sharply in conflict with the assumptions of our age than in its teaching concerning God's future judgment of all men. It is correspondingly one of the most serious contemporary expressions of Christian intellectual and spiritual capitulation that this particular truth should be so little reflected in current preaching and writing. The world has been permitted at this point only too clearly to squeeze the church into its own mould (Rom. 12:1f., Phillips). Thus a theological commentator can complain with full justice that today the notion of final judgment 'figures so little in the theology and preaching of the Church' (T. Preiss, *Life in Christ*, 1954, p. 79). This theological neglect is the more inexcusable in that this century has witnessed an unprecedented recovery of the biblical eschatological perspective. This particular aspect of eschatology, however, *viz.* future divine judgment, quite unwarrantedly, has been largely left on one side.

Man today rejects out of hand the idea that he must one day render account for his life and its decisions. His loss of conviction concerning an after-life, combined with the erosion of the notion of moral responsibility on the basis of popular understanding of psychological and psycho-analytical theories, has contributed to the moral indifference and pragmatism of our times. Moral issues, in so far as they matter at all, relate only to the present moment and to considerations of personal happiness. The thought that they might relate to some transcendent divine dimension, or that all men will one day be inescapably summoned to accept responsibility for these very moral decisions in the all-seeing presence of their Creator, is anathema. Unfortunately for modern man it happens to be true. Judgment is inevitable and awaits us all. In face of this modern tendency to dismiss future judgment there is the greater and more urgent responsibility placed upon the Christian church tenaciously to maintain the biblical perspective.

B.A.M.

JUDGMENT SEAT. In Greek states the assembly met in front of a dais (*bēma*) from which all official business was conducted. Thus Herod Agrippa I sits on the dais (RSV 'throne') to address the republics of Tyre and Sidon (Acts 12:21). The Gk. term is otherwise used in the NT for the *tribunal* (Acts 18:12, etc.), the platform on which a Roman magistrate sat, flanked by his counsellors, to administer justice. It was traditionally erected in some public place, as apparently in the case of Pilate (Jn. 19:13), or alternatively in an auditorium (Acts 25:23). That it was the solemn integrity of Roman justice that prompted the image of the judgment seat of God (Rom. 14:10) or Christ (2 Cor. 5:10) seems likely from the fact that Paul is in either case addressing an audience familiar with direct Roman government.

JULIUS. The family name of the Caesars, which must have become widespread since their rise to power due to the custom of conferring on new citizens the name of the magistrate under whose auspices they were enfranchised. The centurion who escorted Paul to Rome (Acts 27:1) presumably belongs to this class of Julii, since no aristocratic member of the house would serve in that rank. His unit (the 'Augustan Cohort', see *ARMY) has been thought (by Mommsen and Ramsay) to be the Caesar's regular staff of couriers. The term corresponds exactly, however, to the *cohort Augustae* known from epigraphic evidence. That this was an auxiliary (*i.e.* non-citizen) force, and therefore not likely to supply the escort for a Roman, is not a serious objection, since the centurion himself is manifestly a citizen. Whether enfranchised on promotion, or seconded to the *auxilia* from the legions, he belongs with Paul to the proud and growing body of new citizen families that Roman statesmanship created in the East.

JUSTICE. The word 'justice' occurs 115 times in RSV OT, usually for *mišpāt*, 'judgment', the rule that should guide *judges. In the AV, however, it represents *mišpāt* only once (Jb. 36:17); elsewhere it translates *šedeq* or *s'ḏāqā*. The more frequent rendering of these latter nouns is 'righteousness'; but when *mišpāt* and *s'ḏāqā* appear together AV translates the whole phrase as 'judgment and justice' (e.g. 2 Sa. 8:15; cf. Gn. 18:19), though RSV renders the same combination as 'justice and righteousness'. In AV, therefore, 'justice' must be understood as being the same word as *'righteousness', and seldom as denoting the specialized concept of 'fair play', or legal equity, with which the term justice is presently associated. The expression, 'to do (someone) justice', occurs twice, being taken from the corresponding Heb. verbal root, *šādaq*, causative, which means 'to declare one right' (2 Sa. 15:4; Ps. 82:3). Similarly, the adjective *šaddiq*, 'righteous', is over 40 times rendered by the adjective 'just', in both vss. In RSV NT, the noun 'justice' represents both *krisis*, 'judgment', and *dikaïosynē*, 'righteousness'. In AV it does not appear; but at over 30 points the adjective *dikaïos*, 'righteous', is likewise translated by the English term 'just'.

This biblical concept of justice exhibits development through nine, generally chronological stages.

1. Etymologically, it appears that the root of *ṣ'ḏāqā*, like that of its kindred noun *yōšer*, 'uprightness' (Dt. 9:5), signifies 'straightness', in a physical sense (*BDB*, p. 841).

2. But already in the patriarchal age *ṣ'ḏāqā* has the abstract meaning of conformity, by a given object or action, to an accepted standard of values, e.g. Jacob's 'honest' living up to the terms of his sheep-contract with Laban (Gn. 30:33). Moses thus speaks of just balances, weights and measures (Lv. 19:36; Dt. 25:15) and insists that Israel's 'judges pronounce 'just' (AV; righteous, RSV) judgment' (Dt. 16:18, 20). Arguments that are actually questionable may seem, at first glance, to be 'just' (Pr. 18:17; RSV, 'right'); and Christian masters are cautioned to treat their slaves 'justly and fairly' (Col. 4:1). Even inanimate objects may be described as *ṣeḏeq*, if they measure up to the appropriate standards. The phrase, 'paths of *ṣeḏeq*' (Ps. 23:3), for example, designates walkable paths.

3. Since life's highest standard is derived from the character of deity, 'justice', from the time of Moses and onwards (cf. Dt. 32:4), comes to distinguish that which is God's will and those activities which result from it. Heavenly choirs proclaim, 'Just and true are thy ways' (Rev. 15:3). Recognizing the ultimacy of the will of the Lord, Job therefore asks, 'How can a man be just before God?' (Jb. 9:2; cf. 4:17; 33:12). But even though God stands answerable to no man, still 'to justice ... he doeth no violence' (37:23, RVMG); for the actions of the God who acts in harmony with his own standard are always perfect and right (Zp. 3:5; Ps. 89:14). *ṣ'ḏāqā* may thus describe Yahweh's preservation of both human and animal life (Ps. 36:6) or his dissociation from vain enterprise (Is. 45:19). In both of the latter verses the EVV translate *ṣ'ḏāqā* as 'righteousness'; but it might with greater accuracy be rendered 'regularity' or 'reliability'.

4. By a natural transition, 'justice' then comes to identify that moral standard by which God measures human conduct (Is. 26:7). Men too must 'do justice' (Gn. 18:19) as they walk with deity (Gn. 6:9; Mt. 5:48); for not the hearers, but the doers of the law, are 'just' (AV; righteous, RSV) before God' (Rom. 2:13). The attribute of justice is to be anticipated only in the hearts of those who fear God (Lk. 18:2), because justice in the biblical sense begins with holiness (Mi. 6:8; Mk. 6:20; 1 Thes. 2:10) and with sincere devotion (Lk. 2:25; Acts 10:22). Positively, however, the wholehearted participation of the Gadites in the divinely ordered conquest of Canaan is described as 'executing the just decrees of the Lord' (Dt. 33:21; cf. S. R. Driver, *JCC*). The need for earnest conformity to the moral will of God lies especially incumbent upon kings (2 Sa. 8:15; Je. 22:15), princes (Pr. 8:15), and judges (Ec. 5:8); but every true believer is expected to 'do justice' (Ps. 119:121, AV; Pr. 1:3; cf. its personification in Is. 59:14). Justice constitutes the opposite of sin (Ec. 7:20) and serves as a marked characteristic of Jesus the Messiah (Is. 9:7; Zc. 9:9; Mt. 27:19; Acts 3:14). In the poetry of the OT there do arise affirmations of self-righteousness by men like David ('Judge me according to my righteousness, and establish the just', Ps. 7:8-9, AV; cf. 18:20-24) or Job ('I am ... just and blameless' Jb. 12:4; cf. 1:1), that might appear incongruous when considered in the light

of their acknowledged iniquity (cf. Jb. 7:21; 13:26). The poets' aims, however, are either to exonerate themselves from particular crimes that enemies have laid to their charge (cf. Ps. 7:4) or to profess a genuine purity of purpose and single-hearted devotion to God (Ps. 17:1). 'They breathe the spirit of simple faith and childlike trust, which throws itself unreservedly on God ... and they disclaim all fellowship with the wicked, from whom they may expect to be distinguished in the course of His Providence' (A. F. Kirkpatrick, *The Book of Psalms*, 1906, 1, p. lxxxvii). As Ezekiel described such a man, 'He walks in my statutes ... he is righteous (AV, just), he shall surely live, says the Lord God' (Ezk. 18:9).

5. In reference to divine government, justice becomes descriptive in a particular way of punishment for moral infraction. Under the lash of heaven-sent plagues, Pharaoh confessed, 'The Lord is *saddiq*, and I and my people are wicked' (Ex. 9:27; cf. Ne. 9:33); and the one thief cried to the other as they were crucified, 'We indeed justly ...' (Lk. 23:41). For God cannot remain indifferent to evil (Hab. 1:13; cf. Zp. 1:12), nor will the Almighty pervert justice (Jb. 8:3; cf. 8:4; 36:17). Even the pagans of Malta believed in a divine nemesis, so that when they saw Paul bitten by a viper they concluded, 'This man is a murderer ... justice has not allowed him to live' (Acts 28:4). God's punitive righteousness is as a consuming fire (Dt. 32:22; Heb. 12:29; *WRATH), and condemnation is just (Rom. 3:8).

6. From the time of the judges and onward, however, *ṣ'ḏāqā* comes also to describe his deeds of vindication for the deserving, 'the triumph of the Lord' (Jdg. 5:11). Absalom thus promised a petitioner he 'would give him justice' (2 Sa. 15:4; cf. Ps. 82:3), and Solomon proclaimed that God 'blesses the abode of the righteous (AV, just)' (Pr. 3:33; cf. Ps. 94:15). Divine vindication became also the plea of Isaiah's contemporaries, 'They ask of me the ordinances of justice' (Is. 58:2-3, AV); for though God's intervention might have been delayed (Ec. 7:15; 8:14; cf. Is. 40:27), he yet 'became jealous for his land, and had pity on his people' (Joel 2:18).

7. Such words, however, introduce another aspect, in which divine justice ceases to constitute an expression of precise moral desert and partakes rather of divine pity, love and grace. This connotation appears first in David's prayer for the forgiveness of his crimes over Bathsheba, when he implored, 'Deliver me from bloodguiltiness, O God, thou God of my salvation, and my tongue will sing aloud of thy *ṣ'ḏāqā*' (deliverance) (Ps. 51:14). But what David sought was not vindication; for he had just acknowledged his heinous sin and, indeed, his depravity from birth (Ps. 51:5). His petition sought rather for undeserved pardon; and *ṣ'ḏāqā* may be translated by simple repetition—O God of my salvation: my tongue shall sing of thy 'salvation'. *ṣ'ḏāqā*, in other words, has become redemptive; it is God's fulfilling of his own graciously promised salvation, irrespective of the merits of men (cf. David's same usage in Pss. 31:1; 103:17; 143:1). David's counsellor Ethan thus moves, in the space of two verses, from a reference to God's 'justice [*ṣeḏeq*, according to sense 4 above] and judgment' (Ps. 89:14, AV) to the joyful testimony, 'In thy *ṣ'ḏāqā* [promised grace] shall Israel be exalted' (Ps. 89:16, AV; cf. a similar contrast within Is. 56:1). When Isaiah, therefore, speaks of 'a just [AV;

righteous, RSV; *šaddiq*) God and a Saviour' (Is. 45:21), his thought is not, 'A just God, and yet at the same time a Saviour', but rather, 'A *šaddiq* God, and therefore a Saviour' (cf. the parallelism of *'righteousness' with salvation in Is. 45:8; 46:13). Correspondingly, we read in the NT that 'if we confess our sins, he is faithful and just [*dikaios* = faithful to his gracious promise, not, demanding justice] and will forgive our sins' (1 Jn. 1:9). Such concepts of non-judicial 'justice', however, must be limited to those passages in which this usage is specifically intended. In Rom. 3, on the contrary, with its contextual emphasis upon the wrath of God against sin and upon the propitiatory sacrifice of Christ for the satisfaction of the Father's justice, we must continue to understand *dikaiois* (Rom. 3:26) in its traditional sense: 'That he [God] might be just [exacting punishment, according to sense 5 above], and [yet at the same time] the justifier of him which believeth in Jesus' (AV; see Sanday and Headlam, ICC; *JUSTIFICATION).

8. As a condition that arises out of God's forgiving 'justice', there next appears in Scripture a humanly possessed *š'dāqā*, which is simultaneously declared to have been God's own moral attribute (*š'dāqā* in sense 4 above), but which has now been imparted to those who believe on his grace. Moses thus describes how Abraham's faith served as a medium for imputed righteousness (Gn. 15:6), though one must, of course, observe that his faith did not constitute in itself the meritorious righteousness but was merely 'reckoned' so. He was justified *through* faith, not *because of* it (cf. John Murray, *Redemption, Accomplished and Applied*, 1955, p. 155). Habakkuk likewise declared, 'The just shall live by his faith' (Hab. 2:4, AV), though here too the justification derives, not from man's own, rugged 'faithfulness' (RSVmg.), but from his humble dependence upon God's mercy (contrast the self-reliance of the Babylonians, which the same context condemns; and cf. Rom. 1:17; Gal. 3:11). It was God's prophet Isaiah, however, who first spoke directly of 'the heritage of the servants of the Lord . . . their *š'dāqā* from me' (Is. 54:17). Of this 'righteousness', A. B. Davidson accurately observed, 'It is not a Divine attribute. It is a Divine effect . . . produced in the world by God' (*The Theology of the Old Testament*, 1925, p. 143). That is to say, there exists within Yahweh a righteousness which, by his grace, becomes the possession of the believer (Is. 45:24). Our own righteousness is totally inadequate (Is. 64:6); but 'in Yahweh' we 'are righteous' (*šādaq*) (Is. 45:25), having been made just by the imputed merit of Christ (Phil. 3:9). A century later, Jeremiah thus speaks both of Judah and of God himself as a 'habitation of justice' (Je. 31:23; 50:7, AV), i.e. a source of justification for the faithful (cf. Je. 23:6; 33:16, 'Yahweh our righteousness', Theo. Laetsch, *Biblical Commentary, Jeremiah*, 1952, pp. 191-192, 254).

9. But even as God in his grace bestows righteousness upon the unworthy, so the people of God are called upon to 'seek justice' (Is. 1:17) in the sense of pleading for the widow and 'judging the cause of the poor and needy' (Je. 22:16). 'Justice' has thus come to connote goodness (Lk. 23:50) and loving consideration (Mt. 1:19). Further, from the days of the Exile onward, Aram. *šidqā*, 'righteousness', becomes specialized into a designation for alms or charity (Dn. 4:27), an equivalent expression for 'giving to the poor' (Ps. 112:9; cf. Mt.

6:1) One might therefore be led to conceive of biblical 'justice', particularly in these last three, supra-judicial senses, as involving a certain tension or even contradiction: e.g. *š'dāqā* in its 7th, gracious sense seems to forgive the very crimes that it condemns in its 5th, punitive sense. The ultimate solution, however, appears in the person and work of the Lord Jesus Christ. The ethical example furnished by his sinless life (Heb. 4:15) constitutes the climax of biblical revelation on the moral will of God and far exceeds the perverted though seemingly lofty justice of the scribes and Pharisees (Mt. 5:20). Yet he who commanded men to be perfect, even as their heavenly Father is perfect (Mt. 5:48), exhibited at the same time that love which has no equal, as he laid down his life for his undeserving friends (Jn. 15:13). Here was revealed *š'dāqā*, 'justice', in its ethical stage 5, in its redemptive stage 7, and in its imputed stage 8, all united in one. He came that God might be just and yet the justifier of him that believeth in Jesus (Rom. 3:26) and that we might be found in him, who is made our righteousness and sanctification and redemption (1 Cor. 1:30).

JUSTIFICATION.

I. Meaning of the word

'Justify' (Heb. *šādaq*; Gk. [LXX and NT, *dikaioō*] is a forensic term meaning 'acquit', 'declare righteous', the opposite of 'condemn' (cf. Dt. 25:1; Pr. 17:15; Rom. 8:33). Justifying is the judge's act. From the litigant's standpoint, therefore, 'be justified' means 'get the verdict' (Is. 43:9, 26).

In Scripture, God is 'the Judge of all the earth' (Gn. 18:25), and his dealings with men are constantly described in forensic terms. God's Law is a complex of moral goals and standards by which his rational creatures should live. Righteousness, i.e. conformity with his law, is what he requires of his human creatures, and he shows his own righteousness as Judge in taking vengeance, i.e. inflicting punitive retribution ('wrath') on those who fall short of it (cf. Ps. 7:11, RV; Is. 5:16; 10:22; Acts 17:31; Rom. 2:5; 3:5f.). There is no hope for anyone if God's verdict goes against him.

Because God is King, the thought of him as justifying may have an executive as well as a judicial aspect. Like the ideal royal judge in Israel, he will not only pass a verdict in favour of the accused, but actively implement it by showing favour towards him and publicly reinstating him. The verb 'justify' may focus on either aspect of God's action. For instance, the justifying of Israel and the Servant, envisaged in Is. 45:25; 50:8, is a public

vindication through a change in their fortunes. The justification of sinners that Jesus illustrates by his shock-ending story of the Pharisee and the publican (Lk. 18:9–14) and that Paul expounds in Rom. 3–5, Gal. 2–4 and 2 Cor. 5:14–21 is, however, simply the passing and sustaining of a favourable verdict. Jesus and Paul certainly believe that God shows favour to those whom he has acquitted, but they use other terms to describe this (chiefly, the family language of adoption, inheritance, and paternal care).

'Justify' is also used for ascriptions of righteousness in non-forensic contexts. Men are said to justify God by confessing him just (Lk. 7:29; cf. Rom. 3:4, quoting Ps. 51:4), and themselves by claiming to be just (Jb. 32:2; Lk. 10:29; 16:15). Jerusalem is ironically said to have 'justified' Sodom and Samaria by outdoing them in sin! (Ezk. 16:51). The passive can denote being vindicated by events against suspicion, criticism and mistrust (Mt. 11:19; Lk. 7:35; 1 Tim. 3:16; cf. Jas. 2:21, 24f., for which see below).

Lexical support is wanting for the view of Chrysostom, Augustine and the Council of Trent that when Paul and James speak of present justification they refer to God's work of *making* righteous by inner renewal, as well as of *counting* righteous through remission of sins. James seems to mean neither, Paul only the latter. His synonyms for 'justify' are 'reckon righteousness', 'remit sins', 'not reckon sin' (see Rom. 4:5–8, rv)—phrases expressing the idea, not of inner transformation, but of conferring a legal status and cancelling a legal liability. Justification, to Paul, is a judgment passed on man, not a work wrought within man. The two things go together, no doubt, but they are distinct.

II. Justification in Paul

Out of the 39 occurrences of the verb 'justify' in the NT, 29 come in the Epistles or recorded words of Paul; so do the two occurrences of the corresponding noun, *dikaiōsis* (Rom. 4:25; 5:18). This reflects the fact that Paul alone of NT writers left us letters (Romans and Galatians in particular) that make the reality of justification by grace, bringing freedom from the dominion of sin and death, the focus for his exposition of salvation in and through Christ.

Justification means to Paul *God's act of remitting the sins of guilty men, and accounting them righteous, freely, by his grace, through faith in Christ, on the ground, not of their own works, but of the representative law-keeping and redemptive blood-shedding of the Lord Jesus Christ on their behalf.* (For the parts of this definition, see Rom. 3:23–26; 4:5–8; 5:18f.) Paul's doctrine of justification is his characteristic way of formulating the central gospel truth, that God forgives believing sinners. Theologically, it is the most highly developed expression of this truth in the NT.

In Romans, Paul introduces the gospel as disclosing 'the righteousness of God' (1:17). The most natural of the many views canvassed is that this phrase expresses the single, complex, dynamic idea of God's morally glorious and eternally worship-worthy display of mercy and justice in bestowing on guilty transgressors the status of perfect lawkeepers. Within this frame, the phrase has two points of reference. 1. It refers to this status, which God through Christ freely confers upon believing sinners ('the gift of righteousness' as opposed to condemnation and death, Rom. 5:17; cf.

3:21f.; 9:30; 10:3–10; 2 Cor. 5:21; Phil. 3:9). It has been argued that the essence of this gift is covenant status in the new Israel that is constituted by faith-union with the risen Christ, and certainly the justified are henceforth in covenant with God in just this way. But justification, as such, for Paul is pardon and acceptance, not covenant involvement, and the hinge-question throughout Romans is not who is in covenant with God, but how may sinners find eternal life. 2. Also, and indeed primarily, the phrase refers to the way in which the gospel reveals God as doing what is right—not only judging transgressors as they deserve (2:5; 3:5f.) but also keeping his promise to send salvation to Israel (3:4f.), and justifying sinners in such a way that his own judicial claims upon them are met (3:25f.). 'The righteousness of God' is thus a predominantly forensic concept, denoting God's gracious work of bestowing upon guilty sinners a justified justification, acquitting them in the court of heaven without prejudice to his justice as their Judge.

Many scholars today find the background of this phrase in a few passages from Is. 40ff. and the psalms in which God's 'righteousness' and 'salvation' appear as equivalents (Is. 45:8, cf. vv. 19–25; 46:13; 51:3–6; Ps. 98:2; etc.). This may be right, but since Paul nowhere quotes these verses, it cannot be proved. It must also be remembered that the reason why these texts call God's vindication of his oppressed people his 'righteousness' is that it is an act of faithfulness to his covenant promise to them; whereas Romans deals principally with God's justifying of Gentiles, who previously were not his people and to whom he had promised nothing (cf. 9:24f.; 10:19f.)—quite a different situation.

E. Käsemann and others construe God's righteousness in Paul as a gracious exertion of power whereby God keeps faith with both his covenant people (by fulfilling his promise to save them) and his captive creation (by restoring his dominion over it). Both thoughts are Pauline, but it is doubtful whether (as is argued) 'righteousness' in Rom. 3:25–26 and 'just' in v. 26 point only to gracious faithfulness saving the needy and not to judicial retribution (cf. 2:5; 3:5) saving the guilty by being diverted upon the One set forth to be a *propitiation. The latter exegesis fits the flow of thought better; the former cannot explain why 'and' appears in the phrase 'just and the justifier' (AV), for it finds in these words only one thought, not two.

It has been questioned whether Paul's doctrine of justification by faith without works is any more than a controversial device, developed simply as a weapon against the Judaizers. But the following facts indicate that it was more than this.

1. The Epistle to the *Romans is evidently to be read as a full-dress statement of Paul's gospel, and the doctrine of justification is its backbone.

2. In three places Paul writes in personal terms of the convictions that had made him the man and the missionary that he was, and all three are couched in terms of justification (Gal. 2:15–21; 2 Cor. 5:16–21; Phil. 3:4–14). In Rom. 7:7ff. Paul describes his personal need of Christ in terms of the law's condemnation—a need which only God's justifying sentence in Christ could relieve (cf. Rom. 8:1f.; Gal. 3:19–4:7). Paul's personal religion was evidently rooted in the knowledge of his justification.

3. Justification is to Paul God's fundamental act

JUSTIFICATION

of blessing, for it both saves from the past and secures for the future. On the one hand, it means pardon, and the end of hostility between God and ourselves (Acts 13:39; Rom. 4:6f.; 5:9f.). On the other hand, it means acceptance and a title to all blessings promised to the just, a thought which Paul develops by linking justification with adoption and heirship (Gal. 4:4ff.; Rom. 8:14ff.). Both aspects appear in Rom. 5:1–2, where Paul says that justification brings both peace with God (because sins are remitted) and hope of God's glory (because the sinner is accepted as righteous). This hope is a certainty; for justification has an eschatological significance. It is the judgment of the last day brought into the present, a final, irreversible verdict. The justified person can accordingly be sure that nothing will ever separate him from the love of his God (Rom. 8:33–39; cf. 5:9). His glorification is certain (Rom. 8:30). The coming inquisition before Christ's judgment-seat (Rom. 14:10ff.; 2 Cor. 5:10) may deprive him of particular rewards (1 Cor. 3:15), but not of his justified status.

4. Paul's doctrine of salvation has justification as its basic reference-point. His belief about justification is the source from which flows his view of Christianity as a world-religion of grace and faith, in which Gentiles and Jews stand on an equal footing (Rom. 1:16; 3:29ff.; Gal. 3:8–14, 28f., etc.). It is in terms of justification that he explains grace (Rom. 3:24; 4:4f., 16), the saving significance of Christ's obedience and death (Rom. 3:24f.; 5:16ff.), the revelation of God's love at the cross (Rom. 5:5–9), the meaning of redemption (Rom. 3:24; Gal. 3:13; Eph. 1:7) and reconciliation (2 Cor. 5:18f.), the covenant relationship (Gal. 3:15f.), faith (Rom. 4:23ff.; 10:8ff.), union with Christ (Rom. 8:1; Gal. 2:17, rv), adoption and the gift of the Spirit (Gal. 4:6–8; Rom. 8:10, cf. v. 15), and Christian assurance (Rom. 5:1–11; 8:33ff.). It is in terms of justification that Paul explains all hints, prophecies and instances of salvation in the OT (Rom. 1:17; Gal. 3:11, quoting Hab. 2:4; Rom. 3:21; 4:3–8, quoting Gn. 15:6; Ps. 32:1f.; Rom. 9:22–10:21, quoting Ho. 2:23; 1:10; Is. 8:14; Joel 2:32; Is. 65:1, etc.; Rom. 11:26f., quoting Is. 59:20f.; Gal. 3:8, quoting Gn. 12:3; Gal. 4:21ff., quoting Gn. 21:10; etc.).

5. Justification is the key to Paul's philosophy of history. He holds that God's central overarching purpose in his ordering of world-history since the Fall has been to lead sinners to justifying faith.

God deals with mankind, Paul tells us, through two representative men: 'the first man Adam', and 'the second man', who is 'the last Adam', Jesus Christ (1 Cor. 15:45ff.; Rom. 5:12ff.). The first man, by disobeying, brought condemnation and death upon the whole race; the second man, by his obedience, has become the author of justification and life for all who have faith (Rom. 5:16ff.).

From the time of Adam's fall, death reigned universally, though sin was not yet clearly known (Rom. 5:12ff.). But God took Abraham and his family into covenant, justifying Abraham through his faith, and promising that in Abraham's seed (*i.e.* through one of his descendants) all nations should be blessed (*i.e.* justified) (Gal. 3:6–9, 16; Rom. 4:3, 9–22). Then through Moses God revealed his law to Abraham's family. The law was meant to give, not salvation, but knowledge of sin. By detecting and provoking transgressions, it was to teach Israelites their need of justification, thus acting as a *paidagōgos* (the household slave who took children to school) to lead them to Christ

(Gal. 3:19–24; Rom. 3:20; 5:20; 7:5, 7–13). This epoch of divine preparatory education lasted till the coming of Christ (Gal. 3:23–25; 4:1–5).

The effect of Christ's work was to abolish the barrier of exclusivism which Israel's possession of the law and promise had erected between Jew and Gentile (Eph. 2:14ff.). Through Christ, justification by faith could now be preached to Jew and Gentile without distinction, for in Christ all believers were made Abraham's seed, and became sons of God and heirs of the covenant (Gal. 3:26–29). Unhappily, in this situation most Jews proved to be legalists; they sought to establish a righteousness of their own by works of law, and would not believe that faith in Christ was the God-given way to righteousness (Rom. 9:30–10:21). So many 'natural branches' had been cut off from the olive-tree of the historic covenant community (Rom. 11:16ff.), and the church was for the present predominantly Gentile; but there was hope that an elect remnant from fallen Israel, provoked by the mercy shown to underserving Gentiles, would itself come to faith and find remission of sins in the end (Rom. 11:23–32). Thus both Jew and Gentile would be saved, not through their own works and effort, but through the free grace of God justifying the disobedient and ungodly; and all the glory of salvation will be God's alone (Rom. 11:30–36).

These considerations point to the fundamental place of justification in Paul's apprehension and analysis of what was always his central theme, namely salvation in and through Jesus Christ.

III. The ground of justification

As stated by Paul in Romans, the doctrine of justification seems to raise a problem of theodicy. Its background, set out in 1:18–3:20, is the solidarity of humankind in sin, and the inevitability of judgment. In 2:5–16 Paul states his doctrine of the judgment day. The principle of judgment, he says, will be 'to every man according to his works' (v. 6, rsv). The standard of judgment will be God's law, in the highest form in which men know it (if not the Mosaic law, then the law of conscience, vv. 12–15). The evidence will be 'the secrets of men' (v. 16). Only law-keepers can hope to be justified (vv. 7, 10, 12f.). And there are no law-keepers. None is righteous; all have sinned (3:9ff.). So the prospect is of universal condemnation, for Jew as well as Gentile, for a law-breaking Jew is no more acceptable to God than anyone else (2:17–27). All, it seems, are doomed. 'No human being will be justified in his sight by works of the law' (3:20, echoing Ps. 143:2).

But now Paul proclaims the present justification of believing sinners (3:21ff.). God reckons righteousness to the unrighteous and justifies the ungodly (3:23f.; 4:5f.). The (deliberately?) paradoxical quality of the last phrase is heightened by the fact that these very Greek words are used in the LXX of Ex. 23:7 ('I will not justify the wicked') and Is. 5:22f. ('Woe unto them . . . which justify the wicked . . .'). The question arises: on what grounds can God justify the ungodly without compromising his own justice as the Judge?

Paul maintains that God justifies sinners on a just ground: namely, that Jesus Christ, acting on their behalf, has satisfied the claims of God's law upon them. He was 'born under the law' (Gal. 4:4) in order to fulfil the precept and bear the penalty of the law in their stead. By his 'blood' (*i.e.* his death) he put away their sins (Rom. 3:25; 5:9). By

his obedience to God he won for all his people the status of law-keepers (Rom. 5:19). He became 'obedient unto death' (Phil. 2:8); his life of righteousness culminated in his dying the death of the unrighteous, bearing the law's penal curse (Gal. 3:13; cf. Is. 53:4–12). In his person on the cross, the sins of his people were judged and expiated. Through this 'one act of righteousness'—his sinless life and death—'the free gift came unto all men to justification of life' (Rom. 5:18, RV). Thus believers become 'the righteousness of God' in and through him who 'knew no sin' personally, but was representatively 'made sin' (treated as a sinner, and judged) in their place (2 Cor. 5:21). Thus Paul speaks of 'Christ Jesus, whom God made . . . our righteousness' (1 Cor. 1:30). This was the thought expressed in older Protestant theology by the phrase 'the imputation of Christ's righteousness'. The phrase is not in Paul, but its meaning is. The point that it makes is that believers are made righteous before God (Rom. 5:19) through his admitting them to share Christ's status of acceptance. In other words, God treats them according to Christ's desert. There is nothing arbitrary or artificial in this, for God recognizes the existence of a real union of covenantal solidarity between them and Christ. For Paul, union with Christ is not fiction, but fact—the basic fact, indeed, of Christianity; and his doctrine of justification is simply his first step in analysing its meaning. So it is 'in Christ' (Gal. 2:17; 2 Cor. 5:21) that sinners are justified. God accounts them righteous, not because he accounts them to have kept his law personally (which would be a false judgment), but because he accounts them to be 'in' the One who kept God's law representatively (which is a true judgment).

So, when God justifies sinners on the ground of Christ's obedience and death, he acts justly. So far from compromising his judicial righteousness, this method of justification actually exhibits it. It is designed 'to show God's righteousness, because in his divine forbearance he had passed over former sins [*i.e.* in OT times]; it was to prove at the present time that he himself is righteous and that he justifies him who has faith in Jesus' (Rom. 3:25f.). The key words are repeated for emphasis, for the point is crucial. The gospel which proclaims God's apparent violation of his justice really reveals his justice. By his method of justifying sinners, God (in another sense) justified himself; for by setting forth Christ as a propitiation for sins, in whom human sin was actually judged and punished as it deserved, he revealed the just ground on which he was able to pardon and accept believing sinners in OT times (as in fact he did: cf. Ps. 130:3f.), no less than in the Christian era.

IV. The means of justification

Faith in Christ, says Paul, is the means whereby righteousness is received and justification bestowed. Sinners are justified 'by' or 'through' faith (Gk. *pistei*, *dia* or *ek pisteōs*). Paul does not regard faith as the ground of justification. If it were, it would be a meritorious work, and Paul would not be able to term the believer, as such, 'one who does not work' (Rom. 4:5); nor could he go on to say that salvation by faith rests on grace (v. 16), for grace absolutely excludes works (Rom. 11:6). Paul quotes the case of Abraham, who 'believed God, and it was reckoned to him as righteousness', to prove that a person is justified through faith with-

out works (Rom. 4:3ff.; Gal. 3:6; quoting Gn. 15:6). In Rom. 4:5, 9 (cf. vv. 22, 24) Paul refers to the Genesis text as teaching that Abraham's faith was 'reckoned . . . as righteousness'. All he means, however, as the context shows, is that Abraham's faith—whole-hearted reliance on God's promise (vv. 18ff.)—was the occasion and means of his being justified. The phrase 'reckoned *eis* righteousness' could either mean 'as' (by real equivalence, or some arbitrary method of calculation), or else 'with a view to', 'leading to', 'issuing in'. The latter alternative is clearly right. Paul is not suggesting that faith, viewed either as righteousness, actual or inchoate, or as a substitute for righteousness, is the *ground* of justification; Rom. 4 does not deal with the ground of justification at all, only with the means of securing it.

V. Paul and James

On the assumption that Jas. 2:14–26 teaches that God accepts men on the double ground of faith and works, some have thought that James deliberately contradicts Paul's teaching of justification by faith without works, supposing it to be antinomian (cf. Rom. 3:8). But this seems to misconceive James' point. It must be remembered that Paul is the only NT writer to use 'justify' as a technical term for God's act of accepting sinners when they believe. When James speaks of 'being justified', he appears to be using the word in its more general sense of being vindicated, or proved genuine and right before God and men, in face of possible doubt as to whether one was all that one professed, or was said, to be (cf. the usage in Mt. 11:19). For someone to be justified in this sense is for him to be shown a genuine believer, one who will demonstrate his faith by action. This justification is, in effect, a manifesting of the justification that concerns Paul. James quotes Gn. 15:6 for the same purpose as Paul does—to show that it was faith that secured Abraham's acceptance. But now, he argues, this statement was 'fulfilled' (confirmed, shown to be true, and brought to its appointed completion by events) 30 years later, when 'Abraham (was) justified by works, when he offered his son Isaac upon the altar' (v. 21). By this his faith was 'made perfect', *i.e.* brought to due expression in appropriate actions; thus he was shown to be a true believer. The case of Rahab is parallel (v. 25). James' point in this paragraph is simply that 'faith', *i.e.* a bare orthodoxy, such as the devils have (v. 19), unaccompanied by good works, provides no sufficient grounds for inferring that a man is saved. Paul would have agreed heartily (cf. 1 Cor. 6:9; Eph. 5:5f.; Tit. 1:16).

JUSTIFICATION

60–78; N. T. Wright, *The Climax of the Covenant*, 1991. J.I.P.

JUSTUS. A Latin name. Lightfoot (on Col. 4:11) notes its frequency among Jews and proselytes, often combined with a Jewish name (*cf.* 1 and 3 below, and see Deissmann, *Bible Studies*, pp. 315f.), and suggests that it was meant to denote obedience and devotion to the Law.

1. A name of Joseph Barsabbas, one of the two conceived as the possible apostolic successor to Judas Iscariot (Acts 1:23). By the context he was thus a consistent disciple from John the Baptist's time. Papias had a story of his survival of a heathen ordeal by poison (Eusebius, *EH* 3. 39. 9; *cf.* Lightfoot, *Apostolic Fathers*, 1891, p. 531, for another authority). On the name 'Barsabbas' ('son of—*i.e.* born on—a Sabbath?'), see H. J. Cadbury in *Amicitiae Corolla*, ed. H. G. Wood, 1933, pp. 48ff. If it is a true patronymic, Judas Barsabbas (Acts 15:22) could be a brother.

2. Gentile adherent and neighbour of the synagogue in Corinth. When Christian preaching split the synagogue, the house of Justus became Paul's

centre (Acts 18:7). The mss variously render his other name as Titus or Titius, or omit it altogether (accepted as the original reading by Ropes, *BC*, 3, p. 173). Following the hint of Rom. 16:23, Ramsay, and, more fully, E. J. Goodspeed (*JBL* 69, 1950, pp. 382ff.) identify him with *Gaius of Corinth, rendering his name 'Gaius Titius Justus'. The guess that he was the Titus of Paul's letters has nothing but its antiquity to commend it.

3. Alias Jesus, a valued Jewish co-worker of Paul (Col. 4:11). Nothing more is known of him. It has been conjectured that his name has accidentally dropped out from Phm. 24 (*cf.* E. Amling, *ZNW* 10, 1909, p. 261).

A.F.W.

JUTTAH (Heb. *yūttāh*). A walled town on a hill 8 km due S of Hebron, 5 km SW of Ziph, assigned to the priests (Jos. 15:55; 21:16; *cf.* 1 Ch. 6:59, where Juttah appears in LXX as *Atta*, and is required to make the count); modern Yatta. In Lk. 1:39 some commentators would read Juttah, in apposition to *polin*, for 'Judah'; F.-M. Abel emphatically disagrees (*Géographie de la Palestine* 2, 1938, p. 367).

J.P.U.L.

K

KABZEEL. A town in S Judah; birthplace of Benaiiah; ben-Jehoiada (2 Sa. 23:20); resettled in Nehemiah's time (called Jekabzeel in Ne. 11:25). Khirbet Hora, site of an Israelite fortress 13 km E of Beer-sheba, is a possible identification. See F.-M. Abel, *Géographie de la Palestine*, 2, 1938, pp. 89, 353; Y. Aharoni, *IEJ* 8, 1958, pp. 36–38.

R. P. G.

KADESH. 1. Kadesh Barne'a. The site has been identified with 'Ain Qudeis, about 80 km SW of Beer Sheva, but this depends on the similarity of the ancient and modern names. The spring produces an insignificant amount of water. 'Ain Qudeirat, roughly 8 km NW of 'Ain Qudeis, has much more water and vegetation and is a more suitable location for Kadesh Barne'a.

Chadaraomer and his allies came to En Mishpat (*i.e.* Kadesh) and subdued the Amalekites before returning to defeat the kings of the Cities of the (Dead Sea) Plain (Gn. 14:5–9). In the narrative of the fugitive Hagar's experience of God, the well Be'er-le Hai-Ro'i is 'between Kadesh and Bered', on the way to Shur (Gn. 16:7, 14); Kadesh is also associated with the way to Shur in Gn. 20:1.

Journeying through the Sinai wilderness, the Israelites stayed in the region of Kadesh on the edges of the wilderness of Paran and Zin more than once (Nu. 13:26; 20:1; Dt. 1:19, 46); from here Moses sent his spies into Canaan. From Horeb or Sinai to Kadesh was 11 days' journey via Mt. Seir (Dt. 1:2). From the traditional Mt. Sinai to Dahab on the E coast of Sinai and up the coast and across to Kadesh (Qudeirat) is indeed 11 days' travel. At Kadesh, after doubting God's ability to give them the promised land, Israel was condemned to wander for 40 years until a new generation should arise (Nu. 14:32–35; *cf.* Dt. 2:14). After some time, Israel returned to Kadesh (Nu. 33:36–37), Miriam being buried there (Nu. 20:1). At this time, too, for failing to glorify God when striking water from the rock (Nu. 20:10–13; 27:14; Dt. 32:51), Moses was denied entry to the promised land; from there, too, he sent messengers in vain to the king of Edom, to grant Israel permission to pass through his territory (Nu. 20:14–21; Jdg. 11:16–17). Kadesh Barne'a was to be the S corner of the SW boundary of Judah, turning W then NW to reach the Mediterranean along the 'Brook of Egypt' (Nu. 34:4; Jos. 15:3). It was also included as a boundary-point by Ezekiel (47:19; 48:28). The SE to SW limits of Joshua's S Canaanite campaign were marked by Kadesh Barne'a and Gaza respectively (Jos. 10:41). Kadesh in Jos. 15:23, in the southernmost territory of Judah, may either be Kadesh Barne'a or an otherwise unknown site.

The site of Tell el-Qudeirat was first surveyed by Woolley and Lawrence in 1914. The fortress they

identified was excavated by M. Dothan in 1956, and by Cohen in 1976–82. Cohen identified three superimposed fortresses, but Ussishkin has shown that there were only two. The lower fortlet was small and elliptical in shape, fortified by a casemate wall with a courtyard in the centre. To the W of it was a small unfortified settlement. The fortlet is dated to the 10th century BC and is one of many such fortlets known from the Negev. Today they are thought to have served as focal points for local desert clans. The daily utensil pots were made of the local 'Negbite' ware, whereas the storage jars had been imported with their contents from Judah. The later and larger fortress is rectangular with casemate walls and eight protruding towers, one in each corner, and one along each side. The fortress was constructed on a raised platform of earth with a shallow moat around it. On the inside were a number of buildings and a cistern. Around the fortress and the spring was a small unfortified settlement. The fortress is one of a number known from the Negev from the end of the Judaeen kingdom. Its construction was probably the initiative of the Assyrians, as part of their efforts to control the trade routes to Arabia, but following Assyria's collapse it came under the control of the Egyptians before finally being destroyed in 586 BC by Nebuchadrezzar. It is from this final phase that a number of ostraca (pots sherds with writing on them) were found. One ostrakon contained three columns of Heb. script and hieratic numerals, and is thought to have been part of a student's exercise.

2. Kadesh (on the Orontes). The site was excavated by M. Pezard and later P. Parr at Tell Nebi Merd and flourished in the late Bronze Age; renowned for the battle when Rameses II defeated the Hittites.

See also *KADESH.

J. W.

KADMIEL (Heb. *qadmī'el*, 'God/EI is the first/ancient one'). A Levite who returned with Zerubabel (Ezr. 2:40; Ne. 7:43; 12:8, 24), and was concerned with the commencement of the Temple rebuilding (Ezr. 3:9), with the day of national repentance (Ne. 9:4–5) and with the sealing of the covenant (Ne. 10:9). L. H. Brockington (*Ezra, Nehemiah and Esther, NCB*, 1969) suggests that the name appears mainly, if not entirely, limited to the designation of a levitical family. J. G. G. N.

KADMONITES. A people whose name, *qadmōni*, is identical in form with the adjective *qadmōni*, 'eastern' (*e.g.* Ezk. 47:18), and for this reason may simply mean 'Easterners' and be another designation for the *b'nē-qedem* *('children of the) East'. The word occurs but once as a name however (Gn. 15:19, with the article), in the list of peoples to be

KADMONITES

given to Abraham's seed. It may therefore well be the name of a tribe.

T.C.M.

KAIN. A town to the S of Hebron (Jos. 15:57). Khirbet Yaqin has been suggested, but its antiquity is uncertain. LXX takes as one name with Zanoah, altering the count (*ZANOAH, 2).

J.D.D.

KAIWAN (Heb. *kiyyin*), AV **CHIUN** (Am. 5:26). Earlier scholars thought it meant 'pedestal' or 'image-stand' (see W. R. Harper, *Amos, ICC*, 1910, pp. 139f.). Vulg. has *imaginem*, RVmg. 'shrine'. Most now believe that it represents Assy. *kaiwanu*, a name of Ninurta, god of the planet Saturn, but that the Massoretes have changed the original vowel-points of *kaiwanu* to those of *siqqus* (= 'abomination'). LXX *Rhaiphan* (*REPHAN, AV Remphan) seems to support this view.

D.W.G.

KANAH (Heb. *qānāh*). 1. A wadi running W from the watershed at the head of the Michmethath valley, 8 km SW of Shechem; its lower course was the boundary of Ephraim with Manasseh (Jos. 16:8).

2. A town in the Lebanon foothills, assigned to Asher (Jos. 19:28); probably modern Qana, 10 km SE of Tyre.

J.P.U.L.

KEDAR (Heb. *qēdār*, probably 'black', 'swarthy'). 1. A son of Ishmael (Gn. 25:13; 1 Ch. 1:29), forebear of like-named tribe.

2. Nomadic tribesfolk of the Syro-Arabian desert from Palestine to Mesopotamia. In 8th century BC, known in S Babylonia (1. Eph'al, *JAOS* 94, 1974, p. 112), Isaiah prophesying their downfall (Is. 21:16–17). They developed 'villages' (Is. 42:11), possibly simple encampments (H. M. Orlinsky, *JAOS* 59, 1939, pp. 22ff.), living in black tents (Ct. 1:5). As keepers of large flocks (Is. 60:7), they traded over to Tyre (Ezk. 27:21). Geographically, Kittim (Cyprus) W in the Mediterranean and Kedar E into the desert were like opposite poles (Je. 2:10). Dwelling with the Kedarites was like a barbaric exile to one psalmist (Ps. 120:5).

Alongside Arabian tribes, Nebaioth, etc., Kedarites clashed with Ashurbanipal in the 7th century BC (M. Weippert, *Welt des Orients* 7, 1973–74, p. 67). Likewise they suffered attack by Nebuchadrezzar II of Babylon in 599 BC (cf. D. J. Wiseman, *Chronicles of Chaldaean Kings*, 1956, p. 32), as announced by Jeremiah (Je. 49:28). By the Persian period, a regular succession of kings of Kedar controlled a realm astride the vital land-route from Palestine to Egypt, regarded as its guardians by the Persian emperors. Such was *Geshem (Gashmu)—opponent of Nehemiah (Ne. 6:1–2, 6)—whose son Qaynu is entitled 'King of Kedar' on a silver bowl from a shrine in the Egypt. E Delta. On this and these kings, see I. Rabinowitz, *JNES* 15, 1956, pp. 1–9, pl. 7; W. J. Dumbrell, *BASOR* 203, 1971, pp. 33–44; A. Lemaire, *RB* 81, 1974, pp. 63–72.

K.A.K.

KEDEMOTH. Probably present-day ez-Za'ferān, c. 16 km N of the Arnon, just inside Sihon's ter-

ritory and near the Amorites' E border. A levitical city (Jos. 21:37; 1 Ch. 6:79) from the inheritance of Reuben (Jos. 13:18), giving its name to a nearby desert area (Dt. 2:26).

BIBLIOGRAPHY. F. M. Abel, *Géographie de la Bible*, 1938, p. 69; *LOB*, p. 186.

N.H.

KEDESH, KEDESH IN NAPHTALI. 1. A former Canaanite royal city (Jos. 12:22) which became a principal town in Naphtali (Jos. 19:37). It was sometimes designated 'of Naphtali' (Jdg. 4:6) to distinguish it from 2. It was assigned to the Levites (Jos. 21:32) and made a city of refuge (20:7). Kedesh was also marked by its location in Galilee (Jos. 20:7; 1 Ch. 6:76).

This Kedesh may well be the home of Barak where he collected his forces from Naphtali and Zebulun for war against Siserā (Jdg. 4:9–11). When Tiglath-pileser III of Assyria invaded N Israel in 734–732 BC Kedesh, being on the route S from Hazor, was one of the first cities to fall to him (2 Ki. 15:29). It was the scene of the great battle fought between the Maccabees and Demetrius (1 Macc. 11:63, 73). Kedesh is the modern Tell Kudeish, NW of Lake Huleh, where soundings and surface finds show it to have been occupied during the early and late Bronze Ages.

2. A town of Issachar given to Gershonite Levites (1 Ch. 6:72). Its place is taken by Kishion in the list of Jos. 21:28. It is identified with the modern Tell Abu Qedes, SSW of Megiddo. See *NEAEHL*, p. 860.

3. A town in S Judah near the Edomite border (Jos. 15:23), probably to be identified with Kadesh Barne'a, so *Kadesh.

BIBLIOGRAPHY. *Excavations and Researches*, 1973 (Tell Aviv), pp. 93–122.

D.J.W.

KEILAH (Heb. *q'īlāh*). A town in the Shephelah (Jos. 15:43), probably Kelti of Amarna Letters 279–280, 290 (*ANET*, pp. 289, 487). In Saul's time, David relieved it from a Philistine attack, but found Saul's influence too strong for his safety (1 Sa. 23). At the Restoration its territory formed two districts (Ne. 3:17f.). Khirbet Qila, on a hill 10 km E of Beit Guvrin, commands the ascent to Hebron S from Socoh, in the valley between the Shephelah and the hills.

J.P.U.L.

KENATH (Heb. *q'nāl*, 'possession'). A city in N Transjordan taken from the Amorites by *Nobah, who gave it his name (Nu. 32:42), and later taken by *Geshur and Aram (1 Ch. 2:23). The name appears in several Egypt. texts of the 2nd millennium (cf. *LOB*, index). It is usually identified with the extensive ruins at Qanawāt, some 25 km NE of Bozrah; but see F. M. Abel, *Géographie de la Palestine*, 2, p. 417, and M. Noth, *Numbers*, p. 241 (cf. *PJB* 37, 1941, pp. 80–81), who prefers a location W or NW of modern Amman, comparing Jdg. 8:11.

J.D.D.

G.I.D.

KENAZ. 1. A grandson of *Esau and an *Edomite chief (Gn. 36:11, 15, 42). Some commentators consider these vv. indicate Kenaz was the ancestor of the *Kenizzites. 2. The brother of *Caleb and father of *Othniel and *Seraiah (Jos.

15:17; Jdg. 1:13; 3:9, 11; 1 Ch. 4:13). 3. A grandson of Caleb (1 Ch. 4:15). Uknaz (Avmg.) results from Heb. word for 'and' being read as part of the name of Kenaz.

R.A.H.G.

KENITES. The Kenites were a Midianite tribe (Nu. 10:29; Jdg. 1:16; 4:11). The name means 'smith', and the presence of copper SE of the Gulf of Aqabah, the Kenite-Midianite region, confirms this interpretation. The Kenites first appear as inhabitants of patriarchal Canaan (Gn. 15:19). Subsequently Moses becomes son-in-law of Reuel (Ex. 2:18), and invites Hobab his son to accompany the Israelites, coveting his nomadic skill (Nu. 10:29). The Kenites accompanied Judah into their inheritance (Jdg. 1:16; 1 Sa. 27:10). They were spared by Saul in his Amalekite war (1 Sa. 15:6), and David cultivated their friendship (1 Sa. 30:29). The Rechabites were of Kenite stock (1 Ch. 2:55), and were prominent in post-exilic times (Ne. 3:14).

The 'Kenite hypothesis' gives this Midianite clan importance in the religion of Israel. It purports to answer the question: Where did Moses learn the name Yahweh? Rejecting pre-Mosaic knowledge of the name in Israel, some reply that he learnt the name from Jethro, the Kenite-Midianite. The later Yahwistic zeal of the Rechabite-Kenites cannot support this theory: it is not unknown for converts to be more zealous than traditional believers! Nor does Jethro's sacrifice (Ex. 18:12) bear the weight placed upon it, that Jethro was instructing Moses how Yahweh should be worshipped, for the chapter shows him as the learner, led to faith by Moses' testimony (v. 11). Apart, therefore, from the unconvincing observation that 'the Kenites were the smiths of the ancient nomad tribes, ... and undoubtedly Yahweh is a fire-god' (Oesterley and Robinson, *History of Israel*, 1, p. 92), the sole support of the Kenite hypothesis is that their ancestor Cain bore the mark of Yahweh (Gn. 4:15). This hypothesis is advocated, e.g., by L. Koehler, *Old Testament Theology*, p. 45; contested by M. Buber, *Moses*, p. 94. The testimony of Genesis is that the name Yahweh was known to the Patriarchs, and indeed from the earliest times (Gn. 4:1, 26). The hypothesis is a fruit of the application of documentary analysis, and well merits being called 'the acme of liberal inventiveness' (U. E. Simon, *A Theology of Salvation*, 1953, p. 88).

BIBLIOGRAPHY. H. H. Rowley, *From Moses to Qumran*, 1963, pp. 48ff.; *Joseph to Joshua*, 1950, pp. 149ff.; Y. Kaufmann, *The Religion of Israel*, 1961, pp. 242ff.

J.A.M.

KENIZZITES (Heb. *q'nizzi*). A leading Edomite family, tracing descent from Eliphaz, Esau's eldest son (Gn. 36:11, 15, 42; 1 Ch. 1:36, 53). Part of them joined the Judahites; their contribution to Israel's history is indicated in 1 Ch. 4:13ff. V. 15 is difficult; perhaps it read originally '... (names lost); these were the sons of Kenaz'. Caleb's Kenizzite descent is always expressed through Jephunneh (Nu. 32:12, Jos. 14:6, 14). 'Othniel, son of Kenaz' may simply mean 'Othniel, the Kenizzite'; otherwise, this Kenaz would have been Caleb's younger brother, and Othniel his nephew. Caleb's history implies that his family was well established in Judah before the Exodus (cf. Nu. 13:6); so it may have been Jephunneh's ancestors who first joined the tribe.

The Kenizzites are mentioned in Gn. 15:19 with nine other nations as occupying the land promised to Abraham; this, apparently defined in terms of settlements made after his time, included the Negeb but no part of Edom proper (cf. Dt. 2:5).

J.P.U.L.

KENOSIS. This Gk. term is formed from the verb *heauton ekenōsen*, 'he emptied himself', which the AV of Phil. 2:7 renders 'he made himself of no reputation'. As a substantive it is used, in the technical sense, of the Christological theory which sets out 'to show how the Second Person of the Trinity could so enter into human life as that there resulted the genuinely human experience which is described by the evangelists' (H. R. Mackintosh). In its classic form this Christology goes back no farther than the middle of the last century, to Thomasius of Erlangen in Germany.

The essence of the original kenotic view is stated clearly by J. M. Creed. 'The Divine Logos by His Incarnation divested Himself of His divine attributes of omniscience and omnipotence, so that in His incarnate life the Divine Person is revealed and solely revealed through a human consciousness' (art. 'Recent Tendencies in English Christology' in *Mysterium Christi*, ed. Bell and Deissmann, 1930, p. 133). This Christological statement is open to damaging theological objections; and, on exegetical grounds too, there is little support for it.

The verb *kenoun* means simply 'to empty'. In the literal sense it is used, for example, of Rebekah's emptying the water from her pitcher into the trough (Gn. 24:20, LXX: the verb is *eekenōsen*). In Je. 14:2; 15:9 the LXX uses the verb *kenoun* to render the *pu'al* of *'amal*, which the RV translates as 'language'; and this translation points to a metaphorical usage which prepares the way for the interpretation of the Philippians text. The use of *kenoun* there in the active voice is unique in the NT, and the whole phrase with the reflexive is not only un-Pauline but un-Greek too. This fact supports the suggestion that the phrase is a rendering into Gk. of a Sem. original, the linguistic solecism being explained by the literal translation from one language into another. Recent scholars (H. W. Robinson, J. Jeremias) have found this original in Is. 53:12: 'He poured out his soul to death'. On this reading of Phil. 2:7, the 'kenosis' is not that of his incarnation but the final surrender of his life, in utter self-giving and sacrifice, on the cross. Even if this novel interpretation is regarded as somewhat forced (for a critique, see R. P. Martin, *Carmen Christi*, 1967, ch. 7) it puts us on the right track. The words 'he emptied himself' in the Pauline context say nothing about the abandonment of the divine attributes, and to that extent the kenotic theory is an entire misunderstanding of the scriptural words. Linguistically the self-emptying is to be interpreted in the light of the words which immediately follow. It refers to the 'pre-incarnate renunciation coincident with the act of "taking the form of a servant"' (V. Taylor, *The Person of Christ in New Testament Teaching*, 1958, p. 77). His taking of the servant's form involved the necessary limitation of the glory which he laid aside that he might be born 'in the likeness of men'. That glory of his pre-existent oneness with the Father (see Jn. 17:5, 24) was his because from all eternity he existed 'in the form of God' (Phil. 2:6). It was concealed in the 'form of a servant' which he took

KENOSIS

when he assumed our nature and appeared in our likeness; and with the acceptance of our humanity he took also his destiny as the Servant of the Lord who humbled himself to the sacrifice of himself at Calvary. The 'kenosis' then began in his Father's presence with his preincarnate choice to assume our nature; it led inevitably to the final obedience to the cross when he did, to the fullest extent, pour out his soul unto death (see Rom. 8:3; 2 Cor. 8:9; Gal. 4:4-5; Heb. 2:14-16; 10:5ff.).

BIBLIOGRAPHY. The fullest modern treatment of the kenosis doctrine, both historically and theologically, is that by P. Henry, art. 'Kénose' in *DBS*, Fasc. 24, 1950, cols. 7-161; D. G. Dawe, *The Form of a Servant*, 1964; T. A. Thomas, *EQ* 42, 1970, pp. 142-151. For a modern theological discussion, see R. S. Anderson, *Historical Transcendence and the Reality of God*, 1975.

R. P. M.

KERCHIEFS (AV trans. of Heb. *mispāhōt*, only in plur. Ezk. 13:18, 21, RSV 'veils'). A word associated with the practice of divination, and found in this obscure passage. Some understand the word as denoting long drapes or coverings put over the heads of those who consulted false prophetesses. These coverings for 'persons of every stature' reached down to the feet, and were connected with the introduction of the wearer into the magical circle. Others suggest that the word means a close-fitting cap (cf. Heb. *sāpāh*, 'to join'), which also fulfils the condition of certain forms of divination or sorcery that the head should be covered. See also *AMULETS, *MAGIC AND SORcery, II. b; and, for full discussion of the context and possible interpretations, G. A. Cooke, *Ezekiel, ICC*, 1936, pp. 144ff.

J. D. D.

KEREN-HAPPUCH (Heb. *qeren happūk* 'paint-horn', i.e. 'beautifier'; LXX *Amaltheias keras*). The name given to the third and youngest daughter of Job after his prosperity had been restored (Jb. 42:14). For discussion of the name, *COSMETICS AND PERFUMERY, III. a.

J. D. D.

KERIOth. I. A town in the extreme S of Judah, known also as Kerioth-hezron or Hazor, possibly the modern Khirbet el-Qaryatein (Jos. 15:25). **2.** A city of Moab (Je. 48:24), formerly fortified (Je. 48:41), and possessing palaces (Am. 2:2). Probably El-Qereiyat, S of Ataroth. Some writers identify it with Ar, the ancient capital of Moab, because when Ar is listed among Moabite towns Kerioth is omitted (Is. 15-16), and *vice versa* (Je. 48). There was a sanctuary there for Chemosh, to which Mesha dragged Arel the chief of Ataroth. (*MOABITE STONE.)

J. A. T.

KESITAH (Heb. *q'sitā*, probably 'that which is weighed', 'a fixed weight', from an Arab. word meaning 'to divide, fix'). A unit of unknown value, evidently uncoined money used by the Patriarchs. LXX, Onkelos and Jerome render as 'lambs', early weights often being modelled in animal-forms (*WEIGHTS AND MEASURES). Possibly it may represent the value of a sheep in silver. It occurs only in Gn. 33:19 and Jos. 24:32 of Jacob's land-purchase at Shechem, and in Jb. 42:11 of a congratulatory

present. RSV translates as 'piece of money', but NEB as 'sheep'.

J. G. G. N.

KETURAH (Heb. *q'tūrā*, 'perfumed one'). Abraham's second wife after the death of Sarah who bore him Zimran, Jokshan, Medan, Midian, Ishbak and Shuah, who in their turn became the ancestors of a number of N Arabian peoples (Gn. 25:1-4; 1 Ch. 1:32-33). (*ARABIA.)

BIBLIOGRAPHY. J. A. Montgomery, *Arabia and the Bible*, 1934, pp. 42-45.

T. C. M.

KEY (Heb. *maṭīēah*, 'opener'; Gk. *kleis*, 'key'). In its literal sense the word is found only in Jdg. 3:25; the key was 'a flat piece of wood furnished with pins corresponding to holes in a hollow bolt. The bolt was on the inside, shot into a socket in the doorpost and fastened by pins which fell into the holes in the bolt from an upright piece of wood (the lock) attached to the inside of the door. To unlock the door one put one's hand in by a hole in the door (cf. Ct. 5:4) and raised the pins in the bolt by means of the corresponding pins in the key' (F. F. Bruce in *NBCR*, p. 260). The more usual biblical sense of the word is a symbol of power and authority (e.g. Mt. 16:19; Rev. 1:18; Is. 22:22).

See also *POWER OF THE KEYS.

J. D. D.

KIBROTH-HATTA AVAH (Heb. *qibrōt hatta^{awā}*, 'graves of craving'). A camp of the Israelites a day's journey from the wilderness of Sinai. There the people, having craved flesh to eat and been sent quails by the Lord, were overtaken by plague, which caused many fatalities (Nu. 11:31-34; 33:16; Dt. 9:22; cf. Ps. 78:27-31). Some have suggested that the incident at Taberah (Nu. 11:1-3) had the same location as that at Kibroth-hattaavah, but Dt. 9:22 seems to argue against this. Eberling makes an identification with Ruweis el-Ebeir, NE of Mt Sinai.

J. D. D.

KIDNEYS. In the RSV the Heb. word *k'lāyōt* is translated by 'kidneys' when it refers to the physical organ of sacrificial beasts, principally in Leviticus (3:4; 4:9; 7:4, etc.). The practice was that the two kidneys, together with the fat and part of the liver, were burnt on the altar as Yahweh's portion, while the worshippers no doubt consumed the rest. The kidneys along with the blood and other internal organs were held to contain the life, and the kidneys were regarded as a choice portion, perhaps because of their coating of fat; cf. Dt. 32:14, where the RSV translates *hēleb k'lāyōt*, lit. 'fat of the kidneys of', as 'the finest of' (the wheat).

The same Heb. word is translated variously where it refers, generally figuratively, to the human organs, which were held to possess psychical functions. RSV renders it as 'the heart' which is 'troubled' (Jb. 19:27; Ps. 73:21), and 'tried' by God (Je. 11:20). In Pr. 23:16 RSV uses 'soul', which 'rejoices'. In NT Gk. *nephros* (lit. kidneys) occurs once, but RSV renders 'mind' (Rev. 2:23).

The parallelism reveals how the heart and the other internal organs (*BOWELS, *HEART) were held to be the centre of the personality and will, without clear distinction between them.

The reference to the *k'lāyōt* (RSV 'heart') instructing one (Ps. 16:7) (with a parallel in the Ras

Shamra texts, 'his inwards instruct him') is a further similar usage, with which compare the late Jewish concept that one kidney prompts a man to do good and the other prompts him to do evil (TJ, *Berakhoth* 61a).

B. O. B.

KIDRON. The brook Kidron, the modern Wadi en-Nar, is a torrent-bed, which begins to the N of Jerusalem, passes the Temple mount and the Mount of Olives *en route* to the Dead Sea, which it reaches by way of the wilderness of Judaea. Its modern name means 'the Fire wadi', and this bears witness to the fact that it is dry and sun-baked for most of the year. Only for short periods during the rainy seasons is it filled with water. It was also called 'the Valley of *Jehoshaphat'

On the W side of the Kidron there is a spring known as the Gihon ('Gusher') or 'Virgin's Fountain', the flow of which was artificially diverted under Hezekiah's orders to serve the needs of Jerusalem and to protect its water-supply from the enemy. This was the latest of several tunnels and shafts connected with the spring.

As its name would suggest, the water does not come through in a steady flow, but accumulates underground in a reservoir and breaks out from time to time. In 1880 a Heb. inscription was found in which information was recorded about the making of Hezekiah's tunnel (*SILOAM). For the archaeology, see K. M. Kenyon, *Digging up Jerusalem*, 1974, pp. 84-89, 151-159.

David passed over the brook Kidron on his way out of Jerusalem during Absalom's revolt (2 Sa. 15:23). The reforming kings, such as Asa, Hezekiah and Josiah, used the valley as a place of destruction where heathen idols, altars, *etc.*, were burnt or ground to powder (1 Ki. 15:13, *etc.*). It seems to be taken as one of the boundaries of Jerusalem in 1 Ki. 2:37 and Je. 31:40.

Some suggest a reference to the Kidron in Ezk. 47, where the prophet sees a stream of water issuing from the threshold of the Temple and pursuing its way towards the Dead Sea, making the land fertile in the process. See especially G. Adam Smith, *The Historical Geography of the Holy Land*, 1931, pp. 510ff.; W. R. Farmer, 'The Geography of Ezekiel's River of Life', *BA* 19, 1956, pp. 17ff. That Ezekiel was thinking of the filling-up of the dry bed of the Kidron by the healing stream of water seems probable, but cannot be maintained with any degree of certainty.

G. W. G.

KIN, KINSMAN. Israel was originally tribal in nature. The idea was never entirely lost, although as the centuries passed the distinctions became less well marked, until today they have all but disappeared (*cf.* Scots' clans). Many of Israel's family relationships are to be understood in terms of tribal customs known all over the world. Kinship consisted basically in the possession of a common blood and was strongest nearest to its origin in the father's house, but it was not lost in the further reaches of family relationship. At the head of the family (*mišpāhā*) stood the father (*'āb*), a word which expressed kinship and authority. The father founded a father's house (*bēṭ 'āb*), which was the smallest unit of a tribe. But the strong cohesion of the family extended upwards from the father to the fathers, and downwards from the father to the sons and daughters. Hence the term family could mean

the father's house (*bēṭ 'āb*), and also the house of the fathers (*bēṭ 'ābōṭ*). Indeed, at times the whole of Israel was called a family.

A picture of tribal relationships which is more or less contemporary with the patriarchs comes from the Middle Bronze Age society at *Mari on the Euphrates. Here semi-nomadic and urban peoples of the same general stock lived side by side in a dimorphic society. The village-pastoral group were not marauding peoples but sheep-breeders who moved their encampments periodically in search of water and pastures, living in tents but settling at times. These peoples were tribally organized into 'paternal houses' or 'families' (*bit abim*; *cf.* *bēṭ 'āb* in Gn. 12:1, *etc.*). Recent studies provide several detailed comparisons between Mari and the patriarchal society. The texts from Mari provide literary evidence for such a comparison.

The word brother (*'āh*) also connoted various things. In its simplest meaning it referred to those who had common parents. In polygamous Israel there were many brothers who had only a common father. These too were brothers, though the brotherhood was not the same as that of men who had a common mother. Thus in Gn. 42:4 there are two kinds of brothers, full and half. The full brother was defined by the phrase 'his brother, Benjamin, his mother's son' (Gn. 43:29). However, the term extended as far as the feeling of consanguinity extended. Wherever there was a family there were brothers, for all were bearers of kinship (Gn. 24:4, 27, 38; Jdg. 14:3). At times all Israelites were called brothers (Ex. 2:11; Lv. 10:6; 2 Sa. 19:41-42).

There were limits to the closeness of relationship permitted when a man came to seek a wife. Abraham would seek a wife for his son Isaac from his kindred (*mišpāhā*) and from his father's house (*bēṭ 'āb*), not from the daughters of Canaan (Gn. 24:38, 40). She had to be someone of the same flesh and blood. But she could not be of such close relationship as a sister, mother, child's daughter, *etc.* The forbidden areas are defined in Lv. 18.

There were significant obligations laid on kinsmen. Among the more important we may mention the following.

Since a woman, married to a man, would normally have the privilege of bearing his son and heir, in the case of the untimely death of the husband without a son, the law of levirate (Lat. *levir*, 'husband's brother') *marriage came into force, and progeny was raised up to the dead man who had died 'without a name in Israel' by his next of kin (Dt. 25:5-10). There is a good illustration of this in the book of Ruth.

Then in the matter of inheritance, a man's property was normally passed on to his son or sons. Failing these, it went to his daughters, and then in order to his brethren, to his father's brethren, and finally to his kinsman who was nearest to him (Nu. 27:1-11).

Again it was obligatory on a kinsman to redeem the property of a fellow-kinsman who had fallen into the hands of creditors (Lv. 25:25ff.).

In the special circumstances where a man's life was taken by another, since this was part of the life of the family, an obligation rested on the son, or the brother, or the next of kin in order, to take vengeance (*cf.* Gn. 9:5-6). Where kinship ends, there is no longer any *avenger (*gō'ēl*).

KING, KINGSHIP. Heb. *melek*; Gk. *basileus*. Both words are of obscure origin; the former, common to all Semitic languages, is possibly connected either with an Arab. root meaning 'possess' or an Assyr. and Aram. word meaning 'counsel'. The latter is probably taken over from an early Aegean language.

The office was common in the Middle East from the earliest times, the general pattern apparently being of a ruler who held sway over a settled region, often centred on a city (Gn. 14:1–2; 20:1ff.). His authority seems to have been hereditary (but cf. Gn. 36:31ff.), and to have derived from the divine-king or god of the land (see J. A. Soggin, *Protestantismo* 17, 1962, pp. 85–89), often spoken of as the ancestor or father of the ruling king (e.g. Ras Shamra—Legend of King Keret). In Egypt the tendency was for the king or pharaoh to be regarded as identical with the god; in Assyria, rather as representing the god.

In classical Greek *basileus* denotes the legal hereditary ruler, guiding the life of the people by his justice or injustice, but contrasted with the tyrant or usurper. The king's power is traced back to Zeus. Later, under Plato, we find a movement towards the idea of the king as 'benefactor', whose will is law, leading up to the idea of 'divine-king' in Alexander and the Caesars.

I. Early ideas in Israel

In the history of Israel the early nomadic tribes were ruled by the clan Patriarch. During the Exodus from Egypt rule was exercised by Moses, succeeded by Joshua, in what was a virtual theocracy, with the non-hereditary leader-elected by divine call and acknowledged by the people, though not without some protest (Ex. 4:29ff.; Nu. 16:1ff.). When Israel first settled in Palestine the tribes were ruled largely by village fathers (Jdg. 11:5), who would call on a certain man to lead the militia against an enemy. Jephthah (Jdg. 11:9) demanded that he be made 'head' if he took the lead in this way, but his son did not succeed him. Gideon was asked to rule (*mālak*) over Israel (8:22) and refused, but his son Abimelech seized a temporary and local kingship after him (9:6ff.). The book of Judges ends on a note of social chaos (chs. 19–21), and this is attributed to the lack of a king (19:1; 21:25).

II. From Eli and Samuel

The following period was one of improvement under the religio-judicial lead of Eli and Samuel. Eli was chief priest at the central sanctuary in

Shiloh (1 Sa. 1:3; 4:13); Samuel was a non-hereditary leader (after the style of Moses and Joshua) who, after the destruction of Shiloh, judged Israel from several places which he visited in circuit (7:15f.). Finally, Samuel became the king-maker of Israel, though at the insistence of the people (1 Sa. 8:4ff.). This seems to have been regarded as a measure of apostasy from the theocracy (1 Sa. 8:7). The request was probably made largely in view of the continual Philistine threat, necessitating a sustained army (8:20), and Saul's success as a warrior was his main qualification for the role as the first king of Israel. Under his reign, however, Samuel, while he lived, preserved the religious leadership (1 Sa. 13:9ff.), and Saul never quite established his position, nor his dynasty.

III. Development under David

David, however, was eminently successful, and was ever afterwards regarded as the ideal king. He established a dynasty that lasted for over 400 years, until the break-up of the state in 587 bc. The security of David's dynasty seems to have been based largely on what has been called the Davidic covenant (Ps. 132:11f.). The capital city, centrally situated between what became later the N and S states, was Jerusalem (2 Sa. 5:5ff.). It may be that David assumed something of the role of priest-king after the style of the Jebusite kings, whose priesthood apparently dated back to the time of Abraham (Gn. 14:17ff.; Ps. 110), since he seems to have taken a lead in the cult (2 Sa. 6:13ff.; cf. also 1 Ki. 8:5).

The Davidic covenant may have been an extension of the Mosaic covenant, particularly if G. E. Mendenhall is right in suggesting that the form of the Mosaic covenant was analogous to Hittite treaty patterns. Under these a Hittite overlord granted an enduring dynasty to his vassal, if the vassal king was a relation, but otherwise he was always personally responsible for the appointment of a successor. The reference to the king as the son of God (Ps. 2:6–7) and the promise to maintain the dynasty in terms of the covenant (1 Ki. 9:4–5) make the suggestion easily credible.

The main responsibility of the king was the maintenance of righteousness (Is. 11:1–4; Je. 33:15), possibly signified by the possession of the testimonies or law or *tōrā* (Dt. 17:18ff.; 1 Sa. 10:25; 1 Ki. 9:4ff.; 2 Ki. 11:12), with the duty not only to act as judge (1 Ki. 3:28) but to preserve justice and proclaim the law (2 Ki. 23:2; cf. 2 Ch. 17:7ff.; cf. also Jdg. 17:6).

But many of the kings were wicked themselves and encouraged in justice and wickedness to flourish, not only in the schismatic N kingdom but in the S too (1 Ki. 14:16; 2 Ki. 21:16). The reform under Josiah (2 Ki. 22–23) may have been an attempt to revive the Mosaic precepts in connection with the Davidic covenant, but it was above all the prophetic movement which provided a check upon the waywardness of the kings (2 Sa. 12:11f.; 1 Ki. 18:17–18; Je. 26:11f.) (*PROPHECY; see also IV. below).

It will be noticed that several so-called Messianic passages have been applied above to the Davidic dynasty (Pss. 2; 110; 132; Is. 11:1–4; Je. 33:15). and it is the considered view of many modern scholars that this is their primary reference, the psalms referred to being, among others, probably coronation psalms used in the Jerusalem Temple. The failure of the kings to live up to the ideal, however, tended to cast the hope for a righteous

G. W. Ahlström, *Royal Administration and National Religion in Ancient Palestine*, 1982.

B.O.B.

ruler more and more into the future. With the fall of the S kingdom, and later the failure of the Davidic prince, Zerubbabel (1 Ch. 3:19; Hg. 2:23; Mt. 1:12) to restore the dynasty on the throne of the post-exilic state, the expectation crystallized into what is technically known as the Messianic hope, though many scholars believe it began earlier. (*MESSIAH.)

IV. The king's ministers

But it should be noted that the prophets were not apparently appointed by the king, though the priests were (1 Ki. 2:27). Both officiated in the installation of a king (1:34), but the prophet sometimes took the greater initiative, especially with a change of dynasty, as in the N kingdom (1 Ki. 19:16). Other servants of the king were the commander of the army (2 Sa. 19:13); the secretary (2 Sa. 8:17; 2 Ki. 12:10), and the recorder, plus sundry others (1 Ki. 4:3ff.). The recorder (*mazkir*, literally one who causes to remember) was perhaps connected with the chronicling of state events (cf. 2 Ki. 21:25), or the term may signify the advisory and executive position of a prime minister or grand vizier. Another possibility is that it was a vocal office, parallel to the Egypt. *whm.w.*, 'court announcer' or 'king's herald'.

V. Later developments

During the period 104–37 BC certain of the Macabean high priests assumed the title of king, and some were proclaimed as the fulfilment of the Messianic hope, but it is essentially the message of the NT that this hope was fulfilled only in Jesus Christ (Mt. 1:1–17; 21:5, with which compare Zc. 9:9 and the coronation procedure in the case of Solomon, 1 Ki. 1:33; also Jn. 1:49). Jesus' message began with the proclamation, 'The kingdom of God is at hand' (Mk. 1:15), and announced to the Pharisees that the kingdom was in their midst (Lk. 17:21). He pointed out that it was not a kingdom of this world (Jn. 18:36), and so was not on the same plane as that of the Roman governor, Pilate, or of Herod, the Idumaean king of Judah and vassal of Rome (cf. Mt. 2:16).

Though the word translated 'kingdom' (*basileia*) is used in the sense of realm or domain (Mt. 12:25), the dominant sense is 'sovereignty' or 'kingly rule'. The sovereignty of God is absolute, but not recognized by sinful man, who thus merits destruction. The 'gospel of the kingdom of God' means that men are given an opportunity to receive the kingdom by repentance and faith (Mk. 1:15). This is achieved through Christ the Messiah-King, to whom every knee must bow, whether in willing loyalty or under judgment (Rom. 14:10–11; Phil. 2:9–11).

The rule of earthly kings is limited, and Christ claims the first allegiance (Mt. 6:33). His subjects are delivered from the power of darkness (Col. 1:13), and thus are set free to live righteously (Rom. 14:17). Christ's kingdom is an everlasting kingdom (2 Pet. 1:11), but yet to be consummated (Lk. 22:16; 1 Cor. 15:24–28). (*KINGDOM OF GOD.)

The kingdom of heaven or kingdom of God is the central theme of Jesus' preaching, according to the Synoptic Gospels. While Matthew, who addresses himself to the Jews, speaks for the most part of the 'kingdom of heaven', Mark and Luke speak of the 'kingdom of God', which has the same meaning as the 'kingdom of heaven', but was more intelligible to non-Jews. The use of 'kingdom of heaven' in Matthew is certainly due to the tendency in Judaism to avoid the direct use of the name of God. In any case no distinction in sense is to be assumed between the two expressions (cf., e.g., Mt. 5:3 with Lk. 6:20).

I. In John the Baptist

John the Baptist first comes forward with the announcement that the kingdom of heaven is at hand (Mt. 3:2) and Jesus takes this message over from him (Mt. 4:17). The expression 'kingdom of heaven' (Heb. *mal'kūt sāmāyīm*) originates with the late-Jewish expectation of the future in which it denoted the decisive intervention of God, ardently expected by Israel, to restore his people's fortunes and liberate them from the power of their enemies. The coming of the kingdom is the great perspective of the future, prepared by the coming of the *Messiah, which paves the way for the kingdom of God.

By the time of Jesus the development of this eschatological hope in Judaism had taken a great variety of forms, in which now the national element and now the cosmic and apocalyptic element is prominent. This hope goes back to the proclamation in OT prophecy concerning both the restoration of David's throne and the coming of God to renew the world. Although the OT has nothing to say of the eschatological kingdom of heaven in so many words, yet in the Psalms and prophets the future manifestation of God's royal sovereignty belongs to the most central concepts of OT faith and hope. Here too various elements achieve prominence, as may be clearly seen from a comparison of the earlier prophets with the prophecies regarding universal world-sovereignty and the emergence of the Son of man in the book of *Daniel.

When John the Baptist and, after him, Jesus himself proclaimed that the kingdom was at hand, this proclamation involved an awakening cry of sensational and universal significance. The long-expected divine turning-point in history, the great restoration, however it was conceived at the time, is proclaimed as being at hand. It is therefore of all the greater importance to survey the content of the NT preaching with regard to the coming of the kingdom.

In the preaching of John the Baptist prominence is given to the announcement of divine judgment as a reality which is immediately at hand. The axe is already laid to the root of the trees. God's coming as King is above all else a coming to purify, to sift, to judge. No-one can evade it. No privilege can buy exemption from it, not even the ability to claim Abraham as one's father. At the same time John the Baptist points to the coming One who is to follow him, whose forerunner he himself is. The coming One comes with the winnowing-fan in his

KINGDOM OF GOD, KINGDOM OF HEAVEN

hand. In view of his coming the people must repent and submit to baptism for the washing away of sins, so as to escape the coming wrath and participate in the salvation of the kingdom and the baptism with the Holy Spirit which will be poured out when it comes (Mt. 3:1–12).

II. In the teaching of Jesus

a. Present aspect

Jesus' proclamation of the kingdom follows word for word on John's, yet it bears a much more comprehensive character. After John the Baptist had watched Jesus' appearance for a considerable time, he began to be in doubt whether Jesus was, after all, the coming One whom he had announced (Mt. 11:2f.). Jesus' proclamation of the kingdom differs in two respects from that of the Baptist. In the first place, while it retains without qualification the announcement of judgment and the call to repentance, it is the saving significance of the kingdom that stands in the foreground. In the second place—and here is the pith and core of the matter—he announced the kingdom not just as a reality which was at hand, something which would appear in the immediate future, but as a reality which was already present, manifested in his own person and ministry. Although the places where Jesus speaks explicitly of the kingdom as being present are not numerous (see especially Mt. 12:28 and parallels), his whole preaching and ministry are marked by this dominant reality. In him the great future has already become 'present time'.

This present aspect of the kingdom manifests itself in all sorts of ways in the person and deeds of Christ. It appears palpably and visibly in the casting out of demons (*cf.* Lk. 11:20) and generally in Jesus' miraculous power. In the healing of those who are demon-possessed it becomes evident that Jesus has invaded the house of 'the strong man', has bound him fast and so is in a position to plunder his goods (Mt. 12:29). The kingdom of heaven breaks into the domain of the evil one. The power of Satan is broken. Jesus sees him fall like lightning from heaven. He possesses and bestows power to trample on the dominion of the enemy. Nothing can be impossible for those who go forth into the world, invested with Jesus' power, as witnesses of the kingdom (Lk. 10:18f.). The whole of Jesus' miraculous activity is the proof of the coming of the kingdom. What many prophets and righteous men desired in vain to see—the breaking in of the great epoch of salvation—the disciples can now see and hear (Mt. 13:16; Lk. 10:23). When John the Baptist sent his disciples to ask, 'Are you he who is to come, or shall we look for another?' they were shown the wonderful works done by Jesus, in which, according to the promise of prophecy, the kingdom was already being manifested: the blind were enabled to see, the lame to walk, the deaf to hear; lepers were being cleansed and dead people raised to life, and the gospel was being proclaimed to the poor (Mt. 11:2ff.; Lk. 7:18ff.). Also in the last of these—the proclamation of the gospel—the breaking through of the kingdom is seen. Since salvation is announced and offered as a gift already available to the poor in spirit, the hungry and the mourners, the kingdom is theirs. So too the forgiveness of sins is proclaimed, not merely as a future reality to be accomplished in heaven, nor merely as a present possibility, but as a dispensation offered today, on earth, through Jesus himself;

'Son, daughter, your sins are forgiven; for the Son of man has power on earth to forgive sins' (see Mk. 2:1–12, *et passim*).

As appears clearly from this last-quoted word of power, all this is founded on the fact that Jesus is the Christ, the Son of God. The kingdom has come in him and with him; he is the *auto-basileia*. Jesus' self-revelation as the Messiah, the Son of man and Servant of the Lord, constitutes both the mystery and the unfolding of the whole gospel.

It is impossible to explain these sayings of Jesus about himself in a future sense, as some have wished to do, as though he referred to himself only as the future *Messiah, the Son of man who was to be expected on a coming day on the clouds of heaven. For however much this future revelation of the kingdom remains an essential element in the content of the gospel, we cannot mistake the fact that in the Gospels Jesus' Messiahship is present here and now. Not only is he proclaimed as such at his baptism and on the Mount of Transfiguration—as the beloved and elect One of God (plain Messianic designations)—but he is also endowed with the Holy Spirit (Mt. 3:16) and invested with full divine authority (Mt. 21:27); the Gospel is full of his declarations of absolute authority, he is presented as the One sent by the Father, the One who has come to fulfil what the prophets foretold. In his coming and teaching the Scripture is fulfilled in the ears of those who listen to him (Lk. 4:21). He came not to destroy but to fulfil (Mt. 5:17ff.), to announce the kingdom (Mk. 1:38), to seek and to save the lost (Lk. 19:10), to serve others, and to give his life a ransom for many (Mk. 10:45). The secret of belonging to the kingdom lies in belonging to him (Mt. 7:23; 25:41). In brief, the person of Jesus as the Messiah is the centre of all that is announced in the gospel concerning the kingdom. The kingdom is concentrated in him in its present and future aspects alike.

b. Future aspect

There is a future aspect as well. For although it is clearly stated that the kingdom is manifested here and now in the gospel, so also is it shown that as yet it is manifested in this world only in a provisional manner. That is why the proclamation of its present activity in the words, 'The blind receive their sight; the dead are raised; the poor have good news preached to them', is followed by the warning: 'Blessed is he who takes no offence at me' (Mt. 11:6; Lk. 7:23). The 'offence' lies in the hidden character of the kingdom in this epoch. The miracles are still tokens of another order of reality than the present one; it is not yet the time when the demons will be delivered to eternal darkness (Mt. 8:29). The gospel of the kingdom is still revealed only as a seed which is being sown. In the parables of the sower, the seed growing secretly, the tares among the wheat, the mustard seed, the leaven, it is about this hidden aspect of the kingdom that Jesus instructs his disciples. The Son of man himself, invested with all power by God, the One who is to come on the clouds of heaven, is the Sower who sows the Word of God. He is depicted as a man dependent upon others: the birds, the thorns, human beings, can partially frustrate his work. He has to wait and see what will come of his seed. Indeed, the hiddenness of the kingdom is deeper still: the King himself comes in the form of a slave. The birds of the air have nests, but the Son of man (Dn. 7:13) has no place to lay his head. In order to

receive everything, he must first of all give up everything. He must give his life as a ransom; as the suffering Servant of the Lord of Is. 53, he must be numbered with the transgressors. The kingdom has come; the kingdom will come. But it comes by the way of the cross, and before the Son of man exercises his authority over all the kingdoms of the earth (Mt. 4:8; 28:18) he must tread the path of obedience to his Father in order thus to fulfil all righteousness (Mt. 3:15). The manifestation of the kingdom has therefore a history in this world. It must be proclaimed to every creature. Like the wonderful seed, it must sprout and grow, no man knows how (Mk. 4:27). It has an inward power by which it makes its way through all sorts of obstacles and advances over all; for the field in which the seed is sown is the world (Mt. 13:38). The gospel of the kingdom goes forth to all nations (Mt. 28:19), for the King of the kingdom is also Lord of the Spirit. His resurrection brings in a new aeon; the preaching of the kingdom *and* the King reaches out to the ends of the earth. The decision has already come to pass; but the fulfilment still recedes into the future. What at first appears to be one and the same coming of the kingdom, what is announced as one indivisible reality, at hand and at close quarters, extends itself to cover new periods of time and far distances. For the frontiers of this kingdom are not coterminous with Israel's boundaries or history: the kingdom embraces all nations and fills all ages until the end of the world comes.

III. Kingdom and church

The kingdom is thus related to the history of the church and of the world alike. A connection exists between kingdom and church, but they are not identical, even in the present age. The kingdom is the whole of God's redeeming activity in Christ in this world; the church is the assembly of those who belong to Jesus Christ. Perhaps one could speak in terms of two concentric circles, of which the church is the smaller and the kingdom the larger, while Christ is the centre of both. This relation of the church to the kingdom can be formulated in all kinds of ways. The church is the assembly of those who have accepted the gospel of the kingdom in faith, who participate in the salvation of the kingdom, which includes the forgiveness of sins, adoption by God, the indwelling of the Holy Spirit, the possession of eternal life. They are also those in whose life the kingdom takes visible form, the light of the world, the salt of the earth; those who have taken on themselves the yoke of the kingdom, who live by their King's commandments and learn from him (Mt. 11:28-30). The church, as the organ of the kingdom, is called to confess Jesus as the Christ, to the missionary task of preaching the gospel in the world; she is also the community of those who wait for the coming of the kingdom in glory, the servants who have received their Lord's talents in prospect of his return. The church receives her whole constitution from the kingdom, on all sides she is beset and directed by the revelation, the progress, the future coming of the kingdom of God, without at any time being the kingdom herself or even being identified with it.

Therefore the kingdom is not confined within the frontiers of the church. Christ's Kingship is supreme above all. Where it prevails and is acknowledged, not only is the individual human being set free, but the whole pattern of life is changed: the curse of the demons and fear of hos-

tile powers disappears. The change which Christianity brings about among peoples dominated by nature-religions is a proof of the comprehensive, all-embracing significance of the kingdom. It works not only outwardly like a mustard seed but inwardly like leaven. It makes its way into the world with its redeeming power. The last book of the Bible, which portrays Christ's Kingship in the history of the world and its advancing momentum right to the end, especially illuminates the antithesis between the triumphant Christ-King (*cf.*, e.g., Rev. 5:1ff.) and the power of Satan and antichrist, which still survives on earth and contends against Christ and his church. However much the kingdom invades world-history with its blessing and deliverance, however much it presents itself as a saving power against the tyranny of gods and forces inimical to mankind, it is only through a final and universal crisis that the kingdom, as a visible and all-conquering reign of peace and salvation, will bring to full fruition the new heaven and the new earth.

IV. In the rest of the New Testament

The expression 'kingdom of heaven' or 'kingdom of God' does not appear so frequently in the NT outside the Synoptic Gospels. This is, however, simply a matter of terminology. As the indication of the great revolution in the history of salvation which has already been inaugurated by Christ's coming, and as the expected consummation of all the acts of God, it is the central theme of the whole NT revelation of God.

V. In theological thought

As regards the conception of the kingdom of heaven in theology, this has been powerfully subjected to all kinds of influences and viewpoints during the various periods and trends of theological thought. In Roman Catholic theology a distinctive feature is the identification of the kingdom of God and the church in the earthly dispensation, an identification which is principally due to Augustine's influence. Through the ecclesiastical hierarchy Christ is actualized as King of the kingdom of God. The area of the kingdom is coterminous with the frontiers of the church's power and authority. The kingdom of heaven is extended by the mission and advance of the church in the world.

In their resistance to the Roman Catholic hierarchy, the Reformers laid chief emphasis on the spiritual and invisible significance of the kingdom and readily (and wrongly) invoked Lk. 17:20f. in support of this. The kingdom of heaven, that is to say, is a spiritual sovereignty which Christ exercises through the preaching of his word and the operation of the Holy Spirit. While the Reformation in its earliest days did not lose sight of the kingdom's great dimensions of saving history, the kingdom of God, under the influence of the Enlightenment and pietism, came to be increasingly conceived in an individualistic sense; it is the sovereignty of grace and peace in the hearts of men. In later liberal theology this conception developed in a moralistic direction (especially under the influence of Kant): the kingdom of God is the kingdom of peace, love and righteousness. At first, even in pietism and sectarian circles, the expectation of the coming kingdom of God was maintained, without, however, making allowance for a positive significance of the kingdom for life in this world. Over against this more or less dualistic understanding of

KINGDOM OF GOD, KINGDOM OF HEAVEN

the kingdom we must distinguish the social conception of the kingdom which lays all the stress on its visible and communal significance. This conception is distinguished in some writers by a social radicalism (the 'Sermon on the Mount' Christianity of Tolstoy and others, or the 'religious-social' interpretation of, e.g., Kutter and Ragaz in Switzerland), in others by the evolutionary belief in progress (the 'social gospel' in America). The coming of the kingdom consists in the forward march of social righteousness and communal development.

In contrast to these spiritualizing, moralistic and evolutionary interpretations of the kingdom, NT scholarship is rightly laying stress again on the original significance of the kingdom in Jesus' preaching—a significance bound up with the history of salvation and eschatology. While the founders of this newer eschatological direction gave an extreme interpretation to the idea of the kingdom of heaven, so that there was no room left for the kingdom's penetration of the present world-order (Johannes Weiss, Albert Schweitzer, the so-called 'thoroughgoing' eschatology), more attention has been paid latterly to the unmistakable present significance of the kingdom, while this significance has been brought within the perspective of the history of salvation, the perspective of the progress of God's dynamic activity in history, which has the final consummation as its goal.

BIBLIOGRAPHY. The literature on the kingdom of God is immense. For the use of the term in the New Testament, see G. Dalman, *The Words of Jesus*, 1902; *SBI*, pp. 172–184; G. Gloege, *RGG*, pp. 916–929; K. L. Schmidt *et al.*, *TDNT* 1, pp. 564–593; B. Klappert, *NIDNTT* 2, pp. 372–390; for the newer interpretation, see among others H. D. H. R.

KINGS, BOOKS OF. The closing part of the narrative which begins in Genesis and focuses on the story of Israel from her origins in Egypt to the ending of her political independence by the Babylonians. The division of the books of Kings from the books of Samuel is an artificial one, as is the further division of Kings itself into two books, which was introduced by the LXX.

I. Outline of contents

Kings consists of an account of the Israelite monarchy written from a theological perspective and taking the history from its high point in the united monarchy to its low point in the Exile.

(a) The reign of Solomon (1 Ki. 1–11): his accession (1–2), his successes (3–10), his failures (11).

(b) The divided kingdom (1 Ki. 12–2 Ki. 17): Judah under Rehoboam, and the majority N tribes under Jeroboam who retain the title Israel, separate from each other. Israel comes under considerable pagan influence from the beginning and experiences many bloody coups before finally being exiled. Judah is less paganized, though only preserved because of Yahweh's faithfulness to his promise to David. The prophets Elijah and Elisha are heavily involved, especially in the story of Israel.

(c) The kingdom of Judah (2 Ki. 18–25): despite the reforms of Hezekiah and Josiah, the paganizing policy of Manasseh finally bears fruit in the fall of Judah too. But the conclusion of the books sounds a possible note of hope (25:27–30).

II. Origin

The last event to which Kings refers is the exiled king Jehoiachin's release from prison in Babylon in 561 (2 Ki. 25:27), and clearly the books in their final form must come from after this time. There may be elsewhere hints of even later situations: notably, the dating of the building of the Temple (1 Ki. 6:1) perhaps reflects a chronological scheme which places that event midway between the Exodus and the rebuilding of the Temple after the Exile.

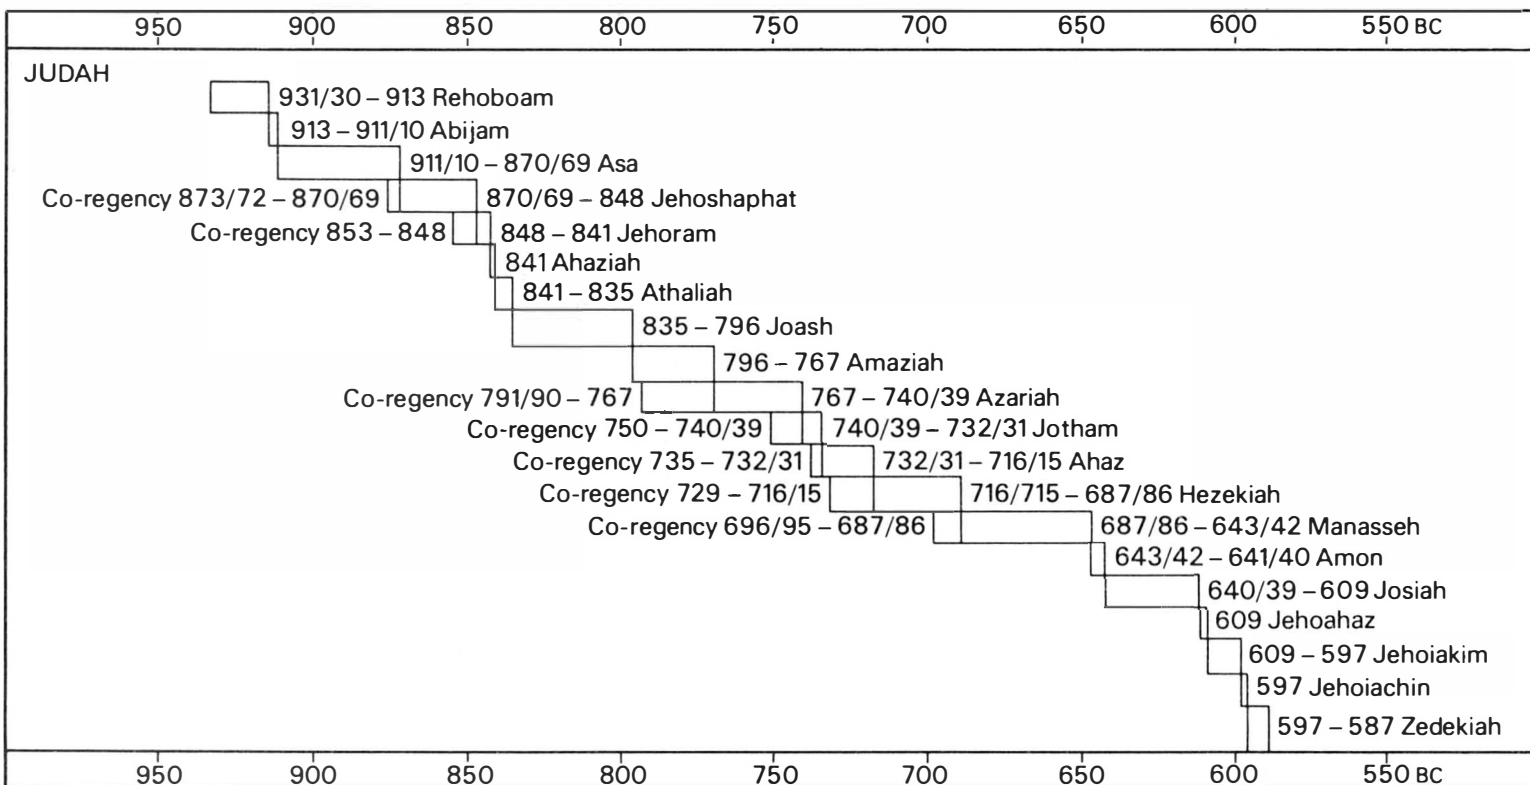

The main composition of the work is to be dated earlier, however. This may have been in the early years of the Exile (P. R. Ackroyd, *Exile and Restoration*, *OTL*, 1968, ch. 5). Alternatively, it may have been after the release of Jehoiachin in 561 (R. K. Harrison, *IOT*, 1970, pp. 730f., following M. Noth). Another view dates the 'first edition' of Kings in the reign of Josiah (J. Gray, *I and II Kings*¹, *OTL*, 1970). But while much of the material in Kings dates from long before the Exile, and some reflects its pre-exilic perspective, the evidence for an actual 'first edition' of Kings in the reign of Josiah, or for a pre-Deuteronomistic earlier version of the history, is scant.

Any pre- or post-exilic work on the books must have taken place in Palestine. Work during the exilic period itself might have taken place in Babylon or Palestine (the arguments for each location are discussed by Ackroyd, pp. 65–68, and by E. W. Nicholson, *Preaching to the Exiles: A Study of the Prose Tradition in the Book of Jeremiah*, 1970, pp. 117–122).

We do not know the name of the author(s) of Kings, though the group which was responsible for the work is often described as the 'Deuteronomists'. This description reflects the view that Kings is not merely the last part of the story begun in Genesis; it is more specifically the last part of the 'Deuteronomistic history', which begins with the book of Deuteronomy. On this view, the story from Joshua to Kings, known in the Hebrew Bible as the 'Former Prophets', has been written or edited as a whole to show how principles declared in Deuteronomy worked out in Israel's history from the conquest, via the period of the judges and the united monarchy, to the Exile. The view usually presupposes a belief that Deuteronomy itself was written in the late pre-exilic period, though it need not involve this. It is to be noted, however, that the emphases of the Deuteronomic law by no means coincide with those of Kings. On the one side, the humanitarian, social and moral concerns of Deuteronomy are not reflected in Kings. Conversely, while Deuteronomy stresses the central sanctuary

(though without referring explicitly to Jerusalem) and refers to the monarchy (though without ascribing to it the theological significance it receives in Judah), these do not have the paramount importance they receive in Kings.

III. Literary characteristics

The formal structure of Kings is provided by a reign-by-reign treatment of the history. During the period of the divided monarchy, the accounts of N and S kings are allowed to interweave in order to preserve a broadly chronological treatment. Each king is summarily described and evaluated according to a fairly consistent pattern, which may be perceived by examining the short accounts of the reign of Jehoshaphat (1 Ki. 22:41–50) or Amon (2 Ki. 21:19–26). Usually, however, this summary description and evaluation is the framework within which other material is enclosed, so that its opening and closing elements may be separated by several chapters (see, e.g., the account of the reign of Hezekiah, 2 Ki. 18–20). Thus the accounts of Solomon, Rehoboam, Ahab, Jehoram, Jehu and Joash, for instance, include considerable narrative material centring on royal and political matters. Other narratives centre on prophets, especially Elijah, Elisha and Isaiah. Sometimes these prophets are involved in royal and political matters (revealingly, however, the Israelite king is not even named in 2 Ki. 5–7: he is not the real centre of interest). Other narratives concern the prophets' personal lives and ministries (e.g. 2 Ki. 4). The 'Deuteronomistic' perspective of the work as a whole is expounded most systematically in Kings in an extensive theological comment which closes off the history of the N kingdom (2 Ki. 17).

Various views are held as to the historical value of Kings. Clearly it is no attempt to write 'objective' or 'critical' history of a post-Enlightenment kind. It is history with a message, and the events it relates are chosen in accordance with their relevance to the message. It is thus not a political history, and some periods of great political significance (such as the reign of Omri) are passed over relatively briefly because they are of little significance in relation to the writer's concern with the history of Israel's relationship with Yahweh.

Within the Deuteronomistic framework, however, material of recognized historical value is included. The summary frameworks refer the reader to 'the book of the acts of Solomon' and to the annals of the kings of Judah and of Israel for further information on the various reigns, and it seems likely that these were the sources of many of the bare historical facts passed on by Kings (such as the name of a king's mother and the brief references to specific events). Complex chronological problems are raised by the dates provided for the kings (one basic solution for these is provided by E. Thiele, *The Mysterious Numbers of the Hebrew Kings*, 1965; cf. *CHRONOLOGY OF THE OT). Beyond these royal annals, it is widely accepted that 1 Ki. 1–2 forms the original ending of an account of how Solomon came to the throne, which extends back at least to 2 Sa. 9. As for the other narratives incorporated into Kings, Gray (for instance) accepts the fundamental historical value both of the material more concerned with political and military events and that concerned with the prophets, though he regards the more personal stories about Elijah and Elisha in 1 Ki. 17 and 2

Ki. 1–6 as folk-loristic, in part simply because of the miraculous element in them. But the precise nature of the author's sources, beyond the royal annals to which they actually refer, is not clear (cf. Gray, pp. 14–35). Considerable archaeological material from the Iron Age in Israel and Judah is relevant to Kings (*ARCHAEOLOGY).

The authors' method of composition means that their work is not a smooth literary whole, but it both gives us access to the material they pass on from their sources in a largely unredacted form, and impresses a degree of unity on the whole by the distinctive framework in which they set this material. Sometimes the source material, or the collected form of a section of the material, may fruitfully be treated by a literary critical approach, and this is likely to be a subject of increasing study (*Semeia* 3, 1975; 8, 1977).

The text of Kings in MT presents relatively few problems. But the Qumran discoveries (combined with evidence from Chronicles and the LXX) have implications for the state of the pre-MT textual traditions of Kings, as of other books (*TEXTS AND VERSIONS).

IV. Emphases

(a) We have noted that Kings begins at the high point of the period covered by the Deuteronomistic history, the united monarchy. The fact that this is the high point reflects the importance of the Davidic monarchy and the Temple of Solomon. Yahweh's commitment to David (2 Sa. 7:11–16) is often referred to by Yahweh and by the narrator as the explanation for Yahweh's faithfulness to Judah and to David's successors (1 Ki. 6:12; 11:12–13, 36; 2 Ki. 8:19; 19:34), and David's loyalty to Yahweh is frequently (and slightly surprisingly) a standard by which later kings are judged (e.g. 1 Ki. 9:4; 2 Ki. 22:2). But the repercussions of one king's reign in later times can also be negative: the sins of Manasseh are ultimately the cause of the Exile (2 Ki. 24:3–4). Thus the well-being of the people as a whole is tied up with the behaviour of the king (2 Ki. 21:11–15).

The building of the Temple is the climax of the opening chapters of Kings. 1 Ki. 8 focuses the Kings' theology of the Temple, which is the dwelling-place of Yahweh's name. W. Eichrodt (*Theology of the OT*, 2, 1967, pp. 23–45) sees Yahweh's name as the most sophisticated OT form of 'the spiritualization of the theophany'—a way of talking of the real revelatory presence of God without compromising his transcendence. The importance of the Temple makes it a crucial touchstone for the evaluation of the kings. Jeroboam I is condemned for devising alternative places and forms of worship for the N kingdom (1 Ki. 12–13), and his successors are condemned for continuing to have recourse to these. Josiah, the antitype to Jeroboam, appearing near the end of the story as Jeroboam appears near its beginning, is commended for his reform of temple worship and for his destruction of high places generally and of the shrine at Bethel in particular (2 Ki. 22–23).

(b) Kings' attitude to the monarchy and to the Temple, however, shows that these are not to be seen as absolutes. They are subject, first of all, to the Torah. 'The Deuteronomist sees the main problem of the history of Israel as lying in the question of the correct correlation of Moses and David' (G. von Rad, *Old Testament Theology*, 1, 1968, p. 339).

KINGS, BOOKS OF

The Davidic promise can be relied on only as long as the Mosaic covenant demand is accepted. Thus the great villain of the story of Judah in Kings is Manasseh; the list of his acts corresponds closely to what Deuteronomy says Israel should not do (cf. 2 Ki. 21:2-9 with Dt. 17:2-4; 18:9-12). Conversely in the story of its great hero Josiah, Kings emphasizes the significance of his discovery of the 'book of the covenant' by giving it first mention in its account of his reign (contrast the account in 2 Ch. 34), and the list of his acts corresponds closely to what Deuteronomy says Israel should do. Thus the requirements and the sanctions of the Torah (specifically of Deuteronomy) provide the principles for understanding Israel's history. When kings obeyed the Torah (especially its demand for faithful worship at the central shrine), they generally prospered. When they ignored it, they did not.

But the spoken word of the prophet is thought of as succeeding and supporting the written word of Moses (cf. the role of Huldah after the discovery of the lawbook in 2 Ki. 22:13-20), and also demanding the attention of king and people. 'What fascinated (the Deuteronomist) was, we might say, the functioning of the divine word in history' (cf. 1 Ki. 8:24) (G. von Rad, 'The Deuteronomistic theology of history in the books of Kings', in 'Studies in Deuteronomy', *SBT* 9, 1961, p. 91). Thus Kings pictures 'a course of history which was shaped and led to a fulfilment by a word of judgment and salvation continually injected into it' (von Rad, *Old Testament Theology*, I, p. 344). This point is made by including lengthy stories about various prophets, especially as regards their involvement in the nation's political life. 'In the decisive political events the initiative stems from prophets, who change the gears of history with a word of God' (*ibid.*, p. 342). It is also made by criss-crossing the story with prophecies and their fulfilment (e.g. 1 Ki. 11:29-39 and 12:15; 1 Ki. 13:1-10 and 2 Ki. 23:15-18; 2 Ki. 20:16-17 and 24:13). The stress on how true prophecies were fulfilled may reflect concern with the problem of false prophecy during the Exile. Thus a king's attitude to the prophet's word forms another index of his attitude to God (Hezekiah, Josiah).

(c) One of the characteristic emphases of the covenant as expounded in Deuteronomy is that God blesses those who are faithful to him but brings trouble to those who disobey him (Dt. 28-30). Thus in Kings the material concerning Solomon's reign is arranged so that Solomon's setbacks are seen as consequences of his association with foreign women (1 Ki. 11). On the other hand, Kings recognizes that God's justice does not work out in this way in every reign. Manasseh enjoys a long reign, and his apostasy only brings its fruit decades later (2 Ki. 21; 24:3-4). Josiah is responsive to Yahweh's word, but dies an early and tragic death (2 Ki. 23:29).

V. Message and purpose

The function of Kings' review of the history which led up to the Exile is to explain why the Exile came about and to express an admission that there was ample cause for God to judge Israel. It is a form of confession, or 'an act of praise at the justice of the judgment of God'; 'this statement with its apparent lack of hope for the future lays the only possible foundation for the future' (Ackroyd, p. 78, following von Rad) because it throws the people of God totally back on the grace of God.

The possibility of hope for the future is hinted at in the way the theological emphases of Kings, described above, remain open to the future. Perhaps God's commitment to David still holds: it may be that the release of Jehoiachin, related in the final paragraph of Kings, makes this hope explicit. Although the Temple has been pillaged and burnt, prayer is still possible in the Temple, or towards it on the part of people who are cut off from it, and God has undertaken to hear such prayer (see 1 Ki. 8-9). Although judgment has come in accordance with the sanctions of the covenant, the same covenant allows for the possibility of repentance and restoration after judgment (see 1 Ki. 8:46-53; cf. Dt. 30). Although the prophetic words which Israel ignored form a further reason for her punishment, the fact that those prophetic words of judgment have come true may encourage the hope that the prophetic promises of restoration (e.g. those of Jeremiah) may come true, too.

Thus the aim of Kings is in part didactic, 'to present the divine view of Israelite history' (R. K. Harrison, p. 722). Beyond this, there are at least hints of the kerygmatic (cf. E. W. Nicholson, p. 75). Kings does open up the possibility of there being a future. On the basis of this possibility it further seeks to be paraenetic, in that it implicitly challenges the generation of the Exile to turn back to Yahweh in repentance, faith and commitment to obedience (cf. 1 Ki. 8:46-50). For 'the judgment of 587 did not mean the end of the people of God; nothing but refusal to turn would be the end' (von Rad, *Old Testament Theology*, I, p. 346).

VI. Context and implications

Kings is thus one of the several responses to the fall of Judah and the Exile. It bears comparison especially with *Lamentations (five psalms which express the feelings and tentative hopes of people in Judah after the fall of Jerusalem) and with the book of Jeremiah (whose material was collected and assembled in this same period and manifests many literary and theological points of contact with Kings; see E. W. Nicholson, *op. cit.*). Kings may also be studied in the light of parallel treatments of events it narrates as these appear in Chronicles, Isaiah and Jeremiah (see, e.g., B. S. Childs, 'Isaiah and the Assyrian Crisis', *SBT* 2. 3, 1967).

In a volume of expositions of passages from 2 Kings, *The Politics of God and the Politics of Man* (1972, pp. 13-21), J. Ellul suggests that Kings makes a twofold distinctive contribution to the Canon of Scripture. First, it pictures God's involvement in political life, and thus warns both against undervaluing the importance of politics, and against absolutizing this realm (since it shows how God brings judgment on politics). Secondly, it displays the interplay of the free determination of man (who in various political situations makes his decisions and puts his policies into effect) and the free decision of God (who nevertheless effects his will through or despite these deliberate human acts).

In reaction to an overstress in recent biblical study on the idea of 'God as the one who acts in history, the importance of this motif in the Bible is in danger of being understressed. Kings is a book which itself particularly emphasizes this motif' (see J. E. Goldingay, "'That you may know that Yahweh is God": A study in the relationship between theology and historical truth in the Old

Testament', *TynB* 23, 1972, pp. 58-93; and on the application of this idea today, see D. N. Freedman, 'The biblical idea of history', *Int* 21, 1967, pp. 32-49). God is one who works out a purpose in history, and his people may use the marks of his footsteps in past history to see what he may be doing in the present.

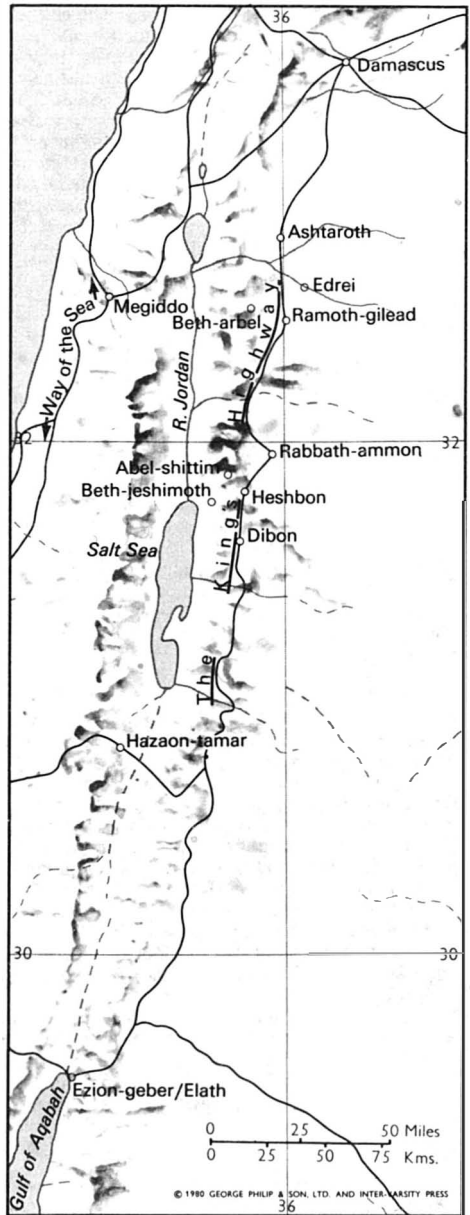

BIBLIOGRAPHY. W. Brueggemann, *1 Kings and 2 Kings*, 1982; G. H. Jones, *1 and 2 Kings*, NCB, 2 vols., 1984; R. Nelson, *First and Second Kings*, 1987; D. J. Wiseman, *1 and 2 Kings*, TOTC, 1993. J.E.G.

KING'S GARDEN. An open space in Jerusalem near 'the gate between the two walls' (2 Ki. 25:4; Je. 39:4; 52:7) and close to the Pool of *Siloam (Ne. 3:15). The 'two walls' (cf. Is. 22:11) were probably those below the 'Fountain Gate', SE of Ophel, running along the W side of the E hill of Jerusalem, and along the E side of the W hill (S. R. Driver, *Jeremiah*, 1918, p. 239; N. Grollenberg, *Atlas*, Maps 24B & C). J.D.D.

KING'S HIGHWAY. The name given to the direct road running from the Gulf of Aqabah to Damascus in Syria, E of the Dead Sea and Jordan valley. The route was in use between the 23rd and 20th centuries BC, being marked along its length by Early Bronze Age settlements and fortresses. It was, therefore, likely that Chedorlaomer and his allies approached Sodom and Gomorrah by this way and were pursued up it by Abraham (Gn. 14). Its further use in the 13th-6th centuries BC is also marked by datable ruins showing that the road was occupied at the time that the Edomites and the Ammonites prevented Moses and the Israelites from using it (Nu. 20:17; 21:22; cf. Dt. 2:27). In Solomon's reign the highway played an important part as a trade-link between Ezion-geber, Judah and Syria. Roman milestones show that it was incorporated into Trajan's road built in the 2nd century AD and was used by the Nabataeans. The modern motorway follows part of the old track, which is still called Tariq es-Sultan.

KIR. In the Heb. text the name of the place of exile of the Syrians (2 Ki. 16:9; Am. 1:5), and a country, not necessarily the same, from which Yahweh brought them (Am. 9:7). This is perhaps not their original home, but a land occupied at some earlier stage in their history, parallel to Israel in Egypt and the *Philistines in *Caphtor (*ARAM). In Is. 22:6 Kir is parallel to Elam. No ancient place of this name is known; however, as it simply means 'city', it need not be specific. The LXX does not use a proper name in any of these passages, but translates 'from a pit' (Am. 9:7, Gk. *ek bothrou*), 'called as an ally' (Am. 1:5, Gk. *epiklētos*) and 'congregation' (Is. 22:6, Gk. *synagōgē*), feasible translations of an unpointed Heb. text. Vulg. follows the mistaken identification with Cyrene made by Symmachus. Kir has been altered to read Koa' (by Cheyne), and said to be Gutium in the Kurdish hills (cf. Ezk. 23:23; Is. 22:5-6). The problem is not yet solved. A.R.M.

Map showing the route of the ancient 'King's Highway'.

KIRIATHAIM. The dual form of Heb. *qiryā*, 'city, town', and meaning therefore 'double city', a name applied to two cities in the Bible.

I. A place in the territory allotted to Reuben (Jos. 13:19) which had already been conquered and rebuilt by the Reubenites (Nu. 32:37). It is possible that Shaveh Kiriathaim, which is mentioned in the account of the invasion of Chedorlaomer in the time of Abraham (Gn. 14:5), refers to this locality, as the 'plain' of Kiriathaim (rvmg.), though *sāwēh*

KIRIATHAIM

is a rare word of uncertain meaning. The city was later in the hands of the Moabites (Je. 48:1, 23; Ezk. 25:9), and is mentioned in the 9th-century inscription of King Mesha of Moab (*qrytn*, line 10) as having been rebuilt by him, so it cannot have remained under Israelite control for more than about 3 centuries. The site is possibly near to modern El Qurayyāt about 10 km NW of Dibon in Jordan, but the place has not yet been located (cf. H. Donner and W. Röllig, *Kanaanäische und aramäische Inschriften*, 1962–4, pp. 74–175).

2. A levitical city in Naphtali (1 Ch. 6:76), possibly to be identified with Kartan (*qartān*) of Jos. 21:32. The site is unknown, though various suggestions have been made (see *GTT*, §§ 298, 337, 357). T.C.M.

KIRIATH-ARBA (Heb. *qiryat 'arba'*, 'city of four', i.e. 'tetropolis'), an earlier name of *Hebron. According to Jos. 14:15, it was 'the metropolis of the Anakim' (so LXX; *MT* makes the numeral 'arba', 'four', into a personal name). The name Kiriath-arba occurs once in the story of Abraham (Gn. 23:2) and a few times in the narrative of the Conquest (Jos. 14:15; 15:54; 20:7; Jdg. 1:10); thereafter it evidently fell into disuse. Some attempt may have been made to revive it in the post-exilic age (Ne. 11:25), but with the Idumaeian occupation of the place soon afterwards the old name was completely discontinued. F.F.B.

KIRIATH-JEARIM (Heb. *qiryat-y'arim*, 'city of forests'). A chief city of the Gibeonites (Jos. 9:17), on the Judah–Benjamin border (Jos. 18:14–15; cf. Jdg. 18:12), assigned first to Judah (Jos. 15:60), then, assuming an identification with 'Kiriath', to Benjamin (Jos. 18:28). It is called also Kiriath-baal (Jos. 15:60, suggesting that it was an old Canaanite high place), Baalah (Jos. 15:9–10), Baale-judah (2 Sa. 6:2) and Kiriath-arim (Ezr. 2:25).

Here the ark was brought from Beth-shemesh and entrusted to the keeping of Eleazar (1 Sa. 7:1), whence after 20 years David took it to Jerusalem (2 Sa. 6:2; 1 Ch. 13:5; 2 Ch. 1:4). The home of Uriah the prophet was in Kiriath-jearim (Je. 26:20).

Its precise location has not been determined, but the consensus of opinion favours Kuriat el-'Enab (commonly known as Abu Ghosh), a flourishing little village 14 km W of Jerusalem on the Jaffa road. It is a well-wooded district (or has been in the past) and it meets other geographical requirements. J.D.D.

KIRIATH-SEPHER (Heb. *qiryat-sēpher*). The name used for *Debir in the story of Othniel and Achsah (Jos. 15:15ff., Jdg. 1:11ff.). J.P.U.L.

KIR OF MOAB, KIR-HARESETH. A fortified city of S Moab, attacked but not taken by the kings of Israel, Judah and Edom (2 Ki. 3:25). During the siege, Mesha, king of Moab, offered up his eldest son 'for a burnt offering upon the wall'.

The Hebrew name (*qir h'arešet*) means 'the wall of potsherds'. The LXX rendering of Is. 16:11 presupposes the Hebrew *qir h'arēšet*, 'the new city'. Normally the town is called Kir of Moab (Is. 15:1). Some writers see in Je. 48:36–37 a play on words in which Kir Heres is parallel to 'bald' (Heb. *qorhā*).

It is suggested that the original Moabite name was QRHH, probably the town referred to in the *Moabite Stone (lines 22ff.), where Mesha established a sanctuary for Chemosh and carried out a building project. This would place it near Dibon.

Most writers, however, identify it with Kerak, following the Targum rendering, Kerak of Moab. If that is so, the place was built on a strategic rocky hill 1,027 m above sea-level, surrounded by steep valleys, some 18 km E of the Dead Sea and 24 km S of the Arnon River. Today a mediaeval castle crowns the hill.

BIBLIOGRAPHY. F. M. Abel, *Géographie de la Palestine*, 2, 1933, pp. 418–419; Nelson Glueck, *AASOR* 14, 1934, p. 65. J.A.T.

KISH (Heb. *qis*, 'bow', 'power'). 1. A Benjaminite, the son of Abiel and father of King Saul (1 Sa. 9:1; 14:51; cf. Acts 13:21). 2. The son of Jehiel and Maacah (1 Ch. 8:30), perhaps the uncle of I. 3. A Levite, grandson of Merari (1 Ch. 23:21). 4. Another Levite and Merarite who assisted in the cleansing of the Temple in Hezekiah's time (2 Ch. 29:12). 5. A Benjaminite, great-grandfather of Mordecai (Est. 2:5). J.D.D.

6. Name of the capital of a city-state c. 20 km SE of Babylon (mod. Tell el-Ukheimer) where, according to Sumerian tradition (King List), the first dynasty after the *Flood ruled. It flourished c. 3200–3000 BC as a rival of *Erech when it was linked with the legendary Etana and with King Agga who opposed Gilgamesh. Documents from the earlier occupation and from the 2nd millennium are extant. It was excavated by the French (1914) and by a joint Oxford (Ashmolean Museum) and Chicago (Field Museum) expedition (1922–33). Finds include early palaces, tablets and a major flood-deposit level dated c. 3300 BC.

J.D.W.

KISHON. The river, modern Nahr el-Muqatta', which, rising in the hills of N Samaria, drains the plain of Esdraelon and debouches in the bay of Acre, E of Mt Carmel. Though it winds about, in a general sense it flows in a NW direction parallel with, and to the NE of, the mountain range which runs from Samaria to Carmel and in the NE passes of which lay Taanach, Megiddo and Jokneam. The name Kishon is not often used, the river sometimes being indicated by reference to one of the towns overlooking it. Thus it is probably first mentioned in Jos. 19:11, where the 'brook which is east of Jokneam' is given as part of the boundary of Zebulun, though in this case it is only a small section of the river in the vicinity of Jokneam that is referred to.

The best-known reference to the river is that connected with the victory of the Israelites under Barak over the Syrians under Sisera (Jdg. 4–5; Ps. 83:9). The forces of Sisera, fully armed with chariots, were deployed in the plain, and the Israelites made their attack from the mountains SW of the river. The success of the Israelites was in large measure due to the river, which was running high, and must have made the surrounding plain too soft for Sisera's chariots, which became bogged down and useless.

The river is referred to in the Song of Deborah as 'the waters of Megiddo' (Jdg. 5:19), and the fact that Megiddo is not otherwise referred to in this account has been taken by Albright to indicate that it was at this time lying in ruins, while Taanach was flourishing. The excavations of *Megiddo have shown a gap in occupation about 1125 BC between Levels VII and VI, and it may be that the Israelite victory occurred during that period of abandonment, or about 1125 BC.

The river is next mentioned as the scene of the slaughter by Elijah of the prophets of Baal, after the contest on Mt Carmel (1 Ki. 18:40). It is referred to here as a brook (*nahal*), suggesting that the long drought preceding these events had reduced the river to a low level. The rains which followed must have washed away the traces of the execution.

BIBLIOGRAPHY. G. A. Smith, *The Historical Geography of the Holy Land*²⁵, 1931, pp. 394–397; W. F. Albright, *The Archaeology of Palestine*, 1960, pp. 117–118; *LOB*, pp. 204f. T.C.M.

KISS. A common salutation in the E, this word occurs in the OT as a sign of affection between relatives (e.g. Gn. 29:11; 33:4), an expression of love (Ct. 1:2), or lust (Pr. 7:13), and perhaps as a token of homage (1 Sa. 10:1). The last, kissing 'God's anointed', possibly may be, as Ps. 2:10, a religious or cultic rite analogous to that found among idol cults: to kiss the hand (Jb. 31:27), or an image (1 Ki. 19:18; Ho. 13:2), is an act of religious worship. In the NT *phileō* is used as a sign of friendship or affection (e.g. Judas, Mt. 26:48), as is the stronger form *kataphileō* (e.g. Lk. 7:38; 15:20; Acts 20:37). The 'holy kiss' (Rom. 16:16; 1 Pet. 5:14), which later entered into the church's liturgy, was an expression of Christian love and presumably was restricted to one's own sex (cf. *Apostolic Constitutions* 2. 57, 12). See W. Günther, C. Brown, in *NIDNTT* 2, pp. 547–550. E.E.E.

KITTIM. One of the sons of Javan (Gn. 10:4 = 1 Ch. 1:7; Heb. *kittim*) whose descendants settled on the island of Cyprus where their name was given to the town of Kition, modern Larnaka, which is referred to in the Phoenician inscriptions as *kt* or *ky*. They engaged in sea trade (Nu. 24:24), and the name seems to have come to apply to the whole island of Cyprus (Is. 23:1, 12), and then in a more general way to the coastlands and islands of the E Mediterranean (*ʾiyyē kittiyim*: Je. 2:10; Ezk. 27:6). The ostraca of c. 600 BC from Arad refer to *kytm*, probably mercenaries, principally perhaps Greeks, from the islands and coastlands. In Daniel's fourth vision, which probably deals with the period from Cyrus to Antiochus Epiphanes, the latter's failure to conquer Egypt, due to the intervention of Rome, is probably referred to in 11:30, where 'the ships of Kittim' must be Rome. The author probably saw in Rome's intervention the fulfilment of Nu. 24:24, where Vulg. translates Kittim by 'Italy' (so also in Dn. 11:30) and the Targum of Onkelos by 'Romans'. The name occurs in the Dead Sea Scrolls, also probably with reference to Rome, being used, for instance, in the commentary on Habakkuk as an interpretation of the 'Chaldeans' of that prophet (Hab. 1:6).

BIBLIOGRAPHY. A. Lemaire, *Inscriptions*

hébraïques, 1, 1977, p. 156; Y. Yadin, *The Scroll of the War of the Sons of Light Against the Sons of Darkness*, 1962, pp. 22–26. T.C.M.

KNEADING-TROUGH. A large shallow bowl, made of pottery or wood, in which dough was prepared. Modern Arab nomads often use wooden bowls for this purpose. Heb. *miš'eret*, Ex. 12:34; cf. Dt. 28:5, 17 (AV 'store'). For a model, c. 700 BC, see *ANEP*, no. 152. (*BREAD.) A.R.M.

KNEE, KNEEL. The concrete imagery of the OT expresses weakness or fear as 'feeble knees' (Jb. 4:4; Is. 35:3) or as 'the knees tremble', 'knock together' (Na. 2:10; Dn. 5:6).

The fifteen references in the NT are, with the exception of Heb. 12:12, always used in connection with bowing. The action may indicate a sign of respect (Mk. 1:40; cf. 2 Ki. 1:13; Mk. 15:19), or subjection (Rom. 11:4; 14:11; cf. 1 Clement 57:1, 'bending the knees of your heart'), or of religious adoration or worship (Lk. 5:8). In the latter sense kneeling is sometimes the posture of prayer (Lk. 22:41; 1 Ki. 8:54, cf. 18:42). The universal recognition of Christ's Lordship is thus signified: 'every knee should bow' (Phil. 2:10; cf. Rom. 14:10f.; 1 Cor. 15:25). Cf. *TDNT* 1, pp. 738–740; 3, pp. 594–595; 6, pp. 758–766. E.E.E.

KNIFE. The primitive flint knife was current until recent times beside metal forms in the Near East. In the OT it is specified for the *circumcision of Moses' son and of Israel (Ex. 4:25; Jos. 5:2–3), perhaps for hygienic reasons, the once-used flint being discarded without cost. The Heb. *hereb* used in these passages, and for the self-mutilation of the frenzied priests of Baal (1 Ki. 18:28), usually denotes a short sword. In Pr. 30:14 this is parallel to Heb. *ma'kelet*, a knife used in eating. It was such a short sword that Abraham took to kill Isaac and the Levite used to dismember his concubine (Gn. 22:6, 10; Jdg. 19:29). Heb. *šakkin* (Pr. 23:2) is to be connected with Aram. *sakkin*, Arab. *sikkin*, 'knife'.

AV and RV follow Vulg. *cultri* in rendering the unique Heb. *maḥlāpīm*, 'knives' (Ezr. 1:9; cf. Syr. *hlāpā*). RSV 'conspers' is taken from 1 Esdras 2:9 (Gk. *thyiskai*). The LXX 'of a different sort' (Gk. *parēllagmena*) translates the Hebrew but does not throw light on the meaning. A.R.M.

KNOWLEDGE. The Gk. ideal of knowledge was a contemplation of reality in its static and abiding being; the Heb. was primarily concerned with life in its dynamic process, and therefore conceived knowledge as an entry into relationship with the experienced world which makes demands not only on man's understanding but also on man's will.

I. In the Old Testament

Thus it is that the OT speaks of knowing (*yāda'*) the loss of children (Is. 47:8), grief (Is. 53:3), sin (Je. 3:13), God's hand and his might (Je. 16:21), his vengeance (Ezk. 25:14). The intimate sexual relationship is spoken of as knowing a man or a woman (e.g. Gn. 4:1; Jdg. 11:39). Above all, to know God is not simply to be aware of his existence; for the most part this is taken for granted in

KNOWLEDGE

Heb. writings. To know him is to recognize him for what he is, the sovereign Lord who makes a demand on man's obedience and especially upon the obedience of his people Israel, with whom he has made a covenant. He is the God whose holiness and loving-kindness are 'known' in the experience of nation and individual. The criterion of this knowledge is obedience, and its opposite is not simply ignorance but rebellious, wilful turning away from God (cf. 1 Sa. 2:12; 3:7; 2 Ch. 33:13; Is. 1:3; Je. 8:7; 24:7; 31:34). Furthermore, the acknowledgment of the Lord's claims involves a rejection of the heathen gods, knowing that they are not gods (cf. Is. 41:23).

On God's side of the relationship between himself and man there is also knowledge. Here especially there can be no question of theoretical observation; for man and all things are God's creation. It is from this fact that God's omniscience springs: he knows the world and man within it because it is at his command that they come to be (Jb. 28:20ff.; Ps. 139). In particular, God knows those whom he has chosen to be his agents: his knowledge is spoken of in terms of election (Je. 1:5; Ho. 13:5; Am. 3:2).

II. In the New Testament

To speak of knowledge in these ways is natural in addressing a people who all formally believe that God exists but fail to acknowledge his claims. In Hellenistic Judaism and in the NT use of *ginōskēin*, *eidenai*, and their derivatives we find Heb. thought modified by the fact that the Gentiles were ignorant even of God's existence (*IGNORANCE). In general, however, the Heb. conception is retained. All men ought to respond to the revelation in Christ which has made possible a full knowledge of God, no more intellectual apprehension but an obedience to his revealed purpose, an acceptance of his revealed love, and a fellowship with himself (cf. Jn. 17:3; Acts 2:36; 1 Cor. 2:8; Phil. 3:10). This knowledge of God is possible only because God in his love has called men to it (Gal. 4:9; 1 Cor. 13:12; 2 Tim. 2:19). The whole process of enlightenment and acceptance may be called coming to the knowledge of the truth (1 Tim. 2:4; 2 Tim. 2:25; 3:7; Tit. 1:1; cf. Jn. 8:32).

Both Paul and John write at times in conscious contrast with and opposition to the systems of alleged esoteric knowledge purveyed by the mystery cults and syncretistic 'philosophy' of their day (cf. 1 Tim. 6:20; Col. 2:8). To these knowledge was the result of an initiation or illumination which put the initiate in possession of spiritual discernment beyond mere reason or faith. Against them Paul (particularly in 1 Cor. and Col.) and all the Johannine writings stress that knowledge of God springs from committal to the historic Christ; it is not opposed to faith but forms its completion. We need no revelation other than that in Christ. (*GNOSTICISM.)

KOA. Ezekiel (23:23) prophesies that this people, together with other dwellers in Mesopotamia, will attack Jerusalem. Koa has been identified by some with the people called in Assyr. texts *Qutu*, who lived E of the Tigris in the region of the upper

'Adhaim and Diyala rivers. Assyr. records often couple them with another tribe hostile to Assyria, the *Sutu*, perhaps to be equated with Shoa in Ezk. 23:23. Some (e.g. O. Procksch) find Koa in Is. 22:5, but only by a doubtful emendation of the word usually translated 'walls'. Vulg. misinterpreted Koa as *principes*, 'princes', an interpretation which was followed by Luther.

KOHATH, KOHATHITES. Kohath, second son of Levi, was founder of one of the three great Levite families. His family was subdivided into the houses of Amram, Izhar, Hebron and Uzziel, and Moses and Aaron were Amramites (Ex. 6:20). In the wilderness the Kohathites carried the tabernacle furniture and vessels. They camped on the S side of the tabernacle. Their males over a month old numbered 8,600; those who actually served (age-group 30-50), 2,750 (Nu. 3:27-32; 4:36). In the land the Kohathites who, being sons of Aaron, were priests, were allotted thirteen cities, the rest ten cities (Jos. 21:4-5). Under David's reorganization the Kohathites held a wide variety of offices, including a share in the Temple singing (1 Ch. 6:31-38; cf. 9:31-32; 26:23-31). Kohathites are mentioned again under Jehoshaphat, Hezekiah and Josiah (2 Ch. 20:19; 29:12; 34:12), and at the return from the Exile (cf. Ezr. 2:42 with 1 Ch. 9:19; Korahites were Kohathites). See also *KORAH. D.W.G.

KORAH (Heb. *qōrah* = baldness?). 1. Chief (AV 'Duke') of Edom, son of Esau (Gn. 36:5, 14, 18; 1 Ch. 1:35). 2. Chief of Edom, son of Eliphaz (Gn. 36:16). As the name is omitted from Gn. 36:11 and 1 Ch. 1:36, some think this to be a gloss. 3. A son of Hebron (1 Ch. 2:43). 4. A grandson of Kohath and ancestor of a group of sacred musicians ('sons of Korah') who are mentioned in the titles of Ps. 42 and 11 other psalms (1 Ch. 6:22).

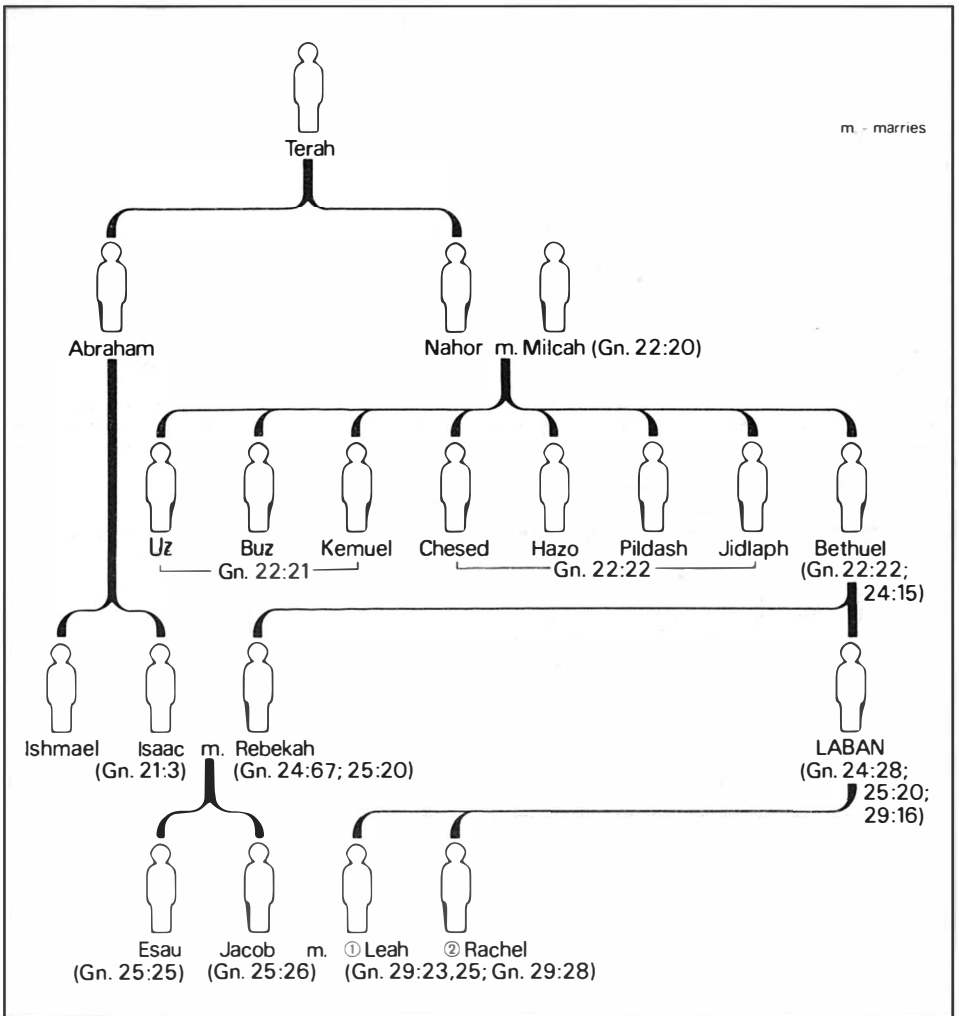

5. A Levite ('Core' in Jude 11, AV), a Kohathite of the house of Izhar, perhaps identical with 4. With Dathan, his brother Abiram and another Reubenite, On, Korah rebelled against Moses and Aaron. Three grounds of revolt are stated, and although these have led some commentators to assume composite authorship according to the documentary hypothesis, the narrative reads naturally as a harmonious unity. Nu. 16 records discontent on the grounds: first, that Moses and Aaron have set themselves above the rest of Israel (vv. 3, 13); secondly, that Moses has failed to bring Israel to the promised land (v. 14); and thirdly, that he and Aaron have arrogated the priesthood to themselves (vv. 7-11). That different grievances should be used unitedly is not unfamiliar in both ancient history and modern. As the rebels prepare to offer incense, the wrath of God is kindled, and after Moses has interceded for the congregation of Israel the rebels and their followers are destroyed by the earth opening to swallow them, and by fire. Cf. Nu. 26:9; Dt. 11:6; Ps. 106:17. It has been argued that this narrative contains two differing versions which reflect variant traditions of the struggle for religious leadership among the Levites.

T.H.J.

L

LABAN (Heb. *laḅan*, 'white'). 1. A descendant of Abraham's brother Nahor (Gn. 22:20–23), son of Bethuel (Gn. 28:5), Rebekah's brother (Gn. 24:47ff.) and uncle and father-in-law of Jacob (Gn. 27:43; 28:2). Laban's branch of the family had remained in Harran, but the close ethnic affinity was maintained by both Isaac and Jacob, who found their wives there. Nevertheless, notable differences

existed between the Harran and Palestinian groups. Laban is described as an Aramean (Gn. 28:5; 31:20), he spoke Aramaic (Gn. 31:47), practised marriage customs unknown to Jacob (Gn. 29:26) and worshipped other gods (Gn. 31:19ff., *cf.* v. 53), though he did acknowledge Yahweh's activity (Gn. 24:50–51). Though generous in his hospitality, Laban's chief characteristics were duplicity

The family of Laban.

and self-interest, as demonstrated in his dealings with Jacob. Taking advantage of Jacob's love for Rachel, he made him work 14 years for his bride, though Jacob responded with his own brand of trickery (Gn. 29–30). When Jacob eventually left with his family for Palestine, Laban, being warned in a dream not to harm them, made a covenant or treaty with Jacob (Gn. 31:44–54). Laban was thwarted ultimately not by Jacob's cunning, but by God's overruling grace. Earlier, Laban rather than Bethuel had arranged Rebekah's marriage (Gn. 24:50ff.), though no usurping of the father's authority need be assumed here (cf. Gn. 31:18–28).

2. An unknown place (Dt. 1:1), probably in the plains of Moab, or perhaps to be identified with *Libnah, a stopping-place in the wilderness (Nu. 33:20–21).
M.J.S.

LACHISH (Heb. *lākīš*, LXX *Lachis*, Arab. *Tell ed-Duweir*). A 31-acre tell in the Shephelah some 40 km SW of Jerusalem, surrounded on three sides by Nahal Lachish. Excavated by Starkey (1932–38), Aharoni (1966–68), Ussishkin (1973–87).

The surrounding hills are known to have been settled by cave-dwellers from at least the 8th millennium BC, but the hill, which today consists of the tell, was first settled c. 3,000 BC, but little is known of the settlement until c. 1750, when the city was fortified by a steep rampart which sloped down to a ditch or fosse at the base of the tell. The city included a palace and a cult place. From now on the caves on the surrounding hills served as tombs.

From c. 1500 BC Lachish was an unfortified Canaanite city, although it is possible that the houses on the edge of the mound formed a defensive ring. A temple was in use in the previous fosse. Three phases were observed, containing a large square hall, whose ceiling was supported by four columns. Its walls were lined with benches on which offerings were placed, and an altar of unhehwn stones (cf. Jos. 8:31) was constructed with steps ascending it (cf. Ex. 20:24ff.). It had at least two side rooms. It is from this city that letters from two rulers, Yabni-ilu and Zimrida (nos. 328–329) were found at *Amarna. In another letter (no. 288) from there, Abdi Heba, king of Jerusalem, accuses Zimrida of conspiring with the Hapiru, while a letter found at Tell el-Hesi says that he has made a treaty with another king, Šipti-Ba'alu. This city was destroyed c. 1200 BC.

The next city showed no evidence of the Philistines, but rather that it was directly under Egypt. The fosse temple was replaced by a temple on the acropolis which was Egyptian in character, with an entrance chamber, main hall and sanctuary. Japhia, king of Lachish, was a member of the Amorite coalition that fought Joshua at Gibeon (Jos. 10:3, 5) and was executed at Makkedah (Jos. 10:22–27) after Joshua's victory. Lachish subsequently fell to Joshua (Jos. 10:31f.). The city was destroyed in c. 1130 BC, possibly by the Israelites, although it could also have been by the Philistines or another Canaanite city.

Apart from a few possible finds on surrounding hills there is no evidence of Israelite settlement during the period of the Judges. During the United Monarchy there appears to have been a large forti-

fied tower surrounded by farmhouses. A small shrine contained a large number of religious objects including an altar, a *massēbāh*, incense burners, and figurine fragments, indicating Canaanite religion in Israel. The prophet Micah (1:13) said that the city was 'the beginning of sin to the daughter of Zion'.

A new city was constructed during the 9th century BC, probably by Rehoboam (2 Ch. 11:5–10) on a new plan. The city was surrounded by two walls. An elaborate gate complex with an inner three-chambered gate led out to a fortified podium protruding from the tell which formed the outer gate. From here the road led down to the saddle connecting the tell with the surrounding hills. From the gate a road led to a large administrative building which now incorporated the earlier tower. This building had a large enclosed courtyard on its E side with storerooms and stables. The residential area of the city was in the S quadrant, and a water shaft is probably located in the NE corner. Amaziah took refuge at Lachish when fleeing from rebels in Jerusalem, who pursued and slew him there (2 Ki. 14:19; 2 Ch. 25:27). In the early 8th century BC the city was damaged by an earthquake (Am. 1:1, Zc. 14:5), and subsequently rebuilt.

Hezekiah rebelled against Assyria, and in 701 BC Sennacherib invaded Judah. In the process he laid siege to, and captured Lachish. The siege is shown on relief sculpture from his palace at Nineveh (now in the British Museum). The excavation has identified the siege ramp in the SW corner and found evidence for the battle, including sling stones, hundreds of arrowheads and fragments of armour. Although the reliefs portray the battle accurately, excavations show that the Judeans put up stiff resistance, in the construction of an inner ramp, with possibly a new city wall on top of it. The earth to construct it was taken from the 'Great Shaft'. The city was, however, eventually razed. Mass burials involving some 1,500 individuals were found in several adjacent caves on the W slope and are related to the Assyrian siege. The Residency, thought to be an Assyrian governor's residence, probably dates to the Persian period.

A new, although smaller, Judaeon city was built. By this stage it, and Azeqa, were the only fortified outposts from Jerusalem (Je. 34:7). It was destroyed by the Babylonians in 586 BC.

Lachish was resettled by returning Israelites (Ne. 11:30) and although very little of the dwellings of this period have been found, two temples, notable for their similarity in plan to each other and with a much earlier example at *Arad, have come to light. The city was walled during the Persian and Hellenistic periods, after which the site was abandoned.

Inscription. The earliest inscription to date from Israel is a dagger from c. 1700 BC with pictographic signs. A few fragments were found from 1600 and 1250 BC with proto-Canaanite letters, as was a scarab of Rameses III and bowls with Egyptian hieratic script, probably documenting temple harvest tax.

Numerous inscriptions of the Judaeon monarchy have been found, but the most important are the seals. Many of these contain the names of officials such as *Gedaliah, the royal steward (Heb. 'who is over the house'). The most important, however, are a group bearing the title *lamelekh* (Heb. 'belonging to the king'). These contain an

emblem of a disk with either two or four wings, and the name of one of four cities – Socoh, Ziph, Hebron, or *mmst*. The excavations at Lachish have shown that these belonged to an administrative organization instituted by Hezekiah in anticipation of Sennacherib's invasion.

A total of twenty-one ostraca (inscribed potsherds), which were written during the last few weeks before Nebuchadrezzar's conquest in 586 BC, were found in the gate house. Although the language is biblical Heb., the cursive script has been almost obliterated on many of the ostraca, making reading impossible. The legible examples reveal that the collection is the correspondence of a subordinate, Hoshayahu, who is in charge of an outpost, to his superior, Yaush, who is the commanding officer of the garrison at Lachish. Hoshayahu commences the letters with the greeting 'May YHWH cause my lord to hear tidings of peace this day' before proceeding with the business, which in most of the letters is answering the charge that he has read confidential letters from the king. In letter II, he replies (cf. 2 Sa. 9:8), 'Who is your servant (but) a dog . . . May YHWH afflict those who re[port] an (evil) rumour about which you are not informed.' It has been suggested that the ostraca were stored in the gate, pending a trial, but it is more likely that the military command to which the letters were sent was situated in the gate building.

Letter IV concludes, 'we are watching for the signals of Lachish, according to all the indications which my lord has given, for we cannot see Azeqah.' This recalls the situation mentioned by Jeremiah (34:7) when Azeqah, Lachish and Jerusalem were the only fortified Judaean cities left. Azeqah is 11 km NE of Lachish, and the fact that Hoshayahu could not see its signals may indicate it had already fallen.

Letters III and XVI refer to 'the prophet'. His identity has been much debated. Jeremiah is one possibility. Uriah who fled to Egypt (Je. 26:20–22) during Jehoikim's reign is another suggestion which requires redating the letters. Others believe him to be an unnamed prophet. The letter testifies to the recognition of prophets in ancient Israel and their participation in affairs of state. Letter III also mentions an expedition to Egypt by the commander of the army, which may have been a last desperate attempt by Zedekiah to obtain Egyptian assistance to withstand the inevitable Babylonian attack.

G.J.D.

LAHMI. A personal name found only in 1 Ch. 20:5 and applied to the brother of *Goliath the Gittite, who is there stated to have been slain by Elhanan. There is no valid reason why this should not be accepted, but it is possible that the reading may be a copyist's error for 'Bethlehemite' (cf. 2 Sa. 21:19), the last part of which is identical to 'Lahmi' in Hebrew. There is, however, no MS authority for this conjecture. G.W.G.

LAMB OF GOD. This expression occurs twice only in the NT (Jn. 1:29, 36). The word *amnos* is also found in Acts 8:32 and 1 Pet. 1:19, *arnos* occurs in Lk. 10:3, and *arnion* is found once in Jn.

21:15 and twenty-eight times in Revelation. The words 'Behold the Lamb of God, who takes away the sin of the world' (Jn. 1:29) are attributed to John the Baptist when acclaiming Jesus. Many possible interpretations of the word 'lamb' have been canvassed.

Some suggest that it refers to the lamb of the sin-offering, and the phrase 'who takes away the sin of the world' lends support to this. The fact that propitiatory ideas do not seem to be found elsewhere in the Fourth Gospel is not a sufficient reason for rejecting this.

Others believe there is a reference to the paschal lamb. The Jewish festivals have great significance in John, and Jn. 19:36 may well be alluding to the lamb of the Passover. But this would not explain the whole phrase, as the paschal lamb did not take away sins.

Some maintain that we have here a reference to the suffering servant of Is. 53. The word *amnos* occurs in the LXX of Is. 53:7. The Baptist quoted from Is. 40 the day before and he may have been meditating on those chapters. The sin-bearing function is clear in Is. 53. The suggestion that *amnos* is a mistranslation of the Aramaic (*ṭalyā*) meaning 'servant' is ingenious, but it has not been proved.

Another possible reference is to the horned ram who led the flock. The 'lamb of God' would thus be the same as the 'king of Israel'. This view is acceptable only if it is claimed that *ho arōn tēn hamartian* has no propitiatory meaning.

It seems likely that, whatever the Baptist intended, the Evangelist intended his readers to think of the lamb offered in the Temple, the paschal lamb, and the suffering servant. The 'Lamb of God' also reminds us of God's provision of a lamb for Abraham to sacrifice (Gn. 22:8, 13–14).

LAMECH (Heb. *lemek*, possibly from an Arabic word meaning 'a strong young man'; so Dillmann, Holzinger). 1. A descendant of Cain (Gn. 4:18f.), who introduced polygamy. One of his sons was Tubal-cain, the first worker in metals, and Lamech's song in Gn. 4:23f. is sometimes thought to be a 'sword-lay' glorifying the weapons of war invented by his son. He boasts to his wives, Adah and Zillah, that he has killed men, and because of his superior strength due to his weapons, he has no need of God's protection like Cain. Jesus may be referring to this in Mt. 18:22, substituting forgiveness for revenge.

2. A descendant of Seth and father of Noah (Gn. 5:25–31; 1 Ch. 1:3; Lk. 3:36). From the fact that 'Lamech' and 'Enoch' occur in both Cainite (Kenite) and Sethite genealogies, and from other likenesses, it is held by many that they are variants of one original list according to J and P (e.g. G. von Rad, *Genesis*, 1961). But there are differences, notably in the character of this Lamech, who voiced the pious hope that Noah would reverse the curse of Adam (Gn. 5:29; cf. 3:17ff.). J.G.G.N.

LAMENTATIONS, BOOK OF. In the Heb. Bible

LAMENTATIONS, BOOK OF

Lamentations (called *'ēkā*, the characteristic lament 'how!'; cf. 1:1; 2:1; 4:1) is included among the five scrolls, since it is read on the ninth of Ab, the day of mourning over the destruction of the Temple. The evv follow the LXX (*thrēnoi*, 'wailings' or 'dirges') and the Vulg. (whose sub-title *Lamentationes* supplied the English name) in placing Lamentations after the book of Jeremiah.

I. Outline of contents and literary structure

The first four chapters are acrostic poems, each containing sixty-six lines, except ch. 4, which has forty-four. Ch. 3 is noteworthy because each of the twenty-two Heb. letters is used for three successive one-line verses. One purpose of an acrostic is to aid memorization. But in a collection of acrostics the alphabetic pattern would not help one remember which verse beginning with a given letter belongs in which chapter. This carefully wrought, highly artificial style seems to have a further purpose: 'to encourage completeness in the expression of grief, the confession of sin and the instilling of hope' (N. K. Gottwald, *Studies in the Book of Lamentations*, 1954, p. 28). The acrostic speaks to the eye, not the ear, and conveys an idea not merely a feeling. Gottwald stresses the cathartic role of the acrostic: 'to bring about a complete cleansing of the conscience through a total confession of sin' (*op. cit.*, p. 30). Though curbing spontaneity, the acrostic lends a restraint, a gentle dignity, to what could have become an unfettered display of grief.

The dirge-like rhythm of chs. 1-4 helps to convey the feeling of grief. Characteristic of Heb. elegies (e.g. 2 Sa. 1:19ff.; Am. 5:2), this *qinā* rhythm drives home its message with short, sobbing lines. An important device in *qinā* poetry is *dramatic contrast* in which the former state of the deceased or bereaved is described in glowing terms to sharpen the sense of tragedy (e.g. 1:1; 4:1-2; cf. 2 Sa. 1:19, 23).

Ch. 3, though written in *qinā* rhythm, is an *individual lament* rather than a funeral dirge (cf. Pss. 7; 22; etc.), containing elements typical of this category: a figurative description of suffering (3:1-18) and an affirmation that God will answer the suppliant's plea (3:19-66), the climax of the book. Though the form is *individual* the intent is *national*; the author speaks for the nation. Ch. 5, neither acrostic nor *qinā*, resembles closely in form the psalms of *communal lament* (e.g. Pss. 44; 80).

II. Authorship and date

Though anonymous, Lamentations has been attributed to Jeremiah by the LXX, Vulg., and Jewish tradition (Targum at Je. 1:1; Talmud, *Baba Bathra* 15a), probably on the basis of 2 Ch. 35:25.

The evidences for and against a Jeremianic authorship approach a stalemate. S. R. Driver and E. J. Young cite similar lines of evidence and reach differing conclusions, Young voting *pro* and Driver *contra*. The chief arguments for the traditional view are the similarity in temperament between Lamentations and Jeremiah, their unanimity in attributing Jerusalem's destruction to God's judgment, and certain stylistic parallels. Against these one must consider the variation in alphabetic order of the acrostic poems (ch. 1, *s*, *i*, *p*; chs. 2-4, *s*, *p*, *l*), which may hint at multiple authorship, alleged conflicts in viewpoint, such as the author's apparent dependence on Egypt (cf. 4:17 with Je. 37:5-10) or his support of King Zedekiah (cf. 4:20 with Je. 24:8-10), and the contrast between Jeremiah's

spontaneity and the stylized acrostics of Lamentations (see S. R. Driver, *LOT*, pp. 462-464, for details of the various arguments).

Attempts to attribute the first four poems to different times and authors have generally proved too subjective to gain wide acceptance. These chapters seem to be the work of an eye-witness of Jerusalem's calamity (c. 587 BC), who recorded his impressions while they were still fresh. Ch. 5 may date from a slightly later period when the intense anguish of the catastrophe had given way to the prolonged ache of captivity. No part of the book need be dated later than the return in 538 BC.

III. Message and significance

Lamentations is by no means barren theologically. Gottwald's analysis is convincing in its main thrusts if not in all details (*op. cit.*, pp. 47-110). Finding the central theme in the *tragic reversal*, the contrast between past glory and present degradation, he discusses the theology in terms of *doom* and *hope*.

The prophets had heralded Judah's doom, convinced that a righteous God would act in history to punish his people's sin. Lamentations continues this prophetic emphasis by seeing in the ashes of Jerusalem the vindication of God's righteousness (1:18). The city's destruction is no capricious coincidence; it is the logical and inevitable result of defying God's law. Even where God is chided (e.g. ch. 2) for his severity, the deep-seated sense of guilt which permeates the book is evident (2:14; cf. 1:5, 8-9, 18, 22; 3:40-42; 4:13, 22; 5:7). The sense of tragedy is heightened by the recognition that it was avoidable. The manifold picture of the wrath of God (e.g. 1:12ff.; 2:1-9, 20-22; 3:1-18; 4:6, 11) makes Lamentations a key source for any study of this aspect of God's nature.

Judah's plight is desperate but not hopeless. Though the aspects of her hope are not delineated, her reason for hope is cogently stated: the faithfulness of a covenant-keeping God (3:19-39). It was one thing for the prophets to forecast a better day before the disaster struck; it is another thing for our prophet to appropriate this hope in the midst of appalling circumstances. His recognition of the disciplinary role of suffering and its relationship to God's goodness (3:25-30) is cogent testimony to his prophetic insight.

Lamentations is a meeting-place of three great strands of Heb. thought: prophecy, ritual and wisdom. The priestly influence is evident in the liturgical forms of the poems. The wisdom emphasis is stressed in the willingness to contemplate the mysteries of God's ways with men, especially in regard to the timeless problem of suffering.

LAMP, LAMPSTAND, LANTERN.

I. Design and development

Small open pottery bowls with one or more slight lips, which can be identified as lamps (Heb. *nēr*,

Gk. *lychnos*, *lampas*), first appear in the Middle Bronze Age. This simple form continued in use throughout the Iron Age, the lip becoming more pronounced. The final development took place in the Hellenistic period when the Greek style of lamp with inward curving rim became completely enclosed, a small central hole alone remaining for feeding the oil (cf. Mt. 25:4). These lamps were mass-produced from moulds, one making the base, the other the lid. A very long spout for the wick characterizes Hellenistic lamps; this was shortened in the Roman period. Small handles were sometimes added. The moulds for the lids were frequently impressed with floral and other patterns, and, in the Roman period when the lid became broad and concave, with pictures that appear in relief on the lamps. From the 3rd century AD Christian symbols (cross, fishes, alpha and omega) form decorative motifs, while the seven-branched candlestick (*menorah*) marks Jewish lamps. The standard Palestinian lamp of the Gospel period was plain, round, with a fairly wide flanged filling hole, and a flared nozzle for the wick, sloping downwards.

Lamps could be held in the hand, set on a shelf or placed on a stand (Heb. *m'nôrâ*, 2 Ki. 4:10; Aram. *nebraštâ*, Dn. 5:5; Gk. *lychnia*, Mt. 5:15; cf. *ANEP*, no. 657, left edge). A simple wooden stand would serve most households, but some Iron Age lamps were provided with thick bases or separate hollow pedestals. Where brighter light was needed lamps with several spouts were employed, seven-spouted examples having been found in Palestine from this and earlier times, and many with provision for multiple wicks are known from the Roman era.

Pottery forms were copied in metal, although few examples survive from the OT period. In the tabernacle stood the elaborate golden lampstand (Ex. 25:31ff.). Three branches ending in flower-shaped lamp-holders protruded from either side of the main stem, which also supported a lamp-holder. Representations on certain Maccabean coins, a Herodian period drawing on stone found in Jerusalem and a relief on the arch of Titus supplement Hebrew descriptions, and it may be assumed the pattern given in Exodus was followed closely throughout. Ten similar lampstands were made for Solomon's Temple (1 Ki. 7:49).

The single lamps described burnt coarse olive oil or fat, and could stay alight for 2 to 4 hours, it seems, with an occasional trimming of the wick which was made of flax or other fibre (Heb. *pištâ*, Is. 42:3; 43:17). It might be allowed to die away at night, or be kept alight (1 Sa. 3:3; Pr. 31:18).

Out-of-doors lamps could be carried in pottery vessels, although no examples are known earlier than the Roman era. These were dome-shaped with a flat base, a handle at the top and an opening at one side for the light. Such may have been the 'lantern' of Jn. 18:3 (Gk. *phanos*), or it may have been a more elaborate metal form. Gk. *phanos* can also mean 'torch', and that could be the sense here. Gideon's men had torches at an earlier date (Heb. *lappid*, Jdg. 7:16).

II. Symbolic uses

Lamps were placed in tombs from the first, partly, no doubt, to illuminate the chamber, at the same time very likely serving as a symbol of life. The expression 'his lamp' is so used metaphorically in the OT (Jb. 21:17; Pr. 20:20; 24:20; cf. 2 Sa. 21:17; 1

Ki. 11:36, etc.). From its purpose the lamp became a symbol of joy and prosperity, and of guidance: see Ps. 119:105; 2 Sa. 22:29; Pr. 6:20, 23, and personal names such as Neriyah, 'The Lord is my light'.

BIBLIOGRAPHY. D. M. Bailey, *Greek and Roman Pottery Lamps*, 1963; R. H. Smith, *BA* 27, 1964, pp. 1-31, 101-124; 29, 1966, pp. 2-27. A.R.M.

III. Symbolic and other uses in the New Testament

In the NT 'lamp' occurs 7 times in AV, on each occasion rendering *lampas*. RV renders *lampas* as 'torch' in Jn. 18:3 (following AV) and in Rev. 8:10, as 'light' in Acts 20:8 (following AV), and as 'lamp' in Mt. 25:1, 3-4, 7-8; Rev. 4:5 (following AV). RV renders *lychnos* (AV 'light' 6 times, 'candle' 8 times) as 'lamp' on every occasion.

The RV rendering must be accepted apart from the translating of *lampas* by 'lamp' in Mt. 25 and Rev. 4:5. In the latter RSV has 'torch'. In the parable of the virgins (Mt. 25:1-13) RVmg. should be followed, where 'torch' is read. The conventional lamp was for indoor use, and what was needed (and what is still sometimes used) at a wedding was a * torch. The rags which formed its wick needed to be soaked in oil. It seems that the foolish virgins had no oil at all (v. 3), and therefore when they lit their torches they went out instantly (v. 8). The wise had taken oil in separate containers ready for use at the appropriate moment. The difference between them seems to have been not in the quantity of oil that they possessed but in the fact of their possessing or not possessing any at all. The foolish could have gone and bought some had they acted in time.

lychnos is used frequently in a symbolic sense. It is the lamp which must be put on a stand to give light to all in the house (Mt. 5:15). John the Baptist was 'a burning and shining lamp' (Jn. 5:35), who came 'to bear witness to the light' (Jn. 1:7). It is Christ who is the light (*phōs*). In Mt. 6:22 the eye is called 'the lamp of the body' because it receives the light from outside.

lychnia is rendered 'candlestick' by AV *passim* and 'stand' by RV in the Gospels. RV translates this 'candlestick' in Heb. 9:2 and also 7 times in Rev., but gives 'lampstand' in mg. RSV has 'lampstand' throughout. The seven churches (Rev. 1:12-13, 20; 2:1, 5) and the two witnesses (Rev. 11:4) are symbolized by lampstands, similar to those used in the tabernacle (Heb. 9:2). R.E.N.

LANDMARK. Canaan was divided among the Israelite tribes, and to each family was given a plot of land to provide its livelihood. This was passed from father to son, or at least kept within the tribe (Nu. 27:1-11; 36), from which it was, theoretically, inalienable (see the story of Naboth, 1 Ki. 21). Inevitably many lost their land through debt, so that the situation in which every man owned his own plot was looked upon as an ideal (Zc. 3:10). The boundaries were defined by stone pillars or cairns. (In Babylonia inscribed stones recorded the size of important estates, Bab. *kudurru*, *ANEP*, nos. 519-522, contemporary with the Israelite settlement of Canaan.) To remove these was tantamount to removing a man's claim, and was a lawless act (Dt. 19:14; 27:17; Pr. 22:28; 23:10). (For an Egypt. parallel, cf. *ANET*, p. 422, ch. 6.) It was a sign of evil times when men dared to do so (Jb. 24:2; Ho. 5:10).

A.R.M.

LANGUAGE OF THE APOCRYPHA. The so-called *'Apocrypha' comprise a heterogeneous group of books, so that to talk of its language is in fact to talk of the individual books and the problems of language which they pose. They have been preserved for us in MSS of the LXX and so lie before us like that translation in Greek. Their Greek varies widely: e.g. an evident 'translation Greek' in Tobit, Judith, Ben-Sira, 1 Maccabees; a relatively idiomatic Greek in 1 Esdras and Wisdom of Solomon 1-9, in which nonetheless may be perceived traces of its original; the rest of Wisdom and 2 Maccabees in a Greek uninfluenced by any other tongue, although these two works differ widely in their literary merit. In this Greek dress, then, the Apocrypha present instances of a variety of popular Greek works current among Jewish people in the three centuries immediately before Christ. The writings pose textual problems which fall within the general pattern of the textual criticism of the LXX.

It has often been assumed that Hebrew is the original tongue of those works in this group which are evidently based on a Semitic original. C. C. Torrey, however, in this as in the NT field, opened the pertinent question whether Aramaic is not the original language, at least in certain cases. His knowledge of Aramaic was vast and his contributions to biblical learning always challenging and stimulating, sometimes providing solutions to problems old and new, but not always convincing or even necessary (see the review by G. R. Driver of his posthumously published work on the Apocalypse: *JTS* n.s. 11, 1960, pp. 383-389). This must be borne in mind in evaluating his views on the language of the Apocrypha.

The Hebrew origin of a number of books is not controverted even by Torrey. 1 Maccabees has been translated from Hebrew by one better acquainted with Greek than Hebrew: signs of its origin are to be seen in, for instance, 1:28; 9:24; 14:28. Judith is plainly from Hebrew, as phrases such as *apo prosōpou, eis prosōpon*, and instrumentally used *en*

show. The prologue to the Wisdom of Ben-Sira, or Ecclesiasticus, as it is often called, expressly states Hebrew to be the original, and a large part of this was discovered in the Cairo Geniza in 1896. The additions to Daniel are shown to be Hebrew in origin by passages such as the Prayer of Azariah 17 (3:40 in continuous Greek text) and Susanna 15. The Greek of the Prayer of Manasses is fluent, but the obscurities of vv. 4 and 7, for example, appear to derive from imperfectly expressed Hebrew locutions. Baruch displays in 4:5 evidence of a scribal error in the Hebrew (*zīkrōn* read instead of *zīkrū*) translated into Greek. 1 Esdras is a rendering of a known original, part Hebrew, part Aramaic: it is idiomatically rendered. Finally, within this group, the first nine chapters of the Wisdom of Solomon are now widely acknowledged to be based on a Hebrew original; they are translated by the author of the rest of the book, to whose original additions we should perhaps also attribute 6:22-8:1.

Tobit is generally conceded to be translated from some Semitic language. Pfeiffer admits that both Hebrew and Aramaic can be proposed but that the case for Aramaic is the stronger. Torrey proposed to find evidence for this latter hypothesis in the meaningless Manasses of 14:10 (MSS B and A), an original participle with objective suffix *m'nassēh*, 'the one who exalted him', 'his benefactor'. (Fragments of Tobit in both Hebrew and Aramaic have been identified among the Qumran texts.) The Epistle of Jeremy admits of debate: some still maintain a Greek original. A crucial point is 'the harlots on the roof' (v. 11). Torrey sees here evidence of a misrendering of 'al 'agrā, 'for their hire', as 'al 'iggārā. However, both readings in the Greek (*stegous/tegous*) may be understood as 'brothel', so that mistranslation seems to be an unnecessary hypothesis in this case. In the case of 2 Esdras (not extant in Greek) variant hypotheses have been advanced for both Hebrew and Aramaic originals. The question of the additions to Esther is larger than merely discussion of language: if the argument of Torrey that this represents the original form of the book be correct, then Aramaic

Hebrew	Hebrew or Aramaic	Greek
1 Maccabees	Tobit	2 Maccabees
Judith	Epistle of Jeremy (or Greek?)	Wisdom of Solomon 9 to the end
Wisdom of Ben Sira (Ecclesiasticus)	(Part of) 1 Esdras	
Additions to Daniel; Susanna 15 Prayer of Azariah Prayer of Manasses	2 Esdras Additions to Esther	
Baruch	2 Maccabees (the letters in chs. 1 and 2)	
(Part of) 1 Esdras		
Wisdom of Solomon 1-9		

Table of languages used for the original texts in the books of the Apocrypha.

may well have been its original. But this argument has not been accepted by most scholars.

Lastly, 2 Maccabees is a composition in Greek, a highly artificial attempt at the attainment of rhetorical heights. The letters which are found in chs. 1 and 2 may be original, and appear to be from a Semitic source, perhaps in Aramaic.

In these linguistic debates it may be well to bear in mind the remarks of G. R. Driver (*op. cit.*) to the effect that in the case of one author at least both Hebrew and Aramaic must be considered. As the one was spoken increasingly during the time of the composition of the Apocrypha and the other was still a literary medium and sometimes spoken, it may be that both have left their imprint upon the eventual Greek form of these books; and that this fact has led to the possibility of such different arguments upon a single matter.

LANGUAGE OF THE OLD TESTAMENT.

I. Hebrew

Hebrew belongs to the W group of the Semitic languages (the word Semitic is formed from the name of Shem, Noah's eldest son). It is most closely related to the language of ancient Ugarit, and to Phoenician and Moabite. *Canaanite is known only from occasional words in the *Amarna letters. Probably it was the parent of Hebrew. In the OT it is called the 'language (lit. "lip") of Canaan' (Is. 19:18), or Judaic (2 Ki. 18:26f.; cf. Is. 36:11ff. and Ne. 13:24). The designation 'Hebrew' first occurs in the Prologue to Ecclesiasticus (Ben Sira, c. 180 BC).

Characteristic of the Semitic languages is the triconsonantal root acting as a kind of frame for a series of vowel-patterns. The insertion of the vowel-pattern into the frame gives it its specific meaning. In *kōhēn*, for instance, *k-h-n* would be the consonantal frame and *o-e* would be the vowel-pattern. The force of the *o-e* is roughly equivalent to that of the present participle in English, thus *kōhēn*, 'ministering (one)'.

Hebrew script is a descendant of the N Semitic or Phoenician script (*WRITING). It consists of 22 consonants (later *š* and *ṣ* were distinguished, making 23). It is written from right to left. It contains various sounds not found in Indo-European languages; e.g. emphatic consonants (*t*, *k* [g], and *ṣ*) and the laryngal 'ayin' ('). The latter was often transliterated into Greek by *gamma*, as for instance in 'Gomorrhah'. When Hebrew was no longer widely current, systems of marks were inserted above, below and within the consonants to show the correct vowels (*TEXTS AND VERSIONS).

This vocalization represents an important synchronic stage in Hebrew, and it is the product of a highly enlightened and reliable tradition, as is shown, for instance, by the care with which it observes the distinction that originally obtained between certain vowels of 'substantival' and

'adjectival' verbs, where modifications of the consonantal frame reveal their primitive forms. There are also a number of extra-alphabetical and punctuation or intonation signs. For biblical Hebrew the pronunciation most commonly adopted is the Sefhardic (Judaeo-Spanish).

The scribes scrupulously avoided making any change in the consonantal text. Where they presumed that there had been a transcriptional error, or where a word was no longer in polite use, they placed what they considered was the right or preferable word in the margin and the vowels of this word were added to the word in the text (over which a small circle was often placed). The consonants in the text are referred to as *K'tib* ('the written'), those in the margin as the *Q'rē* ('that which is to be read').

Hebrew possesses no indefinite article. The definite article (*ha-*) is prefixed to the noun. Its use differs in many details from that of the definite article in English. For example, demonstrative pronouns and adjectives take it when used attributively with a noun determinate in its reference (e.g. the book, the this; the man, the fat). It is also used with a member of a class or with something previously mentioned.

Nouns in Hebrew distinguish gender and number. Gender is grammatical: inanimate as well as animate things are assigned gender. The feminine has usually a specific termination (*-ā*). A number of feminine nouns, however, have no termination, but their gender is indicated by the agreement of adjectives and verbs. Hebrew also possesses a specific termination for the dual, largely confined to members of the body occurring in pairs; case-endings were discarded early, but a few traces remain.

There are two main classes of verbs: those with *substantival* cognates and those with *adjectival* cognates. Broadly speaking, the 'substantival' verb is dynamic, whereas the 'adjectival' (often called 'stative') is static. The verb primarily indicates the kind of the action, and distinguishes two main aspects: completed action (perfective) and incomplete (imperfective). For the perfective, the pronominal element is suffixed: for the imperfective it is prefixed. In the perfective, gender is distinguished in the 3rd person singular and in the 2nd person singular and plural, and in the imperfective also in the 3rd person plural. Hebrew has a number of verb-forms for particular categories of action, such as iterative, causative, tolerative, etc.

Nouns are formed in many ways: by a variety of vowel-patterns, and with or without the addition of certain consonants. When consonants are used they are usually prefixed, *m* and *t* being the most common. Wide use is made of the singular as a collective, with the result that the feminine termination is sometimes used as a kind of singulative ending, e.g. *šē'ār*, 'hair', *šā'rā* (fem.), 'single hair'. Zero forms, that is forms in which a morphological element common to a class is missing, are not uncommon; *šōn* (fem.), 'flocks', cf. *šōn 'ōb'dōt*, 'lost sheep', where *ōt* indicates the element missing. The noun preceding a genitive has its vowels reduced to the minimum and omits the definite article. The group is treated virtually as an inseparable compound. Possessive pronouns appear as suffixes to the noun.

Adjectives may be used either predicatively, when they do not take the definite article and usually precede the noun, or attributively, when they

follow the noun and take the definite article if the noun has it. The adjective may also take the definite article and be used independently, having the value of a substantive. Comparison is rendered by the use of the preposition *min*, 'from', equivalent to the English 'more . . . than'. The highest degree of a quantity is often left unexpressed, e.g. 'the good', namely 'the best', or the superlative is expressed by a phrase consisting of a singular form followed by a plural, e.g. 'song of the songs', i.e. the greatest or best song.

The use of the numerals shows several peculiarities. One and two agree in gender with their noun, but three to ten disagree. This may indicate a late introduction of grammatical gender.

The 'verbless' or nominal sentence in which the predicate consists of a noun, a pronoun, or adjective, is widely used. Usually we supply in translation some part of the verb 'to be', e.g. 'the servant of Abraham (am) I'. In sentences with a finite verb the word-order usually follows the pattern—verb, subject, object. Often with the accusative the particle 'et' is used. If the object consists of a pronoun it can be appended to the accusative particle, or it can be added as an enclitic form to the verb. An indirect object consisting of a preposition and a pronominal suffix normally comes before the subject. If there is an adverbial extension it usually follows the object. Where English might use the impersonal 'one', e.g. in 'one says', Hebrew uses either the 2nd or 3rd singular masculine or the 3rd plural.

The most distinctive feature of Hebrew style is its syndetic or co-ordinative character, that is, the prevalence of the simple conjunction 'and', and the infrequent use of subordinating conjunctions. Compared with English, it might seem to be less abstract. Hebrew, for instance, makes extensive use of terms for physical attitudes to describe psychological states, or organs of the body are associated with mental attitudes. It is most difficult for anyone inured to Indo-European procedure to dissociate his mind from the original meanings; this is particularly so when a work is replete with them, as, for instance, in the Song of Songs.

The imagery of Hebrew is largely drawn from the things and activities of everyday life. It has, therefore, a universal quality and lends itself without difficulty to translation. Hebrew makes use of all the common figures of speech, parables (e.g. 2 Sa. 12), similes, metaphors, e.g. 'star' or 'lion' for hero, 'rock' for refuge, 'light' for life and for the divine revelation, 'darkness' for sorrow and ignorance.

Hebrew, in common with general linguistic usage, makes wide use of anthropomorphic expressions; that is, the transference or adaptation of terms for parts of the human body and for human activities to the inanimate world and other conditions to which they are not strictly attributable. These expressions have their origin in metaphor and come under the heading of 'extension of meaning', a device essential apparently to mechanism of languages in general. They occur as frequently in other Semitic languages as in Hebrew. Akkadian, for instance, refers to the keel of a ship as the 'backbone', to which the 'ribs' are attached. Hebrew speaks about the 'head' of a mountain, the 'face' of the earth, the 'lip' (shore) of the sea, the 'mouth' of a cave, the 'going' of water (a verb often used elsewhere with the meaning of 'walking'). These and many other expressions had obviously become 'fossilized' metaphors. When such expres-

sions are applied to the activities or attributes of God it would be indefensible on linguistic grounds to interpret them in a literal sense, or to base theories of beliefs on what are intrinsic modes of expression dictated by the very nature of linguistic communication.

Elliptical expressions, by which the semantic content of a full phrase is vested in a single member of the group, are not uncommon, e.g. the omission of 'voice' after 'to lift up' (Is. 42:2). Although one of the earliest references to semantic change occurs in the OT (1 Sa. 9:9), there is little evidence of change in Hebrew in the course of the centuries. It is likely, however, that many parts have been revised to a standard Hebrew, perhaps that of late pre-exilic Jerusalem. Traces of dialects may be found in some books, e.g. Ruth, parts of 2 Kings. Later forms of the language can be traced in Esther, Chronicles and other passages. In the nature of the case, it would not be easy to detect loan-words from cognate languages. Examples are *hékāl*, 'temple', from Akkad. *ekallu*, 'palace', which in turn was borrowed from Sumerian *e-gal*, 'great house'; *argāmān*, 'purple', comes from Hittite.

Recovery of numerous ancient texts in cognate languages has brought a more precise understanding of some points. There is a danger that the excitement of new discoveries may give rise to ill-founded proposals that contravene in-built safeguards of the language which prevent ambiguity. Frequent appeal to Arabic in this way mars NEB (see J. Barr, *Comparative Philology and the Text of the Old Testament*, 1968). The great divergences between Hebrew and the other cognate languages, largely due to the action of semantic change, make it extremely hazardous to attempt on etymological grounds to assign meanings to Hebrew words of infrequent occurrence.

The high literary style of much of the OT would seem to indicate the early existence of literary models or of a 'grand style'. The ancient Near East offers examples of high styles continuing in use for many centuries. Much that has been written about divergences in Hebrew style is, in the absence of proper criteria, valueless.

While it is now clear that the influence of Hebrew on NT Greek is not as extensive as was formerly held by many scholars, nevertheless it has left its mark both on vocabulary and syntax. There are a number of loan-words and many loan-translations, e.g. *hilastērion* for the covering of the ark which, on the Day of Atonement, was sprinkled with blood, and an expression like 'Blessed art thou among (lit. "in") women', where the Greek follows the Hebrew use of the preposition.

The influence of Hebrew on European literature is incalculable, even though much of it may have come indirectly through the Vulgate. Among the many Hebrew loan-words in English are: sabbath, sack, Satan, shekel, jubilee, hallelujah, aloes (fragrant resin) and myrrh. The use of 'heart' as the seat of the emotions and will and of 'soul' for person are probably loan-translations.
